FEDERAL REGISTER

Vol. 89 Thursday,

No. 81 April 25, 2024

Pages 31601–32360

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 89, No. 81

Thursday, April 25, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 126

[Docket No. DHS–2022–0039]

RIN 1601–AB09

Procedures of the Transportation Security Oversight Board Review Panel Concerning Federal Aviation Administration Airman Certificates; Correction

AGENCY: Office of the Secretary, DHS.

ACTION: Final rule; correction.

SUMMARY: In a final rule published March 12, 2024, DHS codified the procedures that apply to appeals before the Transportation Security Oversight Board concerning Federal Aviation Administration Airmen Certificates. The rule misstated the editorial action taking place. This document corrects that error.

DATES: This correction is effective May 13, 2024.

FOR FURTHER INFORMATION CONTACT: Randall Kaplan, Attorney, Office of the General Counsel, Department of Homeland Security, Washington, DC 20528–0485. PHONE: 202 282–9822.

SUPPLEMENTARY INFORMATION: In the final rule published March 12, 2024, at 89 FR 17693, DHS amended 6 CFR chapter 1 by revising part 126. However, the words of issuance instructing the amendment erroneously stated the Department is adding part 126. Part 126 already exists, and therefore the instruction should have been that the Department is revising it.

Correction

In FR Rule Doc. No. 2024–05131 appearing on page 17693 in the **Federal Register** of Tuesday, March 12, 2024, the following correction is made:

1. On page 17702, in the third column under the heading ''The Amendments,'' the words of issuance ''For the reasons set forth in the preamble, the Department of Homeland Security adds part 126 to Title 6, Code of Federal Regulations, to read as follows:'' is corrected to read ''For the reasons set forth in the preamble, the Department of Homeland Security revises part 126 to Title 6, Code of Federal Regulations, to read as follows:''.

Christina E. McDonald,

Associate General Counsel for Regulatory Affairs, U.S. Department of Homeland Security.

[FR Doc. 2024–08530 Filed 4–24–24; 8:45 am]

BILLING CODE 9110–9B–P

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 50 and 52

[NRC–2024–0019]

Regulatory Guide: Installation Design and Installation of Vented Lead-Acid Storage Batteries for Production and Utilization Facilities

AGENCY: Nuclear Regulatory Commission.

ACTION: Final guide; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Revision 3 to Regulatory Guide (RG) 1.128, ''Installation Design and Installation of Vented Lead-Acid Storage Batteries for Production and Utilization Facilities.'' This RG describes an approach that is acceptable to the NRC staff to meet regulatory requirements for the installation design and installation of vented lead-acid storage batteries in production and utilization facilities.

DATES: Revision 3 to RG 1.128 is available April 25, 2024.

ADDRESSES: Please refer to Docket ID NRC–2024–0019 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0019. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

Revision 3 to RG 1.128 and the regulatory analysis may be found in ADAMS under Accession Nos. ML24052A077 and ML23277A279, respectively.

Regulatory guides are not copyrighted, and NRC approval is not required to reproduce them.

FOR FURTHER INFORMATION CONTACT: Michael Eudy, Office of Nuclear Regulatory Research, telephone: 301–415–3104, email: *Michael.Eudy@nrc.gov* and Sheila Ray, Office of Nuclear Reactor Regulation, telephone: 301–415–3653, email: *Sheila.Ray@nrc.gov.* Both are staff of the NRC, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC is issuing a revision in the NRC's ''Regulatory Guide'' series. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

The proposed Revision 3 to RG 1.128 was issued with a temporary

identification of Draft Regulatory Guide, (DG)-1421 (ADAMS Accession No. ML23277A276.) This revision of this guide (Revision 3) describes an approach that is acceptable to the NRC staff to meet the regulatory requirements for installation, inspection, and testing for Class 1E power, instrumentation, and control equipment at production and utilization facilities. RG 1.128, Revision 3 endorses, with clarifications, Institute of Electrical and Electronics Engineers (IEEE) Standard 484–2019, ''IEEE Recommended Practice for Installation Design and Installation of Vented Lead-Acid Batteries for Stationary Applications.''

II. Additional Information

The NRC published a notice of the availability of DG–1421 in the **Federal Register** on January 8, 2024 (89 FR 895) for a 30-day public comment period. The public comment period closed on February 7, 2024. Public comments on DG–1421 and the staff responses to the public comments are available in ADAMS under Accession No. ML24052A078.

As noted in the **Federal Register** on December 9, 2022 (87 FR 75671), this document is being published in the ''Rules'' section of the **Federal Register** to comply with publication requirements under chapter 1 of title 1 of the *Code of Federal Regulations* (CFR).

III. Congressional Review Act

This RG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

IV. Backfitting, Forward Fitting, and Issue Finality

Issuance of RG 1.128, Revision 3, does not constitute backfitting as that term is defined in 10 CFR 50.109, ''Backfitting,'' and as described in NRC Management Directive (MD) 8.4, ''Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests;'' does not affect the issue finality of an approval issued under 10 CFR part 52, ''Licenses, Certifications, and Approvals for Nuclear Power Plants;'' and does not constitute forward fitting as that term is defined and described in MD 8.4 because, as explained in RG 1.128, Revision 3, licensees would not be required to comply with the positions set forth in the RG.

V. Submitting Suggestions for Improvement of Regulatory Guides

A member of the public may, at any time, submit suggestions to the NRC for improvement of existing RGs or for the development of new RGs. Suggestions can be submitted on the NRC's public website at *https://www.nrc.gov/reading-rm/doc-collections/reg-guides/contactus.html.* Suggestions will be considered in future updates and enhancements to the ''Regulatory Guide'' series.

Dated: April 19, 2024.

For the Nuclear Regulatory Commission.

[FR Doc. 2024–08866 Filed 4–24–24; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 50 and 52

[NRC–2023–0216]

Regulatory Guide: Installation, Inspection, and Testing for Class 1E Power, Instrumentation, and Control Equipment at Production and Utilization Facilities

AGENCY: Nuclear Regulatory Commission.

ACTION: Final guide; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Revision 1 to Regulatory Guide (RG) 1.30, ''Installation, Inspection, and Testing for Class 1E Power, Instrumentation, and Control Equipment at Production and Utilization Facilities.'' This RG describes an approach that is acceptable to the NRC staff to meet the regulatory requirements for installation, inspection, and testing for Class 1E power, instrumentation, and control equipment at production and utilization facilities.

DATES: Revision 1 to RG 1.30 is available on April 25, 2024.

ADDRESSES: Please refer to Docket ID NRC–2023–0216 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0216. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

Revision 1 to RG 1.30 and the regulatory analysis may be found in ADAMS under Accession Nos. ML24040A161 and ML23235A321, respectively.

Regulatory guides are not copyrighted, and NRC approval is not required to reproduce them.

FOR FURTHER INFORMATION CONTACT: Michael Eudy, Office of Nuclear Regulatory Research, telephone: 301–415–3104; email: *Michael.Eudy@nrc.gov* and Darrell Murdock, Office of Nuclear Regulatory Research, telephone: 301–415–1591; email: *Darrell.Murdock@nrc.gov.* Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC is issuing a revision in the NRC's ''Regulatory Guide'' series. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

The proposed Revision 1 to RG 1.30 was issued with a temporary identification of Draft Regulatory Guide (DG)-1419 (ADAMS Accession No. ML23222A182). This revision of this

guide (Revision 1) describes an approach that is acceptable to the NRC staff to meet the regulatory requirements for installation, inspection, and testing for Class 1E power, instrumentation, and control equipment at production and utilization facilities. RG 1.30, Revision 1 endorses, with a clarification, Institute of Electrical and Electronics Engineers (IEEE) Standard 336–2020, ''IEEE Recommended Practice for Installation, Inspection, and Testing for Class 1E Power, Instrumentation, and Control Equipment at Nuclear Facilities.''

II. Additional Information

The NRC published a notice of the availability of DG–1419 in the **Federal Register** on December 20, 2023 (88 FR 87967) for a 30-day public comment period. The public comment period closed on January 19, 2024. Public comments on DG–1419 and the staff responses to the public comments are available in ADAMS under Accession No. ML24040A165.

As noted in the **Federal Register** on December 9, 2022 (87 FR 75671), this document is being published in the ''Rules'' section of the **Federal Register** to comply with publication requirements under chapter I of title 1 of the *Code of Federal Regulations* (CFR).

III. Congressional Review Act

This RG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

IV. Backfitting, Forward Fitting, and Issue Finality

Issuance of RG 1.30, Revision 1, does not constitute backfitting as that term is defined in 10 CFR 50.109, ''Backfitting,'' and as described in NRC Management Directive (MD) 8.4, ''Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests''; affect the issue finality of an approval issued under 10 CFR part 52, ''Licenses, Certifications, and Approvals for Nuclear Power Plants''; or constitute forward fitting as that term is defined and described in MD 8.4 because, as explained in RG 1.30, Revision 1, licensees are not required to comply with the positions set forth in the RG.

V. Submitting Suggestions for Improvement of Regulatory Guides

A member of the public may, at any time, submit suggestions to the NRC for improvement of existing RGs or for the development of new RGs. Suggestions can be submitted on the NRC's public website at *https://www.nrc.gov/reading-rm/doc-collections/reg-guides/contactus.html.* Suggestions will be considered in future updates and enhancements to the ''Regulatory Guide'' series.

Dated: April 18, 2024.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2023–2247; Airspace Docket No. 23–ACE–4]

RIN 2120–AA66

Amendment of VOR Federal Airway V–132 and Revocation of VOR Federal Airways V–131, V–307, and V–350 in the Vicinity of Chanute, KS

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Very High Frequency Omnidirectional Range (VOR) Federal Airway V–132 and revokes VOR Federal Airways V–131, V–307, and V–350. The FAA is taking this action due to the planned decommissioning of the VOR portion of the Chanute, KS (CNU), VOR/Distance Measuring Equipment (VOR/DME) navigational aid (NAVAID). The Chanute VOR is being decommissioned in support of the FAA's VOR Minimum Operational Network (MON) program.

DATES: Effective date 0901 UTC, July 11, 2024. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of the Notice of Proposed Rulemaking (NPRM), all comments received, this final rule, and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11H, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the Air Traffic Service (ATS) route structure as necessary to preserve the safe and efficient flow of air traffic within the National Airspace System.

History

The FAA published a notice of proposed rulemaking for Docket No. FAA–2023–2247 in the **Federal Register** (88 FR 78265; November 15, 2023), proposing to amend VOR Federal Airway V–132 and revoke VOR Federal Airways V–131, V–307, and V–350 due to the planned decommissioning of the VOR portion of the Chanute, KS, VOR/DME NAVAID. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. No comments were received.

Incorporation by Reference

VOR Federal airways are published in paragraph 6010(a) of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11H, dated August 11, 2023, and effective September 15, 2023. FAA Order JO 7400.11H is publicly available as listed in the ADDRESSES section of this document. These amendments will be published in the next update to FAA Order JO 7400.11.

FAA Order JO 7400.11H lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends 14 CFR part 71 by amending VOR Federal Airway V–132 and revoking VOR Federal Airways V–131, V–307, and V–350 due to the planned decommissioning of the VOR portion of the Chanute, KS, VOR/DME NAVAID. The airway actions are described below.

V–131: Prior to this final rule, V–131 extended between the Okmulgee, OK, VOR/DME and the Topeka, KS, VOR/Tactical Air Navigation (VORTAC). The airway segment between the Tulsa, OK, VORTAC and the Topeka VORTAC is removed due to the planned decommissioning of the Chanute VOR. Additionally, the airway segment between the Okmulgee VOR/DME and the Tulsa VORTAC is also removed since that airway segment overlaps V–161, which will remain charted and provide navigational guidance between the two NAVAIDs. As a result, the airway is removed in its entirety.

V–132: Prior to this final rule, V–132 extended between the Medicine Bow, WY, VOR/DME and the intersection of the Forney, MO, VOR 086° and Vichy, MO, VOR/DME 156° radials (LENOX Fix), excluding that portion of the airway within restricted areas R–4501A, R–4501B, R–4501C, and R–4501D during their time of activation. The airway segment between the Hutchinson, KS, VOR/DME and the Springfield, MO, VORTAC is removed. Additionally, that portion of the airway within restricted areas R–4501E, R–4501F, and R–4501H is also excluded during the restricted areas times of activation since those restricted areas also fall within 4 nautical miles of the airway. As amended, the airway is changed to now extend between the Medicine Bow VOR/DME and the Hutchinson VOR/DME, and between the Springfield VORTAC and the intersection of the Forney VOR 086° and Vichy VOR/DME 156° radials (LENOX Fix), excluding the portion within all 7 restricted areas of the R–4501 restricted area complex.

V–307: Prior to this final rule, V–307 extended between the Chanute, KS, VOR/DME and the Emporia, KS, VORTAC. The airway is removed in its entirety.

V–350: Prior to this final rule, V–350 extended between the Wichita, KS, VORTAC and the Chanute, KS, VOR/DME. The airway is removed in its entirety.

The NAVAID radials listed in the V–132 description in the regulatory text of this final rule are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action of amending VOR Federal Airway V–132 and revoking VOR Federal Airways V–131, V–307, and V–350, due to the planned decommissioning of the VOR portion of the Chanute, KS, VOR/DME NAVAID, qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations at 40 CFR part 1500, and in accordance with FAA Order 1050.1F, Environmental Impacts: Policies and Procedures, paragraph 5–6.5a, which categorically excludes from further environmental impact review rulemaking actions that designate or modify classes of airspace areas, airways, routes, and reporting points (see 14 CFR part 71, Designation of Class A, B, C, D, and E Airspace Areas; Air Traffic Service Routes; and Reporting Points); and paragraph 5–6.5k, which categorically excludes from further environmental impact review publication of existing air traffic control procedures that do not essentially change existing tracks, create new tracks, change altitude, or change concentration of aircraft on these tracks. As such, this action is not expected to result in any potentially significant environmental impacts. In accordance with FAA Order 1050.1F, paragraph 5–2 regarding Extraordinary Circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. The FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact study.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11H, Airspace Designations and Reporting Points, dated August 11, 2023, and effective September 15, 2023, is amended as follows:

Paragraph 6010(a) Domestic VOR Federal Airways.

Establishment and Amendment of United States Area Navigation (RNAV) Routes; Eastern United States

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action establishes United States Area Navigation (RNAV) Routes T–480, T–482, and T–488, and amends RNAV Routes Q–140, T–206, T–258, T–287, T–295, and T–398 in the eastern United States. These actions support Next Generation Air Transportation System (NextGen) which provides a modern RNAV route structure to improve the efficiency of the National Airspace System (NAS).

DATES: Effective date 0901 UTC, July 11, 2024. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of the Notice of Proposed Rulemaking (NPRM), all comments received, this final rule, and all background material may be viewed online at *www.regulations.gov* using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11H, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the Air Traffic Service (ATS) route structure as necessary to preserve the safe and efficient flow of air traffic within the NAS.

History

The FAA published a NPRM for Docket No. FAA 2023–2040 in the **Federal Register** (88 FR 73268; October 25, 2023), proposing to establish three RNAV routes and amend six RNAV routes in the eastern United States. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Differences From the NPRM

Subsequent to publication of the NPRM, the FAA identified that two route points had been inadvertently omitted from the legal description of RNAV Routes T–287 and T–398. These route points are required to be added to the part 71 description of each route as it represents a turn point of one degree or more. The HAMRR, MD, waypoint (WP) is added between the TOMYD, PA, WP and the DANII, MD, WP in the description of T–287; and the MANGE, VA, Fix is added between the BOUSY, VA, WP and the THHMP, VA, WP in the description of T–398. The addition of the HAMRR WP and the MANGE Fix to their respective routes does not substantively alter the route of T–287 and T–398.

The FAA identified the Bangor, ME (BGR), Very High Frequency Omnidirectional Range/Tactical Air Navigation (VORTAC) was inadvertently omitted from the NPRM's part 71 description of RNAV Route T–295. Prior to this action, the Bangor VORTAC was in the description of RNAV Route T–295 and remains on the route between the BRNNS, ME, Fix and the LAUDS, ME, WP.

In the part 71 description of RNAV Route T–206 the NUROE, NC, WP was removed as intended. In the description of the proposed changes the removal of the NUROE WP was not addressed. The NUROE WP remains charted on T–206 but is removed from the part 71 description as the route segments that it makes up do not contain a turn of one degree or more. In the part 71 description of RNAV Route T–287 the BOUSY, VA, WP was inadvertently listed as the BOUSY, NC, WP. The BOUSY WP is located in the state of Virginia in the National Airspace System Resource (NASR) database and charted as such.

Finally, in the NPRM the FAA incorrectly listed the RUBKI, MI; TOTHH, NY; HAVNS, OA; VYSOR, MD; ACUTE, NC; SVILL, VA; and POORK, VA route points as Fixes. The route points are identified as WPs in the NASR database and charted as WPs accordingly. Additionally, the FAA incorrectly listed YODAA, NY as a WP. YODAA, NY is identified as a Fix in the NASR database and charted as a Fix accordingly. This final rule corrects these errors.

Incorporation by Reference

United States Area Navigation routes (Q-routes) are published in paragraph 2006 and United States Area Navigation (T-routes) are published in paragraph 6011 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11H, dated August 11, 2023, and effective September 15, 2023. FAA Order JO 7400.11H is publicly available as listed in the **ADDRESSES** section of this document. These amendments will be published in the next update to FAA Order JO 7400.11.

FAA Order JO 7400.11H lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends 14 CFR part 71 by establishing RNAV Routes T–480, T–482, and T–488, and amending RNAV Routes Q–140, T–206, T–258, T–287, T–295, and T–398 in the eastern United States. This action supports NextGen which provides a modern RNAV route structure to improve the efficiency of the NAS. The amendments are described below.

Q–140: Prior to this final rule, Q–140 extended between the WOBED, WA, WP and the YODAA, NY, Fix. The route is amended by moving the RUBKI, Canada, WP 22 feet west of its current position to align with the United States/Canadian border replacing the CFCTJ, MI, Computer Navigation Fix (CNF). Additionally, the RAGIX, NY, Fix is being moved 0.5 nautical miles (NM) east to align with the United States/Canadian border replacing the CFDHX, NY, CNF. The RODYY, NY, WP is being

replaced with the TOTHH, NY, WP due to similar sounding route point names. Finally, the FAA is removing fixes from the route's legal description for segments that are in Canada, and segments that contain turns of less than one degree. The following are the route points that are removed: GETNG, WA, WP; CORDU, ID, Fix; PETIY, MT, WP; CHOTE, MT, Fix; CESNA, WI, WP; WISCN, WI, WP; PEPLA, Canada, WP; SIKBO, Canada, WP; MEDAV, Canada, WP; HANKK, NY, Fix; BEEPS, NY, Fix; EXTOL, NY, Fix; MEMMS, NY, Fix; and KODEY, NY, Fix. As amended, the route continues to extend between the WOBED WP and the YODAA Fix.

T–206: Prior to this final rule, T–206 extended between the ENADE, NC, WP and the ZADEL, NC, WP. The route is extended to the east between the ZADEL WP and the SNOWS, NC, Fix. As amended, the route is changed to now extend between the ENADE, NC, WP and the SNOWS, NC, Fix.

T–258: Prior to this final rule, T–258 extended between the MINIM, AL, Fix and the GMINI, NC, WP. The route is extended to the northeast between the GMINI WP and the BOUSY, VA, WP. Additionally, the FAA removed fixes from the route's legal description for segments that contain turns of less than one degree. The following are the route points that are removed: CAYAP, AL, Fix; ZIVMU, AL, Fix; DAYVS, AL, WP; HEENA, AL, Fix; KYLEE, AL, Fix; CAMPP, AL, Fix; and LANGA, GA, Fix. As amended, the route is changed to now extend between the MINIM Fix and the BOUSY WP.

T–287: Prior to this final rule, T–287 extended between the DENNN, VA, WP and the TOMYD, MD, WP. The route is extended to the southwest between the GMINI, NC, WP and the DENNN WP; and to the northeast between the TOMYD WP and the Kennebunk, ME (ENE), VOR/Distance Measuring Equipment (VOR/DME). The FAA moved the TOMYD, MD, WP 2.8 NM north of its current location. Moving the TOMYD WP allows alignment with future proposed RNAV routes, and results in the WP being in the state of Pennsylvania. The amended route segment of T–287 overlays a portion of VOR Federal Airway V–44 between the PALEO, MD, WP and the WNSTN, NJ, WP; a portion of VOR Federal Airway V–139 between MANTA, NJ, Fix and the Kennebunk VOR/DME; and a portion of VOR Federal Airway V–454 between the SNOWS, NC, Fix and the Lawrenceville, VA (LVL), VORTAC. Additionally, the FAA removed fixes from the route's legal description for segments that contain turns of less than one degree. The following are the waypoints that are removed: DENNN, VA, WP; CAARY, VA, WP; and WILMY, VA, WP. As amended, the route is changed to now extend between the GMINI WP and the Kennebunk VOR/DME.

T–295: Prior to this final rule, T–295 extended between the POORK, VA, WP and the Presque Isle, ME (PQI), VOR/DME. The FAA extended T–295 to the southwest between the DUFFI, NC, Fix and the POORK WP; added the DOGWD, VA, Fix and the RIPKN, MD, WP to the route; and replaced the Wilkes Barre, PA (LVZ), VOR/DME with the WLKES, PA, Fix. Additionally, the FAA removed the Chester, MA (CTR), VOR/DME from the route's legal description as those segments contain turns of less than one degree. As amended, the route is changed to now extend between the DUFFI Fix and the Presque Isle VOR/DME.

T–398: Prior to this final rule, T–398 extended between the RRORY, TX, WP and the GMINI, NC, WP. The FAA extended T–398 to the northeast between the GMINI WP and the TAPPA, VA, Fix. The amended route segment of T–398 overlays a portion of VOR Federal Airway V–155 from the Sandhills, NC (SDZ), VORTAC to the MANGE, VA, Fix. As amended, the route is changed to now extend between the RRORY WP and the TAPPA Fix.

T–480: T–480 is a new route that extends between the Greensboro, NC (GSO), VORTAC and the ZOLMN, NC, Fix. T–480 overlays a portion of VOR Federal Airway V–266 between the Greensboro VORTAC and the South Boston, MA (SBV), VORTAC; from the MAZON, VA, Fix to the Wright Brothers, NC (RBX), VOR/DME; and a portion of Colored Federal Airway Green 13 (G–13) from the MANTEO, NC (MQI), Nondirectional Radio Beacon (NDB) to the ZOLMN Fix.

T–482: T–482 is a new route that extends between the MEYER, NC, Fix and the COUPN, VA, WP. T–482 overlays a portion of VOR Federal Airway V–615 between the MEYER Fix and the DUFFI, NC, Fix.

T–488: T–488 is a new route that extends between the Tar River, NC (TYI), VORTAC and the RTBRO, NC, Fix. T–488 overlays a portion of VOR Federal Airway V–189 from the Tar River VORTAC and the Wright Brothers, NC (RBX), VOR/DME.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action of establishing RNAV Routes T–480, T–482, and T–488, and amending RNAV Routes Q–140, T–206, T–258, T–287, T–295, and T–398 in the eastern United States in support of FAA NextGen, qualifies for categorical exclusion under the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*) and its implementing regulations at 40 CFR part 1500, and in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5a, which categorically excludes from further environmental impact review rulemaking actions that designate or modify classes of airspace areas, airways, routes, and reporting points (see 14 CFR part 71, Designation of Class A, B, C, D, and E Airspace Areas; Air Traffic Service Routes; and Reporting Points); and paragraph 5–6.5b, which categorically excludes from further environmental impact review ''Actions regarding establishment of jet routes and Federal airways (see 14 CFR 71.15, *Designation of jet routes and VOR Federal airways*) . . .''. As such, this airspace action is not expected to cause any potentially significant environmental impacts. In accordance with FAA Order 1050.1F, paragraph 5–2 regarding Extraordinary Circumstances, the FAA has reviewed this action for factors and circumstances in which a normally categorically excluded action may have a significant environmental impact requiring further analysis. Accordingly, the FAA has determined that no extraordinary circumstances exist that warrant preparation of an environmental assessment or environmental impact study.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11H, Airspace Designations and Reporting Points, dated August 11, 2023, and effective September 15, 2023, is amended as follows:

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31543; Amdt. No. 578]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

DATES: Effective 0901 UTC, May 16, 2024.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73169–6918. Telephone: (405) 954–1139.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

The Rule

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95

Airspace, Navigation (air).

Issued in Washington, DC, on March 21, 2024.

Thomas J. Nichols,

Aviation Safety, Flight Standards Service. Manager, Standards Section, Flight Procedures & Airspace Group, Flight Technologies and Procedures Division.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows effective at 0901 UTC, May 16, 2024.

PART 95—IFR ALTITUDES

■ 1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113 and 14 CFR 11.49(b)(2).

■ 2. Part 95 is amended to read as follows:

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31541; Amdt. No. 4109]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or removes Standard Instrument Approach Procedures (SIAPS) and associated Takeoff Minimums and Obstacle Departure procedures (ODPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective April 25, 2024. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of April 25, 2024.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops–M30. 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001.
2. The FAA Air Traffic Organization Service Area in which the affected airport is located;
3. The office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,
4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73099. Telephone (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by establishing, amending, suspending, or removes SIAPS, Takeoff Minimums and/or ODPS. The complete regulatory description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The applicable FAA Forms are 8260–3, 8260–4, 8260–5, 8260–15A, 8260–15B, when required by an entry on 8260–15A, and 8260–15C.

The large number of SIAPs, Takeoff Minimums and ODPs, their complex nature, and the need for a special format make publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, Takeoff Minimums or ODPs, but instead refer to their graphic depiction on charts printed by publishers or aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPS, Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies

the airport and its location, the procedure, and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPS, Takeoff Minimums and/or ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as amended in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Air Missions (NOTAM) as an emergency action of immediate flights safety relating directly to published aeronautical charts.

The circumstances that created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making some SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Lists of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on April 12, 2024.

Thomas J. Nichols,

Aviation Safety, Flight Standards Service, Manager, Standards Section, Flight Procedures & Airspace Group, Flight Technologies & Procedures Division.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, 14 CFR part 97 is amended by establishing, amending, suspending, or removing Standard Instrument Approach Procedures and/or Takeoff Minimums and Obstacle Departure Procedures effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

Effective 16 May 2024

Salinas, CA, SNS, ILS RWY 31, Amdt 7
Salinas, CA, SNS, LOC RWY 31, Amdt 6

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 31542; Amdt. No. 4110]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule amends, suspends, or removes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide for the safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective April 25, 2024. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of April 25, 2024.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. U.S. Department of Transportation, Docket Ops-M30, 1200 New Jersey Avenue SE, West Bldg., Ground Floor, Washington, DC 20590–0001;
2. The FAA Air Traffic Organization Service Area in which the affected airport is located;
3. The office of Aeronautical Information Services, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,
4. The National Archives and Records Administration (NARA).

For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Availability

All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit the National Flight Data Center online at *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from the FAA Air Traffic Organization Service Area in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Thomas J. Nichols, Flight Procedures and Airspace Group, Flight Technologies and Procedures Division, Flight Standards Service, Federal Aviation Administration. Mailing Address: FAA Mike Monroney Aeronautical Center, Flight Procedures and Airspace Group, 6500 South MacArthur Blvd., STB Annex, Bldg. 26, Room 217, Oklahoma City, OK 73099. Telephone: (405) 954–1139.

SUPPLEMENTARY INFORMATION: This rule amends 14 CFR part 97 by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (NFDC)/Permanent Notice to Air Missions (P–NOTAM), and is incorporated by reference under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR 97.20. The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, pilots do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained on FAA form documents is unnecessary. This amendment provides the affected CFR sections, and specifies the SIAPs and Takeoff Minimums and ODPs with their applicable effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

Availability and Summary of Material Incorporated by Reference

The material incorporated by reference is publicly available as listed in the **ADDRESSES** section.

The material incorporated by reference describes SIAPs, Takeoff Minimums and ODPs as identified in the amendatory language for part 97 of this final rule.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP and Takeoff Minimums and ODP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP and Takeoff Minimums and ODP as modified by FDC permanent NOTAMs.

The SIAPs and Takeoff Minimums and ODPs, as modified by FDC permanent NOTAM, and contained in this amendment are based on criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts.

The circumstances that created the need for these SIAP and Takeoff Minimums and ODP amendments require making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedure under 5 U.S.C. 553(b) are impracticable and contrary to the public interest and, where applicable, under 5 U.S.C. 553(d), good cause exists for making these SIAPs effective in less than 30 days.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Incorporation by reference, Navigation (Air).

Issued in Washington, DC, on April 12, 2024.

Thomas J. Nichols,

Aviation Safety, Flight Standards Service, Manager, Standards Section, Flight Procedures & Airspace Group, Flight Technologies & Procedures Division.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, 14 CFR part 97 is amended by amending Standard Instrument Approach Procedures and Takeoff Minimums and ODPs, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 9992]

RIN 1545–BQ36

Guidance on the Definition of Domestically Controlled Qualified Investment Entities

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations that address the determination of whether a qualified investment entity is domestically controlled, including the treatment of qualified foreign pension funds for this purpose. In particular, these final regulations provide guidance as to when foreign persons are considered to hold directly or indirectly stock in a qualified investment entity. The final regulations primarily affect foreign persons that own stock in a qualified investment entity that would be a United States real property interest if the qualified investment entity were not domestically controlled.

DATES:

Effective date: These regulations are effective on *April 25, 2024.*

Applicability date: For the date of applicability, *see* §§ 1.897–1(a)(2) and 1.1445–2(e).

FOR FURTHER INFORMATION CONTACT: Milton Cahn at (202) 317–4934 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

On December 29, 2022, the Treasury Department and the IRS published proposed regulations (REG–100442–22), relating to the treatment of certain entities, including qualified foreign pension funds (''QFPFs''), for purposes of the exemption from taxation afforded to foreign governments under section

892 of the Internal Revenue Code (the ''Code''), and the determination of whether a qualified investment entity (''QIE'') is domestically controlled under section 897(h)(4)(B) of the Code, in the **Federal Register** (87 FR 80097) (the ''proposed regulations''). This Treasury decision finalizes the proposed regulations, other than those portions addressing the section 892 exemption (which will be addressed in a separate rulemaking), after taking into account and addressing comments with respect to the proposed regulations. Terms used but not defined in this preamble have the meaning provided in the final regulations.

Comments outside the scope of this rulemaking are generally not addressed but may be considered in connection with future regulations. All written comments received in response to the proposed regulations are available at *www.regulations.gov* or upon request. A public hearing on the proposed regulations was not held because there were no requests to speak.

Summary of Comments and Explanation of Revisions

The final regulations retain the general approach and structure of the proposed regulations, with certain revisions. This section of the preamble discusses the comments received in response to the proposed regulations and explains the revisions reflected in the final regulations.

I. Domestic Corporation Look-Through Rule

A. Background

The proposed regulations set forth proposed rules for determining whether stock of a QIE is considered ''held directly or indirectly'' by foreign persons for purposes of defining a domestically controlled QIE under section 897(h)(4)(B). The proposed regulations defined stock in a QIE that is held ''indirectly'' by taking into account stock of the QIE held through certain entities under a limited ''look-through'' approach. As described in the preamble to the proposed regulations, this approach gives effect to both the policy of the exception for domestically controlled QIEs in section 897(h)(2) (''DC–QIE exception''), which is limited to QIEs controlled by United States persons, and the requirement in section 897(h)(4)(B) to take into account ''indirect'' ownership of QIE stock by foreign persons in determining whether a QIE is domestically controlled. 87 FR 80100. The preamble to the proposed regulations also explained that this approach prevents the use of intermediary entities to achieve results contrary to the purposes of the DC–QIE exception. *Id.* at 80100–01.

The proposed regulations addressed the meaning of direct or indirect ownership by setting forth two categories of potential QIE owners, ''look-through persons'' and ''non-look-through persons.'' Proposed § 1.897–1(c)(3)(ii). The proposed regulations generally treated a ''domestic C corporation,'' defined as any domestic corporation other than a regulated investment company (''RIC'') under section 851, a real estate investment trust (''REIT'') under section 856, or an S corporation under section 1361, as a non-look-through person. Proposed § 1.897–1(c)(3)(v)(A) and (D). However, the proposed regulations treated non-publicly traded domestic C corporations as look-through persons if foreign persons hold a 25 percent or greater interest (by value) in the stock of the corporation (the ''domestic corporation look-through rule''). Proposed § 1.897–1(c)(3)(iii)(B) and (c)(3)(v)(B).

Comments generally did not raise concerns with the general look-through approach for determining domestic control of a QIE as it applied to most entities (for example, the treatment of partnerships) but asserted that the domestic corporation look-through rule raises significant issues and should be withdrawn or, if retained, modified to reduce its scope. These comments are addressed in turn in parts I.B. and I.C. of this Summary of Comments and Explanation of Revisions.

B. Comments Recommending Withdrawal of the Domestic Corporation Look-Through Rule

Comments generally recommended that the domestic corporation look-through rule be withdrawn on three related grounds: first, that the rule is based on an incorrect reading of the Code, which for this purpose does not permit look-through treatment for domestic C corporations, including because there are no explicit rules providing for constructive ownership (such as those in section 318) under section 897(h)(4)(B); second, that the enactment of other related legislation (or consideration of legislation) demonstrates the rule is inconsistent with congressional intent; and third, that the rule is not necessary because domestic C corporations are subject to U.S. tax. Certain comments also based their recommendation to withdraw the domestic corporation look-through rule on the contention that the rule would negatively impact the U.S. real estate market or otherwise harm the broader U.S. economy.

The Treasury Department and the IRS have determined that it is necessary and appropriate to provide guidance regarding the meaning of ''indirect'' for determining whether foreign persons are considered to hold less than 50 percent of the value of the stock of a QIE. Every word in a statute must be given effect, and both the proposed and final regulations give effect to the term ''indirectly'' as used in section 897(h)(4)(B) by adopting a limited look-through approach that includes the domestic corporation look-through rule (as modified in the final regulations). The domestic corporation look-through rule does not apply specific constructive ownership rules like those in section 318. Rather, the guidance gives meaning to indirect ownership under section 897(h)(4)(B) in light of the purpose of the DC–QIE exception. Because the final regulations carry out the statute's mandate to determine indirect ownership rather than constructive ownership, the fact that other parts of section 897 refer to section 318 is irrelevant to the determination of whether a QIE is domestically controlled.

The Treasury Department and the IRS do not agree that the enactment of section 897(h)(4)(E) in section 322(b)(1)(A) of the Protecting Americans from Tax Hikes Act of 2015, Public Law 114–113, div. Q (the ''PATH Act''), informs whether the domestic corporation look-through rule should be applied under section 897(h)(4)(B). The rules added in section 897(h)(4)(E) do not prescribe how to interpret the meaning of ''indirectly'' in section 897(h)(4)(B), nor do they suggest that Congress intended for that provision to set out the only rules for QIE stock held by domestic corporations. Although section 897(h)(4)(E) provides certain rules for looking through QIE stock held by another QIE for purposes of the DC–QIE exception, the absence of other specific rules in the statute on whether domestic C corporations (or any other type of entity) should be looked through does not mean that all other entities should be non-look-through persons.

The Treasury Department and the IRS also disagree with the observation in comments that Congress sanctioned the approach taken by a 2009 private letter ruling (the ''2009 PLR'') that treated QIE stock held by a domestic C corporation as owned by a domestic person.[1] The brief citation to that ruling in a report by the Joint Committee on Taxation is neutral and merely restates the holding in the ruling in its description of the then current law. *See* STAFF OF THE

[1] PLR 200923001 (February 26, 2009).

JOINT COMM. ON TAX'N, General Explanation of Tax Legislation Enacted in 2015 (JCS–1–16) 279 (2016) (the ''JCT Report'').[2] The JCT Report did not express any view regarding the effect of the 2009 PLR or indicate that Congress endorsed a rule that precludes looking through domestic C corporations in all cases, and it caveated that a private letter ruling may only be relied on by the specific taxpayer to which it was issued and only provided ''some indication of administrative practice.'' *See* section 6110(k)(3). This is in contrast to other instances where Congress has explicitly endorsed an approach taken by the IRS. *See, for example,* H.R. Rep. No. 103–111, at 727–29 (1993) (in enacting section 7701(l), citing Rev. Rul. 84–152, 1984–2 C.B. 381, Rev. Rul. 84–153 1984–2 C.B. 1, and Rev. Rul. 87–89, 1987–2 C.B. 195, in stating the ''committee believes that the above-cited IRS rulings appropriately ignore conduit entities and properly recharacterize the transactions described therein.''); S. Rep. No. 95–762, at 8 (1978) (stating that the IRS's ''ruling position is correct'' in enacting rules consistent with private letter rulings indicating that certain income earned by exempt organizations was not taxable as debt-financed income). Accordingly, the Treasury Department and the IRS have concluded that the JCT Report's reference to the 2009 PLR does not affect the application of the domestic corporation look-through rule.

Likewise, the Treasury Department and the IRS disagree with comments that emphasized the discussion draft released by the Senate Committee on Finance in 2013 (the ''2013 Discussion Draft'') and the absence of any related changes to section 897 in the PATH Act. The relevant provision in the 2013 Discussion Draft would have replaced the ''held directly or indirectly'' language in section 897(h)(4)(B) with specific constructive ownership rules in section 318 (not just those applicable to corporations) to address uncertainty in the determination of indirect ownership. *See* STAFF OF THE JOINT COMM. ON TAX'N, Technical Explanation of the Senate Committee on Finance Chairman's Staff Discussion Draft of Provisions to Reform International Business Taxation (JCX–15–13) 84 (2013). The 2013 Discussion Draft, however, is not authoritative and has no relevance because it was neither introduced as a bill nor enacted into law. Moreover, Congress did not provide any explanation as to why constructive ownership rules under section 318, as proposed in the 2013 Discussion Draft, were not adopted in the PATH Act nor did it provide any indication as to its interpretation of ''indirectly'' under the statute, and nothing in the legislative history of the PATH Act or otherwise suggests draft legislation from more than two years earlier during a different Congress informed what was ultimately enacted in the PATH Act. *See United States* v. *Wise,* 370 U.S. 405, 411 (1962) (''[S]tatutes are construed by the courts with reference to the circumstances existing at the time of the passage. The interpretation placed upon an existing statute by a subsequent group of Congressmen who are promoting legislation and who are unsuccessful has no persuasive significance here.'').

The Treasury Department and the IRS also disagree with one comment's assertion that the legislative re-enactment doctrine bears on whether to issue the domestic corporation look-through rule. *See Helvering* v. *Reynolds,* 313 U.S. 428, 432 (1941) (''[The doctrine of legislative reenactment] does not mean that the prior construction has become so imbedded in the law that only Congress can effect a change.'').[3] Accordingly, the Treasury Department and the IRS have determined that no changes to section 897 made in, or contemplated in connection with, the PATH Act, or any explanation of those changes, preclude, or otherwise affect, adoption of the domestic corporation look-through rule.

Finally, the Treasury Department and the IRS have determined that the domestic corporation look-through rule is the appropriate interpretation of the term ''indirectly'' in section 897(h)(4)(B) irrespective of whether the domestic C corporation is subject to U.S. tax on income derived from its QIE stock. As expressed through the statutory text, the policy underlying the DC–QIE exception looks to whether control of the QIE is held directly or indirectly by United States or foreign persons, which does not depend on whether United States persons are subject to U.S. tax with respect to income derived from their QIE stock. The determination of domestic control is likewise not affected by whether a foreign shareholder of the domestic C corporation is subject to tax on a disposition of its stock in the corporation under section 897. The purpose of the inquiry is to determine control, and the status of an entity as taxable is not determinative for this purpose.

Accordingly, the Treasury Department and the IRS do not adopt the recommendation to withdraw the domestic corporation look-through rule. However, the final regulations modify the domestic corporation look-through rule as discussed in part I.C of this Summary of Comments and Explanation of Revisions.

C. Comments Recommending Modifications to the Domestic Corporation Look-Through Rule; Explanation of Revision

Comments recommended that, if the final regulations retain a rule similar to the domestic corporation look-through rule, then the approach should be narrowed from what was proposed so that the final rule more directly addresses potentially inappropriate planning and is easier to comply with and administer.

One comment suggested a variety of potential approaches to narrow the domestic corporation look-through rule. Under one such approach, a non-public domestic C corporation that owns 10 percent or less of a QIE (determined after applying constructive ownership rules under section 318, so as to prevent circumvention of the threshold) would be treated as a non-look-through person. The comment asserted that this approach would be less burdensome on taxpayers and the IRS than the proposed regulations and is premised on the view that a foreign person would not structure an investment through a taxable domestic C corporation so that an unrelated foreign person may apply the DC–QIE exception. The comment described an alternative approach, also intended to reduce compliance and administrative burdens, that would treat a non-public domestic C corporation as a look-through person only if there is at least one foreign person that is a non-look-through person that holds, directly or indirectly (using constructive ownership rules under section 318), 25 percent or more of the value of the corporation's stock. Under this alternative, look-through treatment would also apply only as to those foreign non-look-through persons. As another alternative, the comment

[2] *See also* STAFF OF THE JOINT COMM. ON TAX'N, Technical Explanation of the Revenue Provisions of the Protecting Americans from Tax Hikes Act of 2015, House Amendment #2 to the Senate Amendment to H.R. 2029 (JCX–144–15) 186–87 (2015). As noted in the JCT Report, a Senate Committee on Finance report on an earlier, separate bill referenced the 2009 PLR in the same manner in describing provisions similar to those in section 322 of the PATH Act. *See* JCT Report at 277, note 943; S. Rep. No. 114–25, 6 (2015).

[3] *See also Helvering* v. *Wilshire Oil Co.,* 308 U.S. 90, 100 (1939) (holding that the legislative reenactment doctrine applies where ''it does not appear that the rule or practice has been changed by the administrative agency through exercise of its continuing rule-making power''); *McCoy* v. *United States,* 802 F.2d 762 (4th Cir. 1986); *Interstate Drop Forge Co.* v. *Comm'r,* 326 F2d 743 (7th Cir. 1964).

suggested a look-through rule that would apply only if a foreign person or a foreign related party holds both a direct interest in the QIE and a substantial indirect interest in the QIE through a non-public domestic C corporation.

A different comment also recommended an approach that focused on commonality of substantial ownership by a foreign person of the QIE and the domestic C corporation. Specifically, a domestic C corporation would be treated as a foreign person for purposes of section 897(h)(4)(B) (but not for section 897(h)(4)(C)), if more than 50 percent of its stock is owned, by voting power or value, by foreign persons that also hold stock of the QIE directly, or indirectly through one or more partnerships, grantor trusts, or QIEs. Under this comment's recommended approach, a foreign person would be included in the more than 50 percent control test if the domestic C corporation had actual knowledge that the foreign person has cross-ownership of the QIE after inquiry with any person that is at least a 5-percent shareholder of the domestic C corporation (after applying the rules of section 318(a)). The comment reasoned that foreign investors should be considered incidental and thus should not be counted when measuring direct or indirect foreign control of the QIE when they invest through a domestic C corporation and do not have cross-ownership of the QIE directly or through related parties, or do hold interests in both entities but do not individually or collectively control the domestic C corporation.

Finally, one comment advocated that a look-through approach to a domestic C corporation should not apply when that corporation has material business activities unrelated to its investment in a QIE's stock with potential safe harbors such as where the corporation is registered as an investment adviser under the Investment Company Act of 1940 or the foreign owner of the domestic C corporation is actively traded on an established securities market outside of the United States. The comment reasoned that such cases are unlikely to be structured transactions of the type identified by the proposed regulations. Similarly, another comment also proposed that the look-through approach should not apply if a domestic C corporation would be treated as engaged in a U.S. trade or business if it had been a foreign corporation (such that the corporation is not a mere shell), and this exception could be further limited by ensuring that the value of the QIE stock held by the domestic C corporation is less than a certain threshold of the affiliated group's total assets.

The final regulations do not adopt any of the recommended modifications to the domestic corporation look-through rule. Several suggested modifications would limit the application of the rule to situations that indicate that foreign persons are using a domestic C corporation to establish domestic control of a QIE so that their direct investments in the QIE benefit from the DC–QIE exception. However, as discussed in part I.A of this Summary of Comments and Explanation of Revisions, the proposed and final regulations serve a broader purpose by interpreting the meaning of ''indirect'' ownership under section 897(h)(4)(B) to effectuate the policy of the DC–QIE exception by ensuring that the exception is available only when a QIE is controlled by United States persons. The comments also proposed various modifications intended to limit or alter the application of the rule; the Treasury Department and the IRS are of the view that these would introduce additional complexity, such as requiring an examination of the business activities of a domestic C corporation. Furthermore, a modification that would treat domestic C corporations that own less than 10 percent of a QIE as a non-look-through person would not alleviate concerns regarding the ability to identify shareholders through multiple tiers of ownership, and could result in disparate and inconsistent results as to which foreign owners are taken into account in measuring domestic control of a QIE (for example, a foreign non-look-through person that wholly owns a domestic C corporation that owns 9 percent of a QIE would not be taken into account, while a foreign non-look-through person that owns 50 percent of a domestic C corporation that owns 10 percent of the QIE would be taken into account). The Treasury Department and the IRS also do not agree that the domestic corporation look-through rule should only apply if 25 percent or more of the corporation's stock is owned by a single foreign non-look-through person (taking into account section 318 constructive ownership rules), as the DC–QIE exception looks to any measure of foreign ownership of a QIE and such a high threshold would inappropriately exempt foreign persons owning significant indirect interests in QIEs from look-through treatment.

Although the final regulations do not adopt any of the specific recommendations to the domestic corporation look-through rule, the Treasury Department and the IRS agree that the scope of the rule should be narrowed to address compliance concerns and to ensure the rule is more appropriately limited to situations where significant indirect ownership by foreign persons indicative of foreign control is present. After considering the various suggestions raised in comments, the Treasury Department and the IRS have determined that this is best achieved by increasing the amount of foreign ownership required to look through a non-public domestic C corporation from 25 percent or more to more than 50 percent. Increasing the threshold to more than 50 percent significantly narrows the scope of look-through treatment to non-public domestic C corporations that are controlled by foreign persons, and is consistent with the measurement of control for purposes of the domestically controlled QIE test. This change is also consistent with the policy of the DC–QIE exception and other provisions in section 897 that are based on a 50-percent threshold. *See, for example,* section 897(c)(2) (providing that a corporation is a United States real property holding corporation if the fair market value of its United States real property interests (''USRPIs'') meets a 50 percent or greater threshold). Thus, rather than a ''foreign-owned domestic corporation,'' the final regulations apply look-through treatment with respect to a ''foreign-controlled domestic corporation,'' which is defined as any non-public domestic C corporation if foreign persons hold directly or indirectly more than 50 percent of the fair market value of that corporation's outstanding stock (the ''final domestic corporation look-through rule''). § 1.897–1(c)(3)(v)(B). In addition, the final regulations adopt a transition rule for existing QIE structures, as discussed in part IV of this Summary of Comments and Explanation of Revisions.

II. Effect of Section 897(l) on the DC–QIE Exception

A. Background on Section 897(l) and Interaction With the DC–QIE Exception

Section 897(l) provides an exception to the application of section 897(a) for certain foreign pension funds and their wholly owned subsidiaries. As originally enacted in the PATH Act, section 897(l)(1) provided that section 897 does not apply to any USRPI held directly (or indirectly through one or more partnerships) by, or to any distribution received from a REIT by, a QFPF or any entity all of the interests of which are held by a QFPF. Congress later made several technical amendments to section 897(l) in section

101(q) of the Tax Technical Corrections Act of 2018, Public Law 115–141, div. U (the ''2018 technical correction''). As amended by the 2018 technical correction, section 897(l) provides that neither a QFPF nor an entity all the interests of which are held by a QFPF is treated as a nonresident alien individual or foreign corporation for purposes of section 897.

The proposed regulations addressed uncertainty as to whether QFPFs and entities wholly owned by one or more QFPFs (''QCEs''), which are treated as not ''nonresident alien individuals or foreign corporations'' for purposes of section 897, are treated as foreign persons for purposes of the DC–QIE exception. Specifically, proposed § 1.897–1(c)(3)(iv)(A) provided that a QFPF, including any part of a QFPF, or a QCE is a foreign person for purposes of the DC–QIE exception (the ''QFPF DC–QIE rule'').

B. Comments Regarding Authority To Issue the QFPF DC–QIE Rule

Although one comment stated that it was generally in agreement with the QFPF DC–QIE rule, other comments recommended that the rule be withdrawn because it is an incorrect reading of the statute and contrary to congressional intent. One comment contended that the preamble to the proposed regulations failed to consider the existing definition of ''foreign person'' in § 1.897–9T(c) (which includes a foreign corporation, a foreign partnership, a foreign trust, or a nonresident alien individual) and noted that Congress is presumed to have knowledge of that regulatory definition. The comment also contended that the text of section 897(l) is clear and that, without any textual ambiguity, the Treasury Department and the IRS lack the authority to issue the QPFF DC–QIE rule.

Another comment submitted that the legislative history and policy of section 897, including the DC–QIE exception and the section 897(l) exception for QFPFs, indicate that 50 percent or more ownership of a QIE by a QFPF results in the DC–QIE exception being available to other foreign investors. The comment's overall recommendation was to clarify the definition of foreign person in section 897(h)(4)(B) and (C) to have the same meaning as ''a nonresident alien individual or a foreign corporation'' in section 897(a). The comment included several reasons for its recommendation. First, section 897(l) refers generally to section 897, rather than solely to section 897(a), which the comment argued indicates that section 897(l) is intended to be given effect for all purposes under section 897. According to the comment, the effect of section 897(l) on the DC–QIE exception can be analogized to a special election in section 897(i) for a foreign corporation to be treated as a domestic corporation for purposes of section 897 because, when that election applies, it has effect for all of section 897 and can benefit other investors in QIEs even though they are not party to the election. The comment also noted that the 2018 technical correction should be presumed to be a more accurate reflection of the original intent of Congress, which was to align QFPFs with exempt U.S. pension funds. Finally, the comment noted that because a QFPF is not taxed under section 897(h)(1), there is no policy reason to treat it as a foreign person for other rules such as the DC–QIE exception, the foreign ownership percentage rule in section 897(h)(3) or the wash sale rule in section 897(h)(5).

The Treasury Department and the IRS have determined that the QFPF DC–QIE rule reflects the proper interpretation of the statute and congressional intent. The term ''nonresident alien individuals or foreign corporations'' in section 897(l) (introduced only in the 2018 technical correction) differs from ''foreign persons'' in section 897(h)(4)(B), and the purposes of the two provisions also differ. Congress provided no indication that it intended for the definition of foreign person in § 1.897–9T(c) to apply to confer non-foreign person status on QFPFs for purposes of the DC–QIE exception. Instead, the term ''nonresident alien individuals or foreign corporations'' appears in section 897(a) and similar provisions to refer to the persons that are directly subject to tax under FIRPTA. The Treasury Department and the IRS also do not agree that a QFPF is analogous to a foreign corporation that has elected to be treated as a domestic corporation under section 897(i) because that election explicitly treats a foreign corporation as a domestic corporation and therefore not a foreign person. In contrast, section 897(l) treats a QFPF as not a nonresident alien individual or a foreign corporation but does not address whether a QFPF is also not a foreign person.

The Treasury Department and the IRS agree that it is reasonable to presume that the changes made in the 2018 technical correction are a more accurate reflection of original congressional intent, which the preamble to the proposed regulations described (allowing a QFPF and QCE to jointly own a USRPI and qualify for section 897(l) with respect to their partial USRPI interests, as well as clarifying that the section 897(l) exception applies to distributions from all QIEs and not just REITs). 87 FR 80100. However, the Treasury Department and the IRS disagree with the assertion that the 2018 technical correction should be interpreted to bestow the benefit of the DC–QIE exception on foreign investors that cannot claim the section 897(l) exception. Such an interpretation would be inconsistent with the intent of section 897(l) as originally enacted in the PATH Act, which was to provide an exception from section 897 to QFPFs (and QCEs). Where possible, as in this case, the technical correction should be viewed in a manner consistent with a core principle of the original legislation. *See Fed. Nat'l Mortgage Assoc.* v. *United States,* 56 Fed. Cl. 228, 234, 237 (2003), *rev'd and remanded on other grounds,* 379 F.3d 1303 (Fed. Cir. 2004) (''Congress turns to technical corrections when it wishes to clarify existing law or repair a scrivener's error, rather than to change the substantive meaning of the statute. . . . [A] technical correction that merely restores the rule Congress intended to enact cannot be construed as a fundamental change in the operation of the statute.''); STAFF OF THE JOINT COMM. ON TAX'N, Overview of Revenue Estimating Procedures and Methodologies Used by the Staff of the Joint Committee on Taxation (JCX–1–05) 33 (2005) (describing a technical correction as ''legislation that is designed to correct errors in existing law in order to fully implement the intended policies of previously enacted legislation'' and a change that ''conforms to and does not alter the intent'' of the underlying legislation).

The comment discussed above asserts that there is no policy reason to treat a QFPF as a foreign person for other provisions in section 897(h) such as the DC–QIE exception, given that the QFPF is not taxed under section 897(h)(1). The Treasury Department and the IRS disagree based on the statute and its policy. As described earlier in this preamble, the policy of the DC–QIE exception looks to foreign control, not control by taxable persons. The presence or absence of taxation of the controlling persons is not determinative. Additionally, Congress expressed in section 897(l) an intent to provide a tax benefit specifically for QFPFs, and not for other owners of a DC–QIE that would benefit from the QFPF's treatment. Therefore, the Treasury Department and the IRS have determined that the appropriate interpretation of the statute is one that

only gives effect to the purpose of section 897(l) to provide an exception from section 897 for QFPFs, rather than a construction that would give non-QFPF investors the ability to rely on section 897(l) to benefit under the DC–QIE exception. The DC–QIE exception is a separate provision with underlying policies that focus on foreign control rather than taxability of controlling persons, and these policies are inconsistent with treating a QFPF as a United States person for purposes of the DC–QIE exception. Accordingly, the final regulations do not adopt the comments' recommendations.

III. Other Comments and Revisions

A. Certain Registered Investment Vehicles

One comment noted that there are a large number of investment vehicles that are publicly registered with the Securities and Exchange Commission (''SEC'') that own QIEs but are not regularly traded and asserted that the final regulations should treat these investment vehicles offered to retail investors (for example, non-traded publicly registered REITs, non-traded publicly registered RICs, or publicly registered open-ended funds) as non-look-through persons. The comment noted that the same reasoning for applying non-look-through treatment to public domestic C corporations and publicly traded partnerships—that is, difficulty in looking through to the entity's owners and the unlikelihood for use as an intermediary entity to establish domestic control—applied equally to those investment vehicles.

The final regulations do not adopt this comment with respect to registered investment vehicles that are QIEs because section 897(h)(4)(E) already provides specific rules with respect to QIE ownership by other QIEs that are incorporated in the final regulations. In particular, under section 897(h)(4)(E)(ii), stock in a QIE held by certain public QIEs is treated as held by a foreign or United States person based on whether the public QIE is itself domestically controlled. § 1.897–1(c)(3)(iii)(C). Section 897(h)(4)(E)(iii) provides that stock of a QIE held by a QIE that is not a public QIE is only treated as held by a United States person in proportion to the stock of the non-public QIE that is held by a United States person. Section 897(h)(4)(E)(iii) thus contemplates look-through treatment for non-public QIEs, even if such QIEs are publicly registered with the SEC, and this treatment is reflected in the final regulations. § 1.897–1(c)(3)(v)(C).

However, the Treasury Department and the IRS are of the view that the treatment of certain RICs that are not QIEs should be aligned with the treatment of other publicly held entities that are not QIEs. The proposed regulations provided that any RIC that is not a QIE, and thus not subject to the rules that apply to public QIEs, is treated as a look-through person. With respect to RICs whose shares are publicly traded or otherwise widely held, this treatment may be viewed as inconsistent with the treatment of publicly traded partnerships and public domestic C corporations, neither of which is subject to look-through treatment under the proposed regulations primarily due to compliance and administrability concerns. The final regulations therefore provide that a public RIC, generally defined as a RIC that is not a QIE and whose shares are (i) regularly traded on an established securities market or (ii) common stock that is continuously offered pursuant to a public offering and held by at least 500 shareholders, is generally treated as a non-look-through person. § 1.897–1(c)(3)(v)(D) and (I). However, for reasons similar to those discussed in part I.C of this Summary of Comments and Explanation of Revisions (regarding foreign-controlled domestic corporations, which are treated as look-through persons), a RIC will not be a public RIC, and thus will be a look-through person, if the QIE being tested for domestically controlled status under § 1.897–1(c)(3) has actual knowledge that the RIC is foreign controlled, which is determined by treating the RIC as a non-public domestic C corporation and applying § 1.897–1(c)(3)(v)(B). § 1.897–1(c)(3)(v)(I).

B. Public Entities

The proposed regulations provided that a person holding less than five percent of U.S. publicly traded stock of a QIE at all times during the testing period, determined without regard to proposed § 1.897–1(c)(3)(ii)(A), is treated as a United States person that is a non-look-through person with respect to that stock, unless the QIE has actual knowledge that such person is not a United States person. Section 897(h)(4)(E)(i); proposed § 1.897–1(c)(3)(iii)(A). To prevent the avoidance of the actual knowledge exception to this rule, the final regulations modify the rule to provide that it will also not apply if the QIE has actual knowledge that such person is foreign controlled (treating any person that is not a non-public domestic C corporation as a non-public domestic C corporation for this purpose). § 1.897–1(c)(3)(iii)(A).

The proposed regulations also provided non-look-through treatment for public domestic C corporations and publicly traded partnerships, which were generally defined to include entities with a class of stock or interests regularly traded on an established securities market. Proposed § 1.897–1(c)(3)(v)(D), (G) and (I). In the final regulations, these definitions exclude domestic entities that are known to be foreign controlled. Thus, consistent with the treatment of public RICs and for reasons similar to those discussed in part I.C of this Summary of Comments and Explanation of Revisions (regarding foreign-controlled domestic corporations, which are treated as look-through persons), a domestic C corporation or a domestic partnership will not be a public domestic C corporation or a publicly traded partnership, respectively, if the QIE being tested for domestically controlled status under § 1.897–1(c)(3) has actual knowledge that the corporation or partnership is foreign controlled (treating the entity as a non-public domestic C corporation for this purpose). § 1.897–1(c)(3)(v)(G) and (J). In such case, the domestic C corporation or domestic partnership will therefore be a look-through person. § 1.897–1(c)(3)(v)(B) through (E).

C. Certification by Domestic C Corporation

One comment recommended that the final regulations provide guidance on how a domestic C corporation may certify to a QIE that it is not a foreign-owned domestic corporation. The comment suggested that the regulations provide a model certification to confirm that a domestic C corporation is not foreign owned, such as a revised Form W–9.

The final regulations do not provide guidance regarding the procedures for determining whether a domestic C corporation is a foreign-controlled domestic corporation, nor do they provide any procedures generally for a QIE to identify its non-look-through person owners for purposes of determining whether the QIE is domestically controlled. A QIE must take appropriate measures to determine the identity of its direct and indirect shareholders in determining whether it is domestically controlled, and the final regulations do not prescribe a specific form or method as to how it solicits or receives information from its shareholders. Guidance with respect to the manner in which a QIE determines the identity of its relevant shareholders for purposes of establishing domestic control is beyond the scope of this

rulemaking but may be considered in a separate guidance project.

D. Section 1445 Withholding on Dispositions of USRPI

Current regulations under section 1445 (imposing withholding of tax on dispositions of USRPI) provide the circumstances under which a transferee of property can ascertain that there is no duty to withhold under section 1445(a) because the transferor is not a foreign person, the property acquired is not a USRPI, or an exception to withholding applies. § 1.1445–2. Section 1.1445–2(c)(3) provides that no withholding is required with respect to an acquisition of an interest in a domestic corporation if the transferor provides the transferee with a copy of a statement, issued by the corporation pursuant to § 1.897–2(h), certifying that the interest in the corporation is not a USRPI. The transferor must request the statement before the transfer, which may be relied on if the statement is dated not more than 30 days before the date of the transfer. A transferee may also rely on a corporation's statement that is voluntarily provided by the domestic corporation in response to a request from the transferee, if that statement otherwise complies with the requirements of §§ 1.1445–2(c)(3) and 1.897–2(h).

Under § 1.897–2(h)(1), a foreign person holding an interest in a domestic corporation may request that the corporation inform the person whether the interest constitutes a USRPI, which the corporation is required to provide within a reasonable period after receipt of such a request. A statement must be provided by the domestic corporation to the foreign person indicating the corporation's determination, and notice must be provided to the IRS in accordance with § 1.897–2(h)(2). Section 1.897–2(h)(3), however, provides that the requirements of § 1.897–2(h) do not apply to ''domestically-controlled REITs, as defined in section 897(h)(4)(B),'' although a corporation not otherwise required to comply with the requirements of § 1.897–2(h) may voluntarily choose to comply with the requirements of § 1.897–2(h)(4) and attach a statement to its income tax return informing the IRS that it is not a United States real property holding corporation.

The availability of the procedures in § 1.1445–2(c)(3) to holders of stock in a domestically controlled QIE is unclear given its reference to a statement provided under § 1.897–2(h), which is explicitly inapplicable to domestically controlled QIEs under § 1.897–2(h)(3). Although § 1.897–2(h) generally does not apply to domestically controlled QIEs pursuant to § 1.897–2(h)(3) (and, therefore, the corporation is not *required,* upon request, to provide a statement to a person holding an interest in the corporation), this should not preclude the availability of the rules in § 1.1445–2(c)(3) to transferors of interests seeking to avoid withholding under section 1445 when the corporation *voluntarily* provides a statement to an interest holder that otherwise complies with § 1.897–2(h). Absent the availability of these procedures, the transferor would not be able to establish that it is transferring an interest in a domestically controlled QIE and is thus not subject to withholding under section 1445(a). The final regulations thus revise the rules in §§ 1.897–2(h)(3) and 1.1445–2(c)(3) to clarify the procedures available to a transferor to certify to a transferee that no withholding is required because the DC–QIE exception applies. As revised, the final regulations confirm that a domestic corporation may voluntarily provide a statement in response to a request from a transferor certifying that an interest in the corporation is not a USRPI because the corporation is a domestically controlled QIE, which the transferor may furnish to the transferee, provided the statement issued by the corporation otherwise complies with the requirements of § 1.897–2(h).

E. Revisions to Examples

A comment observed that proposed § 1.897–1(c)(3)(vi)(D) (*Example 4*) contained a mathematical error. The final version of this example corrects that error, which does not otherwise affect the overall conclusion that the entity at issue does not qualify as a domestically controlled QIE. § 1.897–1(c)(3)(vii)(D) (*Example 4*). The final regulations make other revisions to the examples in proposed § 1.897–1(c)(3)(vi) to clarify the operation of certain rules, but which are not intended to alter the conclusions or substance of those examples.

IV. Applicability Date and Transition Rules

The proposed regulations generally were proposed to apply to transactions occurring on or after the date that those regulations are published as final regulations in the **Federal Register** (''the finalization date''). The preamble to the proposed regulations noted, however, that the rules applicable for determining whether a QIE is domestically controlled may be relevant for determining QIE ownership during periods before the finalization date to the extent the testing period related to a transaction that occurs on or after the finalization date includes periods before that date.

Comments raised concerns with the proposed applicability date; in particular, they noted that it would have a retroactive effect because of the testing period element of the DC–QIE exception and argued that, if adopted, the domestic corporation look-through rule should apply on a fully prospective basis with no application to any portion of a testing period before the finalization date. Further, these comments characterized the proposed regulations as a change from existing law and asserted that applying the rules to existing structures would be inappropriate because restructuring to comply with the rules would be difficult and costly, and buyers may be less inclined to invest in a structure that may be ''tainted'' as failing to qualify for the DC–QIE exception.

Comments generally advocated for the following types of transition relief: (i) for QIEs in existence on the date the proposed regulations were issued, provide an exception (subject to termination rules like those in § 301.7701–2(d)) such that a foreign-owned domestic corporation is not treated as a look-through person; (ii) exempt foreign investors in existing QIEs from the domestic corporation look-through rule to the extent of existing ownership and capital commitments as of the date the proposed regulations were issued; (iii) only apply the domestic corporation look-through rule to QIE stock acquired by a foreign-owned domestic corporation after the finalization date; or (iv) delay application of the domestic corporation look-through rule to existing QIEs for some period ranging from at least 120 days after the finalization date to tax years beginning on or after January 1, 2028 (drawing from the general five-year testing period standard).

The final regulations do not adopt the suggestion to delay application of the final domestic corporation look-through rule, which would exempt both existing and new QIE structures from the rule. However, the Treasury Department and the IRS have determined that, although the final domestic corporation look-through rule represents the appropriate application of section 897(h)(4)(B), its effect should be limited with respect to investors that may have entered into structures with the expectation that domestic control of a QIE would be determined without regard to that rule. Thus, consistent with the first three types of comments noted above, the final regulations include a transition

rule that, for a ten-year period, exempts existing structures from the final domestic corporation look-through rule, provided they meet certain requirements. § 1.897–1(c)(3)(vi). These requirements are intended to ensure that the final domestic corporation look-through rule does not apply to preexisting business arrangements, but only to the extent the QIE does not acquire a significant amount of new USRPIs and does not undergo a significant change in its ownership (subject to an exception for acquisitions of a USRPI or QIE interest pursuant to a previous binding commitment). § 1.897–1(c)(3)(vi)(A) and (E). If either of these two thresholds is exceeded, the QIE at that time becomes subject to the final domestic corporation look-through rule like any other QIE. § 1.897–1(c)(3)(vi)(B).

A QIE is considered to have acquired a significant amount of new USRPIs if the total fair market value of the USRPIs it acquires directly and indirectly exceeds 20 percent of the fair market value of the USRPIs held directly and indirectly by the QIE as of April 24, 2024. § 1.897–1(c)(3)(vi)(A)(*2*). The final regulations provide that the value of the USRPIs held directly and indirectly by a QIE on April 24, 2024 is determined as of that date and that, for this purpose, taxpayers may use the most recently calculated amounts under the quarterly tests described in section 851(b)(3) or 856(c)(4), as applicable. § 1.897–1(c)(3)(vi)(D). By using these existing rules the final regulations minimize the need to make additional or complex valuations.

In determining whether there has been a significant change in the ownership of a QIE, the final regulations consider whether the direct or indirect ownership of the QIE by non-look-through persons (determined by applying the final domestic corporation look-through rule) has increased by more than 50 percentage points in the aggregate relative to the QIE stock owned by such non-look-through persons on April 24, 2024. § 1.897–1(c)(3)(vi)(A)(*3*). Because this rule applies on a percentage basis, a non-pro-rata issuance or redemption of stock is counted towards the 50 percentage point amount. To simplify the determination of changes in ownership of stock of a QIE that is publicly traded, the final regulations disregard transfers by any person (regardless of whether they are a non-look-through person) that owns a less than five-percent interest in the stock of the QIE, unless the QIE has actual knowledge of that person's ownership. § 1.897–1(c)(3)(vi)(G).

The transition rule applies until April 24, 2034, or, if earlier, until the requirements precluding significant acquisitions of USRPIs and changes in ownership are not met, at which time the final domestic corporation look-through rule applies in determining whether a QIE is domestically controlled. § 1.897–1(c)(3)(vi)(B). The ten-year period is intended to provide sufficient time to mitigate the impact of the final domestic corporation look-through rule on existing QIEs and their investors, but ensures that all QIEs are eventually subject to the same rules. However, even after the transition rule no longer applies, the final domestic corporation look-through rule is prospective only and thus does not apply to any portion of a testing period during which the transition rule applied to a QIE. § 1.897–1(c)(3)(vi)(C). Thus, for example, if the transition rule ceases to apply to a QIE due to a change in its ownership but, at such time, the QIE is a domestically controlled QIE notwithstanding the final domestic corporation look-through rule, the determination of domestic control for the testing period of a subsequent disposition of QIE stock may disregard the final domestic corporation look-through rule to the extent the transition rule applied.

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA) generally requires that a Federal agency obtain the approval of the OMB before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. The collection of information in § 1.1445–2(c)(3) is a statement provided by a domestic corporation that certifies that an interest in such corporation is not a U.S. real property interest. Section 1.1445–2(c)(3) clarifies that the existing procedure may also be used by a domestic corporation to certify that it is a domestically controlled QIE (as determined under § 1.897–1(c)(3)), as long as the certification is voluntarily issued and otherwise complies with the existing requirements in § 1.897–2(h).

This modification to § 1.1445–2(c)(3) clarifies the existing scope of the collection of information. For purposes of the PRA, the reporting burden associated with the collections of information in § 1.1445–2(c)(3) will be reflected in the Paperwork Reduction Act Submissions associated with the section 1445 regulations (OMB control number 1545–0902).

III. Regulatory Flexibility Act

A. Succinct Statement of the Need for, and Objectives of, the Final Regulations

As discussed in the preamble to the proposed regulations, there may be some uncertainty as to whether QFPFs and QCEs, which are treated as not ''nonresident alien individuals or foreign corporations'' for purposes of section 897, are treated as foreign persons for purposes of the DC–QIE exception. Treating QFPFs and QCEs as non-foreign investors for purposes of the DC–QIE exception has the potential to expand the effect of section 897(l) to foreign investors who are neither QFPFs nor QCEs (by exempting such investors from tax under section 897(a)). These regulations eliminate any uncertainty that taxpayers may have as to the proper classification of QFPFs and QCEs for purposes of the DC–QIE exception by providing that QFPFs and QCEs are treated as foreign persons for purposes of the DC–QIE exception.

Also as discussed in the preamble to the proposed regulations, there is uncertainty regarding the determination of whether stock of a QIE is held ''directly or indirectly'' by foreign persons for purposes of the DC–QIE exception. These regulations provide rules to clarify this determination.

Because there was a possibility of significant economic impact on a substantial number of small entities as a result of the rules relating to the treatment of QFPFs and QCEs for purposes of the DC–QIE exception and the definition of a domestically controlled QIE, the proposed regulations provided an initial regulatory flexibility analysis and requested comments from the public on the number of small entities that may be impacted and whether that impact will be economically significant. No comments were received.

B. Small Entities to Which These Regulations Will Apply

The regulation relating to the treatment of QFPFs and QCEs for purposes of the DC–QIE exception affects other foreign investors in QIEs.

The regulation defining a domestically controlled QIE also affects foreign investors in QIEs. Because an estimate of the number of small businesses affected is not currently feasible, this final regulatory flexibility analysis assumes that a substantial number of small businesses will be affected. The Treasury Department and the IRS do not expect that these regulations will affect a substantial number of small nonprofit organizations or small governmental jurisdictions.

C. Projected Reporting, Recordkeeping, and Other Compliance Requirements

These regulations do not impose additional reporting or recordkeeping obligations. However, see Part II of this Special Analysis describing certain voluntary reporting that these regulations clarify is available in § 1.1445–2(c)(3) by a domestic corporation to certify that it is a domestically controlled QIE.

D. Steps Taken To Minimize Significant Economic Impact, Legal Reasons, and Alternatives Considered

The final regulations address potential uncertainty under current law and do not impose an additional economic burden. Consequently, the rules represent the approach with the least economic impact.

These regulations clarify the treatment of QFPFs and QCEs for purposes of the DC–QIE exception. The rules are intended to ensure that the exemption under section 897(l) does not inappropriately inure to non-QFPFs or non-QCEs by treating QFPFs and QCEs as domestic investors for purposes of the DC–QIE exception. These regulations also clarify whether stock of a QIE is held ‘‘directly or indirectly’’ by foreign persons in determining whether the DC–QIE exception applies. The legal basis for these regulations is contained in sections 897(l) and 7805.

Section 897(a) applies to nonresident alien individuals and foreign corporations, and neither the statute nor prior regulations establish different rules for small entities. Moreover, the DC–QIE exception is measured based on the ownership interests in a QIE, regardless of the size of the investor. Because the DC–QIE exception takes into account all investors, regardless of size, the Treasury Department and the IRS have concluded that the DC–QIE exception should apply uniformly to large and small business entities. The Treasury Department and the IRS did not consider any significant alternative to the rule that provides for the treatment of QFPFs and QCEs under the DC–QIE exception.

The Treasury Department and the IRS did consider alternatives for the rule that defines a domestically controlled QIE, including one alternative that generally would treat all domestic C corporations as non-look-through persons (that is, without the special rule for foreign-controlled domestic corporations discussed in part I of the Summary of Comments and Explanation of Revisions section of this preamble). However, the Treasury Department and the IRS concluded that the look-through approach in the final regulations best serves the purposes of the DC–QIE exception while also taking into account ‘‘indirect’’ ownership of QIE stock by foreign persons in determining whether a QIE is domestically controlled under section 897(h)(4)(B).

IV. Section 7805(f)

Pursuant to section 7805(f) of the Code, the proposed regulations (REG–100442–22) preceding these final regulations were submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on the impact on small businesses and no comments were received.

V. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. The final regulations do not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

VI. Executive Order 13132: Federalism

Executive Order 13132 (entitled ‘‘Federalism’’) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. The final regulations do not have federalism implications, do not impose substantial direct compliance costs on State and local governments, and do not preempt State law within the meaning of the Executive order.

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings, Notices, and other guidance cited in this document are published in the Internal Revenue Bulletin or Cumulative Bulletin and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *www.irs.gov.*

Drafting Information

The principal author of these final regulations is Arielle Borsos, Office of Associate Chief Counsel (International). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding entries in numerical order for §§ 1.897–1, 1.897–2, and 1.1445–2 to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.897–1 also issued under 26 U.S.C. 897 and 897(l)(3).

Section 1.897–2 also issued under 26 U.S.C. 897.

* * * * *

Section 1.1445–2 also issued under 26 U.S.C. 1445.

* * * * *

■ **Par. 2.** Section 1.897–1 is amended by:

■ 1. Revising paragraph (a)(2);

■ 2. Removing and reserving paragraph (c)(2)(i);

■ 3. Adding paragraphs (c)(3) and (4) and (k);

■ 4. Revising and republishing paragraph (l); and

■ 5. Adding paragraph (n).

The revisions and additions read as follows:

§ 1.897–1 Taxation of foreign investment in United States real property interests, definition of terms.

(a) * * *

(2) *Applicability date.* Except as otherwise provided in this paragraph (a)(2), the regulations set forth in this section and §§ 1.897–2 through 1.897–4 apply to transactions occurring after June 18, 1980. Except as otherwise

provided in paragraph (c)(3)(vi) of this section, paragraphs (c)(3) and (4), (k), and (l) of this section apply to transactions occurring on or after April 25, 2024, and transactions occurring before April 25, 2024, resulting from an entity classification election under § 301.7701–3 of this chapter that was effective on or before April 25, 2024, but was filed on or after April 25, 2024. For transactions occurring before April 25, 2024, *see* paragraphs (c)(2)(i) and (l) of this section and § 1.897–9T(c) contained in 26 CFR part 1, as revised April 1, 2024.

* * * * *

(c) * * *

(3) *Domestically controlled QIE*—(i) *In general.* An interest in a domestically controlled qualified investment entity (QIE) is not a United States real property interest. A QIE is domestically controlled if foreign persons hold directly or indirectly less than 50 percent of the fair market value of the QIE's outstanding stock at all times during the testing period. For rules that apply to distributions by a QIE (including a domestically controlled QIE) attributable to gain from the sale or exchange of a United States real property interest, *see* section 897(h)(1).

(ii) *Look-through approach for determining QIE stock held directly or indirectly.* The following rules apply for purposes of determining whether a QIE is domestically controlled:

(A) *Non-look-through persons considered holders.* Only a non-look-through person is considered to hold directly or indirectly stock of the QIE.

(B) *Attribution from look-through persons.* Stock of a QIE that, but for the application of paragraph (c)(3)(ii)(A) of this section, would be considered directly or indirectly held by a look-through person, is instead considered held directly or indirectly by the look-through person's shareholders, partners, or beneficiaries, as applicable, that are non-look-through persons based on the non-look-through person's proportionate interest in the look-through person. To the extent the shareholders, partners, or beneficiaries, as applicable, of the look-through person are also look-through persons, this paragraph (c)(3)(ii)(B) applies to such shareholders, partners, or beneficiaries as if they directly or indirectly held, but for the application of paragraph (c)(3)(ii)(A) of this section, their proportionate share of the stock of the QIE.

(C) *No attribution from non-look-through persons.* Stock of a QIE considered held directly or indirectly by a non-look-through person is not considered held directly or indirectly by any other person.

(iii) *Special rules for applying look-through approach.* The following additional special rules apply for purposes of determining whether a QIE is domestically controlled:

(A) *Certain holders of U.S. publicly traded QIE stock.* Notwithstanding any other provision of this paragraph (c)(3), a person holding less than five percent of U.S. publicly traded stock of a QIE at all times during the testing period, determined without regard to paragraph (c)(3)(ii)(A) of this section, is treated as a United States person that is a non-look-through person with respect to that stock, unless the QIE has actual knowledge that such person is not a United States person or has actual knowledge that such person is foreign controlled as determined under paragraph (c)(3)(v)(B) of this section (treating any person that is not a non-public domestic C corporation as if it were a non-public domestic C corporation for this purpose). For an example illustrating the application of this paragraph (c)(3)(iii)(A), *see* paragraph (c)(3)(vii)(C) of this section (*Example 3*).

(B) *Certain foreign-controlled domestic C corporations.* A non-public domestic C corporation is treated as a look-through-person if it is a foreign-controlled domestic corporation. For an example illustrating the application of this paragraph (c)(3)(iii)(B), *see* paragraph (c)(3)(vii)(B) of this section (*Example 2*).

(C) *Public QIEs.* A public QIE is treated as a foreign person that is a non-look-through person. The preceding sentence does not apply, however, if the public QIE is a domestically controlled QIE as defined in this paragraph (c)(3), determined after the application of this paragraph (c)(3)(iii), in which case the public QIE is treated as a United States person that is a non-look-through person. For an example illustrating the application of this paragraph (c)(3)(iii)(C), *see* paragraph (c)(3)(vii)(C) of this section (*Example 3*).

(iv) *Treatment of certain persons as foreign persons*—(A) *Qualified foreign pension fund or qualified controlled entity.* For purposes of this paragraph (c)(3), a qualified foreign pension fund (including any part of a qualified foreign pension fund) or a qualified controlled entity is treated as a foreign person, irrespective of whether the fund or entity qualifies for the exception from section 897 provided in § 1.897(l)–1(b)(1). For an example illustrating the application of this paragraph (c)(3)(iv)(A), *see* paragraph (c)(3)(vii)(A) of this section (*Example 1*). *See also* paragraph (k) of this section for a definition of foreign person that applies for purposes of sections 897, 1445, and 6039C.

(B) *International organization.* For purposes of this paragraph (c)(3), an international organization (as defined in section 7701(a)(18)) is treated as a foreign person. *See* § 1.897–9T(e) (regarding the treatment of international organizations under sections 897, 1445, and 6039C), which provides that an international organization is not a foreign person with respect to United States real property interests, and is not subject to sections 897, 1445, and 6039C on the disposition of a United States real property interest.

(v) *Definitions.* The following definitions apply for purposes of this paragraph (c)(3):

(A) A *domestic C corporation* is any domestic corporation other than a regulated investment company (RIC) as defined in section 851, a real estate investment trust (REIT) as defined in section 856, or an S corporation as defined in section 1361.

(B) A *foreign-controlled domestic corporation* is any non-public domestic C corporation if foreign persons hold directly or indirectly more than 50 percent of the fair market value of the non-public domestic C corporation's outstanding stock. For purposes of determining whether a non-public domestic C corporation is a foreign-controlled domestic corporation, the rules of paragraphs (c)(3)(ii)(A) through (C) and (c)(3)(iii)(C) of this section apply with the following modifications—

(*1*) In paragraphs (c)(3)(ii)(A) through (C) of this section, treating references to *QIE* as references to *non-public domestic C corporation;* and

(*2*) A non-public domestic C corporation that is a foreign-controlled domestic corporation under this paragraph (c)(3)(v)(B) is treated as a look-through person for purposes of determining whether any other non-public domestic C corporation is a foreign-controlled domestic corporation.

(C) A *look-through person* is any person other than a non-look-through person. Thus, for example, a look-through person includes a REIT that is not a public QIE, an S corporation, a partnership (domestic or foreign) that is not a publicly traded partnership, a RIC that is not a public RIC, and a trust (domestic or foreign, whether or not the trust is described in sections 671 through 679). For a special rule that treats certain non-public domestic C corporations as look-through persons, *see* paragraph (c)(3)(iii)(B) of this section.

(D) A *non-look-through person* is an individual, a domestic C corporation (other than a foreign-controlled domestic corporation), a nontaxable holder, a foreign corporation (including a foreign government pursuant to section 892(a)(3)), a publicly traded partnership (domestic or foreign), a public RIC, an estate (domestic or foreign), an international organization (as defined in section 7701(a)(18)), a qualified foreign pension fund (including any part of a qualified foreign pension fund), or a qualified controlled entity. For special rules that treat certain holders of QIE stock as non-look-through persons, *see* paragraphs (c)(3)(iii)(A) and (C) of this section.

(E) A *non-public domestic C corporation* is any domestic C corporation that is not a public domestic C corporation.

(F) A *nontaxable holder* is—

(*1*) Any organization that is exempt from taxation by reason of section 501(a);

(*2*) The United States, any State (as defined in section 7701(a)(10)), any territory of the United States, or a political subdivision of any State or any territory of the United States; or

(*3*) Any Indian Tribal government (as defined in section 7701(a)(40)) or its subdivision (determined in accordance with section 7871(d)).

(G) A *public domestic C corporation* is a domestic C corporation any class of stock of which is regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d). A domestic C corporation is not a public domestic C corporation, however, if the QIE whose status as domestically controlled is being determined under this paragraph (c)(3) has actual knowledge that the domestic C corporation is foreign controlled as determined under paragraph (c)(3)(v)(B) of this section (treating the domestic C corporation for this purpose as if it were a non-public domestic C corporation).

(H) A *public QIE* is a QIE any class of stock of which is regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d), or that is a RIC that issues redeemable securities within the meaning of section 2 of the Investment Company Act of 1940.

(I) A *public RIC* is a RIC that is not a QIE and any class of stock of which is either regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d), or common stock that is continuously offered pursuant to a public offering (within the meaning of section 4 of the Securities Act of 1933, as amended (15 U.S.C. 77a to 77aa)) and held by or for no fewer than 500 persons. A RIC is not a public RIC, however, if the QIE whose status as domestically controlled is being determined under this paragraph (c)(3) has actual knowledge that the RIC is foreign controlled as determined under paragraph (c)(3)(v)(B) of this section (treating the RIC for this purpose as if it were a non-public domestic C corporation).

(J) A *publicly traded partnership* is a partnership any class of interest of which is regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d). A domestic partnership is not a publicly traded partnership, however, if the QIE whose status as domestically controlled is being determined under this paragraph (c)(3) has actual knowledge that the domestic partnership is foreign controlled as determined under paragraph (c)(3)(v)(B) of this section (treating the partnership for this purpose as if it were a non-public domestic C corporation).

(K) A *qualified controlled entity* has the meaning set forth in § 1.897(l)–1(e)(9).

(L) A *qualified foreign pension fund* has the meaning set forth in § 1.897(l)–1(c).

(M) A *QIE* is a qualified investment entity, as defined in section 897(h)(4)(A).

(N) *Testing period* has the meaning set forth in section 897(h)(4)(D).

(O) *U.S. publicly traded QIE stock* is any class of stock of a QIE that is regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d), but only if the established securities market is in the United States.

(vi) *Transition rule for certain QIEs owned by foreign-controlled domestic corporations*—(A) *General rule.* Except as provided in paragraph (c)(3)(vi)(B) of this section, paragraph (c)(3)(iii)(B) of this section does not apply with respect to a QIE that is in existence as April 24, 2024, and satisfies the following requirements at all times on and after April 24, 2024—

(*1*) The QIE is domestically controlled (as determined under this paragraph (c)(3), but without regard to paragraph (c)(3)(iii)(B) of this section);

(*2*) The aggregate fair market value of any United States real property interests acquired by the QIE directly and indirectly after April 24, 2024, is no more than 20 percent of the aggregate fair market value of the United States real property interests held directly and indirectly by the QIE as of April 24, 2024 (determined in accordance with paragraph (c)(3)(vi)(D) of this section); and

(*3*) The percentage of the stock of the QIE held directly or indirectly by one or more non-look-through persons (determined based on fair market value and under the rules of paragraphs (c)(3)(ii) through (v) of this section and this paragraph (c)(3)(vi), including paragraph (c)(3)(iii)(B) of this section) does not increase by more than 50 percentage points in the aggregate over the percentage of stock of the QIE owned directly or indirectly by such non-look-through persons on April 24, 2024.

(B) *Termination of transition rule.* The transition rule described in paragraph (c)(3)(vi)(A) of this section will cease to apply, and the rule in paragraph (c)(3)(iii)(B) of this section will apply for purposes of determining whether a QIE is domestically controlled, with respect to transactions occurring on or after the earlier of:

(*1*) The date immediately following the date on which the QIE fails to meet any of the requirements described in paragraph (c)(3)(vi)(A) of this section; and

(*2*) April 24, 2034. For an example illustrating the application of paragraph (c)(3)(vi)(A) of this section and this paragraph (c)(3)(vi)(B), *see* paragraph (c)(3)(vii)(E) of this section (*Example 5*).

(C) *Effect of transition rule on testing period.* If the transition rule described in paragraph (c)(3)(vi)(A) of this section ceases to apply to a QIE under paragraph (c)(3)(vi)(B) of this section, the rule in paragraph (c)(3)(iii)(B) of this section will not apply to the QIE with respect to the portion of any testing period during which the transition rule in this paragraph (c)(3)(vi) applied.

(D) *Determination of fair market value of United States real property interests.* For purposes of paragraph (c)(3)(vi)(A)(*2*) of this section, the fair market value of the United States real property interests held directly and indirectly by a QIE on April 24, 2024, is the value of such property interests as calculated under section 851(b)(3) or 856(c)(4) as of the close of the most recent quarter of the QIE's taxable year before April 24, 2024. For purposes of paragraph (c)(3)(vi)(A)(*2*) of this section, the fair market value of any property acquired after the close of the most recent quarter of the QIE's taxable year before April 24, 2024, whether acquired before or after April 24, 2024, is determined on the date of such acquisition using a reasonable method, provided the QIE consistently uses the same method with respect to all of its United States real property interests when applying this paragraph (c)(3)(vi).

(E) *Binding commitments.* For purposes of paragraphs (c)(3)(vi)(A)(*2*) and (*3*) of this section, a direct or indirect acquisition of a United States real property interest, or of stock of a QIE pursuant to a written agreement that was (subject to customary conditions) binding before April 24, 2024, and all times thereafter, or pursuant to a tender offer announced before April 24, 2024, that is subject to section 14(e) of the Securities and Exchange Act of 1934 (15 U.S.C. 78n(e)) and 17 CFR 240.14e–1 through 240.14e–8 (Regulation 14E), is treated as occurring on April 24, 2024.

(F) *Ownership by certain successors under section 368(a)(1)(F).* For purposes of paragraph (c)(3)(vi)(A)(*3*) of this section, the transferor corporation and the resulting corporation (as defined in § 1.368–2(m)(1)) in a reorganization described under section 368(a)(1)(F) (whether engaged in by the QIE or by another corporation) are treated as the same corporation.

(G) *Ownership by less than five-percent public shareholders.* For purposes of paragraph (c)(3)(vi)(A)(*3*) of this section, in the case of any class of stock of a QIE that is regularly traded on an established securities market within the meaning of §§ 1.897–1(m) and 1.897–9T(d), all such stock owned by persons holding less than 5 percent of that class of stock, determined without regard to paragraph (c)(3)(ii)(A) of this section, is treated as stock owned by a single non-look-through person except to the extent that the QIE has actual knowledge regarding the ownership of any person.

(vii) *Examples.* The rules of this paragraph (c)(3) are illustrated by the following examples. It is assumed that each entity has a single class of stock or other ownership interests, that the ownership described existed throughout the relevant testing period and that, unless otherwise stated, a QIE is not a public QIE as defined under paragraph (c)(3)(v)(H) of this section.

(A) *Example 1: QIE stock held by public domestic C corporation*—(*1*) *Facts.* USR is a REIT, 51 percent of the stock of which is held by X, a public domestic C corporation as defined in paragraph (c)(3)(v)(G) of this section, and 49 percent of the stock of which is held by nonresident alien individuals, which are foreign persons as defined in paragraph (k) of this section.

(*2*) *Analysis.* Under paragraph (c)(3)(v)(M) of this section, USR is a QIE. Because X is a public domestic C corporation, it cannot be a foreign-controlled domestic corporation and, therefore, is a non-look-through person as defined under paragraph (c)(3)(v)(D) of this section. Thus, under paragraph (c)(3)(ii)(A) of this section X is considered as holding directly or indirectly stock of USR for purposes of determining whether USR is a domestically controlled QIE. Under paragraph (c)(3)(ii)(C) of this section, the USR stock held directly or indirectly by X is not considered held directly or indirectly by any other person, including the shareholders of X. Because X is not a foreign person as defined in paragraph (k) of this section and holds directly or indirectly 51 percent of the single class of outstanding stock of USR, foreign persons hold directly or indirectly less than 50 percent of the fair market value of the stock of USR, and USR therefore is a domestically controlled QIE under paragraph (c)(3)(i) of this section.

(*3*) *Alternative facts: QIE stock held by domestic partnership.* The facts are the same as in paragraph (c)(3)(vii)(A)(*1*) of this section (*Example 1*), except that, instead of being a public domestic C corporation, X is a domestic partnership that is not a publicly traded partnership as defined in paragraph (c)(3)(v)(J) of this section. In addition, FC1, a foreign corporation, holds a 50 percent interest in X, and the remaining interests in X are held by U.S. citizens. X is not a non-look-through person as defined in paragraph (c)(3)(v)(D) of this section and, therefore, is a look-through person as defined in paragraph (c)(3)(v)(C) of this section. Accordingly, under paragraph (c)(3)(ii)(A) of this section, X is not considered as holding directly or indirectly stock of USR for purposes of determining whether USR is a domestically controlled QIE. Under paragraph (c)(3)(ii)(B) of this section, the stock of USR that, but for paragraph (c)(3)(ii)(A) of this section, is considered held by X, a look-through person, is instead considered held proportionately by X's partners that are non-look-through persons. Accordingly, because FC1 and the U.S. citizen partners in X are non-look-through persons as defined in paragraph (c)(3)(v)(D) of this section, 25.5 percent of the stock of USR is considered as held directly or indirectly by FC1 (50% x 51%), a foreign person as defined in paragraph (k) of this section, and 25.5 percent (in the aggregate) of the stock of USR is considered as held directly or indirectly by the U.S. citizen partners in X (50% x 51%), who are not foreign persons as defined in paragraph (k) of this section. Foreign persons therefore hold directly or indirectly 74.5 percent of the stock of USR (49 percent of the stock of USR held directly or indirectly by nonresident alien individuals, who are non-look-through persons as defined in paragraph (c)(3)(v)(D) of this section, plus the 25.5 percent held directly or indirectly by FC1), and USR is not a domestically controlled QIE under paragraph (c)(3)(i) of this section. The result described in this paragraph (c)(3)(vii)(A)(*3*) would be the same if, instead of being a domestic partnership, X were a foreign partnership.

(*4*) *Alternative facts: QIE stock held by a qualified foreign pension fund.* The facts are the same as in paragraph (c)(3)(vii)(A)(*3*) of this section (*Example 1*), except that, instead of being a foreign corporation, FC1 is a qualified foreign pension fund. The analysis is the same as in paragraph (c)(3)(vii)(A)(*3*) (*Example 1*) regarding the treatment of X as a look-through person as defined in paragraph (c)(3)(v)(C) of this section. In addition, FC1, a foreign person under paragraph (c)(3)(iv)(A) of this section, is a non-look-through person as defined in paragraph (c)(3)(v)(D) of this section. Because FC1 and the U.S. citizen partners in X are non-look-through persons, 25.5 percent of the stock of USR is considered as held directly or indirectly by FC1 (50% x 51%), and 25.5 percent (in the aggregate) of the stock of USR is considered as held directly or indirectly by the U.S. citizen partners in X (50% x 51%). Thus, for the same reasons described in paragraph (c)(3)(vii)(A)(*3*) (*Example 1*), foreign persons hold directly or indirectly 74.5 percent of the stock of USR, and USR is not a domestically controlled QIE under paragraph (c)(3)(i) of this section.

(B) *Example 2: QIE stock held by non-public domestic C corporation that is a foreign-controlled domestic corporation*—(*1*) *Facts.* USR is a REIT, 51 percent of the stock of which is held by X, a non-public domestic C corporation as defined in paragraph (c)(3)(v)(E) of this section, and 49 percent of the stock of which is held by nonresident alien individuals, which are foreign persons as defined in paragraph (k) of this section. FC1, a foreign corporation, holds 40 percent of the stock of X, and Y, a nonresident alien individual, holds 15 percent of the stock of X. The remaining 45 percent of the stock of X is held by U.S. citizens.

(*2*) *Analysis.* Under paragraph (c)(3)(v)(M) of this section, USR is a QIE. X, a non-public domestic C corporation, is a non-look-through person as defined under paragraph (c)(3)(v)(D) of this section, unless paragraph (c)(3)(iii)(B) of this section applies to treat X as a look-through person because X is a foreign-controlled domestic corporation. FC1, Y, and the U.S. citizen shareholders of X are non-look-through persons as defined under paragraph (c)(3)(v)(D).

Under paragraph (c)(3)(v)(B)(*1*) of this section, FC1, Y, and the U.S. citizen shareholders are all considered as holding directly or indirectly stock of X for purposes of determining whether X is a foreign-controlled domestic corporation. Under paragraph (c)(3)(v)(B)(*1*) of this section, the stock held directly or indirectly by FC1, Y, and the U.S. citizen shareholders is not considered held directly or indirectly by any other person. Because FC1 and Y, both foreign persons as defined in paragraph (k) of this section, hold directly or indirectly 40 percent and 15 percent of the stock of X, respectively, foreign persons hold directly or indirectly more than 50 percent of the fair market value of the stock of X, and X is a foreign-controlled domestic corporation under paragraph (c)(3)(v)(B) of this section. Accordingly, under paragraph (c)(3)(iii)(B) of this section, X is a look-through person as defined in paragraph (c)(3)(v)(C) of this section and, therefore, under paragraph (c)(3)(ii)(A) of this section is not considered as holding directly or indirectly stock of USR for purposes of determining whether USR is a domestically controlled QIE. Under paragraph (c)(3)(ii)(B) of this section, the stock of USR that, but for paragraph (c)(3)(ii)(A), is considered held by X, a look-through person, is instead considered held proportionately by X's shareholders that are non-look-through persons. Accordingly, because FC1, Y, and the U.S. citizen shareholders of X are non-look-through persons, 20.4 percent of the stock of USR is considered as held directly or indirectly by FC1 (40% x 51%), 7.65 percent of the stock of USR is considered as held directly or indirectly by Y (15% x 51%), and 22.95 percent (in the aggregate) of the stock of USR is considered as held directly or indirectly by the U.S. citizen shareholders (45% x 51%). Foreign persons therefore hold directly or indirectly 77.05 percent of the stock of USR (49 percent of the stock of USR held directly by nonresident alien individuals, who are foreign persons and non-look-through persons as defined in paragraph (c)(3)(v)(D), plus the 20.4 percent and 7.65 percent held indirectly by FC1 and Y, respectively), and USR is not a domestically controlled QIE under paragraph (c)(3)(i) of this section. The result described in this paragraph (c)(3)(vii)(B)(*2*) would be different if Y were a U.S. citizen instead of a nonresident alien individual, in which case X would be a non-look-through person because it is not a foreign-controlled domestic corporation under paragraph (c)(3)(v)(B) (the only foreign non-look-through person to hold directly or indirectly stock in X is FC1, which holds a 40-percent interest). Consequently, USR would be a domestically controlled QIE under paragraph (c)(3)(i) of this section because foreign persons hold directly or indirectly less than 50 percent of the stock of USR.

(C) *Example 3: QIE stock held by public QIE that is a domestically controlled QIE*—(*1*) *Facts.* USR2 is a REIT, 51 percent of the stock of which is held by USR1, a REIT that is a public QIE as defined in paragraph (c)(3)(v)(H) of this section, and 49 percent of the stock of which is held by nonresident alien individuals, which are foreign persons as defined in paragraph (k) of this section. The stock of USR1 is U.S. publicly traded QIE stock as defined in paragraph (c)(3)(v)(O) of this section. FC1 and FC2, both foreign corporations, each hold 20 percent of the stock of USR1. The remaining 60 percent of the stock of USR1 is held by persons that each hold less than 5 percent of the stock of USR1 and with respect to which USR1 has no actual knowledge that such person is not a United States person or is foreign controlled (as determined under paragraph (c)(3)(v)(B) of this section by treating any person that is not a non-public domestic C corporation as if it were a non-public domestic C corporation for this purpose) (USR1 less than five-percent public shareholders).

(*2*) *Analysis.* Under paragraph (c)(3)(v)(M) of this section, USR2 and USR1 are QIEs. Under paragraph (c)(3)(iii)(A) of this section, each of the USR1 less than five-percent public shareholders is treated as a United States person that is a non-look-through person. Consequently, under paragraph (c)(3)(i) of this section USR1 is a domestically controlled QIE because FC1 and FC2, each a foreign person as defined in paragraph (k) of this section that is a non-look-through person under paragraph (c)(3)(v)(D) of this section, together hold directly or indirectly only 40 percent of the stock of USR1 and, thus, foreign persons hold directly or indirectly less than 50 percent of the fair market value of the stock of USR1. In addition, the USR2 stock held by USR1 is treated as held directly or indirectly by a United States person that is a non-look-through person under paragraph (c)(3)(iii)(C) of this section. Because USR1 holds directly or indirectly 51 percent of the stock of USR2, foreign persons hold directly or indirectly less than 50 percent of the fair market value of the stock of USR2, and USR2 is a domestically controlled QIE under paragraph (c)(3)(i) of this section.

(*3*) *Alternative facts: QIE stock held by public QIE that is not a domestically controlled QIE.* The facts are the same as in paragraph (c)(3)(vii)(C)(*1*) of this section (*Example 3*), except that 25 percent of the stock of USR1 is held by each of FC1 and FC2, with the remaining 50 percent of the stock of USR1 held by the USR1 less than five-percent public shareholders. Regardless of the treatment of the USR1 less than five-percent public shareholders, USR1 is not a domestically controlled QIE under paragraph (c)(3)(i) of this section because FC1 and FC2, each a foreign person as defined in paragraph (k) of this section that is a non-look-through person under paragraph (c)(3)(v)(D) of this section, together hold directly or indirectly 50 percent of the stock of USR1 and, thus, foreign persons do not hold directly or indirectly less than 50 percent of the fair market value of the stock of USR1. In addition, the USR2 stock held by USR1 is treated as held by a foreign person that is a non-look-through person under paragraph (c)(3)(iii)(C) of this section. Because USR1 holds directly or indirectly 51 percent of the stock of USR2, foreign persons do not hold directly or indirectly less than 50 percent of the fair market value of the stock of USR2, and USR2 is not a domestically controlled QIE under paragraph (c)(3)(i) of this section.

(D) *Example 4: QIE stock held by non-public QIE*—(*1*) *Facts.* USR2 is a REIT, 49 percent of the stock of which is held by nonresident alien individuals, and 51 percent of the stock of which is held by USR1, a REIT. USR1 is not a public QIE as defined in paragraph (c)(3)(v)(H) of this section. U.S. citizens hold 50 percent of the stock of USR1. The remaining 50 percent of the stock of USR1 is held by PRS, a domestic partnership, 50 percent of the interests in which are held by DC, a public domestic C corporation as defined in paragraph (c)(3)(v)(G) of this section, and 50 percent of the interests in which are held by nonresident alien individuals.

(*2*) *Analysis.* Under paragraph (c)(3)(v)(M) of this section, USR2 and USR1 are QIEs. USR1 is not treated as a non-look-through person under paragraph (c)(3)(iii)(C) of this section because USR1 is not a public QIE as defined in paragraph (c)(3)(v)(H) of this section. Each of USR1 and PRS is a look-through person as defined in paragraph (c)(3)(v)(C) of this section that is not treated as holding directly or indirectly stock in USR2 for purposes of determining whether USR2 is a domestically controlled QIE under paragraph (c)(3)(ii)(A) of this section.

Because the U.S. citizens who hold USR1 stock are non-look-through persons as defined in paragraph (c)(3)(v)(D) of this section, those U.S. citizens are treated under paragraph (c)(3)(ii)(B) of this section as holding directly or indirectly 25.5 percent of the stock of USR2 through their USR1 stock interest (50% x 51%) in accordance with paragraph (c)(3)(ii)(A) of this section. Similarly, because DC and the nonresident alien partners in PRS are non-look-through persons, each is treated under paragraph (c)(3)(ii)(B) of this section as holding directly or indirectly the stock of USR2 through its interest in PRS and PRS's interest in USR1. Thus, DC is treated as holding directly or indirectly 12.75 percent of the stock of USR2 (50% × 50% × 51%) and the nonresident alien individual partners, which are foreign persons as defined in paragraph (k) of this section, are treated as directly or indirectly holding a 12.75 percent aggregate interest in the stock of USR2 (50% × 50% × 51%). Foreign persons therefore hold directly or indirectly 61.75 percent of the stock of USR2 (the 49 percent stock in USR2 directly held by nonresident alien individuals, who are foreign persons and non-look-through persons as defined in paragraph (c)(3)(v)(D), plus the 12.75 percent in stock indirectly held by the nonresident alien individual partners in PRS), and USR2 is not a domestically controlled QIE under paragraph (c)(3)(i) of this section.

(E) *Example 5: Transition rule asset requirement*—(*1*) *Facts.* USR is a REIT formed on January 1, 2018. From formation, 51 percent of the stock of USR is held by X, a non-public domestic C corporation as defined in paragraph (c)(3)(v)(E) of this section, 25 percent of the stock of USR is held by FC1, a foreign corporation, and 24 percent of the stock of USR is held by nonresident alien individuals. FC2, a foreign corporation, and FC3, also a foreign corporation, each hold 50 percent of the stock of X. On April 24, 2024, USR's only property is Asset 1, a United States real property interest. The value of Asset 1, calculated under section 856(c)(4) as of the most recent quarter of USR's taxable year before 24, is $100x. On January 1, 2026, USR borrows $30x and acquires Asset 2, a United States real property interest, for $30x.

(*2*) *Analysis.* As of April 24, 2024, USR is a domestically controlled QIE under paragraph (c)(3)(i) of this section, because, as determined without regard to paragraph (c)(3)(iii)(B) of this section, X is a non-look-through person and, consequently, foreign persons hold directly or indirectly less than 50 percent of the stock of USR. Accordingly, USR satisfies the requirement under paragraph (c)(3)(vi)(A)(*1*) of this section. USR also satisfies the requirements under paragraphs (c)(3)(vi)(A)(*2*) and (*3*) of this section, respectively, as of such date, because USR has not acquired directly or indirectly any United States real property interests, and the ownership of stock of USR has not changed. Thus, as of April 24, 2024, USR qualifies for the transition relief under paragraph (c)(3)(vi)(A) of this section. However, on January 1, 2026, USR no longer meets the requirement for transition relief in paragraph (c)(3)(vi)(A)(*2*) of this section because the fair market value of Asset 2, $30x, is 30 percent (which is more than 20 percent) of $100x, which (as calculated in accordance with paragraphs (c)(3)(vi)(A)(*2*) and (c)(3)(vi)(D) of this section) is the fair market value of USR's United States real property interests, namely Asset 1, as of April 24, 2024. Therefore, under paragraph (c)(3)(vi)(B)(*1*) of this section the transition rule ceases to apply to USR and, thus, paragraph (c)(3)(iii)(B) applies for purposes of determining whether USR is domestically controlled with respect to transactions occurring after January 1, 2026. Because FC2 and FC3 are non-look-through persons that hold more than 50 percent of the stock of X, X is a foreign-controlled domestic corporation under paragraph (c)(3)(iii)(B), and USR will not be a domestically controlled QIE under paragraph (c)(3)(i) of this section as of January 2, 2026, because foreign non-look-through persons (FC1, 25 percent, FC2, 25.5 percent, FC3, 25.5 percent, and the nonresident alien individuals, 24 percent) directly or indirectly hold more than 50 percent of the stock of USR.

(*3*) *Alternative facts: transition rule ownership requirement.* The facts are the same as in paragraph (c)(3)(vii)(E)(*1*) of this section (*Example 5*), except that instead of USR borrowing funds and acquiring Asset 2, FC3 sells its 50-percent stock interest in X to FC2 on June 1, 2024, and, on January 1, 2026, FC1 sells its 25-percent stock interest in USR to FC4, a foreign corporation. Following FC3's sale of its X stock to FC2 on June 1, 2024, FC2's stock interest in USR has increased by 25.5 percentage points, from 25.5 percent on April 24, 2024 (which is 50 percent of 51 percent), to 51 percent. Following FC1's sale of its USR stock to FC4 on January 1, 2026, FC4's stock interest in USR has increased by 25 percentage points, from zero percent on April 24, 2024, to 25 percent. Accordingly, in the aggregate, non-look-through persons have increased their ownership in USR by 50.5 percentage points (25.5 percent and 25 percent for FC2 and FC4, respectively), and USR no longer meets the requirement for transition relief in paragraph (c)(3)(vi)(A)(*3*) of this section as of January 1, 2026. Therefore, under paragraph (c)(3)(vi)(B)(*1*) of this section the transition rule ceases to apply to USR and, thus, paragraph (c)(3)(iii)(B) of this section applies for purposes of determining whether USR is domestically controlled with respect to transactions occurring after January 1, 2026. Because FC2, a non-look-through person, holds more than 50 percent of the stock of X, X is a foreign-controlled domestic corporation under paragraph (c)(3)(iii)(B) of this section, and USR will not be a domestically controlled QIE under paragraph (c)(3)(i) of this section because foreign non-look-through persons (FC2, 51 percent, FC4, 25 percent, and the nonresident alien individuals, 24 percent) directly or indirectly hold more than 50 percent of the stock of USR.

(4) *Foreign ownership percentage.* For purposes of calculating the foreign ownership percentage under section 897(h)(4)(C), the determination of the QIE stock that was held directly or indirectly by foreign persons is made under the rules of paragraphs (c)(3)(ii) through (vii) of this section.

* * * * *

(k) *Foreign person.* The term *foreign person* means a nonresident alien individual (including an individual subject to the provisions of section 877), a foreign corporation as defined in paragraph (l) of this section, a foreign partnership, a foreign trust or a foreign estate, as such persons are defined by section 7701 and the regulations in this chapter under section 7701. A resident alien individual, including a nonresident alien individual with respect to whom there is in effect an election under section 6013(g) or (h) to be treated as United States resident, is not a foreign person. With respect to the status of foreign governments and international organizations, *see* § 1.897–9T(e). *See* paragraph (c)(3)(iv)(A) of this section regarding the treatment of qualified foreign pension funds and qualified controlled entities as foreign persons for purposes of section 897(h)(4)(B).

(l) *Foreign corporation.* The term *foreign corporation* has the meaning ascribed to such term in section 7701(a)(3) and (5) and § 301.7701–5. For purposes of sections 897 and 6039C, however, the term does not include a foreign corporation with respect to

which there is in effect an election under section 897(i) and § 1.897–3 to be treated as a domestic corporation. For purposes of section 897, the term does not include a qualified holder described in § 1.897(l)-1(d); *see* paragraph (c)(3)(iv)(A) of this section regarding the treatment of qualified foreign pension funds and qualified controlled entities as foreign persons for purposes of section 897(h)(4)(B).

* * * * *

(n) *Regularly traded cross-reference. See* § 1.897–9T(d) for a definition of regularly traded for purposes of sections 897, 1445, and 6039C.

* * * * *

■ **Par. 3.** Section 1.897–2 is amended by revising paragraph (h)(3) to read as follows:

§ 1.897–2 United States real property holding corporations.

* * * * *

(h) * * *

(3) *Requirements not applicable.* The requirements of this paragraph (h) do not apply to domestically-controlled qualified investment entities, as defined in section 897(h)(4)(B). *But see* § 1.1445–2(c)(3) for rules providing that no withholding is required under section 1445(a) in certain cases when a statement is voluntarily issued by the corporation and otherwise complies with the requirements of this paragraph (h). The requirements of this paragraph (h) also do not apply to a corporation any class of stock in which is regularly traded on an established securities market at any time during the calendar year. However, such a corporation may voluntarily choose to comply with the requirements of paragraph (h)(4) of this section.

* * * * *

■ **Par. 4.** Section 1.897–9T is amended by:

■ 1. Removing and reserving paragraph (c); and

■ 2. Revising and republishing paragraph (e).

The revision reads as follows:

§ 1.897–9T Treatment of certain interest in publicly traded corporations, definition of foreign person, and foreign governments and international organizations (temporary).

* * * * *

(e) *Foreign governments and international organizations.* A foreign government shall be treated as a foreign person with respect to U.S. real property interests, and shall be subject to sections 897, 1445, and 6039C on the disposition of a U.S. real property interest except to the extent specifically otherwise provided in the regulations in this chapter issued under section 892. An international organization (as defined in section 7701(a)(18)) is not a foreign person with respect to U.S. real property interests, and is not subject to sections 897, 1445, and 6039C on the disposition of a U.S. real property interest. *See* § 1.897–1(c)(3)(iv)(B) regarding the treatment of international organizations as foreign persons for purposes of section 897(h)(4)(B). Buildings or parts of buildings and the land ancillary thereto (including the residence of the head of the diplomatic mission) used by the foreign government for a diplomatic mission shall not be a U.S. real property interest in the hands of the respective foreign government.

* * * * *

■ **Par. 5.** Section 1.1445–2 is amended by:

■ 1. Revising paragraph (c)(3)(i); and

■ 2. Adding two sentences at the end of paragraph (e).

The revision and additions read as follows:

§ 1.1445–2 Situations in which withholding is not required under section 1445(a).

* * * * *

(c) * * *

(3) * * *

(i) *In general.* No withholding is required under section 1445(a) upon the acquisition of an interest in a domestic corporation, if the transferor provides the transferee with a copy of a statement, issued by the corporation pursuant to § 1.897–2(h), certifying that the interest is not a U.S. real property interest, or if the transferor provides the transferee with a statement certifying that the corporation is a domestically controlled qualified investment entity (as determined under § 1.897–1(c)(3)) that is voluntarily issued by the corporation but otherwise complies with the requirements of § 1.897–2(h). In general, a corporation may issue such a statement only if the corporation was not a U.S. real property holding corporation at any time during the previous five years (or the period in which the interest was held by its present holder, if shorter), the corporation is a domestically controlled qualified investment entity (as determined under § 1.897–1(c)(3)), or if interests in the corporation ceased to be United States real property interests under section 897(c)(1)(B). (A corporation may not provide such a statement based on its determination that the interest in question is an interest solely as a creditor.) *See* § 1.897–2(f) and (h). The corporation may provide such a statement directly to the transferee at the transferor's request. The transferor must request such a statement before the transfer, and shall, to the extent possible, specify the anticipated date of the transfer. A corporation's statement may be relied upon for purposes of this paragraph (c)(3) only if the statement is dated not more than 30 days before the date of the transfer. A transferee may also rely upon a corporation's statement that is voluntarily provided by the corporation in response to a request from the transferee, if that statement otherwise complies with the requirements of this paragraph (c)(3) and § 1.897–2(h).

* * * * *

(e) * * * Paragraph (c)(3)(i) of this section applies with respect to dispositions of U.S. real property interests, and distributions described in section 897(h), occurring on or after April 25, 2024. For dispositions of U.S. real property interests, and distributions described in section 897(h), occurring before April 25, 2024, *see* § 1.1445–2(c)(3)(i), as contained in 26 CFR part 1, revised as of April 1, 2024.

Douglas W. O'Donnell,

Deputy Commissioner.

Approved: April 2, 2024.

Aviva Aron-Dine,

Acting Assistant Secretary of the Treasury (Tax Policy).

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Alcohol and Tobacco Tax and Trade Bureau

27 CFR Part 9

[Docket No. TTB–2022–0008; T.D. TTB–193; Ref: Notice No. 214]

RIN 1513–AC85

Establishment of the Yucaipa Valley Viticultural Area

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Final rule; Treasury decision.

SUMMARY: The Alcohol and Tobacco Tax and Trade Bureau (TTB) establishes the 36,467-acre ''Yucaipa Valley'' American viticultural area (AVA) in San Bernardino County, California. The Yucaipa Valley viticultural area is not located within, nor does it contain, any other established viticultural area. TTB designates viticultural areas to allow vintners to better describe the origin of their wines and to allow consumers to better identify wines they may purchase.

DATES: This final rule is effective May 28, 2024.

FOR FURTHER INFORMATION CONTACT: Karen A. Thornton, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005; phone 202–453–1039, ext. 175.

SUPPLEMENTARY INFORMATION:

Background on Viticultural Areas

TTB Authority

Section 105(e) of the Federal Alcohol Administration Act (FAA Act), 27 U.S.C. 205(e), authorizes the Secretary of the Treasury to prescribe regulations for the labeling of wine, distilled spirits, and malt beverages. The FAA Act provides that these regulations should, among other things, prohibit consumer deception and the use of misleading statements on labels and ensure that labels provide the consumer with adequate information as to the identity and quality of the product. The Alcohol and Tobacco Tax and Trade Bureau (TTB) administers the FAA Act pursuant to section 1111(d) of the Homeland Security Act of 2002, codified at 6 U.S.C. 531(d). The Secretary has delegated the functions and duties in the administration and enforcement of these provisions to the TTB Administrator through Treasury Order 120–01, dated December 10, 2013.

Part 4 of the TTB regulations (27 CFR part 4) authorizes TTB to establish definitive viticultural areas and regulate the use of their names as appellations of origin on wine labels and in wine advertisements. Part 9 of the TTB regulations (27 CFR part 9) sets forth standards for the preparation and submission to TTB of petitions for the establishment or modification of American viticultural areas (AVAs) and lists the approved AVAs.

Definition

Section 4.25(e)(1)(i) of the TTB regulations (27 CFR 4.25(e)(1)(i)) defines a viticultural area for American wine as a delimited grape-growing region having distinguishing features as described in part 9 of the regulations and, once approved, a name and a delineated boundary codified in part 9 of the regulations. These designations allow vintners and consumers to attribute a given quality, reputation, or other characteristic of a wine made from grapes grown in an area to the wine's geographic origin. The establishment of AVAs allows vintners to describe more accurately the origin of their wines to consumers and helps consumers to identify wines they may purchase. Establishment of an AVA is neither an approval nor an endorsement by TTB of the wine produced in that area.

Requirements

Section 4.25(e)(2) of the TTB regulations (27 CFR 4.25(e)(2)) outlines the procedure for proposing an AVA and allows any interested party to petition TTB to establish a grape-growing region as an AVA. Section 9.12 of the TTB regulations (27 CFR 9.12) prescribes standards for petitions to establish or modify AVAs. Petitions to establish an AVA must include the following:

- Evidence that the area within the proposed AVA boundary is nationally or locally known by the AVA name specified in the petition;
- An explanation of the basis for defining the boundary of the proposed AVA;
- A narrative description of the features of the proposed AVA affecting viticulture, such as climate, geology, soils, physical features, and elevation, that make the proposed AVA distinctive and distinguish it from adjacent areas outside the proposed AVA boundary;
- The appropriate United States Geological Survey (USGS) map(s) showing the location of the proposed AVA, with the boundary of the proposed AVA clearly drawn thereon; and
- A detailed narrative description of the proposed AVA boundary based on USGS map markings.

Yucaipa Valley AVA Petition

TTB received a petition from the Yucaipa Valley Wine Alliance, proposing establishment of the "Yucaipa Valley" AVA. The proposed AVA is in San Bernardino County, California, and is not within any established AVA. The proposed AVA covers 36,467 acres and includes approximately 23 vineyards and two wineries. The petition identifies the distinguishing features of the proposed Yucaipa Valley AVA as its elevation and climate.

The proposed Yucaipa Valley AVA is a region of rolling hills in the foothills of the San Bernardino Mountains and includes the incorporated municipalities of Yucaipa and Calimesa and the unincorporated area of Oak Glen. Elevations within the proposed Yucaipa Valley AVA range from 2,000 to 4,600 feet. According to the petition, sunlight becomes more concentrated at high elevations. As a result, grapes receive a "tan," which results in thicker skin than the same varietals grown at lower elevations. The petition states that thick skins contribute to the color and tannin levels of the resulting wine and protect developing grapes from the dramatic climate shifts that can occur in high altitude vineyards.

By contrast, Yucaipa Ridge, which is located to the immediate north and northeast of the proposed Yucaipa Valley AVA, is a mountain range of steep slopes with elevations up to 2,000 feet higher than the proposed AVA. The region east of the proposed AVA has elevations similar to those within the proposed AVA but is not included in the proposed AVA because it is largely uninhabited and undeveloped, has few roads, is largely covered by a national forest that is not available for commercial viticulture, and does not have historical ties to the region known as the Yucaipa Valley. Cherry Valley and Beaumont are communities which extend from the southeast to the south of the proposed AVA and have elevations similar to those in the lower portions of the proposed AVA. However, these areas do not have the rolling hills found in the Yucaipa Valley. The San Timoteo Canyon extends from the southwest to the south of the proposed AVA and has elevations that are lower than those in the proposed AVA, ranging from 1,600 to 2,000 feet. To the west of the proposed AVA is the Redlands Valley, which also has lower elevations ranging from 1,100 to 2,000 feet.

The petition described the climate of the proposed Yucaipa Valley AVA as a hot, dry climate suitable for growing grape varietals such as Cabernet Sauvignon, Merlot, Zinfandel, Syrah, Malbec, Nebbiolo, Barbera, and Petite Sirah. Within the city of Yucaipa, the average high temperature is 78.3 degrees Fahrenheit (F), and the average low temperature is 48.7 degrees F. August is typically the warmest month, with an average high of 97 degrees F, and December is typically the coolest month, with an average minimum temperature of 40 degrees F. The record high temperature in the city of Yucaipa is 114 degrees F, while the record low temperature is 11 degrees F. The city of Yucaipa receives an average cumulative rainfall of 4.14 inches during the growing season of April through October. The average amount of precipitation for the city of Yucaipa during the winter months, November through March, is substantially greater, 15.35 inches, with an average of one inch being snow.

By contrast, the region to the west of the proposed AVA, is slightly warmer and drier, while the region to the north and northeast is cooler. The average high temperature in the city of Redlands, located west of the proposed AVA, is 79.6 degrees F, and the average

low temperature is 50.5 degrees F. August is typically the warmest month in Redlands, with an average high of 96 degrees F, and December is typically the coolest month, with an average minimum temperature of 40 degrees F. The record high temperature in Redlands is 118 degrees F, and the record low temperature is 18 degrees F. Redlands receives an average of 10.86 inches of winter precipitation, but seldom receives snow due to its warmer winter temperatures. In the community of Forest Falls, located to the north and northeast of the proposed AVA, the average high temperature is 61.5 degrees F, and the average low temperature is 40.9 degrees F. August is typically the warmest month in Forest Falls, with an average high of 81 degrees F. The record high temperature is 106 degrees F, and the record low temperature is 5 degrees F. The petition did not include temperature data from the regions to the northwest, east, and south of the proposed Yucaipa Valley AVA but did note that the city of Beaumont, located south and southeast of the proposed AVA, receives an average winter precipitation amount very similar to that of the proposed AVA, although it seldom has any snow.

Notice of Proposed Rulemaking and Comments Received

TTB published Notice No. 214 in the **Federal Register** on September 21, 2022 (87 FR 57657), proposing to establish the Yucaipa Valley AVA. In the notice, TTB summarized the evidence from the petition regarding the name, boundary, and distinguishing features for the proposed AVA. The notice also included information from the petition comparing the distinguishing features of the proposed AVA to the surrounding areas. For a detailed description of the evidence relating to the name, boundary, and distinguishing features of the proposed AVA, and for a detailed comparison of the distinguishing features of the proposed AVA to the surrounding areas, see Notice No. 214. In Notice No. 214, TTB solicited comments on the accuracy of the name, boundary, and other required information submitted in support of the petition. The comment period closed on November 21, 2022.

Comments Received

In response to Notice No. 214, TTB received twelve comments. Eight of the comments fully support the proposed AVA (comments 1, 2, 3, 4, 6, 7, 8, and 10). The comments state that, among other things, the proposed AVA could increase consumer awareness of wines from the area and promote economic development in the city of Yucaipa and in the other communities within and near the proposed AVA.

Two comments (comments 11 and 12) agree that the petition fulfilled TTB's requirements for the establishment of an AVA. These commenters, however, believe that before deciding to establish the AVA, TTB should conduct studies on the effects the AVA may have. Comment 11 believes TTB should study the effect of a potential AVA on ''property values, displaced ownership, or general effects on the market'' for occupants of the area, regardless of whether they are involved in the wine industry. Comment 12 suggests that TTB study the effects an AVA may have on water consumption because an AVA may promote increased agricultural activities and, therefore, increase water consumption in a region that has limited water resources.

Two comments (comments 5 and 9) oppose the proposed Yucaipa Valley AVA. Comment 5 states that the region is ''too small for such a venture,'' that the proposed vineyards are close to an earthquake fault line, that citizens do not want the vineyards depleting the ''already low'' local water table, and that establishing an AVA could increase traffic on small streets and raise the risk of drunk drivers. Comment 9 also opposes the proposed AVA due to the potential for increased traffic and drunk driving that could ''pose a serious threat to local drivers, pedestrians, and children in the community.'' Additionally, the commenter expresses concern that an AVA designation could raise property values and property taxes if the increased tourism also leads to a rise in the purchase of vacation homes in the area. The commenter also believes that small vineyards in the proposed AVA ''may have to restructure their winemaking processes to comply with this 85 percent standard required to attach the AVA label to their wines.'' The commenter asserts that such a move could be costly because it ''will require winemakers to develop new formulas, increase grape production, and adapt their facilities to accommodate the changes.''

TTB Response

TTB establishes AVAs to allow winemakers to better describe, in labeling and advertising, the origins of their wines and to allow consumers to better identify wines they may purchase. TTB reviews any petition submitted to it to establish an AVA and determines if the petition meets the regulatory criteria. Labeling and advertising of wines using an AVA is voluntary, and approving an AVA does not apply any new requirements on grape growers or winemakers in the region other than any addressed in the section ''Impact on Current Wine Labels.'' Any potential impacts on such things as economic growth or an increase in tourism would be because of the efforts of businesses or other interests in using the AVA name in promoting the region or the wines and because of consumer acceptance of wines from that area.

With respect to concerns about increased financial burdens for local wine industry members, as noted above, the use of an AVA name on a wine label is completely voluntary. Winemakers who believe it would be costly for them to comply with the 85 percent requirement for use of the AVA name can choose not to use the AVA name and can continue to operate their businesses as usual. Therefore, any additional costs incurred from the use of an AVA name on a wine label would be the result of the decisions of the individual winemaker and not the direct result of the rulemaking.

Finally, when establishing an AVA to allow winemakers to better describe the origins of their wines, TTB is not required to determine the possible effects of this administrative regulatory action on property values or the environment. Furthermore, TTB notes that comment 10, submitted by the Third District Supervisor of the San Bernardino County Board of Supervisors in support of the proposed AVA, acknowledges the importance of protecting water resources in the county and states that vineyards have little impact on the water reserves as they require far less water than other agricultural crops.

TTB Determination

After careful review of the petition and comments, TTB finds that the evidence provided by the petitioner supports the establishment of the Yucaipa Valley AVA. Accordingly, under the authority of the FAA Act, section 1111(d) of the Homeland Security Act of 2002, and parts 4 and 9 of the TTB regulations, TTB establishes the ''Yucaipa Valley'' AVA in San Bernardino County, California, effective 30 days from the publication date of this document.

Boundary Description

See the narrative description of the boundary of the Yucaipa Valley AVA in the regulatory text published at the end of this final rule.

Maps

The petitioner provided the required maps, and they are listed below in the regulatory text. The Yucaipa Valley AVA boundary may also be viewed on the AVA Map Explorer on the TTB website, at *https://www.ttb.gov/wine/ava-map-explorer.*

Impact on Current Wine Labels

Part 4 of the TTB regulations prohibits any label reference on a wine that indicates or implies an origin other than the wine's true place of origin. For a wine to be labeled with an AVA name or with a brand name that includes an AVA name, at least 85 percent of the wine must be derived from grapes grown within the area represented by that name, and the wine must meet the other conditions listed in 27 CFR 4.25(e)(3). If the wine is not eligible for labeling with an AVA name and that name appears in the brand name, then the label is not in compliance and the bottler must change the brand name and obtain approval of a new label. Similarly, if the AVA name appears in another reference on the label in a misleading manner, the bottler would have to obtain approval of a new label. Different rules apply if a wine has a brand name containing an AVA name that was used as a brand name on a label approved before July 7, 1986. See 27 CFR 4.39(i)(2) for details.

With the establishment of the Yucaipa Valley AVA, its name, ''Yucaipa Valley,'' will be recognized as a name of viticultural significance under § 4.39(i)(3) of the TTB regulations (27 CFR 4.39(i)(3)). The text of the regulations clarifies this point. Consequently, wine bottlers using the name ''Yucaipa Valley'' in a brand name, including a trademark, or in another label reference to the origin of the wine, will have to ensure that the product is eligible to use the AVA name as an appellation of origin.

The establishment of the Yucaipa Valley AVA will not affect any existing AVA. The establishment of the Yucaipa Valley AVA will allow vintners to use ''Yucaipa Valley'' as an appellation of origin for wines made primarily from grapes grown within the Yucaipa Valley AVA if the wines meet the eligibility requirements for the appellation.

Regulatory Flexibility Act

TTB certifies that this regulation will not have a significant economic impact on a substantial number of small entities. The regulation imposes no new reporting, recordkeeping, or other administrative requirement. Any benefit derived from the use of an AVA name would be the result of a proprietor's efforts and consumer acceptance of wines from that area. Therefore, no regulatory flexibility analysis is required.

Executive Order 12866

It has been determined that this final rule is not a significant regulatory action as defined by Executive Order 12866 of September 30, 1993, as amended. Therefore, no regulatory assessment is required.

Drafting Information

Karen A. Thornton of the Regulations and Rulings Division drafted this final rule.

Wine.

The Regulatory Amendment

For the reasons discussed in the preamble, TTB amends title 27, chapter I, part 9, Code of Federal Regulations, as follows:

PART 9—AMERICAN VITICULTURAL AREAS

■ 1. The authority citation for part 9 continues to read as follows:

Authority: 27 U.S.C. 205.

Subpart C—Approved American Viticultural Areas

■ 2. Add § 9.293 to read as follows:

§ 9.293 Yucaipa Valley AVA.

(a) *Name.* The name of the viticultural area described in this section is ''Yucaipa Valley''. For purposes of part 4 of this chapter, ''Yucaipa Valley'' is a term of viticultural significance.

(b) *Approved maps.* The 4 United States Geological Survey (USGS) 1:24,000 scale topographic maps used to determine the boundary of the Yucaipa Valley viticultural area are:

(1) Yucaipa, CA, 1996;

(2) Forest Falls, CA, 1996;

(3) Beaumont, CA, 1996; and

(4) El Casco, CA, 1967; photorevised 1979.

(c) *Boundary.* The Yucaipa Valley viticultural area is located in San Bernardino County, California. The boundary of the Yucaipa Valley viticultural area is as described as follows:

(1) The boundary begins on the Yucaipa map at the intersection of Highway 38/Mill Creek Road and the western boundary of section 13, T1S/R2W. From the beginning point, proceed northeast along Highway 38/Mill Creek Road to the 2,924-foot benchmark in section 13; then

(2) Proceed east in a straight line to the 3,800-foot elevation contour in section 18, T1S/R1W; then

(3) Proceed east-southeasterly along the 3,800-foot elevation contour, crossing onto the Forest Falls map, and continuing along the 3,800-foot elevation contour to its intersection with Wilson Creek along the eastern boundary of section 21, T1S/R1W; then

(4) Proceed northerly along Wilson Creek to its intersection with the 4,400-foot elevation contour in section 22, T1S/R1W; then

(5) Proceed south-southeasterly along the 4,400-foot elevation contour to its intersection with Birch Creek in section 26, T1S/RR1W; then

(6) Proceed northeasterly along Birch Creek to its intersection with the 5,200-foot elevation contour in section 23, T1S/R1W; then

(7) Proceed south-southeasterly along the 5,200-foot elevation contour to its intersection with the eastern branch of Little San Gorgonio Creek along the San Bernardino National Forest boundary in section 31, T1S/R1E; then

(8) Proceed southwesterly along the eastern branch of Little San Gorgonio Creek to its confluence with the main channel of Little San Gorgonio Creek near the gaging station in section 1, R1W/T2S; then

(9) Proceed southwesterly along the main channel of Little San Gorgonio Creek, crossing onto the Beaumont map, and continuing along the creek to its intersection with Orchard Avenue in section 22, T2S/R1W; then

(10) Proceed west along Orchard Street to the point where the road makes a sharp turn south and becomes locally known as Taylor Street along the western boundary of section 28, T2S/R1W; then

(11) Proceed south along Taylor Street to its intersection with Vineland Avenue in section 28, T2S/R1W; then

(12) Proceed west along Vineland Avenue to its intersection with an unnamed road known locally as Union Street along the western edge of the Beaumont map in section 29, T2S/R1W; then

(13) Proceed south along Union Street to its intersection with Woodland Avenue in section 29, T2S/R1W; then

(14) Proceed west along Woodland Avenue, crossing onto the El Casco map, where the road becomes known as Cherry Valley Boulevard, and continue west along Cherry Valley Boulevard to its intersection with Interstate 10 in the Tract Between San Jacinto and San Gorgonio, T2S/R2W; then

(15) Proceed southeasterly along Interstate 10 to its intersection with the

first unnamed, intermittent stream in section 32, T2S/R1W; then

(16) Proceed west in a straight line to the western boundary of section 31, T2S/R1W; then

(17) Proceed north along the western boundary of section 31 to the southernmost transmission line at the northwest corner of section 31, T2S/R1W; then

(18) Proceed northwesterly along the transmission line to its intersection with San Timoteo Canyon Road in the Tract Between San Jacinto and San Gorgonio, T2S/R2W; then

(19) Proceed northwesterly along San Timoteo Canyon Road to its intersection with the western boundary of the Tract Between San Jacinto and San Gorgonio, T2S/R2W; then

(20) Proceed north, then northeasterly along the boundary of the tract to its intersection with the southwestern corner of section 22, T2S/R2W; then

(21) Proceed north along the western boundary of section 22 to its intersection with the southeastern corner of section 16, T2S/R2W; then

(22) Proceed west along the southern boundaries of sections 16 and 17 to the southwestern corner of section 17, T2S/R2W; then

(23) Proceed north along the western boundary of section 17, crossing onto the Yucaipa map and continuing along the western boundary of section 17 to its intersection with the Riverside–San Bernardino County line along the northern boundary of section 17, T2S/R2W; then

(24) Proceed east along the Riverside–San Bernardino County line to its intersection with the eastern boundary of section 17, T2S/R2W; then

(25) Proceed north in a straight line to the boundary of the San Bernardino Land Grant, T2S/R2W; then

(26) Proceed west along the land grant boundary to its intersection with the eastern boundary of section 8, T2S/R2W; then

(27) Proceed north along the eastern boundaries of sections 8 and 5 to the intersection of the northeast corner of section 5 and an unnamed road known locally as Highview Drive, T2S/R2W; then

(28) Proceed northwest in a straight line to its intersection with Interstate 10 west of an unnamed light-duty road known locally as Knoll Road in the San Bernardino Land Grant, T2S/R2W; then

(29) Proceed northeast in a straight line to the northeast corner of section 32, T1S/R2W; then

(30) Proceed east along the northern boundaries of sections 33, 34, and 35 to the southwestern corner of section 25, T1S/R2W; then

(31) Proceed north along the western boundaries of sections 25, 24, and 13 to the intersection of the western boundary of section 13 and Highway 38/Mill Creek Road, T1S/R2W, which is the beginning point.

Signed: April 19, 2024.

Mary G. Ryan,

Administrator.

Approved: April 20, 2024.

Aviva R. Aron-Dine,

Acting Assistant Secretary (Tax Policy).

BILLING CODE 4810–31–P

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Parts 38 and 39

RIN 2900–AS06

Expansion of Prohibition of Interment or Memorialization of Persons Who Committed Certain Crimes

AGENCY: Department of Veterans Affairs.

ACTION: Final rule.

SUMMARY: The Department of Veterans Affairs (VA) is amending its regulations that prohibit interment or memorialization of persons who committed Federal or State capital crimes or certain sex offenses. This action is necessary to implement statutory amendments enacted on January 5, 2023. VA is required to prohibit interment or memorialization of a person who is found to have committed a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act but has not been convicted of such crime due to death or flight to avoid prosecution. This final rule also implements the statutory amendment to the sex offender prohibition to apply in conviction cases in which the person was sentenced to a term of 99 years or more. This final rule also makes corresponding amendments to the regulations that govern VA grant-funded cemeteries. The intended effect of this final rule is to comport the regulations with the amendments to the statutory bar to entitled benefits for individuals who commit certain criminal acts and to uphold the dignity and solemnity of VA national cemeteries as national shrines.

DATES: This rule is effective April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Artis Parker, Executive Director, Office of Field Programs, National Cemetery Administration, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420. Telephone: (314) 416–6304 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: This final rule amends three sections in 38 CFR parts 38 and 39 to implement statutory requirements enacted in section 6 of Public Law 117–355, the ''National Cemeteries Preservation and Protection Act of 2022'' (the Act), which amended 38 U.S.C. 2411 to expand the prohibition of memorialization or interment in a cemetery in the National Cemetery Administration (NCA) or Arlington National Cemetery of persons who committed certain crimes. Specifically, the amendment adds a new category of ''persons prohibited'' in sec. 2411(b)(5) to include a person who is found to have committed a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) but has not been convicted of such crime because they were not available for trial due to death or flight to avoid prosecution. The Act also amended sec. 2411(b)(4)(B) to bar interment or memorialization of a person convicted of a Federal or State crime causing the person to be a tier III sex offender who for such crime was sentenced to a period of 99 years or more, whereas the statute previously only included individuals sentenced to a minimum of life imprisonment.

To implement the new statutory requirements, VA is amending 38 CFR 38.617, 38.618, and 39.10. These sections include references to the statutory authority to bar eligible individuals who by their criminal acts are prohibited from receiving memorialization benefits and interment in VA national and VA grant-funded cemeteries. Specific amendments to §§ 38.617, 38.618, and 39.10 are as follows.

VA is amending 38 CFR 38.617(a)(4) by inserting the words ''or to a period of 99 years or more'' after ''life imprisonment'' and adding new paragraph (a)(5) to implement the new category of persons to be barred under 38 U.S.C. 2411(b)(5). Implementing this change will not affect VA's current adjudication or appeals processes for interment and memorialization requests.

VA is also making a couple of technical corrections in § 38.617. First, VA is revising the section heading from ''Prohibition of interment or memorialization of persons who have been convicted of Federal or State capital crimes or certain sex offenses'' to ''Prohibition of interment or

memorialization of persons who committed certain Federal or State crimes'' to capture those persons who committed certain Federal or State crimes but avoided conviction due to death or flight to avoid prosecution. Second, VA is amending paragraph (b) to clarify that the prohibition referred to in newly added paragraph (a)(5), which applies to a person found to have committed a Federal or State crime that would cause the person to be a tier III sex offender but avoided conviction due to death or flight to avoid prosecution, is not contingent on receipt by the Secretary of Veterans Affairs or any other VA official of notice from any Federal or State official.

VA is revising § 38.618 by revising the heading to include the words ''or certain sex offenses''. Section 38.618 amendments revise paragraphs (a) through (c), (e) and (f) by adding the words ''or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*)'' to include the new category of prohibited persons. Implementing this additional basis for the statutory bar to apply to interment and memorialization requests will not result in a change to VA's adjudication or appeals processes.

VA is also making a technical correction updating the reference to ''VA regional counsel'' to ''VA district counsel'' in § 38.618(a).

Finally, changes in sec. 2411 affect the application of that statute for cemeteries that receive a grant under 38 U.S.C. 2408. Specifically, sec. 2408(e) conditions any grant on the grantee's prohibition of interment or memorialization of a person described in sec. 2411(b). As a result, VA will amend § 39.10(b)(4) by inserting the words ''or to a period of 99 years or more'' after ''life imprisonment,'' and VA will add new paragraph (b)(5) to implement the new category of persons to be barred under 38 U.S.C. 2411(b)(5). These amendments implementing new statutory requirements that affect VA grant-funded cemeteries will not affect the cemetery grant process. VA defers to State officials to establish procedures for applying the statutory bar to benefits under sec. 2411(b), in accordance with sec. 2408(e).

Administrative Procedure Act

The Secretary of Veterans Affairs finds that there is good cause under the provisions of 5 U.S.C. 553(b)(B) to publish this rule without prior opportunity for public comment and dispense with the 30-day delay for the effective date of a rule under 5 U.S.C. 553(d)(3). Pursuant to sec. 553(b)(B) of the Administrative Procedure Act, general notice and opportunity for public comment are not required with respect to a rulemaking when an ''agency for good cause finds (and incorporates the finding and a brief statement of reasons therefor in the rules issued) that notice and public procedure thereon are impracticable, unnecessary, or contrary to the public interest.'' Pursuant to sec. 553(d)(3), an agency may ''for good cause found'' dispense with the 30-day delay in the effective date of a rule.

Public comment is unnecessary for this rulemaking because this final rule merely incorporates the statutory text enacted by Congress, which is already in effect, and makes no other changes to existing processes for applying the bar to interment and memorialization requests. *See Hadson Gas Sys.* v. *FERC,* 75 F.3d 680, 684–85 (D.C. Cir. 1996) (holding that notice and public comment were not necessary when an agency removed regulations which had been rendered obsolete by statutory changes). For the same reason, VA concludes that there is good cause for the rule to be effective immediately under 5 U.S.C. 553(d)(3).

Executive Orders 12866, 13563 and 14094

Executive Orders 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages; distributive impacts; and equity). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 (Modernizing Regulatory Review) supplements and reaffirms the principles, structures, and definitions governing contemporary regulatory review established in Executive Orders 12866 and 13563. The Office of Information and Regulatory Affairs has determined that this rulemaking is not a significant regulatory action under Executive Order 12866, as amended by Executive Order 14094. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at *www.regulations.gov.*

Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601–612, is not applicable to this rulemaking because notice of proposed rulemaking is not required. *See* 5 U.S.C. 601(2), 603(a), 604(a).

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies, before promulgating any general notice of proposed rulemaking, prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. This requirement is not applicable to this rulemaking because a general notice of proposed rulemaking is not required. *See* 2 U.S.C. 1532.

Paperwork Reduction Act

This final rule contains no provisions constituting a collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521).

Congressional Review Act

Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (known as the Congressional Review Act) (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not satisfying the criteria under 5 U.S.C. 804(2).

List of Subjects

38 CFR Part 38

Administrative practice and procedure, Cemeteries, Claims, Crime, Veterans.

38 CFR Part 39

Cemeteries, Grant programs-veterans, Veterans.

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, approved and signed this document on April 10, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Luvenia Potts,

Regulation Development Coordinator, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs amends 38 CFR parts 38 and 39 as set forth below:

PART 38—NATIONAL CEMETERIES OF THE DEPARTMENT OF VETERANS AFFAIRS

■ 1. The authority citation for part 38 continues to read as follows:

Authority: 38 U.S.C. 107, 501, 512, 2306, 2400, 2402, 2403, 2404, 2407, 2408, 2411, 7105.

■ 2. Amend § 38.617 by:
■ a. Revising the section heading;
■ b. Revising paragraph (a)(4);
■ c. Adding paragraph (a)(5); and
■ d. Revising paragraph (b).

The revisions and addition read as follows:

§ 38.617 Prohibition of interment or memorialization of persons who committed certain Federal or State crimes.

(a) * * *

(4) A person identified to the Secretary of Veterans Affairs, by the United States Attorney General, in the case of a Federal crime, or by an appropriate State official, in the case of a State crime, as an individual who has been convicted of a Federal or State crime causing the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901, *et seq.*); who, for such crime, is sentenced to a minimum of life imprisonment or to a period of 99 years or more; and whose conviction is final (other than a person whose sentence was commuted by the President or Governor of a State).

(5) A person found, under procedures specified in § 38.618, to have committed a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) but avoided conviction of such crime by reason of unavailability for trial due to death or flight to avoid prosecution.

(b) *Notice.* The prohibition referred to in paragraphs (a)(3) and (5) of this section is not contingent on receipt by the Secretary of Veterans Affairs or any other VA official of notice from any Federal or State official.

* * * * *

■ 3. Amend § 38.618 by revising the section heading, paragraphs (a), (b)(1), (c)(1), (e)(1) and (2), and (f) to read as follows:

§ 38.618 Findings concerning commission of a capital crime or certain sex offenses where a person has not been convicted due to death or flight to avoid prosecution.

(a) *Inquiry.* With respect to a request for interment or memorialization, if a cemetery director has reason to believe that a deceased individual who is otherwise eligible for interment or memorialization may have committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*), but avoided conviction of such crime by reason of unavailability for trial due to death or flight to avoid prosecution, the cemetery director, with the assistance of the VA district counsel, as necessary, will initiate an inquiry seeking information from Federal, State, or local law enforcement officials, or other sources of potentially relevant information. After completion of this inquiry and any further measures required under paragraphs (c) through (f) of this section, the cemetery director will make a decision on the request for interment or memorialization in accordance with paragraph (b), (e), or (g) of this section.

(b) * * *

(1) If, after conducting the inquiry described in paragraph (a) of this section, the cemetery director determines that there is no clear and convincing evidence that the deceased committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) of which he or she was not convicted due to death or flight to avoid prosecution, and the deceased remains otherwise eligible, the cemetery director will make a decision approving the interment or memorialization.

* * * * *

(c) * * *

(1) If, after conducting the inquiry described in paragraph (a) of this section, the cemetery director determines that there appears to be clear and convincing evidence that the deceased has committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) of which he or she was not convicted by reason of unavailability for trial due to death or flight to avoid prosecution, the cemetery director will provide the personal representative of the deceased with a written summary of the evidence of record and a written notice of procedural options.

* * * * *

(e) * * *

(1) If the cemetery director determines that it has not been established by clear and convincing evidence that the deceased committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) of which he or she was not convicted due to death or flight to avoid prosecution, and the deceased remains otherwise eligible, the cemetery director will make a decision approving interment or memorialization; or

(2) If the cemetery director believes that there is clear and convincing evidence that the deceased committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) of which he or she was not convicted due to death or flight to avoid prosecution, the cemetery director will forward a request for a finding on that issue, together with the cemetery director's recommendation and a copy of the record to the Under Secretary for Memorial Affairs.

(f) *Finding by the Under Secretary for Memorial Affairs.* Upon receipt of a request from the cemetery director under paragraph (e) of this section, the Under Secretary for Memorial Affairs will make a finding concerning whether the deceased committed a Federal or State capital crime or a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) of which he or she was not convicted by reason of unavailability for trial due to death or flight to avoid prosecution. The finding will be based on consideration of the cemetery director's recommendation and the record supplied by the cemetery director.

* * * * *

PART 39—AID FOR THE ESTABLISHMENT, EXPANSION, AND IMPROVEMENT, OR OPERATION AND MAINTENANCE, OF VETERANS CEMETERIES

■ 4. The authority citation for part 39 continues to read as follows:

Authority: 38 U.S.C. 101, 501, 2408, 2411, 3765.

■ 5. Amend § 39.10 by revising paragraph (b)(4) and adding paragraph (b)(5) to read as follows:

§ 39.10 Cemetery requirements and prohibitions and recapture provisions.

* * * * *

(b) * * *

(4) Who has been convicted of a Federal or State crime causing the

person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901, *et seq.*); who, for such crime, is sentenced to a minimum of life imprisonment or to a period of 99 years or more; and whose conviction is final (other than a person whose sentence was commuted by the President or Governor of a State).

(5) Who has been found by an appropriate State official, as defined in § 38.600(a) of this part, under procedures to be established by the State, to have committed a Federal or State crime that would cause the person to be a tier III sex offender for purposes of the Sex Offender Registration and Notification Act (34 U.S.C. 20901 *et seq.*) but avoided conviction of such crime by reason of unavailability for trial due to death or flight to avoid prosecution.

BILLING CODE 8320–01–P

POSTAL SERVICE

39 CFR Part 111

Electronic Verification System Migrated to USPS Ship

AGENCY: Postal Service™.

ACTION: Final rule.

SUMMARY: The Postal Service is amending *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM®) to require the use of USPS Ship™ (aka Package Platform) for the acceptance and payment of all commercial domestic and international parcel mailings and discontinue the use of the Electronic Verification System (eVS®).

DATES: *Effective Date:* February 1, 2025.

FOR FURTHER INFORMATION CONTACT: Diane Smith at (202) 268–8091, Vicki Bosch (202) 268–4978 or Garry Rodriguez at (202) 268–7281.

SUPPLEMENTARY INFORMATION: On November 28, 2023, the Postal Service published a notice of proposed rulemaking (88 FR 83056–83062) to require the use of USPS Ship. In response to the proposed rule, the Postal Service received two responses containing multiple comments, as follows:

Comment: One commenter recommended the final rule clarify that USPS Ship will replace only eVS and that all other payment and acceptance channels including Click-N-Ship, ePostage, PC Postage, IBI postage meters, non-eVS (BMEU entered and permit imprint) will be unaffected unless specifically addressed.

Response: All commercial packages will be verified through USPS Ship.

Comment: One commenter recommended the final rule clarify that for purposes of the migration from eVS to USPS Ship, negotiated service agreement (NSA) provisions governing payment and acceptance processes will not be changed, rather USPS Ship will be deemed a successor system to eVS, and that the migration will not otherwise modify preexisting contractual payment and acceptance processes.

Response: In Terms of NSAs, customers are expected to transition to the successor system which is USPS Ship.

Comment: One commenter recommended the final rule clarify any planned changes in the refund and disputes processes to ensure quality control and quality assurance for fee assessment in connection with the migration to USPS Ship.

Response: The Postal Service has the USPS Ship User Guide, which will be available on PostalPro at *https://postalpro.usps.com,* and mailers should reference the document for all information regarding USPS Ship including questions for refunds and disputes.

Comment: Two commenters expressed concern over the implementation date. One commenter stated they appreciate the need to identify an aggressive target implementation date, in this case February 1, 2025. However, past experiences with comparable payment systems migrations underscore the countervailing importance of setting and measuring incremental progress against intermediate benchmarks. This is especially important for competitive package products offered in a highly competitive marketplace. Another commenter stated that there are concerns that the planned schedule will not allow sufficient time for the Postal Service's systems to stabilize or for shippers to make necessary system changes in response.

Response: While the Postal Service works with the industry toward meeting the target implementation date, we will consider if any extensions to the date are needed.

The Postal Service is requiring the use of USPS Ship for the acceptance and payment of all commercial domestic and international parcel mailings. USPS Ship combines the attributes captured from scan data and manifested attributes to ensure customers are charged accurate postage. For consolidators, if there are adjustments to inaccurate original postage, those individual package costs can be provided to the mail owners.

USPS Ship offers online enrollment, individual package pricing, automated adjustments, online reports, and data feeds via IV–MTR. The automated capture enables individual package attributes to be compared to manifest data to validate accurate postage. Shortpaid (postage due) or overpaid (refunds) will be assessed upon package delivery and applied to the Enterprise Payment Account (EPA) on file.

Requirements to participate in USPS Ship are as follows:

- Customers must enroll in USPS Ship and be assigned a unique Mailer Identifier (MID) for use on packages.
- Customers must submit valid rate ingredients for payment for each package within their shipment.
- Customers must upload manifests to USPS using the Parcel Data Exchange or Electronic Interchange (SFTP or AS2) for payment as noted in eVS Pub 205.
- Customers must pay postage through an Enterprise Payment Account.
- Packages must include a Tracking Number that is unique for 120 days.
- Customers must ship the following products:
  - Domestic Products—Priority Mail Express®, Priority Mail®, USPS Ground Advantage™ (formerly First-Class Package® Service), Bound Printed Matter, Media Mail®, Library Mail, USPS Marketing Mail® parcels, USPS Marking Mail Nonprofit parcels, Parcel Select® Destination Entry, USPS Connect™ Local, USPS Connect Local Mail, and USPS Returns®.
  - International Products—Global Express Guaranteed®, Priority Mail Express International®, Priority Mail International®, and First-Class Package International Service®.

Manifest Mailing Operations in USPS Ship

Mailers and shippers who meet program requirements must ship parcels using the following procedure:

1. The mailer/parcel shipper transmits an electronic manifest to the Postal Service detailing all USPS Ship parcels to be deposited into the mailstream on or before the date of mailing.
2. USPS Ship will validate the electronic manifest and calculate postage based on rate ingredients.
3. Postage is charged to the EPA on the day that the manifest was submitted and processed. Transactions and manifest summary information can be

accessed through the online reports or data feeds.

4. The mailer/parcel shipper transports and enters the mail at the appropriate origin or destination entry (NDC/RP&DC, SCF/RP&DC, DHub, DDU or S&DC) Postal Service facility.

5. As parcels are deposited at the origin entry facilities, packages are run across Mail Processing Equipment (MPE) and captured attributes (weight, dimensions, entry, packaging) are transmitted to USPS Ship. The captured attributes are compared to manifested attributes to ensure the correct postage has been paid. If there are discrepancies, shortpaid/overpaid will be applied to the EPA.

6. As parcels are deposited at the DDU or DS&DC facilities, packages are sampled, and the sampled attributes are compared to the manifested attributes. A Statistical Quality Assessment is performed, and additional postage will be charged to the EPA.

7. Assessment details can be accessed through the online reports or data feeds.

Postage Assessments

USPS Ship will collect postage daily based on the electronic manifest(s) received that day from mailers. In addition, postage will be calculated and assessed for the following types of errors when detected:

- *Census Verification* occurs for packages that are automatically captured while packages are processed on MPE. The individual package information captured may include the weight, dimensions, USPS packaging, ZIP Code of scan, and destination ZIP Code. The captured information will be compared to the manifest information after the delivery scan for the package. The correct postage will be assessed, additional postage will be charged or refunded to reflect the accurate postage for the individual packages.
  - *Misshipped* is include in the Census Verification. The manifest is matched to a scan and the Destination ZIP Code and Destination Rate Indicator of the is compared to the Mail Direction File (MDF) to determine the correct Dropship location. The ZIP Code of the first scan event is compared to the expected Dropship location indicated in the MDF. If the ZIP Code of the first scan event does not match the expected Dropship location, then a Misshipped error is logged, and additional postage will be charged.
- *Unmanifested packages* are identified by scanned packages without a manifest for payment in USPS Ship.
- *Duplicate packages* are identified by scanned packages with duplicate barcodes without a payment for each package in USPS Ship.
- *IMpb noncompliance* is measured using the same evaluation and established thresholds for the month period as previously required by eVS.
- *Presort* is measured by the 24-hour period to meet presort minimums by mail class as previously required by eVS.
- *Statistical Quality Assessment (SQA)* occurs for Parcel Select, Bound Printed Matter, USPS Marketing Mail packages that are entered and claimed at Destination Delivery Unit (DDU) prices. This verification is similar to the Postage Adjustment Factor (PAF), but is limited to DDU or DS&DC entered packages. If the postage for the packages that are sampled at a DDU or DS&DC compared to the manifested data, exceeds 1.5% underpayment, the percentage in error will be multiplied by the total postage for the mail class for the month and this calculated additional postage charge will be assessed. Only packages that are prompted for sampling will be part of this verification, any non- prompted samples will be part of the Census Verification.
- Content Audit is measured using the same business rules as previously required by eVS.

Postage Payment

Commercial shippers entering at a Business Mail Entry Unit (BMEU) with small quantities may use Click-N-Ship or USPS Ship to enter their parcels. Otherwise, payment applies as follows:

- Parcel shippers/consolidators and mailers using permit imprint as the payment method and claiming Commercial or NSA prices that are not using Click-N-Ship are required to use USPS Ship for postage manifesting and payment.
- Parcel shippers/consolidators and mailers who use USPS APIs to create labels and submit their manifest files are also required to enroll in USPS Ship.

Postage Payment Schedule

- Daily—Postage for manifest files is charged the day of the manifest receipt/processing. The census verification is charged/refunded the day of delivery.
- Monthly—Unmanifested, duplicates, IMpb, presort, content audit and SQA are assessed monthly and charged on the 15th of the following month.

Retrieving Data

USPS Ship enables customers to view manifest and assessment data by accessing online reports or subscribing to IV–MTR data feeds.

- *Accessing Online Reports*—The Online Dashboard provides summary details for manifests that were charged and package level details for postage adjustments. Customers should complete the following to access the USPS Ship Reports:

- Login to the Business Customer Gateway (BCG)
- Click ''Go to Service'' button on the USPS Ship Report service within Manage Services menu
- Click ''Summary Dashboard''
- Monthly Activity Report will be displayed
- Click ''Reports'' dropdown menu to view and select from the list of available reports
  - Reports can be filtered, sorted, and exported in Excel and CSV formats

- Subscribing to IV–MTR Data Feeds—IV–MTR allows customer to customize to select and organize fields to be included, chose frequency, choose file format, and choose delivery location. Customers should complete the following to setup IV–MTR subscriptions:

- Login to BCG
- Click ''Go to Service'' button on the Informed Visibility service within Manage Services Menu
- Click ''Create and Manage Data Feeds''
- Select Data Feed Type
- Select File Format
- Select Server for Data Feed Delivery
- Select Frequency of Data Feed Delivery
- Define Data Fields of Data Feed
  - Detailed Instructions for accessing IV–MTR can be found under Applying for Access to Informed Visibility Mail Tracking and Reporting on PostalPro. Detailed instructions for customizing data feeds can be found under 'Orientation Training for Informed Visibility Mail Tracking and Reporting' on PostalPro

eVS Discontinued

Due to the ability to automatically capture package attributes, and the new system infrastructure, the Postal Service will discontinue eVS.

We believe the proposed revisions will provide customers with a more efficient mailing experience.

The Postal Service adopts the described changes to *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM), incorporated by reference in the *Code of Federal Regulations.*

We will publish an appropriate amendment to 39 CFR part 111 to reflect these changes.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

Accordingly, 39 CFR part 111 is amended as follows:

PART 111—[AMENDED]

■ 1. The authority citation for 39 CFR part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 13 U.S.C. 301–307; 18 U.S.C. 1692–1737; 39 U.S.C. 101, 401–404, 414, 416, 3001–3018, 3201–3220, 3401–3406, 3621, 3622, 3626, 3629, 3631–3633, 3641, 3681–3685, and 5001.

■ 2. Revise the *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM) as follows:

Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)

* * * * *

200 Commercial Mail Letters, Flats, and Parcels

* * * * *

202 Elements on the Face of a Mailpiece

* * * * *

3.0 Placement and Content of Mail Markings

* * * * *

3.8 Exceptions to Markings

Exceptions are as follows:

* * * * *

[Revise the last sentence of the introductory text of item b to read as follows:]

b. * * * Mail manifested using the USPS Ship system under 705.2.0 must bear the basic marking and the additional marking ‘‘USPS Ship’’ in two places:

* * * * *

6.0 Barcode Placement for Parcels

* * * * *

6.3 Intelligent Mail Barcodes

[Revise the first sentence of 6.3 to read as follows:]

Intelligent Mail barcodes (IMb) do not meet barcode eligibility requirements for parcels and do not qualify for any barcode-related prices for parcels, but one barcode may be included only in the address block on a parcel, except on USPS Ship parcels. * * *

* * * * *

203 Basic Postage Statement, Documentation, and Preparation Standards

1.0 Postage Statements

1.1 Completing Postage Statements

[Revise the first sentence under 1.1 to read as follows:]

Unless manifested using USPS Ship under 705.2.9, any mailing claiming a discount and all permit imprint mailings must be accompanied by a postage statement completed and signed by the mailer (in duplicate if the mailer wants a receipted copy). * * *

* * * * *

2.0 Documentation

2.1 Basic Documentation Standards

[Revise the second sentence of 2.1 to read as follows:]

* * * Supporting documentation (see 3.0) of postage is required for each mailing except for USPS Ship mailings under 705.2.9, or unless the correct price is affixed to each piece or each piece is of identical weight and the pieces are separated by price and when applicable zone (including separation by In-County and Outside-County prices and destination entry for Periodicals) when presented for acceptance. * * *

* * * * *

5.0 Letter and Flat Trays

* * * * *

5.13 Line 3 (Office of Mailing or Mailer Information Line)

[Revise the text of 5.13 to read as follows:]

Line 3 (origin line showing office of mailing or mailer information) must be the bottom line of required information unless the sack/flat tray contains mail manifested using the USPS Ship under 705.2.9. Line 3 must show either the city and state of the entry Post Office or the mailer‘s name and the city and state of the mailer‘s location. It is recommended that the mailer‘s name also appear with the city and state of the entry Post Office. As an alternative to adding a fourth line for USPS Ship mailings as required by 5.6, ‘‘USPS Ship’’ may appear as the first element on Line 3.

* * * * *

6.0 Sacks

* * * * *

6.4 USPS Ship System

[Revise the text of 6.4 to read as follows:]

All sacks containing parcels prepared and identified using the USPS Ship program under 705.2.9 must show ‘‘USPS Ship’’ directly below Line 3 using the same size and lettering used for Line 3. As an option, ‘‘USPS Ship’’ may be placed as the first element on Line 3.

* * * * *

204 Barcode Standards

* * * * *

2.0 Standards for Package and Extra Service Barcodes

2.1 Intelligent Mail Package Barcode

* * * * *

2.1.8 Compliance Quality Thresholds

* * * * *

Exhibit 2.1.8 IMpb Compliance Quality Thresholds

Compliance Categories Compliance Codes Validations Compliance Thresholds

* * * * *

[Revise the fifth bullet under the ‘‘Validations’’ column to read as follows:]

• Customers using USPS Ship must provide the address information before the Arrival at Unit (07) Event Scan and non-USPS Ship customers at the time of mailing.

