No. 82 April 26, 2024

Pages 32361–33182

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 3

RIN 2900–AQ95

Update and Clarify Regulatory Bars to Benefits Based on Character of Discharge

AGENCY: Department of Veterans Affairs.

ACTION: Final rule.

SUMMARY: In a document published in the **Federal Register** on July 10, 2020, the Department of Veterans Affairs (VA) proposed to amend its regulation regarding character of discharge (COD) determinations. After considering public comments, VA has decided to finalize its proposal with some modifications to expand VA benefits eligibility, bring more consistency to adjudications of benefits eligibility, and ensure COD determinations consider all pertinent factors.

DATES:

Effective date: This final rule is effective June 25, 2024.

Applicability date: The provisions of this final rule shall apply to all applications for benefits that are received by VA on or after June 25, 2024, or that are pending before VA, the United States Court of Appeals for Veterans Claims, or the United States Court of Appeals for the Federal Circuit (Federal Circuit) on June 25, 2024.

FOR FURTHER INFORMATION CONTACT: Robert Parks, Chief, Part 3 Regulations Staff (211C), Compensation Service, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, (202) 461–9700. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION:

I. COD Regulatory History

Eligibility for most VA benefits requires that a former service member (SM) be a ''veteran.'' ''Veteran'' status is bestowed to former SMs ''who served in the active military, naval, air, or space service, and who [were] discharged or released therefrom under conditions other than dishonorable.'' 38 U.S.C. 101(2). The term ''conditions other than dishonorable'' is not a term of art in the military and was chosen by Congress in 1944 to provide VA some discretion with respect to setting the standard for Veteran status and benefits eligibility of former SMs. *Garvey* v. *Wilkie,* 972 F.3d 1333, 1337, 1339 (Fed. Cir. 2020). In October 1946, VA codified 38 CFR 2.1064, which reiterated that, for a former SM to obtain benefits, the SM must have been terminated under conditions ''other than dishonorable.'' VA provided that ''dishonorable'' discharges included those due to (1) mutiny; (2) spying; or (3) an offense involving moral turpitude or willful and persistent misconduct (terms that originated in Public Law 68–242, section 23, 43 Stat. 613 (1924)). 38 CFR 2.1064(a). VA also considered dishonorable an undesirable discharge to escape trial by general court-martial (GCM) and a discharge due to homosexual acts. 38 CFR 2.1064(c), (d). VA further codified the ''statutory bars'' found in the Servicemen's Readjustment Act of 1944, Public Law 78–346, section 300, 58 Stat. 284, which precluded benefits for a person who was (1) discharged or dismissed by GCM; (2) discharged for being a conscientious objector who refused to perform military duties, wear the uniform or comply with lawful orders of competent military authorities; (3) a deserter; or (4) as an officer who resigned for the good of the service. 38 CFR 2.1064(b).

Since 1946, 38 CFR 2.1064 and its successors (most notably, current 38 CFR 3.12) have provided the criteria used by VA adjudicators for determining Veteran status and evaluating benefit eligibility for former SMs. Currently, there are six ''statutory bars'' to benefits for former SMs listed in 38 U.S.C. 5303(a) and reiterated in paragraph (c) of 38 CFR 3.12. In addition, currently, there are five ''regulatory bars'' to benefits listed in paragraph (d) of 38 CFR 3.12, which states that discharges based on the five listed offenses are ''considered to have been issued under dishonorable conditions.'' The last update to § 3.12(d) occurred in 1980, more than 40 years ago. The 1980 update provided examples of aggravated homosexual acts. 45 FR 2318 (Jan. 11, 1980).

On July 10, 2020, VA published at 85 FR 41471 its proposal to amend its regulation governing COD determinations. Specifically, VA proposed to modify the regulatory standards for discharges considered ''dishonorable'' for VA benefit eligibility purposes, such as discharges due to ''willful and persistent misconduct,'' and ''homosexual acts involving aggravating circumstances or other factors affecting the performance of duty.'' VA also proposed to extend a ''compelling circumstances'' exception to certain regulatory bars to benefits to ensure consideration of all pertinent factors. In response to the proposed rule, over 70 comments were received. Given the ''various and differing'' comments received, VA issued a Request for Information (RFI) in September 2021. 86 FR 50513. Specifically, VA asked the public questions about the factors for consideration in a compelling circumstances analysis. Regarding willful and persistent misconduct, the RFI asked whether VA should define ''serious misconduct''; whether VA should require misconduct to actually cause harm to person or property; and how VA should define persistence. VA asked about the proposed rule's definition of moral turpitude. VA asked whether removing the regulatory bars would affect military order and discipline or denigrate others' honorable service; and what specific changes could be made to the proposed rule to fairly adjudicate the benefits eligibility of historically disadvantaged and vulnerable populations.

In response to the RFI, over 45 comments were received. In addition to the proposed rule and the RFI, in October 2021, VA held a two-day listening session to receive oral comments from any member of the public on the RFI questions. Transcripts from the listening session can be found at *https://www.regulations.gov/docket/VA-2020-VBA-0018.*

II. VA's Decision To Finalize the Proposed Rule With Modifications

After extensive consideration of this issue and all the comments received, VA has decided to finalize the proposed rule with some modifications. This will expand VA benefits eligibility, bring

more consistency to adjudications of benefits eligibility, and ensure character of discharge determinations consider all pertinent factors. This decision respects concerns of the Military Departments regarding the impact to their ability to maintain good order and discipline among their troops. Specifically, that the removal of the regulatory bars would undermine their ability to use the consequence of loss of VA benefits as a deterrent to misconduct. In addition, the Military Departments were concerned that removal of the ''in lieu of general court-martial'' bar would deprive the commander, or for covered offenses, Special Trial Counsel, of a tool to dispose of misconduct in an administrative forum while balancing the interests of justice and victim preferences. Finally, the Military Departments expressed concern that the proposed rule's definition of ''an offense involving moral turpitude'' as ''a willful act that gravely violates accepted moral standards and would be expected to cause harm or loss to person or property'' would exclude certain offenses that do not include a willfulness element.

Thus, with this final rule, there will be only four regulatory bars: (1) acceptance of a discharge under other than honorable conditions or its equivalent in lieu of trial by GCM; (2) mutiny or spying; (3) moral turpitude; and (4) willful and persistent misconduct. The definition for willful and persistent misconduct has been refined for more objective application, and an expanded compelling circumstances exception now applies to both the moral turpitude (MT) and willful and persistent misconduct bars. Based upon interagency concerns, VA has decided not to alter the current regulatory bar for MT and does not adopt the language from the proposed rule. This will allow the military to retain a deterrent to misconduct that promotes good order and discipline, while also allowing VA to provide a case-by-case, more holistic analysis of whether a former SM who received a Bad-Conduct Discharge (BCD) or Other Than Honorable (OTH) discharge nevertheless warrants ''veteran'' status and VA benefits eligibility.

As indicated in its RFI, VA rigorously considered the possibility of making more sweeping liberalizing changes than finalized here. But as discussed throughout this notice, there is concern that more sweeping changes would reduce deterrents to misconduct in the military and undermine good order and discipline, as well as concerns that removal of the ''in lieu of general court-martial'' bar would deprive the commander, or for covered offenses, Special Trial Counsel, of a tool to dispose of misconduct in an administrative forum while balancing the interests of justice and victim preferences.

Given those factors, with this rule, VA seeks to strike a balance between bestowing benefits to those who have earned them, even those whose service was not without blemish, and limiting benefits for those whose service involved serious misconduct. As the Federal Circuit in *Garvey* noted, there are SMs whose significant misconduct rendered their discharge dishonorable, even if the military did not explicitly characterize their discharges as Dishonorable for reasons unrelated to the seriousness of the misconduct itself. 972 F.3d at 1338–40. Military justice is designed to be flexible, allow exercise of discretion, and balance a number of concerns with regard to how SMs are prosecuted and discharged. Military officials may choose not to prosecute an offense for a variety of reasons, including: (1) to spare crime victims, including children, or their families from the trauma of testifying; (2) to avoid evidentiary issues involving classified documents or military operations; or (3) because the SM has already been convicted of the crime in another court. In these situations, the SM may be administratively separated to avoid the burden, expense, or resources involved in GCM litigation. That decision to avoid trial, however, does not necessarily mean that the SM did not commit an offense.

On the other hand, there are some SMs whose service, while not without blemish, was generally of benefit to this Nation and therefore have earned the status of ''veteran'' and the benefits to which veterans are entitled. There are also SMs who service to our nation placed them in high-risk situations which could lead to injuries or other circumstances that increase risk for behaviors or conduct that Military Commanders deem inappropriate. For example, as consequence of repeated traumatic exposures during combat, SMs are at risk of posttraumatic stress disorder,[1] traumatic brain injury,[2] moral injury or other combat related emotional and cognitive consequences.[3] Symptoms of these medical conditions include changes to decision making and behaviors. It is therefore important to institute a robust compelling circumstances exception that considers the individual facts and evidence in a particular case. The compelling circumstances language in this final rule includes consideration of the length and character of service exclusive of a period of misconduct and potential mitigating reasons for the misconduct such as mental impairment, physical health, hardship, sexual abuse/assault, duress, obligations to others, and age, education, cultural background and judgmental maturity. The compelling circumstances exception—along with more specific criteria instituted herein for the willful and persistent misconduct regulatory bar—will help enable SMs whose conduct was not dishonorable to receive the VA benefits they have earned.

It is important to clarify here that the regulatory bars shall only be applied when they are clearly supported by the military record. The benefit of the doubt will be resolved in favor of the former SM. *See* 38 U.S.C. 5107(b), 38 CFR 3.102. In other words, when there is insufficient evidence of the alleged misconduct, racial bias in the allegation, or an approximate balance of positive and negative evidence about the alleged misconduct, the bar shall not be applied.

Further, as discussed below, VA agrees with the commenters who recommended limiting the conduct being considered for a COD determination to only that which formed the basis of the discharge from service. In short, if the military decided that a SM's misconduct did not preclude the SM from continuing to serve, then it also should not preclude benefits eligibility. This limitation will prevent conduct unrelated to the basis of the discharge from contributing to a bar from benefits.

Overall, under this final rule, more SMs will be eligible for benefits than under the prior 38 CFR 3.12(d). That said, a favorable COD determination under this rule does not result in blanket eligibility for all VA benefits or a change in the Department of Defense's (DoD) discharge characterization. Rather, certain VA benefits have specific eligibility requirements as it pertains to COD. For example, education assistance under the Montgomery GI Bill program or Post-9/11 GI Bill program is available only for periods of service resulting in an ''honorable'' discharge. *See* 38 U.S.C. 3011(a)(3)(B) and 3311(c)(1). Therefore, former SMs who do not receive an

[1] How Common is PTSD in Veterans?—PTSD: National Center for PTSD (*va.gov*), *https://www.ptsd.va.gov/understand/common/common_veterans.asp.*

[2] Traumatic Brain Injury and PTSD—PTSD: National Center for PTSD (*va.gov*), *https://www.ptsd.va.gov/understand/related/tbi_ptsd.asp.*

[3] War and Combat—PTSD: National Center for PTSD (*va.gov*), *https://www.ptsd.va.gov/understand/types/types_war_combat.asp.*

Honorable discharge from DoD are ineligible for the VA Education benefit.

Moreover, while relaxing the bars to eligibility, this final rule does not extend VA benefits eligibility to all former SMs. Former SMs who do not meet the criteria for benefits eligibility may remain entitled to certain critical benefits to address the harms caused by their military service such as mental health and substance use care, emergent suicide care, and medical care in emergency situations, as discussed below.

III. Discussion of the Comments Received by Topic (From the Proposed Rule, Request for Information and the Listening Session)

VA received 148 comments total in response to the proposed rule, RFI, and Listening Session. In this section, VA discusses in detail the public comments addressing issues raised in the proposed rule, RFI, and listening session.

Congressional Intent

Multiple commenters stated that Congress authorized the exclusion from VA benefits of only those SMs who received or should have received a dishonorable discharge or those who were discharged for conduct falling within a statutory bar. They stated Congress never intended to give VA authority to create new standards to determine veteran status nor was it Congress's intent to have those standards be more exclusionary than the statutory bars. Other commenters stated that VA is subverting congressional intent by withholding healthcare through these regulatory bars. VA thanks the commenters for these comments but believes that this final rule accords with congressional intent.

Congress has authorized VA to consider discharges based on certain conduct as dishonorable. 38 U.S.C. 101(2); *see Garvey,* 972 F.3d at 340; *Camarena* v. *Brown,* 6 Vet. App. 565, 568 (1994), *aff'd* 60 F.3d 843 (Fed. Cir. 1995) (per curiam); *see also* 90 Cong. Rec. at 3077 (Mar. 24, 1944) (Sen. Clark) (for certain conduct, ''the Veterans' Administration will have some discretion with respect to regarding the discharge from the service as dishonorable''). The bars in question have been in regulation since 1946 and the Federal Circuit has concluded that VA has the authority to institute such bars. *Garvey,* 972 F.3d at 1339–40. To the extent the current regulatory bars are viewed by some as overly restrictive, the modifications finalized in this rule should ensure that only SMs who committed serious, dishonorable misconduct in service are precluded from benefits. This approach generally accords with congressional intent. *Id.* at 1339.

Furthermore, VA disagrees with the comment that VA's regulatory bars subvert congressional intent by withholding healthcare. Under 38 CFR 3.360, VA determines a service member's eligibility for healthcare even if the SM is not eligible for other benefits. Thus, VA makes no changes in response to these comments.

Automatic Eligibility

Some commenters urged VA to establish automatic eligibility for VA benefits for all SMs who received an OTH discharge based on their service to the Nation. One commenter urged VA to update its definition of ''veteran'' to include OTH discharges and to otherwise be more SM-friendly. VA thanks these commenters for their comments, but VA cannot establish automatic eligibility, because some SMs who received an OTH discharge are statutorily barred from benefits by 38 U.S.C. 5303(a). Nevertheless, this final rule is more SM-friendly, as VA has removed one of the regulatory bars, refined another, and instituted a compelling circumstances exception to two bars, which will lead to an increase in benefits eligibility in the COD process.

Healthcare Eligibility

One commenter stated that ''VA should also provide healthcare for those veterans who are waiting for a decision by VA'' and that ''Veterans should be presumed eligible for VA health care unless proven otherwise.'' Another argued that VA should amend 38 CFR 17.34 and 17.36 to provide tentative eligibility for healthcare and update enrollment procedures. VA thanks the commenters for their comments. Currently, some OTH-discharged SMs have access to certain VA health care services, such as health care for service-incurred disabilities, mental health and substance use care, emergent suicide care, and medical care in emergency situations (if it is determined that benefits eligibility will probably be established). 38 U.S.C. 1720I, 1720J; 38 CFR 3.360, 17.34. Moreover, VA has initiated efforts to amend 38 CFR 17.34, but those amendments were not proposed in this rulemaking.

Removal of Homosexual Acts Bar

Some commenters supported the proposed rule's replacement of the word ''homosexual'' with ''sexual.'' However, many commenters still felt that lesbian, gay, bisexual, transgender and queer (LGBTQ+) SMs were subject to discrimination that would manifest even with this amendment. VA agrees that any bar that explicitly relates to sex may still disproportionally affect LGBTQ+ SMs. Additionally, the commenters felt that most of the offenses listed in this section could also be barred under moral turpitude (MT) offenses (*e.g.,* child molestation, sexual assault, etc.) or willful and persistent misconduct, further rendering this bar to benefits unnecessary. VA agrees that the homosexual acts bar is outdated and unnecessary and is entirely removing this regulatory bar. VA is also not adopting the sexual acts bar from the proposed rule, as this misconduct will be sufficiently excluded by either the statutory bars or the remaining regulatory bars.

COD Process/Eligibility

Many commenters asserted that VA presumes that former SMs with OTH discharges are ineligible for VA benefits and must be proven otherwise through the COD determination process. They also stated that VA presumes that former SMs with honorable or under honorable conditions discharges are eligible for VA benefits. Based on this, the commenters asked that VA presume former SMs with OTH discharges as eligible for benefits unless proven otherwise. One commenter stated that VA should not review OTH discharges unless they are issued in lieu of court marital (CM). Further, one commenter stated that the proposed rule did not include changes to § 3.12(a), the provision governing ''which former [SMs] . . . are presumptively excluded from VA access until successful completion of [a COD] review.''

VA thanks these commenters for their comments. VA is not persuaded that modification of § 3.12(a) is necessary here, insofar as it merely reiterates the statutory requirement that discharge must be ''under conditions other than dishonorable.'' There is no need to revise that provision to carry out the goals of this rulemaking. Moreover, there is no regulation that presumes the outcome of a COD determination for a SM with an OTH discharge. Rather, each OTH discharge is assessed to determine VA benefits eligibility.

Another commenter asked VA to presume eligibility for all SMs with administrative discharges except discharge in lieu of CM and stated that ''VA annually deems about 80 to 90 percent of veterans who received OTH have served 'dishonorably'.'' VA thanks the commenter for the comment, but that statistic is inaccurate. Between October 1, 2019, and September 30, 2022, VA deemed SMs with OTH

discharges eligible for healthcare or benefits or both more than 75% of the time. VA is providing the documentation for this data in the rulemaking record.[4] VA makes no changes based on these comments.

Still another commenter stated that VA should presume eligibility for SMs with OTH discharges and terminate benefits ''in exactly the same process as is currently used for statutory bars. This would save VA the expense of processing countless, costly denials of benefits appeals, while providing veterans benefits, they have rightfully earned in service to this country, as Congress intended.'' VA thanks the commenter for their comment. VA believes that, through the modifications of this final rule, including the compelling circumstances exception, it will be able to expand VA benefits eligibility for former SMs with OTH discharges. The reasons that VA has determined more extensive liberalization is not being advanced are discussed in greater detail below.

Another commenter stated ''[t]he majority of veterans do not undergo COD determinations for numerous reasons and those that do are overwhelmingly unsuccessful in establishing eligibility.'' VA thanks the commenter for their comment, but, again, the data above reflects otherwise. In any event, VA anticipates that the amendments in this final rule—including refining the willful and persistent misconduct bar and implementing the compelling circumstances exception for moral turpitude and willful and persistent misconduct—will increase the number of former SMs eligible for benefits.

One commenter stated that ''VA must assert independence from other federal entities'' and that ''VA has a vastly different mission statement from DoD.'' The commenter further noted that VA was proposing to use the Uniform Code of Military Justice (UCMJ) from DoD, but the basis for why DoD wants to remove a SM, such as drug use or minor infractions, does not mean that VA should deny that SM health care, mental health treatment and benefits for service-related injuries. VA recognizes that there is a relationship between dishonorable service and VA benefits eligibility, as reflected in Congress's enactment of 38 U.S.C. 101(2). This final rule precludes benefits eligibility for only those SMs who committed misconduct that renders their service effectively dishonorable.