* * * * *

210 Commercial Mail Priority Mail Express

213 Prices and Eligibility

1.0 Prices and Fees

* * * * *

1.2 Determining Single-Piece Weight

[Revise the first sentence of 1.2 to read as follows:]

When determining single-piece weight, express all weights in decimal pounds rounded off to two decimal places (except mailers using USPS Ship). * * *

1.3 Commercial Prices

Priority Mail Express commercial prices are less than Priority Mail Express retail prices (see Notice 123—Price List). These prices are available to:

* * * * *

[Revise the text of item d to read as follows:]

d. Customers who pay postage with a permit imprint using the USPS Ship system to document and pay postage (see 705.2.9).

* * * * *

214 Postage Payment and Documentation

* * * * *

1.0 Basic Standards for Postage Payment Options

* * * * *

1.2 Commercial Prices

Commercial Priority Mail Express postage may be paid with:

* * * * *

[Revise the text of item d to read as follows:]

d. Permit imprint through the USPS Ship system under 705.2.9.

* * * * *

220 Commercial Mail Priority Mail

223 Prices and Eligibility

1.0 Prices and Fees

* * * * *

1.3 Cubic

1.3.1 Cubic Eligibility

* * * * *

[Revise the second sentence of item b to read as follows:]

b. Permit imprint customers. * * * Customers are required to use the USPS Ship program or submit an electronic postage statement with a computerized manifest under 705.2.0. * * *

* * * * *

1.7 Determining Single-Piece Weight

[Revise the third and fourth sentence in 1.7 to read as follows:]

* * * Except for mailers using USPS Ship, express all single-piece weights in decimal pounds rounded off to two decimal places.

Mailers using USPS Ship may round off to four decimals, and USPS Ship will automatically round to the appropriate decimal place. * * *

* * * * *

240 Commercial Mail USPS Marketing Mail

243 Prices and Eligibility

1.0 Prices and Fees

* * * * *

1.4 Fees

1.4.1 Presort Mailing Fee

[Revise the third sentence in 1.4.1 to read as follows:]

* * * For mail manifested using the USPS Ship System under 705.2.9, only one annual mailing fee, paid at the Post Office of account where the permit imprint account is held, is required regardless of the number of Post Offices of mailing. * * *

* * * * *

244 Postage Payment and Documentation

1.0 Basic Standards for Postage Payment

[Revise the third sentence in 1.0 to read as follows:]

* * * Mail manifested using the USPS Ship system under 705.2.9 must be paid with a permit imprint. * * *

* * * * *

250 Commercial Mail Parcel Select

253 Prices and Eligibility

1.0 Prices and Fees

* * * * *

1.3 Computing Postage

1.3.1 Determining Single-Piece Weight

[Revise the third and fourth sentence in 1.3.1 to read as follows:]

* * * Except for mailers using the USPS Ship system or preparing Parcel Select lightweight mailings, when determining single-piece weight for Parcel Select mailpieces, express all weights in decimal pounds rounded off to two decimal places. Mailers using USPS Ship may round off to four decimals, and USPS Ship will automatically round to the appropriate decimal place. * * *

* * * * *

254 Postage Payment and Documentation

1.0 Basic Standards for Postage Payment

1.1 Postage Payment Options

1.1.1 Parcel Select Destination Entry

Parcel Select destination entry postage may be paid as follows:

* * * * *

[Revise the first and second sentence of item c to read as follows:]

c. Except for plant-verified drop shipments (see 705.17.0), USPS Ship shipments (see 705.2.9), and metered mail drop shipments (see 705.19.0), the mailer must have a meter license or permit imprint authorization at the destination facility parent Post Office for mailings deposited for entry at a DNDC/DRP&DC or ASF/RP&DC, at a DSCF/DRP&DC, or at the parent Post Office of a DDU or DS&DC. Except for manifested mail using USPS Ship under 705.2.9, postage and fees are paid to the Post Office that verifies the mailings. * * *

* * * * *

2.0 Mailing Documentation

2.1 Completing Postage Statements

[Revise the first sentence in 2.1 to read as follows:]

All metered and permit imprint mailings of 50 pieces or more, except manifested mail using USPS Ship under 705.2.9, must be accompanied by a postage statement completed and signed by the mailer (in duplicate if the mailer wants a receipted copy). * * *

* * * * *

256 Enter and Deposit

* * * * *

2.0 Deposit

* * * * *

2.5 Mail Separation and Presentation of Destination Entry Mailings

[Revise the second and third sentence in 2.5 to read as follows:]

* * * Mailers may deposit only PVDS and USPS Ship mailings at a destination delivery unit not co-located with a Post Office or other Postal Service facility with a business mail entry unit. If authorized under 705.7.0, mailers may commingle Parcel Select with other approved parcel mail using USPS Ship. * * * Mailers presenting destination entry mailings to the Postal Service must meet the following requirements:

[Revise the last sentence of item a to read as follows:]

a. * * * If USPS Ship is used, include the marking ''USPS Ship'' on each piece as described in 604.5.0.

* * * * *

[Revise the last sentence of items c and d to read as follows:]

c. * * * USPS Ship mailings do not require these forms.

d. * * * For PVDS mailings and USPS Ship mailings, separate mailings for deposit at different destination Postal Service facilities.

* * * * *

260 Commercial Mail Bound Printed Matter

263 Prices and Eligibility

1.0 Prices and Fees

* * * * *

1.2 Presorted and Carrier Route Bound Printed Matter

* * * * *

1.2.5 Destination Entry Mailing Fee

[Revise the second sentence of 1.2.5 to read as follows:]

* * * For BPM Flats destination entry mail manifested using USPS Ship under 705.2.9, only one annual BPM Flats destination entry mailing fee, paid at the Post Office where the USPS Ship permit imprint account is held, is required regardless of the number of Postal Service facilities where mailings are verified. * * *

* * * * *

265 Mail Preparation

* * * * *

8.0 Preparing Presorted Parcels

* * * * *

8.2 Preparing Irregular Parcels Weighing Less Than 10 Pounds

8.2.1 Required Bundling

* * * Each physical bundle must contain at least two addressed pieces (except mixed ADC/RP&DC bundles). Bundling also is subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement whether they applied the piece count, weight, or both, except for USPS Ship mailings prepared under 705.2.9.

* * * * *

8.2.3 Required Sacking

* * * Sacking also is subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement whether they applied the piece count or weight except for USPS Ship mailings prepared under 705.2.9.

* * * * *

8.4 Preparing Machinable Parcels Not Claiming DNDC Prices

8.4.1 Required Sacking

* * * Sacking also is subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement whether they applied the piece count or weight except for USPS Ship mailings prepared under 705.2.9.

* * * * *

8.5 Preparing Machinable Parcels Claiming DNDC Prices

8.5.1 Required Sacking

* * * Sacking also is subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement whether they applied the piece count or weight except for USPS Ship mailings prepared under 705.2.9.

* * * * *

266 Enter and Deposit

* * * * *

3.0 Destination Entry

* * * * *

3.2 Minimum Volume

A destination entry price BPM mailing is subject to these minimum volume requirements:

* * * * *

[Revise the first sentence of item f to read as follows:]

f. When Bound Printed Matter presorted parcel mailings are presented together under the USPS Ship system, a mailer may use the total piece count for all line items to all destinations reported within the 24-hour mailing period defined in 705.2.9. * * *

* * * * *

270 Commercial Mail Media Mail and Library Mail

* * * * *

274 Postage Payment and Documentation

1.0 Basic Standards for Postage Payment

[Revise the second sentence of 1.0 to read as follows:]

* * * Mail manifested using USPS Ship under 705.2.9 must be paid with a permit imprint. * * *

* * * * *

275 Mail Preparation

* * * * *

6.0 Preparing Media Mail and Library Mail Parcels

* * * * *

6.2 Preparing Machinable Parcels

6.2.1 Required Sacking

* * * Sacking also is subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement which sacking method was used except for USPS Ship mailings prepared under 705.2.9.

* * * * *

6.3 Preparing Irregular Parcels

6.3.1 Required Bundling

* * * Bundling is also subject to these conditions:

* * * * *

c. Mailers must note on the postage statement which sacking method was used except for USPS Ship mailings prepared under 705.2.9.

* * * * *

6.3.3 Required Sacking

* * * Sacking is also subject to these conditions:

* * * * *

[Revise the text of item c to read as follows:]

c. Mailers must note on the postage statement which sacking method was used except for USPS Ship mailings prepared under 705.2.9.

* * * * *

276 Enter and Deposit

1.0 Verification and Deposit

[Revise the first sentence of 1.0 to read as follows:]

Except for USPS Ship shipments (see 705.2.9) or metered mail drop shipments (see 705.20.0), all presorted mailings must be presented for verification and acceptance at the Post Office where the permit or license is held. * * *

* * * * *

280 Commercial Mail USPS Ground Advantage—Commercial

* * * * *

284 Postage Payment and Documentation

* * * * *

2.0 Postage Payment for USPS Ground Advantage—Commercial

2.1 Permit Imprint Postage

[Revise the second sentence of 2.1 to read as follows:]

* * * All mail manifested using USPS Ship under 705.2.9 must be paid using a permit imprint. * * *

* * * * *

500 Additional Services

* * * * *

507 Mailer Services

* * * * *

3.0 Hold For Pickup

* * * * *

3.2 Basic Information

* * * * *

3.2.2 Basic Eligibility

It is also available with commercial mailings of Priority Mail Express presented under 213.4.2 or 213.4.3, Priority Mail, USPS Ground Advantage—Commercial, Parcel Select Lightweight, and Bound Printed Matter parcels, when:

* * * * *

[Revise the last sentence of item b to read as follows:]

b. * * * If the pieces are not of identical weight, then either the exact postage must be affixed to each piece or postage must be paid with permit imprint using USPS Ship (705.2.9).

* * * * *

508 Recipient Services

* * * * *

7.0 Premium Forwarding Services

* * * * *

7.3 Premium Forwarding Service Commercial

* * * * *

7.3.3 Conditions

* * * PFS-Commercial service is subject to these conditions:

* * * * *

[Revise the text of item b to read as follows:]

b. The annual enrollment fee and applicable Priority Mail Express or Priority Mail postage for each shipment container is paid using an USPS Ship account linked to the Enterprise Payment System (EPS).

* * * * *

600 Basic Standards for All Mailing Services

* * * * *

604 Postage Payment Methods and Refunds

* * * * *

5.0 Permit Imprint (Indicia)

5.1 General Standards

5.1.1 Definition

[Revise the second sentence of 5.1.1 to read as follows:]

* * * This payment method may be used for postage and extra service fees for Priority Mail Express (''USPS Ship'' only), Priority Mail, First-Class Mail, USPS Ground Advantage—Commercial, USPS Marketing Mail, Package Services, and Parcel Select mailpieces. * * *

5.1.2 Minimum Volume

Permit imprint mailings must contain at least 200 pieces or 50 pounds of mail, except:

* * * * *

[Revise the first and second sentence of item g to read as follows:]

g. A mailing containing 50 pieces or 50 pounds of nonpresorted single-piece domestic mail parcels submitted under the terms of an approved Manifest Mailing System (including USPS Ship) agreement under 705.2.0. Mailers may include any combination of the following products under this provision: Priority Mail Express (USPS Ship only), Priority Mail, USPS Ground Advantage—Commercial parcels, nonpresorted Bound Printed Matter parcels, and single-piece Media Mail and Library Mail parcels. * * *

* * * * *

5.1.5 Application Fee

[Revise the first sentence of 5.1.5 to read as follows:]

An application fee is required only when a permit imprint is used as the payment method for First-Class Mail, USPS Marketing Mail, Bound Printed Matter Flats and international mail, and the mailer does not use USPS Ship. * * *

* * * * *

5.3.6 Priority Mail Express, Priority Mail, First-Class Mail, and USPS Ground Advantage—Commercial Format

A permit imprint indicia on Priority Mail Express, Priority Mail, First-Class Mail, or USPS Ground Advantage—Commercial mailpieces must be formatted as follows:

[Revise the second sentence of item a to read as follows:]

a. * * * If the USPS Ship program is used under 705.2.9, the marking ''USPS Ship'' must appear directly below the permit number. * * *

* * * * *

5.3.7 USPS Marketing Mail, Parcel Select and Package Services Format

[Revise the second sentence of 5.3.7 to read as follows:]

* * * If USPS Ship is used under 705.2.9, the marking ''USPS Ship'' must appear directly below the permit number. * * *

* * * * *

5.3.9 Use of a Company Permit Imprint

[Revise the second and third sentence in the introductory text of 5.3.9 to read as follows:]

* * * If a company permit imprint is used for USPS Ship under 705.2.9, the marking ''USPS Ship'' is placed directly below the name on a separate line. As an option for USPS Ship mail only, ''Permit No.'' and the permit number used exclusively for USPS Ship may appear on a separate line between the company name and the marking ''USPS Ship.'' * * *

* * * * *

608 Postal Information and Resources

* * * * *

7.0 Trademarks and Copyrights of the USPS

7.1 USPS Trademarks

[Revise the list of trademarked items under 7.1 by deleting ''eVS'' and ''e-VS'', and add USPS Ship alphabetically.]

* * * * *

609 Filing Indemnity Claims for Loss or Damage

1.0 General Filing Instructions

* * * * *

1.3 Who May File

A claim may be filed by:

* * * * *

[Revise the text of item e to read as follows:]

e. Only the mailer, for insured or collect on delivery (COD) parcels paid using USPS Ship under 705.2.9.

* * * * *

3.0 Providing Evidence of Insurance and Value

3.1 Evidence of Insurance

* * * Examples of acceptable evidence are:

* * * * *

[Revise the introductory text of item d to read as follows:]

d. For insured mail or COD mail paid using MMS or USPS Ship under 705.2.0, or for insured mail paid using an EPS account for USPS Returns service under 505.3.0, the mailer must use one of the following:

* * * * *

700 Special Standards

* * * * *

705 Advanced Preparation and Special Postage Payment Systems

* * * * *

2.0 Manifest Mailing System

2.1 Description

* * * * *

2.1.2 Eligible Mail

[Revise the second sentence of 2.1.2 to read as follows:]

* * * For Priority Mail Express (USPS Ship only) see 2.9. * * *

* * * * *

2.1.4 USPS Ship System

[Revise the text of 2.1.4 to read as follows:]

Mailers using a MMS when presenting Parcel Select destination entry mailings under 256.2.0 or commingled parcel mailings under 6.0 or 7.0, may document and pay postage using USPS Ship (see 2.9). Business Acceptance Solutions, USPS Headquarters, must approve these systems. Unless authorized by Business Acceptance Solutions, mailers may not commingle USPS Ship mail with non-USPS Ship mail within the same mailing or place USPS Ship mail and non-USPS Ship mail in or on the same mailing container.

* * * * *

2.4 Authorization

2.4.1 Application

The mailer must submit an MMS application and supporting documentation as specified on the application to the postmaster of each Post Office where mailings will be deposited and under the publications as follows:

* * * * *

[Revise the text of item b to read as follows:]

b. Publication 205, *USPS Ship Technical Guide,* provides the USPS Ship application procedures for mailers. Customers using an Electronic Manifesting Solution for Parcels must also establish a user account and mailer agreement with USPS in the Business Customer Gateway at *https://gateway.usps.com.*

* * * * *

2.4.3 General Requirements for Authorization

General requirements for authorization are as follows:

* * * * *

[Revise the introductory text of item c to read as follows:]

c. For USPS Ship mailings prepared under 2.9, USPS charges USPS Ship mailers for postage due for any underpaid, unmanifested, or mis-shipped destination delivery unit (DDU) parcels at the end of the review period following the monthly mailing period as follows:

* * * * *

[Revise the first sentence of item c2 to read as follows:]

2. *Unmanifested Parcels.* USPS charges USPS Ship mailers for parcels not listed in the mailer's manifest files but identified by USPS processing scans or acceptance and delivery scans as being mailed. * * *

[Revise the first sentence of item c3 to read as follows:]

3. *Mis-Shipped DDU or DS&DC Parcels.* USPS charges USPS Ship mailers the appropriate single-piece price less the original price paid for parcels identified by acceptance scans to be deposited at incorrect destination delivery units or sorting and delivery centers. * * *

* * * * *

2.4.5 Approval Authority

Approval authority for manifest mailing systems is as follows:

* * * * *

[Revise the text of item b to read as follows:]

b. The director, Business Acceptance Solutions, USPS Headquarters, approves MMS that produce presorted First-Class Mail (except as noted in 2.4.5a) or USPS Marketing Mail mailings, Package Services or Parcel Select presort mailings, PVDS mailings, or USPS Ship mailings.

* * * * *

[Revise the heading and text of 2.6 to read as follows:]

2.6 USPS Ship System

The USPS Ship program is an electronic manifest mailing system that allows mailers to document and pay postage and extra services fees by transmitting electronic files to the Postal Service without generating paper manifests, postage statements, or clearance documents. Additional information on USPS Ship can be found online and in Publication 205, *USPS Ship Business and Technical Guide,* available on PostalPro at *https://postalpro.usps.com.*

* * * * *

7.0 Combining Package Services and Parcel Select Parcels for Destination Entry

7.1 Combining Parcels—DSCF/DRP&DC and DDU or DS&DC Entry

* * * * *

7.1.2 Basic Standards

Package Services and Parcel Select parcels that qualify as machinable, nonmachinable, and irregular under 201 and meet the following conditions may be combined in 5-digit scheme and 5-digit sacks or 5-digit scheme and 5-digit pallets under these conditions:

* * * * *

[Revise the second sentence of item b to read as follows:]

b. * * * For mailings presented under 7.0, mailers may document and pay postage using USPS Ship under 2.9.

* * * * *

7.2 Combining Parcel Select and Package Services Machinable Parcels for DNDC/DRP&DC Entry

* * * * *

7.2.2 Basic Standards

Parcel Select and Package Services parcels must meet the following conditions:

* * * * *

[Revise the second sentence of item d to read as follows:]

d. * * * For mailings presented under 7.0, mailers may document and pay postage using USPS Ship under 2.9.

* * * * *

8.0 Preparing Pallets

* * * * *

8.6 Pallet Labels

* * * * *

8.6.6 Line 3

[Revise the third sentence of the introductory text of 8.6.6 to read as follows:]

* * * Labels on containers of parcels prepared using USPS Ship under 2.9 must show ''USPS Ship'' either to the left of required line 3 information or directly below line 3 using the same size and lettering used for line 3. * * *

* * * * *

18.0 riority Mail Express Open and Distribute and Priority Mail Open and Distribute

18.1 Prices and Fees

* * * * *

18.1.6 Postage Statement for Enclosed Mail

[Revise the text of 18.1.6 to read as follows:]

The mailer must provide the correct postage statement for the enclosed mail unless prepared under USPS Ship. If the enclosed mail is zone-priced, the mailer must either provide documentation that details the pieces and postage, by zone for each Priority Mail Express Open and Distribute or Priority Mail Open and Distribute shipment destination or provide a separate postage statement for each Priority Mail Express Open and Distribute or Priority Mail Open and Distribute shipment destination. The mailer must always present the mailing to the designated USPS acceptance unit for verification of postage and fees. A postage statement is not required for the Priority Mail Express or Priority Mail portion of the Open and Distribute shipment, unless Priority Mail postage is paid by permit imprint not prepared under USPS Ship.

* * * * *

18.5 Preparation

* * * * *

18.5.3 Tags 257 and 267—Priority Mail Express Open and Distribute

[Revise the second sentence of the introductory text of 18.5.3 to read as follows:]

* * * For mailings prepared under USPS Ship, use blue Tag 257–EVS and yellow Tag 267–EVS. * * *

* * * * *

18.5.4 Tags 161 and 190—Priority Mail Open and Distribute

[Revise the second sentence of the introductory text of 18.5.4 to read as follows:]

* * * For mailings prepared under USPS Ship, use green Tag 161–EVS and pink Tag 190–EVS. * * *

* * * * *

18.5.7 Address Label Service Barcode Requirement

[Revise the first sentence in the introductory text of 18.5.7 to read as follows:]

An electronic service barcode must include USS 128 or Intelligent Mail package barcode (IMpb) (USPS Ship approved mailers) symbology for Priority Mail Express Open and Distribute, and the IMpb symbology for Priority Mail Open and Distribute in the address label. * * *

* * * * *

18.6 Enter and Deposit

* * * * *

18.6.3 Postmark and Signing Tags and Labels

[Revise the text of 18.6.3 to read as follows:]

Upon completion of the verification and acceptance of the contents, all Open and Distribute tags and labels must be postmarked and signed in the space provided unless prepared under an authorized USPS Ship manifest mailing system. Open and Distribute USPS Ship tags and labels bear the marking ''APPROVED USPS Ship MAILER'' in the space normally designated for the postmark and signature.

* * * * *

21.0 Optional Combined Parcel Mailings

21.1 Basic Standards for Combining Parcel Select, Package Services, and USPS Marketing Mail Parcels

* * * * *

21.1.2 Postage Payment

[Revise the last sentence of 21.1.2 to read as follows:]

* * * Mailers may document and pay postage using USPS Ship under 2.9.

* * * * *

Index

* * * * *

E

* * * * *

[Delete the ''Electronic Verification System (eVS), 705.2.9'' line item.

BILLING CODE 7710–12–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2021–0936; FRL–9859–02–R5]

Air Plan Approval; Indiana; Opacity Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a revision to the Indiana State Implementation Plan (SIP), authorizing temporary alternative opacity limitations at the BP Products North America, Inc. (BP) facility in Whiting, Indiana during startup and shutdown. This approval is consistent with the Clean Air Act (CAA) and EPA regulations regarding emissions during these periods in the refinery sector. EPA proposed to approve this SIP submission on August 17, 2022, and received no comments.

DATES: This final rule is effective May 28, 2024.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R05–OAR–2021–0936. All documents in the docket are listed on the *www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through *www.regulations.gov* or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Matt Rau at (312) 886–6524 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Matt Rau, Air and Radiation Division (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6524, *rau.matthew@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

I. Background Information

On August 17, 2022 (87 FR 50594), EPA proposed to approve Indiana's opacity rule section 326 Indiana Administrative Code (IAC) 5–1–8, effective December 8, 2021, as a revision to the Indiana SIP. The rule revision provides BP's two fluidized catalytic cracking units (FCUs), FCU 500 and FCU 600, with a temporary alternative opacity limitation to address safety hazards during startup, shutdown, and hot standby.

As noted in EPA's proposal, the temporary alternative opacity limitation provided to BP in 326 IAC 5–1–8 is consistent with applicable requirements in 326 IAC 5–1–3, approved by EPA on July 16, 2002 (67 FR 46589). This revision applies only to opacity rules at 326 IAC 5–1–8 as allowed under 326 IAC 5–1–3. Emission limitations and monitoring for all other pollutants, including particulate matter, remain unchanged.

The temporary alternative opacity limit is also consistent with the requirements of 40 CFR part 63, subpart UUU, the National Emission Standards for Hazardous Air Pollutants (NESHAP) for Petroleum Refineries: Catalytic Cracking Units, Catalytic Reforming Units, and Sulfur Recovery Units. The NESHAP allows units to demonstrate compliance during periods of startup, shutdown, or hot standby by maintaining the inlet velocity to the primary internal cyclones of the FCU catalyst regenerator at or above 20 feet per second. 326 IAC 5–1–8(c) requires BP to follow the same requirement as the NESHAP for FCU 500 and FCU 600, including the operating, data collection, and recordkeeping requirements. 326 IAC 5–1–8 (c)(3)(G) also requires BP to minimize emissions consistent with the NESHAP.

The public comment period for this proposed rule ended on September 16, 2022. EPA received no comments. EPA is finalizing this action as proposed.

II. Final Action.

EPA is approving Indiana's opacity rule section 326 IAC 5–1–8 as a revision to the Indiana SIP.

III. Incorporation by Reference.

In this rule, EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is finalizing the incorporation by reference of the Indiana Regulations described in Section I of this preamble and set forth in the amendments to 40 CFR part 52 below. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov,* and at the EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the SIP, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[1]

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993), and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.''

Indiana did not evaluate environmental justice considerations as part of its SIP submission; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this action.

This action is subject to the Congressional Review Act, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 24, 2024. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not

[1] 62 FR 27968 (May 22, 1997).

be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter, Reporting and recordkeeping requirements.

Dated: April 18, 2024.

Debra Shore,

Regional Administrator, Region 5.

For the reasons stated in the preamble, title 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. In § 52.770, the table in paragraph (c) is amended by revising the entry for ''5–1–8'' to read as follows:

§ 52.770 Identification of plan.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA–R02–OAR–2023–0636, FRL–11638–02–R2]

Approval and Promulgation of Plans for Designated Facilities; New Jersey; Delegation of Authority

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a request from the New Jersey Department of Environmental Protection (NJDEP) for delegation of authority to implement and enforce the Federal Plan Requirements for Municipal Solid Waste (MSW) landfills that commenced construction on or before July 17, 2014, and have not been modified or reconstructed since July 17, 2014. On November 21, 2023, the NJDEP Assistant Commissioner signed a memorandum of agreement (MoA) concerning the delegation of authority of the Federal Plan for existing MSW landfills to the NJDEP by the EPA. Subsequently, on November 28, 2023, the MoA became effective upon the EPA Region 2 Regional Administrator's signature. The signed MoA serves as the mechanism for the transfer of the EPA's authority to the NJDEP. The purpose of this delegation is to acknowledge the NJDEP's ability to implement the Federal Plan and to transfer primary implementation and enforcement responsibilities from the EPA to the NJDEP for existing sources of MSW landfills. This notice informs the public of the MoA, provides a copy of the signed document, and amends regulatory text to promulgate the delegation of authority.

DATES: This rule is effective on May 28, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID Number EPA–R02–OAR–2023–0636. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Controlled Unclassified Information (CUI) (formally referred to as Confidential Business Information (CBI)) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Fausto Taveras, Environmental Protection Agency, Region 2, Air Programs Branch, 290 Broadway, New York, New York 10007–1866, at (212) 637–3378, or by email at *Taveras.Fausto@epa.gov.*

SUPPLEMENTARY INFORMATION: The **SUPPLEMENTARY INFORMATION** section is arranged as follows:

I. What is the background for this action?
II. What comments were received in response to the EPA's proposed action?
III. What action is the EPA taking?
IV. Statutory and Executive Order Reviews

I. What is the background for this action?

On February 20, 2024 (89 FR 12796), the EPA published a Notice of Proposed Rulemaking (NPRM) that proposed approving the New Jersey Department of Environmental Protection (NJDEP) request, dated May 8, 2023, for delegation of authority of the Federal Plan Requirements for Municipal Solid Waste (MSW) Landfills That Commenced Construction On or Before July 17, 2014, and Have Not Been Modified or Reconstructed Since July 17, 2014, (Federal Plan), codified at 40 CFR part 62, subpart OOO, for existing sources of MSW Landfills. New Jersey's request letter included a commitment to enter a memorandum of agreement (MoA) developed by the NJDEP and the EPA, which defines the policies, responsibilities, and procedures that the NJDEP and the EPA will conform to in administering the Federal Plan requirements. The MoA was signed by the NJDEP Assistant Commissioner on November 21, 2023, and the EPA Region 2 Regional Administrator on November 28, 2023. The NPRM informed the public of the MoA, provided a copy of the signed document, and proposed amending associated regulatory text at 40 CFR part 62, subpart FF—New Jersey to promulgate the approved delegation of authority to the NJDEP for implementing and enforcing the Federal Plan Requirements for Municipal Solid

Waste Landfills That Commenced Construction On or Before July 17, 2014 and Have Not Been Modified or Reconstructed Since July 17, 2014 at 40 CFR part 62, subpart OOO.

The EPA will continue to retain enforcement authority along with the NJDEP, and the EPA will continue to retain certain specific authorities reserved for the EPA in the Federal Plans and as indicated in the MoA (*e.g.,* authority to approve major alternatives to test methods or monitoring, authority to approve alternative methods to determine the site-specific NMOC concentration or a site-specific methane generation rate constant, etc).

II. What comments were received in response to the EPA's proposed action?

On February 20, 2024 (89 FR 12796), the EPA proposed to approve the NJDEP's request for delegation of the MSW landfill Federal Plan. For a detailed discussion on the content and requirements of the NJDEP's delegation request, the reader is referred to the EPA's proposed rulemaking action. The EPA received no public comments in response to its February 20, 2024, NPRM.

III. What action is the EPA taking?

The EPA approves amending regulatory text at 40 CFR part 62, subpart FF—New Jersey, to promulgate the delegation of authority to the NJDEP for implementing and enforcing the Federal Plan Requirements for Municipal Solid Waste Landfills That Commenced Construction On or Before July 17, 2014, and Have Not Been Modified or Reconstructed Since July 17, 2014, at 40 CFR part 62, subpart OOO.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator has the authority to delegate the authority to implement a 111(d)/129 Federal Plan that complies with the provisions of the CAA and applicable Federal regulations. *See* 40 CFR 60.27. In reviewing 111(d)/129 Federal Plan delegation requests, the EPA's role is to approve State choices, provided that they meet the criteria of the CAA and of the EPA's implementing regulations. Accordingly, this action merely codifies in the Code of Federal Regulations the EPA's delegation of authority to implement the Federal Plan and does not impose additional requirements beyond those imposed by the already-applicable Federal Plan. For that reason, this action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993), and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, this rulemaking action, pertaining to New Jersey's section 111(d) request for delegation of authority to implement and enforce the Federal Plan for existing MSW landfills, is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and it will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. The EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' The EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.''

The NJDEP did not evaluate EJ considerations as part of its formal request; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898 of achieving environmental justice for people of color, low-income populations, and Indigenous peoples.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by June 24, 2024. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2)).

List of Subjects in 40 CFR Part 62

Environmental protection, Administrative practice and procedure, Air pollution control, Intergovernmental relations, Landfills, Reporting and recordkeeping requirements, Waste treatment and disposal.

Authority: 42 U.S.C. 7401 *et seq.*

Lisa Garcia,

Regional Administrator, Region 2.

For the reasons set forth in the preamble, 40 CFR part 62 is amended as follows:

PART 62—APPROVAL AND PROMULGATION OF STATE PLANS FOR DESIGNATED FACILITIES AND POLLUTANTS

■ 1. The authority citation for part 62 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart FF—New Jersey

■ 2. Amend § 62.7605, by adding paragraphs (e) through (h) to read as follows:

§ 62.7605 Identification of plan—delegation of authority.

* * * * *

(e) Letter from the New Jersey Department of Environmental Protection (NJDEP), submitted May 8, 2023, requested delegation of authority from EPA to implement and enforce the Federal Plan Requirements for existing Municipal Solid Waste Landfills. The Federal plan will be administered by both the NJDEP and the EPA, pursuant to ''Federal Plan Requirements for Municipal Solid Waste (MSW) Landfills That Commenced Construction On or Before July 17, 2014, and Have Not Been Modified or Reconstructed Since July 17, 2014'' 40 CFR 62.16710–62.16730.

(f) Identification of sources. The Existing MSW Landfills Federal Plan applies to each municipal solid waste landfill that meets the following criteria:

(1) Commenced construction, reconstruction, or modification on or before July 17, 2014.

(2) Accepted waste at any time since November 8, 1987, or has additional capacity for future waste deposition.

(g) On November 21, 2023, the NJDEP Assistant Commissioner signed a Memorandum of Agreement (MoA) concerning the Delegation of Authority of the Federal Plan for Existing Municipal Solid Waste Landfills to the New Jersey Department of Environmental Protection by the United States Environmental Protection Agency. On November 28, 2023, the EPA Region 2 Regional Administrator signed the MoA, therefore agreeing to the terms and conditions of the MoA and accepting responsibility to enforce and implement the policies, responsibilities, and procedures for existing MSW landfills.

(h) The delegation became fully effective on November 28, 2023, the date the MoA was signed by the EPA Region 2 Regional Administrator.

[EPA–HQ–OPP–2024–0052; FRL–11896–01–OCSPP]

BLB2 and AMR3 Proteins in Potato; Temporary Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation amends and extends a temporary exemption from the requirement of a tolerance for residues of the BLB2 and AMR3 proteins in potato, when used as a plant-incorporated protectant (PIP) in accordance with the terms of Experimental Use Permit (EUP) No. 8971–EUP–3. J.R. Simplot Company, submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting the temporary tolerance exemption. This regulation eliminates the need under FFDCA to establish a maximum permissible level for residues of BLB2 and AMR3 proteins. The temporary tolerance exemption expires on March 31, 2025.

DATES: This regulation is effective April 25, 2024. Objections and requests for hearings must be received on or before June 24, 2024, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2024–0052, is available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and for the OPP Docket is (202) 566–1744. Please review the visitor instructions and additional information about the docket available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Madison Le, Biopesticides and Pollution Prevention Division (7511M), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1400; email address: *BPPDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 174 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2024–0052 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before June 24, 2024. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2024–0052, by one of the following methods:

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

• *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.

• *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets.* Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Background

In the **Federal Register** of February 29, 2024 (89 FR 14795) (FRL–11682–01–OCSPP), EPA issued notice pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide tolerance petition (3F9098) by J.R. Simplot Company, 5369 W. Irving Street, Boise, ID 83706. The petition requested that 40 CFR part 174 be amended to extend a temporary exemption from the requirement of a tolerance for plant-incorporated protectants BLB2 and AMR3 proteins in potato from March 31, 2024, to March 31, 2025. That document referenced a summary of the petition prepared by the petitioner J.R. Simplot Company, which is available in the docket via *https://www.regulations.gov.* There were no comments received in response to the Notice of Filing.

III. Final Rule

A. EPA's Safety Determination

Section 408(r) of FFDCA authorizes EPA to establish a temporary exemption from the requirement of a tolerance for residues covered by an experimental use permit issued under the Federal Insecticide, Fungicide, and Rodenticide Act. That section states that the provisions of section 408(c)(2) of FFDCA apply to exemptions issued under FFDCA section 408(r). Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. Pursuant to FFDCA section 408(c)(2)(B), in establishing or maintaining in effect an exemption from the requirement of a tolerance, EPA must take into account the factors set forth in FFDCA section 408(b)(2)(C), which require EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance or tolerance exemption and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . . .'' Additionally, FFDCA section 408(b)(2)(D) requires that EPA consider, among other factors, ''available information concerning the cumulative effects of [a particular pesticide's] . . . residues and other substances that have a common mechanism of toxicity.''

EPA evaluated the available toxicity and exposure data on BLB2 and AMR3 proteins and considered its validity, completeness, and reliability, as well as the relationship of this information to human risk. In summary, the available data does not indicate any adverse effects due to toxicity or allergenicity of the BLB2 and AMR3 proteins. A full summary of the data upon which EPA relied and its risk assessments based on that data can be found within the document entitled ''Review of the Application for an Experimental Use Permit for Gen 3 Potatoes expressing transgenic R-proteins BLB2, AMR3 and VNT1, PVY Coat Protein Hairpin RNA and inert ingredient StmALS and associated FFDCA Petitions for the Temporary Exemption from a Tolerance for AMR3 and BLB2, as well as FFDCA Petition for the Exemption from a Tolerance for StmALS'' (Human Health Risk Assessment). This document, which was prepared in support of the original temporary exemption from the requirement of a tolerance for residues of the BLB2 and AMR3 proteins in potato, continues to support this amendment and extension of the tolerance exemption. The Human Health Risk Assessment, as well as other relevant information, is available in the docket for this action as described under **ADDRESSES**.

Available data have demonstrated that, with regard to humans, BLB2 and AMR3 proteins are not anticipated to be toxic or allergenic via any reasonably foreseeable route of exposure. The plant-incorporated protectant (PIP) active ingredients are resistance (''R'') proteins that confer protection against potato pathogens by directly or indirectly recognizing pathogen-secreted effector proteins. This recognition leads to the activation of the hypersensitive response, which is a form of programmed cell death characterized by cytoplasmic shrinkage, chromatin condensation, mitochondrial swelling, vacuolization and chloroplast disruption. This hypersensitive response pathway involves immune signaling triggered by R proteins that is specific to plants; activated R-proteins cannot trigger cell death in mammals. Thus, BLB2 and AMR3 proteins do not have a toxic mechanism of action, but instead activate signaling cascades within the plant which invoke the plant cell death pathway to prevent growth and spread of the pathogen.

There is likely to be dietary exposure to BLB2 and AMR3 through consumption of potato-derived foods containing the proteins. However, the Agency has concluded that any potential dietary risk from the use of BLB2 and AMR3 proteins to human health is considered negligible for the following reasons. (1) As described above, the mode-of-action of BLB2 and AMR3 is specific to plants and does not affect mammalian cells. (2) Both the BLB2 and AMR3 proteins are expressed at extremely low levels in potato, which indicates very low human exposure to the proteins through the consumption of BLB2- and AMR3-expressing potatoes. (3) Bioinformatics analyses of BLB2 and AMR3 proteins revealed no homology with known toxins or allergens. (4) The source organisms for the active ingredients, *Solanum bulbocastanum* (BLB2) and *Solanum americanum* (AMR3), are not known as allergens. (5) Both proteins have a history of safe use. BLB2 originates from *S. bulbocastanum* (ornamental nightshade), a close potato relative that has 82% sequency similarity with the tomato gene Mi-1, which has a history of safe use since tomatoes have been consumed by humans for hundreds of years. Furthermore, the BLB2 protein is present in two *Solanum tuberosum* potato varieties (Toluca and Bionica) that have been conventionally bred and cultivated for food use in Europe. AMR3 originates from *S. americanum* (American black nightshade) which is cultivated for medicinal and food use, and as part of breeding programs for improved nutrition. Although some members of the *Solanum* genus have toxicity, these effects are caused by glycoalkaloids, which can cause toxicity even in the common potato, *Solanum*

tuberosum. Neither BLB2 nor AMR3 are glycoalkaloids; instead, they belong to a large family of R-proteins found throughout the plant kingdom. There are hundreds to thousands of R-proteins in *S. tuberosum* and other crops which have a long history of safe consumption.

Oral exposure from ingestion of drinking water is unlikely because BLB2 and AMR3 proteins are present at very low levels within the plant cells. If AMR3 and BLB2 do enter the water column, they are expected to degrade rapidly in the presence of soil microbes, or upon normal communal water-treatment procedures. In addition, there is unlikely to be residential or non-occupational exposure given that the active ingredients are plant-incorporated protectants in potato. Therefore, the only possible route of non-occupational exposure, other than dietary, is via handling of the plants and plant products. However, BLB2 and AMR3 proteins are present in the transformed potato tissues at levels below the level of detection, resulting in minimal to negligible exposure. Furthermore, there are no risks associated with these exposure routes because bioinformatics analysis and the history of safe use have shown that the proteins are not toxic or allergenic.

Although FFDCA section 408(b)(2)(C) provides for an additional tenfold margin of safety for infants and children in the case of threshold effects, EPA has determined that there are no such effects due to the lack of toxicity and allergenicity for these PIP active ingredients. As a result, an additional margin of safety for the protection of infants and children is unnecessary.

Based upon its evaluation, EPA concludes that there is reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of the BLB2 and AMR3 proteins in potatoes. This includes all anticipated dietary exposures and all other exposures for which there is reliable information. The Agency has arrived at this conclusion based on the mode-of-action, history of safe use, and lack of toxicity and allergenicity for the BLB2 and AMR3 proteins in potato.

B. Analytical Enforcement Methodology

EPA has determined that an analytical method is not required for enforcement purposes since the Agency is establishing a temporary exemption from the requirement of a tolerance without any numerical limitation. Nonetheless, the petitioner submitted a reverse transcription-quantitative polymerase chain reaction (RT-qPCR) method for detection of BLB2 and AMR3 in transformed leaves and tubers.

C. Conclusion

Based upon its evaluation in the Human Health Risk Assessment, EPA concludes that there is a reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of BLB2 and ARM3 proteins in potatoes. Therefore, the expiration date for the temporary exemption from the requirement of a tolerance for residues of BLB2 and AMR3 proteins in potato, when used as a plant-incorporated protectant in accordance with the terms of Experimental Use Permit No. 8971–EUP–3, is extended from March 31, 2024, to March 31, 2025.

IV. Statutory and Executive Order Reviews

This action modifies an exemption from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to EPA. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*) nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance exemption in this action, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes. As a result, this action does not alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, EPA has determined that this action will not have a substantial direct effect on States or Tribal governments, on the relationship between the National Government and the States or Tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, EPA has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000), do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require EPA's consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

V. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 174

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 18, 2024.

Madison Le,

Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 174—PROCEDURES AND REQUIREMENTS FOR PLANT-INCORPORATED PROTECTANTS

■ 1. The authority citation for part 174 continues to read as follows:

Authority: 7 U.S.C. 136–136y; 21 U.S.C. 321(q), 346a and 371.

■ 2. Revise and republish § 174.545 to subpart W to read as follows:

§ 174.545 BLB2 and AMR3 proteins in potato; temporary exemption from the requirement of a tolerance.

Residues of BLB2 and AMR3 proteins in potato are temporarily exempt from the requirement of a tolerance when used as a plant-incorporated protectant in potato in accordance with the terms of Experimental Use Permit No. 8917–EUP–3. This temporary exemption from the requirement of a tolerance expires on March 31, 2025.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2021–0681; FRL–11878–01–OCSPP]

Escherichia coli Strain K–12 P678–54 Micelles in Pesticide Formulations; Tolerance Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of *Escherichia coli* strain K–12 P678–54 micelles (also known as *E. coli* K–12 derived micelles) when used as an inert ingredient (encapsulation of active ingredient) on growing crops and raw agricultural commodities pre- and post-harvest. AgroSpheres, Inc., submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of *E. coli* K–12 derived micelles, when used in accordance with the terms of those exemptions.

DATES: This regulation is effective April 25, 2024. Objections and requests for hearings must be received on or before June 24, 2024 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2021–0681, is available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and the OPP docket is (202) 566–1744. Please review the visitor instructions and additional information about the docket available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2021–0681 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before June 24, 2024. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2021–0681, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets#express.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Petition for Exemption

In the **Federal Register** of October 21, 2021 (86 FR 58239) (FRL–8793–04–OCSPP), EPA issued a document pursuant to FFDCA section 408, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP IN–11585) by AgroSpheres, Inc., 1180 Seminole Trail, Charlottesville, VA, USA, 22901. The petition requested that 40 CFR be amended by establishing an exemption from the requirement of a tolerance for residues of *E. coli* K–12 derived micelles, when used as an inert ingredient (encapsulation of active ingredient) in pesticide formulations applied to growing crops or raw agricultural commodities pre- and post-harvest under 40 CFR 180.910. That document referenced a summary of the petition prepared by AgroSpheres, Inc., 1180 Seminole Trail, Charlottesville, VA, USA, 22901, the petitioner, which is available in the docket, *https://www.regulations.gov.* There were no comments received in response to the notice of filing.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term ''inert'' is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. When making a safety determination for an exemption for the requirement of a tolerance FFDCA section 408(c)(2)(B) directs EPA to consider the considerations in section 408(b)(2)(C) and (D). Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . .'' Section 408(b)(2)(D) lists other factors for EPA consideration making safety determinations, *e.g.,* the validity, completeness, and reliability of available data, nature of toxic effects, available information concerning the cumulative effects of the pesticide chemical and other substances with a common mechanism of toxicity, and available information concerning aggregate exposure levels to the pesticide chemical and other related substances, among others.

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no harm to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with FFDCA section 408(c)(2)(A), and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for *E. coli* K–12 derived micelles including exposure resulting from the exemption established by this action. EPA's assessment of exposures and risks associated with *E. coli* K–12 derived micelles follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by *E. coli* K–12 derived micelles as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

The available toxicity studies show that *E. coli* K–12 derived micelles have a low overall acute toxicity via the oral and inhalation route. Furthermore, *E. coli* K–12 derived micelles are obtained from bacteria (E. coli K–12) that are nontoxigenic and nonpathogenic. *E. coli* K–12 derived micelles are also non-viable, further reducing the likelihood of infectivity or pathogenicity to negligible levels. Repeated exposures to high concentrations of microbial proteins may cause allergic sensitization, but this scenario is not anticipated in residential settings.

B. Toxicological Points of Departure/Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/overview-risk-assessment-pesticide-program.*

The hazard profile of *E. coli* K–12 derived micelles is adequately defined. Overall, *E. coli* K–12 derived micelles have low toxicity and are nontoxigenic and non-pathogenic. This conclusion is predicated on the manufacturing process ensuring the absence of human pathogenic bacteria in the inert ingredient product. Taking into consideration all available information, no toxicological endpoints were identified, and a quantitative risk assessment is not needed.

C. Exposure Assessment

1. Dietary exposure from food and feed uses. In evaluating dietary exposure to *E. coli* K–12 derived micelles, EPA considered exposure under the proposed exemption from the requirement of a tolerance. EPA assessed dietary exposures from *E. coli*

K–12 derived micelles in food as follows:

Dietary exposure (food and drinking water) to *E. coli* K–12 derived micelles may occur from eating foods treated with pesticide formulations containing this inert ingredient and drinking water containing runoff from soils containing the treated crops. However, no toxicological endpoints of concern were selected, and therefore, a quantitative dietary exposure assessment for *E. coli* K–12 derived micelles was not conducted.

2. *From non-dietary exposure.* The term "residential exposure" is used in this document to refer to non-occupational, non-dietary exposure (*e.g.,* textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables).

E. coli K–12 derived micelles may be present in pesticide and non-pesticide products that may be used in and around the home. However, a quantitative residential exposure assessment was not conducted since a toxicological endpoint for risk assessment was not identified.

3. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residues and "other substances that have a common mechanism of toxicity."

Based on the lack of toxicity in the available database, EPA has not found *E. coli* K–12 derived micelles to share a common mechanism of toxicity with any other substances, and *E. coli* K–12 derived micelles do not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance exemption, therefore, EPA has not found *E. coli* K–12 derived micelles to share a common mechanism of toxicity with any other substances, and *E. coli* K–12 derived micelles do not appear to produce a toxic metabolite produced by other substances. Therefore, for the purposes of this tolerance exemption, EPA has not assumed that *E. coli K–12 derived micelles* have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see the policy statements released by OPP concerning common mechanism determinations and procedures for cumulating effects from substances found to have a common mechanism on EPA's website. (*https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/cumulative-assessment-risk-pesticides*).

D. Additional Safety Factor for the Protection of Infants and Children

Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act (FQPA) Safety Factor (SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

Based on an assessment of *E. coli* K–12 derived micelles, EPA has concluded that there are no toxicological endpoints of concern for the U.S. population, including infants and children. Because there are no threshold effects associated with *E. coli* K–12 derived micelles, EPA conducted a qualitative assessment. As part of that assessment, the Agency did not use safety factors for assessing risk, and no additional safety factor is needed for assessing risk to infants and children.

E. Aggregate Risks and Determination of Safety

Because no toxicological endpoints of concern were identified, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to *E. coli* K–12 derived micelle residues.

V. Other Considerations

Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established for residues of *Escherichia coli* strain K–12 P678–54 micelles (also known as *E. coli* K–12 derived micelles) (No CAS Reg. No.) when used as an inert ingredient (encapsulation of active ingredient) in pesticide formulations applied to growing crops and raw agricultural commodities after harvest under 40 CFR 180.910.

VII. Statutory and Executive Order Reviews

This action establishes exemptions from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled "Regulatory Planning and Review" (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled "Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations" (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemptions in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal governments, on the relationship between the National Government and the States or Tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled "Federalism" (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled "Consultation and Coordination with Indian Tribal Governments" (65 FR 67249, November 9, 2000) do not apply

to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VIII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: April 18, 2024.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.910, amend Table 1 to 180.910 by adding, in alphabetical order, an entry for ''*Escherichia coli* strain K–12 P678–54 micelles'' to read as follows:

§ 180.910 Inert ingredients used pre- and post-harvest; exemptions from the requirement of a tolerance.

* * * * *

TABLE 1 TO 180.910

Inert ingredients	Limits	Uses
* * * * * * *		
Escherichia coli strain K–12 P678–54 micelles	....	Encapsulation of active ingredient.
* * * * * * *

RIN 2070–AK86

Asbestos Part 1; Chrysotile Asbestos; Regulation of Certain Conditions of Use Under the Toxic Substances Control Act (TSCA); Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; correction.

SUMMARY: The Environmental Protection Agency (EPA) is correcting a final rule that appeared in the **Federal Register** of Thursday, March 28, 2024, which finalized the rule under the Toxic Substances Control Act (TSCA) to address to the extent necessary the unreasonable risk of injury to health presented by chrysotile asbestos based on the risks posed by certain conditions of use. The injuries to human health include mesothelioma and lung, ovarian, and laryngeal cancers resulting from chronic inhalation exposure to chrysotile asbestos.

DATES: This correction is effective on May 28, 2024.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2021–0057, is available online at *https://www.regulations.gov*. Additional instructions for visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/*.

FOR FURTHER INFORMATION CONTACT: *For technical information contact:* Peter Gimlin, Existing Chemicals Risk Management Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–0515; email address: *gimlin.peter@epa.gov*.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov*.

SUPPLEMENTARY INFORMATION: EPA is correcting the final rule that published in the **Federal Register** of Thursday, March 28, 2024 (89 FR 21970); FRL–8332–01–OCSPP) to address an inadvertent error made while numbering the paragraphs in § 751.515(c)(1).

Correction

In FR Doc. 2024–05972, appearing on page 21970 in the **Federal Register** of Thursday, March 28, 2024, the following correction is made:

§ 751.515 [Corrected]

■ On page 22010, in the third column, in § 751.515(c)(1), the paragraph designation ''(vi)'' is correctly designated as ''(v)'' and the paragraph designation ''(vii)'' is correctly designated as ''(vi)''.

Dated: April 19, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

Defense Acquisition Regulations System

48 CFR Parts 207 and 234

[Docket DARS–2023–0030]

RIN 0750–AL82

Defense Federal Acquisition Regulation Supplement: Use of Fixed-Price Contracts for Certain Major Defense Acquisition Programs (DFARS Case 2023–D009)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2023 that limits the number of low-rate initial production lots associated with a major defense acquisition program under certain circumstances.

DATES: Effective April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Mr. Jon Snyder, telephone 703–945–5341.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 88 FR 67611 on September 29, 2023, to implement section 808 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2023 (Pub. L. 117–263). Section 808 amends section 818 of Public Law 109–364 to limit the number of low-rate initial production lots associated with a major defense acquisition program to be procured to no more than one when the milestone decision authority authorizes the use of a fixed-price type contract at Milestone B and the scope of the work includes both development and low-rate initial production. This limitation may be waived. Two respondents submitted public comments in response to the proposed rule.

II. Discussion and Analysis

DoD reviewed the public comments in the development of the final rule. A discussion of the comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

There are no significant changes from the proposed rule.

B. Analysis of Public Comments

1. Support for the Rule

Comment: One respondent indicted support for the rule.

Response: The support for the rule is noted.

2. Clarifications

Comment: One respondent suggested that the rule should define or provide a reference to the definition of a fixed-price contract. The rule does not specify whether fixed-price contracts include firm-fixed-price, fixed-price-incentive, or fixed-price-with-economic-price-adjustment, which could create ambiguity or inconsistency in the application of the rule and affect the level of risk and incentive for the Government and contractors. The respondent recommended providing a reference to the relevant section of the Federal Acquisition Regulation (FAR) that defines these types of contracts or specify the types of fixed-price contracts that can be used.

Response: This rule does not stand alone; contracting officers will implement the rule in the context provided by the FAR and DFARS. FAR subpart 16.2 describes the types of fixed-price contracts that a contracting officer may use. The DFARS, as a supplement to the FAR, does not duplicate the content of the FAR.

Comment: One respondent suggested that the rule should explain the rationale or purpose of the limitation on procuring more than one lot for low-rate initial production (LRIP) using a fixed-price type contract for a major defense acquisition program. The rule currently does not state why this limitation is necessary or beneficial, or how it relates to the objective of reducing cost risk and improving performance. This could make it difficult to evaluate the effectiveness or impact of the rule, or to justify its use in specific cases.

Response: Section 808 of the NDAA for FY 2023 limits the number of LRIP lots to no more than one on fixed-price contracts that also include development. Neither section 808 nor the Joint Explanatory Statement provides the rationale or purpose of the limitation. However, the limitation may result in a reduction in risk to the contractor associated with proposing prices for multiple production lots of an item prior to the completion of development and initial production of the item.

Comment: One respondent suggested that the rule should establish some criteria or guidelines for exercising the waiver authority for the limitation on LRIP procurement. The rule currently does not indicate how the service acquisition executive should decide whether to grant or deny a waiver, or what factors should be considered in making this decision. This could lead to arbitrary or inconsistent decisions or undermine the accountability or transparency of the waiver process. Providing examples of factors that could justify a waiver and indicate that the waiver authority should be used sparingly and only in exceptional circumstances.

Response: Section 808 provides the service acquisition executive the authority to waive this limitation. It does not specify the criteria to be considered in making such a waiver decision. Providing examples of factors to consider in determining whether or not to waive the limitation may preclude the consideration of factors that are relevant to the instant acquisition and may have a negative impact on meeting mission needs.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT), for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items), and for Commercial Services

This final rule does not create any new solicitation provisions or contract clauses. It does not impact any existing solicitation provisions or contract clauses or their applicability to contracts valued at or below the simplified acquisition threshold, for commercial products including COTS items, or for commercial services.

IV. Expected Impact of the Rule

As a result of this final rule, unless waived, the Government may not procure more than one low-rate initial production lot associated with a major defense acquisition program if, at the time of Milestone B approval, the milestone decision authority authorizes the use of a fixed-price type contract and the scope of work of the fixed-price contract includes both development and low-rate initial production of items associated with such major defense acquisition program. This rule does not impact contractor operations; however, it may limit contractor risk assumed under such contracts. Development and initial production of an item likely involve the discovery and resolution of problems that are unknown beforehand. Risk to a contractor is higher when the contractor must propose prices for multiple production lots of an item before the development and initial production of that item are complete. By limiting the number of low-rate initial production lots on a fixed-price contract

that also includes development, this risk to the contractor may be reduced.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VII. Regulatory Flexibility Act

A final regulatory flexibility analysis has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* and is summarized as follows:

This final rule is necessary to implement section 808 of the National Defense Authorization Act for Fiscal Year (FY) 2023 (Pub. L. 117–263). Section 808 modifies section 818 of Public Law 109–364 to limit the number of low-rate initial production lots associated with a major defense acquisition program to be procured to no more than one when the milestone decision authority authorizes the use of a fixed-price type contract at the time of Milestone B approval and the scope of the fixed-price contract includes both development and low-rate initial production.

No comments were received in response to the initial regulatory flexibility analysis.

Data is not available on the number of fixed-price type contracts for major defense acquisition programs that contain both development and low-rate initial production; therefore, data was obtained for contracts that include DFARS clause 252.234–7004, Cost and Software Data Reporting System, or its alternate I clause. This DFARS clause is required to be included in solicitations and contracts for major defense acquisition programs that exceed $50 million, and its alternate I clause is required to be included in solicitations and contracts for major defense acquisition programs that are greater than $20 million but less than or equal to $50 million under certain circumstances. According to the Procurement Business Intelligence Service, DoD awarded contracts for major defense acquisition programs to 130 unique small entities in FY 2021, 99 in FY 2022, and 109 in FY 2023. The average over the three-year period is 112 per fiscal year. Therefore, the number of small entities to which this rule may apply is 112.

This final rule does not impose any new reporting, recordkeeping, or other compliance requirements for small entities.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

VIII. Paperwork Reduction Act

This final rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Parts 207 and 234

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 207 and 234 are amended as follows:

■ 1. The authority citation for parts 207 and 234 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 207—ACQUISITION PLANNING

■ 2. In section 207.106, revise paragraph (S–74) to read as follows:

207.106 Additional requirements for major systems.

* * * * *

(S–74) When selecting contract type for a major defense acquisition program, see 234.004.

PART 234—MAJOR SYSTEM ACQUISITION

■ 3. Amend section 234.004 by adding paragraph (2)(v) to read as follows:

234.004 Acquisition strategy.

* * * * *

(2) * * *

(v) In accordance with section 808 of the National Defense Authorization Act for Fiscal Year 2023 (Pub. L. 117–263)—

(A) The contracting officer shall not procure more than one lot for low-rate initial production, as defined at 10 U.S.C. 4231, associated with a major defense acquisition program if—

(*1*) The milestone decision authority authorizes the use of a fixed-price type contract at the time of Milestone B approval; and

(*2*) The scope of work of the fixed-price type contract includes both the development and low-rate initial production of items for such major defense acquisition program; and

(B) This limitation may be waived by the service acquisition executive for the department concerned, delegable to no lower than one level above the contracting officer, if—

(*1*) A written notification of the waiver, including associated rationale, is provided to the congressional defense committees no later than 30 days after issuance of the waiver in accordance with agency procedures; and

(*2*) A copy of the waiver and such congressional notification are included in the contract file.

[FR Doc. 2024–08435 Filed 4–24–24; 8:45 am]

BILLING CODE 6001–FR–P

AGENCY FOR INTERNATIONAL DEVELOPMENT

48 CFR Parts 701 and 705

RIN 0412–AA88

U.S. Agency for International Development Acquisition Regulation; Administrative Updates: Correction

AGENCY: U.S. Agency for International Development.

ACTION: Direct final rule, Correction.

SUMMARY: The U.S. Agency for International Development (USAID) is issuing this final rule revising the Agency for International Development Acquisition Regulation (AIDAR) to maintain consistency with Federal and agency regulations, remove obsolete material and internal agency procedures, and make editorial amendments to clarify the regulation.

DATES: *Effective date:* May 22, 2024.

FOR FURTHER INFORMATION CONTACT: Lyudmila Bond, 202–916–2622, *policymailbox@usaid.gov.*

SUPPLEMENTARY INFORMATION: In the FR Doc. 2023–27953, starting on page 4201 in the **Federal Register** of January 23, 2024, USAID is making the following corrections:

■ 1. On page 4203, starting in the first column, section 701.470 is corrected by:

■ a. Revising paragraphs (a)(2)and (b)(1);

■ b. redesignating paragraph (b)(3) through (5) as (b)(4) through (6); and

■ c. adding new paragraph (b)(3).

The revisions and addition read as follows:

701.470 [Corrected]

(a) * * *

(2) In preparing and submitting deviations for approval, USAID operating units must follow the applicable USAID policies in the ADS 300 series, including mandatory written consultations with the Bureau for Management, Office of Acquisition and Assistance, Policy Division (M/OAA/P) and the Office of the General Counsel. For deviations related to AIDAR appendices D and J, Director of M/OAA clearance is required in lieu of M/OAA/P consultations, as outlined in appendices D and J. The CO must retain all approved deviations in the contract file.

(b) * * *

(1) Class deviations from the AIDAR will be processed in the same manner as prescribed in paragraph (a)(2) of this section.

* * * * *

(3) Individual heads of contracting activities have authority to approve class deviations affecting contracts only within the contracting activity under their management authority. Only the M/OAA Director has authority to approve class deviations that affect more than one contracting activity.

* * * * *

■ 2. On page 4205, in the first column, section 705.102 is corrected by adding a sentence at the end of the paragraph to read as follows:

705.102 [Corrected]

* * * For FAR 5.102(a)(5) exceptions applicable to personal services contracts with individuals, see appendix D, section 5 and appendix J, section 5.

Jami J. Rodgers,

Chief Acquisition Officer.

[FR Doc. 2024–08588 Filed 4–24–24; 8:45 am]

BILLING CODE 6116–01–P

Proposed Rules

Federal Register
Vol. 89, No. 81
Thursday, April 25, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–1004; Project Identifier AD–2023–01058–R]

RIN 2120–AA64

Airworthiness Directives; Various Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for various helicopters modified by certain supplemental type certificates (STCs) that approve the installation of an emergency float kit or an emergency float with liferaft kit. This proposed AD was prompted by the results of an accident investigation and subsequent reports of difficulty pulling the emergency float kit float activation handle installed on the pilot cyclic. This proposed AD would require repetitively inspecting the pull force on the float activation handle and, depending on the results, accomplishing corrective actions. For certain model helicopters, this proposed AD would also require removing from service and replacing certain part-numbered float inflation reservoirs (reservoirs) and pull cable assemblies (cables) with certain other part-numbered reservoirs and cables. Finally, this proposed AD would prohibit installing certain part-numbered reservoirs and cables on certain helicopters. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 10, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1004; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For Dart Aerospace service information identified in this NPRM, contact Dart Aerospace, LTD., 1270 Aberdeen St., Hawkesbury, ON, K6A 1K7, Canada; phone: 1–613–632–5200; Fax: 1–613–632–5246; or at *dartaero.com.*
- You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Parkway, Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110.

Other Related Service Information: For additional Dart Aerospace service information identified in this NPRM, use the Dart Aerospace, LTD., contact information under *Material Incorporated by Reference* above. You may also view this service information at the FAA contact information under *Material Incorporated by Reference* above.

FOR FURTHER INFORMATION CONTACT: Johann Magana, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627–5322; email: *johann.magana@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2024–1004; Project Identifier AD–2023–01058–R'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Johann Magana, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627–5322; email: *johann.magana@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA received reports of an accident involving an Airbus Helicopters Model AS350B2 helicopter impacting a body of water during an autorotation. The left-hand and right-hand emergency floats did not inflate symmetrically, and the helicopter subsequently capsized.

During the accident investigation, the FAA learned of reports of difficulty pulling the emergency float kit float activation handle installed on the pilot cyclic. Asymmetric inflation of the float system and difficulty deploying the float system from the float activation handle installed on the pilot cyclic can be caused by improperly installed cables. These emergency float kits utilize a system of cables to activate and release compressed gas from the float cylinders into the floats. Proper installation of the cables allows the two float cylinders installed on the aircraft to activate simultaneously, allowing for proper distribution of gas to all floats in the system. Improperly installed cables, if not addressed, could result in loss of the left or right-hand float, causing the helicopter to roll to one side but remain buoyant, or loss of both floats, causing the helicopter to capsize underwater.

Accordingly, the FAA issued AD 2020–02–23, Amendment 39–21027 (85 FR 8150, February 13, 2020) (AD 2020–02–23), for Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350C, AS350D, and AS350D1 helicopters modified by STC SR00470LA, and Airbus Helicopters Model AS355E, AS355F, AS355F1, AS355F2, AS355N, and AS355NP helicopters modified by STC SR00645LA. AD 2020–02–23 requires repetitive inspections of the installation of the cables on the emergency float kits. After AD 2020–02–23 was issued, the National Transportation Safety Board reported that similar deficiencies may remain unresolved in other similar FAA-approved emergency flotation systems.[1]

Additionally, after AD 2020–02–23 was issued, the FAA determined additional design approval holders that use the same float activation pull system may have similar deployment mechanism deficiencies as the unsafe condition addressed in AD 2020–02–23. Consequently, this proposed AD would require repetitively inspecting the pull force on the float activation handle to detect and address improperly installed cables and, depending on the results, accomplishing corrective actions. This condition, if not addressed, could result in loss of the left-hand or right-hand float, causing the helicopter to roll to one side, or loss of both floats, causing the helicopter to capsize underwater.

[1] NTSB Investigation; Inadvertent Activation of the Fuel Shutoff Lever, Subsequent Loss of Engine Power, and Ditching on the East River, Liberty Helicopters Inc. This information may be viewed under 2.4.3 Certification Review Process, of Docket Item #79 NTSB—Adopted Board Report, which is available at *https://data.ntsb.gov/Docket/?NTSBNumber=ERA18MA099.*

FAA's Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type designs.

Related Service Information Under 1 CFR Part 51

The FAA reviewed DART Aerospace Operation Instructional Manual for General Pull Cable Rigging and Testing Procedure, Revision A, dated December 23, 2020. This service information specifies procedures for testing the pull cable rigging on the DART Aerospace emergency float and liferaft systems using certain part-numbered pull cable test tools.

The FAA also reviewed DART Aerospace Service Bulletin (SB) No. SB2020–09, Revision A, dated March 16, 2021, DART Aerospace SB No. SB2021–01, Revision A, dated December 28, 2021, DART Aerospace SB No. SB2021–02, dated April 30, 2021, DART Aerospace SB No. SB2021–03, dated June 30, 2021, and DART Aerospace SB No. SB2022–01, dated March 14, 2022. This service information specifies procedures for inspecting the installation of the cable emergency float kits (*e.g.,* inspecting for activation pull forces on the float activation handle), readjusting the cable rigging if improperly installed, and contacting DART if readjusting the rigging is not successful. This service information also specifies optional procedures for deactivating the emergency float system as inoperative and reporting compliance to DART.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in ADDRESSES.

Other Related Service Information

The FAA reviewed DART Aerospace SB No. SB 2022–03, dated May 12, 2023, for Model R44 and R44 II helicopters, which specifies procedures for removing and replacing certain-part numbered reservoirs and cables with new part-numbered reservoirs and cables. This service information also specifies procedures for revising the rotorcraft flight manual and recording compliance with the service information in the aircraft logbook.

Proposed AD Requirements in This NPRM

This proposed AD would require repetitively inspecting the installation of the cables on certain emergency float systems and, depending on the results, repairing the cable installation or, deactivating and placarding the emergency float system as inoperative. For certain helicopters, this proposed AD would also require removing from service and replacing certain part-numbered reservoirs and cables with other part-numbered reservoirs and cables. Additionally, this proposed AD would prohibit installing certain part-numbered reservoirs and cables on certain helicopters.

Differences Between This Proposed AD and the Service Information

The service information specifies a one-time pull cable test, whereas this proposed AD would require repetitively inspecting the pull force on the float activation handle.

Where the service information specifies contacting DART, this proposed AD would require actions in accordance with FAA-approved procedures.

Appendix A of the service information specifies to ty-wrap the pin into place on the pilot collective and contacting DART customer service for a resolution, whereas this proposed AD would require accomplishing corrective actions in accordance with FAA-approved procedures.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 1,150 emergency float kits or emergency float with liferaft kits installed on helicopters of U.S. registry. The FAA estimates the following costs to comply with this proposed AD. Labor costs are estimated at $85 per work-hour.

Inspecting the pull force on the float activation handle would take approximately 1 work-hour with one test kit costing approximately $2,000 for an estimated cost of $2,085 per helicopter and $2,397,750 for the U.S. fleet, per inspection cycle.

Replacing a reservoir and cable (Model R44 and R44 II helicopters) would take approximately 2 work-hours and parts would cost approximately $5,800 for an estimated cost of $5,970 per helicopter.

The FAA has no way of determining what repairs may be required following the inspection required by this proposed AD, the number of helicopters that may need repairs, or the costs to perform repairs. However, if required as a repair, replacing and adjusting an affected cable would take approximately 8 work-hours and parts would cost approximately $255 for an estimated cost of $935 per helicopter.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Various Helicopters: Docket No. FAA–2024–1004; Project Identifier AD–2023–01058–R.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 10, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the helicopters identified in paragraphs (c)(1) through (8) of this AD, certificated in any category.

(1) Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350C, AS350D, AS350D1, AS355E, AS355F, AS355F1, AS355F2, and AS355N helicopters modified by Supplemental Type Certificate (STC) SR00831LA; Model EC120B helicopters modified by STC SR00780LA; and Model EC130B4 helicopters modified by STC SR01687LA.

Note 1 to paragraph (c)(1): Helicopters with an AS350B3e designation are Model AS350B3 helicopters.

(2) Airbus Helicopters Deutschland GmbH (AHD) Model BO–105A, BO–105C, BO–105S, and BO–105LS A–3 helicopters modified by STC SR00856LA; Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, and EC135T3 helicopters modified by STC SR01855LA; and Model MBB–BK 117 C–2 and MBB–BK 117 D–2 helicopters modified by STC SR02244LA.

Note 2 to paragraph (c)(2): Helicopters with an EC135P3H designation are Model EC135P3 helicopters; helicopters with an EC135T3H designation are Model EC135T3 helicopters; and helicopters with an MBB–BK117 C–2e designation are Model MBB–BK117 C–2 helicopters.

(3) Bell Textron Inc., Model 210, 212, 412, 412CF, and 412EP helicopters modified by STC SR01779LA; and Model 412, 412CF, and 412EP helicopters modified by STC SR01459LA.

(4) Bell Textron Canada Limited Model 206A, 206B, 206L, 206L–1, 206L–3, 206L–4, and 407 helicopters modified by STC SR01535LA.

Note 3 to paragraph (c)(4): Helicopters with a 206B3 designation are Model 206B helicopters; helicopters with a 206L–1+ designation are Model 206L–1 helicopters; and helicopters with a 206L–3+ designation are Model 206L–3 helicopters.

(5) Leonardo S.p.a. Model AB412 and AB412 EP helicopters modified by STC SR01779LA.

(6) MD Helicopters, LLC, Model 369D, 369E, 369F, 369FF, 369HE, 369HM, 369HS, and 500N helicopters modified by STC SR00932LA.

(7) Robinson Helicopter Company Model R44 and R44 II helicopters modified by STC SR02049LA; and Model R66 helicopters modified by STC SR02484LA.

(8) Sikorsky Aircraft Corporation Model S–76A, S–76B, and S–76C helicopters modified by STC SR01902LA.

(d) Subject

Joint Aircraft System Component (JASC) Code: 2560, Emergency Equipment; and 3212, Emergency Flotation Section.

(e) Unsafe Condition

This AD was prompted by the results of an accident investigation and subsequent reports of difficulty pulling the emergency float kit float activation handle installed on the pilot cyclic. The FAA is issuing this AD to detect and address improperly installed cables, which can lead to difficulty deploying the float system from the float activation handle. The unsafe condition, if not addressed, could result in loss of the left-hand or right-hand float, causing the helicopter to roll to one side, or loss of both floats causing the helicopter to capsize underwater.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 100 hours time-in-service (TIS) or 30 days after the effective date of this AD, whichever occurs first, and thereafter at intervals not to exceed six months, accomplish the actions required by paragraphs (g)(1)(i) through (vi) of this AD, as applicable to your model helicopter.

(i) For Airbus Helicopters Model EC130B4 helicopters identified in paragraph (c)(1) of this AD, accomplish the actions required by paragraphs (g)(1)(i)(A) or (B) of this AD, as applicable, and paragraph (g)(1)(i)(C) of this AD, as applicable.

(A) Inspect the pull force on the float activation handle in accordance with section 2.0 (for pull cable test tool part-number (P/N) 606.7803), paragraphs 1 through 14 of DART Aerospace Operation Instructional Manual for General Pull Cable Rigging and Testing Procedure, Revision B, dated May 12, 2023 (DART OIM–11 Rev B), except if the inflation handle makes contact with the cyclic stick in paragraph 6, before further flight, perform cable rigging in accordance with FAA-approved procedures and, once the cable is properly rigged, continue with the actions required by this paragraph, and except the measurement in paragraph 8 must be 0.85 in (2.16 cm) or greater; or

(B) Inspect the pull force on the float activation handle in accordance with section 3.0 (for pull cable test tool P/N 607.1602), paragraphs 3 through 20 of DART OIM–11 Rev B, except in paragraph 3, where it states, ''it is advised to mark these locations and verify the hole centers by removing the two set screws from the test tool and sliding the tool onto the shroud and aligning the tool with the marks,'' replace that text with ''mark these locations and verify the hole centers by removing the two set screws from the test tool and sliding the tool onto the shroud and aligning the tool with the marks,'' and except the measurement in paragraph 13 must be 0.75 in (1.91 cm) or greater.

(C) If the pull force is greater than 25 lbf (111.2N) or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(ii) For Airbus Helicopters Deutschland GmbH (AHD) Model MBB–BK 117 C–2 and MBB–BK 117 D–2 helicopters identified in paragraph (c)(2) of this AD, accomplish the actions required by paragraphs (g)(1)(ii)(A) and (B) of this AD, as applicable.

(A) Inspect the pull force on the float activation handle in accordance with section 2.0 (for pull cable test tool P/N 606.7803), paragraphs 1 through 14 of DART OIM–11 Rev B, except if the inflation handle makes contact with the cyclic stick in paragraph 6, before further flight perform cable rigging in accordance with FAA-approved procedures, and except the measurement in paragraph 8 must be 0.85 in (2.16 cm) or greater.

(B) If the pull force is greater than 25 lbf (111.2N), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(iii) For Bell Textron Inc., Model 210, 212, 412, 412CF, and 412EP helicopters identified in paragraph (c)(3) of this AD, accomplish the actions required by paragraphs (g)(1)(iii)(A) or (B) of this AD, as applicable, and paragraph (g)(1)(iii)(C) of this AD, as applicable.

(A) Inspect the pull force on the float activation handle in accordance with section 2.0 (for pull cable test tool P/N 606.7803), paragraphs 1 through 14 of DART OIM–11 Rev B, except if the inflation handle makes contact with the cyclic stick in paragraph 6, before further flight perform cable rigging in accordance with FAA-approved procedures, and except the measurement in paragraph 8 must be 0.85 in (2.16 cm) or greater; or

(B) Inspect the pull force on the float activation handle in accordance with section 3.0 (for pull cable test tool P/N 607.1602), paragraphs 3 through 20 of DART OIM–11 Rev B, except in paragraph 3, where it states, ''it is advised to mark these locations and verify the hole centers by removing the two set screws from the test tool and sliding the tool onto the shroud and aligning the tool with the marks.'' replace that text with ''mark these locations and verify the hole centers by removing the two set screws from the test tool and sliding the tool onto the shroud and aligning the tool with the marks,'' and except the measurement in paragraph 13 must be 0.75 in (1.91 cm) or greater.

(C) If the pull force is greater than 25 lbf (111.2N), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(iv) For Bell Textron Canada Limited Model 206A, 206B, 206L, 206L–1, 206L–3, 206L–4, and 407 helicopters identified in paragraph (c)(4) of this AD, accomplish the actions required by paragraphs (g)(1)(iv)(A) and (B) of this AD, as applicable.

(A) Inspect the pull force on the float activation handle in accordance with section 2.0 (for pull cable test tool P/N 606.7803), paragraphs 1 through 14 of DART OIM–11 Rev B, except if the inflation handle makes contact with the cyclic stick in paragraph 6, before further flight perform cable rigging in accordance with FAA-approved procedures, and except the measurement in paragraph 8 must be 0.85 in (2.16 cm) or greater.

(B) If the pull force is greater than 25 lbf (111.2N), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(v) For Robinson Helicopter Company Model R66 helicopters identified in paragraph (c)(7) of this AD, accomplish the actions required by paragraphs (g)(1)(v)(A) and (B) of this AD, as applicable.

(A) Inspect the pull force on the float activation handle in accordance with section 2.0 (for pull cable test tool P/N 607.7803), paragraphs 1 through 14 of DART OIM–11 Rev B, except if the inflation handle makes contact with the cyclic stick in paragraph 6, before further flight perform cable rigging in accordance with FAA-approved procedures, and except the measurement in paragraph 8 must be 0.85 in (2.16 cm) or greater.

(B) If the pull force is greater than 25 lbf (111.2N), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(vi) For the helicopters identified in paragraphs (g)(1)(vi)(A) through (E) of this AD, inspect the pull force on the float activation handle in accordance with FAA-approved procedures. The threshold for this pull force inspection must not exceed 25 lbf (111.2N). If the float activation handle fails the test, (if the pull force is greater than 25 lbf (111.2N)), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with paragraph (g)(2) of this AD, as applicable to your model helicopter.

(A) Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350C, AS350D, AS350D1, AS355E, AS355F, AS355F1, AS355F2, AS355N, and EC120B helicopters identified in paragraph (c)(1) of this AD.

(B) Airbus Helicopters Deutschland GmbH (AHD) Model BO–105A, BO–105C, BO–105S, BO–105LS A–3, EC135P1, EC135P2, EC135 P2+, EC135P3, EC135T1, EC135T2, EC135T2+, and EC135T3 helicopters identified in paragraph (c)(2) of this AD.

(C) Leonardo S.p.a. Model AB412 and AB412 EP helicopters identified in paragraph (c)(5) of this AD.

(D) MD Helicopters, LLC, Model 369D, 369E, 369F, 369FF, 369HE, 369HM, 369HS, and 500N helicopters identified in paragraph (c)(6) of this AD.

(E) Sikorsky Aircraft Corporation Model S–76A, S–76B, and S–76C helicopters identified in paragraph (c)(8) of this AD.

(2) For the helicopters identified in paragraphs (g)(1)(i) through (v) of this AD, as a result of the actions required by paragraphs (g)(1)(i) through (v) of this AD, if the pull force is greater than 25 lbf (111.2N), or exceeds the limits in the existing Installation Instructions or Instructions for Continued Airworthiness for your helicopter, as applicable, before further flight, comply with either paragraph (g)(2)(i) or (ii) of this AD.

(i) Repair the cable installation in accordance with FAA-approved procedures.

(ii) Deactivate and placard the emergency float system as inoperative in accordance with Appendix A of DART Aerospace Service Bulletin (SB) No. SB2020–09, Revision A, dated March 16, 2021, DART Aerospace SB No. SB2021–01, Revision A, dated December 28, 2021, DART Aerospace SB No. SB2021–02, dated April 30, 2021, DART Aerospace SB No. SB2021–03, dated June 30, 2021, or DART Aerospace SB No. SB2022–01, dated March 14, 2022, as applicable to your model helicopter, except where Appendix A specifies ty-wrapping the pin into place on the pilot collective, and where Appendix A specifies contacting DART customer service for a resolution, accomplish the deactivation and placarding in accordance with FAA-approved procedures. If the emergency float system is deactivated and placarded as inoperative, you are not required to accomplish the actions required by paragraph (g)(1) of this AD. This AD does not allow operation with an inoperative emergency float system unless the requirements of 14 CFR 91.205, 91.213, 135.183, and 136.11 have been met.

(3) For the helicopters identified in paragraphs (g)(1)(vi)(A) through (E) of this AD, as a result of the actions required by the introductory text of paragraph (g)(1)(vi) of this AD, if the pull force is greater than 25 lbf (111.2N), before further flight, repair the cable installation, or deactivate and placard the emergency float system as inoperative in accordance with FAA-approved procedures.

(4) For Robinson Helicopter Company Model R44 and R44 II helicopters identified in paragraph (c)(7) of this AD, within 36 months or at the next float inflation reservoir (reservoir) overhaul after the effective date of this AD, whichever occurs first, perform the requirements in paragraphs (g)(4)(i) and (ii) of this AD. Thereafter, within intervals not to exceed six months, repeat the actions required by paragraph (g)(4)(ii) of this AD.

(i) Remove cable P/N 644.7501 or P/N 644.7502 from service, as applicable, and replace with cable P/N 644.7503; and remove each reservoir P/N 644.7701 from service and replace with reservoir P/N 644.7702 or P/N 644.7703.

(ii) Inspect the pull force on the float activation handle in accordance with FAA-approved procedures. The threshold for this pull force inspection must not exceed 25 lbf (111.2N). If the pull cable installation fails the test (if the pull force is greater than 25 lbf (111.2N)), before further flight, repair the cable installation, or deactivate and placard the emergency float system as inoperative in accordance with FAA-approved procedures.

(5) As of the effective date of this AD, do not install reservoir P/N 644.7701 and cable P/N 644.7501 or reservoir P/N 644.7701 and cable P/N 644.7502 on any Robinson Helicopter Company Model R44 or R44 II helicopter.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, West Certification Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the West Certification Branch, send it to the attention of the person identified in paragraph (i) of this AD. Information may be emailed to: *9-ANM-LAACO-AMOC-REQUESTS@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Additional Information

For more information about this AD, contact Johann Magana, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627–5322; email: *johann.magana@faa.gov*.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) DART Aerospace Operation Instructional Manual for General Pull Cable Rigging and Testing Procedure, Revision B, dated May 12, 2023.

(ii) DART Aerospace Service Bulletin (SB) No. SB2020–09, Revision A, dated March 16, 2021.

(iii) DART Aerospace SB No. SB2021–01, Revision A, dated December 28, 2021.

(iv) DART Aerospace SB No. SB2021–02, dated April 30, 2021.

(v) DART Aerospace SB No. SB2021–03, dated June 30, 2021.

(vi) DART Aerospace SB No. SB2022–01, dated March 14, 2022.

(3) For service information identified in this AD, contact Dart Aerospace, LTD., 1270 Aberdeen St., Hawkesbury, ON, K6A 1K7, Canada; phone: 1–613–632–5200; Fax: 1–613–632–5246; or at *dartaero.com*.

[Docket No. FAA–2024–1010; Project Identifier MCAI–2024–00079–T]

RIN 2120–AA64

Airworthiness Directives; Dassault Aviation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2023–18–09, which applies to certain Dassault Aviation Model FALCON 900EX airplanes. AD 2023–18–09 requires revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. Since the FAA issued AD 2023–18–09, the FAA has determined that new or more restrictive airworthiness limitations are necessary. This proposed AD would continue to require certain actions in AD 2023–18–09 and would require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 10, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1010; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For the EASA ADs, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.* It is also available at *regulations.gov* under Docket No. FAA–2024–1010.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Tom Rodriguez, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3226; email *tom.rodriguez@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2024–1010; Project Identifier MCAI–2024–00079–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important

that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Tom Rodriguez, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3226; email *tom.rodriguez@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2023–18–09, Amendment 39–22550 (88 FR 66683, September 28, 2023) (AD 2023–18–09), for certain Dassault Aviation Model FALCON 900EX airplanes. AD 2023–18–09 was prompted by an MCAI originated by EASA, which is the Technical Agent for the Member States of the European Union. EASA issued AD 2023–0047, dated March 2, 2023 (EASA AD 2023–0047) (which corresponds to FAA AD 2023–18–09), to correct an unsafe condition.

AD 2023–18–09 requires revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. The FAA issued AD 2023–18–09 to address among other things, fatigue cracking and damage in principal structural elements. The unsafe condition, if not addressed, could result in reduced structural integrity of the airplane.

Actions Since AD 2023–18–09 Was Issued

Since the FAA issued AD 2023–18–09, EASA superseded EASA AD 2023–0047, and issued EASA AD 2024–0034, dated January 31, 2024 (EASA AD 2024–0034) (also referred to as the MCAI), to correct an unsafe condition for certain Dassault Aviation Model FALCON 900EX airplanes. The MCAI states that new or more restrictive airworthiness limitations have been developed.

Airplanes with an original airworthiness certificate or original export certificate of airworthiness issued after November 15, 2023, must comply with the airworthiness limitations specified as part of the approved type design and referenced on the type certificate data sheet; this proposed AD therefore does not include those airplanes in the applicability.

The FAA is proposing this AD to address among other things, fatigue cracking and damage in principal structural elements. The unsafe condition, if not addressed, could result in reduced structural integrity of the airplane. You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–1010.

Related Service Information Under 1 CFR Part 51

The FAA reviewed EASA AD 2024–0034 which specifies new or more restrictive airworthiness limitations for airplane structures and safe life limits.

This proposed AD would also require EASA AD 2023–0047, which the Director of the Federal Register approved for incorporation by reference as of November 2, 2023 (88 FR 66683, September 28, 2023).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would retain certain requirements of AD 2023–18–09. This proposed AD would also require revising the existing maintenance or inspection program, as applicable, to incorporate additional new or more restrictive airworthiness limitations, which are specified in EASA AD 2024–0034 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

This proposed AD would require revisions to certain operator maintenance documents to include new actions (*e.g.,* inspections). Compliance with these actions is required by 14 CFR 91.403(c). For airplanes that have been previously modified, altered, or repaired in the areas addressed by this proposed AD, the operator may not be able to accomplish the actions described in the revisions. In this situation, to comply with 14 CFR 91.403(c), the operator must request approval for an alternative method of compliance (AMOC) according to paragraph (m)(1) of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to retain the IBR of EASA AD 2023–0047 and incorporate EASA AD 2024–0034 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2023–0047 and EASA AD 2024–0034 in their entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2023–0047 or EASA AD 2024–0034 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2023–0047 or EASA AD 2024–0034. Service information required by EASA AD 2023–0047 and EASA AD 2024–0034 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–1010 after the FAA final rule is published.

Airworthiness Limitation ADs Using the New Process

The FAA's process of incorporating by reference MCAI ADs as the primary source of information for compliance with corresponding FAA ADs has been limited to certain MCAI ADs (primarily those with service bulletins as the primary source of information for accomplishing the actions required by the FAA AD). However, the FAA is now expanding the process to include MCAI ADs that require a change to airworthiness limitation documents, such as airworthiness limitation sections.

For these ADs that incorporate by reference an MCAI AD that changes airworthiness limitations, the FAA requirements are unchanged. Operators must revise the existing maintenance or inspection program, as applicable, to incorporate the information specified in the new airworthiness limitation document. The airworthiness

limitations must be followed according to 14 CFR 91.403(c) and 91.409(e).

The previous format of the airworthiness limitation ADs included a paragraph that specified that no alternative actions (*e.g.,* inspections) or intervals may be used unless the actions and intervals are approved as an AMOC in accordance with the procedures specified in the AMOCs paragraph under ''Additional AD Provisions.'' This new format includes a ''New Provisions for Alternative and Intervals'' paragraph that does not specifically refer to AMOCs, but operators may still request an AMOC to use an alternative action or interval.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 158 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

The FAA estimates the total cost per operator for the retained actions from AD 2023–18–09 to be $7,650 (90 work-hours × $85 per work-hour).

The FAA has determined that revising the existing maintenance or inspection program takes an average of 90 work-hours per operator, although the agency recognizes that this number may vary from operator to operator. Since operators incorporate maintenance or inspection program changes for their affected fleet(s), the FAA has determined that a per-operator estimate is more accurate than a per-airplane estimate.

The FAA estimates the total cost per operator for the new proposed actions to be $7,650 (90 work-hours × $85 per work-hour).

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing airworthiness directive 2023–18–09, Amendment 39–22550 (88 FR 66683, September 28, 2023); and

■ b. Adding the following new airworthiness directive:

Dassault Aviation: Docket No. FAA–2024–1010; Project Identifier MCAI–2024–00079–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 10, 2024.

(b) Affected ADs

This AD replaces AD 2023–18–09, Amendment 39 22550 (88 FR 66683, September 28, 2023) (AD 2023–18–09).

(c) Applicability

This AD applies to Dassault Aviation Model FALCON 900EX airplanes, serial number (S/N) 97 and S/Ns 120 and higher, certificated in any category, with an original airworthiness certificate or original export certificate of airworthiness issued on or before November 15, 2023.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks.

(e) Unsafe Condition

This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is issuing this AD to address among other things, fatigue cracking and damage in principal structural elements. The unsafe condition, if not addressed, could result in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Revision of the Existing Maintenance or Inspection Program, With a New Terminating Action

This paragraph restates the requirements of paragraph (j) of AD 2023–18–09, with a new terminating action. For airplanes with an original airworthiness certificate or original export certificate of airworthiness issued on or before November 15, 2022: Except as specified in paragraph (h) of this AD, comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2023–0047, dated March 2, 2023 (EASA AD 2023–0047). Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of this paragraph.

(h) Retained Exceptions to EASA AD 2023–0047, With No Changes

This paragraph restates the exceptions specified in paragraph (k) of AD 2023–18–09, with no changes.

(1) The requirements specified in paragraphs (1) and (2) of EASA AD 2023–0047 do not apply to this AD.

(2) Paragraph (3) of EASA AD 2023–0047 specifies revising ''the approved AMP'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after November 2, 2023 (the effective date of AD 2023–18–09).

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2023–0047 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2023–0047, or within 90 days after November 2, 2023 (the effective date of AD 2023–18–09), whichever occurs later.

(4) The provisions specified in paragraphs (4) and (5) of EASA AD 2023–0047 do not apply to this AD.

(5) The ''Remarks'' section of EASA AD 2023–0047 does not apply to this AD.

(i) Retained Restrictions on Alternative Actions and Intervals, With a New Exception

This paragraph restates the requirements of paragraph (l) of AD 2023–18–09, with a new exception. Except as required by paragraph (j) of this AD, after the maintenance or

inspection program has been revised as required by paragraph (g) of this AD, no alternative actions (*e.g.,* inspections) and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2023–0047.

(j) New Revision of the Existing Maintenance or Inspection Program

Except as specified in paragraph (k) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0034, dated January 31, 2024 (EASA AD 2024–0034). Accomplishing the revision of the existing maintenance or inspection program required by this paragraph terminates the requirements of paragraph (g) of this AD.

(k) Exceptions to EASA AD 2024–0034

(1) This AD does not adopt the requirements specified in paragraphs (1) and (2) of EASA AD 2024–0034.

(2) Paragraph (3) of EASA AD 2024–0034 specifies revising ''the approved AMP'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2024–0034 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2024–0034, or within 90 days after the effective date of this AD, whichever occurs later.

(4) This AD does not adopt the provisions specified in paragraphs (4) and (5) of EASA AD 2024–0034.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0034.

(l) New Provisions for Alternative Actions and Intervals

After the existing maintenance or inspection program has been revised as required by paragraph (j) of this AD, no alternative actions (*e.g.,* inspections) and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2024–0034.

(m) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (n) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Dassault Aviation's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(n) Additional Information

For more information about this AD, contact Tom Rodriguez, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3226; email *tom.rodriguez@faa.gov.*

(o) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following service information was approved for IBR on [DATE 35 DAYS AFTER PUBLICATION OF THE FINAL RULE].

(i) European Union Aviation Safety Agency (EASA) AD 2024–0034, dated January 31, 2024.

(ii) [Reserved]

(4) The following service information was approved for IBR on November 2, 2023 (88 FR 66683, September 28, 2023).

(i) European Union Aviation Safety Agency (EASA) AD 2023–0047, dated March 2, 2023.

(ii) [Reserved]

(5) For EASA AD 2024–0034 and AD 2023–0047, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find these EASA ADs on the EASA website at *ad.easa.europa.eu.*

(6) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(7) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 19, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2023–1299; Airspace Docket No. 22–AEA–18]

RIN 2120–AA66

Amendment of Very High Frequency (VHF) Omnidirectional Range (VOR) Federal Airway V–469 and Revocation of VOR Federal Airways V–164, V–423, and V–576; Eastern United States

AGENCY: Federal Aviation Administration (FAA) DOT.

ACTION: Proposed rule; withdrawal.

SUMMARY: The FAA is withdrawing the Notice of Proposed Rulemaking (NPRM) published in the **Federal Register** on June 15, 2023, proposing to amend Very High Frequency Omnidirectional Range (VOR) Federal Airway V–469; and to revoke VOR Federal Airways V–164, V–423, and V–576; due to the planned decommissioning of the Williamsport, PA (FQM), VOR/Distance Measuring Equipment (DME); Stonyfork, PA (SFK), VOR/DME; Danville, VA (DAN), VOR; Hancock, NY (HNK), VOR/DME; and Delancey, NY (DNY), VOR/DME.

DATES: Effective as of 0901 UTC, April 25, 2024, the proposed rule published June 15, 2023 (88 FR 39204), is withdrawn.

FOR FURTHER INFORMATION CONTACT: Brian Vidis, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Reason for Withdrawal

The FAA published a NPRM in the **Federal Register** for Docket No. FAA–2023–1299 (88 FR 39204; June 15, 2023). The NPRM proposed to amend VOR Federal Airway V–469; and to revoke VOR Federal Airways V–164, V–423, and V–576; due to the planned decommissioning of the Williamsport, PA (FQM), VOR/DME; the Stonyfork, PA (SFK), VOR/DME; the Danville, VA (DAN), VOR; the Hancock, NY (HNK), VOR/DME; and the Delancey, NY (DNY), VOR/DME which provides navigation guidance for portions of the affected airways. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. No comments were received. Subsequent to the NPRM, the Williamsport VOR/DME decommissioning was delayed, and

other airway docket actions rendered this proposal unnecessary.

Conclusion

The FAA determined that the NPRM published on June 15, 2023, is unnecessary. Therefore, the FAA withdraws that NPRM.

Issued in Washington, DC, on April 18, 2024.

Frank Lias,

Manager, Rules and Regulations Group.

[Docket No. FAA–2024–1048; Airspace Docket No. 24–AGL–1]

RIN 2120–AA66

Amendment of Jet Routes J–35 and J–101; Amendment VOR Federal Airways V–9, V–48, V–69, V–227, and V–313; and Revocation of VOR Federal Airway V–586 in the Vicinity of Pontiac, IL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Jet Routes J–35 and J–101; amend Very High Frequency Omnidirectional Range (VOR) Federal Airways V–9, V–48, V–69, V–227, and V–313; and revoke VOR Federal Airway V–586. The FAA is proposing this action due to the planned decommissioning of the VOR portion of the Pontiac, IL (PNT), VOR/Distance Measuring Equipment (VOR/DME) navigational aid (NAVAID). The Pontiac VOR is being decommissioned in support of the FAA's VOR Minimum Operational Network (MON) program.

DATES: Comments must be received on or before June 10, 2024.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2024–1048 and Airspace Docket No. 24–AGL–1 using any of the following methods:

* *Federal eRulemaking Portal:* Go to *www.regulations.gov* and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at *www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FAA Order JO 7400.11H, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *www.faa.gov/air_traffic/publications/.* You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Colby Abbott, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would modify the National Airspace System as necessary to preserve the safe and efficient flow of air traffic.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at *www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Operations Support Group, Central Service Center, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Incorporation by Reference

Jet Routes are published in paragraph 2004 and VOR Federal Airways are published in paragraph 6010(a) of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order

JO 7400.11H, dated August 11, 2023, and effective September 15, 2023. These updates would be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11H lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

Background

The FAA is planning to decommission the VOR portion of the Pontiac, IL, VOR/DME in December 2024. The Pontiac VOR is one of the candidate VORs identified for discontinuance by the FAA's VOR MON program and listed in the Final policy statement notice, ''Provision of Navigation Services for the Next Generation Air Transportation System (NextGen) Transition to Performance-Based Navigation (PBN) (Plan for Establishing a VOR Minimum Operational Network),'' published in the **Federal Register** on July 26, 2016 (81 FR 48694), Docket No. FAA–2011–1082.

Although the VOR portion of the Pontiac VOR/DME is planned for decommissioning, the co-located Distance Measuring Equipment (DME) is being retained to continue supporting current and future NextGen PBN flight procedure requirements.

The Air Traffic Service (ATS) routes affected by the planned decommissioning of the Pontiac VOR are Jet Routes J–35 and J–101, and VOR Federal Airways V–9, V–48, V–69, V–227, V–313, and V–586. With the planned decommissioning of the Pontiac VOR, the remaining ground-based NAVAID coverage in the area is insufficient to enable the continuity of the affected routes. As such, proposed modifications to J–35, V–48, V–69, V–227 and V–313 would result in the ATS routes being shortened; to J–101 would result in a gap in the route; to V–9 would result in an existing gap being widened; and to V–586 would result in the airway being revoked.

To address the proposed amendments to the affected ATS routes, instrument flight rules (IFR) traffic could use adjacent Jet Routes J–19, J–26, J–71, J–96, and J–181 in the high-altitude stratum or use VOR Federal Airways V–156, V–173, V–233, V–262, V–429, and V–434 in the low-altitude stratum to navigate around the area affected by the planned decommissioning of the Pontiac VOR. Additionally, IFR pilots equipped with area navigation (RNAV) capabilities could also navigate using RNAV route Q–42 in the high-altitude stratum; RNAV routes T–215, T–325, T–354, and T–478 in the low-altitude stratum; or point-to-point using the existing Fixes and waypoints (WP) that would remain in place to support continued operations though the affected area. Visual flight rules pilots who elect to navigate via the affected ATS routes could also take advantage of the adjacent conventional airways listed above, as well as the listed RNAV routes and point-to-point navigation, if properly equipped. Lastly, all aircraft also have the option to request and receive radar vectors from air traffic control to transit the affected area.

The Proposal

The FAA is proposing to amend 14 CFR part 71 by amending Jet Routes J–35 and J–101; amending VOR Federal Airways V–9, V–48, V–69, V–227, and V–313; and revoking VOR Federal Airway V–586 due to the planned decommissioning of the Pontiac, IL, VOR. The proposed ATS route actions are described below.

J–35: J–35 currently extends between the Leeville, LA, VOR/Tactical Air Navigation (VORTAC) and the Northbrook, IL, VOR/DME. The FAA proposes to remove the route segment between the Spinner, IL, VORTAC and the Joliet, IL, VOR/DME due to the planned decommissioning of the VOR portion of the Pontiac VOR/DME. Additionally, the FAA proposes to also remove the route segments between the Farmington, MO, VORTAC and the St. Louis, MO, VORTAC due to that route segment overlapping J–151; between the St. Louis VORTAC and the Spinner VORTAC due to that route segment overlapping J–101; and between the Joliet VOR/DME and the Northbrook VOR/DME due to that route segment overlapping J–87. The overlapped J–151, J–101, and J–87 route segments would remain charted and provide navigational guidance between the affected NAVAIDs. As amended, the route would be changed to extend between the Leeville VORTAC and the Farmington VORTAC.

J–101: J–101 currently extends between the Humble, TX, VORTAC and the Sault Ste Marie, MI, VOR/DME. The FAA proposes to remove the route segment between the Spinner, IL, VORTAC and the Joliet, IL, VOR/DME due to the planned decommissioning of the VOR portion of the Pontiac VOR/DME. Additionally, the FAA proposes to remove the route segment between the Joliet VOR/DME and the Northbrook, IL, VOR/DME due to that route segment overlapping J–87. As amended, the route would be changed to extend between the Humble VORTAC and the Spinner VORTAC, and between the Northbrook VOR/DME and the Sault Ste Marie VOR/DME. Additional route changes have been proposed in a separate NPRM action.

V–9: V–9 currently extends between the Leeville, LA, VORTAC and the Pontiac, IL, VOR/DME; and between the Janesville, WI, VOR/DME and the Houghton, MI, VOR/DME. The FAA proposes to remove the airway segment between the Spinner, IL, VORTAC and the Pontiac VOR/DME. As amended, the airway would be changed to extend between the Leeville VORTAC and the Spinner VORTAC, and between the Janesville VOR/DME and the Houghton VOR/DME.

V–48: V–48 currently extends between the Ottumwa, IA, VOR/DME and the Pontiac, IL, VOR/DME. The FAA proposes to remove the airway segment between the Peoria, IL, VORTAC and the Pontiac VOR/DME. As amended, the airway would be changed to extend between the Ottumwa VOR/DME and the Peoria VORTAC. Additional airway changes have been proposed in a separate NPRM action.

V–69: V–69 currently extends between the El Dorado, AR, VOR/DME and the Joliet, IL, VOR/DME. The FAA proposes to remove the airway segment between the Spinner, IL, VORTAC and the Joliet VOR/DME. As amended, the airway would be changed to extend between the El Dorado VOR/DME and the Spinner VORTAC.

V–227: V–227 currently extends between the Boiler, IN, VORTAC and the intersection of the Pontiac, IL, 006° and Bradford, IL, 058° radials (PLANO Fix). The FAA proposes to remove the airway segment between the Roberts, IL, VOR/DME and the intersection of the Pontiac, IL, 006° and Bradford, IL, 058° radials (PLANO Fix). As amended, the airway would be changed to extend between the Boiler VORTAC and the Roberts VOR/DME.

V–313: V–313 currently extends between the Centralia, IL, VORTAC and the Pontiac, IL, VOR/DME. The FAA proposes to remove the airway segment between the Adders, IL, VORTAC and the Pontiac VOR/DME. As amended, the airway would be changed to extend between the Centralia VORTAC and the Adders VORTAC.

V–586: V–586 currently extends between the Peoria, IL, VORTAC and the Joliet, IL, VOR/DME via the Pontiac, IL, VOR/DME. The FAA proposes to remove the airway in its entirety.

All NAVAID radials listed in the VOR Federal airway descriptions in the proposed regulatory text of this notice of proposed rulemaking are unchanged and stated in degrees True north.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11H, Airspace Designations and Reporting Points, dated August 11, 2023, and effective September 15, 2023, is amended as follows:

Paragraph 2004 Jet Routes.

* * * * *

J–35 [Amended]

From Leeville, LA; Mc Comb, MS; Sidon, MS; Memphis, TN; to Farmington, MO.

* * * * *

J–101 [Amended]

From Humble, TX; Lufkin, TX; Little Rock, AR; St. Louis, MO; to Spinner, IL. From Northbrook, IL; Badger, WI; Green Bay, WI; to Sault Ste Marie, MI.

* * * * *

Paragraph 6010(a) Domestic VOR Federal Airways.

* * * * *

V–9 [Amended]

From Leeville, LA; Mc Comb, MS; INT Mc Comb 004° and Magnolia, MS, 194° radials; Magnolia; Sidon, MS; Marvell, AR; INT Marvell 326° and Walnut Ridge, AR, 187° radials; Walnut Ridge; Farmington, MO; St. Louis, MO; to Spinner, IL. From Janesville, WI; Madison, WI; Oshkosh, WI; Green Bay, WI; Iron Mountain, MI; to Houghton, MI.

* * * * *

V–48 [Amended]

From Ottumwa, IA; Burlington, IA; to Peoria, IL.

* * * * *

V–69 [Amended]

From El Dorado, AR; Pine Bluff, AR; INT Pine Bluff 038° and Walnut Ridge, AR, 187° radials; Walnut Ridge; Farmington, MO; Troy, IL; to Spinner, IL.

* * * * *

V–227 [Amended]

From Boiler, IN; to Roberts, IL.

* * * * *

V–313 [Amended]

From Centralia, IL; to Adders, IL.

* * * * *

V–586 [Removed]

* * * * *

Issued in Washington, DC, on April 18, 2024.

Frank Lias,

Manager, Rules and Regulations Group.

BILLING CODE 4910–13–P

COMMODITY FUTURES TRADING COMMISSION

17 CFR Parts 37 and 38

RIN 3038–AF29

Requirements for Designated Contract Markets and Swap Execution Facilities Regarding Governance and the Mitigation of Conflicts of Interest Impacting Market Regulation Functions

AGENCY: Commodity Futures Trading Commission.

ACTION: Proposed rule; extension of comment period.

SUMMARY: On March 19, 2024, the Commodity Futures Trading Commission (''Commission'' or ''CFTC'') published in the **Federal Register** a notice of proposed rulemaking (''Proposed Rule'' or ''NPRM'') titled Requirements for Designated Contract Markets and Swap Execution Facilities Regarding Governance and the Mitigation of Conflicts of Interest Impacting Market Regulation Functions. The comment period for the Proposed Rule was set to close on April 22, 2024. The Commission is extending the comment period for this NPRM by an additional twenty-one days.

DATES: The comment period for the NPRM titled Requirements for Designated Contract Markets and Swap Execution Facilities Regarding Governance and the Mitigation of Conflicts of Interest Impacting Market Regulation Functions notice of proposed rulemaking is extended through May 13, 2024.

ADDRESSES: You may submit comments, identified by ''Requirements for Designated Contract Markets and Swap Execution Facilities Regarding Governance and the Mitigation of Conflicts of Interest Impacting Market Regulation Functions, RIN 3038–AF29,'' by any of the following methods:

- *CFTC Comments Portal: https://comments.cftc.gov/.* Select the ''Submit Comments'' link for this rulemaking and follow the instructions on the Public Comment Form.
- *Mail:* Send to Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.
- *Hand Delivery/Courier:* Follow the same instructions as for Mail above.

Please submit your comments using only one of these methods. To avoid possible delays with mail or in-person deliveries, submissions through the CFTC Comments Portal are encouraged.

All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to *https://comments.cftc.gov.* You should submit only information that you wish to make available publicly. If you wish the Commission to consider information that you believe is exempt from disclosure under the Freedom of Information Act (''FOIA''), a petition for confidential treatment of the exempt information may be submitted according to the procedures established in § 145.9 of the Commission's regulations.[1]

The Commission reserves the right, but shall have no obligation, to review,

[1] 17 CFR 145.9.

pre-screen, filter, redact, refuse, or remove any or all of your submission from *https://comments.cftc.gov* that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the rulemaking will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable laws, and may be accessible under the FOIA.

FOR FURTHER INFORMATION CONTACT: Rachel Berdansky, Deputy Director, *rberdansky@cftc.gov,* 202–418–5429; Swati Shah, Associate Director, *sshah@cftc.gov,* 202–418–5042; Caitlin Holzem, Special Counsel, *cholzem@cftc.gov,* 202–418–5557; Division of Market Oversight, Commodity Futures Trading Commission, 1155 21st Street NW, Washington, DC 20581.

SUPPLEMENTARY INFORMATION: On March 19, 2024, the Commission published proposed amendments [2] to Parts 37 and 38 that would: adopt the existing standards under the Guidance and Acceptable Practices for DCMs implementing Core Principle 15 and Core Principle 16; adopt rules implementing SEF Core Principle 12 rules that are consistent with existing standards under the Guidance and Acceptable Practices for DCM Core Principles 15 and 16; move certain existing conflicts of interest and governance requirements from Part 1 to Part 37 for SEFs and Part 38 for DCMs; adopt Part 38 rules more detailed standards concerning the DCM Chief Regulatory Officer; adopt as Parts 37 and 38 more detailed standards concerning the Regulatory Oversight Committee (''ROC''); amend Part 37 and 38 regulations regarding the notification of a transfer of equity interest in a SEF and DCM. The comment period for the NPRM closes on April 22, 2024.

In a March 24, 2024, Request Letter,[3] commenters express concerns that the originally-allotted 60-day comment period is insufficient. The Commission is extending the comment period by an additional twenty-one days in order to allow interested persons additional time to analyze the proposal and prepare their comments.

Issued in Washington, DC, on April 22, 2024 by the Commission.

Robert Sidman,

Deputy Secretary of the Commission.

Note: the following appendix will not appear in the Code of Federal Regulations.

Appendix to Requirements for Designated Contract Markets and Swap Execution Facilities Regarding Governance and the Mitigation of Conflicts of Interest Impacting Market Regulation Functions—Commission Voting Summary

On this matter, Chairman Behnam and Commissioners Johnson, Goldsmith Romero, and Pham voted in the affirmative. Commissioner Mersinger voted to concur. No Commissioner voted in the negative.

POSTAL REGULATORY COMMISSION

39 CFR Part 3006

[Docket No. RM2024–5; Order No. 7052]

RIN 3211–AA38

Freedom of Information Act

AGENCY: Postal Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Notice of Proposed Rulemaking seeks comment on a proposal to amend the Commission's Freedom of Information Act (FOIA) regulations. The proposal is designed to improve readability by reorganizing and rephrasing existing content in a more accessible manner. Additionally, the proposal would better align the Commission's existing FOIA regulations with the practices of other agencies subject to the FOIA, as necessarily adapted to the Commission's size and area of regulatory oversight. Finally, the proposal includes amendments to clarify and amplify the information given to the public and improve the efficiency of the Commission's FOIA administration. This document informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* May 23, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *https://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives. The Rule Summary can be found on the Commission's Rule Summary Page at *https://www.prc.gov/rule-summary-page.*

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

I. Background
II. Basis of Proposed Rules
III. Proposed Rules

I. Background

The Commission is an independent Federal agency that regulates the United States Postal Service (''Postal Service''). The Commission's mission is to ensure transparency and accountability of the Postal Service and to foster a vital and efficient universal mail system. The Commission is subject to the FOIA. The Commission is also a micro agency with fewer than 100 employees. Year to year, the bulk of the FOIA requests received by the Commission are intended for the Postal Service and the requester is therefore directed to the Postal Service, as a best practice. The Commission's existing FOIA regulations appear in existing 39 CFR part 3006.

II. Basis of the Proposed Rules

Based on experience with the existing FOIA regulations, the Commission proposes amendments that would improve readability, align the Commission's existing FOIA regulations with the practices of other agencies subject to the FOIA (with appropriate adaptions for the Commission's size and area of regulatory oversight), improve the efficiency of the Commission's FOIA administration, and clarify and amplify the information provided to the public.

To improve readability, the Commission proposes to organize the material currently appearing in existing 39 CFR part 3006, by grouping related material (individual sections of the existing regulations) under three new subparts. The proposed order of the subparts seeks to provide the public with information in a more easily accessible manner. Sections and subparts are organized to provide the most general material first, which likely will be of interest to the widest audience.

The Commission also proposes amendments that would better align content with the practices of other agencies subject to the FOIA (as necessarily adapted to the Commission's size and area of regulatory oversight), improve the efficiency of the Commission's FOIA administration, and amplify the usefulness of the information provided to the public.

Accordingly, much of the proposed content is modeled upon the sample language appearing in the U.S. Department of Justice, Office of Information Policy's Template for Agency FOIA Regulations.

III. Proposed Rules

List of Subjects in 39 CFR Part 3006

Administrative practice and procedure, Freedom of information, Reporting and recordkeeping requirements, Sunshine Act.

For the reasons stated in the preamble, the Commission proposes to amend 39 CFR part 3006 as follows:

PART 3006—PUBLIC RECORDS AND FREEDOM OF INFORMATION ACT

■ 1. The authority citation for part 3006 continues to read as follows:

Authority: 5 U.S.C. 552; 39 U.S.C. 407, 503, 504.

■ 2. Revise part 3006 to read as follows:

PART 3006—PUBLIC RECORDS AND FREEDOM OF INFORMATION ACT

Subpart A—General Provisions

Sec.
3006.100 Applicability and scope.
3006.101 Commission policy.
3006.102 Proactive disclosures.
3006.103 Reading room.
3006.104 Chief Freedom of Information Act Officer.
3006.105 Freedom of Information Act Public Liaison.
3006.106 Commission procedure when served a subpoena.

Subpart B—Procedures for Freedom of Information Act Requests

Sec.
3006.200 Procedures for submitting requests.
3006.201 Timing of responses to requests.
3006.202 Responses to requests.
3006.203 Appeals.
3006.204 Relationship among the Freedom of Information Act, the Privacy Act, and the Commission's procedures for according appropriate confidentiality.
3006.205 Consultations, referrals, and coordinations.
3006.206 Submission of non-public materials by a person other than the Postal Service.

Subpart C—Fees for Freedom of Information Act Requests

Sec.
3006.300 Definitions applicable to this subpart.
3006.301 Request category.
3006.302 General provisions.
3006.303 Fee schedule.
3006.304 Procedure for assessing and collecting fees.

Subpart A—General Provisions

§ 3006.100 Applicability and scope.

(a) The rules in this part apply to requests for records under the Freedom of Information Act (FOIA), 5 U.S.C. 552. These rules should be read in conjunction with the text of the FOIA and the Uniform Freedom of Information Act Fee Schedule and Guidelines published by the Office of Management and Budget (OMB Guidelines).

(b) Requests made by individuals for records about themselves under the Privacy Act of 1974, 5 U.S.C. 552a, are processed in accordance with the Commission's Privacy Act regulations appearing in part 3005 of this chapter and § 3006.204.

§ 3006.101 Commission policy.

(a) The Commission shall be proactive and timely in identifying and posting public records and other frequently requested records to its website.

(b) It is the stated policy of the Commission that FOIA requests shall be administered with a clear presumption of openness. The Commission will only withhold information if it reasonably foresees that disclosure would harm an interest protected by a FOIA exemption, such as information specifically exempted from disclosure by statute (for example 39 U.S.C. 410(c)), or disclosure is otherwise prohibited by law.

(c) This Commission policy does not create any right enforceable in court.

§ 3006.102 Proactive disclosures.

(a) Except as provided in § 3006.101(b) and in part 3011 of this chapter, Commission records, required by the FOIA to be made available, will be made available on the Commission's website, *http://www.prc.gov.*

(b) Descriptions of the Commission's organization, its methods of operation, statements of policy and interpretations, and procedural and substantive rules, are published in the **Federal Register** publication system, and are available on the Commission's website, *http://www.prc.gov.*

§ 3006.103 Reading room.

(a) The Commission maintains an electronic reading room at *http://www.prc.gov.*

(b) The records available for public inspection include, for example, decisions; reports; opinions; orders; notices; findings; determinations; statements of policy; copies of selected records released under FOIA; indexes required to be maintained under FOIA; and records relating to any matter or proceeding before the Commission.

(c) The Commission shall make available, in an electronic form, records previously released under FOIA and which the Commission determines are or are likely to become of significant public interest.

(d) Commission records that have been requested three or more times will be made available on the Commission's website, *http://www.prc.gov.*

§ 3006.104 Chief Freedom of Information Act Officer.

The Commission designates the General Counsel of the Commission as the Chief FOIA Officer. The Chief FOIA Officer shall be responsible for the administration of and reporting on the Commission's Freedom of Information Act program. The Chief FOIA Officer (and any individual(s) designated by the Chief FOIA Officer to communicate with FOIA requesters) may be contacted via email at *FOIA@prc.gov* or telephone at 202–789–6800.

§ 3006.105 Freedom of Information Act Public Liaison.

The Commission designates the Director of the Office of Public Affairs and Government Relations or the individual's designee as the FOIA Public Liaison who shall assist in the resolution of any dispute between a requester and the Commission. The FOIA Public Liaison may be contacted via email at *PRC-PAGR@prc.gov* or telephone at 202–789–6800.

§ 3006.106 Commission procedure when served a subpoena.

If an officer or employee of the Commission is served with a subpoena duces tecum, material that is not part of the public files and records of the Commission shall be produced only as authorized by the General Counsel. Service of such a subpoena shall immediately be reported to the General Counsel with a statement of all relevant facts. The General Counsel will thereupon enter such order or give such instructions as it deems advisable.

Subpart B—Procedures for Freedom of Information Act Requests

§ 3006.200 Procedures for submitting requests.

(a) *Electronic submission requirements.* A request will receive the quickest possible response if it is submitted electronically. An electronic request may be submitted via the Commission's online FOIA request form that is accessible through the Commission's website (*http://www.prc.gov*), emailing *FOIA@prc.gov,* or the web portal at *http://*

www.foia.gov/. Each electronic request must:

(1) Reasonably describe the records sought,

(2) Identify the request category under § 3006.301, and

(3) Include the requester's name, daytime telephone number, and a valid email or mailing address to receive records and written communications from the Commission regarding the request.

(b) *Hard copy submission requirements.* A requester may also submit a request for records via hard copy. Each hard copy request must:

(1) Be in writing,

(2) Be clearly identified as ''Freedom of Information Act Request'' both in the text of the request and on the envelope,

(3) Be submitted to the Commission's office (901 New York Avenue NW, Suite 200, Washington, DC 20268–0001),

(4) Reasonably describe the records sought, and

(5) Include the requester's name, daytime telephone number, and a valid email or mailing address to receive records and written communications from the Commission regarding the request.

(c) *Content of request.* Each request must describe the records sought in sufficient detail to enable Commission personnel to locate them with a reasonable amount of effort. Whenever possible, the request should include specific information about each record sought that might assist the Commission in responding to the request, such as the type of record (*e.g.,* contract, report, memorandum, etc.); the title or docket number of a specific document or report; the topic or subject matter; the name of the office and/or employees most likely to possess the record; the date or general timeframe of the record's creation; and any details related to the purpose of the record. Requests for email records should specify the likely senders and recipients, keywords, and a range of dates. Before submitting requests, a requester may contact the Chief FOIA Officer (or the individual's designee) or the FOIA Public Liaison to discuss the records sought and to receive assistance in describing the records. The request may also specify the requester's preferred method of communication (telephone, email, or mailing address) and the preferred form or format (including electronic formats) of the requested records.

(d) *Improper requests.* A request that does not reasonably describe the records sought or does not comply with the published rules regarding the procedures to be followed for submitting a request will be deemed to be an improper FOIA request. If the Commission does not receive the additional information needed that reasonably describes the records to enable their location by the Commission with a reasonable amount of effort, then the Commission will administratively close the file.

(1) If after receiving a request, the Commission determines that it is improper, the Chief FOIA Officer or the individual's designee will provide one written notification to the requester using the contact information included in the request. The notification will inform the requester of all the following:

(i) The reason(s) why the request is improper;

(ii) The additional information needed from the requester that would reasonably describe the records to enable their location by the Commission with a reasonable amount of effort;

(iii) The Commission will not be able to comply with the request unless the Commission receives such additional information in writing within the specified timeframe and if the Commission does not receive a written response containing the additional information needed within the specified timeframe, then it will presume that the requester is no longer interested in the records and will administratively close the file on the request;

(iv) The preferred method for the requester to provide the additional information is by emailing *FOIA@prc.gov;*

(v) The requester may also provide the additional information by mailing or by hand delivery during regular business hours (which are from 8 a.m. to 4:30 p.m. Eastern Time, except for Saturdays, Sundays, and Federal holidays) to the Office of Secretary and Administration, Postal Regulatory Commission, 901 New York Avenue NW, Suite 200, Washington, DC 20268–0001); and

(vi) The contact information for the Chief FOIA Officer (or the individual's designee) and the FOIA Public Liaison, each of whom is available to assist the requester in reasonably describing the records sought.

(2) If the requester provides the additional information needed that reasonably describes the records to enable their location by the Commission with a reasonable amount of effort by the timeframe specified in the notification, then the Commission will confirm receipt of the information and process the request.

(3) After administrative closure, if the Commission receives the additional information needed that reasonably describes the records to enable their location by the Commission with a reasonable amount of effort, then the Commission will notify the requester that the request will be processed as a new request.

(e) *Expedited processing.* At any time, a requester that has satisfied all applicable requirements of paragraphs (a) through (c) of this section may seek expedited processing of a request or an administrative appeal. To seek expedited processing, the requester must:

(1) Include ''Expedited Freedom of Information Act Request'' or ''Expedited Freedom of Information Act Appeal'' in the body of the submission;

(2) For any hard copy submission, include ''Expedited Freedom of Information Act Request'' or ''Expedited Freedom of Information Act Appeal'' on the envelope;

(3) Demonstrate a compelling need as defined in 5 U.S.C. 552(a)(6)(E)(v); and

(4) Certify the statement of compelling need to be true and correct to the best of the requester's knowledge and belief. The Commission has discretion to waive the certification requirement.

§ 3006.201 Timing of responses to requests.

(a) *In general.* Requests will ordinarily be responded to according to their order of receipt.

(b) *Multitrack processing.* (1) Unless expedited processing has been granted, the Commission places each request in simple or complex tracks based on the amount of work and time involved in processing the request. Factors considered in assigning a request into the complex track may include one or more of the following:

(i) The request involves voluminous documents;

(ii) The complexity of the material;

(iii) The request involves record searches at multiple facilities or locations;

(iv) The request requires consultation among the Commission or other agencies; or

(v) The number of open requests submitted by the same requester.

(2) Within each track, the Commission processes requests in the order in which they are received. When appropriate, the Chief FOIA Officer or the individual's designee will notify the requester of placing a request in the ''Complex'' track and provide the requester with an opportunity to limit the scope of the request. If the requester limits the scope of the request, it may result in faster processing.

(c) *Expedited processing.* (1) Requests and appeals shall be processed on an expedited basis whenever it is determined that they involve the following:

(i) Circumstances in which the lack of expedited processing could reasonably be expected to pose an imminent threat to the life or physical safety of an individual; or

(ii) An urgency to inform the public about an actual or alleged Federal Government activity, if made by a person who is primarily engaged in disseminating information.

(2) Within 10 calendar days of the receipt of a request for expedited processing, the Chief FOIA Officer or the individual's designee will notify the requester of the decision whether to grant or deny expedited processing. If expedited processing is granted, the request shall be given priority, placed in the processing track for expedited requests, and shall be processed as soon as practicable. If a request for expedited processing is denied, the Chief FOIA Officer or the individual's designee will inform the requester of the denial in writing, the right to appeal the denial to the Commission in writing, and the procedures for appealing the denial. Any request for records that has been denied expedited processing will be processed in the same manner as a request that did not seek expedited processing.

(3) Where a compelling need is not shown in an expedited request as specified in § 3006.200(e), the Commission may grant the request for expedited processing at its discretion.

(d) *Unusual circumstances.* Whenever the statutory time limit for processing a request cannot be met because of ''unusual circumstances'', as defined in 5 U.S.C. 552(a)(6)(B)(iii), and the Commission extends the time limit on that basis, the Commission shall, before the expiration of the 20 business day period to respond, notify the requester in writing of the unusual circumstances involved and of the date by which processing of the request can be expected to be completed. If an extension will exceed 10 business days, the Commission will:

(1) Provide the requester with an opportunity to modify the request or arrange an alternative timeframe for processing; and

(2) Make its FOIA Public Liaison available to the requester and apprise the requester of their right to seek dispute resolution services from the Office of Government Information Services.

(e) *Aggregating requests.* For the purposes of satisfying unusual circumstances under the FOIA, the Commission may aggregate requests in cases where it reasonably appears that multiple requests, submitted either by a single requester or by a group of requesters acting in concert, constitute a single request that would otherwise involve unusual circumstances. Multiple requests that involve unrelated matters shall not be aggregated.

§ 3006.202 Responses to requests.

(a) *In general.* To the extent practicable and unless the request indicates a different preferred method of communication, the Commission will communicate with the requester electronically (such as via email). In determining which records are responsive to a request, the Commission will include only records in its possession and control on the date that it begins its search. If any other date is used, the Commission shall inform the requester of that date. A record that is excluded from the requirements of the FOIA pursuant to 5 U.S.C. 552(c) is not considered responsive to the request.

(b) *Acknowledgments of requests.* The Commission shall acknowledge the request and assign it an individualized tracking number if it will take longer than 10 days (excluding Saturdays, Sundays, and legal holidays) to process. The acknowledgment must include a brief description of the records sought to allow requesters to keep track of their requests more easily.

(c) *Grants of requests.* Once the Commission makes a determination to grant a request in full or in part, the Chief FOIA Officer or the individual's designee shall notify the requester in writing. The Commission also shall inform the requester of any fees charged and shall disclose the requested records to the requester promptly upon payment of any applicable fees. The Commission must inform the requester of the availability of the FOIA Public Liaison to offer assistance.

(d) *Adverse determinations of requests.* If the Commission makes an adverse determination denying a request in any respect, then the Chief FOIA Officer or the individual's designee shall notify the requester of that determination in writing. Adverse determinations, or denials of requests, include decisions that: the requested record is exempt, in whole or in part; the request does not reasonably describe the records sought; the information requested is not a record subject to the FOIA; the requested record does not exist, cannot be located, or has been destroyed; or the requested record is not readily reproducible in the form or format sought by the requester. Adverse determinations also include denials involving fees or fee waiver matters or denials of requests for expedited processing.

(e) *Content of denials.* The denial shall be signed by the Chief FOIA Officer or the individual's designee and shall include:

(1) The name and title or position of the person responsible for the denial;

(2) A brief statement of the reasons for the denial, including any FOIA exemption applied by the Commission in denying the request;

(3) An estimate of the volume of any records or information withheld, such as the number of pages or some other reasonable form of estimation, although such an estimate is not required if the volume is otherwise indicated by deletions marked on records that are disclosed in part or if providing an estimate would harm an interest protected by an applicable exemption;

(4) A statement that the denial may be appealed under § 3006.203, and a description of the requirements; and

(5) A statement notifying the requester of the assistance available from the Commission's FOIA Public Liaison and the dispute resolution services offered by the Office of Government Information Services.

(f) *Markings on released documents.* Markings on released documents must be clearly visible to the requester. Records disclosed in part shall be marked to show the amount of information deleted and the exemption under which the deletion was made unless doing so would harm an interest protected by an applicable exemption. The location of the information deleted shall also be indicated on the record, if technically feasible.

(g) *Use of record exclusions.* (1) If the Commission identifies records that may be subject to exclusion from the requirements of the FOIA pursuant to 5 U.S.C. 552(c), the Commission must confer with the Department of Justice, Office of Information Policy (OIP), to obtain approval to apply the exclusion.

(2) Upon invoking an exclusion, the Commission must maintain an administrative record of the process of invocation and approval of exclusion by OIP.

§ 3006.203 Appeals.

(a) *Discretionary review.* The Commission (on its own initiative) may review any decision of the Chief FOIA Officer or the individual's designee within 90 calendar days.

(b) *Requirements for making an appeal.* A requester may appeal an adverse decision on their FOIA request rendered by the Commission by submitting a hard copy to the Commission's office (901 New York Avenue NW, Suite 200, Washington, DC

20268–0001) or by emailing *FOIA@prc.gov.* The requester must make the appeal in writing and to be considered timely it must be postmarked, or in the case of electronic submissions, transmitted, within 90 calendar days after the date of the Commission's response. To facilitate handling, the requester must mark both the appeal letter and envelope or the subject line of the electronic transmission ''Freedom of Information Act Appeal.'' The appeal must include, as applicable:

(1) A copy of the request, of any notification of denial or other action, and of any other related correspondence;

(2) The FOIA tracking number assigned to the request;

(3) A description of the action (or failure to act) which is being challenged;

(4) If challenging specific redactions made to responsive records, a statement identifying the specific redactions being challenged;

(5) A statement of the relief sought; and

(6) A statement of the reasons why the requester believes the action or failure to act is erroneous.

(c) *Adjudication of appeals.* (1) The decision of the Commission constitutes the final decision on the issue being appealed. The Commission will give prompt consideration to an appeal for expedited processing of a request. All other decisions normally will be made within 20 days (excluding Saturdays, Sundays, and legal holidays) from the time of the receipt by the Commission. The 20-business day response period may be extended by the Commission for a period not to exceed an additional 10 business days when reasonably necessary to permit the proper consideration of an appeal, under one or more of the ''unusual circumstances'', as defined in 5 U.S.C. 552(a)(6)(B)(iii). The aggregate number of additional business days used, however, may not exceed 10 business days.

(2) An appeal ordinarily will not be adjudicated if the request becomes a matter of FOIA litigation.

(3) On receipt of any appeal involving classified information, the Commission must take appropriate action to ensure compliance with applicable classification rules.

(d) *Decisions on appeals.* A decision on an appeal must be made in writing. A decision that upholds the adverse determination in whole or in part will contain a statement that identifies the reasons for the affirmance, including any FOIA exemptions applied. The decision will provide the requester with notification of the statutory right to file a lawsuit and will inform the requester of the mediation services offered by the Office of Government Information Services of the National Archives and Records Administration as a non-exclusive alternative to litigation. If the adverse determination is remanded or modified on appeal, the requester will be notified in writing and the Chief FOIA Officer or the individual's designee will further process the request in accordance with that appellate decision and respond directly to the requester. If not prohibited by or under law, the Commission may direct the disclosure of a record even though its disclosure is not required by law or regulation.

(e) *Engaging in dispute resolution services provided by OGIS.* Dispute resolution is a voluntary process. If the Commission agrees to participate in the dispute resolution services provided by OGIS, it will actively engage as a partner to the process in an attempt to resolve the dispute.

(f) *When an appeal is required.* Before seeking judicial review of an adverse determination rendered by the Commission on a FOIA request, a requester generally must first submit a timely administrative appeal.

§ 3006.204 Relationship among the Freedom of Information Act, the Privacy Act, and the Commission's procedures for according appropriate confidentiality.

(a) *Coverage.* FOIA applies to all Commission records and provides the public with access to government records.

(b) *Requesting records subject to the Privacy Act.* A request by an individual for the individual's own records contained in a system of records is governed by the Privacy Act. Release will first be considered under the Privacy Act pursuant to part 3005 of this chapter. However, if there is any record that the Commission need not release under the Privacy Act, the Commission will also consider the request under FOIA, and will release the record if FOIA requires it.

(c) *Requesting another individual's record.* Request for records of individuals which may not be granted under the Privacy Act shall be considered under FOIA.

(1) If the Commission makes a disclosure in response to a request and the disclosure is permitted by the Privacy Act's disclosure provision, 5 U.S.C. 552a(b), the Commission will rely on the Privacy Act to govern the disclosure.

(2) In some circumstances, the Privacy Act may prohibit the Commission's ability to release records which may be released under FOIA.

(d) *Requesting a Postal Service record.* The Commission maintains custody of records that are both Commission and Postal Service records. Except when the Postal Service submits materials to the Commission in connection with activities under 39 U.S.C. 407(b)(2)(A), in all other instances that the Postal Service submits materials to the Commission that the Postal Service reasonably believes to be exempt from public disclosure, the Postal Service shall follow the procedures described in part 3011, subpart B of this chapter.

(1) A request made pursuant to FOIA for Postal Service records shall be referred to the Postal Service; and

(2) A request made pursuant to part 3011 of this chapter for records designated as non-public by the Postal Service shall be considered under the applicable standards set forth in that part.

(e) *Requesting a record submitted by a person other than the Postal Service.* The Commission maintains records of a confidential nature submitted by persons other than the Postal Service as non-public materials.

(1) A request made pursuant to FOIA for records submitted by a person other than the Postal Service shall adhere to the applicable procedures of § 3006.205. If such a FOIA request is not referred to a different Federal agency pursuant to § 3006.205(b), the Commission shall consider it in light of all applicable exemptions and in accordance with the following procedures:

(i) If such materials are designated as non-public, the Commission shall follow the procedures appearing in § 3006.206(b) through (d) in determining the FOIA request; or

(ii) In all other instances, the Commission shall determine the FOIA request after notifying the person of the FOIA request and providing the person with an opportunity to respond within 7 days of the date of the notice under the following circumstances:

(A) The records sought contain confidential commercial information that may be protected from disclosure under 5 U.S.C. 552(b)(4); and

(B) The Commission determines that it may be required to disclose the records, provided that at least one of the following applies:

(1) The requested information has been designated in good faith by the submitter as information considered protected from disclosure under 5 U.S.C. 552(b)(4); or

(2) The Commission has a reason to believe that the requested information may be protected from disclosure under

5 U.S.C. 552(b)(4), but has not yet determined whether the information is protected from disclosure.

(2) A request made pursuant to part 3011 of this chapter for records designated as non-public by a person other than the Postal Service shall be considered under the applicable standards set forth in that part.

§ 3006.205 Consultations, referrals, and coordinations.

(a) *Consultations.* If records originated with the Commission but contain within them information of significance to another Federal agency or office, the Commission will typically consult with that other entity prior to making a release determination.

(b) *Referrals.* In addition to referring all requests made pursuant to FOIA for Postal Service records to the Postal Service as specified by § 3006.204(d)(1), if the Commission believes that a different Federal agency is best able to determine whether to disclose the record, the Commission will typically refer responsibility for responding to the request regarding that record to that agency. Ordinarily, the agency that originated the record is presumed to be the best agency to make the disclosure determination. Whenever the Commission refers any part of the responsibility for responding to a request to another agency, the Commission will notify the requester of the referral, including the name of the agency and that agency's FOIA contact information.

(c) *Coordinations.* The standard referral procedure is not appropriate where disclosure of the identity of the Federal agency to which the referral would be made could harm an interest protected by an applicable exemption, such as the exemptions that protect personal privacy or national security interests. For example, if a non-law enforcement agency responding to a request for records on a living third party locates within its files records originating with a law enforcement agency, and if the existence of that law enforcement interest in the third party was not publicly known, then to disclose that law enforcement interest could cause an unwarranted invasion of the personal privacy of the third party. Similarly, if the Commission locates within its files material originating with an Intelligence Community agency, and the involvement of that agency in the matter is classified and not publicly acknowledged, then to disclose or give attribution to the involvement of that Intelligence Community agency could cause national security harms. In such instances, in order to avoid harm to an interest protected by an applicable exemption, the Commission will coordinate with the originating agency to seek its views on disclosure of the record. The Commission then will notify the requester of the release determination for the record that is the subject of the coordination.

(d) *Classified information.* On receipt of any request involving classified information, the Commission will determine whether the information is currently and properly classified in accordance with applicable classification rules. Whenever a request involves a record containing information that has been classified or may be appropriate for classification by another agency under any applicable executive order concerning the classification of records, the Commission must refer the responsibility for responding to the request regarding that information to the agency that classified the information, or that should consider the information for classification. Whenever an agency's record contains information that has been derivatively classified (for example, when it contains information classified by another agency), the Commission must refer the responsibility for responding to that portion of the request to the agency that classified the underlying information.

(e) *Timing of responses to consultations and referrals.* All consultations and referrals received by the Commission will be handled according to the date that the first agency received the perfected FOIA request.

(f) *Agreements regarding consultations and referrals.* The Commission may establish agreements with other agencies to eliminate the need for consultations or referrals with respect to particular types of records.

§ 3006.206 Submission of non-public materials by a person other than the Postal Service.

(a) *Overlap with treatment of non-public materials.* Any person who submits materials to the Commission (submitter) that the submitter reasonably believes to be exempt from public disclosure shall follow the procedures described in part 3011, subpart B of this chapter, except when the submitter submits materials to the Commission in connection with activities under 39 U.S.C. 407(b)(2)(A).

(b) *Notice of request.* Except as provided in § 3006.204(d), if a FOIA request seeks materials designated as non-public materials, the Commission will provide the submitter with notice of the request. The Commission may also provide notice when it has reason to believe that materials submitted by a person other than the Postal Service are possibly exempt from disclosure and may fall within the scope of any FOIA request.

(c) *Objections to disclosure.* A submitter may file written objections to the request specifying all grounds for withholding the information under FOIA within 7 days of the date of the notice. If the submitter fails to respond to the notice, the submitter will be considered to have no objection, beyond those objections articulated in its application for non-public treatment pursuant to § 3011.201 of this chapter, to the disclosure of the information.

(d) *Notice of decision.* If, after considering the submitter's objections to disclosure the Commission decides to disclose the information, it will give the submitter written notice of the decision and a brief explanation of the reasons for not sustaining the submitter's objections. The actual disclosure will not be made before 3 days after publication of the Commission's decision.

Subpart C—Fees for Freedom of Information Act Requests

§ 3006.300 Definitions applicable to this subpart.

Commercial use means a request from or on behalf of a person seeking information for a use or purpose that furthers the commercial, trade, or profit interests of the requester or person on whose behalf the request is made. In determining the applicability of this term, the use to which a requester will put the document is considered first; where reasonable doubt exists as to the use, the Commission may seek clarification before assigning the request to a category.

Direct costs means the expenditures the Commission incurs in searching for, duplicating, and, where applicable, reviewing documents to respond to a request. They include (without limitation) the salary of the employee(s) performing work (the basic pay rate of such employee(s) plus 16 percent to cover benefits).

Duplication means copying the documents necessary to respond to a request. Such copies may be paper, microform, audiovisual, or machine-readable.

Educational institution means a preschool, a public or private elementary or secondary school, an institution of graduate or undergraduate higher education, an institution of professional education, and an institution of vocational education,

which operates a program or programs of scholarly research.

Noncommercial scientific institution means an institution, not operated on a commercial basis (as referenced above), which is operated solely for the purpose of conducting scientific research whose results are not intended to promote any particular product or industry.

Representative of the news media means any person or entity that gathers information of potential interest to a segment of the public, uses its editorial skills to turn the raw materials into a distinct work, and distributes that work to an audience. The term ''news'' means information that is about current events or that would be of current interest to the public. Examples of news media entities are television or radio stations broadcasting to the public at large and publishers of periodicals (but only if such entities qualify as disseminators of ''news'') who make their products available for purchase or by subscription or by free distribution to the general public. These examples are not all inclusive and may include alternate media to disseminate news. A freelance journalist shall be regarded as working for a news media entity if the journalist can demonstrate a solid basis for expecting publication through that entity (*e.g.,* by a publication contract or prior publication record), whether or not the journalist is actually employed by the entity.

Review means examining documents located in response to a request to determine whether any portion is exempt from disclosure, and processing or preparing documents for release, but not determination of general legal or policy issues regarding application of exemptions.

Search includes all time spent looking for material responsive to a request, including identification of pages or lines within documents. The term covers both manual and computerized searching.

§ 3006.301 Request category.

(a) *Fees.* The level of fee charged depends on the request category.

(1) *Commercial use.* A request appearing to be for commercial use will be charged the full direct costs of searching for, reviewing, and duplicating the records sought.

(2) *Educational and noncommercial scientific institutions.* A request from an educational or noncommercial scientific institution will be charged for the cost of duplication only (excluding charges for the first 100 pages). To be eligible for this category, a requester must show that the request is made under the auspices of a qualifying institution and that the records are not sought for commercial use but are in furtherance of scholarly (in the case of educational institutions) or scientific (in the case of noncommercial scientific institutions) research.

(3) *News media.* A request from a representative of the news media will be charged the cost of duplication only (excluding charges for the first 100 pages).

(4) *Other requesters.* A request from any other person will be charged the full direct cost of searching for, reviewing, and duplicating records responsive to the request, except that the first 100 pages of duplication and the first 2 hours of search/review will be furnished without charge.

(b) *Privacy Act.* A request by an individual for the individual's own records in a system of records will be charged fees as provided under the Commission' s Privacy Act regulations in part 3005 of this chapter.

§ 3006.302 General provisions.

(a) The Commission may charge search fees even if no records are found or if the records found are exempt from disclosure.

(b) Except in the case of commercial use requesters, the first 100 pages of duplication and the first 2 hours of search time are provided without charge.

(1) A page for these purposes is a letter- or legal-size sheet, or the equivalent amount of information in a medium other than paper copy.

(2) Search time for these purposes refers to manual searching; if the search is performed by computer, the 2 hours provided without charge will be equal to 2 hours' salary of the person performing the search.

(c) No requester will be charged a fee when the Commission determines that the cost of collecting the fee would equal or exceed the fee itself. In determining whether cost of collection would equal or exceed the fee, the allowance for 2 hours' search or 100 pages of duplication will be made before comparing the remaining fee and the cost of collection.

(d) Records will be provided without charge or at a reduced charge if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester.

(e) No requester will be charged a fee after any search or response which occurs after the applicable time limits as described in §§ 3006.202 and 3006.203, unless:

(1) The Commission extends the time limit for its response due to unusual circumstances, pursuant to § 3006.201(d), and the Commission completes its response within the extension of time provided under that section; or

(2) The Commission extends the time limit for its response due to unusual circumstances and more than 5,000 pages are necessary to respond to the request and the Commission has discussed with the requester how they could effectively limit the scope of the request or made at least three good faith attempts to do so; or

(3) A court has determined that exceptional circumstances exist and excused the Commission from responding by court order.

(f) The Commission may, however, charge fees for review, and in some cases duplication, for a partial grant of a request while it reviews records that may be exempt and may be responsive to the request, so long as the partial grant is made within the applicable time limits.

§ 3006.303 Fee schedule.

(a) Fees will be calculated as follows:

(1) *Manual search.* At the salary rate (basic pay plus 16 percent) of the employee(s) making the search. Search time may be charged for even if the Commission fails to locate records or if records located are exempt from disclosure.

(2) *Computer search.* At the direct cost of providing the search, including computer search time directly attributable to searching for records responsive to the request runs and employee salary apportionable to the search.

(3) *Review (commercial use).* At the salary rate (basic pay plus 16 percent) of the employee(s) conducting the review. Charges are imposed only for the review necessary at the initial administrative level to determine the applicability of any exemption, and not for review at the administrative appeal level of an exemption already applied.

(4) *Duplication.* At 10 cents per page for paper copy, which the Commission has found to be the reasonable direct cost thereof. For copies of records prepared by computer the direct cost of production, including employee time, will be charged.

(5) *Additional services.* Postage, insurance, and other additional services that may be arranged for by the requester will be charged at actually incurred cost.

(b) In addition to the fee waiver provisions of § 3006.302(d), fees may be

waived at the discretion of the Commission.

§ 3006.304 Procedure for assessing and collecting fees.

(a) Advance payment may be required if the requester failed to pay previous bills in a timely fashion or when the fees are likely to exceed $250.

(1) Where the requester has previously failed to pay within 30 days of the billing date, the Commission may require the requester to pay an advance payment of the estimated fee together with either the past due fees (plus applicable interest) or proof that the past fees were paid.

(2) When advance payment is required, the administrative time limits prescribed in 5 U.S.C. 552(a)(6) (§ 3006.201) begin only after such payment has been received.

(b) Interest at the rate published by the Secretary of the Treasury as prescribed in 31 U.S.C. 3717 will be charged on unpaid fee bills starting on the 31st day after the bill was sent. Receipt of a fee by the Commission, whether processed or not, will stay the accrual of interest.

By the Commission.

Erica A. Barker,

Secretary.

BILLING CODE 7710–FW–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2022–0295; FRL–10162–06–R5]

Air Plan Approval; Michigan; Revisions to Part 1 and 2 Rules

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve revisions to Michigan Air Pollution Control rules Part 2 Air Use Approval for inclusion in the Michigan State Implementation Plan (SIP).

DATES: Comments must be received on or before May 28, 2024.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2022–0295 at *https://www.regulations.gov,* or via email to *damico.genevieve@epa.gov.* For comments submitted at *Regulations.gov*, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Constantine Blathras, Air Permit Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–0671, *blathras.constantine@epa.gov.* The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19.

SUPPLEMENTARY INFORMATION: Throughout this document whenever ''we,'' ''us,'' or ''our'' is used, we mean EPA.

I. Background

Section 110(a)(2)(C) of the Clean Air Act (CAA) requires that the SIP include a program to provide for the ''regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that National Ambient Air Quality Standards (NAAQs) are achieved.'' This includes a program for permitting construction and modification of both major and minor sources that the state deems necessary to protect air quality. The State of Michigan's minor source permit to install rules are contained in Part 2, Air Use Approval, R. 336.1201 to R. 336.1299 of the Michigan Administrative Code. Changes to the Part 2 rules were submitted on November 12, 1993; May 16, 1996; April 3, 1998; September 2, 2003; March 24, 2009; February 28, 2017; and March 8, 2022. EPA approved changes to the Part 2 rules most recently in a final approval dated April 27, 2023 (88 FR 25498).

On September 27, 2022 (87 FR 58471), EPA proposed approval, via a direct final rule, of the Michigan SIP revisions submitted on March 8, 2022. During the public comment period, EPA received an adverse comment on the Michigan rule revisions to R 336.1285 ''Permit to install exemptions; miscellaneous'' and R 336.1291, ''Permit to install exemptions; emission units with 'de minimis' emissions''. On November 14, 2022 (87 FR 68634), EPA withdrew the direct final rule. EPA approved the revisions to the Michigan rule revision which did not receive adverse comment (88 FR 25498, April 27, 2023). As explained in that action, we did not consider the comments received to be germane or relevant to EPA's proposal to approve portions of Michigan's Part 1 and Part 2 rules beyond the permit exemption rules, and therefore not adverse to approving them into the Michigan SIP.

EPA is now proposing to approve Michigan's rules R 336.1285(2)(oo) and R 336.1291 into the Michigan SIP. On November 14, 2023, Michigan submitted a supplement to the original March 8, 2022, submittal by supplying additional information regarding the approval of Michigan rules R 336.1285(2)(oo) and R 336.1291 in response to comments we received on the rulemaking. These rules exempt certain processes and/or equipment from Michigan's minor New Source Review permitting program. The November 14, 2023, Michigan supplemental submittal as well as the original March 8, 2022, submittal are available with the docket for this rulemaking action.

Michigan Rule R 336.1285(2)(oo)

Michigan rule R 336.1285(2)(oo) exempts vapor intrusion mitigation systems. Specifically, this exemption applies to equipment or systems, or both, used exclusively to mitigate vapor intrusion of an indoor space that is not on the property where the release of the hazardous substance occurred, and which has an exhaust that meets all of the following requirements:

i. Unobstructed vertically upward.

ii. At least 12 inches above the nearest eave of the roof or at least 12 inches above the surface of the roof at the point of penetration.

iii. More than 10 feet above the ground.

iv. More than 2 feet above or more than 10 feet away from windows, doors, other buildings, and other air intakes.

Michigan Rule R 336.1291

Michigan rule R 336.1291 exempts emission units with ''de minimis'' emissions. Specifically, rule R 336.1291 requires that records be maintained providing a description of the emission unit(s), and documentation and/or calculations identifying the quality, nature, and quantity of the air contaminant emissions are maintained in sufficient detail to demonstrate that the potential emissions are less than those listed in the table of air contaminants applicable to this exemption. Michigan's rule R 336.1291 exemption is based on the units' potential to emit. Potential to emit is defined in Michigan's rule 336.2801(hh) as:

''(T)he maximum capacity of a stationary source to emit a pollutant under its physical and operational design. A physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is legally enforceable and enforceable as a practical matter by the state, local air pollution control agency, or United States Environmental Protection Agency. Secondary emissions do not count in determining the potential to emit of a stationary source.''

In Michigan's November 14, 2023, supplemental submittal, Michigan provides an analysis of the rule revisions and addresses comments raised in the October 27, 2022, letter. Michigan's analysis included responses to the commenter's points including: 1) the section 110(l) analysis must consider the program as a whole; 2) Michigan cannot rely on the Tribal rule thresholds; 3) Michigan did not demonstrate that annual potential to emit limitations sufficiently protect short-term NAAQS; 4) Michigan's justification for not having more stringent thresholds in non-attainment areas does not hold up; and 5) Michigan's representation of its actual emission exemptions are insufficient.

To demonstrate that the two exemptions would not interfere with any applicable requirement concerning the attainment and reasonable further progress, or any other applicable requirement, Michigan reviewed its Michigan Air Emissions Reporting System (MAERS). The Michigan rule 291 exemption has been in effect in the state since 2016. The MAERS data contains information on a specific subset of emission units that are exempt. As described in the table of emission unit and pollutant levels for various exemptions in Michigan's supplemental submittal, of those facilities that are reporting, Michigan rule 291 emission units are responsible for less than 0.9 percent of volatile organic compound emissions from all units reported to MAERS, and less than 3.6 percent of volatile organic compound emissions from exempt units reported in MAERS. Requiring Michigan to permit these exempt units would not contribute to Michigan's plan for attainment or reasonable further progress, but would rather divert Michigan air permitting program resources from addressing other more significant air pollutant emitters. The air permit exemptions have been in effect for several years and have had no measurable impact on attainment or reasonable further progress.

Section 110(l) Demonstration

As part of the SIP revision request supplemental submittal, Michigan submitted a 110(l) demonstration. Section 110(l) of the CAA governs the submittal of SIP revisions. Each revision to an implementation plan submitted by a State shall be adopted by the State after reasonable notice and public hearing. The Administrator shall not approve a revision of a plan if the revision would interfere with any applicable requirement concerning the attainment and reasonable further progress (as defined by 40 CFR 7501), or any other applicable requirement of this chapter.

As part of its 110(l) demonstration, Michigan provided an analysis of the emission exemptions impacts, using the Modeled Emission Rates for Precursors as a Tier 1 Demonstration Tool to demonstrate ozone and fine particulate ($PM_{2.5}$) impacts from single sources on secondary pollutants for the Prevention of Significant Deterioration (PSD) permitting program, from the sources using Michigan rule 291 exemption air emissions.

Michigan evaluated the air quality impact that Michigan Rule 291 would have on ozone and secondary $PM_{2.5}$ formation. Michigan used the method set forth in EPA's April 30, 2019, *Guidance on the Development of Modeled Emission Rates for Precursors (MERPs) as a Tier 1 Demonstration Tool for Ozone and $PM_{2.5}$ under the PSD Permitting Program* (MERPs guidance) to estimate source specific contributions to ozone and secondary $PM_{2.5}$ formation.

As part of its analysis, Michigan utilized hypothetical source modeling that EPA used to illustrate the framework established in the MERPs guidance. Hypothetical sources, modeled emission rates, and modeled air quality impacts were obtained using EPA's MERPs View Qlik tool. For its analysis, Michigan considered hypothetical sources located in Michigan. A hypothetical source was selected for this analysis if the hypothetical source has the lowest MERP for a given precursor pollutant. For a given precursor pollutant, a lower MERP suggests that the precursor pollutant more readily forms the secondary pollutant. As a result, choosing a lower MERP more conservatively estimates the air quality impacts for the secondary pollutant since the source has a higher modeled air quality impact for a given modeled emission rate. For all precursor pollutants except VOC as a precursor to ozone, Michigan utilized modeling results from the Montcalm County, Michigan hypothetical source. For VOC as a precursor to ozone, Michigan utilized the Marquette County, Michigan, hypothetical source. For all precursor pollutants, Michigan chose the hypothetical source in Michigan with the lowest MERP for a given precursor pollutant. Using the modeled results for the Marquette and Montcalm County, Michigan, hypothetical sources, Michigan evaluated the air quality impacts associated with the emission thresholds for Michigan Rule 291 using a method that was consistent with the framework recommended in the MERPs guidance.

For the single emission unit impact analysis, Michigan evaluated a proposed project that would emit 10 tons per year of sulfur dioxide (SO_2), 10 tons per year of nitrogen oxides (NO_X), and 5 tons per year of volatile organic compounds (VOC). This is the maximum emission rate that would be allowed for a single emission unit under Michigan Rule 291. Based on its single emission unit impact analysis, Michigan determined that ozone impacts would be 0.047 parts per billion (ppb), annual $PM_{2.5}$ impacts would be 0.000413 micrograms per cubic meter (μg/m^3), and 24-hour $PM_{2.5}$ impacts would be 0.0155 μg/m^3.

For the multiple emission unit impact analysis, Michigan evaluated a proposed project that would emit 40 tons of SO_2, 40 tons per year of NO_X, and 40 tons per year of VOC. This is the maximum emission rate that would be allowed for multiple emission units that are part of the same project without being considered significant as defined under Michigan Rule 119(e). Based on its multiple emission unit impact analysis, Michigan determined that 8-hour ozone

impacts would be 0.20 ppb, annual $PM_{2.5}$ impacts would be 0.00165 µg/m^3, and 24-hour $PM_{2.5}$ impacts would be 0.062 µg/m^3.

EPA believes that Michigan's goal of reducing permitting workload on Michigan permitting staff by utilizing these permit exemptions would not interfere with Michigan's air program since any permitting of these exempt units would not impose any additional air pollution controls due to the de minimus level of the exempted unit's air emissions. The amount of emissions from these exempt units do not interfere with continued Michigan's attainment nor reasonable further progress, or any other applicable requirement of the NAAQs.

The 110(l) demonstration in the SIP revision request adequately addresses this requirement and will have no effect on Michigan's NAAQS attainment status, or any backsliding on achieved improvements. The Michigan air permit exemptions do not apply to any activity that is subject to PSD of air quality regulations or new source review for major sources in non-attainment areas regulations. As Michigan has stated in its supplemental submittal, the exemptions have not had any measurable or discernable impact on attainment. The exemptions specified do not apply to the construction, modification, or reconstruction of a new major source of hazardous air pollutants as defined in the Federal requirements of 40 CFR parts 61 and 63, or any other applicable requirement or existing program limitation. By including such language in Michigan's minor source regulations, Michigan has attempted to address any sources that may have significant emissions and the potential to negatively impact ambient air quality. This approach ensures that sources that might otherwise be exempt from permitting are subject to minor NSR permitting. States must develop minor NSR programs to attain and maintain the NAAQS and the Federal requirements for state minor NSR programs are outlined in 40 CFR 51.160 through 51.164. These Federal requirements for minor NSR programs are considerably less prescriptive than those for major sources and, as a result, there is a larger variation of requirements across the state minor NSR programs. The air permit exemptions allow Michigan to allocate its limited resources to address sources in air permitting by avoiding the permitting of small sources with no perceivable impact on attainment. Michigan's November 14, 2023, supplemental submittal demonstrates that its minor NSR program will adequately protect the NAAQs with the additional exemptions to the already approved air permit rule exemptions in its SIP.

II. What Action is EPA Taking?

EPA is proposing approval of revisions to Michigan's Part 2 regulations, specifically Michigan Air Pollution Control Rules R 336.1285(2)(oo) and R 336.1291.

III. Incorporation by Reference

In this rule, EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, EPA is proposing to incorporate by reference Michigan rules R 336.1285(2)(oo) and R 336.1291, effective 1/2/2019 and 12/20/2016 respectively, discussed in section I. of this preamble. EPA has made, and will continue to make, these documents generally available through *www.regulations.gov* and at the EPA Region 5 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993), and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.''

EGLE did not evaluate environmental justice considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898 of achieving environmental justice for people of color, low-income populations, and Indigenous peoples.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Dated: April 18, 2024.

Debra Shore,

Regional Administrator, Region 5.

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 206

[Docket DARS–2024–0014]

RIN 0750–AL65

Defense Federal Acquisition Regulation Supplement: Modification of Prize Authority for Advanced Technology Achievements (DFARS Case 2022–D014)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2022 that provides procedures and approval and reporting requirements for contracts awarded as prizes for advanced technology achievements.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before June 24, 2024, to be considered in the formation of a final rule.

ADDRESSES: Submit comments identified by DFARS Case 2022–D014, using either of the following methods:

○ *Federal eRulemaking Portal: https://www.regulations.gov.* Search for DFARS Case 2022–D014. Select ''Comment'' and follow the instructions to submit a comment. Please include ''DFARS Case 2022–D014'' on any attached documents.

○ *Email: osd.dfars@mail.mil.* Include DFARS Case 2022–D014 in the subject line of the message.

Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *https://www.regulations.gov,* approximately two to three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Mr. Jon Snyder, telephone 703–945–5341.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to revise the DFARS to implement section 822 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2022 (Pub. L. 117–81), which amends 10 U.S.C. 4025. Section 822 provides the authority to carry out advanced technology prize programs to award contracts to recognize outstanding achievements in basic, advanced, and applied research; technology development; and prototype development. Section 822 specifies the award of a contract as a prize is a competitive procedure if the solicitation is widely advertised. Section 822 also requires approval of such awards that exceed $10,000 and congressional reporting for contracts that exceed $10 million.

II. Discussion and Analysis

This proposed rule includes changes to the DFARS to implement section 822 of the NDAA for FY 2022. Changes are proposed to DFARS 206.102–70, Other competitive procedures, to provide that the award of a contract, for the competitive selection of prize recipients, is a competitive procedure, when the solicitation is widely advertised including through the Governmentwide point of entry (*https://sam.gov*).

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT), for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items), and for Commercial Services

This proposed rule does not create any new solicitation provisions or contract clauses. It does not impact any existing solicitation provisions or contract clauses or their applicability to contracts valued at or below the simplified acquisition threshold, for commercial products including COTS items, or for commercial services.

IV. Expected Impact of the Rule

Prior to the enactment of the NDAA for FY 2022, 10 U.S.C. 4025 (formerly 10 U.S.C. 2374a) did not provide for the award of contracts as prizes for outstanding achievements in basic, advanced, and applied research; technology development; and prototype development. This proposed rule will implement the authority to award contracts as prizes under certain conditions.

DoD expects this proposed rule, when finalized, may increase participation in prize competitions and decrease the lead time to deliver to the warfighter achievements in basic, advanced, and applied research; technology development; and prototype development. This proposed rule may help to expand the defense industrial base by providing a way for entities that are new to DoD procurement to obtain DoD contracts. It may also streamline the competitive process, which could reduce Government administrative costs associated with competitive negotiated acquisitions. For this reason, the difference in the cost of managing a contract instead of another type of prize is expected to be negligible.

Data provided from the Office of the Under Secretary of Defense for Research and Engineering indicates there were a total of 809 cash prizes awarded from FY 2021 to FY 2023, or approximately 270 per year, worth a total of about $3.5 million annually. DoD estimates 20 percent of these 270 historical cash prize awards, or 54 cash prize awards worth a total of approximately $700,000, would be converted to contracts. Therefore, DoD estimates that approximately 54 entities per year would be awarded contracts or a combination of contracts, other agreements (*e.g.,* grants, cooperative agreements, other transaction agreements), and cash prizes as a result of the changes in this proposed rule.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule, when finalized, to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because DoD estimates that

approximately 127 small businesses would be awarded contracts or a combination of contracts and other prizes. However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

DoD is proposing to implement section 822 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2022 (Pub. L. 117–81), which amends 10 U.S.C. 4025, Prizes for advanced technology achievements. Section 822 provides advanced technology prize programs authority to award contracts to recognize outstanding achievements in basic, advanced, and applied research; technology development; and prototype development. This proposed rule also provides that the award of a contract as a prize is a competitive procedure if the prize program solicitation is widely advertised. Section 822 also requires approval of such awards exceeding $10,000 and congressional reporting for contracts exceeding $10 million.

The objective of the proposed rule is to implement section 822 of the NDAA for FY 2022, which is the legal basis for the rule.

DoD does not have data on contracts awarded as prizes to recognize outstanding achievements in basic, advanced, and applied research; technology development; and prototype development. Contracts were not authorized as a prize. However, analyzing data provided from the Office of the Under Secretary of Defense for Research and Engineering, there were 809 cash prizes awarded from FY 2021 to FY 2023. During this three-year period, DoD awarded a total of 636 cash prizes to small businesses, which is an average of 212 per year. DoD estimates 20 percent of the 212 historical cash prize awards per year would be converted to contracts. Therefore, DoD estimates that approximately 42 small businesses per year would be awarded contracts or a combination of contracts and other prizes as a result of this proposed rule. Therefore, DoD does not anticipate that this proposed rule, when finalized, will have a significant impact on small entities.

This rule does not impose any new reporting, recordkeeping, or other compliance requirements for small entities.

This rule does not duplicate, overlap, or conflict with any other Federal rules.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

DoD invites comments from small business concerns and other interested parties on the expected impact of this proposed rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this proposed rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2022–D014), in correspondence.

VII. Paperwork Reduction Act

This proposed rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Part 206

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR part 206 is proposed to be amended as follows:

PART 206—COMPETITION REQUIREMENTS

■ 1. The authority citation for 48 CFR part 206 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

■ 2. Amend section 206.102–70 by—

■ a. Designating the text as paragraph (a); and

■ b. Adding a new paragraph (b) to read as follows:

206.102–70 Other competitive procedures.

(a) * * *

(b) The award of a contract as a prize resulting from a competitive selection of prize recipients for advanced technology achievements is a competitive procedure (10 U.S.C. 4025(f)), when the solicitation is widely advertised, including through the Governmentwide point of entry (see FAR part 5). See PGI 206.102–70 for approval requirements.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to revise the DFARS to implement section 1024 of the William M. (Mac) Thornberry National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021 (Pub. L. 116–283). Section 1024 amends 10 U.S.C. 2631 to,

among other things, clarify circumstances in which DoD may seek a waiver from the basic requirement for DoD supplies to be transported by sea in either vessels belonging to the United States or vessels of the United States. In particular, section 1024 specifies that DoD may waive this requirement, where such vessels are either not available at a fair and reasonable rate for commercial vessels of the United States or otherwise not available. Section 1024 also modifies the requirement for reflagging or repair work in the United States for vessels used under time charter contracts for the transportation of supplies, and it adds a requirement to ensure contractor compliance with 10 U.S.C. 2631.

II. Discussion and Analysis

This proposed rule includes modifications at DFARS 247.572(a)(1) and the contract clause at 252.247–7023, Transportation of Supplies by Sea, including its alternates, to specify that DoD may waive the requirement for DoD supplies to be transported by sea in either vessels belonging to the United States or vessels of the United States. Under this proposed rule, waivers may be granted, where such vessels are either not available at a fair and reasonable rate for commercial vessels of the United States or otherwise not available.

This proposed rule contains changes to DFARS 247.572(c) and the clause at 252.247–7025, Reflagging or Repair Work, to update requirements for reflagging or repair work in the United States for vessels used under time charter contracts for the transportation of supplies. This rule also includes modifications at DFARS 247.573(b) and DFARS 242.1502(g) to specify DoD procedures for increasing contractor compliance with the requirements of the clause at 252.247–7023, including its alternates.