[4] See *https://www.regulations.gov/docket/VA-2020-VBA-0018.*

Another commenter asserted that ''[c]onduct reviewed for COD determinations must be clearly defined. The review must be limited to the misconduct that led to the discharge.'' The comment includes the story of someone discharged due to absent without leave (AWOL) and disrespecting a superior officer, but the COD determination included a discussion of some AWOL that occurred in a separate enlistment. Other commenters expressed similar sentiments. VA thanks the commenters for their comments and recognizes the concern that COD determinations might consider unrelated conduct. But the introductory language of § 3.12(d) states that the regulatory bars apply to the conditions under which ''the former service member was discharged or released'' and VA affirms that this language means that only misconduct that led to the discharge may be considered in the COD determination. This is implicit in the regulations. Meaning in its COD review, VA will only consider misconduct or AWOL that according to military department records explicitly indicate led to the discharge. VA notes, however, that there remains a statutory bar of a period of AWOL of more than 180 days that only Congress can amend.

Another commenter stated that many VA employees are without the necessary information or training to fully serve SMs and that has led to employees wrongfully turning away eligible SMs. Other commenters also mentioned that many SMs who did not receive an honorable discharge attempt to apply to VA for health care and are simply turned away. VA is aware of these concerns and will continue to provide training to its employees and messaging to the public that VA encourages all SMs to apply for healthcare and benefits regardless of their COD. VA expects that the changes made by this final rule will lead to some increased benefits eligibility for former SMs without Honorable discharges.

Compelling Circumstances

A. Generally Apply Compelling Circumstances Exception

Multiple commenters requested that the compelling circumstances exception should be applied generally and used to counterbalance the negative aspects of the SM's service. Three commenters requested that VA lower the standard necessary to apply the ''benefit to the Nation'' exception found in proposed § 3.12(e)(1). Specifically, commenters stated that requiring the character of service, exclusive of the period of AWOL or misconduct, ''be of such quality and length that it can be characterized as honest, faithful and meritorious and of benefit to the Nation'' is nebulous. One commenter stated that the term ''meritorious'' has a special meaning in military law. This commenter noted ''meritorious sets a higher standard than some former SMs would be able to achieve, as many were willing to, but were never, deployed; never received an award; and otherwise fulfilled their duties, but for the conduct leading to the OTH discharge. Accordingly, VA should create a standard that honors the sacrifice of all SMs, particularly considering how few Americans serve in the military.'' Another commenter recommended that VA only require the service to be ''substantially favorable. A determination of favorable service will consider (a) the overall duration and quality of service; (b) combat, overseas, or hardship service; (c) medals, awards, decorations, and other achievements or acts of merit; and (d) other facts or circumstances relevant to the inquiry.'' That commenter also stated that all service should be considered to the Nation's benefit unless proven otherwise (based on the commenter's belief that DoD is better at documenting bad behavior than good behavior). Similarly, one commenter felt that compelling circumstances should be assessed on a holistic basis considering the totality of the circumstances.

Additionally, some commenters stated that some military branches use OTH at higher rates than others, resulting in disparate discharges for similar misconduct. Some commenters noted that military discharges may vary based on the era of war in which the SM served. One commenter noted the difference between discharges for commissioned officers and enlisted personnel and a ''lack of insight'' into how the regulatory change affected officers. VA thanks these commenters for their comments. VA's intent with the compelling circumstances exception to the moral turpitude and willful and persistent misconduct bars is to provide claims processors a holistic means to evaluate the misconduct underlying a SM's discharge and to determine if that misconduct is outweighed by otherwise honorable service or can be excused due to circumstances influencing the former SM's decision-making around the time of the offense or otherwise providing context for the offense. Consistent with that intent, assessment of the length and quality of service exclusive of the misconduct necessarily must be a case-by-case determination. If VA revised the

standard to suggest that the service of all former SMs who make the sacrifice inherent in all military service is sufficient to establish compelling circumstances, however, this exception would become the rule, not the exception. Regarding the comment that all service is to the Nation's benefit unless proven otherwise, it is important to note that the only cases at issue in a compelling circumstances analysis are those which involved a discharge due to some level of misconduct. The goal of the compelling circumstances analysis is to determine whether the misconduct is mitigated by the circumstances, is outweighed by otherwise honorable service, or actually renders the service dishonorable, not to ignore the fact that misconduct may have taken place.

Moreover, the compelling circumstances exception is designed to counter the possibility that certain military branches may have favored particular types of discharges during particular periods of time, including different periods of war. It allows VA to determine whether the misconduct leading to an OTH discharge actually rendered the service dishonorable, or alternatively was outweighed by otherwise honorable service or mitigated by the circumstances. Each COD determination will be made based on each SM's facts and circumstances.

B. Apply Compelling Circumstances To Discharge in Lieu of General Court-Martial

Several commenters urged VA to apply the compelling circumstances exception to the regulatory bar of discharge in lieu of GCM, because VA proposed to apply compelling circumstances to MT offenses, which (they asserted) are arguably more serious. Other commenters stated that the GCM process is filled with misinformation and procedural gaps. One commenter stated SMs were forced into OTH discharges without being informed of their rights or because they faced retaliation. Another commenter stated innocent civilians routinely accept plea bargains to avoid trial, and some innocent SMs accept discharge in lieu of GCM. Another stated some commanding officers use the SM's acceptance of a discharge in lieu of trial by GCM as a means to force certain SMs out of the military. VA thanks the commenters for their comments. Due to interagency concerns associated with good order and discipline, VA has decided not to extend the compelling circumstances exception beyond the scope laid out in the proposed rule.

One commenter recommended that VA remove ''or its equivalent'' from the text as the commenter was unaware of any equivalent to an OTH discharge. VA thanks the commenter for this comment; however, VA included ''or its equivalent'' to account for historic discharges, such as undesirable discharges. Additionally, DoD may establish new discharge characterizations. Using this terminology allows VA's regulations to remain applicable to both past and future character of discharge determinations.

C. List of Mental and Cognitive Impairments

Several commenters expressed concern that claims adjudicators would fail to recognize the list of mental impairments in proposed § 3.12(e)(2)(i) was non-exhaustive and that claims adjudicators would consider only the listed mental impairments. One commenter stated that the mental impairments contained diagnoses (*e.g.,* bipolar disorder and posttraumatic stress disorder), symptoms (*e.g.,* depression and impulsive behavior), and a neurodevelopmental condition (attention deficit hyperactivity disorder (ADHD)) but stated that the latter is not subject to service connection under 38 CFR 3.303(c), 4.9, and 4.127. That commenter was further concerned that the rule referenced redundant co-morbid conditions when mental impairment alone is enough to trigger consideration. One commenter urged VA to have SMs who suffer from posttraumatic stress disorder, traumatic brain injury, military sexual trauma (MST), or other mental illness examined by specialists prior to being denied benefits.

VA confirms the list of mental and cognitive impairments is non-exhaustive and the included list was intended only as a guide. Additionally, VA confirms the mental or cognitive impairment need not be service connected or subject to service connection to be considered as a compelling circumstance to excuse the prolonged AWOL or misconduct. Hence, neurodevelopmental conditions, such as ADHD or personality disorders, may excuse prolonged AWOL or misconduct even if no VA benefits can be awarded for the same condition. Further, VA agrees that including co-morbid conditions is redundant because a single mental impairment is enough to trigger consideration for compelling circumstances and, if the comorbidity was both mental and physical impairments, § 3.12(e)(2)(ii) will now allow consideration of physical health in any event.

D. Abuses of a Sexual Nature, Discrimination, Disparity Between Branches, and Military Sexual Trauma

Several commenters requested that VA include additional factors to consider when evaluating the reason(s) for prolonged AWOL or misconduct found in proposed § 3.12(e)(2), including sexual harassment and intimate partner violence (IPV); bereavement; discrimination due to protected class; disparate discharge outcomes based on military branch; and ''mistreatment, misdiagnosis, or other intentional or unintentional injustice.'' One commenter stated VA should include whether the SM experienced discrimination in service or the discharge was due to a discriminatory pretextual reason instead of the stated reason(s). Other commenters requested VA add the terms MST and sexual harassment as a compelling circumstance. One was concerned application of a regulatory bar would retraumatize a SM by causing isolation from the military community.

Multiple commenters commented on the proposed rule's impact on SMs, who are homeless women and victims of sexual assault and MST. Other commenters noted disparate racial treatment in the military, including infractions for certain hairstyles or facial hair. VA thanks these commenters for their comments.

VA is committed to protecting SMs who are homeless, MST victims, and victims of harassment, all forms of discrimination and IPV. VA believes that a compelling circumstances exception—that includes factors such as mental and cognitive impairment; physical trauma; sexual abuse/assault; duress, coercion, or desperation; hardships; abuses of a sexual nature; and the former SM's age, education, cultural background, and judgmental maturity—when combined with refined criteria for defining ''willful and persistent misconduct'' will sufficiently allow victims of MST, discrimination, and misdiagnosis to receive fairer COD evaluations. VA will consider any records or attestations from SMs about experiencing these circumstances to be relevant in their consideration of COD.

Although VA acknowledges that many forms of discrimination exist and may contribute to or result in former SMs receiving OTH discharges, VA evaluates each particular SM's COD based on the record before it. When VA conducts a COD determination, VA reviews the SM's service personnel and medical treatment records and any other pertinent records. VA reviews that SM's military units' duty locations and

combat engagements. Should any given record establish discrimination as the basis for the OTH discharge, including but not limited to discrimination based on race or sex, the compelling circumstances exception would allow VA to adjudicate a favorable COD determination. And, even if no such record exists, the reforms of this final rule will ensure a fair COD adjudication, considering all pertinent factors on a case-by-case basis, for all SMs, including those who are homeless or victims of MST, IPV or potential discrimination.

E. Compelling Circumstance Unknown to Service Members

One commenter noted that the compelling circumstances factors are complicated for SMs to understand on their own. This commenter notes the standard is not helpful to many SMs who apply without assistance. VA thanks this commenter for these comments. VA encourages all former SMs and claimants to seek the assistance of qualified Veterans Service Organizations (VSOs) or other accredited representatives to assist with the claims process, including COD determinations. Further, assistance with the claims process, COD determinations, and governing regulations is available at *www.va.gov* and at Regional Offices. VA makes every effort to provide training to its employees to assist former SMs in the non-adversarial COD process. VA has a duty to assist and will work with former SMs to ensure appropriate records, including self-attestations, are well documented in the record being reviewed in the COD process. Whenever possible, VA aims to review records sympathetically and give the benefit of the doubt, particularly when records are missing or incomplete.

F. Include Due Process Errors to Legal Defense Exception

Finally, one commenter requested VA add to its compelling circumstances exception an additional legal defense for cases when the prosecution committed due process errors or violations. VA thanks the commenter for this comment. However, VA believes that due process errors would be included as a valid legal defense under § 3.12(e)(3). Therefore, no changes are necessary in response to this comment.

Acceptance of an Undesirable Discharge To Escape General Court-Martial

One commenter opined that the regulatory bar associated with discharge in lieu of GCM should be clarified. The commenter went on to state that even though ''undesirable'' is not used anymore as a discharge characterization, there are still some living veterans with ''undesirable'' discharges that should not be excluded. The commenter also noted that the proposed rule's phrase ''or its equivalent'' is vague and that some claims processors may think a ''general'' discharge is equivalent. The same commenter stated that VA should explicitly state that this bar does not apply to special CM discharges. Another commenter stated that the bar for discharge in lieu of GCM should be limited to cases where charges were referred to a GCM. Another commenter similarly stated that the regulations should clearly identify the need for documentation of a GCM charge before applying regulatory bar. Another commenter stated, ''there should be evidence of a [GCM] convening.''

VA thanks the commenters for their comments. Per the plain language of revised § 3.12(d)(1)(i), this regulatory bar requires accepting an OTH discharge in lieu of trial by *GCM;* the former SM will receive the benefit of the doubt in the determination of whether the OTH discharge was accepted *in lieu of* trial, and whether that trial would have been *by GCM.* Accordingly, VA sees no need to further amend the regulatory language.

One commenter agreed with the decision to eliminate stigma from a SM's actions by removing the language of ''undesirable'' and ''escape'' from the regulation. However, the commenter stressed the need for an in-depth and personalized evaluation of a SM's file, to determine whether a discharge was received because of coercive pressure from a commanding officer to ''get rid'' of the SM. A different commenter stated that VA should require a more thorough analysis of the conditions and circumstances surrounding a former SM's acceptance of discharge in lieu of CM, because former SMs may accept this result without committing an offense, much like civilian plea deals. Another commenter suggested that excluding former SMs discharged in lieu of trial misunderstands the nature of the administrative separation and that systematic misinformation and gaps in those procedures are well documented. The commenter also stated some SMs are unable to respond rationally when they are still engaging in misconduct (substance abuse, AWOL) that is leading to discharge. The commenter continued that it is difficult for claims processors to determine whether the discharge was in lieu of GCM or another CM. VA thanks the commenters for the comments but is not modifying this regulatory bar (beyond what was proposed) due to concerns raised by the Military Departments that further changes to this bar would undermine their ability to maintain good order and discipline within their ranks. That said, again, if there is a question about whether the discharge was in lieu of GCM or special CM, VA will consider all appropriate records and the former SM will receive the benefit of the doubt.

Moral Turpitude

One commenter stated the proposed definition of MT is too broad and does not adequately put former SMs on notice as to what constitutes an offense involving MT. The commenter also stated that it is contrary to fundamental fairness to bar a former SM from their benefits for life based on commission of an MT crime without a guilty finding in a formal proceeding with adequate procedural and due process protections. The commenter noted that the definition also does not contain any reference to deception, fraud, or depravity by the SM; therefore, a simple assault or loss of property that does not involve fraud or deceit could meet this definition.

In addition, many commenters opined that MT is unclearly defined and vague. One commenter stated that VA should simplify such a standard. Another commenter asserted that the MT standard is imprecise and legalistic, lacking definition in civilian and military jurisprudence. VA thanks the commenters for their comments.

Based on interagency concerns regarding the proposed definition of MT, VA has decided not to implement the language from the proposed rule and will maintain the current regulatory language. VAOPGC 6–87 (July 27, 1987), a VA General Counsel Opinion, states ''an offense will, for veterans' benefit purposes, be considered to involve moral turpitude if it is willful, gravely violates accepted moral standards, is committed without justification or legal excuse, and, by reasonable calculation, would be expected to cause harm or loss to person or property.'' [5] This precedential opinion continues to govern VA's application of this bar in COD determinations.

Given that the definition of moral turpitude under VAOPGC 6–87 requires a willful act that gravely violates accepted moral standards, it is difficult to imagine that minor misconduct—misconduct for which the maximum punishment is not longer than one year confinement—could ever meet that definition. This accords with common Federal appellate court decisions interpreting the term in other contexts.

[5] *https://www.va.gov/OGC/docs/1987/06-87.pdf.*

Garcia-Martinez v. *Barr,* 921 F.3d 674, 676 (7th Cir. 2019) (MT ''shocks the public conscience as being inherently base, vile, or depraved, and contrary to the accepted rules of morality and the duties owed between persons or to society in general''); *Escobar* v. *Lynch,* 846 F.3d 1019, 1023 (9th Cir. 2017) (MT ''is generally a crime that (1) is vile, base, or depraved and (2) violates accepted moral standards'').

Moreover, VA declines to require a felony conviction for MT, because the military's choice not to prosecute could be premised on a desire to protect victims or other reasons, rather than any view that the conduct was not felonious or dishonorable. Moreover, while obtaining a final conviction may be necessary for the military to confine an SM, it is not necessary for VA's purposes of evaluating the character of a SM's discharge. So long as the offense is clearly established by the record (after applying the benefit of the doubt to the advantage of the SM), VA may conclude that offense was committed. This is also supported by VAOPGC 6–87 which states ''while the conviction of a felony creates a rebuttable presumption that an offense involved moral turpitude, the absence of such conviction does not absolve an offense from the taint of moral turpitude.'' In sum, due to concerns about changes to this bar that could impact the Military Departments' ability to maintain good order and discipline, VA makes no changes to the current regulatory text based on these comments.

Willful and Persistent Misconduct

A. VA's Proposed Definition

Some commenters stated that the definition of willful and persistent misconduct should be redefined to be more favorable to former SMs. Others conveyed that minor misconduct should not be a disqualification. Multiple commenters were concerned that the proposed rule continued to punish offenders removed from the military for minor offenses with a maximum sentence of one year. Other commenters commented on those who received an OTH discharge due to drug possession or use, including those who became addicted to painkillers after surgery in the military, and noted such members should not be deprived of VA benefits for the same. Another was concerned that VA's definition would result in ''lengthy, complex investigations for rating officers.'' One commenter stated this regulatory bar allows VA to exclude former SMs for misconduct that would not lead to a dishonorable discharge. Other commenters stated that using the maximum punishment for the offense ignores instances where the offense is adjudicated as minor by the prosecuting authority. One commenter stated that the only conduct considered should be that causing harm to a person or property. VA thanks these commenters for their comments.

VA noted in the preamble to the proposed rule that ''willful misconduct'' is already defined in 38 CFR 3.1(n) as ''an act involving conscious wrongdoing or known prohibited action'' that must involve ''deliberate or intentional wrongdoing with knowledge of or wanton and reckless disregard of its probable consequences.'' Additionally, VA noted that 38 CFR 3.1(n)(2) states that ''[m]ere technical violations of police regulations or ordinances will not per se constitute willful misconduct.'' But the term ''persistent,'' VA explained, was undefined. Thus, VA proposed a framework for determining ''persistence'' derived from the statutes of limitations for punishment in the Manual for Court-Martial United States (MCM)[6] and UCMJ. This makes sense, because—if the military will no longer prosecute an offense after a certain period of time—there is no reason for VA to link that offense to other misconduct in order to find persistence.

Overall, the proposed rule (and this final rule) brings both objectivity and liberalization to the ''willful and persistent misconduct'' standard. The bar only applies if there are (1) instances of minor misconduct (as defined in reference to the MCM) occurring within two years of each other; (2) an instance of minor misconduct occurring within two years of more serious misconduct; or (3) instances of more serious misconduct occurring within five years of each other. Moreover, the compelling circumstances exception applies to this bar, such that even SMs whose misconduct meets the definition of ''willful and persistent'' will receive an individualized review that considers whether the misconduct should be considered mitigated or outweighed by otherwise meritorious service or other factors. To the extent this is still unsatisfactory to certain commenters, VA declines to make further amendments due to interagency concerns regarding the Military Departments' ability to use the loss of VA benefits as a deterrent to misconduct in order to promote good order and discipline.