This proposed rule adds a definition of ''corrective and preventive maintenance or repair'' both to DFARS 247.571 and to the clause at 252.247–7025. Further, this proposed rule updates the definitions of ''foreign shipyard,'' ''ocean transportation,'' ''supplies'' and ''U.S.-flag vessel'' at DFARS 247.571 and at the clause at 252.247–7023, including its alternates, and the solicitation provision at 252.247–7026, Evaluation Preference for Use of Domestic Shipyards—Applicable to Acquisition of Carriage by Vessel for DoD Cargo in the Coastwise or Noncontiguous Trade. Additionally, this proposed rule deletes the definition of ''shipyard'' from the provision at 252.247–7026 because the common definition of this term suffices for this rule. The definition of ''Department of Defense'' is deleted from the clause at 252.247–7023, including its alternates, because the definition of this term at DFARS 2.101 suffices for purposes of this proposed rule.

This proposed rule clarifies the submission requirements in paragraph (d)(7) of the clause at 252.247–7023, including its alternates, where a contractor requests use of foreign-flag vessels.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold (SAT), for Commercial Products (Including Commercially Available Off-the-Shelf (COTS) Items), and for Commercial Services

This proposed rule amends the clauses at DFARS 252.247–7023, including alternates, 252.247–7025, and the provision at 252.247–7026. However, this proposed rule does not impose any new requirements on contracts at or below the SAT, for commercial products including COTS items, or for commercial services. The clauses will continue to apply to acquisitions at or below the SAT, to acquisitions of commercial products including COTS items, and to acquisitions of commercial services.

IV. Expected Impact of the Rule

This proposed rule is intended to increase compliance with military cargo preference requirements, in accordance with section 1024 of the NDAA for FY 2021. These changes are largely clarifying in nature, including clarification of operational requirements internal to DoD. Therefore, this proposed rule, when finalized, is not expected to have a significant impact on the public.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Regulatory Flexibility Act

DoD does not expect this proposed rule, when finalized, to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the rule does not create any new requirements or significantly change any existing requirements for contractors. However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 1024 of the William M. (Mac) Thornberry National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021. Section 1024 modifies 10 U.S.C. 2631 to add a requirement to ensure contractor compliance with 10 U.S.C. 2631 and otherwise updates the listed circumstances in which DoD may waive the requirement that DoD supplies be transported by sea in vessels belonging to the United States or vessels of the United States. It also modifies the requirement for reflagging or repair work in the United States for vessels used under time-charter contracts.

The objective of this rule is to implement section 1024 of the NDAA for FY 2021. Section 1024 is the legal basis for the rule.

This proposed rule will apply to small entities that have contracts that include DFARS clauses 252.247–7023, Transportation of Supplies by Sea, and 252.247–7025, Reflagging or Repair Work. DoD obtained data from the Procurement Business Intelligence Service (PBIS) for all contracts and modifications that include DFARS clauses 252.247–7023 and 252.247–7025 for fiscal years 2020 through 2022. DoD awarded on average 649,016 contract actions per year that included either DFARS clause 252.247–7023 or 252.247–7025, or both, to 31,665 unique entities, of which approximately 363,260 contract awards (56 percent) were made to 21,737 unique small entities (69 percent).

The proposed rule does not impose any new reporting, recordkeeping, or other compliance requirements.

The rule does not duplicate, overlap, or conflict with any other Federal rules.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

DoD invites comments from small business concerns and other interested parties on the expected impact of this proposed rule on small entities.

DoD will also consider comments from small entities concerning the

existing regulations in subparts affected by this proposed rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2021–D020), in correspondence.

VII. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. chapter 35) applies to this proposed rule. However, these changes to the DFARS do not impose additional information collection requirements to the paperwork burden previously approved under OMB Control Number 0704–0245, titled: Defense Federal Acquisition Regulation Supplement (DFARS) Part 247, Transportation, and Related Clauses at 252.247.

List of Subjects in 48 CFR Parts 242, 247, and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 242, 247, and 252 are proposed to be amended as follows:

■ 1. The authority citation for parts 242, 247, and 252 continue to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 242—CONTRACT ADMINISTRATION AND AUDIT SERVICES

■ 2. Amend section 242.1502—

■ a. In paragraph (g)(i) by removing ''Program); and'' and adding ''Program);'' in its place;

■ b. In paragraph (g)(ii) by removing ''(B)).'' and adding ''(B)); and'' in its place; and

■ c. By adding paragraph (g)(iii) to read as follows:

242.1502 Policy.

(g) * * *

(iii) In accordance with 10 U.S.C. 2631(d), shall include information on contractor compliance with requirements of the clause at 252.247–7023, Transportation of Supplies by Sea (see 10 U.S.C. 2631(a), (b), and (c)).

PART 247—TRANSPORTATION

■ 3. Amend section 247.570—

■ a. By revising paragraph (a)(1);

■ b. In paragraph (a)(2) by removing ''(Pub. L. 109–364)'' and adding ''(Pub. L. 109–364) (10 U.S.C. 2631 note)'' in its place;

■ c. In paragraph (a)(3) by removing ''(Pub. L. 110–417)'' and ''chapter 121, title 46 U.S.C.'' and adding ''(Pub. L. 110–417) (10 U.S.C. chapter 257 note)'' and ''46 U.S.C. chapter 121'' in their places, respectively;

■ d. By adding a new paragraph (a)(4).

■ e. In paragraph (b) by removing ''46 U.S.C. 1241(b)'' and adding ''46 U.S.C. chapter 553'' in its place; and

■ f. By revising paragraph (c).

The revisions read as follows:

247.570 Scope.

* * * * *

(a) * * *

(1) The Military Cargo Preference Act of 1904 (''the 1904 Act''), 10 U.S.C. 2631, which applies to the ocean transportation of cargo owned by, destined for use by, or otherwise transported by DoD;

* * * * *

(4) Section 1024 of the National Defense Authorization Act for Fiscal Year 2021 (Pub. L. 116–283), which updates the listed circumstances where DoD may waive the requirement that DoD supplies be transported by sea in vessels belonging to the United States or vessels of the United States, and it modifies the requirement for reflagging or repair work in the United States for vessels used under time-charter contracts.

* * * * *

(c) Does not implement—

(1) Section 27 of the Merchant Marine Act, 1920 (46 U.S.C. chapters 121 and 552), commonly known as the ''Jones Act,'' for the application of coastwise trade; or

(2) Waivers thereof pursuant to 46 U.S.C. 501.

■ 4. Revise section 247.571 to read as follows:

247.571 Definitions.

As used in this subpart—

Corrective and preventive maintenance or repair means—

(1) Maintenance or repair actions performed as a result of a failure in order to return or restore equipment to acceptable performance levels; and

(2) Scheduled maintenance or repair actions to prevent or discover functional failures.

Covered vessel means a vessel—

(1) Owned, operated, or controlled by the offeror; and

(2) Qualified to engage in the carriage of cargo in the coastwise or noncontiguous trade under 46 U.S.C. 12112 and 50501 and 46 U.S.C. chapter 551.

Foreign-flag vessel means any vessel that is not a U.S.-flag vessel.

Foreign shipyard means a shipyard that is not located in the United States.

Ocean transportation means any water-borne transportation aboard a ship, vessel, boat, barge, ferry, or the like outside the internal waters of the United States (as defined in 33 CFR 2.24).

Overhaul, repair, and maintenance work means work requiring a shipyard period greater than or equal to 5 calendar days.

Reflagging or repair work means work performed on a vessel—

(1) To enable the vessel to meet applicable standards to become a vessel of the United States; or

(2) To convert the vessel to a more useful military configuration.

Supplies means supplies that are clearly identifiable for eventual use by or owned by DoD at the time of transportation by sea, or are otherwise transported by DoD, regardless of ownership or use by DoD. An item is clearly identifiable for eventual use by DoD if, for example, the contract documentation contains a reference to a DoD contract number or a military destination.

U.S.-flag vessel means either a vessel belonging to the United States or a vessel of the United States as that term is defined in 46 U.S.C. 116.

■ 5. Revise section 247.572 to read as follows:

247.572 Policy.

(a) In accordance with 10 U.S.C. 2631(a), DoD contractors shall transport supplies exclusively on U.S.-flag vessels. In accordance with 10 U.S.C. 2631(b), DoD (see 247.573(a)) may waive this requirement when a U.S.-flag vessel—

(1) Is not available at a fair and reasonable rate for commercial vessels of the United States; or

(2) Is not otherwise available.

(b) Contracts must provide for the use of vessels belonging to the United States when security classifications prohibit the use of other than vessels belonging to the United States.

(c) In accordance with 10 U.S.C. 2631(c)—

(1) Any vessel used under a time charter contract for the transportation of supplies under this section shall have the following work performed in the United States or its outlying areas:

(i) Reflagging or repair work, if the reflagging or repair work is performed—

(A) On a vessel for which the contractor submitted an offer in response to the solicitation for the contract; and

(B) Prior to acceptance of the vessel by the Government.

(ii) Corrective and preventive maintenance or repair work for the duration of the contract, to the greatest extent practicable.

(2) The Secretary of Defense may waive this requirement if the Secretary determines that such waiver is critical to the national security of the United States. In accordance with 10 U.S.C. 2631(c)(2), DoD shall immediately submit, in writing, a notice to the congressional committees listed at 10 U.S.C. 2631(e) of such a waiver and the reason for the waiver.

(d) In accordance with section 1017 of the National Defense Authorization Act for Fiscal Year 2007 (Pub. L. 109–364), when obtaining carriage requiring a covered vessel, the contracting officer shall consider the extent to which offerors have had overhaul, repair, and maintenance work for covered vessels performed in shipyards located in the United States or Guam.

(e) In accordance with section 3504 of the National Defense Authorization Act for Fiscal Year 2009 (Pub. L. 110–417), DoD may not award, renew or extend, or exercise an option under a charter of, or contract for carriage of cargo by, a U.S.-flag vessel documented under 46 U.S.C. chapter 121, unless the contract contains the clause at 252.247–7027.

■ 6. Amend section 247.573—
■ a. By revising paragraph (a);
■ b. In paragraph (b)—
■ i. By revising paragraph (3);
■ ii. In paragraph (4) by removing ''Procedures are provided at'' and adding ''Follow the procedures at'' in its place; and
■ iii. By adding a new paragraph (5).

The revisions and addition read as follows:

247.573 General.

(a) *Delegated authority.* Pursuant to 10 U.S.C. 2631(b)(2), the Secretary of Defense has delegated (see PGI 247.573) the authority to make determinations either that a U.S.-flag vessel is not available at a fair and reasonable rate for commercial vessels of the United States or is otherwise not available to—

(1) The Commander, United States Transportation Command; and

(2) The Secretary of the Navy.

(b) * * *

* * * * *

(3) See PGI 247.573(b)(3) for agency and department procedures relating to annual reporting requirements of waivers granted for nonavailability of U.S.-flag vessels.

* * * * *

(5)(i) In accordance with 10 U.S.C. 2631(d), contracting officers shall exercise appropriate contractual rights and remedies against contractors who fail to comply. Such remedies may include the determination that a contractor is ineligible for award of future contracts, termination of an existing contract, or suspension or debarment of the contractor. Also see 242.1502 regarding assessments of the contractor's past performance.

(ii) In the event of a contractor's unauthorized use of foreign-flag vessels in the performance of a contract, the contracting officer is authorized to consider an equitable adjustment.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 7. Amend section 252.247–7023—
■ a. Revising the date of the clause;
■ b. By revising paragraph (a);
■ c. By revising paragraph (c);
■ d. In paragraph (d) introductory text by revising the second sentence and paragraph (7);
■ e. In paragraph (e)(10) by removing ''the steamship company'' and adding ''the carrier'' in its place;
■ f. In paragraph (f)(3) by removing ''had the written consent of the Contracting Officer'' and adding ''had received a prior-approved waiver for U.S.-flag vessels'' in its place;
■ g. In paragraph (f)(4) by removing ''of the Contracting Officer'' and adding ''of DoD'' in its place;
■ h. Amend Alternate I—
■ i. Revising the date of the clause;
■ ii. By revising paragraph (a);
■ iii. By revising paragraph (c);
■ iv. In paragraph (d) introductory text by revising the second sentence and paragraph (7);
■ v. In paragraph (e)(10) by removing ''steamship company'' and adding ''the carrier'' in its place;
■ vi. In paragraph (f)(3) by removing ''had the written consent of the Contracting Officer'' and adding ''had received a prior-approved waiver for U.S.-flag vessels'' in its place;
■ vii. In paragraph (f)(4) by removing ''of the Contracting Officer'' and adding ''of DoD'' in its place;
■ i. Amend Alternate II—
■ i. Revising the date of the clause;
■ ii. By revising paragraph (a);
■ iii. By revising paragraph (c);
■ iv. In paragraph (d) introductory text by revising the second sentence and paragraph (7);
■ v. In paragraph (e)(10) by removing ''steamship company'' and adding ''the carrier'' in its place;
■ vi. In paragraph (f)(3) by removing ''had the written consent of the Contracting Officer'' and adding ''had received a prior-approved waiver for U.S.-flag vessels'' in its place; and
■ vii. In paragraph (f)(4) by removing ''of the Contracting Officer'' and adding ''of DoD'' in its place.

The revisions read as follows:

252.247–7023 Transportation of Supplies by Sea.

* * * * *

Transportation of Supplies by Sea—Basic (Date)

(a) *Definitions.* As used in this clause—

Foreign-flag vessel means any vessel that is not a U.S.-flag vessel.

Ocean transportation means any water-borne transportation aboard a ship, vessel, boat, barge, ferry, or the like outside the internal waters of the United States as defined in 33 CFR 2.24.

Subcontractor means a supplier, materialman, distributor, or vendor at any level below the prime contractor whose contractual obligation to perform results from, or is conditioned upon, award of the prime contract and who is performing any part of the work or other requirement of the prime contract.

Supplies means supplies that are clearly identifiable for eventual use by or owned by DoD at the time of transportation by sea, or are otherwise transported by DoD, regardless of ownership or use by DoD. An item is clearly identifiable for eventual use by DoD if, for example, the contract documentation contains a reference to a DoD contract number or a military destination.

U.S.-flag vessel means either a vessel belonging to the United States or a vessel of the United States as that term is defined in 46 U.S.C. 116.

* * * * *

(c) The Contractor and its subcontractors may request, via the Contracting Officer, a waiver of the requirement to use a U.S.-flag vessel, or identification of any available U.S.-flag vessels, if the Contractor or a subcontractor sufficiently explains that—

(1) U.S.-flag vessels are not available at a fair and reasonable rate for commercial vessels of the United States; or

(2) U.S.-flag vessels are otherwise not available.

(d) * * * The Contracting Officer will process requests submitted after such date(s) as expeditiously as possible, however, if a DoD waiver is not approved prior to the shipper's sailing date, this will not of itself constitute a compensable delay under this or any other clause of this contract. * * *

* * * * *

(7) A documented description of current, diligent efforts made to secure U.S.-flag vessels, including points of contact (with names and telephone numbers) with at least two U.S.-flag

carriers contacted. Copies of quotes will suffice for this purpose. Copies of telephone notes, emails, and other relevant communications will otherwise be considered for this purpose.

* * * * *

Transportation of Supplies by Sea—Alternate I (Date)

(a) *Definitions.* As used in this clause—

Foreign-flag vessel means any vessel that is not a U.S.-flag vessel.

Ocean transportation means any water-borne transportation aboard a ship, vessel, boat, barge, ferry, or the like outside the internal waters of the United States as defined in 33 CFR 2.24.

Subcontractor means a supplier, materialman, distributor, or vendor at any level below the prime contractor whose contractual obligation to perform results from, or is conditioned upon, award of the prime contract and who is performing any part of the work or other requirement of the prime contract.

Supplies means supplies that are clearly identifiable for eventual use by or owned by DoD at the time of transportation by sea, or are otherwise transported by DoD, regardless of ownership or use by DoD. An item is clearly identifiable for eventual use by DoD if, for example, the contract documentation contains a reference to a DoD contract number or a military destination.

U.S.-flag vessel means either a vessel belonging to the United States or a vessel of the United States as that term is defined in 46 U.S.C. 116.

* * * * *

(c) The Contractor and its subcontractors may request, via the Contracting Officer, a waiver of the requirement to use a U.S.-flag vessel, or identification of any available U.S.-flag vessels, if the Contractor or a subcontractor sufficiently explains that—

(1) U.S.-flag vessels are not available at a fair and reasonable rate for commercial vessels of the United States; or

(2) U.S.-flag vessels are otherwise not available.

(d) * * * The Contracting Officer will process requests submitted after such date(s) as expeditiously as possible, however, if a DoD waiver is not approved prior to the shipper's sailing date, this will not of itself constitute a compensable delay under this or any other clause of this contract. * * *

* * * * *

(7) A documented description of current, diligent efforts made to secure U.S.-flag vessels, including points of contact (with names and telephone numbers) with at least two U.S.-flag carriers contacted. Copies of quotes will suffice for this purpose. Copies of telephone notes, emails, and other relevant communications will otherwise be considered for this purpose.

* * * * *

Transportation of Supplies By Sea—Alternate II (Date)

(a) *Definitions.* As used in this clause—

Foreign-flag vessel means any vessel that is not a U.S.-flag vessel.

Ocean transportation means any water-borne transportation aboard a ship, vessel, boat, barge, ferry, or the like outside the internal waters of the United States as defined in 33 CFR 2.24.

Subcontractor means a supplier, materialman, distributor, or vendor at any level below the prime contractor whose contractual obligation to perform results from, or is conditioned upon, award of the prime contract and who is performing any part of the work or other requirement of the prime contract.

Supplies means supplies that are clearly identifiable for eventual use by or owned by DoD at the time of transportation by sea, or are otherwise transported by DoD, regardless of ownership or use by DoD. An item is clearly identifiable for eventual use by DoD if, for example, the contract documentation contains a reference to a DoD contract number or a military destination.

U.S.-flag vessel means either a vessel belonging to the United States or a vessel of the United States as that term is defined in 46 U.S.C. 116.

* * * * *

(c) The Contractor and its subcontractors may request, via the Contracting Officer, a waiver of the requirement to use a U.S.-flag vessel, or identification of any available U.S.-flag vessels, if the Contractor or a subcontractor sufficiently explains that—

(1) U.S.-flag vessels are not available at a fair and reasonable rate for commercial vessels of the United States; or

(2) U.S.-flag vessels are otherwise not available.

(d) * * * The Contracting Officer will process requests submitted after such date(s) as expeditiously as possible, however, if a DoD waiver is not approved prior to the shipper's sailing date, this will not of itself constitute a compensable delay under this or any other clause of this contract. * * *

(7) A documented description of current, diligent efforts made to secure U.S.-flag vessels, including points of contact (with names and telephone numbers) with at least two U.S.-flag carriers contacted. Copies of quotes will suffice for this purpose. Copies of telephone notes, emails, and other relevant communications will otherwise be considered for this purpose.

* * * * *

■ 8. Revise section 252.247–7025 to read as follows:

252.247–7025 Reflagging or Repair Work.

As prescribed in 247.574(c), use the following clause:

Reflagging or Repair Work (Date)

(a) *Definitions.* As used in this clause—

Corrective and preventive maintenance or repair means—

(1) Maintenance or repair actions performed as a result of a failure in order to return or restore equipment to acceptable performance levels; and

(2) Scheduled maintenance or repair actions to prevent or discover functional failures.

Reflagging or repair work means work performed on a vessel—

(1) To enable the vessel to meet applicable standards to become a vessel of the United States; or

(2) To convert the vessel to a more useful military configuration.

(b) *Requirement.* Unless DoD waives this requirement, the Contractor shall ensure performance of the following in the United States or its outlying areas:

(1) Reflagging or repair work, if the reflagging or repair work is performed—

(i) On a vessel for which the Contractor submitted an offer in response to the solicitation for this contract; and

(ii) Prior to acceptance of the vessel by the Government.

(2) Corrective and preventive maintenance or repair work for the duration of the contract, to the greatest extent practicable.

(End of clause)

■ 9. Amend section 252.247–7026—

■ a. By removing the provision date ''Nov 2008'' and adding ''Date'' in its place;

■ b. In paragraph (a) by revising the definitions of ''Covered vessel'' and ''Foreign shipyard'' and removing the definition of ''Shipyard'';

■ c. In paragraphs (b) and (c) by removing ''offeror'' and adding ''Offeror'' in its place;

■ d. In paragraph (e) removing ''Section 1017 of Public Law 109–364'' and adding ''section 1017 of Public Law 109–364 (10 U.S.C. 2631 note)'' in its place.

The revisions read as follows:

252.247–7026 Evaluation Preference for Use of Domestic Shipyards—Applicable to Acquisition of Carriage by Vessel for DoD Cargo in the Coastwise or Noncontiguous Trade.

* * * * *

(a) * * *

Covered vessel means a vessel—

(1) Owned, operated, or controlled by the offeror; and

(2) Qualified to engage in the carriage of cargo in the coastwise or noncontiguous trade under 46 U.S.C. 12112 and 50501 and 46 U.S.C. chapter 551.

Foreign shipyard means a shipyard that is not located in the United States.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 252

[Docket DARS–2022–0030]

RIN 0750–AL67

Defense Federal Acquisition Regulation Supplement: Update of Challenge Period for Validation of Asserted Restrictions on Technical Data and Computer Software (DFARS Case 2022–D016)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2012, which addresses the validation of proprietary data restrictions. In addition to the request for written comments, DoD will hold a public meeting to hear the views of interested parties.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before June 24, 2024, to be considered in the formation of a final rule.

Public Meeting: A virtual public meeting will be held on May 17, 2024, from 1:00 p.m. to 5:00 p.m. Eastern time. The public meeting will end at the stated time, or when the discussion ends, whichever comes first.

Registration: Registration to attend the public meeting must be received no later than close of business on May 9, 2024. Information on how to register for the public meeting is provided under the **SUPPLEMENTARY INFORMATION** section of this proposed rule.

ADDRESSES: *Public Meeting:* A virtual public meeting will be held using Zoom video conferencing software.

Submission of Comments: Submit comments identified by DFARS Case 2022–D016, using either of the following methods:

○ *Federal eRulemaking Portal: https://www.regulations.gov.* Search for DFARS Case 2022–D016. Select ''Comment'' and follow the instructions to submit a comment. Please include ''DFARS Case 2022–D016'' on any attached documents.

○ *Email: osd.dfars@mail.mil.* Include DFARS Case 2022–D016 in the subject line of the message.

Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *https://www.regulations.gov,* approximately two to three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: David Johnson, telephone 202–913–5764.

SUPPLEMENTARY INFORMATION:

I. Background

DoD is proposing to revise the DFARS to implement section 815(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2012 (Pub. L. 112–81). Section 815(b) amended 10 U.S.C. 2321 (currently 10 U.S.C. 3782) by increasing the validation period for asserted restrictions from three years to six years. Section 815(b) also amended 10 U.S.C. 2321 to provide an exception to the prescribed time limit for validation of asserted restrictions if the technical data involved are the subject of a fraudulently asserted use or release restriction.

DoD published an advance notice of proposed rulemaking (ANPR) in the **Federal Register** on December 16, 2022, at 87 FR 77055, providing draft DFARS revisions and requesting written public comments. DoD hosted a public meeting to obtain the views of interested parties regarding the ANPR on January 26, 2023.

The preamble to the ANPR provided detailed explanations of revisions related to—

• The validation period for asserted restrictions; and

• The new statutory exception to the prescribed time limit for validation of asserted restrictions.

One respondent submitted public comments in response to the ANPR.

II. Public Meeting

DoD is interested in continuing a dialogue with experts and interested parties in the Government and the private sector regarding amending the DFARS to implement section 815(b) of the NDAA for FY 2012.

Registration: Individuals wishing to participate in the virtual meeting must register by May 9, 2024, to facilitate entry to the meeting. Interested parties may register for the meeting by sending the following information via email to *osd.dfars@mail.mil* and include ''Public Meeting, DFARS Case 2022–D016'' in the subject line of the message:

• Full name.

• Valid email address, which will be used for admittance to the meeting.

• Valid telephone number, which will serve as a secondary connection method. Registrants must provide the telephone number they plan on using to connect to the virtual meeting.

• Company or organization name.

• Whether the individual desires to make a presentation.

Pre-registered individuals will receive instructions for connecting using the Zoom video conferencing software not more than one week before the meeting is scheduled to commence.

Presentations: Presentations will be limited to 5 minutes per company or organization. This limit may be subject to adjustment, depending on the number of entities requesting to present, in order to ensure adequate time for discussion. If you wish to make a presentation, please submit an electronic copy of your presentation via email to *osd.dfars@mail.mil* no later than the registration date for the meeting. Each presentation should be in PowerPoint to facilitate projection during the public meeting and should include the presenter's name, title, organization affiliation, telephone number, and email address on the cover page.

Correspondence, Comments, and Presentations: Please cite ''Public Meeting, DFARS Case 2022–D016'' in all correspondence related to the public meeting. There will be no transcription at the meeting. The submitted presentations will be posted to the following website at the conclusion of the public meeting: *https://www.acq.osd.mil/dpap/dars/technical_data_rights.html.*

III. Discussion and Analysis

DoD reviewed the public comments in response to the ANPR in the development of the proposed rule. No changes are made in this proposed rule text as a result of the public comments. A discussion of the comments is provided, as follows:

A. Analysis of Public Comments

1. Virtual Public Meetings

Comment: The respondent thanked DoD for the opportunity to participate in the rulemaking process and provide input.

Response: DoD acknowledges the respondent's comment.

2. Definition of Fraud

Comment: The respondent requested clarification with respect to when a use or release restriction would be considered ''fraudulently asserted.'' In particular, the respondent asked whether there is a knowledge requirement on behalf of the contractor asserting restrictions.

Response: The statutory revisions being implemented in DFARS Case 2022–D016 do not establish a specialized definition of ''fraudulently asserted'' or a knowledge requirement. DoD will rely upon the common meaning of the terminology used in the statute and regulatory implementation, informed by applicable procurement statutes, other applicable statutes, and case precedent.

3. Deferred Ordering and the Challenge Period

Comment: The respondent requested clarification regarding applicability to deferred ordering situations. The respondent asked if the period related to final payment resets when a payment is made on a deferred ordering basis.

Response: The proposed rule includes the following language related to technical data: ''During the period within 6 years of final payment on a contract or within 6 years of delivery of the technical data to the Government, whichever is later, the Contracting Officer may review and make a written determination to challenge the restriction.'' It also includes the following language regarding software: ''the Government may exercise this right only within 6 years after the date(s) the software is delivered or otherwise furnished to the Government, or 6 years following final payment under this contract, whichever is later.''

Invocation of the deferred ordering clause institutes new technical data or software delivery requirements; these deliverables may be delivered under the original contract (in which the clause was incorporated) or another contract. Accordingly, the expiration of the challenge period will depend upon the date the data is furnished or the date of final payment under the contract where the technical data or software is delivered, whichever is later.

B. Other Changes

The proposed rule includes other changes to align the language in the clauses at DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, and DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data. In addition, editorial changes were made, including updates to comport with DFARS content and drafting conventions. For example, the proposed rule includes changes to the clauses to consistently refer to validation of ''asserted restrictions'' (rather than ''restrictive markings''), thereby aligning this language with the scope and purpose of the clauses and the underlying statutes (10 U.S.C 3781–3786). In addition, the proposed rule includes revisions to the clauses to ensure consistent syntax in instances where the clause refers to striking or correcting a restrictive marking. Furthermore, the proposed rule corrects all references to the ''United States Claims Court'' to read as the ''United States Court of Federal Claims'', to reflect the correct name of the applicable court.

IV. Applicability to Contracts at or Below the Simplified Acquisition Threshold, for Commercial Products (Including Commercially Available Off-the-Shelf Items), and for Commercial Services

This proposed rule amends the clauses at DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, and DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data. However, this proposed rule does not impose any new requirements on contracts at or below the SAT, for commercial products including COTS items, or for commercial services. The clause will continue to apply to acquisitions at or below the SAT, to acquisitions of commercial products including COTS items, and to acquisitions of commercial services.

V. Expected Impact of the Rule

The proposed rule includes changes to lengthen the validation period for asserted restrictions from three years to six years. The proposed rule also provides an exception to the prescribed time limit for validation of asserted restrictions if the technical data or computer software involved are the subject of a fraudulently asserted restriction. Therefore, the proposed rule, when finalized, may increase the number of challenges to which contractors must respond. However, DoD cannot quantify the estimated number of the additional challenges at this time.

VI. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993, as amended.

VII. Regulatory Flexibility Act

DoD does not expect this proposed rule, when finalized, to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because the statutory requirements only lengthen the challenge period for asserted restrictions. However, an initial regulatory flexibility analysis has been performed and is summarized as follows:

DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 815(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2012, which addresses the time period for validation of proprietary data restrictions.

The objective of the rule is to implement section 815(b) of the NDAA for FY 2012 (Pub. L. 112–81), which is the legal basis for the rule. Section 815(b) amended 10 U.S.C. 2321 (currently 10 U.S.C. 3782) by increasing the validation period for asserted restrictions from three years to six years. Section 815(b) also amended 10 U.S.C. 2321 to provide an exception to the prescribed time limit for validation of asserted restrictions if the technical data involved are the subject of a fraudulently asserted use or release restriction. This proposed rule, when finalized, will ensure that the Government has adequate opportunity to challenge discrepancies or inaccuracies in contractor assertions of data and software rights.

This proposed rule will apply to small entities that have contracts with DoD requiring delivery of data, including

technical data and computer software. DoD obtained data for fiscal years 2020 through 2022 from the Procurement Business Intelligence Service for all contracts and modifications that include one or more of the following DFARS clauses: 252.227–7013, Rights in Technical Data—Other Than Commercial Products or Commercial Services; 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; 252.227–7015, Technical Data—Commercial Products and Commercial Services; and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research (SBIR) Program. DoD awarded on average 54,255 contract actions per year that included one or more of the listed clauses to 9,550 unique entities, of which 28,657 contract awards (53 percent) were made to 6,033 unique small entities (63 percent).

This proposed rule does not impose any new reporting, recordkeeping, or other compliance requirements for small entities.

This proposed rule does not duplicate, overlap, or conflict with any other Federal rules.

There are no known alternatives that would accomplish the stated objectives of the applicable statute.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this proposed rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2022–D016), in correspondence.

VIII. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C. chapter 35) applies to this proposed rule. However, these changes to the DFARS do not impose additional information collection requirements to the paperwork burden previously approved by the Office of Management and Budget (OMB) under OMB Control Number 0704–0369, entitled ''DFARS Subpart 227.71, Rights in Technical Data; and Subpart 227.72, Rights in Computer Software and Computer Software Documentation, and related provisions and clauses.''

List of Subjects in 48 CFR Part 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR part 252 is proposed to be amended as follows:

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 1. The authority citation for part 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

■ 2. Amend section 252.227–7019—
■ a. By revising the date of the clause;
■ b. By revising paragraph (b);
■ c. In paragraph (d)(2)(i)(B) by revising the second sentence;
■ d. In paragraph (e)(1) by revising the second sentence;
■ e. In paragraph (f)(1)(ii) by removing ''within sixty (60)'' and adding ''in writing within 60'' in its place;
■ f. In paragraph (f)(1)(iv) by removing ''three-year'' and adding ''3-year'' in its place;
■ g. In paragraph (g)(1)(i) by removing ''ninety (90)'' and adding ''90'' in its place;
■ h. In paragraph (g)(1)(ii) by removing ''one'' and ''ninety (90)'' and adding ''1'' and ''90'' in their places, respectively;
■ i. In paragraph (g)(1)(iii) by removing ''suit an appropriate'', ''ninety (90)'' wherever it appears, and ''one'' and adding ''suit in an appropriate'', ''90'', and ''1'' in their places, respectively;
■ j. In paragraph (g)(2)(i) and (ii) by removing ''ninety (90)'' and adding ''90'' in its place;
■ k. In paragraph (g)(2)(iii) removing ''one'' and ''ninety (90)'' and adding ''1'' and ''90'' in their places, respectively; and
■ l. In paragraph (g)(3) removing ''government'' wherever it appears and ''non-disclosure'' and adding ''Government'' and ''nondisclosure'' in their places, respectively.

The revisions read as follows:

252.227–7019 Validation of Asserted Restrictions-Computer Software.

* * * * *

Validation Of Asserted Restrictions—Computer Software (DATE)

* * * * *

(b) *Justification.* The Contractor shall maintain records sufficient to justify the validity of any asserted restrictions on the Government's rights to use, modify, reproduce, perform, display, release, or disclose computer software delivered, required to be delivered, or otherwise provided to the Government under this contract and shall be prepared to furnish to the Contracting Officer a written justification for such asserted restrictions in response to a request for information under paragraph (d) of this clause or a challenge under paragraph (f) of this clause.

* * * * *

(d) * * *

(2) * * *

(i) * * *

(B) * * * If the Contractor fails to correct or strike the unjustified marking and return the corrected software to the Contracting Officer within 60 days following receipt of the software, the Contracting Officer may correct the strike the marking at the Contractor's expense.

* * * * *

(e) * * *

(1) * * * Except for software that is publicly available, has been furnished to the Government without restrictions, has been otherwise made available without restrictions, or is the subject of a fraudulently asserted use or release restriction, the Government may exercise this right only within 6 years after the date(s) the software is delivered or otherwise furnished to the Government, or 6 years following final payment under this contract, whichever is later.

* * * * *

■ 3. Amend section 252.227–7037—
■ a. By revising the section heading, and the heading and date of the clause;
■ b. By revising paragraphs (c), and (d);
■ c. By revising paragraph (e)(1) introductory text;
■ d. In paragraph (e)(1)(i) removing ''services,'' and adding ''services, with'' in its place;
■ e. By revising paragraph (e)(1)(iii);
■ f. In paragraph (e)(4) by removing ''restrictive markings'' and adding ''asserted restrictions'' in its place;
■ g. By revising paragraph (g)(1);
■ h. In paragraph (g)(2)(i) by removing ''restrictive marking'' and ''In order to'' and adding ''asserted restriction'' and ''To'' in their places, respectively;
■ i. By revising paragraphs (g)(2)(ii), (iii), and (iv);
■ j. In paragraph (h)(1)(i) by removing ''marking'' and adding ''marking that is based on the asserted restriction'' in its place;
■ k. In paragraph (h)(1)(ii) by removing ''restrictive marking'' wherever it appears and ''marking'' and adding ''asserted restriction'' in their places;
■ l. By revising paragraph (i); and
■ m. In paragraph (k) by removing ''restrictive marking'' and ''subcontractors'' and adding

''restrictions'' and ''subcontractor'' in their places, respectively.

The revisions read as follows:

252.227–7037 Validation of Asserted Restrictions on Technical Data.

* * * * *

Validation of Asserted Restrictions on Technical Data (DATE)

* * * * *

(c) *Justification.* The Contractor or subcontractor at any tier is responsible for maintaining records sufficient to justify the validity of its asserted restrictions on the rights of the Government and others to use, duplicate, release, or disclose technical data delivered, required to be delivered, or otherwise provided to the Government under the contract or subcontract. Except as provided in paragraph (b) of this clause, the Contractor or subcontractor shall be prepared to furnish to the Contracting Officer a written justification for such asserted restrictions in response to a challenge under paragraph (e) of this clause.

(d) *Prechallenge request for information.*

(1) The Contracting Officer may request the Contractor or subcontractor to furnish a written explanation for any asserted restriction on the right of the United States or others to use, disclose, or release technical data. If, upon review of the explanation submitted, the Contracting Officer cannot determine the basis of the asserted restriction, the Contracting Officer may further request the Contractor or subcontractor to furnish additional information in the records of, or otherwise in the possession of or reasonably available to, the Contractor or subcontractor to justify the validity of any asserted restriction on technical data delivered, to be delivered, or otherwise provided to the Government under the contract or subcontract (*e.g.,* a statement of facts accompanied with supporting documentation). The Contractor or subcontractor shall submit such written data as requested by the Contracting Officer within the time required or such longer period as may be mutually agreed.

(2) If the Contracting Officer, after reviewing the written data furnished pursuant to paragraph (d)(1) of this clause, or any other available information pertaining to the validity of an asserted restriction, determines that reasonable grounds exist to question the current validity of the asserted restriction and that continued adherence to the asserted restriction would make impracticable the subsequent competitive acquisition of the item or process to which the technical data relates, the Contracting Officer will follow the procedures in paragraph (e) of this clause.

(3) If the Contractor or subcontractor fails to respond to the Contracting Officer's request for information under paragraph (d)(1) of this clause, and the Contracting Officer determines that continued adherence to the asserted restriction would make impracticable the subsequent competitive acquisition of the item or process to which the technical data relates, the Contracting Officer may challenge the validity of the asserted restriction as described in paragraph (e) of this clause.

(e) * * *

(1) Notwithstanding any provision of this contract concerning inspection and acceptance, if the Contracting Officer determines that a challenge to the asserted restriction is warranted, the Contracting Officer will send a written challenge notice to the Contractor or subcontractor making the asserted restriction. The challenge notice and all related correspondence shall be subject to handling procedures for classified information and controlled unclassified information. Such challenge shall—

* * * * *

(iii) State that a Contracting Officer's final decision, issued pursuant to paragraph (g) of this clause, sustaining the validity of a prior asserted restriction identical to the current asserted restriction, within the 3-year period preceding the current challenge, shall serve as justification for the current asserted restriction if the prior validated restriction was asserted by the same Contractor or subcontractor (or any licensee of such Contractor or subcontractor) to which such notice is being provided; and

* * * * *

(g) * * *

(1) If the Contracting Officer determines that the Contractor or subcontractor has justified the validity of the asserted restriction, the Contracting Officer will issue a final decision to the Contractor or subcontractor that sustains the validity of the asserted restriction and that states that the Government will continue to be bound by the asserted restriction. The Contracting Officer will issue this final decision within 60 days after receipt of the Contractor's or subcontractor's response to the challenge notice, or within such longer period that the Contracting Officer has notified the Contractor or subcontractor that the Government will require. The Contracting Officer will provide notification of any longer period for issuance of a final decision within 60 days after receipt of the response to the challenge notice.

(2) * * *

(i) * * *

(ii) The Government agrees that it will continue to be bound by the asserted restriction for a period of 90 days from the issuance of the Contracting Officer's final decision under paragraph (g)(2)(i) of this clause. The Contractor or subcontractor agrees that, if it intends to file suit in the United States Court of Federal Claims, it will provide a notice of intent to file suit to the Contracting Officer within 90 days from the issuance of the Contracting Officer's final decision under paragraph (g)(2)(i) of this clause. If the Contractor or subcontractor fails to appeal, file suit, or provide a notice of intent to file suit to the Contracting Officer within the 90-day period, the Government may cancel or ignore the restrictive markings that are based on the asserted restrictions, and the failure of the Contractor or subcontractor to take the required action constitutes agreement with such Government action.

(iii) The Government agrees that it will continue to be bound by the asserted restriction where a notice of intent to file suit in the United States Court of Federal Claims is provided to the Contracting Officer within 90 days from the issuance of the final decision under paragraph (g)(2)(i) of this clause. The Government will no longer be bound, and the Contractor or subcontractor agrees that the Government may strike or ignore the restrictive marking that is based on the asserted restriction, if the Contractor or subcontractor fails to file its suit within 1 year after issuance of the final decision. Notwithstanding the foregoing, where the head of an agency determines, on a nondelegable basis, that urgent or compelling circumstances will not permit waiting for the filing of a suit in the United States Court of Federal Claims, the Contractor or subcontractor agrees that the agency may, following notice to the Contractor or subcontractor, authorize release or disclosure of the technical data. Such agency determination may be made at any time after issuance of the final decision and will not affect the Contractor's or subcontractor's right to damages against the United States where its asserted restrictions are ultimately upheld or to pursue other relief, if any, as may be provided by law.

(iv) The Government agrees that it will be bound by the asserted restrictions where an appeal or suit is filed pursuant to the Contract Disputes

statute until final disposition by an agency Board of Contract Appeals or the United States Court of Federal Claims. Notwithstanding the foregoing, where the head of an agency determines, on a nondelegable basis, following notice to the Contractor that urgent or compelling circumstances will not permit awaiting the decision by such Board of Contract Appeals or the United States Court of Federal Claims, the Contractor or subcontractor agrees that the agency may authorize release or disclosure of the technical data. Such agency determination may be made at any time after issuance of the final decision and will not affect the Contractor's or subcontractor's right to damages against the United States where its asserted restrictions are ultimately upheld or to pursue other relief, if any, as may be provided by law.

* * * * *

(i) *Duration of right to challenge.*

(1) The Government may review the validity of any restriction on technical data, delivered or to be delivered under a contract, asserted by the Contractor or subcontractor. During the period within 6 years of final payment on a contract or within 6 years of delivery of the technical data to the Government, whichever is later, the Contracting Officer may review and make a written determination to challenge the restriction. The Government may, however, challenge a restriction on the release, disclosure, or use of technical data at any time if such technical data—

(i) Are publicly available;

(ii) Have been furnished to the United States without restriction;

(iii) Have been otherwise made available without restriction; or

(iv) Are the subject of a fraudulently asserted use or release restriction.

(2) Only the Contracting Officer's final decision resolving a formal challenge by sustaining the validity of a restrictive marking constitutes ''validation'' as addressed in 10 U.S.C. 3785(c).

[FR Doc. 2024–08438 Filed 4–24–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 260

[Docket No. 240412–0106]

RIN 0648–BH37

Inspection and Certification of Establishments, Fishery Products, and Other Marine Ingredients

AGENCY: National Marine Fisheries Service (NMFS or Agency), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: The NMFS Office of International Affairs, Trade, and Commerce proposes to revise its current implementing regulations to improve the uniformity and reliability of seafood inspection services by adopting recognized best practices for inspection. NMFS has not significantly revised or updated the existing regulations since first issuing them in 1971, though it has modified many operating procedures since implementation of the current regulations. NMFS anticipates that these revisions will benefit the seafood industry by streamlining seafood inspection services and providing improved, more accurate inspection results, as described below.

DATES: Written comments must be received by May 28, 2024.

ADDRESSES: Written comments on this action, identified by NOAA–NMFS–2024–0022, may be submitted by either of the following methods:

- *Electronic Submissions:* Submit all electronic public comments via the Federal eRulemaking Portal. Go to *http://www.regulations.gov/document/NOAA-NMFS-240412-0106,* click the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Steven Wilson, Chief, Seafood Inspection Program, Office of International Affairs, Trade, and Commerce, 1315 East-West Highway, Silver Spring, MD 20910. All comments received are a part of the public record and will generally be posted to *https://www.regulations.gov* without change. All personal identifying information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

NMFS will accept anonymous comments. Enter N/A in the required fields if you wish to remain anonymous. Attachments to electronic comments will be accepted in Microsoft Word, Excel, WordPerfect, or Adobe portable document file (PDF) formats only.

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements contained in this proposed rule may be submitted to the NMFS Office of International Affairs, Trade, and Commerce and by email to: *OIRA_Submission@omb.eop.gov* or fax to (202) 395–7285.

FOR FURTHER INFORMATION CONTACT: Steven Wilson, Chief, Seafood Inspection Program, by email at *Steven.Wilson@noaa.gov* or by phone at 301–427–8312.

SUPPLEMENTARY INFORMATION:

Background

Under the authority of the Agricultural Marketing Act (AMA) of 1946 (7 U.S.C. 1621 *et seq.*), and in accordance with the Reorganization Plan Number 4 of 1970 (84 Stat. 2090), NOAA administers a voluntary Seafood Inspection Program (SIP or Program) which offers inspection and grading services for seafood and other marine products, as well as audit and consultative services to domestic and international processors, importers, and international competent food safety authorities. SIP also authorizes the use of certain marks and shields to processors meeting specific safety, quality, and other program requirements. The existing regulations codified at 50 CFR part 260 have not been significantly revised or updated since NMFS first issued them in 1971, 36 FR 21037 (November 3, 1971), and currently do not reflect the changes in industry practices or the expanding role of SIP since that time. On October 15, 2019, NMFS issued an advance notice of proposed rulemaking (ANPR) requesting input from stakeholders and interested parties on focused areas of the Seafood Inspection Program regulations. Based on the eight public comments received and NMFS' overall assessment of the current program, NMFS proposes these comprehensive updates to the existing regulations. NMFS looks forward to receiving comments on the updates and modernizations proposed here.

The revisions proposed herein incorporate the significant changes and updates that SIP has already made and those that it still needs to implement to simplify its administrative, inspection, and certification procedures. These changes and updates will lead to

increased uniformity of and efficiencies associated with inspections, while retaining the reliability and validity of inspection results. In an effort to minimize costs, streamline operations, and enable updates in a cost-effective and timely fashion, SIP is proposing to remove certain provisions from 50 CFR part 260 and place them in the NMFS Fishery Products Inspection Manual (SIP Manual), which can be found online at *https://www.fisheries.noaa.gov/national/seafood-commerce-certification/seafood-inspection-manual.* The proposed rule does not change the way SIP currently operates but removes outdated regulatory text, adds relevant text to incorporate current practices, and moves certain provisions to the SIP Manual so that the regulations would both more accurately reflect current industry practices and allow for adaptation to potential changes in technologies and product requirements. NMFS anticipates that these revisions will benefit the seafood industry by clarifying and simplifying the procedures for obtaining seafood inspection services and providing improved, more accurate and consistent inspection results, as compared with the current published regulations. Table 1 below summarizes the proposed rule's impacts on section number and title changes, as well as identifying provisions that would be deleted from the regulations.

1. Modernize Definitions and Administrative Procedures

With respect to administrative procedures, NMFS proposes to remove specific provisions that are no longer in use, such as the option to request inspection service via telegraph, from the regulatory text. The requirement to request inspection services would be retained, while the specific, detailed procedures for requesting such service would be moved from the regulatory text to the online SIP Manual, where they can more readily be updated and modified as new technologies and procedures are implemented. Putting these strictly procedural matters in the online manual would make implementing cost-neutral and cost-saving procedural changes more timely and efficient for both government and industry.

Definitions

The proposed rule would update definitions in § 260.6 (proposed § 260.2) to reflect the current use and meaning of certain terms used throughout part 260 and in general use in industry. Terms such as ''Approved Establishment,'' ''Fish,'' ''Fishery Product,'' ''Marine Ingredient,'' ''NMFS Fishery Products Inspection Manual (SIP Manual),'' ''Processing,'' and ''Product'' would be added to align with current SIP policies and procedures, as well as current U.S. Standards for Grades (50 CFR part 261), Food and Drug Administration (FDA) Hazard Analysis and Critical Control Point (HACCP) regulations (21 CFR part 123), and Good Manufacturing Practices (GMPs) (21 CFR part 117). Other terms, such as ''Deviant,'' ''Deviation,'' and ''Plant'' would be removed because they are either no longer commonly used in the context of seafood inspection or are more accurately defined in other terms. In general, only terms that pertain specifically to the regulations in this part are defined therein.

Inspection Service and Appeal Inspection

The existing regulations at §§ 260.12–260.41 are out of date and inconsistent with current procedures for requesting inspection services, performance of inspections and product grading activities, issuance of certificates, and appeal of inspection results. The proposed regulations reflect the now-common use of the internet and the online Seafood Inspection Services Portal (online portal) system for requesting SIP inspection services, as well as the use of electronic documents (*e.g.,* inspection certificates), which the current regulations do not address. The online portal, first deployed in 2008 for inspection services requests and issuance of certificates and reports, enables SIP staff to address the needs of industry in a more timely and consistent manner. Tracking service requests through the online portal system also enables SIP management to better allocate resources to meet the needs of its customers. Public comment on the ANPR supported the increased use of the online portal for requesting all inspection services and continued electronic transfer of records. In addition to the increases in efficiency, the use of the online portal for the generation of official inspection certificates, whether printed on water-marked paper or delivered electronically, has reduced government costs by eliminating the need to print and secure the old carbon-copy controlled certificate books, whereby each inspector or office had to secure a log and retain a copy of each certificate type issued.

While the proposed regulations would still allow for inspection services to be requested by fax, the move to the online portal system reduces the cost to seafood businesses by allowing computer access to all services in one account, storing information, reducing the amount of time required to make a request, and eliminating the need to have a separate fax machine, which many smaller businesses do not otherwise use or need. The proposed rule would consolidate the current sections associated with applying for service (§§ 260.14–260.17) into a new § 260.6, with language updated to reflect the current practice of applying for inspection services through the online portal system per the instructions in the SIP Manual, found in part 1, chapter 12. The regulatory language in § 260.21(b)(1–5) (proposed § 260.10(b)(1–4)) would be updated to reflect the current product inspection grade and compliance assessment practices. SIP's intent is to consolidate and harmonize the current U.S. Grade Standards outside of this rulemaking action, and to keep current product inspection and quality assessment procedures detailed in the SIP Manual. This shift will allow SIP to keep current with changes and improvements in inspection techniques, as well as any changes to finished product specifications and the approval process of buyer and customer specifications.

NMFS proposes removing § 260.23, Postponement of Inspection Service, from regulatory text, and placing this procedure in the SIP Manual, part 1, chapter 12. This specific activity is strictly procedural in nature and does not need to be regulated in part 260.

The proposed rule would modify the existing provisions for requesting and performing appeal inspections found in §§ 260.36–260.41 by removing the procedures to file the request for appeal (§ 260.36; proposed § 260.19) and the mechanics of numbering and dating the appeal inspection certificates (§ 260.41; proposed § 260.23) from part 260 and placing them in the SIP Manual, part 1, chapter 14. NMFS proposes to leave the remainder of the appeal process in regulatory text and add provisions for appeals of audits and other services (the current regulations only address appeal of fishery product inspections) to ensure that all customers get equitable and consistent treatment, regardless of their level of participation in SIP. For example, a person requesting one lot inspection would have the same right to appeal as a company with multiple facilities and vessels participating in SIP as an Approved Establishment.

Fees and Charges

NMFS proposes to consolidate the current subgroup Fees and Charges (§§ 260.69—260.81) into a new § 260.30,

Inspection Fees, Payment Guarantees, Charges and Payments, and remove the details of individual fees and charges from regulatory text. The current fees for all SIP services are available in the SIP Manual, part 1, chapter 13 and on the SIP website at *https://www.fisheries.noaa.gov/national/seafood-commerce-trade/inspection-and-analytical-services-fees.* Putting the specific fees and charges in the SIP Manual, rather than in the regulatory text, would allow for annual updates and any modifications to the fee structure to be accurately reflected in a timely manner without additional rulemaking. SIP would continue to provide notice of fee updates and modifications to the fee structure in the **Federal Register** consistent with existing §§ 260.70 and 260.81.

In response to the ANPR, one commenter suggested that travel costs be the same for all participants in SIP and not based on their contract/non-contract type or level of participation. The commenter also suggested that HACCP contract rates have become too high for many small businesses and that when a participant regularly demonstrates compliance and minimal deficiencies in an audit, the frequency of HACCP audits should be reduced to twice yearly. Another comment suggested that with the online portal system, where most certificate information is filled out online by the requestor instead of SIP staff, the cost of certificates should be reduced, while another commenter suggested that the fees charged for scoresheets and duplicate certificates should be re-evaluated. NMFS also received one comment suggesting that SIP clarify its billing processes and activity time charges and make them consistent across the regions and offices. The same commenter expressed concern that any changes made to sampling plans not increase the cost of inspection.

While there may be an incremental cost increase for small entities choosing to participate in the activities of SIP, all of the fees assessed by SIP are analyzed and updated regularly and are set in such a way as to offset the costs of the program while not generating a profit per the Financial Policy outlined in the SIP Manual in part 1, chapter 13. This includes certificate fees, whether or not issued through the online portal. All travel costs incurred with inspection services, including mileage, transportation, travel time, and lodging and per diem when required, are billed to the requestor. Lodging, per diem, and the personal vehicle mileage rate are set annually by the U.S. General Services Administration (GSA) and are applied equally to all users, so any disparity in these charges between regions can be attributed to cost variations in different parts of the country. Billing for travel-related costs is detailed in the SIP Manual, part 4, chapter 18, and in part 1, chapter 14. Any changes proposed to sampling plans resulting from this proposed rule are expected to have a positive impact on associated costs and will be detailed in the SIP Manual, part 4, chapter 19. These positive impacts could include using smaller sample sizes and less destructive sampling, which would decrease both the cost of the samples themselves as well as the time required for sampling and inspecting said samples. The frequency of HACCP and surveillance audits is established and detailed in the SIP Manual in part 3, chapters 11 and 12 and appendix 1. Audit frequency may be increased or tightened based on the results of an audit as determined by the Regional Inspection Branch. NMFS has set the minimum audit frequency at levels appropriate to ensure that federal regulations and Program requirements are being met.

Policies and Procedures

The proposed rule would update the current § 260.84, Policies and procedures (see proposed § 260.34), to reflect that NOAA no longer publishes a hard-copy inspection manual, formerly known as NOAA Handbook 25. All SIP policies and procedures are now contained in the SIP Manual, which is publicly available online at *https://www.fisheries.noaa.gov/national/seafood-commerce-certification/seafood-inspection-manual.* The SIP Manual moved to the online format over a decade ago to allow for updates and corrections in real time. The online version is always current and available to inspection staff, program participants, and the general public at all times and in any location with internet access. Any update to a policy or procedure can be uploaded to the SIP Manual and broadcast to all users within hours. The move to the online format also saves the government money by eliminating the costs of printing and postage, as well as eliminating the need for inspectors to spend time each quarter manually removing old pages and adding new pages to the hard-copy handbook.

NMFS is proposing to remove the section on Political Activity (currently § 260.88), since it is now specifically governed through the Hatch Act, as amended (see 5 U.S.C. 7321–7326), and its inclusion in the updated SIP regulations is redundant.

A few minor updates are proposed to § 260.93, Debarment and suspension (proposed § 260.39), to reflect the use of more modern terms (*i.e.,* ''Grade A Equivalent'' and ''processing establishment'' instead of ''plant''). In addition, the requirement to file five copies of all documents would be removed from § 260.93(h)(1), as that practice is no longer necessary. Any documents filed today are likely to be converted to electronic format, if not submitted electronically.

Approved Establishments

Under the proposed rule, the provisions regarding Approved Establishments would be moved and updated. Requirements for Plants Operating Under Continuous Inspection on a Contract Basis, currently §§ 260.96–260.104, would be renumbered §§ 260.31–260.33 and retitled Requirements for Approved Establishments for purposes of clarity and to reflect current practices. In this proposed format, the requirements for becoming an Approved Establishment are set out prior to specifying the benefits of being an Approved Establishment, such as the ability to use marks and official statements on seafood products, providing a more logical flow for these provisions. Section 260.96, Application for fishery products inspection service on a contract basis at official establishments, would be re-titled Application for SIP Approved Establishment and re-numbered as § 260.31. The requirement to submit an application to SIP for inspection services would remain in the part 260 regulations, but the specific details of the application procedures would be placed into the SIP Manual, part 3, chapter 5. This movement aligns directly with the Agency's goal of keeping the operational requirements and procedures of SIP up to date as technologies and methods of communication change, as well as staying current with industry practices.

Sections 260.97(a) and § 260.97(b) would be modified to reflect that the requirements for receiving inspection services at establishments are based on an establishment's good standing, which is assessed by the Agency through the combination of systems, process and product auditing and inspection activities. Approved Establishments are included in a list published on the Program's website and periodically in hard copy. Inclusion on this list is contingent upon the firm's continued adherence to the Program requirements, which are addressed in detail in the SIP Manual at part 3. They also include FDA and U.S. Department of Commerce (USDC) regulations governing the construction and maintenance of

facilities and equipment, processing techniques, and employee practices, all of which are verified by on-site facility and product audits. The provisions in § 260.97(b) would be retained in proposed § 260.32(c). Sub-sections 260.97(c)(3–6) and (14) regarding the use of labels and other NOAA marks would be addressed in the proposed §§ 260.35 and 260.36. Sub-sections 260.97(c)(1–2), regarding raw materials and lot identification, and 260.97(c)(8–10), regarding office and lab space and laundry service, would be moved to § 260.32(d)(1–4). The procedures currently at § 260.97(c)(7), (12–13), and (15–16) detailing furnishing NOAA with reports, product specifications, label proofs, and other insignia, would also be removed entirely from the regulations in this part and placed in the SIP Manual, parts 3 and 4. Again, this move from regulatory text to the SIP Manual is an effort to align with the Agency's goal of being able to adapt to changes in policies and industry practices in real time. Section 260.97(c)(11) would be removed completely from the rule since the practice of having contracting parties provide clerical and stenographic assistance to the Agency is obsolete.

For purposes of clarity, § 260.97(c)(17) (proposed § 260.32(d)(5)) would be re-worded to cover all inspection services, and § 260.97(d), Termination of Inspection Services, would be moved to § 260.32(f). Current section 260.97(d)(1)(iii) would be separated into two sub-items: § 260.32(f)(1)(iii) would detail how service may be terminated due to failure of the contracting party to meet financial obligations and § 260.32(f)(1)(iv) would detail how service may be terminated due to failure of the contracting party to meet statutory or regulatory requirements, including the provisions of the regulations in this part.

With one exception, §§ 260.98–260.104 would be condensed into one new § 260.33, Compliance with Statutory and Regulatory Requirements, which would read: ''Approved Establishments shall comply with all statutory and regulatory requirements and provisions pertaining to the production of fish and fishery products and other marine ingredients for human or animal consumption.'' This provision would underscore that participation as an Approved Establishment does not exempt an establishment from any statutory or regulatory requirements. The audit criteria for Approved Establishments detailed in the SIP Manual, part 3, encompasses all of the requirements previously covered in regulatory text in these sections regarding premises, buildings and structures, facilities, lavatory accommodations, equipment, effective sanitation programs, and personnel. The Agency is not adopting by reference other agencies' regulations as part of this rulemaking, specifically FDA HACCP regulations (21 CFR part 123) and GMPs (21 CFR part 117), which already cover the requirements for premises, sanitation programs, and personnel.

The current § 260.103(f) detailing the authority of NMFS to reject product and retain equipment would be relocated to § 260.32(e). This move aligns with NMFS' goal of streamlining the regulatory text and consolidating the requirements for Approved Establishments but in no way diminishes the authority of NMFS to identify, isolate, and hold any product that has been deemed mislabeled or unwholesome or any equipment that has been deemed unsanitary or likely to contaminate processed product in any way. Any product or equipment that has been placed on such hold and identified with the word ''RETAINED'' may not be used or disposed of until inspection or testing has been completed and the NMFS inspector has removed the ''RETAINED'' identification.

2. Modernize Sampling Plan and Lot Compliance Determination Procedures

NMFS proposes several adjustments to the current section ''Licensing of Samplers and Inspectors'' (§§ 260.47–260.51). The text currently at § 260.48 regarding the application to become a licensed sampler would be removed. The Agency no longer requires formal application for a person to become a licensed sampler, though the person's qualifications must still meet the standards outlined in the SIP Manual, part 1, chapter 6, and be approved by an authorized employee of the Agency. The current sections on Licensed Sampler (§ 260.47) and Inspectors (§ 260.49) would be reversed in order and renumbered as § 260.24–25. The intent of this renumbering is to emphasize the role of inspectors, NOAA employees who are qualified to perform the full catalog of inspection services, over the role of licensed samplers, who are only authorized to pull samples.

Sampling

The changes proposed to the section Sampling, currently under §§ 260.57–260.63 (proposed §§ 260.28–29), are intended to make sampling less restrictive and more flexible for both industry and government. The opportunity and flexibility to use different sampling plans for lot inspections is detailed in the SIP Manual in part 4, chapter 19, and for grading standards in part 5, chapter 5. The use of more flexible sampling plans is expected to reduce the amount of destructive sampling and the time and costs associated with the act of sampling itself and increase the reliability of the results based on the samples used. Since 1966, when the current sampling plan (§ 260.61) was established, many improvements have been made by both industry and government in terms of sampling and lot compliance determination. NMFS has determined that using a static sample size of six and acceptance number of zero, regardless of the lot size, will both simplify the sampling procedures and maintain the statistical validity of the inspection results. With the current sampling plans, the sample size can range from 3 to over 72 sample units and often involves destruction of the product and packaging. Having a uniform sample size of six would reduce the time needed to select samples in most cases and minimize the destruction and loss of product due to sampling. Determining lot compliance would also be easier, since the assessment of the lowest performing sample unit would apply to the entire lot with an acceptance number of zero. This would mean the lot must have zero non-conforming sample units to be accepted. In other words, if one sample unit does not meet the inspection requirements, the entire lot is rendered non-conforming. Removing the specific sampling procedures and sampling plans from the regulatory text in this part and placing them in the SIP Manual aligns with the Agency's goal of being more adaptable to changes in industry practice and applying new techniques as they become available. It would also allow SIP to keep up to date with the Codex Alimentarius (CODEX) and other internationally agreed upon standards as they are improved and updated without requiring new regulatory action. When finished product inspection is required, a SIP inspector would follow the Sampling Procedures and Sampling Plans set forth in the SIP Manual, part 4, chapters 12 and 19.

The following requirements related to lot identification and sampling are unchanged in the rulemaking updates proposed here (§ 260.60–61; proposed § 260.28–29): all product must be readily identifiable and accessible for sufficient sampling; officially drawn samples shall be marked by the Agency representative so they can be properly identified for inspection; a certificate of sampling shall be prepared and signed

by the inspector or licensed sampler; any lot not readily identifiable shall be marked by the Agency representative in a manner prescribed by the Agency; and any samples that require shipment to an Inspection Office shall be shipped in a manner to avoid, if possible, any material change in the quality or condition of the fish or fishery product or other marine ingredient. All costs associated with furnishing samples for inspection and shipments shall be at the expense of the applicant.

NMFS proposes to remove from regulatory text the single and multiple sampling plans and procedures for determining lot compliance, currently found in § 260.61, and adopt internationally recognized standards and specifications for sampling practices, sample sizes, and lot compliance determinations. These standards and specifications would continue to be housed and detailed in the SIP Manual, part 4, chapter 12 and 19 for lot inspections and in part 5, chapter 5 for grading standards rather than in regulatory text. One comment received on the ANPR suggested that NMFS consult with the National Institute for Standards and Technology (NIST) to ensure that any modified sampling plans align with their procedures and provide uniformity between states' and SIP's inspection results regarding net weight compliance. The commenter also suggested that NMFS use information from the research of the CODEX Committee on Methods of Analysis and Sampling (CCMAS) as a benchmark to align SIP's sample size and lot compliance procedures with other globally accepted methods. NMFS works closely with NIST, agrees with the goal of alignment with other globally accepted procedures, and seeks additional comment specifically on modifications to sampling plans, sample sizes, and lot compliance determination, as found in the SIP Manual, part 4, chapter 19.

3. Modernize Use of Inspection and Certification Marks

The section on marks and official statements (§ 260.86; proposed § 260.35) would be updated to reflect the changes associated with the development of Approved Establishments and their associated marks and statements. Products may bear a mark showing they were processed in an approved facility and/or a mark showing that they meet applicable SIP-approved specifications or inspections as prescribed in part 3, chapter 16, and part 4, chapter 10, of the SIP Manual. The ''USDC Lot Inspected Shield'' would be removed, as it is antiquated and no longer in use. Proposed § 260.36 would be added to clearly identify the terms for revocation of approval to use inspection marks and statements. The outdated mention of any marks referencing the U.S. Department of the Interior would be removed.

One public comment suggested using a special mark to identify product sourced sustainably, such as aquaculture grown in a safe and sustainable manner, stating that certification standards reflecting more sustainable practices would be recognized by consumers and help influence industry guidelines to reflect more sustainable practices. NMFS fully supports sustainability in all aspects of fisheries, but the Agricultural Marketing Act of 1946 only authorizes NMFS to certify the quality, quantity, and condition of products. Sustainability claims are out of the scope and authority of SIP at this time. One commenter suggested that NMFS survey current program users to see what value SIP marks still have, if any, given the numerous third-party program available today, and then develop and implement a new communication effort to improve the understanding among consumers of what the marks actually signify. SIP marks continue to be sought-after by industry participants, and the agency publicizes the value of SIP-inspected products as resources permit.

Another commenter added that the value of existing labeling would be increased if it was simplified and made clearer to consumers and included an assessment of the facility(ies) involved. While NMFS appreciates the suggestions for making SIP marks more effective and recognizable to the consumer, we believe the Approved Establishment marks and statements already convey such an assessment. In order to qualify to bear these marks, a facility must comply with all the requirements spelled out in the SIP Manual, part 3, regarding approved establishments and maintain a level of compliance assessed through regular auditing.

4. Extension of Services to Product Forms Beyond Those for Human Consumption

The proposed rule expands the scope of service to include certain foods for animal consumption such as fishmeal, fish bone meal, fish for bait and some types of pet food for cats and dogs, but it does not include products such as food for aquarium fish. This proposed expansion also covers other products of marine origin, such as seaweed, kelp, algae, fish-based fertilizers, and other fishery by-products whether or not intended for human consumption. The expansion of SIP to non-consumer and other marine products is an expansion of opportunity and markets and helps to facilitate trade for U.S. businesses. By including non-human-consumption fish and fishery products and other marine ingredients to the program, U.S. businesses are better able to compete with industry members from other countries in providing these valuable resources to the worldwide marketplace. Some countries, such as China and the Republic of Korea, already require both physical product inspection and participation in SIP in order to export fish and fishery products to those countries, including items such as fish meal and fishery by-products. At the request of industry, SIP has been providing these services for several years, so there is little to no cost increase to the Agency or industry to include these products through this proposed rule. Specifically, adding inspection and certification services for non-food, by-products, and other marine ingredients in the revised SIP regulations would enable SIP to provide services to businesses trading in marine products that traditionally the FDA and the U.S. Department of Agriculture (USDA) Food Safety and Inspection Service (FSIS) do not provide. While NMFS does propose to expand inspection and certification services to include fish food for aquaculture operations, the Agency does not propose to expand services to pet foods, such as fish food for aquarium fish, or to ornamental/brood stock/research animals, as these products fall under the regulatory authority of the USDA Animal and Plant Health Inspection Service (APHIS).

The fish oil market is growing at 5.8 percent annually and is expected to reach $3.34 billion by 2030 (Reports and Data, February 2023). To facilitate trade with foreign nations, U.S. suppliers must effectively identify the sourcing history of their products, which could be satisfied if NMFS continued and expanded its support for the trade and certification of fishery by-products, including fish oils. Multiple commenters supported and encouraged the efforts of SIP to provide certification services for inedible fishery products, including aquatic fish food, the latter of which the Agency lacks the authority to inspect.

5. Modernize U.S. Grade Standards

In the ANPR (84 FR 55130, October 15, 2019), NMFS also requested comment on the modernization of the U.S. Grade Standards found in 50 CFR part 261. Comments from industry

members generally support the maintenance of U.S. Grade Standards in the SIP Manual, currently in part 5, and encourage the development of simplified grading documentation and harmonizing of the grading standards across regions, stakeholders, and products. Based on comments received and NMFS' internal review, the Agency has decided not to update the U.S. Grade Standards as part of this proposed rulemaking but may address changes to 50 CFR part 261 in future rulemaking. Currently, NMFS intends to reduce the existing grade standards down to seven or eight consolidated U.S. Standards for fishery products and to adopt a uniform sample size of six with zero non-conformities for lot acceptance. This means that for all lot sizes, six sample units would be selected for inspection, and each sample unit must meet the regulatory or quality criteria for the lot to be accepted.

The changes proposed to ''Basis of inspection, grade, and compliance assessment'' currently at § 260.21 (proposed § 260.10) would enable SIP to perform finished product inspections based on specifications and procedures found in the SIP Manual, parts 4 and 5, and compliance would be determined according to the inspection and assessment procedures outlined in the SIP Manual in parts 4 and 5.

General public comments on the ANPR also included a request for NMFS to continue its outreach to program participants, including hosting webinars and public meetings where industry could provide more input on the efforts to modernize the SIP. NMFS encourages and actively seeks public comment on all of the modernization efforts proposed here. Any public meetings and/or webinars will be posted on our website and announced through the current communication channels to all program participants and interested industry members. See table 1 below for details of all the proposed section number and title changes.

TABLE 1—PROPOSED RE-ORDERING OF PART 260

PART 260—INSPECTION AND CERTIFICATION

Current Subpart A—Inspection and Certification of Establishments and Fishery Products for Human Consumption

Proposed Subpart A—Inspection and Certification of Establishments, Fishery Products, and Other Marine Ingredients

Current section	Current section title	Proposed section	Proposed section title
260.1	Administration of regulations.	260.1	Administration of regulations.
Definitions 260.6–260.7		Definitions 260.2–260.3	
260.6	Terms defined.	260.2	Terms defined.
260.7	Designation of official certificates, memoranda, marks, other identifications, and devices for purposes of the Agricultural Marketing Act.	260.3	Designation and use of official certificates, memoranda, marks, other identifications, and devices for purposes of the Agricultural Marketing Act.
Inspection Service 260.12–260.30		Inspection Service 260.4–260.18	
260.12	Where inspection service is offered.	260.4	Where inspection service is offered.
260.13	Who may obtain inspection service.	260.5	Who may obtain inspection service.
260.14	How to make application.	260.6	Application for inspection service.
260.15	Information required in connection with application.		Deleted.
260.16	Filing of application		Deleted.
260.17	Record of filing time.		Deleted.
260.18	When application may be rejected.	260.7	Rejection of application for inspection service.
260.19	When application may be withdrawn.	260.8	Withdrawal of an application for inspection service.

Classification

This proposed rule is published under the authority of the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1621 *et seq.*). The NMFS Assistant Administrator has determined that this proposed action is consistent with the provisions of this and other applicable laws, subject to further consideration after public comment.

Executive Order 12866

This proposed rule has been determined to be not significant for the purposes of Executive Order 12866.

Regulatory Flexibility Act

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. A description of the factual basis for this determination follows.

The regulatory action being considered is described in the preamble of this proposed rule and includes updates, deletions, and additions to the regulations currently found at 50 CFR part 260. The proposed action reflects the significant changes and updates SIP

has already made to simplify its administrative, inspection, and certification procedures, which will result in increased uniformity of inspection results and efficiencies associated with inspection effort, while retaining the reliability and validity of inspection results, detailed in the above sections. Many of the changes proposed here are not actual changes to the way SIP currently operates, but merely a removal of outdated regulatory text, so the regulations both more accurately reflect current Program and industry practices and remain adaptable to potential future changes in technologies and product requirements.

Even though SIP operates as a fee-for-service program, it must adhere to the regulatory authority of the FDA under which all seafood processors in the United States operate, regardless of their status or participation in SIP. The proposed rule clarifies the authority SIP has to provide services for fishery products, regardless of intended end-use, and allows SIP the flexibility to keep its policies and operational procedures current with both industry practices and international standards by housing the day-to-day operational details in the online SIP Manual versus in regulatory text.

The entities affected by this rulemaking include all seafood harvesters, processors, brokers, importers, exporters, storage facilities, and other entities who utilize the fee-based services provided by the SIP. This group includes both businesses that choose to contract with the Agency for certain services and those who wish to export seafood products that require certification that only SIP can provide. SIP services both domestic and foreign businesses. Per the RFA's definition of small business and regulations issued by the SBA, impacts on "a business entity organized for profit, with a place of business located in the United States, and which operates primarily with the United States or which makes a significant contribution to the U.S. economy though payment of taxes or use of American products, material or labor" will be analyzed below.

Small entities include "small businesses," "small organizations," and "small governmental jurisdictions." The SBA has established size standards for all major industry sectors using the North American Industry Classification System (NAICS). Size thresholds can be based on either a company's number of employees or its sales, depending on SBA's criteria for that industry. On December 29, 2015, NMFS issued a final rule establishing a small business size standard of $11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry (NAICS 11411) for RFA compliance purposes only (80 FR 81194). The $11 million standard became effective on July 1, 2016, and is to be used in place of the U.S. NAICS 114111, 114112, and 114119 sectors of the U.S. commercial fishing industry in all NMFS rules subject to the RFA after July 1, 2016. Id. at 81194.

Based on the list of SIP businesses requesting services in 2021, 64 NAICS industries were identified. This analysis applies those SBA/NMFS small business definitions to the 64 6-digit NAICS industries. For the purposes of this analysis, it is assumed that the choice to participate in SIP is not correlated with business size, and thus the estimated number of small entities is the fraction of that NAICS industry that is considered small multiplied by the number of entities in that industry participating in SIP. The total number of entities that are small for NAICS with employment-based small entity definitions is calculated using the 2021 Statistics of U.S. Businesses (SUSB) by detailed employment size (U.S. Census Bureau 2023). In some cases, the small business threshold is somewhere in the middle of a SUSB bracket, in which case an adjustment is necessary. Assuming that firms are uniformly distributed within an employment size bracket, the number of small firms from the sub-divided bracket is estimated based on the proportion of the bracket below the threshold. For example, if the small business threshold is 125 employees and SUSB reports 40 businesses in the 100–149 employee bracket, it is assumed that 20 of the businesses are small because half of the bracket is below the 125-employee threshold. However, if the small business threshold is in the top bracket (*e.g.* a threshold of 750 employees with a top bracket of 500+ employees), then a conservative estimate is made that all the affected entities are small. The percentage of businesses that are small for NAICS with revenue-based small business definitions is calculated using the 2017 SUSB by revenue,[1] with revenues inflated to 2022 dollars using the Consumer Price Index Inflator. The same proportional rules are applied here when the threshold lies somewhere in the data bracket.

A complete list of the NAICS codes, NAICS descriptions, the corresponding SBA size standard thresholds, total entities and the number of entities determined to be small entities affected by this rule is provided in table 2.

TABLE 2—NAICS CODES, SMALL BUSINESS THRESHOLDS AND ENTITY TOTALS

NAICS Code	NAICS description	Small business threshold	Total entities by NAICS	Estimated small entities
11411	Commercial Fishing Industry	11 million	18	18
112511	Finfish Farming and Fish Hatcheries	3.75 million	4	4
112519	Other Aquaculture	3.75 million	2	2
311119	Other Animal Food Manufacturing	650 employees	4	4
311412	Frozen Specialty Food Manufacturing	1250 employees	5	5
311423	Dry and Dehydrated Food Manufacturing	750 employees	2	2
311615	Poultry Processing	1250 employees	3	3
311710	Seafood Product and Preparation and Packaging	750 employees	80	78
311942	Spice and Extract Manufacturing	650 employees	1	1
311999	All Other Miscellaneous Food Manufacturing	700 employees	5	5
325311	Nitrogenous Fertilizer Manufacturing	1050 employees	1	1
325411	Medicinal and Botanical Manufacturing	1000 employees	3	3
325412	Pharmaceutical Preparation Manufacturing	1300 employees	4	4
325414	Biological Product (except Diagnostic) Manufacturing	1250 employees	1	1
325612	Polish and Other Sanitation Good Manufacturing	900 employees	1	1

[1] The 2019 and 2021 SUSB updates do not include data by revenue, so this is the most recent available.

TABLE 2—NAICS CODES, SMALL BUSINESS THRESHOLDS AND ENTITY TOTALS—Continued

NAICS Code	NAICS description	Small business threshold	Total entities by NAICS	Estimated small entities
325998	All Other Miscellaneous Chemical Product and Preparation Manufacturing.	650 employees	2	2
333241	Food Product Machinery Manufacturing	500 employees	1	1
333998	All Other Miscellaneous General Purpose Machinery Manufacturing.	700 employees	3	3
423450	Medical, Dental, and Hospital Equipment and Supplies Merchant Wholesalers.	200 employees	1	1
423740	Refrigeration Equipment and Supplies Merchant Wholesalers.	125 employees	1	1
424210	Drugs and Druggists' Sundries Merchant Wholesalers.	250 employees	3	3
424410	General Line Grocery Merchant Wholesalers	250 employees	18	17
424420	Packaged Frozen Food Merchant Wholesalers	200 employees	15	14
424440	Poultry and Poultry Product Merchant Wholesalers	150 employees	4	4
424460	Fish and Seafood Merchant Wholesalers	100 employees	233	228
424470	Meat and Meat Product Merchant Wholesalers	150 employees	10	10
424480	Fresh Fruit and Vegetable Merchant Wholesalers	100 employees	2	2
424490	Other Grocery and Related Products Merchant Wholesalers.	250 employees	16	16
424910	Farm Supplies Merchant Wholesalers	200 employees	1	1
424990	Other miscellaneous nondurable goods merchant wholesalers.	100 employees	15	15
445110	Supermarkets and Other Grocery (except Convenience) Stores Retailers.	40 million	3	3
445210	Meat Markets Retailers	500 employees	2	2
445250	Fish and Seafood Markets Retailers	9 million	11	11
445298	All Other Specialty Food Retailers	10 million	4	4
456110	Pharmacies and Drug Stores Retailers	37.5 million	1	1
456191	Food Health Supplement Stores Retailers	22.5 million	5	5
459110	Sporting Goods Stores Retailers	26.5 million	1	1
459910	Pet and Pet Supplies Stores Retailers	32 million	2	2
455219	All Other General Merchandise Stores Retailers	40 million	2	2
483111	Deep Sea Freight Transportation	1050 employees	1	1
483113	Coastal and Great Lakes Freight Transportation	800 employees	1	1
484110	General Freight Trucking, Local	34 million	1	1
488210	Support Activities for Rail Transportation	34 million	1	1
488320	Marine Cargo Handling	47 million	1	1
488510	Freight Transportation Arrangement	20 million	29	27
488999	All Other Support Activities for Transportation	25 million	2	2
493110	General Warehousing and Storage	34 million	7	5
493120	Refrigerated Warehousing and Storage	36.5 million	5	5
523160	Commodity Contracts Dealing Intermediation	47 million	1	1
523910	Miscellaneous Intermediation	47 million	1	1
523991	Trust, Fiduciary, and Custody Activities	47 million	1	1
541611	Administrative Management and General Management Consulting Services.	24.5 million	3	3
541890	Other Services Related to Advertising	19 million	1	1
541990	All Other Professional, Scientific, and Technical Services.	19.5 million	1	1
561110	Office Administrative Services	12.5 million	3	3
561499	All Other Business Support Services	21.5 million	5	5
561510	Travel Agencies	25 million	2	2
561910	Packaging and Labeling Service	19.5 million	1	1
561990	All Other Support Services	16.5 million	1	1
721199	All Other Traveler Accommodation	9 million	1	1
721214	Recreational and Vacation Camps (except Campgrounds).	9 million	1	1
722511	Full-Service Restaurants	11.5 million	15	15
813319	Other Social Advocacy Organizations	18 million	1	1
	Non-classifiable Establishments	n/a	1	1
	TOTAL		577	553

Source: U.S. Small Business Administration Table of Small Business Size Standards (Effective date January 1, 2022). Available at: *https://www.sba.gov/document/support--table-size-standards*.

Based on the information above, NMFS expects approximately 553 small entities ranging across 64 NAICS sectors would be directly affected by this rule upon implementation. As more entities participate in the services, including those expanded services proposed in the rule, the number of entities is likely to increase marginally over time.

This proposed action would not establish any new reporting,

recordkeeping, or other compliance requirements for small entities. The proposed rule would add or amend definitions, clarify the authority SIP has to provide services for fishery products (regardless of intended end-use), and allow SIP the flexibility to keep its policies and operational procedures current with both industry practices and international standards by housing the day-to-day operational details in the online SIP Manual versus in regulatory text. The actions proposed would not change the way SIP currently operates but merely remove outdated regulatory text so the regulations both more accurately reflect current industry practices and remain adaptable to potential changes in technologies and product requirements. Thus, no small business or local government would be required to undertake any additional reporting, recordkeeping, or other affirmative actions in order to comply with the proposed rule. No duplicative, overlapping, or conflicting federal rules have been identified.

Using the 2021 SUSB by detailed employment size (U.S. Census Bureau 2023) and 2017 SUSB by revenue, most of the entities affected represent less than one percent of the total number of firms in their NAICS sector. Those industries in NAICS code sectors that had five or fewer entities participating in the SIP programs were assumed to be well below one percent of the total number of firms in the sector since sectors generally contain many hundreds of entities.

Only two NAICS sectors exceeded one percent, Seafood Product Preparation and Packaging (311710) with 13.6 percent and Fish and Seafood Merchant Wholesalers (424460) with 11.2 percent. The affected small entities do not represent a large portion of their sectors, but the total number of affected small entities (78 and 228, respectively) could be considered a substantial number.

NMFS anticipates some small entities affected by the rule would likely incur some compliance cost associated with familiarizing themselves with the relocated text in the online manual. The SIP Manual was moved online over a decade ago, allowing for updates and corrections to be made in real time. The online version is routinely updated and available to inspection staff, program participants, and the general public at all times, and in any location with internet access. Based on existing participants' knowledge and current use of the online manual, NMFS anticipates small entities will likely incur 2 burden hours associated with rule, definition, and online manual familiarization associated with changes proposed in the rule. Table 3 provides the most common services and the occupation title most associated with those requesting services. Wage rates for Office Clerks (General) and Food Service Managers are from the U.S. Bureau of Labor Statistics' (BLS) Employer Costs for Employee Compensation (ECEC) historical data for May 2022 (BLS 2022a). The estimate and cost per firm is provided in table 4. The affected small businesses subject to the rule are likely to incur 2 burden hours at an average cost of $59.54 per firm, for a total of $32,925.62.

TABLE 3—SUMMARY OF ESTIMATED BURDEN HOURS AND COST FOR USERS REQUESTING COMMON SERVICES

Common services	Type of user (*e.g.,* occupational title)	Average burden (hour)	Mean hourly wage rate [1] (for type of user)	Total annual wage burden costs
§ 260.15 (prop. § 260.6) Application for Inspection Services.	Office Clerks, General (43–9061)	2.00	$19.78	$39.56
§ 260.36 (prop. § 260.19) Application for appeal	Food Service Managers (11–9051)	2.00	32.27	64.54
§ 260.96 (prop. § 260.31) Contract Completion	Food Service Managers (11–9051)	2.00	32.27	64.54
§ 260.97(c)(12), (13), and (15) (prop. § 260.32) Label and Specification Submission.	Food Service Managers (11–9051)	2.00	32.27	64.54
HACCP Participants	Food Service Managers (11–9051)	2.00	32.27	64.54
Average per Firm			29.77	59.54

[1] Source: BLS 2022.

TABLE 4—SUMMARY OF COMPLIANCE COST BY ACTIVITY

Activity	Number of affected firms	Average burden per firm (hours)	Total burden (hours)	Average cost per firm (2022$)	Total cost (2022$)
Rule Familiarization	553	0.5	276.5	$14.89	$8,231.41
Definition Familiarization	553	0.5	276.5	14.89	8,231.41
SIP Online Manual Familiarization	553	1	553	29.77	16,462.81
Total Cost for all activities				59.55	32,925.62

While NMFS does not have firm level information on profit, an annual cost of $59.55 can reasonably be assumed to be well below 1 percent of total profit for the affected entities. For the 553 small entities subject to the rule, 100 percent are expected to have cost impacts of less than 1 percent of their annual revenues. Therefore, NMFS does not expect the cost associated with the proposed rule to represent a significant impact to small entities.

NMFS believes the actions contained in this rule would not create a competitive disadvantage for small entities vis-a-vis large entities. The proposed rule, if finalized, would help ensure that all entities regardless of size get equitable and consistent treatment, regardless of their level of participation in the SIP. A person requesting one lot inspection has the same access to information and available services, as well as the equal right to an appeal inspection, as a company with multiple facilities and vessels.

While unable to quantify cost savings, NMFS assumes the overall impact of the rule to be neutral to marginally positive on profitability for all entities, is not expected to significantly reduce profits for a substantial number of small entities, and does not create a significant competitive disadvantage to small entities. While it is debatable if the number of affected small entities may qualify as ''substantial,'' the economic impact of this rule is very small. Therefore, NMFS does not expect the proposed rule, if finalized, to have a significant economic impact on a substantial number of small entities. An initial regulatory flexibility analysis is not required, and none has been prepared.

National Environmental Policy Act

Under NOAA Administrative Order (NAO 216–6A), the promulgation of regulations that are administrative, financial, legal, technical or procedural in nature are categorically excluded from the requirement to prepare an Environmental Assessment. These proposed regulations to update 50 CFR part 260 are procedural and administrative in nature, in that they merely reflect the actual operations of the SIP today. Neither fishing activity nor trade in seafood products are further restricted relative to any existing laws or regulations, either foreign or domestic. Given the procedural and administrative nature of this rulemaking, an Environmental Assessment was not prepared.

Paperwork Reduction Act

This proposed rule does not contain a change to a collection of information requirement for purposes of the Paperwork Reduction Act of 1995. The existing collection of information requirements would continue to apply under the following OMB Control Number: 0648–0266, Seafood Inspection and Certification Requirements.

List of Subjects in 50 CFR Part 260

Inspection, Inspection Services, Certification, Approved Establishment, Sampling, Imports, Exports, Fish and Fisheries Products, Marine Ingredients, Grade Standards, Marks.

Dated: April 18, 2024.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NOAA proposes to revise part 260 of title 50 of the Code of Federal Regulations to read as follows:

PART 260—INSPECTION AND CERTIFICATION

Subpart A—Inspection and Certification of Establishments, Fishery Products, and Other Marine Ingredients

Sec.
260.1 Administration of regulations.

Definitions

260.2 Terms defined.
260.3 Designation and use of official certificates, memoranda, marks, other identifications, and devices for purposes of the Agricultural Marketing Act.

Inspection Service

260.4 Where inspection service is offered.
260.5 Who may obtain inspection service.
260.6 Application for inspection service.
260.7 Rejection of application for inspection service.
260.8 Withdrawal of an application for inspection service.
260.9 Disposition of inspected samples.
260.10 Basis of inspection, grade and compliance assessment.
260.11 Order of inspection service.
260.12 Financial interest of inspector.
260.13 Official forms for inspection services.
260.14 Issuance of certificates.
260.15 Issuance of corrected certificates.
260.16 Issuance of an inspection report in lieu of an inspection certificate.
260.17 Retention and provision of inspection certificates.
260.18 Report of inspection results prior to issuance of formal report.

Appeal Service

260.19 Requesting an appeal.
260.20 Withdrawing an appeal application.
260.21 Declining an appeal application.
260.22 Appeal inspector selection protocol.
260.23 Appeal documentation.

Licensing of Inspectors and Samplers

260.24 Inspectors.
260.25 Licensed sampler.
260.26 Suspension or revocation of licensed inspector or licensed sampler.
260.27 Surrender of license.

Sampling

260.28 Sampling plans and procedures.
260.29 Shipment of samples.

Fees and Charges

260.30 Inspection fees, payment guarantees, charges and payments.

Requirements for Approved Establishments

260.31 Application for SIP Approved Establishment.
260.32 Requirements for the provision of Inspection Services for Approved Establishments.
260.33 Compliance with statutory and regulatory requirements.

Miscellaneous

260.34 Policies and procedures.
260.35 Approved marks, shields, stamps and official statements.
260.36 Revocation of approval to use inspection marks and statements.
260.37 Compliance with other laws.
260.38 Identification.
260.39 Debarment and suspension.

Authority: Sec. 6, 70 Stat. 1122, 16 U.S.C. 742e; secs. 203, 205, 60 Stat. 1087, 1090 as amended; 7 U.S.C. 1622, 1624; Reorganization Plan No. 4 of 1970 (84 Stat. 2090).

Subpart A—Inspection and Certification of Establishments, Fishery Products, and Other Marine Ingredients

§ 260.1 Administration of regulations.

The Secretary of the Department of Commerce is charged by the Agricultural Marketing Act of 1946 with the administration of the regulations in this part, except that they may delegate any or all of such functions to any officer or employee of the National Marine Fisheries Service (the *Agency*) of the Department at their discretion.

Definitions

§ 260.2 Terms defined.

Words in the regulations in this part in the singular form shall be deemed to import the plural and vice versa, as the case may demand. For the purposes of the regulations in this part, unless the context otherwise requires, the following terms shall have the following meanings:

Acceptance number means the number in a sampling plan that indicates the maximum number of nonconformities permitted in a sample of a lot that meets a specific requirement.

Act means the applicable provisions of the Agricultural Marketing Act of 1946 (60 Stat. 1087 *et seq.,* as amended; 7 U.S.C. 1621 *et seq.*) or any other act of Congress conferring like authority.

Administrator means the Administrator of NOAA (Under Secretary of Commerce for Oceans and Atmosphere) or a designee.

Agency means the National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce.

Applicant means any interested party who requests inspection service under the regulations in this part.

Approved Establishment means an establishment which has been approved by the Agency pursuant to this Part and the NMFS Fishery Products Inspection Manual (SIP Manual) and utilizes inspection service on a contract basis.

Certificate of loading means an official certificate or document that makes a statement relative to check-loading of a fish or fishery product or other marine ingredient subsequent to inspection thereof issued pursuant to the regulations in this part.

Certificate of sampling means an official certificate or document that makes a statement pursuant to the regulations in this part identifying officially drawn samples and may include a description of the condition of containers and the condition under which the fish or fishery product or other marine ingredient is stored.

Class means a grade or rank of quality.

Condition means the degree of soundness of the product that may affect its merchantability and includes but is not limited to those factors that are subject to change due to age, improper preparation and processing, improper packaging, improper storage, or improper handling.

Cross-Licensed Inspector means a qualified person employed and licensed by the agency to perform specified inspection services under a joint Federal-State inspection service arrangement.

Department means the U.S. Department of Commerce.

Director means the Assistant Administrator for Fisheries, NOAA, or a designee.

Establishment means the premises, buildings, structures, facilities, and equipment (including machines, utensils, fixtures and transit vehicles) used with respect to the receipt, processing and transport of fish and fishery products and other marine ingredients.

Fish means a fresh or saltwater finfish, crustaceans, other forms of aquatic animal life (including, but not limited to, alligator, frog, aquatic turtle, jellyfish, sea cucumber, and sea urchin and the roe of such animals) other than birds or mammals, and including all mollusks, where such animal life is intended for human or animal consumption or for other non-food uses.

Fishery product means any human food product in which fish is a characterizing ingredient.

Inspection certificate means a statement, either written or printed, issued pursuant to the regulations in this part, setting forth the quality and condition of the product, or any part thereof, in addition to appropriate descriptive information relative to a fish, fishery product, or other marine ingredient, and the container thereof. It may also include a description of the conditions under which the product is stored.

Inspection service means:

(1) The performance of sampling pursuant to the regulations in this part;

(2) The determination pursuant to the regulations and requirements in this part:

(i) Assessing compliance with statutory and regulatory requirements pertaining to the interstate commerce of fish and fishery products or other marine ingredients for human or animal food;

(ii) Identifying the essential characteristics such as style, type, size, or identity of any fish or fishery product or other marine ingredient; or

(iii) Assessing the class, quality, and condition of any fish or fishery product or other marine ingredient, including the condition of the container thereof by the examination of appropriate samples;

(3) The issuance of any certificates of sampling, inspection certificates, or certificates of loading of a fish or fishery product or other marine ingredient, or any report relative to any of the foregoing; or

(4) The performance by an inspector of any related services, such as:

(i) Observing the preparation of the product from its raw state through each step in the entire process;

(ii) Observing the conditions under which the product is being harvested, prepared, handled, stored, processed, packed, preserved, transported, or held;

(iii) Observing the sanitation conditions as a prerequisite to the inspection of the processed product, either on a contract basis or periodic basis;

(iv) Check-loading the inspected processed product in connection with the marketing of the product; or

(v) Conducting any other type of service of a consultative or advisory nature related herewith as outlined in the NMFS Fishery Products Inspection Manual.

Inspector means any employee of the Department authorized by the Secretary or any other person licensed by the Secretary to investigate, sample, inspect, and certify in accordance with the regulations in this part to any interested party the class, quality and condition of processed products covered in this part and to perform related duties in connection with the inspection service.

Interested party means any person who has a financial interest in the fish or fishery product or other marine ingredient involved.

Licensed sampler means any person who is authorized by the Secretary to draw samples of fish and fishery products or other marine ingredients for inspection service, to confirm the identification and condition of containers in a lot, and may, when authorized by the Secretary, perform other related services under the act and the regulations in this part.

Lot means a defined quantity of product accumulated under conditions considered uniform for sampling purposes.

(1) For processors who manufacture fish and fishery products or other marine ingredients, a lot is a production unit as defined by mutual agreement between the processor and SIP, consisting of fish or fishery products or other marine ingredients of the same type, style, form and size, which have been marked or labeled as such and produced under conditions as nearly uniform as possible, during a single 8 hour shift (or as defined and approved) on an individual processing line.

(2) For establishments that receive fish or fishery products or other marine ingredients and perform no additional processing, such as distribution warehouses and foodservice distributors, a lot is defined by mutual agreement between the establishment and SIP and must consist of fish or fishery products or other marine ingredients located in a discrete grouping that consists of fish or fishery products or other marine ingredients of the same type, style and size and are marked or labeled as such. Except that: Fish or fishery products or other marine ingredients located in separate groups that differ from each other as to grade or other factors may be deemed as separate lots in some cases, for example:

(i) Fish or fishery products or other marine ingredients located in the same group bearing an identification mark different from other containers in that group may be deemed as separate lots;

(ii) Containers of fish or fishery products or other marine ingredients in a group bearing an identification mark different from other containers in that group, if determined to be of lower grade or deficient in other factors, may be deemed as separate lots; or

(iii) If the applicant requests more than one inspection certificate covering different portions of a lot, the quantity of the product covered by each certificate shall be deemed a separate lot.

Marine ingredient means any product of marine origin, whether or not intended for human consumption, including, but not limited to, fishmeal, fish oil, fish-based fertilizer, seaweed, kelp, and algae.

NMFS Fishery Products Inspection Manual (SIP Manual) means the online handbook, housed at *https://www.fisheries.noaa.gov/national/seafood-commerce-certification/seafood-inspection-manual,* that provides procedures of how services shall be scheduled, planned, conducted, and documented and describes services that conform to global activities that harmonize inspection protocols.

Officially drawn sample means any sample that has been selected from a particular lot by an inspector, licensed sampler, or by any other person authorized by the Secretary pursuant to the regulations in this part.

Person means any individual, partnership, association, business trust, corporation, any organized group of persons (whether incorporated or not); the United States (including, but not limited to, any corporate agencies thereof) any State, county, or municipal government; any common carrier; and any authorized agent of any of the foregoing.

Processing means, with respect to fish and fishery products and other marine ingredients, activities that an establishment engages in including handling, storing, preparing, heading, eviscerating, shucking, freezing, changing into different market forms, manufacturing, preserving, packing, labeling, dockside unloading, or holding. *Product* means any fish or fishery product or other marine ingredient, whether or not destined for human consumption, presented to NMFS for inspection and/or certification service.

Quality means the inherent properties of any processed product that determine the relative degree of excellence of such product, includes the effects of preparation and processing, and may or may not include the effects of packing media or added ingredients.

Rejection number means the smallest number of nonconformities, defectives (or defects) in the sample or samples under consideration that will require rejection of the lot.

Sample means the number of sample units drawn from a lot for purposes of inspection to reach a decision regarding acceptance of the lot and for purposes of quality to reach a conclusion regarding conformity of the lot.

Sample unit means a ''unit of product'', a primary container and its contents that makes up the sample that is inspected to determine whether it complies with regulatory criteria and that is quality assessed to determine whether it conforms to quality criteria.

Sampling means the process of selecting sample units that comprise the sample for the purpose of inspection and quality assessment under the regulations of this part.

Seafood Inspection Program (SIP) means the program within the U.S. Department of Commerce, National Oceanic and Atmospheric Administration, which offers inspection and grading services for seafood and other marine products as well as audit and consultative services to domestic and international processors, importers, and international competent food safety authorities.

Secretary means the Secretary of the Department of Commerce or any other officer or employee of the Department authorized to exercise the powers and to perform the duties of the Secretary with respect to the matters covered by the regulations in this part.

Shipping container means an individual container designed for shipping a number of packages or cans ordinarily packed in a container for shipping or designed for packing unpackaged fish or fishery products or other marine ingredients for shipping.

Unofficially drawn sample means any sample that has been selected by any person other than an inspector or licensed sampler.

Wholesome means the minimum basis of acceptability for human food purposes of any fish or fishery product or other marine ingredient as defined in section 402 of the Federal Food, Drug, and Cosmetic Act, as amended.

§ 260.3 Designation and use of official certificates, memoranda, marks, other identifications, and devices for purposes of the Agricultural Marketing Act.

Section 203(h) of the Agricultural Marketing Act of 1946 provides criminal penalties for various specified offenses relating to the misuse of official certificates, memoranda, marks or other identifications and devices for making such marks or identifications, issued or authorized under section 203 of said Act, and certain misrepresentations concerning the inspection or grading of agricultural products under said section. For the purposes of said section and the provisions in this part, the terms listed below shall have the respective meanings specified:

Official certificate means any form of written, printed or electronic certification, including those defined in § 260.2, used under this part to document and/or certify the compliance of fish or fishery products and other marine ingredients to applicable specifications with respect to inspection compliance and conformity to class, grade, quality, size, quantity, or condition requirements.

Official device means a mechanically or manually operated tool, appliance or other means approved by the Agency to apply an official mark or other identification to any product or the packaging material thereof that is approved by the Director, including, but not limited to, a stamping appliance, branding device, stencil, or printed label.

Official identification means any designation of class, grade, quality, size, quantity, condition, or attribute specified by this part or any symbol, stamp, label, seal, or official statement indicating that the product has been inspected or graded using specifications deemed appropriate by SIP or otherwise evaluated for any buyer specified attribute.

Official insignia means a grade mark, inspection mark, combined inspection and grade mark, shield, stamp, other emblem, and/or official statement approved by the Secretary, authorized by the Agency, and used in accordance with the NMFS Fishery Products Inspection Manual (SIP Manual).

Official document means a record of findings made by an authorized person having performed any inspection, certification, grading, audit or any other service pursuant to this part.

Inspection Service

§ 260.4 Where inspection service is offered.

Inspection services may be furnished where an inspector, cross-licensed inspector, or licensed sampler is available and when the establishment's facilities and conditions are appropriate for the conduct of such service. This location can include, but is not limited to, SIP regional and field offices, warehouses, processing facilities, docks, and vessels, as detailed in the SIP Manual.

§ 260.5 Who may obtain inspection service.

Any person engaged in the processing, shipping or receiving of fish and fishery products or other marine ingredients in interstate commerce may apply for inspection service.

§ 260.6 Application for inspection service.

Prospective service participants must submit an application for inspection service per the Application for Inspection Services procedures in the SIP Manual. To be considered for approval, applications for inspection service must be complete and conform to all SIP inspection service requirements as specified in the SIP Manual.

§ 260.7 Rejection of application for inspection service.

Applicants will be notified if an Application for Inspection Service is rejected. Inspection Service applications may be rejected when: (a) the application is incomplete or in contravention of regulations and/or policy; (b) there is a noncompliance with NOAA financial policy, such as

nonpayment for previous inspection services rendered; (c) the fish or fishery product or other marine ingredient is not properly identified; or (d) it appears that the performance of the inspection service would not be in the best interests of the Government.

§ 260.8 Withdrawal of an application for inspection service.

The applicant may withdraw an Application for Inspection Service at any time before the inspection is performed, provided that the applicant shall pay for all costs and expenses which have been incurred by the inspection service in connection with such application.

§ 260.9 Disposition of inspected samples.

Any product sample that has been used for inspection may be returned to the applicant, at its request and expense; otherwise it shall be destroyed or, when appropriate, diverted to a charitable institution.

§ 260.10 Basis of inspection, grade and compliance assessment.

(a) Finished product inspection and certification services shall be performed on the basis of the specifications deemed appropriate by SIP.

(b) Unless otherwise approved by SIP, compliance with the appropriate specifications shall be determined by evaluating the product, or sample, in accordance with the product inspection and quality assessment procedures outlined in the SIP Manual. *Provided,* That:

(1) Such sample complies with the applicable standards of quality promulgated under the Federal Food, Drug, and Cosmetic Act;

(2) Such sample complies with the product description;

(3) Such sample meets the indicated grade with respect to factors of quality which are not rated by score points; and

(4) The number of sample units classed as deviants does not exceed the applicable acceptance number indicated in the sampling plans approved and used. A ''deviant,'' as used in this paragraph, means a sample unit that falls below the indicated grade or specification parameter.

§ 260.11 Order of inspection service.

Inspection services shall be performed, insofar as practicable, in the order in which Application for Inspection Service is made, except that precedence is given first to the United States (including, but not limited to, any instrumentality or agency thereof); second, to an inspection contract holder; and third, to an interested party without an inspection contract.

§ 260.12 Financial interest of inspector.

No inspector shall inspect any product in which s/he has a direct or indirect financial interest.

§ 260.13 Official forms for inspection services.

Inspection certificates, memoranda, reports and other documents associated with inspection services shall only be issued on forms approved by the Agency.

§ 260.14 Issuance of certificates.

Inspection Certificates and Certificates of Loading may be issued by an inspector authorized by the Agency to affix their signature to a certificate that has been prepared in accordance with the documented evidence in connection with the inspection service provided.

§ 260.15 Issuance of corrected certificates.

When an issued inspection certificate contains errors or otherwise requires revision, the inspector who issued the original document or another employee of the Agency may issue a corrected inspection certificate. The corrected certificate will supersede the original document, which will become null and void after the issuance of the corrected certificate.

§ 260.16 Issuance of an inspection report in lieu of an inspection certificate.

A written report in lieu of an inspection certificate may be issued by an inspector when such action appears to be more suitable than an inspection certificate.

§ 260.17 Retention and provision of inspection certificates.

Inspection certificate copies or other documents issued under the regulations in this part shall be retained by the Agency in accordance with Agency record retention policies. The original certificate (electronic or other) or copy is provided to the inspection service requester, and copies may be provided to other interested parties as identified by the Agency.

§ 260.18 Report of inspection results prior to issuance of formal report. Upon request by any interested party and approval by the Agency, the interim inspection findings may be provided.

Appeal Service

§ 260.19 Requesting an appeal.

(a) An application for an appeal may be made by any interested party who has cause to disagree with the results of a product inspection or audit finding. An official appeal inspection of a product inspection may only be performed when the lot of fish or fishery products or other marine ingredients can be positively identified by the inspection service as the lot from which officially drawn samples were previously inspected.

(b) Such application shall be made in adherence with the SIP Manual and shall be made within 30 days following the day on which the previous result was communicated, except that upon approval by SIP the time may be extended.

§ 260.20 Withdrawing an appeal application.

An application for appeal may be withdrawn by the applicant at any time before the appeal service is performed, provided that the applicant shall pay for all costs and expenses which have been incurred by the inspection service in connection with such application.

§ 260.21 Declining an appeal application.

A request for an appeal may be declined when:

(a) The reasons for the appeal are frivolous or not substantial;

(b) The quality or condition of the product has undergone a material change since the inspection covering the product on which an appeal inspection is requested;

(c) The lot relative to which an appeal inspection is requested is not, or cannot be made, accessible for the selection of officially drawn samples;

(d) The lot relative to which an appeal inspection is requested cannot be positively identified by the inspector as the lot from which officially drawn samples were previously inspected; or

(e) There is noncompliance with the regulations in this part. The applicant shall be notified promptly if a request for appeal is declined, as outlined in the SIP Manual.

§ 260.22 Appeal inspector selection protocol.

(a) An inspector who did not perform the original product inspection shall be assigned to perform the appeal service; provided that the inspector who made the original product inspection on which an appeal is requested may be authorized to draw the samples when another inspector or licensed sampler is not available in the area where the product is located.

(b) Whenever practical, the appeal service shall be conducted jointly by two inspectors.

§ 260.23 Appeal documentation.

(a) After an appeal service has been completed, the results will be recorded on an appropriate document, as outlined in the SIP Manual. Any appeal

document shall supersede the certificate or report previously issued for the product or establishment involved.

(b) The superseded document shall become null and void upon the issuance of the appeal document and shall no longer represent the quality or condition of the product, system, or establishment described therein.

(c) If the original document and all copies have not been returned to the inspector(s) performing the appeal service, the appeal document shall be issued to the person(s) the inspector(s) considers necessary to prevent misuse of the superseded document.

(d) All provisions in this regulation concerning the use, issuance and disposition of inspection certificates shall apply to appeal inspection certificates, except that electronic copies of the appeal inspection certificates shall be furnished to all interested parties who received the superseded certificate.

Licensing of Inspectors and Samplers

§ 260.24 Inspectors.

(a) Federal Government employees licensed or authorized as inspectors will perform inspections.

(b) In addition, qualified persons may be employed and licensed (Cross-Licensee) by the Agency to perform specified inspection services under a joint Federal-State inspection service arrangement.

(c) An Inspector or Cross-Licensee shall perform their duties pursuant to the regulations in this part as directed by the Director.

§ 260.25 Licensed sampler.

(a) Any person deemed to have the necessary qualifications may be approved as a licensed sampler.

(b) Licensed samplers are authorized to draw samples, to confirm the identity of the lot, and assess the condition of containers in the lot.

(c) Licensed samplers are not authorized to inspect fish or fishery products or other marine ingredients.

§ 260.26 Suspension or revocation of licensed inspector or licensed sampler.

In adherence to Federal and Agency requirements, the Agency may suspend or revoke the license of a licensed inspector or licensed sampler when deemed necessary, as outlined in the SIP Manual.

§ 260.27 Surrender of license.

Upon suspension, revocation and/or termination of the services of a licensed inspector and/or licensed sampler, or in the case of an expired license, the licensee shall surrender their license to the Agency.

Sampling

§ 260.28 Sampling plans and procedures.

(a) When finished product inspections of fish and fishery products and other marine ingredients are performed, the Sampling Plans and Sampling Procedures set forth in the SIP Manual will be followed.

(b) Defined lots of product must be accessible, allowing thorough and proper sampling in accordance with the regulations of this part. Failure to make lots accessible for proper sampling shall be sufficient cause for postponing or canceling inspection service.

(c) Lots must be readily identifiable; if lots to be sampled are not suitably identified, the inspector or licensed sampler will mark the lot in a manner prescribed by the agency in the regulations and in the SIP Manual.

(d) Samples shall be furnished for inspection at no cost to the Agency.

(e) A certificate of sampling shall be prepared and signed by the inspector or licensed sampler.

(f) Officially drawn samples shall be marked by the Agency representative so such samples can be properly identified for inspection.

§ 260.29 Shipment of samples.

Samples that require shipment to an Inspection Office shall be shipped in a manner to avoid, if possible, any material change in the quality or condition of the product. Costs associated with shipments shall be at the expense of the applicant.

Fees and Charges

§ 260.30 Inspection fees, payment guarantees, charges and payments.

(a) A schedule of fees, charges, payment guarantees and payments for inspection services shall be made in accordance with the applicable provisions of the regulations in this part and the Financial Policy provided in the SIP Manual.

(b) The Schedule of Fees to be charged and collected for any inspection service performed under the regulations of this part will be determined annually, or as required, and published as a Notice in the **Federal Register**.

(c) Fees for inspection under a cooperative agreement with any State or person shall be transferred and collected in accordance with the terms of such agreement. Such portion of the fees collected under a cooperative agreement as may be due the United States shall be remitted in accordance with this section and the Financial Policy as provided in the SIP Manual.

(d) Charges may be made to cover the cost of travel and other expenses incurred in connection with the performance of any inspection service, including appeal inspections, as provided in the SIP Manual.

(e) Inspection services may be made on a contract basis or via a memorandum of understanding with other Federal and State entities pursuant to the Agricultural Marketing Act of 1946, provided the Agency is reimbursed for the full cost of such service.

(f) For each calendar year, SIP will calculate the rate for services, per hour per program employee, using the following formulas:

(1) *Regular rate.* The total SIP inspection program personnel direct pay divided by direct hours, which is then multiplied by the next year's percentage of cost of living increase, plus the benefits rate, plus the operating rate, plus the allowance for bad debt rate. If applicable, travel expenses may also be added to the cost of providing the service. The regular rate shall be the contract rate.

(2) *Overtime rate.* The total SIP inspection program personnel direct pay divided by direct hours, which is then multiplied by the next year's percentage of cost of living increase and then multiplied by 1.5 plus the benefits rate, plus the operating rate, plus an allowance for bad debt. If applicable, travel expenses may also be added to the cost of providing the service.

(3) *Holiday rate.* The total SIP inspection program personnel direct pay divided by direct hours which is then multiplied by the next year's percentage of cost of living increase and then multiplied by 2, plus benefits rate, plus the operating rate, plus an allowance for bad debt. If applicable, travel expenses may also be added to the cost of providing the service.

(g) For each calendar year, based on previous fiscal year/historical actual costs, SIP will calculate the benefits, operating, and allowance for bad debt components of the regular, overtime and holiday rates as follows:

(1) *Benefits rate.* The total SIP inspection program direct benefits costs divided by the total hours (regular, overtime, and holiday) worked, which is then multiplied by the next calendar year's percentage cost of living increase. Some examples of direct benefits are health insurance, retirement, life insurance, and Thrift Savings Plan (TSP) retirement basic and matching contributions.

(2) *Operating rate.* The total SIP inspection program operating costs divided by total hours (regular, overtime, and holiday) worked, which is

then multiplied by the percentage of inflation.

(3) *Allowance for bad debt rate.* Total allowance for bad debt divided by total hours (regular, overtime, and holiday) worked.

(h) The calendar year cost of living expenses and percentage of inflation factors used in the formulas in this section are based on the most recent Office of Management and Budget's Presidential Economic Assumptions.

(1) When an inspection is delayed because product is not available or readily accessible, a charge for waiting time shall be determined using the formulas in this section.

Requirements for Approved Establishments

§ 260.31 Application for SIP Approved Establishment.

Any person desiring to process and pack fish and fishery products and other marine ingredients as an SIP Approved Establishment must receive approval of their written and implemented food management system per the application procedures which are detailed in the SIP Manual.

§ 260.32 Requirements for the provision of Inspection Services for Approved Establishments.

All establishments must remain in good standing in order to receive services per this Part.

(a) The determination as to the inspection effort required to adequately provide inspection service at any establishment will be made by NMFS. The person-hours required may vary at different establishments due to factors such as, but not limited to, size and complexity of operations, volume and variety of products produced, and adequacy of control systems and cooperation. The inspection effort requirement may be reevaluated when the contracting party or NMFS deems there is sufficient change in production, equipment and change of quality control input to warrant reevaluation. Inspectors will not be available to perform any of the employee or management duties; however, they will be available for consultation purposes. NMFS reserves the right to reassign inspectors as it deems necessary.

(b) Assessment of an establishment's good standing will be made by the Agency through systems, process, and product auditing and inspection activities, which are further specified in the SIP manual.

(c) The Agency shall not be held responsible:

(1) For damages occurring through any act of commission or omission on the part of its inspectors when engaged in performing services; or

(2) For production errors, such as processing temperatures, length of process, or misbranding of products; or

(3) For failure to supply enough inspection effort during any period of service.

(d) Approved Establishments shall:

(1) Use, handle, process, store and distribute only raw materials and finished products that meet processing and sanitation statutory and regulatory requirements for food safety, wholesomeness and labeling;

(2) Adequately code each primary container and master case of products sold or otherwise distributed from a manufacturing, processing, packing, or repackaging activity to enable lot identification to facilitate, where necessary, the segregation of specific food lots that may have become contaminated or otherwise unfit for their intended use;

(3) Provide adequate office space in the designated establishment, if required by the Agency, and furnish suitable desks, office equipment, internet services access, laboratory facilities and equipment required to perform product verification and inspection, as prescribed by the Agency;

(4) Furnish and provide laundry service for coats, trousers, smocks, and towels used by inspectors during performance of duty in establishments if required by the Agency; and

(5) During all reasonable times, provide representatives of the Agency free and immediate access to the establishment under the applicant's control for the purpose of performing any and all inspection services.

(e) Retention tags:

(1) Any equipment such as, but not limited to, conveyors, tillers, sorters, choppers, and containers which fail to meet appropriate and adequate sanitation requirements will be identified by the inspector in an appropriate and conspicuous manner with the word ''RETAINED.'' Following such identification, the equipment shall not be used until the discrepancy has been resolved, the equipment re-inspected and approved by the inspector and the ''RETAINED'' identification removed by the inspector.

(2) Lot(s) of processed products that may be considered to be mislabeled and/or unwholesome by reason of contaminants, or which may otherwise be in such condition as to require further evaluation or testing to determine that the product is properly labeled and/or wholesome, will be identified by the inspector in an appropriate and conspicuous manner with the word ''RETAINED.'' Such lot(s) of product shall be held for re-inspection or testing. Final disposition of the lot(s) shall be determined by NMFS and the removal of the ''RETAINED'' identification shall be performed by the inspector.

(f) Termination of inspection services:

(1) The fishery products inspection service, including the issuance of inspection reports, shall be rendered from the date of the commencement specified in the contract and continue until suspended or terminated:

(i) by mutual consent;

(ii) by either party giving the other party 60 days' written notice specifying the date of suspension or termination;

(iii) by written notice by the Agency in the event the applicant does not meet financial obligations;

(iv) by written notice by the Agency, terminating service in the event the applicant fails to meet statutory and/or regulatory requirements, or in the event the applicant fails to comply with any provisions of the regulations contained in this part;

(v) by automatic termination in case of bankruptcy, closing out of business, or change in controlling ownership.

(2) In case the contracting party wishes to terminate the fishery products inspection service under the terms of paragraph (f)(1)(i) or (ii) of this section:

(i) the service must be continued until all unused containers, labels, and advertising material on hand or in possession of his supplier bearing official identification marks or reference to the fishery products inspection service have been used;

(ii) all unused containers, labels, and advertising material bearing official identification marks or reference to the fishery products inspection service must be destroyed;

(iii) official identification marks and all other reference to the fishery products inspection service on all unused containers, labels, advertising material must be obliterated; or

(iv) assurance satisfactory to NMFS must be furnished that all unused containers, labels, and advertising material bearing official identification marks or reference to the fishery products inspection service will not be used in violation of any of the provisions of the regulations in the part.

(3) In case the fishery products inspection service is terminated for cause by NMFS under the terms of paragraph (f)(1)(iii) or (iv) of this section, or in case of automatic termination under terms of paragraph (f)(1)(v) of this section, the contracting party must destroy all unused containers, labels, and advertising

material on hand bearing official identification marks or reference to the fishery products inspection service or must obliterate official identification marks and all reference to the fishery products inspection service on said containers, labels and advertising material. After termination of the fishery products inspection service, NMFS may, at such time or times as it may determine to be necessary, during regular business hours, enter the establishment(s) or other facilities in order to ascertain that the containers, labels, and advertising material have been altered or disposed of in the manner provided herein, to the satisfaction of NMFS.

§ 260.33 Compliance with statutory and regulatory requirements.

Approved Establishments shall comply with all statutory and regulatory requirements and provisions pertaining to the production of fish and fishery products and other marine ingredients for human or animal consumption.

Miscellaneous

§ 260.34 Policies and procedures.

The policies and procedures pertaining to the Agency's inspection services are contained within the SIP Manual.

§ 260.35 Approved marks, shields, stamps and official statements.

As prescribed by the SIP Manual, Inspection Service participants meeting the requirements may request approval to utilize specified SIP Grade Marks, Shields, Stamps and Official Statements (collectively *SIP Insignia*).

(a) *Participants as Approved Establishments*

(1) Fish and Fishery products and other marine ingredients that are processed under Federal inspection to assure compliance with all applicable regulatory requirements through the SIP Approved Establishments Program may be eligible to bear an:

(i) Approved Establishment inspection mark; and/or,

(ii) Approved Establishment Official Statement.

Figure 1 to Paragraph (a)(1)(ii)—USDC Approved Establishment Inspection Mark

(2) Fish and Fishery products and other marine ingredients that are (1) processed under Federal inspection to ensure compliance with all applicable regulatory requirements through the SIP Approved Establishments Program and (2) certified by an inspector as meeting the requirements of the applicable Approved Specification additionally may be eligible to bear (as applicable):

(i) Grade A shield;

(ii) Processed Under Federal Inspection (PUFI) mark; and/or

(iii) Other official statements and/or marks, as approved by SIP, *e.g.*

Figure 2 to Paragraph (a)(2)(i)—U.S. Grade A Shield

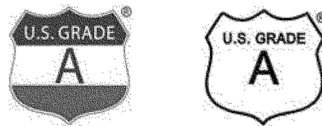

Figure 3 to Paragraph (a)(2)(ii)—Processed Under Federal Inspection (PUFI) Mark

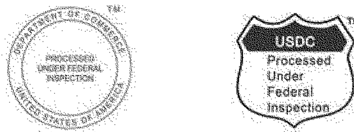

(3) Approved Establishments will not make deceptive, fraudulent, or unauthorized use in advertising, or otherwise, of the fishery products inspection service marks, the inspection certificates or reports issued, or the containers on which official identification marks are embossed or otherwise identified, in connection with the sale of any processed products;

(b) *Lot Inspection Marks*

(1) Fish and fishery products and other marine ingredients that have not been processed under Federal inspection may not be approved for the use of Grade or Inspection Marks. Such products may, however, be inspected on a Lot Inspection basis.

(2) Master cases and inspection certificates for products that are (1) submitted for inspection through the lot inspection process identified in the SIP Manual and are (2) certified by an inspector as meeting the requirements of the applicable USDC Approved Specification corresponding with the shield, may bear one or more of the following:

(i) USDC Accepted Per Specifications shield;

(ii) Officially Sampled shield, *e.g.*

Figure 4 to Paragraph (b)(2)(i)—USDC Accepted Per Specifications Shield

Figure 5 to Paragraph (b)(2)(ii)—Officially Sampled Shield

§ 260.36 Revocation of approval to use inspection marks and statements.

(a) Approval for use of SIP inspection marks, statements, and insignia will be rescinded when evidence indicates that processing conditions and/or product lots do not meet applicable regulatory, inspection and/or quality requirements per the SIP Manual.

(b) Any affected lot(s) shall be retained and may not enter commerce unless the lot meets minimum regulatory requirements to enter commerce and the SIP insignia is removed.

(c) The establishment or processor shall obtain written clearance from the Agency for the release of product lots that have been put on hold under this part.

§ 260.37 Compliance with other laws.

None of the requirements in the regulations in this part shall excuse failure to comply with any Federal, State, county, or municipal laws applicable to the operation of food processing establishments and to processed food products.

§ 260.38 Identification.

Each inspector and licensed sampler shall have a means of identification furnished by the Agency in his/her possession and, while on duty, present such identification upon request.

§ 260.39 Debarment and suspension.

(a) *Debarment.* Any person may be debarred from using or benefiting from the inspection service provided under the regulations of this subchapter or under the terms of any inspection contract, and such debarment may apply to one or more processing establishments under their control, if such person engages in one or more of the following acts or activities:

(1) Misrepresenting, misstating, or withholding any material or relevant facts or information in conjunction with any application or request for an

inspection contract, inspection service, inspection appeal, lot inspection, or other service provided for under the regulations of this subchapter.

(2) Using on a fish or fishery or other marine ingredient product any label that displays any official identification, official device, or official mark, when the label is not currently approved for use by the Director or his/her delegate.

(3) Using on a fish or fishery product or other marine ingredient any label that displays the words ''USDC Approved Establishment'' or ''Processed Under Federal Inspection, U.S. Department of Commerce''; any official mark, official device, or official identification; or a facsimile of the foregoing, when such product has not been inspected under the regulations of this subchapter.

(4) Making any statement or reference to the U.S. Grade of any product or any inspection service provided under the regulations of this subchapter on the label or in the advertising of any product when such product has not been inspected under the regulations of this subchapter.

(5) Making, using, issuing or attempting to issue or use in conjunction with the sale, shipment, transfer or advertisement of a product any certificate of loading, certificate of sampling, inspection certificate, official device, official identification, official mark, official document, or score sheet which has not been issued, approved, or authorized for use with such product by an inspector.

(6) Using any of the terms ''United States,'' ''Officially graded,'' ''Officially inspected,'' ''Government inspected,'' ''Federally inspected,'' ''Officially sampled,'' ''Grade A Equivalent'' or words of similar import or meanings, or using any official device, official identification, or official mark on the label, on the shipping container, or in the advertising of any fish or fishery product or other marine ingredient, when such product has not been inspected under the regulations of this subchapter.

(7) Using, attempting to use, altering or reproducing any certificate, certificate form, design, insignia, mark, shield, device, or figure which simulates in whole or in part any official mark, official device, official identification, certificate of loading, certificate of sampling, inspection certificate or other official certificate issued pursuant to the regulations of this subchapter.

(8) Assaulting, harassing, interfering, obstructing or attempting to interfere with or obstruct any inspector or licensed sampler in the performance of their duties under the regulations of this subchapter.

(9) Violating any one or more of the terms of any inspection contract or the provisions of the regulations of this subchapter.

(10) Engaging in acts or activities which destroy or interfere with the purposes of the inspection program or which have the effect of undermining the integrity of the inspection program.

(b) *Temporary suspension.*

(1) Whenever the Director has reasonable cause to believe that any person has engaged in any act or activity described in paragraph

(a) of this section and such act or activity, in the judgment of the Director, would cause serious and irreparable injury to the inspection program and services provided under the regulations of this subchapter, the Director may, without a hearing, temporarily suspend, either before or after the institution of a debarment hearing, the inspection service provided under the regulations of this subchapter or under any inspection contract for one or more processing establishments under the control of such person. Notice of suspension shall be served by registered or certified mail, return receipt requested, and the notice shall specifically state those acts or activities of such person that are the basis for the suspension. The suspension shall become effective 5 days after receipt of the notice.

(2) Once a person has received a notice of a temporary suspension, a debarment hearing will be set for 30 days after the effective date of the suspension. Within 60 days after the completion of the debarment hearing, the Hearing Examiner shall determine, based upon evidence of record, whether the temporary suspension shall be continued or terminated. A temporary suspension shall be terminated by the Hearing Examiner if they determine that the acts or activities that were the bases for the suspension did not occur or will not cause serious and irreparable injury to the inspection program and services provided under the regulations of this subchapter. This determination of the Hearing Examiner on the continuation or termination of the temporary suspension shall be final, and there shall be no appeal of this determination. The initial decision by the Hearing Examiner on the debarment shall be made in accordance with paragraph (b)(l), *Decisions,* of this section.

(3) After a debarment hearing has been instituted against any person by a suspension, such suspension will remain in effect until a final decision is rendered on the debarment in accordance with the regulations of this section or the temporary suspension is terminated by the Hearing Examiner.

(4) When a debarment hearing has been instituted against any person not under suspension, the Director may, in accordance with the regulations of this paragraph (b), of this section, temporarily suspend such person, and the suspension will remain in effect until a final decision on the debarment is rendered in accordance with the regulations of this section or the temporary suspension is terminated by the Hearing Examiner.

(c) *Hearing Examiner.* All hearings shall be held before a Hearing Examiner appointed by the Secretary or the Director.

(d) *Hearing.* If one or more of the acts or activities described in paragraph

(a) of this section have occurred, the Director may institute a hearing to determine the length of time during which the person shall be debarred and those processing establishments to which the debarment shall apply. No person may be debarred unless there is a hearing, as prescribed in this section, and it has been determined by the Hearing Examiner, based on evidence of record, that one or more of the activities described in paragraph

(a) of this section have occurred. Any debarment or suspension must be instituted within 2 years of the time when such acts or activities described in paragraph (a) of this section have occurred.

(e) *Notice of hearing.* The Director shall notify such person of the debarment hearing by registered or certified mail, return receipt requested. The notice shall set forth the time and place of the hearing, the specific acts or activities which are the basis for the debarment hearing, the time period of debarment being sought, and those processing establishments to which the debarment shall apply. Except for the debarment hearing provided for in paragraph (b) of this section the hearing will be set for a time not longer than 120 days after receipt of the notice of hearing.

(f) *Time and place of hearing.* The hearing shall be held at a time and place fixed by the Director: *Provided,* however, the Hearing Examiner may, upon a proper showing of inconvenience, change the time and place of the hearing. Motions for change of time or place of the hearing must be mailed to or served upon the Hearing Examiner no later than 10 days before the hearing.

(g) *Right to counsel.* In all proceedings under this section, all persons and the Department of Commerce shall have the right to be represented by counsel, in

accordance with the rules and regulations set forth in title 15, Code of Federal Regulations, Part 906.

(h) *Form, execution, and service of documents.*

(1) All papers to be filed under the regulations in this section shall be clear and legible; and shall be dated, signed in ink, contain the docket description and title of the proceeding, if any, and the address of the signatory. Documents filed shall be executed by:

(i) The person or persons filing same;

(ii) An authorized officer thereof if it be a corporation; or

(iii) An attorney or other person having authority with respect thereto.

(2) All documents, when filed, shall show that service has been made upon all parties to the proceeding. Such service shall be made by delivering one copy to each party in person or by mailing by first-class mail, properly addressed with postage prepaid. When a party has appeared by attorney or other representative, service on such attorney or other representative will be deemed service upon the party. The date of service of document shall be the day when the matter served is deposited in the U.S. mail, shown by the postmark thereon, or is delivered in person, as the case may be.

(3) A person is deemed to have appeared in a hearing by filing with the Director a written notice of their appearance or their authority to appear on behalf of one of the parties to the hearing.

(4) The original of every document filed under this section and required to be served upon all parties to a proceeding shall be accompanied by a certificate of service signed by the party making service, stating that such service has been made upon each party to the proceeding. Certificates of service may be in substantially the following form:

I hereby certify that I have this day served the foregoing document upon all parties of record in this proceeding by: (1) Mailing postage prepaid, (2) delivering in person, or (3) electronically delivering a copy to each party.

Dated at ________ this ________ day of ________, 20____

Signature ____________________________

(i) *Procedures and evidence.*

(1) All parties to a hearing shall be entitled to introduce all relevant evidence on the issues as stated in the notice for hearing or as determined by the Hearing Examiner at the outset of or during the hearing.

(2) Technical rules of evidence shall not apply to hearings conducted pursuant to this section, but rules or principles designed to assure production of the most credible evidence available and to subject testimony to test by cross-examination shall be applied where reasonably necessary.

(j) *Duties of Hearing Examiner.* The Hearing Examiner shall have the authority to:

(1) Take depositions or cause depositions to be taken;

(2) Regulate the course of the hearings;

(3) Prescribe the order in which evidence shall be presented;

(4) Dispose of procedural requests or similar matters;

(5) Hear and initially rule upon all motions and petitions before them;

(6) Administer oaths and affirmations;

(7) Rule upon offers of proof and receive competent, relevant, material, reliable, and probative evidence;

(8) Prevent the admission of irrelevant, immaterial, incompetent, unreliable, repetitious, or cumulative evidence;

(9) Hear oral arguments if the Hearing Examiner determined such requirement is necessary;

(10) Fix the time for filing briefs, motions, and other documents to be filed in connection with hearings;

(11) Issue the initial decision and dispose of any other pertinent matters that normally and properly arise in the course of proceedings; and

(12) Do all other things necessary for an orderly and impartial hearing.

(k) *The record.*

(1) The Director will designate an official reporter for all hearings. The official transcript of testimony taken, together with any exhibits and briefs filed therewith, shall be filed with the Director. Transcripts of testimony will be available in any proceeding under the regulations of this section at rates fixed by the contract between the United States of America and the reporter. If the reporter is an employee of the Department of Commerce, the Director will fix the rate.

(2) The transcript of testimony and exhibits, together with all briefs, papers, and all rulings by the Hearing Examiner shall constitute the record. The initial decision will be predicated on the same record, as will the final decision.

(l) *Decisions.*

(1) The Hearing Examiner shall render the initial decision in all debarment proceedings before them. The same Hearing Examiner who presides at the hearing shall render the initial decision except when such Examiner becomes unavailable to the Department of Commerce. In such case, another Hearing Examiner will be designated by the Secretary or Director to render the initial decision. Briefs or other documents to be submitted after the hearing must be received not later than 20 days after the hearing unless otherwise extended by the Hearing Examiner upon motion by a party. The initial decision shall be made within 60 days after the receipt of all briefs. If no appeal from the initial decision is served upon the Director within 10 days of the date of the initial decision, it will become the final decision on the 20th day following the date of the initial decision. If an appeal is received, the appeal will be transmitted to the Secretary who will render the final decision after considering the record and the appeal.

(2) All initial and final decisions shall include a statement of findings and conclusions, as well as the reasons or bases therefore, upon the material issues presented. A copy of each decision shall be served on the parties to the proceeding and furnished to interested persons upon request.

(3) It shall be the duty of the Hearing Examiner, and the Secretary where there is an appeal, to determine whether the person has engaged in one or more of the acts or activities described in paragraph (a) of this section, and, if there is a finding that the person has engaged in such acts or activities, the length of time the person shall be debarred and the processing establishments to which the debarment shall apply.

[FR Doc. 2024–08676 Filed 4–24–24; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 300

[Docket No. 240417–0110]

RIN 0648–BM67

International Fisheries; Pacific Tuna Fisheries; Safe Handling and Release Practices for Sharks on Longline Vessels and Revision to Vessel Monitoring System Requirements in the Eastern Pacific Ocean

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS is proposing regulations under the Tuna Conventions

Act of 1950, as amended, to implement Resolutions C–23–07 (Conservation Measures for the Protection and Sustainable Management of Sharks) and C–23–11 (On the Establishment of a Vessel Monitoring System) adopted by the Inter-American Tropical Tuna Commission (IATTC) at its meeting in August 2023 in Victoria, Canada. This proposed rule would implement provisions of these Resolutions and would require U.S. longline vessels fishing for tuna or tuna-like species in the eastern Pacific Ocean (EPO) that have incidental shark catch to release sharks by leaving them in the water and cutting the branchline so that less than 1 meter remains on each animal. The proposed rule would also require large vessels fishing for tuna or tuna-like species in the EPO to make manual reports every six hours in the event of a malfunctioning vessel monitoring system (VMS) unit. This action is necessary for the United States to satisfy its obligations as a member of the IATTC.

DATES: Comments on the proposed rule and supporting documents must be submitted in writing by May 28, 2024.

ADDRESSES: A plain language summary of this proposed rule is available at *https://www.regulations.gov/docket/NOAA-NMFS-2024-0041.* You may submit comments on this document, identified by NOAA–NMFS–2024–0041, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Visit *https://www.regulations.gov* and type NOAA–NMFS–2024–0041 in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Amanda Munro, NMFS West Coast Region Long Beach Office, 501 W Ocean Blvd., Suite 4200, Long Beach, CA 90802. Include the identifier ''NOAA–NMFS–2024–0041'' in the comments.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Copies of the draft Regulatory Impact Review (RIR) and other supporting documents are available via the Federal eRulemaking Portal: *https://www.regulations.gov,* docket NOAA–NMFS–2024–0041 or contact the Highly Migratory Species Branch, Amanda Munro, 501 W. Ocean Blvd., Suite 4200, Long Beach, CA 90802, or *WCR.HMS@noaa.gov.*

Send comments on the collection of information pursuant to the Paperwork Reduction Act (PRA) by email to *OIRA_Submission@omb.eop.gov,* or fax to (202) 395–5806.

FOR FURTHER INFORMATION CONTACT: Amanda Munro, NMFS, (619) 407–9284, *Amanda.Munro@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Background on the Inter-American Tropical Tuna Commission

The United States is a member of the IATTC, which was established in 1949 and operates under the Convention for the Strengthening of the Inter-American Tropical Tuna Commission Established by the 1949 Convention between the United States of America and the Republic of Costa Rica (Antigua Convention).

The IATTC consists of 21 member nations and 5 cooperating non-member nations. The IATTC facilitates the conservation, research, and management of tuna and tuna-like species in the IATTC Convention Area (Convention Area). The Convention Area is defined as waters of the EPO within the area bounded by the west coast of the Americas and by 50° N latitude, 150° W longitude, and 50° S latitude. The IATTC maintains a scientific research and fishery monitoring program and regularly assesses the status of tuna, shark, and billfish stocks in the EPO to determine appropriate catch limits and other measures to promote sustainable fisheries and prevent overexploitation.

The text of the Antigua Convention can be found here: *https://www.iattc.org/PDFFiles/IATTC-Instruments/_English/IATTC_Antigua_Convention%20Jun%202003.pdf.*

International Obligations of the United States Under the Convention

As a Party to the Antigua Convention and a member of the IATTC, the United States is legally bound to implement decisions of the IATTC. The Tuna Conventions Act (TCA), 16 U.S.C. 951 *et seq.,* directs the Secretary of Commerce, in consultation with the Secretary of State and, with respect to enforcement measures, the U.S. Coast Guard, to promulgate such regulations as may be necessary to carry out the United States' obligations under the Antigua Convention, including recommendations and decisions adopted by the IATTC. The authority of the Secretary of Commerce to promulgate such regulations has been delegated to NMFS. All Resolutions adopted by the IATTC can be found online: *https://iattc.org/ResolutionsActiveENG.htm.*

IATTC Resolutions on Sharks and VMS

The IATTC held its 101st Meeting in August 2023 in Victoria, Canada. During this meeting, the IATTC adopted several resolutions, including the two that would be implemented by this proposed rule—IATTC Resolutions C–23–07 (Conservation Measures for the Protection and Sustainable Management of Sharks) and C–23–11 (On the Establishment of a Vessel Monitoring System).

IATTC Resolution C–23–07 includes new requirements regarding safe handling and release procedures for sharks caught by longline vessels. Paragraph 11(f) of the Resolution includes the requirements to ''leave the shark in the water, where possible'' and ''use a line cutter to cut the branchline as close to the hook as possible, and so that less than 1 meter remains on the animal, to the extent practicable.'' It also includes provisions applicable to all vessels prohibiting shark finning and requiring sharks be landed with fins naturally attached, which are already required in the United States by the Shark Conservation Act of 2010.

To ensure that vessel locations and identification numbers remain available to relevant authorities at a consistent interval even in the event of a technical failure, IATTC Resolution C–23–11 specifies a manual reporting requirement in the event of a malfunctioning VMS unit for vessels above 24 meters (78.74 feet) in length. The Resolution states in paragraph 4 that ''a fishing vessel with a defective satellite tracking device shall communicate to the . . . relevant competent authority at a minimum every 6 hours, reports containing [vessel identification number, location, date, time, speed, and course] by appropriate telecommunication means (*e.g.,* radio, web-based reporting, electronic mail, telefax or telex).''

Proposed Regulations for Sharks

This proposed rule, if adopted, would amend 50 CFR 300.27(k), which currently contains shark handling and release requirements for purse seine vessels, to also include shark handling and release requirements for longline vessels. No changes are proposed to the

existing requirements for purse seine vessels. Specifically, the proposed rule would require U.S. longline vessel owners and operators to leave live, unretained sharks in the water and cut the branchline so that less than 1 meter of trailing gear remains on the animal. If this procedure is not possible without compromising the safety of any persons, the vessel owner or operator would be required to cut the branchline as close to the hook as possible.

To facilitate the trimming of the branchline to the appropriate length, longline vessel owners or operators would be required to carry a line clipper meeting minimum design standards onboard the vessel and use it to cut branchline. The standards for this line clipper would be the same as those already required for Hawaii-based longline vessels (see 50 CFR 665.812(a)(5)), which make up the majority of longline vessels fishing in the EPO. The standards for the line clipper would include a protected cutting blade with an edge capable of cutting monofilament line or braided mainline that is securely fastened to an extended reach holder of at least 6 feet.

Shark finning (*i.e.,* the practice of removing any fin from the body of a shark at sea) is prohibited in the United States by the Shark Conservation Act of 2010, which was implemented by regulations at 50 CFR part 600, subpart N. The statute and regulations also prohibit the possession, transfer, and landing of any shark fin that is not naturally attached (*i.e.,* attached to the corresponding shark carcass through some portion of uncut skin). As part of this rulemaking, NMFS is proposing to include a cross-reference to these regulations in the regulations governing EPO tuna fisheries, which are found in 50 CFR part 300, subpart C. The cross-reference would make clear the regulations in 50 CFR part 600, subpart N apply to vessel owners and operators fishing for tuna and tuna-like species in the IATTC Convention Area.

Proposed Regulations for VMS

Any U.S. commercial fishing vessel that is 24 meters or more in overall length and engaging in fishing activities for tuna or tuna-like species in the IATTC Convention Area is already required to have a VMS unit installed, per regulations at 50 CFR 300.26(b). In the rare event of a technical failure of a VMS unit while the vessel is at sea, vessel operators are required to notify NOAA Office of Law Enforcement (OLE) and follow OLE's instructions (see 50 CFR 300.26(c)(4)(ii)).

This proposed rule would add the requirement of manual reporting in the event of a malfunctioning VMS unit. NMFS would require vessel owners and operators to provide manual reports to OLE with specific information every 6 hours by appropriate telecommunication means such as radio, email, or telephone. The manual reports would include: the vessel's identification, the vessel's geographical position (latitude and longitude) with an error of less than 100 meters at a confidence level of 98 percent, the date and time of the fixing of the vessel's position, and the vessel's speed and course. NMFS would require these reports to continue until the VMS unit issue is resolved or the vessel is back in port.

Classification

The NMFS Assistant Administrator has determined that this proposed rule is consistent with the Tuna Conventions Act and other applicable laws, subject to further consideration after public comment.

Executive Order 12866

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

Paperwork Reduction Act

The VMS section of this proposed rule contains a revision to a collection-of-information requirement for purposes of the Paperwork Reduction Act of 1995 (PRA). *West Coast Region Vessel Monitoring System and Pre-Trip Reporting System Requirements,* OMB Control Number(s): 0648–0498, would be modified to add the manual reporting requirement in the event of a technical VMS unit failure. All VMS and pre-trip reporting requirements under that collection-of-information would continue to apply.

NMFS estimates that the public reporting burden for the collection of information for manual VMS reports will average 5 minutes per report, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

NMFS requests any comments on the addition of the VMS manual reporting data collection to the PRA package, including whether the paperwork would unnecessarily burden any vessel owners and operators. Public comment is sought regarding: whether this proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; the accuracy of the burden estimate; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information, including through the use of automated collection techniques or other forms of information technology. Send comments on these or any other aspects of the collection of information to the **ADDRESSES** above, and by email to *OIRA_Submission@omb.eop.gov,* or fax to (202) 395–5806.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (RFA), 5 U.S.C. 605(b), the Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The rationale for this certification is provided in the following paragraphs.

Background

This action would apply to U.S. commercial fishing vessels of several gear types fishing for tuna and tuna-like species in the IATTC Convention Area. The objectives of the proposed action are: (1) to reduce post-release mortality of incidentally caught shark species, (2) ensure vessel locations and identification numbers remain available to relevant authorities even in the event of a technical VMS unit failure, and (3) fulfill international obligations of the United States as a member of the IATTC.

As described under Proposed regulations for sharks and Proposed regulations for VMS, the proposed rule would require U.S. longline vessels with incidental catch of sharks to leave the shark in the water and cut trailing gear, using a specified line clipper, so that less than 1 meter of trailing gear remains on the animal. It would also require large vessels fishing for tuna or tuna-like species, in the event of a malfunctioning VMS unit, to make manual reports every 6 hours of the vessel's identification, date, time, geographical position, speed, and course. The entities directly affected by the proposed action are: (1) U.S. vessels greater than 24 meters in overall length that fish for tuna or tuna-like species in the IATTC Convention Area, which include purse seine vessels, longline vessels, troll/jig, and

multipurpose vessels; and (2) all other U.S. longline vessels fishing in the IATTC Convention Area.

For RFA purposes only, NMFS has established a small business size standard of $11 million in annual gross receipts for all businesses, including their affiliates, primarily engaged in the commercial fishing industry (see 50 CFR 200.2). This standard applies to all businesses classified under North American Industry Classification System (NAICS) code 11411 for commercial fishing, including all businesses classified as commercial finfish fishing (NAICS 114111), commercial shellfish fishing (NAICS 114112), and other commercial marine fishing (NAICS 114119) businesses.

NMFS prepared analyses for this regulatory action based on this size standard. All of the entities directly regulated by this regulatory action are commercial finfish fishing businesses. Under this size standard, some U.S. fishing vessels affected by this action are considered large businesses, while others are small businesses.

Impacts to Longline Vessels From Proposed Regulations on Sharks

The proposed action would implement shark handling and release requirements for all owners and operators of U.S. longline fishing vessels fishing in the IATTC Convention Area. To estimate the number of affected entities, we utilized landings data from the Pacific Islands Fisheries Science Center (PIFSC), Pacific highly migratory species (HMS) permits (issued under 50 CFR 660.707), Hawaii longline limited access permits (issued under 50 CFR 665.13), and high seas fishing permits (issued under 50 CFR 300.333).

Between 2019 and 2023, an average of 115 U.S. longline vessels fished for HMS in the IATTC Convention Area. The majority of these longline vessels have Hawaii longline limited access permits or both Hawaii and Pacific HMS permits. Three of these longline vessels were based on the West Coast and operated solely under the Pacific HMS permit and high seas permit. U.S. West Coast-based longline vessels operating under the Pacific HMS permit fish primarily in the EPO are currently restricted to fishing with deep-set longline gear outside of the U.S. exclusive economic zone (EEZ) and can only make landings on the U.S. West Coast. Hawaii-based longline vessels fishing in the EPO as well as the Western Central Pacific Ocean (WCPO) can fish with both shallow-set and deep-set longline gear outside of the U.S. EEZ and make landings in Hawaii as well as the West Coast.

According to U.S. logbook and observer data between 2018 and 2023, longline vessels in the EPO interacted with an average of 16 different shark species every year, including Smooth hammerhead shark (*Sphyrna zygaena*), Shortfin mako shark (*Isurus oxyrinchus*), Tiger shark (*Galeocerdo cuvier*), and others. The vessels caught between 5,191 and 10,799 sharks every year with an average of 7,679 sharks per year. The majority of these sharks were released alive, with an average of 6,820 sharks (*i.e.,* 89 percent) released alive per year.

The ultimate fate of sharks post-release is often unobserved, so survivorship is largely unquantified. A growing body of research suggests that post-release mortality of sharks caught by longline vessels varies widely, depending on species and other factors. Research from PIFSC suggests that animals released with a minimum of trailing fishing gear have the highest rates of survival.

Between 2019 and 2023, longline vessels that fished in the IATTC Convention Area had average ex-vessel revenues ranging from $197,301 to $255,985 for total landings, including those in the EPO and WCPO. The maximum ex-vessel revenue of any longline vessel that fished in the IATTC Convention Area was well below the $11 million threshold for finfish harvesting businesses. Therefore, all of the longline vessels impacted by the proposed rule would be considered small business entities.

One economic impact of the proposed action to these entities would be the requirement to carry a specified line clipper to free incidentally caught sharks. Longline vessels with Hawaii longline limited access permits are already required to carry line clippers that meet these same specifications through regulations codified at 50 CFR 665.812. Therefore, it is expected that only the three vessels based on the West Coast would be required to purchase materials and assemble the line clipper. Each line clipper costs between $15 and $30 to make.

Another potential economic impact could be a loss of fishing time due to increased handling and release procedures. The amount of time lost would likely vary depending on crew experience, weather conditions, and shark species, among other factors. However, the time lost is expected to be minimal.

All of these vessels are considered small businesses, so there will not be a disproportionate impact between small and large businesses as a result of this requirement.

Impacts to Vessels Over 24 Meters in Length From Proposed Regulations on VMS

The proposed action would also implement a requirement for manual reporting in the event of a malfunctioning VMS unit for all owners and operators of U.S. commercial fishing vessels 24 meters or more in overall length used to target tuna or tuna-like species in the IATTC Convention Area. To estimate the number of entities affected by this portion of the proposed action, we utilized the number of vessels authorized to fish for HMS in the EPO as a reasonable proxy. The permits used to estimate the number of affected entities were: Pacific HMS permits (issued under 50 CFR 660.707) and high seas fishing permits (issued under 50 CFR 300.333). We obtained revenue data from IATTC, PIFSC, and SWFSC.

As of January 2024, there were 145 vessels of this size authorized to fish for HMS in the EPO on the IATTC Regional Vessel Register. These vessels include purse seine, longline, multipurpose, and troll/jig vessels.

Purse Seine vessels: As of January 2024, there are 15 U.S. purse seine vessels larger than 24 meters in length registered to fish in the IATTC Convention Area. These purse seine vessels target skipjack tuna by fishing on floating objects and unassociated sets; they also catch and retain yellowfin and bigeye tuna. Based on the limited financial information about the affected fishing fleets and using individual vessels as proxies for individual businesses, NMFS analyzed revenue for the 15 currently active vessels within the large purse seine fleet by vessel.

Regional Purse Seine Logbook (RPL) data from NMFS' Pacific Islands Fisheries Science Center (PIFSC), and observer data from the IATTC may be used as a proxy for fish landings by large U.S. purse seiners. Because neither gross receipts nor ex-vessel price information specific to individual fishing vessels are available to NMFS, NMFS applied indicative regional cannery prices—as approximations of ex-vessel prices—to annual catches of individual vessels obtained from RPLs and IATTC observer data to estimate the vessels' annual receipts. Indicative regional cannery prices are available through 2020 (developed by the Pacific Islands Forum Fisheries Agency; available at *https://www.ffa.int*). NMFS estimated vessels' annual receipts during 2019–2020. Using this approach, NMFS estimates that among the affected vessels, the range in annual average

receipts in 2019–2020 was $400,000 to $15 million with an average of approximately $8 million.

Based on this limited financial information about the affected fishing fleets, NMFS believes that over half of the vessels in the purse seine fleet are small entities as defined by the RFA; that is, they are independently owned and operated and not dominant in their fields of operation and have annual receipts of no more than $11 million.

Longline vessels: As stated previously in the previous section of this RFA discussion, all of the longline vessels that fished in the IATTC Convention Area between 2019 and 2023, including vessels longer than 24 meters in length impacted by these proposed VMS provisions, would be considered small businesses.

Troll/Jig and Multipurpose: North Pacific albacore troll is a West Coast fishery that historically operates during the summer months, ranging from Southern California to Canadian waters. Currently, most vessels are based out of Oregon and Washington, with some vessels based out of California. Between 2019 and 2023, 43 troll/jig and multipurpose vessels larger than 24 meters in length made landings on the West Coast. Among these vessels, average ex-vessel revenue ranged from $48 to $942,686, with an average of $140,860. All of these vessels had annual revenues less than $11 million and thus are considered to be small entities.

VMS unit failures: According to NOAA OLE, over the course of 2 years in 2022 and 2023, there were 36.5 VMS unit failures among 1,600 West Coast vessels. Based on these numbers, it is reasonable to estimate that approximately 1 percent of vessels equipped with VMS will experience a VMS unit failure at sea in a given year. Therefore, with a maximum of 145 vessels impacted by the rulemaking, and a 1 percent failure rate, NMFS conservatively estimates that 1.5 vessels per year might experience a failure and be impacted by the proposed action, on average. A failure would require that vessel operator to make a series of 5–10 minute phone calls or emails every 6 hours until the issue is resolved. As the cost of a phone call or email is generally less than a dollar, the economic impact of the new reporting requirements would be minimal. This impact is the same regardless of the type of vessel impacted, so impacts between large and small entities are expected to be the same.

Overall Economic Impacts of Proposed Regulations

In summary, the proposed action, if adopted, is not expected to have a significant adverse economic impact on the profitability of a substantial number of small entities or a disproportionate economic effect on small entities relative to large entities. The entities impacted by the provisions related to VMS are considered large and small businesses, and the entities impacted by the provisions related to sharks are considered small businesses. The impacts of both components of the proposed rule are minor and do not have different impacts on large and small entities. The proposed action, if adopted, is not expected to substantially change the typical fishing practices of the affected vessels. Any impact to the income of U.S. vessels is expected to be minimal.

Therefore, the action is not expected to have a significant economic impact on a substantial number of small entities. As a result, an Initial Regulatory Flexibility Analysis is not required and none has been prepared.

List of Subjects in 50 CFR Part 300

Administrative practice and procedure, Fish, Fisheries, Fishing, Marine resources, Reporting and recordkeeping requirements, Treaties.

Dated: April 18, 2024.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS proposes to amend 50 CFR part 300 as follows:

PART 300—INTERNATIONAL FISHERIES REGULATIONS

Subpart C—Eastern Pacific Tuna Fisheries

■ 1. The authority citation for part 300, subpart C, continues to read as follows:

Authority: 16 U.S.C. 951 *et seq.*

■ 2. In § 300.24, revise paragraph (z) to read as follows:

§ 300.24 Prohibitions.

* * * * *

(z) In the event of VMS unit failure or interruption: fail to repair or replace a VMS unit; fail to notify the Assistant Director, NOAA Office of Law Enforcement, Pacific Islands Division (or designee) and follow the instructions provided; fail to manually report as required in § 300.26(c)(4)(ii); or otherwise fail to act as provided in § 300.26(c)(4).

* * * * *

■ 3. In § 300.26, revise paragraph (c)(4)(ii) to read as follows:

§ 300.26 Vessel monitoring system (VMS).

* * * * *

(c) * * *

(4) * * *

(ii) If the vessel is at sea: The vessel owner, operator, or designee must contact the Assistant Director (AD) of NOAA Office of Law Enforcement (OLE) by telephone, facsimile, or email at the earliest opportunity during the AD's business hours and identify the caller and vessel. The vessel operator must follow the instructions provided by the AD which could include, but may not be limited to, ceasing fishing, stowing fishing gear, and/or returning to port. The vessel operator must also manually report to OLE every 6 hours by appropriate telecommunication means reports containing: the vessel's identification, the vessel's geographical position (latitude and longitude) with an error of less than 100 meters at a confidence level of 98 percent, the date and time (UTC) of the fixing of the vessel's position, and the vessel's speed and course. These reports must continue until the vessel returns to port or the VMS unit is once again functioning normally. The vessel operator must repair or replace the VMS unit and ensure it is operable before starting the next trip.

* * * * *

■ 4. In § 300.27, revise paragraph (k) and add paragraphs (m) and (n) to read as follows:

§ 300.27 Incidental catch and tuna retention requirements.

* * * * *

(k) *Shark handling and release requirements.* (1) For purse seine vessels: the crew, operator, or owner of a U.S. commercial purse seine fishing vessel must promptly release unharmed, to the extent practicable, any shark (whether live or dead) caught in the IATTC Convention Area, as soon as it is seen in the net or on the deck, without compromising the safety of any persons. If a shark is live when caught, the crew, operator, or owner must follow these release procedures:

(i) Sharks must be released out of the purse seine net by directly releasing the shark from the brailer into the ocean. Sharks that cannot be released without compromising the safety of persons or the sharks before being landed on deck must be returned to the water as soon as possible, either utilizing a ramp from the deck connecting to an opening on

the side of the boat or through escape hatches. If ramps or escape hatches are not available, the sharks must be lowered with a sling or cargo net, using a crane or similar equipment, if available.

(ii) No shark may be gaffed or hooked, lifted by the head, tail, gill slits or spiracles, or lifted by using bind wire against or inserted through the body, and no holes may be punched through the bodies of sharks (*e.g.,* to pass a cable through for lifting the shark).

(2) For longline vessels: the crew, operator, or owner of a U.S. commercial longline fishing vessel must promptly release unharmed, to the extent practicable, any shark (whether live or dead) caught in the IATTC Convention Area that is not retained, as soon as it is seen on the line, without compromising the safety of any persons. If a shark is live when seen on the line, the crew, operator, or owner must follow these release procedures:

(i) Leave the shark in the water.

(ii) Use a line clipper meeting the minimum design standards in paragraph (m) of this section to cut the branchline so that less than 1 meter (or 3.3 ft) of line remains on the animal. If this is not possible without compromising the safety of any persons, cut the branchline as close to the hook as possible.

* * * * *

(m) *Possession and use of required mitigation gear.* (1) NMFS has established minimum design standards for line clippers. At least one line clipper meeting these design standards must be present onboard any longline vessel fishing in the IATTC Convention Area. The minimum design standards are as follows:

(i) The line clipper must have a protected cutting blade. The cutting blade must be curved, recessed, contained in a holder, or otherwise afforded some protection to minimize direct contact of the cutting surface with animals or users of the cutting blade.

(ii) The cutting blade edge must be capable of cutting 2.0–2.1 mm monofilament line and nylon or polypropylene multi-strand material commonly known as braided mainline or tarred mainline.

(iii) The line clipper must have an extended reach handle or pole of at least 6 ft (1.82 m) for the cutting blade.

(iv) The cutting blade must be securely fastened to the extended reach handle or pole to ensure effective deployment and use.

(2) [Reserved]

(n) *Prohibition on shark finning.* Vessel owners and operators must comply with regulations governing the harvest, possession, landing, purchase, and sale of shark fins found at part 600, subpart N of this title.

Vol. 89, No. 81

Thursday, April 25, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc. No. AMS–ST–24–0017]

Notice of Request for Extension and Revision of a Currently Approved Information Collection

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Agricultural Marketing Service's (AMS) intention to request approval, from the Office of Management and Budget (OMB), for an extension of and revision to the currently approved information collection ''Laboratory Approval and Testing Division.''

DATES: Comments on this notice must be received by June 24, 2024 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit comments concerning this notice by using the electronic process available at *https://www.regulations.gov/*. All comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this notice will be posted without change, including any personal information provided, at *https://www.regulations.gov/* and will be included in the record and made available to the public.

FOR FURTHER INFORMATION CONTACT: Director (Kerry Smith), Laboratory Approval and Testing Division, Science & Technology Program, Agricultural Marketing Service, U.S. Department of Agriculture, 1400 Independence Avenue SW, Room 2912–S, Washington, DC 20250–0272; Phone: (202) 690–4089; or Email: *LAS@usda.gov*.

SUPPLEMENTARY INFORMATION:

Agency: USDA, AMS.

Title: Laboratory Approval and Testing Division.

OMB Number: 0581–0251.

Type of Request: Extension and revision of a currently approved information collection.

Abstract: Under the Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1621–1627), AMS' Laboratory Approval and Testing Division (LATD) provides laboratory testing and approval services to facilitate domestic and international marketing of food and agricultural commodities. The authority for implementing LATD programs appear in regulation 7 CFR part 91.

AMS' Laboratory Approval Service (LAS) approves, or accredits, laboratories to perform testing services in support of domestic and international trade. At the request of industry, other Federal agencies, or foreign governments, AMS develops and administers laboratory approval programs (LAPs) to verify that the analysis of food and agricultural products meet country or customer-specified requirements. LAS ensures the testing of products marketed is conducted by qualified and approved laboratories. Laboratory approval program requirements include good laboratory, quality assurance and control practices; applicable domestic and international standards (such as ISO/IEC 17025); established methods and accepted equipment; and on-site audits. Laboratories voluntarily participate in LAPs and pay program fees.

AMS' National Science Laboratories (NSL) provides chemical, microbiological, and bio-molecular lab analytical testing services to facilitate domestic and international marketing of food and agricultural commodities. NSL provides testing services for AMS commodity programs, other USDA agencies, Federal and State agencies, US Military, research institutions, and private sector food and agricultural industries. Applicants voluntarily submit samples for analytical testing and pay testing fees.

The information collection outlines essential information needed about a customer/business for collecting payment for AMS services; evaluating laboratories for compliance to LAP requirements; and submitting samples for laboratory testing. Only authorized representatives of AMS have access to information provided on the forms.

AMS needs to collect customer business information on form ST–1, Application for Service. The information includes business legal name, Federal Tax ID Number, mailing address, billing address, primary and accounts payable contact, and is used to establish an account and deliver communications for collection of service fees.

AMS needs to collect information from customers for the application process and subsequent evaluations for continued participation for voluntary participation in a LAP. The greatest information collection burden is during the application process, a one-time event, which includes request for service and documented policies, procedures, and records as evidence of compliance to the LAP requirements. Once an applicant is approved into the program, the information collection burden decreases for a participant's continued participation which includes intent to continue participation, records as evidence of ongoing compliance in-between audits (*e.g.,* surveillance), and documented policies, procedures, and records for audits. Occasionally, a participant's scope of approval is reduced, or the participant exits the program. When this happens information about the participant's request is collected. This information is essential to determine fees for service and evaluate the participant's ability to meet the LAP requirements.

AMS needs to collect information about the sample and type of testing requested to conduct voluntary analytical laboratory testing. This information can be submitted by the applicant using their internal format or on form ST–2, National Science Laboratories Sample Submission Form or ST–3, National Science Laboratories Sample Submission Form—Hemp. Such information includes applicant contact information; sample description; sample identifier/lot number, number of items; analyses requested; and inclusions needed on the analytical certificate/report of results.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 0.50 hours per response.

Respondents: Food and Agricultural Businesses.

Estimated Number of Respondents: 3620.00.

Estimated Total Annual Responses: 4059.00.

Estimated Number of Responses per Respondent: 1.12.

Estimated Total Annual Burden on Respondents: 2023.70 hours.

Comments: Comments are invited on: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information including completion of analyses related documentation; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record.

Melissa Bailey,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by May 28, 2024 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Animal and Plant Health Inspection Service

Title: Importation of Animals and Poultry, Animal and Poultry Products, Certain Animal Embryos, Semen, and Zoological Animals.

OMB Control Number: 0579–0040.

Summary of Collection: The Animal Health Protection Act (AHPA) of 2002 (7 U.S.C. 8301), is the primary Federal law governing the protection of animal health. The law gives the Secretary of Agriculture broad authority to detect, control, or eradicate pests or diseases of livestock or poultry. The agency charged with carrying out this disease prevention mission is the Animal and Plant Health Inspection Service (APHIS). Disease prevention is the most effective method for maintain a healthy animal population and enhancing APHIS' ability to compete globally in animal and animal product trade. APHIS' Veterinary Services (VS) unit is responsible for, among other things, preventing the introduction of foreign or certain other communicable animal diseases into the United States; and for rapidly identifying, containing, eradicating, or otherwise mitigating such diseases when feasible. In connection with this mission, APHIS collects information from individuals, businesses, and farms who are involved with importation of animals or poultry, animal or poultry products, or animal germplasm (semen, ooycysts, and embryos, including eggs for hatching) into the United States as well as from foreign countries and States to support these imports.

Need and Use of the Information: APHIS will collect information from foreign animal health authorities as well as U.S. importers; foreign exporters; veterinarians and animal health technicians in other countries; State animal health authorities; shippers; owners and operators of foreign processing plants and farms; USDA-approved zoos, laboratories, and feedlots; private quarantine facilities; and other entities involved (directly or indirectly) in the importation of animal and poultry, animals and poultry products, zoological animals, and animal germplasm.

Information collection activities include: agreements; permits; application and space reservation requests; inspections; registers; declarations of importation; requests for hearings; daily logs; additional requirements; application for permits; export health certificates; letters; written notices; daily record of horse activities; written requests; opportunities to present views; reporting; applications for approval of facilities; certifications; arrival notices; on-hold shipment notifications; reports; affidavits; animal identification; written plans; checklists; specimen submissions; emergency action notifications; refusal of entry and order to dispose of fish; premises information; recordkeeping; application of seals; reports; testing submission forms; summaries; identification and certification; and notices. APHIS needs this information to help ensure that these imports do not introduce foreign animal diseases into the United States.

Description of Respondents: Foreign federal governments; state, local, and tribal governments; business or other for-profit and not-for-profits; farms; and individuals and households.

Number of Respondents: 73,769.

Frequency of Responses: Reporting: On occasion; Recordkeeping.

Total Burden Hours: 600,320.

Rachelle Ragland-Greene,

Acting Departmental Information Collection Clearance Officer.