[6] *See https://jsc.defense.gov/Portals/99/2024%20MCM%20files/MCM%20(2024%20ed)%20-%20TOC%20no%20index.pdf?ver=b7JVpxV5rbIHg0ENlCRVKQ%3D%3D.*

B. Minor Misconduct

Several commenters stated that minor misconduct should not be used as a bar because Congress never intended for former SMs to be barred from VA benefits due to minor misconduct. One commenter asserted that almost every UCMJ punitive article is punishable by either one-year confinement or a dishonorable discharge, rendering almost any SM subject to a bar to benefits. Instead, the commenter stated, VA should only bar people for serious misconduct. Others noted that adjudicators must determine COD on only that which led to discharge, and not prior misconduct. VA thanks these commenters for these comments.

VA clarifies that, even though it uses the term ''minor'' to distinguish one type of misconduct from another, this regulatory bar applies only to former SMs who have not received an Honorable or General (under honorable conditions) discharge. If a SM has an Honorable or General discharge, VA does not conduct a COD determination and this bar is irrelevant. *See* 38 CFR 3.12(a). Therefore, VA does not bar former SMs simply because they have minor offenses in their record. And even for SMs with a BCD or OTH discharge, VA will not bar benefits for sporadic, minor misconduct, given the definition of ''persistent'' in this final rule. Finally, any misconduct that meets the definition of ''persistent'' can also be outweighed by otherwise meritorious service or mitigated by the circumstances in a compelling circumstances analysis. Accordingly, as a practical matter, VA commits that the only former SMs who will be barred under the willful and persistent misconduct standard of this final rule are those that committed willful, frequent misconduct, which according to documentation in their military discharge records led to their discharge, outweighed the merit of their service, and was not mitigated by any relevant factors. To the extent this is still unsatisfactory to certain commenters, VA declines to make further amendments due to interagency interest in maintaining deterrents to misconduct that promote good order and discipline.

C. Definition of Persistent

Several commenters believed VA's use of the term ''persistent'' did not comport with the dictionary definition of ''persistent.'' Specifically, the commenters felt that the dictionary definition of persistent would either require three instances of misconduct or be habitual misconduct. Additionally, some commenters thought that VA

should consider service members' patterns of offenses instead of the offenses in succession. Commenters also suggested VA consider multiple offenses that are committed within a short time period and/or have a similar origin, such as mental distress, as a single instance of misconduct. Others were concerned VA adjudicators would consider actions beyond those considered by the service branch for discharge. VA thanks these commenters for their comments and clarifies here that VA will consider multiple offenses that originate from a single event or circumstance (*e.g.,* attempted robbery leading to fleeing and then leading to resisting arrest) as one ''instance'' of misconduct. Moreover, VA cited a dictionary definition in the preamble to its proposed rule and maintains that it is appropriate to align its definition of ''persistent'' with military statutes of limitations in order to exclude earlier misconduct that would not have been considered in a discharge. To the extent this is unsatisfactory to certain commenters, VA declines to make further amendments due to interagency interest in maintaining deterrents to misconduct that promote good order and discipline within the military.

D. Department of Defense and Congress

One commenter stated the willful and persistent misconduct bar should apply only if the commanding officer discharges or releases a SM for such misconduct. The commenter felt that VA should rely on DoD or the commanding officers to determine the conduct's nature rather than making its own assessment. Another commenter stated the willful and persistent misconduct bar was ''unlawful'' and should be removed as contravening congressional intent. This commenter states any exclusion should be based on only severe misconduct. VA thanks the commenters for their comments.

VA agrees that the willful and persistent misconduct bar should be reserved only for misconduct that is willful and persists and ultimately renders the service dishonorable. To the extent this bar has been susceptible to subjectivity, this final rule provides (1) the time frame in which the misconduct must occur, and (2) a compelling circumstances analysis, which combine to ensure that this regulatory bar will be applied only against SMs who willfully and persistently committed misconduct in service that explicitly led to their discharge, is not mitigated by any circumstances, and was not outweighed by otherwise meritorious service. VA believes this is consistent with congressional intent. Finally, as stated above, VA assures that misconduct that did not lead to discharge will not be considered—because conduct that did not concern DoD or the commanding officer in a dispositive way should similarly not concern VA.

Concerns Over the COD Adjudicatory Process

Multiple commenters expressed concern that the proposed rules will create an onerous and time-consuming adjudicatory process for VA and SMs. Some of these commenters also noted that the process left too much discretion to individual adjudicators. VA thanks these commenters for these comments. However, VA notes no additional burden is placed on VA's adjudicators than currently exists. Indeed, the objective criteria for willful and persistent misconduct should accelerate the COD process. Moreover, VA has robust training procedures and subregulatory guidance to ensure consistency among decisionmakers and accordingly makes no changes based on these comments.

Enforcement of Military Discipline and the Message to Honorable Veterans

Many commenters stated that they supported this rule but urged VA to not further liberalize current COD rules. One commenter noted that additional liberalization of the COD rules would send ''a message to those [SMs] committing misconduct, that there are few if any repercussions for doing so.'' Another commenter asserted VA should not liberalize benefits for OTH SMs unless such discharge is upgraded to at least a general discharge because the basis for OTH discharges is at least the violation of a lawful order. The commenter continued that allowing benefits for such SMs communicated that there were no ''adverse repercussions'' for wrongful actions, and such behavior would ''severely undermine good order and discipline in units. Problem [SMs] get the message that committing misconduct will have little to no adverse [e]ffect on their subsequent civilian lives and therefore are not deterred from continuing misconduct.'' The commenter was concerned about the demoralization of law-abiding SMs, who would be ''in no better steed [sic] than the derelicts, malingerers, rule breakers, malfeasant and criminal amongst them in the ranks.'' This commenter further asked whether VA wished to send the message that one could be ''a crook in the Army and get VA benefits notwithstanding.''

Another commenter, a former master sergeant, stated ''[t]he VA should not denigrate our honorable service by changing the rules to provide care to people who could not, or would not, serve in the same manner. There are, and must remain to be, consequences for people who fail to live up to the ideals expected of military service. Treating those who failed in the same manner as those who succeeded detracts from the status of all of us who served honorably and will be looked at as a slap in the face to most of us.'' Another commenter stated that this rule means ''get discharged with an OTH and get benefits anyway. This is bad for moral [sic] and dangerous, military people need to have a form of trust, without this, it will create more poor serving members.'' That commenter noted that ''[h]onor and honesty saves lives.''

In contrast, however, other commenters (further discussed below) requested VA remove all regulatory bars because they are not necessary to enforce military discipline. As one commenter noted, ''[w]ith such a robust system in place within the military itself, we doubt that any commander in the U.S. Military relies on VA's eligibility rules to maintain good order and discipline within her command.''

VA recognizes the challenging nature of this subject and included it in the RFI for this very reason. VA thanks all the commenters for their comments on the issues of military discipline and denigration of honorable service. After extensive interagency discussion, VA was advised that Commanders within the Military Departments use the prospect of VA benefits bars as one tool to enforce good order and discipline, and that the Military Departments were concerned that any expansion of VA benefits to former SMs who committed serious misconduct would have the effect of removing disincentives to misconduct. Thus, VA is retaining four of the regulatory bars, with modifications. Those modifications will help distinguish those who committed serious misconduct that renders their service dishonorable from those whose misconduct comes with a mitigating circumstance or is outweighed by otherwise meritorious service. This strikes an appropriate balance: it expands VA benefits eligibility, but also avoids sending a message that misconduct has no repercussions. It aligns with the necessary Military Department incentives for military discipline, while also guaranteeing a more holistic and equitable COD review for former SMs.

One commenter requested that VA not extend benefits to those with BCD or OTH discharges. The commenter stated that ''determination of character of service should reside solely with the

service department'' and not VA employees. The commenter continued: ''There is already a legal mechanism in place to allow the individual to appeal the character of discharge with the service department.'' Another commenter stated: ''Getting a BCD, OTH, or dishonorable discharge is extremely difficult, and the process has numerous layers to ensure the integrity of the process. Those individuals who receive these discharges are not worthy of the military and totally undeserving of veteran benefits . . . Providing hard earned benefits to those who could not and did not serve honorable [sic] is a slap in the face to the millions of veterans who did the right things during their service.'' A commenter stated that ''VA should be prohibited from deciding why a character of discharge is issued. Allowing this change disrupts the military process and weakens the authority of the Secretary of each military branch and within due process. VA employees do not follow the same regulatory requirements as those who service on military boards.''

VA thanks the commenters for their comments. It is true that character of service determinations remain DoD's responsibility, and upgrades are available from the Military Departments. But VA has both the authority and responsibility to determine eligibility for veterans' benefits. It has been performing this function for decades via 38 CFR 3.12 and its predecessors. Even if DoD has a different approach to or framework for characterizing the service of its former members, VA maintains its authority to determine COD for purposes of VA benefits eligibility.

One commenter stated ''I do not believe that anyone who receives a bad conduct or dishonorable discharge deserves to be treated by VA. Veterans wait forever for appointments and it's not right to add another million people to the rolls. We, honorable veterans, will never be seen. The VA needs to improve its track record before starting to reclassify people. The VA needs a lot more doctors and a lot more hospitals already.'' Another added that ''the added patient workload will also adversely impact the availability and timeliness of care received by all veterans at VA health care facilities.'' VA thanks the commenters for their comments and assures the commenters that those who received a Dishonorable discharge from the military are excluded from benefits eligibility. That said, VA has determined (after several rounds of public input) that the current regulatory approach to SMs with BCD and OTH discharges needs a restructuring to strike the appropriate balance between bestowing benefits to those who have earned them, while also limiting benefits for those whose service involved serious misconduct. This final rule's revision of § 3.12(d) attempts to strike that balance.

Similarly, a few commenters stated that former SMs with ''Bad Paper,'' OTH or dishonorable discharges should not be eligible for VA benefits, do not deserve any VA assistance and that their eligibility may delay the receipt of care for former SMs with honorable service. VA thanks these commenters for their comments. As noted above, VA aims to strike an appropriate balance between bestowing benefits to those who have earned them and limiting benefits for those whose service involved serious misconduct. VA believes this final rule does so by eliminating one of the regulatory bars, refining another, and applying a compelling circumstances exception to two of the regulatory bars, which provides a more holistic assessment of all appropriate factors in determining whether a former SM, despite a BCD or OTH discharge, has nevertheless earned ''veteran'' status.

Another commenter opined that ''[u]nless a discharge is upgraded, every OTH, BC[D], and D[ishonorable] D[ischarge] should be barred from getting any VA benefit. Doing otherwise would teach servicemembers that misconduct does not have repercussions which undermines good order and discipline.'' The commenter stated that ''I have experience processing CODs for VA and every case, the misconduct was severe, not simple things like eating too much or being late. If we allow these people to receive benefits, the message to the public will be deleterious. If there has been a miscarriage of justice in the discharge by the military, the military has upgrade boards to fix that.'' Still another commenter cautioned against changes that give people license to behave badly knowing they can still get benefits. ''The military relies on trust, and this undermines that. Personal experience of having two soldiers, under his/her command, get court-martialed out due to drugs and team remained understaffed. OTH are given to non-conforming or repeat offenders, or just criminals.''

VA thanks the commenter for this comment. VA has refined the willful and persistent misconduct bar, as well as implemented a compelling circumstances exception, to distinguish between serious misconduct worthy of a ''dishonorable'' determination and misconduct that is mitigated by the circumstances or outweighed by otherwise meritorious service. The aim is to provide benefits in the latter situation, but not the former.

One commenter stated that ''[c]hanges to VA shouldn't be bureaucratic, they should be legislative. In addition, Veterans should serve honorably throughout their contract otherwise they shouldn't be entitled to VA benefits.'' VA thanks the commenter for their comment. As discussed above, Congress delegated to VA the ability to set criteria for what constitutes ''other than dishonorable'' service for purposes of VA benefits eligibility. This rulemaking is necessary to refine those criteria. VA makes no changes to the regulatory text based on this comment.

Support Expanding Benefits Eligibility

Some commenters requested that all regulatory bars be removed. They stated that removing the regulatory bars would not affect military order and discipline. One commenter stated that, ''having served as a lower enlisted soldier, I can tell you I had no idea what the regulatory or statutory bars to VA benefits were. What was most important to me was . . . the people to my right and my left . . ., and the idea that [the bars] would have any impact on my behavior [i]s frankly absurd to me.'' Another commenter, former military defense counsel, stated ''I've done hundreds of cases. I can tell you very confidently that when people [commit repeated but minor misconduct], the last thing on their minds is VA benefits.'' Another commenter, a former SM, stated that most SMs ''have little or no knowledge of VA regulations or practice.'' Another commenter noted that misconduct during service can result in a criminal conviction and concluded that ''it is difficult to believe that the loss of disability compensation is not dwarfed by the incentive to avoid a criminal conviction.'' Another commenter asserted that ''[a]ny concerns regarding military order and discipline should be reflected in [DoD's] policies and regulations,'' and that removal of the regulatory bars would have ''minimal if any affect [sic] on military order and discipline as there are other remedies readily available to the chain of command.''

Relatedly, some commenters stated that expanding benefits eligibility would not denigrate other veterans' honorable service. One commenter in particular, a former SM, stated that ''any argument that providing a disabled former [SM] with life-saving healthcare, an ability to eat or an ability to be sheltered somehow denigrates honorable service is [ ] patently [ ] inhumane.'' Another commenter, a former SM, stated: ''What would *truly*

denigrate my honorable service would be to leave those comrades behind, to suffer from poverty, homelessness, and the lack of access to healthcare while I enjoy the benefits of my discharge'' (emphasis added). Similarly, another commenter, a former SM, stated: ''I'm not honored by seeing other [SMs] left homeless, by seeing them without medical care . . . That does not honor me or my service.'' Another commenter stated that the provision of VA benefits is not about bestowing or withholding ''honor''; it is about delivering lifesaving and life-changing benefits to those who served this country. Another commenter similarly stated that VA should ''leave to the DoD the matter of conferring or withholding honor'' and focus on its ''top clinical priority [of] preventing suicide among all Veterans,'' regardless of discharge status.

VA thanks the commenters for these comments. As noted above, VA recognizes the challenging nature of this subject and included it in the RFI for this very reason. Ultimately, after considering the comments for and against further limitation or removal of the regulatory bars to benefits, VA has determined that the provisions of this final rule strike a balance that will better ensure consistency in VA character of discharge determinations while also respecting the Military Departments' interest in disincentivizing significant misconduct prejudicial to good order and discipline. VA recognizes that the Military Departments use the prospect of VA benefits bars as one tool to enforce good order and discipline, and, for that reason, VA has decided not to remove all the regulatory bars, but to remove one and modify one. In that way, the changes in this final rule expand VA benefits to more SMs than ever before, but still align with the necessary incentives for military discipline.

One commenter stated VA should look into the circumstances underlying a ''bad paper discharge.'' The commenter continued that ''VA should clear up the definition of willful and persistent misconduct.'' VA thanks the commenter for their comment. In this final rule, VA has crafted objective criteria to limit willful and persistent misconduct to specific parameters, and implemented a compelling circumstances exception that examines potential reasons why the misconduct underlying an OTH discharge may be mitigated or outweighed by otherwise meritorious service.

One commenter asked VA to ''[p]lease revise the rules to allow all who have served our country to receive VA Benefits and Healthcare but have been denied based on their character of discharge. Cold War Veterans, and particularly those who served during Vietnam and post-Vietnam were hit hard with many poor leaders. Many [v]eterans suffered significantly from mental health issues during a time in which mental health programs were not readily available, and to those who took advantage where they were available, were given bad paper.'' VA thanks the commenter for their comment. Instances of injustice or inequity in the military about discharges should be addressed to the Boards for Correction of Military Records and/or the Discharge Review Board. That said, the compelling circumstances exception is designed to consider factors like mental impairment and overseas-related hardship, and to consider whether (notwithstanding misconduct) the service was honest, faithful, and meritorious.

Other Comments (General)

One commenter noted concerns over the effect of OTH discharges on homeless former SMs. VA thanks this commenter for this comment, and notes that VA currently provides certain healthcare and homeless support benefits to former SMs with OTH, and in some cases, BCD, discharges. As the commenter offered no regulatory change, VA makes no changes based on this comment.

One commenter suggested that VA should not use the term ''insanity'' in 38 CFR 3.12(b). VA thanks the commenter for their comment; however, VA proposed no changes to the definition of insanity, and solicited no comments on that definition, in the proposed rule. Further, the regulatory language originates in statute, so VA has a legal basis for using it. 38 U.S.C. 5303(b). Thus, VA is not changing the definition in this final rule.

Numerous commenters stated their general opposition to VA-related matters outside of the scope of COD determinations, such as opposition to the privatization of VA services and the Choice Act. VA thanks the commenters for their comments, though they are outside the scope of this rulemaking and will not be addressed here.

Some commenters requested assistance with VA benefits unrelated to the rulemaking package. VA thanks these commenters for their comments. However, as they are not related to the rulemaking, and offer no change to the regulatory text, VA makes no changes in response to these comments. These commenters are encouraged to seek out VSOs, other accredited representatives, or employees at VA Regional Offices to assist with VA benefits questions.

One commenter noted that the new rule would help that commenter's case personally. VA thanks the commenter for the comment, but as the commenter offered no regulatory change, VA makes no changes based on this comment.

IV. Uncharacterized Discharges and Coast Guard Discharges

VA wishes to clarify the applicability of this rule to uncharacterized discharges and Coast Guard discharges. Per 38 CFR 3.12(k) (redesignated in this rule to § 3.12(l)), there are three types of uncharacterized separations: (1) entry level separation; (2) void enlistment or induction; and (3) dropped from the rolls. An entry level separation is considered under conditions other than dishonorable; accordingly, this rulemaking does not apply to this type of uncharacterized separation. *See* 38 CFR 3.12(a). Void enlistments are reviewed under the factors listed in 38 CFR 3.14, and thus are also not impacted by this rulemaking.

However, when a former SM was dropped from the rolls, the facts and circumstances surrounding the separation must be reviewed to determine whether the separation was under conditions other than dishonorable. These determinations are conducted in the same manner as if such former SM received an OTH discharge. Accordingly, these former SMs will be favorably impacted by this rulemaking for the reasons discussed above.

The Coast Guard serves a unique place in the armed Forces. The term ''armed forces'' means the Army, Navy, Air Force, Marine Corps, Space Force, and Coast Guard. 10 U.S.C. 101(a)(4). The military departments are the Departments of the Army, Navy, and Air Force. 10 U.S.C. 101(a)(8). The Secretary of the Air Force has authority over the Air Force and the Space Force, and the Secretary of the Navy has authority over the Navy and Marine Corps. 10 U.S.C. 101(a)(9)(B), (C). The Coast Guard serves under the Department of Homeland Security, except upon Presidential direction to transfer it to the Department of the Navy or a declaration of war including a direction for its transfer to the Department of the Navy. 14 U.S.C. 101; 14 U.S.C. 103(a), (b); 10 U.S.C. 101(a)(9)(B). The Coast Guard issues the following discharges for officers: honorable, general/under honorable conditions, OTH, dismissal pursuant to GCM or administrative separation. For an enlisted SM, the discharges are the same as any other SM—honorable, general/under honorable conditions, OTH, bad conduct or dishonorable. SMs may also receive uncharacterized

discharges. As these discharges are identical to any other SM, this rulemaking will have the same effect on the SMs or officers who receive a BCD or OTH discharge and apply for VA benefits or health care or seek a COD determination.

V. Past Denials and Effective Date

In view of the complexity of the law VA administers, a brief discussion of the effect of prior COD adjudications and how to re-adjudicate the same is likely to reduce confusion, both by claimants and by VA adjudicators, and may facilitate timely access to benefits.

When this rule becomes effective, any claimant with a prior unfavorable COD determination, to include the no longer used undesirable discharge, may request a new COD determination under new § 3.12. *Cf. Routen* v. *West,* 142 F.3d 1434, 1441 (Fed. Cir. 1998). For those claimants found eligible for benefits under new § 3.12, the effective date of such benefits would be governed by 38 U.S.C. 5110(g) and 38 CFR 3.114. In short, if the claim is submitted within one year of the effective date of this final rule, the effective date of benefits could be as early as the effective date of this final rule. 38 CFR 3.114(a)(1).

However, VA makes clear this regulatory change is not a ground for clear and unmistakable error (CUE) in prior COD determinations. Although this final rule departs from VA's prior approach to COD, that does not render VA's prior regulation unlawful, *Garvey,* 972 F.3d at 1339, and, even if it were, a change in law cannot support a claim of CUE, *George* v. *McDonough,* 142 S. Ct. 1953, 1957 (2022). Accordingly, prior final decisions would not be subject to revision for CUE based on the new rulemaking. Claims for CUE on bases other than a change in regulation shall be considered on a case-by-case basis.

VI. Severability

The purpose of this section is to clarify VA's intent with respect to the severability of provisions of this rule. Each provision of this rulemaking is capable of operating independently, and VA intends them to operate independently. If any provision of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid. For example, amendments to any given regulatory bar are intended to operate independently, and are capable of operating independently, from amendments to other regulatory bars. Likewise, if the application of any portion of this rule to a particular circumstance is determined to be invalid, VA intends that the rule remain applicable to all other circumstances.

VII. Amendment Summary

As noted above, 38 U.S.C. 101(2) defines a ''veteran'' as an individual ''who served in the active military, naval, air, or space service, and who was discharged or released therefrom under conditions other than dishonorable.'' Pursuant to binding judicial precedent, VA has the discretion to determine who satisfies the ''under conditions other than dishonorable'' requirement. Moreover, 38 U.S.C. 501(a) provides that ''[t]he Secretary has authority to prescribe all rules and regulations which are necessary or appropriate to carry out the laws administered by [VA] and are consistent with those laws, including—(1) regulations with respect to the nature and extent of proof and evidence and the method of taking and furnishing them in order to establish the right to benefits under such laws.'' These authorities permitted VA to establish a COD regulation, 38 CFR 3.12, and to amend that regulation herein.

In this final rule, VA amends the section heading to read ''Benefit eligibility based on character of discharge'' to reflect the fact that VA does not have the authority to alter character of service determinations made by the Armed Forces. Rather, VA utilizes the characterization to determine basic VA benefit eligibility.

Consistent with the proposed rule, VA amends paragraphs (a) and (b) by adding descriptive headers and implementing non-substantive changes for clarity.

VA adds a descriptive header to paragraph (c) and amends paragraph (c)(1) to make ''lawful order'' plural so that it accurately reflects the text of 38 U.S.C. 5303(a). VA also amends paragraph (c)(6) by dividing the language of current paragraph (c)(6) into two subordinate paragraphs and making edits to that language, as well as moving current paragraphs (c)(6)(i) through (iii) to new paragraphs (e)(1) through (3) and making edits to that language.

VA amends paragraph (d) to add a descriptive header ''Regulatory bars to benefits''; to revise the regulatory bars as discussed above, and to remove the homosexual acts bar.

New paragraph (e) addresses the ''compelling circumstances'' exception. As noted above, new paragraphs (e)(1) through (3) expand upon current paragraphs (c)(6)(i) through (iii), with minor wording changes to reflect the fact that this language will now be applied to not just prolonged AWOL but also certain misconduct.

Current paragraphs (e) through (k) are redesignated as paragraphs (f) through (l). Several of these paragraphs are provided descriptive headers and updated cross-references after the addition of new paragraph (e). Moreover, the authority citation for redesignated paragraph (i) has been embedded into that paragraph's text. Finally, VA is amending the authority citation for the section to clarify the statutory authorities through which 38 CFR 3.12 is promulgated.

Executive Orders 12866, 13563 and 14094

Executive Order 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages; distributive impacts; and equity). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 (Executive Order on Modernizing Regulatory Review) supplements and reaffirms the principles, structures, and definitions governing contemporary regulatory review established in Executive Order 12866 of September 30, 1993 (Regulatory Planning and Review), and Executive Order 13563 of January 18, 2011 (Improving Regulation and Regulatory Review). The Office of Information and Regulatory Affairs has determined that this rule is a significant regulatory action under Executive Order 12866, section 3(f)(1), as amended by Executive Order 14094. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at *www.regulations.gov.*

Regulatory Flexibility Act

The Secretary hereby certifies that this final rule will not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act (5 U.S.C. 601–612). The anticipated costs of this regulatory action are directly and only attributed to VA's internal processing and budgetary appropriations. There are no small entities involved or impacted by this regulatory action. Therefore, pursuant to 5 U.S.C. 605(b), the initial and final regulatory flexibility analysis requirements of 5 U.S.C. 603 and 604 do not apply.

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. This final rule will have no such effect on State, local, and tribal governments, or on the private sector.

Paperwork Reduction Act (PRA)

Although this final rule contains a collection of information under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521), there are no provisions associated with this rulemaking constituting any new collection of information or any revisions to the current collection of information. The collection of information for 38 CFR 3.12 is currently approved by the Office of Management and Budget (OMB) and has valid OMB control numbers of 2900–0747, 2900–0886, 2900–0002 and 2900–0004.

Congressional Review Act

Under the Congressional Review Act, this regulatory action may result in an annual effect on the economy of $100 million or more, 5 U.S.C. 804(2), and so is subject to the 60-day delay in effective date under 5 U.S.C. 801(a)(3). In accordance with 5 U.S.C. 801(a)(1), VA will submit to the Comptroller General and to Congress a copy of this regulation and the Regulatory Impact Analysis (RIA) associated with the regulation.

List of Subjects in 38 CFR Part 3

Administrative practice and procedure, Claims, Disability benefits, Health care, Pensions, Veterans.

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, approved and signed this document on April 23, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Jeffrey M. Martin,

Assistant Director, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs amends 38 CFR part 3 as set forth below:

PART 3—ADJUDICATION

Subpart A—Pension, Compensation, and Dependency and Indemnity Compensation

■ 1. The authority citation for part 3, subpart A, continues to read as follows:

Authority: 38 U.S.C. 501(a), unless otherwise noted.

■ 2. Amend § 3.12 as follows:
■ a. Revise the section heading and paragraphs (a), (b), (c) introductory text, (c)(1) and (6), and (d).
■ b. Redesignate paragraphs (e) through (k) as paragraphs (f) through (l).
■ c. Add new paragraph (e).
■ d. Add a heading at the beginning of newly redesignated paragraph (f).
■ e. Revise newly redesignated paragraphs (g), (h) introductory text, and (i) introductory text.
■ f. Remove the authority citation after newly redesignated paragraph (i).
■ g. Revise newly redesignated paragraph (j).
■ h. Add a heading at the beginning of newly redesignated paragraph (k).
■ i. Revise the authority citation at the end of the section.

The revisions and additions read as follows:

§ 3.12 Benefit eligibility based on character of discharge.

(a) *General rule.* If the former service member did not die in service, then pension, compensation, or dependency and indemnity compensation is payable for claims based on a period of service that was terminated by discharge or release under conditions other than dishonorable. (38 U.S.C. 101(2)) A discharge under honorable conditions is binding on the Department of Veterans Affairs as to character of discharge.

(b) *Insanity exception.* No bar to benefits under this section shall be applied if VA determines that the former service member was insane at the time he or she committed the offense(s) leading to the discharge or release under dishonorable conditions. (38 U.S.C. 5303(b)) Insanity is defined in § 3.354.

(c) *Statutory bars to benefits.* Benefits are not payable where the former service member was discharged or released under one of the following conditions:

(1) As a conscientious objector who refused to perform military duty, wear the uniform, or comply with lawful orders of competent military authorities.

* * * * *

(6) By reason of a discharge under other than honorable conditions issued as a result of an absence without official leave (AWOL) for a continuous period of at least 180 days (38 U.S.C. 5303(a)).

(i) *Compelling circumstances exception.* This paragraph (c)(6) does not apply if compelling circumstances mitigate the prolonged unauthorized absence, as discussed in paragraph (e) of this section.

(ii) *Applicability prior to October 8, 1977.* This paragraph (c)(6) applies to any person awarded an honorable or general discharge prior to October 8, 1977, under one of the programs listed in paragraph (i) of this section, and to any person who prior to October 8, 1977, had not otherwise established basic eligibility to receive Department of Veterans Affairs benefits. *Basic eligibility* for purposes of this paragraph (c)(6)(ii) means either a Department of Veterans Affairs determination that an other than honorable discharge was issued under conditions other than dishonorable, or an upgraded honorable or general discharge issued prior to October 8, 1977, under criteria other than those prescribed by one of the programs listed in paragraph (i) of this section. However, if a person was discharged or released by reason of the sentence of a general court-martial, only a finding of insanity (paragraph (b) of this section) or a decision of a board of correction of records established under 10 U.S.C. 1552 can establish basic eligibility to receive Department of Veterans Affairs benefits.

(d) *Regulatory bars to benefits.* Benefits are not payable where the former service member was discharged or released under one of the conditions listed in paragraph (d)(1) or (2) of this section.

(1) Compelling circumstances exception is not applicable for:

(i) *Discharge in lieu of trial.* Acceptance of a discharge under other than honorable conditions or its equivalent in lieu of trial by general court-martial.

(ii) *Mutiny or espionage.* Mutiny or spying.

(2) Compelling circumstances exception is applicable for:

(i) *An offense involving moral turpitude.* This paragraph (d)(2)(i) includes, generally, conviction of a felony.

(ii) *Willful and persistent misconduct.* For purposes of this section, instances of minor misconduct occurring within two years of each other are persistent; an instance of minor misconduct occurring within two years of more serious misconduct is persistent; and instances of more serious misconduct occurring within five years of each other are persistent. For purposes of this section, minor misconduct is misconduct for which the maximum sentence imposable pursuant to the

Manual for Courts-Martial United States would not include a dishonorable discharge or confinement for longer than one year if tried by general court-martial.

(e) *Compelling circumstances exception.* The bar to benefits for prolonged AWOL under paragraph (c)(6) of this section and the two types of misconduct described in paragraph (d)(2) of this section will not be applied if compelling circumstances mitigate the AWOL or misconduct at issue. The following factors will be considered in a determination on this matter:

(1) *Length and character of service exclusive of the period of prolonged AWOL or misconduct.* Service exclusive of the period of prolonged AWOL or misconduct should generally be of such quality and length that it can be characterized as honest, faithful, and meritorious and of benefit to the Nation.

(2) *Reasons for prolonged AWOL or misconduct.* Factors considered are as follows:

(i) Mental or cognitive impairment at the time of the prolonged AWOL or misconduct, to include but not limited to a clinical diagnosis of (or evidence that could later be medically determined to demonstrate existence of) posttraumatic stress disorder (PTSD), depression, bipolar disorder, schizophrenia, substance use disorder, attention deficit hyperactivity disorder (ADHD), impulsive behavior, or cognitive disabilities.

(ii) Physical health, to include physical trauma and any side effects of medication.

(iii) Combat-related or overseas-related hardship.

(iv) Sexual abuse/assault.

(v) Duress, coercion, or desperation.

(vi) Family obligations or comparable obligations to third parties.

(vii) Age, education, cultural background, and judgmental maturity.

(3) Whether a valid legal defense would have precluded a conviction for AWOL or misconduct under the Uniform Code of Military Justice. For purposes of this paragraph (e)(3), the defense must go directly to the substantive issue of absence or misconduct rather than to procedures, technicalities, or formalities.

(f) *Board of corrections upgrade.* * * *

(g) *Discharge review board upgrades prior to October 8, 1977.* An honorable or general discharge issued prior to October 8, 1977, under authority other than that listed in paragraphs (i)(1) through (3) of this section by a discharge review board established under 10 U.S.C. 1553, sets aside any bar to benefits imposed under paragraph (c) or (d) of this section except the bar contained in paragraph (c)(2) of this section.

(h) *Discharge review board upgrades on or after October 8, 1977.* An honorable or general discharge issued on or after October 8, 1977, by a discharge review board established under 10 U.S.C. 1553, sets aside a bar to benefits imposed under paragraph (d) of this section, but not under paragraph (c) of this section, provided that:

* * * * *

(i) *Special review board upgrades.* Under 38 U.S.C. 5303(e), unless a discharge review board established under 10 U.S.C. 1553 determines on an individual case basis that the discharge would be upgraded under uniform standards meeting the requirements set forth in paragraph (h) of this section, an honorable or general discharge awarded under one of the following programs does not remove any bar to benefits imposed under this section:

* * * * *

(j) *Overpayments after October 8, 1977, due to discharge review board upgrades.* No overpayments shall be created as a result of payments made after October 8, 1977, based on an upgraded honorable or general discharge issued under one of the programs listed in paragraph (i) of this section which would not be awarded under the standards set forth in paragraph (h) of this section. Accounts in payment status on or after October 8, 1977, shall be terminated the end of the month in which it is determined that the original other than honorable discharge was not issued under conditions other than dishonorable following notice from the appropriate discharge review board that the discharge would not have been upgraded under the standards set forth in paragraph (h) of this section, or April 7, 1978, whichever is the earliest. Accounts in suspense (either before or after October 8, 1977) shall be terminated on the date of last payment or April 7, 1978, whichever is the earliest.

(k) *Overpayments after October 8, 1977, based on application of AWOL statutory bar.* * * *

(Authority: 38 U.S.C. 101, 501, and 5303)

BILLING CODE 8320–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 4

[PS Docket Nos. 21–346, 15–80; ET Docket No. 04–35; FCC 24–5; FR ID 214797]

Resilient Networks; Disruptions to Communications; Correction

AGENCY: Federal Communications Commission.

ACTION: Final rule; correction.

SUMMARY: The Federal Communications Commission published a document in the **Federal Register** on April 11, 2024, containing the effective and compliance dates for a new rule. While the **DATES** section at the beginning of the document was correct, Section E of the document, ''Timelines for Compliance,'' requires a correction.

DATES: Effective April 26, 2024.

FOR FURTHER INFORMATION CONTACT: Scott Cinnamon, Attorney Advisor, 202–418–2319.

SUPPLEMENTARY INFORMATION:

Federal Register Correction

In rule document 2024–07402 at 89 FR 25535 in the issue of April 11, 2024, on page 25541, in the second column, the first sentence of Section E, ''Timelines for Compliance,'' is corrected to read as follows:

We set a single date for compliance by all subject providers for implementing these rules as the later of 30 days after the FCC publishes notice in the **Federal Register** that the OMB has completed its review of Paperwork Reduction Act requirements, or November 30, 2024.

Dated: April 17, 2024.

Federal Communications Commission.

Katura Jackson,

Federal Register Liaison Officer, Office of the Secretary.

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 240419–0114]

RIN 0648–BM83

Fisheries of the Northeastern United States; 2024 and 2025 Summer Flounder and Scup, and 2024 Black Sea Bass Recreational Management Measures

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS announces Federal management measures for the 2024 and 2025 summer flounder fishery and the 2024 black sea bass recreational fishery. The implementing regulations for these fisheries require NMFS to publish recreational measures for each fishing year and to provide an opportunity for public comment. The intent of this action is to set management measures that allow the recreational fisheries to achieve, but not exceed, the recreational harvest targets and thereby prevent overfishing.

DATES: This rule is effective April 26, 2024.

ADDRESSES: Copies of this final rule and the small entity compliance guide prepared for permit holders are available from: Michael Pentony, Regional Administrator, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930, and accessible via the internet at: *https://www.fisheries.noaa.gov/action/proposed-rule-implement-2024-and-2025-summer-flounder-and-scup-and-2024-black-sea-bass.*

FOR FURTHER INFORMATION CONTACT: Emily Keiley, Fishery Policy Analyst, (978) 281–9116, or *Emily.Keiley@noaa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The Mid-Atlantic Fishery Management Council (Council) and the Atlantic States Marine Fisheries Commission (Commission) cooperatively manage summer flounder, scup, and black sea bass. The Council and the Commission's Management Boards meet jointly each year to recommend recreational management measures. For summer flounder and black sea bass, NMFS must implement coastwide measures or approve conservation-equivalent measures, per 50 CFR 648.102(d) and 648.142(d), as soon as possible once the Council and Commission's makes their recommendation. This action approves conservation equivalency for summer flounder and black sea bass in 2024 and for summer flounder in 2025.

For scup, no changes to the Federal recreational management measures are being implemented. The 2024 and 2025 Federal recreational scup management measures are a 10-inch (25.4-centimeters (cm)) minimum fish size, a 50-fish per person possession limit, and a year-round open season.

Conservation Equivalency

In this final rule, NMFS is implementing conservation equivalency to manage the 2024 and 2025 summer flounder and 2024 black sea bass recreational fisheries, as proposed in the proposed rule published on February 23, 2024 (89 FR 13674). Under conservation equivalency, Federal recreational measures are waived and all recreational vessels fishing in Federal waters are subject to the recreational fishing measures implemented by the state in which they land. This approach allows for more customized measures to constrain recreational harvest at a state or regional level that are likely to meet the needs of anglers in each area, as opposed to coastwide measures that may be advantageous to anglers in some areas and unnecessarily restrictive in others.

The combination of state or regional measures must be ''equivalent'' in terms of conservation to a set of ''non-preferred coastwide measures,'' which are recommended by the Council and the Summer Flounder, Scup, and Black Sea Bass Board (Board) each year. States, through the Commission, are collectively implementing measures designed to constrain landings to the recreational harvest targets. Additional information on the development of these measures is provided in the proposed rule (see 89 FR 13674, February 23, 2024) and not repeated here.