[FR Doc. 2024–08879 Filed 4–24–24; 8:45 am]

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding: whether the collection of information is necessary for the proper performance of the functions of the agency, including

whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by May 28, 2024 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Utilities Service

Title: Rural Energy Savings Program.

OMB Control Number: 0572–0151.

Summary of Collection: The Rural Utilities Service (RUS), a Rural Development agency of the United States Department of Agriculture (USDA), provides RESP loans to eligible entities that agree to, in turn, make loans to qualified consumers for energy efficiency measures, including cost effective energy storage and renewable energy systems. These loans are made available under the authority of section 6407 of the Farm Security and Rural Investment Act of 2002, as amended, (section 6407). Eligible energy efficiency measures must be for or at a property or properties served by a RESP borrower, using commercially available technologies that would allow qualified consumers to decrease their energy use or costs through cost-effective energy efficiency investments. Loans made by RESP borrowers under this program are repaid through a recurring bill to the qualified consumer for the property or properties for, or at which, the energy efficiencies measures are or will be implemented.

Since its inception in 2016, the Rural Energy Savings Program (RESP or the Program) has evolved. New and clarifying authorities have been added to the program including changes made by the Agriculture Improvement Act of 2018 (2018 Farm Bill) (Pub. L. 115–334) which reauthorized the implementation of the RESP. Title VI, subtitle C, section 6303 of the Agriculture Improvement Act of 2018 introduced several amendments to section 6407 of the Farm Security and Rural Investment Act of 2002 (7 U.S.C. 8107a). The amendments include an increase in the maximum amount RUS eligible borrowers may charge to their qualified consumers, streamlining the accounting requirements, and the use of a recurring bill to the qualified consumer as a repayment mechanism for the RUS borrowers. The governing regulation for this program is 7 CFR 1719.

Need and Use of the Information: This collection receives information only from those RUS electric borrowers or eligible entities who submit letters of intent to apply for the Rural Energy Savings Program and those who subsequently are invited to submit applications. Several qualified entities will be invited to submit applications for a RESP loan after notifying the agency of their interest. The information required from the respondents is limited to essential criteria for screening to determine if proposed activities and investment are consistent with the purpose of the statute, determining eligibility, evaluating the likelihood of fulfilling requirements of a complete application, and to make a preliminary assessment of the feasibility of the business model contemplated by the applicant in order to protect the interests of the Government when making the loan. The information collected is consistent with requirements necessary to determine acceptable qualifications and evaluate applications. Some of the relending projects outlined in applications may vary substantially in complexity and administration and so, the individual respondent's burden may vary as well. The information submitted is used by RUS to determine public interest in the program, determine eligibility of applicants for loans under RESP, and to ensure borrowers use the funds for purposes consistent with goals of RESP.

Description of Respondents: Not-for-profit institutions.

Number of Respondents: 9.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 849.

Rural Utilities Service

Title: OneRD Guaranteed Loan Program.

OMB Control Number: 0572–0155.

Summary of Collection: Rural Development is implementing a new consolidated guaranteed loan program. This rule created a new guaranteed loan program that combined four existing guaranteed loan programs under one regulatory platform. These four programs, described below, are: (1) the Community Facilities Program, (2) the Water and Waste Disposal Program, (3) the Business and Industry Program, and (4) the Rural Energy for America Program (formerly known as the Renewable Energy Systems and Energy Efficiency Improvements Program under Title IX, Section 9007 of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill).

Community Facilities Program. The Rural Housing Service (RHS) is authorized by Section 306 of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926) to make loans to public agencies, nonprofit corporations, and Indian tribes for the development of essential community facilities primarily serving rural residents. RHS has been making guaranteed loans through its Community Programs, which was authorized by Congress in 1990. Community Program guaranteed loans are used to finance many types of projects varying in size and complexity from large general hospitals to small firefighting equipment loans. The guaranteed loan program encourages lender participation and provides specific guidance in the processing and servicing of guaranteed Community Facility loans.

Water and Waste Disposal Program. The Rural Utilities Service is authorized by Section 306 of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926) to make loans to public agencies, nonprofit corporations, and Indian tribes for the development of water and waste disposal facilities primarily serving rural residents. Water and Waste Disposal Programs (WW), which has been in existence for approximately 60 years, was authorized with the Appropriations Act of 1990, when Congress appropriated funds, to implement the Water and Waste Disposal guaranteed loan program. Water and waste disposal guaranteed loans are used to finance many types of projects varying in size and complexity. The guaranteed loan program encourages lender participation and provides specific guidance in the

processing and servicing of guaranteed WW loans.

Business and Industry Program. The Business and Industry (B&I) Guaranteed Loan Program was legislated in 1972 under Section 310B of the Consolidated Farm and Rural Development Act, as amended. The purpose of the program is to improve, develop, or finance businesses, industries, and employment and improve the economic and environmental climate in rural communities. This purpose is achieved through bolstering the existing private credit structure through the guaranteeing of quality loans made by lending institutions, thereby providing lasting community benefits.

Rural Energy for America Program. The Rural Energy for America Program is authorized under the 2008 Farm Bill to make loan guarantees and grants to farmers, ranchers, and rural small businesses to purchase renewable energy systems and make energy efficiency improvements. The program is designed to help farmers, ranchers, and rural small business reduce energy cost and consumption, develop new income streams, and help meet the nation's critical energy needs.

In an effort to reduce paperwork and make Rural Development forms more consistent with each other, thereby improving customer service, RD has revised the forms in this burden package to accommodate all four programs.

Need and Use of the Information: Lending entities who wish to participate in this program must submit an application and/or certain information to Rural Development. This information will be used to determine their eligibility for participation in this program.

Eligible lenders and their prospective borrowers who are seeking guaranteed loans will have to submit applications with specified information, certifications, and agreements to the State Office. This information will be used to determine borrower eligibility, to determine project eligibility and feasibility, and to ensure that borrowers operate on a sound basis and use funds for authorized purposes.

Description of Respondents: Business or other for-profit; Not-for-profit institutions.

Number of Respondents: 464.

Frequency of Responses: Reporting: Annually.

Total Burden Hours: 64,694.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–15–P

DEPARTMENT OF AGRICULTURE

[Docket No. FPAC–2024–0001]

Federal Award Performance Monitoring and Reporting Form

AGENCY: Farm Production and Conservation Business Center, USDA.

ACTION: Notice; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act requirements, the Farm Production and Conservation (FPAC) is requesting comments from all interested individuals and organizations on a new information collection request for the FPAC Federal Award Performance Monitoring and Reporting Form in support of the implementation of Performance Measurement.

DATES: We will consider comments that we must be received by June 24, 2024.

ADDRESSES: We invite you to submit comments on this notice. You may submit comments, identified by Docket ID: FPAC–2024–0001, in the Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments. Comments will be available for viewing online at *regulations.gov.*

You may also send comments to the Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

Copies of the information collection may be requested by contacting Kenneth James.

FOR FURTHER INFORMATION CONTACT: Kenneth James; telephone: (517) 318–3188; email: *Kenneth.James@usda.gov.* Individuals who require alternative means for communication should contact the USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunications Relay service (both voice and text telephone users can initiate this call from any telephone).

SUPPLEMENTARY INFORMATION:

Title: FPAC Federal Award Performance Monitoring and Reporting Form.

OMB Control Number: 0565–New.

Type of Request: New.

Abstract: FPAC will use the Federal Award Performance Monitoring and Reporting Form to support the implementation of section 301 of 2 CFR part 200, Performance Measurement. This section of the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, 2 CFR 200, requires Federal Agencies to measure recipients' accomplishments against performance goals and objectives. Performance reporting allows the Federal Agency to share lessons learned, improve program outcomes, and foster adoption of promising practices. In addition, performance reporting frequency and content is established to not only allow the Federal awarding agency to understand the recipient progress, but also to facilitate identification of promising practices among recipients and build the evidence upon which the Federal awarding agency's program and performance decisions are made.

This information must be collected with the frequency required by the terms and conditions of the Federal award, but no less frequently than annually and not more frequently than quarterly except in unusual circumstances. The information collection, FPAC Federal Award Performance Monitoring and Reporting Form, will support the FPAC Business Center (BC), Farm Service Agency (FSA), Commodity Credit Corporation (CCC), Natural Resources Conservation Service (NRCS), and Risk Management Agency (RMA) in obtaining required Federal award performance information from recipients. This form will replace the discontinued ''Standard Form (SF) Performance Progress Report'' which had previously been used to collect this data.

Applicable award recipients must submit performance data using the FPAC Federal Award Performance Monitoring and Reporting Form. Recipients will use this form to:

1. Show accomplishments, including providing a status of work completed, and comparing accomplishments to the project's goals and objectives;
2. Provide reasons and recommend solutions when differences exist between accomplishments and the project's goals and objectives;
3. Provide a status of expenditures;
4. Describe any problems or adverse conditions that are having a negative impact on the project;
5. Describe any pending or proposed changes to the agreement;
6. Summarize future work planned during the next reporting period; and
7. List any recently completed or ongoing subrecipient monitoring activities.

The recipients can be City or township governments, County governments, For-profit organizations other than small businesses, Independent school districts, Native American tribal governments (Federally recognized), Native American tribal organizations (other than Federally recognized tribal governments), Nonprofits having a 501(c)(3) status with the IRS (other than institutions of

higher education), Nonprofits that do not have a 501(c)(3) status with the IRS (other than institutions of higher education), Private institutions of higher education, Public and State-controlled institutions of higher education, Public housing authorities or Indian housing authorities, Small businesses, Individuals, Special district governments, agricultural producer associations, farmer cooperatives, special service districts, or State governments.

For the following estimated total annual burden on respondents, the formula used to calculate the total burden hours is the estimated average time per response multiplied by the estimated total annual number of responses.

Estimate of Average Time to Respond: Public reporting burden for collecting information under this notice is estimated to average 45 minutes per response (0.75), including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Type of Respondents: Individual or Household, Private Sectors: Businesses or other for-profits; Farms, Not-for-profits institution, and State, Local and Tribal Government.

Estimated Number of Respondents: 4,000.

Estimated Average Number of Responses per Respondent: 2.

Estimated Total Annual Responses: 8,000.

Estimated Average Time per Response: 0.75 hour.

Estimated Total Annual Burden on Respondents: 6,000 hours.

FPAC is requesting comments on all aspects of this information collection to help us to:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of burden of the collection of information including the validity of the methodology and assumptions used;

(3) Evaluate the quality, utility, and clarity of the information collection; and

(4) Minimize the burden of the information collection on those who respond through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All comments received in response to this notice, including names and addresses where provided, will be anonymous. Comments will be summarized and included in the request for OMB approval.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and USDA civil rights regulations and policies, USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Individuals who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY) or dial 711 for Telecommunications Relay Service (both voice and text telephone users can initiate this call from any telephone). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint* and at any USDA office or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410 or email: *OAC@usda.gov.*

USDA is an equal opportunity provider, employer, and lender.

Scott Linsky,

Acting Deputy Chief Operating Officer, USDA Farm Production and Conservation Business Center.

[FR Doc. 2024–08854 Filed 4–24–24; 8:45 am]

BILLING CODE 3411–E2–P

DEPARTMENT OF AGRICULTURE

Forest Service

Newspapers for Publication of Legal Notices in the Eastern Region

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice.

SUMMARY: This notice lists the newspapers that will be used by the Ranger Districts, Forests, and Regional Office of the Eastern Region to publish legal notices required under Forest Service regulations. The intended effect of this action is to inform interested members of the public which newspapers the Forest Service will use to publish notices of proposed actions and notices of decisions. This will provide the public with constructive notice of Forest Service proposals and decisions, provide information on the procedures to comment, object, or appeal, and establish the date that the Forest Service will use to determine if comments, appeals, or objections were timely.

DATES: Publication of legal notices in the listed newspapers begins on the date of this publication. This list of newspapers will remain in effect until a new list is published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Matthew St. Pierre, Administrative Review Specialist, Eastern Region, 626 E Wisconsin Avenue, Milwaukee, Wisconsin 53202 and by email at *matthew.stpierre@usda.gov* or phone at 414–297–3600.

SUPPLEMENTARY INFORMATION: The administrative procedures at 36 CFR 218 and 219 require the Forest Service to publish notices in a newspaper of general circulation. The content of the notices is specified in 36 CFR 218 and 219. In general, the notices will identify: the decision or project by title or subject matter; the name and title of the official making the decision; how to obtain additional information; and where and how to file comments or appeals/objection. The date the notice is published will be used to establish the official date for the beginning of the comment, appeal, or objection period.

BILLING CODE 3411–15–P

AMERICAN BATTLE MONUMENTS COMMISSION

Request for a Revision of a Currently Approved Collection; ABMC Web Survey Amendments

AGENCY: American Battle Monuments Commission (ABMC).

ACTION: Notice of information collection, request for comment.

SUMMARY: This The American Battle Monuments Commission, in accordance with the Paperwork Reduction Act (PRA) of 1995, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment on the proposed revision to the Visitor Web Survey prior to the submission of these information collection request (ICR) to OMB for approval.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before May 22, 2024.

ADDRESSES: Interested persons are invited to submit written comments by email to *byrnesa@abmc.gov.* Please reference Visitor Web Survey in the subject line of your comments. You may also submit comments, identified by Docket Number ABMC–2024–0001, to the Federal e-Rulemaking Portal: *http://www.regulations.gov.* All comments received are part of the public record. No comments will be posted to *http://www.regulations.gov* for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential information or otherwise sensitive or protected information. You may submit attachments to electronic comments in Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT: Ashleigh Byrnes, Deputy Chief of Public Affairs, 703–584–1564, *byrnesa@abmc.gov;* (Alternate) Lin-Lin Jennifer Li, Chief Information Officer, 703–584–1530, *lij@abmc.gov.*

SUPPLEMENTARY INFORMATION:

Title: Clearance for the Electronic Survey Collection of Demographic Data on Agency Website Usage and Service Delivery.

Type of Request: Regular submission, Request for a Revision of a Currently Approved Collection.

Abstract: In an effort to improve online visitor experience and usage habits, the American Battle Monuments Commission (ABMC) is conducting a web survey (survey) on *abmc.gov.* The existing survey collects information to track visitor feedback to enhance web design and content, increase data quality, and operate more efficiently. The survey solicits [or, ''provides ABMC''] information on visitation to ABMC's physical locations, functionality of the website, and overall experience.

The survey collected roughly 500 responses in 2023. The sample size increased to this point due to survey look and feel enhancements that launched on July 12, 2023. The visual appearance of the survey was realigned with the color palette and design of the abmc.gov site to make the survey more appealing to respondents. The official sampling percentage for the survey did not change, but collection did improve as a result of these enhancements. Prior to that, the survey sample size was fairly consistent over time.

The survey is designed to allow for incorporation of new content based on previous visitor feedback and agency objectives. New questions pertaining to demographic information must be submitted to the OMB for approval.

The survey currently collects the following information from site visitors:

- Visitation habits to ABMC physical locations (cemeteries, memorials, monuments, markers).
- Visitation habits to *abmc.gov.*
- Purpose of use for visiting *abmc.gov.*
- Applicable categories of interest associated with ABMC and *abmc.gov* (historical research, genealogy, media, education).
- Website functionality and usability.
- Overall user experience.

In accordance with federal guidance to advance diversity, equity, inclusion and accessibility, ABMC proposes to incorporate additional voluntary survey questions to collect data on select demographic characteristics for web visitors, including:

- Age range and sex.
- Ethnicity or race.
- Veteran status.
- Language.
- Disability and accessibility needs.

This feedback will provide insights into customer or stakeholder perceptions, experiences, and expectations, taking into account the diverse preferences and needs of the Agency's audience. If this information is not collected, vital feedback from customers and stakeholders on the Agency's services will be unavailable. Information gathered is intended to be used only internally for general service improvement and program management purposes and is not intended for release outside of the agency.

Method of Collection: The survey collection is conducted electronically using a web-based questionnaire, and randomly samples 50% of desktop website visitors who have visited 2 or more pages. Sampled visitors are presented with an invitation to take the survey, which they can accept or decline. The survey also uses cookies to ensure that repeat visitors are not continuously asked to take the survey. Currently, these cookies are set to offer the ABMC survey every 90 days. Visitors who have been to the site and have accepted, declined, or abandoned a survey will not be invited again for 90 days in that browser, on that device, unless they clear their cookies.

Type of Respondents: Individuals and Households, Business and Organizations, State, Local or Tribal Government.

Estimate of Burden per Response: 10 minutes.

Estimated Number of Respondents: 500.

Estimated Total Annual Burden on Respondents: 83 hours per year.

Respondent's Obligation: Optional.

Request for Comments: Comment is invited on: (1) Whether this collection of information is necessary for the stated purposes and the proper performance of the functions of the Agency, including whether the information will have practical utility; (2) the accuracy of the Agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All comments received in response to this notice, including names and addresses when provided, will be a matter of public record. Comments will be summarized and included in the submission to the Office of Management and Budget for approval.

Kelly Dove,

Chief Human Capital Officer, ABMC.

BILLING CODE P

DEPARTMENT OF COMMERCE

Office of the Secretary

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Generic Clearance Program Performance Progress Reports

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on December 07, 2023, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Office of the Secretary, Department of Commerce.

Title: Generic Clearance Program Performance Progress Reports.

OMB Control Number: Not yet issued. This is a new information collection.

Form Number(s): Varies or None.

Type of Request: Regular submission.

Number of Respondents: 5,000.

Average Hours per Response: Varies.

Burden Hours: 50,000.

Needs and Uses: Some program offices may use some form of electronic collection. This could include web pages, email or other online data management systems. Recipients may be required to enter and retrieve information pertinent to their awards through electronic forms closely resembling the paper forms (*i.e.,* fillable PDFs or tailored online data management systems). Such technology support is expected to improve standardization and timeliness of recipient reporting and to ease further analyses of reported data.

Affected Public: Individuals or households; Private Sector; Not-for-profit institutions; State, Local, or Tribal government.

Frequency: Varies.

Respondent's Obligation: Voluntary or Mandatory.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering the title of the collection.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–17–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Sensors and Instrumentation Technical Advisory Committee; Notice of Partially Closed Meeting

The Sensors and Instrumentation Technical Advisory Committee (Committee) will meet on

Thursday, May 9, 2024, at 1:00 p.m.–2:30 p.m., Eastern Daylight Time. This meeting will be virtual via MS Teams. The Committee advises the Under Secretary for Industry and Security through the Assistant Secretary for Export Administration, BIS, U.S. Department of Commerce, in accordance with the Secretary's delegation of authority under Department Organization Order (DOO) 10–16 and assigned functions with BIS under DOO 50–1, on technical questions that affect the level of export controls applicable to sensors and instrumentation equipment and technology. The purpose of the meeting is to have Committee members and U.S. Government representatives mutually review updated technical data and policy-driving information that has been gathered.

Agenda

Open Session

1. Welcome and Introductions.
2. Remarks from the Bureau of Industry and Security Management.
3. Industry Presentations.
4. New Business.

Closed Session

5. Discussion of matters determined to be exempt from the open meeting and public participation requirements found in sections 1009(a)(1) and 1009(a)(3) of the Federal Advisory Committee Act (FACA) (5 U.S.C. 1001–1014). The exemption is authorized by section 1009(d) of the FACA, which permits the closure of advisory committee meetings, or portions thereof, if the head of the agency to which the advisory committee reports determines such meetings may be closed to the public in accordance with subsection (c) of the Government in the Sunshine Act (5 U.S.C. 552b(c)). In this case, the applicable provisions of 5 U.S.C. 552b(c) are subsection 552b(c)(4), which permits closure to protect trade secrets and commercial or financial information that is privileged or confidential, and subsection 552b(c)(9)(B), which permits closure to protect information that would be likely to significantly frustrate implementation of a proposed agency action were it to be disclosed prematurely. The closed session of the meeting will involve

committee discussions and guidance regarding U.S. Government strategies and policies.

The open session will be accessible via teleconference. To join the conference, submit inquiries to Ms. Yvette Springer at *Yvette.Springer@bis.doc.gov,* no later than April 23, 2024.

To the extent time permits, members of the public may present oral statements to the Committee. The public may submit written statements at any time before or after the meeting. However, to facilitate distribution of materials to Committee members, the Committee suggests that members of the public forward their materials prior to the meeting to Ms. Springer. Material submitted by the public will be made public and therefore should not contain confidential information.

The Deputy Assistant Secretary for Administration Performing the non-exclusive functions and duties of the Chief Financial Officer with the concurrence of the delegate of the General Counsel, formally determined on April 9, 2024, pursuant to 5 U.S.C. 1009(d)), that the portion of the meeting dealing with pre-decisional changes to the Commerce Control List and the U.S. export control policies shall be exempt from the provisions relating to public meetings found in 5 U.S.C. 1009(a)(1) and 1009(a)(3). The remaining portions of the meeting will be open to the public.

For more information, contact Ms. Springer via email.

Yvette Springer,

Committee Liaison Officer.

DEPARTMENT OF COMMERCE

International Trade Administration

[C–331–806]

Frozen Warmwater Shrimp From Ecuador: Amended Preliminary Determination of Countervailing Duty Investigation

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) published a notice in the **Federal Register** on April 1, 2024, in which Commerce preliminarily determined that countervailable subsidies are being provided to producers and exporters of frozen warmwater shrimp (shrimp) from Ecuador. Based on comments filed by interested parties in this investigation, Commerce is amending the preliminary affirmative countervailing duty (CVD) determination on shrimp from Ecuador to correct significant ministerial errors.

DATES: Applicable April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Zachary Shaykin or Reginald Anadio, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2638 or (202) 482–3166, respectively.

SUPPLEMENTARY INFORMATION:

Background

In accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.205(b), on April 1, 2024, Commerce published in the **Federal Register** the preliminary affirmative CVD determination for shrimp from Ecuador, and alignment of the final determination with the final antidumping duty determination.[1] From March 28 through April 2, 2024, we received timely-filed ministerial error allegations from Industrial Pesquera Santa Priscila S.A. (Santa Priscila), Sociedad Nacional de Galápagos C.A. (SONGA), the petitioner,[2] and the Government of Ecuador (GOE).[3] Santa Priscila, SONGA, and the GOE alleged in their ministerial error allegations that Commerce made significant ministerial errors in the *Preliminary Determination* with respect to Santa Priscila and SONGA's subsidy rates.[4]

Period of Investigation

The period of investigation (POI) is January 1, 2022, through December 31, 2022.

Scope of the Investigation

The products covered by this investigation are shrimp from Ecuador. For a complete description of the scope of this investigation, *see Preliminary Determination* at Appendix I.

Analysis of Significant Ministerial Error Allegations

Commerce will analyze any comments received and, if appropriate, correct any significant ministerial error by amending the preliminary determination according to 19 CFR 351.224(e). A ministerial error is defined in 19 CFR 351.224(f) as ''an error in addition, subtraction, or other arithmetic function, clerical error resulting from inaccurate copying, duplication, or the like, and any other similar type of unintentional error which the Secretary considers ministerial.'' [5] A significant ministerial error is defined as a ministerial error, the correction of which, singly or in combination with other errors, would result in: (1) a change of at least five absolute percentage points in, but not less than 25 percent of, the CVD rate calculated in the original preliminary determination; or (2) a difference between a CVD rate of zero (or *de minimis*) and a CVD rate greater than *de minimis,* or vice versa.[6]

Amended Preliminary Determination

Pursuant to 19 CFR 351.224(e) and (g)(1), Commerce is amending the *Preliminary Determination* to reflect the correction of two ministerial errors made in the calculation of the countervailable subsidy rate for Santa Priscila.[7] Specifically, when calculating a countervailable subsidy rate attributable to Santa Priscila under the Tax Incentives for Priority Sectors under the 2010 Organic Production Code (Priority Sectors) program, we inadvertently used the wrong tax deduction amount with which to calculate the benefit attributable to Santa Priscila under the Priority Sectors Program.[8] Further, we inadvertently

---

[1] *See Frozen Warmwater Shrimp From Ecuador: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With the Final Antidumping Duty Determination,* 89 FR 22379 (April 1, 2024) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum (PDM).

[2] The petitioner in this investigation is the American Shrimp Processors Association.

[3] *See* Santa Priscila's Letter, ''Frozen Warmwater Shrimp from Ecuador—Request for Correction of Ministerial Errors with Respect to Industrial Pesquera Santa Priscila S.A. and Request for Meeting,'' dated March 28, 2024 (Santa Priscila's Ministerial Error Allegation); SONGA's Letter, ''Frozen Warmwater Shrimp from Ecuador—Request for Correction of Ministerial Error in Preliminary Determination,'' dated March 29, 2024 (SONGA's Ministerial Error Allegation); *see also* Petitioner's Letter, ''Frozen Warmwater Shrimp from Ecuador: Ministerial Error Comments,'' dated April 2, 2024; and GOE's Letter, ''Frozen Warmwater Shrimp from Ecuador—Request for Correction of Ministerial Errors with Respect to Industrial Pesquera Santa Priscila S.A. and Request for Meeting,'' dated April 2, 2024 (GOE's Ministerial Error Allegation).

[4] *See* Santa Priscila's Ministerial Error Allegation; *see also* SONGA's Ministerial Error Allegation; and GOE's Ministerial Error Allegation.

[5] *See* section 705(e) of the Act.

[6] *See* 19 CFR 351.224(g).

[7] *See* Memorandum, ''Countervailing Duty Investigation of Frozen Warmwater Shrimp from Ecuador: Allegations of Significant Ministerial Errors in the Preliminary Determination,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Ministerial Error Memorandum).

[8] *See Preliminary Determination* PDM at 15 through 17.

calculated a countervailable subsidy rate attributable to Santa Priscila under both the Priority Sectors program and the Investment Contract program that should have only been calculated pursuant to one program, *i.e.,* the Priority Sectors Program.[9] Commerce finds that these ministerial errors are significant ministerial errors within the meaning of 19 CFR 351.224(g) because correction of these errors decreases Santa Priscila's countervailing subsidy rate from 13.41 to 2.89 percent, which is a change that is at least five absolute percentage points in, and more than 25 percent of, the subsidy rate calculated for Santa Priscila in the original *Preliminary Determination.*

Furthermore, in the *Preliminary Determination,* we calculated a 1.69 percent subsidy rate for SONGA and indicated that we will instruct U.S. Customs and Border Protection (CBP) to require a cash deposit equal to that rate. Section 703(b)(4)(B) of the Act, provides that Commerce will apply a *de minimis* threshold of two percent to a country designated by the United States Trade Representative (USTR) as a developing country for purposes of the CVD law.[10] Ecuador is designated as a developing country by the USTR under CVD law and is subject to a *de minimis* standard of two percent.[11] As stated by SONGA and the GOE,[12] we inadvertently did not designate the preliminary *ad valorem* subsidy rate assigned to SONGA as *de minimis* as stipulated by section 703(b)(4)(B) of the Act. Therefore, for SONGA, we will not direct CBP to suspend liquidation of entries of the subject merchandise from Ecuador, in accordance with section 703(b)(4)(B) of the Act.

In addition, as a result of this inadvertent error and as stipulated by section 705(c)(5)(A) of the Act, we are correcting the all-others rate to equal the amended preliminary CVD rate established for Santa Priscila, *i.e.,* 2.89 percent *ad valorem,* as this is the only rate that is not zero, *de minimis,* or based entirely on the facts otherwise available.

Also, we listed an incorrect name for one of Santa Priscila's cross-owned companies, *i.e.,* Tropical Packing Ecuador S.A.[13] Moreover, we inadvertently stated ''aluminum extrusions from Indonesia'' in the ITC Notification section of the original notice.[14]

For a complete discussion of the alleged ministerial errors, *see* the Preliminary Ministerial Error Memorandum.

Amended Preliminary Determination

Company	Subsidy rate (percent *ad valorem*)
Industrial Pesquera Santa Priscila S.A.[15]	2.89.
Sociedad Nacional de Galápagos C.A.[16]	1.69 (*de minimis*).
All-Others	2.89.

Correction

In the **Federal Register** of April 1, 2024, in FR Doc 2024–06845, on page 22380, in the third column, correct the Subsidy Rate (percent *ad valorem*) for Sociedad Nacional de Galapagos C.A. and All Others, as found in the rate table, to 1.69 *de minimis* and 2.89, respectively, and correct the name ''Tropack S.A.'' as found under footnote 9 to ''Tropical Packing Ecuador S.A.'' Additionally, in FR Doc 2024–06845, on page 22380, in the third column, second paragraph, include ''As provided for in section 703(b)(4)(B) of the Act, for developing countries, any rate less than two percent *ad valorem* in an investigation is *de minimis.* Accordingly, for SONGA, we will not direct CBP to suspend liquidation of entries of subject merchandise'' before the sentence stating, ''Further, pursuant to 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the rates indicated above.'' Additionally, in FR Doc 2024–06845, on page 22381, in the second column, correct ''aluminum extrusions from Indonesia'' to ''shrimp from Ecuador.''

Amended Cash Deposits and Suspension of Liquidation

The collection of cash deposits and suspension of liquidation will be established according to the rates calculated in this amended preliminary determination. Because the amended rates for Santa Priscila and all others result in decreased cash deposits, they will be effective retroactively to April 1, 2024, the date of publication of the *Preliminary Determination.* Parties will be notified of this determination, in accordance with section 703(d) and (f) of the Act.

Disclosure

We intend to disclose the calculations performed to parties in this proceeding within five days after public announcement of the amended preliminary determination, in accordance with 19 CFR 351.224.

International Trade Commission Notification

In accordance with section 703(f) of the Act, we will notify the International Trade Commission of our amended preliminary determination.

Notification to Interested Parties

This notice is issued and published in accordance with sections 703(f) and 777(i) of the Act.

Dated: April 19, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

The Regents of the University of Michigan; Application(s) for Duty-Free Entry of Scientific Instruments

Pursuant to section 6(c) of the Educational, Scientific and Cultural Materials Importation Act of 1966 (Pub. L. 89–651, asamended by Pub. L. 106–36; 80 Stat. 897; 15 CFR part 301), we

invite comments on the question of whether instruments of equivalent scientific value, for the purposes for which the instruments shown below are intended to be used, are being manufactured in the United States.

Comments must comply with 15 CFR 301.5(a)(3) and (4) of the regulations and be postmarked on or before May 15, 2024. Address written comments to Statutory Import Programs Staff, Room 41006, U.S. Department of Commerce, Washington, DC 20230. Please also email a copy of those comments to *Dianne.Hanshaw@trade.gov.*

Docket Number: 24–009. Applicant: The Regents of the University of Michigan, 5082 Wolverine Tower, 3003 South State Street, Ann Arbor, MI 48109–1287. Instrument: Formula Student Motor and Motor Controllers. Manufacturer: AMK Motion GmbH + CoKG, Germany. Intended Use: The instrument is intended to be used to teach current engineering students at the University of Michigan about vehicle integration, design, and dynamics. This is taught to students through participation in the national wide intercollegiate Formula SAE competitions. This motor is a critical component in the electric powertrain of the vehicle as each motor will independently control each wheel of the car. These specific motors from AMK allow our team to learn the fundamentals of such a process without having to design and manufacture our motors and motor controllers, which is a far more expensive, time-consuming, and knowledge-heavy process. Justification for Duty-Free Entry: According to the applicant, there are no instruments of the same general category manufactured in the United States. Application accepted by Commissioner of Customs: January 3, 2024.

Dated: April 19, 2024.

Gregory W. Campbell,

Director, Subsidies and Economic Analysis, Enforcement and Compliance.

Common Alloy Aluminum Sheet From Germany: Preliminary Results and Partial Rescission of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that Speira GmbH (Speira), the sole respondent subject to this administrative review of the antidumping duty order on common alloy aluminum sheet from Germany, sold subject merchandise at less than normal value (NV) during the period of review (POR) April 1, 2022, through March 31, 2023. Interested parties are invited to comment on these preliminary results of the review.

DATES: Applicable April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Jeff Pedersen, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2769.

SUPPLEMENTARY INFORMATION:

Background

On June 12, 2023, Commerce initiated an administrative review of the antidumping duty order on common alloy aluminum sheet from Germany covering the POR.[1] On December 27, 2023, Commerce extended the deadline for issuing the preliminary results of this review until April 19, 2024.[2]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[3] A list of the topics discussed in the Preliminary Decision Memorandum is attached as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Order

The products covered by the *Order* are common alloy aluminum sheet, which is a flat-rolled aluminum product having a thickness of 6.3 mm or less, but greater than 0.2 mm, in coils or cut-to-length, regardless of width. Common alloy sheet within the scope of the *Order* includes both not clad aluminum sheet, as well as multi-alloy, clad aluminum sheet. Common alloy sheet is currently classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7606.11.3060, 7606.11.6000, 7606.12.3096, 7606.12.6000, 7606.91.3095, 7606.91.6095, 7606.92.3035, and 7606.92.6095. Further, merchandise that falls within the scope of the *Order* may also be entered into the United States under HTSUS subheadings 7606.11.3030, 7606.12.3015, 7606.12.3025, 7606.12.3035, 7606.12.3091, 7606.91.3055, 7606.91.6055, 7606.92.3025, 7606.92.6055, 7607.11.9090. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the *Order* is dispositive. For a full description of the scope of the *Order, see* the Preliminary Decision Memorandum.

Partial Rescission of the Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole, or in part, with respect to specific companies, if all parties who requested the review withdraw their requests within 90 days of publication of the notice of initiation of the requested review in the **Federal Register**. All parties timely withdrew their review requests for the following companies: (1) Alanod GmbH & Co. KG (Alanod); (2) Constellium Rolled Products Singen GmbH & Co. KG (Constellium Rolled); (3) Constellium Singen GmbH (Constellium Singen); and (4) Novelis Deutschland GmbH (Novelis). Therefore, consistent with 19 CFR 351.213(d)(1), Commerce is

[3] *See* Memorandum, ''Decision Memorandum for Preliminary Results of the 2022–2023 Administrative Review of the Antidumping Duty Order on Common Alloy Aluminum Sheet from Germany,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

rescinding this review, in part, with respect to these companies.

Methodology

Commerce is conducting this review in accordance with section 751(a)(1)(B) of the Tariff Act of 1930, as amended (the Act). We calculated export prices and NV for Speira in accordance with sections 772 and 773 of the Act, respectively. For a full description of the methodology underlying our preliminary results of review, *see* the Preliminary Decision Memorandum.

Preliminary Results of Review

We are assigning the following weighted-average dumping margin to the company listed below for the period April 1, 2022, through March 31, 2023:

Producer or exporter	Weighted-average dumping margin (percent)
Speira GmbH [4]	6.44

[4] Formerly known as Hydro Aluminium Rolled Products GmbH. *See Common Alloy Aluminum Sheet from Germany: Preliminary Results of Antidumping Duty Administrative Review; 2020–2022,* 88 FR 30087 (May 10, 2023, unchanged in *Common Alloy Aluminum Sheet from Germany: Final Results of Anti-dumping Duty Administrative Review; 2020–2022,* 88 FR 77556 (November 13, 2023).

Disclosure and Public Comment

Commerce intends to disclose, under administrative protective order, its calculations and analysis performed for these preliminary results of review to parties to the proceeding within five days of any public announcement of the preliminary results or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs to Commerce no later than 30 days after the date of publication of this notice in the **Federal Register**. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[5] Interested parties who submit case briefs or rebuttal briefs in this review must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[6]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their briefs that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[7] Further, we request that interested parties limit their executive summary of each issue to no more than 450 words, not including citations. We intend to use the executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[8]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request for a hearing to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests for a hearing should contain: (1) the requesting party's name, address, and telephone number; (2) the number of individuals associated with the requesting party that will attend the hearing and whether any of those individuals is a foreign national; and (3) a list of the issues that the party intends to discuss at the hearing. Issues raised in the hearing will be limited to those raised in the respective case and rebuttal briefs. An electronically filed hearing request must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5 p.m. Eastern Time within 30 days after the date of publication of this notice in the **Federal Register**. If a request for a hearing is made, Commerce will announce the date and time of the hearing. Parties should confirm the date and time of the hearing two days before the scheduled hearing date.

Final Results of Review

Unless otherwise extended, Commerce intends to issue the final results of this administrative review, which will include the results of its analysis of issues raised in any briefs, within 120 days of publication of these preliminary results of review in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act.[9]

Assessment Rates

In accordance with section 751(a)(2)(C) of the Act, the assessment of antidumping duties on entries of merchandise covered by the review shall be based on the final results of this review.[10] Therefore, upon issuance of the final results of this review, Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise covered by this review in accordance with 19 CFR 351.212(b)(1).

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

We will calculate importer-specific assessment rates for Speira, in accordance with 19 CFR 351.212(b)(1).[11] Because Speira does not know, and thus did not report, entered values, we will calculate importer-specific per-unit assessment rates for the company by dividing the total amount of dumping calculated in the final results of this review for all reviewed U.S. sales to the importer by the total quantity of those sales. While we will calculate estimated *ad valorem* importer-specific assessment rates to determine whether the per-unit assessment rates are *de minimis,* we will report the per-unit assessment rates to CBP. [12] Where either the respondent's *ad valorem* weighted-average dumping margin is zero or *de minimis,* or an importer-specific *ad valorem* assessment rate is zero or *de minimis,*[13] we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

Pursuant to a refinement to Commerce's assessment practice, where sales of subject merchandise that was produced or exported by an individually examined respondent were

[5] *See* 19 CFR 351.309(d); *see also Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings,* 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Final Rule*).

[6] *See* 19 351.309(c)(2) and (d)(2).

[7] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

[8] *See APO and Service Final Rule,* 88 FR at 67077.

[9] *See* section 751(a)(3)(A) of the Act; *see also* 19 CFR 351.213(h)(1).

[10] *See* section 751(a)(2)(C) of the Act.

[11] We applied the assessment rate calculation method adopted in *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Proceedings: Final Modification,* 77 FR 8101 (February 14, 2012).

[12] *See* 19 CFR 351.212(b)(1).

[13] *See* 19 CFR 351.106(c)(2).

not reported in the U.S. sales data submitted by the respondent, but the merchandise was entered for consumption in the United States during the POR, we will instruct CBP to liquidate any entries of such merchandise at the all-others rate (*i.e.,* 49.40 percent) if there is no rate for the intermediate company(ies) involved in the transaction.[14]

Because Commerce is rescinding this review with respect to Alanod, Constellium Rolled, Constellium Singen, and Novelis, we will instruct CBP to assess antidumping duties on all appropriate entries of subject merchandise during the POR from these companies at rates equal to the cash deposit rate for estimated antidumping duties that was required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue its rescission instructions to CBP no earlier than 35 days after the date of publication of this notice in the **Federal Register**.

Cash Deposit Requirements

The following cash deposit requirements will be in effect for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the notice of the final results of this administrative review in the **Federal Register**, as provided for by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for Speira will be equal to the weighted-average dumping margin established for the company in the final results of this review, except if the weighted-average dumping margin is less than 0.50 percent, and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), the cash deposit rate will be zero; (2) for previously investigated or reviewed exporters that are not covered by this review, the cash deposit rate will continue to be the company's cash deposit rate from the most recently completed segment of the proceeding in which it was examined; (3) if the exporter is not covered by this review, and does not have a cash deposit rate from a completed segment of this proceeding, but the producer of the subject merchandise does have a cash deposit rate, then the cash deposit rate will be the producer's cash deposit rate from the most recently completed segment of the proceeding in which it was examined; and (4) the cash deposit rate for all other producers or exporters will continue to be 49.40 percent, the all-others rate established in the less-than-fair-value investigation.[15] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results of review in accordance with sections 751(a)(1) and 777(i)(l) of the Act, and 19 CFR 351.213 and 351.221(b)(4).

Dated: April 19, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Circular Welded Non-Alloy Steel Pipe From the Republic of Korea; Oil Country Tubular Goods From the Republic of Korea; Welded Line Pipe From the Republic of Korea; and Large Diameter Welded Pipe From the Republic of Korea: Notice of Initiation of Antidumping Duty Changed Circumstances Reviews

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is initiating a changed circumstances review (CCR) to determine whether Hyundai Steel Pipe Co., Ltd. (HSP) is the successor-in-interest to Hyundai Steel Company (Hyundai Steel) in the context of the antidumping duty (AD) orders on circular welded non-alloy steel pipe (CWP); oil country tubular goods (OCTG); welded line pipe (WLP); and large diameter welded pipe (LDWP) from the Republic of Korea (Korea).

DATES: Applicable April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Erin Kearney, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; (202) 482–0167.

SUPPLEMENTARY INFORMATION:

Background

On November 2, 1992, September 10, 2014, December 1, 2015, and May 2, 2019, respectively, Commerce published in the **Federal Register** AD orders on CWP, OCTG, WLP, and LDWP from Korea.[1] On March 11, 2024, HSP requested that, pursuant to section 751(b)(1) of the Tariff Act of 1930, as amended (the Act), 19 CFR 351.216, and 19 CFR 351.221(c)(3), Commerce conduct an expedited CCR to determine that HSP is the successor-in-interest to Hyundai Steel and accordingly to assign it the cash deposit rates currently applicable to Hyundai Steel pursuant to *CWP Order, OCTG Order, WLP Order, and LDWP Order.*[2] In its submission, HSP stated that on April 1, 2021, Hyundai Steel restructured to organize its internal departmental units on the basis of product type through the end of 2023. HSP stated that on September 26, 2023, Hyundai Steel's board of directors

[2] *See* HSP's Letter, ''Hyundai Steel Pipe Request for Changed Circumstances Review,'' dated March 11, 2024 (HSP's CCR Request).

approved a plan to spin off its Steel Pipe Business Division into an independent operating company named Hyundai Steel Pipe Co., Ltd (HSP). HSP stated that, on October 25, 2023, Hyundai Steel's board of directors approved a resolution to transfer its assets and liabilities to HSP.[3]

Scope of the Orders

The merchandise covered by these orders is CWP, OCTG, WLP, and LDWP from Korea.[4]

Initiation of CCRs

Pursuant to section 751(b)(1)(A) of the Act and 19 CFR 351.216(d), Commerce conducts a CCR upon receipt of information concerning, or a request from, an interested party for a review of an AD and/or CVD order which shows changed circumstances sufficient to warrant a review of the order. The information submitted by HSP regarding its claim that it is the successor-in-interest to Hyundai Steel demonstrates changed circumstances sufficient to warrant the initiation of such reviews.[5] Therefore, in accordance with section 751(b)(1)(A) of the Act and 19 CFR 351.216(d) and (e), we are initiating the CCRs.

In making a successor-in-interest determination, Commerce examines several factors, including, but not limited to, changes in the following: (1) management; (2) production facilities; (3) supplier relationships; and (4) customer base.[6] While no single factor or combination of factors will necessarily provide a dispositive indication of a successor-in-interest relationship, generally, Commerce will consider the new company to be the successor to the previous company if the new company's resulting operation is not materially dissimilar to that of its predecessor.[7] Thus, if the record evidence demonstrates that, with respect to the production and sale of the subject merchandise, the new company operates as the same business entity as the predecessor company, Commerce may assign the new company the cash deposit rate of its predecessor.[8]

Pursuant to 19 CFR 351.221(c)(3)(ii), Commerce may combine the notices of initiation and preliminary results of a CCR into a single notice if it concludes that expedited action is warranted. We have determined that it is appropriate to further consider, and potentially seek additional information regarding, certain factors noted above that Commerce examines in successor-in-interest CCRs. Therefore, we have determined that expedited action is not warranted, and we have not combined the notice of preliminary results of the CCRs with this notice. Commerce intends to publish in the **Federal Register** a notice of the preliminary results of this CCR, in accordance with 19 CFR 351.221(b)(4) and (c)(3)(i), which will set forth Commerce's preliminary factual and legal conclusions. Pursuant to 19 CFR 351.221(b)(4)(ii), interested parties will have an opportunity to comment on the preliminary results.

Unless extended, Commerce intends to issue the final results of this CCR within 270 days after the date of initiation, in accordance with 19 CFR 351.216(e).

Notification to Interested Parties

We are issuing this notice in accordance with sections 751(b)(1) and 777(i) of the Act and 19 CFR 351.216(b) and 351.221(b)(1).

Dated: April 19, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy & Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Truck and Bus Tires From People's Republic of China: Final Results of the Expedited First Sunset Review of the Countervailing Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) finds that revocation of the countervailing duty (CVD) order on truck and bus tires from the People's Republic of China (China) would likely lead to the continuation or recurrence of countervailable subsidies at the levels indicated in the ''Final Results of Expedited Sunset Review'' section of this notice.

DATES: Applicable April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Suresh Maniam, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1603.

SUPPLEMENTARY INFORMATION:

Background

On February 15, 2019, Commerce published in the **Federal Register** the CVD *Order* on truck and bus tires from China.[1] On January 2, 2024, Commerce published in the **Federal Register** the notice of initiation of the first five-year sunset review of the *Order* pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act).[2] On January 12, 2024, we received a timely notice of intent to participate in this sunset review from the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial Workers Union, AFL–CIO, CLC (the domestic interested party) within 15-day deadline specified in 19 CFR 351.218(d)(1)(i).[3] The domestic interested claimed interested party status under section 771(9)(D) of the Act as a certified union representative of a U.S. industry engaged in the manufacture of truck and bus tires in the United States. On February 4, 2024, the domestic interested party provided a complete substantive response for this review

[1] *See Truck and Bus Tires from the People's Republic of China: Amended Final Determination and Countervailing Duty Order,* 84 FR 4434 (February 15, 2019) (*Order*).

[2] *See Initiation of Five-Year (Sunset) Reviews,* 89 FR 66 (January 2, 2024) (*Initiation Notice).*

[3] *See* Domestic Interested Party's Letter, ''Notice of Intent to Participate,'' dated January 12, 2024.

within the 30-day deadline specified in 19 CFR 351.218(d)(3)(i).[4] Commerce received no substantive responses from any other interested parties, including the Government of China, nor was a hearing requested. On February 22, 2024, Commerce notified the U.S. International Trade Commission that it did not receive an adequate substantive response from other interested parties.[5] As a result, in accordance with section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(1)(ii)(C)(2), Commerce conducted an expedited, *i.e.,* 120-day, sunset review of the *Order.*

Scope of the Order

The products covered by the scope of the *Order* are truck and bus tires from China. A complete description of the scope of the *Order* is contained in the Issues and Decision Memorandum.[6]

Analysis of Comments Received

A complete discussion of all issues raised in this sunset review, including the likelihood of the continuation or recurrence of subsidization in the event of revocation of the *Order* and the countervailable subsidy rates likely to prevail if the *Order* were to be revoked, are addressed in the Issues and Decision Memorandum. A list of topics discussed in the Issues and Decision Memorandum is included in the Appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS), which is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Final Results of Sunset Review

Pursuant to sections 751(c)(1) and 752(b) of the Act, Commerce determines that revocation of the *Order* would likely lead to the continuation or recurrence of a countervailable subsidy at the following net countervailable subsidy rates:

Exporter/producer	Subsidy rate (percent *ad valorem*)
Guizhou Tyre Import and Export Co., Ltd.[7]	66.28
Double Coin Holdings Ltd.[8]	23.92
All Others	45.10

Administrative Protective Order

This notice serves as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results and notice in accordance with sections 751(c), 752(b), and 777(i)(1) of the Act, and 19 CFR 351.218.

Dated: April 19, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

[2] *See Initiation of Five-Year (Sunset) Reviews,* 89 FR 66 (January 2, 2024); *see also Order.*

Industrial Workers Union, AFL–CIO, CLC (the domestic interested party) within the 15-day deadline specified in 19 CFR 351.218(d)(1)(i).[3] The domestic interested party claimed interested party status under section 771(9)(D) of the Act and 19 CFR 351.102(b)(17) as a certified union representative of a U.S. industry engaged in the manufacture of truck and bus tires in the United States. On February 1, 2024, the domestic interested party provided a complete substantive response for this review within the 30-day period specified in 19 CFR 351.218(d)(3)(i).[4] Commerce received no substantive responses from any other interested parties, including the Government of China, nor was a hearing requested.

On February 22, 2024, Commerce notified the U.S. International Trade Commission that it did not receive an adequate substantive response from other interested parties.[5] As a result, in accordance with section 751(c)(3)(B) of the Act and 19 CFR 351.218(e)(1)(ii)(C)(2), Commerce conducted an expedited, *i.e.,* 120-day, sunset review of the *Order.*

Scope of the Order

The products covered by the scope of the *Order* are truck and bus tires from China. A complete description of the scope of the *Order* is contained in the Issues and Decision Memorandum.[6]

Analysis of Comments Received

All issues raised in this sunset review are addressed in the Issues and Decision Memorandum. A list of topics discussed in the Issues and Decision Memorandum is included as the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

[3] *See* Domestic Interested Party's Letter, ''Notice of Intent to Participate,'' dated January 12, 2024.

[4] *See* Domestic Interested Party's Letter, ''Substantive Response of the USW,'' dated February 1, 2024 (Substantive Response).

[5] *See* Commerce's Letter, ''Sunset Reviews for January 2024,'' dated February 22, 2024.

[6] *See* Memorandum, ''Issues and Decision Memorandum for the Expedited First Sunset Review of the Antidumping Duty Order on Truck and Bus Tires from the People's Republic of China,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

Final Results of Sunset Review

Pursuant to sections 751(c)(1) and 752(c)(1) and (3) of the Act, Commerce determines that revocation of the *Order* would likely lead to the continuation or recurrence of dumping and that the magnitude of the margins of dumping likely to prevail would be margins up to 22.57 percent.

Administrative Protective Order

This notice serves as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results and notice in accordance with sections 751(c), 752(c), and 777(i)(1) of the Act, and 19 CFR 351.221(c)(5)(ii).

Dated: April 19, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix

List of Topics Discussed in the Issues and Decision Memorandum

I. Summary
II. Background
III. Scope of the *Order*
IV. History of the *Order*
V. Legal Framework
VI. Discussion of the Issues
1. Likelihood of Continuation or Recurrence of Dumping
2. Magnitude of the Margin of Dumping Likely To Prevail
VII. Final Results of Expedited Sunset Review
VIII. Recommendation

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD860]

International Affairs; U.S. Fishing Opportunities in the Northwest Atlantic Fisheries Organization Regulatory Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification of U.S. fishing opportunities.

SUMMARY: We are announcing 2024 fishing opportunities in the Northwest Atlantic Fisheries Organization Regulatory Area. This action is necessary to make fishing privileges in the Regulatory Area available on an equitable basis to the extent possible. The intended effect of this notice is to alert U.S. fishing vessels of fishing opportunities for yellowtail flounder, redfish, and *Illex* squid along with Atlantic halibut, to relay the available quotas available to U.S. participants, and to outline the process and requirements for vessels to apply to participate in the 2024 fishery in the Northwest Atlantic Fisheries Organization Regulatory Area.

DATES: Effective through December 31, 2024. Expressions of interest regarding fishing opportunities in Northwest Atlantic Fisheries Organization (NAFO) will be accepted through May 10, 2024.

ADDRESSES: Expressions of interest regarding U.S. fishing opportunities should be made in writing to Michael Pentony, U.S. Commissioner to NAFO, NMFS Greater Atlantic Regional Fisheries Office at 55 Great Republic Drive, Gloucester, MA 01930 (phone: 978–281–9315, email: *Michael.Pentony@noaa.gov*).

Information relating to chartering vessels of NAFO Contracting Party, transferring NAFO fishing opportunities to or from another NAFO Contracting Party, or U.S. participation in NAFO is available from Patrick E. Moran in the NMFS Office of International Affairs, Trade, and Commerce at 1315 East-West Highway, Silver Spring, MD 20910 (phone: 301–427–8370, fax: 301–713–2313, email: *Pat.Moran@noaa.gov*).

Additional information about NAFO fishing opportunities, NAFO Conservation and Enforcement Measures (CEM), and the High Seas Fishing Compliance Act (HSFCA) Permit required for NAFO participation is available from Shannah Jaburek, in

the NMFS Greater Atlantic Regional Fisheries Office at 55 Great Republic Drive, Gloucester, MA 01930 (phone: 978–282–8456, fax: 978–281–9135, email: *Shannah.Jaburek@noaa.gov*) and online from NAFO at *https://www.nafo.int.*

FOR FURTHER INFORMATION CONTACT: Shannah Jaburek, Fishery Policy Analyst, (978) 282–8456.

SUPPLEMENTARY INFORMATION:

General NAFO Background

The United States is a Contracting Party to NAFO. NAFO is an intergovernmental fisheries science and management body whose convention applies to most fishery resources in international waters of the Northwest Atlantic, except salmon, tunas/marlins, whales, and sedentary species such as shellfish. Currently, NAFO has 12 contracting parties from North America, Europe, Asia, and the Caribbean. NAFO's Commission is responsible for the management and conservation of the fishery resources in the NAFO Regulatory Area (in waters outside the exclusive economic zones (EEZ)). Figure 1 shows the NAFO Regulatory Area.

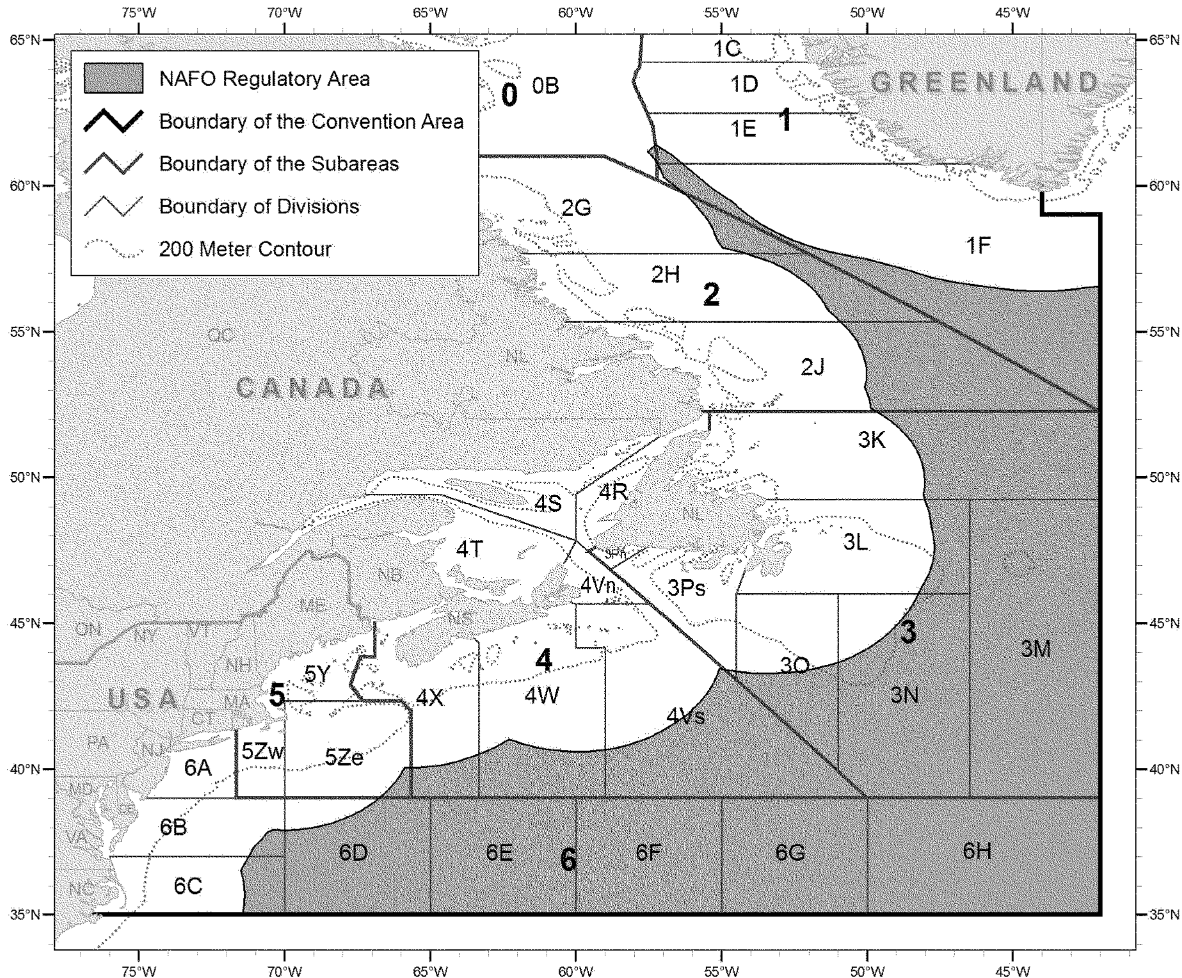

Figure 1 -- NAFO Convention Area Including Statistical Subareas, Divisions, and Subdivisions

As a Contracting Party within NAFO, the United States may be allocated catch quotas or effort allocations for certain species in specific areas within the NAFO Regulatory Area and may participate in fisheries for other species for which we have not received a specific quota. For most stocks for which the United States does not receive a specific allocation, an open allocation, known as the ''Others'' allocation under the Convention, is shared access among all NAFO Contracting Parties.

Additional information on NAFO can be found online at *https://www.nafo.int/About-us.* The 2024 NAFO CEM that specify the fishery regulations, Total Allowable Catches (TAC or ''quotas'') and other information about the fishery program will be available online at: *https://www.nafo.int/Fisheries/Conservation* when completed. Information from the 2023 Annual Meeting of NAFO, at which changes to the TACs and other management measures occur, is available on the NAFO website.

This notice announces the fishing opportunities available to U.S. vessels in NAFO regulatory waters, including specific 2024 stocks for which the United States has an allocation under

NAFO, and fishing opportunities under the ''Other'' NAFO allocations. This notice also outlines the application process and other requirements for U.S. vessels that wish to participate in the 2024 NAFO fisheries.

NAFO Fishing Opportunities Available to U.S. Fishing Vessels

The principal species managed by NAFO are Atlantic cod, yellowtail and witch flounders, Acadian redfish, American plaice, Greenland halibut, white hake, capelin, shrimp, skates, and *Illex* squid. NAFO specifies conservation measures for fisheries on these species occurring in its Regulatory Area, including TACs for these managed species that are allocated among NAFO Contracting Parties. The United States received quota allocations at the 2023 NAFO Annual Meeting for two stocks to be fished during 2024. The species, location by NAFO subarea, and allocation (in metric tons (mt)) of these 2024 U.S. fishing opportunities are as follows: Redfish in Division 3M, 69 mt; and *Illex* Squid in Subareas 3 & 4, 453 mt. In addition, the United States received a transfer of 1,000 mt of NAFO Division 3LNO yellowtail flounder from Canada's 2024 quota allocation consistent with the continuation of a 2020 bilateral arrangement between the two countries.

The TACs that may be available to U.S. vessels for stocks where the United States has not been allocated quota (*i.e.,* the ''Others'' allocation in Annex I.A of the CEM) are as follows:

TABLE 1—2024 NAFO ''OTHERS'' ALLOCATIONS

Species	NAFO Division	Others quota (mt)
Cod	3M	46.8
Redfish	3LN	109
	3M	124
	3O	100
Yellowtail Flounder	3LNO	78
Witch Flounder	3NO	14
White Hake	3NO	59
Skates	3LNO	258
Illex squid	Squid 3_4 (Sub-Areas 3+4)	794

Note that the United States shares the ''Other'' allocations with other NAFO Contracting Parties, and access is on a first come, first served basis. Directed fishing is prohibited by NAFO when the ''Others'' quota for a particular stock has been fully harvested.

Additional directed quota for these and other stocks managed within the NAFO Regulatory Area could be made available to U.S. vessels through industry-initiated chartering arrangements or government-to-government transfers of quota from other NAFO Contracting Parties.

U.S. vessels participating in NAFO may also retain bycatch of NAFO managed species to the following maximum amounts as outlined in Article 6 of the CEM. The percentage, by weight, is calculated as a percent of each stock of the total catch of species listed in CEM Annex I.A (*i.e.,* the NAFO managed stocks listed in table 1) retained onboard from the applicable division at the time of inspection, based on logbook information:

1. Cod, Division 3M: 1,250 kilograms (kg) or 5 percent, whichever is more;
2. Witch Flounder, Division 3NO: 1,250 kg or 5 percent, whichever is more;
3. Redfish, Division 3LN: 1,250 kg or 5 percent, whichever is more;
4. Cod, Division 3NO: 1,000 kg or 4 percent, whichever is more;
5. American plaice: While conducting a directed fishery for yellowtail flounder in Divisions 3LNO—2,900 kg or 15 percent of American plaice in accordance with provisions in Article 6.3(g); otherwise, 1,250 kg or 5 percent, whichever is greater; and
6. For all other Annex I.A stocks where the U.S. has no specific quota, the bycatch limit is 2,500 kg or 10 percent unless a ban on fishing applies or the quota for the stock has been fully utilized. If the fishery for the stock is closed or a retention ban applies, the permitted bycatch limit is 1,250 kg or 5 percent.

Opportunities to fish for species not listed above (*i.e.,* species listed in Annex I.A of the NAFO CEM and non-allocated on non-regulated species), but occurring within the NAFO Regulatory Area such as Atlantic halibut, may also be available. U.S. fishermen interested in fishing for these other species should contact the NMFS Greater Atlantic Regional Fisheries Office (see **ADDRESSES**) for additional information. Authorization to fish for such species will include permit-related conditions or restrictions, including but not limited to, minimum size requirements, bycatch-related measures, and catch limits. Any such conditions or restrictions will be designed to ensure the optimum utilization, long-term sustainability, and rational management and conservation of fishery resources in the NAFO Regulatory Area, consistent with the Convention on Cooperation in the Northwest Atlantic Fisheries, which has been adopted by all NAFO Contracting Parties.

Applying for These Fishing Opportunities

Expressions of interest to fish for any or all of the 2024 U.S. fishing opportunities in NAFO described above will be considered from all U.S. fishing interests (*e.g.,* vessel owners, processors, agents, others). Applicants are urged to carefully review and thoroughly address the application requirements and selection criteria as detailed below. Expressions of interest should be directed in writing to Regional Administrator Michael Pentony (see **ADDRESSES**).

Information Required in an Application Letter

Expressions of interest should include a detailed description of anticipated fishing operations in 2024. Descriptions should include, at a minimum:

- Intended target species;
- Proposed dates of fishing operations;
- Vessel(s) to be used to harvest fish, including the name, registration, and home port of the intended harvesting vessel(s);
- The number of fishing personnel and their nationality involved in vessel operations;
- Intended landing port or ports; including for ports outside of the United States, whether or not the product will be shipped to the United States for processing;
- Processing facilities to be used;

• Target market for harvested fish; and

• Evidence demonstrating the ability of the applicant to successfully conduct fishing operations in the NAFO Regulatory Area, in accordance with NAFO management measures. This may include descriptions of previously successful NAFO or domestic fisheries participation.

Note that applicant U.S. vessels must possess or be eligible to receive a valid HSFCA permit. HSFCA permits are available from the NMFS Greater Atlantic Regional Fisheries Office. Information regarding other requirements for fishing in the NAFO Regulatory Area is detailed below and is also available from the NMFS Greater Atlantic Regional Fisheries Office (see **ADDRESSES**).

U.S. applicants wishing to harvest U.S. allocations using a vessel from another NAFO Contracting Party, or hoping to enter a chartering arrangement with a vessel from another NAFO Contracting Party, should see below for details on U.S. and NAFO requirements for such activities. If you have further questions regarding what information is required in an expression of interest, please contact Patrick Moran (see **ADDRESSES**).

Criteria Used in Identifying Successful Applicants

Applicants demonstrating the greatest benefits to the United States through their intended operations will be most successful. Such benefits may include:

• The use of U.S. vessels and crew to harvest fish in the NAFO Regulatory Area;

• Positive impacts on U.S. employment as a result of the fishing, transport, or processing operations;

• Use of U.S. processing facilities;

• Transport, marketing, and sales of product within the U.S.; and

• Other ancillary demonstrable benefits to U.S. businesses as a result of the fishing operation.

Other factors we may consider include, but are not limited to: A documented history of successful fishing operations in NAFO or other similar fisheries; the history of compliance by the vessel with the NAFO CEM or other domestic and international regulatory requirements, including potential disqualification of an applicant with repeated compliance issues; and for those applicants without NAFO or other international fishery history, a description of demonstrated harvest, processing, marketing, and regulatory compliance within domestic fisheries.

To ensure equitable access by U.S. fishing interests, we may provide additional guidance or procedures, or we may issue regulations designed to allocate fishing interests to one or more U.S. applicants from among qualified applicants. After reviewing all requests for allocations submitted, we may also decide not to grant any allocations if it is determined that no requests adequately meet the criteria described in this notice.

Notification of Selected Vessels in the 2024 NAFO Fisheries

We will provide written responses to all applicants notifying them of their application status and, as needed for successful applicants, allocation awards will be made as quickly as possible so that we may notify NAFO and take other necessary actions to facilitate operations in the Regulatory Area by U.S. fishing interests. Successful applicants will receive additional information from us on permit conditions and applicable regulations before starting 2024 fishing operations.

Mid-Season Allocation Adjustments

In the event that an approved U.S. entity does not, is not able to, or is not expected to fish an allocation, or part thereof, awarded to them, NMFS may reallocate to other approved U.S. entities. If requested, approved U.S. entities must provide updated fishing plans and/or schedules. A U.S. entity may not consolidate or transfer allocations without prior approval from NMFS.

Chartering a Vessel to Fish Available U.S. Allocations

Under the bilateral arrangement with Canada, the United States may enter into a chartering (or other) arrangement with a Canadian vessel to harvest the transferred yellowtail flounder. For other NAFO-regulated species listed in Annexes I.A and I.B, the United States may enter into a chartering arrangement with a vessel from any other NAFO Contracting Party. Additionally, any U.S. vessel or fishing operation may enter into a chartering arrangement with any other vessel or business from a NAFO Contracting Party. The United States and the other Contracting Party involved in a chartering arrangement must agree to the charter, and the NAFO Executive Secretary must be advised of the chartering arrangement before the commencement of any charter fishing operations. Any U.S. vessel or fishing operation interested in making use of the chartering provisions of NAFO must provide at least the following information: The name and registration number of the U.S. vessel; a copy of the charter agreement; a detailed fishing plan; a written letter of consent from the applicable NAFO Contracting Party; and the date from which the vessel is authorized to commence fishing; and the duration of the charter (not to exceed 6 months).

Expressions of interest using another NAFO Contracting Party vessel under charter should be accompanied by a detailed description of anticipated benefits to the United States, as described above. Additional detail on chartering arrangements can be found in Article 26 of the CEM (*https://www.nafo.int/Fisheries/Conservation*).

Any vessel from another Contracting Party wishing to enter into a chartering arrangement with the United States must be in full current compliance with the requirements outlined in the NAFO Convention and CEM. These requirements include, but are not limited to, submission of the following reports to the NAFO Executive Secretary:

• Notification that the vessel is authorized by its flag state to fish within the NAFO Regulatory Area during 2024;

• Provisional monthly catch reports for all vessels of that NAFO Contracting Party operating in the NAFO Regulatory Area;

• Daily catch reports for each day fished by the subject vessel within the Regulatory Area;

• Observer reports within 30 days following the completion of a fishing trip; and

• An annual statement of actions taken by its flag state to comply with the NAFO Convention.

The United States may also consider the vessel's previous compliance with NAFO bycatch, reporting, and other provisions, as outlined in the NAFO CEM, before authorizing the chartering arrangement.

Transfer of U.S. Quota Allocations to Another NAFO Party

Under NAFO rules in effect for 2024, the United States may transfer fishing opportunities by mutual agreement with another NAFO Contracting Party and with prior notification to the NAFO Executive Secretary. An applicant may request to arrange for any of the previously described U.S. opportunities to be transferred to another NAFO party, although such applications will likely be given lesser priority than those that involve more direct harvesting or processing by U.S. entities. Applications to arrange for a transfer of U.S. fishing opportunities should contain a letter of consent from the receiving NAFO Contracting Party, and should also be

accompanied by a detailed description of anticipated benefits to the United States. As in the case of chartering operations, the United States may also consider a NAFO Contracting Party's previous compliance with NAFO bycatch, reporting, and other provisions, as outlined in the NAFO CEM, before entering agreeing to a transfer.

Receiving a Transfer of NAFO Quota Allocations From Another NAFO Party

Under NAFO rules in effect for 2024, the United States may receive transfers of additional fishing opportunities from other NAFO Contracting Parties. We are required to provide a letter consenting to such a transfer and must provide notice to the NAFO Executive Secretary. In the event that an applicant is able to arrange for the transfer of additional fishing opportunities from another NAFO Contracting Party to the United States, the U.S. may agree to facilitate such a transfer. However, there is no guarantee that if an applicant has facilitated the transfer of quota from another Contracting Party to the United States, such applicant will receive authorization to fish for such quota. If quota is transferred to the United States, we may need to solicit new applications for the use of such quota. All applicable NAFO requirements for transfers must be met. As in the case of chartering operations, the United States may also consider a NAFO Contracting Party's previous compliance with NAFO bycatch, reporting, and other provisions, as outlined in the NAFO CEM, before agreeing to accept a transfer. Any fishing quota or other harvesting opportunities received via this type of transfer are subject to all U.S and NAFO rules as detailed below.

For more details on NAFO requirements for chartering and transferring NAFO allocations, contact Patrick Moran (see **ADDRESSES**).

Fishing in the NAFO Regulatory Area

U.S. applicant vessels must be in possession of, or obtain, a valid HSFCA permit, which is available from the NMFS Greater Atlantic Regional Fisheries Office. All permitted vessels must comply with any conditions of this permit and all applicable provisions of the Convention on Cooperation in the Northwest Atlantic Fisheries and the CEM. We reserve the right to impose additional permit conditions that ensure compliance with the NAFO Convention and the CEM, the Magnuson-Stevens Fishery Conservation and Management Act, and any other applicable law.

The CEM provisions include, but are not limited to:

- Maintaining a fishing logbook with NAFO-designated entries (Annex II.A and Article 28);
- Adhering to NAFO hail system requirements (Annexes II.D and II.F; Article 28);
- Carrying an approved onboard observer for each trip consistent with requirements of Article 30;
- Maintaining and using a functioning, autonomous vessel monitoring system authorized by issuance of the HSFCA permit as required by Articles 29 and 30; and
- Complying with all relevant NAFO CEM requirements, including minimum fish sizes, gear, bycatch retention, and per-tow move on provisions for exceeding bycatch limits in any one haul/set.

Further details regarding U.S. and NAFO requirements are available from the NMFS Greater Atlantic Regional Fisheries Office, and can also be found in the NAFO CEM on the internet (*https://www.nafo.int/Fisheries/Conservation*).

Vessels issued valid HSFCA permits under 50 CFR part 300 are exempt from certain domestic fisheries regulations governing fisheries in the Northeast United States found in 50 CFR part 648. These exemptions are conditional on the following requirements: The vessel operator has a letter of authorization issued by the Regional Administrator on board the vessel; for the duration of the trip, the vessel fishes, except for transiting purposes, exclusively in the NAFO Regulatory Area and does not harvest fish in, or possess fish harvested in, or from, the U.S. EEZ; when transiting the U.S. EEZ, all gear is properly stowed and not available for immediate use as defined under § 648.2; and the vessel operator complies with the provisions, conditions, and restrictions specified on the HSFCA permit and all NAFO CEM while fishing in the NAFO Regulatory Area.

Dated: April 19, 2024.

Alexa Cole,

Office of International Affairs, Trade, and Commerce, National Marine Fisheries Science.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Availability of Final Evaluation Findings of State Coastal Management Programs and National Estuarine Research Reserves

AGENCY: Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration, Department of Commerce.

ACTION: Notice of availability.

SUMMARY: Notice is hereby given of the availability of final evaluation findings for seven State and territory coastal management programs (*i.e.,* Alabama, Connecticut, Guam, Michigan, Ohio, Texas, and Virginia), and four national estuarine research reserves (*i.e.,* Heʻeia, Grand Bay, Narragansett Bay, and Waquoit Bay), which were prepared pursuant to sections 312 and 315 of the Coastal Zone Management Act (CZMA).

ADDRESSES: Copies of these final evaluation findings may be found at *https://coast.noaa.gov/czm/evaluations/evaluation_findings/index.html* or by submitting a written request to Michael Migliori at *Michael.Migliori@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Michael Migliori, Lead Evaluator, NOAA Office for Coastal Management, by phone at (443) 332–8936 or email at *Michael.Migliori@noaa.gov.*

SUPPLEMENTARY INFORMATION: The NOAA Office for Coastal Management has completed the coastal zone management program final evaluation findings for the States of Alabama, Connecticut, Michigan, Ohio, Texas, and Virginia and the Territory of Guam. The States and territory were found to be implementing and enforcing their federally approved coastal zone management programs, addressing the national coastal management objectives identified in CZMA section 303(2), and adhering to the programmatic terms of their financial assistance awards. In addition, the NOAA Office for Coastal Management has completed the final evaluation findings for Heʻeia, Grand Bay, Narragansett Bay, and Waquoit Bay National Estuarine Research Reserves. The reserves were found to be adhering to the terms of the reserves' financial assistance awards and to the programmatic requirements of the Coastal Zone Management Act, including the requirements of CZMA section 315(b)(2), and its implementing regulations.

NOAA published in the **Federal Register** notices for public meetings and

opportunities to submit public comments on the evaluation of these State coastal zone management programs and national estuarine research reserves. See 88 FR 42917 (July 5, 2023, Alabama), 87 FR 47983 (August 5, 2022, Connecticut), 88 FR 15376 (March 13, 2023, Guam), 87 FR 41665 (July 13, 2022, Michigan), 87 FR 59062 (September 29, 2022, Ohio), 87 FR 48156 (August 8, 2022, Texas), 87 FR 41673 (July 13, 2022, Virginia), 88 FR 30950 (May 15, 2023, He'eia), 88 FR 50847 (August 2, 2023, Grand Bay), 88 FR 59871 (August 30, 2023, Narragansett Bay), and 87 FR 27989 (May 10, 2022, Waquoit Bay). NOAA addressed the public comments it received in the final evaluation findings.

Authority: 16 U.S.C. 1458 and 1461(f); 15 CFR 921.40 and 923.133.

Keelin Kuipers,

Deputy Director, Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–08–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Ocean Research Advisory Panel (ORAP)

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meetings.

SUMMARY: This notice sets forth a new schedule and proposed agenda of a meeting of the Ocean Research Advisory Panel (ORAP) that could not proceed on February 26, 2024 due to technical difficulties. At this new scheduled meeting, the members will discuss issues outlined in the section on Matters to be considered.

DATES: The meeting is scheduled for May 21, 2024 from 9 a.m. to 4:30 p.m. eastern daylight time (EDT) and May 22, 2024 from 8:30 a.m. to 12:30 p.m. EDT. These times and the agenda topics described below are subject to change.

ADDRESSES: The May 21–22, 2024 meeting will be at the NOAA Fisheries Southeast Regional Office, 263 13th Ave. S St., Petersburg, FL 33701. At this meeting location, all public attendees need to bring a valid driver's license or valid Government ID to sign in at the Security desk when they arrive. The link for the webinar registration will be posted, when available, on the ORAP website: *https://www.noaa.gov/ocean-research-advisory-panel/orap-public-meetings*.

For the latest agenda please refer to the ORAP website: *https://www.noaa.gov/ocean-research-advisory-panel/orap-public-meetings*.

FOR FURTHER INFORMATION CONTACT: Viviane Silva, ORAP Designated Federal Officer (DFO), SSMC3, Room 11320, 1315 East-West Hwy., Silver Spring, MD 20910; Phone Number: 240–624–0656; Email: *DFO.orap@noaa.gov;* or visit the ORAP website at *https://www.noaa.gov/ocean-research-advisory-panel/orap-public-meetings*.

SUPPLEMENTARY INFORMATION: The Ocean Research Advisory Panel (ORAP) advises the Ocean Policy Committee (OPC) and provides independent recommendations to the Federal Government on matters of ocean policy.

Congress directed the establishment of the ORAP in Section 1055(c) of the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021 (Pub. L. 116–283), 10 U.S.C. 8933.

ORAP's responsibilities are (1) to advise the OPC on policies and procedures to implement the National Oceanographic Partnership Program; (2) to advise the OPC on matters relating to national oceanographic science, engineering, facilities, or resource requirements; (3) to advise the OPC on improving diversity, equity, and inclusion in the ocean sciences and related fields; (4) to advise the OPC on national ocean research priorities; and (5) any additional responsibilities that the OPC considers appropriate.

Status: The May 21–22, 2024 meeting will be open to public participation with a 30-minute public comment period at 3:15 p.m. EDT. The ORAP expects that public statements presented at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to a total time of three-five minutes. Written comments for the May 21–22, 2024 meeting should be received by May 10, 2024 by the ORAP DFO (*DFO.orap@noaa.gov*) to provide sufficient time for ORAP review. Written comments received by the ORAP DFO after this date will be distributed to the ORAP, but may not be reviewed prior to the meeting date.

Special Accommodations: These meetings are physically accessible to people with disabilities. Requests for special accommodations may be directed to the ORAP DFO no later than 12:00 p.m. EDT on May 10, 2024.

Matters to Be Considered: During the ORAP meeting on Dec 13–14, 2023, the Ocean Policy Committee (OPC) requested that the ORAP advise on areas of opportunity for partnership (such as through the National Oceanic Partnership Program) on the topic of emerging technology (which could include Artificial Intelligence/Machine Learning, eDNA, and similar technology) with ocean industry and other sectors over the next 5–10 years. The OPC also requested that ORAP self-select another topic to address. The ORAP members agreed that the topic of accessible, inter-operable, interdisciplinary, and trusted ocean data to meet research and user needs is critical and deserves ORAP immediate attention. At this meeting on May 21–22, 2024, ORAP members will be discussing the two OPC tasks based on an initial review of each topic conducted by ORAP members.

Meeting materials, including work products, will be made available on the ORAP website: *https://www.noaa.gov/ocean-research-advisory-panel/orap-public-meetings*.

Dated: March 29, 2024.

David Holst,

Director Chief Financial Officer/CAO, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–KD–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Alaska Region Logbook and Activity Family of Forms

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on December 5, 2023 (*88 FR 84305*), during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic & Atmospheric Administration (NOAA), Commerce.

Title: Alaska Region Logbook and Activity Family of Forms.

OMB Control Number: 0648–0213.

Form Number(s): None.

Type of Request: Regular submission (extension of a current information collection).

Number of Respondents: 255.

Average Hours per Response: Catcher Vessel Trawl DFL: 18 minutes; Catcher Vessel Longline/Pot DFL: 35 minutes; Catcher/Processor Longline/Pot DCPL: 50 minutes; Shoreside Processor Check-in/Check-out Report: 5 minutes; Mothership Check-in/Check-out Report: 7 minutes; Product Transfer Report: 20 minutes; Vessel Activity Report: 14 minutes.

Total Annual Burden Hours: 12,386 hours.

Needs and Uses: The National Marine Fisheries Service, Alaska Region (NMFS AKR), is requesting renewal of this currently approved information collection that consists of paper logbooks and reports used for management of the groundfish fisheries in the Bering Sea and Aleutian Islands Management Area (BSAI) and the Gulf of Alaska, management of the Individual Fishing Quota halibut and sablefish fisheries, and management of the BSAI Crab Rationalization Program crab fisheries.

One change has been made to this information collection. The text for one data field on the Product Transfer Report form has been clarified to include that it collects the shipper's Federal Processor Permit number. This change is necessary to make the form consistent with the form's instructions and with 50 CFR 679.5(g)(4)(ii), which requires the shipper's Federal Fisheries Permit number or Federal Processor Permit number to be included on the report. This does not change the respondents, responses, or burden for this report.

NMFS AKR manages the groundfish and crab fisheries in the exclusive economic zone (EEZ) of the BSAI and the groundfish fisheries of the Gulf of Alaska under fishery management plans (FMPs) for the respective areas. The North Pacific Fishery Management Council prepared, and NMFS approved, the FMPs under the authority of the Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. 1801 *et seq.* Regulations implementing the FMPs appear at 50 CFR parts 679 and 680. Regulations for the logbooks and reports in this information collection are at 50 CFR 679.5.

The information collected through the paper logbooks and reports promotes the goals and objectives of the FMPs, the Magnuson-Stevens Fishery Conservation and Management Act, and other applicable laws. The collection of reliable data is essential to the effective conservation, management, and scientific understanding of the fishery resources.

Collecting information from fishery participants is necessary to promote successful management of groundfish, crab, Pacific halibut, and salmon resources. A comprehensive information system that identifies the participants and monitors their fishing activity is necessary to enforce the management measures and prevent overfishing. An information system is also needed to measure the consequences of management controls. This collection supports an effective monitoring and enforcement system with information that includes identification of the participating vessels, operators, dealers, and processors; location of the fishing activity; timeframes when fishing and processing is occurring; and shipment and transfer of fishing products.

Shoreside processors, stationary floating processors, and motherships receiving EEZ-caught fish and all vessels of the United States harvesting EEZ fish are required to hold a Federal permit and thus comply with reporting requirements per CFR 679.5. The data collected are used for making in-season and inter-season management decisions that affect the groundfish resources and the fishing industry that uses them.

This information collection contains four components: Paper logbooks, vessel activity reports, check-in/check-out reports, and product transfer reports. Daily logbooks provide data about the location and timing of fishing effort, as well as discard information of prohibited species. NOAA Office for Law Enforcement (OLE) and the United States Coast Guard (USCG) use logbook information during vessel boarding and site visits to ensure conservation of groundfish, compliance with regulations, and reporting accuracy by the fishing industry. The logbooks are also an important source of information for NMFS to determine where and when fishing activity occurs and the number of sets and hauls.

Vessel activity reports provide information about fish or fish product on board a vessel when it crosses the boundary of the EEZ off Alaska or crosses the U.S.—Canada international boundary between Alaska and British Columbia. NOAA OLE and USCG boarding officers use this information to audit and separate product inventory when boarding a vessel. Check-in/check-out reports provide information on participation by processors and motherships in the groundfish fisheries. The check-in/check-out information is used by NMFS in-season managers to monitor the fishing capacity and effort in fishery allocations and quotas. Additionally, NOAA OLE agents use this information to track commercial business activity and ensure accurate accountability and proper reporting is being performed.

Product transfer reports provide information on the volume of groundfish disposed of by persons buying it from the harvesters. The product transfer report is an important enforcement document and provides an important check on buyer purchase reports. Information collected on product transfer reports is used by NOAA OLE to verify the accuracy of reported shipments through physical inspections. NOAA OLE uses the product transfer report to monitor movement of product in and out of the processor on a timely basis.

Affected Public: Individuals or households; Business or other for-profit organizations.

Frequency: Quarterly; On Occasion; Daily.

Respondent's Obligation: Mandatory.

Legal Authority: Magnuson-Stevens Fishery Conservation and Management Act.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0213.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; West Coast Region Groundfish Trawl Fishery Monitoring and Catch Accounting Program

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on February 9, 2024, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic & Atmospheric Administration (NOAA), Commerce.

Title: West Coast Region Groundfish Trawl Fishery Monitoring and Catch Accounting Program.

OMB Control Number: 0648–0619.

Form Number(s): None.

Type of Request: Regular submission (extension of a current information collection).

Number of Respondents: 153.

Average Hours per Response: For 5 existing observer providers: 2 hours for preparation and submission of the annual observer provider permit renewal application. For 1 new observer provider: 10 hours for observer provider permit application preparation and submission. For 1 observer provider: 4 hours for a written response and submission of an appeal if an observer provider permit is denied. For 45 catch monitors: 1 hour for submission of qualifications to work as a catch monitor. For 5 catch monitors: 4 hours for a written response and submission of an appeal if a catch monitor permit is denied. For 16 vessels in the Mothership or Catcher/Processor fleet, 30 minutes or less for satisfying requirements for use of at-sea scales, including daily testing reports (30 minutes), daily catch and cumulative weight reports (10 minutes), audit trail (1 minute), calibration log (2 minutes), and fault log (3 minutes).

Total Annual Burden Hours: 447 hours.

Needs and Uses: This request is for extension of the current collection for the West Coast Region Groundfish Trawl Fishery Monitoring and Catch Accounting Program. In January 2011, the National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service (NMFS) implemented a trawl rationalization program, a catch share program, for the Pacific coast groundfish fishery's trawl fleet. The program was developed through Amendment 20 to the Groundfish Fishery Management Plan (FMP), under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*) and consists of an individual fishing quota (IFQ) program for the shorebased trawl fleet (including whiting and non-whiting fisheries); and cooperative (coop) programs for the at-sea mothership (MS) and catcher/processor (C/P) trawl fleets (whiting only). Fixed allocations to the limited entry trawl fleet were developed through a parallel process with Amendment 21 to the FMP. The regulations implementing the program were effective January 1, 2011; all of the necessary tracking systems to make the program operational became active on January 11, 2011, the date fishing began under the new program. Since that time, the Council and NMFS have been addressing implementation issues as they arise. To achieve individual accountability for catch and bycatch and track total catch, the shorebased IFQ Program is subject to 100 percent monitoring both at-sea and dockside. In addition to 100 percent monitoring at-sea, motherships and catcher/processors are subject to flow scale requirements that include daily testing, reporting, and an annual inspection.

Affected Public: Business or other for-profit organizations.

Frequency: Reporting on occasion, daily, weekly, or annually.

Respondent's Obligation: Mandatory.

Legal Authority: Magnuson-Stevens Fishery Conservation and Management Act. US Code 16 U.S.C. 1801 *et seq.* And CFR Citation 50 CFR 660.15

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0619.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Science Advisory Board

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meetings.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Science Advisory Board (SAB). The members will discuss issues outlined in the section on Matters to be Considered.

DATES: The meeting is scheduled for June 18, 2024, from 1 p.m. to 5 p.m. eastern standard time (EST). The time and the agenda topics described below are subject to change.

ADDRESSES: The meeting will be held virtually. The link for the webinar registration will be posted, when available, on the SAB website: *https://sab.noaa.gov/current-meetings/.*

For the latest agenda please refer to the SAB website: *http://sab.noaa.gov/SABMeetings/.*

FOR FURTHER INFORMATION CONTACT: Casey Stewart, Executive Director, SSMC3, Room 11360, 1315 East-West Hwy., Silver Spring, MD 20910; Phone Number: 240–381–0833; Email: *noaa.scienceadvisoryboard@noaa.gov;* or visit the SAB website at *https://sab.noaa.gov/current-meetings/.*

SUPPLEMENTARY INFORMATION: The NOAA Science Advisory Board (SAB) was established by a Decision Memorandum dated September 25, 1997, and is the only Federal Advisory Committee with responsibility to advise the Under Secretary of Commerce for Oceans and Atmosphere on strategies for research, education, and application of science to operations and information services. SAB activities and advice provide necessary input to ensure that National Oceanic and Atmospheric Administration (NOAA) science programs are of the highest quality and

provide optimal support to resource management.

Status: The June 18, 2024, meeting will be open to public participation with a 10-minute public comment period at 4:20 p.m. EST on June 18, 2024. The SAB expects that public statements presented at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to a total time of three minutes. Written comments for the June 18, 2024 meeting should be received by the SAB Executive Director's Office (*noaa.scienceadvisoryboard@noaa.gov*) by June 13, 2024 to provide sufficient time for SAB review. Written comments received by the SAB Executive Director after these dates will be distributed to the SAB, but may not be reviewed prior to the meeting date.

Special Accommodations: The meeting is virtual. Requests for special accommodations may be directed to the Executive Director no later than 12 p.m. on June 04, 2024.

Matters to Be Considered: The meeting on June 18, 2024, will include the following topics: (1) the SAB Consent Calendar, (2) Working Group Updates, (3) ngGong Response, (4) NOAA Response to SAB and TSTAP Statement on National Risk Assessment, (5) NOAA Response to White Paper on Air Quality in a Changing Climate: NOAA's Role, (6) NOAA Response to SAB Climate Working Group (CWG) White Paper on Climate Information Needs for 5–10 Year Hazard Mitigation Planning Cycles, and (7) Business Develop Working Group Update.

Meeting materials, including work products, will also be available on the SAB website: *https://sab.noaa.gov/current-meetings/current-meeting-documents/*.

David Holst,

Chief Financial Officer/Administrative Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–KD–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Determination Under the Textile and Apparel Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement ("CAFTA–DR")

AGENCY: The Committee for the Implementation of Textile Agreements.

ACTION: Determination to add a product in unrestricted quantities to Annex 3.25 of the CAFTA–DR.

SUMMARY: The Committee for the Implementation of Textile Agreements ("CITA") has determined that certain double-knit jacquard fabric, as specified below, is not available in commercial quantities in a timely manner in the CAFTA–DR countries. The product is added to the list in Annex 3.25 of the CAFTA–DR in unrestricted quantities.

DATES: *Applicable Date:* April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Laurie Mease, Office of Textiles and Apparel, U.S. Department of Commerce, 202–482–2043 or *Laurie.Mease@trade.gov.*

For Further Information Online: https://otexaprod.trade.gov/otexacapublicsite/requests/cafta under "Approved Requests," File Number: CA2024001.

SUPPLEMENTARY INFORMATION:

Authority: The CAFTA–DR; Section 203(o)(4) of the Dominican Republic-Central America-United States Free Trade Agreement Implementation Act ("CAFTA–DR Implementation Act"), Public Law 109–53; the Statement of Administrative Action accompanying the CAFTA–DR Implementation Act; and Presidential Proclamation 7987 (February 28, 2006).

Background: The CAFTA–DR provides a list in Annex 3.25 for fabrics, yarns, and fibers that the Parties to the CAFTA–DR have determined are not available in commercial quantities in a timely manner in the territory of any Party. The CAFTA–DR provides that this list may be modified pursuant to Article 3.25.4, when the United States determines that a fabric, yarn, or fiber is not available in commercial quantities in a timely manner in the territory of any Party. *See* Annex 3.25 of the CAFTA–DR; *see also* section 203(o)(4)(C) of the CAFTA–DR Implementation Act.

The CAFTA–DR Implementation Act requires the President to establish procedures governing the submission of a request and providing opportunity for interested entities to submit comments and supporting evidence before a commercial availability determination is made. In Presidential Proclamation 7987, the President delegated to CITA the authority under section 203(o)(4) of the CAFTA–DR Implementation Act for modifying the Annex 3.25 list. Pursuant to this authority, on September 15, 2008, CITA published modified procedures it would follow in considering requests to modify the Annex 3.25 list of products determined to be not commercially available in the territory of any Party to the CAFTA–DR (*Modifications to Procedures for Considering Requests Under the Commercial Availability Provision of the Dominican Republic-Central America-United States Free Trade Agreement,* 73 FR 53200) ("CITA's Procedures").

On March 14, 2024, CITA received a Commercial Availability Request ("Request") from Lacoste for certain double-knit jacquard fabric, as specified below. On March 18, in accordance with CITA's Procedures, CITA notified interested parties of the Request, which was posted on the dedicated website for CAFTA–DR Commercial Availability proceedings. In its notification, CITA advised that any Response with an Offer to Supply ("Response") must be submitted by March 28, and any Rebuttal to a Response ("Rebuttal") must be submitted by April 3, in accordance with sections 6 and 7 of CITA's Procedures.

No interested entity submitted a Response to the Request advising CITA of its objection to the Request with an offer to supply the subject product.

In accordance with section 203(o)(4)(C) of the CAFTA–DR Implementation Act, and section 8(c)(2) of CITA's Procedures, as no interested entity submitted a Response objecting to the Request and providing an offer to supply the subject product, CITA has determined to add the specified fabric to the list in Annex 3.25 of the CAFTA–DR.

The subject product has been added to the list in Annex 3.25 of the CAFTA–DR Agreement in unrestricted quantities. A revised list has been posted on the dedicated website for CAFTA–DR Commercial Availability proceedings, at *https://otexaprod.trade.gov/otexacapublicsite/shortsupply/cafta.*

Specifications: Certain Double-Knit Jacquard Fabric

HTS: 6006.33
Fabric Type: Polyester/Cotton/Nylon Double Face Jacquard Knitted Fabric
Fiber Content: 55% to 65% Polyester/30% to 40% Cotton/3% to 6% Nylon
Yarn Size:
  Face: 100% Polyester Filament yarn 100 to 200 Denier
  Tie: 100% Nylon 10 to 40 Denier
  Back: 100% Cotton 20/1 to 34/1
Fabric Weight:
  Metric: 200–340 GM2
  English: 5.8–10.03 ounces per square yard
Weave Type: Double Knit Jacquard

Fabric Width:
Metric: 152–195 cm
English: 59.8–76.8 inches
Finish: Yarn Dye of Various Color

Remarks: The yarn size designations describe a range of yarn specifications for yarn before knitting, dyeing and finishing of the fabric. They are intended as specifications to be followed by the mills in sourcing yarn used to produce the fabric. Dyeing, finishing, and knitting can alter the characteristic of the yarn as it appears in the finished fabric. This specification therefore includes yarns appearing in the finished fabric as finer or coarser than the designated yarn sizes provided that the variation occurs after processing of the greige yarn and production of the fabric. The specifications for the fabric apply to the fabric itself prior to cutting and sewing of the finished garment. Such processing may alter the measurements.

Jennifer Knight,
Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–P

COMMODITY FUTURES TRADING COMMISSION

Sunshine Act Meetings

TIME AND DATE: 9:30 a.m. EDT, Monday, April 29, 2024.

PLACE: CFTC Headquarters Conference Center, Three Lafayette Centre, 1155 21st Street NW, Washington, DC.

STATUS: Open.

MATTERS TO BE CONSIDERED: The Commodity Futures Trading Commission (''Commission'' or ''CFTC'') will hold this meeting to consider the following matters:

- *Final Rule:* Capital and Financial Reporting Requirements for Swap Dealers and Major Swap Participants; and
- *Final Rule:* Adopting Amendments to the Large Trader Reporting Rules for Futures and Options.

The agenda for this meeting will be available to the public and posted on the Commission's website at *https://www.cftc.gov.* Members of the public are free to attend the meeting in person, or have the option to listen by phone or view a live stream. Instructions for listening to the meeting by phone and connecting to the live video stream will be posted on the Commission's website.

In the event that the time, date, or place of this meeting changes, an announcement of the change, along with the new time, date, or place of the meeting, will be posted on the Commission's website.

CONTACT PERSON FOR MORE INFORMATION: Christopher Kirkpatrick, Secretary of the Commission, 202–418–5964.

Authority: 5 U.S.C. 552b.

Dated: April 22, 2024.

Christopher Kirkpatrick,
Secretary of the Commission.

BILLING CODE 6351–01–P

CONSUMER FINANCIAL PROTECTION BUREAU

Consumer Advisory Board Meeting

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice of public meeting.

SUMMARY: Under the Federal Advisory Committee Act (FACA), this notice sets forth the announcement of a public meeting of the Consumer Advisory Board (CAB or Board) of the Consumer Financial Protection Bureau (CFPB or Bureau). The notice also describes the functions of the Board.

DATES: The meeting date is Wednesday, May 15, 2024, from approximately 10:30 a.m. to 1:00 p.m., eastern time. This meeting will be held virtually and is open to the general public. Members of the public will receive the agenda and dial-in information when they RSVP.

FOR FURTHER INFORMATION CONTACT: Kim George, Outreach and Engagement Associate, Advisory Board and Councils, External Affairs Division, at 202–450–8617, or email: *CFPB_CABandCouncilsEvents@cfpb.gov.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 3 of the charter of the Board states that: The purpose of the CAB is outlined in section 1014(a) of the Dodd-Frank Act, which states that the CAB shall ''advise and consult with the Bureau in the exercise of its functions under the Federal consumer financial laws'' and ''provide information on emerging practices in the consumer financial products or services industry, including regional trends, concerns, and other relevant information.''

To carry out the CAB's purpose, the scope of its activities shall include providing information, analysis, and recommendations to the CFPB. The CAB will generally serve as a vehicle for trends and themes in the consumer finance marketplace for the CFPB. Its objectives will include identifying and assessing the impact on consumers and other market participants of new, emerging, and changing products, practices, or services.

II. Agenda

The CAB will discuss broad policy matters related to the Bureau's Unified Regulatory Agenda and general scope of authority.

If you require any additional reasonable accommodation(s) in order to attend this event, please contact the Reasonable Accommodations team at *CFPB_ReasonableAccommodations@cfpb.gov* 48 hours prior to the start of this event.

Written comments will be accepted from interested members of the public and should be sent to *CFPB_CABandCouncilsEvents@cfpb.gov,* a minimum of seven (7) days in advance of the meeting. The comments will be provided to the CAB members for consideration. Individuals who wish to join this meeting must RSVP via this link *https://surveys.consumerfinance.gov/jfe/form/SV_ahJBv2l19gR1vwi.*

III. Availability

The Board's agenda will be made available to the public on Tuesday, May 14, 2024, via *consumerfinance.gov.*

A recording and summary of this meeting will be available after the meeting on the Bureau's website *consumerfinance.gov.*

Jocelyn Sutton,
Deputy Chief of Staff, Consumer Financial Protection Bureau.

BILLING CODE 4810–AM–P

DEPARTMENT OF DEFENSE

Department of the Army

[Docket ID: USA–2024–HQ–0006]

Proposed Collection; Comment Request

AGENCY: U.S. Army Corps of Engineers (USACE), Department of the Army, Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the USACE announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is

necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by June 24, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the U.S. Army Corps of Engineers Alaska District 2204 3rd St, Elmendorf AFB, AK 99506, ATTN: Ms. Megan Green, or call 907–753–2524.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Homer Small Boat Harbor Vessel Survey; OMB Control Number 0710–HSBH.

Needs and Uses: The Alaska District of the Corps of Engineers is currently conducting a general investigation into the feasibility of building a second harbor in Homer, Alaska. The small boat harbor which exists there currently is overcrowded, and enlarging it is not feasible given the geography of the area. This project would be intended to reduce delays and safety risks resultant from overcrowding by building a second harbor adjacent to the existing one. The purpose of this survey is to collect data crucial to estimate delay times and associated costs in the existing conditions upon which formulated alternative plans will be compared. The data collected will also inform benefits associated with project alternatives. This data collection is essential for development of an accurate model because there is no readily available data on vessel movement patterns or delays in Alaskan small boat harbors, which are generally multi-use, serving commercial and subsistence fishing, freight, recreational boaters, and others. Many of these boats do not have Automatic Identification System transponders and harbors do not keep data on vessel movements or delays.

Affected Public: Business or other for-profit; individuals or households.

Annual Burden Hours: 1,313.

Number of Respondents: 1,750.

Responses per Respondent: 1.

Annual Responses: 1,750.

Average Burden per Response: 45 minutes.

Frequency: Once.

Dated: April 19, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2024–08859 Filed 4–24–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0044]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense (Comptroller)/Chief Financial Officer, Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Finance and Accounting Service (DFAS) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by June 24, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Enterprise Standards and Solutions, Disbursing, DFAS, 8899 E 56th Street Indianapolis, IN 46249–0201, ATTN: Kellen Stout (DFAS IMCO), Phone Number: (317) 212–1801.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Statement of Claimant Requesting Replacement Check; DD Form 2660; OMB Control Number 0730–0002.

Needs and Uses: Information collection is necessary to obtain a signed statement from payee regarding non-receipt or loss of a Treasury check and request for a replacement (recertified) check. The statement acknowledges non-entitlement to both checks and consents to recoupment from future pay and allowances due if both checks are negotiated.

Affected Public: Individuals or households.

Annual Burden Hours: 2,000.

Number of Respondents: 2,000.

Responses per Respondent: 1.

Annual Responses: 2,000.

Average Burden per Response: 1 hour.

Frequency: As required.

Dated: April 19, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–HA–0043]

Proposed Collection; Comment Request

AGENCY: The Office of the Assistant Secretary of Defense for Health Affairs (OASD(HA)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Health Agency (DHA) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by June 24, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to DHA, 7700 Arlington Blvd., Falls Church, VA 22042, ATTN: Amanda Grifka, 703–681–1771.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Professional Fulfillment Index (PFI) Survey; OMB Control Number 0720–PFIS.

Needs and Uses: The PFI was developed by Stanford and collects data about healthcare professional's burnout and professional fulfillment. The DHA seeks to empower the Military Health System to address areas of opportunity around provider burnout and aims to inform leaders about the state of healthcare providers and teams with respect to the Culture of Wellness, Efficiency of Practice, and Personal Resilience. This brief survey will be completed by providers quarterly to track changes in responses over time.

Affected Public: Individuals or households.

Annual Burden Hours: 48,333.

Number of Respondents: 145,000.

Responses per Respondent: 4.

Annual Responses: 580,000.

Average Burden per Response: 5 minutes.

Frequency: Quarterly.

Dated: April 19, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2024–08856 Filed 4–24–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF EDUCATION

[Docket ID ED–2024–OUS–0014]

Request for Information (RFI) Regarding Developing a Postsecondary Student Success Award Program for Institutions of Higher Education

AGENCY: Office of the Under Secretary, U.S. Department of Education.

ACTION: Request for information.

SUMMARY: The U.S. Department of Education (Department) is requesting information in the form of written comments that include information, suggestions, and proposals regarding an award system to recognize institutions of higher education (IHEs) that serve as engines of opportunity and economic mobility by supporting all students to complete affordable credentials of value that prepare them well to participate in the workforce, their communities, and our democracy.

DATES: We must receive your comments by May 28, 2024.

ADDRESSES: Comments must be submitted via the Federal eRulemaking Portal at *www.regulations.gov.* However, if you require an accommodation or cannot otherwise submit your comments via *regulations.gov*, please contact the program contact person listed below under **FOR FURTHER INFORMATION CONTACT**. The Department will not accept comments by fax or by email, or comments submitted after the comment period closes. To ensure that the Department does not receive duplicate copies, please submit your comments only once. Additionally, please include the Docket ID at the top of your comments.

The Department strongly encourages you to submit any comments or attachments in Microsoft Word format. If you must submit a comment in Adobe Portable Document Format (PDF), the Department strongly encourages you to convert the PDF to ''print-to-PDF'' format, or to use some other commonly used searchable text format. Please do not submit the PDF in a scanned format. Using a print-to-PDF format allows the Department to electronically search and copy certain portions of your submissions to assist in the rulemaking process.

Federal eRulemaking Portal: Please go to *www.regulations.gov* to submit your comments electronically. Information on using *regulations.gov*, including instructions for finding a rule on the site and submitting comments, is available on the site under ''FAQ.''

Privacy Note: The Department's policy is to generally make comments received from members of the public available for public viewing on the Federal eRulemaking Portal at *www.regulations.gov.* Therefore, commenters should include in their comments only information about themselves that they wish to make publicly available. Commenters should not include in their comments any information that identifies other individuals or that permits readers to identify other individuals. The Department will not make comments that contain personally identifiable information (PII) about someone other than the commenter publicly available on *www.regulations.gov* for privacy reasons. This may include comments where the commenter refers to a third-party individual without using their name if the Department determines that the comment provides enough detail that could allow one or more readers to link the information to the third party. If your comment refers to a third-party individual, to help ensure that your comment is posted, please consider submitting your comment anonymously to reduce the chance that information in your comment about a third party could be linked to the third party. The Department will also not make comments that contain threats of harm to another person or to oneself available on *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Jennifer Engle, U.S. Department of Education, 400 Maryland Avenue SW, room 5C136, Washington, DC 20202. Telephone: (202) 987–0420. Email: *jennifer.engle@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION: For purposes of this award, the Department considers postsecondary student success to include providing access to an affordable education including to underserved populations,[1] supporting students through to completion of credentials of value, and helping students navigate to career pathways that improve their lives through economic opportunity and mobility.

I. Background

A college education can serve as a ladder to socioeconomic mobility and lifelong success. Postsecondary education is associated with lower rates of unemployment, higher levels of earnings, better health, and greater community engagement.[2] Higher education—particularly at certain broad access colleges and universities that enroll a significant share of students from low-income backgrounds and serve them well—can dramatically increase students' socioeconomic mobility, launching students from the lowest-income households into lives with economic security,[3] helping to build a strong middle class that contributes to local communities and the broader economy.

However, at too many IHEs, a credential remains out of reach for many of their students. Just one in three first-time students at two-year colleges, and only two in three first-time students at four-year colleges, graduate from the first institution they attend within three and six years respectively.[4] Further,

[1] The definition of ''underserved student,'' for the purposes of this award, aligns with the definition of this term in the Secretary's Supplemental Priorities and Definitions for Discretionary Grant Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities). This may include: (a) a student who is living in poverty or is served by schools with high concentrations of students living in poverty; (b) a student of color; (c) a student who is a member of a federally recognized Indian Tribe; (d) an English learner; (e) a student with a disability; (f) a student experiencing homelessness or housing insecurity; (g) a lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+) student; (h) a student without documentation of immigration status; (i) a pregnant, parenting, or caregiving student; (j) a student impacted by the justice system, including a formerly incarcerated student; (k) a student who is the first in their family to attend postsecondary education; (l) a student enrolling in or seeking to enroll in postsecondary education for the first time at the age of 20 or older; (m) a student who is working full-time while enrolled in postsecondary education; (n) a student who is enrolled in or is seeking to enroll in postsecondary education who is eligible for a Pell Grant; (o) an adult student in need of improving their basic skills or an adult student with limited English proficiency; and/or (p) a military- or veteran- connected student.

Continued

despite 80 percent of community college students (aspiring to transfer to a four-year institution to earn bachelor's degrees, only about a third of community college students transfer to four-year institutions. Fewer than half of those students complete bachelor's degrees within six years.[5] Students from low-income backgrounds, first-generation students, students of color, English language learners, adult students, students with disabilities, and other students who have been historically underserved in postsecondary education often fare worse, resulting in double-digit gaps in graduation rates for some students of color (*e.g.,* 43 and 46 percent of Native American and Black students respectively graduate within six years compared to 68 percent of white students in four-year institutions) and some students from low-income backgrounds (*e.g.,* 49 percent of first-time, full-time Pell Grant recipients in public institutions graduate within eight years compared to 66 percent of non-Pell students)in comparison to their peers.[6]

Many students who leave college unable to earn a credential also hold debt from financing their postsecondary education. The consequences of stopping or dropping out can be significant, particularly for these borrowers. Students who leave college with educational debt, but no credential, are far more likely to default on their student loans, even when their balances are relatively low.[7] Recent Department data show that 68 percent of students in default on their Federal student loans did not complete their program.[8] Without affordable credentials and degrees that lead to good jobs, former students may not recoup the time and money they have invested in their schooling, not to mention the public investment in financing their education. Student debt can also negatively impact the economy by reducing consumption in homeownership and everyday goods and services.[9]

II. Postsecondary Education Success Efforts

Many IHEs, non-profit organizations, systems of higher education, and States have invested in postsecondary education success efforts and have improved transfer and graduation rates for all students, while enrolling students reflective of the communities they serve—whether locally, statewide, or nationally—including underserved populations. These efforts pay dividends for the students earning credentials of value—affordable certificates and degrees that lead to economic opportunity—as well as for their regional economies and communities.

For instance, studies show the importance of early support from institutions like help completing the Free Application for Federal Student Aid (FAFSA®) and well-designed financial aid programs, including high-quality free community college programs, in promoting student success.[10] Other studies show that the adoption of co-requisite (as opposed to pre-requisite) remediation programs and reforming placement policies can help ensure students successfully complete college-level coursework needed for graduation while simultaneously addressing opportunity gaps in access to courses, programs, and other supports that strengthen students' English or math skills,[11] which may result from disparities in their secondary school experiences or delays in college-going to pursue employment. Similarly, research indicates that comprehensive, integrated academic advising—including wraparound support services such as transportation and child care as well as accessibility services—can be critically important to ensuring students complete academic coursework and graduate at higher rates.[12] Research also shows that students with disabilities who access universally-available or disability-related supports are more likely to persist in their college program.[13] Colleges and universities that have improved student outcomes often go beyond implementing specific interventions by instituting more comprehensive, data-driven transformation efforts.[14] Research consistently shows that implementing these kinds of evidence-based practices can improve postsecondary success rates, which is why the Department

wants to shine a spotlight on the institutions and their partners that are already doing exceptional work to ensure successful outcomes for all of their students.

III. Solicitation of Comments: Developing a Postsecondary Student Success Award Program for Institutions of Higher Education

The Department is interested in developing an award system to recognize IHEs [15] that are supporting success across all of their students by conferring affordable credentials of value that lead to economic success while enrolling student bodies reflective of their communities—including students from underserved populations. The Department requests comments on how to understand institutions' efforts to ensure success in postsecondary education in order to evaluate and select institutions to receive the award. We seek feedback on what information the Department should request or require of institutions that are invited to apply and what information we should use to determine which institutions should be selected to receive the award:

1. What metrics should the Department use and how should the Department measure performance on those metrics to determine both which institutions should be eligible to apply for and which should be selected to receive the award? The Department is particularly interested in—

- Which data and data sources to use related to access, transfer and completion, and post-college outcomes (*e.g.,* preparing students for high-demand occupations that pay a livable wage or further training and education, providing economic value or affordability in relation to earnings);
- What benchmarks to use to measure performance and progress on these metrics and what methods to use to weigh performance across these metrics to assess eligibility and confer awards; and
- What contextual factors and operational structures (*e.g.,* selectivity) should be considered alongside these metrics including whether and how to categorize institutions for purposes of award eligibility and receipt;
- Which categories to use to disaggregate student data especially for underserved students (*e.g.,* economic status, first-generation status, race/ethnicity, English learner status, disability status).

2. How should applicant institutions demonstrate they are using data to drive success for all students while enrolling a student body reflective of the communities they serve, including underserved populations? The Department is particularly interested in understanding how the application for the award can show:

- Which data and research have been used to identify the institutional policies and practices needed to ensure success for all students and how data and research have been used to set goals and to implement and evaluate evidence-based solutions;
- Which data are used by institutional leaders, faculty, and staff to monitor progress toward success goals and what processes and structures are used to ensure data are well understood and used broadly and frequently across the campus community to ensure student success, especially for underserved populations;
- How institutions have assessed and addressed gaps in their data systems, tools, and capacity to support student success efforts and use these data to support systems of continuous improvement, including whether institutions are using more robust and real-time data than available from public data systems (*e.g.,* IPEDS) such as leading indicators of student success based on course-level data (*e.g.,* credit accumulation, gateway course completion); predictive analytics based on student engagement; unmet financial need; retention, transfer, and completion rates inclusive of all students; time and credits to credential or upward transfer; upward transfer rates and post-transfer success rates; pursuit of graduate education; and earnings, debt, and loan repayment by program and completion status; and
- How data are shared with other education institutions in the State or region, including those in the preK–12 system (including alternative preparation programs) and IHEs from which and to which students transfer, and with relevant State agencies, to inform coordinated student success efforts.

3. How should applicant institutions demonstrate a commitment by senior leadership, including the governing board of the institution (where applicable), to support economic mobility through campus-wide student success efforts? The Department is particularly interested in understanding how the application can show:

- That the vision, mission, and strategic goals of the institutions reflect an actualized commitment to shared success for all students, including populations that may be underserved by postsecondary education;
- That the efforts and strategies undertaken by the institution create a shared value system and cross-campus culture supportive of an institutional commitment to student success;
- That the organization and staffing of the institution ensure a continued focus on maintaining or increasing success rates for all students, including through faculty and staff selection, onboarding, training, and development, and that faculty are well integrated into, and committed to, student success efforts;
- That the institution has established effective external partnerships by the institution to help support success efforts; and
- That the success efforts undertaken by the institution are sustainable, both through funding and through organizational design strategies.

4. How should applicant institutions demonstrate the effectiveness of their strategies to ensure economic mobility through student success efforts? The Department is particularly interested in understanding how the application can show:

- The impact of effective implementation of interventions and strategies across all student groups leading to completion and post-college education and economic opportunity;
- The integration of such strategies with other institutional planning efforts, such as strategic plan development and renewal of accreditation processes, as well as continuous improvement efforts; and
- The rigorous evaluation of the strategies implemented by the institution and the dissemination of such evaluations to support knowledge-building in the field as well as transparency regarding student outcomes, such as through public dashboards.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

[Docket No. 24–28–LNG]

Sabine Pass Liquefaction, LLC; Application for Blanket Authorization To Export Previously Imported Liquefied Natural Gas to Non-Free Trade Agreement Countries on a Short-Term Basis

AGENCY: Office of Fossil Energy and Carbon Management, Department of Energy.

ACTION: Notice of application.

SUMMARY: The Office of Fossil Energy and Carbon Management (FECM) of the Department of Energy (DOE) gives notice (Notice) of receipt of an application (Application), filed on March 21, 2024, by Sabine Pass Liquefaction, LLC (SPL or Sabine Pass). SPL requests blanket authorization to export liquefied natural gas (LNG) previously imported into the United States by vessel from foreign sources in a volume equivalent to 500 billion cubic feet (Bcf) of natural gas on a cumulative basis over a two-year period. SPL filed the Application under the Natural Gas Act (NGA).

DATES: Protests, motions to intervene, or notices of intervention, as applicable, requests for additional procedures, and written comments are to be filed as detailed in the Public Comment Procedures section no later than 4:30 p.m., Eastern time, May 28, 2024.

ADDRESSES:

Electronic Filing by email (Strongly encouraged): fergas@hq.doe.gov.

Postal Mail, Hand Delivery, or Private Delivery Services (e.g., FedEx, UPS, etc.): U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Fossil Energy and Carbon Management, Forrestal Building, Room 3E–056, 1000 Independence Avenue SW, Washington, DC 20585.

Due to potential delays in DOE's receipt and processing of mail sent through the U.S. Postal Service, we encourage respondents to submit filings electronically to ensure timely receipt.

FOR FURTHER INFORMATION CONTACT:

Jennifer Wade or Peri Ulrey, U.S. Department of Energy (FE–34), Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability, Office of Fossil Energy and Carbon Management, Forrestal Building, Room 3E–042, 1000 Independence Avenue SW, Washington, DC 20585, (202) 586–4749 or (202) 586–7893, *jennifer.wade@hq.doe.gov* or *peri.ulrey@hq.doe.gov.*

Cassandra Bernstein, U.S. Department of Energy (GC–76) Office of the Assistant General Counsel for Energy Delivery and Resilience, Forrestal Building, Room 6D–033, 1000 Independence Avenue SW, Washington, DC 20585, (240) 780–1691, *cassandra.bernstein@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: SPL requests a short-term blanket authorization to export LNG that has been previously imported into the United States from foreign sources for a two-year period commencing on June 7, 2024. SPL states that it will export the LNG from the Sabine Pass LNG Terminal located in Cameron Parish, Louisiana, to any country with the capacity to import LNG via ocean-going carrier and with which trade is not prohibited by U.S. law or policy. This includes both countries with which the United States has entered into a free trade agreement (FTA) requiring national treatment for trade in natural gas (FTA countries) and all other countries (non-FTA countries). This Notice applies only to the portion of the Application requesting authority to export the LNG to non-FTA countries pursuant to section 3(a) of the NGA, 15 U.S.C. 717b(a). SPL states that its existing blanket re-export authorization, set forth in DOE/FECM Order No. 4838 (Docket No. 22–19–LNG), is scheduled to expire on June 6, 2024. SPL further states that it does not seek authorization to export domestically produced natural gas or LNG.

SPL requests this authorization on its own behalf and as agent for other parties that hold title to the LNG at the time of export. Additional details can be found in SPL's Application, posted on the DOE website at: *https://www.energy.gov/fecm/articles/sabine-pass-liquefaction-llc-docket-no-24-28-lng.*

DOE Evaluation

In reviewing SPL's Application, DOE will consider any issues required by law or policy. DOE will consider domestic need for the natural gas, as well as any other issues determined to be appropriate, including whether the arrangement is consistent with DOE's policy of promoting competition in the marketplace by allowing commercial parties to freely negotiate their own trade arrangements. Parties that may oppose this application should comment in their responses on these issues.

The National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.,* requires DOE to give appropriate consideration to the environmental effects of its proposed decisions. No final decision will be issued in this proceeding until DOE has met its NEPA responsibilities.

Public Comment Procedures

In response to this Notice, any person may file a protest, comments, or a motion to intervene or notice of intervention, as applicable. Interested parties will be provided 30 days from the date of publication of this Notice in which to submit comments, protests, motions to intervene, or notices of intervention.

Any person wishing to become a party to the proceeding must file a motion to intervene or notice of intervention. The filing of comments or a protest with respect to the Application will not serve to make the commenter or protestant a party to this proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the Application. All protests, comments, motions to intervene, or notices of intervention must meet the requirements specified by the regulations in 10 CFR part 590, including the service requirements.

Filings may be submitted using one of the following methods:

(1) Submitting the filing electronically at *fergas@hq.doe.gov;*

(2) Mailing the filing to the Office of Regulation, Analysis, and Engagement at the address listed in the **ADDRESSES** section; or

(3) Hand delivering the filing to the Office of Regulation, Analysis, and Engagement at the address listed in the **ADDRESSES** section.

For administrative efficiency, DOE prefers filings to be filed electronically. All filings must include a reference to ''Docket No. 24–28–LNG'' or ''Sabine Pass Liquefaction Application'' in the title line.

For electronic submissions: Please include all related documents and attachments (*e.g.,* exhibits) in the original email correspondence. Please do not include any active hyperlinks or password protection in any of the documents or attachments related to the filing. All electronic filings submitted to DOE must follow these guidelines to ensure that all documents are filed in a timely manner.

The Application and any filed protests, motions to intervene, notices of intervention, and comments will be available electronically on the DOE website at *www.energy.gov/fecm/regulation.*

A decisional record on the Application will be developed through responses to this Notice by parties, including the parties' written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete understanding of the facts and issues. If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final Order may be issued based on the official record, including the Application and responses filed by parties pursuant to this Notice, in accordance with 10 CFR 590.316.

Signed in Washington, DC, on April 22, 2024.

Amy Sweeney,

Director, Office of Regulation, Analysis, and Engagement, Office of Resource Sustainability.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Savannah River Site

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Savannah River Site. The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Monday, May 20, 2024; 1 p.m.–4:15 p.m. EDT; Tuesday, May 21, 2024; 9 a.m.–3:30 p.m. EDT.

ADDRESSES: The DeSoto Savannah, 15 E Liberty, Savannah, Georgia 31401. The meeting will also be streamed on YouTube, no registration is necessary; links for the livestream can be found on the following website: *https://cab.srs.gov/srs-cab.html.*

FOR FURTHER INFORMATION CONTACT: Amy Boyette, Office of External Affairs, U.S. Department of Energy (DOE), Savannah River Operations Office, P.O. Box A, Aiken, SC 29802; Phone: (803) 952–6120; or Email: *amy.boyette@srs.gov.*

SUPPLEMENTARY INFORMATION: *Purpose of the Board:* The purpose of the Board is to provide advice and recommendations concerning the following EM site-specific issues: clean-up activities and environmental restoration; waste and nuclear materials management and disposition; excess facilities; future land use and long-term stewardship. The Board may also be asked to provide advice and recommendations on any EM program components.

Tentative Agenda

Monday, May 20, 2024

Tuesday, May 21, 2024

Program Presentations
Public Comments
Board Business and Voting

Public Participation: The meeting is open to the public. To register for in-person attendance, please send an email to *srscitizensadvisoryboard@srs.gov* no later than 4 p.m. EDT on Thursday, May 16, 2024. The EM SSAB, Savannah River Site, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Amy Boyette at least seven days in advance of the meeting at the telephone number listed above. Written statements may be filed with the Board via email either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should submit their request to *srscitizensadvisoryboard@srs.gov.* Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. Comments will be accepted after the meeting, by no later than 4 p.m. EDT on Tuesday, May 28, 2024. Please submit comments to *srscitizensadvisoryboard@srs.gov.* The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make oral public comments will be provided a maximum of five minutes to present their comments. Individuals wishing to submit written public comments should email them as directed above.

Minutes: Minutes will be available by emailing or calling Amy Boyette at the email address or telephone number listed above. Minutes will also be available at the following website: *https://cab.srs.gov/srs-cab.html.*

Signing Authority: This document of the Department of Energy was signed on April 22, 2024, by David Borak, Deputy Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 22, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. DI24–1–000]

Paradigm Shift Hydro, LLC; Notice of Declaration of Intention and Soliciting Comments, Protests, and Motions To Intervene

Take notice that the following application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Declaration of Intention.

b. *Docket No:* DI24–1–000.

c. *Date Filed:* November 21, 2023.

d. *Applicant:* Paradigm Shift Hydro, LLC.

e. *Name of Project:* Johnson Canyon Energy Project.

f. *Location:* The proposed Johnson Canyon Energy Project would be located near the town of Plymouth, in Box Elder County, Utah.

g. *Filed Pursuant to:* Section 23(b)(1) of the Federal Power Act, 16 U.S.C. 817(b).

h. *Applicant Contact:* Paradigm Shift Hydro, LLC; 270 Bellevue Avenue, PMB #1053; Newport, RI 02840; Agent Contact: Jonathan Pertillo, Managing Member, Paradigm Shift Hydro, LLC; 270 Bellevue Avenue, PMB #1053; Newport, RI 02840.

i. *FERC Contact:* Jennifer Polardino, (202) 502–6437, or *Jennifer.Polardino@ferc.gov.*

j. *Deadline for filing comments, protests, and motions to intervene is:* May 20, 2024.

The Commission strongly encourages electronic filing. Please file comments, protests, and motions to intervene using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number DI24–1–000. Comments emailed to Commission staff are not considered part of the Commission record.

k. *Description of Project:* The proposed closed-loop Johnson Canyon Energy Project would consist of: (1) a 50-foot-high, 400-foot-long dam forming a 20-acre upper reservoir with a storage capacity of 1,000 acre-feet; (2) a 50-foot-high, 450-foot-long dam forming a 25-acre lower reservoir with a storage capacity of 1,250 acre-feet; (3) underground tunnels connecting the upper and lower reservoirs consisting of: (a) two, 10-foot diameter parallel pipes with a length of 7,500-feet each; (b) two 10-foot diameter, 100-foot-high vertical shafts; (c) a 25-foot diameter, 200-foot-long pump intake tunnel located in the lower reservoir ; (4) a reinforced concrete and steel powerhouse containing two 50 megawatt (MW) reversible pump-turbines for a total installed capacity of 100 MW; and (5) appurtenant facilities. The proposed project would connect to the Rocky Mountain Power system at the Josephson substation via a new 1.6-mile overhead transmission line.

When a Declaration of Intention is filed with the Federal Energy Regulatory Commission, the Federal Power Act requires the Commission to investigate and determine if the project would affect the interests of interstate or foreign commerce. The Commission also determines whether or not the project: (1) would be located on a navigable waterway; (2) would occupy public lands or reservations of the United States; (3) would utilize surplus water or water power from a government dam; or (4) would be located on a non-navigable stream over which Congress has Commerce Clause jurisdiction and would be constructed or enlarged after 1935.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, and .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Responsive Documents:* All filings must bear in all capital letters the title ''COMMENTS'', ''PROTESTS'', and ''MOTIONS TO INTERVENE'', as applicable, and the Docket Number of the particular application to which the filing refers. A copy of any Motion to Intervene must also be served upon each representative of the Applicant specified in the particular application.

p. *Agency Comments:* Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

Dated: April 18, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

[FR Doc. 2024–08779 Filed 4–24–24; 8:45 am]

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2018–0367; FRL–11867–01–OMS]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Underground Storage Tanks: Technical and Financial Requirements, and State Program Approval Procedures (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Underground Storage Tanks: Technical and Financial Requirements, and State Program Approval Procedures (EPA ICR Number 1360.18, OMB Control Number 2050–0068) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2024. Public comments were previously requested via the **Federal Register** on July 11, 2023 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 28, 2024.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OLEM–2018–0368 to EPA online using *www.regulations.gov* (our preferred method) or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Elizabeth McDermott, Office of Underground Storage Tanks, Mail Code 5401R, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–0646; email address: *mcdermott.elizabeth@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on July 11, 2023 during a 60-day comment period (88 FR 44125). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: Subtitle I of the Resource Conservation and Recovery Act (RCRA), as amended, requires that EPA develop standards for Underground Storage Tank (UST) systems, as may be necessary, to protect human health and the environment, and procedures for approving state programs in lieu of the federal program. EPA promulgated technical and financial requirements for owners and operators of USTs at 40 CFR part 280, and state program approval procedures at 40 CFR part 281. This ICR is a comprehensive presentation of all information collection requirements contained at 40 CFR parts 280 and 281.

The data collected for new and existing UST system operations and financial requirements are used by owners and operators and/or EPA or the implementing agency to monitor results of testing, inspections, and operation of UST systems, as well as to demonstrate compliance with regulations. EPA believes strongly that if the minimum requirements specified under the regulations are not met, neither the facilities nor EPA can ensure that UST systems are being managed in a manner protective of human health and the environment.

EPA uses state program applications to determine whether to approve a state program. Before granting approval, EPA must determine that programs will be no less stringent than the federal program and contain adequate enforcement mechanisms.

Form Numbers: 600–25; 7530–1.

Respondents/affected entities: Facilities that own and operate underground storage tanks (USTs), states that implement the UST programs, and tribes.

Respondent's obligation to respond: Mandatory (40 CFR part 280).

Estimated number of respondents: 193,876.

Frequency of response: Once, on occasion, annual.

Total estimated burden: 8,332,975 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: $689,689,686 (per year), includes $406,006,490 annualized capital and operation & maintenance costs.

Changes in Estimates: There is a decrease of 389,217 hours in the total estimated respondent burden hours compared with the ICR currently approved by OMB. There is a total decrease in burden hours because the overall number of underground storage tanks decreased while the requirements for each tank owner remained the same.

Courtney Kerwin,

Director, Information Engagement Division.

[FR Doc. 2024–08830 Filed 4–24–24; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2024–0139; FRL–11668–01–OCSPP]

Agency Information Collection Activities; Proposed Renewal of an Existing ICR Collection and Request for Comment; Notice of Arrival of Pesticides and Devices Under Section 17(c) of FIFRA

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA), this document announces the availability of and solicits public comment on the following Information Collection Request (ICR) that EPA is planning to submit to the Office of Management and Budget (OMB): ''Notice of Arrival of Pesticides and Devices under section 17(c) of FIFRA,'' identified by EPA ICR No. 0152.15 and OMB Control No. 2070–0020. This ICR represents a renewal of an existing ICR that is currently approved through January 31, 2025. Before submitting the ICR to OMB for review and approval under the PRA, EPA is soliciting comments on specific aspects of the information collection that is summarized in this document. The ICR and accompanying material are available in the docket for public review and comment.

DATES: Comments must be received on or before June 24, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2024–0139, through *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Carolyn Siu, Mission Support Division (7602M), Office of Program Support, Office of Chemical Safety and Pollution Prevention, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (703) 719–1649; email address: *siu.carolyn@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility.

2. Evaluate the accuracy of the Agency's estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.

3. Enhance the quality, utility, and clarity of the information to be collected.

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

II. What information collection activity or ICR does this action apply to?

Title: Notice of Arrival of Pesticides and Devices under section 17(c) of FIFRA.

EPA ICR No.: 0152.15.

OMB Control No.: 2070–0020.

ICR status: This ICR is currently approved through January 31, 2025. Under the PRA, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the Code of Federal Regulations (CFR), after appearing in the **Federal Register** when approved, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: The U.S. Customs and Border Protection (Customs) regulations at 19 CFR 12.112 require that an importer desiring to import a pesticide or device into the United States shall, prior to the shipment's arrival in the United States, submit a Notice of Arrival (NOA) of Pesticides and Devices (EPA Form 3540–1 or its Customs-authorized electronic equivalent) to EPA. Once EPA receives the NOA, EPA will determine the disposition of the shipment upon its arrival in the United States. Upon completing its review, the EPA response is sent to the importer of record or licensed customs broker, who must present the NOA to Customs upon arrival of the shipment at the port of entry. This is necessary to ensure that EPA is notified of the arrival of pesticides and pesticidal devices as required under section 17(c) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), and that EPA has the ability to examine such shipments to determine compliance with FIFRA. Customs compares entry documents for the shipment with the NOA and notifies the EPA regional office of any discrepancies. Alternatively, importers may submit NOA information electronically through Customs' Automated Commercial Environment. Most of the electronic filings are automatically processed, and an early indication is provided to the filer if the initial reporting requirements have been met and if the shipment can be released upon arrival at the port of entry. For those filings that do not meet the reporting requirements, automatic checks will be performed to notify the filer of errors.

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 26 minutes per response. Burden is defined in 5 CFR 1320.3(b).

The ICR, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized here:

Respondents/affected entities: Entities potentially affected are those that are pesticide importers, which include the following North American Industrial Classification System (NAICS) codes ranging from Commercial and Institutional Building Construction (NAICS 236220) to Pesticide and Other Agricultural Chemical Manufacturing (NAICS 325300) and even Public Administration: Executive Offices (NAICS 921110). Other business and institutions that import pesticides include Agriculture, Forestry, Fishing and Hunting (Sector 11), Wholesale Trade, (Sector 42).

Respondent's obligation to respond: Mandatory, per 40 CFR 152.25(f) and FIFRA sections 3 and 25.

Forms: EPA Form 3540–1 or its Customs-authorized electronic equivalent.

Frequency of response: On occasion.

Total estimated number of potential respondents: 92,133.

Total estimated average number of responses for each respondent: 1.

Total estimated annual burden hours: 67,723 hours.

Total estimated annual respondent costs: $5,478,039, which includes an estimated cost of $0 for capital investment or maintenance and operational costs.

III. Are there changes in the estimates from the last approval?

There is an increase of 26,843 hours in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB. This change reflects an increase in the annual number of NOAs submitted electronically through the ACE system by 75,892. There is an increase in respondent costs by $2,724,517. Cost increases are a result of changes to reflect the current wage rates. This is an adjustment.

In addition, OMB has asked the Agency to replace the format EPA has historically used for ICR Supporting Statements with the 18-question format that is used by other federal agencies and departments. The 18-question format is based on the submission instructions to agencies that appear on the OMB submission form. Although this supporting statement has been modified to reflect the 18-question format, the change in format has not changed the information collection activities or related estimated burden and costs. EPA welcomes your feedback on whether this improves the presentation of the information collection activities and related burden and costs estimates.

IV. What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another **Federal Register** document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: April 22, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

[FR Doc. 2024–08906 Filed 4–24–24; 8:45 am]

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0228; FR ID 215504]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s). Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments should be submitted on or before June 24, 2024. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contacts below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–0228.

Title: Section 80.59, Compulsory Ship Inspections and Ship Inspection Certificates, FCC Forms 806, 824, 827, and 829.

Form No.: FCC Forms 806, 824, 827, and 829.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for profit, not-for-profit institutions, and State, local, or tribal government.

Number of Respondents and Responses: 10,150 respondents and 15,175 responses.

Estimated Time per Response: The actual inspection will take approximately 4 hours to complete. An FCC ship safety certificate will take approximately 0.083 hours (5 minutes) to complete. Providing an entry in the ship's log will take an inspector and ship operator/owner approximately 0.25 hours (15 minutes) each to complete. These estimates are based on FCC staff's knowledge and familiarity with the availability of the data required. Approximately 100 requests for a waiver of the required annual inspection are received each year from the licensees of large oceangoing vessels returning from a foreign port; it is estimated than an engineer or communications specialists would spend two hours preparing such a waiver request. Therefore, the range for completing the information collection requirements is 0.083 hours–4 hours.

Frequency of Response: On occasion, annual, and every five-year reporting requirements, recordkeeping requirement, and third party disclosure requirement.

Obligation to Respond: Required for regulatory or compliance. The statutory authority for this collection 47 U.S.C. 154, 303, 307(e), 309 and 332, unless noted.

Total Annual Burden: 23,229 hours.

Annual Cost Burden: No cost.

Needs and Uses: The requirements contained in § 80.59 are necessary to implement the provisions of section 362(b) of the Communications Act of 1934, as amended, which require the Commission to inspect the radio installation of large cargo ships and certain passenger ships at least once a year to ensure that the radio installation is in compliance with the Communications Act.

Additionally, section 385 of the Communications Act requires the inspection of small passenger ships at least once every five years, and Subpart T of Part 80 of the Commission's rules requires the inspection of certain vessels operating in the Great Lakes at least once every 48 months.

The Safety Convention—an international treaty (to which the United States (U.S.) is a signatory)—also requires an annual inspection. The Safety Convention permits an Administrator to entrust the inspections to either surveyors nominated for the purpose or to organizations recognized by it. Therefore, the U.S. can have other parties conduct the radio inspection of vessels for compliance with the Safety Convention.

The Commission allows FCC-licensed technicians to conduct these inspections. FCC-licensed technicians not only certify that the ship passed an inspection, but also issue a safety certificate. These safety certificates (FCC Forms 806, 824, 827, and 829) indicate that the vessel complies with the Communications Act, the Commission's rules, and the Safety Convention. These technicians are required to provide a summary of the results of the inspection in the ship's log. In addition, the vessel's owner, operator, or ship's master must certify in the ship's log that the inspection was satisfactory. Inspection certificates issued in accordance with the Safety Convention must be posted in a prominent and accessible place on the ship.

Further, § 80.59(d) states that the Commission may, upon a finding that the public interest would be served, grant a waiver of the annual inspection required by section 362(b) of the Communications Act, for a period of not more than 90 days for the sole purpose of enabling a U.S. vessel to complete its voyage and proceed to a port in the U.S. when an inspection can be held. An information application must be submitted by a ship's owner, operator, or authorized agent. The application must be electronically submitted to the FCC Headquarters (via email to *Ghassan.Khalek@fcc.gov, Katie.Knox@fcc.gov, Kathleen.Curameng@fcc.gov,* and *Thomas.Derenge@fcc.gov*) at least three days before the ship's arrival. The application must provide specific information that is contained in § 80.59. The forms to be completed are FCC Forms 806, 824, 827, and 829.

The Commission seeks revision of this OMB control number due to recent amendments to the Safety Convention by way of Resolution Marine Safety Committee (MSC) 496(105) that was adopted on April 28, 2022; as a result of SOLAS revisions of its Passenger Ship Safety Certificate and Cargo Ship

Radio certificates, FCC Forms 806 and 829 are being revised accordingly. Regarding the remaining forms associated with this OMB control number, FCC Forms 824 and 827 will undergo technical amendments for non-substantive edits.

Federal Communications Commission.

Katura Jackson,

Federal Register Liaison Officer, Office of the Secretary.

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meetings

TIME AND DATE: 5:30 p.m. on Monday, April 22, 2024.

PLACE: The meeting was held via video conference on the internet.

STATUS: Closed.

MATTERS TO BE CONSIDERED: The Special Review Committee of the Federal Deposit Insurance Corporation met to consider matters related to the Corporation's corporate activities within its authority to act on behalf of the Federal Deposit Insurance Corporation. In calling the meeting, the Special Review Committee determined, by the unanimous vote of Director Jonathan P. McKernan and Director Michael J. Hsu (Acting Comptroller of the Currency), that Corporation business required its consideration of the matters which were to be the subject of this meeting on less than seven days' notice to the public; that no earlier notice of the meeting was practicable; that the public interest did not require consideration of the matters in a meeting open to public observation; and that the matters could be considered in a closed meeting by authority of subsections (c)(2), (4), and (6) of the ''Government in the Sunshine Act'' (5 U.S.C. 552b (c)(2),(c)(4), and (c)(6)).

CONTACT PERSON FOR MORE INFORMATION: Requests for further information concerning the meeting may be directed to Debra A. Decker, Executive Secretary of the Corporation, at 202–898–8748.

Dated: April 22, 2024.

Federal Deposit Insurance Corporation.

Debra A. Decker,

Executive Secretary.

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meetings

Notice of Meeting Held With Less Than Seven Days Advance Notice

TIME AND DATE: 10:00 a.m. on April 25, 2024.

PLACE: This Board meeting will be open to public observation only by webcast. Visit *https://www.fdic.gov/news/board-matters/video.html* for a link to the webcast. FDIC Board Members and staff will participate from FDIC Headquarters, 550 17th Street NW, Washington, DC.

Observers requiring auxiliary aids (*e.g.,* sign language interpretation) for this meeting should email *DisabilityProgram@fdic.gov* to make necessary arrangements.

STATUS: Open to public observation via webcast.

MATTERS TO BE CONSIDERED: The Federal Deposit Insurance Corporation's Board of Directors will meet in open session at 10:00 a.m. on Thursday, April 25, 2024 to consider the following matters:

Discussion Agenda

Memorandum re: Deposit Insurance Fund Restoration Plan Semiannual Update.

Memorandum and resolution re: Proposals Related to Change in Bank Control Act.

Summary Agenda

Disposition of Minutes of a Board of Directors' Meeting Previously Distributed.

Report of actions taken pursuant to authority delegated by the Board of Directors.

CONTACT PERSON FOR MORE INFORMATION: Direct requests for further information concerning the meeting to Debra A. Decker, Executive Secretary of the Corporation, at 202–898–8748.

Authority: 5 U.S.C. 552b.

Dated at Washington, DC, on April 23, 2024.

Federal Deposit Insurance Corporation.

James P. Sheesley,

Assistant Executive Secretary.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Announcement of Requirements and Registration for The REACH Lark Galloway-Gilliam Award for Advancing Health Equity Challenge (REACH Lark Award Challenge)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the 2024 Racial and Ethnic Approaches to Community Health (REACH) Lark Galloway-Gilliam for Advancing Health Equity Award Challenge (REACH Lark Award Challenge). This biennial challenge was established in 2019 to recognize extraordinary individuals, organizations, or community coalitions associated with the REACH program whose work has contributed to the implementation of culturally tailored interventions that advance health equity, reduce health disparities, and increase community engagement to address preventable risk behaviors (*e.g.,* tobacco use, poor nutrition, and physical inactivity).

DATES: The Challenge will accept applications from April 29, 2024, through June 21, 2024.

FOR FURTHER INFORMATION CONTACT: Stormie Israel, National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention, 4770 Buford Hwy., NE, Mailstop S107–5, Atlanta, GA 30341, Telephone: 770–488–2964, Email: *dnpaopolicy@cdc.gov.*

SUPPLEMENTARY INFORMATION: Racial and ethnic disparities in health remain pervasive across the United States. CDC administers REACH, a national program that provides funding to State and local health departments, tribes, universities, and community-based organizations. Since REACH was established in 1999, the program has demonstrated success in addressing these disparities and advancing health equity by engaging with diverse communities and implementing culturally tailored interventions. For more information about the REACH program, visit *https://www.cdc.gov/nccdphp/dnpao/state-local-programs/reach/index.htm.*

The intent of this challenge is to recognize individuals, organizations, or community coalitions associated with

the REACH program that meaningfully assisted with and carried out culturally tailored interventions that advance health equity, reduce health disparities, and increase community engagement to address preventable risk behaviors (*e.g.,* tobacco use, poor nutrition, physical inactivity, and inadequate access to clinical services) in populations/groups disproportionately affected by chronic disease; including, African American/Black, American Indian or Alaska Native, Asian, Hispanic or Latino, and Native Hawaiian or other Pacific Islander persons. To support the science and practice of improving health equity, this challenge can help further the goals of the REACH program by documenting and further disseminating the innovative or unique interventions employed by individuals, organizations, or community coalitions applying or nominated for this award.

Subject of Challenge Competition: The CDC's National Center for Chronic Disease Prevention and Health Promotion is conducting this Challenge under the America Creating Opportunities to Meaningfully Promote Excellence in Technology, Education, and Science (COMPETES) Reauthorization Act of 2010, as amended (15 U.S.C. 3719).

The ''applicant'' refers to each individual, organization, or community coalition that submits an application or nomination. The ''nominee'' refers to each individual or organization/community coalition who is nominated, whether self-nominated or nominated by a separate individual or organization.

Applicants will be asked to respond to a series of questions related to how the nominee assisted with and carried out culturally tailored interventions to advance health equity, reduce health disparities, and increase community engagement to address preventable risk behaviors (*e.g.,* tobacco use, poor nutrition, physical inactivity, and inadequate access to clinical services) in populations or groups disproportionately affected by chronic disease, including African American/Black, American Indian or Alaska Native, Asian, Hispanic or Latino, and Native Hawaiian or other Pacific Islander persons.

Award Approving Official: Mandy K. Cohen, MD, MPH, Director, Centers for Disease Control and Prevention, and Administrator, Agency for Toxic Substances and Disease Registry.

Eligibility Rules for Participating in the Challenge

The REACH Lark Award Challenge is open to the public. To be eligible for this award, nominees must meet the following eligibility requirements:

(1) Shall have completed the application (for self-nominees) or have had an application submitted on their behalf (for those nominated by others) for the competition under the rules promulgated by HHS/CDC;

(2) Shall have complied with all the requirements under this section and satisfy one of the following requirements:

a. Be a currently or previously funded CDC REACH recipient that has not previously received the REACH Lark Award in any year; or

b. Be a technical assistance provider to a former or current REACH recipient (current and past REACH recipients can be found at: *https://www.cdc.gov/nccdphp/dnpao/state-local-programs/reach/index.htm*); or

c. Be a partner organization, part of a partner network, or coalition members that collaborated on REACH-related work with a current or previously funded REACH recipient;

(3) Shall not have been a REACH Lark Award Challenge recipient in any previous year;

(4) Shall be either:

a. A U.S. citizen or legal permanent resident, eighteen years of age or older, if the nominee is an individual or group of individuals; or

b. Incorporated in and maintain a primary place of business in the United States, if the nominee is an entity; where the United States means a State, the District of Columbia, the Commonwealth of Puerto Rico, and any other territory or possession of the United States;

(5) Shall not be a federal entity or federal employee acting within the scope of their employment;

(6) Shall not be an employee of or contractor of CDC;

(7) Shall not use federal funds from a grant or cooperative agreement to develop COMPETES Act challenge applications for this challenge, if the applicant is a federal grantee;

(8) Shall not use federal funds from a contract to develop COMPETES Act challenge applications or to fund efforts in support of a COMPETES Act challenge submission, if the applicant is a federal contractor;

(9) Shall not be deemed ineligible because an individual or team applicant or nominee used federal facilities or consulted with federal employees during a competition if the facilities and employees are made available to all individuals and entities participating in the competition on an equitable basis.

(10) By participating, the applicant represents, warrants, and agrees that the entry contains accurate information. If an applicant is nominating another individual, organization, community coalition (*e.g.,* not self-nominating), the applicant must provide acknowledgement in writing that the nominee consents to being nominated.

(11) Applicants and nominees must agree to be recognized if selected as a winner and agree to participate in an interview with CDC staff to provide information that may be used by CDC staff to write a success story that describes the intervention(s) that advanced health equity. Winners and their intervention(s) may be recognized, and the success story may be made public, including but not limited to press releases, the challenge website, and Division of Nutrition, Physical Activity, and Obesity and CDC Resources, and other publicly available platforms (*e.g.,* social media, CDC website, etc.).

(12) By participating in this challenge, applicants agree to assume any and all risks related to participating in the challenge. Applicants also agree to waive claims against the federal government and its related entities, except in the case of willful misconduct, when participating in the challenge, including claims for injury; death; damage; or loss of property, money, or profits; and including those risks caused by negligence or other causes.

Applicants and nominees who are not selected for the award may be asked for permission for CDC to share information about successful interventions that promoted health equity on CDC's Division of Nutrition, Physical Activity, and Obesity website, the CDC website, social media, or other platform generally with appropriate attribution to the applicant or nominee.

Registration Process for Participants

To participate and submit an application, interested parties should go to *https://www.challenge.gov.* The application requires responses to questions related to eligibility, followed by three questions related to the nominee's work; the answer to each of the three questions should be no longer than 300 words. Applicants can also submit supplemental materials that demonstrate the nominee's work and/or impact. Supplemental materials are not to exceed 10 total pages. Examples of supplementary materials include PDF of online content and other forms of written materials (*e.g.,* news articles, evaluation reports, or success stories).

Amount of the Prize

No cash prize will be awarded. A maximum of two applicants (one

individual and one organization/community coalition) associated with the REACH program will be a recipient of the 2024 REACH Lark Award. Recipients of the REACH Lark Award will receive a plaque (''Winner''). While the winners may be invited to meetings by CDC, attendance at such events is not required as a condition of accepting the award.

Basis Upon Which Winners Will Be Selected

CDC's Division of Nutrition, Physical Activity, and Obesity's (DNPAO's) Office of Policy Partnerships and Communication (OPPC) will select three to five judges based on their knowledge of the REACH program, the science and practice of achieving health equity, and the elimination of health disparities at the national, state, or local levels. Judges may include REACH program senior advisors, other CDC employees, or nonfederal individuals from outside the agency. Participating as a previous REACH Lark Award judge does not disqualify an individual or organization from being an award recipient for the 2024 challenge. Conflict of interest issues related to Judges will be handled, per the COMPETES Act (15 U.S.C. 3719(k)(2)).

Judges will review the applications and select up to two award recipients (one individual and one organization or community coalition) from all eligible entries based on:

(1) Community Context and Challenge(s)—The following questions address the challenges of the community in which the nominee works/worked. (10 points)

(a) Describe the priority population with whom the nominee worked. (5 points)

Scoring will be based on the extent to which the nominee worked to address chronic disease risk factors among priority populations experiencing health disparities for chronic diseases including the following: Black or African American people, American Indian/Alaska Native people, Hispanic or Latino people, Asian people, and/or Native Hawaiian/Other Pacific Islander people.

(b) Describe the preventable risk factors associated with chronic diseases (hypertension, heart disease, type 2 diabetes, and/or obesity) that the nominee addressed. (5 points)

Scoring will be based on the extent to which the risk factor(s) addressed align with the REACH program's goals of advancing health equity. Information about past REACH programs can be found here: *https://www.cdc.gov/nccdphp/dnpao/state-local-programs/reach/past_programs/index.htm.* Examples of risk factors that align with the goals of the REACH program include poor nutrition, physical inactivity, inadequate access to clinical services, and tobacco use.

(c) Describe any relevant additional community characteristics/challenges that will help the judges understand the context of the community in which the nominee worked. (Not scored).

(2) Strategies—The following questions pertain to strategies used by the nominee to address the challenge(s) discussed above. (30 points)

(a) Describe the strategies that the nominee used to address challenges and how the nominee's work aligns with the CDC REACH program's goals of advancing health equity. (15 points)

Scoring will be based on the extent to which the nominee's work contributed to developing, implementing, and/or evaluating strategies that were:

(1) Evidence-based or practice-based (5 points)
(2) Culturally tailored and designed to reduce health inequities (5 points)
(3) Supportive of policy, systems, and/or environmental change (5 points)

(b) Describe how the nominee's work actively and effectively engaged members of the community and partners across different sectors, such as, but not limited to transportation, healthcare, agriculture, emergency food systems, and faith-based and community-based organizations. (15 points)

Scoring will be based on the extent to which the nominee engaged members of the community and partners across different sectors in identifying and implementing strategies.

(3) Impact—The following questions pertain to the impact of the nominee's work on addressing preventable risk factors in a population(s)/group(s) disproportionately affected by chronic diseases. (20 points)

(a) Describe the impact of the nominee's work on addressing preventable risk factors in populations/groups disproportionately affected by chronic diseases. (20 points)

(i) To the extent possible, provide quantitative data that support impact statements (*e.g.,* number of people served by a strategy, number of people reporting a behavior change, health outcome data if available, etc.).

(ii) Provide qualitative data from community members, partners, co-workers, etc., (*e.g.,* success stories, testimonials, etc.) that provide insight into the impact of nominee's work.

Scoring will be based on the extent to which the nominee's work resulted in progress toward addressing preventable risk factors in the population(s)/group(s) identified in Section 1. While quantitative data is not required, nominations that include quantitative and qualitative data are more likely to paint a more complete picture of the nominee's contributions and their impact on the community.

Judges will use the point system outlined in the judging criteria above to select the winner(s).

Additional Information

Information about the winners, such as the name and location of the individual, organization, or community coalition, priority population served, and health outcomes addressed may be shared through press releases, the challenge website, and Division of Nutrition, Physical Activity, and Obesity and CDC Resources, and other publicly available platforms (*e.g.,* social media, CDC website, etc.) Details regarding the winners and their applications may be shared with the public as part of recognition efforts.

The award is named in honor of Lark Galloway-Gilliam, the founding Executive Director of Community Health Councils, Inc. (CHC). CHC began in 1992 to support planning, resource development, and policy education in response to the growing health crisis in the South Los Angeles area and other under-resourced and marginalized communities throughout Los Angeles County. Lark led the CHC team to engage communities and strengthen the connections among organizations to improve health, eliminate disparities, and advance health equity. Lark also served in several leadership roles, including the first president of the National REACH Coalition, the MLK Medical Center Advisory Board, and the Institute for People, Place, and Possibility (IP3) Board of Directors for Community Commons.

Compliance with Rules and Contacting Challenge Winners

Applicants, nominees, and the REACH Lark Award Challenge winners must comply with all terms and conditions of these Official Rules and winning is contingent upon fulfilling all requirements herein. The winners will be notified by email, telephone, or mail after the date of the judging.

Privacy

If applicants choose to provide HHS/CDC with personal information by registering or filling out the application form through the *Challenge.gov* website, that information will only be used to respond to contestants in matters regarding their submission,

announcements of entrants, finalists, and winners of the contest. Information is not collected for commercial marketing. Winners are permitted to cite that they won this contest.

General Conditions

CDC reserves the right to cancel, suspend, and/or modify the Challenge, or any part of it, for any reason, at CDC's sole discretion.

Participation in this Challenge constitutes an applicants' full and unconditional agreement to abide by the Challenge's Official Rules found at *https://www.Challenge.gov.*

Authority: 15 U.S.C. 3719.

Noah Aleshire,

Chief Regulatory Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers: CMS–10291, CMS–10529, CMS–10722, CMS–R–148, and CMS–10725]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by *May 28, 2024.*

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing*

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Extension without change of a currently approved collection; *Title of Information Collection:* State Collection and Reporting of Dental Provider and Benefit Package Information on the Insure Kids Now! Website and Hotline; *Use:* On the Insure Kids Now (IKN) website, the Secretary is required to post a current and accurate list of dentists and providers that provide dental services to children enrolled in the state plan (or waiver) under Medicaid or the state child health plan (or waiver) under CHIP. States collect the information pertaining to their Medicaid and CHIP dental benefits. *Form Number:* CMS–10291 (OMB control number: 0938–1065); *Frequency:* Yearly and quarterly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 51; Total Annual Responses: 255; *Total Annual Hours:* 11,781. (For policy questions regarding this collection contact Andrew Snyder at 410–786–1274.)

2. *Type of Information Collection Request:* Extension without change of a currently approved collection; *Title of Information Collection:* Quarterly Medicaid and CHIP Budget and Expenditure Reporting for the Medical Assistance Program, Administration and CHIP; *Use:* The Medicaid and CHIP Financial System is a financial reporting system that produces budget estimate statements for Forms CMS–37 and CMS–21B. The Medicaid and CHIP Budget and Expenditure System is a financial reporting system that produces expenditure statements for Forms CMS–64 and CMS–21. All forms are to be filed on a quarterly basis and need to be certified by the states. *Form Number:* CMS–10529 (OMB control number: 0938–1265); *Frequency:* Quarterly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 56; *Total Annual Responses:* 672; *Total Annual Hours:* 18,144. (For policy questions regarding this collection contact Robert Lane at 410–786–2015.)

3. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Annual State Report on CMS Value Based Purchasing Arrangements (VBP) Supplemental Rebate Agreements; *Use:* The reported data is being collected to safeguard against unnecessary utilization of such care and services and to assure that state payments to providers of Medicaid services are consistent with efficiency, economy, and quality of care. CMS will collect this data to ensure that VBP programs adopted by states continue to meet these standards. *Form Number:* CMS–10722 (OMB control number: 0938–1385); *Frequency:* Yearly; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 51; *Total Annual Responses:* 51; *Total Annual Hours:* 306. (For policy questions regarding this collection contact Abraham Weinschneider at 410–786–5688.)

4. *Type of Information Collection Request:* Extension without change of a currently approved collection; *Title of Information Collection:* Limitations on Provider Related Donations and Health Care Related Taxes, Medicaid and

Supporting Regulations in 42 CFR 433.68 through 433.74; *Use:* States may elect to submit a waiver to CMS for the broad based and/or uniformity requirements for any health care related tax program which does not conform to the broad based and uniformity requirements. It is also the responsibility of each State to demonstrate that their tax program(s) do not violate the hold harmless provision. For a waiver to be approved and a determination that the hold harmless provision is not violated, States must submit written documentation which satisfies the regulatory requirements. Without this information, the amount of FFP (Federal financial participation) payable to a State cannot be correctly determined. *Form Number:* CMS–R–148 (OMB control number: 0938–0618); *Frequency:* Quarterly and occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 50; *Total Annual Responses:* 40; *Total Annual Hours:* 3,200. (For policy questions regarding this collection contact Stuart Goldstein at 410–786–0694.)

5. *Title of Information Collection:* Pharmacy Benefit Manager Transparency for Qualified Health Plans; *Type of Information Collection Request:* Revision of a currently approved collection; *Use:* Implementation of section 1150A of the Social Security Act, as added by section 6005 of the Patient Protection and Affordable Care Act (ACA), requires, among other entities, Qualified Health Plans (QHPs) and pharmacy benefit managers (PBMs) that serve QHP issuers to report information on prescription drug benefits to the U.S. Department of Health and Human Services (HHS). PBMs are third-party administrators of prescription programs for a variety of types of health plans, including QHPs. CMS finalized regulations for this reporting at 45 CFR 156.295 and 184.50.

Under these requirements a QHP issuer is required to report issuer and plan level prescription drug data to CMS only when the QHP issuer does not contract with a PBM to administer the prescription drug benefit for their QHPs. Section 1150A(a)(1) of the Social Security Act authorizes CMS to collect the same prescription drug and rebate information from Prescription Drug Plan sponsors of a prescription drug plan and Medicare Advantage organizations offering a Medicare Advantage Prescription Drug Plan under part D of title XVIII. Since 2012, CMS has collected these data from Part D sponsors as part of the Medicare Part D Direct and Indirect Remuneration (DIR) reporting requirement, and detailed drug information for each National Drug Code (NDC) from the Prescription Drug Event (PDE) data that plans are required to submit.

CMS is formally requesting an extension of this ICR in connection with submission from QHP issuers that do not contract with a PBM and PBMs (hereinafter referred to as ''submitters''). The information required from submitters and the process of submission has changed since the previous OMB approval. The submitters are now required to complete a web form that reports the allocation methodology that is selected by the submitters to allocate data, where necessary. Submitters are required to maintain internal documentation of the allocation methodologies chosen, as CMS may need to follow up with the submitters to better understand the methodology. The associated burden estimates for this collection reflect the time and effort for submitters to provide prescription drug benefit information to CMS using the Health Information Oversight System (HIOS) module. *Form Number:* CMS–10725 (OMB control number: 0938–1394); *Frequency:* Annually; *Affected Public:* Private Sector, Business or other For-Profits; *Number of Respondents:* 278; *Number of Responses:* 278; *Total Annual Hours:* 1,285. (For questions regarding this collection, contact LeAnn Brodhead at (301) 492–4493.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–3449–N]

Announcement of the Re-Approval of AABB (Association for the Advancement of Blood and Biotherapies) as an Accreditation Organization Under the Clinical Laboratory Improvement Amendments of 1988

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: This notice announces the application of the Association for the Advancement of Blood and Biotherapies (AABB) for re-approval as an accreditation organization for clinical laboratories under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) program. This deeming authority is granted to AABB for the Blood Bank and Transfusion Service (BB/TS) program, the Immunohematology Reference Laboratory (IRL) program, the Molecular Testing (MT) program, and the Cellular Therapy (CT) program. We have determined that AABB meets or exceeds the applicable CLIA requirements. We are announcing the re-approval and grant AABB deeming authority for a period of 6 years.

DATES: The approval is effective from April 25, 2024 to April 25, 2030.

FOR FURTHER INFORMATION CONTACT: Daralyn Hassan, 410–786–9360.

SUPPLEMENTARY INFORMATION:

I. Background and Legislative Authority

On October 31, 1988, the Congress enacted the Clinical Laboratory Improvement Amendments of 1988 (CLIA) (Pub. L. 100–578). CLIA amended section 353 of the Public Health Service Act. We issued a final rule implementing the accreditation provisions of CLIA on July 31, 1992 (57 FR 33992). Under those provisions, we may grant deeming authority to an accreditation organization if its requirements for laboratories accredited under its program are equal to or more stringent than the applicable CLIA program requirements in 42 CFR part 493 (Laboratory Requirements). Subpart E of part 493 (Accreditation by a Private, Nonprofit Accreditation Organization or Exemption Under an Approved State Laboratory Program) specifies the requirements an accreditation organization must meet to be approved by CMS as an accreditation organization under CLIA.

II. Notice of Re-Approval of AABB as an Accreditation Organization

In this notice, we approve the Association for the Advancement of Blood and Biotherapies (AABB) as an organization that may accredit laboratories for purposes of establishing their compliance with CLIA requirements for the following specialty and subspecialty areas under CLIA:

- Microbiology, including Bacteriology, Mycology, Parasitology, and Virology.
- Diagnostic Immunology, including Syphilis Serology and General Immunology.
- Chemistry, including Routine Chemistry.
- Hematology.

- Immunohematology, including ABO Group & Rh Group, Antibody Detection, Antibody Identification, and Compatibility Testing.

We have examined the initial AABB application and all subsequent submissions to determine its accreditation program's equivalency with the requirements for re-approval of an accreditation organization under subpart E of part 493. We have determined that AABB meets or exceeds the applicable CLIA requirements. We have also determined that AABB will ensure that its accredited laboratories will meet or exceed the applicable requirements in subparts H, I, J, K, M, Q, and the applicable sections of R. Therefore, we grant AABB re-approval as an accreditation organization under subpart E of part 493, for the period stated in the **DATES** section of this notice for the submitted specialty and subspecialty areas under CLIA. As a result of this determination, any laboratory that is accredited by AABB during the time period stated in the **DATES** section of this notice will be deemed to meet the CLIA requirements for the listed specialties and subspecialties, and therefore, will generally not be subject to routine inspections by a State survey agency to determine its compliance with CLIA requirements. The accredited laboratory, however, is subject to validation and complaint investigation surveys performed by CMS or its agent(s).

III. Evaluation of AABB Request for Re-Approval as an Accreditation Organization Under CLIA

The following describes the process we used to determine that the AABB accreditation program meets the necessary requirements to be approved by CMS and that, as such, we may approve AABB as an accreditation program with deeming authority under the CLIA program. AABB formally applied to CMS for re-approval as an accreditation organization under CLIA for the following specialties and subspecialties:

- Microbiology, including Bacteriology, Mycology, Parasitology, and Virology.
- Diagnostic Immunology, including Syphilis Serology and General Immunology.
- Chemistry, including Routine Chemistry.
- Hematology.
- Immunohematology, including ABO Group & Rh Group, Antibody Detection, Antibody Identification, and Compatibility Testing.