Summer Flounder Recreational Management Measures

On April 4, 2024, the Commission notified NMFS that it had certified that the 2024 and 2025 recreational fishing measures required to be implemented in state waters for summer flounder are, collectively, the conservation equivalent of the season, fish size, and possession limit prescribed in §§ 648.104(b), 648.105, and 648.106(a). Pursuant to § 648.102(d)(2), if conservation equivalency is adopted, vessels subject to the recreational fishing measures are not subject to Federal measures and instead are subject to the recreational fishing measures implemented by the state in which they land. Section 648.107(a) is amended through this final rule to recognize state-implemented measures as the conservation equivalent of the Federal coastwide recreational management measures for 2024 and 2025.

In addition, this action revises the default ''non-preferred'' summer flounder coastwide measures at §§ 648.104(b), 648.105, and 648.106(a). For 2024 and 2025, the non-preferred coastwide measures are: (1) an 18.5-inch (46.99-cm) minimum fish size; (2) a three-fish per person possession limit; and (3) an open season from May 8 to September 30. The coastwide measures become the default management measures the year after conservation equivalency expires (in this case 2026) until the joint process establishes either coastwide or conservation-equivalency measures for the next year.

Black Sea Bass Recreational Management Measures

On April 4, 2024, the Commission notified NMFS that it had certified that the 2024 recreational fishing measures required to be implemented in state waters for black sea bass are, collectively, the conservation equivalent of the season, fish size, and possession limit prescribed in §§ 648.145(a), 648.146, and 648.147(b). According to § 648.142(d)(2), if conservation equivalency is adopted, vessels subject to the recreational fishing measures are not subject to Federal measures and instead are subject to the recreational fishing measures implemented by the state in which they land. Section 648.151 is amended through this final rule to recognize state-implemented measures as the conservation equivalent of the Federal coastwide recreational management measures for 2024.

Regulatory Text Correction

The definition of a recreational fishing vessel found at § 648.2 previously only referenced the recreational scup fishery. However, the definition applies to all recreational fisheries. This action corrects this definition, removing the reference to the scup fishery.

Changes From the Proposed Rule

There are no changes from the proposed rule.

Comments and Responses

NMFS received 18 comments on the proposed rule. Comments were received from 15 individuals, the Natural Resources Defense Council (NRDC), the Virginia Beach Charter Captains, and one comment was submitted anonymously. Ten comments focused, in whole or in part, on state measures or commercial management, which were not part of the proposed action and, therefore, are not addressed in the following responses.

NMFS received a comment from the NRDC. Attached to NRDC's comment letter was a copy of the complaint they filed in ongoing litigation on Framework 17 (*NRDC* v. *Raimondo,* No. 23–cv–982 (D.D.C. Aug. 29, 2023)). That legal challenge is fully briefed, and the parties await the court's decision. Given that this litigation is ongoing, NMFS will not address the complaint here. NRDC also incorporated, by reference, its comments on the 2023 summer flounder, scup, and black sea bass recreational measures. Our responses to those comments are provided in the final rule (88 FR 55411, August 15, 2023), and are not repeated here.

Comment 1: A comment from NRDC stated that the proposed rule and Framework 17, on which this proposed rule is based, are inconsistent with the Magnuson-Stevens Fishery Conservation Management Act's (Magnuson-Stevens Act) annual catch limits (ACL) provisions because they allow the Council to manage recreational fishing to new recreational harvest target levels that are not consistent with the ACLs derived from the Science and Statistical Committee's (SSC) recommendations.

Response: The Percent Change Approach has been established by the rulemaking implementing Framework 17 and, as such, must be followed in setting the recreational management measures in this action. Deviating from this approach would require new rulemaking to modify Framework 17, which is beyond the scope of this action. However, as explained in detail in the final rule implementing Framework 17, the new Percent Change Approach is a harvest control rule designed by the Council and Commission for use in managing mid-Atlantic recreational fisheries and uses two factors to determine if management measures could remain status quo, could be liberalized, or must be restricted. These two factors are: (1) a comparison of the confidence interval (CI) around an estimate of expected harvest under status quo measures with the average Recreational Harvest Limit (RHL) for the upcoming 2 years; and (2) biomass compared to the target level, as defined by the most recent stock assessment. These two factors also determine the appropriate degree of change (*i.e.,* a percentage change in expected harvest).

The Percent Change Approach does not change the process for setting measurable and objective status determination criteria (*e.g.,* overfishing limit (OFL), acceptable biological catch (ABC), ACL) as required by National Standard 1. The status determination criteria continue to be based on the best available scientific information as determined by the Council's SSC. The Percent Change Approach does not eliminate the recreational ACL or RHL and continues to use both in the process of setting measures and triggering accountability measures (AM). Together, these measures meet the requirements of National Standard 1. The Percent Change Approach is a method for determining the need for, and extent of, recreational fishing measures to prevent overfishing while allowing catch to target optimal yield. This approach attempts to constrain harvest to prevent overfishing while also acknowledging that recreational catch estimates are uncertain and often highly variable (more so than commercial catch estimates). The Percent Change Approach makes incremental adjustments, thus reducing the tendency of management measures to chase after the highs and lows by either liberalizing or restricting measures too much in any given year in reaction to potentially large swings in recreational catch estimates.

The approach also builds in more precaution for stocks at lower biomass levels. Biomass levels and the target are taken directly from the approved and peer-reviewed stock assessments that occur every other year. Consider that when biomass is in decline, the stock often becomes less available to the recreational fishery, and, therefore, catch estimates may decline relative to the RHL. Formerly, management measures would be liberalized, sometimes significantly, while catch fell due to a declining biomass, increasing fishing pressure on a declining stock. Conversely, as healthy stocks increase, sometimes far above the target biomass level, such as the current situations with black sea bass and scup, the fish become more available to the fishery even under restrictive measures, resulting in catch estimates that exceed the RHL. However, what appear to be overages have, in these circumstances, been found to have no negative biological impact on abundant stocks, as NMFS continues to see increases in biomass in a subsequent stock assessment. Therefore, not all overages result in overfishing. For example, black sea bass has not been subject to overfishing in over 10 years despite sustained high recreational catch levels that sometimes exceeded the RHL and the recreational ACL.

Prior to implementing the Percent Change Approach, the method used to determine recreational measures used the same criteria (*i.e.,* RHL and estimated catch) but did not consider or incorporate stock biomass in determining the extent of changes (whether more liberal or more conservative). The prior method prescribed the same degree of changes to management measures whether a stock biomass was considered overfished (*i.e.,* less than 50 percent of its maximum sustainable yield target) or over 200 percent of its target level. The Percent Change Approach also considers the estimated harvest compared to the RHL, but, in contrast to the previous approach, also incorporates information about stock status to determine whether, and how much, to either liberalize or restrict management measures. This ensures more conservative responses than the previous method for stocks in lower biomass conditions, while allowing potentially more liberal responses only for stocks at very high biomass levels.

Comment 2: NRDC commented that the recreational harvest target for scup (13.76 million pounds (lb); 6,241 metric tons (mt)) overshoots the 2024 and 2025 RHLs prescribed by the specifications. The NRDC comment also concludes that the total expected scup harvest will exceed the OFL in 2025.

Response: Application of the Percent Change Approach and the Recreational Demand Model (RDM) resulted in a recommendation of a 10-percent reduction in scup harvest in 2024 and 2025. This is because scup has a very high biomass, but harvest under status quo measures is expected to be above the RHL.

Scup is a healthy stock far above the target biomass level, because of the high abundance and availability to the fishery, even under restrictive measures, the catch is likely to exceed the RHL. However, observed recent overages of the scup RHL, ACL, ABC, and even OFL have had no negative biological impact on the stock. The conservation risk of a harvest reduction that is less than what would have previously been applied is negligible for a stock, like scup, that has a very high biomass (over 150 percent of its biomass target). The Magnuson-Stevens Act defines overfishing as a

''rate or level of fishing mortality that jeopardizes the capacity of a fishery to produce the maximum sustainable yield *on a continuing basis*'' (emphasis added) (16 U.S.C. 1802(34)). This scenario, in which a stock continues to maintain biomass significantly above the target, does not constitute overfishing.

Moreover, it is highly unlikely that there will be overfishing of scup when such a determination takes into account both recreational and commercial harvest, and the commercial scup fishery has not come close to harvesting its allocation of the scup ACL in recent years. From 2018 to 2021, the commercial sector only landed between 55 percent and 63 percent of its allocated scup quota, an annual average of 13.42 million lb (6,087 mt) landed. The commercial scup quotas for 2024 and 2025 are 21.15 million lb (9,593 mt) and 18.80 million lb (8,527 mt), respectively, higher than recent commercial landings. In this context, even if there is a recreational harvest above the RHL it is unlikely to result in negative biological consequences for the scup stock, where the overall total of commercial and recreational harvests remains below overfishing levels.

In 2022, the total scup catch did exceed the 2022 OFL. The scup total catch was 35.98 million lb (16,322 mt), compared to the OFL of 32.56 million lb (14,770 mt), corresponding to an 11 percent overage. Although the catch exceeded the OFL and the ABC, the status determination criteria for scup makes use of the annual fishing mortality rate relative to a maximum fishing mortality rate to determine if overfishing has occurred. The 2023 Management Track Assessment estimated fishing mortality rate was 0.171, which is below the fishing mortality rate at maximum sustainable yield (F_{MSY}) of 0.19, which means that despite an exceedance of the OFL, there was no overfishing of scup.

Additionally, the estimated biomass (159,050 mt) was estimated to be well above the biomass at maximum sustainable yield (78,593 mt). Despite the overage of the OFL in 2022, the best available science supports the determination that overfishing was not occurring. As seen in 2022 with scup, overages of the OFL do not always correspond to overfishing. The OFL and corresponding catch limits are based on projections from a stock assessment and can prove to be inaccurate when considered retrospectively with the insight of a subsequent stock assessment.

It is also important to again note the uncertainty in estimated recreational harvests. This uncertainty is one of the main drivers for the adoption of the Percent Change Approach in Framework 17. Here, the median coastwide projected 2024–2025 harvest under 2023 measures is 15.29 million lb (6,935 mt), with an 80 percent CI of 14.07–16.29 million lb (6,382–7,389 mt), meaning that, statistically, the estimate can fall anywhere in that range with equal likelihood. With the 10 percent reduction adopted here, the recreational harvest of scup could be anywhere from 12.66 million lb (5,744 mt) to 14.66 million lb (6,650 mt). The average 2024–2025 scup RHL is 12.51 million lb (5,674 mt), which is only about 1 percent below the likely range of scup harvest after the 10 percent reduction is applied. Given the significant uncertainty of both recreational harvest and the specifications themselves, coupled with low risk of overfishing, a 10 percent scup reduction is a reasonable approach. To the extent that biomass remains high but additional reductions are needed the next time that recreational measures are developed, another 10-percent reduction would occur. However, due to the inherent variability and uncertainty in recreational catch data in the context of a very high biomass of scup, more drastic changes to measures could prove to be unwarranted and could lead to the undesirable result of increased recreational discards of dead fish. Scup provides an example of how the gradual approach of adjustments to recreational targets that the Harvest Control Rule provides for abundant stocks can work effectively with little risk of negative consequences to the stock.

Comment 3: One comment expressed concern about the lack of new information on the biomass of black sea bass, three comments noted that the black sea bass stock is very abundant and expanding, and one of these comments noted concerns about the impact of the high abundance of black sea bass on other species.

Response: In December 2023, a research track assessment was completed for black sea bass. Research track assessments are not used to inform management or make official determinations of stock status. In spring 2024, a management track assessment will be conducted for black sea bass, incorporating data through 2023. The results of this assessment will be used to inform specifications and recreational management measures for 2025. Although the research track assessment is not used for official status determinations, the results did indicate that the black sea bass stock is at a very high biomass level and that biomass has been increasing in recent years.

Comment 4: One comment on the summer flounder recreational management measures noted concerns about the minimum size requirement (18.5 inches (46.99 cm)). This commenter suggested that the minimum size should be lower (16.5 inches (41.91 cm)). The lower minimum size was suggested due to concerns about the post-release survival of small summer flounder. The comment noted that most of the fish they encounter are less than the minimum size.

Response: The 18.5-inch (46.99-cm) minimum size is part of the non-preferred coastwide measures. These measures are being waived for 2024 and 2025, as NMFS has approved conservation equivalency. Anglers must adhere to the measures in the state where they land. The minimum size specified for a state or region may differ from the 18.5-inch (46.99-cm) minimum size proposed as part of the non-preferred measures. One benefit of the conservation equivalency approach is that states and regions can tailor recreational management measures to meet the needs of anglers in their state or region, compared to coastwide measures that may be advantageous to anglers in some areas and unnecessarily restrictive in others.

Comment 5: Four comments expressed concern about recreational data. Two comments specifically suggested that new data collection techniques be implemented, such as the development of a reporting application or the use of for-hire vessel trip reports (VTR). One commenter was concerned about the underreporting of recreational catch.

Response: The data used to inform the summer flounder, scup, and black sea bass recreational management measures are the best available data on recreational catch. In addition to Marine Recreational Information Program (MRIP) data, a bioeconomic model, the RDM, was used to estimate harvest. The RDM uses trip attributes such as expected harvest and costs, as well as the availability of different sizes of fish, to estimate the likelihood that an angler will go fishing under a given set of regulations. The RDM is informed by a 2022 survey of anglers from Maine through Virginia as well as recent size distribution information from the stock assessment.

Expanded use of recreational for-hire VTRs may be considered in the future. The Council has initiated an action to consider additional changes to recreational fisheries management, including the consideration of options

related to recreational catch accounting, such as private angler reporting and enhanced VTR requirements.

Comment 6: One comment cited concerns about the recreational data, specifically MRIP data and that the recent pilot study that indicates that the current configuration of MRIP may be resulting in effort being overestimated. The comment expressed concern that information from the pilot study was not currently being accepted or used.

Response: This comment correctly points out that NMFS has conducted a pilot study on the recreational Fishing Effort Survey. The preliminary results suggest that the order of the questions in the Fishing Effort Survey may lead to overestimation of fishing effort. However, these are preliminary results and a more robust study to analyze this issue is currently underway. Additional analyses are necessary to confirm findings. Once sufficient information has been collected and the implications of the MRIP estimates are fully understood, that information will be incorporated into the relevant science and management processes.

Comment 7: Two comments opposed more restrictive black sea bass recreational regulations and one comment opposed more restrictive summer flounder recreational regulations. These comments also highlighted the importance of recreational fisheries to the economy.

Response: The 2024 black sea bass measures are the same as those implemented in 2023, no additional restrictions have been implemented.

The 28-percent reduction implemented for summer flounder is based on the results of the Percent Change Approach. Because summer flounder biomass is in the low category and the 2023 management measures were expected to result in an RHL overage, the approach requires a reduction in recreational harvest. It is also important to note that the 2023 management track assessment for summer flounder indicated that overfishing was occurring. Thus, this reduction, in addition to commercial quota reductions, is necessary to ensure that overfishing is ended.

Comment 8: One comment asked if jigging would become illegal for summer flounder, noting that they are a terrible fish to spear.

Response: This action does not ban jigging for summer flounder.

Comment 9: One comment supported the implementation of conservation equivalency.

Response: NMFS agrees, and this action implements conservation equivalency for both summer flounder and black sea bass.

Comment 10: One comment supported the 28-percent harvest reduction for summer flounder, citing their observations of declining recreational catch over the years. An additional comment was supportive of the non-preferred coastwide measures for summer flounder.

Response: NMFS agrees. NMFS has approved conservation equivalency. States and regions have implemented measures consistent with the 28-percent harvest reduction. While the non-preferred coastwide measures have been waived for 2024 and 2025, the measures implemented by the states or regions are equivalent in terms of their conservation benefit.

Classification

Pursuant to section 305(d) of the Magnuson-Stevens Act, the Assistant Administrator for Fisheries, NOAA, has determined that this action is necessary to carry out the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan, and its implementing regulations and that this final rule is consistent with the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan, other provisions of the Magnuson-Stevens Act, and other applicable law.

The Assistant Administrator for Fisheries, NOAA, finds good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay of effectiveness period for this rule, to ensure that the final management measures are in place as soon as possible. This action implements 2024 recreational management measures for summer flounder and black sea bass.

NMFS could not publish this final rule at an earlier date. The recreational management measure setting process begins after the Council and Board set the annual specifications. The Council's Monitoring Committee evaluates the needed changes in recreational harvest and develop recommendations for coastwide management measures for the Council and Board to consider. At the December 12–14, 2023, meeting, the Council and Board voted on recommended recreational management measures. Council staff then prepared and submitted those recommendations to NMFS on January 16, 2024. The proposed rule was published on February 23, 2024, with a public comment period open through March 11, 2024. After the comment period closes NMFS, must review, consider, and respond to all comments on the proposed rule and develop the final rule package, which is then subject to further review upon completion. In addition, during the proposed rule development and comment period, the states are developing management measures and submitting that information to the Commission to ensure that the suite of state measures are the conservation equivalent of coastwide Federal measures. The letter confirming conservation equivalent measures from the Commission was received by NMFS on April 4, 2024. Pursuant to §§ 648.102(d)(2)(ii) and 648.142(d)(2)(ii), NMFS cannot finalize conservation equivalency without this information from the Commission. This final rule was submitted to the Department of Commerce Office of General Council on April 9, 2024. Given the time needed to review the recommendations and prepare the Federal rulemaking, and the need to confirm conservation equivalency through the Commission's process, this is the earliest this rule could be published.

The Federal coastwide regulatory measures for recreational summer flounder and black sea bass fishing that were codified last year (88 FR 55411, August 15, 2023) remain in effect until the decision to waive Federal measures for 2024 is made effective by this final rule. Many states have already implemented their conservationally equivalent 2024 measures and a delay in implementing the measures of this rule will increase confusion on what measures are in place in Federal waters. Inconsistencies between the states' measures and the Federal measures could lead to misunderstanding of the applicable regulations and could increase the likelihood of noncompliant landings.

Additionally, the Federal summer flounder measures currently in place are more liberal than many of the measures in state waters. Further delay of the implementation of the 2024 measures will increase the likelihood that the 2024 RHL and recreational ACL will be exceeded. NMFS is required to implement measures to constrain recreational harvest to prevent overfishing.

Unlike actions that require an adjustment period to comply with new rules, this action does not require recreational and charter/party operators to purchase new equipment or otherwise expend time or money to comply with this action's management measures. Rather, compliance with this final rule simply means adhering to the published state management measures for summer flounder and black sea bass while the recreational and charter/party

operators are engaged in fishing activities.

Additionally, stakeholder and industry groups have been involved with the development of this action and have participated in public meetings throughout the past year. Generally, stakeholders are supportive of the use of conservation equivalency because it allows states, and regions, more flexibility to set measures, instead of one set of coastwide measures that apply to all. A delay in implementation past the start of the recreational fishing season would be contrary to the public interest, as it could create confusion both in the recreational fisheries regarding the management measures, and with state agencies as they prepare and finalize their recreational management measures.