In reviewing these materials, we reached the following determinations for each applicable part of the CLIA regulations:

A. Subpart E—Accreditation by a Private, Nonprofit Accreditation Organization or Exemption Under an Approved State Laboratory Program

AABB submitted a description of its mechanism for monitoring compliance with all requirements equivalent to condition-level requirements, a list of all its current laboratories and the expiration date of their accreditation, and a detailed comparison of the individual accreditation requirements with the comparable condition-level requirements. We have determined that AABB's policies and procedures for oversight of laboratories performing laboratory testing for the submitted CLIA specialties and subspecialties are equivalent to those required by our CLIA regulations with respect to inspection, monitoring proficiency testing (PT) performance, investigating complaints, and making PT information available. AABB also submitted documentation regarding its requirements for monitoring and inspecting laboratories and describing its own standards regarding accreditation organization data management, inspection processes, procedures for removal or withdrawal of accreditation, notification requirements, and accreditation organization resources. The requirements of the accreditation programs submitted for re-approval are equal to or more stringent than the requirements of the CLIA regulations.

B. Subpart H—Participation in Proficiency Testing for Laboratories Performing Nonwaived Testing

AABB's requirements are equal to or more stringent than the CLIA requirements at §§ 493.801 through 493.865. Like CLIA, all AABB's accredited laboratories are required to participate in an HHS-approved PT program for tests listed in part 493 subpart I. Additionally, AABB administers a non-regulated PT program to challenge the ability of the laboratories in the IRL program to resolve complex serological problems. Laboratories in the MT program are required to participate in a graded PT program or a sample exchange program.

C. Subpart J—Facility Administration for Nonwaived Testing

We have determined that AABB requirements are equal to the CLIA requirements at §§ 493.1100 through 493.1105.

D. Subpart K—Quality System for Nonwaived Testing

We have determined that AABB requirements are equal to the CLIA requirements at §§ 493.1200 through 493.1299.

E. Subpart M—Personnel for Nonwaived Testing

We have determined that AABB requirements are equal to the CLIA requirements at §§ 493.1403 through 493.1495 for laboratories that perform moderate and high complexity testing.

F. Subpart Q—Inspection

We have determined that AABB requirements are equal to the CLIA requirements at §§ 493.1771 through 493.1780. AABB will continue to conduct biennial onsite inspections.

G. Subpart R—Enforcement Procedures

AABB meets the requirements of subpart R to the extent that it applies to accreditation organizations. AABB policy sets forth the actions the organization takes when laboratories it accredits do not comply with its requirements and standards for accreditation. When appropriate, AABB will deny, suspend, or revoke accreditation in a laboratory accredited by AABB and report that action to us within 30 days. AABB also provides an appeals process for laboratories that have had accreditation denied, suspended, or revoked.

We have determined that AABB laboratory enforcement and appeal policies are equal to or more stringent than the requirements of part 493 subpart R as they apply to accreditation organizations.

IV. Federal Validation Inspections and Continuing Oversight

In accordance with § 493.563, the Federal validation inspections of laboratories accredited by AABB may be conducted on a representative sample basis or in response to substantial allegations of noncompliance (that is, complaint inspections). The outcome of those validation inspections, performed by CMS or our agents, or the State survey agencies, will be our principal means for verifying that the laboratories accredited by AABB remain in compliance with CLIA requirements. This Federal monitoring is an ongoing process.

V. Removal of Re-Approval as an Accrediting Organization

CLIA regulation at § 493.575 provide that we may rescind the approval of an accreditation organization, such as that of AABB, for cause, before the end of

the effective date of re-approval. If we determine that AABB has failed to adopt, maintain, and enforce requirements that are equal to, or more stringent than, the CLIA requirements or that systemic problems exist in its monitoring, inspection, or enforcement processes, we may impose a probationary period, not to exceed 1 year, in which AABB would be allowed to address any identified issues. Should AABB be unable to address the identified issues within that timeframe, we may, in accordance with the applicable regulations, revoke AABB's deeming authority under CLIA.

Should circumstances result in our withdrawal of AABB's re-approval, we will publish a notice in the **Federal Register** explaining the basis for removing its re-approval.

VI. Collection of Information Requirements

The information collection requirements associated with the accreditation process for clinical laboratories under the CLIA program are currently OMB-approved under OMB control number 0938–0686 and expire May 31, 2025. Additionally, this notice does not impose any new or revised information collection requirements, that is, reporting, recordkeeping, or third-party disclosure requirements. Consequently, it does not need to be reviewed by the Office of Management and Budget (OMB) under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq).

VII. Executive Order 12866 Statement

In accordance with the provisions of Executive Order 12866, this notice was not reviewed by the Office of Management and Budget.

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Trenesha Fultz-Mimms, who is the **Federal Register** Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Trenesha Fultz-Mimms,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2019–D–5473]

Promotional Labeling and Advertising Considerations for Prescription Biological Reference Products, Biosimilar Products, and Interchangeable Biosimilar Products: Questions and Answers; Revised Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a revised draft guidance for industry entitled ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference Products, Biosimilar Products, and Interchangeable Biosimilar Products: Questions and Answers.'' FDA is issuing this revised draft guidance to address questions that manufacturers, packers, distributors, and their representatives (firms) may have when developing FDA-regulated promotional labeling and advertisements (promotional communications) for prescription reference products, biosimilar products, and interchangeable biosimilar products licensed under the Public Health Service Act (PHS Act). In conjunction with the enactment of the Biosimilar User Fee Amendments of 2022 (BsUFA III), FDA agreed to publish a draft guidance on promotional labeling and advertising considerations for interchangeable biosimilar products, as described in the document titled ''Biosimilar Biological Product Reauthorization Performance Goals and Procedures Fiscal Years 2023 through 2027.'' The revised draft guidance is consistent with this commitment and replaces the draft guidance for industry entitled ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference and Biosimilar Products: Questions and Answers'' issued on February 4, 2020.

DATES: Submit either electronic or written comments on the draft guidance by June 24, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2019–D–5473 for ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference Products, Biosimilar Products, and Interchangeable Biosimilar Products: Questions and Answers.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two

copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002; or the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128 Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT:
Alpita Popat, Office of Prescription Drug Promotion, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 3203, Silver Spring, MD 20993–0002, 301–796–1200, *CDER-OPDP-RPM@fda.hhs.gov;* or James Myers, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a revised draft guidance for industry entitled ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference Products, Biosimilar Products, and Interchangeable Biosimilar Products: Questions and Answers.'' The revised draft guidance addresses questions firms may have when developing FDA-regulated promotional communications for prescription reference products licensed under section 351(a) of the PHS Act (42 U.S.C. 262(a)) and prescription biosimilar products, including interchangeable biosimilar products, licensed under section 351(k) of the PHS Act. *Reference product,* as defined in section 351(i)(4) of the PHS Act, means the single biological product licensed under section 351(a) of the PHS Act against which a biological product is evaluated in an application submitted under section 351(k) of the PHS Act. This guidance does not make any recommendations for nonprescription products. Unless otherwise specified, the term *biosimilar product* as used in this revised draft guidance refers to a product that is licensed under section 351(k) of the PHS Act as biosimilar to or biosimilar to and interchangeable with a reference product.

Section 351(k) of the PHS Act provides an abbreviated licensure pathway for biological products shown to be biosimilar to or biosimilar to and interchangeable with an FDA-licensed reference product. Section 351(i) of the PHS Act defines *biosimilarity* to mean ''that the biological product is highly similar to the reference product notwithstanding minor differences in clinically inactive components'' and that ''there are no clinically meaningful differences between the biological product and the reference product in terms of the safety, purity, and potency of the product.'' To meet the standard for *interchangeability,* an applicant must provide sufficient information to demonstrate biosimilarity and also to demonstrate that the biological product can be expected to produce the same clinical result as the reference product in any given patient and, if the biological product is administered more than once to an individual, the risk in terms of safety or diminished efficacy of alternating or switching between the use of the biological product and the reference product is not greater than the risk of using the reference product without such alternation or switch (351(k)(4) of the PHS Act). Interchangeable biosimilar products may be substituted for the reference product without the intervention of the prescribing healthcare provider (351(i)(3) of the PHS Act).

FDA is providing this revised draft guidance to address questions firms may have when developing FDA-regulated promotional communications for prescription reference products or prescription biosimilar products, including interchangeable biosimilar products. The revised draft guidance discusses considerations for presenting data and information about reference products or biosimilar products in these promotional communications to help ensure that they are accurate, truthful and non-misleading. The revised draft guidance includes information about general requirements for the content of FDA-regulated promotional communications that apply to reference products and biosimilar products and includes more specific considerations for developing promotional communications for reference products and biosimilar products, such as:

- Identifying reference products and biosimilar products
- Presenting information from the studies conducted to support licensure of the reference product when the information is included in the FDA-approved labeling of both the reference and the biosimilar products
- Presenting data or information for a biosimilar product related to the safety or effectiveness of the biosimilar product that is not included in the FDA-approved labeling but is consistent with the FDA-approved labeling for that product (see the guidance for industry entitled ''Medical Product Communications That Are Consistent With the FDA-Required Labeling: Questions and Answers'' (June 2018))
- Presenting comparisons between a reference product and its biosimilar product(s)
- Submitting promotional communications to FDA

The revised draft guidance also provides examples to illustrate some of the considerations outlined in the guidance.

This revised draft guidance replaces the draft guidance for industry ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference and Biosimilar Products: Questions and Answers''

issued on February 4, 2020 (85 FR 6201) (2020 draft guidance). In revising this guidance, FDA considered comments received on the 2020 draft guidance and expanded the scope of the 2020 draft guidance to fulfill the BsUFA III commitment to publish draft guidance on promotional labeling and advertising considerations for interchangeable biosimilar products. Changes from the 2020 draft guidance include additional recommendations and an example for interchangeable biosimilar products. In addition, editorial changes were made to improve clarity.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Promotional Labeling and Advertising Considerations for Prescription Biological Reference Products, Biosimilar Products, and Interchangeable Biosimilar Products: Questions and Answers.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in FDA's guidance entitled ''Providing Regulatory Submissions in Electronic and Non-Electronic Format: Promotional Labeling and Advertising Materials for Human Prescription Drugs,'' the collections of information in 21 CFR part 314, and the collections of information resulting from submissions using Form FDA 2253 (Transmittal of Advertisements and Promotional Labeling for Drugs and Biologics for Human Use) have been approved under OMB control number 0910–0001. The collections of information in 21 CFR 601.12 have been approved under OMB control number 0910–0338; the collections of information in 21 CFR 202.1 have been approved under OMB control number 0910–0686; the collections of information in FDA's guidance entitled ''Medical Product Communications That Are Consistent With the Food and Drug Administration Required Labeling: Questions and Answers'' have been approved under OMB control number 0910–0856; the collections of information in 21 CFR part 11 pertaining to electronic records and signatures have been approved under OMB control number 0910–0303; and the collections of information relating to section 351(k) of the Public Health Service Act relating to biosimilar and interchangeable product applications have been approved under OMB control number 0910–0718.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

Dated: April 17, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

[Document Identifier: OS–0990–0477]

Agency Information Collection Revision 60-Day Public Comment Request

AGENCY: Office of the Secretary, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of a proposed collection for public comment.

DATES: Comments on the ICR must be received on or before June 24, 2024.

ADDRESSES: Submit your comments to *Sherrette.Funn@hhs.gov* or by calling (202) 264–0041 and *PRA@HHS.GOV.*

FOR FURTHER INFORMATION CONTACT: When submitting comments or requesting information, please include the document identifier 0990–0477–60D and project title for reference, to Sherrette A. Funn, email: *Sherrette.Funn@hhs.gov, PRA@HHS.GOV* or call (202) 264–0041 the Reports Clearance Officer.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Title of the Collection: Incident Report Form.

Type of Collection: Reinstatement with Change.

OMB No.: 0990–0477.

Abstract: The Office of the Assistant Secretary for Health, Office for Human Research Protections (OHRP), is requesting reinstatement of the OMB No. 0990–0477, Incident Report Form, with two new information elements on the Incident Report form: *IORG # for Reviewing IRB;* and, *Revising research policies and procedures* as a corrective action plan category, if it applies. The purpose of the Incident Report form is to facilitate organizations or institutions prompt reporting of specific human subject protection incidents to OHRP, in a simplified standardized format, as required by HHS protection of human subjects regulations at 45 CFR part 46.

ANNUALIZED BURDEN HOUR TABLE

Forms name	Number of respondents	Number of responses per respondents	Average burden per response	Total burden hours
Incident Report	25	1	30/60	12.5
Incident Report	25	3	30/60	37.5
Incident Report	200	5	30/60	500
Total				550

Sherrette A. Funn,

Paperwork Reduction Act Reports Clearance Officer, Office of the Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Nursing Research; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Council for Nursing Research.

This will be a hybrid meeting held in-person and virtually and will be open to the public as indicated below. Individuals who plan to attend in-person or view the virtual meeting and need special assistance or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The meeting can be accessed from the NIH Videocast at the following link: *https://videocast.nih.gov/watch=54495*

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council for Nursing Research.

Date: May 23, 2024.

Open: May 23, 2024, 9:00 a.m. to 4:15 p.m.

Agenda: Call to Order and Opening Remarks, NINR Director's Report, Discussion of NINR Programs, Council Open Discussion.

Place: National Institutes of Health, Building 31, 31 Center Drive, Room 6C6, Bethesda, MD 20892 (Hybrid Meeting).

Closed: May 23, 2024, 4:15 p.m. to 4:45 p.m.

Agenda: To review and evaluate grant applications and/or proposals.

Place: National Institutes of Health, Building 31, 31 Center Drive, Room 6C6, Bethesda, MD 20892.

Contact Person: Elizabeth Tarlov, Ph.D., RN Director, Division of Extramural Science Programs (DESP), National Institute of Nursing Research, 31 Center Drive, Bethesda, MD 20892, (301) 594–1580, *elizabeth.tarlov@nih.gov.*

Any member of the public interested in presenting oral comments to the committee may notify the Contact Person listed on this notice at least 10 days in advance of the meeting. Interested individuals and representatives of an organization may submit a letter of intent, a brief description of the organization represented and a short description of the oral presentation. Only one representative of an organization may be allowed to present oral comments and presentations may be limited to five minutes. Both printed and electronic copies are requested for the record. In addition, any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has procedures at *https://www.nih.gov/about-nih/visitor-information/campus-access-security* for entrance into on-campus and off-campus facilities. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors attending a meeting on campus or at an off-campus federal facility will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *https://www.ninr.nih.gov/aboutninr/nacnr,* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_NM_FRN_MO#4500179000; NM–106239540]

Public Land Order No. 7940; Placitas Area Withdrawal, New Mexico

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This Public Land Order (PLO) withdraws 4,212.98 acres of public lands from location and entry under the United States mining laws, from leasing under the mineral leasing laws, and

from disposal of minerals under the Materials Act of 1947, subject to valid existing rights, for 50 years. The purpose of this withdrawal is to protect, preserve, and promote the scenic integrity, cultural importance, recreational values, and wildlife habitat connectivity within the Placitas area.

DATES: This PLO takes effect on April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Jillian Aragon, Bureau of Land Management, New Mexico State Office, 505–564–7722 or *jgaragon@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or Tele Braille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Order

By virtue of the authority vested in the Secretary of the Interior by section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714, it is ordered as follows:

1. Subject to valid existing rights, the following described lands are hereby withdrawn from location and entry under the United States mining laws, from leasing under the mineral leasing laws, and from disposal of minerals under the Materials Act of 1947, for a 50-year term to protect, preserve, and promote the scenic, cultural, recreational, and wildlife habitat connectivity values within the Placitas area.

New Mexico Principal Meridian, New Mexico

San Antonio de las Huertas Grant,
 Parcel C.
Town of Tejon Grant,
 Tract 40.
T. 13 N., R. 4 E.,
 sec. 13, Lots 6 thru 9 and S½;
 sec. 14, Lots 12 thru 15, E½SE¼, and SW¼SE¼;
 sec. 15, Lot 10;
 sec. 22, Lots 6 and 7, and SE¼NE¼;
 sec. 23, N½, NE¼SW¼, and SE¼;
 sec. 24, N½.
T. 12 N, R. 5 E.,
 Tract 39.
T. 13 N., R. 5 E.,
 sec. 10, Lots 14 and 15;
 sec.11, Lot 9;
 sec. 17, Lots 1 thru 4, S½SW¼, and S½SE¼;
 sec. 18, Lots 1 thru 7, SE¼SW¼, and S½SE¼;
 sec. 19, Lots 1 thru 3, NE¼, and E½NW¼;
 sec. 20, E½, E½NW¼, NW¼NW¼, and NE¼SW¼;
 sec. 29, Lots 1 thru 4;
 sec. 30, SE¼;
 sec. 31, NE¼NE¼;
 Tract 38.

The areas described aggregate 4,212.98 acres according to the official plats of the surveys of the said lands, on file with the BLM.

2. The withdrawal made by this Order does not alter the applicability of laws governing the use of public lands other than the mining laws, mineral leasing laws, and mineral material laws.

3. This withdrawal will expire 50 years from the effective date of this Order, unless, as a result of a review conducted prior to the expiration date pursuant to section 204(f) of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714(f), the Secretary determines that the withdrawal shall be extended.

(Authority: 43 U.S.C. 1714)

Dated: April 18, 2024.

Deb Haaland,

Secretary.

Bureau of Land Management

[BLM_OR_FRN_MO4500178664]

Public Meeting for the Steens Mountain Advisory Council, Oregon

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of public meeting.

SUMMARY: In accordance with the Federal Land Policy and Management Act of 1976 and the Federal Advisory Committee Act of 1972, the U.S. Department of the Interior, Bureau of Land Management's (BLM) Steens Mountain Advisory Council (SMAC) will meet as follows.

DATES: The SMAC will participate in a field tour of sites within the Steens Mountain Cooperative Management and Protection Area, Thursday, June 13, 2024, from 8 a.m. to 5 p.m. Pacific time (PT), and a business meeting on Friday, June 14, from 8:30 a.m. to 3:30 p.m. PT.

ADDRESSES: The business meeting and the field tour will commence and conclude at the BLM's Burns District Office at 28910 Highway 20 West in Hines, Oregon. Virtual attendance through the Zoom for Government platform will be available for the Friday meeting. The final meeting agenda and Zoom link will be published on the SMAC's web page at least 10 days in advance at *https://on.doi.gov/2PnZRcl.*

FOR FURTHER INFORMATION CONTACT: Tara Thissell, Public Affairs Specialist, BLM Burns District Office, 28910 Highway 20 West, Hines, Oregon 97738; telephone: (541) 573–4519; email: *tthissell@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The SMAC was established on August 14, 2001, pursuant to the Steens Mountain Cooperative Management and Protection Act of 2000 (Pub. L. 106–399) (Act). The SMAC provides recommendations to the BLM regarding new and unique approaches to management of the public lands within the boundaries of the Steens Mountain Cooperative Management and Protection Area, and recommends cooperative programs and incentives for landscape management that meets human needs and maintains and improves the ecological and economic integrity of the Cooperative Management and Protection Area.

A field tour to the Steens Mountain area is planned for June 13. Tour stops will vary depending on road, weather, and access conditions, but may include Riddle Brothers Ranch, Page Springs Weir, South Steens Herd Management Area or campground, or fuels treatment project sites. The public is welcome to attend but must provide their own transportation and personal amenities, such as appropriate clothing and footwear, food, and water. High-clearance, four-wheel drive vehicles are recommended.

The June 14 meeting agenda will include information sharing from the Designated Federal Officer and the Andrews/Steens Field Manager, a conversation about Inflation Reduction Act projects, a discussion on specific language in parts of the Steens Act, and a presentation from the Burns Paiute Tribe about their culture and aboriginal homelands in the area. Council members also have the opportunity to share information from their constituents or present research. Any other matters that may reasonably come before the SMAC may also be included at any time throughout the meeting.

The meeting is open to the public and a public comment period is scheduled for 1:30 p.m. PT on Friday, June 14. Depending on the number of people wishing to comment and the time available, the amount of time for oral

comments may be limited. Written public comments may be sent to the BLM Burns District Office listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. All comments received at least one week prior to the meeting will be provided to the SMAC in advance of the meeting. The meeting may end early if all business items are completed ahead of schedule or may be extended if discussions warrant more time.

Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodations. We ask that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice at least 7 business days prior to the meeting to give the BLM sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comments, please be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

(Authority: 5 U.S.C. ch. 10)

Jeffrey Rose,

District Manager.

Notice of Intended Repatriation: Augusta Museum of History, Augusta, GA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Augusta Museum of History intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after May 28, 2024.

ADDRESSES: Nancy Glaser, Augusta Museum of History, 560 Reynolds Street, Augusta, GA 30901, telephone (706) 722–8454, email *amh@augustamuseum.org*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Augusta Museum of History, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of three cultural items have been requested for repatriation. The three unassociated funerary objects are three lots of shell beads. These items were removed from Elliott Mound (CA–SAC–88) by Smith Coin & Curio Company, likely between the years of 1924–1938. The items were acquired by former Museum Director Jouett Davenport, Sr. (1937–1963).

Determinations

The Augusta Museum of History has determined that:

- The three unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.
- There is a reasonable connection between the cultural items described in this notice and the Wilton Rancheria, California.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after May 28, 2024. If competing requests for repatriation are received, the Augusta Museum of History must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The Augusta Museum of History is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: April 15, 2024.

Notice of Inventory Completion: Jacksonville State University, Jacksonville, AL

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Jacksonville State University has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after May 28, 2024.

ADDRESSES: Tim Lindblom, Jacksonville State University, 700 Pelham Rd N, Jacksonville, AL 36265, telephone (256) 782–8488, email *tlindblom@jsu.edu*.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Jacksonville State University, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at least, 21 individuals have been reasonably identified. The at least 1,901 associated funerary objects include lithic debris, ceramic sherds, shells, worked stone objects, wood objects, glass sherds, iron objects, a European-manufactured ceramic sherd, unidentified objects, bone fragments, lithic debitage, mixed fragmentary materials, charcoal samples, and a soil sample. The remains and associated objects are from 10 sites in Alabama. Remains and associated objects from Coosa River (exact provenience unknown), Copena Burial Cave (Talladega County, exact provenience unknown), Bains Gap (1CA625), and Polecat Ford (1CE308) were provided to Jacksonville State University by members of the public. Remains and associated objects from Morgan Mountain (1CA42), Blue Hole (1CA421), Wright's Farm (1CA18), Terrapin Creek (1CE309), and Hog Island (1CE421) were excavated by Jacksonville State University's Archaeological Research Laboratory and field school courses under the direction of Dr. Harry O. Holstein. Remains and associated objects have been curated at Jacksonville State University following excavation or donation. Records indicate that remains from De Soto State Park (1DK49) were excavated by members of the public and/or a follow-up excavation by Jacksonville State University, but have not been physically located.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

Jacksonville State University has determined that:

- The human remains described in this notice represent the physical remains of at least 21 individuals of Native American ancestry.
- The at least 1,901 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the human remains and associated funerary objects described in this notice and The Muscogee (Creek) Nation.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after May 28, 2024. If competing requests for repatriation are received, Jacksonville State University must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. Jacksonville State University is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2024.

Notice of Intended Repatriation: Santa Barbara Museum of Natural History, Santa Barbara, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Santa Barbara Museum of Natural History intends to repatriate certain cultural items that meet the definition of a sacred objects and that has a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural item in this notice may occur on or after May 28, 2024.

ADDRESSES: Luke Swetland, President and CEO, Santa Barbara Museum of Natural History, 2559 Puesta del Sol, Santa Barbara, CA 93105, telephone (805) 682–4711, email *lswetland@sbnature2.org.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Santa Barbara Museum of Natural History, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one sacred object is a Navajo Jish (medicine bundle) donated by Nancy Alexander in 1984, originally acquired from dealer Larry Frank around 1975. This bundle is believed to be a composite, made up of parts of two or more original bundles. Larry Frank (1926–2006) was a noted historian, art collector, and author, living in Arroyo Hondo (not far from Taos, NM) when Nancy Alexander made the purchase.

Determinations

The Santa Barbara Museum of Natural History has determined that:

- The one sacred object described in this notice is a specific ceremonial object needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization.
- There is a reasonable connection between the cultural item described in this notice and the Navajo Nation, Arizona, New Mexico, & Utah.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after May 28, 2024. If competing requests for repatriation are received, the Santa Barbara Museum of Natural History must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item are considered a single request and not competing requests. The Santa Barbara Museum of Natural History is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: University of California, Santa Barbara, Repository for Archaeological and Ethnographic Collections, Santa Barbara, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of California, Santa Barbara (UCSB), Repository for Archaeological and Ethnographic Collections has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after May 28, 2024.

ADDRESSES: Hugh Radde, University of California, Santa Barbara, 4129 Cheadle Hall, Santa Barbara, CA 93106–2033, telephone (805) 893–3525, email *hradde@ucsb.edu.*

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the UCSB Repository for Archaeological and Ethnographic Collections, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

In 2012, UCSB Repository for Archaeological and Ethnographic reported 395 ancestors and their 3,985 associated funerary objects from Santa Barbara County, CA, Kern County, CA, and Los Angeles County, CA. The Notice of Inventory Completion was published in the **Federal Register** on June 12, 2012 (77 FR 34991–34997). Upon further consultation with the culturally affiliated Tribe we discovered an additional 8,250 associated funerary objects. The following inventory consists entirely of these additional AFOs which were associated with the ancestors reported in UCSB's 2012 Notice of Inventory Completion.

In 1956 and 1957, four associated funerary objects were removed from CA–SBA–53 in Santa Barbara County, CA (Accession 101). The excavation was directed by William Harrison and Norman Gabel during salvage operations associated with grading for the construction of Aerophysics Corporation buildings. The additional four associated funerary objects are one shotgun case, one lot of processed material, one lot of large groundstone fragments, and one lot of unprocessed material.

In 1958 and 1959, 247 associated funerary objects were removed from CA–SBA–1C (also known as CA–SBA–119) at Rincon Point in Santa Barbara County, CA (Accession 104). The excavation was directed by William Harrison and P. Lyons as part of Harrison's dissertation research at the University of Arizona. The additional 247 associated funerary objects are one clam disc bead, a minimum of 103 animal bones, 40 unmodified shell fragments, a minimum of 80 small pebbles, one bone bead, 19 raptor talons, one chert drill, one stone pendant, and one lot of processed material.

In the summers of 1958 and 1959, 86 associated funerary objects were removed from CA–SBA–78 at Dos Pueblos Ranch in Santa Barbara County, CA (Accession 117). The excavations were directed by William Harrison as part of a summer field school with the permission of the private land owner. The additional 86 associated funerary objects are one asphaltum fragment, one charcoal fragment, three tarring pebbles, 28 Olivella shell beads, four undifferentiated shell beads, one stone bead, one whale bone, seven flakes, a minimum of four groundstone fragments, two mano fragments, one green glass fragment, one animal tooth, one olla fragment, 17 unmodified shells, one burned animal bone, a minimum of 10 unmodified stones, one lot of processed material, one lot of unsorted material, and one large metate fragment.

In 1958 and 1959, four associated funerary objects were removed from CA–SBA–1D (also known as CA–SBA–141) at Rincon Point, in Santa Barbara County, CA (Accession 126). The excavations were led by William Harrison and P. Lyons as part of Harrison's dissertation research. The four associated funerary objects are two drills, one lot of processed material, and one lot of large groundstone fragments.

In 1963, 35 associated funerary objects were removed from CA–SBA–60 at the west end of Goleta Slough in Santa Barbara County, CA (Accession 127A). It is believed that the excavations were led by Humphrey during a UCSB field school. The 35 associated funerary objects are 21 clam shells, nine oyster shells, two scallop fragments, two unidentified shell fragments, and one chert flake.

In 1960, three associated funerary objects were removed from CA–SBA–38 in Santa Barbara County, CA (Accession 131). The salvage excavations were directed by William Harrison. The three associated funerary objects are one lot of large groundstone fragments, one lot of processed material, and one lot of unprocessed material.

In 1961, four associated funerary objects were removed from CA–SBA–167 in the Santa Ynez Valley, Santa Barbara County, CA (Accession 140). The collection was excavated by James Deetz during a UCSB summer field school. The additional four associated funerary objects are one shell bead fragment, one lot of processed material, one lot of large groundstone fragments,

and one lot of unprocessed bulk material.

In 1961, 589 funerary objects were removed from CA–SBA–46 on Mescalitan Island in Santa Barbara County, CA (Accession 144). The excavation was directed by James Deetz (UCSB) and a student crew as part of a salvage archeological project. The additional 589 funerary objects are three asphaltum applicators, two shell beads, two bifaces, 483 unmodified animal bones, one core, one large fire-cracked rock, 27 flakes, one glass fragment, three groundstone fragments, one charcoal fragment, 10 modified animal bone tools, one norris top shell ornament, two serpentine pendants, four mortars, one pestle, 17 unmodified shell fragments, nine unmodified stone fragments, 14 asphaltum pieces, four tarring pebbles, one lot of processed material, and two large groundstone fragments.

In 1964, two associated funerary objects were removed from CA–SBA–51, west of Goleta Slough in Santa Barbara County, CA (Accession 156). The excavations were directed by Michael Glassow (UCSB) as part of an archaeological field school. The two associated funerary objects are one unmodified animal bone and one lot of processed material.

In 1965, three associated funerary objects were removed from CA–SBA–485 at the south end of Lake Cachuma, Santa Barbara County, CA (Accession 158). The excavations were led by Jay Rub (UCSB). The additional three associated funerary objects are one lot of processed material, one lot of soil samples, and one lot of large groundstone fragments.

In 1958 and 1959, two associated funerary objects were removed from CA–SBA–78 at Dos Pueblos Ranch in Santa Barbara County, CA (Accession 164). William Harrison directed the excavations under the auspices of an archaeological field school. The two associated funerary objects are one lot of processed material and one large mortar fragment.

In 1969, 564 associated funerary objects were removed from CA–SBA–46C on Mescalitan Island, Santa Barbara County, CA (Accession 177). The excavations were directed by Claude Warren as an archaeological field school. The 564 associated funerary objects are one lot of asphaltum fragments, two asphaltum basketry impressions, one bone awl, a minimum of 16 undifferentiated shell beads, four Olivella shell beads, two bone beads, two steatite beads, 489 unmodified bone fragments, one modified bone tube fragment, four bone tubes inlaid with shell beads, one ochre-stained bone, two lumps of charcoal, one drill, six unmodified stones, five flakes, two flake tools, one mano fragment, one large mortar mended with asphaltum, two ochre lumps, 13 projectile point fragments, one complete unmodified abalone, one lot of shell fragments, three limpet pendants, one lot of processed material, one soil sample, and one lot of unprocessed material.

In 1970, two associated funerary objects were removed from CA–SBA–51, west of Goleta Slough in Santa Barbara County, CA (Accession 181). Michael Glassow (UCSB) directed the excavations as part of an archaeological field school. The two associated funerary objects are one lot of unprocessed bulk material and one lot of large groundstone fragments.

In 1968, five funerary objects were removed from CA–SBA–60 on the north end of the Goleta Slough, Santa Barbara County, CA (Accession 182). The excavations were led by Claude Warren and a student crew. The additional five associated funerary objects are two unmodified stones, one drilled turtle shell ornament, one lot of processed material, and one lot of unmodified animal bones.

In 1971, 161 associated funerary objects were removed from CA–SBA–71 in Santa Barbara County, CA (Accession 185 & 187). The excavations were led by Claude Warren as part of an archaeological field school. The additional 161 associated funerary objects are one chert drill, two awl fragments, a minimum of 125 unmodified animal bones, one bone bead, two modified bone objects, one fire-cracked steatite fragment, five flakes, one flake tool, two groundstone objects, one small cylindrical item, three ochre pieces, four unmodified shell fragments, two Olivella shells, two soil samples, six unmodified stones, one stone tool, one lot of processed material, and one lot of unprocessed material.

In 1970, 469 funerary objects were removed from CA–SCRI–236 at Christy Ranch on Santa Cruz Island in Santa Barbara County, CA (Accession 186). The excavations were directed by Michael Glassow (UCSB) with permission from the private landowner. The 469 associated funerary objects are 430 animal bones, 13 wood fragments, one stone tool, two glass beads, one clam bead, nine Olivella shell beads, one mussel shell bead, eight chert bladelets, one asphaltum chunk, one flake, one lot of processed material, and one lot of unprocessed material.

In 1974, 3,859 associated funerary objects were removed from CA–SCRI–240 at Prisoner's Harbor on Santa Cruz Island in Santa Barbara County, CA (Accession 206). The excavations were led by Albert Spaulding (UCSB). The 3,859 funerary objects are one abalone shell bowl, two asphaltum fragments, six bone gorges, two chert cores, one ochre piece, 3,831 Olivella columellas, one pestle fragment, nine modified abalone ornaments, one shale stone, one stone tool, one lot of processed material, one lot of large groundstone fragments, one huge asphaltum chunk, and one lot of unprocessed material.

In 1974, 190 associated funerary objects were removed from CA–SCRI–328 near Forney Cove on the west end of Santa Cruz Island in Santa Barbara County, CA (Accession 209). The excavations were led by UCSB graduate student Steve Horne, under the direction of Albert Spaulding and Michael Glassow. The additional 190 associated funerary objects are one lot of asphaltum nodules, 159 undifferentiated shell beads, one bone bead, one lot of animal bones, four drills, two glass beads, three modified abalone pendants, 11 soil samples, one unmodified stone, one lot of redwood fragments, two braided sea grass fragments, one lot of unmodified seagrass, one lot of processed material, one large mortar fragment, and one lot of unprocessed material.

At an unknown date, 15 associated funerary objects were removed from CA–SBA–37, near Atascadero Creek in Santa Barbara County, CA (Accession 210). Later, at an unknown date the collection was donated to UCSB by D.E. Brown. The 15 associated funerary objects are eight sandstone manos, four quartz flakes, one sandstone pestle, one lot of processed materials, and one lot of large groundstone fragments.

In 1973, 666 associated funerary objects were removed from CA–SCRI–163 near Stanton Ranch on Santa Cruz Island in Santa Barbara County, CA (Accession 211). The salvage excavations were led by Michael Glassow and Albert Spaulding (UCSB) with the permission of the private landowner. The additional 666 associated funerary objects are one bag of ash, 15 asphaltum fragments, one abalone with asphaltum, four bladelets, 98 undifferentiated shell beads, 18 Olivella shell beads, 188 unmodified animal bones, one Island fox cranium, one bipointed gorge, one bird bone whistles, one modified bird bone tube, one lot of fish bones, one chert core, 43 stone drills, one donut stone, 267 flakes, one glass bead, one glass fragment, one groundstone fragment, one hammerstone, one metal nail, one sandstone mortar, one ochre fragment, one ochre applicator, four shell fishhooks, three stone fragments, one

stone net weight, seven tarring pebbles, and one lot of processed material.

In 1973, 1,261 associated funerary objects were removed from CA–SCRI–240 near Prisoner's Harbor on Santa Cruz Island in Santa Barbara County, CA (Accession 211). The excavation was directed by Michael Glassow (UCSB). The 1,261 associated funerary objects are 12 chert bladelets, one bead, one unmodified animal bone, one swordfish bill, 263 chert cores, 946 flakes, 21 hammerstones, one metal nail, one unmodified abalone shell, 13 wood fragments, and one lot of processed material.

In 1973, 12 associated funerary objects were removed from CA–SCRI–381 on Santa Cruz Island in Santa Barbara County, CA (Accession 211). The excavation was led by Michael Glassow (UCSB) with the permission of the private land owner. The 12 associated funerary objects are five flakes and seven shell beads.

In 1976, 26 associated funerary objects were removed from CA–SCRI–382 on Santa Cruz Island in Santa Barbara County, CA (Accession 211). The excavation was directed by Michael Glassow (UCSB) with the permission of the private land owner. The 26 associated funerary objects are one bird bone whistle, one modified bird bone, one shell fishhook, 17 shell beads, one drill, one flake, and four marine mammal bones.

At an unknown date, one associated funerary object was removed from Christy's Ranch on Santa Cruz Island in Santa Barbara County, CA (Accession 211–112). In 1976, the collection was donated to UCSB. The one associated funerary object is one lot of animal bones.

In 1977, four associated funerary objects were removed from CA–KER–307, on the banks of Castaic Lake, Kern County, CA (Accession 212). The excavation was led by David Jennings of Los Angeles Community College. The additional four associated funerary objects are one bag of stones, one deer humerus fragment, one lot of unmodified animal bones, and one lot of groundstone fragments.

In or around 1928, three associated funerary objects were removed from CA–SBA–28 in Santa Barbara County, CA (Accession 227). The excavation was directed by John P. Harrington and later donated to the San Diego State University. In 1970, the collection was donated to UCSB. The three associated funerary objects are one lot of animal bone, one lot of processed material, and one lot of large groundstone fragments.

At unknown date, three associated funerary objects were removed from an archaeological site approximately located in the Vandenberg area of Santa Barbara County, CA. In 1983, the collection was donated to UCSB (Accession 248–19 and Accession 250–187, –188, –189). The three associated funerary objects are one sweat stick, one lot of abalone pendants, and one lot of Olivella beads.

In 1985, one associated funerary object was removed from Diablo Peak on Santa Cruz Island in Santa Barbara County, CA (Accession 248–33). It was collected by Robert Peterson and donated to UCSB. The one associated funerary object is a single lot of shell midden.

In 1950 and 1952, 15 associated funerary objects were removed from CA–SBA–485 at the south end of Lake Cachuma in Santa Barbara County, CA (Accession 261). The excavation was led by Martin Baumhoff under the auspices of the River Basin Surveys of the Smithsonian Institute. The 15 associated funerary objects are 12 asphaltum skirt weights, one projectile point, one lot of processed material, and one lot of unprocessed groundstone fragments.

Between 1974 and 1979, seven associated funerary objects were removed from CA–SBA–143 at Dos Pueblos High School in Santa Barbara County, CA (Accession 320). The excavations were conducted by Dos Pueblos High School. The seven associated funerary objects are one lot of animal bones, one bead, one lot of processed material, one lot of large groundstone fragments, one lot of unprocessed bulk material, one lot of unprocessed groundstone material, and one lot of column samples.

In 1983, three associated funerary objects were removed from CA–SBA–75 within Tecolote Canyon in Santa Barbara County, CA (Accession 328). Jon Erlandson recovered the surface collection during an assessment of cultural resources associated with the proposed Hyatt Regency Resort and Hotel. The three associated funerary objects are one lot of processed material, one large mortar fragment, and one lot of groundstone objects.

In 1985, four associated funerary objects were removed from CA–SBA–46G on Mescalitan Island in Santa Barbara County, CA (Accession 351). The excavation was conducted by a private firm, Scientific Resource Survey. The four associated funerary objects are one lot of column samples, one lot of processed material, one lot of unprocessed material, and one lot of midden soil.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the associated funerary objects described in this notice.

Determinations

The UCSB Repository for Archaeological and Ethnographic Collections has determined that:

- The 8,250 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the associated funerary objects described in this notice and the Santa Ynez Band of Chumash Mission Indians of the Santa Ynez Reservation, California.

Requests for Repatriation

Written requests for repatriation of associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the associated funerary objects in this notice to a requestor may occur on or after May 28, 2024. If competing requests for repatriation are received, the UCSB Repository for Archaeological and Ethnographic Collections must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. The UCSB Repository for Archaeological and Ethnographic Collections is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: April 15, 2024.

Melanie O'Brien,

Manager, National NAGPRA Program.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–720 and 731–TA–1688 (Preliminary)]

Ceramic Tile From India; Institution of Antidumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–720 and 731–TA–1688 (Preliminary) pursuant to the Tariff Act of 1930 (''the Act'') to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of ceramic tile from India, provided for in subheadings 6907.21.10, 6907.21.20, 6907.21.30, 6907.21.40, 6907.21.90, 6907.22.10, 6907.22.20, 6907.22.30, 6907.22.40, 6907.22.90, 6907.23.10, 6907.23.20, 6907.23.30, 6907.23.40, 6907.23.90, 6907.30.10, 6907.30.20, 6907.30.30, 6907.30.40, 6907.30.90, 6907.40.10, 6907.40.20, 6907.40.30, 6907.40.40, and 6907.40.90 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value and alleged to be subsidized by the Government of India. Unless the Department of Commerce (''Commerce'') extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by June 3, 2024. The Commission's views must be transmitted to Commerce within five business days thereafter, or by June 10, 2024.

DATES: April 19, 2024.

FOR FURTHER INFORMATION CONTACT: Nitin Joshi ((202) 708–1669), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on April 19, 2024, by Coalition for Fair Trade in Ceramic Tile.[1]

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Office of Investigations will hold a staff conference in connection with the preliminary phase of these investigations beginning at 9:30 a.m. on Friday, May 10, 2024. Requests to appear at the conference should be emailed to *preliminaryconferences@usitc.gov* (DO NOT FILE ON EDIS) on or before Wednesday, May 8, 2024. Please provide an email address for each conference participant in the email. Information on conference procedures, format, and participation, including guidance for requests to appear as a witness via videoconference, will be available on the Commission's Public Calendar (Calendar (USITC) | United States International Trade Commission). A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before 5:15 p.m. on May 15, 2024, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties shall file written testimony and supplementary material in connection with their presentation at the conference no later than noon on May 9, 2024. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

[1] The Coalition for Fair Trade in Ceramic Tile is comprised of Crossville, Inc., Crossville, TN; Dal-Tile Corporation, Dallas, TX; Del Conca USA, Inc., Loudon, TN; Wonder Porcelain, Lebanon, TN; Landmark Ceramics—UST, Inc., Mount Pleasant, TN; Florim USA, Clarksville, TN; Florida Tile, Lexington, KY; Portobello America Manufacturing LLC, Pompano Beach, FL; and StonePeak Ceramics Inc., Chicago, IL.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: April 22, 2024.

Lisa Barton,

Secretary to the Commission.

DEPARTMENT OF JUSTICE

Foreign Claims Settlement Commission

[F.C.S.C. Meeting and Hearing Notice No. 01–24]

Sunshine Act Meeting

The Foreign Claims Settlement Commission, pursuant to its regulations (45 CFR part 503.25) and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice in regard to the scheduling of open meetings as follows:

TIME AND DATE: Tuesday, May 7, 2024, at 10:00 a.m. EST.

PLACE: All meetings are held at the Foreign Claims Settlement Commission, 441 G Street NW, Room 6330, Washington, DC.

STATUS: Open.

MATTERS TO BE CONSIDERED: 10:00 a.m.– Oral hearing on Objection to Commission's Proposed Decision in Claim No. ALB–352.

CONTACT PERSON FOR MORE INFORMATION: Requests for information, or advance notices of intention to observe an open meeting, may be directed to: Patricia M. Hall, Foreign Claims Settlement Commission, 441 G St NW, Room 6234, Washington, DC 20579. Telephone: (202) 616–6975.

Brian M. Simkin,

Chief Counsel.

BILLING CODE 4410–BA–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Comprehensive Environmental Response, Compensation, and Liability Act

On April 18, 2024, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the Middle District of Florida in the lawsuit entitled *United States* v. *General Dynamics Corporation, et al.,* Civil Action No. 6:24–cv–00722. In the filed Complaint, the United States, on behalf of the U.S. Environmental Protection Agency (''EPA''), alleges that the Defendants are liable under the Comprehensive Environmental Response, Compensation, and Liability Act, 42 U.S.C. 9606 and 9607(a), for the releases and/or threatened releases of hazardous substances into the environment at the General Dynamics Longwood Superfund Site located at 1333 North U.S. Highway 17–92 Road in Longwood, Seminole County, Florida, which the Defendants owned and operated. The Consent Decree requires the Defendants to perform a Remedial Design and Remedial Action for the Site, reimburse EPA for its past response costs for the Site, and pay future costs related to the work. The estimated cost of the Remedial Design and Remedial Action is $560,784.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States* v. *General Dynamics Corporation et al.,* D.J. Ref. No. 90–11–3–12834. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Any comments submitted in writing may be filed by the United States in whole or in part on the public court docket without notice to the commenter.

During the public comment period, the proposed Consent Decree may be examined and downloaded at this Justice Department website: *https://www.justice.gov/enrd/consent-decrees.* If you require assistance accessing the proposed Consent Decree, you may request assistance by email or by mail to the addresses provided above for submitting comments.

Scott Bauer,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–P

DEPARTMENT OF JUSTICE

National Institute of Justice

[OJP (NIJ) Docket No. 1824]

Request for Input From the Public on Section 7.1(b) of Executive Order 14110, ''Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence''

AGENCY: National Institute of Justice, Office of Justice Programs, U.S. Department of Justice.

ACTION: Notice.

SUMMARY: The National Institute of Justice (NIJ) seeks written input from the public relevant to section 7.1(b) of Executive Order 14110, ''Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence.'' NIJ is seeking information that could inform a report that addresses the use of artificial intelligence (AI) in the criminal justice system.

DATES: Written input must be received by 5 p.m. eastern time on May 28, 2024.

ADDRESSES:

How to Respond and What to Include: Submissions must include a one-page cover letter that summarizes key points and can include additional written input. The cover letter must contain the contact information of the person submitting comments, including name, address, phone number, and email

address. There is no page limit for the additional written input. All submissions must be sent electronically as an email attachment to the contact below. NIJ prefers submissions in common file formats such as PDF or Word. Please indicate ''Public Input to Section 7.1(b) of E.O. 14110'' in the subject line of the email. Input must be received by the date listed above. Organizational responses may be submitted. If an organizational response is submitted, please indicate a point of contact in the cover letter, including name, address, phone number, and email address.

FOR FURTHER INFORMATION CONTACT: Mark Greene, Office Director, Office of Technology and Standards, National Institute of Justice, 810 7th Street NW, Washington, DC 20531; telephone number: (202) 598–9481; email address: *mark.greene2@usdoj.gov.*

SUPPLEMENTARY INFORMATION: NIJ plans to review the input provided by the public as it drafts a report responsive to section 7.1(b) of Executive Order 14110. All materials will be shared with U.S. Government staff or U.S. Government contractors for evaluation purposes. NIJ does not plan to publish the input received, however all materials submitted are subject to public release under the Freedom of Information Act. Comments should not include any sensitive personal information or confidential commercial information. If you wish to voluntarily submit confidential commercial information, you must mark that content prominently as ''CONFIDENTIAL COMMERCIAL INFORMATION'' and NIJ will, to the extent permitted by law, withhold such information from public release.

NIJ publishes this notice pursuant to its authority at 34 U.S.C. 10122(c) and 6 U.S.C. 161–165.

Nancy La Vigne,

Director, National Institute of Justice.

[FR Doc. 2024–08818 Filed 4–24–24; 8:45 am]

BILLING CODE 4410–18–P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[NOTICE: 24–029]

Adoption of a Department of the Air Force Categorical Exclusion Under the National Environmental Policy Act

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of adoption of categorical exclusion.

SUMMARY: The National Aeronautics and Space Administration (NASA) is adopting the Department of Air Force (DAF) Categorical Exclusion (CATEX) A2.3.34, Supersonic flying operations over land and above 30,000 feet Mean Sea Level, or over water and above 10,000 feet Mean Sea Level and more than 15 nautical miles from land, under the National Environmental Policy Act (NEPA) to use in NASA's program and funding opportunities administered by NASA. This notice describes the categories of proposed actions for which NASA intends to use DAF's CATEX and describes the consultation between the agencies.

DATES: The categorical exclusion is adopted April 25, 2024.

FOR FURTHER INFORMATION CONTACT: Amy Keith, NASA Headquarters, Environmental Management Division by phone at 256–701–2815 or by email *amy.keith@nasa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

NEPA and CATEXs

The National Environmental Policy Act, as amended (42 U.S.C. 4321–4347) (NEPA), requires all Federal agencies to assess the environmental impact of their actions. Congress enacted NEPA in order to encourage productive and enjoyable harmony between humans and the environment, recognizing the profound impact of human activity and the critical importance of restoring and maintaining environmental quality to the overall welfare of humankind. 42 U.S.C. 4321, 4331. NEPA's twin aims are to ensure agencies consider the environmental effects of their proposed actions in their decision-making processes and inform and involve the public in that process. 42 U.S.C. 4331. NEPA created the Council on Environmental Quality (CEQ), which promulgated NEPA implementing regulations, 40 CFR parts 1500 through 1508 (CEQ regulations).

To comply with NEPA, agencies determine the appropriate level of review—an environmental impact statement (EIS), environmental assessment (EA), or categorical exclusion (CATEX). 42 U.S.C. 4336. If a proposed action is likely to have significant environmental effects, the agency must prepare an EIS and document its decision in a record of decision. 42 U.S.C. 4336. If the proposed action is not likely to have significant environmental effects or the effects are unknown, the agency may instead prepare an EA, which involves a more concise analysis and process than an EIS. 42 U.S.C. 4336. Following the EA, the agency may conclude the process with a finding of no significant impact if the analysis shows that the action will have no significant effects. If, however, the analysis in the EA finds that the action is likely to have significant effects which cannot be mitigated below a significant level, then an EIS is required.

Under NEPA and the CEQ regulations, a Federal agency also can establish CATEXs—categories of actions that the agency has determined normally do not significantly affect the quality of the human environment—in their agency NEPA procedures. 42 U.S.C. 4336(e)(1); 40 CFR 1501.4, 1507.3(e)(2)(ii), 1508.1(d). If an agency determines that a CATEX covers a proposed action, it then evaluates the proposed action for extraordinary circumstances in which a normally excluded action may have a significant effect. 40 CFR 1501.4(b). If no extraordinary circumstances are present or if further analysis determines that the extraordinary circumstances do not involve the potential for significant environmental impacts, the agency may apply the CATEX to the proposed action without preparing an EA or EIS. 42 U.S.C. 4336(a)(2), 40 CFR 1501.4. If the extraordinary circumstances have the potential to result in significant effects, the agency is required to prepare an EA or EIS.

Section 109 of NEPA, enacted as part of the Fiscal Responsibility Act of 2023, allows a Federal agency to ''adopt'' or use another agency's CATEX for a category of proposed agency actions. 42 U.S.C. 4336(c). To use another agency's CATEX under section 109, an agency must identify the relevant CATEX listed in another agency's (''establishing agency'') NEPA procedures that cover its category of proposed actions or related actions; consult with the establishing agency to ensure that the proposed adoption of the CATEX to a category of actions is appropriate; identify to the public the CATEX that the agency plans to use for its proposed actions; and document adoption of the CATEX. *Id.* This notice documents NASA's adoption of Department of the Air Force (DAF) CATEX A2.3.34., Supersonic flying operations over land and above 30,000 feet Mean Sea Level, or over water and above 10,000 feet Mean Sea Level and more than 15 nautical miles from land, under section 109 of NEPA to use in NASA's programs and funding opportunities, including those administered by NASA's Quesst mission.

NASA's Program

NASA's Quesst mission is working with the international community to develop standards needed to open the commercial market to supersonic flight.

One of the most important of these standards is for sound levels from supersonic overflight that prevent adverse impacts to populations in developed and undeveloped areas. The Quesst mission has two goals. The first is to demonstrate the viability of aerodynamic design technology that reduces the sonic boom associated with supersonic flight to a soft thump sound. The second is to collect data on the response of populations to this thump sound that will inform the development of the needed standard. The mission involves multiple supersonic flights over representative communities with diverse climates and populations in four to six discrete geographic areas of approximately 120x50 miles in the continental U.S. For each community, the Quesst mission expects to fly approximately 100 total supersonic passes over a 30-day period. The daily community overflight schedule will not exceed 3 flights per day, with one to two passes per flight, for a maximum of 6 passes per day. The flights will only occur during daytime hours (*i.e.,* no night flights will occur). The sound levels will approximate those of naturally occurring distant thunder and result in non-adverse effects on communities, wildlife, domesticated animals, or other natural or cultural resources. The flights will operate from military and/or joint use military-civilian airfields. Supersonic flight operations will take place at speeds up to approximately Mach 1.4 and at altitudes between 42 and 55 thousand feet over the communities. NASA will comply with all existing regulations and operating procedures in effect at the airfields and for operations within the National Airspace. Well in advance of any overflight, communities will be provided general information about the tests and the sounds that may be heard. In the event that a flight may pass over tribal lands, tribal nations will also be engaged. Survey participants selected from the community population will be asked to respond via mobile device with reactions to the supersonic thump. Ground measurement hardware, including microphones and weather equipment, will record and characterize the supersonic thump at ground level. This data will be analyzed to document the relationship between sound exposure (dose) and annoyance (response) that will be provided to the International Civil Aviation Organization's Committee on Aviation Environmental Protection (ICAO–CAEP) to inform the sound limits of a supersonic overflight noise standard.

II. Identification of the Categorical Exclusion (CATEX) DAF's Supersonic Flying Operations CATEX

The DAF's environmental impact analysis process is codified in 32 CFR part 989. The DAF's categorical exclusion process is set forth in 32 CFR 989.13 as follows:

(a) CATEXs define those categories of actions that do not individually or cumulatively have potential for significant effect on the environment and do not, therefore, require further environmental analysis in an EA or an EIS. The list of Air Force-approved CATEXs is in appendix B. Supplements to this part may not add CATEXs or expand the scope of the CATEXs in appendix B.

(b) Characteristics of categories of actions that usually do not require either an EIS or an EA (in the absence of extraordinary circumstances) include:

(1) Minimal adverse effect on environmental quality.

(2) No significant change to existing environmental conditions.

(3) No significant cumulative environmental impact.

(4) Socioeconomic effects only.

(5) Similarity to actions previously assessed and found to have no significant environmental impacts.

(c) CATEXs apply to actions in the United States and abroad. General exemptions specific to actions abroad are in 32 CFR part 187. The EPF or other decision-maker forwards requests for additional exemption determinations for actions abroad to HQ USAF/A7CI with a justification letter.

(d) Normally, any decision-making level may determine the applicability of a CATEX and need not formally record the determination on AF Form 813 or elsewhere, except as noted in the CATEX list.

(e) Application of a CATEX to an action does not eliminate the need to meet air conformity requirements (see § 989.30).

The DAF's list of specific categorical exclusions is set forth at appendix B to part 989—Categorical Exclusions. NASA identified CATEX A2.3.34., Supersonic flying operations over land and above 30,000 feet Mean Sea Level, or over water and above 10,000 feet Mean Sea Level and more than 15 nautical miles from land, as applicable and appropriate to use in NASA's programs and funding opportunities, including those administered by the NASA Quesst mission.

Proposed NASA Category of Actions

NASA intends to apply CATEX A2.3.34 to NASA's Quesst mission. NASA also intends to apply the CATEX to other similar NASA programs that meet the qualifications of the CATEX. NASA will consider each proposal to use CATEX A2.3.34 to ensure that the proposal is within the scope of the CATEX. NASA intends to apply this CATEX in a manner consistent with DAF's application.

III. Consideration of Extraordinary Circumstances

The DAF's implementing regulations in 32 CFR, part 989, appendix B describe when additional analysis may be required (*i.e.,* extraordinary circumstances). Circumstances may arise in which usually categorically excluded actions may have a significant environmental impact and, therefore, may generate a requirement for further environmental analysis. Examples of situations where such circumstances may be present include:

A2.2.1. Actions of greater scope or size than generally experienced for a particular category of action.

A2.2.2. Potential for degradation (even though slight) of already marginal or poor environmental conditions.

A2.2.3. Initiating a degrading influence, activity, or effect in areas not already significantly modified from their natural condition.

A2.2.4. Use of unproved technology.

A2.2.5. Use of hazardous or toxic substances that may come in contact with the surrounding environment.

A2.2.6. Presence of threatened or endangered species, archaeological remains, historical sites, or other protected resources.

A2.2.7. Proposals adversely affecting areas of critical environmental concern, such as prime or unique agricultural lands, wetlands, coastal zones, wilderness areas, floodplains, or wild and scenic river areas.

A2.2.8. Proposals with disproportionately high and adverse human health or environmental effects on minority populations or low-income populations.

When applying CATEX A2.3.34, NASA will evaluate the proposed action and ensure each circumstance prescribed both in DAF regulations (as set forth above), and in NASA's NEPA implementing regulations at 14 CFR 1216.304(c), is carefully considered and do not apply to NASA's proposed action. If an extraordinary circumstance, or circumstances, exists, NASA will determine whether the proposed action has the potential to result in a significant environmental impact before applying CATEX A2.3.34, or proceed with preparation of an EIS or EA as appropriate. NASA will comply with

environmental requirements related to the proposal, including application and receipt of any necessary permits, and other applicable federal and state regulatory agency consultations and approvals which may be required.

IV. Consultation With DAF and Determination of Appropriateness

DAF and NASA consulted on the appropriateness of NASA's adoption of CATEX A2.3.34 in February 2024. DAF and NASA's consultation included a review of DAF's experience developing and applying the CATEX, as well as the types of actions for which NASA plans to use the CATEX. These NASA actions are very similar to the type of projects for which DAF has applied the CATEX and therefore the impacts of NASA projects, in this case, the Quesst mission, will be very similar to the impacts of DAF projects, which are not significant, absent the existence of extraordinary circumstances. Therefore, NASA has determined that its proposed use of the CATEX as described in this notice is appropriate.

V. Notice to the Public and Documentation of Adoption

This notice serves to identify to the public and document NASA's adoption of DAF's CATEX A2.3.34., Supersonic flying operations over land and above 30,000 feet Mean Sea Level, or over water and above 10,000 feet Mean Sea Level and more than 15 nautical miles from land. The notice identifies the types of actions to which NASA will apply the CATEX, as well as the considerations that NASA will use in determining whether an action is within the scope of the CATEX.

Nanette Smith,

Team Lead, NASA Directives and Regulations.

BILLING CODE 7510–13–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

[NARA–2024–030]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice.

SUMMARY: We are proposing to request an extension from the Office of Management and Budget (OMB) of a currently approved information collection, 3095–0060, Volunteer Service Application (NA Form 6045), used by individuals who wish to volunteer at the National Archives Building, the National Archives at College Park, regional records services facilities, and Presidential libraries and a new form, Voluntary Internship Application (NA Form 3060A), used by individuals who wish to intern at the National Archives Building, the National Archives at College Park, regional records services facilities, and Presidential libraries. We invite you to comment on this proposed information collection pursuant to the Paperwork Reduction Act of 1995.

DATES: We must receive written comments on or before June 24, 2024.

ADDRESSES: Send comments to Paperwork Reduction Act Comments (MP), Room 4100; National Archives and Records Administration; 8601 Adelphi Road; College Park, MD 20740–6001, or email them to *tamee.fechhelm@nara.gov.*

FOR FURTHER INFORMATION CONTACT: Tamee Fechhelm, Paperwork Reduction Act Officer, by email at *tamee.fechhelm@nara.gov* or by telephone at 301.837.1694 with requests for additional information or copies of the proposed information collection and supporting statement.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13), we invite the public and other Federal agencies to comment on proposed information collections. If you have comments or suggestions, they should address one or more of the following points: (a) whether the proposed information collection is necessary for NARA to properly perform its functions; (b) our estimate of the burden of the proposed information collection and its accuracy; (c) ways we could enhance the quality, utility, and clarity of the information we collect; (d) ways we could minimize the burden on respondents of collecting the information, including through information technology; and (e) whether the collection affects small businesses.

We will summarize any comments you submit and include the summary in our request for OMB approval. All comments will become a matter of public record.

In this notice, we solicit comments concerning the following information collection:

Title: Volunteer Service Application and Voluntary Internship Application.

OMB number: 3095–0060.

Agency form numbers: NA Form 6045 (Volunteer Service Application) and NA Form 3060A, Voluntary Internship Application.

Type of review: Regular.

Affected public: Individuals or households.

Estimated number of respondents: 1,000.

Estimated time per response: 25 minutes.

Frequency of response: On occasion.

Estimated total annual burden hours: 416 hours.

Abstract: We use volunteer resources to enhance our services to the public and to further our mission of providing ready access to essential evidence. Volunteers assist in outreach and public programs and provide technical and research support for administrative, archival, library, and curatorial staff, as well as other programs. We use a standard form for volunteers to apply and to assess the qualifications of potential volunteers. Members of the public who are interested in being a NARA volunteer use NA Form 6045, to signal their interest and to identify their qualifications for the work. Once we have selected someone as a volunteer, they fill out NA Form 6045a, Standards of Conduct for Volunteers, NA Form 6045b, Volunteer or Intern Emergency and Medical Consent, and NA Form 6045c, Volunteer or Intern Confidentiality Statement.

In addition to Pathways internships, NARA also uses voluntary (unpaid) interns to create a pipeline; bring fresh perspectives and ideas; and serve as NARA brand ambassadors. This opportunity provides interns with training, experience, and skills that will prepare them for their careers; and prepares participants for future employment with NARA. Engaging interns also involves the use of NA Form 3060A, Voluntary Internship Application to collect information for intern qualifications. Upon selection, applicants fill out the NA Form 3060, Voluntary Internship Agreement, as well as the other forms listed above.

Sheena Burrell,

Executive for Information Services/CIO.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2024–240 and CP2024–2416; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 222 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 19, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 *et seq.,* and 39 CFR 3035.105; *Public Representative:* Kenneth R. Moeller; *Comments Due:* April 29, 2024.

2. *Docket No(s).:* MC2024–241 and CP2024–247; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 223 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 19, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 *et seq.,* and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* April 29, 2024.

3. *Docket No(s).:* MC2024–242 and CP2024–248; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 58 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 19, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 *et seq.,* and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* April 29, 2024.

4. *Docket No(s).:* MC2024–243 and CP2024–249; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 224 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 19, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 *et seq.,* and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* April 29, 2024.

This Notice will be published in the **Federal Register**.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99993; File No. SR–NYSEARCA–2024–33]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify Rule 6.91P–O

April 19, 2024

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 5, 2024, NYSE Arca, Inc. (''NYSE Arca'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify Rule 6.91P–O (Electronic Complex Order Trading) to specify that a Complex Customer Cross Order received during a Complex Order Auction (''COA'') would result in the early end of the COA. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 6.91P–O (Electronic Complex Order Trading) to specify that a Complex Customer Cross (''Complex C2C'') Order received during a COA would result in the early end of the COA. This proposed functionality is not new or novel and mirrors a recently adopted rule requiring that a COA in progress ends early upon the receipt of a Complex QCC Order in the same complex strategy as the COA.[4] As

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] *See* Rule 6.91–O(f)(3)(E). *See* Securities Exchange Act Release No. 99597 (February 23, 2024), 89 FR 14906 (February 29, 2024 (SR–

Continued

discussed below, the reasons justifying the early end of a COA upon the receipt of a Complex QCC Order apply equally to the required early end of a COA upon receipt of a Complex C2C Order in the same complex strategy.[5]

Rule 6.91P–O reflects how Electronic Complex Orders (''ECOs'') will trade on the Exchange [6] and paragraph (f) to this rule describes the handling of ECOs submitted to the Complex Order Auction (COA) process.[7] When a COA Order initiates a COA, the Exchange disseminates a Request for Response (''RFR'') to solicit potentially price-improving ECO interest—which solicited interest includes interest designated to respond to the COA (*i.e.,* ECO GTX Orders) and unrelated price-improving ECO interest (resting and newly arriving) that arrives during the Response Time Interval (each an ''RFR Response'') (collectively, the ''auction interest'').[8] The COA lasts for the duration of the Response Time Interval unless, during the COA, the Exchange receives certain options trading interest that requires the COA to conclude early.[9] When the COA concludes, the COA Order executes first with price-improving ECO interest, next with any contra-side interest, including the leg markets (if permissible),[10] and any remaining balance (that is not cancelled) is ranked in the Consolidated Book (the ''Consolidated Book'' or ''Book'').[11] Once the COA Order executes to the extent possible—whether with the best-priced Complex Orders or the best-priced interest in the leg markets—and is placed in the Book, the Exchange will update its complex order book and, if applicable, the Exchange BBO (as a result of any executions of the COA Order with the leg markets).

The Exchange proposes to modify Rule 6.91P–O(f)(3)(E) to add an additional early end scenario to specify that a COA in progress will end early any time there is a Complex C2C Order submitted in the same complex strategy as the COA Order.[12] By its terms, a Complex C2C Order ''that is not rejected'' by the Exchange, ''will immediately trade in full at its limit price.'' [13]

To avoid rejection, a Complex C2C Order must satisfy certain price validations, including that each option leg may not be priced worse than the Exchange BBO; and, that the transaction price must be equal to or better than the best-priced Complex Orders, unless the best-priced Complex Orders contains displayed Customer interest, in which case the transaction price must improve such interest.[14] In addition, the price of a Complex C2C Order must be priced at or between the DBBO; [15] provided, however, that the Complex C2C Order may not equal the DBBO if the DBBO is calculated using the Exchange BBO and the Exchange BBO for any component of the complex strategy on either side of the market includes displayed Customer interest.[16] Specifically, if the DBB (DBO) includes displayed Customer interest on the Exchange, the transaction price must improve the DBB (DBO) by at least one cent ($0.01).[17]

As noted above, until a COA concludes, the Book is not updated to reflect any COA Order executions (with price-improving auction interest or with resting ECO or leg market interest) or any balance of the COA Order ranking in the Book. Thus, to allow the later-arriving Complex C2C Order to be evaluated based on the most up-to-date Book, the Exchange proposes to end a COA upon the arrival of a Complex QCC [sic] Order in the same complex strategy. This proposed early termination would allow the Exchange to incorporate executions from the COA, or any remaining balance of the COA Order, to conduct the requisite price validations per Rule 6.62P–O(g)(2)(C) for the Complex C2C Order—including based on the Exchange BBO, the DBBO, and best-priced Complex Orders on the Exchange following the COA Order executions and ranking.

Like current Rule 6.91P–O(3)(f)(E), the proposed rule change would be consistent with current Rule 6.91P–O(f)(3)(A)–(D), which describes four circumstances that cause the early end of a COA to ensure that later-arriving interest does not trade ahead of a COA Order and to ensure that the Book is updated to reflect executions resulting from the COA. The Exchange believes that the proposed rule change achieves this same objective. As with the existing early end scenarios, the proposed early end of a COA does not prevent the COA Order from trading with any interest, including price-improving interest, that arrived prior to the early termination (*i.e.,* because of a Complex C2C Order in

NYSEARCA–2024–17) (adopting, on an immediately effective basis, Rule 6.91P–O (f)(3)(E) which specifies that a COA in progress ends early upon receipt of a Complex QCC Order in the same complex strategy). The Exchange notes that the same rule change has been adopted on its affiliated options exchange, NYSE American LLC. *See* NYSE American Rule 980NYP(f)(3)(E). *See* Securities Exchange Act Release No. 99354 (January 17, 2024), 89 FR 4358 (January 17 [sic], 2024) (SR–NYSEAMER–2024–03) (adopting, on an immediately effective basis, NYSE American Rule 980NYP(f)(3)(E) which specifies that a COA in progress ends early upon receipt of a Complex QCC Order in the same complex strategy).

[5] *See, e.g., id.,* 89 FR, at 14906.

[6] *See generally* Rule 6.91P–O (Electronic Complex Order Trading). Unless otherwise specified, all capitalized terms used herein have the same meaning as is set forth in Rule 6.91P–O.

[7] *See* Rules 6.91P–O(f) (Execution of ECOs During a COA), (f)(1) (Initiation of a COA), (f)(2) (Pricing of a COA). *See also* Rule 6.91P–O(a)(3)(A) (defining a ''COA Order'' as an ECO designated as eligible to initiate a COA).

[8] *See* Rules 6.91P–O(a)(3)(B) (defining, and detailing the information included in, each RFR); (a)(3)(C) (defining each ''RFR Response'' as, among other things, ''any ECO'' received during the Response Time Interval that is in the same complex strategy as, and is marketable against, the COA Order); and (a)(3)(D) (defining the Response Time Interval as the period during which RFR Responses may be entered, which period ''will not be less than 100 milliseconds and will not exceed one (1) second,'' as determined by the Exchange and announced by Trader Update). *See* Rule 6.91P–O(b)(2)(C) (defining a ''ECO GTX Order,'' including that such order is submitted in response to an RFR announcing a COA and will trade with the COA Order to the extent possible and then cancel).

[9] *See* Rule 6.91P–O(f)(3)(A)–(E) (setting forth the circumstances under which a COA will conclude before the end of the Response Time Interval, including, as discussed *infra,* upon receipt of a Complex QCC Order in the same complex strategy as the COA).

[10] The Exchange notes that there are certain limitations to how an ECO, including a COA Order post-COA, may interact with the leg markets. *See, e.g.,* Rule 6.91P–O(e)(1)(A) (providing, in relevant part, that the leg markets will trade first with an ECO, but only if the legs can execute with the ECO ''in full or in a permissible ratio,'' and, once the leg markets trade with the ECO to the extent possible, such ECO will trade with same-priced ECOs resting in the Book). *See also* Rule 6.91P–O(e)(1)(C)–(D) (describing ECOs that are not permitted to trade with the leg markets).

[11] *See* Rule 6.91P–O(f)(4)(A)-(C) (Allocation of COA Orders) (providing, in relevant part, that when a COA ends early or at the end of the Response Time Interval, a COA Order trades first with price-improving interest, next ''with any contra-side interest, including the leg markets, unless the COA is designated as a Complex Only Order'' and any remaining portion is ranked in the Consolidated Book and the COA Order is processed as an ECO pursuant to Rule 6.91P–O(e) (Execution of ECOs During Core Trading Hours). *See* Rule 1,1 (defining Consolidated Book as ''the Exchange's electronic book of orders and quotes.'').

[12] *See* proposed Rule 6.91P–O(f)(3)(E).

[13] *See* Rule 6.62P–O (g)(2)(A) (providing that a Customer Cross (''C2C'') Order, including a Complex C2C Order, ''that is not rejected per paragraph (g)(2)(B) [Execution of C2C Orders] or (C) [Execution of Complex C2C Orders] below will immediately trade in full at its limit price'').

[14] *See* Rule 6.62P–O(g)(2)(C) & (g)(2)(C)(ii).

[15] The DBBO establishes a derived (theoretical) bid or offer for a particular complex strategy. *See* Rule 6.91P–O(a)(5) (defining the DBBO and providing that the bid (offer) price used to calculate the DBBO on each leg will be the Exchange BB (BO) (if available), bound by the maximum allowable Away Market Deviation). The Away Market Deviation, as defined in Rule 6.91P–O(a)(1), ensures that an ECO does not execute too far away from the prevailing market. Rule 6.91P–O(a)(5) also provides for the establishment of the DBBO in the absence of an Exchange BB (BO), or ABB (ABO), or both. A Complex C2C Order will not be processed if there is no DBBO for any leg of the strategy either because there is no Exchange BBO or Away BBO for a leg of the complex strategy, or the best bid and offer prices for a leg are locked or crossed, per Rule 6.91P–O(a)(5)(B) or (a)(5)(C). *See* Rule 6.62P–O(g)(2)(C).

[16] *See* Rule 6.62P–O(g)(2)(C) & (g)(2)(C)(i).

[17] *See id.*

the same complex strategy as the COA). In addition, any portion of the COA Order that does not trade in the COA is placed on the Consolidated Book where it continues to have opportunities to trade.[18]

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934 (the ''Act''),[19] in general, and furthers the objectives of Section 6(b)(5),[20] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed amendment to Rule 6.91P–O(f)(3)(E) regarding the additional circumstance that would cause a COA to end early would promote just and equitable principles of trade because it would ensure that the COA Order is executed to the extent possible and, if applicable, is ranked in the Consolidated Book before the Exchange evaluates the later-arriving Complex C2C Order. As noted above, until the COA concludes, the Book is not updated to reflect any COA Order executions (with price-improving auction interest or with resting ECO or leg market interest) or any balance of the COA Order ranking in the Book. This proposed early termination would then allow the Exchange to incorporate executions from the COA, or any remaining balance of the COA Order, to conduct the requisite price validations for the Complex C2C Order (per Rule 6.62P–O(g)(2)(C)) based on the most up-to-date Book (*i.e.,* based on the DBBO, Exchange BBO, and best-priced Complex Orders on the Exchange following the COA).

As noted herein, the proposed change is being made for the same reasons that a COA in progress would end early upon the receipt of another Cross Order—a Complex QCC Order, per Rule 6.91P–O(f)(3)(E)—and therefore raises no new or novel issues and would ensure internal consistency of Exchange rules. In addition, Rule 908NYP(f)(A)–(D) describes the other four circumstances under which a COA must end early to ensure that later-arriving interest does not trade ahead of a COA Order and to ensure that the Book is updated to reflect executions resulting from the COA. The Exchange believes that the proposed rule change achieves this same objective. As with each of the early end scenarios, the proposed early end of a COA does not prevent the COA Order from trading with any interest, including price-improving interest, that arrived prior to the early termination (*i.e.,* because of a Complex C2C Order in the same complex strategy as the COA). As such, the proposed change would benefit investors because it would ensure the timely executions of COA Orders (at potentially improved prices) and would also allow a timely execution of the Complex C2C Orders in the same complex strategy as the COA Order. In addition, the proposal would ensure that the prices used to validate a Complex C2C Order would incorporate executions from the COA, or any remaining balance of the COA Order.[21]

For the same reasons articulated when the Exchange adopted Rule 6.91P–O(f)(3)(E) (early end of a COA upon receipt of a Complex QCC Order), the Exchange believes that its proposed approach would provide the best protection to investors because ending a COA upon receipt of a C2C Order would ensure that the COA Order executes to the extent possible and that the Exchange relies on the most-up-to-date Book (following executions in the COA) to validate the price of the Complex QCC [sic] Order. Thus, the Exchange believes the proposed rule change would promote just and equitable principles of trade because it would help preserve—and maintain investor's confidence in—the integrity of the Exchange's local market.

Finally, the Exchange believes that modifying the rule as proposed would add clarity and transparency to Rule 6.91P–O regarding the handling of COA Orders.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on intra-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change would apply in the same manner to all similarly-situated market participants that opt to utilize the COA process, the use of which is voluntary and, as such, market participants are not required to avail themselves of this process.

The Exchange does not believe that its proposed rule change will impose any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed change is designed to ensure that both a COA Order and a C2C Order receive timely executions based on current market conditions. To the extent that other options exchanges offer complex order auctions and Complex C2C Orders, such exchanges are free to adopt (if they have not already done so) the early termination provision proposed herein.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[22] and Rule 19b–4(f)(6) thereunder.[23] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.[24]

A proposed rule change filed under Rule 19b–4(f)(6)[25] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[26] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public

[18] *See* note 11, *supra* (describing that any remaining portion of a COA Order following the COA will be placed on the Consolidated Book and will be processed as an ECO).

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(5).

[21] As noted herein, any portion of the COA Order that does not trade in the COA is placed in the Consolidated Book where it continues to have opportunities to trade. *See, e.g.,* note 11, *supra.*

[22] 15 U.S.C. 78s(b)(3)(A)(iii).

[23] 17 CFR 240.19b–4.

[24] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires the Exchange to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[25] 17 CFR 240.19b–4(f)(6).

[26] 17 CFR 240.19b–4(f)(6)(iii).

interest. The Exchange has asked the Commission to waive the 30-day operative delay. The Exchange states that waiver of the operative delay would allow the Exchange to immediately implement the Complex C2C functionality, including the associated early end scenarios in proposed Exchange Rule 6.91P–O(f)(3)(E). The Commission finds that waiving the operative delay is consistent with the protection of investors and the public interest because it will allow a COA Order in a complex strategy to execute to the extent possible after the Exchange receives a Complex C2C Order in the same strategy while allowing the Exchange to conduct the required price validations for the Complex C2C Order [27] based on a Book that has been updated to reflect any executions of the COA Order, thereby ensuring that the required price validations for the Complex C2C Order have accounted for all trading interest on the Exchange.[28] In addition, any portion of the COA Order that does not execute during the COA may be placed in the Consolidated Book, where it will continue to have opportunities to trade. For these reasons, the Commission designates the proposal operative upon filing.[29]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEARCA–2024–33 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2024–33. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEARCA–2024–33 and should be submitted on or before May 16, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[30]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2024–08803 Filed 4–24–24; 8:45 am]

BILLING CODE 8011–01–P

[27] *See* Exchange Rule 6.62P–O(g)(2)(C).

[28] The Exchange's proposal to end a COA early when it receives a Complex C2C Order for the same strategy as the COA Order is consistent with current Exchange Rule 6.91P–O(f)(3)(E). Specifically, as discussed above, Exchange Rule 6.91P–O(f)(3)(E) currently states that a COA will end early if the Exchange receives a Complex QCC Order in the same complex strategy as the COA order. The Exchange proposes to amend Exchange Rule 6.91P–O(f)(3)(E) to provide that a COA also will end early if the Exchange receives a Complex C2C Order in the same complex strategy as the COA Order. The Exchange states that the purpose of the early termination is the same for both Complex QCC and Complex C2C Orders—to allow the Exchange to conduct the required price validations for a Complex QCC Order or Complex C2C Order based on a Book that has been updated to include any executions from the COA for the same complex strategy. The Exchange states that ending the COA upon receipt of a Complex C2C Order in the same strategy as the COA Order protects investors by ensuring that the COA Order executes to the extent possible and that the Exchange relies on the most-up-to-date Book (following executions in the COA) to validate the price of the Complex C2C Order, which the Exchange believes will help to preserve the integrity of the Exchange's local market.

[29] For purposes only of accelerating the operative date of this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

Sound Point Meridian Capital, Inc., et al.

April 19, 2024.

AGENCY: Securities and Exchange Commission ("Commission" or "SEC").

ACTION: Notice.

Notice of application for an order under section 17(d) of the Investment Company Act of 1940 (the "Act") and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by section 17(d) of the Act and rule 17d–1 under the Act.

Summary of Application: Applicants request an order to permit certain closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

Applicants: Sound Point Meridian Capital, Inc., Sound Point Meridian Management Company, LLC, Sound Point Capital Management, LP, Sound Point Harbor Master Fund LP, Sound Point Harbor Fund LP, Sound Point Harbor Offshore Fund LP, Sound Point CLO Master Fund LP, Sound Point CLO Fund LP, and Sound Point CLO Fund, Ltd.

Filing Dates: The application was filed on June 13, 2023, and amended on October 3, 2023, January 12, 2024, March 19, 2024, and April 15, 2024.

Hearing or Notification of Hearing: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on May 14, 2024 and should be accompanied by proof of service on the Applicants, in the form of an affidavit or, for lawyers, a

certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: *The Commission: Secretarys-Office@sec.gov.* Applicants: Wendy Ruberti, General Counsel, Sound Point Capital Management, LP, 375 Park Avenue, 33rd Floor, New York, NY 10152 with copies to Harry S. Pangas and Philip T. Hinkle, Dechert LLP, 1900 K Street NW, Washington, DC 20006–1110.

FOR FURTHER INFORMATION CONTACT: Laura J. Riegel, Senior Counsel, or Lisa Reid Ragen, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' fourth amended and restated application, dated April 15, 2024, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system.

The SEC's EDGAR system may be searched at *http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99992; File No. SR–NYSE–2024–21]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing of Proposed Rule Change, as Modified by Amendment No. 1, To Amend Section 802.01D of the NYSE Listed Company Manual Concerning the Suspension and Delisting of a Listed Company That Has Changed its Primary Business Focus

April 19, 2024.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act''),[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 4, 2024, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. On April 17, 2024, the Exchange filed Amendment No. 1, which supersedes the original filing in its entirety. The Commission is publishing this notice to solicit comments on the proposed rule change, as modified by Amendment No. 1, from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Section 802.01D of the NYSE Listed Company Manual (''Manual'') to provide the Exchange with discretion to commence suspension and delisting proceedings with respect to a listed company that has changed its primary business focus to a new area of business that it was not engaged in at the time of its original listing, or which was immaterial to its operations at the time of its original listing. The text of the proposed rule change is set forth in Exhibit 5. This Amendment No. 1 to SR–NYSE–2024–21 replaces SR–NYSE–2024–21 as originally filed and supersedes such filing in its entirety.[4]

The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C.78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] *See* note 5 *infra.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

This Amendment No. 1 to SR–NYSE–2024–21 replaces SR–NYSE–2024–21 as originally filed and supersedes such filing in its entirety.[5] Amendment No.1 amends the original filing to: (i) insert a new sentence in the proposed new paragraph in Section 802.01D stating that the Exchange would focus its analysis of a company's suitability for continued listing after a change in operations on whether it would have accepted the listed company for initial listing if it had been engaged in its modified business at the time of original listing; (ii) amend the lead-in language to Section 802.01D and the description in the Purpose section of the filing to include a parenthetical that specifies that, instead of applying the procedures outlined in Sections 802.02 and 802.03, the Exchange will instead commence immediate suspension and delisting procedures if the individual paragraph of Section 802.01D so specifies; (iii) insert a sentence in the Purpose section noting that the Exchange's analysis of a company's change in business operations will focus on the qualitative aspects of the company's suitability for listing and will not entail an application of the quantitative standards for initial listing; (iv) amend the proposed new paragraph of Section 802.01D under the heading ''Change in Primary Business Focus'' to clarify that the proposed paragraph will apply only where the company has changed its primary business focus to a new area of business that is ''substantially different'' from the business it was engaged in at the time of its original listing or, as provided in the original filing, which was immaterial to its operations at the time of its original listing; (v) clarify that any

[5] *See* SR–NYSE–2024–21 (April 4, 2024).

suspension and delisting resulting from a change in operations will be undertaken in accordance with the procedures set out in Section 804.00 of the Manual; and (vi) make conforming changes to the Statutory Basis section.

It has been the Exchange's experience that listed companies occasionally change the focus of their operations from the business they were engaged in at the time of initial listing to a business line that is completely unrelated or that was not material at the time of its original listing. The Exchange is concerned that, in such circumstances, investors who acquired the company's stock prior to this change in operations (including, in many cases, in connection with the company's initial public offering) may have made their investment decision based on the company's disclosure about its original business and might not have made their investment if they had been aware of how the company would change. In addition, a wholesale change in business operations may give rise to a concern about the suitability for listing of the company had it been in engaged in that line of business at the time of its application for listing. The Exchange notes that, in some circumstances, there has been significant downward price movement subsequent to such a change in business focus, which resulted in significant investor losses and an inability to meet exchange continued listing standards.[6]

In light of the foregoing, the Exchange proposes to amend Section 802.01D of the Manual (''Other Criteria'') to include a new paragraph (''Change in Primary Business Focus'') providing that the Exchange may in its sole discretion subject a listed company to immediate suspension and delisting in accordance with the procedures set forth in Section 804.00 of the Manual if that listed company has changed its primary business focus to a new area of business that it was not engaged in at the time of its original listing or which was immaterial to its operations at the time of its original listing. If the Exchange becomes aware of such a change in the company's primary business focus, the Exchange's Staff would conduct a thorough assessment of the company's suitability for continued listing in light of such change. The Exchange would focus its analysis on whether it would have accepted the listed company for initial listing if it had been engaged in its modified business at the time of original listing. The Exchange notes that this analysis will focus on the qualitative aspects of the company's suitability for listing and will not entail an application of the quantitative standards for initial listing. For example, the Exchange would, where appropriate, take into consideration other changes that may have occurred in connection with the change in the company's primary business focus, including, but not limited to, changes in the management, board of directors, voting power, ownership, and financial structure of the company. The Exchange acknowledges that seeking to suspend and delist a company's stock under this revised rule would be an extraordinary action. The Exchange therefore anticipates seldom relying on this new discretionary authority, and only after thorough analysis of all relevant facts and circumstances.

The lead-in to Section 802.01D provides that if any of the factors set forth in 802.01D apply to a listed company, the Exchange may in its sole discretion subject the company to the procedures outlined in Paras. 802.02 and 802.03, which provide noncompliant companies with an opportunity to cure their deficiencies. The Exchange proposes to add a parenthetical to this lead-in language to specify that, instead of applying the procedures outlined in Paras. 802.02 and 802.03, the Exchange will instead commence immediate suspension and delisting procedures if the individual paragraph of Section 802.01D so specifies). This proposed parenthetical provision in the lead-in to Section 802.01D will make the lead-in consistent with the Exchange's proposal to include a provision in the proposed new paragraph of that rule providing that any listed company that is deemed to be unsuitable for continued listing because of a change of business operations will be subject to immediate suspension and delisting procedures.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[7] in general, and furthers the objectives of Section 6(b)(5) of the Act[8] in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes it is consistent with the protection of investors to amend Section 802.01D to provide the Exchange with the discretion to immediately commence suspension and delisting procedures in accordance with Section 804.00 of the Manual with respect to a listed company that has changed its primary business focus to a new area of business that it was not engaged in at the time of its original listing or which was immaterial to its operations at the time of its original listing. The Exchange notes that investors who acquired the company's stock prior to this change in operations (including, in many cases, in connection with the company's initial public offering) may have made their investment decision based on the company's disclosure about its original business and might not have made their investment if they had been aware of how the company would change. In addition, the Exchange is concerned that a listed company may change its business operations to a line of business that would have given rise to a concern about the suitability for listing of the company had it been in engaged in that line of business at the time of its application for listing. The Exchange notes that taking delisting action in such cases would be discretionary and that the Exchange would undertake such action only after a careful analysis of the company's suitability for continued listing, taking into account all relevant factors, including, but not limited to, changes in the management, board of directors, voting power, ownership, and financial structure of the company. In making these determinations, the Exchange would focus its analysis on whether it would have accepted the listed company for initial listing if it had been engaged in its modified business at the time of original listing. The Exchange notes that this analysis will focus on the qualitative aspects of the company's suitability for listing and will not entail an application of the quantitative standards for initial listing.

The proposed inclusion of new parenthetical language in the lead-in to Section 802.01D makes that lead-in consistent with the proposed new paragraph with respect to a company's change in business, as it provides that

---

[6] For example, Bit Brother, a company listed on Nasdaq, initially focused on selling tea products but ultimately changed its business line to crypto. After three reverse splits, one of which was quite large (1000:1), the company was still unable to regain sustained compliance with listing standards. The stock was delisted from Nasdaq in February 2024. *See https://www.wsj.com/finance/stocks/as-trading-frenzies-grip-penny-stocks-criticism-of-nasdaq-grows-8bd4118b* (Feb 23, 2024).

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

he Exchange can immediately suspend and delist a company under Section 802.01D where the applicable paragraph of the rule so provides, as is the case with the proposed new provision with respect to changes in business operations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that there are several listing venues and that any company that the Exchange deemed unsuitable for continued listing under the proposed rule could apply for listing on one or more other exchanges.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period *up to 90 days* (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove the proposed rule change, as modified by Amendment No. 1, or

(B) institute proceedings to determine whether the proposed rule change as modified by Amendment No. 1, should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as modified by Amendment No. 1, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or

• Send an email to *rule-comments@sec.gov*. Please include file number SR–NYSE–2024–21 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSE–2024–21. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSE–2024–21 and should be submitted on or before May 16, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[9]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99994; File No. 4–820]

Options Price Reporting Authority; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Amendment To Modify Section 5.2(c)(iii) of the OPRA Plan Relating to Dissemination of Exchange Proprietary Data Information

April 19, 2024.

I. Introduction

On November 8, 2023, the Cboe BZX Exchange, Inc. (''BZX Options''), Cboe Exchange, Inc. (''Cboe Options''), Cboe C2 Exchange, Inc. (''C2 Options''), and Cboe EDGX Exchange, Inc. (''EDGX Options'') (collectively, the ''Sponsors'' or ''Cboe'') filed with the Securities and Exchange Commission (''Commission'') a proposed amendment to the Plan for Reporting of Consolidated Options Last Sale Reports and Quotation Information (''OPRA Plan''). The proposed amendment was published for comment in the **Federal Register** on January 22, 2024.[1]

This order institutes proceedings, under Rule 608(b)(2)(i) of Regulation NMS,[2] to determine whether to approve or disapprove the proposed amendment or to approve the proposed amendment with any changes or subject to any conditions the Commission deems necessary or appropriate after considering public comment.

II. Proceedings To Determine Whether To Approve or Disapprove the Proposed Amendment

The Commission is instituting proceedings pursuant to Rule 608(b)(2)(i) of Regulation NMS,[3] and Rules 700 and 701 of the Commission's Rules of Practice,[4] to determine whether to approve or disapprove the proposed amendment or to approve the proposed amendment with any changes or subject to any conditions the Commission deems necessary or appropriate. The Commission is instituting proceedings to have sufficient time to consider the issues raised by proposed amendment, including comments received.

[1] *See* Options Price Reporting Authority; Notice of Filing of Proposed Amendment to Modify Section 5.2(c)(iii) of the OPRA Plan Relating to Dissemination of Exchange Proprietary Data Information, Securities Exchange Act Release No. 99345 (Jan. 16, 2024), 89 FR 3963 (Jan. 22, 2024) (''Notice''). Comments received in response to the Notice can be found on the Commission's website at *https://www.sec.gov/comments/4-820/4-820.htm.*

[2] 17 CFR 242.608(b)(2)(i).

[3] *Id.*

[4] 17 CFR 201.700; 17 CFR 201.701.

Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, the Commission seeks and encourages interested persons to provide additional comment on the proposed amendment to inform the Commission's analysis.

Rule 608(b)(2) of Regulation NMS provides that the Commission ''shall approve a national market system plan . . ., with such changes or subject to such conditions as the Commission may deem necessary or appropriate, if it finds that such plan . . . is necessary or appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system, or otherwise in furtherance of the purposes of the Act.'' [5] Rule 608(b)(2) further provides that the Commission shall disapprove a national market system plan or proposed amendment if it does not make such a finding.[6] In this order, pursuant to Rule 608(b)(2)(i) of Regulation NMS,[7] the Commission is providing notice of the grounds for disapproval under consideration:

- Whether, consistent with Rule 608 of Regulation NMS, the Sponsors have demonstrated that the proposed amendment is necessary or appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system, or otherwise in furtherance of the purposes of the Exchange Act.[8]

Under the Commission's Rules of Practice, the ''burden to demonstrate that a NMS plan filing is consistent with the Exchange Act and the rules and regulations issued thereunder. . . is on the plan participants that filed the NMS plan filing.'' [9] The description of the NMS plan filing, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding.[10] Any failure by the Sponsors to provide such detail and specificity may result in the Commission not having a sufficient basis to make an affirmative finding that the NMS plan filing is consistent with the Exchange Act and the applicable rules and regulations thereunder.[11]

III. Commission's Solicitation of Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposed amendment. In particular, the Commission asks that commenters address the sufficiency and merit of the Sponsors' statements in support of the proposed amendment, in addition to any other comments they may wish to submit about the proposed amendment.

Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 608(b)(2)(i) of Regulation NMS,[12] any request for an opportunity to make an oral presentation.[13]

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number 4–820 on the subject line.

Paper Comments

- *Send paper comments in triplicate to:* Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number 4–820. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the Sponsors' principal offices. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number 4–820 and should be submitted on or before May 16, 2024. Rebuttal comments should be submitted by May 30, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[14]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99995; File No. SR–NYSEAMER–2024–26]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Change To Modify Rule 980NYP

April 19, 2024

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 12, 2024, NYSE American LLC (''NYSE American'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify Rule 980NYP (Electronic Complex Order Trading) to specify that a

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

Complex Customer Cross Order received during a Complex Order Auction (''COA'') would result in the early end of the COA. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 980NYP (Electronic Complex Order Trading) to specify that a Complex Customer Cross (''Complex C2C'') Order received during a COA would result in the early end of the COA. This proposed functionality is not new or novel and mirrors a recently adopted rule requiring that a COA in progress ends early upon the receipt of a Complex QCC Order in the same complex strategy as the COA.[4] As discussed below, the reasons justifying the early end of a COA upon the receipt of a Complex QCC Order apply equally to the required early end of a COA upon receipt of a Complex C2C Order in the same complex strategy.[5]

Rule 980NYP reflects how Electronic Complex Orders (''ECOs'') will trade on the Exchange[6] and paragraph (f) to this rule describes the handling of ECOs submitted to the Complex Order Auction (COA) process.[7] When a COA Order initiates a COA, the Exchange disseminates a Request for Response (''RFR'') to solicit potentially price-improving ECO interest—which solicited interest includes interest designated to respond to the COA (*i.e.,* COA GTX Orders) and unrelated price-improving ECO interest (resting and newly arriving) that arrives during the Response Time Interval (each an ''RFR Response'') (collectively, the ''auction interest'').[8] The COA lasts for the duration of the Response Time Interval unless, during the COA, the Exchange receives certain options trading interest that requires the COA to conclude early.[9] When the COA concludes, the COA Order executes first with price-improving ECO interest, next with any contra-side interest, including the leg markets (if permissible),[10] and any remaining balance (that is not cancelled) is ranked in the Consolidated Book (the ''Consolidated Book'' or ''Book'').[11]

Once the COA Order executes to the extent possible—whether with the best-priced Complex Orders or the best-priced interest in the leg markets—and is placed in the Book, the Exchange will update its complex order book and, if applicable, the Exchange BBO (as a result of any executions of the COA Order with the leg markets).

The Exchange proposes to modify Rule 980NYP(f)(3)(E) to add an additional early end scenario to specify that a COA in progress will end early any time there is a Complex C2C Order submitted in the same complex strategy as the COA Order.[12] By its terms, a Complex C2C Order ''that is not rejected'' by the Exchange, ''will immediately trade in full at its limit price.''[13]

To avoid rejection, a Complex C2C Order must satisfy certain price validations, including that each option leg may not be priced worse than the Exchange BBO; and, that the transaction price must be equal to or better than the best-priced Complex Orders, unless the best-priced Complex Orders contains displayed Customer interest, in which case the transaction price must improve such interest.[14] In addition, the price of a Complex C2C Order must be priced at or between the DBBO;[15] provided, however, that the Complex C2C Order may not equal the DBBO if the DBBO is calculated using the Exchange BBO and the Exchange BBO for any component of the complex strategy on either side of the market includes displayed Customer

[4] *See* Rule 980NYP(f)(3)(E). *See also* Securities Exchange Act Release No. 99354 (January 17, 2024), 89 FR 4358 (January 232 [sic], 2024) (SR–NYSEAMER–2024–03) (adopting, on an immediately effective basis, Rule 980NYP(f)(3)(E), which specifies that a COA in progress ends early upon receipt of a Complex QCC Order in the same complex strategy). The Exchange notes that the same rule change has been adopted on its affiliated options exchange, NYSE Arca Inc. *See* Arca Rule 6.91–O(f)(3)(E). *See* Securities Exchange Act Release No. 99597 (February 23, 2024), 89 FR 14906 (February 29, 2024) (SR–NYSEARCA–2024–17) (adopting, on an immediately effective basis, Arca Rule 6.91P–O (f)(3)(E) which specifies that a COA in progress ends early upon receipt of a Complex QCC Order in the same complex strategy).

[5] *See, e.g., id.,* 89 FR, at 4359.

[6] *See generally* Rule 980NYP (Electronic Complex Order Trading). Unless otherwise specified, all capitalized terms used herein have the same meaning as is set forth in Rule 980NYP.

[7] *See* Rules 980NYP(f) (Execution of ECOs During a COA), (f)(1) (Initiation of a COA), (f)(2) (Pricing of a COA). *See also* Rule 980NYP(a)(3)(A) (defining a ''COA Order'' as an ECO designated as eligible to initiate a COA).

[8] *See* Rules 980NYP(a)(3)(B) (defining, and detailing the information included in, each RFR); (a)(3)(C) (defining each ''RFR Response'' as, among other things, ''any ECO'' received during the Response Time Interval that is in the same complex strategy as, and is marketable against, the COA Order); and (a)(3)(D) (defining the Response Time Interval as the period during which RFR Responses may be entered, which period ''will not be less than 100 milliseconds and will not exceed one (1) second,'' as determined by the Exchange and announced by Trader Update). *See* Rule 980NYP(b)(2)(C) (defining a ''COA GTX Order,'' including that such order is submitted in response to an RFR announcing a COA and will trade with the COA Order to the extent possible and then cancel).

[9] *See* Rule 980NYP(f)(3)(A)–(E) (setting forth the circumstances under which a COA will conclude before the end of the Response Time Interval, including, as discussed *infra,* upon receipt of a Complex QCC Order in the same complex strategy as the COA).

[10] The Exchange notes that there are certain limitations to how an ECO, including a COA Order post-COA, may interact with the leg markets. *See, e.g.,* Rule 980NYP(e)(1)(A) (providing, in relevant part, that the leg markets will trade first with an ECO, but only if the legs can execute with the ECO ''in full or in a permissible ratio,'' and, once the leg markets trade with the ECO to the extent possible, such ECO will trade with same-priced ECOs resting in the Book). *See also* Rule 980NYP(e)(1)(C)–(D) (describing ECOs that are not permitted to trade with the leg markets).

[11] *See* Rule 980NYP(f)(4)(A)–(C) (Allocation of COA Orders) (providing, in relevant part, that when a COA ends early or at the end of the Response Time Interval, a COA Order trades first with price-improving interest, next ''with any contra-side interest, including the leg markets, unless the COA is designated as a Complex Only Order'' and any remaining portion is ranked in the Consolidated Book and the COA Order is processed as an ECO pursuant to Rule 980NYP(e) (Execution of ECOs During Core Trading Hours). *See* Rule 900.2NY (defining Consolidated Book as ''the Exchange's electronic book of orders and quotes.'').

[12] *See* proposed Rule 980NYP(f)(3)(E).

[13] *See* Rule 900.3NYP(g)(2)(A) (providing that a Customer Cross (''C2C'') Order, including a Complex C2C Order, ''that is not rejected per paragraph (g)(2)(B) [Execution of C2C Orders] or (C) [Execution of Complex C2C Orders] below will immediately trade in full at its limit price'').

[14] *See* Rule 900.3NYP(g)(2)(C).

[15] The DBBO establishes a derived (theoretical) bid or offer for a particular complex strategy. *See* Rule 980NYP(a)(5) (defining the DBBO and providing that the bid (offer) price used to calculate the DBBO on each leg will be the Exchange BB (BO) (if available), bound by the maximum allowable Away Market Deviation). The Away Market Deviation, as defined in Rule 980NYP(a)(1), ensures that an ECO does not execute too far away from the prevailing market. Rule 980NYP(a)(5) also provides for the establishment of the DBBO in the absence of an Exchange BB (BO), or ABB (ABO), or both. A Complex C2C Order will not be processed if there is no DBBO for any leg of the strategy either because there is no Exchange BBO or Away BBO for a leg of the complex strategy, or the best bid and offer prices for a leg are locked or crossed, per Rule 980NYP(a)(5)(B) or (a)(5)(C). *See* Rule 900.3NYP(g)(2)(C).

interest.[16] Specifically, if the DBB (DBO) includes a displayed Customer interest on the Exchange, the transaction price must improve the DBB (DBO) by at least one cent ($0.01).[17]

As noted above, until a COA concludes, the Book is not updated to reflect any COA Order executions (with price-improving auction interest or with resting ECO or leg market interest) or any balance of the COA Order ranking in the Book. Thus, to allow the later-arriving Complex C2C Order to be evaluated based on the most up-to-date Book, the Exchange proposes to end a COA upon the arrival of a Complex C2C Order in the same complex strategy. This proposed early termination would allow the Exchange to incorporate executions from the COA, or any remaining balance of the COA Order, to conduct the requisite price validations per Rule 900.3NYP(g)(2)(C) for the Complex C2C Order—including based on the Exchange BBO, the DBBO, and best-priced Complex Orders on the Exchange following the COA Order executions and ranking.

Like current Rule 980NYP(3)(f)(E), the proposed rule change would be consistent with current Rule 980NYP(f)(3)(A)–(D), which describes four circumstances that cause the early end of a COA to ensure that later-arriving interest does not trade ahead of a COA Order and to ensure that the Book is updated to reflect executions resulting from the COA. The Exchange believes that the proposed rule change achieves this same objective. As with the existing early end scenarios, the proposed early end of a COA does not prevent the COA Order from trading with any interest, including price-improving interest, that arrived prior to the early termination (*i.e.,* because of a Complex C2C Order in the same complex strategy as the COA). In addition, any portion of the COA Order that does not trade in the COA is placed on the Consolidated Book where it continues to have opportunities to trade.[18]

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Section 6(b)(5),[20] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed amendment to Rule 980NYP(f)(3) regarding the additional circumstance that would cause a COA to end early would promote just and equitable principles of trade because it would ensure that the COA Order is executed to the extent possible and, if applicable, is ranked in the Consolidated Book before the Exchange evaluates the later-arriving Complex C2C Order. As noted above, until the COA concludes, the Book is not updated to reflect any COA Order executions (with price-improving auction interest or with resting ECO or leg market interest) or any balance of the COA Order ranking in the Book. This proposed early termination would then allow the Exchange to incorporate executions from the COA, or any remaining balance of the COA Order, to conduct the requisite price validations for the Complex C2C Order (per Rule 900.3NYP(g)(2)(C)) based on the most up-to-date Book (*i.e.,* based on the DBBO, Exchange BBO, and best-priced Complex Orders on the Exchange following the COA).

As noted herein, the proposed change is being made for the same reasons that a COA in progress would end early upon the receipt of another Cross Order—a Complex QCC Order, per Rule 980NYP(f)(3)(E)—and therefore raises no new or novel issues and would ensure internal consistency of Exchange rules. In addition, Rule 908NYP(f)(A)–(D) describes the other four circumstances under which a COA must end early to ensure that later-arriving interest does not trade ahead of a COA Order and to ensure that the Book is updated to reflect executions resulting from the COA. The Exchange believes that the proposed rule change achieves this same objective. As with each of the early end scenarios, the proposed early end of a COA does not prevent the COA Order from trading with any interest, including price-improving interest, that arrived prior to the early termination (*i.e.,* because of a Complex C2C Order in the same complex strategy as the COA). As such, the proposed change would benefit investors because it would ensure the timely executions of COA Orders (at potentially improved prices) and would also allow a timely execution of the Complex C2C Orders in the same complex strategy as the COA Order. In addition, the proposal would ensure that the prices used to validate a Complex C2C Order would incorporate executions from the COA, or any remaining balance of the COA Order.[21]

For the same reasons articulated when the Exchange adopted Rule 980NYP(f)(3)(E) (early end of a COA upon receipt of a Complex QCC Order), the Exchange believes that its proposed approach would provide the best protection to investors because ending a COA upon receipt of a C2C Order would ensure that the COA Order executes to the extent possible and that the Exchange relies on the most-up-to-date Book (following executions in the COA) to validate the price of the Complex QCC [sic] Order. Thus, the Exchange believes the proposed rule change would promote just and equitable principles of trade because it would help preserve—and maintain investor's confidence in—the integrity of the Exchange's local market.

Finally, the Exchange believes that modifying the rule as proposed would add clarity and transparency to Rule 980NYP regarding the handling of COA Orders.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on intra-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed rule change would apply in the same manner to all similarly-situated market participants that opt to utilize the COA process, the use of which is voluntary and, as such, market participants are not required to avail themselves of this process.

The Exchange does not believe that its proposed rule change will impose any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed change is designed to ensure that both a COA Order and a C2C Order receive timely executions based on current market conditions. To the extent that other options exchanges offer complex order auctions and Complex C2C Orders, such exchanges are free to adopt (if they have not already done so) the early termination provision proposed herein.

---

[16] *See* Rule 900.3NYP(g)(2)(C) & (g)(2)(C)(i).

[17] *See id.*

[18] *See* note 11, *supra* (describing that any remaining portion of a COA Order following the COA will be placed on the Consolidated Book and will be processed as an ECO).

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(5).

[21] As noted, any portion of the COA Order that does not trade in the COA is placed in the Consolidated Book where it continues to have opportunities to trade. *See, e.g.,* note 12 [sic], *supra.*

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Pursuant to Section 19(b)(3)(A) of the Act [22] and Rule 19b–4(f)(6) [23] thereunder, the Exchange has designated this proposal as one that effects a change that: (i) does not significantly affect the protection of investors or the public interest; (ii) does not impose any significant burden on competition; and (iii) by its terms, does not become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest.[24]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [25] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay. The Exchange states that waiver of the operative delay would allow the Exchange to immediately implement the Complex C2C functionality, including the associated early end scenarios in proposed Exchange Rule 980NYP(f)(3)(E). The Commission finds that waiving the operative delay is consistent with the protection of investors and the public interest because it will allow a COA Order in a complex strategy to execute to the extent possible after the Exchange receives a Complex C2C Order in the same strategy while allowing the Exchange to conduct the required price validations for the Complex C2C Order [26] based on a Book that has been updated to reflect any executions of the COA Order, thereby ensuring that the required price validations for the Complex C2C Order have accounted for all trading interest on the Exchange.[27] In addition, any portion of the COA Order that does not execute during the COA may be placed in the Consolidated Book, where it will continue to have opportunities to trade. For these reasons, the Commission designates the proposal operative upon filing.[28]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEAMER–2024–26 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEAMER–2024–26. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEAMER–2024–26 and should be submitted on or before May 16, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[29]

Sherry R. Haywood,

Assistant Secretary.

[FR Doc. 2024–08805 Filed 4–24–24; 8:45 am]

BILLING CODE 8011–01–P

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA–2024–0005]

Privacy Act of 1974; Matching Program

AGENCY: Social Security Administration (SSA).

ACTION: Notice of a new matching program.

SUMMARY: In accordance with the provisions of the Privacy Act, as

[22] 15 U.S.C. 78s(b)(3)(A).

[23] 17 CFR 240.19b–4(f)(6).

[24] In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[25] 17 CFR 240.19b–4(f)(6)(iii).

[26] *See* Exchange Rule 900.3NYP(g)(2)(C).

[27] The Exchange's proposal to end a COA early when it receives a Complex C2C Order for the same strategy as the COA Order is consistent with current Exchange Rule 980NYP(f)(3)(E). Specifically, as discussed above, Exchange Rule 980NYP(f)(3)(E) currently states that a COA will end early if the Exchange receives a Complex QCC Order in the same complex strategy as the COA order The Exchange proposes to amend Exchange Rule 980NYP(f)(3)(E) to provide that a COA also will end early if the Exchange receives a Complex C2C Order in the same complex strategy as the COA Order. The Exchange states that the purpose of the early termination is the same for both Complex QCC and Complex C2C Orders—to allow the Exchange to conduct the required price validations for a Complex QCC Order or Complex C2C Order based on a Book that has been updated to include any executions from the COA for the same complex strategy. The Exchange states that ending the COA upon receipt of a Complex C2C Order in the same strategy as the COA Order protects investors by ensuring that the COA Order executes to the extent possible and that the Exchange relies on the most-up-to-date Book (following executions in the COA) to validate the price of the Complex C2C Order, which the Exchange believes will help to preserve the integrity of the Exchange's local market.

[28] For purposes only of accelerating the operative date of this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

[29] 17 CFR 200.30–3(a)(12), (59).

amended, this notice announces a new matching program with the Department of Defense (DOD), Defense Manpower Data Center (DMDC).

DATES: Submit comments on the proposed matching program no later than May 28, 2024.

The matching program will be applicable on May 28, 2024, or once a minimum of 30 days after publication of this notice has elapsed, whichever is later. The matching program will be in effect for a period of 18 months.

ADDRESSES: You may submit comments by any one of three methods—internet, fax, or mail. Do not submit the same comments multiple times or by more than one method. Regardless of which method you choose, please state that your comments refer to Docket No. SSA–2024–0005 so that we may associate your comments with the correct regulation.

Caution: You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at *http://www.regulations.gov.* Use the *Search* function to find docket number SSA–2024–0005 and then submit your comments. The system will issue you a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each submission manually. It may take up to a week for your comments to be viewable.

2. *Fax:* Fax comments to (833) 410–1631.

3. *Mail:* Matthew Ramsey, Executive Director, Office of Privacy and Disclosure, Office of the General Counsel, Social Security Administration, G–401 WHR, 6401 Security Boulevard, Baltimore, MD 21235–6401, or emailing *Matthew.Ramsey@ssa.gov.* Comments are also available for public viewing on the Federal eRulemaking portal at *http://www.regulations.gov* or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT: Interested parties may submit general questions about the matching program to Cynthia Scott, Division Director, Office of Privacy and Disclosure, Office of the General Counsel, Social Security Administration, G–401 WHR, 6401 Security Boulevard, Baltimore, MD 21235–6401, at telephone: (410) 966–1943, or send an email to *Cynthia.Scott@ssa.gov.*

SUPPLEMENTARY INFORMATION: Under this matching program, DoD/DMDC will disclose military retirement payment and survivor benefit payment data to SSA. SSA will use the military retirement payment and survivor benefit payment data to verify information provided by applicants, recipients, deemors (*i.e.,* someone other than the eligible individual or eligible spouse whose income and resources are considered when determining an individual's eligibility for Supplemental Security Income (SSI) and the amount of his or her payment), and beneficiaries of SSI payments and Special Veterans Benefits (SVB).

Matthew Ramsey,

Executive Director, Office of Privacy and Disclosure, Office of the General Counsel.

PARTICIPATING AGENCIES:

SSA and DoD/DMDC.

AUTHORITY FOR CONDUCTING THE MATCHING PROGRAM:

This matching agreement between SSA and DoD/DMDC is executed pursuant to the Privacy Act of 1974, as amended by the Computer Matching and Privacy Protection Act of 1988, and the Computer Matching Privacy Protections Amendments of 1990 (Privacy Act) (5 U.S.C. 552a) and the regulations and guidance promulgated thereunder, including Office of Management and Budget (OMB) Circular No. A–108, ''Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act,'' published at 81 **Federal Register** 94424 (Dec. 23, 2016); OMB Circular No. A–130, ''Managing Information as a Strategic Resource,'' published at 61 FR 49689 (July 15, 2016); and ''Privacy Act of 1974: Final Guidance Interpreting the Provisions of Public Law 100–503, the Computer Matching and Privacy Protection Act of 1988,'' published at 54 FR 25818 (June 19, 1989).

The legal authority for this exchange is sections 806(b) and 1631(e)(1)(B) and (f) of the Social Security Act (Act) (42 U.S.C. 1006(b) and 1383(e)(1)(B) and (f)). SSA's legal authority to disclose data to DoD/DMDC is section 1106(a) of the Act (42 U.S.C. 1306(a)) and section (b)(3) of the Privacy Act (5 U.S.C. 552a(b)(3)).

PURPOSE(S):

This agreement sets forth the terms, conditions, and safeguards under which the DoD/DMDC will disclose military retirement payment and survivor benefit payment data to the SSA. SSA will use the military retirement payment and survivor benefit payment data to verify information provided by applicants, recipients, deemors (*i.e.,* someone other than the eligible individual or eligible spouse whose income and resources are considered when determining an individual's eligibility for Supplemental Security Income (SSI) and the amount of their payment), and beneficiaries of SSI payments and Special Veterans Benefits (SVB).

The SSI and SVB applicants, recipients, deemors, and beneficiaries provide information about eligibility and entitlement factors (*e.g.,* income, resources, living arrangements). SSA obtains additional information, as necessary, before making any determinations of eligibility, payments, entitlement or benefit amounts or adjustments thereto. Military retirement payments to SSI and SVB applicants, recipients, deemors, and beneficiaries include retired members, or their survivors, of the Uniformed Services, *i.e.,* Army; Navy; Air Force; Marine Corps; Coast Guard; Space Force; and Commissioned Corps of the National Oceanic and Atmospheric Administration (but not including the Commissioned Corps of the U.S. Public Health Service). SSA will obtain military retirement payments through a computer matching program with DoD/DMDC.

CATEGORIES OF INDIVIDUALS:

The individuals whose information is involved in this matching program are SSI and SVB applicants, recipients, deemors, and beneficiaries including retired members, or their survivors, of the Uniformed Services.

CATEGORIES OF RECORDS:

SSA will provide DoD/DMDC with an electronic finder file using a mutually approved secure file transfer application, such as the MFT application. Upon receipt of the electronic file, DoD/DMDC will perform a computer match using all nine digits of the Social Security Number (SSN) against data maintained in the DoD SORN, DMDC 01, ''Defense Manpower Data Center Data Base.'' In the response file, DoD/DMDC will use a mutually approved secure file transfer, such as the MFT application to furnish SSA with matches to the Retired and Survivor Pay file.

SSA will compare DoD/DMDC's data with SSA data recorded in the Supplemental Security Income Record and Special Veterans Benefits system of records, 60–0103.

SYSTEM(S) OF RECORDS:

SSA will disclose records from the ''Supplemental Security Income Record and Special Veterans Benefits'' system of records, 60–0103, last fully published at 71 FR 1830 (January 11, 2006), and updated at 72 FR 69723 (December 10, 2007), 83 FR 31250–31251 (July 3, 2018), 83 FR. 54969 (November 1, 2018), and 89 FR 825 (January 5, 2024). DoD/DMDC will disclose records from the following system of records: DMDC 01, entitled ''Defense Manpower Data Center Data Base,'' last published in full at 84 FR 6383 (February 27, 2019), and amended at 84 FR 8698 (March 11, 2019), 84 FR 15605 (April 16, 2019), and 87 FR 32145 (May 27, 2022).

[FR Doc. 2024–08794 Filed 4–24–24; 8:45 am]

BILLING CODE 4191–02–P

DEPARTMENT OF STATE

[Public Notice: 12359]

60-Day Notice of Proposed Information Collection: Request for Approval of Special Validation for Travel to a Restricted Country or Area

ACTION: Notice of request for public comment.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

DATES: The Department will accept comments from the public up to June 24, 2024.

ADDRESSES: You may submit comments by any of the following methods:

- *Web:* Persons with access to the internet may comment on this notice by going to *www.Regulations.gov.* You can search for the document by entering ''Docket Number: DOS–2024–0006'' in the Search field. Then click the ''Comment Now'' button and complete the comment form.
- *Email: PPTSpecialValidations@state.gov.*
- *Regular Mail:* Send written comments to: Special Validations, U.S. Department of State, CA/PPT/S/A/AP, 44132 Mercure Circle, P.O. Box 1227, Sterling, VA 20166–1227.

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Request for Approval for Multiple-Entry Travel to a Restricted Country or Area.
- *OMB Control Number:* 1405–0228.
- *Type of Request:* Revision of a Currently Approved Collection.
- *Originating Office:* Bureau of Consular Affairs, Passport Services, CA/PPT/S/A/AP.
- *Form Number:* No form.
- *Respondents:* Individuals requesting they be granted single or multiple-entry special validation, in accordance with 22 CFR 51.64, to use a U.S. passport to travel to, in, or through a country or area as to which U.S. passports have been declared invalid for such travel pursuant to 22 U.S.C. 211a and Executive Order 11295 (August 5, 1966) and in accordance with 22 CFR 51.63(a).
- *Estimated Number of Respondents:* 150.
- *Estimated Number of Responses:* 150.
- *Average Time per Response for single entry validation request:* 45 minutes.
- *Average Time per Response for multiple-entry validation request:* 90 minutes.
- *Total Estimated Burden Time:* 150 hours.
- *Frequency:* Once per year when the individual wishes to travel to the restricted country or area, with a single-entry validation. Once every two years for individuals with a multiple-entry validation.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The Secretary of State may exercise authority, under 22 U.S.C. 211a, Executive Order 11295 (August 5, 1966), and 22 CFR 51.63, to invalidate all U.S. passports for travel to a country or area if he determines that any of three conditions exist: The country is at war with the United States; armed hostilities are in progress in the country or area; or there is imminent danger to the public health or physical safety of U.S. travelers in the country or area. The regulations of the Department of State provide that an individual's passport may be considered for validation for travel to, in, or through a country or area despite such restriction if the individual's travel is determined to fall within one of several categories established by the regulation 22 CFR 51.64. Without the requisite validation, use of a U.S. passport for travel to, in, or through a restricted country or area may justify revocation of the passport for misuse under 22 CFR 51.62(a)(3) and subject the traveler to felony prosecution under 18 U.S.C. 1544 for misuse of a passport or other applicable laws.

The categories of persons specified in 22 CFR 51.64(b) as being eligible for consideration for passport validation are as follows:

(a) An applicant who is a professional reporter and journalist whose trip is for the purpose of collecting and making available to the public information about the restricted country or area;

(b) An applicant who is a representative of the American Red Cross or the International Committee of the Red Cross on an officially sponsored Red Cross mission;

(c) An applicant whose trip to the restricted country or area is justified by compelling humanitarian considerations; or

(d) An applicant whose trip to the restricted country or area is otherwise in the national interest.

The proposed information collection solicits data necessary for the Passport Services Directorate to determine whether an applicant is eligible to receive a special validation in their U.S. passport book permitting the applicant to make single or multiple round-trips to a restricted country or area, subject to additional requirements. The information requested consists of the applicant's name; a copy of the front and back of the applicant's valid government-issued photo identification card with the applicant's date of birth and signature; current contact information, including telephone number, email and mailing address; a

statement explaining the reason that the applicant thinks their trip is in the national interest, including proposed travel dates and the applicant's role and responsibilities on the trip; and supporting documentary evidence. For those seeking a multiple-entry special validation, applicants must also identify they are seeking the multiple-entry type of special validation and submit the following: documentation showing the applicant or their organization has a well-established history of traveling to the DPRK to work on well-monitored projects with compelling humanitarian considerations; the applicant's draft itinerary, including dates of travel and what specific work they intend to perform on each trip; and documentation that shows the applicant's humanitarian work requires that they make multiple trips to the DPRK in the next two-year period. Those who are approved for a multiple-entry special validation must also submit a final itinerary detailing dates and purpose of travel at least one month (30 days) prior to each trip to the DPRK while using their multi-entry special validation U.S. passport. Failure to provide the requested information may result in denial of a special validation to use a U.S. passport to travel to, in, or through a restricted country or area.

Effective September 1, 2017, upon determining that there is imminent danger to the public health or physical safety of U.S. travelers in the Democratic People's Republic of Korea (DPRK), the former Secretary of State imposed a passport restriction with respect to travel to the DPRK. Such restriction was further renewed in 2018, 2019, 2020, 2021, 2022, and most recently in 2023 for one year, effective September 1, 2023. The estimated number of recipients represents the Department of State's estimate of the annual number of special validations requests individuals will submit who wish to use their U.S. passport to travel to the DPRK, based on the current number of requests following the implementation of the Secretary of State's passport restriction. At this time, there are no other countries or areas that are the subject of passport restrictions pursuant to 22 CFR 51.63.

Methodology

Instructions for individuals seeking to apply for a special validation to use a U.S. passport to travel to, in, or through a restricted country or area is posted on a web page maintained by the Department (*travel.state.gov*). The web page directs applicants to submit the requested information via email to the Passport Services Directorate (*PPTSpecialValidations@state.gov*) or by mail to Special Validations, U.S. Department of State, CA/PPT/S/A/AP, 44132 Mercure Circle, P.O. Box 1227, Sterling, VA 20166–1227.

Information collected in this manner will be used to facilitate the granting of special validations to U.S. nationals who are eligible. The primary purpose of soliciting the information is to establish whether an applicant is within one of the categories specified in the regulations of the Department of State codified at 22 CFR 51.64(b) and therefore eligible to be issued a U.S. passport containing a special validation enabling him or her to make one or multiple entry round-trips to a restricted country or area, and to facilitate the application for a passport of such applicants.

Donald E. Jacobson,

Acting Deputy Assistant Secretary, Bureau of Consular Affairs, Department of State.

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36745]

Massachusetts Coastal Railroad, LLC—Modified Certificate of Public Convenience and Necessity

Massachusetts Coastal Railroad, LLC (Mass Coastal), a Class III rail carrier, has filed a notice for a modified certificate of public convenience and necessity [1] under 49 CFR part 1150 subpart C—*Modified Certificate of Public Convenience and Necessity,* for Mass Coastal to operate the Plymouth line between milepost 1.7 at South Braintree, Mass., and milepost 27.1 at Plymouth, Mass. (the Line).

Mass Coastal states the Line was acquired from Penn Central Transportation Company by Massachusetts Bay Transportation Authority (MBTA) subject to an operating easement in Consolidated Rail Corporation (Conrail). (Am. Notice 5.) Conrail applied to abandon the Line under Section 308(b) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 748) in Interstate Commerce Commission (ICC) Docket No. AB 167 (Sub-No. 388), and an operating subsidy was offered by the Commonwealth of Massachusetts under agreement filed with the ICC on February 24, 1982. (Am. Notice 5.) According to Mass Coastal, the subsidy ended on May 26, 1982. (*Id.*) Bay Colony subsequently filed a notice for a modified certificate of public convenience and necessity, and the ICC found the Line qualified for operation under a modified rail certificate. (*Id.*); *see Bay Colony R.R.—Modified Rail Certificate,* FD 29963 (ICC served June 29, 1982). According to Mass Coastal, although Bay Colony's operating agreement with MBTA expired, MBTA agreed in a 1993 letter that Bay Colony would have the first right to negotiate to operate the Line for freight service. (Am. Notice 3–4.) Mass Coastal explains that it has entered into an agreement with Bay Colony to acquire all of Bay Colony's remaining operating rights and rail assets, including its first right to negotiate to operate the Line for freight service.[2] (*See* Am. Notice 3.) Mass Coastal states that MBTA has consented ''to the extent required.'' (Am. Notice 3; *see also id.,* Ex. A (Notice to and Consent of MBTA).) Mass Coastal states that it has received an inquiry from a potential freight shipper and has begun discussions with MBTA regarding an operating agreement. (Am. Notice 4.)

The Line qualifies for a modified certificate of public convenience and necessity. *See Common Carrier Status of States, State Agencies & Instrumentalities & Pol. Subdivs.,* FD 28990F (ICC served July 16, 1981); 49 CFR 1150.22. Mass Coastal states that no subsidy is involved and that there will be no preconditions that shippers must meet to receive service. (Am. Notice 6.) Mass Coastal's notice also includes a certificate of liability insurance coverage. (Am. Notice, Ex. B).

This notice will be served on the Association of American Railroads (Car Service Division), as agent for all railroads subscribing to the car-service and car-hire agreement, at 425 Third Street SW, Suite 1000, Washington, DC 20024; and on the American Short Line and Regional Railroad Association at 50 F Street NW, Suite 500, Washington, DC 20001.

Board decisions and notices are available at *www.stb.gov.*

Decided: April 22, 2024.

[1] Mass Coastal filed a notice on December 15, 2023, and filed an amended notice on March 29, 2023.

[2] On March 29, 2024, Bay Colony filed, in Docket No. FD 29963, a notice of intent to terminate service on the Line, which will become effective on May 28, 2024. *See* 49 CFR 1150.24. Because Mass Coastal now has authority to commence operations at any time, *see* 49 CFR 1150.23(a) (''Operations may commence immediately on the filing'' of the modified certificate), there will be no break in the availability of the Line for freight service.

By the Board, Mai T. Dinh., Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No.: FAA–2024–0318; Summary Notice No. –2024–12]

Petition for Exemption; Summary of Petition Received; Stallion 51 Flight Operations LLC

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Federal Aviation Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion nor omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before May 15, 2024.

ADDRESSES: Send comments identified by docket number FAA–2024–0318 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *http://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *http://www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jimeca Callaham, (202) 267–0312, Office of Rulemaking, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591.

This notice is published pursuant to 14 CFR 11.85.

Issued in Washington, DC, on April 22, 2024.

Brandon Roberts,

Executive Director, Office of Rulemaking.

Petition for Exemption

Docket No.: FAA–2024–0318.

Petitioner: Stallion 51 Flight Operations LLC.

Section(s) of 14 CFR Affected: §§ 91.9, 91.111(c), 91.315, 119.5(g), and 119.21(a).

Description of Relief Sought: Stallion 51 requests relief from 14 CFR 91.9, 91.111(c), 91.315, 119.5(g), and 119.21(a) to provide a ''hands-on'' warbird flight experience to the public in its four North American P–51D (TF–51) airplanes certificated as limited category civil aircraft. These former-military aircraft are modified dual-cockpit/dual-control variants of the P–51. Customers, under the supervision of a person who holds a flight instructor certificate, will be given the opportunity to manipulate the controls under specified conditions, including aerobatic flight.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2024–0029]

Agency Information Collection Activities: Notice of Request for Reinstatement of a Previously Approved Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of request for reinstatement of a previously approved information collection.

SUMMARY: The FHWA has forwarded the information collection request described in this notice to the Office of Management and Budget (OMB) to reinstate an information collection. We published a **Federal Register** Notice with a 60-day public comment period on this information collection on February 9, 2024. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by May 28, 2024.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 0029 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to *http://www.regulations.gov.*

Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Wendy McAbee, 202–366–5658, Office of Bridges and Structures, Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: The comments and FHWA's responses to the 60-day notice published February 9, 2024, at 89 FR 9285 are below:

There was one public comment to the **Federal Register** notice referencing a Consumer Affairs report on roadway pavement conditions nationwide. The comment did not indicate what year the data analyzed for the report was collected nor whether tunnel lane miles were considered in that analysis.

Condition of the roadway wearing surface is collected in the NTI and can be used for analysis and reporting of roadway pavement conditions nationwide. The number of lane miles collected in the NTI is miniscule when compared to the number of lane miles

that represent all roadways on the National Highway System (NHS) and would have little effect on the Nation's pavement condition.

Title: National Tunnel Inspection Program.

OMB Control: 2125–0640.

Background: This collection is necessary to meet legislative requirements of Title 23 United States Code section 144, and the Code of Federal Regulations, 23 Highways Part 650, Subpart E—National Tunnel Inspection Standards which require States, Federal Agencies, and Tribal Governments to: (1) perform, and report inventory and element data from, initial, routine, damage, in-depth, and special inspections as appropriate for all highway tunnels on public roads, and (2) report critical findings on highway tunnels. The critical findings information is periodically provided to the FHWA. The tunnel information is used for multiple purposes, including: (1) the determination of the condition of the Nation's tunnels; (2) for various reports to Congress on Tunnel Safety; (3) for conducting oversight of the National Tunnel Inspection Program at the State, Federal agency, and Tribal level; and (4) for strategic national defense needs.

Respondents: 42 States, the District of Columbia, Puerto Rico and 4 Federal agencies. The number of inspections per respondent varies in accordance with the National Tunnel Inspection Standards.

Frequency: Annually.

Estimated Average Burden per Response: The estimated average burden for each tunnel inspection is 40 hours. The estimated average burden for reporting critical findings is 40 hours.

Estimated Total Annual Burden Hours: The annual burden hours associated with this renewal is 15,880 hours. This estimated figure is based on annual instances for tunnel inspections multiplied by 40 hours (13,960 hours); plus 40 hours for follow up on critical findings multiplied by 48 respondents (1,920 hours) for a combined annual burden of 15,880 hours.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.48.

Issued on: April 22, 2024.

Jazmyne Lewis,

Information Collection Officer.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2013–0106; FMCSA–2013–0442; FMCSA–2015–0115; FMCSA–2015–0119; FMCSA–2015–0321; FMCSA–2017–0181; FMCSA–2017–0254; FMCSA–2019–0030; FMCSA–2019–0036; FMCSA–2019–0206; FMCSA–2020–0045; FMCSA–2020–0046; FMCSA–2021–0026; FMCSA–2022–0042]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for 22 individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have "no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV." The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions are applicable on the dates stated in the discussions below and will expire on the dates stated in the discussions below. Comments must be received on or before May 28, 2024.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2013–0106, Docket No. FMCSA–2013–0442, Docket No. FMCSA–2015–0115, Docket No. FMCSA–2015–0119, Docket No. FMCSA–2015–0321, Docket No. FMCSA–2017–0181, Docket No. FMCSA–2017–0254, Docket No. FMCSA–2019–0030, Docket No. FMCSA–2019–0036, Docket No. FMCSA–2019–0206, Docket No. FMCSA–2020–0045, Docket No. FMCSA–2020–0046, Docket No. FMCSA–2021–0026, or Docket No. FMCSA–2022–0042 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov/,* insert the docket number (FMCSA–2013–0106, FMCSA–2013–0442, FMCSA–2015–0115, FMCSA–2015–0119, FMCSA–2015–0321, FMCSA–2017–0181, FMCSA–2017–0254, FMCSA–2019–0030, FMCSA–2019–0036, FMCSA–2019–0206, FMCSA–2020–0045, FMCSA–2020–0046, FMCSA–2021–0026, or FMCSA–2022–0042) in the keyword box and click "Search." Next, sort the results by "Posted (Newer-Older)," choose the first notice listed, and click on the "Comment" button. Follow the online instructions for submitting comments.
- *Mail:* Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001 between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal Holidays.
- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the "Public Participation" portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, (202) 366–4001, *fmcsamedical@dot.gov.* Office hours are from 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2013–0106, Docket No. FMCSA–2013–0442, Docket No. FMCSA–2015–0115, Docket No. FMCSA–2015–0119, Docket No. FMCSA–2015–0321, Docket No. FMCSA–2017–0181, Docket No. FMCSA–2017–0254, Docket No. FMCSA–2019–0030, Docket No. FMCSA–2019–0036, Docket No.

FMCSA–2019–0206, Docket No. FMCSA–2020–0045, Docket No. FMCSA–2020–0046, Docket No. FMCSA–2021–0026, or Docket No. FMCSA–2022–0042), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *www.regulations.gov/,* insert the docket number (FMCSA–2013–0106, FMCSA–2013–0442, FMCSA–2015–0115, FMCSA–2015–0119, FMCSA–2015–0321, FMCSA–2017–0181, FMCSA–2017–0254, FMCSA–2019–0030, FMCSA–2019–0036, FMCSA–2019–0206, FMCSA–2020–0045, FMCSA–2020–0046, FMCSA–2021–0026, or FMCSA–2022–0042) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, click the ''Comment'' button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to *www.regulations.gov.* Insert the docket number (FMCSA–2013–0106, FMCSA–2013–0442, FMCSA–2015–0115, FMCSA–2015–0119, FMCSA–2015–0321, FMCSA–2017–0181, FMCSA–2017–0254, FMCSA–2019–0030, FMCSA–2019–0036, FMCSA–2019–0206, FMCSA–2020–0045, FMCSA–2020–0046, FMCSA–2021–0026, or FMCSA–2022–0042) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption request. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov.* As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices,* the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. However, FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria [1] to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce.

The 22 individuals listed in this notice have requested renewal of their exemptions from the epilepsy and seizure disorders prohibition in § 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

[1] These criteria may be found in APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. *Epilepsy:* § 391.41(b)(8), paragraphs 3, 4, and 5, which is available on the internet at *https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf.*

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the 22 applicants has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition. The 22 drivers in this notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous 2-year exemption period. In addition, for commercial driver's license (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each renewal applicant for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

In accordance with 49 U.S.C. 31136(e) and 31315(b), the following groups of drivers received renewed exemptions in the month of May and are discussed below.

As of May 6, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following nine individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Gary Clark (KY)
Michael Curtis (DE)
Callon Hegman (IL)
Zachary Henson (IL)
Gregory Johnson (NC)
Robert Lombardo (CA)

Armando Macias-Tovar (FL)
Joseph Mendoza (IN)
Douglas Slagel (OH)

The drivers were included in docket number FMCSA–2013–0106, FMCSA–2017–0181, FMCSA–2021–0026, or FMCSA–2022–0042 Their exemptions are applicable as of May 6, 2024 and will expire on May 6, 2026.

As of May 15, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 13 individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Barry Dull (OH)
Robert J. Forney (WI)
Matthew Heinen (MN)
Logan Hertzler (PA)
Preston Kanagy (TN)
Kenneth Lewis (NC)
Kevin Market (OH)
Gary Olsen (MN)
Randy Pinto (PA)
Jeffrey Totten (KS)
Paul Vitous (WA)
Thomas Vivirito (PA)
Robert J. Wenner (MN)

The drivers were included in docket number FMCSA–2013–0442, FMCSA–2015–0115, FMCSA–2015–0119, FMCSA–2015–0321, FMCSA–2017–0181, FMCSA–2017–0254, FMCSA–2019–0030, FMCSA–2019–0036, FMCSA–2020–0045, or FMCSA–2020–0046. Their exemptions are applicable as of May 15, 2024 and will expire on May 15, 2026.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must remain seizure-free and maintain a stable treatment during the 2-year exemption period; (2) each driver must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified ME, as defined by § 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based on its evaluation of the 22 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the epilepsy and seizure disorders prohibition in § 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[Docket No.: FTA–2023–0006]

Notice of Availability of Programmatic Assessment of Greenhouse Gas Emissions From Transit Projects

AGENCY: Federal Transit Administration (FTA), Department of Transportation (DOT).

ACTION: Notice of availability.

SUMMARY: The Federal Transit Administration (FTA) announces the availability of a Programmatic Assessment of Greenhouse Gas Emissions from Transit Projects (Programmatic Assessment). On September 25, 2023, FTA announced in the **Federal Register** the availability of the draft Programmatic Assessment and requested public comment. FTA received six comment letters and presents its responses to those comments in this notice.

DATES: The final Programmatic Assessment is effective immediately.

ADDRESSES: The final Programmatic Assessment will be made available in the U.S. Government's electronic docket site at *https://www.regulations.gov/docket/FTA-2023-0006* and on the FTA website at *https://www.transit.dot.gov/regulations-and-programs/environmental-programs/climate-considerations.*

FOR FURTHER INFORMATION CONTACT: Megan Blum, Office of Environmental Programs, (202) 366–0463, *Megan.Blum@dot.gov,* or Alexandra Brun, Office of Environmental Programs, (202) 366–7469, *Alexandra.Brun@dot.gov;* Mark Montgomery, Office of Chief Counsel, (202) 366–1017, *Mark.Montgomery@dot.gov.* Office hours are from 9:00 a.m. to 5:00 p.m. ET, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Background

The National Environmental Policy Act (NEPA) requires Federal agencies to disclose and analyze the environmental effects of their proposed actions. In 2016, the Council on Environmental Quality (CEQ) issued the Final Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act Reviews (81 FR 51866) (2016 CEQ guidance), which provided a framework for agencies to consider the effects of a proposed action on climate change, as indicated by its estimated GHG emissions and advised agencies to assess the effects of climate change on their proposed actions. The 2016 CEQ guidance also acknowledged that incorporation by reference is of great value in considering GHG emissions or the implications of climate change for the proposed action and its environmental effects. The 2016 CEQ guidance noted that an agency may decide that it would be useful and efficient to provide an aggregate analysis of GHG emissions or climate change effects in a programmatic analysis and then incorporate that analysis by reference into future NEPA reviews. FTA considers it practicable to assess the effects of GHG emissions and climate change for transit projects at a programmatic level, where possible.

In January 2017, FTA published a Programmatic Assessment of Greenhouse Gas Emissions from Transit Projects (82 FR 5636) based on the 2016 CEQ guidance framework. In January 2023, CEQ issued the National Environmental Policy Act Guidance on Consideration of Greenhouse Gas Emissions and Climate Change (88 FR 1196) (2023 CEQ guidance) to assist agencies in analyzing greenhouse gas (GHG) emissions and climate change effects of their proposed actions under NEPA. The 2023 CEQ guidance continues to support a programmatic approach for assessing GHG emissions from transit projects.

The 2024 Programmatic Assessment of Greenhouse Gas Emissions from

Transit Projects (Programmatic Assessment) updates and supersedes the 2017 Programmatic Assessment in accordance with the 2023 CEQ guidance. The 2024 Programmatic Assessment is a NEPA streamlining tool that creates greater efficiency by: (1) reporting on whether certain types of proposed transit projects merit detailed analysis of their GHG emissions at the project-level; and (2) providing a source of data and analysis for FTA and its project sponsors to reference in future environmental documents for projects where detailed, project-level GHG analysis would provide only limited information beyond what is collected and considered in the Programmatic Assessment. The Programmatic Assessment is intended to update and supersede FTA's January 2017 Programmatic Assessment of Greenhouse Gas Emissions from Transit Projects (82 FR 5636).

The Programmatic Assessment presents results from an analysis to estimate direct and indirect GHG emissions generated from the construction, operations, and maintenance phases for a sample of bus rapid transit, streetcar rail, light rail, commuter rail, and heavy rail projects, as well as an estimate of personal vehicle emissions displaced due to transit's ''ridership effect.'' Emissions estimates were calculated using FTA's Transit Greenhouse Gas Estimator (GHG Estimator), version 3.0 (*https://www.transit.dot.gov/regulations-and-guidance/environmental-programs/ftas-transit-greenhouse-gas-emissions-estimator*), which is an Excel-based tool that allows users to calculate partial lifecycle GHG emissions estimates by transit mode based on limited data inputs. The 2023 CEQ guidance also indicates that project proponents should place potential GHG emissions and their impacts in appropriate context. In order to provide additional context for the GHG estimates included in the Programmatic Assessment, the net social benefits of reduced operational emissions resulting from each transit project in the sample were estimated.

The Programmatic Assessment provides a reference for FTA and its project sponsors to use in future NEPA documents to describe the effects of proposed transit investments on partial lifecycle GHG emissions. The Programmatic Assessment's results can inform transit project proponents who are considering the GHG emissions of future transit investments or who might independently want to evaluate the GHG emissions benefits and cost of such investments.

Comments Received

On September 25, 2023, FTA announced in the **Federal Register** the availability of the draft Programmatic Assessment and requested public comment. As of the date of issuance of this notice of availability, FTA considered all comments received in the docket. FTA received comments from one transit agency, two state Departments of Transportation (DOT), one trade association, one nonprofit organization, and one member of the public. This notice discusses the comments FTA received, organized here by topic, and provides FTA's responses to those comments.

Comment: One state DOT commented that the Programmatic Assessment does not include GHG emissions associated with the induced VMT that can occur if new highway capacity is constructed in lieu of transit.

Response: The Programmatic Assessment is intended to serve as a NEPA streamlining tool for transit projects. FTA is not attempting to quantify GHG emissions for highway projects, nor is the Programmatic Assessment aiming to compare potential transit projects to potential highway projects. Furthermore, highway capacity projects are not usually considered reasonable alternatives to proposed transit projects during the environmental review (the stage in which a transit agency would be expected to refer to the Programmatic Assessment).

Comment: A state DOT asserted the sample size of transit projects used in the analysis could lead to unreliable results.

Response: FTA first stresses that the use of the Programmatic Assessment (or the GHG Estimator) as a reference and NEPA streamlining tool is entirely voluntary. FTA also notes that the sample of transit projects analyzed in the Programmatic Assessment included 68 transit projects that applied for funding through the 49 U.S.C. 5309 Capital Investment Grants (CIG) Program. This represents an increase of 32 transit projects as compared to the sample used in the 2017 Programmatic Assessment (36 transit projects). FTA believes the sample relied upon is representative of transit project types that will seek FTA funding and, consequently, require compliance with NEPA. In cases in which a proposed project's characteristics and assumptions are similar to the sample, FTA recommends that transit agencies considering bus rapid transit, streetcar, light rail, and commuter rail projects incorporate the Programmatic Assessment by reference into their NEPA analyses.

Comment: A state DOT questioned the use of forecasts of automobile VMT reductions as the metric by which transit operations and GHG emissions be measured, pointing out that ratios of displaced automobile VMT to transit VMT in the Programmatic Assessment ranged from 1:1 to 48:1.

Response: FTA acknowledges there are other metrics by which transit operations can be measured. The results presented in the Programmatic Assessment rely on an analysis that uses GHG emissions per VMT as the metric to evaluate vehicle operations. Other metrics, such as emissions per revenue vehicle hour, which measures operational efficiency, and emissions per passenger- or seat-mile, which takes service productivity into account, offer useful benchmarks. The Programmatic Assessment does recast results to account for passenger loads for each transit mode. Those results suggested that even during times of lower than usual transit ridership, all transit modes can be expected to result in net annual GHG emissions reductions when considering GHG emissions on a per-passenger basis. Adding further information is inconsistent with the information transit agencies provide in CIG templates—the primary data source for the transit project sample. Additionally, the methodology used in the Programmatic Assessment is optional and may be tailored to a specific transit project. FTA notes that Appendix B offers characteristics for each individual project in the sample of transit projects referred to for the assessment. FTA also reiterates the Programmatic Assessment's point that the ratios that the comment identified were all for the sample heavy rail projects. Given the limited number of projects within that heavy rail sample and the wide variation in the estimated GHG emissions across it, the Programmatic Assessment recommends that FTA's GHG Estimator or another locally recommended approach be used to make project-specific GHG emissions estimates in NEPA analyses for heavy rail projects.

Comment: A state DOT stated that findings for transit projects other than large-scale, fixed-guideway projects are not included.

Response: FTA clarifies that the Programmatic Assessment examines the GHG impacts of project types included in CIG templates. The analysis presented is intended to be a voluntary NEPA streamlining tool, providing a source of data and analysis for FTA and its project sponsors to reference in

future environmental documents for projects where detailed, project-level GHG analysis would provide only limited information beyond what is collected and considered in the Programmatic Assessment.

Comment: A state DOT asserted that region-based electricity factors should be used.

Response: The Programmatic Assessment methodology relies on the best available data and tools to estimate the GHG emissions associated with transit projects. In the Programmatic Assessment, the emissions factors associated with electrically powered vehicles use the ''U.S. Mix'' region from the Environmental Protection Agency's (EPA's) eGRID2020, which represents an average value for the country. FTA acknowledges here and in the Programmatic Assessment that the ''U.S. Mix'' may differ from region-specific factors. For regions with cleaner electricity generation mixes than the U.S. Mix, this approach will overestimate emissions for electrically powered vehicles. Likewise, this approach will underestimate emissions for the same in regions where electricity production is less clean than the U.S. Mix. Figure 4–2 in the Programmatic Assessment illustrates the differences in the GHG emissions associated with an example light rail project across different eGRID subregions. Appendix A in the Programmatic Assessment includes the eGRID sub-region electricity emission factors; these factors are incorporated in the Programmatic Assessment's accompanying Estimator Tool. Transit agencies can replicate the methodology that the Programmatic Assessment establishes using locally available data sets, if they choose to do so.

Comment: One state DOT requested additional clarification about the sample projects.

Response: FTA developed the Programmatic Assessment to provide transit agencies with an analysis of the effects of GHG emissions for certain types of projects that they can reference in future environmental review documents to meet NEPA requirements without necessitating a project-specific evaluation for that impact area. The sample of transit projects analyzed in the Programmatic Assessment included 68 transit projects that applied for funding through the CIG Program. Specific characteristics of those projects are in Appendix B of the Programmatic Assessment. Additional information regarding CIG projects is available in annual reports to Congress that FTA is required by law to prepare (*https://www.transit.dot.gov/funding/grant-programs/capital-investments/annual-report-funding-recommendations*).

Comment: One state DOT recommended that more details be provided to explain the differences in results included in the draft Programmatic Assessment relative to the results reported in the superseded 2017 Programmatic Assessment.

Response: For construction GHG emissions data, the 2017 Programmatic Assessment relied on the Infrastructure Carbon Estimator version 1 (ICE v1). A second version of that tool, ICE v2, was developed in the interim between the 2017 Programmatic Assessment and the current Programmatic Assessment. The current Programmatic Assessment relied on ICE v2. Construction GHG emission rates included in ICE v2 are higher than those in ICE v1 due to the use of higher quality data and modeling. Furthermore, for bus rapid transit projects specifically, FTA reduced the period over which GHG emissions were amortized from 50 years to 40 years to reflect minimum useful lifespans, per FTA Circular 5010.1E, more accurately. These changes result in GHG emissions estimates that appear higher in the current Programmatic Assessment than in the 2017 Programmatic Assessment. FTA will note the ICE versioning differences in a footnote in the Programmatic Assessment and clarify the minimum useful lifespan figure used for bus rapid transit.

Comment: One state DOT recommended additional factors be considered when applying the GHG calculation methodology to the no action alternatives in Appendix C.

Response: The 2023 CEQ guidance suggests that NEPA reviews identify the current and projected future state of the affected environment without the proposed action (*i.e.,* the no action alternative), which serves as the baseline for considering the effects of the proposed action and its reasonable alternatives. In the context of the Programmatic Assessment, the effects of the no action alternative are represented by the GHG emissions from automobile use that is expected to occur in the absence of the transit project (*i.e.,* automobile VMT displaced in the action alternative). Other than displaced automobile VMT, data on other aspects of the no action alternative, such as displaced GHG emissions from road maintenance and construction, were not included. Use of the Programmatic Assessment by transit agencies is voluntary; transit agencies that want to develop more holistic estimates of GHG emissions for a project-specific no action alternative may opt to do so.

Comment: One nonprofit organization: (1) requested additional clarification on when project-specific analysis is required; and (2) recommended that FTA work with the Federal Highway Administration (FHWA) to conduct programmatic GHG-related emissions evaluations during the long-range transportation planning process.

Response: FTA reiterates its recommendation that in cases in which the project characteristics and assumptions are similar to the sample of analyzed projects, transit agencies considering bus rapid transit, streetcar, light rail, and commuter rail projects may incorporate the Programmatic Assessment by reference into their NEPA analyses. In these cases, no additional project-specific GHG emissions analyses would be necessary for purposes of NEPA. Use of the Programmatic Assessment is voluntary, and transit agencies may choose to conduct their own GHG emissions analyses if they determine the Programmatic Assessment does not meet their project needs. FTA will evaluate the Programmatic Assessment and the accompanying Estimator, as appropriate, to provide better estimates of GHG emissions for transit projects. The Estimator is available for transit agencies that wish to have a more tailored estimate of emissions or for which a project differs substantially from those used to create the Programmatic Assessment.

On the second general point, during development of the 2017 Programmatic Assessment FTA worked with FHWA to discuss approaches to considering GHG emissions consistent with the 2016 CEQ guidance. FTA will continue to explore best practices for considering GHG emissions at other stages during transportation project development, including long-range transportation planning.

Comment: One trade association suggested that FTA exclude maintenance projects from requirements for GHG assessments.

Response: FTA notes that use of Programmatic Assessment as a reference and NEPA streamlining tool is entirely voluntary. The Programmatic Assessment does not introduce any new requirements. Rather, the Programmatic Assessment recommends that NEPA reviews for new individual light rail, street car, bus rapid transit, and commuter rail projects incorporate by reference the analysis of construction-related, operations-related, and maintenance-related upstream and downstream GHG emissions in cases in which the project characteristics and

assumptions are similar to the sample projects analyzed The Programmatic Assessment does not consider emissions from or provide recommendations for projects that maintain existing systems.

Comment: One trade association suggested that FTA recognize the critical influence of transit on energy-efficient community design.

Response: FTA revised the Programmatic Assessment to further highlight energy-efficient community design as a benefit of transit. The report notes that transit enables denser, more energy-efficient land use patterns that keep GHG emissions low through fewer and/or shorter driving trips, more trips on foot or by bicycle, and a reduction in car ownership and use.

Authority: 42 U.S.C. 4321 *et seq.;* 40 CFR 1507.3; 49 CFR 1.81(a)(5) and 1.91(c).

Mark Ferroni,

Acting Associate Administrator for Planning and Environment.

BILLING CODE 4910–57–P

DEPARTMENT OF THE TREASURY

Solicitation of Nominations for Membership on the Treasury Advisory Committee on Racial Equity

AGENCY: Department of the Treasury.

ACTION: Solicitation of nominations for membership of the Treasury Advisory Committee on Racial Equity; application deadline extension.

SUMMARY: The Treasury Department is soliciting nominations for membership on the Treasury Advisory Committee on Racial Equity (TACRE). The TACRE is composed of up to 15 members who will provide information, advice and recommendations to the Department of the Treasury on matters relating to the advancement of racial equity. This notice extends the deadline for applications for committee membership.

DATES: The application deadline for the notice published March 14, 2024 at 89 FR 18703, is extended. Applications are due on or before May 20, 2024.

FOR FURTHER INFORMATION CONTACT: Rhianna Rogers, Chief Diversity, Equity, inclusion, and Accessibility (DEIA) Officer, Department of Treasury, by emailing *Equity@Treasury.gov* or by calling (202) 622–3644 (this is not a toll-free number). For persons who are deaf, hard of hearing, have a speech disability or difficulty speaking may dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION:

Application Process for Advisory Committee Appointment

Applicants are required to submit the following documents specifically referencing the objectives and duties outlined above:

- A one (1) page cover letter detailing their qualifications and areas of expertise as they relate to the key issues before the committee; and
- A two (2) page resume/curriculum vitae, which should clearly highlight relevant experience that addresses the focus areas of TACRE.

Nominations may be submitted by the candidate themselves or by the person/organization recommending the candidate.

Some members of the Committee may be required to adhere to the conflict-of-interest rules applicable to Special Government Employees, as such employees are defined in 18 U.S.C. 202(a). These rules include relevant provisions in 18 U.S.C. related to criminal activity, Standards of Ethical Conduct for Employees of the Executive Branch (5 CFR part 2635), and Executive Order 12674 (as modified by Executive Order 12731).

In accordance with Department of Treasury Directive 21–03, a clearance process includes fingerprints, tax checks, and a Federal Bureau of Investigation criminal check. *Applicants must state in their application that they agree to submit to these pre-appointment checks.*

The application period for interested candidates will extend to the date outlined above. Applications should be submitted in sufficient time to be received by the close of business on the closing date and should be sent to *Equity@treasury.gov.* If you require reasonable accommodation to submit your application, please contact the Departmental Offices Reasonable Accommodations Coordinator at *ReasonableAccommodationRequests@treasury.gov.* Please make sure your request to the Reasonable Accommodations Coordinator is made at least five (5) days prior to the close of the application period, if possible.

Pursuant to the Federal Advisory Committee Act (FACA) (5 U.S.C. 1001 *et seq.,* as amended), the Department of the Treasury (''Department'') established the TACRE in order to carry out the provisions of Executive Order 13985, *Advancing Racial Equity and Support for Underserved Communities Throughout the Federal Government.*

On March 14, 2024 (89 FR 18703), the Department announced in the **Federal Register** the application process for committee membership. The application deadline announced in the notice was April 20, 2024. In order to provide additional opportunity for applications, the Department is extending the deadline to May 20, 2024.

Dated: April 19, 2024.

Snider Page,

Director, Office of Civil Rights and EEO and Designated Federal Officer.

Part II

Environmental Protection Agency

40 CFR Parts 9 and 98

Revisions and Confidentiality Determinations for Data Elements Under the Greenhouse Gas Reporting Rule; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 9 and 98

[EPA–HQ–OAR–2019–0424; FRL–7230–01–OAR]

RIN 2060–AU35

Revisions and Confidentiality Determinations for Data Elements Under the Greenhouse Gas Reporting Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The EPA is amending specific provisions in the Greenhouse Gas Reporting Rule to improve data quality and consistency. This action updates the General Provisions to reflect revised global warming potentials; expands reporting to additional sectors; improves the calculation, recordkeeping, and reporting requirements by updating existing methodologies; improves data verifications; and provides for collection of additional data to better inform and be relevant to a wide variety of Clean Air Act provisions that the EPA carries out. This action adds greenhouse gas monitoring and reporting for five source categories including coke calcining; ceramics manufacturing; calcium carbide production; caprolactam, glyoxal, and glyoxylic acid production; and facilities conducting geologic sequestration of carbon dioxide with enhanced oil recovery. These revisions also include changes that will improve implementation of the rule such as updates to applicability estimation methodologies, simplifying calculation and monitoring methodologies, streamlining recordkeeping and reporting, and other minor technical corrections or clarifications. This action also establishes and amends confidentiality determinations for the reporting of certain data elements to be added or substantially revised in these amendments.

DATES: This rule is effective January 1, 2025. The incorporation by reference of certain material listed in this final rule is approved by the Director of the Federal Register beginning January 1, 2025. The incorporation by reference of certain other material listed in the rule was approved by the Director of the Federal Register as of January 1, 2018.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2019–0424. All documents in the docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. This Docket Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744 and the telephone number for the Air Docket is (202) 566–1742.

FOR FURTHER INFORMATION CONTACT: Jennifer Bohman, Climate Change Division, Office of Atmospheric Programs (MC–6207A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460; telephone number: (202) 343–9548; email address: *GHGReporting@epa.gov.* For technical information, please go to the Greenhouse Gas Reporting Program (GHGRP) website, *www.epa.gov/ghgreporting.* To submit a question, select Help Center, followed by ‘‘Contact Us.’’

World Wide Web (WWW). In addition to being available in the docket, an electronic copy of this final rule will also be available through the WWW. Following the Administrator’s signature, a copy of this final rule will be posted on the EPA’s GHGRP website at *www.epa.gov/ghgreporting.*

SUPPLEMENTARY INFORMATION:

Regulated entities. These final revisions affect certain entities that must submit annual greenhouse gas (GHG) reports under the GHGRP (codified at 40 CFR part 98). These are amendments to existing regulations and will affect owners or operators of certain industry sectors that are suppliers and direct emitters of GHGs. Regulated categories and entities include, but are not limited to, those listed in table 1 of this preamble:

TABLE 1—EXAMPLES OF AFFECTED ENTITIES BY CATEGORY

Category	North American Industry Classification System (NAICS)	Examples of facilities that may be subject to part 98:+
General Stationary Fuel Combustion Sources		Facilities operating boilers, process heaters, incinerators, turbines, and internal combustion engines.
	211	Extractors of crude petroleum and natural gas.
	321	Manufacturers of lumber and wood products.
	322	Pulp and paper mills.
	325	Chemical manufacturers.
	324	Petroleum refineries, and manufacturers of coal products.
	316, 326, 339	Manufacturers of rubber and miscellaneous plastic products.
	331	Steel works, blast furnaces.
	332	Electroplating, plating, polishing, anodizing, and coloring.
	336	Manufacturers of motor vehicle parts and accessories.
	221	Electric, gas, and sanitary services.
	622	Health services.
	611	Educational services.
Electric Power Generation	2211	Generation facilities that produce electric energy.
Adipic Acid Production	325199	All other basic organic chemical manufacturing: Adipic acid manufacturing.
Aluminum Production	331313	Primary aluminum production facilities.
Ammonia Manufacturing	325311	Anhydrous ammonia manufacturing facilities.
Calcium Carbide Production	325180	Other basic inorganic chemical manufacturing: calcium carbide manufacturing.

TABLE 1—EXAMPLES OF AFFECTED ENTITIES BY CATEGORY—Continued

Category	North American Industry Classification System (NAICS)	Examples of facilities that may be subject to part 98:+
Carbon Dioxide Enhanced Oil Recovery Projects	211120	Oil and gas extraction projects using carbon dioxide enhanced oil recovery.
Caprolactam, Glyoxal, and Glyoxylic Acid Production	325199	All other basic organic chemical manufacturing.
Cement Production	327310	Cement manufacturing.
Ceramics Manufacturing	327110	Pottery, ceramics, and plumbing fixture manufacturing.
	327120	Clay building material and refractories manufacturing.
Coke Calcining	299901	Coke; coke, petroleum; coke, calcined petroleum.
Electronics Manufacturing	334111	Microcomputers manufacturing facilities.
	334413	Semiconductor, photovoltaic (PV) (solid-state) device manufacturing facilities.
	334419	Liquid crystal display (LCD) unit screens manufacturing facilities; Microelectromechanical (MEMS) manufacturing facilities.
Electrical Equipment Manufacture or Refurbishment	33531	Power transmission and distribution switchgear and specialty transformers manufacturing facilities.
Electricity generation units that report through 40 CFR part 75.	221112	Electric power generation, fossil fuel (*e.g.,* coal, oil, gas).
Electrical Equipment Use	221121	Electric bulk power transmission and control facilities.
Electrical transmission and distribution equipment manufacture or refurbishment.	33361	Engine, Turbine, and Power Transmission Equipment Manufacturing.
Ferroalloy Production	331110	Ferroalloys manufacturing.
Fluorinated Greenhouse Gas Production	325120	Industrial gases manufacturing facilities.
Geologic Sequestration	NA	CO_2 geologic sequestration sites.
Glass Production	327211	Flat glass manufacturing facilities.
	327213	Glass container manufacturing facilities.
	327212	Other pressed and blown glass and glassware manufacturing facilities.
HCFC–22 Production	325120	Industrial gas manufacturing: Hydrochlorofluorocarbon (HCFC) gases manufacturing.
HFC–23 destruction processes that are not collocated with a HCFC–22 production facility and that destroy more than 2.14 metric tons of HFC–23 per year.	325120	Industrial gas manufacturing: Hydrofluorocarbon (HFC) gases manufacturing.
Hydrogen Production	325120	Hydrogen manufacturing facilities.
Industrial Waste Landfill	562212	Solid waste landfills.
Industrial Wastewater Treatment	221310	Water treatment plants.
Injection of Carbon Dioxide	211	Oil and gas extraction.
Iron and Steel Production	333110	Integrated iron and steel mills, steel companies, sinter plants, blast furnaces, basic oxygen process furnace (BOPF) shops.
Lead Production	331	Primary metal manufacturing.
Lime Manufacturing	327410	Lime production.
Magnesium Production	331410	Nonferrous metal (except aluminum) smelting and refining: Magnesium refining, primary.
Nitric Acid Production	325311	Nitrogenous fertilizer manufacturing: Nitric acid manufacturing.
Petroleum and Natural Gas Systems	486210	Pipeline transportation of natural gas.
	221210	Natural gas distribution facilities.
	211120	Crude petroleum extraction.
	211130	Natural gas extraction.
Petrochemical Production	324110	Petrochemicals made in petroleum refineries.
Petroleum Refineries	324110	Petroleum refineries.
Phosphoric Acid Production	325312	Phosphatic fertilizer manufacturing.
Pulp and Paper Manufacturing	322110	Pulp mills.
	322120	Paper mills.
	322130	Paperboard mills.
Miscellaneous Uses of Carbonate	Facilities included elsewhere.	
Municipal Solid Waste Landfills	562212	Solid waste landfills.
	221320	Sewage treatment facilities.
Silicon Carbide Production	327910	Silicon carbide abrasives manufacturing.
Soda Ash Production	325180	Other basic inorganic chemical manufacturing: Soda ash manufacturing.
Suppliers of Carbon Dioxide	325120	Industrial gas manufacturing facilities.
Suppliers of Industrial Greenhouse Gases	325120	Industrial greenhouse gas manufacturing facilities.
Titanium Dioxide Production	325180	Other basic inorganic chemical manufacturing: Titanium dioxide manufacturing.
Underground Coal Mines	212115	Underground coal mining.

TABLE 1—EXAMPLES OF AFFECTED ENTITIES BY CATEGORY—Continued

Category	North American Industry Classification System (NAICS)	Examples of facilities that may be subject to part 98:+
Zinc Production	331410	Nonferrous metal (except aluminum) smelting and refining: Zinc refining, primary.
Suppliers of Coal-based Liquid Fuels	211130	Coal liquefaction at mine sites.
Suppliers of Natural Gas and Natural Gas Liquids	221210	Natural gas distribution facilities.
	211112	Natural gas liquid extraction facilities.
Suppliers of Petroleum Products	324110	Petroleum refineries.
Suppliers of Carbon Dioxide	325120	Industrial gas manufacturing facilities.
Suppliers of Industrial Greenhouse Gases	325120	Industrial greenhouse gas manufacturing facilities.
Importers and Exporters of Pre-charged Equipment and Closed-Cell Foams.	423730	Air-conditioning equipment (except room units) merchant wholesalers.
	333415	Air-conditioning equipment (except motor vehicle) manufacturing.
	423620	Air-conditioners, room, merchant wholesalers.
	449210	Electronics and appliance retailers.
	326150	Polyurethane foam products manufacturing.
	335313	Circuit breakers, power, manufacturing.
	423610	Circuit breakers and related equipment merchant wholesalers.