For these reasons, the Assistant Administrator finds good cause to waive the 30-day delay in the date of effectiveness and to implement this rule upon the date of publication in the **Federal Register**.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. NMFS received no comments regarding this certification. Therefore, a final regulatory flexibility analysis was not required and none was prepared.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects in 50 CFR Part 648

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: April 19, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 648 as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 648.2, revise the definition of a recreational fishing vessel to read as follows:

§ 648.2 Definitions.

* * * * *

Recreational fishing vessel, means any vessel from which no fishing other than recreational fishing is conducted. Charter and party boats are considered recreational fishing vessels for purposes of minimum size, season, and possession limit requirements.

* * * * *

■ 3. In § 648.104, revise paragraph (b) to read as follows:

§ 648.104 Summer flounder size requirements.

* * * * *

(b) *Party/charter permitted vessels and recreational fishery participants.* The minimum size for summer flounder is 18.5 inches (46.99 cm) total length for all vessels that do not qualify for a summer flounder moratorium permit under § 648.4(a)(3), and charter boats holding a summer flounder moratorium permit if fishing with more than three crew members, or party boats holding a summer flounder moratorium permit if fishing with passengers for hire or carrying more than five crew members, unless otherwise specified in the conservation-equivalency regulations at § 648.107. If conservation equivalency is not in effect in any given year, possession of smaller (or larger, if applicable) summer flounder harvested from state waters is allowed for state-only permitted vessels when transiting Federal waters within the Block Island Sound Transit Area provided they follow the provisions at § 648.111 and abide by state regulations.

* * * * *

■ 4. In § 648.105, revise the introductory text to read as follows:

§ 648.105 Summer flounder recreational fishing season.

No person may fish for summer flounder in the EEZ from October 1 to May 7 unless that person is the owner or operator of a fishing vessel issued a commercial summer flounder moratorium permit, or is issued a summer flounder dealer permit, or unless otherwise specified in the conservation-equivalency measures at § 648.107. Persons aboard a commercial vessel that is not eligible for a summer flounder moratorium permit are subject to this recreational fishing season. This time period may be adjusted pursuant to the procedures in § 648.102. Possession of summer flounder harvested from state waters during this time is allowed for state-only permitted vessels when transiting Federal waters within the Block Island Sound Transit Area provided they follow the provisions at § 648.111 and abide by state regulations.

■ 5. In § 648.106, revise paragraph (a) to read as follows:

§ 648.106 Summer flounder possession restrictions.

(a) *Party/charter and recreational possession limits.* No person shall possess more than three summer flounder in, or harvested from, the EEZ, per trip unless that person is the owner or operator of a fishing vessel issued a summer flounder moratorium permit, or is issued a summer flounder dealer permit, or unless otherwise specified in the conservation-equivalency measures at § 648.107. Persons aboard a commercial vessel that is not eligible for a summer flounder moratorium permit are subject to this possession limit. The owner, operator, and crew of a charter or party boat issued a summer flounder moratorium permit are subject to the possession limit when carrying passengers for hire or when carrying more than five crew members for a party boat, or more than three crew members for a charter boat. This possession limit may be adjusted pursuant to the procedures in § 648.102. Possession of summer flounder harvested from state waters above this possession limit is allowed for state-only permitted vessels when transiting Federal waters within the Block Island Sound Transit Area provided they follow the provisions at § 648.111 and abide by state regulations.

* * * * *

■ 6. In § 648.107, revise paragraph (a) introductory text to read as follows:

§ 648.107 Conservation equivalent measures for the summer flounder fishery.

(a) The Regional Administrator has determined that the recreational fishing measures proposed to be implemented by the states of Maine through North Carolina for 2024 and 2025 are the conservation equivalent of the season, size limits, and possession limit prescribed in §§ 648.104(b), 648.105, and 648.106. This determination is based on a recommendation from the Summer Flounder Board of the Atlantic States Marine Fisheries Commission.

* * * * *

■ 7. In § 648.151, revise paragraph (a) introductory text to read as follows:

§ 648.151 Black sea bass conservation equivalency.

(a) The Regional Administrator has determined that the recreational fishing measures proposed to be implemented by the states of Maine through North Carolina for 2024 are the conservation

equivalent of the season, size limits, and possession limit prescribed in §§ 648.146, 648.147(b), and 648.145(a).

This determination is based on a recommendation from the Black Sea Bass Board of the Atlantic States Marine Fisheries Commission.

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 89, No. 82
Friday, April 26, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–1003; Project Identifier MCAI–2023–00712–T]

RIN 2120–AA64

Airworthiness Directives; Bombardier, Inc., Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2023–11–01, which applies to certain Bombardier, Inc., Model BD–100–1A10 airplanes. AD 2023–11–01 requires a records check and replacement of affected left-hand (LH) direct current power center (DCPC) units. AD 2023–11–01 also provides optional terminating action for the records check and replacement. However, it has been determined that certain LH DCPC units require additional modification. This proposed AD would require checking maintenance records of certain airplanes, replacing certain DCPC units, and modifying certain DCPC units. This proposed AD would also expand the applicability of AD 2023–11–01. This proposed AD would also prohibit the installation of affected parts. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 10, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1003; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For service information identified in this NPRM, contact Bombardier Business Aircraft Customer Response Center, 400 Côte-Vertu Road West, Dorval, Québec H4S 1Y9, Canada; telephone 514–855–2999; email *ac.yul@aero.bombardier.com;* website *bombardier.com.*
- You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2024–1003; Project Identifier MCAI–2023–00712–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2023–11–01, Amendment 39–22446 (88 FR 44042, July 11, 2023) (AD 2023–11–01), for certain Bombardier, Inc., Model BD–100–1A10 airplanes. AD 2023–11–01 was prompted by an MCAI originated by Transport Canada, which is the aviation authority for Canada. Transport Canada issued AD CF–2022–28, dated May 26, 2022 (Transport Canada AD CF–2022–28), to correct an unsafe condition.

AD 2023–11–01 requires a records check and replacement of affected LH DCPC units, and provides optional terminating action for those actions. The FAA issued AD 2023–11–01 to address erratic indications, which could cause the flightcrew to turn off fully operational electrical power sources, leading to partial or complete loss of electrical power. The unsafe condition, if not addressed, could result in loss of flight displays and reduced controllability of the airplane.

Actions Since AD 2023–11–01 Was Issued

The preamble to AD 2023–11–01 explains that the FAA considers the requirements ''interim action'' and was considering further rulemaking. The FAA has now determined that further rulemaking is indeed necessary, and this NPRM follows from that determination.

Transport Canada superseded AD CF–2022–28, dated May 26, 2022 (Transport Canada AD CF–2022–28), and issued Transport Canada AD CF–2023–35, dated May 26, 2023 (Transport Canada AD CF–2023–35) (referred to after this as the MCAI), to correct an unsafe condition on all Bombardier, Inc., Model BD–100–1A10 airplanes. The MCAI states that airplanes could experience misleading electrical system status indications (push button annunciators (PBA) and engine indicating and crew alerting system (EICAS)) as a result of contamination of electrical contacts in the LH DCPC internal communication data bus. These erratic indications could cause the flightcrew to turn off fully operational electrical power sources, leading to partial or complete loss of electrical power. Loss of electrical power could result in the loss of flight displays and reduced controllability of the airplane. The MCAI retains the requirement to verify the airplane records, requires removal of certain LH DCPC units for cleaning, and requires modification of certain LH DCPC units by adding a protective layer of tape to prevent the ingress of contaminants into the printed circuit board cage. The MCAI also prohibits installation of affected parts. The FAA is proposing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–1003.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Bombardier Service Bulletins 100–24–29 and 350–24–004, both Revision 01, both dated July 27, 2023. This service information specifies procedures for a records check to determine the total flight hours and replacement of affected LH DCPC units (part numbers 975GC02Y04, 975GC0Y05, 975GC02Y06, and 975GC02Y07). These documents are distinct since they apply to different airplane configurations.

The following documents specify procedures for removing LH DCPC units.

- Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, use Document Identification No. CH 300 AMM.)
- Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, use Document Identification No. CH 350 AMM.)

The following documents specify procedures for installing LH DCPC units.

- Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, use Document Identification No. CH 300 AMM.)
- Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, use Document Identification No. CH 350 AMM.)

The following documents specify procedures for testing LH DCPC units.

- Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24, 61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, use Document Identification No. CH 300 AMM.)
- Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24, 61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023. (For obtaining the task for the Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, use Document Identification No. CH 350 AMM.)

This proposed AD would also require the following service information, which the Director of the Federal Register approved for incorporation by reference as of August 15, 2023 (88 FR 44042, July 11, 2023).

- Bombardier Service Bulletin 100–24–29, dated April 9, 2021.
- Bombardier Service Bulletin 100–24–30, dated November 29, 2022.
- Bombardier Service Bulletin 350–24–004, dated April 9, 2021.
- Bombardier Service Bulletin 350–24–005, dated November 29, 2022.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this NPRM after determining that unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would expand the applicability of AD 2023–11–01 and require the actions specified in the service information described previously, except as discussed under ''Differences Between this Proposed AD and the MCAI.''

Differences Between This Proposed AD and the MCAI

Although the MCAI only requires LH DCPC P/N 975GC02Y07 that have been cleaned or replaced to be modified to P/N 975GC02Y08, this proposed AD would also require that LH DCPC P/N 975GC02Y04, 975GC02Y05, and 975GC02Y06 that have been cleaned or replaced, as required by Transport

Canada AD CF–2022–28 (which corresponds to AD 2023–11–01), to be replaced with LH DCPC P/N 975GC02Y08.

Additionally, although the MCAI only requires the test of the DCPC logic and protections after modification of P/N 975GC02Y07 that have been cleaned or replaced, as required by Transport Canada AD CF–2022–28, to P/N 975GC02Y08, this proposed AD also requires the functional test of the LH DCPC unit.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 356 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Records check	1 work-hours × $85 per hour = $85	$0	$85	$30,260
New proposed actions (modification)	2 work-hours × $85 per hour = $170	0	170	60,520

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
7 work-hours × $85 per hour = $595	Up to $35,000	Up to $35,595.

According to the manufacturer, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all known costs in the cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA has determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2023–11–01, Amendment 39–22446 (88 FR 44042, July 11, 2023); and

■ b. Adding the following new AD:

Bombardier, Inc.: Docket No. FAA–2024–1003; Project Identifier MCAI–2023–00712–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 10, 2024.

(b) Affected ADs

This AD replaces AD 2023–11–01, Amendment 39–22446 (88 FR 44042, July 11, 2023) (AD 2023–11–01).

(c) Applicability

This AD applies to all Bombardier, Inc., Model BD–100–1A10 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 24, Electrical Power.

(e) Unsafe Condition

This AD was prompted by multiple reports of erratic electrical system status on the push button annunciators (PBAs) and the engine instrument and crew alerting system (EICAS) while on-ground and during flight, and by the determination that certain direct current power center (DCPC) units require additional modification or replacement. The FAA is issuing this AD to address erratic indications, which could cause the flightcrew to turn off fully operational electrical power sources, leading to partial or complete loss of electrical power. The unsafe condition, if not addressed, could result in loss of flight displays and reduced controllability of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Records Check

For any left-hand (LH) DCPC unit having part number (P/N) 975GC02Y04, 975GC02Y05, 975GC02Y06, or 975GC02Y07 that was not cleaned before the effective date of this AD as specified in Safran Service Bulletin 975GC02Y–24–018 or replaced before the effective date of this AD as specified in Bombardier Service Bulletin 100–24–29 or Bombardier Service Bulletin 350–24–004: Within 60 days after the effective date of this AD, verify the total flight hours of the LH DCPC unit since the date of manufacture by doing a records check in accordance with paragraph 2.B.(1) of the Accomplishment Instructions of the applicable service bulletin identified in paragraphs (g)(1) and (2) of this AD.

(1) For airplanes having serial numbers 20001 through 20500 inclusive, use Bombardier Service Bulletin 100–24–29, dated April 9, 2021, or Revision 01, dated July 27, 2023. As of the effective date of this AD, use only Bombardier Service Bulletin 100–24–29, Revision 01, dated July 27, 2023.

(2) For airplanes having serial numbers 20501 through 20999 inclusive, use Bombardier Service Bulletin 350–24–004, dated April 9, 2021, or Revision 01, dated July 27, 2023. As of the effective date of this AD, use only Bombardier Service Bulletin 350–24–004, Revision 01, dated July 27, 2023.

(h) Replacement of the LH DCPC

If, during the records check required by paragraph (g) of this AD, the total flight hours since date of manufacture of the LH DCPC unit is equal to or more than 3,500 total flight hours as of the effective date of this AD, and the LH DCPC was not previously cleaned as specified in Safran Service Bulletin 957GC02Y–24–018, or replaced as specified in Bombardier Service Bulletin 100–24–29 or Bombardier Service Bulletin 350–24–004: Within 12 months after the effective date of this AD, remove, replace with LH DCPC P/N 975GC02Y08, test the DCPC logic and protection cards, and do the functional test for the LH DCPC unit, in accordance with the applicable service information specified in paragraphs (h)(1) through (8) of this AD. If any test fails, do corrective actions and repeat the test before further flight until the test passes.

(1) Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023.

(2) Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023.

(3) Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023.

(4) Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023.

(5) For airplanes having serial number 20001 through 20500 inclusive, use paragraph 2.D. of the Accomplishment Instructions of Bombardier Service Bulletin 100–24–30, dated November 29, 2022.

(6) For airplanes having serial number 20501 through 20999 inclusive, use paragraph 2.D. of the Accomplishment Instructions of Bombardier Service Bulletin 350–24–005, dated November 29, 2022.

(7) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023.

(8) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023.

(i) Exception to the Service Information

Although the note in paragraph 2.B.(4) of the Accomplishment Instructions of Bombardier Service Bulletin 100–24–29, dated April 9, 2021, and Revision 01, dated July 27, 2023, and Bombardier Service Bulletin 350–24–004, dated April 9, 2021, and Revision 01, dated July 27, 2023, specify that actions will reset ''the unit total flight hours to zero at date of incorporation,'' this AD does not include that requirement.

(j) Modification

For LH DCPC P/N 975GC02Y07 units that were cleaned before the effective date of this AD as specified in Safran Service Bulletin 975GC02Y–24–018, or replaced before the effective date of this AD as specified in Bombardier Service Bulletin 100–24–29 or Bombardier Service Bulletin 350–24–004: Within 12 months after the effective date of this AD, modify each LH DCPC P/N 975GC02Y07 into LH DCPC P/N 975GC02Y08, in accordance with paragraph 2.C. of the Accomplishment Instructions of the applicable service bulletin identified in paragraph (j)(1) or (2) of this AD. Before further flight after the modification, test the DCPC logic and protection cards in accordance with paragraph 2.D. of the Accomplishment Instructions of the applicable service bulletin identified in paragraph (j)(1) or (2) of this AD, and do the functional test for the LH DCPC unit, in accordance with the applicable service information specified in paragraphs (j)(3) or (4) of this AD. If any test fails, do corrective actions and repeat the test before further flight until the test passes.

(1) For airplanes having serial number 20001 through 20500 inclusive, use Bombardier Service Bulletin 100–24–30, dated November 29, 2022.

(2) For airplanes having serial number 20501 through 20999 inclusive, use Bombardier Service Bulletin 350–24–005, dated November 29, 2022.

(3) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two—Publication No. CH 300 AMM, Revision 82, dated November 9, 2023.

(4) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Adjustment/Test, Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, Revision 38, dated November 9, 2023.

(k) Replacement of Certain LH DCPC P/N 975GC02Y04, 975GC02Y05, and 975GC02Y06

For LH DCPC P/N 975GC02Y04, 975GC02Y05, and 975GC02Y06 that were cleaned before the effective date of this AD as specified in Safran Service Bulletin 975GC02Y–24–018, or replaced before the effective date of this AD as specified in Bombardier Service Bulletin 100–24–29 or Bombardier Service Bulletin 350–24–004: Within 12 months after the effective date of this AD, remove, replace with LH DCPC P/N 975GC02Y08, test the DCPC logic and protection cards, and do the functional test for the LH DCPC unit, in accordance with the applicable service information specified in paragraphs (h)(1) through (8) of this AD. If any test fails, do corrective actions and repeat the test before further flight until the test passes.

(l) Parts Installation Prohibition

As of 60 days from the effective date of this AD, it is prohibited to install a LH DCPC with P/N 975GC02Y04, 975GC02Y05, 975GC02Y06, or 975GC02Y07, on any airplane.

(m) Additional AD Provisions

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (n)(2) of this AD. Information may be emailed to: *9-AVS-NYACO-COS@faa.gov.*

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Bombardier, Inc.'s Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(n) Additional Information

(1) Refer to Transport Canada AD CF–2023–35, dated May 26, 2023, for related information. This Transport Canada AD may be found in the AD docket at regulations.gov under Docket No. FAA–2024–1003.

(2) For more information about this AD, contact Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

(o) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following service information was approved for IBR on [DATE 35 DAYS AFTER PUBLICATION OF THE FINAL RULE].

(i) Bombardier Service Bulletin 100–24–29, Revision 01, dated July 27, 2023.

(ii) Bombardier Service Bulletin 350–24–004, Revision 01, dated July 27, 2023.

(iii) Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two, Publication No. CH 300 AMM, Revision 82, dated November 9, 2023.

(A) Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation.

Note 1 to paragraph (o)(3)(iii)(A): For obtaining the tasks specified in paragraphs (o)(3)(iii)(A) through (C) of this AD for the Bombardier Challenger 300 Aircraft Maintenance Manual, Part Two, Publication No. CH 300 AMM, use Document Identification No. CH 300 AMM.

(B) Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation.

(C) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24, 61–01, DC Power Center (DCPC), Adjustment/Test.

(iv) Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two, Publication No. CH 350 AMM, Revision 38, dated November 9, 2023.

(A) Task 24–61–01–000–801, Removal of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation.

Note 2 to paragraph (o)(3)(iv)(A): For obtaining the tasks specified in paragraphs (o)(3)(iv)(A) through (C) of this AD for the Bombardier Challenger 350 Aircraft Maintenance Manual, Part Two—Publication No. CH 350 AMM, use Document Identification No. CH 350 AMM.

(B) Task 24–61–01–400–801, Installation of the DC Power Center (DCPC), Subject 24–61–01, DC Power Center (DCPC), Removal/Installation.

(C) Task 24–61–01–720–801, Functional Test of the DC Power Center (DCPC), Subject 24, 61–01, DC Power Center (DCPC), Adjustment/Test.

(4) The following service information was approved for IBR on August 15, 2023 (88 FR 44042, July 11, 2023).

(i) Bombardier Service Bulletin 100–24–29, dated April 9, 2021.

(ii) Bombardier Service Bulletin 100–24–30, dated November 29, 2022.