Table 1 of this preamble is not intended to be exhaustive, but rather provides a guide for readers regarding facilities likely to be affected by this action. This table lists the types of facilities that the EPA is now aware could potentially be affected by this action. Other types of facilities than those listed in the table could also be subject to reporting requirements. To determine whether you will be affected by this action, you should carefully examine the applicability criteria found in 40 CFR part 98, subpart A (General Provisions) and each source category. Many facilities that are affected by 40 CFR part 98 have greenhouse gas emissions from multiple source categories listed in table 1 of this preamble. If you have questions regarding the applicability of this action to a particular facility, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

I. Background

A. How is this preamble organized?

Section I. of this preamble contains background information on the June 21, 2022 proposed rule (87 FR 36920, hereafter referred to as ''2022 Data Quality Improvements Proposal'') and the May 22, 2023 supplemental proposed rule (88 FR 32852, hereafter referred to as ''2023 Supplemental Proposal''). This section also discusses the EPA's legal authority under the CAA to promulgate (including subsequent amendments to) the GHG Reporting Rule, codified at 40 CFR part 98 (hereinafter referred to as ''part 98''), and the EPA's legal authority to make confidentiality determinations for new or revised data elements corresponding to these amendments or for existing data elements for which the EPA is finalizing a new determination. Section II. of this preamble describes the types of amendments included in this final rule. Section III. of this preamble is organized by part 98 subpart and contains detailed information on the final new requirements for, or revisions to, each subpart. Section IV. of this preamble describes the final revisions to 40 CFR part 9. Section V. of this preamble explains the effective date of the final revisions and how the revisions are required to be implemented in reporting year (RY) 2024 and RY2025 reports. Section VI. of this preamble discusses the final confidentiality determinations for new or substantially revised (*i.e.,* requiring additional or different data to be reported) data reporting elements, as well as for certain existing data elements for which the EPA is finalizing a new determination. Section VII. of this preamble discusses the impacts of the final amendments. Finally, section VIII. of this preamble describes the statutory and Executive order requirements applicable to this action.

B. Executive Summary

The EPA is finalizing certain proposed revisions to part 98 included in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, with some changes made after consideration of public comments. The final amendments include improvements to requirements that, broadly, will enhance the quality and the scope of information collected, clarify elements of the rule, and streamline elements of reporting and recordkeeping. These final revisions include a comprehensive update to the global warming potentials (GWPs) in table A–1 to subpart A of part 98; updates to provide for collection of additional data to understand new source categories or new emission sources for specific sectors; updates to emission factors to more accurately reflect industry emissions; refinements to existing emissions calculation methodologies to reflect an improved understanding of emissions sources and end uses of GHGs; additions or modifications to reporting requirements in order to eliminate data gaps and improve verification of reported emissions; revisions that address prior commenter concerns or clarify requirements; and editorial corrections that are intended to improve the public's understanding of the rule. The final amendments also include streamlining measures such as revisions to applicability for certain industry sectors to account for changes in usage of certain GHGs or instances where the current applicability estimation methodology may overestimate emissions; revisions that provide flexibility for or simplify monitoring and calculation methods; and revisions to streamline reported data elements or recordkeeping where the current requirements are redundant, where reported data are not currently useful for verification or analysis, or for which continued collection of the data at the same frequency would not likely

provide new insights or knowledge of the industry sector, emissions, or trends at this time. This action also finalizes confidentiality determinations for the reporting of data elements added or substantially revised in these final amendments, and for certain existing data elements for which no confidentiality determination has been made previously or for which the EPA proposed to revise the existing determination.

In some cases, and as further described in section III. of this preamble, the EPA is not taking final action in this final rule on certain proposed revisions included in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. For example, after review of comments received in response to the proposed requirements to report purchased electricity and thermal energy consumption information under the proposed subpart B (Energy Consumption), the EPA is not taking action at this time on those proposed provisions. The EPA believes additional time is needed to consider the comments received before taking final action. Similarly, the EPA is not taking final action at this time on certain proposed changes for some subparts. In some cases, *e.g.,* for subparts G (Ammonia Production), P (Hydrogen Production), S (Lime Production), and HH (Municipal Solid Waste Landfills), we are not taking final action at this time on certain revisions to the calculation or monitoring methodologies that would have revised how data are collected and reported in the EPA's electronic greenhouse gas reporting tool (e-GGRT). In several cases, we are also not taking final action at this time on proposed revisions to add reporting requirements. For example, under subpart C (General Stationary Fuel Combustion), we are not taking final action at this time on proposed revisions to the requirements for units in either an aggregation of units or common pipe configuration that would have required reporters to provide additional information such as the unit type, maximum rated heat input capacity, and fraction of the actual total heat input for each unit in the aggregation or the common pipe configuration. Also under subpart C, we are not taking final action at this time on proposed requirements that would have required reporters to identify, for any configuration, whether the unit is an electricity generating unit, and, for group configurations (*i.e.,* common stack/duct, common pipe, and aggregation of units) that contain an electricity generating unit, the estimated decimal fraction of total emissions attributable to the electricity generating unit. Similarly, we are not taking final action at this time on certain data elements that were proposed to be added to subparts A (General Provisions), F (Aluminum Production), G, H (Cement Production), P, S, HH, OO (Suppliers of Industrial Greenhouse Gases), and QQ (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment and Closed-Cell Foams). Additional proposed revisions that EPA is not taking final action on at this time are discussed in section III. of this preamble.

This final rule also includes an amendment to 40 CFR part 9 to include the Office of Management and Budget (OMB) control number issued under the Paperwork Reduction Act (PRA) for the information collection request for the GHGRP.

The final amendments will become effective on January 1, 2025. As provided under the existing regulations in subpart A of part 98, the GWP amendments to table A–1 to subpart A will apply to reports submitted by current reporters that are submitted in calendar year 2025 and subsequent years (*i.e.,* starting with reports submitted for RY2024 on March 31, 2025). All other final revisions, which apply to both existing and new reporters, will be implemented for reports prepared for RY2025 and submitted March 31, 2026. Reporters who are newly subject to the rule will be required to implement all requirements to collect data, including any required monitoring and recordkeeping, on January 1, 2025.

These final amendments are anticipated to result in an overall increase in burden for part 98 reporters in cases where the amendments expand current applicability, add or revise reporting requirements, or require additional emissions data to be reported. The primary burden associated with the final rule is due to revisions to applicability, including revisions to the global warming potentials in table A–1 to subpart A of part 98, that will change the number of reporters currently at or near the 25,000 metric tons carbon dioxide equivalent ($mtCO_2e$) threshold; revisions to establish requirements for new source categories for coke calcining, calcium carbide, caprolactam, glyoxal, and glyoxylic acid production, ceramics manufacturing, and facilities conducting geologic sequestration of carbon dioxide with enhanced oil recovery; and revisions to expand reporting to include new emission sources for specific sectors, such as the addition of captive (non-merchant) hydrogen production facilities. The final revisions will affect approximately 254 new reporters across 13 source categories, including the hydrogen production, petroleum and natural gas systems, petroleum refineries, electrical transmission and distribution systems, industrial wastewater treatment, municipal solid waste landfills, fluorinated GHG suppliers, and industrial waste landfills source categories, as well as the new source categories added in these final revisions. The EPA anticipates some decrease in burden where the final revisions will adjust or improve the estimation methodologies for determining applicability, simplify calculation methodologies or monitoring requirements, or simplify the data that must be reported. In several cases, we are also finalizing changes where we anticipate increased clarity or more flexibility for reporters that could result in a potential decrease in burden. The incremental implementation labor costs for all subparts include $2,684,681 in RY2025, and $2,671,831 in each subsequent year (RY2026 and RY2027). The incremental implementation labor costs over the next three years (RY2025 through RY2027) total $8,028,343. There is an additional incremental burden of $2,733,937 for capital and operation and maintenance (O&M) costs in RY2025 and in each subsequent year (RY2026 and RY2027), which reflects changes to applicability and monitoring for subparts with new or additional reporters. The incremental non-labor costs for RY2025 through RY2027 total $8,201,812 over the next three years.

C. Background on This Final Rule

The GHGRP requires annual reporting of GHG data and other relevant information from large facilities and suppliers in the United States. In its 2022 Data Quality Improvements Proposal, the EPA proposed amendments to specific provisions of part 98 where we identified opportunities to improve the quality of the data collected under the rule. This included revisions that would provide for the collection of additional data that may be necessary to better understand emissions from specific sectors or inform future policy decisions under the CAA; update emission factors; and refine emissions estimation methodologies. The proposed rule also included revisions that provided for the collection of additional data that would be useful to improve verification of collected data and complement or

inform other EPA programs. These proposed revisions included the incorporation of a new source category to add calculation and reporting requirements for quantifying geologic sequestration of CO_2 in association with enhanced oil recovery (EOR) operations. In several cases, the 2022 Data Quality Improvements Proposal included revisions that would resolve gaps in the current coverage of the GHGRP that leave out potentially significant sources of GHG emissions or end uses. The EPA also proposed revisions that clarified or updated provisions that may be unclear, and that would streamline calculation, monitoring, or reporting in specific provisions in part 98 to provide flexibility or increase the efficiency of data collection. The EPA included a request for comment on expanding the GHGRP to include several new source categories (see section IV. of the preamble to the 2022 Data Quality Improvements Proposal at 87 FR 37016) and requested comment on potential future amendments to add new calculation, monitoring, and reporting requirements for these categories. The EPA also proposed confidentiality determinations for new or substantially revised data reporting elements that would be amended under the proposed rule, as well as for certain existing data elements for which the EPA proposed a new or revised determination. The EPA received comments on the 2022 Data Quality Improvements Proposal from June 21, 2022, through October 6, 2022.

The EPA subsequently proposed additional amendments to part 98 where the Agency had received or identified new information to further improve the data collected under the GHGRP. The 2023 Supplemental Proposal included amendments that were informed by a review of comments and information provided by stakeholders on the 2022 Data Quality Improvements Proposal, as well as newly proposed amendments that the EPA had identified from program implementation, *e.g.,* where additional data would improve verification of data reported to the GHGRP or would further aid our understanding of changing industry emission trends. The 2023 Supplemental Proposal included a proposed comprehensive update to the GWPs in table A–1 to subpart A of part 98; proposed amendments to establish new subparts with specific reporting provisions under part 98 for five new source categories; and several proposed revisions where the EPA had identified new data supporting improvements to the calculation, monitoring, and recordkeeping requirements. The 2023 Supplemental Proposal also clarified or corrected specific proposed provisions of the 2022 Data Quality Improvements Proposal. The amendments included in the 2023 Supplemental Proposal were proposed as part of the EPA's continued efforts to address potential data gaps and improve the quality of the data collected in the GHGRP. The EPA also proposed confidentiality determinations for new or substantially revised data reporting elements that would be revised under the supplemental proposed amendments. The EPA received comments on the 2023 Supplemental Proposal from May 22, 2023, through July 21, 2023.

The revisions included in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal were based on the EPA's assessment of advances in scientific understanding of GHG emissions sources, updated guidance on GHG estimation methods, and a review of the data collected and emissions trends established following more than 10 years of implementation of the program. The EPA is finalizing amendments and confidentiality determinations in this action, with certain changes from the proposed rules following consideration of comments submitted and based on the EPA's updated assessment. The revisions reflect the EPA's efforts to update and improve the GHGRP by better capturing the changing landscape of GHG emissions, providing for more complete coverage of U.S. GHG emission sources, and providing a more comprehensive approach to understanding GHG emissions. Responses to major comments submitted on the proposed amendments from the 2022 Data Quality Improvement Proposal and the 2023 Supplemental Proposal considered in the development of this final rule can be found in sections III. and VI. of this preamble. Documentation of all comments received as well as the EPA's responses can be found in the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

This final rule does not address implementation of provisions of the Inflation Reduction Act, which was signed into law on August 16, 2022. Section 60113 of the Inflation Reduction Act amended the CAA by adding section 136, ''Methane Emissions and Waste Reduction Incentive Program for Petroleum and Natural Gas Systems.'' Although the EPA proposed amendments to subpart W of part 98 (Petroleum and Natural Gas Systems) in the 2022 Data Quality Improvements Proposal, these were developed prior to the Congressional direction provided in CAA section 136. The EPA noted in the preamble to the 2023 Supplemental Proposal (see section I.B., 88 FR 32855) that we intend to issue one or more separate actions to implement the requirements of CAA section 136, including revisions to certain requirements of subpart W. Subsequently, the EPA published a proposed rule for subpart W on August 1, 2023 (88 FR 50282, hereinafter referred to as the ''2023 Subpart W Proposal''), as well as a proposed rule to implement CAA section 136(c), ''Waste Emissions Charge,'' that was signed by the Administrator on January 12, 2024 and published on January 26, 2024 (89 FR 5318),[1] to comply with CAA section 136. As discussed in the 2023 Subpart W Proposal, the EPA considered the 2022 Data Quality Improvements Proposal as well as additional proposed revisions in the development of the 2023 Subpart W Proposal. Accordingly, the EPA is not taking final action on the revisions to subpart W, including harmonizing revisions to subparts A (General Provisions) and C (General Stationary Fuel Combustion Sources) related to subpart W, that were proposed in the 2022 Data Quality Improvements Proposal in this final rule.

D. Legal Authority

The EPA is finalizing these rule amendments under its existing CAA authority provided in CAA section 114. As stated in the preamble to the *Mandatory Reporting of Greenhouse Gases* final rule (74 FR 56260, October 30, 2009), CAA section 114(a)(1) provides the EPA authority to require the information gathered by this rule because such data will inform and are relevant to the EPA's carrying out of a variety of CAA provisions. Thus, when promulgating amendments to the GHGRP, the EPA has assessed the reasonableness of requiring the information to be provided and explained how the data are relevant to the EPA's ability to carry out the provisions of the CAA. See the preambles to the proposed GHG

[1] CAA section 136(c), ''Waste Emissions Charge,'' directs the Administrator to impose and collect a charge on methane (CH_4) emissions that exceed statutorily specified waste emissions thresholds from an owner or operator of an applicable facility that reports more than 25,000 metric tons carbon dioxide equivalent pursuant to the Greenhouse Gas Reporting Rule's requirements for the petroleum and natural gas systems source category (codified as subpart W in EPA's Greenhouse Gas Reporting Rule regulations).

Reporting Rule (74 FR 16448, April 10, 2009) and the final GHG Reporting Rule (74 FR 56260, October 30, 2009) for further discussion of this authority. Additionally, in enacting CAA section 136 (discussed above in preamble section I.C.), Congress implicitly recognized EPA's appropriate use of CAA authority in promulgating the GHGRP. The provisions of CAA section 136 reference and are in part based on the Greenhouse Gas Reporting Rule requirements under subpart W for the petroleum and natural gas systems source category and require further revisions to subpart W for purposes of supporting implementation of section 136.

The Administrator has determined that this action is subject to the provisions of section 307(d) of the CAA (see also section VIII.L. of this preamble). Section 307(d) contains a set of procedures relating to the issuance and review of certain CAA rules.

In addition, pursuant to sections 114, 301, and 307 of the CAA, the EPA is publishing final confidentiality determinations for the new or substantially revised data elements required by these amendments. Section 114(c) requires that the EPA make information obtained under section 114 available to the public, except for information (excluding emission data) that qualifies for confidential treatment.

II. Overview of Final Revisions to 40 CFR Part 98 and 40 CFR Part 9

Relevant to this final rule, the EPA previously proposed revisions to part 98 in two separate documents: the 2022 Data Quality Improvements Proposal (June 21, 2022, 87 FR 36920) and the 2023 Supplemental Proposal (May 22, 2023, 88 FR 32852). In the proposed rules, the EPA identified two primary categories of revisions that we are finalizing in this rule. First, the EPA identified revisions that would modify the rule to improve the quality of the data collected and better inform the EPA's understanding of U.S. GHG emissions sources. Specifically, the EPA identified six types of revisions to improve the quality of the data collected under part 98 that we are finalizing in this rule, as follows:

- Revisions to table A–1 to the General Provisions of part 98 to update GWPs to reflect advances in scientific knowledge and better characterize the climate impacts of certain GHGs, by including values agreed to under the United Nations Framework Convention on Climate Change, and to maintain comparability and consistency with the Inventory of U.S. Greenhouse Gas Emissions and Sinks (hereafter referred to as ''the Inventory'') and other analyses produced by the EPA;
- Revisions to expand source categories or add new source categories to address potential gaps in reporting of data on U.S. GHG emissions or supply in order to improve the accuracy and completeness of the data provided by the GHGRP;
- Amendments to update emission factors to incorporate new measurement data that more accurately reflect industry emissions;
- Revisions to refine existing emissions calculation methodologies to reflect an improved understanding of emissions sources and end uses of GHGs, or to incorporate more recent research on GHG emissions or formation;
- Additions or modifications to reporting requirements to eliminate data gaps and improve verification of emissions estimates; and
- Revisions that clarify requirements that reporters have previously found vague to ensure that accurate data are being collected, and editorial corrections or harmonizing changes that will improve the public's understanding of the rule.

Second, the EPA identified revisions that would streamline the calculation, monitoring, or reporting requirements of part 98 to provide flexibility or increase the efficiency of data collection. In the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Notice, the EPA identified several streamlining revisions that we are finalizing in this rule, as follows:

- Revisions to applicability criteria for certain industry sectors without the 25,000 $mtCO_2e$ per year reporting threshold to account for changes in usage of certain GHGs, or where the current applicability estimation methodology may overestimate emissions;
- Revisions that provide flexibility for and simplify monitoring and calculation methods where further monitoring and data collection will not likely significantly improve our understanding of emission sources at this time, or where we currently allow similar less burdensome methodologies for other sources; and
- Revisions to reported data elements or recordkeeping where the current requirements are redundant or where reported data are not currently useful for verification or analysis, or for which continued collection of the data at the same frequency will not likely provide new insights or knowledge of the industry sector, emissions, or trends at this time.

The revisions included in this final rule will advance the EPA's goal of updating the GHGRP to reflect advances in scientific knowledge, better reflect the EPA's current understanding of U.S. GHG emissions and trends and improve data collection and reporting to better understand emissions from specific sectors or inform future policy decisions under the CAA. The types of streamlining revisions we are finalizing will simplify requirements while maintaining the quality of the data collected under part 98, where continued collection of information assists in evaluation and support of EPA programs and policies.

The EPA has frequently considered and relied on data collected under the GHGRP to carry out provisions of the CAA; to inform policy options; and to support regulatory and non-regulatory actions. For example, GHGRP landfill data from subpart HH of part 98 (Municipal Solid Waste Landfills) were previously analyzed to inform the development of the 2016 new source performance standards (NSPS) and emission guidelines (EG) for landfills (89 FR 59322; August 29, 2016). Specifically, the EPA used data from part 98 reporting to update the characteristics and technical attributes of over 1,200 landfills in the EPA's landfills data set, as well as to estimate emission reductions and costs, to inform the revised performance standards. Most recently, the EPA used GHGRP data collected under subparts RR (Geologic Sequestration of Carbon Dioxide) and UU (Injection of Carbon Dioxide) of part 98 to inform the development of the proposed NSPS and EG for GHG emissions from fossil fuel-fired electric generating units (EGUs) (88 FR 33240, May 23, 2023, hereafter ''EGU NSPS/EG proposed rule''), including to assess the geographic availability of geologic sequestration and enhanced oil recovery. These final revisions to the GHGRP will, as discussed herein, improve the GHG emissions data and supplier data that is collected under the GHGRP to better inform the EPA in carrying out provisions of the CAA (such as providing a better understanding of upstream production, downstream emissions, and potential impacts) and otherwise supporting the continued development of climate and air quality standards under the CAA.

As the EPA has explained since the GHGRP was first promulgated, the data also will inform the EPA's implementation of CAA section 103(g) regarding improvements in nonregulatory strategies and technologies for preventing or reducing air pollutants (*e.g.,* EPA's voluntary

GHG reduction programs such as the non-CO_2 partnership programs and ENERGY STAR) (74 FR 56265). The final rule will support the overall goals of the GHGRP to collect high-quality GHG data and to incorporate metrics and methodologies that reflect scientific updates. For example, we are finalizing revisions to table A–1 to subpart A of part 98 to update the chemical-specific GWP values of certain GHGs to (1) reflect GWPs from the Intergovernmental Panel on Climate Change (IPCC) Fifth Assessment Report (hereinafter referred to as ''AR5''); [2] (2) for certain GHGs that do not have chemical-specific GWPs listed in AR5, to adopt GWP values from the IPCC Sixth Assessment Report (hereinafter referred to as ''AR6''); [3] and (3) to revise and expand the set of default GWPs which are applied to GHGs for which peer-reviewed chemical-specific GWPs are not available.

In several cases, we are finalizing updates to emissions and default factors where we have received or identified updated measurement data. For example, we are finalizing updates to the default biogenic fraction for tire combustion in subpart C of part 98 (General Stationary Fuel Combustion) based on updated data obtained by the EPA on the weighted average composition of natural rubber in tires, allowing for the estimation of an emission factor that is more representative of these sources. Similarly, we are finalizing updates to the emission factors and default destruction and removal efficiency values in subpart I of part 98 (Electronics Manufacturing). The updated emission factors are based on newly submitted data from the 2017 and 2020 technology assessment reports submitted under the GHGRP with RY2016 and RY2019 annual reports, as well as consideration of new emission factors available in the *2019 Refinement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories* (hereafter ''2019 Refinement'').[4]

In other cases, we are finalizing updates to calculation methodologies to incorporate updates that are based on an improved understanding of emission sources. For example, for subpart I of part 98 (Electronics Manufacturing), the EPA is implementing emissions estimation improvements from the 2019 Refinement such as updates to the method used to calculate the fraction of fluorinated input gases and byproducts exhausted from tools with abatement systems during stack tests; revising equations that calculate the weighted average DREs for individual fluorinated greenhouse gases (F–GHGs) across process types; requiring that all stack systems be tested if the stack test method is used; and updating a set of equations that will more accurately account for emissions when pre-control emissions of a F–GHG approach or exceed the consumption of that gas during the test period. For subpart Y (Petroleum Refineries), we are amending the calculation methodology for delayed coking units to more accurately reflect the activities conducted at certain facilities that were not captured by the current emissions estimation methodology, which relies on a steam generation model. The incorporation of updated metrics and methodologies will improve the quality and accuracy of the data collected under the GHGRP, increase the Agency's understanding of the relative distribution of GHGs that are emitted, and better inform EPA policy and programs under the CAA.

The improvements to part 98 will further provide a more comprehensive, nationwide GHG emissions profile reflective of the origin and distribution of GHG emissions in the United States and will more accurately inform EPA policy options for potential regulatory or non-regulatory CAA programs. The EPA is finalizing several amendments that will reduce gaps in the reporting of GHG emissions and supply from specific sectors, including the broadening of existing source categories; and establishing new source categories that will add calculation, monitoring, reporting, and recordkeeping requirements for certain sectors of the economy. The final revisions add five new source categories, including coke calcining; ceramics manufacturing; calcium carbide production; caprolactam, glyoxal, and glyoxylic acid production; and facilities conducting geologic sequestration of carbon dioxide with enhanced oil recovery. These source categories were identified upon evaluation of emission sources that potentially contribute significant GHG emissions that are not currently reported or where facilities representative of these source categories may currently report under another part 98 source category using methodologies that may not provide complete or accurate emissions. Additionally, the inclusion of certain source categories will improve the completeness of the emissions estimates presented in the Inventory, such as collection of data on ceramics manufacturing; calcium carbide production; and caprolactam, glyoxal, and glyoxylic acid production. The EPA is also finalizing updates to certain subparts to add reporting of new emissions or emissions sources for existing sectors to address potential gaps in reporting. For example, we are adding requirements for the monitoring, calculation, and reporting of F–GHGs other than sulfur hexafluoride (SF_6) and perfluorocarbons (PFCs) under subparts DD (Electrical Equipment and Distribution Equipment Use) and SS (Electrical Equipment Manufacture or Refurbishment) to account for the introduction of alternative technologies and replacements for SF_6.

Likewise, we are finalizing revisions that will improve reporting under subpart HH to better account for CH_4 emissions from these facilities. Following review of recent studies indicating that CH_4 emissions from landfills may be considerably higher than what is currently reported to part 98 due in part to emissions from poorly operating gas collection systems or destruction devices, we are revising the calculation methodologies in subpart HH to better account for these scenarios. These changes are necessary for the EPA to continue to analyze the relative emissions and distribution of emissions from specific industries, improve the overall quality of the data collected under the GHGRP, and better inform future EPA policy and programs under the CAA. For example, the final revisions to subpart HH will be used to further improve the data in the EPA's landfills data set by providing more

comprehensive and accurate information on landfill emissions and the efficacy of gas collection systems and destruction devices.

The final revisions also help ensure that the data collected in the GHGRP can be compared to the data collected and presented by other EPA programs under the CAA. For example, we are finalizing several revisions to the reporting requirements for subpart HH, including more clearly identifying reporting elements associated with each gas collection system, each measurement location within a gas collection system, and each control device associated with a measurement location in subpart HH of part 98. These revisions can be used to estimate the relative volume of gas flared versus sent to landfill-gas-to-energy projects to better understand the amount of recovered CH_4 that is beneficially used in energy recovery projects. Understanding the energy recovery of these facilities is critical for evaluating and identifying progress towards renewable energy targets. Specifically, these data will allow the Agency to identify industry-specific trends of beneficial use of landfill gas, communicate best operating practices for reducing GHG emissions, and evaluate options for expanding the use of these best practices or other potential policy options under the CAA.

Similarly, we are finalizing revisions to clarify subpart RR (Geologic Sequestration of Carbon Dioxide) and add subpart VV (Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916) to part 98. Subpart VV provides for the reporting of incidental CO_2 storage associated with enhanced oil recovery based on the CSA Group (CSA)/American National Standards Institute (ANSI) International Standards Organization (ISO) 27916:19.

In the EGU NSPS/EG proposed rule, the EPA proposed that any affected EGU that employs CCS technology that captures enough CO_2 to meet the proposed standard and injects the CO_2 underground must assure that the CO_2 is managed at a facility reporting under subpart RR or new subpart VV of part 98. As such, this final rule complements the EGU NSPS/EG proposed rule.

In other cases, the revisions include collection of data that could be compared to other national and international inventories, improving, for example, the estimates provided to the Inventory. For instance, we are finalizing revisions to subpart N (Glass Production) to require reporting of the annual quantities of cullet (*i.e.,* recycled scrap glass) used as a raw material. Because differences in the quantities of cullet used can lead to variations in emissions from the production of different glass types, the annual quantities of cullet used will provide a useful metric for understanding variations and differences in emissions estimates as well as improve the analysis, transparency, and accuracy of the glass manufacturing sector in the Inventory and other EPA programs. Likewise, the addition of reporting for new source categories will improve the completeness of the emissions estimates presented in the Inventory, such as collection of data on ceramics manufacturing, calcium carbide production, and caprolactam, glyoxal, and glyoxylic acid production.

The EPA is finalizing several amendments to improve verification of the annual GHG reports. For example, we are finalizing amendments to subpart H (Cement Production) to collect additional data including annual averages for certain chemical composition input data on a facility-basis, which the Agency will use to build verification checks. These edits will provide the EPA the ability to check reported emissions data from subpart H reporters using both the mass balance and direct measurement estimation methods, allowing the EPA to back-estimate process emissions, which will result in more accurate reporting. Similarly, we are amending subparts OO (Suppliers of Industrial Greenhouse Gases) and QQ (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment or Closed-Cell Foams) of part 98 to require reporting of the Harmonized Tariff System code for each F–GHG, fluorinated heat transfer fluid (F–HTF), or nitrous oxide (N_2O) shipped, which will reduce instances of reporting where the data provided is unclear or unable to be compared to outside data sources for verification.

Lastly, the changes in this final rule will further advance the ability of the GHGRP to provide access to quality data on greenhouse gas emissions. Since its implementation, the collection of data under the GHGRP has allowed the Agency and relevant stakeholders to identify changes in industry and emissions trends, such as transitions in equipment technology or use of alternative lower-GWP greenhouses gases, that may be beneficial for informing other EPA programs under the CAA. The GHGRP provides an important data resource for communities and the public to understand GHG emissions. Since facilities are required to use prescribed calculation and monitoring methods, emissions data can be compared and analyzed, including locations of emissions sources. GHGRP data are easily accessible to the public via the EPA's online data publication tool, also known as FLIGHT at: *https://ghgdata.epa.gov/ghgp/main.do.* FLIGHT allows users to view and sort GHG data for every reporting year starting with 2010 from over 8,000 entities in a variety of ways including by location, industrial sector, and type of GHG emitted. This powerful data resource provides a critical tool for communities to identify nearby sources of GHGs and provide information to state and local governments. Overall, the final revisions in this action will improve the quality of the data collected under the program and available to communities.

These final revisions will, as such, maximize the effectiveness of part 98. Section III. of this preamble describes the specific changes that we are finalizing for each subpart to part 98 in more detail. Additional discussion of the benefits of the final rule are in section VII. of this preamble.

Additionally, we are finalizing a technical amendment to 40 CFR part 9 to update the table that lists the OMB control numbers issued under the PRA to include the information collection request (ICR) for 40 CFR part 98. This amendment satisfies the display requirements of the PRA and OMB's implementing regulations at 5 CFR part 1320 and is further described in section IV. of this preamble.

III. Final Revisions to Each Subpart of Part 98 and Summary of Comments and Responses

This section summarizes the final amendments to each part 98 subpart, as generally described in section II. of this preamble. Major changes to the final rule as compared to the proposed revisions are identified in this section. The amendments to each subpart are followed by a summary of the major comments on those amendments, and the EPA's responses to those comments. Other minor corrections and clarifications are reflected in the final redline regulatory text in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

A. Subpart A—General Provisions

The EPA is finalizing several amendments to subpart A of part 98 (General Provisions) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.A.1. of this preamble discusses the final revisions to subpart A. The EPA received several comments on the proposed subpart A revisions which are discussed in section III.A.2.

of this preamble. We are not finalizing the proposed confidentiality determinations for data elements that were included in the proposed revisions to subpart A, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart A

This section summarizes the final amendments to subpart A. Major changes in this final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart A can be found in section III.A.2. of this preamble. Additional information for these amendments and their supporting basis is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Revisions to Global Warming Potentials

As proposed, we are revising table A–1 to subpart A of part 98 to reflect more accurate GWPs to better characterize the climate impacts of individual GHGs and to ensure continued consistency with other U.S. climate programs, including the Inventory. The amendments to the GWPs in table A–1 that we are finalizing in this document are discussed in this section of this preamble. The EPA's response to comments received on the proposed revisions to table A–1 are in section III.A.2.a. of this preamble.

In the 2022 Data Quality Improvements Proposal, the EPA proposed two updates to table A–1 to subpart A of part 98 to update GWP values to reflect advances in scientific knowledge. First, we proposed to adopt a chemical-specific GWP of 0.14 for carbonic difluoride (COF_2) using the atmospheric lifetime and radiative efficiency published by the World Meteorological Organization (WMO) in its Scientific Assessment of Ozone Depletion.[5] We also proposed to expand one of the F–GHG groups to which a default GWP is assigned. Default GWPs are applied to GHGs for which peer-reviewed chemical-specific GWPs are not available. Specifically, we proposed to expand the ninth F–GHG group in table A–1 to subpart A of part 98, which includes unsaturated PFCs, unsaturated HFCs, unsaturated hydrochlorofluorocarbons (HCFCs), unsaturated halogenated ethers, unsaturated halogenated esters, fluorinated aldehydes, and fluorinated ketones, to include additional unsaturated fluorocarbons. Given the very short atmospheric lifetimes of unsaturated GHGs and review of available evaluations of individual unsaturated chlorofluorocarbons and unsaturated bromofluorocarbons in the 2018 WMO Scientific Assessment, we proposed to add unsaturated bromofluorocarbons, unsaturated chlorofluorocarbons, unsaturated bromochlorofluorocarbons, unsaturated hydrobromofluorocarbons, and unsaturated hydrobromochlorofluorocarbons to this F–GHG group, which will apply a default GWP of 1 to these compounds. Additional information on these amendments and their supporting basis is available in section III.A.1. of the preamble to the 2022 Data Quality Improvements Proposal.

As the 2022 Data Quality Improvements Proposal was nearing publication, the Parties to the United Nations Framework Convention on Climate Change (UNFCCC) fully specified which GWPs countries should use for purposes of GHG reporting.[6] The EPA subsequently proposed a comprehensive update to table A–1 to subpart A of part 98 in the 2023 Supplemental Proposal, consistent with recent science and the UNFCCC decision. This update carried out the intent that the EPA expressed at the time the GHGRP was first promulgated and in subsequent updates to part 98 to periodically update table A–1 as science and UNFCCC decisions evolve. Specifically, the EPA proposed revisions to table A–1 to update the chemical-specific GWPs values of certain GHGs to reflect values from the IPCC AR5 [7] and, for certain GHGs that do not have chemical-specific GWPs listed in AR5, to adopt GWP values from the IPCC AR6.[8] We proposed to adopt the AR5 and AR6 GWPs based on a 100-year time horizon. We also proposed to revise and expand the set of default GWPs in table A–1 for GHGs for which peer-reviewed chemical-specific GWPs are not available, including adding two new fluorinated GHG groups for saturated chlorofluorocarbons (CFCs) and for cyclic forms of unsaturated halogenated compounds, modifying the ninth F–GHG group to more clearly apply to non-cyclic unsaturated halogenated compounds, and updating the existing default GWP values to reflect values estimated from the chemical-specific GWPs that we proposed to adopt from AR5 and AR6. See sections II.A. and III.A.1. of the preamble to the 2023 Supplemental Proposal for additional information.

As proposed, we are amending table A–1 to subpart A of part 98 to update and add chemical-specific and default GWPs. Consistent with the 2021 UNFCCC decision, we are updating table A–1 to use, for GHGs with GWPs in AR5, the AR5 GWP values in table 8.A.1 (that reflect the climate-carbon feedbacks of CO_2 but not the GHG whose GWP is being evaluated), and for CH_4, the GWP that is not the GWP for fossil CH_4 in table 8.A.1 (*i.e.,* the GWP for CH_4 that does not reflect either the climate-carbon feedbacks for CH_4 or the atmospheric CO_2 that would result from the oxidation of CH_4 in the atmosphere). We are also updating table A–1 to adopt AR6 GWP values for 31 F–GHGs that have GWPs listed in AR6 but not AR5. Table 2 of this preamble lists the final GWP values for each GHG.

Scientific Assessment of Ozone Depletion: 2018, Global Ozone Research and Monitoring Project–Report No. 58, 588 pp., Geneva, Switzerland, 2018. *www.esrl.noaa.gov/csd/assessments/ozone/2018/downloads/018OzoneAssessment.pdf.* Retrieved July 29, 2019. Available in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

[6] As explained in section III.A.1. of the preamble to the 2023 Supplemental Proposal, the Parties to the UNFCCC specified the agreed-on GWPs in November 2021, which was too late to allow the EPA to consider proposing a comprehensive GWP update in the 2022 Data Quality Improvement Proposal.

Heptafluoroisobutyronitrile	42532–60–5	$(CF_3)_2CFCN$	2,750
Carbonyl fluoride	353–50–4	COF_2	0.14

As proposed, we are also amending table A–1 to subpart A of part 98 to revise the default GWPs. We are modifying the default GWP groups to add a group for saturated CFCs and a group for cyclic forms of unsaturated halogenated compounds. Based on the numerical differences between the GWP for cyclic unsaturated halogenated compounds and non-cyclic unsaturated halogenated compounds, we are also modifying the ninth F–GHG group to reflect non-cyclic forms of unsaturated halogenated compounds. The amendments update the default GWPs of each group based on the average of the updated chemical-specific GWPs (adopted from either the IPCC AR5 or AR6) for the compounds that belong to that group. We are also finalizing our proposal to rename the fluorinated GHG group ''Other fluorinated GHGs'' to ''Remaining fluorinated GHGs.'' The new and revised fluorinated GHG groups and their new and revised GWPs are listed in table 3 of this preamble.

TABLE 3—FLUORINATED GHG GROUPS AND DEFAULT GWPS FOR TABLE A–1

Fluorinated GHG group	GWP (100-year)
Fully fluorinated GHGs	9,200
Saturated hydrofluorocarbons (HFCs) with two or fewer carbon-hydrogen bonds.	3,000
Saturated HFCs with three or more carbon-hydrogen bonds.	840
Saturated hydrofluoroethers (HFEs) and hydrochlorofluoroethers (HCFEs) with one carbon-hydrogen bond.	6,600
Saturated HFEs and HCFEs with two carbon-hydrogen bonds.	2,900
Saturated HFEs and HCFEs with three or more carbon-hydrogen bonds.	320
Saturated chlorofluorocarbons (CFCs).	4,900
Fluorinated formates	350
Cyclic forms of the following: unsaturated perfluorocarbons (PFCs), unsaturated HFCs, unsaturated CFCs, unsaturated hydrochlorofluorocarbons (HCFCs), unsaturated bromofluorocarbons (BFCs), unsaturated bromochlorofluorocarbons (BCFCs), unsaturated hydrobromofluorocarbons (HBFCs), unsaturated hydrobromochlorofluorocarbons (HBCFCs), unsaturated halogenated ethers, and unsaturated halogenated esters.	58
Fluorinated acetates, carbonofluoridates, and fluorinated alcohols other than fluorotelomer alcohols.	25
Fluorinated aldehydes, fluorinated ketones, and non-cyclic forms of the following: unsaturated PFCs, unsaturated HFCs, unsaturated CFCs, unsaturated HCFCs, unsaturated BFCs, unsaturated BCFCs, unsaturated HBFCs, unsaturated HBCFCs, unsaturated halogenated ethers, and unsaturated halogenated esters.	1
Fluorotelomer alcohols	1
Fluorinated GHGs with carbon-iodine bond(s).	1
Remaining fluorinated GHGs	1,800

b. Other Revisions To Improve the Quality of Data Collected for Subpart A

The EPA is finalizing several revisions to improve the quality of data collected for subpart A as proposed. In some cases, we are finalizing the proposed amendments with revisions. First, we are clarifying in 40 CFR 98.2(i)(1) and (2), as proposed, that the provision to allow cessation of reporting or ''off-ramping,'' due to meeting either the 15,000 $mtCO_2e$ level or the 25,000 $mtCO_2e$ level for the number of years specified in 40 CFR 98.2(i), is based on the CO_2e reported, calculated in accordance with 40 CFR 98.3(c)(4)(i) (*i.e.,* the annual emissions report value as specified in that provision). The final amendments also clarify that after an

owner or operator off-ramps, the owner or operator must use equation A–1 to subpart A and follow the requirements of 40 CFR 98.2(b)(4) (the emission estimation methods used for determination of applicability) in subsequent years to determine if emissions exceed the 25,000 $mtCO_2e$ applicability threshold and whether the facility or supplier must resume reporting.

Additionally, the EPA is amending 40 CFR 98.2(f)(1) and adding new paragraph (k) as proposed to clarify the calculation of GHG quantities for comparison to the 25,000 $mtCO_2e$ threshold for importers and exporters of industrial greenhouse gases. The final amendments to 40 CFR 98.2(f)(1) state that importers and exporters must include the F–HTFs that are imported or exported during the year. New paragraph (k) specifies how to calculate the quantities of F–GHGs and F–HTFs destroyed for purposes of comparing them to the 25,000 $mtCO_2e$ threshold for stand-alone industrial F–GHG or F–HTF destruction facilities. The EPA is also finalizing as proposed revisions to 40 CFR 98.3(h)(4) to limit the total number of days a reporter can request to extend the time period for resolving a substantive error, either by submitting a revised report or providing information demonstrating that the previously submitted report does not contain the substantive error, to 180 days. Specifically, the Administrator will only approve extension requests for a total of 180 days from the initial notification of a substantive error. See section III.A.1. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

We are finalizing minor clarifications to the reporting and special provisions for best available monitoring methods in 40 CFR 98.3(k) and (l) as proposed, which apply to owners or operators of facilities or suppliers that first become subject to any subpart of part 98 due to amendment(s) to table A–1 to subpart A. The final requirements revise the term ''published'' to add ''in the **Federal Register** as a final rulemaking'' to clarify the EPA's intent that the requirements apply to facilities or suppliers that are first subject to the GHGRP in the year after the year the GWP is published as part of a final rule.

The EPA is finalizing an additional edit to subpart A to the electronic reporting provisions of 40 CFR 98.5(b). The revisions clarify that 40 CFR 98.5(b) applies to any data that is specified as verification software records in a subpart's applicable recordkeeping section.

The EPA is finalizing several revisions to subpart A to incorporate new and revised source categories. We are revising tables A–3 and A–4 to subpart A to clarify the reporting applicability for facilities included in the new source categories of coke calcining; ceramics manufacturing; calcium carbide production; caprolactam, glyoxal, and glyoxylic acid production; and facilities conducting geologic sequestration of carbon dioxide with enhanced oil recovery. We are revising table A–3 to subpart A to add new subparts that are ''all-in'' source categories, including subpart VV (Geologic Sequestration of Carbon Dioxide with Enhanced Oil Recovery Using ISO 27916) (section III.AA. of this preamble), subpart WW (Coke Calciners) (section III.BB. of this preamble), subpart XX (Calcium Carbide Production) (section III.CC. of this preamble), and subpart YY (Caprolactam, Glyoxal, and Glyoxylic Acid Production) (section III.DD. of this preamble). We are revising table A–4 to add new subpart ZZ (Ceramics Manufacturing) and assign a threshold of 25,000 $mtCO_2e$, as proposed. As discussed in section III.EE. of this preamble, subpart ZZ to part 98 applies to certain ceramics manufacturing processes that exceed a minimum production level (*i.e.,* annually consume at least 2,000 tons of carbonates, either as raw materials or as a constituent in clay, heated to a temperature sufficient to allow the calcination reaction to occur) and that exceed the 25,000 $mtCO_2e$ threshold. The revisions to tables A–3 and A–4 to subpart A clarify that these new source categories apply in RY2025 and future years.

The EPA is finalizing several revisions to defined terms in 40 CFR 98.6 as proposed to provide further clarity. These revisions to definitions include:

- Revising the definition of ''bulk'' to clarify that the import and export of gas includes small containers and does not exclude a minimum container size below which reporting will not be required (except for small shipments (*i.e.,* those including less than 25 kilograms)), and to align with the definition of ''bulk'' under the American Innovation and Manufacturing Act of 2020 (AIM) regulations at 40 CFR part 84.
- Revising the definition of ''greenhouse gas or GHG'' to clarify the treatment of fluorinated greenhouse gases by removing the partial list of fluorinated GHGs currently included in the definition and to simply refer to the definition of ''fluorinated greenhouse gas (GHG).''
- Adding the acronym ''(GHGs)'' after the term ''fluorinated greenhouse gas'' both in the definition of ''greenhouse gas or GHG'' and in the definition of ''fluorinated greenhouse gas'' to avoid redundancy and potential confusion between the definitions of ''greenhouse gas'' and ''fluorinated greenhouse gas.''
- Consistent with the revisions of the fluorinated GHG groups used to assign default GWPs discussed in section III.A.1.a. of this preamble, adding a definition of ''cyclic'' as it applies to molecular structures of various fluorinated GHGs; adding definitions of ''unsaturated chlorofluorocarbons (CFCs),'' ''saturated chlorofluorocarbons (CFCs),'' ''unsaturated bromofluorocarbons (BFCs),'' ''unsaturated bromochlorofluorocarbons (BCFCs),'' ''unsaturated hydrobromofluorocarbons (HBFCs),'' and ''unsaturated hydrobromochlorofluorocarbons (HBCFCs)''; and revising the definition of ''fluorinated greenhouse (GHG) group'' to include the new and revised groups.
- Revising the term ''other fluorinated GHGs'' to ''remaining fluorinated GHGs'' and to revise the definition of the term to reflect the new and revised fluorinated GHG groups discussed in section III.A.1.a. of this preamble.
- Revising the definition of ''fluorinated heat transfer fluids'' and moving it from 40 CFR 98.98 to 98.6 to harmonize with changes to subpart OO of part 98 (Suppliers of Industrial Greenhouse Gases) (see section III.U. of this preamble). The revised definition (1) explicitly includes industries other than electronics manufacturing, and (2) excludes most HFCs which are widely used as heat transfer fluids outside of electronics manufacturing and are regulated under the AIM regulations at 40 CFR part 84.
- Consistent with final revisions to subpart PP (Suppliers of Carbon Dioxide) (see section III.V. of this preamble), we are finalizing revisions to 40 CFR 98.6 to add a definition for ''Direct air capture'' and to amend the definition of ''Carbon dioxide stream.''

The EPA is making one revision to the definitions in the final rule from proposed to correct the definition of ''ASTM''. This change updates the definition to include the current name of the standards organization, ''ASTM, International''.

Consistent with final revisions to subparts Q (Iron and Steel Production), VV (Geologic Sequestration of Carbon Dioxide with Enhanced Oil Recovery Using ISO 27916), WW (Coke Calciners), and XX (Calcium Carbide Production), we are finalizing revisions to 40 CFR

98.7 to incorporate by reference ASTM International (ASTM) E415–17, *Standard Test Method for Analysis of Carbon and Low-Alloy Steel by Spark Atomic Emission Spectrometry* (2017) (subpart Q); CSA/ANSI ISO 27916:19, *Carbon dioxide capture, transportation and geological storage—Carbon dioxide storage using enhanced oil recovery* (CO_2–EOR) (2019) (subpart VV) (as proposed in the 2023 Supplemental Proposal); ASTM D3176–15 *Standard Practice for Ultimate Analysis of Coal and Coke* (2015), ASTM D5291–16 *Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants* (2016), ASTM D5373–21 *Standard Test Methods for Determination of Carbon, Hydrogen, and Nitrogen in Analysis Samples of Coal and Carbon in Analysis Samples of Coal and Coke* (2021), and NIST HB 44–2023: *Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices,* 2023 edition (subpart WW); and ASTM D5373–08 *Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Laboratory Samples of Coal* (2008) and ASTM C25–06, *Standard Test Methods for Chemical Analysis of Limestone, Quicklime, and Hydrated Lime* (2006) (subpart XX). The EPA has revised the regulatory text of 40 CFR 98.7 from proposal to incorporate these revisions and to reorganize the existing referenced ASTM standards in alphanumeric order.

The EPA is not finalizing proposed amendments to subpart A from the 2022 Data Quality Improvements Proposal that correlate with proposed amendments to subpart W of part 98 (Petroleum and Natural Gas Systems) from the 2022 Data Quality Improvements Proposal in this action. As noted in section I.C. of this preamble, the EPA has issued a subsequent proposed rule for subpart W on August 1, 2023, and has reproposed related amendments to subpart A in that action. Additionally, the EPA is not taking final action at this time on proposed amendments to subpart A from the 2023 Supplemental Proposal that were proposed harmonizing revisions intended to integrate proposed subpart B (Energy Consumption), including proposed reporting and recordkeeping under 40 CFR 98.2(a)(1), 98.3(c)(4), and 98.3(g)(5). Finally, we are not taking final action, at this time, on proposed amendments to 40 CFR 98.7 to incorporate by reference standards for electric metering. As discussed in section III.B. of this document, the EPA is not taking final action on subpart B at this time.

c. Revisions To Streamline and Improve Implementation for Subpart A

The EPA is finalizing several revisions to subpart A proposed in the 2022 Data Quality Improvements Proposal that will streamline and improve implementation for part 98. First, we are revising tables A–3 and table A–4 to subpart A to revise the applicability of subparts DD (Electrical Transmission and Distribution Equipment Use) and SS (Electrical Equipment Manufacture of Refurbishment) of part 98 as proposed. For subpart DD, the final revisions to table A–3 change the threshold such that facilities must account for the total estimated emissions from F–GHGs, as determined under 40 CFR 98.301 (subpart DD), for comparison to a threshold equivalent to 25,000 $mtCO_2e$ or more per year. We are also moving subpart SS from table A–3 to table A–4 to subpart A and specifying that subpart SS facilities must account for emissions of F–GHGs, as determined under the requirements of 40 CFR 98.451 (subpart SS), for comparison to a threshold equivalent to 25,000 $mtCO_2e$ or more per year. The final rule updates the threshold of subparts DD and SS to be consistent with the threshold set for the majority of subparts under part 98, and accounts for additional fluorinated gases (including F–GHG mixtures) reported by industry. For subpart DD, these final changes also focus Agency resources on the substantial emission sources within the sector by excluding facilities or operations that may report emissions that are consistently and substantially below 25,000 $mtCO_2e$ per year. See sections III.Q. and III.Y. of this preamble for additional information.

2. Summary of Comments and Responses on Subpart A

This section summarizes the major comments and responses related to the proposed amendments to subpart A. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart A.

a. Comments on Revisions To Global Warming Potentials

Comment: Several commenters supported the proposed revisions to table A–1 to subpart A to update the GWP values to use values from table 8.A.1 from the IPCC AR5, and for certain GHGs without GWP values listed in AR5, to adopt values from the IPCC AR6. Commenters remarked that the updates to the GWP values will be more accurate, align with UNFCCC guidance and the Inventory, and provide consistency to reporters who may also report under various voluntary standards, such as the GHG Protocol or Sustainability Accounting Standards Board.

Some commenters requested that the EPA clarify the effects of changing the GWP (particularly for CH_4) on the reported total CO_2e emissions, despite any actual change in mass emissions. The commenters asserted that it is important to inform stakeholders that future increases in CO_2e emissions due to the change in GWP are not reflective of any actual mass emission increases and may obscure decreases in annual mass emissions. The commenters also recommended that the EPA acknowledge how combustion CO_2e emissions will be affected.

Response: In the final rule, the EPA is finalizing its proposal (in the 2023 Supplemental Proposal) to adopt the 100-year GWPs from AR5, and for certain GHGs without GWPs listed in AR5, to adopt values from AR6. Regarding the commenters' concern that the change in GWPs may result in apparent, but not real, upward or downward trends in the data, the EPA has always published emissions using consistent GWPs for every year and will continue to do so. Prior to publication, the EPA updates all reported CO_2e values to reflect the current GWP values in table A–1 to subpart A of part 98. The CO_2e published by the EPA are based on the same GWP values across all reporting years. Hence, there will be no apparent upward or downward trend in emissions that are due only to a change in a GWP value.

Comment: A number of commenters supported the continued use of a 100-year GWP; one commenter stated that the 100-year GWP is consistent with Article 2 of the UNFCCC and that any movement to a framework that reduces the mitigation focus on CO_2 emissions and adds to long-term warming potential compared to the 100-year GWP framework would not be well justified. Several commenters specifically commented on the proposed GWP for CH_4; a number of commenters generally supported revising the CH_4 GWP value from 25 to 28 using the 100-year GWP. Other commenters recommended that the EPA consider incorporating GWP values on multiple time horizons in the reporting requirement, or when publicizing reported emissions. One

commenter stated that the 100-year GWP does not capture the near-term potency of short-lived gases like methane and hydrogen and is insufficient to reflect a pollutant's warming power over time. Commenters requested that the EPA incorporate the use of additional time horizons, such as the 20-year GWP, to acknowledge the near-term warming potency of short-lived gases such as CH_4, because they play a critical role in driving the rate of warming for the near future. Commenters argued that the 20-year GWP more accurately represents the powerful, short-term impact of methane on the atmosphere. Commenters noted that this would also align with several state regulatory programs, including California, New York, and New Jersey, that currently consider 20-year GWPs. Commenters stressed that adopting short-lived climate pollutant strategies and emissions controls to limit near-term warming is critical from a policy perspective and directly relevant to the EPA's efforts under the Clean Air Act. Commenters also requested that historic inventories be updated to reflect the role that short-lived climate pollutants play and to demonstrate that near-term CH_4 emissions reductions are as important as long-term CO_2 reductions.

Response: As has been the case since the inception of the GHGRP, we are finalizing 100-year GWPs for all GHGs. As noted in the ''Response to Comments on Final Rule, Volume 3: General Monitoring Approach, the Need for Detailed Reporting, and Other General Rationale Comments'' (see Docket ID. No. EPA–HQ–OAR–2008–0508–2260), the EPA selected the 100-year GWPs because these values are the internationally accepted standard for reporting GHG emissions. For example, the parties to the UNFCCC agreed to use GWPs that are based on a 100-year time period for preparing national inventories, and the reports submitted by other signatories to the UNFCCC use GWPs based on a 100-year time period, including the GWP for CH_4 and certain GHGs identified as short-lived climate pollutants. These values were subsequently adopted and used in multiple EPA climate initiatives, including the EPA's Significant New Alternatives Policy (SNAP) program and the Inventory, as well as EPA voluntary reduction partnerships (*e.g.,* Natural Gas STAR). Human-influenced climate change occurs on both short (decadal) and long (millennial) time scales. While there is no single best way to value both short- and long-term impacts in a single metric, the 100-year GWP is a reasonable approach that has been widely accepted by the international community. If the EPA were to adopt a 20-year GWP solely for CH_4, or for certain other compounds, it would introduce a metric that is inconsistent with both the GWPs used for the remaining table A–1 gases and with the reporting guidelines issued by the UNFCCC and used by the Inventory and other EPA programs. Additionally, the EPA and other Federal agencies, which calculate the impact of short-lived GHGs using 100-year GWPs, are making reduction of short-lived GHGs a priority, such as through the U.S. Global Methane Initiative. In addition, it is beneficial for both regulatory agencies and industry to use the same GWP values for these GHG compounds because it allows for more efficient review of data collected through the GHGRP and other U.S. climate programs, reduces potential errors that may arise when comparing multiple data sets or converting GHG emissions or supply based on separate GWPs, and reduces the burden for reporters and agencies to keep track of separate GWPs. For the reasons described above, the EPA is retaining a 100-year time horizon as the standard metric for defining GWPs in the GHGRP.

b. Comments on Other Revisions To Improve the Quality of Data Collected for Subpart A

Comment: Several commenters opposed the EPA's proposed revisions to 40 CFR 98.3(h)(4) to limit the total number of days a reporter can request to extend the time period for resolving a substantive error, either by submitting a revised report or providing information demonstrating that the previously submitted report does not contain the substantive error, to 180 days. Commenters requested that the Agency not put an inflexible cap on the number of days to resolve reporting issues; the commenters asserted that the extensions can be helpful for newly affected sources, when there is a change in facility ownership, and in other situations. One commenter stated that the proposed revision may result in arbitrarily short time-periods in which an operator may correct an error, especially in cases where the correction may not be accepted. The commenter contended that the EPA must add additional language to clarify that the 180-day limit will restart if the correction is not accepted. Commenters also requested that the EPA increase the limit of the total number of days a reporter can request an extension beyond the proposed 180 days to provide reporters more time to work through the new provisions in the program. One commenter requested the EPA restart the 180-day extension request opportunity for each instance in which an operator is notified of a substantive error or rejected correction (*e.g.,* if a correction is rejected, if additional corrections are requested, if corrections span more than one reporting year, or if EPA responses to operator questions are delayed).

Response: The EPA expects that 180 days is a reasonable amount of time for a facility to examine company records, gather additional data, and/or perform recalculations to submit a revised report or provide the necessary information such that the report may be verified. This represents more than four 30-day additional extensions beyond the initial 45-day period. As noted in the preamble to the final rule promulgated on October 30, 2009 (74 FR 52620, hereafter referred to as the ''2009 Final Rule''), the EPA concluded that this initial 45-day period would be sufficient since facilities have three months from the end of a reporting period to submit the initial annual report and have already collected and retained data needed for the analyses, so revisions to address a known error would likely require less time (see 74 FR 56278). A subsequent series of extensions of up to an additional 135 days is a reasonable amount of time to accommodate any additional changes that may be needed to the revision.

B. Subpart B—Energy Consumption

The EPA is not taking final action on the proposed addition of subpart B of part 98 (Energy Consumption) in this final rule. The EPA received a number of comments for proposed subpart B. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to proposed subpart B.

In the 2022 Data Quality Improvements Proposal, the EPA requested comment on collecting data on energy consumption in order to improve the quality of the data collected under the GHGRP. Specifically, we provided background on the EPA's original request for comment on the collection of data related to electricity consumption in the development of part 98 and the EPA's response in the 2009 Final Rule, and requested comment on whether and how the EPA should collect energy consumption data in order to support data analyses related to informing voluntary energy efficiency

programs, provide information on industrial sectors where currently little data are reported to GHGRP, and inform quality assurance/quality control (QA/QC) of the Inventory. We requested comment on specific considerations for the potential addition of the energy consumption source category (see section IV.F. of the preamble to the 2022 Data Quality Improvements Proposal for additional information).

Following consideration of comments received in response to the EPA's request for comment, we subsequently proposed, in the 2023 Supplemental Proposal, the addition of subpart B to part 98. At that time, we reiterated our interest in collecting data on energy consumption to gain an improved understanding of the energy intensity (*i.e.,* the amount of energy required to produce a given level of product or activity, both through on-site energy produced from fuel combustion and purchased energy) of specific facilities or sectors, and to better inform our understanding of energy needs and the potential indirect GHG emissions associated with certain sectors. The proposed rule included specific monitoring and reporting requirements for direct emitting facilities that report under part 98 and purchase metered electricity or metered thermal energy products. In the proposed rule, the EPA outlined a source category definition, rationale for the proposed applicability of the subpart to direct emitting facilities in lieu of a threshold, and specific monitoring, missing data, recordkeeping, and reporting requirements. The EPA did not propose requirements for facilities to calculate or report indirect emissions estimates associated with purchased metered electricity or metered thermal energy products. Additional information on the proposed amendments is available in the preamble to the 2023 Supplemental Proposal.

In response to the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, the EPA received many comments on the proposed subpart from a variety of stakeholders providing input on the definition, applicability criteria, monitoring, reporting, recordkeeping, and additional requirements of the source category, as proposed, as well as a number of comments on the EPA's authority to collect the energy consumption data proposed under subpart B. The EPA is not taking final action on proposed subpart B at this time. The EPA intends to further review and consider these comments and other relevant information and may consider any next steps on the collection of data related to energy consumption in a future rulemaking. Therefore, none of the proposed requirements related to subpart B are included in this final rule. The EPA is also not taking final action on related amendments to subpart A (General Provisions) of part 98 that were proposed harmonizing changes for the implementation subpart B, including reporting requirements, as discussed in section III.A.1.b. of this preamble.

C. Subpart C—General Stationary Fuel Combustion

The EPA is finalizing several amendments to subpart C of part 98 (General Stationary Fuel Combustion) as proposed. In some cases, we are finalizing the proposed amendments with revisions. In other cases, we are not taking final action on the proposed amendments. Section III.C.1. of this preamble discusses the final revisions to subpart C. The EPA received several comments on the proposed subpart C revisions which are discussed in section III.C.2. of this preamble. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the final revisions to subpart C, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart C

This section summarizes the final amendments to subpart C. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart C can be found in this section and section III.C.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Revisions To Improve the Quality of Data Collected for Subpart C

The EPA is finalizing several revisions to improve the quality of data collected for subpart C. First, the EPA is finalizing modifications to the Tier 3 calculation methodology, including revisions to 40 CFR 98.33(a)(3)(iii) to provide new equations C–5A and C–5B, as proposed. The updated equations provide for calculating a weighted annual average carbon content and a weighted annual average molecular weight, respectively, and correct the calculation method for Tier 3 gaseous fuels. The new equations incorporate the molar volume conversion factor at standard conditions (as defined at 40 CFR 98.6) and, for annual average carbon content, the measured molecular weight of the fuel, in order to convert the fuel flow to the appropriate units of measure. The final rule includes corrections to the proposed paragraph references included in the definition of the variable ''MW'' (*i.e.,* molecular weight) to equation C–5.

The EPA is also finalizing as proposed revisions to provisions pertaining to the calculation of biogenic emissions from tire combustion. These revisions include:

- Removing the additional provision in 40 CFR 98.33(b)(1)(vii) on how to apply the threshold to only municipal solid waste (MSW) fuel when MSW and tires are both combusted and the reporter elects not to separately calculate and report biogenic CO_2 emissions from the combustion of tires, since biogenic CO_2 emissions from tire combustion must now be calculated and reported in all cases;
- Removing the language in 40 CFR 98.33(e) and 98.36(e)(2)(xi) referring to optional biogenic CO_2 emissions reporting from tire combustion;
- Removing the restriction in 40 CFR 98.33(e)(3)(iv) that the default factor that is used to determine biogenic CO_2 emissions may only be used to estimate the annual biogenic CO_2 emissions from the combustion of tires if the combustion of tires represents ''no more than 10 percent annual heat input to a unit'';
- Revising 40 CFR 98.33(e)(3)(iv)(A) so that total annual CO_2 emissions will be calculated using the applicable methodology in 40 CFR 98.33(a)(1) through (3) for units using Tier 1 through 3 for purposes of 40 CFR 98.33(a), and using the Tier 1 calculation methodology in 40 CFR 98.33(a)(1) for units using the Tier 4 or part 75 calculation methodologies for purposes of 40 CFR 98.33(a), when determining the biogenic component of MSW and/or tires under 40 CFR 98.33(e)(3)(iv);
- Revising 40 CFR 98.33(e)(3)(iv)(B) to update the default factor that is used to determine biogenic CO_2 emissions from the combustion of tires from 0.20 to 0.24; and
- Correcting 40 CFR 98.34(d) to reference 40 CFR 98.33(e)(3)(iv) instead of 40 CFR 98.33(b)(1)(vi) and (vii) and correcting 40 CFR 98.33(e)(1) to delete the parenthetical clause ''(except MSW and tires).''

These final revisions will update the default factor to be based on more recent data collected on the average composition of natural rubber in tires, remove potentially confusing or conflicting requirements, and result in a more accurate characterization of biogenic emissions from these sources.

See section III.B.1. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis. The EPA is also finalizing one additional revision related to the estimation of biogenic emissions after consideration of comments received on the 2022 Data Quality Improvements Proposal. Commenters requested that the EPA expand the monitoring requirements at 40 CFR 98.34(e) to include all combined biomass and fossil fuels and to allow for testing at one source when a common fuel is combusted. The EPA agrees that testing one emission source is reasonable when multiple combustion units are fed from a common fuel source. Accordingly, the EPA is revising 40 CFR 98.34(e) to allow for quarterly ASTM D6866–16 and ASTM D7459–08 testing of one representative unit for a common fuel source for all combined biomass (or fuels with a biomass component) and fossil fuels. See section III.C.2. of this preamble for additional information on related comments and the EPA's response.

We are finalizing corrections to the variable ''R'' in equation C–11. The term ''R'' is currently defined as ''The number of moles of CO_2 released upon capture of one mole of the acid gas species being removed (R = 1.00 when the sorbent is $CaCO_3$ and the targeted acid gas species is SO_2)'' and is being amended to ''The number of moles of CO_2 released per mole of sorbent used (R = 1.00 when the sorbent is $CaCO_3$ and the targeted acid gas species is SO_2).'' We are finalizing amendments to 40 CFR 98.33(c)(6)(i), (ii), (ii)(A), and (iii)(C), and to remove and reserve 40 CFR 98.33(c)(6)(iii)(B) (to clarify the methods used to calculate CH_4 and N_2O emissions for blended fuels when heat input is determined after the fuels are mixed and combusted), as proposed.

The EPA identified one additional minor correction to subpart C in review of changes for the final rule. Subsequently, we are correcting the definition of the term emission factor ''EF'' in equation C–10 from ''Fuel-specific emission factor for CH_4 or N_2O, from table C–2 of this section'' to ''Fuel-specific emission factor for CH_4 or N_2O, from table C–2 to this subpart.''

The EPA is finalizing as proposed two additional clarifications to the reporting and recordkeeping requirements. We are revising the first sentence of 40 CFR 98.36(e)(2)(ii)(C) to clarify that both the annual average, and where applicable, monthly high heat values are required to be reported. This change clarifies that the annual average high heat value is also a reporting requirement (for reporters who do not use the electronic inputs verification tool (IVT) within the e-GGRT). We are finalizing revisions to the 40 CFR 98.37(b) introductory paragraph and paragraphs (b)(9) through (11), (14), (18), (20), (22), and (23) to specify recordkeeping data that is currently contained in the file generated by the verification software that is already required to be retained by reporters under 40 CFR 98.37(b). These revisions correct omissions that currently exist in the verification software recordkeeping requirements specific to equations C–2a, C–2b, C–3, C–4, and C–5. They also align the verification software recordkeeping requirements with the final revisions to equation C–5 at 40 CFR 98.33(a)(3)(iii).

In the 2022 Data Quality Improvements Proposal, we proposed additional reporting requirements, for each unit greater than or equal to 10 mmBtu/hour in either an aggregation of units or common pipe configuration. The proposed reporting included, for each individual unit with maximum rated heat input capacity greater than or equal to 10 mmBtu/hour included in the group, the unit type, maximum rated heat input capacity, and an estimate of the fraction of the total group annual heat input attributable to each unit (proposed 40 CFR 98.36(c)(1)(ii) and (c)(3)(xi)). Following consideration of public comments, the EPA is not taking final action on the proposed reporting requirements (*i.e.,* identifying the unit type, maximum rated heat input capacity, and fraction of the total annual heat input for each unit in the aggregation of unit or common pipe). See section III.C.2. of this preamble for a summary of the related comments and the EPA's response.

In the 2023 Supplemental Proposal, the EPA proposed to add a requirement to report whether the unit is an EGU for each configuration that reports emissions, under either the individual unit provisions at 40 CFR 98.36(b)(12) or the multi-unit provisions at 40 CFR 98.36(c)(1)(xii), (c)(2)(xii), and (c)(3)(xii). For multi-unit reporting configurations, we also proposed adding a requirement for facilities to report an estimated decimal fraction of total emissions from the group that are attributable to EGU(s) included in the group. Following consideration of public comments, the EPA is not taking final action on the proposed revisions to the reporting requirements in this rule. See section III.C.2. of this preamble for a summary of the related comments and the EPA's response.

The EPA is also not taking final action in this final rule on proposed revisions to subpart C correlated with proposed amendments to subpart W (Petroleum and Natural Gas Systems). As noted in section I.C. of this preamble, the EPA has issued a subsequent proposed rule for subpart W on August 1, 2023 and has reproposed related amendments to subpart C in that separate action.

b. Revisions To Streamline and Improve Implementation for Subpart C

The EPA is finalizing all revisions to streamline and improvement implementation for subpart C as proposed. Specifically, the EPA is finalizing (1) amendments to 40 CFR 98.34(c)(6) to allow cylinder gas audits (CGAs) to be performed using calibration gas concentrations of 40–60 percent and 80–100 percent of CO_2 span, whenever the required CO_2 span value for a flue gas does is not appropriate for the prescribed audit ranges in appendix F of 40 CFR part 60; and (2) amendments to provisions in 40 CFR 98.36(c)(1)(vi) and 98.36(c)(3)(vi) to remove language requiring that facilities with the aggregation of units or common pipe configuration types report the total annual CO_2 mass emissions from all fossil fuels combined. See section III.B.2. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these changes and their supporting basis.

2. Summary of Comments and Responses on Subpart C

This section summarizes the major comments and responses related to the proposed amendments to subpart C. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart C.

Comment: One commenter provided a correction to the proposed revisions to equation C–5 related to the revisions to the Tier 3 calculation methodology. The commenter noted that the proposed revisions to variable ''MW'' of equation C–5 which specify the procedures to be used to determine the annual average molecular weight included an incorrect reference to paragraphs (a)(3)(iii)(A)(3) and (4), and should point to (a)(3)(iii)(B)(1) and (2).

Response: We agree that the proposal inadvertently contained incorrect cross-references for the variable ''MW'' of equation C–5, and the EPA has corrected these cross-references in the final rule.

Comment: Commenters generally supported the EPA's proposed revisions

to update the calculation methodology for biogenic emissions from tire combustion. One commenter requested that the EPA consider expanding the requirements of 40 CFR 98.34(e), which requires quarterly testing to determine biogenic CO_2 when biomass and non-biogenic fuels are co-fired in a unit. The commenter noted that 40 CFR 98.34(e) currently allows for testing of a single representative unit for facilities with multiple units in which tires are the primary fuel combusted and the units are fed from a common fuel source. The commenter noted that for facilities with multiple units combusting the same fuel, testing each source quarterly imposes an additional burden without enhancing the accuracy of reported emissions. The commenter requested that the EPA expand the provisions to include all combined biomass and fossil fuels and to allow for testing one representative unit when fuel from a common fuel source is combusted.

Response: The EPA acknowledges the commenter's support for the proposed revisions. The EPA agrees with the commenter that testing one emission source when multiple emission sources are fed from a common fuel source should be allowed for all combined biomass (or fuels with a biomass component) and fossil fuels. Accordingly, the EPA has finalized quarterly ASTM D6866–16 and ASTM D7459–08 testing of one representative unit for multiple units fed from a common fuel source, for all combined biomass (or fuels with a biomass component) and fossil fuels.

Comment: Some commenters supported the EPA's proposal to revise 40 CFR 98.36(c)(1) and (3) to require reporting of additional information for each unit in either an aggregation of units or common pipe configuration (excluding units with maximum rated heat input capacity less than 10 mmBtu/hour), including the unit type, maximum rated heat input capacity, and an estimate of the fraction of the total annual heat input to the unit. These commenters agreed that unit-specific data is necessary to understand both the distribution of emissions across unit types and sizes, but also the abatement potential through various decarbonization strategies (*e.g.,* certain abatement strategies may be better suited for certain unit types and uses). The commenters stated that the requested data could assist the EPA in the development of NSPS or EG under CAA section 111. The commenters noted that, given the prevalence of reporting using combined configurations, this data would fill large data gaps in the current characterization of industrial sectors. One commenter asserted that the requirement should be extended to facilities that report using the common stack configuration or the alternative part 75 configuration, which would ensure that all emissions under the subpart are similarly affected by the proposed revisions and would provide a full picture of the GHG abatement potential of various source categories. Commenters also requested the EPA consider lowering or eliminate the size threshold below 10 mmBtu/hour; the commenter stated that although smaller units do not account for a large share of total capacity, they often present the most viable opportunities for greenhouse gas emissions abatement such as electrification with heat pump technology.

Other commenters opposed the proposed requirements. Opposing commenters stated that the EPA's explanation for collecting the data was ambiguous and did not sufficiently explain what data gaps are missing or how the collection of the additional information would resolve issues within the currently collected data. One commenter opposed disaggregating total emissions from the grouped combustion equipment, asserting that aggregating the emissions by individual equipment (excluding units rated less than 10 mmBtu/hour) using estimation techniques would not provide useful information. Several commenters asserted that the proposed approach could not reliably provide accurate estimates of actual heat input and is likely not to be technically feasible. For example, one commenter stated that the physical configuration of certain lime plants would preclude accurate unit-specific estimates of actual heat input, as the facilities lack certified calibrated meters on a kiln-by-kiln basis and rely on quantifying solid fuel usage based on surveys of on-site stockpiles. The commenter added that facility-wide reporting of combustion emissions satisfies the EPA's objective of developing facility-wide emissions information, and additional unit-level information is superfluous and of limited value. Other commenters stated that individual fuel meters are not common, asserting that annual heat input for individual units is often estimated based on the maximum high heat input rating and operating hours. One commenter stated that the heat input records maintained by facilities do not necessarily correspond to the actual heat input of a unit, especially for industries that use batching with different process equipment for different products. That commenter asserted that actual heat input may vary based on age of the unit; how it is utilized in processes for steam, cooling, or other purposes; and the high heating value of fuel during certain operating periods. Another commenter questioned whether the estimation technique proposed would likely undermine the reported data or compromise the integrity of actual values that are currently reported. Commenters asserted that the requirements would have potentially very limited value and may detract from the GHG emission estimates that regulated facilities produce for the EPA or other proposed Federal rules.

Commenters also expressed that the proposed requirements would be overly burdensome and significantly increase the recordkeeping and reporting burden. One commenter specifically referred to the requirement for facilities to estimate the total annual input of each unit expressed as a decimal fraction based on the actual heat input of each unit compared to the whole; the commenter stated that this requirement would essentially negate the time efficiencies gained by reporting the aggregated group, especially for reporters using the common pipe configuration. The commenter stated that this would essentially require that heat inputs be calculated for each piece of equipment each year and could result in a ten-fold increase in burden for reporters using the common pipe method. Commenters urged that the maximum rated heat input of each unit in the aggregated group and operating hours should provide enough information for the EPA to reasonably approximate emissions for individual equipment.

Response: Upon careful consideration, the EPA has decided not to take final action on the proposed reporting requirements for each unit greater than or equal to 10 mmBtu/hour in either an aggregation of units or common pipe configuration (the unit type, maximum rated heat input capacity, and an estimate of the fraction of the total annual heat input attributable to each unit in the group) (proposed 40 CFR 98.36(c)(1)(ii) and (c)(3)(xi)) at this time. We note that the EPA disagrees that estimating the fraction of the actual total annual heat input for each unit in the group, based on company records, will be overly burdensome to reporters. ''Company records'' is defined in the existing part 98 regulations at 40 CFR 98.6 to mean, ''in reference to the amount of fuel consumed by a stationary combustion unit (or by a group of such units), a complete record of the methods used, the measurements made, and the calculations performed to quantify fuel

usage. Company records may include, but are not limited to, direct measurements of fuel consumption by gravimetric or volumetric means, tank drop measurements, and calculated values of fuel usage obtained by measuring auxiliary parameters such as steam generation or unit operating hours. Fuel billing records obtained from the fuel supplier qualify as company records.'' The broad definition of company records would afford reporters considerable flexibility when it comes to estimating the fraction of the actual total annual heat input for each unit in the group. The EPA may consider such reporting requirements in future rulemakings.

Comment: Two commenters stated that EGUs should not be reported under subpart C and are already reported under subpart D (Electricity Generation); one commenter asserted that it is unclear from the proposal how reporting these emissions under subpart C would not be duplicative. One of the two commenters additionally stated that EGUs are not specifically defined in subparts A or C of part 98, and that the EPA should provide clarification on the definition of EGUs. The commenter added that the proposed requirement would impose burden and regulatory confusion because of the conflicting definitions in, and applicability of, other EPA regulatory programs which traditionally have regulated EGUs separately from non-EGU combustion sources. The commenter stated that 40 CFR 98.36(f) already requires sources to identify if they are tied to an entity regulated by any public utility commission.

Another commenter suggested a definition for EGUs that aligns with a footnote to table A–7 to subpart A that defines EGUs for sources reporting under subpart C as ''a fuel-fired electric generator owned or operated by an entity that is subject to regulation of customer billing rates by the public utilities commission (excluding generators connected to combustion units subject to 40 CFR part 98, subpart D) and that are located at a facility for which the sum of the nameplate capacities for all such electric generators is greater than or equal to 1 megawatt electric output.''

One commenter requested clarification that waste heat generation is not included; the commenter added that requiring facilities to report emissions from the generation of electricity using waste heat recovery would be double counting. Other commenters requested clarification that emergency generators are exempt from the proposed requirements.

Two commenters supported the EPA's proposed requirement to allow operators to use an engineering estimate of the percentage of combustion emissions attributable to facility electricity generation. However, another commenter disagreed, stating that the EPA did not describe how a reporter would identify such a fraction. The commenter added that the EPA failed to take into account that emissions from a single combustion unit might provide steam to multiple consumers for multiple purposes, only a portion of which includes on-site electricity generation. The commenter expressed concerns that, if the rule is finalized as proposed, the methods to determine electricity-related emissions by fraction could become subject to numerous other requirements, such as calculations for GHG emissions, monitoring and QA/QC requirements, data reporting, and record retention obligations.

Response: The EPA is not taking final action on the proposed addition of a new indicator that would identify units as electricity generating units at this time. Furthermore, the EPA is not taking final action on the additional requirement for reporting an estimate of a group's total reported emissions attributable to electricity generation at this time. As discussed in the preamble to the 2023 Supplemental Proposal, under the current subpart C reporting requirements, the EPA cannot currently determine the quantity of EGU emissions included in the reported total emissions for the subpart. Although some facilities currently indicate whether certain stationary fuel combustion sources are connected to a fuel-fired electric generator in 40 CFR 98.36(f), this requirement only captures a subset of subpart C EGU emissions. The EPA therefore intended the proposed reporting requirements to identify other EGUs reporting under subpart C in order to improve our understanding of subpart C EGU GHG emissions and the attribution of GHG emissions to the power plant sector. However, we agree with commenters that the proposed requirements could require additional burden not contemplated by the proposed rule. Specifically, as noted by commenters, we recognize that there could be scenarios in which a single combustion unit or group of units may provide steam for multiple purposes, only a portion of which includes on-site electricity generation. In this case, although a facility may know the quantity of electricity generated and could estimate the quantity of steam required to generate the electricity, determination of the portion of GHG emissions that are attributable to the combustion unit(s) producing the steam that is used in an on-site EGU (among other processes) would additionally require the estimation of the type and quantity of fuel used by each combustion unit for the purposes of producing the steam used to generate electricity. For this reason we are not taking final action on these requirements in this rule.

D. Subpart F—Aluminum Production

We are not taking final action on any proposed amendments to subpart F of part 98 (Aluminum Production) in this action. In the 2022 Data Quality Improvements Proposal, the EPA requested comment on several issues related to determining emissions from aluminum production. Specifically, the EPA requested information on the extent to which low voltage emissions have been characterized, if data are available to develop guidance on low voltage emission measurements, and on the use of the non-linear method as an alternative to the slope coefficient and overvoltage methods currently allowed in subpart F. The EPA received comments on these issues but is not taking final action on any changes to the measurement methodology for subpart F at this time.

In the 2023 Supplemental Proposal, the EPA proposed revisions to the reporting requirements at 40 CFR 98.66(a) and (g) to require that facilities report the facility's annual production capacity and annual days of operation for each potline. We noted at that time that the capacity of the facility and capacity utilization would provide useful information for understanding variations in annual emissions and emission trends across the sector. The EPA received several comments on the proposed subpart F revisions. Following consideration of comments received, we are not taking final action on the proposed revisions at this time. However, the EPA may consider similar changes to reporting requirements in a future rulemaking. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart F.

E. Subpart G—Ammonia Manufacturing

We are finalizing amendments to subpart G of part 98 (Ammonia Manufacturing) as proposed. In some cases, we are finalizing the proposed

amendments with revisions. In other cases, we are not taking final action on the proposed amendments. This section discusses the final revisions to subpart G. The EPA received only supportive comments for the proposed revisions to subpart G. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart G. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

In the 2022 Data Quality Improvements Proposal, the EPA proposed several revisions to subpart G to require reporters to report the GHG emissions that occur directly from the ammonia manufacturing process (*i.e.,* net CO_2 process emissions) after subtracting out carbon or CO_2 captured and used in other products. The proposed revisions included combining equation G–4 and equation G–5 into a new equation G–4 and several harmonizing revisions to 40 CFR 98.72(a); revisions to the introductory paragraph of 40 CFR 98.73; the removal of § 98.73(b)(5); revisions to the introductory paragraph of 40 CFR 98.76; and revisions to the reported data elements at 40 CFR 98.76(b)(1) and (13), as described in section III.C. of the preamble to the 2022 Data Quality Improvements Proposal.

The EPA is finalizing minor edits to 40 CFR 98.72(a), the introductory paragraph of 40 CFR 98.73, the introductory paragraph to 40 CFR 98.76, and 40 CFR 98.76(b)(1) to clarify the term ''ammonia manufacturing unit,'' as well as clarifying edits to 40 CFR 98.76(b)(13) to clearly identify any CO_2 used in the production of urea and carbon bound in methanol that is intentionally produced as a desired product. Additionally, we are finalizing clarifying amendments to equation G–1, equation G–2, and equation G–3 to simplify the equations by removing the process unit ''k'' designation in the terms ''$CO_{2,G,k}$,'' ''$CO_{2,L,k}$,'' and ''$CO_{2,S,k}$.'' We are also finalizing the removal of § 98.73(b)(5) and equation G–5, consistent with our intent at proposal to require reporting of emissions by ammonia manufacturing unit.

Following consideration of comments received on similar changes proposed for subpart S (Lime Manufacturing), the EPA is not taking final action at this time on the proposed revisions to allow facilities to subtract out carbon or CO_2 captured and used in other products. We have revised new equation G–4 in the final rule to remove the proposed equation terms related to CO_2 collected and consumed on-site for urea production and the mass of methanol intentionally produced as a desired product, and removed text related to ''net'' CO_2 process emissions. The EPA is also not taking final action at this time on the addition of related monthly recordkeeping data elements that were proposed as verification software records. See section III.K.2. of this preamble for a summary of related comments and the EPA's response.

We are finalizing as proposed one amendment to subpart G from the 2023 Supplemental Proposal to include a requirement for facilities to report the annual quantity of excess hydrogen produced that is not consumed through the production of ammonia at 40 CFR 98.76(b)(16). This is a harmonizing change to ensure that the final revisions to subpart P (Hydrogen Production) to exclude reporting from any process unit for which emissions are reported under another subpart of part 98, including ammonia production units that report emissions under subpart G (see section III.I. of this preamble), will not result in the exclusion of reporting of any excess hydrogen production at facilities that are subject to subpart G.

We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart G, as described in section VI. of this preamble.

F. Subpart H—Cement Production

We are finalizing several amendments to subpart H of part 98 (Cement Production) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.F.1. of this preamble discusses the final revisions to subpart H. The EPA received several comments on the proposed subpart H revisions which are discussed in section III.F.2. of this preamble. We are also finalizing confidentiality determinations for new data elements resulting from the revisions to subpart H, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart H

This section summarizes the final amendments to subpart H. Major changes in this final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart H can be found in this section and section III.F.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal.

The EPA is finalizing several revisions to improve the quality of data collected for subpart H. First, we are finalizing the addition of several new data reporting elements to subpart H under 40 CFR 98.86(a) and (b) to enhance the quality and accuracy of the data collected. In the 2022 Data Quality Improvements Proposal, the EPA proposed to add several data reporting elements based on annual average chemical composition data for facilities using either the direct measurement (using a continuous emission monitoring system (CEMS)) methodology or the mass balance methodology, in order to assist in improving verification of reported data. The proposed data elements included (for both facilities that report CEMS data and those that report using a mass balance method) the annual arithmetic average weight fraction of: the total calcium oxide (CaO) content, non-calcined CaO content, total magnesium oxide (MgO) content, and non-calcined MgO content of clinker at the facility (proposed 40 CFR 98.86(a)(4) through (a)(7) and (b)(19) through (b)(22)); and the total CaO content of cement kiln dust (CKD) not recycled to the kiln(s), non-calcined CaO content of CKD not recycled to the kiln(s), total MgO content of CKD not recycled to the kiln(s), and non-calcined MgO content of CKD not recycled to the kiln(s) at the facility (proposed 40 CFR 98.86(a)(8) through (11) and (b)(23) through (26)). The EPA also proposed to collect other data (from both facilities using CEMS and those that report using the mass balance method), including annual facility CKD not recycled to the kiln(s) in tons (proposed 40 CFR 98.86(a)(12) and (b)(27)) and raw kiln feed consumed annually at the facility in tons (dry basis) (proposed 40 CFR 98.86(a)(13) and (b)(28)), for both verification and to improve the methodologies of the Inventory.

The EPA is finalizing the proposed requirements to report the annual arithmetic average weight fraction of the total CaO content, non-calcined CaO content, total MgO content, and non-calcined MgO content of clinker at the facility (proposed 40 CFR 98.86(a)(4) through (7) and (b)(19) through (22)), and the annual facility CKD not recycled to the kiln(s) (proposed 40 CFR 98.86(a)(12) and (b)(27), finalized as 40 CFR 98.86(a)(8) and (b)(27), respectively), for both facilities that use CEMS and those that report using the mass balance method. We are also finalizing, for facilities using the mass

balance method, the total CaO content of CKD not recycled to the kiln(s), non-calcined CaO content of CKD not recycled to the kiln(s), total MgO content of CKD not recycled to the kiln(s), and non-calcined MgO content of CKD not recycled to the kiln(s) at the facility (proposed 40 CFR 98.86(b)(23) through (26)), and the amount of raw kiln feed consumed annually (proposed 40 CFR 98.86(b)(28)). Finalizing these data elements will improve the EPA's ability to verify reported emissions (*e.g.,* the EPA will be able to create a rough estimate of process emissions at the facility and compare that to the reported total emissions, and check whether the ratio is within expected ranges). For facilities using CEMS, the finalized data elements will enable the EPA to estimate process emissions from facilities to provide a more accurate national-level cement emissions profile and the Inventory. Following consideration of public comments, we are not taking final action on certain proposed data elements for facilities that report using CEMS. Specifically, the EPA is not taking final action on the proposed requirements to report the annual arithmetic average of the total CaO content of CKD not recycled to the kiln(s), non-calcined CaO content of CKD not recycled to the kiln(s), total MgO content of CKD not recycled to the kiln(s), and non-calcined MgO content of CKD not recycled to the kiln(s) at the facility (proposed 40 CFR 98.86(a)(8) through (11)). We are also not taking final action on the reporting of the amount of raw kiln feed consumed annually (proposed 40 CFR 98.86(a)(13)). See section III.F.2. of this preamble for a summary of the related comments and the EPA's response.

The EPA is finalizing as proposed several clarifications and corrections to equations H–1, H–4, and H–5 included in the 2022 Data Quality Improvements Proposal. The final revisions to equation H–1 add brackets to clarify the summation of clinker and raw material emissions for each kiln, and update the definition of parameter ''$CO_{2\ rm}$'' to ''$CO_{2\ rm,m}$'' and clarify the raw material input is on a per-kiln basis. The final revisions to equation H–5 revise the inputs ''rm,'' ''$CO_{2\ rm}$'' (revised to ''$CO_{2\ rm,m}$''), and ''TOC_{rm},'' and add brackets to clarify that emissions are calculated as the sum of emissions from all raw materials or raw kiln feed used in the kiln. The final revisions to equation H–4 correct the defined parameters for the quarterly non-calcined CaO content and the quarterly non-calcined MgO content of CKD not recycled to ''CKD_{ncCaO}'' and ''CKD_{ncMgO},'' respectively, to align with the parameters defined in the equation.

2. Summary of Comments and Responses on Subpart H

This section summarizes the major comments and responses related to the proposed amendments to subpart H. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart H.

Comment: One commenter objected to the EPA's proposed addition of data reporting requirements for facilities reporting using the CEMS methodology. The commenter asserted that the new data requirements would add unnecessary burden without providing additional insight into cement industry GHG emissions or improving the quality or accuracy of the emissions data provided. The commenter stated that, under the new provisions, the EPA would essentially be requiring kilns that are currently using CEMS to report their emissions to verify their data by using the mass balance method, with associated reporting and recordkeeping. The commenter noted that CEMS are already required to meet extensive quality assurance and quality control requirements and have been determined as the most accurate means of measuring stack emissions. Further, the commenter reasoned that the EPA can accurately determine process emissions using already reported data, total kiln stack emissions data, and combustion emissions data, which they stated is included in the confidential monthly clinker production data and fuel use data provided using the Tier 4 methodology in subpart C. The commenter stated that it is well established by the scientific community that process emissions represent 60 percent of CO_2 emissions from the kiln based on the standard chemistry of the cement manufacturing process, and that the currently reported data should be sufficient.

The commenter also opposed the EPA's proposed data reporting elements for facilities using the mass balance (non-CEMS) methodology, likewise insisting that the EPA can readily determine both process and combustion emissions from the existing reporting requirements. The commenter explained that (1) the reporting of total and non-calcined CaO and MgO is irrelevant to calculating CO_2 process emissions as they are inherently non-carbonate; and (2) in reference to the proposed CKD reporting requirement, calculating the CKD not recycled and the quantity of raw kiln feed at all kilns within a facility would add burden without providing any additional information about industry GHG emissions. The commenter also questioned the need for the additional data, stating that the EPA did not provide an explanation of how the additional data would be used separately from potentially verifying process emissions. The commenter also expressed concern that the addition of these data elements would justify regulatory overreach from other programs.

Response: We disagree with the commenter's statement that reporting additional data from facilities using CEMS will not enhance the EPA's verification of the facility reported values. The EPA has encountered occasional instances of mistakes in reported CEMS data (*e.g.,* from data entry mistakes), resulting in significant errors in reported emissions. Fuel use data are not provided to the EPA for cement plants that report emissions using CEMS. Currently, fuel use data are entered into the IVT to calculate CH_4 and N_2O emissions from combustion for kilns with CEMS, as the process and combustion emissions are both vented through the same stack. These IVT data are not directly reported to the EPA, so the EPA cannot use them to verify the accuracy of reported emissions.

Furthermore, we are not persuaded by the commenter's assertion that process emissions represent 60 percent of kiln emissions. Cement kilns can have very different process and combustion emissions depending on the input materials, the fuel or energy source used, etc., and an average process emissions factor would not be representative of all facilities in subpart H. Furthermore, the commenter does not provide additional information about how this statistic was calculated and whether it is representative of cement manufacturing plants in the United States. The commenter did not specify where this statistic can be found in the cited source (''Getting the Numbers Right Database, Global Cement and Concrete Association'' [9]) and did not provide the underlying data to the EPA for review. Importantly, this database contains information on global cement production, and emissions profiles at facilities in the United States can differ widely from those in other countries due to differences in input

[9] Available at *https://gccassociation.org/sustainability-innovation/gnr-gcca-in-numbers/.* Accessed January 9, 2024.

materials, fuels used, and emission control systems that may be in place. The EPA has reviewed data, such as those from the UNFCCC, which suggest that implied emissions rates may vary from 49–57 percent and change by country.[10]

Upon careful review and consideration, the EPA has decided not to adopt the proposed changes to require the chemical composition data for CKD and amount of raw kiln feed consumed annually for facilities reporting with CEMS (proposed 40 CFR 98.86(a)(8) through (11) and (a)(13)). We are not taking final action on these elements after consideration of the comments and in an effort to reduce potential burden. The EPA is finalizing the remaining proposed reporting requirements as these data elements will improve verification of reported emissions. For example, the EPA will be able to create a rough estimate of process emissions at the facility and compare that to the reported total emissions, and check whether the ratio is within expected ranges. We will also be able to build evidence-based verification checks on the clinker composition data that is entered by facilities that do not use CEMS (we currently have very little information on what chemical compositions are typical in cement kilns). The final reporting elements will also enable the EPA to estimate process emissions from CEMS facilities to provide a more accurate national-level emissions profile for the cement industry and the Inventory. Reporting average chemical composition data for the clinker is expected to be less burdensome for facilities, as this data is likely collected as a part of normal business operations, while collection of CKD data may be less common. Furthermore, we do not believe these additional data elements constitute regulatory overreach as they are similar to other data already collected under subpart H and will be important for verification and our understanding of process and combustion emissions.

We also disagree that collecting additional data from facilities using the mass balance method will not enhance the EPA's verification of the facility reported values. Currently clinker composition data are entered into the IVT and are not included in the annual report that is submitted to the EPA. Reporting of these and additional data elements will improve verification of reported emissions and the mass balance calculations (*e.g.,* by allowing us to create evidence-based verification checks for clinker composition data). The final reporting elements will also provide a more accurate national-level emissions profile for the cement industry and the Inventory. With respect to the burden associated with these added reporting elements for reporters using the mass balance reporting method, these data elements are the annual arithmetic averages of either monthly or quarterly data elements that these reporters already input into e-GGRT through the IVT. These data elements are currently entered into the IVT and used for equations H–2 through H–5; but they are not reported to the EPA. Thus, the burden, if any, is expected to be minimal. There are no changes, as compared to the proposal, to the final reporting requirements for facilities using the mass balance methodology after consideration of this comment.

G. Subpart I—Electronics Manufacturing

We are finalizing several amendments to subpart I of part 98 (Electronics Manufacturing) as proposed. In some cases, we are finalizing the proposed amendments with revisions. In other cases, we are not taking final action on the proposed amendments. Section III.G.1. of this preamble discusses the final revisions to subpart I. The EPA received several comments on the proposed subpart I revisions which are discussed in section III.G.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart I as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart I

This section summarizes the final amendments to subpart I. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart I can be found in this section and section III.G.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Revisions To Improve the Quality of Data Collected for Subpart I

In the 2022 Data Quality Improvements Proposal, the EPA proposed several revisions to subpart I to improve data quality, including revising the stack testing calculation method, updating the calculation methods used to estimate emission factors in the technology assessment report, updating existing default emission factors and destruction or removal efficiencies (DREs) based on new data, adding a calculation method for calculating byproducts produced in abatement systems, amending data reporting requirements, and providing clarification on reporting requirements. In the 2023 Supplemental Proposal, the EPA subsequently proposed corrections to specific revisions from the 2022 Data Quality Improvements Proposal, including DRE values in table I–16 and gamma factors in proposed new table I–18 to subpart I of part 98.

The EPA is finalizing several revisions to 40 CFR 98.93(i) to improve the calculation methodology for stack testing. These revisions include:

- Adding new equations I–24C and I–24D and a table of default weighting factors (new table I–18) to calculate the fraction of fluorinated input gases exhausted from tools with abatement systems, $a_{i,f}$, for use in equations I–19A through I–19C and I–21, and the fraction of byproducts exhausted from tools with abatement systems, $a_{k,i,f}$, for use in equations I–20 and I–22.
- Revising equations I–24A and I–24B, which calculate the weighted average DREs for individual F–GHGs across process types in each fab.
- Revising 40 CFR 98.93(i)(3) to require that all stacks be tested if the stack test method is used.
- Replacing equation I–19 with a set of equations (*i.e.,* equations I–19A, I–19B, and I–19C) that will more accurately account for emissions when pre-control emissions of an F–GHG come close to or exceed the consumption of that F–GHG during the stack testing period.
- Clarifying the definitions of the variables d_{if} and d_{kif}, the average DREs for input gases and byproduct gases respectively, in equations I–19A, I–19B, I–19C, and I–19D, in equations I–20 through I–22, in equations I–24A and B, and in equation I–28 to subpart I.

These revisions will remove the current requirements to apportion gas consumption to different process types, to manufacturing tools equipped versus not equipped with abatement systems, and to tested versus untested stacks. Equations I–24C and I–24D add the option to calculate the fraction of each input gas "i" and byproduct gas "k" exhausted from tools with abatement systems based on the number of tools that are equipped versus not equipped with abatement systems, along with weighting factors that account for the

different per-tool emission rates that apply to different process types. The weighting factors ($\gamma_{i,p}$ for input gases and $\gamma_{k,i,p}$ for byproduct gases, provided in table I–18) are based on data submitted by semiconductor manufacturers during the process of developing the 2019 Refinement (as corrected in the 2023 Supplemental Proposal). We are finalizing revisions to equations I–24A and I–24B, used to calculate the average DRE for each input gas ''i'' and byproduct gas ''k,'' based on tool counts and the same weighting factors that will be used in equations I–24C and I–24D; this accounts for operations in which a facility uses one or more abatement systems with a certified DRE value that is different from the default to calculate and report controlled emissions. We are finalizing the requirement that all stack systems be tested by removing 40 CFR 98.93(i)(1); this removes not only the need to apportion gas usage to tested versus untested stack systems, but also the requirement to perform a preliminary calculation of the emissions from each stack system. We are finalizing new equations I–19A, I–19B, and I–19C, with a clarification, which will more accurately account for emissions when emissions of an F–GHG prior to entering any abatement system (*i.e.,* pre-control emissions) would approach or exceed the consumption of that F–GHG during the stack testing period. We are clarifying that the 0.8 maximum for the 1–U value only applies to carbon-containing F–GHGs. As discussed in the proposal, the modification to the stack testing method was intended to accurately account for the source of emissions when the measured emissions exceed the consumption of the F–GHG during the stack testing period, which may occur in situations where the input gas is also generated in significant quantities as a by-product by the other input gases. However, it is not expected that NF_3 or SF_6 could be generated as a by-product by a fluorocarbon used as an input gas. Therefore, this modification is not appropriate and was not intended to apply to SF_6 or NF_3 emissions when calculating emissions using the stack test method. The revised equations improve upon the current equations because they account both for any control of the emissions and for some utilization of the input gas. Finally, we are finalizing revisions to the definitions of the variables d_{if} and d_{kif} in equations I–19A, I–19B, I–19C, and I– 19D, in equations I–20 through I–22, in equations I–24A and B, and in equation I–28 to clarify that these variables reflect the fraction of gas i (or byproduct gas k) that is destroyed once gas i (or byproduct gas k) is fed into abatement systems. See section III.E.1.a. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

With some changes, the EPA is finalizing revisions to improve the quality of the data submitted in the technology assessment reports in 40 CFR 98.96(y) as proposed in the 2022 Data Quality Improvements Proposal. Specifically, the EPA proposed to require that reporters who submit a technology assessment report would use three methods (the ''all-input gas method,'' the ''dominant gas method,'' and the ''reference emission factor method'') to report the results of each emissions test to estimate utilization and byproduct formation emission rates. The EPA is finalizing a requirement to report the results using two of the three methods proposed, including the all-input gas method, with a clarification, and the reference emission factor method, and is allowing use of a third method of the reporter's choice, as follows:

- All-input gas method. For input gas emission rates, this method attributes all emissions of each F–GHG that is an input gas to the input gas emission factor (1–U) factor for that gas, if the input gas does not contain carbon or until that 1–U factor reaches 0.8 if the input gas does contain carbon, after which emissions of the F–GHG are attributed to the other input gases. For byproduct formation rates, this method attributes emissions of F–GHG byproducts that are not also input gases to all F–GHG input gases (kilogram (kg) of byproduct emitted/kg of all F–GHGs used).
- Reference emission factor method. This method estimates emissions using the 1–U and the byproduct formation rates that are observed in single gas recipes and then adjusts both emission factors based on the ratio between the emissions calculated based on the factors and the emissions actually observed in the multi-gas process.
- The EPA is finalizing an option for reporters to use, in addition to the utilization and byproduct formation rates calculated according to the required all-input gas method and the reference emission factor method, an alternative method of their choice to calculate and report the utilization or byproduct formation rates based on the collected data.

These revisions will ensure that the emission factors submitted in the technology assessment reports are robust (for example, not unduly affected by changing ratios of input gases) and are comparable to each other and to the emission factors already in the EPA's database. The EPA proposed, and is finalizing with a clarification, modifications to the all-input gas method to avoid an input gas emission factor greater than 0.1 when multiple gases are used. The modified method uses 0.8 as the maximum 1–U value, and as such, attributes emissions of each F–GHG used as an input gas to that input gas until the mass emitted equals 80 percent of the mass fed into the process (*i.e.,* until the 1–U factor equals 0.8). The all-input gas method assigns the remaining emissions of the F–GHG to the other input gases as a byproduct in proportion to the quantity of each input gas used in the process. We are finalizing this modified method with the clarification that the 0.8 maximum for the 1–U value only applies to carbon-containing F–GHGs. As discussed in the proposal, the modification to the all-input method was intended to avoid the situations where the historical methods would violate the conservation of mass or fail to reflect the fact that some fraction of the input gas reacts with the film it is being used to etch or clean, which may occur in situations where the input gas is also generated in significant quantities as a by-product by the other input gases. However, it is not expected that NF_3 or SF_6 could be generated as a by-product by a fluorocarbon used as an input gas. Therefore, this modification is not appropriate and was not intended to apply to SF_6 or NF_3 emissions when calculating emission factors. The EPA is requiring use of the all-input gas method to facilitate comparisons of new data to historical data; the all-input gas method was the most commonly used method in the submitted data sets included in technology assessment reports from 2013 and earlier. Following consideration of comments received and to reduce burden, the EPA is not taking final action on the proposed requirement to report emission factors using the dominant gas method. The dominant gas method calculates 1–U factors in the same way as the all-input gas method, but it calculates byproduct formation rates differently, attributing all emissions of F–GHG byproducts to the carbon-containing F–GHG input gas accounting for the largest share by mass of the input gases. Additional information on each of the three methods is available in section III.E.1.b. of the preamble to the 2022 Data Quality Improvements Proposal and in the memorandum ''Technical Support for Modifications to the Fluorinated

Greenhouse Gas Emission Estimation Method Option for Semiconductor Facilities under Subpart I,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424. As noted in the proposed rule, the EPA intends to make available a calculation workbook for the technology assessment report that will calculate the two sets of emission factors based on each of the final methods using a single set of data entered by the reporter. The option to calculate the emission factors using an additional method provides flexibility for reporters while enabling comparison between the results of the additional method and the results of the two required methods. Where reporters choose to submit emission factors using the additional method, we will be able to evaluate the reliability and robustness of emission factors calculated using all three methods. Additional information on comments related to the calculation methods and the EPA's response can be found in section III.G.2.a. of this preamble.

The EPA is also finalizing two additional requirements for the submitted technology assessment reports including requiring reporters to specify (1) the method used to calculate the reported utilization and byproduct formation rates and assign and provide an identifying record number for each data set; and (2) for any DRE data submitted, whether the abatement system used for the measurement is specifically designed to abate the gas measured under the operating condition used for the measurement. For reporters who opt to additionally provide utilization and byproduct formation rates using an alternative method of their choice, reporters must provide this information and a description of the alternative method used.

The EPA is finalizing revisions to update the default emission factors and DREs in subpart I based on new data submitted as part of the 2017 and 2020 technology assessment reports and the 2019 Refinement, as proposed in the 2022 Data Quality Improvements Proposal and corrected in the 2023 Supplemental Proposal. These revisions include:

- Updates to the utilization rates and byproduct emission factors (BEFs) for F–GHGs used in semiconductor manufacturing in tables I–3, I–4, I–11 and I–12;
- Removal of byproduct emission factors from tables I–3 and I–4 where there is a combination of both a low BEF and a low GWP resulting in very low reported emissions per metric ton of input gas used (removes the BEF for C_4F_6 and C_5F_8 for all input gases used in wafer cleaning or plasma etching processes, and results in not adding BEFs for COF_2 and C_2F_4 for any input gas/process combination from the new data submitted as part of the 2017 and 2020 technology assessment reports).
- In cases where neither the input gas nor the films being processed in the tool contain carbon, setting the BEF for the carbon-containing byproducts to zero. These provisions apply at the process subtype level. For example, a BEF of zero will only be used for a combination of input gas and chamber cleaning process subtype (*e.g.,* NF_3 in remote plasma cleaning (RPC)) if no carbon-containing materials were removed using that combination of input gas and chamber cleaning process subtype during the year and no carbon-containing input gases were used on those tools. Otherwise, the default BEF will be used for that combination of input gas and chamber cleaning process subtype for all of that gas consumed for that subtype in the fab for the year. The EPA is making one modification to the proposed equation to clarify that the carbon-containing byproduct emission factors are zero when the combination of input gas and etching and wafer cleaning process type uses only non-carbon containing input gases (SF_6, NF_3, F_2 or other non-carbon input gases) and etches or cleans only films that do not contain carbon.
- Updates to the default emission factors for N_2O used in all electronics manufacturing in table I–8, including distinct utilization rates for semiconductor manufacturing and LCD manufacturing and, for semiconductor manufacturing, utilization rates by wafer size;
- Revisions to the calculation methodology for MEMS and PV manufacturing to allow use of 40 CFR 98.93(a)(1), the current methodology for semiconductor manufacturing, for manufacture of MEMS and PV using semiconductor tools and processes, which applies the default emission factors in tables I–3 and I–4 to these processes;
- Revisions to 40 CFR 98.93(a)(6) to revise the utilization rate and byproduct emission factor values assigned to gas/process combinations where no default utilization rate is available; these revisions account for the likely partial conversion of the input gas into CF_4 and C_2F_6. The final rule requires, for a gas/process combination where no default input gas emission factor is available in tables I–3, I–4, I–5, I–6, and I–7, reporters will use an input gas emission factor (1–U) equal to 0.8 (*i.e.,* a default utilization rate or U equal to 0.2) with BEFs of 0.15 for CF_4 and 0.05 for C_2F_6.
- Revisions to the default DREs in table I–16 to subpart I to reflect new data and strengthening of abatement system certification requirements. The final revisions assign chemical-specific DREs to all commonly used F–GHGs for the semiconductor manufacturing sub-sector without distinguishing between process types.

Additional information on the EPA's derivation of the final emission factors and DREs is available in section III.E.1.c. of the preamble to the 2022 Data Quality Improvements Proposal and in the revised technical support document, ''Revised Technical Support for Revisions to Subpart I: Electronics Manufacturing,'' available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

The EPA is also finalizing revisions to the conditions under which the default DRE may be claimed, with some revisions from the proposal so that the new documentation requirements apply only to abatement systems purchased and installed on or after January 1, 2025. For all abatement systems for which a DRE is being claimed, including abatement systems purchased and installed during or after 2025 and older abatement systems, the EPA is maintaining the current certification and documentation requirements and is finalizing the proposed additional requirement that the certification must contain a manufacturer-verified DRE value. If the abatement system is certified to abate the F–GHG or N_2O at a value equal to or higher than the default DRE, the facility may claim the default DRE. If the abatement system is certified to abate the F–GHG or N_2O but at a value lower than the default DRE, the facility may not claim the default; however, the facility may claim the lower manufacturer-verified value. (Site-specific measurements by the electronics manufacturer are still required to claim a DRE higher than the default.) Based on annual reports submitted through RY2022, facilities have historically been able to provide manufacturer-verified DRE values for all abatement systems for which emission reductions have been claimed.

Additional requirements apply to abatement systems purchased and installed on or after January 1, 2025. Specifically, the EPA is finalizing revisions to the definition of operational mode in 40 CFR 98.98 to specify that for abatement systems purchased and installed during or after January 1, 2025, operational mode means that the system is operated within the range of parameters as specified in the DRE certification documentation. The specified parameters must include the

highest total F–GHG or N_2O flows and highest total gas flows (with N_2 dilution accounted for) through the emissions control systems. Systems operated outside the range of parameters specified in the documentation supporting the DRE certification may rely on a measured site-specific DRE according to 40 CFR 98.94(f)(4) to be considered operational within the range of parameters used to develop a site-specific DRE.

The EPA is also finalizing revisions to 40 CFR 98.94(f)(3) to modify the conditions under which the default or lower DRE may be claimed for abatement systems purchased and installed on or after January 1, 2025. For systems purchased and installed on or after January 1, 2025, reporters are required to: (1) certify that the abatement device is able to achieve, under the worst-case flow conditions during which the facility is claiming that the system is in operational mode, a DRE equal to or greater than either the default DRE value, or if the DRE claimed is lower than the default DRE value, a manufacturer-verified DRE equal to or greater than the DRE claimed; and (2) provide supporting documentation. Specifically, for POU abatement devices purchased and installed on or after January 1, 2025, reporters must certify and document under 40 CFR 98.94(f)(3)(i) and (ii) that the abatement system has been tested by the abatement system manufacturer using a scientifically sound, industry-accepted measurement methodology that accounts for dilution through the abatement system, such as EPA 430–R–10–003,[11] and that the system has been verified to meet (or exceed) the destruction or removal efficiency used for that fluorinated GHG or N_2O under worst-case flow conditions (the highest total F–GHG or N_2O flows and highest total gas flows, with N_2 dilution accounted for). Because manufacturers routinely conduct DRE testing and are familiar with the protocols of EPA 430–R–10–003, we anticipate this information will be readily available for abatement systems purchased in calendar year 2025 or later. The EPA is finalizing that the new DRE requirements will be implemented for reports prepared for RY2025 and submitted March 31, 2026, which provides over a year for reporters to acquire the necessary documentation. Reporters are not required to maintain documentation of the DRE on abatement systems for which a DRE is not being claimed.

We are also clarifying that the list of abatement system manufacturer specifications within which the abatement system must be operated at 40 CFR 98.96(q)(2) is intended to be exemplary, adding ''which may include, for example,'' before the list. This clarifies that some of the listed specifications or parameters may not be specified by all abatement system manufacturers for all abatement systems, and leaves open the possibility that some abatement system manufacturers may include other specifications within which the abatement system must be operated.

Additionally, following consideration of comments received, we are clarifying how reporters account for uptime of the abatement device if suitable backup emissions control equipment or interlocking with the process tool is implemented for each emissions control system. The EPA is revising the definition of the term ''UT_{ij}'' in equation I–15 and the definition of ''UT_f'' in equation I–23 to clarify that if all the abatement systems for the relevant input gas and process type are interlocked with all the tools feeding them, the uptime may be set to one (1). We are also clarifying equations I–15 and I–23 to reference the provisions in 40 CFR 98.94(f)(4)(vi) when accounting for uptime when redundant abatement systems are used. See section III.G.2.a. of this preamble for additional information on related comments and the EPA's response.

The EPA is finalizing the addition of a calculation methodology that estimates the emissions of CF_4 produced in hydrocarbon-fuel based combustion emissions control systems (''HC fuel CECs'') that are not certified not to generate CF_4. Following consideration of public comments, the calculation will be required only for HC fuel CECs purchased and installed on or after January 1, 2025. To implement the new calculation methodology, we are adding a new equation I–9 and renumbering the previous equation I–9 as equation I–8B. Equation I–9 only applies to processes that use F_2 as an input gas or to remote plasma cleaning processes that use NF_3 as an input gas. Equation I–9 estimates the emissions of CF_4 from generation in emissions control systems by calculating the mass of the fluorine entering uncertified HC fuel CECs (the product of the consumption of the input gas, the emission factor for fluorine, and a_i, where a_i is the ratio of the number of tools with uncertified abatement devices for the gas-process combination to the total number of process tools for the gas-process combination) and multiplying that mass by a CF_4 emission factor, $AB_{CF4,F2}$, which has a value of 0.116. In related changes, the EPA is finalizing a BEF for F_2 from NF_3 used in remote plasma clean processes of 0.5. For other gas and process combinations where no data are available (listed as ''NA'' in tables I–3 and I–4), the EPA is finalizing a BEF of 0.8 be used for F_2 in equation I–9 for all process types.

The EPA is requiring that reporters estimate CF_4 emissions from all HC fuel CECs that are purchased and installed on or after January 1, 2025 and that are not certified not to produce CF_4, even if reporters are not claiming DREs for those systems. However, as noted above, the requirements apply only to HC fuel CECs used on processes that use F_2 as an input gas or to remote plasma cleaning processes that use NF_3 as an input gas. We are also finalizing a related definition of ''hydrocarbon-fuel-based combustion emissions control system (HC fuel CECS),'' which we have revised from the proposed ''hydrocarbon-fuel-based emissions control system,'' to align with the 2019 Refinement and to clarify that the term includes systems used on processes that have the potential to emit F_2 or fluorinated GHGs, as recommended by commenters. As noted above, we have also revised the final rule from proposal to require these estimates from HC fuel CECS purchased and installed on or after January 1, 2025. We are also finalizing corresponding monitoring, reporting, and recordkeeping requirements (see 40 CFR 98.94(e), 40 CFR 98.96(o), and 40 CFR 98.97(b), respectively) for facilities that use HC fuel CECS purchased and installed during or after 2025 to control emissions from tools that use either NF_3 as an input gas in RPC processes or F_2 as an input gas in any process and assume in equation I–9 that one or more of those systems do not form CF_4 from F_2. Under these requirements facilities must certify and document that the model for each of the systems that the facility assumes does not form CF_4 from F_2 has been tested and verified to produce less than 0.1 percent CF_4 from F_2, and that each of these systems is installed, operated, and maintained in accordance with the directions of the HC fuel CECS manufacturer. The facility may perform the testing itself, or it may supply documentation from the HC fuel CECS manufacturer that supports the certification. Because the requirement to quantify emissions of CF_4 from F_2 is being applied only to HC fuel CECS purchased and installed on or after

[11] Protocol for Measuring Destruction or Removal Efficiency of Fluorinated Greenhouse Gas Abatement Equipment in Electronics Manufacturing, Version 1, March 2010 (''EPA DRE Protocol''), as incorporated at 40 CFR 98.7.

January 1, 2025, we anticipate that most HC fuel CECS will be tested by the HC fuel CECS manufacturer. If the facility performs the testing, it is required to measure the rate of conversion from F_2 to CF_4 using a scientifically sound, industry-accepted method that accounts for dilution through the abatement device, such as the EPA DRE Protocol, adjusted to calculate the rate of conversion from F_2 to CF_4 rather than the DRE.

The EPA is also finalizing related amendments to 40 CFR 98.94(j)(1)(i) to require that the uptime (*i.e.,* the fraction of time that abatement system is operational and maintained according to the site maintenance plan for abatement systems) during the stack testing period average at least 90 percent for uncertified HC fuel CECS. Following consideration of comments received, we are clarifying in the final rule that these provisions are limited to only those HC fuel CECS that were purchased and installed on or after January 1, 2025, that are used to control emissions from tools that use either NF_3 in remote plasma cleaning processes or F_2 as an input gas in any process type or sub-type, and that are not certified not to form CF_4. See section III.G.2.a. of this preamble for additional information on related comments on HC fuel CECS and the EPA's response.

Finally, the EPA is not taking final action on proposed revisions to the calibration requirements for abatement systems. In the 2022 Data Quality Improvements Proposal, the EPA proposed that a vacuum pump's purge flow indicators are calibrated every time a vacuum pump is serviced or exchanged, with the expectation that this requirement would require calibrations every one to six months, depending on the process. Following review of input provided by commenters, we are not taking final action on the proposed revisions. Removal of the proposed requirements is anticipated to reduce the potential burden on reporters without any large effects on data quality. Section III.G.2.a. of this preamble provides additional information on the comments received related to vacuum pump purge flow calibration and the EPA's response.

b. Revisions To Streamline and Improve Implementation for Subpart I

In the 2022 Data Quality Improvements Proposal, the EPA proposed several revisions intended to streamline the calculation, monitoring, or reporting in specific provisions in subpart I to provide flexibility or increase the efficiency of data collection. The EPA is finalizing these changes as proposed. First, the final rule revises the applicability of subpart I as follows:

- Adds a second option in 40 CFR 98.91(a)(1) and (2) for estimating GHG emissions for semiconductor, MEMS, and LCD manufacturers, for comparison to the 25,000 $mtCO_2e$ per year emissions threshold in 40 CFR 98.2(a)(2), that is based on gas consumption in lieu of production capacity. The revisions include new equations I–1B and I–2B to multiply gas consumption by a simple set of emission factors, the gas GWPs, and a factor to account for heat transfer fluid to estimate emissions. The emission factors are included in new table I–2 to subpart I of part 98 and are the same as the emission factors for gas and process combinations for which there is no default in tables I–3, I–4, or I–5 to subpart I. Facilities that choose to use this option for their calculation method will be required to track annual gas consumption by GHG but are not required to apportion consumption by process type for the purposes of assessing rule applicability.
- Revises the current applicability calculation for PV manufacturers to revise equation I–3 and refer to new table I–2, and delete the phrase ''that have listed GWP values in table A–1,'' to increase the accuracy of the estimated emissions for determining applicability; and
- Updates the emission factors in table I–1 to subpart I of part 98 used in the current applicability calculations for MEMS and LCD manufacturers based on new Tier 1 emission factors in the 2019 Refinement.

Additional information on the EPA's revisions to applicability and the final emission factors is available in section III.E.2.a. of the preamble to the 2022 Data Quality Improvements Proposal.

The EPA additionally proposed, and is finalizing, to revise the frequency and applicability of the technology assessment report requirements in 40 CFR 98.96(y), which applies to semiconductor manufacturing facilities with GHG emissions from subpart I processes greater than 40,000 $mtCO_2e$ per year. First, we are finalizing amendments to 40 CFR 98.96(y) to decrease the frequency of submission of the reports from every three years to every five years. As we noted in the preamble to the 2022 Data Quality Improvements Proposal, revising the frequency of submission to every five years will increase the likelihood that reports will include updates in technology rather than conclusions that technology has not changed. At the time of proposal, this would have moved the due date for the next technology assessment, from March 31, 2023, to March 31, 2025. Because the EPA is not implementing the revisions in this final rule until January 1, 2025, we have revised the provision in the final rule to clarify that the first technology assessment report due after January 1, 2025 is due on March 31, 2028. Section III.G.2.b. of this preamble provides additional information on the comments received related to the frequency of submittal of the technology assessment report and the EPA's response.

We are also finalizing revisions to restrict the reporting requirement in 40 CFR 98.96(y) to facilities that emitted greater than 40,000 $mtCO_2e$ and produced wafer sizes greater than 150 mm (*i.e.,* 200 mm or larger) during the period covered by the technology assessment report, as well as explicitly state that semiconductor manufacturing facilities that manufacture only 150 mm or smaller wafers are not required to prepare and submit a technology assessment report. The final provisions also clarify that a technology assessment report need not be submitted by a facility that has ceased (and has not resumed) semiconductor manufacturing before the last reporting year covered by the technology assessment report (*i.e.,* no manufacturing at the facility for the entirety of the year immediately before the year during which the technology assessment report is due).

2. Summary of Comments and Responses on Subpart I

This section summarizes the major comments and responses related to the proposed amendments to subpart I. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart I.

a. Comments on Revisions To Improve the Quality of Data Collected for Subpart I

Comment: The EPA received several comments related to the proposed revisions to the stack testing calculation methodology in subpart I. Largely, commenters objected to the EPA's proposal that ''all stacks'' be tested. The commenters questioned the use of the terminology ''all stacks'' within the proposed preamble and disagreed with the EPA's assumption that the number of stacks at each fab is expected to be small (*e.g.,* one to two). The commenters provided input from an industry survey of 33 fabs, suggesting that over 250

stacks would require testing, as well as an additional 170 process stacks that do not contain F–GHGs (*e.g.,* general fab exhausts). The commenters urged that adding stacks that do not have the potential to emit F–GHGs to the stack testing scope would add an additional $60,000 to $200,000 per testing event and as much as $400,000 for large sites. The commenters requested the EPA clarify that the testing is required for all operating stacks or stack systems that have the potential to emit F–GHGs, and that the rule retain the current terminology of ''stack system.''

Response: Even though the EPA referred to ''all stacks'' in the proposal preamble, we agree that the testing is required only for all operating stack systems. The proposed and final regulatory text continue to use the term ''stack system,'' which is defined as ''one or more stacks that are connected by a common header or manifold, through which a fluorinated GHG-containing gas stream originating from one or more fab processes is, or has the potential to be, released to the atmosphere. For purposes of this subpart, stack systems do not include emergency vents or bypass stacks through which emissions are not usually vented under typical operating conditions.'' We are finalizing the proposed requirement that all stack systems must be tested in accordance with 40 CFR 98.93(i)(3)(ii).

Comment: The EPA received comments objecting to proposed revisions to the technology assessment report to require use of three proposed calculation methods (*i.e.,* the dominant input gas method, all-input gas method, and reference emission factor method) to develop utilization and byproduct emission factors. The commenters expressed that each of EPA's proposed methods fails to meet the agency's goals for consistent implementation of emission factors across facilities and to allow for comparability across the industry and in industry emission rates. Specifically, the commenters asserted that the dominant input gas method and all-input gas method violate the physical reality of conservation of mass for plasma etch/wafer cleaning processes when using multiple gases and may lead to byproduct emission factors greater than 1. The commenters continued that the dominant input gas method does not clearly define what gas would be dominant in situations where gases of equal or near-equal mass are used. For both of the all-input gas method and the dominant input gas method, the commenters criticized the use of a ''cap'' value of 0.8 as inconsistent with the agency's goal to calculate emission factors consistently with those already in the EPA's data set. For the all-input gas method, commenters added that the cap of 0.8 for individual testing does not align with the maximum seen within historical test data submitted by industry, but is instead aligned with the maximum average emission factor across all gases. Commenters stated that the modification to both methods may amplify or obfuscate technology changes by setting an artificial maximum emissions value.

The commenters also stated that it is unclear how the reference emission factor method would be implemented. Specifically, commenters questioned whether 1–U or the byproduct emission factors would be held constant, maintaining that the method increases the difficulty in comparing individual tests depending on what is held constant, and adding that if new gases or byproducts are used or measured, the methodology will not have a reference emission basis to apply. Commenters expressed that the additional burden and complexity of calculating technology emission factors three different ways could be a disincentive to facility testing and would not improve overall emissions accuracy.

The commenters requested that in lieu of the three calculation methods, the EPA consider use of the ''multi-gas method,'' which attributes all non-carbon-containing GHGs, such as SF_6 and NF_3, to the input of these non-carbon-containing GHGs and attributes all carbon-containing F–GHG emissions across all carbon-based input F–GHGs. The commenters believe that the multi-gas method would appropriately assign emissions (especially for recipes running more than two gases at once), would eliminate concerns regarding emission factors that do not meet conservation of mass principles, and is not reliant on past or assumed data to calculate emission factors or byproduct emission factors. Commenters explained that high variability in single-gas emission factors is due to a variety of factors, including the amount or concentration of input gases, as well as plasma and manufacturing tool variables, and suggested that use of the multi-gas method would generate emission factors consistent and within the range of the existing emission factor data, while also being able to accommodate new gases and changes in technology.

Response: The EPA disagrees with the commenter's assessment of the three proposed emission factor methods. We also disagree that the proposed requirements are overly burdensome. However, following consideration of the comments raised, we are revising the final rule to require reporters to estimate emission factors using two of the three proposed methods (the all-input gas method and the reference emission factor method) and to allow reporters to submit results using an additional method of their choice. As noted in the preamble to the proposed rule, we plan to provide a spreadsheet that will automatically perform the calculations for the two required methods using a single data set entered by the reporters, minimizing burden. As explained in both section III.E.1.b. to the preamble to the 2022 Data Quality Improvements proposal and the subpart I technical support document,[12] the all-input gas method is quite consistent with the historically used methods, differing from the historically used methods only under circumstances where the historically used methods are likely to yield unrealistic results (*e.g.,* where CF_4 is used as an input gas and accounts for a small fraction of the mass of all input gases, yielding CF_4 input gas emission factors over 0.8). Of the three methods proposed, the reference emission factor method is somewhat less consistent with the historically used methods, but is expected to be more robust in that its results are less affected by changing ratios of input gases. As discussed further below, both of these methods are more consistent with the historical methods and less affected by changing input gas ratios than the method favored by the commenter, the multi-gas method.

After consideration of comments, the EPA is not taking final action on the proposed requirement to report emission factors calculated using the dominant gas method for several reasons. First, the dominant gas method estimates the input gas emission rate in the same way as the all-input gas method, making it redundant with the all-input gas method for calculation of input gas emission rates. Second, the dominant gas method estimates the byproduct emission rate by assigning all emissions of F–GHG byproducts to the carbon-containing F–GHG input gas accounting for the largest share by mass of the input gases, which is anticipated, as noted by commenters, to be less accurate in cases where input gases of equal or near-equal mass are used. Third, in the historical data sets submitted to the EPA, the all-input gas method was the most commonly used

[12] See document ''Technical Support for Proposed Revisions to Subpart I (2022),'' available in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

method; therefore, retaining this approach rather than the dominant gas method will allow the EPA to more reliably compare the new data submitted to the historical data set. Finally, not requiring use of the dominant gas method will reduce burden on facilities that are required to submit technology assessment reports.

As noted in the preamble to the 2022 Data Quality Improvements proposal, receiving results based on multiple methods will enable the EPA: (1) to directly compare the new emission factor data to the emission factor data that are already in the EPA's database and that were calculated using the historical method; and (2) to compare the results across the available emission factor calculation methods and to identify any systematic differences in the results of the different methods for each gas and process type. By identifying and quantifying systematic differences in the results of the different methods, we will be better able to distinguish these differences from differences attributable to technology changes. Knowledge of these systematic differences will also be useful in the event that we ultimately require facilities to submit emission factors using one method only, particularly if that method is not closely related to one of the methods used historically. We will also be able to evaluate how much the results of each method vary for each gas and process type; high variability may indicate that the results of a method are being affected by varying input gas proportions rather than differences in gas behavior. On the other hand, extremely low variability may also indicate that a method is affected by input gas proportions. For example, if the all-input-gas method yields a large number of input gas emission factors equal to 0.8, the maximum allowed value for input gas emission factors under this method, this implies that some of the emissions being attributed to the input gas are actually being generated as byproducts from other input gases that are collectively more voluminous, conditions under which the reference emission factor method may yield the most reliable results. Ultimately, these analyses will enable us to more accurately characterize emissions from semiconductor manufacturing by selecting the most robust emission factor data for updating the default emission factors in tables I–3 and I–4. Note that the EPA would update the default emission factors using the rulemaking process, providing an opportunity for industry to comment on the data and methodology used to develop any proposed factors.

Regarding the comment that the proposed rule did not clarify how the reference emission factor would be implemented, including whether the 1–U or by-product emission factors would be adjusted, the proposed rule made it clear that both the 1–U and byproduct emission factors would be adjusted where the emitted gas was also an input gas. The preamble to the proposed rule stated, ''the reference emission factor method calculates emissions using the 1–U and the BEFs [by-product emission factors] that are observed in single gas recipes and then adjusts both factors based on the ratio between the emissions calculated based on the factors and the emissions actually observed in the multi-gas process. This approach uses all the information available on utilization and by-product generation rates from single-gas recipes while avoiding assumptions about which of these are changing in the multi-gas recipe'' (87 FR 36947). The proposed equations I–31A (for 1–U factors, finalized as equation I–30A) and I–31B (for by-product factors, finalized as equation I–30B) showed this in mathematical terms and also showed how the method would apply where more than two input gases were used. The proposed rule also clearly indicated that where a by-product gas was not also an input gas, proposed equation I–30B (finalized as equation I–29B) was to be used. Equation I–29B is the equation used in the all-input-gas method as well as the reference emission factor method for by-products that are not also input gases. Equation I–29B would apply to newly observed as well as previously observed by-product gases that were not also input gases.

This leaves only the situation where an input gas is used in a process type for the first time along with other input gases. While we expect that this situation will be rare, we agree that it should be addressed. We are clarifying in the final rule that where an input gas is used in a process type with other input gases and there is no 1–U factor for that input gas in table I–19 or I–20, as applicable, the Reference Emission Factor Method will not be used to estimate the emission factors for that process.

We are not specifying the multi-gas method as the sole method for calculating emission factors submitted in the technology assessment report. As noted in the proposed rule, one of the EPA's goals in collecting emission factor data through the technology assessment report is to better understand how emission factors may be changing as a result of technological changes in the semiconductor industry, and whether the changes to the emission factors may justify further data collection to comprehensively update the default emission factors in tables I–3 and I–4. To meet this goal, the emission factors submitted in the technology assessment reports should be calculated using methods that are similar to the methods used to calculate the emission factors already in the EPA's database; otherwise, differences attributable to differences in calculation methods may amplify or obscure differences attributable to technology changes. The multi-gas method assigns emissions of all carbon-containing F–GHGs to all carbon-containing F–GHG input gases, regardless of species, yielding input gas emission factors that are equal to byproduct gas formation factors for each emitted F–GHG. These input gas and byproduct gas emission factors are significantly different from the input gas and byproduct gas emission factors yielded by the historically used methods, making it difficult to discern the impact of technology changes as opposed to calculation method changes on the emission factors. In addition, our analysis indicated that the multi-gas method results are highly sensitive to the ratios of the masses of input gases fed into the process, which appears likely to affect the robustness and reliability of emission factors calculated using that method.[13] For these reasons, we have concluded that it would not be appropriate to require submission of emission factors using only the multi-gas method.

However, we are providing an option in the final rule for reporters to use, in addition to the required all-input gas method and the reference emission factor method, an alternative method of their choice to calculate and report updated utilization or byproduct formation rates based on the collected data. Reporters will therefore have the opportunity to provide emission factor data that are calculated using the multi-gas method or other methodologies, provided the reporter provides a complete, mathematical description of the alternative calculation method and labels the data calculated using that method consistent with the requirements for the all-input gas method and the reference emission factor method. Submitting emission factors calculated using the multi-gas

[13] *Id.* The EPA has included in the docket a memo and spreadsheet showing the results of the different emission factor calculation methods using the same data (see Docket ID. No. EPA–HQ–OAR–2019–0424–0142, memorandum and attachment 3 Excel spreadsheet).

method along with the other two methods would allow us to compare the results of the multi-gas method to the results of the other two (one of which is very similar to the primary historically used method) and to identify any systematic differences. As noted above, by identifying and quantifying systematic differences in the results of the different methods, we will be better able to distinguish these differences from differences attributable to technology changes. We may also be able to relate the results of the historical methods to the results of methods that differ from those used historically. Receiving emission factors calculated using three methods would also allow us to better assess the robustness and reliability of the emission factors calculated using all three methods, *e.g.,* by seeing which methods yield highly variable emission factors within each input gas-process type combination. Because the final rule does not require reporters to submit emission factors calculated using an alternative methodology, the requirement to provide a complete, mathematical description of the alternative calculation method used is not anticipated to add significant burden.

Comment: Commenters supported the proposal to remove BEFs for C_4F_6 and C_5F_8 and the decision to not add COF_2 and C_2F_4, as byproduct emissions of them account for <<0.001% of overall GHG emissions from semiconductor manufacturing operations. One commenter also requested the EPA clarify that carbon-containing byproduct emission factors are zero when calculating emissions from non-carbon containing input gases (SF_6, NF_3, F_2, or other non-carbon input gases) and when the film being etched or cleaned does not contain carbon, as this would align the EPA final rule with the 2019 Refinement.

Response: The EPA is finalizing the rule as proposed to remove the BEFs for C_4F_6 and C_5F_8. The EPA is also not adding BEFs for COF_2 or C_2F_4. For non-carbon containing input gases used in cleaning processes, we proposed to set carbon-containing byproduct emission factors to zero when the combination of input gas and chamber cleaning process sub-type is never used to clean chamber walls on manufacturing tools that process carbon-containing films during the year (*e.g.,* when NF_3 is used in remote plasma cleaning processes to only clean chambers that never process carbon-containing films during the year). We agree with the commenter that non-carbon-containing input gases used in etching processes are similarly not expected to give rise to carbon-containing byproducts if neither the input gases nor the films being etched contain carbon. We are therefore finalizing an expanded version of the proposed provision, setting carbon-containing byproduct emission factors to zero for etching and wafer cleaning processes as well as chamber-cleaning processes when these conditions are met. The revisions align the rule requirements with the 2019 Refinement.

Comment: Commenters expressed several concerns regarding the EPA's proposed revisions to the conditions under which the default DRE may be claimed. One commenter requested the EPA remove the requirement to provide supporting documentation for all abatement units using certified default or lower than default DREs. The commenter also requested the EPA clarify that reporters are not required to maintain supporting documentation on abatement units for which a DRE is not being claimed.

Commenters also contended that the existing language in subpart I is sufficient to ensure proper point-of-use (POU) device performance while being consistent with the 2019 Refinement, and the requirement to provide supporting documentation of manufacturer certified POU DREs, including testing method, is burdensome and may be unachievable, especially for older abatement units. One commenter expressed concern that the proposed increase in certification and documentation requirements beyond existing POU operational requirements will dissuade semiconductor companies from accounting for DREs from installed POU, resulting in an over-estimate of emissions from the semiconductor industry. The commenter also stated that adding operational elements of fuel and oxidizer settings, fuel gas flows and pressures, fuel calorific values, and water quality, flow, and pressures to the POU DRE requirements are outside the manufacturer-specified requirements for emissions control and are not necessary to ensure accurate POU DREs. Commenters stated that abatement equipment installed across the industry does not have manufacturer specifications for all listed parameters, or the capability to track all listed parameters. Commenters concluded that these and other POU default DRE certification and documentation requirements go above and beyond the 2019 Refinement and will make it more difficult for U.S. reporters to take credit for installed and future emissions control devices, resulting in a less accurate, overestimated GHG emissions inventory. One commenter supported applying the requirements only to equipment purchased after the reporting rule becomes effective. The commenter stated that verification testing would be especially burdensome; the commenter estimated testing to take approximately 20 weeks per chemistry and stated it could take up to 2+ years for individual vendors to have required documentation. The commenter also expressed concern that the proposed requirements could have cascading impacts to facility manufacturing and operating permits based on state implementation of the Tailoring Rule, which typically rely on GHGRP protocols. Commenters supported aligning the emission control device operational requirements for default POU DREs with the following 2019 Refinement language: ''. . . obtain a certification by the emissions control system manufacturers that their emissions control systems are capable of removing a particular gas to at least the default DRE in the worst-case flow conditions, as defined by each reporting site.''

The commenter also requested the EPA include language supporting full uptime for emission control devices interlocked with manufacturing tools or with abatement redundancy. The commenter supported 2019 Refinement language that: ''Inventory compilers should also note that UT [uptime] may be set to one (1) if suitable backup emissions control equipment or interlocking with the process tool is implemented for each emissions control system. Thus, using interlocked process tools or backup emissions control systems reduces uncertainty by eliminating the need to estimate UT for the reporting facility.'' The commenter contended that such language will drive further use of manufacturing tool interlocks or emission control system redundancy while having the added benefit of simplifying uptime tracking of individual POU.

Response: The EPA is clarifying in this response that reporters are not required to maintain documentation of the DRE on abatement units for which a DRE is not being claimed. However, no regulatory changes are needed to reflect this clarification. For abatement units for which a DRE is being claimed, reporters are still required to provide certification that the abatement systems for which emissions are being reported were specifically designed for fluorinated GHG or N_2O abatement, as applicable, and support the certification by providing abatement system supplier documentation stating that the system was designed for fluorinated GHG or N_2O abatement. The facility must certify

that the DRE provided by the abatement system manufacturer is greater than or equal to the DRE claimed (either the default, if the certified DRE is greater than or equal to the default, or the manufacturer-verified DRE itself, if the certified DRE is lower than the default DRE). To use the default or lower manufacturer-verified destruction or removal efficiency values, operation of the abatement system must be within the manufacturer's specifications. It was not the EPA's intent to require that certified abatement systems that operate within the manufacturer's specifications must meet all the operational parameters listed, and we are revising the final rule at 40 CFR 98.96(q)(2) to add ''which may include, for example,'' to clarify that, in order to use the default or lower manufacturer-verified destruction or removal efficiency values, operation of the abatement system must be within those manufacturer's specifications that apply for the certification.

In the final rule, the EPA is maintaining the current certification and documentation requirements for older POU abatement devices, although the certification must contain a manufacturer-verified DRE value that is equal to or higher than the default in order to claim the default DRE; facilities are allowed to claim a lower manufacturer-verified value if the provided certified DRE is lower than the default. The EPA concurs that some older POU abatement systems may not have full documentation from the manufacturer of the test methods used and whether testing was conducted under worst-case flow conditions; however, we believe this documentation should be available for most newer abatement systems. As a result, reporters with the older POU abatement devices will not have any additional documentation requirements beyond those currently in place, except to provide the certified DRE. Following a review of annual reports submitted under subpart I, we determined that facilities have historically provided manufacturer-verified DRE values for all abatement systems for which emission reductions have been claimed. Therefore, we have determined that these final requirements are reasonable. The EPA is finalizing the new documentation requirements for POU abatement devices purchased on or after January 1, 2025 under 40 CFR 98.94(f)(3)(i) and (ii), these additional requirements include that the manufacturer-verified DREs reflect that the abatement system has been tested by the manufacturer using a scientifically sound, industry-accepted measurement methodology that accounts for dilution through the abatement system, such as the EPA DRE Protocol (EPA 430–R–10–003), and verified to meet (or exceed) the default destruction or removal efficiency for the fluorinated GHG or N_2O under worst-case flow conditions. Since manufacturers routinely conduct DRE testing and are familiar with the protocols of EPA 430–R–10–003, this information would be readily available for abatement systems purchased in calendar year 2025 or later. Further, these final rule requirements will be implemented for reports prepared for RY2025 and submitted March 31, 2026, providing adequate time for reporters to acquire documentation.

The EPA agrees with the recommendation to align the rule with the 2019 Refinement with respect to the uptime factor for interlocked tools and abatement systems and is making this change in the final rule. The use of interlocked tools is already accounted for in the current rule in the definition of terms ''UT_{ijp}'' and ''UT_{pf}'' in equations I–15 and I–23 (the total time in minutes per year in which the abatement system has at least one associated tool in operation), which state that ''[i]f you have tools that are idle with no gas flow through the tool for part of the year, you may calculate total tool time using the actual time that gas is flowing through the tool.'' However, to clarify and simplify the calculation of uptime where interlocked tools are used, the EPA is revising the definition of the term ''UT_{ij}'' in equation I–15 to say that if all the abatement systems for the relevant input gas and process type are interlocked with all the tools feeding them, the uptime may be set to one (1). The revised text specifies that ''all'' tools and abatement systems for the relevant input gas and process sub-type or type are interlocked because the numerator and denominator of the uptime calculation in equations I–15 and I–23 are separately summed across abatement systems for input gas ''i'' and process sub-type or type ''j.'' Similar changes are made for the same reasons in the definition of ''UT_f'' in equation I–23. With the use of an interlock between the process tool and abatement device, the process tool should never be operating when the abatement device is not operating.

The current rule also accounts for the use of redundant abatement systems. Section 98.94(f)(4)(vi) currently states, ''If your fab uses redundant abatement systems, you may account for the total abatement system uptime (that is, the time that at least one abatement system is in operational mode) calculated for a specific exhaust stream during the reporting year.'' This provision achieves nearly the same objective as suggested by the commenters. To clarify this point, the EPA is revising the definition of the terms ''Td_{ijp}'' in equation I–15 and ''Td_{pf}'' in equation I–23 to reference the provision in 40 CFR 98.94(f)(4)(vi) when accounting for uptime when redundant abatement systems are used.

Comment: Commenters objected to the EPA's proposed requirements to include a calculation methodology to estimate emissions of CF_4 produced in hydrocarbon-fuel based combustion emissions control systems (HC fuel CECS) that are not certified not to generate CF_4. The commenters claimed that the CF_4 byproduct emissions from HC fuel CEC abatement of F_2 gas (from etch or remote plasma chamber cleaning processes) are based on limited and unverified data. Specifically, the commenters expressed concern that the values documented within the 2019 Refinement and referenced within the proposal are based on a single, confidential data set from one abatement supplier. One commenter stated that developing regulatory language around this single, unverified data set does not accurately represent the CF_4 byproduct emissions from the uses or generation of F_2 and may deliver an advantage to the single emissions control system supplier that provided the data.

The commenters also listed the following concerns with the information provided within the 2019 Refinement and the proposed rule supporting documentation upon which the CF_4 byproduct ($AB_{CF4,F2}$ and $B_{F2,NF3}$) is based:

- The F_2 emission values presented in ''Influence of CH_4-F_2 mixing on CF_4 byproduct formation in the combustive abatement of F_2'' by Gray & Banu (2018) are based on testing conducted in a lab under conditions that are not found in actual semiconductor abatement installations. Test methods do not appear to adhere to those specified in industry standard test methods or the EPA DRE Protocol. F_2 results are measured from a device, the MST Satellite XT, designed to provide ''nominal'' F_2 concentrations meant for health and safety risk management and not for environmental emissions measurement.
- ''FTIR spectrometers measure scrubber abatement efficiencies'' by Li, et al. (2002) and ''Thermochemical and Chemical Kinetic Data for Fluorinated Hydrocarbons'' by Burgess, et al. (1996) provide anecdotal and hypothetical emission pathways for the combustion of fluorinated gases, but do not confirm

reliable and peer reviewed CF_4 emission results from current semiconductor manufacturing use or generation of F_2.

- EPA references a single, confidential data set from Edwards, Ltd. (2018) upon which numerical $AB_{CF4,F2}$ and $B_{F2,NF3}$ values are based. This single data set of 15 measurements refers to an RPC NF_3 to F_2 emission value based on mass balance. The commenter opposed using the data provided by Edwards confidentially without the ability to review the underlying data and experimental procedure of the 15 measurements upon which the RPC NF_3 to F_2 emission factor was based. Mass balance has shown to be a highly conservative method in estimating emission factors and this confidential data set lacks visibility into repeatability, experimental design, and semiconductor process applicability.

The commenters further contended that the requirement to calculate CF_4 emissions from HC fuel CECS abatement of F_2, based on equation I–9 if the HC fuel CECS is not certified to not convert F_2 at less than 0.1%, adds complexity to apportioning RPC NF_3 and F_2 to both <0.1% certified and uncertified HC fuel CECS and will require time and cost investments which are not justified by data. One commenter added that this could disincentivize the use of low emission NF_3 cleans or potentially slow implementation of F_2 processes with zero-GWP potential due to the requirement to report CF_4 BEF generation with tools with POU abatement. Another commenter added that this requirement appears to apply to all relevant HC fuel CECS regardless of whether a default or measured DRE is claimed for the abatement device. The commenter stated that if HC fuel CECS abatement suppliers and device manufacturers are not able to provide the required certification to exempt systems from this added emission, for every kilogram of RPC NF_3 used, CO_2e emissions out of the HC fuel CECS will increase more than 600% for 200 mm and more than 400% for 300 mm processes. Commenters added that this jump in CF_4 emissions will result in a time series inconsistency for semiconductor industry greenhouse gas reporting.

One commenter also stated that, if EPA maintains this requirement, it is unclear if equation I–9 applies in addition to or in place of existing CF_4 byproduct emission factors. The commenter requested that CF_4 emissions from the HC fuel CECS abatement of F_2, as calculated by equation I–9, are applied instead of, not in addition to, default CF_4 BEFs for RPC NF_3. Commenters requested the removal of equation I–9 and associated $AB_{CF4,F2}$ and $B_{F2,NF3}$ data elements; one commenter added that an alternative would be to make changes to HC fuel CECS requirements to remove confusion and double counting of emissions.

Response: The EPA disagrees with the commenter after a thorough review of the issue, as documented in detail in a memorandum in the docket for the final rulemaking.[14] The analysis conducted for the EPA demonstrated that: (1) the formation of CF_4 by reaction of CH_4 and F_2 in POU combustion systems is thermodynamically favored and that there is no question that CF_4 emissions can be observed if mixing of CH_4 and F_2 is allowed to occur; (2) that a revised $B_{F2,NF3}$ default emission factor of 0.5 is well supported by scientific peer-reviewed evidence to describe the formation of F_2 from NF_3-based RPC processes; (3) that the proposed default value for $AB_{CF4,F2}$ of 0.116, describing the rate of formation of CF_4 from F_2, is well supported by experimental evidence under conditions that are representative of the designs and use of commercially available POU emissions control systems in production conditions; (4) that there is strong *prima facie* evidence of the formation of CF_4 from within POU emissions control systems during the production of semiconductor devices; and (5) that not reporting such CF_4 emissions could lead to a significant underestimation of GHG emissions from semiconductor manufacturing facilities.

Based on the evidence documented in the memorandum, the EPA is finalizing as proposed the requirement that the electronic manufacturers estimate and report CF_4 byproduct emissions from hydrocarbon-fuel-based POU emissions control systems that abate F_2 processes or NF_3-based RPC processes.

The EPA is also requiring that reporters estimate CF_4 emissions from all POU abatement devices that are not certified not to produce CF_4, even if they are not claiming a DRE from those devices, because the CF_4 emissions from HC fuel combustion in the abatement of F_2 or F–GHG is a separate issue from whether or not a DRE is claimed for the same devices. The EPA disagrees that the rule is adding unnecessary complexity to apportion RPC NF_3 and F_2 between POU abatement systems that are certified not to convert F_2 to CF_4 and those that are not certified. Reporters will use tool counts in this case rather than the usual gas apportioning model. This should be straightforward because it requires the reporters to: (1) count the total number of tools running the process type of interest (either RPC NF_3 or F_2 in any process type); (2) count the number of tools running that process type that are equipped with HC fuel CECs that are not certified not to form CF_4; and (3) divide (2) by (1).

The EPA is revising the final rule to require that reporters must only provide estimates of CF_4 emissions from HC fuel CECS purchased and installed on or after January 1, 2025. We recognize that applying the testing, certification, and emissions estimation requirements to older equipment would have expanded the set of equipment for which testing would need to be performed and/or emissions would need to be estimated, which may have posed logistical challenges, particularly for older equipment that may no longer be manufactured. Making the requirements applicable only to HC fuel CECs purchased and installed on or after January 1, 2025 ensures that abatement system manufacturers and/or electronics manufacturers can test the equipment and measure its CF_4 generation rate from F_2 by March 31, 2026, by which time facilities must either certify that the HC fuel CECS do not generate CF_4 or quantify CF_4 emissions from the HC fuel CECS.

The EPA recognizes that the new requirement to report CF_4 emissions from HC fuel CECS could lead to a time series inconsistency in reported emissions. However, such an inconsistency is not in conflict with the overall purpose of the GHGRP to accurately estimate GHG emissions. Nor would it be unique to the electronics industry, because other GHGRP subparts have been revised in ways that altered the time series of the emissions as new source types were added or more accurate methods were adopted. For example, in 2015, subpart W was updated to include a new source, completions and workovers of oil wells with hydraulic fracturing, in the existing Onshore Petroleum and Natural Gas Production segment and also added two entirely new segments, the Onshore Petroleum and Natural Gas Gathering and Boosting and Onshore Natural Gas Transmission Pipelines segments. Such changes in reported emissions are often documented in the public data, including in the EPA's sector profiles.

The EPA is clarifying in this response to comment that equation I–9 is in addition to, rather than in place of, CF_4 byproduct factors for RPC NF_3, because the CF_4 byproduct factors for RPC NF_3

[14] Memorandum from Sebastien Raoux to U.S. EPA. "CF_4 byproduct formation from the combustion of CH_4 and F_2 in Point of Use emissions control systems in the electronics industry." Prepared for the U.S. EPA. May 2023, available in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

represent emissions from the process before abatement, and these emissions were measured without abatement equipment running.

Comment: One commenter supported using the term ''hydrocarbon-fuel-based combustion emissions control systems'' (HC fuel CECS) because it aligns with the nomenclature within 2019 Refinement rather than the less used ''hydrocarbon-fueled abatement systems'' or other terms. The commenter explained that semiconductor facilities widely implement large, facility-level volatile organic compound abatement devices to eliminate and control criteria volatile and non-volatile organic compounds, with no expectation of fluorinated greenhouse gas emissions. The commenter expressed concern that the broad definition of HC fuel CECS may be interpreted to include all hydrocarbon-based fuel control systems, not just tool-level POU abatement. The commenter added that, although not currently implemented, future facility-level F–GHG abatement systems could be incorrectly included in the scope of equation I–9 as it is written. The commenter requested that all emissions control systems language is updated to be consistent. The commenter also specifically requested the definition of ''hydrocarbon-fuel-based combustion emission control systems'' be tailored to specify HC fuel CECS connected to manufacturing tools, and include the following language: ''and have the potential to emit fluorinated greenhouse gases.''

Response: The EPA agrees with the commenter and has revised the proposed language to include the term, ''hydrocarbon-fuel-based combustion emissions control systems'' (HC fuel CECS) to align with the nomenclature within 2019 Refinement. The EPA is also clarifying in the final rule that these requirements apply only to equipment that is connected to manufacturing tools that have the potential to emit F_2 or F–GHGs. It is important to include emissions of F_2 as well as F–GHGs since it is F_2 that may combine with hydrocarbon fuels to generate CF_4 emissions. These changes include revising ''hydrocarbon fuel-based emissions control systems'' to ''HC fuel CECS'' in the terms ''EAB_{CF4},'' $a_{F2,j}$,'' ''$UT_{F2,j}$,'' ''$AB_{CF4,F2}$,'' ''$a_{NF3,RPC}$,'' ''and ''$UT_{NF3,RPC,F2}$'' defined in equation I–9.

Comment: One commenter requested the EPA specify that HC fuel CECS uptime during stack testing is ''representative of the emissions stream'' and the EPA specify that HC fuel CECS uptime during stack testing applies to RPC NF_3 or input F_2 processes only. The commenter questioned the EPA's proposed requirement that the uptime during the stack testing period must average at least 90 percent for uncertified hydrocarbon-fueled emissions control systems. The commenters asserted that uptime tracking for uncertified abatement devices is excessive, goes beyond the 2019 Refinement requirements, and does not improve the accuracy of emissions estimates. The commenter requested language to limit this requirement to ''at least 90% uptime of NF_3 remote plasma clean HC fuel CECS devices that are not certified to not form CF_4 during the test.'' The commenter also requested EPA clarify that equation I–9 does not apply in addition to stack testing requirements. The commenter requested that CF_4 emissions from the HC fuel CECS abatement of F_2, as calculated by equation I–9, be specifically exempted from the stack testing method as it would double count CF_4 emissions.

Response: The EPA agrees with the commenter that it would be helpful to clarify of the applicability of the 90-percent uptime requirement for HC fuel CECS. The EPA is revising the rule language at 40 CFR 98.94(j)(1) to further limit the HC fuel CECS 90-percent uptime requirement to systems that were purchased and installed on or after January 1, 2025 and that are used to control emissions from tools that use either NF_3 in remote plasma cleaning processes or F_2 as an input gas in any process type or sub-type. Either of these input gas-process type combinations may exhaust F_2 into HC fuel CECS, potentially leading to the formation of CF_4. The qualification ''that are not certified not to form CF_4'' is being finalized as proposed.

Regarding the commenters' concerns related to the uptime tracking requirements for uncertified abatement devices during stack testing, we reiterate that the uptime tracking requirement during stack testing is for hydrocarbon-fueled abatement devices that are not certified to not form CF_4, because these reporters still need to account for CF_4 emissions even if not accounting the abatement device's F–GHG DRE.

The EPA is also clarifying in this response that equation I–9 is *not* in addition to stack test calculations. The emissions from HC fuel CECS, should they occur, will be captured by the stack testing measurements. Because equation I–9 is not included in or referenced by the stack testing section, the regulatory text in 40 CFR 98.93(i) as currently drafted does not need any additional revision. However, the header paragraph 40 CFR 98.93(a) has been revised to clarify that paragraph (a)(7), which includes equation I–9, is one of the paragraphs used to calculate emissions based on default gas utilization rates and byproduct formations rates.

Comment: One commenter objected to the EPA's proposed calibration requirements for abatement systems, specifically for vacuum pump purge systems. The commenter urged that this would have significant impacts on the semiconductor industry and would drive a major increase in pump replacement and tool downtime. The commenter explained that POU abatement devices and their connected vacuum pumps are separate systems, and while physically connected, POU maintenance and pump replacement schedules are independent of one another. Further, the commenter asserted that pump purge flow calibration is technically and operationally infeasible for device manufacturers to perform. The commenter explained that purge flow indicators are factory calibrated and are part of the pump installation and commissioning; if there is a flow indicator failure, the vacuum pump is replaced with a factory-calibrated pump. The commenter stated that pump maintenance and repair is not typically performed at the manufacturing tool and requires pump disconnection and physical removal, and thus pumps are often repaired off-site. The commenter stressed that pump manufacturers do not provide recommendations or specifications for re-calibration of these pumps. The commenter added that there is no pump redundancy installed on a tool, and to check the calibration and potentially replace the flow transducer, the vacuum pump must be shutdown to safely work on it. The commenter noted that any replacement of the pump would require a tool shutdown and therefore 12 to 48 hours of downtime for manufacturing requalification.

The commenter stated that pumps remain continually in service on the order of years and asserted that pump vendors indicate that pumps can remain in service for many years without requiring calibration of the pump purge. The commenter provided that pump changes and refurbishment costs can be over $5,000 per occurrence and noted that pump repair or calibration activities can require significant coordination with factory and site operations due to the highly specialized equipment and resources needed. The commenter estimated that semiconductor manufacturing sites can have 2,000+ POU abatement devices as well as 4,000+ vacuum pumps in a high-volume-manufacturing site. The

commenter subsequently estimated that the EPA's proposed revisions could result in pump downtime, process equipment tool downtime, and maintenance costs to the U.S. semiconductor industry of about $40 million annually.

The commenter also stated that they believe the existing performance certification of POU emissions control devices based on high flow conditions are highly protective of POU system reliability. The commenter reiterated that high flow POU certification is based on maximum device flows, which, for multi-chamber tools, includes all chambers running at once. The commenter urged that significant variations in pump purge flows are unlikely and the magnitude of these variations would be a small component of overall POU flow volumes. As such, the commenter urged that pump purge flows are not necessary to calibrate after initial pump commissioning.

Response: The EPA agrees with the commenter that calibration of N_2 purge flows is normally done during pump service or maintenance, when the pumps are typically: (1) disconnected from the process tool; (2) replaced by a new or refurbished pump; and (3) brought to a ''service center'' for refurbishment (sometimes on-site, sometimes off-site). The EPA also concurs with commenters that requiring N_2 pump purge calibration could be disruptive if done outside of ''normal'' service periods. Consequently, the EPA proposed to require that pump purge flow indicators be calibrated ''each time a vacuum pump is serviced or exchanged'' rather than more frequently. The anticipated frequency of calibration mentioned in the preamble, every six months, was intended to be descriptive rather than prescriptive. Thus, the EPA does not believe that the proposed requirement would have the large economic impacts cited by the commenter. Nevertheless, because it appears that pumps are typically factory calibrated when commissioned and are replaced with factory-calibrated pumps when the flow indicator fails, a calibration requirement is not required. Therefore, the EPA is not taking final action on the proposed calibration requirement.

b. Comments on Revisions To Streamline and Improve Implementation for Subpart I

Comment: One commenter supported finalizing the amendment to 40 CFR 98.96(y) decreasing the frequency of submission of technology assessment reports, before the due date for the next technology assessment report.

Response: The EPA acknowledges the commenter's support and is finalizing revisions to 40 CFR 98.96(y) to decrease the frequency of submission of technology assessment reporters to every 5 years, as proposed. However, because the EPA is not implementing the final revisions until January 1, 2025 (see section V. of this preamble), we have revised the provision to clarify that the first technology assessment report due after January 1, 2025 is due on March 31, 2028. Subsequent reports must be submitted every 5 years no later than March 31 of the year in which it is due.

H. Subpart N—Glass Production

We are finalizing several amendments to subpart N of part 98 (Glass Production) as proposed. The EPA received only supportive comments for the proposed revisions to subpart N. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart N. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart N, as described in section VI. of this preamble.

The EPA is finalizing two revisions to the recordkeeping and reporting requirements of subpart N of part 98 (Glass Production) as proposed in the 2022 Data Quality Improvement Proposal. The revisions apply to both CEMS and non-CEMS reporters and require that facilities report and maintain records of annual glass production by glass type (*e.g.,* container, flat glass, fiber glass, specialty glass). Specifically, the final amendments revise (1) 40 CFR 98.146(a)(2) and (b)(3) to require the annual quantity of glass produced in tons, by glass type, from each continuous glass melting furnace and from all furnaces combined; and (2) 40 CFR 98.147(a)(1) and (b)(1), to add that records must also be kept on the basis of glass type. Differences in the composition profile of raw materials, use of recycled material, and other factors lead to differences in emissions from the production of different glass types. Collecting data on the annual quantities of glass produced by type will improve the EPA's understanding of emissions variations and industry trends, and improve verification for the GHGRP, as well as provide useful information to improve analysis of this sector in the Inventory. The EPA is also finalizing revisions to the recordkeeping and reporting requirements of subpart N as proposed in the 2023 Supplemental Proposal. The final revisions add reporting provisions at 40 CFR 98.146(a)(3) and (b)(4) to require the annual quantity (in tons), by glass type (*e.g.,* container, flat glass, fiber glass, or specialty glass), of cullet charged to each continuous glass melting furnace and in all furnaces combined, and revises 40 CFR 98.146(b)(9) to require the number of times in the reporting year that missing data procedures were used to measure monthly quantities of cullet used. The final revisions also add recordkeeping provisions to 40 CFR 98.147(a)(3) and (b)(3) to require the monthly quantity of cullet (in tons) charged to each continuous glass melting furnace by product type (*e.g.,* container, flat glass, fiber glass, or specialty glass). Differences in the quantities of cullet used in the production of different glass types can lead to variations in emissions, and, due to lower melting temperatures, can reduce the amount of energy and combustion required to produce glass. As such, the annual quantities of cullet used will further improve the EPA's understanding of variations and differences in emissions estimates, industry trends, and verification, as well as improve analysis for the Inventory. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

I. Subpart P—Hydrogen Production

We are finalizing several amendments to subpart P of part 98 (Hydrogen Production) as proposed. In some cases, we are finalizing the proposed amendments with revisions. In other cases, we are not taking final action on the proposed amendments. Section III.I.1. of this preamble discusses the final revisions to subpart P. The EPA received several comments on the proposed subpart P revisions which are discussed in section III.I.2. of this preamble. We are also finalizing related confidentiality determinations for data elements resulting from the revisions to subpart P, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart P

This section summarizes the final amendments to subpart P. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other final revisions to 40 CFR part 98, subpart P can be found in this

section and section III.I.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Revisions To Improve the Quality of Data Collected for Subpart P

In the 2023 Supplemental Proposal, the EPA proposed several amendments to subpart P of part 98 to expand and clarify the source category definition. First, to increase the GHGRP's coverage of facilities in the hydrogen production sector, we are amending, as proposed, the source category definition in 40 CFR 98.160 to include all facilities that produce hydrogen gas regardless of whether the hydrogen gas is sold. The final revisions will address potential gaps in applicability and reporting, allowing the EPA to better understand and track emissions from facilities that do not sell hydrogen gas to other entities. As proposed, these amendments categorically exempt any process unit for which emissions are currently reported under another subpart of part 98, including, but not necessarily limited to, ammonia production units that report emissions under subpart G of part 98 (Ammonia Manufacturing), catalytic reforming units located at petroleum refineries that produce hydrogen as a byproduct for which emissions are reported under subpart Y of part 98 (Petroleum Refineries), and petrochemical production units that report emissions under subpart X of part 98 (Petrochemical Production). As proposed, we are also exempting process units that only separate out diatomic hydrogen from a gaseous mixture and are not associated with a unit that produces diatomic hydrogen created by transformation of feedstocks.

The EPA is also amending the source category definition at 40 CFR 98.160 as proposed to clarify that stationary combustion sources that are part of the hydrogen production unit (*e.g.,* reforming furnaces and hydrogen production process unit heaters) are part of the hydrogen production source category and that their emissions are to be reported under subpart P. These amendments, which include a harmonizing change at 40 CFR 98.162(a), clarify that these furnaces or process heaters are part of the hydrogen production process unit regardless of where the emissions are exhausted (through the same stack or through separate stacks). Similarly, we are finalizing a clarification for hydrogen production units with separate stacks for ''process'' emissions and ''combustion'' emission that use a CEMS to quantify emissions from the process emissions stack. The final amendments at 40 CFR 98.163(c) require reporters to calculate and report the CO_2 emissions from the hydrogen production unit's fuel combustion using the mass balance equations (equations P–1 through P–3) in addition to calculating and reporting the process CO_2 emissions measured by the CEMS. Additional information on these revisions and their supporting basis may be found in section III.G. of the preamble to the 2023 Supplemental Proposal. We are adding one additional revision to address the monitoring of stationary combustion units directly associated with hydrogen production (*e.g.,* reforming furnaces and hydrogen production process unit heaters), following a review of comments received. Based on the EPA's analysis of reported data, there may be a small number of reporters that may not currently measure the fuel use to these combustion units separately. We have decided to add new § 98.164(c) to provide the use of best available monitoring methods (BAMM) for those facilities that may still need to install monitoring equipment to measure the fuel used by each stationary combustion unit directly associated with the hydrogen production process unit. To be eligible to use BAMM, the stationary combustion unit must be directly associated with hydrogen production; the unit must not have a measurement device installed as of January 1, 2025; the hydrogen production unit and the stationary combustion unit are operated continuously; and the installation of a measurement device must require a planned process equipment or unit shutdown or only be able to be done through a hot tap. BAMM can be the use of supplier data, engineering calculation methods, or other company records. We are not requiring facilities to provide an application to use BAMM that would require EPA review and approval to measure the fuel used in the hydrogen production process combustion unit. However, we are adding a new requirement at 40 CFR 98.166(d)(10) to require each facility to indicate in their annual report, for each stationary combustion unit directly associated with hydrogen production, whether they are using BAMM, the date they began using BAMM, and the anticipated or actual end date of BAMM use. Providing the use of BAMM is intended to reduce the burden associated with installation of new equipment, and we do not anticipate that the requirement to report the required indicators of BAMM will add significant burden. See section III.I.2. of this preamble for additional information on related comments and the EPA's response.