(iii) Bombardier Service Bulletin 350–24–004, dated April 9, 2021.

(iv) Bombardier Service Bulletin 350–24–005, dated November 29, 2022.

(5) For service information identified in this AD, contact Bombardier Business Aircraft Customer Response Center, 400 Côte-Vertu Road West, Dorval, Québec H4S 1Y9, Canada; telephone 514–855–2999; email *ac.yul@aero.bombardier.com;* website *bombardier.com.*

(6) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(7) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on April 15, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 80

[Docket No. FDA–2022–N–1635]

RIN 0910–AI69

Color Additive Certification; Increase in Fees for Certification Services; Reopening of the Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule; reopening of the comment period.

SUMMARY: The Food and Drug Administration (FDA or we) is reopening the comment period for the proposed rule, ''Color Additive Certification; Increase in Fees for Certification Services,'' which published in the **Federal Register** of November 2, 2022. We are taking this action to add supporting information to the administrative record and to adjust the record to reflect the same cost and benefits figures that were published in the preliminary regulatory impact analysis. We are reopening the comment period for 30 days specifically to invite public comments on the new information being added to the administrative record.

DATES: FDA is reopening the comment period on the proposed rule ''Color Additive Certification; Increase in Fees for Certification Services,'' which published in the **Federal Register** on November 2, 2022 (87 FR 66116). Either electronic or written comments must be submitted by May 28, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of May 28, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2022–N–1635 for ''Color Additive Certification; Increase in Fees for Certification Services; Reopening of the

Comment Period.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Bryan Bowes, Office of Cosmetics and Colors (HFS–105), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–1122; or Carrol Bascus, Center for Food Safety and Applied Nutrition, Office of Regulations and Policy (HFS–024), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2378.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of November 2, 2022 (87 FR 66116), FDA published a proposed rule to amend the color additive regulations to increase the fee for certification services. The change in fees would allow FDA to continue to maintain an adequate color certification program as required by the Federal Food, Drug, and Cosmetic Act. The fees are intended to recover the full costs of operation of FDA's color certification program. We originally gave interested persons until January 3, 2023, to provide comments on the proposed rule. On January 24, 2023, in response to a stakeholder request, we reopened the comment period for an additional 45 days to allow interested parties more time to collect, analyze, and incorporate data and submit comments to the proposed rule.

Subsequently, we determined that additional supporting information should be included in the administrative record. Therefore, we are adding a Color Certification Fee Study (March 2024) to the administrative record that further explains the basis for the proposed rule. The fee study documents the need for increased fees and outlines the basis on which we developed the fee schedule in the proposed rule. We are adding the fee study to the administrative record and reopening the comment period for 30 days to provide the public an opportunity to comment on the document. Comments are invited, and will be considered, only to the extent they are focused on the information being newly added to the record.

Additionally, for transparency, we are adjusting the Preliminary Economic Analysis of Impacts, in Section V. B. Summary of Costs and Benefits (87 FR 66116 at 66118). The proposed rule did not include the same estimates that were published in the Preliminary Regulatory Impact Analysis (PRIA) listed in the reference section (87 FR 66116 at 66119). The PRIA, entitled ''Color Additive Certification; Increase in Fees for Certification Services'' Preliminary Regulatory Impact Analysis, Initial Regulatory Flexibility Analysis, Unfunded Mandates Reform Act Analysis, and available at *https://www.fda.gov/about-fda/economics-staff/regulatory-impact-analyses-ria* describes the estimates of the costs and benefits of the proposed rule.

Consistent with the published PRIA, Section V.B. Summary of Costs and Benefits should read as follows:

This proposed rule, if finalized, would amend existing color additive regulations by increasing fees for certification services. The fee schedule for color additive certification, as provided for in this proposed regulation, is designed to cover all the costs of operation of FDA's color certification program. This includes both the cost of specific tests required by the regulations and the general costs associated with the certification program, such as the costs of accounting, reviewing data, issuing certificates, conducting research, inspecting establishments, and purchasing and maintaining equipment. The fee for certification services of straight colors including lakes would increase from $0.35 per pound to $0.45 per pound, with the minimum fee increasing from $224 to $288. The fees for repacks of certified color additives and color additive mixtures would increase from $35 for 100 pounds or less to $45 for 100 pounds or less. The fee for repacks of certified color additives and color additive mixtures over 100 pounds, but not over 1,000 pounds would increase from $35 plus $0.06 for each pound over 100 pounds to $45 plus $0.08 for each pound over 100 pounds. The fee for repacks of certified color additives and color additive mixtures over 1,000 pounds would increase from $89 plus $0.02 for each pound over 1,000 pounds to $114 plus $0.03 for each pound over 1,000 pounds.

The economic burdens of this proposed rule, if finalized, would accrue to color additive manufacturers. We estimate a one-time cost to read and understand the rule for all color additive manufacturers. The present value of this cost is approximately $2,307 at a 3 percent rate of discount, and $2,221 at a 7 percent rate of discount. The annualized value of these costs estimates is approximately $270 at a 3 percent discount rate and $316 at a 7 percent discount rate. Because the value of these impacts is small relative to manufacturer revenues, we assume that the supply of color additives would not be affected by this proposed rule. Consequently, we estimate no other impacts associated with this proposed rule.

As noted in the preamble, the fees are intended to recover the full costs of operation of FDA's color certification program. Since 2005, the costs of the certification program significantly increased as a result of escalating staff payroll, rent and facility charges, as well as general operational expenses including purchasing and maintaining equipment. As the increase in fees is not associated with any change in the FDA certification program, no economic benefits are expected to result from the proposed rule. Similarly, the impact of

the increase in certification fees on color additive manufacturers is considered a transfer, rather than an economic cost. Accordingly, we do not estimate economic benefits associated with this proposed rule, and the impact of the increase in color certification fees is estimated as an ongoing transfer from manufacturers of color additives to the federal government. Our estimates are summarized in Table 1, below.

TABLE 1—SUMMARY OF BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF PROPOSED RULE

[Millions of 2020 dollars over 10-year time horizon]

Category	Primary estimate	Low estimate	High estimate	Units			Notes
				Year dollars	Discount rate (%)	Period covered (years)	
Benefits:							
Annualized					7		
Monetized $/year					3		
Annualized					7		
Quantified					3		
Qualitative							
Costs:							
Annualized	$0.00032			2020	7	10	
Monetized $/year	$0.00027			2020	3	10	
Annualized					7		
Quantified					3		
Qualitative							
Transfers:							
Federal	$2.46			2020	7	10	
Annualized	$2.46			2020	3	10	
Monetized $/year							
From/To	From: Manufacturers of color additives			To: Federal Government			
Other Annualized					7		
Monetized $/year					3		
From/To	From:			To:			

Effects:

State, Local or Tribal Government: No effect.

Small Business: The proposed rule, if finalized, would generate costs to small businesses, as well as transfers from small businesses to FDA that we treat as costs from the perspective of the small business. On average, these costs amount to approximately 0.2733% of annual average revenues of the small firms in the affected industry.

Wages: No effect.

Growth: No effect.

Dated: April 22, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 177

[Docket No. FDA–2024–F–1912]

Filing of Food Additive Petition From Environmental Defense Fund, Breast Cancer Prevention Partners, Center for Food Safety, Environmental Working Group, Tom Neltner, and Maricel Maffini; Request To Amend the Food Additive Regulations To Remove Authorization of Fluorinated Polyethylene

AGENCY: Food and Drug Administration, HHS.

ACTION: Notification of petition.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing that we have filed a food additive petition, submitted by Environmental Defense Fund, et al., proposing that the food additive regulations be amended to remove fluorinated polyethylene.

DATES: The food additive petition was filed on April 17, 2024. Either electronic or written comments must be submitted by June 25, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 25, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–F–1912 for ''Filing of Food Additive Petition from Environmental Defense Fund, et al.; Request to Amend the Food Additive Regulations to Remove Fluorinated Polyethylene.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comment only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Lillian Mawby, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 301–796–4041.

SUPPLEMENTARY INFORMATION:

I. Background

Under section 409(b)(5) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 348(b)(5)), we are giving notice that we have filed a food additive petition (FAP 3B4837), submitted by Environmental Defense Fund, Breast Cancer Prevention Partners, Center for Food Safety, Environmental Working Group, Tom Neltner, and Maricel Maffini, c/o Maricel Maffini, Frederick, MD 21701. The petition proposes that we revoke § 177.1615 (21 CFR 177.1615, ''Polyethylene, fluorinated'').

II. Request To Repeal 21 CFR Part 177.1615

In accordance with the procedures for amending or repealing a food additive regulation in § 171.130 (21 CFR 171.130), the petition asks us to repeal § 177.1615. Specifically, the petitioners state that the fluorinated polyethylene manufactured consistent with § 177.1615 can produce polymeric per- and poly-fluorinated alkyl substances that can migrate to food and, therefore, are not safe pursuant to section 409(c)(5) of the FD&C Act (21 U.S.C. 348(c)(5)).

The petition is available in the docket. We invite comments, additional scientific data, and other information related to the issues raised by this petition. If we determine that the available data justifies repealing § 177.1615, we will publish our decision in the **Federal Register** in accordance with § 171.130.

The petitioners have claimed that this action is categorically excluded under 21 CFR 25.32(m), which applies to an action to prohibit or otherwise restrict or reduce the use of a substance in food, food packaging, or cosmetics. In addition, the petitioners have stated that, to their knowledge, no extraordinary circumstances exist. If FDA determines a categorical exclusion applies, neither an environmental assessment nor an environmental impact statement is required. If FDA determines a categorical exclusion does not apply, we will request an environmental assessment and make it available for public inspection.

Dated: April 23, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2024–09027 Filed 4–25–24; 8:45 am]

BILLING CODE 4164–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA–R04–OAR–2021–0258; FRL–9562–01–R4]

South Carolina; Approval of State Plan for Control of Emissions From Commercial and Industrial Solid Waste Incineration Units

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the Clean Air Act (CAA or Act) section 111(d)/129 State plan submitted by the State of South Carolina, through the South Carolina Department of Health and Environmental Control (SCDHEC), on December 19, 2014, and supplemented on September 17, 2018, and June 19, 2019, and November 5, 2019, for implementing and enforcing the Emissions Guidelines (EG) applicable to existing Commercial and Industrial Solid Waste Incineration (CISWI) units. The State plan provides for implementation and enforcement of the EG, as finalized by the EPA on June 23, 2016, applicable to existing CISWI units for which construction commenced on or before June 4, 2010, or for which modification or reconstruction commenced after June 4, 2010, but no later than August 7, 2013; the State plan also incorporates the CISWI technical amendments finalized by the EPA on April 16, 2019. The State plan establishes emission limits, monitoring, operating, recordkeeping, and reporting requirements for affected CISWI units.

DATES: Comments must be received on or before May 28, 2024.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R04–OAR–2021–0258 at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment

received to its public docket. Do not submit electronically any information you consider to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www2.epa.gov/dockets/commenting-epa-dockets.*

FOR FURTHER INFORMATION CONTACT: Mark Bloeth, Communities and Air Toxics Section, Air Analysis and Support Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303. Mr. Bloeth can be reached via telephone at (404) 562–9013 and via email at *bloeth.mark@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 129 of the Clean Air Act (CAA or the Act) directs the Administrator to establish performance standards and emission guidelines pursuant to section 111(d) of the Act limiting emissions of nine air pollutants (particulate matter, sulfur dioxide, hydrogen chloride, oxides of nitrogen, carbon monoxide, lead, cadmium, mercury, and dioxins/furans) from four categories of solid waste incineration units: municipal solid waste; hospital, medical, and infectious solid waste; commercial and industrial solid waste; and other solid waste.

Section 129(b)(2) of the CAA requires States to submit to the EPA for approval State plans and revisions that implement and enforce the EG—in this case, 40 CFR part 60, subpart DDDD. State plans and revisions must be at least as protective as the EG, and they become federally enforceable upon approval by the EPA. The procedures for adoption and submittal of State plans and revisions are codified in 40 CFR part 60, subpart B.

On December 1, 2000, the EPA promulgated new source performance standards (NSPS) and EG to reduce air pollution from CISWI units, which are codified at 40 CFR part 60, subparts CCCC and DDDD, respectively. *See* 65 FR 75338. The EPA revised the NSPS and EG for CISWI units on March 21, 2011. *See* 76 FR 15704. Following promulgation of the 2011 CISWI rule, the EPA received petitions for reconsideration requesting that the EPA reconsider numerous provisions in the rule. The EPA granted reconsideration on certain issues and promulgated a CISWI reconsideration rule on February 7, 2013. *See* 78 FR 9112 (February 7, 2013). Subsequently, EPA received petitions to further reconsider certain provisions of the 2013 NSPS and EG for CISWI units. On January 21, 2015, the EPA granted reconsideration on four specific issues, and it finalized reconsideration of the CISWI NSPS and EG on June 23, 2016. *See* 81 FR 40956. On April 16, 2019, the EPA finalized amendments to the NSPS and EG for CISWI units, which discussed clarifications and/or corrections regarding: (1) an alternative equivalent emission limit for mercury (Hg) for waste-burning kilns, (2) timing of initial test and initial performance evaluation, (3) extension of electronic data reporting requirement, (4) non-delegated authorities, (5) demonstrating initial and continuous compliance when using a continuous emissions monitoring system (CEMS), (6) continuous opacity monitoring requirements, (7) other CEMS requirements, (8) reduced testing requirements, (9) deviation reporting requirements for continuous monitoring data, and (10) clarification of air curtain incinerator requirements (ACI), as well as corrections to typographical errors. *See* 84 FR 15846.

II. Review of South Carolina's CISWI State Plan Submittal

South Carolina submitted a State plan to implement and enforce the EG for existing CISWI units in the State [1] on December 19, 2014, with a subsequent supplemental revision on September 17, 2018, an addendum on June 19, 2019, and a final updated State plan on November 5, 2019. The EPA has reviewed the State plan submittals for existing CISWI units in the context of the requirements of 40 CFR part 60, subparts B and DDDD. State plans must include the following nine essential elements: identification of legal authority; identification of mechanism for implementation; inventory of affected facilities; emissions inventory; emission limits; compliance schedules; testing, monitoring, recordkeeping, and reporting; public hearing records; and annual State progress reports on plan enforcement. For the reasons explained below, the EPA is proposing to approve South Carolina's CISWI State plan as consistent with those requirements.

In addition to the foregoing statutory and regulatory provisions, South Carolina's regulations also include, through incorporation by reference, 40 CFR part 60, subpart DDDD (as amended most recently at 84 FR 15846 (April 16, 2019), which includes the following Federal requirements: (1) Increments of Progress, (2) Waste Management Plan, (3) Operator Training and Qualification, (4) Emission Limitations and Operating Limits, (5) Performance Testing, (6) Initial Compliance Requirements, (7) Continuous Compliance Requirements, (8) Monitoring, (9) Recordkeeping and Reporting, (10) Title V Operating Permits, (11) Air Curtain Incinerators, (12) Definitions, (13) a modified Table 1 to include the final compliance date of February 7, 2018, and (14) Tables 2 through 9 of 40 CFR part 60, subpart DDDD.

A. Identification of Legal Authority

Under 40 CFR 60.26 and 60.2515(a)(9), an approvable State plan must demonstrate that the State has legal authority to adopt and implement the EG's emission standards and compliance schedule. In its submittals, South Carolina cites the following State law provisions for its authority to implement and enforce the State plan via its air quality program: South Carolina Code Section 48–1, Chapter 1 of the Pollution Control Act, South Carolina Department of Health and Environmental Control, Chapter 61, Statutory Authority: 1976 Code Section 48–1–10 through Section 48–1–350.; SCDHEC Regulation 61–62.60, Subpart DDDD, State effective on August 23, 2019. The EPA has reviewed the cited authorities and proposes to find that the State has adequately demonstrated legal authority to implement and enforce the CISWI State plan in South Carolina.

B. Identification of Enforceable State Mechanisms for Implementing the Plan

Under 40 CFR 60.24(a), a State plan must include emission standards, defined at 40 CFR 60.21(f) as ''a legally enforceable regulation setting forth an allowable rate of emissions into the atmosphere, or prescribing equipment specifications for control of air pollution emissions.'' *See also* 40 CFR 60.2515(a)(8). South Carolina has adopted enforceable emission standards for affected CISWI units by incorporating by reference 40 CFR part 60, subpart DDDD (as amended most recently at 84 FR 15846), at SCDHEC's Regulation 61–62.60, Subpart DDDD—Performance Standards and Compliance

[1] The submitted State plan does not apply in Indian country located in the State.

Times for Existing Commercial and Industrial Solid Waste Incineration Units, as described in South Carolina State Register Vol. 43, Issue 8 (August 23, 2019). The EPA proposes to find that South Carolina's Regulation 61–62.60, Subpart DDDD, meets the emission standards requirement under 40 CFR 60.24(a).

C. Inventory of Affected Units

Under 40 CFR 60.25(a) and 60.2515(a)(1), a State plan must include a complete source inventory of all CISWI units. South Carolina has identified affected units at six facilities: Argos (kiln), DAK Americas (fluidized bed incinerator), Ulmer Brothers, Inc. (air curtain incinerator), Coastal Debris (air curtain incinerator), Advanced Machining & Fabrication, Inc. (air curtain incinerator), and Tri-County Pallet (air curtain incinerator). Omission from this inventory of CISWI units does not exempt an affected facility from the applicable section 111(d)/129 requirements. The EPA proposes to find that South Carolina has met the affected unit inventory requirements under 40 CFR 60.25(a) and 60.2515(a)(1).

D. Inventory of Emissions From Affected CISWI Units

Under 40 CFR 60.25(a) and 60.2515(a)(2), a State plan must include an emissions inventory of the pollutants regulated by the EG. Emissions from CISWI units may contain cadmium, carbon monoxide, dioxins/furans, hydrogen chloride, lead, mercury, nitrogen oxides, particulate matter, and sulfur dioxide. South Carolina submitted an emissions inventory for CISWI units as part of its State plan. This emissions inventory contains CISWI unit emissions rates for each regulated pollutant. Therefore, the EPA proposes to find that South Carolina has met the emissions inventory requirements of 40 CFR 60.25(a) and 60.2515(a)(2).

E. Emission Limitations, Operator Training and Qualification, Waste Management Plan, and Operating Limits for CISWI Units

Under 40 CFR 60.24(c) and 60.2515(a)(4), the State plan must include emission standards that are no less stringent than the EG. 40 CFR 60.2515(a)(4) also requires operator training and qualification requirements, a waste management plan, and operating limits. At its Regulation 61–62.60 Subpart DDDD, South Carolina has incorporated by reference the EG's emission standards, operator training and qualification requirements, waste management plan, and operating limits for CISWI units. Therefore, the EPA proposes to find that South Carolina's State plan satisfies the requirements of 40 CFR 60.24(c) and 60.2515(a)(4).