In the 2022 Data Quality Improvements Proposal, the EPA proposed several amendments to subpart P to allow the subtraction of the mass of carbon contained in products (other than CO_2 or methanol) and the carbon contained in intentionally produced methanol from the carbon mass balance used to estimate CO_2 emissions. The proposed revisions included new equation P–4 to allow facilities to adjust the calculated emissions from fuel and feedstock consumption in order to calculate net CO_2 process emissions, as well as harmonizing revisions to the introductory paragraph of 40 CFR 98.163 and 98.163(b) and the reporting requirements at 40 CFR 98.167(b)(7). Following review of comments received on similar changes proposed for subpart S (Lime Manufacturing), the EPA is not taking final action at this time on the proposed revisions to allow facilities to subtract out carbon contained in products other than CO_2 or methanol and the carbon contained in methanol. See sections III.E., III.I.2., and III.K.2. of this preamble for additional information on the comments related to subparts G, P and S and the EPA's response. However, the EPA is finalizing the proposed reporting requirement at 40 CFR 98.166(b)(7) (now 40 CFR 98.166(d)(7)), with minor revisions as a result of comments received. See the discussion in this section regarding subpart P reporting requirements for additional information as to why EPA is making revisions as a result of comments received.

The EPA is finalizing several additional revisions to the subpart P reporting requirements to improve the quality of the data collected based on the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. The final reporting requirements are reorganized to accommodate the final amendments at 40 CFR 98.163(c), which require reporters using CEMS that do not include combustion emissions from the hydrogen production unit to calculate and report the CO_2 emissions from fuel combustion using the material balance equations (equations P–1 through P–3) in addition to the process CO_2 emissions measured by the CEMS. The revisions to 40 CFR 98.166 clarify the reporting elements that must be provided for each hydrogen production process unit based on the calculation methodologies used. Reporters using CEMS to measure combined CO_2 process and fuel combustion emissions will be required

to meet the requirements at 40 CFR 98.166(b); reporters using only the material balance method will be required to meet the requirements at 40 CFR 98.166(c); and reporters using CEMS to measure CO_2 process emissions and the material balance method to calculate emissions from fuel combustion emissions using equations P–1 through P–3 will be required to meet the requirements of 40 CFR 98.166(b) and (c). If a common stack CEMS is used to measure emissions from either a common stack for multiple hydrogen production units or a common stack for hydrogen production unit(s) and other source(s), reporters must also report the estimated fraction of CO_2 emissions attributable to each hydrogen production process unit. All other reporting requirements for each hydrogen production process unit (regardless of the calculation method) are consolidated under 40 CFR 98.166(d).

As proposed, we are finalizing the addition of requirements for facilities to report the process type for each hydrogen production unit (*i.e.,* steam methane reforming (SMR), SMR followed by water gas shift reaction (SMR–WGS), partial oxidation (POX), partial oxidation followed by WGS (POX–WGS), Water Electrolysis, Brine Electrolysis, or Other (specify)), and the purification type for each hydrogen production unit (*i.e.,* pressure swing adsorption (PSA), Amine Adsorption, Membrane Separation, Other (specify), or none); the final requirements have been moved to 40 CFR 98.166(d)(1) and (2) and paragraph (d)(1) has been revised to include ''autothermal reforming only'' and ''autothermal reforming followed by WGS'' as additional unit types.

We are amending, as proposed, requirements to clarify that the annual quantity of hydrogen produced is the quantity of hydrogen that is produced ''. . . by reforming, gasification, oxidation, reaction, or other transformations of feedstocks,'' and to add reporting for the annual quantity of hydrogen that is only purified by each hydrogen production unit; the final requirements have been moved to 40 CFR 98.166(d)(3) and (4).

We are finalizing a requirement at 40 CFR 98.166(c) (proposed 40 CFR 98.166(b)(5)), to report the name and annual quantity (metric tons (mt)) of each carbon-containing fuel and feedstock (formerly 40 CFR 98.166(b)(7)). For clarity, we have revised the text of the requirement at 40 CFR 98.166(c) from proposal to specify that the information is required whenever equations P–1 through P–3 are used to calculate CO_2 emissions. We are finalizing revisions that renumber 40 CFR 98.166(c) and (d) (now 40 CFR 98.166(d)(6) and (7)), and are finalizing paragraph (d)(7) with revisions from those proposed to require reporting, on a unit-level: (1) the quantity of CO_2 that is collected and transferred off-site; and (2) the quantity of carbon other than CO_2 or methanol collected and transferred off-site, or transferred to a separate process unit within the facility for which GHG emissions associated with the carbon is being reported under other provisions of part 98. The final rule also requires at 40 CFR 98.166(d)(9) the reporting of the annual net quantity of steam consumed by the unit (proposed as 40 CFR 98.166(c)(9)). This value will be a positive quantity if the hydrogen production unit is a net steam user (*i.e.,* uses more steam than it produces) and a negative quantity if the hydrogen production unit is a net steam producer (*i.e.,* produces more steam than it uses).

Finally, for consistency with the final revisions to the reporting requirements for facilities subject to revised 40 CFR 98.163(c), we are making a harmonizing change to the recordkeeping requirements at 40 CFR 98.167(a) to specify that, if the facility CEMS measures emissions from a common stack for multiple hydrogen production units or emissions from a common stack for hydrogen production unit(s) and other source(s), reporters must maintain records used to estimate the decimal fraction of the total annual CO_2 emissions from the CEMS monitoring location attributable to each hydrogen production unit. We are also finalizing as proposed clarifying edits in 40 CFR 98.167(e) that retention of the file required under that provision satisfies the recordkeeping requirements for each hydrogen production unit. See section III.G.1. of the preamble to the 2022 Data Quality Improvements Proposal and section III.G. of the preamble to the 2023 Supplemental Proposal for additional information on these revisions and their supporting basis.

In the 2023 Supplemental Proposal, the EPA also requested comment on, but did not propose, other potential revisions to subpart P, including revisions that would remove the 25,000 $mtCO_2e$ threshold under 40 CFR 98.2(a)(2), which would result in a requirement that any facility meeting the definition of the hydrogen production category in 40 CFR 98.160 report annual emissions to the GHGRP. The EPA considered these changes in order to collect information on facilities that use electrolysis or other production methods that may have small direct emissions, but that may use relatively large amounts of off-site energy to power the process (*i.e.,* the emissions occurring on-site at these hydrogen production facilities may fall below the existing applicability threshold, while the combined direct emissions (*i.e.,* ''scope 1'' emissions) and emissions attributable to energy consumption (*i.e.,* ''scope 2'' emissions) could be relatively large), as collecting information from these kinds of facilities as well is especially important in understanding hydrogen as a fuel source. To reduce the burden on small producers, the EPA requested comment on applying a minimum annual production quantity within the source category definition to limit the applicability of the source category to larger hydrogen production facilities, such as defining the source category to only include those hydrogen production processes that exceed a 2,500 metric ton (mt) hydrogen production threshold. The EPA also requested comment on potential options to require continued reporting from hydrogen production facilities that use electrolysis or other production methods that may have small direct emissions (*i.e.,* scope 1 emissions) that would likely qualify to cease reporting after three to five years under the part 98 ''off-ramp'' provisions of 40 CFR 98.2(i) (*i.e.,* facilities may stop reporting after three years if their emissions are under 15,000 $mtCO_2e$ or after five years if their emissions are between 15,000 and 25,000 $mtCO_2e$), to enable collection of a more comprehensive data set over time. Following consideration of comments received, the EPA is not taking final action on these potential revisions in this rule. See section III.I.2. of this preamble for additional information on related comments and the EPA's responses. The EPA also considered, but did not propose, further expanding the reporting requirements to include the quantity of hydrogen provided to each end-user (including both on-site use and delivered hydrogen) and, if the end-user reports to GHGRP, the e-GGRT identifier for that customer. The EPA requested comment on the approach to collecting this sales information and the burden such a requirement may impose in the 2023 Supplemental Proposal. Following review of comments received, the EPA is not taking final action on these potential revisions in this rule.

b. Revisions To Streamline and Improve Implementation for Subpart P

The EPA is finalizing several revisions to subpart P to streamline the requirements of this subpart and improve flexibility for reporters. To

address the recent use of low carbon content feedstocks, the EPA is finalizing, with revisions from those proposed, revisions to 40 CFR 98.164(b)(2) and (3) to allow the use of product specification information annually as specified in the final provisions for (1) gaseous fuels and feedstocks that have carbon content less than or equal to 20 parts per million by weight (*i.e.,* 0.00002 kg carbon per kg of gaseous fuel or feedstock) (rather than at least weekly sampling and analysis), and (2) for liquid fuels and feedstocks that have a carbon content of less than or equal to 0.00006 kg carbon per gallon of liquid fuel or feedstock (rather than monthly sampling and analysis). As explained in the 2022 Data Quality Improvements Proposal, the fuels and feedstocks below these concentrations have very limited GHG emission potential and are currently an insignificant contribution to the GHG emissions from hydrogen production. The revisions from those proposed were included to remove the term ''non-hydrocarbon'' because it is not necessary since the maximum hydrocarbon concentrations that qualify for the revised monitoring requirements are included in 40 CFR 98.164(b)(2) and (3).

The EPA is finalizing, with revisions from those proposed, the addition of new 40 CFR 98.164(b)(5)(xix) to allow the use of modifications of the methods listed in 40 CFR 98.164(b)(5)(i) through (xviii) or use of other methods that are applicable to the fuel or feedstock if the methods currently in 40 CFR 98.164(b)(5) are not appropriate because the relevant compounds cannot be detected, the quality control requirements are not technically feasible, or use of the method would be unsafe. The revisions from those proposed were harmonizing changes to remove the term ''non-hydrocarbon'' and tie the proposed revisions back more clearly to the specifications in paragraphs (b)(2) and (3).

The final rule also finalizes as proposed, revisions to § 98.164(b)(2) through (4) to specifically state that the carbon content must be determined ''. . . using the applicable methods in paragraph (b)(5) of this section'' to clarify the linkage between the requirements in § 98.164(b)(2) through (4) and § 98.164(b)(5).

Finally, the EPA is finalizing revisions to the recordkeeping requirements at 40 CFR 98.167(b) to refer to paragraph (b) of 40 CFR 98.166. For facilities using the alternatives at 40 CFR 98.164(b)(2), (3) or (5)(xix), these requirements include retention of product specification sheets, records of modifications to the methods listed in 40 CFR 98.164(b)(5)(i) through (xviii) that are used, and records of the alternative methods used, as applicable. We are also finalizing a revision to remove and reserve redundant recordkeeping requirements in 40 CFR 98.167(c). See section III.G.2. of the preamble to the 2022 Data Quality Improvements Proposal and section III.G. of the preamble to the 2023 Supplemental Proposal for additional information on these revisions and their supporting basis.

2. Summary of Comments and Responses on Subpart P

This section summarizes the major comments and responses related to the proposed amendments to subpart P. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart P.

Comment: Two commenters recommended expanding the source category to include all hydrogen production facilities; this would include non-merchant producers, facilities that use electrolysis or renewable energy, and include process units that do not report to other subparts. Other commenters did not oppose expanding the source category to non-merchant facilities. One commenter on the 2022 Data Quality Improvements Proposal stated that the existing definition may cause confusion in situations where the hydrogen produced is used on-site or otherwise not ''sold as a product to other entities'' and suggested specific revisions to expand the source category to include other types of hydrogen production plants, including those using electrolysis. One commenter stated that reporting energy consumption by hydrogen production sources is necessary to inform decarbonization strategies, *e.g.,* whether producing excessive amounts of green hydrogen may risk delaying fossil fuel retirement by diverting renewable energy from other uses. The commenter recommended a threshold for these facilities based on energy input. The commenter added that any hydrogen production facilities using carbon capture and sequestration technology should be required to report in all instances, as emissions data and energy consumption data from these facilities will be highly relevant to future regulatory action.

Multiple commenters commented on the EPA's request for comment regarding removing the threshold for the hydrogen production source category. One commenter strongly urged the EPA to make subpart P an ''all-in'' subpart to ensure all hydrogen production facilities are covered by reporting requirements, including the requirements proposed to report purchased energy consumption under proposed subpart B to part 98. The commenter pointed to hydrogen electrolysis facilities that may consume very large amounts of grid electricity that could have significant upstream emissions impacts; the commenter stated that many or most of these facilities will already be tracking the attributes of the energy they consume to qualify for Federal incentives and investment, and will therefore have this information readily available. The commenter stressed that understanding this information and the lifecycle emissions of hydrogen production will be critical to informing future actions under the CAA. The commenter also supported a production-based reporting threshold to ensure reporting for high production facilities with lower direct emissions and suggested the production threshold should at least include at least the top 75 percent of production facilities. One commenter suggested a hydrogen production threshold of 5,000 mt/year. Another commenter recommended that the EPA should implement a threshold to limit the applicability of the subpart to larger hydrogen production facilities. One commenter opposed a hydrogen production threshold, and recommended that the EPA retain the existing emissions-based threshold of 25,000 $mtCO_2e$; the commenter suggested this would further incentivize the implementation of low GHG hydrogen manufacturing processes over higher emitting processes such as steam methane reformers.

Several commenters also opposed revisions that would remove the ability of sources to off-ramp. One commenter offered the following recommendations: (1) hydrogen production process units which produce hydrogen but emit no direct GHG emissions should become eligible to cease reporting starting January 1 of the following year after the cessation of direct GHG emitting activities associated with the process; (2) if the direct GHG emissions remain below 15,000 $mtCO_2e$ or between 15,000 and 25,000 $mtCO_2e$, reporting would be required for 3 or 5 years respectively, consistent with the existing off-ramp provisions; or (3) if the EPA establishes

a hydrogen production threshold for reporting, then falling below the production threshold should be the trigger for cessation of reporting, either starting January 1 of the following year or on a parallel structure to the three and five year off-ramp emission thresholds. Two other commenters stated that the EPA ignores that the ''off-ramp'' is intended for entities that should no longer be subject to reporting requirements by virtue of the fact that their emissions fall below a reasonable threshold. One commenter stated that it is unclear how the EPA would have authority to continue to require reporting for these entities, and the commenters said that the EPA should justify excluding hydrogen production facilities from the off-ramp. The commenters added that the EPA could use other methods to collect this data, including proposing a separate standard addressing emissions from hydrogen production under CAA section 111.

Response: We agreed with commenters that the language regarding ''hydrogen gas sold as a product to other entities'' could cause confusion, as we intended to require non-merchant hydrogen production units to now report under subpart P. As such, we are finalizing, as proposed in the 2023 Supplemental Proposal, the language in 40 CFR 98.160(a) to focus on hydrogen gas production without referring to the disposition of the hydrogen produced. In the 2023 Supplemental Proposal, we also proposed to significantly revise § 98.160(b) and (c). The supplemental proposal revisions appear to address most of the commenter's suggested revisions, except that we are not including ''electrolysis'' in the list of types of transformations in 40 CFR 98.160(b) because we consider electrolysis as already included under ''. . . reaction, or other transformations of feedstocks.'' This is also supported by the inclusion of water electrolysis and brine electrolysis in the list of hydrogen production unit types in the proposed 40 CFR 98.166(b)(1)(i) (now 40 CFR 98.166(d)(1)). We agree with commenters that subpart P should be applicable to non-merchant facilities and are finalizing the proposed revisions.

The EPA has considered comments both supporting and not supporting changes related to the EPA's request for information regarding removing the emissions-based threshold or introducing an alternative production-based threshold for the hydrogen production source category, including options to require continued reporting from hydrogen production facilities by amending the emissions-based off-ramp provisions at 40 CFR 98.2(i)(1) and (2). The EPA did not propose or provide for review specific revisions to part 98 to expand the source category, beyond the inclusion of non-merchant facilities as discussed in section III.I.1. of this preamble. Therefore, we are not including any revisions to the threshold to subpart P or to the ability of hydrogen production facilities to off-ramp in this final rule. However, the EPA may further consider these comments and the information provided as we evaluate next steps concerning the collection of information from hydrogen production facilities and consider approaches to improving our understanding of hydrogen as a fuel source, including to inform any potential future rulemakings.

Comment: Three commenters did not support the requirement to report combustion from hydrogen production process units under subpart P in lieu of subpart C as proposed in 40 CFR 98.160(c). Two commenters stated that these units may not be metered separately from other combustion units located at an integrated facility, which would require additional metering to comply with subpart P reporting of combustion emissions directly associated with the hydrogen production process. These commenters stated that if combustion emissions directly associated with the hydrogen production process must be reported under subpart P, engineering estimations for fuel consumption should be allowed. One commenter recommended that EPA implement a threshold to limit the applicability of the subpart to larger hydrogen production facilities.

Response: Steam methane reforming (SMR) is an endothermic process, and heating and reheating of fuels and feedstocks to maintain reaction temperatures is an integral part of the steam methane reforming reaction. Therefore, subpart P has always required the reporting of ''fuels and feedstocks'' used in the hydrogen production unit and subpart C should only be used for ''. . . each stationary combustion unit other than hydrogen production process units'' (40 CFR 98.162(c)). We have long noted that the emissions from most SMR furnaces include a mixture of process and combustion emissions.[15] For more accurate comparison of CEMS measured emissions with those estimated using the mass balance method, we required reporting of the combustion emissions from the SMR furnace as part of the subpart P emissions. Our proposed revisions, therefore, were not a new requirement, but a further clarification of the existing requirements in subpart P, as we interpret them. Based on previous reviews of the emissions intensities from hydrogen production as compiled from subpart P reported data, we estimate that there are only a few facilities that do not include the SMR furnace or process heaters combustion emissions in their subpart P emission totals. To allow time for those facilities to measure fuel used in stationary combustion units associated with hydrogen production (*e.g.,* reforming furnaces and hydrogen production process unit heaters), we decided to include in this final rule a limited allowance for BAMM for those facilities that may still need to add appropriate monitoring equipment (as demonstrated through meeting the specified criteria in the final provision). We also note that subpart C units reporting under the common pipe reporting configuration at 40 CFR 98.36(c)(3) may use company records to subtract out the portion of the fuel diverted to other combustion unit(s) prior to performing the GHG emissions calculations for the group of units using the common pipe option. Regarding the recommendation to implement a threshold to limit applicability to larger hydrogen production facilities, we are not taking final action on any revisions to the threshold to subpart P, therefore, facilities with hydrogen production plants will continue to determine applicability to part 98 based on the existing requirements of 40 CFR 98.2(a). A facility that contains a source category listed in table A–4 to subpart A of part 98 (which includes hydrogen production) must report only if the estimated combined annual emissions from stationary fuel combustion units, miscellaneous uses of carbonate, and all applicable source categories in tables A–3 and table A–4 of part 98 are 25,000 mtCO_2e or more. Therefore, the applicability of the subpart is already limited to larger hydrogen production facilities.

Comment: One commenter stated that EPA's proposed mass balance equation under 40 CFR 98.163(d), equation P–4, requires further revision to ensure that it is accurate for refineries that have non-merchant hydrogen plants (such as those currently reporting under subpart Y). The commenter added that to ensure proper accounting, the variable ''$C_{offsite,n}$'' should be further revised to include language for non-merchant hydrogen plants as follows: ''Mass of carbon other than CO_2 or methanol collected from the hydrogen production

[15] See, *e.g., https://ccdsupport.com/confluence/pages/viewpage.action?pageId=173080691.*

unit and transferred off site or reported elsewhere by the facility under this part, from company records for month n (metric tons carbon).''

Response: Following consideration of comments on similar proposed revisions in other subparts, as discussed in section III.K.2. of this preamble, we are not taking final action at this time on proposed amendments to equation P–4 to allow the subtraction of carbon contained in products other than CO_2 or methanol and the carbon contained in methanol from the carbon mass balance used to estimate CO_2 emissions. However, we acknowledge this concern and agree that an analogous scenario may also occur within a facility that contains a captive (non-merchant) hydrogen production process unit. For example, some hydrogen production processes may operate without the water-gas-shift reaction and produce a syngas of hydrogen and carbon monoxide. For merchant plants, this syngas would be sold as a product for use as a fuel or as a feedstock for chemical production process. For a non-merchant plant, the syngas may be used on-site as a fuel or feedstock rather than sold off-site as a product. If a captive hydrogen production unit produces syngas for use as a fuel for an on-site stationary combustion unit, for example, the rule as proposed would not have allowed the subtraction of the carbon in the syngas from the emissions from the hydrogen production unit, resulting in double counting the CO_2 emissions related to this carbon (from both the hydrogen production unit and from the stationary combustion source). Most refineries with captive hydrogen production units seek to produce hydrogen for use in their refining process units and, therefore, use the water-gas-shift reaction to make pure hydrogen rather than syngas. However, production of syngas is possible under some circumstances. Although we are not finalizing equation P–4 as proposed, because the rule currently requires the reporting of carbon other than CO_2 or methanol that is transferred off site, we have revised the reporting requirements to clarify that the reported value, for non-merchant hydrogen production facilities, should include the quantity of carbon other than CO_2 or methanol that is transferred to a separate process unit within the facility for which GHG emissions associated with this carbon are being reported under other provisions of part 98.

Comment: One commenter supported the separate reporting of hydrogen that is produced and hydrogen that is only purified, but requested that the EPA provide sufficient implementation time and allow for best available monitoring methods to be used until installation of necessary monitoring equipment could occur.

Another commenter was supportive of reporting steam consumption data (*i.e.,* annual net quantity of steam consumed). However, the commenter added that there may be situations where steam is sourced from equipment (*e.g.,* a stand-alone boiler) distinct from a waste heat boiler associated with the SMR process; the commenter stated the rule should allow for flexibility in how the steam production and consumption is measured and quantified, including the ability to utilize best available monitoring methods.

Other commenters opposed reporting steam consumption data. One commenter opposing the requirements stated it could result in duplicative reporting based on what is proposed to be reported under subpart B. Two commenters stated that the EPA failed to provide justification for the requirement. Two commenters stated that it may be necessary for the EPA to issue an additional supplemental notice of proposed rulemaking to take comment on any such justification.

Response: Subpart P only provides monitoring requirements for fuels and feedstocks, it does not specify monitoring requirements for other reported data, for example, ammonia and methanol production. There are often cases in part 98 where there are reporting elements, but not specific monitoring requirements. In such cases, company records, engineering estimates, and similar approaches may be used (in addition to direct measurement methods) to report these quantities. As such, there is no need for BAMM provisions related to additional reporting requirements that require separately reporting produced and purified hydrogen quantities and net steam consumption.

We also note that the subpart P requirement is process unit specific, which is not duplicative of the proposed subpart B facility- or subpart-level reporting requirements. We also disagree that we did not provide rationale for the proposed requirements. These requirements (as with many of the other proposed requirements for subpart P) are aimed to obtain better information to verify reported emissions. For example, if a facility is a net steam purchaser, some emissions resulting from activities that support the hydrogen production process may occur at the steam production site. Thus, knowing the net steam consumption may help explain why the emissions to production ratios for these facilities based on reported data do not fall within the expected ranges. Understanding this could result in less correspondence from the EPA to verify these facilities' reports and therefore reduce the burden to these facilities.

J. Subpart Q—Iron and Steel Production

We are finalizing the amendments to subpart Q of part 98 (Iron and Steel Production) as proposed. This section discusses the final revisions to subpart Q. The EPA received comments on the proposed requirements for subpart Q; see the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart Q. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the revisions to subpart Q as described in section VI. of this preamble.

1. Revisions To Improve the Quality of Data Collected for Subpart Q

The EPA is finalizing revisions to subpart Q, as proposed in the 2022 Data Quality Improvements Proposal, to enhance the quality and accuracy of the data collected. First, we are revising 40 CFR 98.176(g) for all unit types (taconite indurating furnace, basic oxygen furnace, non-recovery coke oven battery, sinter process, EAF, decarburization vessel, and direct reduction furnace) and all calculation methods (direct measurement using CEMS, carbon mass balance methodologies, or site-specific emission factors) to require that facilities report the type of unit, the annual production capacity, and the annual operating hours for each unit.

The EPA is also finalizing revisions to correct equation Q–5 in 40 CFR 98.173(b)(1)(v) to remove an error introduced into the equation in prior revisions (81 FR 89188, December 9, 2016). The final rule corrects the equation to remove an unnecessary fraction symbol. See section III.H.1. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

2. Revisions To Streamline and Improve Implementation for Subpart Q

The EPA is finalizing two revisions to subpart Q to streamline monitoring. First, we are revising 40 CFR

98.174(b)(2) to provide the option for facilities to determine the carbon content of process inputs and outputs by use of analyses provided by material recyclers that manage process outputs for sale or use by other industries. Material recyclers conduct testing on their inputs and products to provide to entities using the materials downstream, and therefore perform carbon content analyses using similar test methods and procedures as suppliers. The final revisions include a minor harmonizing change to 40 CFR 98.176(e)(2) to require reporters to indicate if the carbon content was determined from information supplied by a material recycler.

The EPA is also finalizing revisions to 40 CFR 98.174(b)(2) to incorporate a new test method, ASTM E415–17, *Standard Test Method for Analysis of Carbon and Low-Alloy Steel by Spark Atomic Emission Spectrometry* (2017), for carbon content analysis of low-alloy steel. The new method is incorporated by reference in 40 CFR 98.7 and 98.174(b)(2) for use for steel, as applicable. The addition of this alternative test method will provide additional flexibility for reporters. We are also finalizing one harmonizing change to the reporting requirements of 40 CFR 98.176(e)(2), to clarify that the carbon content analysis methods available to report are those methods listed in 40 CFR 98.174(b)(2). See section III.H.2. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

K. Subpart S—Lime Production

We are finalizing several amendments to subpart S of part 98 (Lime Production) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.K.1. of this preamble discusses the final revisions to subpart S. The EPA received several comments on the proposed subpart S revisions which are discussed in section III.K.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart S, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart S

The EPA is finalizing several revisions to subpart S of part 98 (Lime Manufacturing) as proposed to improve the quality of the data collected from this subpart. First, we are finalizing the addition of reporting requirements for reporters using the CEMS methodology, in order to improve our understanding of source category emissions and our ability to verify reported data. The EPA is adding data elements under 40 CFR 98.196(a) to collect annual averages of the chemical composition input data on a facility-basis, including the annual arithmetic average calcium oxide content (mt CaO/mt tons lime) and magnesium oxide content (mt MgO/mt lime) for each type of lime produced, for each type of calcined lime byproduct and waste sold, and for each type of calcined lime byproduct and waste not sold. These data elements rely on an arithmetic average of the measurements rather than requiring reporters to weight by quantities produced in each month. Collecting average chemical composition data for CEMS facilities will provide the EPA the ability to develop a process emission estimation methodology for CEMS reporters, which can be used to verify the accuracy of the reported CEMS emission data.

The EPA is also finalizing additional data elements for reporters using the mass balance methodology (*i.e.,* reporters that comply using the requirements at 40 CFR 98.193(b)(2)). The final rule includes new data elements under 40 CFR 98.196(b) to collect the annual average results of the chemical composition analysis of all lime byproducts or wastes not sold (*e.g.,* a single facility average calcium oxide content calculated from the calcium oxide content of all lime byproduct types at the facility), and the annual quantity of all lime byproducts or wastes not sold (*e.g.,* a single facility total calculated as the sum of all quantities, in tons, of all lime byproducts at the facility not sold during the year). These amendments will allow the EPA to build verification checks for the actual inputs entered (*e.g.,* MgO content). Because the final data elements rely on annual averages of the chemical composition measurements and an annual quantity of all lime byproducts or wastes at the facility, they are distinct from the data entered into the EPA's verification software tool. Additional information on these revisions and their supporting basis may be found in section III.I. of the preamble to the 2022 Data Quality Improvements Proposal.

In the 2022 Data Quality Improvements Proposal, the EPA proposed to improve the methodology for calculation of annual CO_2 process emissions from lime production to account for CO_2 that is captured from lime kilns and used on-site. Specifically, we proposed to modify equation S–4 to subtract the CO_2 that is captured and used in on-site processes, with corresponding revisions to the recordkeeping requirements in 40 CFR 98.197(c) (to record the monthly amount of CO_2 from the lime manufacturing process that is captured for use in all on-site processes), minor amendments to the reporting elements in 40 CFR 98.196(b)(1) (to clarify reporting of annual net emissions), 40 CFR 98.196(b)(17) (to clarify reporters do not need to account for CO_2 that was not captured but was used on-site), and to clarify that reporters must account for CO_2 usage from all on-site processes, including for manufacture of other products, in the total annual amount of CO_2 captured. Following consideration of comments received, the EPA is not taking final action at this time on the proposed revisions to equation S–4, or the corresponding revisions to 40 CFR 98.196(b)(1) and 98.197(c). We are finalizing the clarifying revisions to 40 CFR 98.196(b)(17), as proposed. We are also finalizing an editorial correction to equation S–4 to add a missing equation symbol. See section III.K.2. of this preamble for additional information on related comments and the EPA's response.

2. Summary of Comments and Responses on Subpart S

This section summarizes the major comments and responses related to the proposed amendments to subpart S. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart S.

Comment: One commenter opposed the proposed modifications to equation S–4 requiring monthly subtraction of CO_2 used on-site, stating it would be considerably more burdensome for lime producers that currently track and report this usage on an annual basis. The commenter requested that the EPA continue to allow the annual reporting of CO_2 usage, and thus implement an annual subtraction from total process emissions from all lime kilns combined.

Response: The EPA proposed revisions to subparts G (Ammonia Manufacturing), P (Hydrogen Production), and S (Lime Manufacturing) that would have required monthly measurement of captured CO_2 used to manufacture other products on-site or non-CO_2 carbon sent off-site to external users. It would also have modified the subpart-level equations to require that these amounts

be subtracted from the emissions total. However, the EPA needs additional time to consider these comments and whether a consistent approach across these three subparts should be required or whether there are circumstances where alternative approaches might be warranted. Therefore, the EPA is not taking final action on these proposed revisions to subparts G, P, and S for at this time but may consider implementing these or similar revisions in future rulemakings.

L. Subpart U—Miscellaneous Uses of Carbonate

The EPA is finalizing one minor change to subpart U of part 98 (Miscellaneous Uses of Carbonate). The revision in this final rule is a harmonizing change following review of comments received on proposed subpart ZZ to part 98 (Ceramics Manufacturing) (see section III.EE. of this preamble for additional information on the related comments and the EPA's response). We are revising the source category definition for subpart U at 40 CFR 98.210(b) to clarify that ceramics manufacturing is excluded from the source category. Section 98.210(b) excludes equipment that uses carbonates or carbonate-containing materials that are consumed in production of cement, glass, ferroalloys, iron and steel, lead, lime, phosphoric acid, pulp and paper, soda ash, sodium bicarbonate, sodium hydroxide, or zinc. We are adding the text ''or ceramics'' to ensure that there is no duplicative reporting between subpart U and new subpart ZZ.

M. Subpart X—Petrochemical Production

We are finalizing several amendments to subpart X of part 98 (Petrochemical Production) as proposed. This section summarizes the final revisions to subpart X. The EPA received only minor comments on the proposed requirements for subpart X. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart X.

We are finalizing as proposed several amendments to subpart X to improve the quality of data reported and to clarify the calculation, recordkeeping, and reporting requirements. First, we are finalizing a clarification to the emissions calculation requirements for flares in 40 CFR 98.243(b)(3) and (d)(5) to cross-reference 40 CFR 98.253(b) of subpart Y; these revisions clarify that subpart X reporters are not required to report emissions from combustion of pilot gas and from gas released during startup, shutdown, and malfunction (SSM) events of <500,000 standard cubic feet (scf)/day that are excluded from equation Y–3.

Next, we are finalizing as proposed the addition of new reporting requirements intended to improve the quality of the data collected under the GHGRP. First, we are finalizing reporting a new data element in 40 CFR 98.246(b)(7) and (c)(3). For each flare that is reported under the CEMS and optional ethylene combustion methodologies, facilities must report the estimated fractions of the total CO_2, CH_4, and N_2O emissions from each flare that are due to combusting petrochemical off-gas. The final rule will allow the fractions attributed to each petrochemical process unit that routes emissions to the flare to be estimated using engineering judgment. This change will allow more accurate quantification of emissions both from individual petrochemical process units and from the industry sector as a whole. Next, the EPA is finalizing addition of a requirement in 40 CFR 98.246(c)(6) to report the names and annual quantity (in metric tons) of each product produced in each ethylene production process for emissions estimated using the optional ethylene combustion methodology; this improves consistency with the product reporting requirements under the CEMS and mass balance reporting options.

We are finalizing, as proposed, a number of amendments that are intended to remove redundant or overlapping requirements and to clarify the data to be reported, as follows:

- For facilities that use the mass balance approach, we are finalizing amendments to 40 CFR 98.246(a)(2) to remove the requirement to report feedstock and product names, which previously overlapped with reporting requirements in 40 CFR 98.246(a)(12) and (13).
- We are finalizing revisions to 40 CFR 98.246(a)(5) to clarify the petrochemical and product reporting requirements for integrated ethylene dichloride/vinyl chloride monomer (EDC/VCM) process units. The amendments clarify the rule for facilities with an integrated EDC/VCM process unit that withdraw small amounts of the EDC as a separate product stream. The final rule is revised at 40 CFR 98.246(a)(5) to specify that (1) the portion of the total amount of EDC produced that is an intermediate in the production of VCM may be either a measured quantity or an estimate; (2) the amount of EDC withdrawn from the process unit as a separate product (*i.e.,* the portion of EDC produced that is not utilized in the VCM production) is to be measured in accordance with 40 CFR 98.243(b)(2) or (3); and (3) the sum of the two values is to be reported under 40 CFR 98.246(a)(5) as the total quantity of EDC petrochemical from an integrated EDC/VCM process unit.
- We are finalizing a change in 40 CFR 98.246(a)(13) to clarify that the amount of EDC product to report from an integrated EDC/VCM process unit should be only the amount of EDC, if any, that is withdrawn from the integrated process unit and not used in the VCM production portion of the integrated process unit.
- For facilities that use CEMS, we are finalizing amendments to 40 CFR 98.246(b)(8) to clarify the reporting requirements for the amount of EDC petrochemical when using an integrated EDC/VCM process unit, by removing language related to considering the petrochemical process unit to be the entire integrated EDC/VCM process unit.
- For facilities that use the optional ethylene combustion methodology to determine emissions from ethylene production process units, we are finalizing revisions to 40 CFR 98.246(c)(4) to clarify that the names and annual quantities of feedstocks that must be reported will be limited to feedstocks that contain carbon.
- We are finalizing changes to 40 CFR 98.246(a)(15) to more clearly specify that molecular weight must be reported for gaseous feedstocks and products only when the quantity of the gaseous feedstock or product used in equation X–1 is in standard cubic feet; the molecular weight does not need to be reported when the quantity of the gaseous feedstock or product is in kilograms.

Additional information on the EPA's rationale for these revisions may be found in section III.K. of the preamble to the 2022 Data Quality Improvements Proposal.

We are also finalizing as proposed confidentiality determinations for new data elements resulting from the revisions to subpart X, as described in section VI. of this preamble.

N. Subpart Y—Petroleum Refineries

We are finalizing several amendments to subpart Y of part 98 (Petroleum Refineries) as proposed. This section summarizes the final revisions to subpart Y. The EPA received several comment letters on the proposed

requirements for subpart Y. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart Y.

We are also finalizing as proposed confidentiality determinations for new data elements resulting from the revisions to subpart Y, as described in section VI. of this preamble.

1. Revisions To Improve the Quality of Data Collected for Subpart Y

The EPA is finalizing as proposed several amendments to subpart Y of part 98 to improve data collection, clarify rule requirements, and correct an error in the rule. First, we are finalizing amendments to the provisions for delayed coking units (DCU) to add reporting requirements for facilities using mass measurements from company records to estimate the amount of dry coke at the end of the coking cycle in 40 CFR 98.256(k)(6)(i) and (ii). These new paragraphs will require facilities to additionally report, for each DCU: (1) the internal height of the DCU vessel; and (2) the typical distance from the top of the DCU vessel to the top of the coke bed (*i.e.,* coke drum outage) at the end of the coking cycle (feet). These new elements will allow the EPA to estimate and verify the reported mass of dry coke at the end of the cooling cycle as well as the reported DCU emissions.

We are also finalizing revisions to equation Y–18b in 40 CFR 98.253(i)(2), to include a new variable ''f_{coke}'' to allow facilities that do not completely cover the coke bed with water prior to venting or draining to accurately estimate the mass of water in the drum. The ''f_{coke}'' variable is defined as the fraction of coke-filled bed that is covered by water at the end of the cooling cycle just prior to atmospheric venting or draining, where a value of one (1) represents cases where the coke is completely submerged in water. The second term in equation Y–18b represents the volume of coke in the drum, and is subtracted from the water-filled coke bed volume to determine the volume of water. We are also finalizing revisions to the equation terms ''M_{water}'' and ''H_{water}'' to add the phase ''or draining'' to specify that these parameters reflect the mass of water and the height of water, respectively, at the end of the cooling cycle just prior to atmospheric venting or draining. We are finalizing harmonizing revisions to the recordkeeping requirements at 40 CFR 98.257(b)(45) and (46) and a corresponding recordkeeping requirement at 40 CFR 98.257(b)(53).

To help clarify that the calculation methodologies in 40 CFR 98.253(c) and 98.253(e) are specific to coke burn-off emissions, we are finalizing the addition of ''from coke burn-off'' immediately after the first occurrence of ''emissions'' in the introductory text of 40 CFR 98.253(c) and 98.253(e).

We are also finalizing corrections to an inconsistency inadvertently introduced into subpart Y by amendments published on December 9, 2016 (81 FR 89188), which created an apparent inconsistency about whether to include or exclude SSM events less than 500,000 scf/day in equation Y–3. This final rule clarifies in 40 CFR 98.253(b) that SSM events less than 500,000 scf/day may be excluded, but only if reporters are using the calculation method in 40 CFR 98.253(b)(1)(iii). We are also finalizing revisions to remove the recordkeeping requirements in existing 40 CFR 98.257(b)(53) through (56) and to reserve 40 CFR 98.257(b)(54) through (56). These requirements should have been removed in the December 9, 2016 amendments, which removed the corresponding requirement in 40 CFR 98.253(j) to calculate CH_4 emissions from DCUs using the process vent method (equation Y–19). The EPA is also finalizing corrections to an erroneous cross-reference in 40 CFR 98.253(i)(5), which inaccurately defines the term ''M_{stream}'' in equation Y–18f for DCUs, to correct the cross-reference to § 98.253(i)(4) instead of § 98.253(i)(3). Additional information on the EPA's rationale for these revisions may be found in section III.L.1. of the preamble to the 2022 Data Quality Improvements Proposal.

The EPA is finalizing as proposed one additional revision to improve data quality from the 2023 Supplemental Proposal. Specifically, we are finalizing the addition of a requirement to report the capacity of each asphalt blowing unit, consistent with the existing reporting requirements for other emissions units under subpart Y. The final rule requires that facilities provide the maximum rated unit-level capacity of the asphalt blowing unit, measured in mt of asphalt per day, in 40 CFR 98.256(j)(2). Additional information on the EPA's rationale for these revisions may be found in section III.H. of the preamble to the 2023 Supplemental Proposal.

2. Revisions To Streamline and Improve Implementation for Subpart Y

The EPA is finalizing one change to subpart Y to streamline monitoring. We are finalizing an option for reporters to use mass spectrometer analyzers to determine gas composition and molecular weight without the use of a gas chromatograph. The final rule adds the inclusion of direct mass spectrometer analysis as an allowable gas composition method in 40 CFR 98.254(d). This change will allow reporters to use the same analyzers used for process control or for compliance with continuous sampling which are proposed to be provided under the National Emissions Standards for Hazardous Air Pollutants from Petroleum Refineries (40 CFR part 63, subpart CC), to comply with GHGRP requirements in subpart Y. Additional information on these revisions and their supporting basis may be found in section III.L.2. of the preamble to the 2022 Data Quality Improvements Proposal.

Consistent with changes we are finalizing to subpart P of part 98 (Hydrogen Production) from the 2023 Supplemental Proposal, we are finalizing revisions to remove references to non-merchant hydrogen production plants in 40 CFR 98.250(c) and to delete and reserve 40 CFR 98.252(i), 98.255(d), and 98.256(b). We are also finalizing as proposed revisions to remove references to coke calcining units in 40 CFR 98.250(c) and 98.257(b)(16) through (19) and to remove and reserve 40 CFR 98.252(e), 98.253(g), 98.254(h), 98.254(i), 98.256(i), and 98.257(b)(27) through (31). As proposed in the 2023 Supplemental Proposal, we are finalizing the addition of new subpart WW to part 98 (Coke Calciners), and these provisions are no longer necessary under subpart Y. Additional information on these revisions and their supporting basis may be found in section III.H. of the preamble to the 2023 Supplemental Proposal.

O. Subpart AA—Pulp and Paper Manufacturing

We are finalizing the amendments to subpart AA of part 98 (Pulp and Paper Manufacturing) as proposed. The EPA received no comments regarding the proposed revisions to subpart AA. Additional rationale for these amendments is available in the preamble to the 2023 Supplemental Proposal. The EPA is revising 40 CFR 98.273 to add a biogenic calculation methodology for estimation of CH_4, N_2O, and biogenic CO_2 emissions for units that combust biomass fuels (other

than spent liquor solids) from table C–1 to subpart C of part 98 or that combust biomass fuels (other than spent liquor solids) with other fuels. We are also revising 40 CFR 98.276(a) to remove incorrect references to biogenic CH_4 and N_2O and correcting a typographical error at 40 CFR 98.277(d), as proposed. Additional rationale for these amendments is available in the preamble to the 2023 Supplemental Proposal.

P. Subpart BB—Silicon Carbide Production

We are finalizing the amendments to subpart BB of part 98 (Silicon Carbide Production) as proposed. The EPA received no comments regarding the proposed revisions to subpart BB. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal. The EPA is finalizing a reporting requirement at 40 CFR 98.286(c) such that if CH_4 abatement technology is used at silicon carbide production facilities, then facilities must report: (1) the type of CH_4 abatement technology used and the date of installation for each technology; (2) the CH_4 destruction efficiency (percent destruction) for each CH_4 abatement technology; and (3) the percentage of annual operating hours that CH_4 abatement technology was in use for all silicon carbide process units or production furnaces combined. For each CH_4 abatement technology, reporters must either use the manufacturer's specified destruction efficiency or the destruction efficiency determined via a performance test; if the destruction efficiency is determined via a performance test, reporters must also report the name of the test method that was used during the performance test. Following the initial annual report containing this information, reporters will not be required to resubmit this information unless the information changes during a subsequent reporting year, in which case, the reporter must update the information in the submitted annual report. The final revisions to subpart BB also add a recordkeeping requirement at 40 CFR 98.287(d) for facilities to maintain a copy of the reported information. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal. The EPA is also finalizing, as proposed, confidentiality determinations for the additional data elements to be reported as described in section VI. of this preamble.

Q. Subpart DD—Electrical Transmission and Distribution Equipment Use

We are finalizing several amendments to subpart DD of part 98 (Electrical Transmission and Distribution Equipment Use) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.Q.1. of this preamble discusses the final revisions to subpart DD. The EPA received several comments on the proposed subpart DD revisions which are discussed in section III.Q.2. of this preamble. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the final revisions to subpart DD, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart DD

This section summarizes the final amendments to subpart DD. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other final revisions to 40 CFR part 98, subpart DD can be found in this section and section III.Q.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal.

a. Revisions To Improve the Quality of Data Collected for Subpart DD

The EPA is finalizing several revisions to subpart DD to improve the quality of the data collected under this subpart. First, we are generally finalizing the proposed revisions to the calculation, monitoring, and reporting requirements of subpart DD to require reporting of additional F–GHGs, except insulating gases with weighted average GWPs less than or equal to one will remain excluded from reporting under subpart DD. These final amendments will help to account for use and emissions of replacements for SF_6, including fluorinated gas mixtures, with lower but still significant GWPs. We are revising 40 CFR 98.300(a) to redefine the source category to include equipment containing ''fluorinated GHGs (F–GHGs), including but not limited to sulfur-hexafluoride (SF_6) and perfluorocarbons (PFCs).'' These changes include:

- Revising the threshold determination in 40 CFR 98.301 by adding new equations DD–1 and equation DD–2 (see section III.Q.1.b. of this preamble).
- Revising the GHGs to report at 40 CFR 98.302 by adding a new equation DD–3, which is also used in the definition of ''reportable insulating gas,'' discussed below.
- Redesignating equation DD–1 as equation DD–4 at 40 CFR 98.303 and revising the equation to estimate emissions from all F–GHGs within the existing calculation methodology, including F–GHG mixtures. Equation DD–4 will maintain the facility-level mass balance approach of tracking and accounting for decreases, acquisitions, disbursements, and net increase in total nameplate capacity for the facility each year, but will apply the weight fraction of each F–GHG to determine the user emissions by gas. In the final rule, we are making two clarifications to equation DD–4 in addition to the revisions that were proposed. These are discussed further below.
- Updating the monitoring and quality assurance requirements at 40 CFR 98.304(b) to account for emissions from additional F–GHGs.
- To address references to F–GHGs and F–GHG mixtures, we are finalizing the term ''insulating gas'' which is defined as ''any fluorinated GHG or fluorinated GHG mixture, including but not limited to SF_6 and PFCs, that is used as an insulating and/or arc quenching gas in electrical equipment.''
- To clarify which insulating gases are subject to reporting requirements, we are adding the term ''reportable insulating gas,'' which is defined as ''an insulating gas whose GWP, as calculated in equation DD–3, is greater than one. A fluorinated GHG that makes up either part or all of a reportable insulating gas is considered to be a component of the reportable insulating gas.'' In many though not all cases, we are replacing occurrences of the proposed phrase ''fluorinated GHGs, including PFCs and SF_6'' with ''fluorinated GHGs that are components of reportable insulating gases.''
- Adding harmonizing requirements to the term ''facility'' in the definitions section at 40 CFR 98.308 and the requirements at 40 CFR 98.302, 98.305, and 98.306 to require reporters to account for the mass of each F–GHG for each electric power system.

As noted above, following consideration of comments received, the EPA is revising these requirements from proposal to continue to exclude insulating gases with weighted average 100-year GWPs of less than one. Based on a review of the subpart DD data submitted to date, the EPA has concluded that excluding insulating gases with GWPs of less than one from reporting under subpart DD will have little effect on the accuracy or completeness of the GWP-weighted totals reported under subpart DD or

under the GHGRP generally at this time, and will decrease the reporting burden for facilities. See section III.Q.2. of this preamble for a summary of the related comments and the EPA's response.

Also as noted above, we are making two clarifications to equation DD–4 in addition to the revisions that were proposed. First, to account for the possibility that the same fluorinated GHG could be a component of multiple reportable insulating gases, we are inserting a summation sign at the beginning of the right side of equation DD–4 to ensure that emissions of each fluorinated GHG ''i'' are summed across all reportable insulating gases ''j.'' Second, upon further consideration of equation DD–4 and its relationship to the newly defined terms ''new equipment'' and ''retiring equipment,'' we are modifying the terms for acquisitions and disbursements of reportable insulating gas j to account for acquisitions and disbursements of reportable insulating gas that are linked to the acquisition or sale of all or part of an electric power system. These include acquisitions or disbursements of reportable insulating gas inside equipment that is transferred while in use, acquisitions or disbursements of insulating gas inside equipment that is transferred from or to entities other than electrical equipment manufacturers and distributors while the equipment is not in use, and acquisitions or disbursements of insulating gas in bulk from or to entities other than chemical producers or distributors. Accounting for these acquisitions and disbursements in equation DD–4 ensures that the terms for acquisitions and disbursements of reportable insulating gas will be mathematically consistent with other terms in the equation, including the terms for the net increase in total nameplate capacity and the quantity of gas stored in containers at the end of the year. The term for the net increase in the total nameplate capacity will reflect the new definitions of ''new equipment'' and ''retiring equipment,'' which include transfers of equipment while in use. Similarly, the term for the quantity of reportable insulating gas stored in containers at the end of the year will reflect acquisitions or disbursements of reportable insulating gas stored in containers from or to all other entities, including other electric power systems. If these acquisitions or disbursements of gas in equipment or in bulk are not accounted for in the equation, the result will be incorrect. The revised terms are consistent with the definitions of ''new'' and ''retired'' in their treatment of hermetically sealed pressure equipment, with such equipment being included in terms related to equipment that is transferred while not in use, but excluded from terms related to equipment that is transferred while in use. We are also making harmonizing changes to the reporting requirements at 40 CFR 98.306, revising paragraphs (f), (g), and (i) (to be redesignated as paragraph (k)), and adding paragraphs (i), (n), and (o). These harmonizing revisions do not substantively change the reporting requirements as proposed and therefore would not substantively impact the burden to reporters.

With minor changes, we are finalizing the proposed requirements in 40 CFR 98.303(b) for users of electrical equipment to follow certain procedures when they elect to measure the nameplate capacities (in units of mass of insulating gas) of new and retiring equipment rather than relying on the rated nameplate capacities provided by equipment manufacturers. As proposed, this option will be available only for closed pressure equipment with a voltage capacity greater than 38 kilovolts (kV), not for hermetically sealed pressure equipment or smaller closed-pressure equipment. These procedures are intended to ensure that the nameplate capacity values that equipment users measure match the full and proper charges of insulating gas in the electrical equipment. These procedures are similar to and compatible with the procedures for measuring nameplate capacity adopted by the California Air Resources Board (CARB) in its Regulation for Reducing Greenhouse Gas Emissions from Gas Insulated Switchgear.[16]

Specifically, electrical equipment users electing to measure the nameplate capacities of any new or retiring equipment will be required at 40 CFR 98.303(b)(1) to measure the nameplate capacities of all eligible new and retiring equipment in that year and in all subsequent years. For each piece of equipment, the electrical equipment user will be required to calculate the difference between the user-measured and rated nameplate capacities, verifying that the rated nameplate capacity was the most recent available from the equipment manufacturer. Where a user-measured nameplate capacity differs from the rated nameplate capacity by two percent or more, the electrical equipment user will be required at 40 CFR 98.303(b)(2) to adopt the user-measured nameplate capacity for that equipment for the remainder of the equipment's life. Where a user-measured nameplate capacity differs from the rated nameplate capacity by less than two percent, the electrical equipment user will have the option at 40 CFR 98.303(b)(3) to adopt the user-measured nameplate capacity, but if they chose to do so, they must adopt the user-measured nameplate capacities for all new and retiring equipment whose user-measured nameplate capacity differed from the rated nameplate capacity by less than two percent.

With minor changes, the EPA is finalizing the proposed requirements at 40 CFR 98.303(b)(4) and (5) for when electrical equipment users measure the nameplate capacity of new equipment that they install and for when they measure the nameplate capacity of retiring equipment. These final requirements ensure that electrical equipment users:

- Correctly account for the mass of insulating gas contained in new equipment upon delivery from the manufacturer (*i.e.,* the holding charge), and correctly account for the mass of insulating gas contained in equipment upon retirement, measuring the actual temperature-adjusted pressure and comparing that to the temperature-adjusted pressure that reflects the correct filling density of that equipment.
- Use flowmeters or weigh scales that meet certain accuracy and precision requirements to measure the mass of insulating gas added to or recovered from the equipment;
- Use pressure-temperature charts and pressure gauges and thermometers that meet certain accuracy and precision requirements to fill equipment to the density specified by the equipment manufacturer or to recover the insulating gas from the equipment to the correct blank-off pressure, allowing appropriate time for temperature equilibration; and
- Ensure that insulating gas remaining in the equipment, hoses and gas carts is correctly accounted for.

After consideration of comments, we are including a requirement to follow the procedure specified by the equipment manufacturer to ensure that the measured temperature accurately reflects the temperature of the insulating gas, *e.g.,* by measuring the insulating gas pressure and vessel temperature after allowing appropriate time for the temperature of the transferred gas to equilibrate with the vessel temperature. Also after consideration of comments, we are (1) adding a requirement that facilities that use flow meters to measure the mass of insulating gas added to new equipment must keep the

[16] See *https://ww2.arb.ca.gov/sites/default/files/barcu/regact/2020/sf6/fro.pdf.*

mass flow rate within the range specified by the flowmeter manufacturer, and (2) not finalizing the option to use mass flowmeters to measure the mass of the insulating gas recovered from equipment. We are making both changes because the accuracy and precision of flowmeters can decrease significantly when the mass flow rate declines below the minimum specified by the flow meter manufacturer for accurate and precise measurements.

As proposed, we are allowing equipment users to account for any leakage from the equipment using one of two approaches. In both approaches, users must measure the temperature-compensated pressure of the equipment before they remove the insulating gas from that equipment and compare the measured temperature-compensated pressure to the temperature-compensated pressure corresponding to the full and proper charge of the equipment (the design operating pressure). If the measured temperature-compensated pressure is different from the temperature-compensated pressure corresponding to the full and proper charge of the equipment, the equipment user may either (1) add or remove insulating gas to or from the equipment until the equipment reaches its full and proper charge; recover the gas until the equipment reached a pressure of 0.068 pounds per square inch, absolute (psia) (3.5 Torr) or less; and weigh the recovered gas (charge adjustment approach), or (2) if (a) the starting pressure of the equipment is between its temperature-compensated design operating pressure and five (5) pounds per square inch (psi) below that pressure, and (b) the insulating gas is recovered to a pressure no higher than 5 psia (259 Torr),[17] recover the gas that was already in the equipment; weigh it; and account mathematically for the difference between the quantity of gas recovered from the equipment and the full and proper charge (mathematical adjustment approach, equation DD–5).

In the final rule, we are allowing use of the mathematical adjustment approach in somewhat more limited circumstances than proposed. We proposed that to use the mathematical adjustment approach to calculate the nameplate capacity, facilities would need to recover a quantity of insulating gas equivalent to at least 90 percent of the full manufacturer-rated nameplate capacity of the equipment, which would have provided more flexibility on the starting and ending pressures of the equipment during the recovery process. The proposed requirement was based on an analysis of the proposed accuracies and precisions of measuring devices and their impacts on the accuracy and precision of the mathematical adjustment approach, which indicated that 90 percent of the gas must be recovered to limit the uncertainty of the calculation to below 2 percent. We also recognized that departures from the ideal gas law could result in additional, systematic errors in the mathematical adjustment approach and therefore requested comment on the option of adding compressibility factors, which account for these departures, to equation DD–5 (proposed as equation DD–4). Such compressibility factors are not constant but are functions of the pressure and temperature of the insulating gas based on an equation of state specific to that insulating gas. We did not receive any comment on this option, and after considering the matter further, we believe that performing calculations using compressibility factors would prove too complex to implement in the field to obtain accurate nameplate capacity values. Without compressibility factors, departures of the insulating gas from the ideal gas law limit the reliability of the mathematical adjustment approach except within the ranges of starting and ending pressures described above. Consequently, we are finalizing the mathematical adjustment method as proposed but are restricting its use to the specified ranges of starting and ending pressures. Under these circumstances, any systematic errors in the mathematical adjustment approach are generally expected to fall below 0.5 percent, leading to maximum total errors (accounting for both departures from the ideal gas law and limits on the accuracy and precision of measuring devices) of approximately two percent. (For more discussion of this issue, see ''Update to the Technical Support for Proposed Revisions to Subpart DD, Electrical Transmission and Distribution Equipment Use,'' included in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424).

Given these restrictions, the mathematical adjustment approach cannot be used to calculate the nameplate capacity of equipment that cannot have the insulating gas inside of it recovered below atmospheric pressure. However, as noted above, the approach can still be used for situations where the blank-off pressure of a gas cart is above 3.5 Torr (0.068 psia) but below 5 psia and/or where the starting pressure of the electrical equipment is no more than 5 psi lower than its temperature-compensated design operating pressure. (Note that equipment whose starting pressure is above the temperature-compensated design operating pressure will need to have the excess gas recovered until it reaches the design operating pressure, at which point the nameplate capacity measurement can begin.)

We are finalizing as proposed requirements at 40 CFR 98.303(b)(6) that allow users to measure the nameplate capacity of electrical equipment earlier during maintenance activities that require opening the gas compartment. The equipment user will still be required to follow the measurement procedures required for retiring equipment at 40 CFR 98.303(b)(5) to measure the nameplate capacity, and the measured nameplate capacity must be recorded, but will not be used in equation DD–3 until that equipment is actually retired.

We are finalizing as proposed requirements at 40 CFR 98.303(b)(7) and (8) to require that, where the electrical equipment user is adopting the user-measured nameplate capacity, the user must affix a revised nameplate capacity label showing the revised nameplate value and the year the nameplate capacity adjustment process was performed to the device by the end of the calendar year in which the process was completed. For each piece of electrical equipment whose nameplate capacity is adjusted during the reporting year, the revised nameplate capacity value must be used in all rule provisions wherein the nameplate capacity is required to be recorded, reported, or used in a calculation.

To ensure that the mass balance method is based on consistent nameplate capacity values throughout the life of the equipment, we are finalizing at 40 CFR 98.303(b)(9) that electrical equipment users are allowed to measure and revise the nameplate capacity value of any given piece of equipment only once, unless the nameplate capacity itself is likely to have changed due to changes to the equipment (*e.g.,* replacement of the equipment bushings).

To help ensure that electrical equipment users obtain accurate measurements of their equipment's nameplate capacities, we are finalizing requirements at 40 CR 98.303(b)(10) that

[17] While the mathematical adjustment approach is expected to yield accurate results if the final pressure is 5 psia or less, facilities are encouraged to recover the insulating gas until they reach the blank-off pressure of the gas cart, which is generally expected to fall below 5 psia. Note that where the final pressure is equal to or less than 0.068 psia, the gas remaining in the equipment is estimated to account for a negligible share of the total and therefore facilities are not required to use the Mathematical Adjustment Method to account for it.

electrical equipment users must use measurement devices that meet the following accuracy and precision requirements when they measure the nameplate capacities of new and retiring equipment:

- Flow meters must be certified by the manufacturer to be accurate and precise to within one percent of the largest value that the flow meter can, according to the manufacturer's specifications, accurately record.
- Pressure gauges must be certified by the manufacturer to be accurate and precise to within 0.5 percent of the largest value that the gauge can, according to the manufacturer's specifications, accurately record.
- Temperature gauges must be certified by the manufacturer to be accurate and precise to within ±1.0 °F; and
- Scales must be certified by the manufacturer to be accurate and precise to within one percent of the true weight.

Additional information on these revisions and their supporting basis may be found in section III.N.1. of the preamble to the 2022 Data Quality Improvements Proposal.

We are finalizing at 40 CFR 98.306(r) and (s) (proposed as 40 CFR 98.306(o) and (p)) requirements for equipment users who measure and adopt nameplate capacity values to report the total rated and measured nameplate capacities across all the equipment whose nameplate capacities were measured and for which the measured nameplate capacities have been adopted in that year.

We are finalizing requirements in 40 CFR 98.307(b) as proposed for equipment users to keep records of certain identifying information for each piece of equipment for which they measure the nameplate capacity: the rated and measured nameplate capacities, the date of the nameplate capacity measurement, the measurements and calculations used to obtain the measured nameplate capacity (including the temperature-pressure curve and/or other information used to derive the initial and final temperature adjusted pressures of the equipment), and whether or not the measured nameplate capacity value was adopted for that piece of equipment.

To clarify the mass balance methodology in 40 CFR 98.303, we are adding definitions for "energized," "new equipment," and "retired equipment," at 40 CFR 98.308 as proposed. We are finalizing the definition of "energized" as proposed to mean "connected through busbars or cables to an electrical power system or fully-charged, ready for service, and being prepared for connection to the electrical power system. Energized equipment does not include spare gas insulated equipment (including hermetically-sealed pressure switchgear) in storage that has been acquired by the facility, and is intended for use by the facility, but that is not being used or prepared for connection to the electrical power system." The final definition more clearly designates what equipment is considered to be installed and functioning as opposed to being in storage.

With two minor changes, we are finalizing the proposed definition for "new equipment." "New equipment" is defined as "either (1) any gas insulated equipment, including hermetically-sealed pressure switchgear, that is not energized at the beginning of the reporting year but is energized at the end of the reporting year, or (2) any gas insulated equipment other than hermetically-sealed pressure switchgear that has been transferred while in use, meaning it has been added to the facility's inventory without being taken out of active service (*e.g.,* when the equipment is sold to or acquired by the facility while remaining in place and continuing operation)." Similarly, we are finalizing the definition for "retired equipment" with two minor changes. "Retired Equipment" is defined as "either (1) any gas insulated equipment, including hermetically-sealed pressure switchgear, that is energized at the beginning of the reporting year but is not energized at the end of the reporting year, or (2) any gas insulated equipment other than hermetically-sealed pressure switchgear that has been transferred while in use, meaning it has been removed from the facility's inventory without being taken out of active service (*e.g.,* when the equipment is acquired by a new facility while remaining in place and continuing operation)." The proposed definitions both included two sentences, where the first sentence specified that the equipment changed from "not energized" to "energized" (or vice versa), and the second sentence preceded the phrase "that has been transferred while in use" with "This includes." Upon review of the proposed definitions, we realized that they could lead to confusion because equipment that is transferred while in use does not change from "not energized" to "energized" or vice versa, and therefore cannot be "included" in the sets of equipment that change from "not energized" to "energized" or vice versa. We therefore replaced "This includes" with "or." We also realized that including hermetically-sealed pressure switchgear in equipment that is transferred while in use would trigger requirements to inventory the acquired (new) or disbursed (retired) hermetically-sealed pressure switchgear for purposes of the mass balance calculation (equation DD–4) and the reporting requirements at 40 CFR 98.306(a)(2) and (4). We did not intend to trigger these requirements for hermetically sealed pressure equipment that is transferred during use. Such requirements would be inconsistent with the intent and effect of the current provision at 40 CFR 98.306(a)(1), which excludes existing hermetically-sealed pressure switchgear from the requirement to report the existing nameplate capacity total at the beginning of the year. We therefore excepted hermetically sealed switchgear from equipment that is transferred while in use in both definitions. With these minor changes, the definitions clarify how the terms "new" and "retired" should be interpreted for purposes of equation DD–3.

b. Revisions To Streamline and Improve Implementation for Subpart DD

The EPA is finalizing several revisions to subpart DD to streamline requirements. First, we are revising the applicability threshold of subpart DD at 40 CFR 98.301 largely as proposed, in order to align with revisions to include additional F–GHGs in subpart DD. However, as discussed above, insulating gases with weighted average GWPs less than or equal to 1 will remain excluded from reporting under subpart DD. We are replacing the existing nameplate capacity threshold with an emissions threshold of 25,000 $mtCO_2e$ per year of F–GHGs that are components of reportable insulating gases (*i.e.,* insulating gases whose weighted average GWPs, as calculated in equation DD–3, are greater than one (1)). To calculate their F–GHG emissions for comparison with the threshold, electrical equipment users will use one of two new equations finalized in subpart DD at 40 CFR 98.301, equations DD–1 and DD–2. The equations explicitly include not only the nameplate capacity of the equipment but also an updated default emission factor and the GWP of each insulating gas.

We are also finalizing revisions to the existing calculation, monitoring, and reporting requirements of subpart DD to require reporting of additional F–GHGs beyond SF_6 and PFCs that are components of reportable insulating gases. The new equations DD–1 and DD–2 that we are finalizing for the applicability threshold require potential

reporters to account for the total nameplate capacity of all equipment containing reportable insulating gases (located on-site and/or under common ownership or control), including equipment containing F–GHG mixtures, and multiply by the weight fraction of each F–GHG (for gas mixtures), the GWP for each F–GHG, and an emission factor of 0.10 (representing an emission rate of 10 percent).

We are finalizing harmonizing changes in multiple sections of subpart DD to renumber equation DD–1 and maintain cross-references to the equation. We are also finalizing revisions to the existing threshold in 40 CFR 98.301 and table A–3 to subpart A (General Provisions). Additional information on these revisions and their supporting basis may be found in section III.N.2. of the preamble to the 2022 Data Quality Improvements Proposal.

Finally, we are removing an outdated monitoring provision at 40 CFR 98.304(a), which reserves a prior requirement for use of BAMM that applied solely for RY2011.

2. Summary of Comments and Responses on Subpart DD

This section summarizes the major comments and responses related to the proposed amendments to subpart DD. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart DD.

a. Comments on Revisions To Improve the Quality of Data Collected for Subpart DD

Comment: One commenter asked for clarification regarding whether the equipment user needs to account for insulating gas remaining inside gas-insulated equipment (GIE) that are transferred to another entity (vendor) for repair or salvage. The commenter asserted that since the equipment is leaving the inventory with gas inside, it should be counted as both retired equipment and a gas disbursement. The commenter suggested the ''Disbursements'' term in equation DD–3 be modified to include similar language to the ''Acquisitions'' term, to clarify that gas inside equipment that is transferred to another entity for repair or salvage, in addition to equipment that is sold, counts as a disbursement.

Response: The EPA agrees with the commenter and is revising the ''Disbursements'' term in equation DD–3 (being finalized as equation DD–4) to account for gas ''transferred'' as well as ''sold'' to ''other entities.'' As discussed in section III.Q.1. of this preamble, we are making a number of clarifications to the ''Acquisitions'' and ''Disbursements'' terms in equation DD–4 to accommodate the full range of possible acquisitions and disbursements by electric power systems, which will improve the accuracy and completeness of equation DD–4 and the associated reporting and recordkeeping requirements.

Comment: One commenter suggested that the EPA revise the nameplate capacity adjustment text as follows: first, to remove the word ''covered'' prior to ''insulating gas'' in 40 CFR 98.303(b)(4)(ii)(A), since ''covered'' is not included in the EPA's definition of insulating gas.

Response: The EPA agrees with the commenter and is revising 40 CFR 98.303(b)(4)(ii)(A) as suggested to reflect the language which is used in the definitions and to minimize confusion. As discussed in section III.Q.1. of this preamble, we are introducing the term ''reportable insulating gas'' to distinguish between insulating gas that is included in subpart DD (''reportable'') because it has a weighted average GWP greater than 1 and insulating gas that is not reportable because it has a weighted average GWP of 1 or less.

Comment: Two commenters suggested the EPA change the language in 40 CFR 98.303(b)(5)(ii), which was proposed as a requirement to ''convert the initial system pressure to a temperature-compensated initial system pressure by using the temperature/pressure curve for that insulating gas.'' The commenters stated that the temperature/pressure curve is not intended for conversions of initial system pressure to temperature-compensated pressure. The commenters suggested that the requirement should be to compare the measured initial system pressure and vessel temperature to the equipment manufacturer's temperature-pressure curve specific for the equipment to confirm the equipment is at the proper operating pressure, prior to recovery of the insulating gas. One commenter recommended two options for measuring initial gas pressure: (1) use external pressure and temperature gauges according to 40 CFR 98.303(b)(5)(i); or (2) if an integrated temperature-compensated gas pressure gauge was used for the initial gas fill and to monitor and maintain the gas at the proper operating pressure over the service life of the circuit breaker, use the same gauge to determine whether the circuit breaker is at the proper operating pressure.

Response: The EPA agrees with the commenters regarding the language at 40 CFR 98.303(b)(5)(ii) and is finalizing the requirement as follows: ''Compare the initial system pressure and temperature to the equipment manufacturer's temperature/pressure curve for that equipment and insulating gas.'' Regarding allowing use of an integrated temperature-compensated gas pressure gauge, use of such a gauge is allowed if the gauge is certified by the gauge manufacturer to be accurate and precise to within 0.5 percent of the largest value that the gauge can, according to the manufacturer's specifications, accurately record. It is EPA's understanding that many gauges that are built into the electrical equipment do not meet these accuracy and precision requirements. However, if they do, the rule does not prohibit their use in nameplate capacity measurements.

Comment: One commenter objected to the proposed requirement to recover the insulating gas to a blank-off pressure not greater than 3.5 Torr during the nameplate capacity measurement. The commenter noted that not all facilities own gas carts capable of reaching 3.5 Torr, and, for some GIE, that level of pressure is not necessary for an accurate reading. The commenter recommended that the GIE recovery be performed to allow for 99.1 percent or greater recovery of the insulating gas.

Response: As discussed above, the EPA is finalizing a requirement that facilities measuring the nameplate capacity of their equipment recover the gas to a pressure of at most 5 psia (258.6 Torr). This will accommodate gas carts that are not capable of reaching 3.5 Torr. To ensure that the gas remaining in the equipment at pressures above 3.5 Torr is accounted for, facilities that recover the gas to a pressure between 5 psia and 3.5 Torr will be required to use the mathematical adjustment approach (equation DD–5) to calculate the full nameplate capacity. As discussed in the preamble to the proposed rule, the EPA estimates that 0.1 percent of the full and proper charge of insulating gas would remain in the equipment at 3.5 Torr (assuming that a full and proper charge has a pressure of 3800 Torr), a negligible fraction. However, the fraction of gas remaining after recovery of 99.1 percent of the gas, 0.9%, is not negligible, but represents a significant systematic underestimate compared to the 2% tolerance for nameplate capacity measurements. Since it is straightforward to correct for this systematic underestimate by using the

mathematical adjustment approach, we are requiring use of equation DD–5 in such situations.

Comment: One commenter representing manufacturers of electrical equipment recommended that after insulating gas was added to a piece of electrical equipment, facilities should allow at least 24 hours to allow the gas to condition itself to its container in order to confirm the correct density has been met.

Response: The EPA is adding a requirement to 40 CFR 98.303(b)(4)(ii) that facilities follow the procedure specified by the electrical equipment manufacturer to ensure that the measured temperature accurately reflects the temperature of the insulating gas, *e.g.,* by measuring the insulating gas pressure and vessel temperature after allowing appropriate time for the temperature of the transferred gas to equilibrate with the vessel temperature. This allows for the possibility that some electrical equipment, *e.g.,* electrical equipment with smaller charge sizes, may require less than 24 hours for the insulating gas temperature to equilibrate with the temperature of the vessel. Because achieving the correct density of the insulating gas in the equipment is important to the proper functioning of the equipment, the guidance provided by the equipment manufacturer should be sufficient to ensure that the appropriate density is achieved for purposes of the nameplate capacity measurement.

Comment: Commenters representing electrical equipment users and manufacturers provided input on the use of mass flow meters to measure the nameplate capacities of new and retiring electrical equipment. One commenter provided recommended edits to the proposed text to add requirements to ensure that a minimum gas flow is maintained while measuring the mass of insulating gas being added to new equipment. The commenter stated that to ensure that the flowmeter was properly configured for its application, the maximum and minimum flow rates of the meter, as well as the displacement of the pumps and compressors on the gas cart being used, must be taken into consideration. The commenter added that, in general, mass flow meters designed for high flow applications will not be suitable for low flow conditions and meters designed for low flow applications will not be suitable for high flow conditions. This commenter also recommended adding the use of an in-calibration cylinder scale as an alternative option for measuring the gas transferred during the equipment filling process. Two commenters recommended removing the option to use a mass flow meter to measure the mass of insulating gas recovered from retiring equipment due to the potential for errors when a mass flow meter is used in this process. The commenters stated that use of a mass flow meter to measure the insulating gas recovered is not recommended since a mass flow meter does not accurately measure gas at low flow rates. Instead, the commenters recommended that the gas container weighing method should be used to accurately measure the total weight of insulating gas recovered from the equipment. One commenter added that the process of weighing all gas removed from a GIE and transferred into a cylinder includes weighing all the gas trapped in hoses and in gas cart, which would not be accounted for by the flow meter; the commenter pointed out that the gas (trapped in hoses and in the gas cart) would need to be moved into cylinders to be accurately weighed with a cylinder scale.

Response: After consideration of these comments, the EPA is finalizing the proposed provisions for measuring the nameplate capacities of new and retiring equipment with two changes. First, we are requiring that facilities that use mass flow meters to measure the mass of insulating gas added to new equipment must keep the mass flow rate within the range specified by the mass flow meter manufacturer to assure an accurate and precise mass flow meter reading. Second, we are removing the option to use mass flow meters to measure the quantity of gas recovered from retiring equipment. We have analyzed the impact of the uncertainty of flowmeters at low flow rates on overall nameplate capacity measurements, and we have concluded that this impact may lead to large errors under some circumstances. As noted by the commenters, the relative error for flowmeters can increase when the flowmeter is used to measure mass flow rates below a certain fraction of the maximum full-scale value, and the mass flow rate will gradually decline as the insulating gas is transferred from the container to the equipment or vice versa, reducing the density of the gas inside the source vessel. For measuring the quantity of insulating gas added to new equipment, this issue can be addressed by requiring that the mass flow rate be kept within the range specified by the mass flow meter manufacturer, which can be accomplished by, *e.g.,* switching to a full container when the density of the insulating gas in the current container falls below the minimum level. However, for measuring the quantity of insulating gas recovered from retiring equipment, the insulating gas is being transferred from the equipment itself, and the recovery process therefore inevitably lowers the mass flow rate below the minimum level. For this reason, we are not taking final action on the option to use flowmeters to measure the quantity of insulating gas recovered from retiring equipment.

In our analysis of this issue, we reviewed our proposal at 40 CFR 98.303(b)(10) that mass flow meters must be accurate and precise to within one percent of the largest value that the flow meter can, according to the manufacturer's specifications, accurately record, *i.e.,* the maximum full-scale value. This means that the relative error of the flowmeter could rise hyperbolically from one percent of the measured value (when the measured value equals the maximum value) to much higher levels at lower flow rates, *e.g.,* 2 percent of the flow rate at half the maximum, 4 percent of the flow rate at one quarter of the maximum, 10 percent of the flow rate at one tenth the maximum, etc. These rising relative errors lead to overall errors in the mass flow measurement that are far above one percent. Even if the flow meter is accurate to within one percent of the measured value over a ten-fold range of flow rates, errors at lower flow rates can be significant. In an example provided to us by a company that provides insulating gas recovery equipment (gas carts) and insulating gas recovery services to electric power systems, the relative error of the measurement of the flow rate rose by a factor of five when the flow rate fell below 10 percent of the maximum full-scale value. If the error of a flowmeter climbed from 1 percent to 5 percent when the flow rate fell below 10 percent of the maximum full-scale value, the measurement of the total mass recovered would have a maximum uncertainty of 1.4 percent, which can result in overall errors above 2 percent in the nameplate capacity measurement as a whole (accounting also for the uncertainties of measured pressures, etc.).

Regarding one commenter's recommendation that we allow weigh scales to be used to measure the quantity of gas filled into new equipment, we are finalizing our proposal at 40 CFR 98.303(b)(4)(ii)(A) to allow use of weigh scales for this measurement.

Comment: Two commenters requested the EPA remove the term ''precise'' from proposed 40 CFR 98.303(b)(10). Both commenters stressed that accuracy is more important. One commenter stated that equipment certified to be accurate

and precise may be difficult to find, and another additionally asserted there is little value in precision.

Response: In the final rule, we are finalizing as proposed the accuracy and precision requirements for gauges, flow meters, and weigh scales used to measure nameplate capacities. To obtain an accurate measurement of the nameplate capacity of a piece of equipment, measurement devices must be both accurate and precise. As discussed in the technical support document for the proposed rule,[18] the term ''accurate'' indicates that multiple measurements will yield an average that is near the true value, while the term ''precise'' indicates that multiple measurements will yield consistent results. A measurement device that is accurate without being precise may show inconsistent results from measurement to measurement, and these individual inconsistent results may be significantly different from the true value even if their average is not. Since measurements of nameplate capacity are generally expected to be taken only once for a particular piece of equipment, the devices on which the individual measurements are taken must be both accurate and precise for the measurements to yield results that are near the true values.

Comment: One commenter suggested redefining the definition of ''insulating gas'' to including any gas with a GWP greater than one (1) and not any fluorinated GHG or fluorinated GHG mixture. The commenter urged that the proposed definition ignores other potential gases that may come onto the market that are not fluorinated but still have a GWP. The commenter stated that defining insulating gas to include any gas with a GWP greater than 1 used as an insulating gas and/or arc quenching gas in electrical equipment would mirror the threshold implemented by the California Air Resources Board and would provide consistency for reporters across Federal and State reporting rules.

Response: In the final rule, the EPA is not requiring electric power systems to track or report emissions of insulating gases with weighted average 100-year GWPs of one or less. Based on a review of the subpart DD data submitted to date, the EPA has concluded that excluding insulating gases with weighted average GWPs of one or less from reporting under subpart DD will have little effect on the accuracy or completeness of the GWP-weighted totals reported under subpart DD or under the GHGRP generally. Between 2011 and 2021, the highest emitting facilities reporting under subpart DD reported SF_6 emissions ranging from 8 to 23 mt (unweighted) or 190,000 to 540,000 $mtCO_2e$. Over the same period, total emissions across all facilities have ranged from 96 to 171 mt (unweighted) or 2.3 to 4.1 million $mtCO_2e$. At GWPs of one, these weighted totals would be equivalent to the unweighted quantities reported, which constitute approximately 0.004% (1/23,500) of the GWP-weighted totals. This does not account for the fact that for the first few years it is sold, equipment containing insulating gases with weighted average GWPs of one or less will make up a small fraction of the total nameplate capacity of the electrical equipment in use. (Electrical equipment has a lifetime of about 40 years, so only a small fraction of the total stock of equipment is retired and replaced each year.) Even in a worst-case scenario where the annual emission rate of the equipment containing a very low-GWP insulating gas was assumed to equal the total nameplate capacity of all the equipment installed (implying an emission rate of 100 percent, higher than any ever reported under the GHGRP), the total GWP-weighted emissions reported under subpart DD would be considerably smaller than those reported under any other subpart: total unweighted nameplate capacities reported across all facilities to date have ranged between 4,847 and 6,996 mt. At GWPs of 1, these totals would fall under the 15,000 and 25,000 $mtCO_2e$ quantities below which individual facilities are eventually allowed to exit the program under the off-ramp provisions, as applicable.

To monitor trends in the replacement of SF_6 by insulating gases with weighted average GWPs less than one, the EPA will continue to track supplies of such insulating gases under subparts OO and QQ and will track deliveries of such insulating gases in equipment or containers under subpart SS.

b. Comments on Revisions To Streamline and Improve Implementation for Subpart DD

Comment: One commenter supported the proposed threshold for subpart DD but wanted the EPA to clarify that reporters that do not think they will fall below the revised reporting threshold or are not otherwise using F–GHGs other than SF_6 do not need to recalculate their emissions to show they must report.

Response: The applicability threshold is for determining whether entities must initially begin reporting to the GHGRP. Facilities that have reported have calculated their emissions more precisely using the mass balance approach. If those calculations have shown that they are eligible to exit the program under the off-ramp provisions of subpart A of part 98 (40 CFR 98.2(i)), they do not need to report again unless facility emissions exceed 25,000 $mtCO_2e$. On the other hand, if the calculations have shown that the facility does not meet the existing off-ramp conditions to exit the program, they must continue reporting regardless of the results of the threshold calculation at 40 CFR 98.301.

R. Subpart FF—Underground Coal Mines

We are finalizing the amendments to subpart FF of part 98 (Underground Coal Mines) as proposed. The EPA received no comments objecting to the proposed revisions to subpart FF; therefore, there are no changes from the proposal to the final rule. The EPA is finalizing two technical corrections to: (1) correct the term ''MCF_i'' in equation FF–3 to subpart FF to revise the term ''$1\text{-}(fH2O)_1$'' to ''$1\text{-}(fH2O)_i$'', and (2) to correct 40 CFR 98.326(t) to add the word ''number'' after the word ''identification'' to clarify the reporting requirement. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal.

S. Subpart GG—Zinc Production

This section discusses the final revisions to subpart GG. We are finalizing amendments to subpart GG of part 98 (Zinc Production) as proposed. The EPA received only supportive comments for the proposed revisions to subpart GG. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart GG. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal.

The EPA is finalizing one revision to add a reporting requirement at 40 CFR 98.336(a)(6) and (b)(6) for the total amount of electric arc furnace (EAF) dust annually consumed by all Waelz kilns at zinc production facilities. The final data elements will only require segregation and reporting of the mass of EAF dust consumed for all kilns. These requirements apply to reporters using either the CEMS direct measurement or mass balance calculation

[18] See ''Technical Support for Proposed Revisions to Subpart DD (2021),'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

methodologies. Reporters currently collect information on the EAF dust consumed on a monthly basis as part of their existing operations as a portion of the inputs to equation GG–1 to subpart GG; reporters will only be required to sum all EAF dust consumed on a monthly basis for each kiln and then for all kilns at the facility for reporting and entering the information into e-GGRT. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the final revisions to subpart GG, as described in section VI. of this preamble.

T. Subpart HH—Municipal Solid Waste Landfills

We are finalizing several amendments to subpart HH of part 98 (Municipal Solid Waste Landfills) as proposed. In some cases, we are finalizing the proposed amendments with revisions. In other cases, we are not taking final action on the proposed amendments. Section III.T.1. of this preamble discusses the final revisions to subpart HH. The EPA received several comments on proposed subpart HH revisions which are discussed in section III.T.2. of this preamble. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the final revisions to subpart HH, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart HH

This section summarizes the final amendments to subpart HH. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart HH can be found in this section and section III.T.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

The EPA is finalizing several revisions to subpart HH to improve the quality of data collected under the GHGRP. First, the EPA is finalizing revisions to update the factors used in modeling CH_4 generation from waste disposed at landfills in table HH–1 to subpart HH. As explained in the 2022 Data Quality Improvements Proposal, subpart HH uses a model to estimate CH_4 generation that considers the quantity of MSW landfilled, the degradable organic carbon (DOC) content of that MSW, and the first order decay rate (k) of the DOC. Table HH–1 to subpart HH provides DOC and k values that a reporter must use to calculate their CH_4 generation based on the different categories of waste disposed at that landfill and the climate in which the landfill is located. The EPA previously conducted a multivariate analysis of data reported under subpart HH to estimate updated DOC and k values for each waste characterization option. Details of this analysis are available in the memorandum from Meaghan McGrath, Kate Bronstein, and Jeff Coburn, RTI International, to Rachel Schmeltz, EPA, ''Multivariate analysis of data reported to the EPA's Greenhouse Gas Reporting Program (GHGRP), Subpart HH (Municipal Solid Waste Landfills) to optimize DOC and k values,'' (June 11, 2019), available in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424. The EPA is finalizing the following changes as proposed:

- For the Bulk Waste option, amending the bulk waste DOC value in table HH–1 from 0.20 to 0.17.
- For the Modified Bulk Waste option, for bulk MSW waste without inerts and (C&D) waste, amending the DOC value from 0.31 to 0.27.
- For the Waste Composition option, adding a DOC for uncharacterized MSW of 0.32, and revising 40 CFR 98.343(a)(2) to reference using this uncharacterized MSW DOC value rather than the bulk MSW value for waste materials that could not be specifically assigned to the streams listed in table HH–1 for the Waste Composition option.

The EPA is also revising the default decay rate values in table HH–1 for the Bulk Waste option and the Modified Bulk MSW option and adding k value ranges for uncharacterized MSW for the Waste Composition Option. The final k values, which have been revised from those proposed, are shown in table 4 of this preamble. The revised defaults represent the average optimal k values derived through an additional optimization analysis conducted in response to comments where the bulk waste DOC value was set to the revised value of 0.17 and optimal k values were determined for each precipitation category.

TABLE 4—REVISED DEFAULT k VALUES

Factor	Subpart HH default	Units
k values for Bulk Waste option and Modified Bulk MSW option		
k (precipitation plus recirculated leachate <20 inches/year)	0.033	yr − 1.
k (precipitation plus recirculated leachate 20–40 inches/year)	0.067	yr − 1.
k (precipitation plus recirculated leachate >40 inches/year)	0.098	yr − 1.
k value range for Waste Composition option		
k (uncharacterized MSW)	0.033 to 0.098	yr − 1.

The revisions to the DOC and k values in table HH–1 reflect the compositional changes in materials that are disposed at landfills. These updated factors will allow MSW landfills to more accurately model their CH_4 generation. We are also clarifying in the final rule that starting in RY2025 these new DOC and k values are to be applied for disposal years 2010 and later, consistent with when the compositional changes occurred. Additional information on these revisions and their supporting basis may be found in section III.Q. of the preamble to the 2022 Data Quality Improvements Proposal and in the memorandum ''Revised Analysis and Calculation of Optimal k Values for Subpart HH MSW Landfills Using a 0.17 DOC Default and Timing Considerations'' included in Docket ID. No. EPA–HQ–OAR–2019–0424.

We are also finalizing, as proposed, revisions to account for CH_4 emission events that are not well quantified under the GHGRP including: (1) a poorly operating or non-operating gas collection system; and (2) a poorly operating or non-operating destruction device. The EPA is finalizing, as proposed, revisions and additions to address these scenarios as follows:

- Revising equations HH–7 and HH–8 to more clearly indicate that the ''f_{Rec}'' term is dependent on the gas collection system, to clarify how the equation

applies to landfills that may have more than one gas collection system and may have multiple measurement locations associated with a single gas collection system.

- Clarifying in ''f_{Rec}'' that the recovery system operating hours only include those hours when the system is operating normally. Facilities should not include hours when the system is shut down or when the system is poorly operating (*i.e.,* not operating as intended). Poorly operating systems can be identified when pressure, temperature, or other parameters indicative of system performance are outside of normal variances for a significant portion of the system's gas collection wells.
- For equations HH–6, HH–7, and HH–8, revising the term ''f_{Dest}'' to clarify that the destruction device operating hours exclude periods when the destruction device is poorly operating. Facilities should only include those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter that is indicative of effective operation. For flares, periods when there is no flame present must be excluded from the annual operating hours.

Following consideration of comments received, the EPA is finalizing two minor clarifications of the term ''$f_{Dest,n}$'' in equations HH–7 and HH–8. First, we are removing the redundant phrase ''as measured at the nth measurement location.'' Second, we are removing the word ''pilot'' to clarify that for flares used as a destruction device, the annual operating hours must exclude any period in which no flame is present, either pilot or main. These changes account for variances in flare operation, *e.g.,* flares which may only use a pilot on startup. See section III.T.2. of this preamble for additional information on related comments and the EPA's response.

In the 2023 Supplemental Proposal, we proposed that facilities that conduct surface-emissions monitoring must use that data and correct the emissions calculated in equations HH–6, HH–7, and HH–8 to account for excess emissions when the measured surface methane concentration exceeded 500 ppm based on a correction term added to those equations. We also proposed for facilities not conducting surface-emissions monitoring to use collection efficiencies that are 10-percentage points lower than the historic collection efficiencies in table HH–3 to subpart HH. Following consideration of comments received, we are not taking final action on the surface-emissions monitoring correction term that was proposed. Instead, we are finalizing the proposed lower collection efficiencies in table HH–3 to subpart HH, but applying the reduced collection efficiencies for all reporters under subpart HH. See section III.T.2. of this preamble for additional information on related comments and the EPA's response.

The EPA is also finalizing several revisions to the reporting requirements for subpart HH, including more clearly identifying reporting elements associated with each gas collection system, each measurement location within a gas collection system, and each control device associated with a measurement location. First, we are finalizing revisions to landfills with gas collection systems consistent with the proposed revisions in the methodology, *i.e.,* to separately require reporting for each gas collection systems and for each measurement location within a gas collection system. We are requiring, for each measurement location that measures gas to an on-site destruction device, certain information be reported about the destruction device, including: type of destruction device; the total annual hours where gas was sent to the destruction device; a parameter indicative of effective operation, such as the annual operating hours where active gas flow was sent to the destruction device and the destruction device was operating at its intended temperature; and the fraction of the recovered methane reported for the measurement location directed to the destruction device. We are also requiring reporting of identifying information for each gas collection system, each measurement location within a gas collection system, and each destruction device. We are also finalizing reporting requirements for landfills with gas collection systems to indicate the applicability of the NSPS (40 CFR part 60, subparts WWW or XXX), state plans implementing the EG (40 CFR part 60, subparts Cc or Cf), and Federal plans (40 CFR part 62, subparts GGG and OOO).

In the 2023 Supplemental Proposal, the EPA also sought comment on how other CH_4 monitoring technologies, *e.g.,* satellite imaging, aerial measurement, vehicle-mounted mobile measurement, or continuous sensor networks, might enhance subpart HH emissions estimates. The EPA did not propose, and therefore is not taking final action on, any amendments to subpart HH to this effect. However, the EPA did seek comment on the availability of existing monitoring technologies, and regulatory approaches and provisions necessary to incorporate such data into subpart HH for estimating annual emissions. We will continue to review the comments received along with other studies and may amend subpart HH to allow the incorporation of additional measurement or monitoring methodologies in the future.

2. Summary of Comments and Responses on Subpart HH

This section summarizes the major comments and responses related to the proposed amendments to subpart HH. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart HH.

Comment: Numerous commentors stated that methane detection technology, specifically top-down direct measurement from aerial studies, has greatly improved the ability to observe and quantify emissions from landfills (*e.g.,* Krautwurst, et al., 2017; Cusworth, et al., 2022).[19] [20] Some commenters noted that, among several studies in California, Maryland, Texas, and Indiana, there are discrepancies between observed data collected from these new detection technologies and the estimated emissions from the models that the EPA currently uses. Several commenters pointed to a recent study (Nesser, et al., 2023) using satellite data that highlighted that at 33 of 70 landfills studied, U.S. GHG Inventory landfill emissions are underestimated by 50 percent when compared to the current top-down approaches.[21] These discrepancies indicate methane emissions from landfills may be considerably higher than currently recorded. Some commenters stated that advanced methane monitoring technology has improved significantly in effectiveness and cost, and provided specific input regarding advanced methane monitoring technologies available for landfills and how their data might enhance subpart

[20] Cusworth, D., et al., (2020). ''Using remote sensing to detect, validate, and quantify methane emissions from California solid waste operations.'' Environ. Res. Lett. 15: 054012.

[21] Nesser, H., et al. 2023. High-resolution U.S. methane emissions inferred from an inversion of 2019 TROPOMI satellite data: contributions from individual states, urban areas, and landfills, *EGUsphere* [preprint], *https://doi.org/10.5194/egusphere-2023-946,* 2023.

HH emissions reporting. The commenters pointed to both screening and close-range technologies that would be beneficial for pinpointing leaks or emission sources, and outlined several technologies including satellite imaging, aerial measurements, vehicle-mounted mobile measurement, and continuous sensor networks. The commenters recommended comprehensive monitoring with both screening and close-range technologies to provide full coverage. The commenters suggested the use of these technologies to catch large emission events that are not accounted for in the existing reporting requirements. Commenters noted that the EPA could review submitted reports and activity data to determine how to best quantify the observed large release events as compared to annual reported emissions (*e.g.,* updating f_{Rec} or f_{Dest} values to account for periods of downtime or poor performance not captured that contributed to a large discrepancy).

Other commenters recommended that the EPA create a mechanism under subpart HH for receiving and considering third-party observational data that the EPA could then use to revise reported emissions as necessary. Some commenters suggested the EPA base a threshold for these sources of 100 kg/hour. Commenters also recommended setting assumptions for the duration of the emissions similar to those proposed for subpart W of part 98 (Petroleum and Natural Gas Systems). Some commenters suggested the EPA should embrace for landfills the same tiered methane emissions monitoring approach as is utilized in its proposed rulemaking for the oil and gas sector. Commenters also suggested a tiered approach that combines continuous monitoring ground systems with periodic remote sensing along with approaches for translating methane concentrations from top-down sources to source-specific emission rates. Commenters urged that the sooner the EPA can move toward top-down or facility-wide measurement of emissions for reporting or validation of reported values, the sooner reported and measured emissions would be reconcilable and verifiable. A few commenters also recommended that the EPA facilitate the flow of information from other agencies (the National Aeronautics and Space Administration (NASA), National Oceanic and Atmospheric Administration (NOAA), National Institute of Standards and Technology (NIST), and U.S. Department of Energy (DOE)), third parties, and operators to find and mitigate plumes faster.

Several commenters provided recommendations for additional reporting requirements such as gas collection and capture system (GCCS) type and design, destruction device type and characteristics, monitoring technologies, site cover type, construction periods, and compliance issues which may relate to closures of control devices.

Response: The EPA agrees that recent aerial studies indicate methane emissions from landfills may be considerably higher than bottom-up emissions reported under subpart HH for some landfills. Emissions may be considerably higher due to emissions from poorly operating gas collection systems or destruction devices and leaking cover systems. The supplemental proposal included revisions to the monitoring and calculation methodologies in subpart HH to account for these scenarios. In particular, proposed equations HH–6, HH–7, and HH–8 included modifications to incorporate direct measurement data collected from methane surface-emissions monitoring. In the supplemental proposal, we also requested information about other direct measurement technologies and how their data may enhance emissions reporting under subpart HH. We received many responses to our request. Based on the comments received, we are not taking final action at this time regarding the incorporation of other direct measurement technologies for the following reasons. First, most top-down, facility measurements are taken over limited durations (a few minutes to a few hours) typically during the daylight hours and limited to times when specific meteorological conditions exist (*e.g.,* no cloud cover for satellites; specific atmospheric stability and wind speed ranges for aerial measurements). These direct measurement data taken at a single moment in time may not be representative of the annual CH_4 emissions from the facility, given that many emissions are episodic. If emissions are found during a limited duration sampling, that does not necessarily mean they are present for the entire year. And if emissions are not found during a limited duration sampling, that does not mean significant emissions are not occurring at other times. Extrapolating from limited measurements to an entire year therefore creates risk of either over or under counting actual emissions. Second, while top-down measurement methods, including satellite and aerial methods, have proven their ability to identify and measure large emissions events, their detection limits may be too high to detect emissions from sources with relatively low emission rates or that are spread across large areas, which is common for landfills.[22] This is likely why only seven percent of the landfills in the Duren, et al. (2019) study had detectable emissions. The EPA will continue to review additional information on existing and advanced methodologies and new literature studies, and consider ways to effectively incorporate these methods and data in future revisions under subpart HH for estimating annual emissions.

For the oil and gas sector, the super-emitter program that allows third-party measurement data to be submitted was proposed under 40 CFR part 60, subpart OOOOb (87 FR 74702, December 6, 2022). The GHGRP looked to use this information, but we did not develop or propose such a program under the GHGRP. As such, this type of program is beyond the scope of the proposed rule. We will consider whether developing and implementing a similar super-emitter program within subpart HH of part 98 or the overall GHGRP is appropriate under future rulemakings.

We proposed, and are finalizing, several additional reporting elements including, for landfills with a gas collection system, information on the applicability of the NSPS (40 CFR part 60, subparts WWW or XXX), state plans implementing the EG (40 CFR part 60, subparts Cc or Cf), and Federal plans (40 CFR part 62, subparts GGG and OOO). We note that several of the items suggested are already reporting elements. For example, we already require reporting of a description of the gas collection system, such as the manufacturer, capacity, and number of wells, which provides requested information on GCCS type and design. We also proposed and are finalizing reporting requirements for the type of destruction device. We already require reporting of cover type. We consider the reporting requirements to be sufficient based on the current methodologies used to estimate CH_4 emissions. We will consider the need for additional reporting elements if we incorporate additional measurement or monitoring methodologies in future rulemakings.

Comment: Several commentors expressed limited support for the proposed use of surface emission monitoring data to help account for

[22] Duren, et al. 2019. ''California's methane super-emitters.'' *Nature,* Vol. 575, Issue 7781, pp. 180–184, available at *https://doi.org/10.1038/s41586-019-1720-3.* Available in the docket for this rulemaking, Docket ID. No. EPA–HQ–OAR–2023–0234.

emissions from cover leaks. These commenters either recommended that the EPA use more quantitative emission measurement methods instead of surface-emissions monitoring or to require that the surface-emissions monitoring be conducted at 25-foot intervals consistent with California and other state requirements, and to use a lower leaks definition of 25 parts per million volume (ppmv), rather than using the proposed 30-meter intervals (about 98-foot intervals) with leaks defined as concentrations of 500 ppmv or more above background, to help ensure the surface-emissions monitoring identifies all leaks from the landfill's surface. Other commenters opposed the proposed use of a surface-emissions monitoring correction term in equations HH–6, HH–7, and HH–8. One commenter noted that the correction term that the EPA proposed relied on one study conducted over 20 years ago at one landfill in Canada. This commenter cited several other studies [23] [24] [25] [26] that showed significant variability in correlations between surface methane concentrations and methane emissions and indicated that the EPA should not rely on the results of this limited single study. Another commenter suggested that there is nothing special from a technical perspective of 500 ppmv surface concentration that should drive a step function change in correcting for emissions and surface oxidation, as proposed by the EPA. This commenter indicated that there is already uncertainty in the gas collection efficiencies and that including the proposed surface methane concentration term simply adds to the uncertainty. The commenter recommended mandating the use of lower collection efficiencies when there is evidence of a high number of exceedances or a high surface methane concentration, rather than adding the surface methane concentration term to equations HH–6, HH–7, and HH–8. This commenter also cited the work of Dr. Tarek Abichou (Kormi, et al., 2017 and 2018) for using surface concentration measurements to estimate emissions.[27] [28]

Response: After considering comments received and reviewing additional studies, including those cited by the commenters, we are not taking final action on the proposed surface-emissions monitoring correction term at this time.[29] Upon review of the literature studies cited by one commenter (Abichou, et al., 2011; Abidini, 2014; Lando, et al., 2017; Hettiarachchi, et al., 2023), we confirmed that there is significant variability in measured surface concentrations and methane emissions flux across different landfills. The proposed correction factor, attributed to Heroux, et al. (2010),[30] was the smallest of the correlation factors found across the other cited literature studies we reviewed. Based on a preliminary review of the additional study data, a more central tendency estimate of the correction factor term would be four to six times higher than the correction term proposed.

Due to the high uncertainty in the proposed correction factor, we are assessing whether the correction term proposed for equations HH–6, HH–7, and HH–8 is the most appropriate method for developing a site-specific correction for the overall gas collection efficiency for reporters under subpart HH. The approach presented by Kormi, et al. (2017, 2018) uses a Gaussian plume model in conjunction with surface methane concentration measurements to estimate emissions. This approach appears too complex to incorporate into subpart HH. We are also evaluating other direct measurement technologies for assessing more accurate, landfill-specific gas collection efficiencies. Therefore, we decided not to take final action on the proposed correction term for equations HH–6, HH–7, and HH–8 at this time while we consider and evaluate other options. The EPA will continue to review additional information on existing and advanced methodologies and new literature studies and consider ways to effectively incorporate these methods and data in future revisions under subpart HH for estimating annual emissions.

Comment: Numerous commenters cited studies suggesting that subpart HH underestimates the actual methane emissions released from landfills.[31] [32] These commenters noted that the underestimation in subpart HH emissions is primarily due to high default gas collection efficiencies in subpart HH. Two commenters asserted that gas collection efficiencies over 90 percent should not be used. One of these commenters noted that despite its own two-year study indicating otherwise, the EPA uses a 95 percent collection efficiency for landfills with final covers.[33] Two commenters opposed the EPA's use of the Maryland landfill data to support the proposed 10-percentage point decrease in landfill gas collection efficiencies, noting that these gas collection efficiencies were calculated based on modeled methane generation rather than actual methane emissions measurements. One commenter further suggested that the Maryland study was not properly peer-reviewed and is not suitable for use by the EPA in rulemaking according to the EPA's Summary of General Assessment Factors For Evaluating the Quality of Scientific and Technical Information (hereinafter referred to as "General Assessment Factors").[34] The commenter further stated that the Maryland study is based on a small subset of landfills that is likely not representative of the sector and the EPA's reliance on that study to support a change to the default collection efficiency table (table HH–3

to subpart HH) is inappropriate and will lead to inaccurate reporting of GHG emissions from the sector. This commenter stated that the EPA should continue to rely on the gas collection efficiencies recommended in the Solid Waste Industry for Climate Solutions (''SWICS'') white paper entitled *Current MSW Industry Position and State-of-the-Practice on LFG Collection Efficiency, Methane Oxidation, and Carbon Sequestration in Landfills.*[35] According to the commenter, the SWICS white paper is more comprehensive and relevant than the Maryland study. The commenters noted that the SWICS white paper is being revised and encouraged the EPA to delay revisions to the gas collection efficiency until the revised SWICS white paper is released.

Response: We reviewed the various studies cited by commenters, including available versions of the SWICS white paper. Upon review of these papers and comments received, we maintain our position that the historical collection efficiencies are overstated and that it is appropriate to apply the lower collection efficiency to all landfills. In our review of the SWICS white paper, which was the basis for the historical gas collection efficiencies, we noted that data were omitted due to poor operation of gas collection system. Thus, we consider the historical gas collection efficiencies to be representative of ideal gas collection efficiencies. In our proposal, we required facilities that conduct surface-emission monitoring data to apply a correction factor that would reduce the overall collection efficiency, clearly indicating that we thought the current collection efficiencies are overstated, even for regulated landfills. While we expected that the surface emission correction factor would result in lower emissions than those calculated using the 10-percentage point decrease in collection efficiency, based on our review of other studies correlating surface methane concentrations with methane flux, a more central tendency correlation factor is projected to yield emissions similar to a 10-percentage point decrease in collection efficiency. All the measurement study data we reviewed suggests that current GHGRP collection efficiencies are overstated on average by 10-percentage points or more (Duan, et al., 2022 and Nesser, et al., 2023).[36] In reviewing the data from Nesser, et al. (2023), including the supplemental information,[37] we found that all 38 landfills for which gas collection systems were reported were subject to the NSPS or EG. Comparing the gas collection efficiencies directly reported in the GHGRP, 35 of the 38 landfills had lower or similar measured gas collection efficiencies to those reported in subpart HH. With a 10-percentage point decrease in the default gas collection efficiencies, measured gas collection efficiencies were still at least 10-percentage points lower for 20 of the 38 landfills, approximately equivalent for 13 landfills, and only higher than subpart HH proposed lower default collection efficiencies for 5 of the landfills. Similar low average collection efficiencies were noted by Duan, et al., (2022). Therefore, based on direct measurement data for landfills, we determined it is appropriate to finalize the lower default gas collection efficiencies and apply the lower gas collection efficiency for all landfills.

While the Maryland study data suggests that the gas collection efficiency for voluntary systems may be lower than for regulated gas collection systems, we agree with commenters that these gas collection efficiencies are based on modeled generation rather than measured emissions. The DOC values for individual landfills can vary significantly and the differences observed could be due to differences in the wastes managed at the different Maryland landfills. We could not identify direct measurement study data by which to support further reductions in gas collection efficiencies for voluntary gas collection systems. Therefore, we are providing a single set of gas collection efficiencies for subpart HH reporters to use.

In conclusion, we are finalizing gas collection efficiencies that are lower than those historically provided in subpart HH by 10-percentage points based on comments received and review of recent landfill methane emission measurement studies for landfills with gas collection systems. We had proposed these collection efficiencies for facilities not conducting surface emission monitoring, but we are now finalizing these lower gas collection efficiencies for all landfills.

Comment: Several commenters provided input on the proposed revisions to equations HH–6 through HH–8 to subpart HH to capture emissions from other large release events. Two commenters suggested that the EPA should require monitoring of both the pilot light and flow rate and that the ''f_{Dest}'' term should be excluded during any period the combustion device is not operating properly. The commenters specified that ''f_{Dest}'' should be excluded during any period when the reporter has operational data indicating that the combustion device is not operating according to manufacturer specifications or when the reporter has received credible monitoring data showing an unlit or malfunctioning control device.

One commenter stated that the proposed revisions would be difficult to implement and tend to capture very limited or marginal data. The commenter asserted that gas collection systems by nature require constant adjustment of temperature, pressure, and other parameters or may be subject to frequent repairs that would not be expected to affect the overall control efficiency. The commenter asked the EPA to remove ''normally'' from the first sentence of the proposed definition of ''f_{Rec}'' and remove ''or poor operation, such as times when pressure, temperature, or other parameters indicative of operation are outside of normal variances,'' from the second sentence.

The commenter also expressed concerns regarding how the proposed revisions to ''f_{Dest}'' applies to flares, stating that a large portion of landfill controls use open flares, or are equipped with automatic shutoffs, which have no parameters for monitoring effective operation other than the presence of a flame. The commenter requested the sentence addressing the pilot flame (''For flares, times when there is no pilot flame present must be excluded from the annual operating hours for the destruction device.'') be removed from the proposed revision of ''f_{Dest},'' because it is confusing, unnecessary, and technically incorrect, as a pilot is typically only required during startup.

One commenter also requested the EPA remove the phrase ''. . . as measured at the nth measurement location'' from the first sentence of ''f_{Dest}'' description; the commenter stated the text adds confusion by implying that the time gas is sent to the nth measurement location is equal to the time gas is sent to the control device, which may be incorrect for measurement locations with more than one control device. The commenter also

[36] Duan, Z., Kjeldsen, P., & Scheutz, C. (2022). Efficiency of gas collection systems at Danish landfills and implications for regulations. Waste management (New York, N.Y.), 139, 269–278. *https://doi.org/10.1016/j.wasman.2021.12.023.*

[37] See *https://egusphere.copernicus.org/preprints/2023/egusphere-2023-946/egusphere-2023-946-supplement.pdf.*

proposed a definition striking out ''The annual operating hours for the destruction device should include only those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation.'' The commenter added that because flares and other destruction devices are designed with fail-closed valves or other devices to prevent venting of gas when they are not operating, applying the definition as written overestimates emissions when a measurement location has more than one destruction device and all devices are not operating at the same time.

Response: The EPA agrees with the commenters regarding monitoring the flow rate of the landfill gas; however, a change to the proposed rule is not necessary in this case as the continuous monitoring of the gas flow is already required in 40 CFR 98.343. The EPA disagrees with the comment that ''EPA should likewise specify that f_{Dest} must be excluded during any period when the pilot light and flow rate are not meeting manufacturer specifications for complete combustion.'' Adding this specification to the rule is not necessary as the revision to the definition of f_{Dest} already accounts for this scenario. The proposed revision to the f_{Dest} definition in the supplemental proposal states, ''The annual operating hours for the destruction device should include only those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation.'' Thus, if the destruction device has manufacturer specifications for effective operation that are not met during its operation, the revision to the f_{Dest} definition requires those periods to be excluded in the hours for f_{Dest}. We will further evaluate how credible monitoring data may be defined and excluded from f_{Dest} in a future rulemaking.

The EPA disagrees with the proposed edits to the definition of f_{Rec}, which are to remove the word ''normally'' from the first sentence and remove the phrase ''or poor operation, such as times when pressure, temperature, or other parameters indicative of operation are outside of normal variances'' from the second sentence. These edits would allow for all operating hours in the calculation regardless of how the system operated. We asked for comment on what set of parameters should be used to identify poorly operating periods and whether a threshold on the proportion of wells operating outside of their normal operating variance should be included in the definition of f_{Rec} to define periods of poor performance.

With regards to the commenters' input on the definition of f_{Dest}, the EPA agrees with removing ''as measured at the nth measurement location'' from the first sentence of the definition as the commenter notes, ''flares and other destruction devices are designed with fail-closed valves or other devices to prevent venting of gas when they are not operating, keeping that phrase can overestimate emissions when a measurement location has more than one destruction device and all devices are not operating at the same time.'' We are revising this sentence to remove ''as measured at the nth measurement location.'' We disagree with removing from the definition ''For flares, times when there is no pilot flame present must be excluded from the annual operating hours for the destruction device.'' Instead, we are revising this sentence to read ''For flares, times when there is no flame present must be excluded from the annual operating hours for the destruction device.'' We believe the lack of a flame is an indication the flare is not operating effectively. Lastly, we disagree with removing the sentence, ''The annual operating hours for the destruction device should include only those periods when flow was sent to the destruction device and the destruction device was operating at its intended temperature or other parameter indicative of effective operation.'' We believe this sentence is necessary to ensure the calculation of f_{Dest} represents proper operation of the destruction device.

Comment: We received several comments regarding the revised DOC values. Some commenters supported lowering of the default DOC for bulk waste from 0.20 to 0.17, citing similar findings in a 2019 Environmental Research and Education Foundation (EREF) study.[38] These commenters generally opposed the proposed default value of 0.27 for bulk MSW (excluding inerts and construction and demolition (C&D) waste) and the proposed default value of 0.32 for uncharacterized wastes and recommended the use of either the value of 0.19 from the EREF report or the 0.17 value for bulk wastes for these other general waste categories. According to these commenters, the EPA's method for determining the DOC for bulk MSW (excluding inerts and C&D waste) does not comport with how landfills characterize and manage input waste streams, and the high default DOC value for bulk MSW makes the modified bulk MSW option unusable. Other commenters opposed the proposed reduction in bulk waste and bulk MSW default DOC values, indicating that this will lead to lower emissions over the life of the landfill when research indicates emissions inventories of landfill emissions underestimate actual emissions. One commenter referenced a paper (Bahor, et al., 2010) that, according to the commenter, validated the default DOC of MSW to be 0.20.[39] Other commenters noted that many landfill reporters were taking advantage of the composition method by only reporting inerts and uncharacterized wastes. These commenters supported the proposed default value of 0.32 for uncharacterized wastes.

Response: The EPA included a DOC of 0.20 for bulk waste in subpart HH because the data we reviewed circa 2000 to 2010 indicated that was the best fit DOC value.[40] As noted in the memorandum ''Modified Bulk MSW Option Update'' included in Docket ID. No. EPA–HQ–OAR–2019–0424, we have seen a significant decrease in the percentage of paper and paperboard products being landfilled due to increased recycling of these waste streams. This change in the composition of MSW landfilled supports and confirms the drop in DOC from 0.20 to 0.17 over the time period between 2005 and 2011. With respect to the Bahor, et al. (2010) study, it appears that the HHV measurement data was made using data from 1996 to 2006, with biogenic correction factors developed over 2007 and 2008. Based on the timing of the measurements made, agreement with the DOC value of 0.20 is not surprising and consistent with the findings by which we originally used a default DOC value of 0.20. We specifically sought to reassess the average DOC values considering more recent data to account for potential changes in DOC values over the past decade. Based on our analysis, an average DOC value of 0.17 provides a better fit with current landfill practices. Therefore, we are finalizing a revision of the default DOC value to

[38] The Environmental Research & Education Foundation (2019). ''Analysis of Waste Streams Entering MSW Landfills: Estimating DOC Values & the Impact of Non-MSW Materials.'' Available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

[40] RTI International (2004). Solid Waste Inventory Support—Review Draft: Documentation of Methane Emission Estimates. Prepared for U.S. EPA, Office of Atmospheric Programs, Washington, DC. September 29.

0.17 as proposed. However, we note that the proposed revision was not clear regarding how the new DOC value should be incorporated into the facility's emissions estimate. Some reporters may only begin applying the new DOC value to new wastes being disposed of in 2025 and later years. Other reporters may opt to revise the DOC value for all wastes disposed of in the landfill for all previous disposal years. This could lead to significant discrepancies between emissions reported by reporters with similar landfills and also between the emissions reported for different years by a given reporter. As noted in this discussion, we expect that wastes disposed of prior to 2010 are best characterized using a default DOC value of 0.20 and that wastes disposed of in 2010 and later years are best characterized using a default DOC of 0.17. Therefore, while we are finalizing a revision in the default bulk waste DOC value to 0.17, we are also finalizing clarifications to these revisions to incorporate these revisions consistently across reporters and consistent with the timeframe where the reduction in DOC occurred. Specifically, we are maintaining the historic DOC value of 0.20 for historic disposal years (prior to 2010) and, starting with RY2025, requiring the use of the revised DOC value of 0.17 for disposal years 2010 and later (see memorandum ''Revised Analysis and Calculation of Optimal k values for Subpart HH MSW Landfills Using a 0.17 DOC Default and Timing Considerations'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424).

With respect to the proposed DOC value for bulk MSW (excluding inerts and C&D waste), the approach we used to develop the proposed DOC value is consistent with the approach we used when we originally developed and provided the modified bulk waste option following consideration of comments received (75 FR 66450, October 28, 2010). This option was specifically provided to address comments that the waste composition option was too detailed for most landfill operators to use and that landfill operators should have the opportunity to characterize some of the waste received as inerts under the bulk waste option. Because the DOC values for bulk waste option were derived based on the full quantity of waste disposed at landfills, that DOC value for bulk waste intrinsically includes inerts. Therefore, we sought to develop a representative MSW DOC value that excludes inerts for use in the modified bulk MSW option. We disagree that this makes the modified bulk waste option inaccurate or unusable. On the contrary, we find that using the bulk waste DOC value in the modified bulk MSW option would be less accurate for predicting the CH_4 generation for the modified bulk MSW option because the DOC value for bulk waste was determined by the full quantity of waste disposed at landfills including inerts and C&D waste. We also agree with commenters that some reporters are misusing the waste composition option in order to separately account for inerts but then use the bulk waste DOC value for the rest of the MSW. We conducted a multivariant analysis to project the DOC of uncharacterized MSW in landfills for which reporters used the waste composition method and the DOC for this uncharacterized waste was estimated to be 0.32. This agrees well with the proposed DOC value for bulk MSW of 0.27 and confirms that, when facilities separately report inert waste quantities, the DOC for the remaining MSW (excluding inerts and C&D waste) is much higher than suggested by some of the commenters. Consequently, we concluded that our proposed values of 0.27 for bulk MSW (excluding inerts and C&D waste) and 0.32 for uncharacterized waste should be finalized as proposed. Similar to our clarification regarding how the revision in bulk waste DOC must be implemented, we are finalizing requirements to use the current bulk MSW (excluding inerts and C&D waste) DOC value of 0.31 for historic disposal years (prior to 2010) and requiring the use of the revised bulk MSW (excluding inerts and C&D waste) DOC value of 0.27 for disposal years 2010 and later, consistent with the timeline for which these values were determined. Because we have no method to indicate a change in DOC for uncharacterized wastes, we are requiring the use of the new DOC for uncharacterized waste using the composition option of 0.32 for all years for which the composition option was used.

We also disagree with commenters that having a high bulk MSW default DOC value makes the modified bulk MSW method unusable. Based on waste characterization data as reported for RY2022, approximately 23 percent use the modified bulk MSW method, which suggests a quarter of the reports find the modified bulk MSW option useful. While this option was specifically provided for landfills that accept large quantities of C&D waste or inert waste streams, we disagree that its use should be restricted to that scenario. There is significant variability in the DOC of bulk waste from landfill to landfill. There are many cases when the quantity of landfill gas recovered exceeds the modeled methane generation rates. This is a clear indication that the default DOC (and/or k value) is too low. For reporters with high actual CH_4 generation rates, as noted by the quantity of CH_4 recovered at the landfill, we find that the use of the modified bulk MSW option is appropriate for these reporters and would likely provide a more accurate estimate of modeled CH_4 generation, even if these reporters do not have large quantities of inert or C&D wastes. We encourage reporters that have CH_4 recovery rates exceeding their modeled CH_4 generation rates to evaluate and use, as appropriate, the modified bulk MSW or waste composition options in order to more accurately estimate modeled methane generation.

Comment: Several comments supported revisions to decay rate constants (k values) that more closely match the IPCC recommendations. Other comments were critical of the revisions, suggesting the proposed k values were too high. One commenter noted that the original k values were developed using a separate analysis considering the use of the CH_4 generation potential (Lo, analogous to the DOC input for the first order decay model used in subpart HH). The commenter noted that optimizing k and DOC values simultaneously can lead to extreme and unrealistic values because an error in one value causes an offsetting error in the other. The commenter also stated that the EPA allowed an extremely wide range for the ''optimized'' k values (*e.g.,* 0.001 to 0.400 for dry climates) and should have constrained the k values to more realistic values. The commenter also suggested that the EPA rely on its own research as published in PLoS ONE (Jain et al., 2021).[41] Finally, the commenter suggested that multivariant analysis was not peer-reviewed and therefore does not appear to comply with the General Assessment Factors.

Response: The EPA reviewed the documentation supporting the existing DOC and k value defaults used for subpart HH (RTI International, 2004). Importantly, the memorandum documents that the development of the DOC and k values utilized a two-step process. The first step was a

[41] Jain, P., et al. 2021. ''Greenhouse gas reporting data improves understanding of regional climate impact on landfill methane production and collection.'' PLoS ONE, at 1–3, 10–11 (Feb. 26, 2021), available at *https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0246334.*

multivariant analysis, similar to the analysis conducted in 2019 (McGrath et al., 2019), which was used to determine an optimal DOC value. The second step was to determine optimal k values for each precipitation range using the optimal DOC value from the multivariant analysis. At proposal, we used the DOC and k values determined directly from the multivariant analysis. After consideration of the comments received and the approach used historically, we determined that it would be more appropriate to determine optimal k values once the default DOC value is established. We agree with the commenter that using a fixed DOC value (set at the proposed bulk waste DOC value of 0.17), we expect that the optimal k values in a single-variable analysis would have less variability and better predict methane generation across landfills when using the revised DOC default. Therefore, we conducted this second step of the analysis using the original data set for facilities using the bulk waste approach to determine the optimal k values for these landfills, given a default DOC value of 0.17 (the bulk waste DOC value recommended in the McGrath et al. (2019) memo based on the multivariant analysis).

We also reviewed additional literature to assess reasonable ranges for k values. We found that the lowest allowed k value of 0.001 yr^{-1} was unrealistic and much lower than any k value reported in the literature. We identified some studies suggesting a k value of 0.4 yr^{-1} is possible for wet landfills (or landfills using leachate recirculation). After our review of the additional literature, we revised the allowable k value range from 0.001–0.4 yr^{-1} to 0.007–0.3 yr^{-1}. The results of applying this second step of the analysis, consistent with the approach used previously to develop default k values, indicate that the optimal k values for dry, moderate, and wet climates were 0.033, 0.067, and 0.098 yr^{-1}, respectively (see memorandum ''Revised Analysis and Calculation of Optimal k Values for Subpart HH MSW Landfills Using a 0.17 DOC Default and Timing Considerations'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424). These values are lower than those developed from the multivariant analysis, but still significantly higher than the current defaults in subpart HH. These values also align well with IPCC recommended k value ranges for moderately decaying waste and the k values reported by Jain, et al. (2021). Table 5 of this preamble presents a comparison of the old subpart HH and revised k values with the values recommended by the IPCC and Jain, et al. (2021).

TABLE 5—COMPARISON OF FINALIZED DECAY RATE CONSTANTS (k VALUES IN YRS^{-1}) BY PRECIPITATION RANGE

Precipitation zone	Historic subpart HH and inventory default decay value (k)	Revised subpart HH default decay value (k)	IPCC default decay value (k) ranges for moderately decaying waste	Jain, et al. (2021), recommended k value (and 95% confidence range)
Dry (<20 inches/year)	0.02	0.033	0.04–0.05	0.043 (0.033–0.054)
Moderate (20–40 inches/year)	0.038	0.067	0.04–0.1	0.074 (0.061–0.088)
Wet (>40 inches/year)	0.057	0.098	0.07–0.17	0.090 (0.077–0.105)

Similar to the incorporation of the new DOC values, we note that the proposed revision was not clear regarding how the new k values for bulk waste under the ''Bulk waste option'' and bulk MSW under the ''Modified bulk MSW option'' should be incorporated into the facility's emissions estimate. While we are finalizing revisions for the default bulk waste k values for dry, moderate, and wet climates as 0.033, 0.067, and 0.098 yr^{-1}, respectively, we are also finalizing clarifications to these revisions to incorporate these revisions consistently across reporters and consistent with the timeframe where the reduction in DOC occurred. Specifically, starting in RY2025, we are maintaining the historic k values of 0.20, 0.038, and 0.057 yr^{-1} for historic disposal years (prior to 2010) and requiring the use of the revised k values of 0.033, 0.067, and 0.098 yr^{-1} for disposal years 2010 and later. We are finalizing requirements under the modified bulk waste MSW option to use the current bulk MSW (excluding inerts and C&D waste) k values of 0.02 to 0.057 yr^{-1} for historic disposal years (prior to 2010) and requiring the use of the revised bulk MSW (excluding inerts and C&D waste) k values of 0.033 to 0.098 yr^{-1} for disposal years 2010 and later, consistent with the timeline for which these values were determined. Because we have no method to indicate a change in k value for uncharacterized wastes, we are requiring the use of the new k values for uncharacterized waste using the composition option of 0.033 to 0.098 for all years for which the composition option was used.

With respect to compliance with the General Assessment Factors, we considered a wide variety of information, including peer-reviewed material, when developing our proposed and final k values. While our technical support documents are not formally peer reviewed at proposal, we consider the proposal/public review process to be an adequate forum for public review of our analysis and conclusions. After considering the public comments received, we revised our analysis to more closely match the original approach used to determine default k values. We also adjusted our allowable range for k values based on public comment and additional literature review. All information we have reviewed indicate that the historic subpart HH k values are too low and that the values we determined in our re-analysis of the data will provide improved methane generation estimates. For these reasons, we are finalizing revised k values for subpart HH of 0.033, 0.067, and 0.098 yr^{-1} for dry, moderate, and wet climates, respectively. These k values apply to bulk waste, bulk MSW, and uncharacterized MSW, as proposed.

U. Subpart OO—Suppliers of Industrial Greenhouse Gases

We are finalizing several amendments to subpart OO of part 98 (Suppliers of Industrial Greenhouse Gases) as proposed. Section III.U.1. of this preamble discusses the final revisions to subpart OO. The EPA received comments on the proposed revisions to subpart OO which are discussed in section III.U.2. of this preamble. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the revisions to subpart OO as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart OO

This section summarizes the final amendments to subpart OO. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart OO can be found in this section and section III.U.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

The EPA is finalizing several revisions to subpart OO of part 98 that will improve the quality of the data collection under the GHGRP. First, we are adding a requirement at 40 CFR 98.417(c)(7) for bulk importers of F–GHGs to include, as part of the information required for each import in the annual report, the customs entry number. The customs entry number is provided as part of the U.S. Customs and Border Protection (CBP) Form 7501: Entry Summary and is assigned for each filed CBP entry for each shipment. The EPA has made one minor clarification from proposal. We initially proposed the requirement as the ''customs entry summary number''; the final rule modifies 40 CFR 98.416(a)(7) to clarify the requirement to the ''customs entry number,'' which is associated with the CBP Form 7501, ''Entry Summary.''

As proposed, we are adding a reporting requirement at 40 CFR 98.416(k) that suppliers of N_2O, saturated PFCs, SF_6, and fluorinated HTFs identify the end uses for which the N_2O, SF_6, saturated PFC, or fluorinated HTF is used and the aggregated annual quantities of N_2O, SF_6, each saturated PFC, or each fluorinated HTF transferred to each end use, if known. As discussed in the proposed rules, this requirement is based on a similar requirement in subpart PP to part 98 (Suppliers of Carbon Dioxide) and is intended to provide additional insight into the identities and magnitudes of the uses of these compounds, which are currently less well understood than those of other industrial GHGs such as HFCs, although the GWP-weighted totals supplied are relatively large.

The EPA is also finalizing a clarification to the reporting requirements for importers and exporters of F–GHGs, F–HTFs, or N_2O, to revise the required reporting of ''commodity code,'' which is required for importers at 40 CFR 98.416(c)(6) and for exporters at 40 CFR 98.416(d)(4), to clarify that reporters should submit the Harmonized Tariff System (HTS) code for each F–GHG, F–HTF, or N_2O shipped. Reporters will enter the full 10-digit HTS code with decimals, to extend to the statistical suffix, as it was entered on related customs forms. See section III.S. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on the EPA's rationale for these changes.

As discussed in section III.A.1.b. of this preamble, we are finalizing related revisions to the definition of ''fluorinated HTF,'' previously included in subpart I of part 98 (Electronics Manufacturing), and to move the definition to subpart A of part 98 (General Provisions), to harmonize with the changes to subpart OO.

Finally, we are finalizing revisions to 40 CFR 98.416(c) and (d) to clarify that certain exceptions to the reporting requirements for importers and exporters are voluntary, consistent with our original intent. To implement this change, we are finalizing revisions to insert ''importers may exclude'' between ''except'' and ''for shipments'' in the first sentence of § 98.416(c) and (d), deleting the ''for.'' We are also finalizing revisions to clarify that imports and exports of transshipments will both have to be either included or excluded for any given importer or exporter, and we are finalizing a similar clarification for heels. These changes ensure that importers and exporters treat the exceptions consistently. See section III.K. of the preamble to the 2023 Supplemental Proposal for additional information on these revisions and their supporting basis.

In the 2023 Supplemental Proposal, the EPA proposed a requirement at 40 CFR 98.416(c) for bulk importers of F–GHGs to provide, for GHGs that are not regulated substances under 40 CFR part 84 (Phasedown of Hydrofluorocarbons), copies of the corresponding U.S. CBP entry forms (*e.g.,* CBP Form 7501) in their annual report. Following consideration of public comments received on a similar proposed revision to subpart QQ of part 98 (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment and Closed-Cell Foams), including concerns regarding the availability of this information and the potential burden of submitting large volumes of entry forms, the EPA is not taking final action on the proposed revision to subpart OO. See section III.W. of this preamble for additional information.

2. Summary of Comments and Responses on Subpart OO

This section summarizes the major comments and responses related to the proposed amendments to subpart OO. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart OO.

Comment: One commenter requested that we clarify that chemical supply ''end use'' refers to industry category only, such as electronics or semiconductor use, and does not refer to more specific uses. The commenter recommended that specific purchases and purposes of chemical use should be considered industry confidential business information and therefore protected from public disclosure. The commenter also noted that chemical suppliers or distributors do not typically have visibility to end use, particularly specific end use categories.

Response: As discussed in section VI. of this preamble, we are planning to finalize our proposed determination that the two new subpart OO data elements (the end use(s) to which the N_2O, SF_6, each PFC, or each fluorinated HTF is transferred and the aggregated annual quantity of the GHG that is transferred to that end use application) are ''Eligible for Confidential Treatment.'' This will protect the data from public disclosure. Regarding suppliers' knowledge of the uses of compounds within each industry, suppliers are required to report the end uses only ''if known.'' For N_2O, SF_6, and saturated PFCs, the end uses that we identified in the proposed rule coincided with individual industries and not specific uses within those industries. For fluorinated HTFs, the end uses that we identified in the proposed rule coincided with some specific uses within industries, such as cleaning versus temperature control within the electronics industry. This was because different end uses, even within the same industry, have different emission patterns, which affect the relationship between emissions and consumption of these compounds. (For example, end uses that quickly emit the F–HTF, such as cleaning, are expected to have emissions that are close to consumption, whereas end uses that store the F–HTF, such as process cooling, may have emissions that are less than half of consumption.) However, the electronics industry, unlike other industries that

use F–HTFs, reports its F–HTF emissions to EPA. Thus, in the subpart OO electronic reporting form, we are planning to list ''electronics manufacturing'' (including manufacturing of semiconductors, MEMS, photovoltaic cells, and displays), and not specific uses within electronics manufacturing, among the end uses whose consumption of the fluorinated HTF will be reported.

V. Subpart PP—Suppliers of Carbon Dioxide

We are finalizing several amendments to subpart PP of part 98 (Suppliers of Carbon Dioxide) as proposed. This section discusses the final revisions to subpart PP. The EPA received comments on the proposed revisions to subpart PP. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart PP.

The EPA is finalizing several revisions to subpart PP to improve the quality of the data collected from this subpart. As proposed, we are adding new 40 CFR 98.420(a)(4) and a new definition to 40 CFR 98.6 to explicitly include direct air capture (DAC) as a capture option under subpart PP. Unlike conventional capture sources where CO_2 is separated during the manufacturing or treatment phase of product stream, DAC captures CO_2 from ambient air using aqueous or solid sorbents, which is then processed into a concentrated stream for utilization or injection underground. This final rule provides that DAC, ''with respect to a facility, technology, or system, means that the facility, technology, or system uses carbon capture equipment to capture carbon dioxide directly from the air. DAC does not include any facility, technology, or system that captures carbon dioxide (1) that is deliberately released from a naturally occurring subsurface spring or (2) using natural photosynthesis.''

The EPA is also finalizing an amendment to the definition of ''carbon dioxide stream'' in 40 CFR 98.6 to add ''captured from ambient air (*e.g.,* direct air capture)'' to the definition so that it reads, ''Carbon dioxide stream means carbon dioxide that has been captured from an emission source (*e.g.,* a power plant or other industrial facility), captured from ambient air (*e.g.,* direct air capture), or extracted from a carbon dioxide production well plus incidental associated substances either derived from the source materials and the capture process or extracted with the carbon dioxide.''

We are finalizing harmonizing changes to 40 CFR 98.422, 98.423, 98.426, and 98.427 to add references to DAC into the reporting requirements. The final rule also amends 40 CFR 98.426 as proposed to add additional reporting requirements in paragraph (i) to require DAC facilities to report the annual quantities and sources (*e.g.,* non-hydropower renewable sources, natural gas, oil, coal) of on-site and off-site sourced electricity, heat, and combined heat and power used to power the DAC plant. These quantities must represent the electricity and heat used starting from the air intake at the facility and ending with the compressed CO_2 stream (*i.e.,* the CO_2 stream ready for supply for commercial applications or, if maintaining custody of the stream, sequestration or injection of the stream underground). These quantities must be provided per energy source, if known. For electricity provided to the DAC plant from the grid, reporters must additionally provide identifying information for the facility and electric utility company. In addition, for on-site sourced electricity, heat, and combined heat and power, DAC facilities must indicate whether flue gas is also captured by the DAC process unit. These changes will aid the EPA in understanding this emerging technology at facilities that utilize DAC and in better understanding potential net emissions impacts associated with DAC facilities (particularly given that interest in DAC is primarily intended to be a carbon removal technology to achieve climate benefits). See section III.T. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on the EPA's rationale for these changes.

The EPA is finalizing two additional revisions to improve data quality. First, we are finalizing the addition of a data element to 40 CFR 98.426(f) that will require suppliers to report the annual quantity of CO_2 in metric tons that is transferred for use in geologic sequestration with EOR subject to new subpart VV to part 98 (Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916). To inform the revision of the subpart PP electronic reporting form, the EPA also sought comment on potential end use applications to add to 40 CFR 98.426(f), such as algal systems, chemical production, and mineralization processes, such as the production of cements, aggregates, or bicarbonates. However, because 40 CFR 98.426(f) already includes a reporting category for ''other,'' the existing rule already provides flexibility for this reporting, and we are not taking final action on the addition of specific end-use applications to 40 CFR 98.426 at this time. The EPA may consider the addition of other end-use applications in a future rulemaking.

Second, the EPA is finalizing as proposed that 40 CFR 98.426(h) will apply to any facilities that capture a CO_2 stream from a facility subject to 40 CFR part 98 and supply that CO_2 stream to facilities that are subject to either subpart RR (Geologic Sequestration of Carbon Dioxide) or new subpart VV. The revised paragraph will no longer apply only to suppliers that capture CO_2 from EGUs subject to subpart D (Electricity Generation), but also to suppliers that capture CO_2 from any direct emitting facility that is subject to 40 CFR part 98 and transfer to facilities subject to subparts RR or VV. Reporters must provide the facility identification number associated with the facility that is the source of the captured CO_2 stream, each facility identification number associated with the annual GHG reports for each subpart RR and subpart VV facility to which CO_2 is transferred, and the annual quantity of CO_2 transferred to each subpart RR and VV facility. See section III.L. of the preamble to the 2023 Supplemental Proposal for additional information.

The EPA also requested comment on, but did not propose, expanding the requirement at 40 CFR 98.426(h) such that facilities subject to subpart PP would report transfers of CO_2 to any facilities reporting under 40 CFR part 98, not just those subject to subparts RR and VV. This would include reporting the amount of CO_2 transferred on an annual basis as well as the relevant GHGRP facility identification numbers. The EPA further requested comment on whether information regarding additional end uses would be available to facilities. Following consideration of public comments, we are not extending the reporting requirements at this time but may consider doing so in a future rulemaking.

We are finalizing, with revisions, related confidentiality determinations for data elements resulting from the revisions to subpart PP as described in section VI. of this preamble.

W. Subpart QQ—Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment and Closed-Cell Foams

We are finalizing the amendments to subpart QQ of part 98 (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged

Equipment and Closed-Cell Foams) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.W.1. discusses the final revisions to subpart QQ. The EPA received several comments on proposed subpart QQ revisions which are discussed in section III.W.2. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the final revisions to subpart QQ, as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart QQ

This section summarizes the final amendments to subpart QQ. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart QQ can be found in this section and section III.W.2. of this preamble. Additional rationale for these amendments are available in the preamble to the 2023 Supplemental Proposal.

We are finalizing two revisions from the 2023 Supplemental Proposal. We are finalizing requirements for importers and exporters of fluorinated GHGs contained in pre-charged equipment or closed-cell foams to include, for each import and export, the HTS code (for importers, at 40 CFR 98.436(a)(7)) and the Schedule B code (for exporters, at 40 CFR 98.436(b)(7)) used for shipping each equipment type. These requirements are consistent with the final revisions to subpart OO of part 98 (Suppliers of Industrial Greenhouse Gases), which clarify that reporters should submit the HTS code for each shipment, as discussed in section III.U. of this preamble. See section III.S. of the preamble to the 2023 Supplemental Proposal for additional information on the EPA's rationale for these changes.

The EPA also proposed to revise 40 CFR 98.436 to add a requirement to include collecting copies of the U.S. CBP entry form (*e.g.,* CBP form 7501) for each reported import, which are currently maintained as records under 40 CFR 98.437(a). Following consideration of public comments, the EPA is not taking final action on the proposed requirement to submit copies of each U.S. CBP entry form. See section III.W.2. of this preamble for a summary of the related comments and the EPA's response.

2. Summary of Comments and Responses on Subpart QQ

This section summarizes the major comments and responses related to the proposed amendments and supplemental amendments to subpart QQ. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart QQ.

Comment: Several commenters contested the EPA's proposed requirements to collect a copy of the corresponding U.S. CBP entry form (*e.g.,* Form 7501) for each reported import in 40 CFR 98.436. Some commenters asserted that the information available in the forms is currently provided electronically to CBP through the Automated Commercial Environment (ACE) and should be available to the EPA within the need for reporters to develop or submit copies. The commenters noted that this information should be sufficient to identify which entries are subject to data requirements under subpart QQ. Commenters recommended that the EPA should coordinate with CBP through established bodies (*e.g.,* the Border Interagency Executive Council and Commercial Targeting and Analysis Center, to which the EPA already participates) to identify and utilize this data. One commenter specifically recommended that the EPA review the Entry Summary Line Detail Report, which would show the total quantity reported for entry summary lines by tariff number for the reported unit of measure. The commenters stated that such reports capture the actual data in CBP's system, as filed by importers, and should be sufficient to ensure that the Agency is able to improve the verification and accuracy of the data it collects. One commenter expressed that if the EPA is unable to identify applicable entries through more efficient means, importers should only be asked to identify specific entry numbers that will allow the EPA to identify the applicable electronic submissions within ACE.

Commenters objected to the implied submission of hard-copy entry records as an unnecessary administrative burden. Commenters stated that the proposed requirement runs counter to CBP's longstanding effort to collect import data and documents electronically. One commenter stated that submittal of the border crossing document would necessitate a substantial amount of additional work and resources to comply, including gathering documentation from multiple sources prior to annual reporting. Another commenter noted that in some cases, importers could be required to file over 70,000 entries or forms. One commenter stated that this would require at least 1,300 manual searches for the appropriate forms for each entry. Commenters urged that this would be prohibitively expensive and burdensome. One commenter pointed out that this would require substantial modifications to automakers' existing information systems and processes for their GHG and related reporting obligations. Other commenters noted that paper form requirements would obfuscate industry efforts to further automate their record-keeping and reporting systems. One commenter added that the increased volume of documentation would likely put much more pressure on businesses than they can manage based on the current requirement to file data by March 31st of the year following the reporting year.

One commenter stated that the CBP forms would merely confirm the amount of foam board imported or exported and would not validate the F–GHG quantity which is the intent of the report. The commenter continued that, even if border documents were provided, it would be impossible for the EPA to validate the current reports as the calculations involved to provide the volume of F–gas per board foot would require detailed technical knowledge, including density of the foam board.

Some commenters asserted that the entry form requirement runs counter to Executive Order 13659 and 19 U.S.C. 1411(d), as amended by sections 106 and 107 of the Trade Facilitation and Trade Enforcement Act of 2015, which advance the goal of providing for electronic transmission of import data and seek to eliminate the need for duplicative information submissions across U.S. government agencies with regulatory authority related to goods entered or imported into the United States.

Other commenters questioned the EPA's requirements to require reporting of the HTS) code for each type of pre-charged equipment or closed-cell foam imported and/or the Schedule B code for each type of pre-charged equipment or closed-cell foam exported. One commenter questioned whether the inclusion of both HTS codes and Schedule B codes is necessary for validation of the data that is currently collected, as all polystyrene foams use the same codes. The commenter urged that requiring more than one type of document would prove redundant in showing product type; be burdensome for manufacturers and for the EPA; and would not provide any additional

clarity or validation to the current report.

Another commenter stated that only the border crossing document (which includes the customs tariff number, with the first six digits of an HTS and Schedule B number) should be required as part of the annual report. The commenter noted that these border crossing documents share highly sensitive information such as quantity and price, so should be handled securely. One commenter reiterated that all data proposed to be collected is, and would be, considered highly confidential business information. The commenter added that access to this type of information is restricted internally, which adds complexity to who could manage and deal with the processing of this documentation within facilities.

Response: The EPA is revising the final rule to remove the requirement for reporters to submit copies of their U.S. CBP form 7501. Following consideration of comments received, it has been determined that annually reporting these documents could pose a significant burden for many reporters. Therefore, the EPA is not adopting the proposed data reporting requirement in the final rule.

The EPA is finalizing the proposed requirement to report HTS codes (for imports) and Schedule B codes (for exports) to assist the Agency in verification of data. This requirement will allow the EPA to better compare reported GHGRP data with data from other government sources, specifically CBP records. As only one type of code (HTS or Schedule B) will be required based on whether the shipment is an import or export, this will not require the reporting of redundant information to the EPA. Furthermore, we are making ''No Determination'' of confidentiality for this data element. ''No Determination'' means that the EPA is not making a confidentiality determination through rulemaking at this time. If necessary, the EPA will evaluate and determine the confidentiality status of this data on a per-facility basis in accordance with the provisions of 40 CFR part 2, subpart B.

X. Subpart RR—Geologic Sequestration of Carbon Dioxide

We are finalizing amendments to subpart RR of part 98 (Geologic Sequestration of Carbon Dioxide) as proposed. This section discusses the substantive final revisions to subpart RR. The EPA received only one supportive comment for subpart RR. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart RR. Additional rationale for these amendments is available in the preamble to the 2023 Supplemental Proposal.

We are adding a definition for ''offshore'' to 40 CFR 98.449 to mean ''seaward of the terrestrial borders of the United States, including waters subject to the ebb and flow of the tide, as well as adjacent bays, lakes or other normally standing waters, and extending to the outer boundaries of the jurisdiction and control of the United States under the Outer Continental Shelf Lands Act.'' This definition clarifies the applicability of subpart RR to offshore geologic sequestration activities, including on the outer continental shelf. Additional rationale for these amendments is available in the preamble to the 2023 Supplemental Proposal.

Y. Subpart SS—Electrical Equipment Manufacture or Refurbishment

We are finalizing several amendments to subpart SS of part 98 (Electrical Equipment Manufacture or Refurbishment) as proposed. In some cases, we are finalizing the proposed amendments with revisions. Section III.Y.1. of this preamble discusses the substantive final revisions to subpart SS. The EPA received several comments on the proposed revisions to subpart SS which are addressed in section III.Q.2. of this preamble. We are also finalizing as proposed confidentiality determinations for new data elements resulting from the revisions to subpart SS as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart SS

This section summarizes the final amendments to subpart SS. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other final revisions to 40 CFR part 98, subpart SS can be found in this section and section III.Y.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal.

a. Revisions To Improve the Quality of Data Collected for Subpart SS

The EPA is finalizing several revisions to subpart SS to improve the quality of the data collected from this subpart. We are generally finalizing as proposed revisions to the calculation, monitoring, and reporting requirements of subpart SS (at 40 CFR 98.452, 98.453, 98.454, and 98.456) to require reporting of additional F–GHGs as defined under 40 CFR 98.6, except electrical equipment manufacturers and refurbishers will not be required to report emissions of insulating gases with weighted average GWPs of one (1) or less. However, they will be required to report the quantities of insulating gases with weighted average GWPs of one or less, as well as the nameplate capacities of the associated equipment, that they transfer to their customers. To implement these revisions, we are finalizing revisions that redefine the source category at 40 CFR 98.450 to include equipment containing ''fluorinated GHGs (F–GHG), including but not limited to sulfur-hexafluoride (SF_6) and perfluorocarbons (PFCs).'' The changes also apply to the threshold in 40 CFR 98.451, which we are revising as discussed in section III.Y.1. of this preamble. Facilities also must consider additional F–GHGs purchased by the facility in estimating emissions for comparison to the threshold.

The revisions to subpart SS include the addition of a new equation SS–1 in the reporting threshold at 40 CFR 98.451 (discussed in section III.Y.b. of this preamble) and a new equation SS–2 in the GHGs to report at 40 CFR 98.452. Equation SS–2 is also used in the definition of ''reportable insulating gas,'' discussed in this section of the preamble. We are also making minor revisions to equations SS–1 through SS–6 (which we are renumbering as SS–3 through SS–8 to accommodate new equations SS–1 and SS–2) to incorporate the estimation of emissions from all F–GHGs within the existing calculation methodology. To account for the possibility that the same fluorinated GHG could be a component of multiple reportable insulating gases, we are inserting in the final rule a summation sign at the beginning of the right side of equation SS–3 to ensure that emissions of each fluorinated GHG i are summed across all reportable insulating gases j. In addition, we are updating the monitoring and quality assurance requirements to account for emissions from additional F–GHGs, and harmonizing revisions to the reporting requirements such that reporters account for the mass of each F–GHG at the facility level.

We are also finalizing the proposed definition of ''insulating gas'' and adding the term ''reportable insulating gas,'' which is defined as ''an insulating gas whose weighted average GWP, as calculated in equation SS–2, is greater

than one. A fluorinated GHG that makes up either part or all of a reportable insulating gas is considered to be a component of the reportable insulating gas.'' This term is intended to distinguish between insulating gases whose emissions must be reported under subpart SS and insulating gases whose emissions are not required to be reported under subpart SS (although, as noted above, the quantities of all insulating gases supplied to customers must be reported). In many though not all cases, we are also replacing occurrences of the proposed phrase ''fluorinated GHGs, including PFCs and SF_6'' with ''fluorinated GHGs that are components of reportable insulating gases.'' In addition, we are finalizing revisions to add reporting of an ID number or descriptor for each insulating gas and the name and weight percent of each insulating gas reported. The EPA has also made one minor clarification from proposal. We initially proposed 40 CFR 98.456(u) to require reporting of an ID number or descriptor for each unique insulating gas. To clarify the applicability of this requirement for those gases mixed on-site, the final rule clarifies that facilities must report an ID number or other appropriate descriptor that is unique to the reported insulating gas, and for each ID number or descriptor reported, the name and weight percent of each fluorinated gas in the insulating gas. See section III.U.1. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

b. Revisions To Streamline and Improve Implementation for Subpart SS

To account for changes in the usage of certain GHGs and reduce the likelihood that the reporting threshold will cover facilities with emissions well below 25,000 mtCO$_2$e, we are generally finalizing revisions to the applicability threshold of subpart SS as proposed. (The one change is the introduction of the term ''reportable insulating gas,'' as described in this section III.Y. of the preamble.) The revisions remove the consumption-based threshold at 40 CFR 98.451 and instead require facilities to estimate total annual GHG emissions for comparison to the 25,000 mtCO$_2$e threshold by introducing a new equation, equation SS–1. The equation SS–1 continues to be based on the total annual purchases of insulating gases, but establishes an updated comparison to the threshold, and accounts for the additional fluorinated gases reported by industry. Potential reporters are required to account for the total annual purchases of all reportable insulating gases and multiply the purchases of each reportable insulating gas by the GWP for each F–GHG and the emission factor of 0.10 (or 10 percent). The final rule threshold methodology is more appropriate because it represents the actual fluorinated gases used by a reporter; these revisions also streamline the reporting requirements to focus Agency resources on the substantial emission sources within the sector. Additionally, the changes revise the inclusion of subpart SS in the existing table A–3 to subpart A. Because we are providing a method for direct comparison to the 25,000 mtCO$_2$e threshold, we are removing subpart SS from table A–3 and including the subpart in table A–4 to subpart A. This will require facilities to determine applicability according to 40 CFR 98.2(a)(2) and consider the combined emissions from stationary fuel combustion sources (subpart C), miscellaneous use of carbonates (subpart U), and other applicable source categories. Including subpart SS in table A–4 to subpart A is consistent with other GHGRP subparts that use the 25,000 mtCO$_2$e threshold included under 40 CFR 98.2(a)(2) to determine applicability. See section III.U.2. of the preamble to the 2022 Data Quality Improvements Proposal for additional information on these revisions and their supporting basis.

2. Summary of Comments and Responses on Subpart SS

This section summarizes the major comments and responses related to the proposed amendments to subpart SS. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart SS.

Comment: One commenter suggested redefining the definition of ''insulating gas'' to including any gas with a GWP greater than one and not any fluorinated GHG or fluorinated GHG mixture. The commenter urged that the proposed definition ignores other potential gases that may come onto the market that are not fluorinated but still have a GWP potential. The commenter stated that defining insulating gas under subpart SS to include any gas with a GWP greater than one used as an insulating gas and/or arc quenching gas in electrical equipment would mirror the threshold implemented by the California Air Resources Board and would provide consistency for reporters across Federal and State reporting rules.

Response: In the final rule, the EPA is not requiring electrical equipment manufacturers and refurbishers to report emissions of insulating gases with weighted average 100-year GWPs of one or less, but the EPA is requiring such facilities to report the quantities of insulating gases with GWPs of one or less, as well as the nameplate capacity of the associated equipment, that they transfer to their customers. Based on a review of the subpart SS data submitted to date, the EPA has concluded that excluding emissions of insulating gases with weighted average GWPs of one or less from reporting under subpart SS will have little effect on the accuracy or completeness of the GWP-weighted totals reported under subpart SS or under the GHGRP generally. Between 2011 and 2021, total SF_6 and PFC emissions across all facilities reporting under subpart SS have ranged from 5 to 15 mt (unweighted) or 120,000 to 350,000 mtCO$_2$e. At GWPs of one, these weighted totals would be equivalent to the unweighted quantities reported, which constitute approximately 0.004% (1/23,500) of the GWP-weighted totals. Even in a worst-case scenario where the annual manufacturer emissions of a very low-GWP insulating gas were assumed to equal the total quantity of that gas transferred from manufacturers to customers (implying an emission rate of 100%, higher than any ever reported under subpart SS), the total GWP-weighted emissions reported under subpart SS would be considerably smaller than those reported under any other subpart: total unweighted quantities shipped to customers reported across all facilities to date have ranged between 196 and 372 mt. At GWPs of 1, these totals would fall well below the 15,000- and 25,000 mtCO$_2$e quantities below which individual facilities are eventually allowed to exit the program under the off-ramp provisions of subpart A of part 98 (40 CFR 98.2(i)), as applicable.

While the EPA is not requiring electrical equipment manufacturers and refurbishers to report their emissions of insulating gases with GWPs of one or less, the EPA is requiring such facilities to report the quantities of insulating gases with weighted average GWPs of one or less, as well as the nameplate capacity of the associated equipment, that they transfer to their customers. Tracking such transfers is important to understanding the extent to which substitutes for SF_6 are replacing SF_6 as an insulating gas, which will inform future policies and programs under provisions of the CAA. The EPA

anticipates that tracking transfers to customers will involve a lower burden than tracking emissions and other quantities in addition to transfers.

Z. Subpart UU—Injection of Carbon Dioxide

We are finalizing the amendments to subpart UU of part 98 (Injection of Carbon Dioxide) as revised in the 2023 Supplemental Proposal. This section discusses the final revisions to subpart UU. The EPA received only one supportive comments on the proposed revision to subpart UU in the 2023 Supplemental Proposal. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart UU.

The EPA initially proposed amendments to subpart UU in the 2022 Data Quality Improvements Proposal that were intended to harmonize with revisions to add new subpart VV to part 98 (Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916). Subpart VV is described further in section III.Z. of this preamble. However, we received comments on the 2022 Data Quality Improvements Proposal saying that the applicability of proposed subpart VV was unclear. The EPA subsequently re-proposed revisions to 40 CFR 98.470 in the 2023 Supplemental Proposal. As described in sections III.O. of the preamble of the 2023 Supplemental Proposal, the EPA proposed, and is finalizing, revisions to § 98.470 of subpart UU of part 98 to clarify the applicability of each subpart when a facility quantifies their geologic sequestration of CO_2 in association with EOR operations through the use of the CSA/ANSI ISO 27916:19 method. Specifically, we are clarifying that facilities with a well or group of wells that must report under subpart VV shall not also report data for those same wells under subpart UU. These changes also clarify how CO_2–EOR projects that may transition to use of the CSA/ANSI ISO 27916:19 method during a reporting year will be required to report for the portion of the reporting year before they began using CSA/ANSI ISO 27916:19 and for the portion after they began using CSA/ANSI ISO 27916:19. Additional rationale for these amendments is available in the preamble to the 2023 Supplemental Proposal.

AA. Subpart VV—Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916

We are finalizing several amendments to add subpart VV (Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916) to part 98 as proposed. Section III.Z.1. of this preamble discusses the final requirements of subpart VV. The EPA received several comments on the proposed subpart VV which are discussed in section III.V.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart VV as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart VV

This section summarizes the substantive final amendments to subpart VV. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart VV can be found in this section. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal 2023 Supplemental Proposal.

a. Source Category Definition

In the 2022 Data Quality Improvements Proposal, the EPA proposed adding a new source category, subpart VV, to part 98 to add calculation and reporting requirements for quantifying geologic sequestration of CO_2 in association with EOR operations, which would only apply to facilities that quantify the geologic sequestration of CO_2 in association with EOR operations in conformance with the ISO standard designated as CSA/ANSI ISO 27916:19, *Carbon dioxide capture, transportation and geological storage—Carbon dioxide storage using enhanced oil recovery.*[42] In our initial proposal, the EPA outlined the source category definition, rationale for no threshold, calculation methodology, and monitoring, recordkeeping, and reporting requirements. We noted at that time that under existing GHGRP requirements, facilities that receive CO_2 for injection at EOR operations report under subpart UU (Injection of Carbon Dioxide), and facilities that geologically sequester CO_2 through EOR operations may instead opt-in to subpart RR (Geologic Sequestration of Carbon Dioxide). The EPA proposed to add new subpart VV to require reporting of incidental CO_2 storage associated with EOR based on the CSA/ANSI ISO 27916:19 standard. We subsequently received detailed comments saying that the applicability of proposed subpart VV was unclear, specifically, proposed 40 CFR 98.480 ''Definition of the Source Category.'' The commenters were uncertain whether the EPA had intended to require facilities using CSA/ANSI ISO 27916:19 to report under subpart VV or whether facilities that used CSA/ANSI ISO 27916:19 would have the option to choose under which subpart they would report to: subpart RR, subpart UU, or subpart VV.

In the 2023 Supplemental Proposal, the EPA subsequently reproposed §§ 98.480 and 98.481 of subpart VV to clarify the applicability to each subpart. As explained in section III.P. of the preamble the 2023 Supplemental Proposal, the EPA clarified that if a facility elects to use the CSA/ANSI ISO 27916:19 method for quantifying geologic sequestration of CO_2 in association with EOR operations, then the facility would be required under the GHGRP to report under new subpart VV (unless the facility chooses to report under subpart RR and has received an approved Monitoring, Reporting, and Verification Plan (MRV Plan) from EPA). The EPA further clarified that subpart VV is not intended to apply to facilities that use the content of CSA/ANSI ISO 27916:19 for a purpose other than demonstrating secure geologic storage, such as only as a reference material or for informational purposes. Following review of subsequent comments received on the reproposed source category definition, we are finalizing the definition of the source category as proposed in the 2023 Supplemental Proposal.

b. Reporting Threshold

In the 2022 Data Quality Improvements Proposal, the EPA proposed no threshold for reporting under subpart VV (*i.e.,* that subpart VV would be an ''all-in'' reporting subpart). The EPA also proposed under 40 CFR 98.480(c) that facilities subject only to subpart VV would not be required to report emissions under subpart C or any other subpart listed in 40 CFR 98.2(a)(1) or (2), consistent with the requirements for existing reporters under subpart UU. In the 2023 Supplemental Proposal, the EPA maintained no threshold is required for reporting, but amended the regulatory text to clarify that all CO_2–

[42] Although the title of the standard references only EOR, Clause 1.1 of CSA/ANSI ISO 27916:19 indicates that the standard can apply to enhanced gas recovery as well. Therefore, any reference to EOR in subpart VV also applies to enhanced gas recovery.

EOR projects using CSA/ANSI ISO 27916:19 as a method of quantifying geologic sequestration that do not report under subpart RR would report under subpart VV. We also proposed text at 40 CFR 98.481(c) to clarify how CO_2–EOR projects previously reporting under subpart UU that begin using CSA/ANSI ISO 27916:19 part-way through a reporting year must report. The EPA is finalizing these requirements as reproposed in the 2023 Supplemental Proposal.

Additionally, we are finalizing revisions at 40 CFR 98.481(b) that facilities subject to subpart VV will not be subject to the off-ramp requirements of 40 CFR 98.2(i). Instead, once a facility opts-in to subpart VV, the owner or operator must continue for each year thereafter to comply with all requirements of the subpart, including the requirement to submit annual reports, until the facility demonstrates termination of the CO_2–EOR project following the requirements of CSA/ANSI ISO 27916:19. The operator must notify the Administrator of its intent to cease reporting and provide a copy of the CO_2–EOR project termination documentation prepared for CSA/ANSI ISO 27916:19.

c. Calculation Methods

In the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal, the EPA proposed incorporating the quantification methodology of CSA/ANSI ISO 27916:19 for calculation of emissions. Under CSA/ANSI ISO 27916:19, the mass of CO_2 stored is determined as the total mass of CO_2 received minus the total mass of CO_2 lost from project operations and the mass of CO_2 lost from the EOR complex. The EOR complex is defined as the project reservoir, trap, and such additional surrounding volume in the subsurface as defined by the operator within which injected CO_2 will remain in safe, long-term containment. Specific losses include those from leakage from production, handling, and recycling facilities; from infrastructure (including wellheads); from venting/flaring from production operations; and from entrainment within produced gas/oil/water when this CO_2 is not separated and reinjected. We are finalizing the calculation requirements as proposed.

d. Monitoring, QA/QC, and Verification Requirements

The EPA is finalizing as proposed the requirement for reporters to use the applicable monitoring and quality assurance requirements set forth in CSA/ANSI ISO 27916:19.

e. Procedures for Estimating Missing Data

The EPA is finalizing as proposed the requirement for reporters to use the applicable missing data and quality assurance procedures set forth in CSA/ANSI ISO 27916:19.

f. Data Reporting Requirements

The EPA is finalizing, as proposed, that facilities will report the amount of CO_2 stored, inputs included in the mass balance equation used to determine CO_2 stored using the CSA/ANSI ISO 27916:19 methodology, and documentation providing the basis for that determination as set forth in CSA/ANSI ISO 27916:19. Documentation includes providing the CSA/ANSI ISO 27916:19 EOR Operations Management Plan (OMP), which is required to specify: (1) a geological description of the site and the procedures for field management and operational containment during the quantification period; (2) the initial containment assurance plan to identify potential leakage pathways; (3) the plan for monitoring of potential leakage pathways; and (4) the monitoring methods for detecting and quantifying losses and how this will serve to provide the inputs into site-specific mass balance equations. Reporters must also specify any changes made to containment assurance and monitoring approaches and procedures in the EOR OMP made within the reporting year.

We are also finalizing the reporting of the following information per CSA/ANSI ISO 27916:19: (1) the quantity of CO_2 stored during the year; (2) the formula and data used to quantify the storage, including the quantity of CO_2 delivered to the CO_2–EOR project and losses during the year; (3) the methods used to estimate missing data and the amounts estimated; (4) the approach and method for quantification utilized by the operator, including accuracy, precision and uncertainties; (5) a statement describing the nature of validation or verification, including the date of review, process, findings, and responsible person or entity; and (6) the source of each CO_2 stream quantified as storage. The final rule also requires that reporters provide a copy of the independent engineer or geologist's certification as part of reporting to subpart VV, if such a certification has been made.

Finally, the EPA is finalizing a notification for project termination. The final rule specifies that the time for cessation of reporting under subpart VV is the same as under CSA/ANSI ISO 27916:19; the operator must notify the Administrator of its intent to cease reporting and provide a copy of the CO_2–EOR project termination documentation.

g. Records That Must Be Retained

The EPA is finalizing as proposed the requirement that reporters meet the record retention requirements of 40 CFR 98.3(g) and the applicable recordkeeping retention requirements set forth in CSA/ANSI ISO 27916:19.

2. Summary of Comments and Responses on Subpart VV

The EPA received several comments for subpart VV; the majority of these comments were received on the 2022 Data Quality Improvements Proposal and were previously addressed in the preamble to the 2023 Supplemental Proposal (see section III.P. of the preamble to the 2023 Supplemental Proposal). The EPA received only supportive comments on the proposed revisions to subpart VV in the 2023 Supplemental Proposal; see the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart VV.

BB. Subpart WW —Coke Calciners

We are finalizing the addition of subpart WW to part 98 (Coke Calciners) with revisions in some cases. Section III.BB.1. of this preamble discusses the final requirements of subpart WW. The EPA received several comments on the proposed subpart WW which are discussed in section III.BB.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart WW as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart WW

This section summarizes the substantive final amendments to subpart WW. Major changes in this final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart WW can be found in this section. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Source Category Definition

The EPA is finalizing the source category definition as proposed, with one minor clarification. Specifically, we proposed that the coke calciner source category consists of process units that heat petroleum coke to high temperatures in the absence of air or oxygen for the purpose of removing impurities or volatile substances in the petroleum coke feedstock. Following review of comments received, the EPA is revising the source category definition from that proposed to remove the language ''in the absence of air or oxygen.'' See section III.BB.2. of this preamble for additional information on related comments and the EPA's response. The final definition of the coke calciner source category includes, but is not limited to, rotary kilns or rotary hearth furnaces used to calcine petroleum coke and any afterburner or other equipment used to treat the process gas from the calciner. The source category includes all coke calciners, not just those co-located at petroleum refineries, to provide consistent requirements for all coke calciners.

b. Reporting Threshold

In the 2023 Supplemental Proposal, the EPA proposed no threshold for reporting under subpart WW. Because coke calciners are large emission sources, they are expected to emit over the 25,000 $mtCO_2e$ threshold generally required to report under existing GHGRP subparts with thresholds, and nearly all of them are also projected to exceed the 100,000 $mtCO_2e$ threshold. Therefore, the EPA projects that there are limited differences in the number of reporting facilities based on any of the emission thresholds considered. For this reason, the EPA is finalizing the coke calciner source category as an ''all-in'' subpart (*i.e.,* regardless of their emissions profile).

c. Calculation Methods

Coke calciners primarily emit CO_2, but also have CH_4 and N_2O emissions as part of the process gas emission control combustion device operation. The EPA is finalizing, as proposed in the 2023 Supplemental Proposal, that CO_2, CH_4, and N_2O emissions from each coke calcining unit be estimated.

The EPA reviewed a number of different emissions estimation methods for coke calciners. We subsequently proposed, and are finalizing, to require either one of two separate calculation methods, the use of a CEMS or the carbon mass balance method for estimating emissions. Each of these methodologies are used to estimate CO_2 emissions. We are also finalizing, as proposed, that coke calciners also estimate process CH_4 and N_2O emissions based on the total CO_2 emissions determined for the coke calciner and the ratio of the default CO_2 emission factor for petroleum coke in table C–1 to subpart C of part 98 to the default CH_4 and N_2O emission factors for petroleum products in table C–2 to subpart C of part 98. Under the final methods, petroleum refineries with coke calciners are able to maintain their current calculation methods. Additional detail on the calculation methods reviewed are available in section IV.B. of the preamble to the 2023 Supplemental Proposal.

Direct measurement using CEMS. The CEMS approach directly measures CO_2 concentration and total exhaust gas flow rate for the combined process and combustion source emissions. CO_2 mass emissions are calculated from these measured values using equation C–6 and, if necessary, equation C–7 in 40 CFR 98.33(a)(4).

The EPA proposed that the CEMS method under subpart WW would be implemented consistent with subpart Y of part 98 (Petroleum Refineries), which required reporters to determine CO_2 emissions from auxiliary fuel use discharged in the coke calciner exhaust stack using methods in subpart C of part 98, and to subtract those emissions from the measured CEMS emissions to determine the process CO_2 emissions. We are finalizing this requirement.

Carbon balance method. For those facilities that do not have a qualified CEMS in-place, facilities may use the carbon mass balance method, using data that is expected to be routinely monitored by coke calcining facilities. The carbon mass balance method uses the mass of green coke, calcined coke and petroleum coke dust removed from the dust collection system, along with the carbon content of the green and calcined coke, to estimate process CO_2 emissions; the methodology is the same as current equation Y–13 of 40 CFR 98.253(g)(2) that is used for coke calcining processes co-located at petroleum refineries.

d. Monitoring, QA/QC, and Verification Requirements

The EPA is finalizing the monitoring methods to subpart WW as proposed.

Direct measurement using CEMS. For direct measurement using CEMS, the CEMS method requires both a continuous CO_2 concentration monitor and a continuous volumetric flow monitor. Reporters required to or electing to use CEMS must install, operate, and calibrate the monitoring system according to subpart C (General Stationary Fuel Combustion Sources), which is consistent with the current requirements for coke calciner CO_2 CEMS monitoring requirements within subpart Y. We are finalizing that all CO_2 CEMS and flow rate monitors used for direct measurement of GHG emissions should comply with QA/QC procedures for daily calibration drift checks and quarterly or annual accuracy assessments, such as those provided in Appendix F to part 60 or similar QA/QC procedures. These requirements ensure the quality of the reported GHG emissions and are consistent with the current requirements for CEMS measurements within subparts A (General Provisions) and C of the GHGRP.

Carbon balance method. The carbon mass balance method requires monitoring of mass quantities of green coke fed to the process, calcined coke leaving the process, and coke dust removed from the process by dust collection systems. It also requires periodic determination of carbon content of the green and calcined coke. For coke mass measurements, we are finalizing that the measurement device be calibrated according to the procedures specified by the updated NIST HB 44–2023: *Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices,* 2023 edition (we have clarified the title and publication date of this method in the final rule) or the procedures specified by the manufacturer. We are requiring the measurement device be recalibrated either biennially or at the minimum frequency specified by the manufacturer. These requirements are to ensure the quality of the reported GHG emissions and to be consistent with the current requirements for coke calciner mass measurements within subpart Y.

For carbon content of coke measurements, the owner or operator must follow approved analytical procedures and maintain and calibrate instruments used according to manufacturer's instructions and to document the procedures used to ensure the accuracy of the measurement devices used. These requirements are to ensure the quality of the reported GHG emissions and to be consistent with the current requirements for coke calciner mass measurements within subpart Y. These determinations must be made monthly. If carbon content measurements are made more often than monthly, all measurements made within the calendar month must be used to determine the average for the month.

e. Procedures for Estimating Missing Data

The EPA is finalizing as proposed the procedures for estimating missing data. For the CEMS methodology, whenever a quality-assured value of a required parameter is unavailable (*e.g.,* if a CEMS malfunctions during unit operation or if a required fuel sample is not taken), a substitute data value for the missing parameter shall be used in the calculations. For missing CEMS data, the missing data procedures in subpart C must be used.

Under the carbon mass balance method, for each missing value of mass or carbon content of coke, reporters must use the average of the data measurements before and after the missing data period. If, for a particular parameter, no quality assured data are available prior to the missing data incident, the substitute data value must be the first quality-assured value obtained after the missing data period. Similarly, if no quality-assured data are available after the missing data incident, the substitute data value must be the most recently acquired quality-assured value obtained prior to the missing data period.

f. Data Reporting Requirements

The EPA is finalizing the data reporting requirements of subpart WW as proposed. For coke calcining units, the owner and operator shall report the coke calciner unit ID number and maximum rated throughput of the unit, the method used to calculate GHG emissions, and the calculated CO_2, CH_4, and N_2O annual emissions for each unit, expressed in metric tons of each pollutant emitted. We are also requiring the owner and operator to report the annual mass of green coke fed to the coke calcining unit, the annual mass of marketable petroleum coke produced by the coke calcining unit, the annual mass of petroleum coke dust removed from the process through the dust collection system of the coke calcining unit, the annual average mass fraction carbon content of green coke fed to the unit, and the annual average mass fraction carbon content of the marketable petroleum coke produced by the coke calcining unit.

g. Records That Must Be Retained

The EPA is finalizing the record retention requirements of subpart WW as proposed. Facilities are required to maintain records documenting the procedures used to ensure the accuracy of the measurements of all reported parameters, including but not limited to, calibration of weighing equipment, flow meters, and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided.

For the coke calciners source category, we are finalizing that the verification software specified in 40 CFR 98.5(b) be used to fulfill the recordkeeping requirements for the following five data elements:

- Monthly mass of green coke fed to the coke calcining unit;
- Monthly mass of marketable petroleum coke produced by the coke calcining unit;
- Monthly mass of petroleum coke dust removed from the process through the dust collection system of the coke calcining unit;
- Average monthly mass fraction carbon content of green coke fed to the coke calcining unit; and
- Average monthly mass fraction carbon content of marketable petroleum coke produced by the coke calcining unit.

2. Summary of Comments and Responses on Subpart WW

This section summarizes the major comments and responses related to the proposed subpart WW. The EPA previously requested comment on the addition of coke calciners production source category as a new subpart to part 98 in the 2022 Data Quality Improvements Proposal. The EPA received several comments for subpart WW on the 2022 Data Quality Improvements Proposal; many of these comments were previously addressed in the preamble to the 2023 Supplemental Proposal, wherein the EPA proposed to add new subpart WW for coke calciners (see section IV.B. of the preamble to the 2023 Supplemental Proposal). The EPA received additional comments regarding the proposed subpart WW following the 2023 Supplemental Proposal. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart WW.

Comment: One commenter stated that the description of coke calciners may be overly narrow. The commenter contended that the language ''in the absence of air or oxygen'' is not necessarily accurate. The commenter stated that air/oxygen is necessary for combustion to occur, and that the high temperatures required for proper calcination are from the combustion of volatiles and carbon in the green coke.

Response: We understand that air is introduced in the coke calciner to burn the volatiles from the coke, but the air is introduced in a limited fashion (limited oxygen) so that the complete combustion of coke in the calciner does not occur. However, we agree with the commenter that the phrase ''in the absence of air or oxygen'' may be too restrictive and we have deleted this phrase from the proposed source category description at 40 CFR 98.490(a) in the final rule.

Comment: One commenter stated that coke calciners that use refinery fuel gas or natural gas during startup or during hot standby should be allowed to report emissions from these fuel gases using a methodology from subpart C of part 98, separately from the coke calciner emissions. The commenter stated that where coke calcining and fuel gas combustion are occurring simultaneously, the fuel gas emissions should be subtracted from the emissions that are calculated using CEMS and the proposed stack flow methodology to avoid double counting. The commenter added that the requirements for fuel gas or natural gas composition and heat content use in coke calciners should be the same as required in subpart C.

Response: We agree with the commenter and the issues identified by the commenter were addressed in the 2023 Supplemental Proposal. We are finalizing these provisions for treating GHG emissions from auxiliary fuel use as proposed (see 40 CFR 98.493(b)(1)).

CC. Subpart XX—Calcium Carbide Production

We are finalizing the addition of subpart XX (Calcium Carbide Production) to part 98 as proposed. Section III.CC.1. of this preamble discusses the final requirements of subpart XX. The EPA received comments on the proposed subpart XX which are discussed in section III.CC.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the addition of subpart XX as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart XX

This section summarizes the final amendments to subpart XX. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart XX can be found in this section and section III.CC.2. of this preamble.

Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Source Category Definition

The EPA is finalizing the source category definition as proposed. We are defining calcium carbide production to include any process that produces calcium carbide. Calcium carbide is an industrial chemical manufactured from lime (CaO) and carbon, usually petroleum coke, by heating the mixture to 2,000 to 2,100 C (3,632 to 3,812 °F) in an electric arc furnace. During the production of calcium carbide, the use of carbon-containing raw materials (petroleum coke) results in emissions of CO_2.

Although we considered accounting for emissions from the production of acetylene at calcium carbide facilities in the 2022 Data Quality Improvements Proposal, we ultimately determined that acetylene is not produced at the one known plant that produces calcium carbide. For this reason, in the 2023 Supplemental Proposal we did not propose, and as such are not taking final action on, inclusion of reporting of CO_2 emissions from the production of acetylene from calcium carbide under subpart XX.

b. Reporting Threshold

In the 2023 Supplemental Proposal, the EPA proposed no threshold for reporting under subpart XX. The current estimate of emissions from the single known calcium carbide production facility in the United States exceeds 25,000 mtCO_2e by a factor of about 1.9. Therefore we are finalizing, as proposed, the calcium carbide source category as an ''all-in'' subpart. For a full discussion of the threshold analysis, please refer to section IV.C. of the preamble to the 2023 Supplemental Proposal.

c. Calculation Methods

In the 2023 Supplemental Proposal, the EPA reviewed the production processes and available emissions estimation methods for calcium carbide production including a default emission factor methodology, a carbon balance methodology (IPCC Tier 3), and direct measurement using CEMS (see section IV.C.5. of the preamble to the 2023 Supplemental Proposal). We subsequently proposed and are finalizing two different methods for quantifying GHG emissions from calcium carbide manufacturing, depending on current emissions monitoring at the facility. If a qualified CEMS is in place, the CEMS must be used. Otherwise, the facility can elect to either install a CEMS or elect to use the carbon mass balance method.

Direct measurement using CEMS. Facilities with an existing CEMS that meet the requirements outlined in subpart C of part 98 (General Stationary Fuel Combustion) are required to use CEMS to estimate combined process and combustion CO_2 emissions. Facilities are required to follow the requirements of subpart C to estimate all CO_2 emissions from the industrial source. Facilities will be required to follow subpart C to estimate emissions of CO_2, CH_4, and N_2O from stationary combustion.

Carbon balance method. For facilities that do not have CEMS that meet the requirements of 40 CFR part 98 subpart C, the alternate monitoring method is the carbon balance method. For any stationary combustion units included at the facility, facilities will be required to follow the existing requirements at 40 CFR part 98, subpart C to estimate emissions of CO_2, CH_4, and N_2O from stationary combustion. Use of facility specific information is consistent with IPCC Tier 3 methods and is the preferred method for estimating emissions for other GHGRP sectors.

d. Monitoring, QA/QC, and Verification requirements

The EPA is finalizing the monitoring, QA/QC, and verification requirements to subpart XX as proposed. We are finalizing two separate monitoring methods: direct measurement and a mass balance emission calculation.

Direct measurement using CEMS. For facilities where process emissions and/or combustion GHG emissions are contained within a stack or vent, facilities can take direct measurement of the GHG concentration in the stack gas and the flow rate of the stack gas using a CEMS. Under the final rule, if facilities use an existing CEMS to meet the monitoring requirements, they are required to use CEMS to estimate CO_2 emissions. Where the CEMS capture all combustion- and process-related CO_2 emissions, facilities will be required to follow the requirements of subpart C to estimate emissions.

The CEMS method requires both a continuous CO_2 concentration monitor and a continuous volumetric flow monitor. To qualify as a CEMS, the monitors are required to be installed, operated, and calibrated according to subpart C of part 98 (40 CFR 98.33(a)(4)), which is consistent with CEMS requirements in other GHGRP subparts.

Carbon balance method. For facilities using the carbon mass balance method, we are requiring the facility to determine the annual mass for each material used for the calculations of annual process CO_2 emissions by summing the monthly mass for the material determined for each month of the calendar year. The monthly mass may be determined using plant instruments used for accounting purposes, including either direct measurement of the quantity of the material placed in the unit or by calculations using process operating information.

For the carbon content of the materials used to calculate process CO_2 emissions, we are finalizing a requirement that the owner or operator determine the carbon content using material supplier information or collect and analyze at least three representative samples of the material inputs and outputs each year. The final rule will require the carbon content be analyzed at least annually using standard ASTM methods, including their QA/QC procedures. To reduce burden, if a specific process input or output contributes less than one percent of the total mass of carbon into or out of the process, the reporter does not have to determine the monthly mass or annual carbon content of that input or output.

e. Procedures for Estimating Missing Data

We are finalizing as proposed the use of substitute data whenever a quality-assured value of a parameter is used to calculate emissions is unavailable, or ''missing.'' If the carbon content analysis of carbon inputs or outputs is missing, the substitute data value will be based on collected and analyzed representative samples for average carbon contents. If the monthly mass of carbon-containing inputs and outputs is missing, the substitute data value will be based on the best available estimate of the mass of the inputs and outputs from all available process data or data used for accounting purposes, such as purchase records. The likelihood for missing process input or output data is low, as businesses closely track their purchase of production inputs. These missing data procedures are the same as those for the ferroalloy production source category, subpart K of part 98, under which the existing U.S. calcium carbide production facility currently reports.

f. Data Reporting Requirements

The EPA is finalizing, as proposed, that each carbon carbide production facility report the annual CO_2 emissions

from each calcium carbide production process, as well as any stationary fuel combustion emissions. In addition, we are finalizing requirements for facilities to provide additional information that forms the basis of the emissions estimates, along with supplemental data, so that we can understand and verify the reported emissions. All calcium carbide production facilities will be required to report their annual production and production capacity, total number of calcium carbide production process units, annual consumption of petroleum coke, each end use of any calcium carbide produced and sent off site, and, if the facility produces acetylene, the annual production of acetylene, the quantity of calcium carbide used for acetylene production at the facility, and the end use of the acetylene produced on-site. The EPA is also finalizing reporting the end use of calcium carbide sent off site, as well as acetylene production information for current or future calcium carbide production facilities, to inform future Agency policy under the CAA.

As proposed, we are finalizing requirements that if a facility uses CEMS to measure their CO_2 emissions, they will be required to also report the identification number of each process unit; the EPA is clarifying in the final rule that if a facility uses CEMS, emissions are reported from each CEMS monitoring location. If a CEMS is not used to measure CO_2 emissions, the facility will also report the method used to determine the carbon content of each material for each process unit, how missing data were determined, and the number of months missing data procedures were used.

g. Records That Must Be Retained

The EPA is finalizing as proposed the requirement that facilities maintain records of information used to determine the reported GHG emissions, to allow us to verify that GHG emissions monitoring and calculations were done correctly. If a facility uses a CEMS to measure their CO_2 emissions, they will be required to record the monthly calcium carbide production from each process unit and the number of monthly and annual operating hours for each process unit. If a CEMS is not used, the facility will be required to retain records of monthly production, monthly and annual operating hours, monthly quantities of each material consumed or produced, and carbon content determinations.

As proposed, we are finalizing requirements that the owner or operator maintain records of how measurements are made, including measurements of quantities of materials used or produced and the carbon content of process input and output materials. The procedures for ensuring accuracy of measurement methods, including calibration, must be recorded.

The final rule also requires the retention of a record of the file generated by the verification software specified in 40 CFR 98.5(b) including:

- Carbon content (percent by weight expressed as a decimal fraction) of the reducing agent (petroleum coke), carbon electrode, product produced, and nonproduct outgoing materials; and
- Annual mass (tons) of the reducing agent (petroleum coke), carbon electrode, product produced, and nonproduct outgoing materials.

2. Summary of Comments and Responses on Subpart XX

The EPA previously requested comment on the addition of a calcium carbide source category as a new subpart to part 98 in the 2022 Data Quality Improvements Proposal. The EPA received one comment objecting to the addition of the proposed source category and one comment on the potential calculation methodology. Subsequently, the EPA responded to the comments and proposed to add new subpart XX for calcium carbide (see section IV.C. of the preamble to the 2023 Supplemental Proposal). The EPA received no comments regarding proposed subpart XX following the 2023 Supplemental Proposal. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart XX.

DD. Subpart YY—Caprolactam, Glyoxal, and Glyoxylic Acid Production

We are finalizing the addition of subpart YY (Caprolactam, Glyoxal, and Glyoxylic Acid Production) to part 98 with revisions in some cases. Section III.DD.1. of this preamble discusses the final requirements of subpart YY. Major comments, as applicable, are addressed in section III.DD.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the revisions to subpart YY as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart YY

This section summarizes the substantive final amendments to subpart YY. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart YY can be found in this section. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Source Category Definition

In the 2023 Supplemental Proposal, the EPA proposed that the caprolactam, glyoxal, or glyoxylic acid source category, as defined under subpart YY, would include any facility that produces caprolactam, glyoxal, or glyoxylic acid.

Caprolactam is a crystalline solid organic compound with a wide variety of uses, including brush bristles, textile stiffeners, film coatings, synthetic leather, plastics, plasticizers, paint vehicles, cross-linking for polyurethanes, and in the synthesis of lysine. Caprolactam is primarily used in the manufacture of synthetic fibers, especially Nylon 6.

Glyoxal is a solid organic compound with a wide variety of uses, including as a crosslinking agent in various polymers for paper coatings, textile finishes, adhesives, leather tanning, cosmetics, and oil-drilling fluids; as a sulfur scavenger in natural gas sweetening processes; as a biocide in water treatment; to improve moisture resistance in wood treatment; and as a chemical intermediate in the production of pharmaceuticals, dyestuffs, glyoxylic acid, and other chemicals. It is also used as a less toxic substitute for formaldehyde in some applications (*e.g.,* in wood adhesives and embalming fluids).

Glyoxylic acid is a solid organic compound exclusively produced by the oxidation of glyoxal with nitric acid. It is used mainly in the synthesis of vanillin, allantoin, and several antibiotics like amoxicillin, ampicillin, and the fungicide azoxystrobin.

We are finalizing the source category definition to include any facility that produces caprolactam, glyoxal, or glyoxylic acid as proposed. The source category will exclude the production of glyoxal through the LaPorte process (*i.e.,* the gas-phase catalytic oxidation of ethylene glycol with air in the presence of a silver or copper catalyst). As explained in the 2023 Supplemental Proposal, the LaPorte process does not

emit N_2O and there are no methods for estimating CO_2 in available literature.

b. Reporting Threshold

In the 2023 Supplemental Proposal, the EPA proposed no threshold for reporting under subpart YY (*i.e.,* that subpart YY would be an ''all-in'' reporting subpart). The EPA noted that the total process emissions from current production of caprolactam, glyoxal, and glyoxylic acid are estimated at 1.2 million mtCO_2e, largely from two known caprolactam production facilities; although the known universe of facilities that produce caprolactam, glyoxal, and glyoxylic acid in the United States is four to six total facilities. We proposed that adding caprolactam, glyoxal, and glyoxylic acid production as an ''all-in'' subpart (*i.e.,* regardless of the facility emissions profile) is a conservative approach to gather information from as many facilities that produce caprolactam, glyoxal, and glyoxylic acid as possible, especially if production of glyoxal and glyoxylic acid increase in the near future. The EPA is finalizing these requirements as proposed.

c. Calculation Methods

In the 2023 Supplemental Proposal, the EPA reviewed the production processes and available emissions estimation methods for caprolactam, glyoxal, and glyoxylic acid production and proposed that only N_2O emissions would be estimated from these processes. The EPA also proposed to require the reporting of combustion emissions from facilities that produce caprolactam, glyoxal, and glyoxylic acid, including CO_2, CH_4, and N_2O.

The EPA reviewed two methods from the 2006 IPCC Guidelines,[43] including the Tier 2 and Tier 3 methodologies, for calculating N_2O emissions from the production of caprolactam, glyoxal, and glyoxylic acid, and subsequently proposed the IPCC Tier 2 approach to quantify N_2O process emissions. We are finalizing the N_2O calculation requirements as proposed, with minor revisions. Following the Tier 2 approach established by the IPCC, reporters will apply default N_2O generation factors on a site-specific basis. This requires raw material input to be known in addition to a standard N_2O generation factor, which differs for each of the three chemicals. In addition, Tier 2 requires site-specific knowledge of the use of N_2O control technologies. The volume or mass of each product is measured with a flow meter or weigh scales. The process-related N_2O emissions are estimated by multiplying the generation factor by the production and the destruction efficiency of any N_2O control technology. The EPA is revising the final rule to adjust the N_2O generation factors (proposed in table 1 to subpart YY) for glyoxal and glyoxylic acid production to correctly reflect the conversion of the IPCC default emission factors, which were intended to be converted from metric tons N_2O emitted per metric ton of product produced to kg N_2O per metric ton of product produced using a conversion factor of 1,000 kg per metric ton. The final rule corrects the generation factor for glyoxal from 5,200 to 520 and, for glyoxylic acid, from 1,000 to 100. The EPA is finalizing a minor clarification to equation 1 to 40 CFR 98.513(d)(2) (proposed as equation YY–1) to re-order the defined parameters of the equation to follow their order of appearance in the equation. The EPA is also finalizing an additional equation (equation 3 to 40 CFR 98.513(f)) from the proposed rule, which sums the monthly process emissions estimated by equation 2 to 40 CFR 98.513(e) (proposed as equation YY–2) to an annual value. This additional equation clarifies the methodology for reporting annual emissions and does not require the collection of any additional data.

For any stationary combustion units included at the facility, we proposed that facilities would be required to follow the existing requirements in 40 CFR part 98, subpart C to calculate emissions of CO_2, CH_4 and N_2O from stationary combustion. We are finalizing the combustion calculation requirements as proposed.

d. Monitoring, QA/QC, and Verification Requirements

Monitoring is required to comply with the N_2O calculation methodologies for reporters that produce caprolactam, glyoxal, and glyoxylic acid. In the 2023 Supplemental Proposal, the EPA proposed that reporters that produce caprolactam, glyoxal, and glyoxylic acid are to determine the monthly and annual production quantities of each chemical and to determine the N_2O destruction efficiency of any N_2O abatement technologies in use. The EPA is finalizing as proposed the requirement for reporters to either perform direct measurement of production quantities or to use existing plant procedures to determine production quantities. *E.g.,* the production rate can be determined through sales records or by direct measurement using flow meters or weigh scales.

For determination of the N_2O destruction efficiency, we are finalizing as proposed the requirement that reporters estimate the destruction efficiency for each N_2O abatement technology. The destruction efficiency can be determined by using the manufacturer's specific destruction efficiency or estimating the destruction efficiency through process knowledge. Documentation of how process knowledge was used to estimate the destruction efficiency is required. Examples of information that could constitute process knowledge include calculations based on material balances, process stoichiometry, or previous test results provided that the results are still relevant to the current vent stream conditions.

For the caprolactam, glyoxal, and glyoxylic acid production subpart, we are requiring reporters to perform all applicable flow meter calibration and accuracy requirements and maintain documentation as specified in 40 CFR 98.3(i).

e. Procedures for Estimating Missing Data

For caprolactam, glyoxal, and glyoxylic acid production, the EPA is finalizing as proposed the requirement that substitute data for each missing production value is the best available estimate based on all available process data or data used for accounting purposes (such as sales records). For the control device destruction efficiency, assuming that the control device operation is generally consistent from year to year, the substitute data value should be the most recent quality assured value.

f. Data Reporting Requirements

The EPA is finalizing, as proposed, that facilities must report annual N_2O emissions (in metric tons) from each production line. In addition, facilities must submit the following data to facilitate understanding of the emissions data and verify the reasonableness of the reported emissions: number of process lines; annual production capacity; annual production; number of operating hours in the calendar year for each process line; abatement technology used and installation dates (if applicable); abatement utilization factor for each process line; number of times in the reporting year that missing data procedures were followed to measure production quantities of caprolactam, glyoxal, or glyoxylic acid (months); and

[43] IPCC 2006. IPCC Guidelines for National Greenhouse Gas Inventories, Volume 3, Industrial Processes and Product Use. Chapter 3, Chemical Industry Emissions. 2006. *www.ipcc-nggip.iges.or.jp/public/2006gl/pdf/3_Volume3/V3_3_Ch3_Chemical_Industry.pdf.*

overall percent N_2O reduction for each chemical for all process lines.

g. Records That Must Be Retained

The EPA is finalizing as proposed the requirement that facilities maintain records documenting the procedures used to ensure the accuracy of the measurements of all reported parameters, including but not limited to, calibration of weighing equipment, flow meters, and other measurement devices. The estimated accuracy of measurements made with these devices must also be recorded, and the technical basis for these estimates must be provided. We are also requiring, as proposed, that facilities maintain records documenting the estimate of production rate and abatement technology destruction efficiency through accounting procedures and process knowledge, respectively.

Finally, the EPA is also requiring, as proposed, the retention of a record of the file generated by the verification software specified in 40 CFR 98.5(b) including:

- Monthly production quantities of caprolactam from all process lines;
- Monthly production quantities of glyoxal from all process lines; and
- Monthly production quantities of glyoxylic acid from all process lines.

We are revising the final rule to clarify that these monthly production quantities must be supplied in metric tons and for each process line. Additionally, we are adding a requirement that facilities maintain records of the destruction efficiency of the N_2O abatement technology from each process line, consistent with requirements of equation 2 to 40 CFR 98.513(e). Facilities will enter this information into EPA's electronic verification software in order to ensure proper verification of the reported emission values. Following electronic verification, facilities will be required to retain a record of the file generated by the verification software specified in 40 CFR 98.5(b), therefore, no additional burden is anticipated.

2. Summary of Comments and Responses on Subpart YY

The EPA previously requested comment on the addition of a caprolactam, glyoxal, and glyoxylic acid production source category as a new subpart to part 98 in the 2022 Data Quality Improvements Proposal. The EPA received no comments regarding the addition of the proposed source category. Subsequently, the EPA proposed to add new subpart YY for caprolactam, glyoxal, and glyoxylic acid production (see section IV.D. of the preamble to the 2023 Supplemental Proposal). The EPA received no comments regarding proposed subpart YY following the 2023 Supplemental Proposal.

EE. Subpart ZZ—Ceramics Manufacturing

We are finalizing the addition of subpart ZZ of part 98 (Ceramics Manufacturing) with revisions in some cases. Section III.EE.1. of this preamble discusses the final requirements of subpart ZZ. The EPA received a number of comments on the proposed subpart ZZ which are discussed in section III.EE.2. of this preamble. We are also finalizing as proposed related confidentiality determinations for data elements resulting from the addition of subpart ZZ as described in section VI. of this preamble.

1. Summary of Final Amendments to Subpart ZZ

This section summarizes the final amendments to subpart ZZ. Major changes to the final rule as compared to the proposed revisions are identified in this section. The rationale for these and any other changes to 40 CFR part 98, subpart ZZ can be found in section III.EE.2. of this preamble. Additional rationale for these amendments is available in the preamble to the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal.

a. Source Category Definition

In the 2023 Supplemental Proposal, the EPA defined the ceramics manufacturing source category as any facility that uses nonmetallic, inorganic materials, many of which are clay-based, to produce ceramic products such as bricks and roof tiles, wall and floor tiles, table and ornamental ware (household ceramics), sanitary ware, refractory products, vitrified clay pipes, expanded clay products, inorganic bonded abrasives, and technical ceramics (*e.g.,* aerospace, automotive, electronic, or biomedical applications).

The EPA also proposed that the ceramics source category would apply to facilities that annually consume at least 2,000 tons of carbonates or 20,000 tons of clay heated to a temperature sufficient to allow the calcination reaction to occur, and operate a ceramics manufacturing process unit. The proposed definition of ceramics manufacturers as facilities that use at least the minimum quantity of carbonates or clay (2,000 tons/20,000 tons) was considered consistent with subpart U of part 98 (Miscellaneous Uses of Carbonate). This minimum 2,000 tons of carbonate use was added to subpart U in the 2009 Final Rule based on comments received on the April 10, 2009 proposed rule (74 FR 16448), where commenters requested a carbonate use threshold of 2,000 tons in order to exempt small operations and activities which use carbonates in trace quantities. The proposed source category definition for ceramics manufacturing in the 2023 Supplemental Proposal established a minimum production level as a means to exclude and thus reduce the reporting burden for small artisan-level ceramics manufacturing processes. We defined a ceramics manufacturing process unit as a kiln, dryer, or oven used to calcine clay or other carbonate-based materials for the production of a ceramics product.

The EPA is finalizing the definition of the source category with one change. We are revising the minimum production level in the definition from "at least 2,000 tons of carbonates or 20,000 tons of clay which is heated to a temperature sufficient to allow the calcination reaction to occur" to "at least 2,000 tons of carbonates, either as raw materials or as a constituent in clay, which is heated to a temperature sufficient to allow the calcination reaction to occur." These final revisions focus the production level on the carbonates contained within the raw material rather than the total tons of clay; the final revisions will provide a more accurate means of assessing applicability. Facilities will be required to estimate their carbonate usage using available records to determine applicability. For example, facilities that use clay as a raw material input could calculate whether they meet the carbonate use threshold by multiplying the amount of clay they consume (and heat to calcination) annually by the weight fraction of carbonates contained in the clay. These final revisions add two harmonizing edits to 40 CFR 98.523(b)(1) and 98.526(c)(2) to clarify that the carbonate-based raw materials include clay.

b. Reporting Threshold

In the 2023 Supplemental Proposal, the EPA proposed that facilities must report under subpart ZZ if they met the definition of the source category and if their estimated combined emissions (including from stationary combustion and all applicable source categories) exceed a 25,000 $mtCO_2e$ threshold. We are finalizing the threshold as proposed. The final definition of ceramics manufacturers as facilities that use at least the minimum quantity of carbonates (2,000 tons, either as raw materials or as a constituent in clay) and

the 25,000 mtCO_2e threshold are both expected to ensure that small ceramics manufacturers are excluded. It is estimated that over 25 facilities will meet the definition of a ceramics manufacturer and the threshold of 25,000 mtCO_2e for reporting. For a full discussion of this analysis, section IV.E. of the preamble to the 2023 Supplemental Proposal.

c. Calculation Methods

In the 2023 Supplemental Proposal, the EPA reviewed the production processes and available emissions estimation methods for ceramics manufacturing and proposed that only CO_2 emissions would be estimated from these processes. The EPA also proposed to require the reporting of combustion emissions, including CO_2, CH_4, and N_2O from the ceramics manufacturing unit and other combustion sources on site.

In the 2023 Supplemental Proposal, the EPA reviewed the production processes and available emissions estimation methods for ceramics manufacturing including a basic mass balance methodology that assumed a fixed percentage for carbonates consumed (IPCC Tier 1), a carbon balance methodology (IPCC Tier 3) based on carbon content and the mass of materials input, and direct measurement using CEMS (see section IV.C.5. of the preamble to the 2023 Supplemental Proposal). We are finalizing, as proposed, two different methods for quantifying GHG emissions from ceramics manufacturing, depending on current emissions monitoring at the facility. If a qualified CEMS is in place, the CEMS must be used. Otherwise, the facility can elect to either install a CEMS or elect to use the carbon mass balance method.

Direct measurement using CEMS. Facilities with a CEMS that meet the requirements in subpart C of part 98 (General Stationary Fuel Combustion) will be required to use CEMS to estimate the combined process and combustion CO_2 emissions. The CEMS measures CO_2 concentration and total exhaust gas flow rate for the combined process and combustion source emissions. CO_2 mass emissions will be calculated from these measured values using equation C–6 and, if necessary, equation C–7 in 40 CFR 98.33(a)(4). The combined process and combustion CO_2 emissions will be calculated according to the Tier 4 Calculation Methodology specified in 40 CFR 98.33(a)(4). Facilities will be required to use subpart C to estimate emissions of CO_2, CH_4, and N_2O from stationary combustion.

Carbon balance method. For facilities using carbon mass balance method, the carbon content and the mass of carbonaceous materials input to the process must be determined. The facility must measure the consumption of specific process inputs and the amounts of these materials consumed by end-use/product type. Carbon contents of materials must be determined through the analysis of samples of the material or from information provided by the material suppliers. Additionally, the quantities of materials consumed and produced during production must be measured and recorded. CO_2 emissions are estimated by multiplying the carbon content of each raw material by the corresponding mass, by a carbonate emission factor, and by the decimal fraction of calcination achieved for that raw material. We are finalizing the carbonate emission factors provided in table 1 to subpart ZZ of part 98 as proposed. These factors, pulled from table N–1 to subpart N of part 98, and from Table 2.1 of the 2006 IPCC Guidelines,[44] are based on stoichiometric ratios and represent the weighted average of the emission factors for each particular carbonate. Emission factors provided by the carbonate vendor for other minerals not listed in table 1 to subpart ZZ may also be used.

For any stationary combustion units included at the facility, facilities will be required to follow subpart C to estimate emissions of CO_2, CH_4, and N_2O from stationary combustion. Use of facility specific information under the carbon mass balance method is consistent with IPCC Tier 3 methods and is the preferred method for estimating emissions for other GHGRP sectors.

d. Monitoring, QA/QC, and Verification Requirements

The EPA is finalizing, as proposed, two separate monitoring methods: direct measurement and a mass balance emission calculation.

Direct measurement using CEMS. We are finalizing the CEMS monitoring requirements as proposed. In the case of ceramics manufacturing, process and combustion GHG emissions from ceramics process units are typically emitted from the same stack. If facilities use an existing CEMS to meet the monitoring requirements, they will be required to use CEMS to estimate CO_2 emissions. Where the CEMS capture all combustion- and process-related CO_2 emissions, facilities will be required to follow the requirements of subpart C of part 98 to estimate all CO_2 emissions from the industrial source. The CEMS method requires both a continuous CO_2 concentration monitor and a continuous volumetric flow monitor. To qualify as a CEMS, the monitors will be required to be installed, operated, and calibrated according to subpart C of part 98 (40 CFR 98.33(a)(4)), which is consistent with CEMS requirements in other GHGRP subparts.

Carbon balance method. We are finalizing the carbon mass balance method as proposed, with one change. The carbon mass balance method requires monitoring of mass quantities of carbonate-based raw material (*e.g.,* clay) fed to the process, establishing the mass fraction of carbonate-based minerals in the raw material, and an emission factor based on the type of carbonate consumed. The mass quantities of carbonate-based raw materials consumed by each ceramics process unit can be determined using direct weight measurement of plant instruments or techniques used for accounting purposes, such as calibrated scales, weigh hoppers, or weigh belt feeders. The direct weight measurement can then be compared to records of raw material purchases for the year.

For the carbon content of the materials used to calculate process CO_2 emissions, the final rule requires that the owner or operator determine the carbon mass fraction either by using information provided by the raw material supplier, by collecting and sending representative samples of each carbonate-based material consumed to an off-site laboratory for a chemical analysis of the carbonate content (weight fraction), or by choosing to use the default value of 1.0. The use of 1.0 for the mass fraction assumes that the carbonate-based raw material comprises 100 percent of one carbonate-based mineral. We are revising the final rule to also state that where it is determined that the mass fraction of a carbonate-based raw material is below the detection limit of available testing standards, the facility must assume a default of 0.005 for that material.

We are revising the final rule to allow facilities that determine the carbonate-based mineral mass fractions of a carbonate-based material to use additional sampling and chemical analysis methods to provide additional flexibility for facilities. Specifically, we are revising 40 CFR 98.524(b) from requiring sampling and chemical analysis using consensus standards that specify x-ray fluorescence to requiring that facilities use an ''x-ray fluorescence test, x-ray diffraction test, or other enhanced testing method published by an industry consensus standards

[44] IPCC Guidelines for National Greenhouse Gas Inventories, Volume 3, Industrial Processes and Product Use, Mineral Industry Emissions. 2006. *https://www.ipcc-nggip.iges.or.jp/public/2006gl/pdf/3_Volume3/V3_2_Ch2_Mineral_Industry.pdf.*

organization'' (*e.g.,* ASTM, American Society of Mechanical Engineers (ASME), American Petroleum Institute (API)). The final rule requires the carbon content be analyzed at least annually to verify the mass fraction data provided by the supplier of the raw material.

For the ceramics manufacturing source category, we are finalizing the QA/QC requirements as proposed. Reporters must calibrate all meters or monitors and maintain documentation of this calibration as documented in subpart A of part 98 (General Provisions). These meters or monitors should be calibrated prior to the first reporting year, using a suitable method published by a consensus standards organization, and will be required to be recalibrated either annually or at the minimum frequency specified by the manufacturer. In addition, any flow rate monitors used for direct measurement will be required to comply with QA/QC procedures for daily calibration drift checks and quarterly or annual accuracy assessments, such as those provided in Appendix F to part 60 or similar QA/QC procedures. We are finalizing these requirements to ensure the quality of the reported GHG emissions and to be consistent with the current requirements for CEMS measurements within subparts A (General Provisions) and C of the GHGRP. For measurements of carbonate content, reporters will assess representativeness of the carbonate content received from suppliers with laboratory analysis.

e. Procedures for Estimating Missing Data

We are finalizing the procedures for estimation of missing data as proposed. The final rule requires the use of substitute data whenever a quality-assured value of a parameter that is used to calculate emissions is unavailable, or ''missing.'' For example, if the CEMS malfunctions during unit operation, the substitute data value would be the average of the quality-assured values of the parameter immediately before and immediately after the missing data period. For missing data on the amounts of carbonate-based raw materials consumed, we are finalizing that reporters must use the best available estimate based on all available process data or data used for accounting purposes, such as purchase records. For missing data on the mass fractions of carbonate-based minerals in the carbonate-based raw materials, reporters will assume that the mass fraction of each carbonate-based mineral is 1.0. The use of 1.0 for the mass fraction assumes that the carbonate-based raw material comprises 100 percent of one carbonate-based mineral. Missing data procedures will be applicable for CEMS measurements, mass measurements of raw material, and carbon content measurements.

f. Data Reporting Requirements

The EPA is finalizing the data reporting requirements for subpart ZZ as proposed, with one minor revision. Each ceramics manufacturing facility must report the annual CO_2 process emissions from each ceramics manufacturing process, as well as any stationary fuel combustion emissions. In addition, facilities must report additional information that forms the basis of the emissions estimates so that we can understand and verify the reported emissions. For ceramic manufacturers, the additional information will include: the total number of ceramics process units at the facility and the total number of units operating; annual production of each ceramics product for each process unit and for all ceramics process units combined; the annual production capacity of each ceramics process unit; and the annual quantity of carbonate-based raw material charged to each ceramics process unit and for all ceramics process units combined. The EPA has revised the final rule to clarify at 40 CFR 98.526(c) that facilities that use the carbon balance method must also report the annual quantity of each carbonate-based raw material (including clay) charged to each ceramics process unit. This change is consistent with the requirements the EPA proposed for facilities conducting direct measurement using CEMS, and is not anticipated to substantively impact the burden to reporters as proposed. For ceramic manufacturers with non-CEMS units, the finalized rules will also require reporting of the following information: the method used for the determination for each carbon-based mineral in each raw material; applicable test results used to verify the carbonate based mineral mass fraction for each carbonate-based raw material charged to a ceramics process unit, including the date of test and test methods used; and the number of times in the reporting year that missing data procedures were used.

g. Records That Must Be Retained

The EPA is finalizing the record retention requirements of subpart ZZ as proposed. All facilities are required to maintain monthly records of the ceramics manufacturing rate for each ceramics process unit and the monthly amount of each carbonate-based raw material charged to each ceramics process unit.

For facilities that use the carbon balance procedure, the final rule requires facilities to also maintain monthly records of the carbonate-based mineral mass fraction for each mineral in each carbonate-based raw material. Additionally, facilities that use the carbon balance procedure will be required to maintain (1) records of the supplier-provided mineral mass fractions for all raw materials consumed annually; (2) results of all analyses used to verify the mineral mass fraction for each raw material (including the mass fraction of each sample, the date of test, test methods and method variations, equipment calibration data, and identifying information for the laboratory conducting the test); and (3) annual operating hours for each unit. If facilities use the CEMS procedure, they are required to maintain the CEMS measurement records.

Procedures for ensuring accuracy of measurement methods, including calibration, must be recorded. The final rule requires records of how measurements are made, including measurements of quantities of materials used or produced and the carbon content of minerals in raw materials.

Finally, the final rule requires the retention of a record of the file generated by the verification software specified in 40 CFR 98.5(b) including:

- Annual average decimal mass fraction of each carbonate-based mineral per carbonate-based raw material for each ceramics process unit (percent by weight expressed as a decimal fraction);
- Annual mass of each carbonate-based raw material charged to each ceramics process unit (tons); and
- The decimal fraction of calcination achieved for each carbonate-based raw material for each ceramics process unit (percent by weight expressed as a decimal fraction).

2. Summary of Comments and Responses on Subpart ZZ

This section summarizes the major comments and responses related to the proposed subpart ZZ. The EPA previously requested comment on the addition of ceramics manufacturing sources category as a new subpart to part 98 in the 2022 Data Quality Improvements Proposal. The EPA received some comments for subpart ZZ on the 2022 Data Quality Improvements Proposal; the majority of these comments were previously addressed in the preamble to the 2023 Supplemental Proposal, wherein the EPA proposed to add new subpart ZZ for ceramics manufacturing (see section III.E. of the

preamble to the 2023 Supplemental Proposal). The EPA received additional comments regarding the proposed subpart ZZ following the 2023 Supplemental Proposal. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to subpart ZZ.

Comments: One commenter objected to the EPA's inclusion of the brick manufacturing industry in proposed subpart ZZ. The commenter asserted that GHG emissions from the brick industry represent only about 0.027 percent of U.S. anthropogenic emissions, stating that any relative improvement in accuracy of emissions would not change the fact that GHG emissions from brick manufacturing are a very small fraction of the national total.

The commenter provided a number of reasons to exclude brick manufacturing from subpart ZZ. First, the commenter contested the EPA's assumption that all ceramics manufacturing use materials with significant carbonate content. The commenter stated that the materials used for the production of brick are low carbonate clay and shale materials that should not be characterized as ''carbonate-based materials,'' and that the various processes used to prepare raw materials and to form and fire brick are such that higher carbonate materials cannot be used. The commenter added that high carbonate materials can result in durability problems of the brick, ranging from cosmetic ''lime pops'' to scenarios where the brick can actually fail in service. The commenter further stated that the majority production of brick in the United States is red bodied brick, and therefore the use of carbonates including limestone are undesirable, due to bleaching of the red color during firing.

The commenter explained that the EPA's proposal assumes a carbonate content of 10–15 percent, whereas tested averages for brick making materials average 0.58 percent. The commenter provided a table of carbonate brick values based on testing from the NBRC (National Brick Research Center at Clemson University). The commenter stated that, as such, the actual brick making carbonate percentages are only about 3.8–5.8 percent (0.58 percent divided by 10 percent and 15 percent, respectively) of the carbonate material percentages in the proposed rule. The commenter estimated that based on this determination, the inclusion of carbonate process emissions would only increase reported emissions from a facility by about 2.10 percent, and few, if any, additional sites not already reporting exceeding the 25,000 mtCO_2e reporting threshold would be required to report. The commenter added that even if facilities do not meet the threshold, the added requirements would impose on all sites additional testing and measurement requirements to determine if they exceed the reporting threshold. The commenter stated that the associated costs do not justify the requirements.

The commenter stated that a limited number of brickmaking sites add small amounts of carbonates to some of their products for various reasons. The commenter explained that some manufacturers add barium carbonate to the brick body mix to prevent soluble salts from forming on the final product. In such cases, the commenter noted that barium carbonate is added typically in the range of 0.05 to 0.1 percent. The commenter also stated that sodium carbonate (added in the range of 0.5 percent) is sometimes used to improve the uptake of water during the brick forming process. The commenter asserted that in such cases, if the additional usages of carbonates are significant, they already would be reported under subpart U.

The commenter noted that the EPA's existing methods for estimating GHG emissions from the brick manufacturing industry are good enough to adequately inform the Agency's policy/regulatory decision making and to satisfy the EPA's desire and obligation to maintain an accurate national GHG emissions inventory. The commenter suggested that the EPA could, in lieu of annual reporting, issue a one-time information collection request.

Response: The EPA has considered the information provided by the commenter and is finalizing the addition of the ceramics category to include the brick industry. Consistent with the other source categories of 40 CFR part 98, requiring annual reporting of data for ceramics facilities is preferred to a one-time information collection request. The collection of annual data will help the EPA to understand changes in industry emissions and trends over time. The snapshot of information provided by a one-time information collection request would not provide the type of ongoing information which could inform potential legislation or EPA policy. Collecting annual data also allows us to incorporate accurate time-series emissions changes for the ceramics industry in the GHG Inventory and other EPA analyses. Further, including brick manufacturing in the ceramics source category is consistent with the 2006 IPCC Guidelines for National Greenhouse Gas Inventories.[45] While the commenter asserts that brick manufacturing is a small percentage of the total national GHG emissions, the ceramics subpart would cover more industries than just brick manufacturing and is anticipated to cover emissions comparable to other existing subparts. We have included both an emissions threshold and a carbonate use threshold in order to exempt small facilities or those with minor emissions.

Rather than exempting the brick industry from the ceramics subpart entirely, we have taken the commenter's concerns into account and are modifying the definition of the source category such that the subpart ''would apply to facilities that annually consume at least 2,000 tons of carbonates, either as raw materials or as a constituent in clay . . .''. This is in contrast to the original proposed definition which included the phrase ''or 20,000 tons of clay.'' This revised carbonate use threshold will exclude and thus avoid the reporting burden for facilities that use low annual quantities of carbonates, such as brick manufacturers that use low-carbonate clay. Facilities could estimate their carbonate usage to determine their applicability for whether they meet this carbonate use threshold by multiplying the annual amount of clay consumed as a raw material (and heated to calcination) by the weight fraction of carbonates contained in the clay.

Comment: One commenter objected to the proposed measurement protocols of subpart ZZ and indicated that the methods are infeasible for brick manufacturing materials. The commenter stated that the proposal cites ''suitable chemical analysis methods include using an x-ray fluorescence standard method.'' The commenter asserted that the use of x-ray fluorescence requires a minimum of at least 2.0 percent of any single carbonate material to speciate and determine an amount, which is higher than the total of all carbonates in brick making material, which the commenter

[45] IPCC Guidelines for National Greenhouse Gas Inventories, Volume 3, Industrial Processes and Product Use, Mineral Industry Emissions. 2006. Prepared by the National Greenhouse Gas Inventories Programme, Eggleston H.S., Buendia L., Miwa K., Ngara T. and Tanabe K. (eds). Published: IGES, Japan. *www.ipcc-nggip.iges.or.jp/public/2006gl/pdf/3_Volume3/V3_2_Ch2_Mineral_Industry.pdf.*

provided as 0.58 percent based on testing.

The commenter stated that for brick manufacturing, an alternate measurement of total carbonates such as ASTM E1915 *Standard Test Methods for Analysis of Metal Bearing Ores and Related Materials for Carbon, Sulfur, and Acid-Base Characteristics* (2020)[46] and CO_2e calculation would be a necessary option. The commenter suggested a simpler option would be to develop a default percentage of carbonate in brickmaking raw materials, or an AP–42, Compilation of Air Pollutant Emissions Factors type metric allowing a direct calculation of CO_2e emissions per product throughput tonnage. The commenter contended that this would still yield sufficiently accurate results and suggested that the historical testing data could be the basis for this option.

Response: Upon careful review and consideration, the EPA has considered the information provided by the commenter and will finalize 40 CFR 98.524(b) to allow for other industry standards (*i.e.,* x-ray fluorescence test, x-ray diffraction test, or other enhanced testing method published by an industry consensus standards organization (*e.g.,* ASTM, ASME, API)) as described in 40 CFR 98.524(d) to allow for the flexibility of using the most appropriate standard test method. Furthermore, following consideration of the commenter's recommendation that the EPA include a default carbonate percentage, we are revising 40 CFR 98.524(b) to include a default value of 0.005 for each carbonate material where it is determined that the mass fraction is below the detection limit of available testing standards. The 0.005 value (0.5 percent) is consistent with the example limestone mass fraction that was provided by the Brick Industry Association.[47] Furthermore, the EPA's research into carbonate testing standards revealed that 0.01 (1 percent) is an example detection limit for existing standards (*e.g.,* ASTM F3419–22, *Standard Test Method for Mineral Characterization of Equine Surface Materials by X-Ray Diffraction (XRD) Techniques* (2022)[48]). In scientific settings, it is a common practice to assume that a value of one half the detection limit when concentrations are too low to accurately measure.

Comment: One commenter stated that the proposed rule requirements to report on a unit-by-unit basis instead of facility wide reporting would impose unnecessary burdens on the brick industry. The commenter asserted that most activities (natural gas billing, clay hauling deliveries, material preparation logs, etc.) are done on a per-site basis. The commenter added that there is no benefit to requiring reporting to be done on a per unit basis, and a per site basis should be adequate for determining if emissions exceed the 25,000 metric ton CO_2e reporting threshold.

Response: The EPA routinely collects unit-level capacity data for process equipment in 40 CFR part 98. These unit-level data are essential for quantifying actual GHG emissions from the facility (*e.g.,* the carbon balance method for estimating emissions relies on the actual quantities of carbonate-based raw materials charged to the ceramics process units, not just those delivered to the facility). Furthermore, we use these data to perform statistical analyses as part of our verification process, which allows us to develop ranges of expected emissions by emission source type and successfully identify outliers in the reported data. We disagree that there will be no benefit to reporting on a unit-level basis, as this information will improve the EPA's verification of reported emissions and will provide a more accurate facility-level and national-level emissions profile for the industry.

IV. Final Revisions to 40 CFR Part 9

The EPA is finalizing the proposed amendment to 40 CFR part 9 to include the OMB control number issued under the PRA for the ICR for the GHGRP. The EPA is amending the table in 40 CFR part 9 to list the OMB approval number (OMB No. 2060–0629) under which the ICR for activities in the existing part 98 regulations that were previously approved by OMB have been consolidated. The EPA received no comments on the proposed amendments to 40 CFR part 9 and is finalizing the change as proposed. This codification in the CFR satisfies the display requirements of the PRA and OMB's implementing regulations at 5 CFR part 1320.

V. Effective Date of the Final Amendments

As proposed in the 2023 Supplemental Proposal, the final amendments will become effective on January 1, 2025. As provided under the existing regulations at 40 CFR 98.3(k), the GWP amendments to table A–1 to subpart A will apply to reports submitted by current reporters that are submitted in calendar year 2025 and subsequent years (*i.e.,* starting with reports submitted for RY2024 on or before March 31, 2025). The revisions to GWPs do not affect the data collection, monitoring, or calculation methodologies used by these existing reporters. All other final revisions, which apply to both existing and new reporters, will be implemented for reports prepared for RY2025 and submitted March 31, 2026. Reporters who are newly subject to the rule (facilities that have not previously reported to the GHGRP), either due to final revisions that change what facilities must report under the rule (*e.g.,* newly subject to subparts I or P or subparts WW, XX, YY, or ZZ), or due to the revisions to GWPs in table A–1 to subpart A, will be required to implement all requirements to collect data, including any required monitoring and recordkeeping, on January 1, 2025.

This final rule includes new and revised requirements for numerous provisions under various aspects of GHGRP, including revisions to applicability and updates to reporting, recordkeeping, and monitoring requirements. Further, as explained in section I.B. and this section of this preamble, it amends numerous sections of part 98 for various specific reasons. Therefore, this final rule is a multifaceted rule that addresses many separate things for independent reasons, as detailed in each respective section of this preamble. We intended each portion of this rule to be severable from each other, though we took the approach of including all the parts in one rulemaking rather than promulgating multiple rules to amend each part of the GHGRP. For example, the following portions of this rulemaking are mutually severable from each other, as numbered: (1) revisions to General Provisions, including updates to GWPs in table A–1 to subpart A of part 98 in section III.A.1. of this preamble, (2) revisions to applicability to subparts G (Ammonia Manufacturing), P (Hydrogen Production), and Y (Petroleum Refineries) to address non-merchant hydrogen production in sections III.E., III.I., and III.M.; (3) revisions to applicability to subparts Y and WW (Coke Calciners) to address stand-alone coke calcining operations; (4) revisions to subparts PP (Carbon Dioxide Suppliers) and new subpart VV (Geologic Sequestration of Carbon Dioxide with Enhanced Oil Recovery Using ISO 27916) in sections III.V. and III.Z.; (5) revisions to applicability in subparts UU (Injection of Carbon Dioxide) and subpart VV in sections

[46] Available at *https://www.astm.org/e1915-20.html.* Accessed January 9, 2024.

[47] See Docket ID. No. EPA–HQ–OAR–2019–0424–0332 at *www.regulations.gov.*

[48] Available at *https://www.astm.org/f3419-22.html.* Accessed January 9, 2024.

III.Z. and III.AA., (6) other regulatory amendments discussed in section III. and IV. of this preamble, and (7) confidentiality determinations as discussed in section VI. of this preamble. Each of the regulatory amendments in section III. is severable from all the other regulatory amendments in that section, and each of the confidentiality determinations in section VI. is also severable from all the other determinations in that section. If any of the above portions is set aside by a reviewing court, then we intend the remainder of this action to remain effective, and the remaining portions will be able to function absent any of the identified portions that have been set aside. Moreover, this list is not intended to be exhaustive, and should not be viewed as an intention by the EPA to consider other parts of the rule not explicitly listed here as not severable from other parts of the rule.

VI. Final Confidentiality Determinations

This section provides a summary of the EPA's final confidentiality determinations and emission data designations for new and substantially revised data elements included in these final amendments, certain existing part 98 data elements for which no determination has been previously established, certain existing part 98 data elements for which the EPA is amending or clarifying the existing confidentiality determination, and the EPA's final reporting determinations for inputs to equations included in the final amendments. This section also summarizes the major comments and responses related to the proposed confidentiality determinations, emission data designations, and reporting determinations for these data elements.

The EPA is not taking final action on any requirements for subpart W (Petroleum and Natural Gas Systems) in this final rule, therefore, we are not taking any action on confidentiality determinations or reporting determinations proposed for data elements in subpart W of part 98 in the 2022 Data Quality Improvements Proposal. See section I.C. of this preamble for a discussion of the EPA's actions regarding subpart W. Additionally, we are not taking any final action on proposed subpart B (Energy Consumption) in this final rule; therefore we are not taking any action on confidentiality determinations proposed in the 2023 Supplemental Proposal for subpart B. See section III.B. of this preamble for additional information on subpart B.

For all remaining data elements included in the 2022 Data Quality Improvements Proposal or 2023 Supplemental Proposal, this section identifies any changes to the proposed confidentiality determinations, emissions data designations, or reporting determinations in the final rule.

A. EPA's Approach To Assess Data Elements

In the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, the EPA proposed to assess data elements for eligibility of confidential treatment using a revised approach, in response to *Food Marketing Institute* v. *Argus Leader Media,* 139 S. Ct. 2356 (2019) (hereafter referred to as *Argus Leader*).[49] The EPA proposed that the *Argus Leader* decision did not affect our approach to designating data elements as ''inputs to emission equations'' or our previous approach for designating new and revised reporting requirements as ''emission data.'' We proposed to continue identifying new and revised reporting elements that qualify as ''emission data'' (*i.e.,* data necessary to determine the identity, amount, frequency, or concentration of the emission emitted by the reporting facilities) by evaluating the data for assignment to one of the four data categories designated by the 2011 Final CBI Rule (76 FR 30782, May 26, 2011) to meet the CAA definition of ''emission data'' in 40 CFR 2.301(a)(2)(i) (hereafter referred to as ''emission data categories''). Refer to section II.B. of the July 7, 2010 proposal (75 FR 39094) for descriptions of each of these data categories and the EPA's rationale for designating each data category as ''emission data.'' For data elements designated as ''inputs to emission equations,'' the EPA maintained the two subcategories, data elements entered into e-GGRT's Inputs Verification Tool (IVT) and those directly reported to the EPA. Refer to section VI.C. of the preamble of the 2022 Data Quality Improvements Proposal for further discussion of ''inputs to emission equations.''

In the 2022 Data Quality Improvements Proposal, for new or revised data elements that the EPA did not propose to designate as ''emission data'' or ''inputs to emission equations,'' the EPA proposed a revised approach for assessing data confidentiality. We proposed to assess each individual reporting element according to the new *Argus Leader* standard. So, we evaluated each data element individually to determine whether the information is customarily and actually treated as private by the reporter and proposed a confidentiality determination based on that evaluation.

[49] Available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

The EPA received several comments on its proposed approach in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. The commenters' concerns and the EPA's responses thereto are provided in the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424. Following consideration of the comments received, the EPA is not revising this approach and is continuing to assess data elements for confidentiality determinations as described in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. We are also finalizing the specific confidentiality determinations and reporting determinations as described in section VI.B. and VI.C. of this preamble.

B. Final Confidentiality Determinations and Emissions Data Designations

1. Summary of Final Confidentiality Determinations

a. Final Confidentiality Determinations for New and Revised Data Elements

The EPA is making final confidentiality determinations and emission data designations for new and substantially revised data elements included in these final amendments. Substantially revised data elements include those data elements where the EPA is, in this final action, substantially revising the data elements as compared to the existing requirements. Please refer to the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal for additional information regarding the proposed confidentiality determinations for these data elements.

For subparts A (General Provisions), C (General Stationary Fuel Combustion), F (Aluminum Production), G (Ammonia Manufacturing), H (Cement Production), P (Hydrogen Production), S (Lime Manufacturing), HH (Municipal Solid Waste Landfills), OO (Suppliers of Industrial Greenhouse Gases), and QQ (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment or Closed-Cell Foams), the EPA is not finalizing the proposed confidentiality determinations for certain data elements because the

EPA is not taking final action on the requirements to report these data elements at this time (see section III. of this preamble for additional information). These data elements are listed in table 5 of the memorandum ''Confidentiality Determinations and Emission Data Designations for Data Elements in the 2024 Final Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

For subparts C (General Stationary Fuel Combustion) and PP (Suppliers of Carbon Dioxide), the EPA has revised its final confidentiality determinations or emissions data designations for certain data elements from proposal. For subpart PP, following consideration of public comments, the EPA has revised its final confidentiality determination for eight data elements that were proposed as ''Not Eligible'' to ''Eligible for Confidential Treatment.'' See section VI.B.2. of this preamble for a summary of the related comments and the EPA's response. For subpart C, we identified two revised data elements where the EPA had inadvertently proposed to place the revised version of the data elements into a different emissions data category than the existing version of the data elements (*i.e.,* proposed moving the data elements from one category of emissions data into a different category of emissions data). The EPA has corrected the placement of these data elements from ''Facility and Unit Identifier Information'' to ''Emissions.'' Table 6 of this preamble lists the data elements where the EPA has revised its final confidentiality determinations or emissions data designations as compared to the 2022 Data Quality Improvements Proposal.

TABLE 6—DATA ELEMENTS FOR WHICH THE EPA IS REVISING THE FINAL CONFIDENTIALITY DETERMINATIONS OR EMISSION DATA DESIGNATIONS

Subpart	Citation in 40 CFR part 98	Data element description
C [1]	98.36(c)(1)(vi)	When reporting using aggregation of units, if any of the stationary fuel combustion units burn biomass, the annual CO_2 emissions from combustion of all biomass fuels combined (metric tons).
C [1]	98.36(c)(3)(vi)	When reporting using the common pipe configuration, if any of the stationary fuel combustion units burn biomass, the annual CO_2 emissions from combustion of all biomass fuels combined (metric tons).
PP [2]	98.426(i)(1)	If you capture a CO_2 stream at a facility with a direct air capture (DAC) process unit and electricity (excluding combined heat and power (CHP)) is provided to a dedicated meter for the DAC process unit: annual quantity of electricity (generated on-site or off-site) consumed for the DAC process unit (MWh).
PP [2]	98.426(i)(1)(i)(C)	If you capture a CO_2 stream at a facility with a DAC process unit and electricity (excluding CHP) is provided to a dedicated meter for the DAC process unit: if the electricity is sourced from a grid connection, the name of the electric utility company that supplied the electricity as shown on the last monthly bill issued by the utility company during the reporting period.
PP [2]	98.426(i)(1)(i)(D)	If you capture a CO_2 stream at a facility with a DAC process unit and electricity (excluding CHP) is provided to a dedicated meter for the DAC process unit: if the electricity is sourced from a grid connection, the name of the electric utility company that delivered the electricity.
PP [2]	98.426(i)(1)(i)(E)	If you capture a CO_2 stream at a facility with a DAC process unit and electricity (excluding CHP) is provided to a dedicated meter for the DAC process unit: if the electricity is sourced from a grid connection, the annual quantity of electricity consumed for the DAC process unit (MWh).
PP [2]	98.426(i)(1)(ii)	If you capture a CO_2 stream at a facility with a DAC process unit and electricity (excluding CHP) is provided to a dedicated meter for the DAC process unit: if electricity is sourced from on-site or through a contractual mechanism for dedicated off-site generation, the annual quantity of electricity consumed per applicable source (MWh), if known.
PP [2]	98.426(i)(2)	If you capture a CO_2 stream at a facility with a DAC process unit and you use heat, steam, or other forms of thermal energy (excluding CHP) for the DAC process unit: the annual quantity of heat, steam, or other forms of thermal energy sourced from on-site or through a contractual mechanism for dedicated off-site generation per applicable energy source (MJ), if known.
PP [2]	98.426(i)(3)(i)	If you capture a CO_2 stream at a facility with a DAC process unit and electricity from CHP is sourced from on-site or through a contractual mechanism for dedicated off-site generation: the annual quantity of electricity consumed for the DAC process unit per applicable energy source (MWh), if known.
PP [2]	98.426(i)(3)(ii)	If you capture a CO_2 stream at a facility with a DAC process unit and you use heat from CHP for the DAC process unit: the annual quantity of heat, steam, or other forms of thermal energy from CHP sourced from on-site or through a contractual mechanism for dedicated off-site generation per applicable energy source (MJ), if known.

[1] In the May 26, 2011, final rule (76 FR 30782), this data element was assigned to the ''Emissions Data'' data category and determined to be ''Emissions Data.'' In the 2022 Data Quality Improvements Proposal, the data element was significantly revised, and the EPA proposed that the revised data element would be assigned to the data category ''Facility and Unit Identifier'' and would have a determination of ''Emissions Data.'' We have subsequently determined that the revisions to the data element (revising the language ''if any units burn both fossil fuels and biomass'' with ''if any of the units burn biomass'') is a clarifying change and that the data element was incorrectly assigned to a new data category. Therefore we are finalizing the revised data element in the ''Emissions Data'' data category and determining that it is ''Emissions Data.''

[2] Revised from ''Not Eligible'' to ''Eligible for Confidential Treatment''; see section VI.B.2. of this preamble.

For subparts I (Electronics Manufacturing), P (Hydrogen Production), and ZZ (Ceramics Manufacturing), the EPA is finalizing revisions that include new data elements for which the EPA did not propose a determination. These data elements are listed in table 7 of this preamble and table 6 of the memorandum, ''Confidentiality Determinations and Emission Data Designations for Data Elements in the 2024 Final Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424. Because the EPA has not proposed or solicited public comment on a determination for

these data elements, we are not finalizing confidentiality determinations for these data elements at this time.

TABLE 7—NEW DATA ELEMENTS FROM PROPOSAL TO FINAL FOR WHICH THE EPA IS NOT FINALIZING CONFIDENTIALITY DETERMINATIONS OR EMISSION DATA DESIGNATIONS

Subpart	Citation in 40 CFR part 98	Data element description
I	98.96(y)(2)(iv)	For electronics manufacturing facilities, for the technology assessment report required under 40 CFR 98.96(y), for any destruction or removal efficiency data submitted, if you choose to use an additional alternative calculation methodology to calculate and report the input gas emission factors and by-product formation rates: a complete, mathematical description of the alternative method used (including the equation used to calculate each reported utilization and by-product formation rate).
P	98.166(d)(10)	For each hydrogen production process unit, an indication (yes or no) if best available monitoring methods used in accordance with 40 CFR 98.164(c) to determine fuel flow for each stationary combustion unit directly associated with hydrogen production (*e.g.,* reforming furnace and hydrogen production process unit heater).
P	98.166(d)(10)(i)	For each hydrogen production process unit, if best available monitoring methods were used in accordance with 40 CFR 98.164(c) to determine fuel flow for each stationary combustion unit directly associated with hydrogen production, the beginning date of using best available monitoring methods.
P	98.166(d)(10)(ii)	For each hydrogen production process unit, if best available monitoring methods were used in accordance with 40 CFR 98.164(c) to determine fuel flow for each stationary combustion unit directly associated with hydrogen production, the anticipated or actual end date of using best available monitoring methods.
ZZ	98.526(c)(2)	For a facility containing a ceramics manufacturing process, for each ceramics manufacturing process unit, if process CO_2 emissions are calculated according to the procedures specified in 40 CFR 98.523(b), annual quantity of each carbonate-based raw material (including clay) charged (tons) (no CEMS).

In a handful of cases, the EPA has made minor revisions to data elements in this final action as compared to the proposed data element included in either the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal. For certain proposed data elements, we have revised the citations from proposal to final. In other cases, the minor revisions include clarifications to the text. The EPA evaluated these data elements and how they have been clarified in the final rule to verify that the information collected has not substantially changed since proposal. These data elements are listed in table 7 of the memorandum ''Confidentiality Determinations and Emission Data Designations for Data Elements in the 2024 Final Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424. Because the information to be collected has not substantially changed since proposal, we are finalizing the confidentiality determinations or emission data designations for these data elements as proposed. For additional information on the rationales for the confidentiality determinations for these data elements, see the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal and the memoranda ''Proposed Confidentiality Determinations and Emission Data Designations for Data Elements in Proposed Revisions to the Greenhouse Gas Reporting Rule'' and ''Proposed Confidentiality Determinations and Emission Data Designations for Data Elements in Proposed Supplemental Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

For all other confidentiality determinations for the new or substantially revised data reporting elements for these subparts, the EPA is finalizing the confidentiality determinations as they were proposed. Please refer to the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal for additional information regarding these confidentiality determinations.

b. Final Confidentiality Determinations and Emission Data Designations for Existing Data Elements for Which EPA Did Not Previously Finalize a Confidentiality Determination or Emission Data Designation

The EPA is finalizing all confidentiality determinations as they were proposed for other part 98 data reporting elements for which no determination has been previously established. The EPA received no comments on the proposed determinations. Please refer to the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal for additional information regarding the proposed confidentiality determinations.

c. Final Confidentiality Determinations for Existing Data Elements for Which the EPA is Amending or Clarifying the Existing Confidentiality Determination

The EPA is finalizing as proposed all confidentiality determinations for other part 98 data reporting elements for which the EPA proposed to amend or clarify the existing confidentiality determinations. The EPA received no comments on the proposed determinations. Please refer to the preamble to the 2022 Data Quality Improvements Proposal for additional information regarding the proposed confidentiality determinations.

2. Summary and Response to Public Comments on Proposed Confidentiality Determinations

The EPA received several comments related to the proposed confidentiality determinations. The EPA received minimal comments on the proposed confidentiality determinations for all new or substantially revised data elements, except certain data elements in subparts PP (Suppliers of Carbon Dioxide) and VV (Geologic Sequestration of Carbon Dioxide With Enhanced Oil Recovery Using ISO 27916) as described in this section. Additional comments may be found in the EPA's comment response document in Docket ID. No. EPA–HQ–OAR–2019–

0424. For subparts PP and VV, we received comments questioning the proposed confidentiality determination of certain new and substantially revised data elements in each subpart, including requests that the data elements be treated as confidential. Summaries of the major comments and the EPA's responses thereto are provided below. Additional comments and the EPA's responses may be found in the comment response document noted above.

Comment: One commenter contended that public disclosure of the annual quantity of electricity consumed to power the DAC process unit and natural gas used for thermal energy could undermine the commercial deployment of DAC. The commenter stated that this information should be kept as confidential. The commenter explained that power in a DAC facility is one of the main operating expenses and power consumption is directly related to power cost. The commenter stated that a comprehensive understanding of a DAC unit's power demand, coupled with a basic understanding of the clean power markets in the region where the DAC facility is located, could be used to estimate the DAC power cost. The commenter contended that this knowledge, if available to a competitor or provider of clean power, would affect business-to-business contract negotiations, allow for speculation on potential profit margins on captured CO_2 volumes, and negatively impact the ability of a DAC operator to procure clean power at competitive rates.

The commenter added that many carbon capture technologies will utilize natural gas to provide the thermal energy needed to drive the CO_2 capture process, including DAC facilities. The commenter explained contract negotiations for the supply of natural gas for DAC facilities are competitive and a major operating cost for a DAC facility and information on the annual amount of natural gas consumed by a DAC facility, if available to a competitor or natural gas supplier, will affect the ability of a DAC operator to contract for responsibly sourced natural gas supply at a competitive cost. The commenter requested that natural gas consumption be declared CBI. The commenter added that they still supported the requirement to report on whether flue gas is also captured by the DAC process unit as this requirement allows for a clear distinction of CO_2 captured from the process versus CO_2 captured from the air, increasing public trust in reported CO_2 volumes.

Response: The EPA proposed that 12 new subpart PP data elements in 40 CFR 98.426(i) specific to DAC facilities would not be eligible for confidential treatment. These data elements included: the annual quantities of on-site and off-site electricity consumed for the DAC process unit; the annual quantities of heat, steam, other forms of thermal energy, and combined heat and power (CHP) consumed by the DAC process unit; the state and county where the facility with the DAC process unit is located; the name of the electric utility company that supplied and delivered the electricity if electricity is sourced from a grid connection; the annual quantity of electricity consumed by the DAC process unit supported by billing statements; the annual quantity of electricity, heat, and CHP consumed for the DAC process unit by each applicable source; and whether flue gas is also captured by the DAC process unit when electricity or CHP is generated on-site from natural gas, coal, or oil.

The EPA's proposed determinations were based on research that indicated the proposed data elements are not customarily and actually treated as private by the reporter. We note that this, rather than competitive harm, is now the standard for treating reported data elements as ''Eligible for Confidential Treatment'' or ''Not Eligible'' based on the decision in *Food Marketing Institute* v. *Argus Leader Media,* 139 S. Ct. 2356 (2019). While the commenter explains that there may be competitive harm from releasing electricity and natural gas consumption data in 40 CFR 98.426, they do not clearly demonstrate whether such data are customarily and actually treated as confidential. Following receipt of public comment, the EPA conducted additional research on the public availability of energy use data for DAC and other facilities, and determined that, with the exception of the state and county where the DAC facility is located, the other proposed data elements are not consistently available to the public at this time. As DAC is a nascent field, there are not yet many examples of such facilities to support a determination as to whether the other proposed data elements are typically and actually held confidential. The EPA, therefore, partially agrees with the commenter that certain data elements for DAC process unit energy requirements in 40 CFR 98.426(i) may be treated as confidential by certain facilities. The EPA is, therefore, making a determination of ''Eligible for Confidential Treatment'' for certain data elements. Specifically, the EPA is finalizing the rule with all new data elements in 40 CFR 98.426(i) having the categorical determination of ''Eligible for Confidential Treatment'' except for proposed 40 CFR 98.426(i)(1)(i)(A) and (B), the state and county where the DAC process unit is located, and certain information reported under 40 CFR 98.426(i)(1) through (3), which requires the reporter to indicate each applicable energy source type (*e.g.,* natural gas, oil, coal, nuclear) and provide an indication of whether flue gas is captured (proposed 40 CFR 98.426(i)(1)), respectively. The rule is being finalized with the determination that these four data elements are not eligible for confidential treatment. The requirements to report the state and county are similar to data required to be reported under 40 CFR 98.3(c)(1) that was designated as ''emission data,'' which under CAA section 114 is not entitled to confidential treatment (76 FR 30782, May 26, 2011; CBI Memo, April 29, 2011). Furthermore, the EPA has previously determined that indication of source is not confidential (77 FR 48072, August 13, 2012). Regarding reporting whether flue gas is captured, the EPA has previously determined that an indication of flue gas is ''Not Eligible'' (76 FR 30782, May 26, 2011). While the source of energy would be ''Not Eligible'' for confidential treatment, the actual quantities of energy reported under 40 CFR 98.426(i)(1) through (3) would be ''Eligible for Confidential Treatment.'' The EPA will consider revising the confidentiality status of the energy consumption data elements in the future, as more DAC facilities begin operating and we have a better understanding of how these data are customarily treated. For example, if DAC facilities begin customarily sharing their energy consumption information to advertise their energy efficiency, we may consider revising the confidentiality status to ''No Determination'' or ''Not Eligible for Confidential treatment.''

Comment: The EPA received several comments regarding the confidential treatment of the proposed EOR OMP at 40 CFR 98.488. Several commenters strongly supported the publishing of non-confidential data related to anthropogenic CO_2 volumes permanently stored in in CO_2–EOR operations, including the EOR OMP. Commenters compared the EOR OMP to the MRV plan issued or required under subpart RR, noting that the plans serve very similar purposes and include a geologic characterization of the storage location, information about wells within the storage site area, operations history, monitoring programs, and calculation and quantification methods used to determine the total amount of CO_2

stored in the storage site. One commenter strongly objected to the public disclosure of the OMP. The commenter stated that, unlike an MRV which must receive approval by the EPA under subpart RR, there is no such approval required for an OMP under subpart VV, which is appropriate given the differences in the subpart methodologies. The commenter added that reporting entities are currently free to exercise discretion to publicly disclose their OMPs.

Response: The EPA disagrees with the commenter. The EPA's review and approval of a document does not determine whether the document is eligible for confidential treatment. The EPA proposed that the OMP is not eligible for confidential treatment because it does not consider the data elements in the OMP to be customarily and actually treated as confidential. We note that this, rather than whether the EPA reviews and approves a submission, is the standard for confidentiality of reported data elements based on the *Argus Leader* decision. For example, the OMP shall include geologic characterization of the EOR complex, a description of the facilities within the CO_2–EOR project, a description of all wells and other engineered features in the CO_2–EOR project, the operations history of the project reservoir, descriptions of containment assurance and the monitoring plan, mass of CO_2 previously injected and other information required in the CSA/ANSI ISO 27916:19 standard. This information is normally available to the public through geologic records, construction and operating permitting files, well permits, tax records, and other public records. Furthermore, such information is available in EPA-approved subpart RR MRV plans which have been determined to be not-confidential and are consistently made publicly available on the EPA's website. That the EPA does not have a role in approving the OMP does not mean that the content itself is typically and actually held confidential.

C. Final Reporting Determinations for Inputs to Emission Equations

In the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, the EPA proposed to assign several data elements to the ''Inputs to Emission Equation'' data category. As discussed in section VI.B.1. of the preamble to the 2022 Data Quality Improvements Proposal, the EPA determined that the *Argus Leader* decision does not affect our approach for handling of data elements assigned to the ''Inputs to Emission Equations'' data category. Data assigned to the ''Inputs to Emission Equations'' data category are assigned to one of two subcategories, including ''inputs to emission equations'' that must be directly reported to the EPA, and ''inputs to emission equations'' that are not reported but are entered into the EPA's Inputs Verification Tool (IVT). The EPA received no comments specific to the proposed reporting determinations for inputs to emission equations in the proposed rules. Additional information regarding these reporting determinations may be found in section VI.C. of the preamble to the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal.

The EPA is finalizing the reporting determinations for data elements that the EPA proposed to assign to the ''Inputs to the Emission Equation'' data category as they were proposed for all subparts with the exception of certain records proposed for subparts G (Ammonia Production), P (Hydrogen Production), S (Lime Production), and HH (Municipal Solid Waste Landfills). For subparts G, P, and S, the new and substantially revised data elements were not proposed to be included in the reporting section of those subparts but were instead to be retained as records to be input into the EPA's IVT, and the EPA did not evaluate these data elements further. The EPA is not taking final action on these inputs into IVT because the EPA is not taking final action on the requirement to retain these data elements as records (see section III. of this preamble for additional information.) For subpart HH, the EPA is not finalizing the proposed reporting determinations for certain data elements because the EPA is not taking final action on the requirements to report these data elements at this time (see section III. of this preamble for additional information). These data elements are listed in table 3 of the memorandum ''Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in the 2024 Final Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424.

In a handful of cases, the EPA has made minor revisions to data elements assigned to the ''Inputs to Emissions Equations'' data category in this final action as compared to the proposed data element included in the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal. For certain proposed data elements, we have revised the citations from proposal to final. In other cases, the minor revisions include clarifications to the text. The EPA evaluated these inputs to emissions equations and how they have been clarified in the final rule to verify that the data element has not substantially changed since proposal. These data elements and how they have been clarified in the final rule are listed in table 4 of the memorandum ''Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in the 2024 Final Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket to this rulemaking, Docket ID. No. EPA–HQ–OAR–2019–0424. Because the input has not substantially changed since proposal, we are finalizing the proposed reporting determinations for these data elements as proposed. For additional information on the rationale for the reporting determinations for the data elements, see the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal and the memorandums ''Proposed Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in Proposed Revisions to the Greenhouse Gas Reporting Rule'' and ''Proposed Reporting Determinations for Data Elements Assigned to the Inputs to Emission Equations Data Category in Proposed Supplemental Revisions to the Greenhouse Gas Reporting Rule,'' available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

For all other reporting determinations for the data elements assigned to the ''Inputs to Emission Equations'' data category, the EPA is finalizing the reporting determinations as they were proposed. Please refer to the preamble to the 2022 Data Quality Improvements Proposal or the 2023 Supplemental Proposal for additional information.

VII. Impacts and Benefits of the Final Amendments

This section of the preamble examines the costs and economic impacts of the final rule and the estimated impacts of the rule on affected entities, in addition to the benefits of the final rule. The revisions in this final rule are anticipated to increase burden in cases where the amendments expand the applicability, monitoring, or reporting requirements of part 98. In some cases, the final amendments are anticipated to decrease burden where we streamlined the rule to remove notification or reporting requirements or simplify monitoring and reporting requirements. The final rule consolidates amendments

from the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal that revise 32 subparts that directly affect 30 industries—including revisions to update the GWPs in table A–1 to subpart A of part 98 that affect the number of facilities required to report under part 98; revisions to implement five new source categories or to expand existing source categories that may require facilities to newly report or to report under new provisions; and revisions to add new reporting requirements to a number of subparts that will improve the quality of the data collected under part 98. The bulk of costs associated with the final rule includes those costs to facilities that would be required to newly report under part 98 (subparts I, P, W, DD, HH, II, OO, TT, WW, XX, YY, and ZZ). However, the majority of subparts affected will reflect a modest increase in burden to individual reporters. As discussed in the preamble to the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, in several cases the final rule amendments are anticipated to result in a decrease in burden. In some cases we have quantified where the final rule would result in a decrease in burden for certain reporters, but in other cases we were unable to quantify this decrease. The final revisions also include minor amendments, corrections, and clarifications, including simple revisions of requirements such as clarifying changes to definitions, calculation methodologies, monitoring and quality assurance requirements, and reporting requirements. These revisions clarify part 98 to better reflect the EPA's intent, and do not present any additional burden on reporters. The impacts of the final rule generally reflect an increase in burden for most subparts.

The EPA received a number of comments on the proposed revisions and the impacts of the proposed revisions in both the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. See the document ''Summary of Public Comments and Responses for 2024 Final Revisions and Confidentiality Determinations for Data Elements under the Greenhouse Gas Reporting Rule'' in Docket ID. No. EPA–HQ–OAR–2019–0424 for a complete listing of all comments and responses related to the impacts of the proposed rules. Following consideration of these comments, the EPA has, in some cases, revised the final rule requirements and updated the impacts analysis to reflect these changes.

As noted in section I.C. of this preamble, although the EPA proposed amendments to subpart W (Petroleum and Natural Gas Systems) in the 2022 Data Quality Improvements Proposal, this final rule does not address implementation of these revisions to subpart W, which the EPA is reviewing in concurrent rulemakings. Additionally, as stated in section III.B. of this preamble, the EPA is not taking final action on its proposed amendments to add a source category for collection of data on energy consumption (subpart B) at this time. Accordingly, the impacts of the final rule do not reflect the costs for these proposed revisions.

For some subparts, we are not taking final action on revisions to calculation, monitoring, or reporting requirements that would have required reporters to collect or submit additional data. For example, for subpart C (General Stationary Fuel Combustion), we are not taking final action on proposed revisions to (1) add new reporting for the unit type, maximum rated heat input capacity, and an estimate of the fraction of the total annual heat input from each unit in either an aggregation of units or common pipe configuration (excluding units less than 10 mmBtu/hour); and (2) add new reporting to identify whether any unit in the configuration (individual units, aggregation of units, common stack, or common pipe) is an EGU, and, for multi-unit configurations, an estimated decimal fraction of total emissions from the group that are attributable to EGU(s) included in the group. For subparts G (Ammonia Production), P (Hydrogen Production), S (Lime Production), and HH (Municipal Solid Waste Landfills) we are not taking final action on certain revisions to the calculation methodologies that would have revised how data is collected and reported in e-GGRT. Similarly, we are not taking final action on certain data elements that were proposed to be added to subparts A (General Provisions), F (Aluminum Production), G (Ammonia Production), H (Cement Production), P, S (Lime Production), HH, OO (Suppliers of Industrial Greenhouse Gases), and QQ (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment and Closed-Cell Foams). Therefore, the final burden for these subparts has been revised to reflect only those requirements that are being finalized, and is lower than proposed.

In a few cases, the EPA has adjusted the burden of the final rule to account for additional costs associated with the final rule. In these cases, we have made minor adjustments to the reporting and recordkeeping requirements in the final rule. Specifically, we are finalizing changes from the proposed rule that would add 8 new data elements to subparts I, P, DD, and ZZ (see section III. of this preamble for additional information). The final rule burden estimate has been adjusted to include additional time and labor for these activities, which the EPA estimates is minimal for the reasons described in section III. of this preamble. Finally, the burden for the activities in the final rule has been adjusted to reflect updates to the estimated number of affected reporters based on a review of data from RY2022 reporting.

As discussed in section V. of this preamble, the final rule will be implemented on January 1, 2025, and will apply to RY2025 reports. Costs have been estimated over the three years following the year of implementation. One-time implementation costs are incorporated into first year costs, while subsequent year costs represent the annual burden that will be incurred in total by all affected reporters. The incremental implementation labor costs for all subparts include $2,684,681 in RY2025, and $2,671,831 in each subsequent year (RY2026 and RY2027). The incremental implementation labor costs over the next three years (RY2025 through RY2027) total $8,028,343. There is an additional incremental burden of $2,733,937 for capital and O&M costs in RY2025 and in each subsequent year (RY2026 and RY2027), which reflects changes to applicability and monitoring for subparts I, P, W, V, Y, DD, HH, II, OO, TT, UU and new subparts VV, WW, XX, YY, and ZZ. The incremental non-labor costs for RY2025 through RY2027 total $8,201,812 over the next three years. The incremental burden is summarized by subpart for the rule changes that are finalized for initial and subsequent years in table 8 of this preamble. Note that subparts A, U, FF, and RR only include revisions that are clarifications or harmonizing changes that would not result in any changes to burden, and are not included in table 8 of this preamble.

TABLE 8—ANNUAL INCREMENTAL BURDEN OF THE FINAL RULE, BY SUBPART

Subpart	Number of affected facilities	Labor costs		Capital and O&M
		Initial year	Subsequent years	
C—General Stationary Fuel Combustion Sources [a]				
Facilities Reporting only to Subpart C	133	($1,446)	($1,446)	
Facilities Reporting to Subpart C plus another subpart	177	(979)	(979)	
G—Ammonia Manufacturing	29	119	119	
H—Cement Production	94	1,999	1,999	
I—Electronics Manufacturing [b c]	48	19,651	18,023	$62
N—Glass Production	101	2,074	2,074	
P—Hydrogen Production [b]	114	7,497	7,497	2,561
Q—Iron and Steel Production	121	1,485	1,485	
S—Lime Manufacturing	71	1,186	1,186	
V—Nitric Acid Production [d e]	1	(2,680)	(2,680)	(11,085)
W—Petroleum and Natural Gas Systems [d]	188	2,433,058	2,433,058	2,717,864
X—Petrochemical Production	31	618	618	
Y—Petroleum Refineries [f]	57	(6,133)	(6,133)	(3,930)
AA—Pulp and Paper Manufacturing	1	104	104	
BB—Silicon Carbide Production	1	20	20	
DD—Electrical Transmission [b]	95	15,278	15,278	3,119
GG—Zinc Production	5	20	20	
HH—Municipal Solid Waste Landfills [b]	1,129	84,651	81,793	374
II—Industrial Wastewater Treatment [d]	2	5,288	4,713	3,077
OO—Suppliers of Industrial Greenhouse Gases [a]	121	6,884	6,884	62
PP—Suppliers of Carbon Dioxide	22	872	872	
QQ—Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment or Closed-Cell Foams	33	249	249	
SS—Electrical Equipment Manufacture or Refurbishment	5	358	358	
TT—Industrial Waste Landfills [b d]	1	4,853	3,934	62
UU—Injection of Carbon Dioxide [g]	2	(1,886)	(1,886)	(125)
VV—Geologic Sequestration of Carbon Dioxide with Enhanced Oil Recovery Using ISO 27916 [g]	2	1,882	3,443	250
WW—Coke Calciners	15	37,847	34,525	19,649
XX—Calcium Carbide Production	1	2,849	2,627	62
YY—Caprolactam, Glyoxal, and Glyoxylic Acid Production	6	12,285	11,089	374
ZZ—Ceramics Manufacturing	25	56,678	52,987	1,559
Total		2,684,681	2,671,831	2,733,937

[a] Reflects reduced burden due to revisions to simplify calculation methods and remove reporting requirements.
[b] Applies to reporters that may currently report under existing subparts of part 98 and that are newly subject to reporting under part 98.
[c] Average subsequent year costs for subpart I. Subpart I subsequent year costs include $17,794 in Year 2 and $18,252 in Year 3.
[d] Reflects burden to reporters estimated to be affected due to revisions to table A–1 to subpart A only.
[e] Reflects changes to the number of reporters able to off-ramp from reporting under the part 98 source category.
[f] Reflects changes to the number of reporters with coke calciners reporting under subpart Y that would be required to report under proposed subpart WW.
[g] Reflects changes to the number of reporters reporting under subpart UU who will begin submitting reports under new subpart VV in each year.

Additional details on the EPA's review of the impacts may be found in the memorandum, ''Assessment of Burden Impacts for Final Revisions to the Greenhouse Gas Reporting Rule,'' available in Docket ID. No. EPA–HQ–OAR–2019–0424.

The implementation of the final rule will provide numerous benefits for stakeholders, the Agency, industry, and the general public. The final revisions include improvements to the calculation, monitoring, and reporting requirements, incorporate new data and reflect updated scientific knowledge; provide coverage of new emissions sources and additional sectors; improve analysis and verification of collected data; provide additional data to complement or inform other EPA programs; and streamline calculation, monitoring, or reporting to provide flexibility or increase the efficiency of data collection. The revisions will maintain the quality of the data collected under part 98 where continued collection of information assists in evaluation and support of EPA programs and policies under provisions of the CAA. In some cases, the amendments improve the EPA's ability to assess compliance by revising or adding recordkeeping or reporting elements that will allow the EPA to more thoroughly verify GHG data and advance the ability of the GHGRP to provide access to quality data on greenhouse gas emissions by adding or updating emission factors, revising or adding calculation methodologies, or adding key data elements to improve the usefulness of the data.

Because part 98 is a reporting rule, the EPA did not quantify estimated emission reductions or monetize the benefits from such reductions that could be associated with the final rule. The benefits of the final rule are based on its relevance to policy making, transparency, and market efficiency. The improvements to the GHGRP will benefit the EPA, other policymakers, and the public by increasing the completeness and accuracy of facility emissions data. Public data on emissions allows for accountability of emitters to the public. Improved facility-specific emissions data will aid local, state, and national policymakers as they evaluate and consider future climate change policy decisions and other policy decisions for criteria pollutants, ambient air quality standards, and toxic

air emissions. For example, GHGRP data on petroleum and natural gas systems (subpart W of part 98) were previously analyzed to inform targeted improvements to the 2016 NSPS for the oil and gas industry and to update emission factor and activity data used for that proposal and the final NSPS, as updated in the Inventory (83 FR 52056; October 15, 2018). Similarly, GHGRP data on municipal solid waste landfills (subpart HH of part 98) were previously used to inform the development of the 2016 NSPS and EG for landfills; the EPA was able to update its internal landfills data set and consider the technical attributes of over 1,200 landfills based on data reported under subpart HH. The benefits of improved reporting also include enhancing existing voluntary programs, such as the Landfill Methane Outreach Program (LMOP), which uses GHGRP data to supplement the LMOP Landfill and Landfill Gas Energy Project Database and includes data collected from LMOP Partners about landfill gas energy projects or potential for project development.

The final rule would additionally benefit states by providing improved facility-specific emissions data. Several states use GHGRP data to inform their own policymaking. For example, the state of Hawaii uses GHGRP data to establish an emissions baseline for each facility subject to their GHG Reduction Plan and to assess whether facilities meet their targets in future years.

GHGRP data are also used to improve estimates of GHG emissions internationally. Data collected through the GHGRP complements the Inventory and are used to significantly improve our understanding of key emissions sources by allowing the EPA to better reflect changing technologies and emissions from a wide range of industrial facilities. Specifically, GHGRP data have been used to inform several of the updates to emission estimation methods included in the 2019 Refinement.

Benefits to industry of improved GHG emissions monitoring and reporting from the amendments include the value of having standardized emissions data to present to the public to demonstrate appropriate environmental stewardship, and a better understanding of their emission levels and sources to identify opportunities to reduce emissions. For example, the final rule updates the global warming potential values used under the GHGRP to reflect values from the IPCC AR5 and AR6, which are consistent with the values used under several voluntary standards and frameworks such as the GHG Protocol and Sustainability Accounting Standards Board (SASB), and will provide consistency for company reporting. Businesses and other innovators can use the data to determine and track their GHG footprints, find cost-saving efficiencies that reduce GHG emissions and save product, foster technologies to protect public health and the environment, and to reduce costs associated with fugitive emissions. The final rule will continue to allow for facilities to benchmark themselves against similar facilities to understand better their relative standing within their industry and achieve and disseminate information about their environmental performance.

In addition, transparent, standardized public data on emissions allows for accountability of polluters to the public who bear the cost of the pollution. The GHGRP serves as a powerful data resource and provides a critical tool for communities to identify nearby sources of GHGs and provide information to state and local governments. As discussed in section II. of this preamble, GHGRP data are easily accessible to the public via the EPA's FLIGHT, which allows users to view and sort GHG data by location, industrial sector, and type of GHG emitted, and includes demographic data. Although the emissions reported to the EPA by reporting facilities are global pollutants, many of these facilities also release pollutants that have a more direct and local impact in the surrounding communities. Citizens, community groups, and labor unions have made use of public pollutant release data to negotiate directly with emitters to lower emissions, avoiding the need for additional regulatory action. The final rule would improve the quality and transparency of this reported data to affected communities.

VIII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and 14094: Modernizing Regulatory Review

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act

The information collection activities in this rule have been submitted for approval to the OMB under the PRA. The Information Collection Request (ICR) document that the EPA prepared has been assigned OMB number 2060–0748, EPA ICR number 2773.02. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

The EPA has estimated that the final rule will result in an increase in burden, specifically in cases where the amendments expand the applicability, monitoring, or reporting requirements of part 98. In some cases, the final amendments are anticipated to decrease burden where we streamlined the rule to remove notification or reporting requirements or simplify monitoring and reporting requirements. The final rule consolidates amendments from the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal that revise 31 subparts that directly affect 30 industries—including revisions to update the GWPs in table A–1 to subpart A of part 98 that affect the number of facilities required to report under part 98; revisions to implement five new source categories or to expand existing source categories that may require facilities to newly report; and revisions to add new reporting requirements that will improve the quality of the data collected under part 98. The costs associated with the final rule largely reflect the costs to facilities that would be required to newly report under part 98. However, the majority of subparts affected will reflect a modest increase in burden to existing individual reporters.

Further information on the EPA's assessment on the impact on burden can be found in the memorandum ''Assessment of Burden Impacts for Final Revisions for the Greenhouse Gas Reporting Rule,'' available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424).

Respondents/affected entities: Owners and operators of facilities that must report their GHG emissions and other data to the EPA to comply with 40 CFR part 98.

Respondent's obligation to respond: The respondent's obligation to respond is mandatory and the requirements in this rule are under the authority provided in CAA section 114.

Estimated number of respondents: 2,701.

Frequency of response: Initially, annually.

Total estimated burden: 25,647 hours (annual average per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $5,410,000 (annual average per year), includes $2,734,000 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to

respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this final action will not have a significant economic impact on a substantial number of small entities under the RFA. The small entities subject to the requirements of this action are small businesses across all sectors encompassed by the rule, small governmental jurisdictions, and small non-profits. In the development of 40 CFR part 98, the EPA determined that some small entities are affected because their production processes emit GHGs that must be reported, because they have stationary combustion units on site that emit GHGs that must be reported, or because they have fuel supplier operations for which supply quantities and GHG data must be reported. Small governments and small non-profits are generally affected because they have regulated landfills or stationary combustion units on site, or because they own a local distribution company (LDC).

The EPA previously conducted screening analyses to identify impacts to small entities during the development of the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal. The EPA conducted small entity analyses that assessed the costs and impacts to small entities in three areas, including: (1) amendments that revise the number or types of facilities required to report (*i.e.,* updates of the GHGRP's applicability to certain sources), (2) changes to refine existing monitoring or calculation methodologies that require collection of additional data, and (3) revisions to reporting and recordkeeping requirements for data provided to the program. The analyses provided the subparts affected, the number of small entities affected, and the estimated impact to these entities based on the total annualized reporting costs of the proposed rules. Details of these analyses are presented in the memoranda, *Assessment of Burden Impacts for Proposed Revisions for the Greenhouse Gas Reporting Rule* (May 2022) and *Assessment of Burden Impacts for Proposed Supplemental Revisions for the Greenhouse Gas Reporting Rule* (April 2023), available in the docket for this rulemaking (Docket ID. No. EPA–HQ–OAR–2019–0424). Based on the results of these analyses, we concluded that the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal will have no significant regulatory burden for any directly regulated small entities and thus would not have a significant economic impact on a substantial number of small entities.

As discussed in sections III. and VII. of this preamble, this action finalizes revisions to part 98 as proposed in the 2022 Data Quality Improvements Proposal and the 2023 Supplemental Proposal, or with minor revisions, and we have revised the cost impacts to reflect the final rule requirements and more recent data. For example, we have updated the impacts to better reflect the number of affected reporters that would be subject to the final requirements, based on a review of RY2022 data. These updates also predominantly include removing or adjusting costs where the EPA is not taking final action on specific proposed revisions, including costs associated with the addition of proposed subpart B (Energy Consumption), certain costs associated with proposed revisions to subpart W (Petroleum and Natural Gas Systems) included in the 2022 Data Quality Improvements Proposal,[50] and costs associated with certain revisions to calculations, monitoring, or reporting requirements for subparts A (General Provisions), C (General Stationary Fuel Combustion), F (Aluminum Production), G (Ammonia Production), H (Cement Production), S (Lime Production), HH (Municipal Waste Landfills), OO (Suppliers of Industrial Greenhouse Gases), and QQ (Importers and Exporters of Fluorinated Greenhouse Gases Contained in Pre-Charged Equipment and Closed-Cell Foams). Accordingly, the burden of the final rule is reduced, as compared to the proposals, for facilities that may report for these source categories, including all direct emitting facilities previously proposed to report under subpart B.

The EPA has also adjusted the burden to account for additional costs from changes adopted in the final rule. Specifically, we have adjusted the reporting and recordkeeping requirements for subparts I (Electronics Manufacturing), P (Hydrogen Production), DD (Electrical Transmission and Distribution Equipment Use), HH (Municipal Solid Waste Landfills), and ZZ (Ceramics Manufacturing) to add new data elements for annual reporting across these subparts. The estimated costs associated with the revisions to these subparts for regulated entities are minimal (less than $100 annually), and would not result in costs exceeding more than one percent of sales in any firm size category. Details of this analysis are presented in the memorandum ''Assessment of Burden Impacts for Final Revisions for the Greenhouse Gas Reporting Rule,'' available in Docket ID. No. EPA–HQ–OAR–2019–0424.

The remaining revisions to the final rule include minor clarifications or adjustments to the proposed requirements that are not anticipated to increase the burdens estimated for the 2022 Data Quality Improvements Proposal and 2023 Supplemental Proposal which we previously determined would not have a significant impact on a significant number of small businesses. For these reasons, we have determined that these final revisions are consistent with our prior small entity analyses, and would impose no significant regulatory burden on any directly regulated small entities, and thus would not have a significant economic impact on a substantial number of small entities.

Refer to the memorandum ''Assessment of Burden Impacts for Final Revisions for the Greenhouse Gas Reporting Rule,'' available in Docket ID. No. EPA–HQ–OAR–2019–0424 for further discussion. The EPA continues to conduct significant outreach on the GHGRP and maintains an ''open door'' policy for stakeholders to help inform the EPA's understanding of key issues for the industries.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

[50] The EPA is not taking final action on any revisions to requirements for subpart W (Petroleum and Natural Gas Systems) in this final rule. See sections I.C. and VII. of this preamble for additional information regarding the EPA's actions regarding subpart W and the impacts included in this final rule.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized tribal governments, nor preempt tribal law. This regulation will apply directly to facilities emitting and supplying GHGs that may be owned by tribal governments that emit GHGs. However, it will only have tribal implications where the tribal entity owns a facility that directly emits GHGs above threshold levels; therefore, relatively few (approximately 10) tribal facilities will be affected. This regulation is not anticipated to impact facilities or suppliers of additional sectors owned by tribal governments.

In evaluating the potential implications for tribal entities, we first assessed whether tribes would be affected by any final revisions that expanded the universe of facilities that would report GHG data to the EPA. The final rule amendments will implement requirements to collect additional data to understand new source categories, new sources of GHG emissions or supply for specific sectors; improve the existing emissions estimation methodologies; and improve the EPA's understanding of the sector-specific processes or other factors that influence GHG emission rates and improve verification of collected data. Of the 254 facilities that we anticipate will be newly required to report under the final revisions, we do not anticipate that there are any tribally owned facilities. As discussed in section VII. of this preamble, we expect the final revisions to table A–1 to part 98 to result in a change to the number of facilities required to report under subparts W (Petroleum and Natural Gas Systems), V (Nitric Acid Production), DD (Electrical Transmission and Distribution Equipment Use), HH (MSW Landfills), II (Industrial Wastewater Treatment), OO (Suppliers of Industrial GHGs), and TT (Industrial Waste Landfills). However, we did not identify any potential sources in these source categories that are owned by tribal entities not already reporting to the GHGRP. Similarly, although we are finalizing amendments that will require some facilities in select source categories not currently subject to the GHGRP to begin implementing requirements under the program, we have not identified, and do not anticipate that any of these affected facilities are owned by tribal governments.

As a second step to evaluate potential tribal implications, we evaluated whether there were any tribally owned facilities that are currently reporting under the GHGRP that will be affected by the final revisions. Tribally owned facilities currently subject to part 98 will only be subject to changes that are improvements or clarifications of requirements and that, for the most part, do not significantly change the existing requirements or result in substantial new activities because they do not require new equipment, sampling, or monitoring. Rather, tribally owned facilities would only be subject to new requirements where reporters would provide data that is readily available from company records. As such, the final revisions will not substantially increase reporter burden, impose significant direct compliance costs for tribal facilities, or preempt tribal law.

Specifically, we identified ten facilities currently reporting to part 98 that are owned by six tribal parent companies. For these six parent companies, we identified facilities in the stationary fuel combustion (subpart C), cement production (subpart H), petroleum and natural gas (subpart W), electrical transmission and distribution equipment use (subpart DD), and MSW landfill (subpart HH) source categories that may be affected by the final revisions.

For stationary fuel combustion, the EPA is not taking final action on proposed revisions to add reporting requirements to subpart C, but is retaining revisions that would remove certain reporting requirements. Therefore, the costs for any tribally-owned facilities currently reporting to subpart C are anticipated to decrease and no facilities are anticipated to be negatively impacted. For petroleum and natural gas facilities, the EPA is not including any revisions to subpart W in this final rule (see section I.C. of this document); therefore, any tribally-owned facilities currently reporting to subpart W are not anticipated to be impacted. Three parent companies include existing facilities that report only under subparts C or W, which are not anticipated to have significant impacts under this rule for the reasons discussed in this section. Therefore, the remaining facilities that could be affected by the final revisions are those that report to subparts H, DD, and HH. For the remaining three parent companies, we reviewed publicly available sales and revenue data to assess whether the costs of the final rule would be significant. Under the final rule, the costs for facilities currently reporting under subparts H, DD, or HH are anticipated to increase by less than $100 per year per subpart. Therefore, we were able to confirm that the costs of the final revisions would not have a significant impact for these sources. Further, based on our review of our small entity analyses (discussed in VIII.C. of this preamble), we do not anticipate the final revisions to subparts H, DD, or HH will impose substantial direct compliance costs on the remaining tribally owned entities.

Although few facilities subject to part 98 are likely to be owned by tribal governments, the EPA previously sought opportunities to provide information to tribal governments and representatives during the development of the proposed and final rules for part 98 subparts that were promulgated on October 30, 2009 (74 FR 52620), July 12, 2010 (75 FR 39736), November 30, 2010 (75 FR 74458), and December 1, 2010 (75 FR 74774 and 75 FR 75076). Consistent with the 2011 EPA Policy on Consultation and Coordination with Indian Tribes,[51] the EPA previously consulted with tribal officials early in the process of developing part 98 regulations to permit them to have meaningful and timely input into its development and to provide input on the key regulatory requirements established for these facilities. A summary of these consultations is provided in section VIII.F. of the preamble to the final rule published on October 30, 2009 (74 FR 52620), section V.F. of the preamble to the final rule published on July 12, 2010 (75 FR 39736), section IV.F. of the preamble to the re-proposal of subpart W (Petroleum and Natural Gas Systems) published on April 12, 2010 (75 FR 18608), and section IV.F. of the preambles to the final rules published on December 1, 2010 (75 FR 74774 and 75 FR 75076). As described in this section, the final rule does not significantly revise the established regulatory requirements and will not substantially change the equipment, monitoring, or reporting activities conducted by these facilities, or result in other substantial impacts for tribal facilities.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of "covered regulatory

[51] EPA Policy on Consultation and Coordination with Indian Tribes, May 4, 2011. Available at: *www.epa.gov/sites/default/files/2013-08/documents/cons-and-coord-with-indian-tribes-policy.pdf.*

action'' in section 2–202 of the Executive order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act and 1 CFR Part 51

This action involves technical standards. The EPA has decided to incorporate by reference several standards in establishing monitoring requirements in these final amendments.

The EPA currently allows for the use of the *Protocol for Measuring Destruction or Removal Efficiency (DRE) of Fluorinated Greenhouse Gas Abatement Equipment in Electronics Manufacturing, Version 1,* EPA–430–R–10–003, March 2010 (EPA 430–R–10–003) in other sections of part 98, including subpart I (Electronics Manufacturing). The EPA is adding the use of EPA 430–R–10–003 to subpart I for use for measurement of DREs from abatement systems, including HC fuel CECS, purchased and installed on or after January 1, 2025. EPA 430–R–10–003 provides methods for measuring abatement system inlet and outlet mass or volume flows for single or multi-chamber process tools, accounting for dilution. Anyone may access EPA 430–R–10–003 at *https://www.epa.gov/sites/default/files/2016-02/documents/dre_protocol.pdf.* This standard is available to everyone at no cost; therefore, the method is reasonably available for reporters.

The EPA is allowing the use of an alternate method, ASTM E415–17, *Standard Test Method for Analysis of Carbon and Low-Alloy Steel by Spark Atomic Emission Spectrometry* (2017), for the purposes of subpart Q (Iron and Steel Production) monitoring and reporting. The EPA currently allows for the use of ASTM E415–17 in other sections of part 98, including under 40 CFR 98.144(b) where it can be used to determine the composition of coal, coke, and solid residues from combustion processes by glass production facilities. Therefore, the EPA is allowing ASTM E415–17 to be used in subpart Q. ASTM E415–17 uses spark atomic emission vacuum spectrometry to determine 21 alloying and residual elements in carbon and low-alloy steels. The method is designed for chill-cast, rolled, and forged specimens. (See the end of section VIII.I. of this preamble for availability information.)

The EPA is adding new subpart VV to part 98 for certain EOR operations that choose to use the co-published ISO/CSA standard designated as CSA/ANSI ISO 27916:19, *Carbon dioxide capture, transportation and geological storage—Carbon dioxide storage using enhanced oil recovery (CO_2–EOR),* as a means of quantifying geologic sequestration. The EPA is also clarifying in subpart UU at 40 CFR 98.470(c) and subpart VV at 40 CFR 98.481 that CO_2–EOR projects previously reporting under subpart UU that begin using CSA/ANSI ISO 27916:19 part-way through a reporting year must report under subpart UU for the portion of the year before CSA/ANSI ISO 27916:19 was used and report under subpart VV for the portion of the year once CSA/ANSI ISO 27916:19 began to be used and thereafter. CSA/ANSI ISO 27916:19 identifies and quantifies CO_2 losses (including fugitive emissions) and quantifies the amount of CO_2 stored in association with the CO_2-EOR project. It also shows how allocation rations can be used to account for the anthropogenic portion of the stored CO_2. Anyone may access the standard on the CSA group website (*www.csagroup.org/store*) for additional information. The standard is available to everyone at a cost determined by CSA Group ($225). CSA Group also offers memberships or subscriptions for reduced costs. Because the use of the standard is optional, the cost of obtaining this standard is not a significant financial burden.

The EPA is adding new subpart WW to part 98 (Coke Calciners) and is allowing the use of any one of the following standards for coke calcining facilities: (1) ASTM D3176–15 *Standard Practice for Ultimate Analysis of Coal and Coke,* (2) ASTM D5291–16 *Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants,* and (3) ASTM D5373–21 *Standard Test Methods for Determination of Carbon, Hydrogen, and Nitrogen in Analysis Samples of Coal and Carbon in Analysis Samples of Coal and Coke.* These methods are used to determine the carbon content of petroleum coke. The EPA currently allows for the use of an earlier version of these standard methods for the instrumental determination of carbon content in laboratory samples of petroleum coke in other sections of part 98, including the use of ASTM D3176–89, ASTM D5291–02, and ASTM D5373–08 in 40 CFR 98.244(b) (subpart X—Petrochemical Production) and 40 CFR 98.254(i) (subpart Y—Petroleum Refineries). The EPA is allowing the use of the updated versions of these standards (ASTM D3176–15, ASTM D5291–16, and ASTM D5373–21) to determine the carbon content of petroleum coke for subpart WW (Coke Calciners). ASTM D3176–15 provides direction for a convenient and uniform system of analysis of the ash content and the content of organic constituents in coal and coke; this method references the appropriate ASTM methods for sample collection, preparation, content determination, and provides consistency measures for calculation and reporting of results. ASTM D5291–16 provides a series of test methods for the simultaneous instrumental determination of carbon, hydrogen, and nitrogen in petroleum products and lubricants such as crude oils, fuel oils, additives, and residues; the method allows for a variety of instrumental components and configurations for measurement and calculation of concentrations of carbon, hydrogen, and nitrogen. ASTM D5373–21 provides a methodology for the determination of carbon, hydrogen, and nitrogen content in coal or carbon in coke using furnace combustion and instrument detection systems; the method addresses the determination of carbon in the range of 54.9 percent m/m to 84.7 percent m/m, hydrogen in the range of 3.26 percent m/m to 5.08 percent m/m, and nitrogen in the range of 0.57 percent m/m to 1.76 percent m/m in the analysis sample of coal. (See the end of section VIII.I. of this preamble for availability information.)

We are allowing the use of the following standard for coke calciners subject to subpart WW: NIST HB 44–2023, NIST Handbook 44: *Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices,* 2023 edition. The EPA currently allows for the use of an earlier version of the proposed standard method, *Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices, NIST Handbook 44* (2009), for the calibration and maintenance of instruments used for weighing of mass of samples of petroleum coke in other sections of part 98, including 40 CFR 98.244(b) (subpart X). The EPA is allowing the use of the updated version of this standard, NIST HB 44–2023: *Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices,* 2023 edition, for performing mass measurements of petroleum coke for subpart WW (Coke Calciners). This

standard includes specifications on design of equipment, tolerances to limit the allowable error, sensitivity requirements, and other technical requirements for weighing and measuring devices. Anyone may access the standards on the NIST website (*www.nist.gov/index.html*) for additional information. These standards are available to everyone at no cost; therefore the methods are reasonably available for reporters.

The EPA is adding new subpart XX to part 98 (Calcium Carbide Production) and is allowing the use of one of the following standards for calcium carbide production facilities: (1) ASTM D5373–08 *Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Laboratory Samples of Coal,* or (2) ASTM C25–06, *Standard Test Methods for Chemical Analysis of Limestone, Quicklime, and Hydrated Lime.* ASTM D5373–08 addresses the determination of carbon in the range of 54.9 percent m/m to 84.7 percent m/m, hydrogen in the range of 3.25 percent m/m to 5.10 percent m/m, and nitrogen in the range of 0.57 percent m/m to 1.80 percent m/m in the analysis sample of coal. The EPA currently allows for the use of ASTM D5373–08 in other sections of part 98, including in 40 CFR 98.244(b) (subpart X—Petrochemical Production), 40 CFR 98.284(c) (subpart BB—Silicon Carbide Production), and 40 CFR 98.314(c) (subpart EE—Titanium Production) for the instrumental determination of carbon content in laboratory samples. Therefore, we are allowing the use of ASTM D5373–08 for determination of carbon content of materials consumed, used, or produced at calcium carbide facilities.

The EPA currently allows for the use of ASTM C25–06 in other sections of part 98, including in 40 CFR 98.194(c) (subpart S—Lime Production) for chemical composition analysis of lime products and calcined byproducts and in 40 CFR 98.184(b) (subpart R—Lead Production) for analysis of flux materials such as limestone or dolomite. ASTM C25–06 addresses the chemical analysis of high-calcium and dolomitic limestone, quicklime, and hydrated lime. We are allowing the use of ASTM C25–06 for determination of carbon content of materials consumed, used, or produced at calcium carbide facilities, including analysis of materials such as limestone or dolomite.

Anyone may access the standards on the ASTM website (*www.astm.org/*) for additional information. These standards are available to everyone at a cost determined by the ASTM (between $48 and $92 per standard). The ASTM also offers memberships or subscriptions that allow unlimited access to their methods. The cost of obtaining these methods is not a significant financial burden, making the methods reasonably available for reporters.

The EPA will also make a copy of these documents available in hard copy at the appropriate EPA office (see the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information) for review purposes only. The EPA is not requiring the use of specific consensus standards for new subparts YY (Caprolactam, Glyoxal, and Glyoxylic Acid Production) or ZZ (Ceramics Manufacturing), or for other amendments to part 98.

The following standards appear in the amendatory text of this document and were previously approved for the locations in which they appear:

- ASTM D3176–89 (Reapproved 2002) Standard Practice for Ultimate Analysis of Coal and Coke;
- ASTM D5291–02 (Reapproved 2007) Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants;
- ASTM E1019–08 Standard Test Methods for Determination of Carbon, Sulfur, Nitrogen, and Oxygen in Steel, Iron, Nickel, and Cobalt Alloys by Various Combustion and Fusion Techniques;
- Specifications, Tolerances, and Other Technical Requirements For Weighing and Measuring Devices, NIST Handbook 44 (2009);
- ASTM D6866–16 Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis).
- ASTM D7459–08 Standard Practice for Collection of Integrated Samples for the Speciation of Biomass (Biogenic) and Fossil-Derived Carbon Dioxide Emitted from Stationary Emissions Sources.
- ASTM D2505–88 (Reapproved 2004)e1 Standard Test Method for Ethylene, Other Hydrocarbons, and Carbon Dioxide in High-Purity Ethylene by Gas Chromatography.
- T650 om–05 Solids Content of Black Liquor, TAPPI.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this type of action does not directly concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns. This action does not affect the level of protection provided to human health or the environment, but instead, addresses information collection and reporting procedures. Although this action does not concern human health or environmental conditions, the EPA identified and addressed environmental justice concerns by promoting meaningful engagement from communities in developing the action, and in developing requirements that improve the quality of data available to communities. The EPA provided multiple public comment periods on the proposed 2022 Data Quality Improvements Proposal (from June 21, 2022 to October 6, 2022) and the 2023 Supplemental Proposal (May 22, 2023 to July 21, 2023), and provided opportunities for virtual public hearing(s) for members of the public to share information or concerns and participate in the decision-making process. Further, the EPA has developed improvements to the GHGRP that benefit the public by increasing the completeness and accuracy of facility emissions data. The data collected through this action will provide an important data resource for communities and the public to understand GHG emissions, including requiring reporting of GHG data from additional emission sources and providing more comprehensive coverage of U.S. GHG emissions. Transparent, standardized public data on emissions allows for accountability of polluters to the public who bear the cost of the pollution. Although the emissions reported to the EPA by reporting facilities are global pollutants, many of these facilities also release pollutants that have a more direct and local impact in the surrounding communities. GHGRP data are easily accessible to the public via the EPA's online data publication tool (FLIGHT), which allows users to view and sort GHG data from over 8,000 entities in a variety of ways including by location, industrial sector, type of GHG emitted, and provides supplementary demographic data that may be useful to communities with environmental justice concerns. As described further in sections II. and III. of this preamble, the final rule improves the quality and transparency of this reported data to affected communities and enables members of the public to have access to and improve their understanding of GHG emissions and pollutants that may impact them.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the

Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

L. Judicial Review

Under CAA section 307(b)(1), any petition for review of this final rule must be filed in the U.S. Court of Appeals for the District of Columbia Circuit by June 24, 2024. This final rule establishes requirements applicable to owners and operators of facilities and suppliers in many industry source categories located across the United States that are subject to 40 CFR part 98 and therefore is ''nationally applicable'' within the meaning of CAA section 307(b)(1).

Further, pursuant to CAA section 307(d)(1)(V), the Administrator has determined that this rule is subject to the provisions of CAA section 307(d). See CAA section 307(d)(1)(V) (the provisions of section 307(d) apply to ''such other actions as the Administrator may determine''). Under CAA section 307(d)(7)(B), only an objection to this final rule that was raised with reasonable specificity during the period for public comment can be raised during judicial review. CAA section 307(d)(7)(B) also provides a mechanism for the EPA to convene a proceeding for reconsideration, ''[i]f the person raising an objection can demonstrate to EPA that it was impracticable to raise such objection within [the period for public comment] or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.'' Any person seeking to make such a demonstration should submit a Petition for Reconsideration to the Office of the Administrator, Environmental Protection Agency, Room 3000, William Jefferson Clinton Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460, with an electronic copy to the person listed in FOR FURTHER INFORMATION CONTACT, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20004. Note that under CAA section 307(b)(2), the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce these requirements.

List of Subjects

40 CFR Part 9

Environmental protection, Administrative practice and procedure, Reporting and recordkeeping requirements.

40 CFR Part 98

Environmental protection, Greenhouse gases, Incorporation by reference, Reporting and recordkeeping requirements, Suppliers.

Michael S. Regan,
Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency amends title 40, chapter I, of the Code of Federal Regulations as follows:

PART 9—OMB APPROVALS UNDER THE PAPERWORK REDUCTION ACT

■ 1. The authority citation for part 9 continues to read as follows:

Authority: 7 U.S.C. 135 *et seq.,* 136–136y; 15 U.S.C. 2001, 2003, 2005, 2006, 2601–2671; 21 U.S.C. 331j, 346a, 31 U.S.C. 9701; 33 U.S.C. 1251 *et seq.,* 1311, 1313d, 1314, 1318, 1321, 1326, 1330, 1342, 1344, 1345(d) and (e), 1361; E.O. 11735, 38 FR 21243, 3 CFR, 1971–1975 Comp. p. 973; 42 U.S.C. 241, 242b, 243, 246, 300f, 300g, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–1, 300j–2, 300j–3, 300j–4, 300j–9, 1857 *et seq.,* 6901–6992k, 7401–7671q, 7542, 9601–9657, 11023, 11048.

■ 2. Amend § 9.1 by adding an undesignated center heading and an entry for ''98.1–98.528'' in numerical order to read as follows:

§ 9.1 OMB approvals under the Paperwork Reduction Act.

* * * * *

40 CFR citation	OMB control No.
* * *	* *
Mandatory Greenhouse Gas Reporting	
98.1–98.528	2060–0629
* * *	* *

PART 98—MANDATORY GREENHOUSE GAS REPORTING

■ 3. The authority citation for part 98 continues to read as follows:

Authority: 42 U.S.C. 7401–7671q.

Subpart A—General Provision

■ 4. Amend § 98.2 by:
■ a. Revising paragraphs (f)(1) and (i)(1) and (2); and
■ b. Adding paragraph (k).

The revisions and addition read as follows:

§ 98.2 Who must report?

* * * * *

(f) * * *

(1) Calculate the mass in metric tons per year of CO_2, N_2O, each fluorinated GHG, and each fluorinated heat transfer fluid that is imported and the mass in metric tons per year of CO_2, N_2O, each fluorinated GHG, and each fluorinated heat transfer fluid that is exported during the year.

* * * * *

(i) * * *

(1) If reported CO_2e emissions, calculated in accordance with § 98.3(c)(4)(i), are less than 25,000 metric tons per year for five consecutive years, then the owner or operator may discontinue complying with this part provided that the owner or operator submits a notification to the Administrator that announces the cessation of reporting and explains the reasons for the reduction in emissions. The notification shall be submitted no later than March 31 of the year immediately following the fifth consecutive year of emissions less than 25,000 tons CO_2e per year. The owner or operator must maintain the corresponding records required under § 98.3(g) for each of the five consecutive years prior to notification of discontinuation of reporting and retain such records for three years following the year that reporting was discontinued. The owner or operator must resume reporting if annual CO_2e emissions, calculated in accordance with paragraph (b)(4) of this section, in any future calendar year increase to 25,000 metric tons per year or more.

(2) If reported CO_2e emissions, calculated in accordance with § 98.3(c)(4)(i), were less than 15,000 metric tons per year for three consecutive years, then the owner or operator may discontinue complying with this part provided that the owner or operator submits a notification to the Administrator that announces the cessation of reporting and explains the reasons for the reduction in emissions. The notification shall be submitted no later than March 31 of the year immediately following the third consecutive year of emissions less than 15,000 tons CO_2e per year. The owner or operator must maintain the corresponding records required under § 98.3(g) for each of the three consecutive years and retain such records for three years prior to notification of discontinuation of reporting following the year that reporting was discontinued. The owner

or operator must resume reporting if annual CO_2e emissions, calculated in accordance with paragraph (b)(4) of this section, in any future calendar year increase to 25,000 metric tons per year or more.

* * * * *

(k) To calculate GHG quantities for comparison to the 25,000 metric ton CO_2e per year threshold under paragraph (a)(4) of this section for facilities that destroy fluorinated GHGs or fluorinated heat transfer fluids, the owner or operator shall calculate the mass in metric tons per year of CO_2e destroyed as described in paragraphs (k)(1) through (3) of this section.

(1) Calculate the mass in metric tons per year of each fluorinated GHG or fluorinated heat transfer fluid that is destroyed during the year.

(2) Convert the mass of each destroyed fluorinated GHG or fluorinated heat transfer fluid from paragraph (k)(1) of this section to metric tons of CO_2e using equation A–1 to this section.

(3) Sum the total annual metric tons of CO_2e in paragraph (k)(2) of this section for all destroyed fluorinated GHGs and destroyed fluorinated heat transfer fluids.

■ 5. Amend § 98.3 by:

■ a. Revising paragraphs (b)(2), (h)(4), and (k)(1) through (3); and

■ b. Revising and republishing paragraph (l).

The revisions and republication read as follows:

§ 98.3 What are the general monitoring, reporting, recordkeeping and verification requirements of this part?

* * * * *

(b) * * *

(2) For a new facility or supplier that begins operation on or after January 1, 2010 and becomes subject to the rule in the year that it becomes operational, report emissions starting the first operating month and ending on December 31 of that year. Each subsequent annual report must cover emissions for the calendar year, beginning on January 1 and ending on December 31.

* * * * *

(h) * * *

(4) Notwithstanding paragraphs (h)(1) and (2) of this section, upon request by the owner or operator, the Administrator may provide reasonable extensions of the 45-day period for submission of the revised report or information under paragraphs (h)(1) and (2) of this section. If the Administrator receives a request for extension of the 45-day period, by email to an address prescribed by the Administrator prior to the expiration of the 45-day period, the extension request is deemed to be automatically granted for 30 days. The Administrator may grant an additional extension beyond the automatic 30-day extension if the owner or operator submits a request for an additional extension and the request is received by the Administrator prior to the expiration of the automatic 30-day extension, provided the request demonstrates that it is not practicable to submit a revised report or information under paragraphs (h)(1) and (2) of this section within 75 days. The Administrator will approve the extension request if the request demonstrates to the Administrator's satisfaction that it is not practicable to collect and process the data needed to resolve potential reporting errors identified pursuant to paragraph (h)(1) or (2) of this section within 75 days. The Administrator will only approve an extension request for a total of 180 days after the initial notification of a substantive error.

* * * * *

(k) * * *

(1) A facility or supplier that first becomes subject to part 98 due to a change in the GWP for one or more compounds in table A–1 to this subpart, Global Warming Potentials, is not required to submit an annual GHG report for the reporting year during which the change in GWPs is published in the **Federal Register** as a final rulemaking.

(2) A facility or supplier that was already subject to one or more subparts of this part but becomes subject to one or more additional subparts due to a change in the GWP for one or more compounds in table A–1 to this subpart, is not required to include those subparts to which the facility is subject only due to the change in the GWP in the annual GHG report submitted for the reporting year during which the change in GWPs is published in the **Federal Register** as a final rulemaking.

(3) Starting on January 1 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking, facilities or suppliers identified in paragraph (k)(1) or (2) of this section must start monitoring and collecting GHG data in compliance with the applicable subparts of part 98 to which the facility is subject due to the change in the GWP for the annual greenhouse gas report for that reporting year, which is due by March 31 of the following calendar year.

* * * * *

(l) *Special provision for best available monitoring methods in 2014 and subsequent years.* This paragraph (l) applies to owners or operators of facilities or suppliers that first become subject to any subpart of this part due to an amendment to table A–1 to this subpart, Global Warming Potentials.

(1) *Best available monitoring methods.* From January 1 to March 31 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking, owners or operators subject to this paragraph (l) may use best available monitoring methods for any parameter (*e.g.,* fuel use, feedstock rates) that cannot reasonably be measured according to the monitoring and QA/QC requirements of a relevant subpart. The owner or operator must use the calculation methodologies and equations in the ''Calculating GHG Emissions'' sections of each relevant subpart, but may use the best available monitoring method for any parameter for which it is not reasonably feasible to acquire, install, and operate a required piece of monitoring equipment by January 1 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking. Starting no later than April 1 of the year after the year during which the change in GWPs is published, the owner or operator must discontinue using best available methods and begin following all applicable monitoring and QA/QC requirements of this part, except as provided in paragraph (l)(2) of this section. Best available monitoring methods means any of the following methods:

(i) Monitoring methods currently used by the facility that do not meet the specifications of a relevant subpart.

(ii) Supplier data.

(iii) Engineering calculations.

(iv) Other company records.

(2) *Requests for extension of the use of best available monitoring methods.* The owner or operator may submit a request to the Administrator to use one or more best available monitoring methods beyond March 31 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking.

(i) *Timing of request.* The extension request must be submitted to EPA no later than January 31 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking.

(ii) *Content of request.* Requests must contain the following information:

(A) A list of specific items of monitoring instrumentation for which the request is being made and the locations where each piece of

monitoring instrumentation will be installed.

(B) Identification of the specific rule requirements (by rule subpart, section, and paragraph numbers) for which the instrumentation is needed.

(C) A description of the reasons that the needed equipment could not be obtained and installed before April 1 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking.

(D) If the reason for the extension is that the equipment cannot be purchased and delivered by April 1 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking, include supporting documentation such as the date the monitoring equipment was ordered, investigation of alternative suppliers and the dates by which alternative vendors promised delivery, backorder notices or unexpected delays, descriptions of actions taken to expedite delivery, and the current expected date of delivery.

(E) If the reason for the extension is that the equipment cannot be installed without a process unit shutdown, include supporting documentation demonstrating that it is not practicable to isolate the equipment and install the monitoring instrument without a full process unit shutdown. Include the date of the most recent process unit shutdown, the frequency of shutdowns for this process unit, and the date of the next planned shutdown during which the monitoring equipment can be installed. If there has been a shutdown or if there is a planned process unit shutdown between November 29 of the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking and April 1 of the year after the year during which the change in GWPs is published, include a justification of why the equipment could not be obtained and installed during that shutdown.

(F) A description of the specific actions the facility will take to obtain and install the equipment as soon as reasonably feasible and the expected date by which the equipment will be installed and operating.

(iii) *Approval criteria.* To obtain approval, the owner or operator must demonstrate to the Administrator's satisfaction that it is not reasonably feasible to acquire, install, and operate a required piece of monitoring equipment by April 1 of the year after the year during which the change in GWPs is published in the **Federal Register** as a final rulemaking. The use of best available methods under this paragraph (l) will not be approved beyond December 31 of the year after the year during which the change in GWPs is published.

■ 6. Amend § 98.5 by revising paragraph (b) to read as follows:

§ 98.5 How is the report submitted?

* * * * *

(b) For reporting year 2014 and thereafter, unless a later year is specified in the applicable recordkeeping section, you must enter into verification software specified by the Administrator the data specified as verification software records in each applicable recordkeeping section. For each data element entered into the verification software, if the software produces a warning message for the data value and you elect not to revise the data value, you may provide an explanation in the verification software of why the data value is not being revised.

■ 7. Amend § 98.6 by:

■ a. Revising the definitions ''ASTM'', ''Bulk'', and ''Carbon dioxide stream'';

■ b. Adding the definitions ''Cyclic'' and ''Direct air capture (DAC)'' in alphabetical order;

■ c. Removing the definition ''Fluorinated greenhouse gas'';

■ d. Adding the definition ''Fluorinated greenhouse gas (GHG)'' in alphabetical order;

■ e. Revising the definition ''Fluorinated greenhouse gas (GHG) group'';

■ f. Adding the definition ''Fluorinated heat transfer fluids'' in alphabetic order;

■ g. Revising the definition ''Greenhouse gas or GHG'';

■ h. Removing the definition ''Other fluorinated GHGs'';

■ i. Revising the definition ''Process vent''; and

■ j. Adding definitions ''Remaining fluorinated GHGs'', ''Saturated chlorofluorocarbons (CFCs)'', ''Unsaturated bromochlorofluorocarbons (BCFCs)'', ''Unsaturated bromofluorocarbons (BFCs)'', ''Unsaturated chlorofluorocarbons (CFCs)'', ''Unsaturated hydrobromochlorofluorocarbons (HBCFCs)'', and ''Unsaturated hydrobromofluorocarbons (HBFCs)'' in alphabetic order.

The revisions and additions read as follows:

§ 98.6 Definitions.

* * * * *

ASTM means ASTM, International.

* * * * *

Bulk, with respect to industrial GHG suppliers and CO_2 suppliers, means a transfer of gas in any amount that is in a container for the transportation or storage of that substance such as cylinders, drums, ISO tanks, and small cans. An industrial gas or CO_2 that must first be transferred from a container to another container, vessel, or piece of equipment in order to realize its intended use is a bulk substance. An industrial GHG or CO_2 that is contained in a manufactured product such as electrical equipment, appliances, aerosol cans, or foams is not a bulk substance.

* * * * *

Carbon dioxide stream means carbon dioxide that has been captured from an emission source (*e.g.,* a power plant or other industrial facility), captured from ambient air (*e.g.,* direct air capture), or extracted from a carbon dioxide production well plus incidental associated substances either derived from the source materials and the capture process or extracted with the carbon dioxide.

* * * * *

Cyclic, in the context of fluorinated GHGs, means a fluorinated GHG in which three or more carbon atoms are connected to form a ring.

* * * * *

Direct air capture (DAC), with respect to a facility, technology, or system, means that the facility, technology, or system uses carbon capture equipment to capture carbon dioxide directly from the air. Direct air capture does not include any facility, technology, or system that captures carbon dioxide:

(1) That is deliberately released from a naturally occurring subsurface spring; or

(2) Using natural photosynthesis.

* * * * *

Fluorinated greenhouse gas (GHG) means sulfur hexafluoride (SF_6), nitrogen trifluoride (NF3), and any fluorocarbon except for controlled substances as defined at part 82, subpart A of this subchapter and substances with vapor pressures of less than 1 mm of Hg absolute at 25 degrees C. With these exceptions, ''fluorinated GHG'' includes but is not limited to any hydrofluorocarbon, any perfluorocarbon, any fully fluorinated linear, branched or cyclic alkane, ether, tertiary amine or aminoether, any perfluoropolyether, and any hydrofluoropolyether.

Fluorinated greenhouse gas (GHG) group means one of the following sets of fluorinated GHGs:

(1) Fully fluorinated GHGs;

(2) Saturated hydrofluorocarbons with two or fewer carbon-hydrogen bonds;

(3) Saturated hydrofluorocarbons with three or more carbon-hydrogen bonds;

(4) Saturated hydrofluoroethers and hydrochlorofluoroethers with one carbon-hydrogen bond;

(5) Saturated hydrofluoroethers and hydrochlorofluoroethers with two carbon-hydrogen bonds;

(6) Saturated hydrofluoroethers and hydrochlorofluoroethers with three or more carbon-hydrogen bonds;

(7) Saturated chlorofluorocarbons (CFCs);

(8) Fluorinated formates;

(9) Cyclic forms of the following: unsaturated perfluorocarbons (PFCs), unsaturated HFCs, unsaturated CFCs, unsaturated hydrochlorofluorocarbons (HCFCs), unsaturated bromofluorocarbons (BFCs), unsaturated bromochlorofluorocarbons (BCFCs), unsaturated hydrobromofluorocarbons (HBFCs), unsaturated hydrobromochlorofluorocarbons (HBCFCs), unsaturated halogenated ethers, and unsaturated halogenated esters;

(10) Fluorinated acetates, carbonofluoridates, and fluorinated alcohols other than fluorotelomer alcohols;

(11) Fluorinated aldehydes, fluorinated ketones and non-cyclic forms of the following: unsaturated PFCs, unsaturated HFCs, unsaturated CFCs, unsaturated HCFCs, unsaturated BFCs, unsaturated BCFCs, unsaturated HBFCs, unsaturated HBCFCs, unsaturated halogenated ethers, and unsaturated halogenated esters;

(12) Fluorotelomer alcohols;

(13) Fluorinated GHGs with carbon-iodine bonds; or

(14) Remaining fluorinated GHGs.

Fluorinated heat transfer fluids means fluorinated GHGs used for temperature control, device testing, cleaning substrate surfaces and other parts, other solvent applications, and soldering in certain types of electronics manufacturing production processes and in other industries. Fluorinated heat transfer fluids do not include fluorinated GHGs used as lubricants or surfactants in electronics manufacturing. For fluorinated heat transfer fluids, the lower vapor pressure limit of 1 mm Hg in absolute at 25 °C in the definition of ''fluorinated greenhouse gas'' in this section shall not apply. Fluorinated heat transfer fluids include, but are not limited to, perfluoropolyethers (including PFPMIE), perfluoroalkylamines, perfluoroalkylmorpholines, perfluoroalkanes, perfluoroethers, perfluorocyclic ethers, and hydrofluoroethers. Fluorinated heat transfer fluids include HFC–43–10meee but do not include other hydrofluorocarbons.

* * * * *

Greenhouse gas or *GHG* means carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated greenhouse gases (GHGs) as defined in this section.

* * * * *

Process vent means a gas stream that: Is discharged through a conveyance to the atmosphere either directly or after passing through a control device; originates from a unit operation, including but not limited to reactors (including reformers, crackers, and furnaces, and separation equipment for products and recovered byproducts); and contains or has the potential to contain GHG that is generated in the process. Process vent does not include safety device discharges, equipment leaks, gas streams routed to a fuel gas system or to a flare, discharges from storage tanks.

* * * * *

Remaining fluorinated GHGs means fluorinated GHGs that are none of the following:

(1) Fully fluorinated GHGs;

(2) Saturated hydrofluorocarbons with two or fewer carbon-hydrogen bonds;

(3) Saturated hydrofluorocarbons with three or more carbon-hydrogen bonds;

(4) Saturated hydrofluoroethers and hydrochlorofluoroethers with one carbon-hydrogen bond;

(5) Saturated hydrofluoroethers and hydrochlorofluoroethers with two carbon-hydrogen bonds;

(6) Saturated hydrofluoroethers and hydrochlorofluoroethers with three or more carbon-hydrogen bonds;

(7) Saturated chlorofluorocarbons (CFCs);

(8) Fluorinated formates;

(9) Cyclic forms of the following: unsaturated perfluorocarbons (PFCs), unsaturated HFCs, unsaturated CFCs, unsaturated hydrochlorofluorocarbons (HCFCs), unsaturated bromofluorocarbons (BFCs), unsaturated bromochlorofluorocarbons (BCFCs), unsaturated hydrobromofluorocarbons (HBFCs), unsaturated hydrobromochlorofluorocarbons (HBCFCs), unsaturated halogenated ethers, and unsaturated halogenated esters;

(10) Fluorinated acetates, carbonofluoridates, and fluorinated alcohols other than fluorotelomer alcohols;

(11) Fluorinated aldehydes, fluorinated ketones and non-cyclic forms of the following: unsaturated PFCs, unsaturated HFCs, unsaturated CFCs, unsaturated HCFCs, unsaturated BFCs, unsaturated BCFCs, unsaturated HBFCs, unsaturated HBCFCs, unsaturated halogenated ethers, and unsaturated halogenated esters;

(12) Fluorotelomer alcohols; or

(13) fluorinated GHGs with carbon-iodine bonds.

* * * * *

Saturated chlorofluorocarbons (CFCs) means fluorinated GHGs that contain only chlorine, fluorine, and carbon and that contain only single bonds.

* * * * *

Unsaturated bromochlorofluorocarbons (BCFCs) means fluorinated GHGs that contain only bromine, chlorine, fluorine, and carbon and that contain one or more bonds that are not single bonds.

Unsaturated bromofluorocarbons (BFCs) means fluorinated GHGs that contain only bromine, fluorine, and carbon and that contain one or more bonds that are not single bonds.

Unsaturated chlorofluorocarbons (CFCs) means fluorinated GHGs that contain only chlorine, fluorine, and carbon and that contain one or more bonds that are not single bonds.

* * * * *

Unsaturated hydrobromochlorofluorocarbons (HBCFCs) means fluorinated GHGs that contain only hydrogen, bromine, chlorine, fluorine, and carbon and that contain one or more bonds that are not single bonds.

Unsaturated hydrobromofluorocarbons (HBFCs) means fluorinated GHGs that contain only hydrogen, bromine, fluorine, and carbon and that contain one or more bonds that are not single bonds.

* * * * *

■ 8. Amend § 98.7 by:

■ a. Revising the introductory text;

■ b. Redesignating paragraphs (c) through (e) as paragraphs (b) through (d);

■ c. Revising newly redesignated paragraph (d);

■ d. Adding new paragraph (e); and

■ e. Revising paragraphs (i) and (m)(3).

The revisions and addition read as follows:

§ 98.7 What standardized methods are incorporated by reference into this part?

Certain material is incorporated by reference into this part with the approval of the Director of the **Federal Register** under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, the EPA must publish a document in the **Federal Register** and the material must be available to the public. All approved incorporation by reference (IBR) material is available for inspection at the EPA and at the National Archives

and Records Administration (NARA). Contact EPA at: EPA Docket Center, Public Reading Room, EPA WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC; phone: 202–566–1744; email: *Docket-customerservice@epa.gov;* website: *www.epa.gov/dockets/epa-docket-center-reading-room.* For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.* The material may be obtained from the following sources:

* * * * *

(d) ASTM International (ASTM), 100 Barr Harbor Drive, P.O. Box CB700, West Conshohocken, Pennsylvania 19428–B2959; (800) 262–1373; *www.astm.org.*

(1) ASTM C25–06, Standard Test Method for Chemical Analysis of Limestone, Quicklime, and Hydrated Lime, approved February 15, 2006; IBR approved for §§ 98.114(b); 98.174(b); 98.184(b); 98.194(c); 98.334(b); and 98.504(b).

(2) ASTM C114–09, Standard Test Methods for Chemical Analysis of Hydraulic Cement; IBR approved for § 98.84(a) through (c).

(3) ASTM D235–02 (Reapproved 2007), Standard Specification for Mineral Spirits (Petroleum Spirits) (Hydrocarbon Dry Cleaning Solvent); IBR approved for § 98.6.

(4) ASTM D240–02 (Reapproved 2007), Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter; IBR approved for § 98.254(e).

(5) ASTM D388–05, Standard Classification of Coals by Rank; IBR approved for § 98.6.

(6) ASTM D910–07a, Standard Specification for Aviation Gasolines; IBR approved for § 98.6.

(7) ASTM D1826–94 (Reapproved 2003), Standard Test Method for Calorific (Heating) Value of Gases in Natural Gas Range by Continuous Recording Calorimeter; IBR approved for § 98.254(e).

(8) ASTM D1836–07, Standard Specification for Commercial Hexanes; IBR approved for § 98.6.

(9) ASTM D1941–91 (Reapproved 2007), Standard Test Method for Open Channel Flow Measurement of Water with the Parshall Flume, approved June 15, 2007; IBR approved for § 98.354(d).

(10) ASTM D1945–03, Standard Test Method for Analysis of Natural Gas by Gas Chromatography; IBR approved for §§ 98.74(c); 98.164(b); 98.244(b); 98.254(d); 98.324(d); 98.344(b); 98.354(g).

(11) ASTM D1946–90 (Reapproved 2006), Standard Practice for Analysis of Reformed Gas by Gas Chromatography; IBR approved for §§ 98.74(c); 98.164(b); 98.254(d); 98.324(d); 98.344(b); 98.354(g); 98.364(c).

(12) ASTM D2013–07, Standard Practice for Preparing Coal Samples for Analysis; IBR approved for § 98.164(b).

(13) ASTM D2234/D2234M–07, Standard Practice for Collection of a Gross Sample of Coal; IBR approved for § 98.164(b).

(14) ASTM D2502–04, Standard Test Method for Estimation of Mean Relative Molecular Mass of Petroleum Oils From Viscosity Measurements; IBR approved for § 98.74(c).

(15) ASTM D2503–92 (Reapproved 2007), Standard Test Method for Relative Molecular Mass (Molecular Weight) of Hydrocarbons by Thermoelectric Measurement of Vapor Pressure; IBR approved for §§ 98.74(c); 98.254(d)(6).

(16) ASTM D2505–88 (Reapproved 2004)e1, Standard Test Method for Ethylene, Other Hydrocarbons, and Carbon Dioxide in High-Purity Ethylene by Gas Chromatography; IBR approved for § 98.244(b).

(17) ASTM D2593–93 (Reapproved 2009), Standard Test Method for Butadiene Purity and Hydrocarbon Impurities by Gas Chromatography, approved July 1, 2009; IBR approved for § 98.244(b).

(18) ASTM D2597–94 (Reapproved 2004), Standard Test Method for Analysis of Demethanized Hydrocarbon Liquid Mixtures Containing Nitrogen and Carbon Dioxide by Gas Chromatography; IBR approved for § 98.164(b).

(19) ASTM D2879–97 (Reapproved 2007), Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope (ASTM D2879), approved May 1, 2007; IBR approved for § 98.128.

(20) ASTM D3176–15, Standard Practice for Ultimate Analysis of Coal and Coke, approved January 1, 2015; IBR approved for § 98.494(c).

(21) ASTM D3176–89 (Reapproved 2002), Standard Practice for Ultimate Analysis of Coal and Coke; IBR approved for §§ 98.74(c); 98.164(b); 98.244(b); 98.284(c) and (d); 98.314(c), (d), and (f).

(22) ASTM D3238–95 (Reapproved 2005), Standard Test Method for Calculation of Carbon Distribution and Structural Group Analysis of Petroleum Oils by the n-d-M Method; IBR approved for §§ 98.74(c); 98.164(b).

(23) ASTM D3588–98 (Reapproved 2003), Standard Practice for Calculating Heat Value, Compressibility Factor, and Relative Density of Gaseous Fuels; IBR approved for § 98.254(e).

(24) ASTM D3682–01 (Reapproved 2006), Standard Test Method for Major and Minor Elements in Combustion Residues from Coal Utilization Processes; IBR approved for § 98.144(b).

(25) ASTM D4057–06, Standard Practice for Manual Sampling of Petroleum and Petroleum Products; IBR approved for § 98.164(b).

(26) ASTM D4177–95 (Reapproved 2005), Standard Practice for Automatic Sampling of Petroleum and Petroleum Products; IBR approved for § 98.164(b).

(27) ASTM D4809–06, Standard Test Method for Heat of Combustion of Liquid Hydrocarbon Fuels by Bomb Calorimeter (Precision Method); IBR approved for § 98.254(e).

(28) ASTM D4891–89 (Reapproved 2006), Standard Test Method for Heating Value of Gases in Natural Gas Range by Stoichiometric Combustion; IBR approved for §§ 98.254(e); 98.324(d).

(29) ASTM D5291–02 (Reapproved 2007), Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants; IBR approved for §§ 98.74(c); 98.164(b); 98.244(b).

(30) ASTM D5291–16, Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Petroleum Products and Lubricants, approved October 1, 2016; IBR approved for § 98.494(c).

(31) ASTM D5373–08, Standard Test Methods for Instrumental Determination of Carbon, Hydrogen, and Nitrogen in Laboratory Samples of Coal, approved February 1, 2008; IBR approved for §§ 98.74(c); 98.114(b); 98.164(b); 98.174(b); 98.184(b); 98.244(b); 98.274(b); 98.284(c) and (d); 98.314(c), (d), and (f); 98.334(b); 98.504(b).

(32) ASTM D5373–21, Standard Test Methods for Determination of Carbon, Hydrogen, and Nitrogen in Analysis Samples of Coal and Carbon in Analysis Samples of Coal and Coke, approved April 1, 2021; IBR approved for § 98.494(c).

(33) ASTM D5614–94 (Reapproved 2008), Standard Test Method for Open Channel Flow Measurement of Water with Broad-Crested Weirs, approved October 1, 2008; IBR approved for § 98.354(d).

(34) ASTM D6060–96 (Reapproved 2001), Standard Practice for Sampling of Process Vents With a Portable Gas Chromatograph; IBR approved for § 98.244(b).

(35) ASTM D6348–03, Standard Test Method for Determination of Gaseous Compounds by Extractive Direct Interface Fourier Transform Infrared

(FTIR) Spectroscopy; IBR approved for § 98.54(b); table I–9 to subpart I of this part; §§ 98.224(b); 98.414(n).

(36) ASTM D6349–09, Standard Test Method for Determination of Major and Minor Elements in Coal, Coke, and Solid Residues from Combustion of Coal and Coke by Inductively Coupled Plasma—Atomic Emission Spectrometry; IBR approved for § 98.144(b).

(37) ASTM D6609–08, Standard Guide for Part-Stream Sampling of Coal; IBR approved for § 98.164(b).

(38) ASTM D6751–08, Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels; IBR approved for § 98.6.

(39) ASTM D6866–16, Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis, approved June 1, 2016; IBR approved for §§ 98.34(d) and (e); 98.36(e).

(40) ASTM D6883–04, Standard Practice for Manual Sampling of Stationary Coal from Railroad Cars, Barges, Trucks, or Stockpiles; IBR approved for § 98.164(b).

(41) ASTM D7359–08, Standard Test Method for Total Fluorine, Chlorine and Sulfur in Aromatic Hydrocarbons and Their Mixtures by Oxidative Pyrohydrolytic Combustion followed by Ion Chromatography Detection (Combustion Ion Chromatography-CIC) (ASTM D7359), approved October 15, 2008; IBR approved for § 98.124(e)(2).

(42) ASTM D7430–08ae1, Standard Practice for Mechanical Sampling of Coal; IBR approved for § 98.164(b).

(43) ASTM D7459–08, Standard Practice for Collection of Integrated Samples for the Speciation of Biomass (Biogenic) and Fossil-Derived Carbon Dioxide Emitted from Stationary Emissions Sources; IBR approved for §§ 98.34(d) and (e); 98.36(e).

(44) ASTM D7633–10, Standard Test Method for Carbon Black—Carbon Content, approved May 15, 2010; IBR approved for § 98.244(b).

(45) ASTM E359–00 (Reapproved 2005)e1, Standard Test Methods for Analysis of Soda Ash (Sodium Carbonate); IBR approved for § 98.294(a) and (b).

(46) ASTM E415–17, Standard Test Method for Analysis of Carbon and Low-Alloy Steel by Spark Atomic Emission Spectrometry, approved May 15, 2017; IBR approved for § 98.174(b).

(47) ASTM E1019–08, Standard Test Methods for Determination of Carbon, Sulfur, Nitrogen, and Oxygen in Steel, Iron, Nickel, and Cobalt Alloys by Various Combustion and Fusion Techniques; IBR approved for § 98.174(b).

(48) ASTM E1915–07a, Standard Test Methods for Analysis of Metal Bearing Ores and Related Materials by Combustion Infrared-Absorption Spectrometry; IBR approved for § 98.174(b).

(49) ASTM E1941–04, Standard Test Method for Determination of Carbon in Refractory and Reactive Metals and Their Alloys; IBR approved for §§ 98.114(b); 98.184(b); 98.334(b).

(50) ASTM UOP539–97, Refinery Gas Analysis by Gas Chromatography; IBR approved for §§ 98.164(b); 98.244(b); 98.254(d); 98.324(d); 98.344(b); 98.354(g).

(e) CSA Group (CSA), 178 Rexdale Boulevard, Toronto, Ontario Canada M9W 183; (800) 463–6727; *https://shop.csa.ca.*

(1) CSA/ANSI ISO 27916:19, Carbon dioxide capture, transportation and geological storage—Carbon dioxide storage using enhanced oil recovery (CO_2–EOR), approved August 30, 2019; IBR approved for §§ 98.470(c); 98.480(a); 98.481(a) through (c); 98.482; 98.483; 98.484; 98.485; 98.486(g); 98.487; 98.488(a)(5); 98.489.

Note 1 to paragraph (e)(1): This standard is also available from ISO as ISO 27916:2019(E).

■ 9. Revise table A–1 to subpart A to read as follows:

TABLE A–1 TO SUBPART A OF PART 98—GLOBAL WARMING POTENTIALS, 100-YEAR TIME HORIZON

Name	CAS No.	Chemical formula	Global warming potential (100 yr.)
Chemical-Specific GWPs			
Carbon dioxide	124–38–9	CO_2	1
Methane	74–82–8	CH_4	[a d] 28
Nitrous oxide	10024–97–2	N_2O	[a d] 265
Fully Fluorinated GHGs			
Sulfur hexafluoride	2551–62–4	SF_6	[a d] 23,500
Trifluoromethyl sulphur pentafluoride	373–80–8	SF_5CF_3	[d] 17,400
Nitrogen trifluoride	7783–54–2	NF_3	[d] 16,100
PFC–14 (Perfluoromethane)	75–73–0	CF_4	[a d] 6,630
PFC–116 (Perfluoroethane)	76–16–4	C_2F_6	[a d] 11,100
PFC–218 (Perfluoropropane)	76–19–7	C_3F_8	[a d] 8,900
Perfluorocyclopropane	931–91–9	c-C_3F_6	[d] 9,200
PFC–3–1–10 (Perfluorobutane)	355–25–9	C_4F_{10}	[a d] 9,200
PFC–318 (Perfluorocyclobutane)	115–25–3	c-C_4F_8	[a d] 9,540

TABLE A–1 TO SUBPART A OF PART 98—GLOBAL WARMING POTENTIALS, 100-YEAR TIME HORIZON—Continued

Name	CAS No.	Chemical formula	Global warming potential (100 yr.)
Perfluorotetrahydrofuran	773–14–8	c-C_4F_8O	[e] 13,900
PFC–4–1–12 (Perfluoropentane)	678–26–2	C_5F_{12}	[a,d] 8,550
PFC–5–1–14 (Perfluorohexane, FC–72)	355–42–0	C_6F_{14}	[a,d] 7,910
PFC–6–1–12	335–57–9	C_7F_{16}; $CF_3(CF_2)_5CF_3$	[b] 7,820

Fluorinated GHG group [f]	Global warming potential (100 yr.)
Default GWPs for Compounds for Which Chemical-Specific GWPs Are Not Listed Above	
Fully fluorinated GHGs [g]	9,200
Saturated hydrofluorocarbons (HFCs) with 2 or fewer carbon-hydrogen bonds [g]	3,000
Saturated HFCs with 3 or more carbon-hydrogen bonds [g]	840
Saturated hydrofluoroethers (HFEs) and hydrochlorofluoroethers (HCFEs) with 1 carbon-hydrogen bond [g]	6,600
Saturated HFEs and HCFEs with 2 carbon-hydrogen bonds [g]	2,900
Saturated HFEs and HCFEs with 3 or more carbon-hydrogen bonds [g]	320
Saturated chlorofluorocarbons (CFCs) [g]	4,900
Fluorinated formates	350
Cyclic forms of the following: unsaturated perfluorocarbons (PFCs), unsaturated HFCs, unsaturated CFCs, unsaturated hydrochlorofluorocarbons (HCFCs), unsaturated bromofluorocarbons (BFCs), unsaturated bromochlorofluorocarbons (BCFCs), unsaturated hydrobromofluorocarbons (HBFCs), unsaturated hydrobromochlorofluorocarbons (HBCFCs), unsaturated halogenated ethers, and unsaturated halogenated esters [g]	58
Fluorinated acetates, carbonofluoridates, and fluorinated alcohols other than fluorotelomer alcohols [g]	25

Fluorinated GHG group [f]	Global warming potential (100 yr.)
Fluorinated aldehydes, fluorinated ketones, and non-cyclic forms of the following: unsaturated perfluorocarbons (PFCs), unsaturated HFCs, unsaturated CFCs, unsaturated HCFCs, unsaturated BFCs, unsaturated BCFCs, unsaturated HBFCs, unsaturated HBCFCs, unsaturated halogenated ethers and unsaturated halogenated esters [g]	1
Fluorotelomer alcohols [g]	1
Fluorinated GHGs with carbon-iodine bond(s) [g]	1
Other fluorinated GHGs [g]	1,800

[a] The GWP for this compound was updated in the final rule published on November 29, 2013 [78 FR 71904] and effective on January 1, 2014.
[b] This compound was added to table A–1 in the final rule published on December 11, 2014, and effective on January 1, 2015.
[c] The GWP for this compound was updated in the final rule published on December 11, 2014, and effective on January 1, 2015.
[d] The GWP for this compound was updated in the final rule published on April 25, 2024 and effective on January 1, 2025.
[e] The GWP for this compound was added to table A–1 in the final rule published on April 25, 2024 and effective on January 1, 2025.
[f] For electronics manufacturing (as defined in § 98.90), the term "fluorinated GHGs" in the definition of each fluorinated GHG group in § 98.6 shall include fluorinated heat transfer fluids (as defined in § 98.6), whether or not they are also fluorinated GHGs.
[g] The GWP for this fluorinated GHG group was updated in the final rule published on April 25, 2024 and effective on January 1, 2025.

■ 10. Revise and republish table A–3 to subpart A to read as follows:

TABLE A–3 TO SUBPART A OF PART 98—SOURCE CATEGORY LIST FOR § 98.2(a)(1)

Source Categories [a] Applicable in Reporting Year 2010 and Future Years:
- Electricity generation units that report CO_2 mass emissions year round through 40 CFR part 75 (subpart D).
- Adipic acid production (subpart E of this part).
- Aluminum production (subpart F of this part).
- Ammonia manufacturing (subpart G of this part).
- Cement production (subpart H of this part).
- HCFC–22 production (subpart O of this part).
- HFC–23 destruction processes that are not collocated with a HCFC–22 production facility and that destroy more than 2.14 metric tons of HFC–23 per year (subpart O of this part).
- Lime manufacturing (subpart S of this part).
- Nitric acid production (subpart V of this part).
- Petrochemical production (subpart X of this part).
- Petroleum refineries (subpart Y of this part).
- Phosphoric acid production (subpart Z of this part).
- Silicon carbide production (subpart BB of this part).
- Soda ash production (subpart CC of this part).
- Titanium dioxide production (subpart EE of this part).
- Municipal solid waste landfills that generate CH_4 in amounts equivalent to 25,000 metric tons CO_2e or more per year, as determined according to subpart HH of this part.
- Manure management systems with combined CH_4 and N_2O emissions in amounts equivalent to 25,000 metric tons CO_2e or more per year, as determined according to subpart JJ of this part.

Additional Source Categories [a] Applicable in Reporting Year 2011 and Future Years:
- Electrical transmission and distribution equipment use at facilities where the total estimated emissions from fluorinated GHGs, as determined under § 98.301 (subpart DD of this part), are equivalent to 25,000 metric tons CO_2e or more per year.
- Underground coal mines liberating 36,500,000 actual cubic feet of CH_4 or more per year (subpart FF of this part).
- Geologic sequestration of carbon dioxide (subpart RR of this part).
- Injection of carbon dioxide (subpart UU of this part).

Additional Source Categories [a] Applicable in Reporting Year 2025 and Future Years:
- Geologic sequestration of carbon dioxide with enhanced oil recovery using ISO 27916 (subpart VV of this part).
- Coke calciners (subpart WW of this part).
- Calcium carbide production (subpart XX of this part).
- Caprolactam, glyoxal, and glyoxylic acid production (subpart YY of this part).

[a] Source categories are defined in each applicable subpart of this part.

■ 11. Revise and republish table A–4 to subpart A to read as follows:

TABLE A–4 TO SUBPART A OF PART 98—SOURCE CATEGORY LIST FOR § 98.2(a)(2)

Source Categories [a] Applicable in Reporting Year 2010 and Future Years:
- Ferroalloy production (subpart K of this part).
- Glass production (subpart N of this part).
- Hydrogen production (subpart P of this part).
- Iron and steel production (subpart Q of this part).
- Lead production (subpart R of this part).
- Pulp and paper manufacturing (subpart AA of this part).
- Zinc production (subpart GG of this part).

Additional Source Categories [a] Applicable in Reporting Year 2011 and Future Years:

TABLE A–4 TO SUBPART A OF PART 98—SOURCE CATEGORY LIST FOR § 98.2(a)(2)—Continued

Electronics manufacturing (subpart I of this part).
Fluorinated gas production (subpart L of this part).
Magnesium production (subpart T of this part).
Petroleum and Natural Gas Systems (subpart W of this part).
Industrial wastewater treatment (subpart II of this part).
Electrical transmission and distribution equipment manufacture or refurbishment, as determined under § 98.451 (subpart SS of this part).
Industrial waste landfills (subpart TT of this part).
Additional Source Categories [a] Applicable in Reporting Year 2025 and Future Years:
Ceramics manufacturing facilities, as determined under § 98.520 (subpart ZZ of this part).

[a] Source categories are defined in each applicable subpart.

Subpart C—General Stationary Fuel Combustion Sources

■ 12. Amend § 98.33 by:

■ a. Revising and republishing paragraph (a)(3)(iii);

■ b. Revising paragraph (b)(1)(vii);

■ c. Revising parameter ''EF'' of equation C–10 in paragraph (c)(4) introductory text;

■ d. Revising and republishing paragraph (c)(6);

■ e. Revising parameter ''R'' of equation C–11 in paragraph (d)(1); and

■ f. Revising the introductory text of paragraphs (e), (e)(1) and (3), and paragraph (e)(3)(iv).

The revisions read as follows:

§ 98.33 Calculating GHG emissions.

* * * * *

(a) * * *

(3) * * *

(iii) For a gaseous fuel, use equation C–5 to this section.

$$CO_2 = \frac{44}{12} * \text{Fuel} * \text{CC} * \frac{\text{MW}}{\text{MVC}} * 0.001$$

(Eq. C–5)

Where:

CO_2 = Annual CO_2 mass emissions from combustion of the specific gaseous fuel (metric tons).

Fuel = Annual volume of the gaseous fuel combusted (scf). The volume of fuel combusted must be measured directly, using fuel flow meters calibrated according to § 98.3(i). Fuel billing meters may be used for this purpose.

CC = Annual average carbon content of the gaseous fuel (kg C per kg of fuel). The annual average carbon content shall be determined using the procedures specified in paragraphs (a)(3)(iii)(A)(*1*) and (*2*) of this section.