F. Compliance Schedules

Under 40 CFR 60.24(a), (c), and (e) and 40 CFR 60.2515(a)(3), each State plan must include a compliance schedule, which requires affected CISWI units to expeditiously comply with the State plan requirements. In the State plan at Regulation 61–62.60 Subpart DDDD, South Carolina requires that affected sources comply with the EG initial compliance requirements for CISWI units, which the EPA has codified at 40 CFR 60.2700 through 40 CFR 60.2706. Therefore, EPA proposes to find that South Carolina's State plan satisfies the requirements of 40 CFR 60.24(a), (c), and (e) and 40 CFR 60.2515(a)(3).

G. Testing, Monitoring, Recordkeeping, and Reporting Requirements

Under 40 CFR 60.24(b)(2), 60.25(b), and 60.2515(a)(5), an approvable State plan must require that sources conduct testing, monitoring, recordkeeping, and reporting. South Carolina's State plan incorporates by reference the model rule provisions of the EG at Regulation 61–62.60 Subpart DDDD, including performance testing provisions at 40 CFR 60.2690 through 60.2695, monitoring provisions at 40 CFR 60.2730 through 60.2735, and recordkeeping and reporting provisions at 40 CFR 60.2740 through 60.2800. Additionally, all reports required under 40 CFR 60.2795(a), (b)(1), and (b)(2) must be submitted to SCDHEC as well as to the EPA. Therefore, the EPA proposes to find that South Carolina's State plan satisfies the requirements of 40 CFR 60.24(b)(2), 60.25(b), and 60.2515(a)(5).

H. A Record of Public Hearing on the State Plan Revision

Requirements at 40 CFR 60.23 sets forth the public participation requirements for each State plan. The State must conduct a public hearing; make all relevant plan materials available to the public prior to the hearing; and provide notice of such hearing to the public, the Administrator of the EPA, each local air pollution control agency, and, in the case of an interstate region, each State within the region. Under 40 CFR 60.2515(a)(6) requires each State plan include certification that the hearing was held, a list of witnesses and their organizational affiliations, if any, appearing at the hearing, and a brief written summary of each presentation or written submission.

In its submittal, South Carolina submitted records, including transcripts, of three public hearings. A public hearing was held on November 24, 2014, for the original December 19, 2014, State plan submittal. South Carolina held a second hearing on May 30, 2018, for the September 17, 2018, supplemental State plan submission which addressed the EPA's June 23, 2016, CISWI amendments and reconsideration. *See* 81 FR 40956 (June 23, 2016). South Carolina held a third public hearing on October 29, 2019, for the November 5, 2019, final supplement to the SCDHEC State plan submittal. South Carolina provided notice and made all relevant plan materials available prior to each hearing. Additionally, South Carolina certifies in each of its State plan submittals that hearings were held, and that the State received no written or oral comments on the plan. Therefore, the EPA proposes to find that South Carolina's CISWI plan satisfies the requirements of 40 CFR 60.23 and 60.2515(a)(6).

I. Annual State Progress Reports to EPA

Under 40 CFR 60.25(e) and (f) and 40 CFR 60.2515(a)(7), the State must provide in its State plan for annual reports to EPA on progress in enforcement of the plan. Accordingly, South Carolina provides in its plan that it will submit reports on progress in plan enforcement to the EPA on an annual (calendar year) basis, commencing with the first full reporting period after plan revision approval. The EPA proposes to find that South Carolina's CISWI plan satisfies the requirements of 40 CFR 60.25(e) and (f) and 40 CFR 60.2515(a)(7).

III. Incorporation by Reference

In this action, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference South Carolina Regulation 61–62.60, Subpart DDDD, State effective August 23, 2019, which includes provisions regarding applicability, emission limits, operating, testing, monitoring, recordkeeping, reporting, compliance schedules, and all other relevant requirements contained in EPA's emission guidelines for existing CISWI units and further described in Section II of this preamble. The EPA has made, and will continue to make these materials generally available through *http://www.regulations.gov,* Docket ID No. EPA–R04–OAR–2021–0258, and at

the EPA Region 4 Office (please contact the person identified in the ''For Further Information Contact'' section of this preamble for more information).

IV. Proposed Action

Pursuant to CAA section 111(d), CAA section 129, and 40 CFR part 60, subparts B and DDDD, the EPA is proposing to approve South Carolina's State plan for regulation of CISWI units as submitted on December 19, 2014, with a subsequent supplemental revision submitted on September 17, 2018, an addendum submitted on June 19, 2019, and a final updated State plan submitted on November 5, 2019. In addition, the EPA is proposing to amend 40 CFR part 62, subpart B to reflect this action.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a 111(d)/129 plan submission that complies with the provisions of the CAA and applicable Federal regulations. In reviewing 111(d)/129 plan submissions, the EPA's role is to approve State choices, provided they meet the criteria and objectives of the CAA and the EPA's implementing regulations. Accordingly, this action merely proposes to approve State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA.

Executive Order 12898 (59 FR 7629, February 16, 1994) directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or Indigenous peoples) and low-income populations.

The EPA believes that the human health and environmental conditions that exist prior to this action result in, or have the potential to result in, disproportionate and adverse human health or environmental effects on people of color, low-income populations, and/or Indigenous peoples. Certain areas of the State include communities that are pollution-burdened and underserved according to demographic data. EPA performed a screening-level analysis using EPA's EJSCREEN to identify environmental burdens and susceptible populations in communities surrounding CISWI units in the State. The results of the demographic analysis are presented in the *EJ Screening Report for South Carolina CISWI Units,* a copy of which is available in the docket for this action, Docket ID No. EPA–R04–EPA–2021–0258.

The EPA believes that this action is not likely to change existing disproportionate and adverse effects on people of color, low-income populations, and/or Indigenous peoples because the State plan implements national standards in the CISWI EG that would result in reductions in emissions of a wide array of air pollutants released due to the incineration of solid waste at commercial and industrial facilities. Some such pollutants exist in the waste feed material and are released unchanged during combustion, and some are generated as a result of the combustion process itself. These pollutants include particulate matter, sulfur dioxide, hydrogen chloride, oxides of nitrogen, carbon monoxide, lead, cadmium, mercury, and dioxins/furans . These pollutants are associated with certain negative health effects; for example, SO_2 and NO_X are precursors for the formation of $PM_{2.5}$, which is associated with health effects such as premature mortality for adults and infants, cardiovascular morbidity such as heart attacks, and respiratory morbidity such as asthma attacks, acute bronchitis, and other respiratory symptoms. Reducing these emissions will decrease the amount of such pollutants to which all affected populations are exposed. The EPA has determined that this action increases the level of environmental protection for all affected populations without having any disproportionately high and adverse human health or income or environmental effects on any population, including any minority, low-income, or Indigenous populations. To the extent that any minority, low-income, or Indigenous subpopulation is disproportionately impacted by emissions of any of the pollutants identified above due to the proximity of their homes to sources of these emissions, that subpopulation also stands to see increased environmental and health benefits from the emission reductions called for by this action.

In addition, this proposed approval of South Carolina's State plan for CISWI units does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the EPA is not proposing to approve the submitted plan to apply in Indian country located in the State, and because the submitted plan will not impose substantial direct costs on Tribal governments or preempt Tribal law.

List of Subjects in 40 CFR Part 62

Administrative practice and procedure, Air pollution control, Aluminum, Environmental protection, Fertilizers, Fluoride, Incorporation by reference, Industrial facilities, Intergovernmental relations, Methane, Ozone, Phosphate, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds, Waste treatment and disposal.

Authority: 42 U.S.C. 7411.

Dated: April 19, 2024.

Jeaneanne M. Gettle,

Acting Regional Administrator Region 4.

Notices

Federal Register
Vol. 89, No. 82
Friday, April 26, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

AGENCY FOR INTERNATIONAL DEVELOPMENT

[OMB Control No. 0412–0609]

Information Collection; Improving Customer Experience (OMB Circular A–11, Section 280 Implementation)

AGENCY: U.S. Agency for International Development

ACTION: Notice; request for comment.

SUMMARY: The U.S. Agency for International Development (USAID) as part of its continuing effort to reduce paperwork and respondent burden, is announcing an opportunity for public comment on a new proposed collection of information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, and to allow 30 days for public comment in response to the notice. This notice solicits comments on a renewal collection proposed by the Agency.

DATES: All comments should be submitted within 30 calendar days from the date of this publication.

ADDRESSES: Submit comments identified by Information Collection 0412–0609, Improving Customer Experience (OMB Circular A–11, Section 280 Implementation), by any of the following methods:

- *Federal eRulemaking portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments to *https://www.regulations.gov,* will be posted to the docket unchanged.
- *E-Mail:* ATTN: Allana Welch/IC 0412–0609, A–11 Section 280 Improving Customer Experience, *alwelch@usaid.gov*

Instructions: Please submit comments only and cite Information Collection 0412–0609, Improving Customer Experience (OMB Circular A–11, Section 280 Implementation), in all correspondence related to this collection. To confirm receipt of your comment(s), please check *regulations.gov,* approximately two to three business days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Allana Welch via email to *alwelch@usaid.gov* or by phone to 202–712–4264.

SUPPLEMENTARY INFORMATION:

A. Purpose

Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. USAID published a 60-day notice for this proposed information collection on February 21, 2024 (89 FR 13033). OMB regulations also require Federal Agencies to submit a notice to the **Federal Register** informing the public of its intent to seek OMB approval for an information collection. 5 CFR 1320.10(a). To comply with this requirement, USAIDis publishing notice of the proposed collection of information set forth in this document.

Whether seeking a loan, Social Security benefits, veteran's benefits, or other services provided by the Federal Government, individuals and businesses expect Government customer services to be efficient and intuitive, just like services from leading private-sector organizations. Yet the 2016 American Consumer Satisfaction Index and the 2017 Forrester Federal Customer Experience Index show that, on average, Government services lag nine percentage points behind the private sector.

A modern, streamlined and responsive customer experience means: raising government-wide customer experience to the average of the private sector service industry; developing indicators for high-impact Federal programs to monitor progress towards excellent customer experience and mature digital services; and providing the structure (including increasing transparency) and resources to ensure customer experience is a focal point for agency leadership. To support this, OMB Circular A–11 Section 280 established government-wide standards for mature customer experience organizations in government and measurement. To enable Federal programs to deliver the experience taxpayers deserve, they must undertake three general categories of activities: conduct ongoing customer research, gather and share customer feedback, and test services and digital products.

These data collection efforts may be either qualitative or quantitative in nature or may consist of mixed methods. Additionally, data may be collected via a variety of means, including but not limited to electronic or social media, direct or indirect observation (*i.e.,* in person, video and audio collections), interviews, questionnaires, surveys, and focus groups. USAID will limit its inquiries to data collections that solicit strictly voluntary opinions or responses. Steps will be taken to ensure anonymity of respondents in each activity covered by this request.

The results of the data collected will be used to improve the delivery of Federal services and programs. It will include the creation of personas, customer journey maps, and reports and summaries of customer feedback data and user insights. It will also provide government-wide data on customer experience that can be displayed on performance.gov to help build transparency and accountability of

Federal programs to the customers they serve.

Method of Collection

USAID will collect this information by electronic means when possible, as well as by mail, fax, telephone, technical discussions, and in-person interviews. USAID may also utilize observational techniques to collect this information.

Data

Form Number(s): None.
Type of Review: Renewal.

B. Annual Reporting Burden

Affected Public: Collections will be targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future. For the purposes of this request, ''customers'' are individuals, businesses, and organizations that interact with a Federal Government agency or program, either directly or via a Federal contractor. This could include individuals or households; businesses or other for-profit organizations; not-for-profit institutions; State, local or tribal governments; Federal government; and Universities.

Estimated Number of Respondents: 1,000,775.

Estimated Time per Response: Varied, dependent upon the data collection method used. The possible response time to complete a questionnaire or survey may be 3 minutes or up to 1.5 hours to participate in an interview.

Estimated Total Annual Burden Hours: 50,563.

Estimated Total Annual Cost to Public: $0.

C. Public Comments

USAID invites comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: April 24, 2024.

Allana Welch,

Senior Advisor & Digital Strategy Lead, USAID IPI/ITR/T.

BILLING CODE 6116–01–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc. No. AMS–TM–24–0001]

Notice of Availability of the Final Programmatic Environmental Assessment and Finding of No Significant Impact for AMS Resilient Food Systems Infrastructure Program

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice of availability.

SUMMARY: The Agricultural Marketing Service (AMS) announces the availability of the Final Programmatic Environmental Assessment (PEA) and Finding of No Significant Impact (FONSI) for the Resilient Food Systems Infrastructure (RFSI) Program.

FOR FURTHER INFORMATION CONTACT: Lara Shockey, Natural Resource Specialist, Transportation and Marketing Program; Telephone: (304) 373–5875; Email: *lara.s.shockey@usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

The final PEA and FONSI analyze and disclose the potential environmental impacts associated with the establishment of the Resilient Food Systems Infrastructure (RFSI) Program. The United States Department of Agriculture (USDA) Agricultural Marketing Service (AMS) has proposed to fund cooperative agreements to coordinate initiatives for non-meat and poultry food products in the middle of the supply chain. Funds will support expanded capacity for the aggregation, processing, manufacturing, storing, transporting, wholesaling, and distribution of locally and regionally produced food products, including specialty crops, dairy, grains for human consumption, aquaculture, and other food products, excluding meat and poultry.

States will make subawards to support local and regional food and farm businesses and other entities. States will also provide supply chain and market development services. Through these efforts, the RFSI program aims to enhance market access for small and mid-size producers and food businesses, contributing to a more resilient and sustainable food system.

The RFSI Program is authorized by section 1001 (b)(4) of the American Rescue Plan Act (ARPA) (Pub. L. 117–2), which funds ''loans and grants and other assistance to maintain and improve food and agricultural supply chain resiliency''. Recipients of funding from this proposed program would be allowed 48 months to complete work funded by the awards.

The environmental impacts of funding projects to expand capacity for the aggregation, processing, manufacturing, storing, transporting, wholesaling, and distribution of locally and regionally produced, non-meat and poultry food products and provide supply chain and market development services have been considered in a manner consistent with the provisions of the National Environmental Policy Act (NEPA) of 1969, Public Law 91–190, 42 U.S.C. 4321–4347, as amended.

A final PEA and FONSI have been prepared, and based on this analysis, AMS has determined there will not be a significant impact to the human environment. As a result, an Environmental Impact Statement (EIS) has not been initiated (40 CFR 1501.6). AMS intends for this PEA to create efficiencies by establishing a framework that can be used for ''tiering,'' where appropriate, to project-specific actions that require additional analysis. As decisions on specific applications are made, to the extent additional NEPA analysis is required, environmental review will be conducted to supplement the analysis set forth in this PEA.

The final PEA and FONSI are available for review online at the program website: *https://www.ams.usda.gov/services/grants/rfsi.*

Comments

AMS published a Draft PEA for public comment on February 12, 2024. The public comment period ended on March 13, 2024. No comments were received during the public comment period.

Melissa Bailey,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE 3410–02–P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS–2024–0021]

National Wildlife Services Advisory Committee: Intent To Reestablish

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of intent to reestablish the National Wildlife Services Advisory Committee.

SUMMARY: Pursuant to the Federal Advisory Committee Act, as amended (5 U.S.C. 10) notice is hereby given that the Secretary of Agriculture (Secretary) intends to reestablish the National Wildlife Services Advisory Committee (the ''Committee'') for a 2-year period. The Secretary has determined that the Committee is necessary and in the public interest.

DATES: Once approved by the Secretary, the charter will be valid on the date of filing by the U.S. Department of Agriculture Committee Management Officer and once the filing requirements are met.

FOR FURTHER INFORMATION CONTACT: Ms. Carrie Joyce, Designated Federal Officer, Wildlife Services, APHIS, 4700 River Road, Unit 87, Riverdale, MD 20737; (301) 851–3999; *carrie.e.joyce@usda.gov*.

SUPPLEMENTARY INFORMATION: The purpose of the National Wildlife Services Advisory Committee (the Committee) is to advise the Secretary of Agriculture on policies, program issues, and research needed to conduct the Wildlife Services program. The Committee also serves as a public forum enabling those affected by the Wildlife Services program to have a voice in the program's policies. The duration of the NWSAC is for 2 years unless renewed by the Secretary, USDA.

U.S. Department of Agriculture (USDA) programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.*, Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720–2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877–8339. Additionally, program information may be made available in languages other than English. Equal opportunity practices in accordance with USDA's policies will be followed in all appointments to the Committee. To ensure that the recommendations of the Committee have taken in account the needs of the diverse groups served by USDA, membership shall include to the extent possible, individuals with demonstrated ability to represent minorities, women and person with disabilities. USDA is an equal opportunity provider, employer, and lender.

Dated: April 18, 2024.

Cikena Reid,

USDA Committee Management Officer.

BILLING CODE 3410–34–P

DEPARTMENT OF AGRICULTURE

Forest Service

Tongass National Forest; Alaska; Assessment Phase of Revision of the Land Management Plan for the Tongass National Forest

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of intent to initiate the assessment phase of the Land Management Plan revision for the Tongass National Forest.

SUMMARY: The Forest Service, U.S. Department of Agriculture, is initiating the assessment phase of the Land Management Plan revision process for the Tongass National Forest, located in Southeast Alaska. The assessment supports the subsequent planning phase, which will result in a revised land management plan to guide resource management activities on the Tongass National Forest. The assessment will identify and consider relevant and readily accessible material about ecological, social, and economic conditions and trends in the planning area, and will identify best available scientific information including Native or Indigenous knowledge. Trends and conditions identified in the assessment will inform the need to change the existing plan as well as the subsequent revision process.

DATES: The public will be invited to engage and participate in the assessment phase of the revision process beginning in the spring of 2024 through winter of 2025. Engagement opportunities are posted on the Tongass National Forest Plan Revision website: *https://www.fs.usda.gov/detail/tongass/landmanagement/planning/?cid=fseprd1105492.* A draft assessment, which will reflect input received, is anticipated to be available for review and comment, in January 2025.

ADDRESSES: For questions about Land Management Plan revision or comments on initiating the assessment phase of plan revision, please address mail to: Tongass National Forest Supervisor's Office, Attn: Erin Mathews—Tongass Plan Revision Coordinator, 648 Mission Street, Suite 110, Ketchikan, AK 99901–6591, or via email to *SM.FS.TNFRevision@usda.gov.* All correspondence, including names and addresses, will be part of the public record. More information on the planning process can also be found on the Tongass Plan Revision website at *https://www.fs.usda.gov/detail/tongass/landmanagement/planning/?cid=fseprd1105492.*

FOR FURTHER INFORMATION CONTACT: Erin Mathews, Plan Revision Coordinator, at *erin.eathews@usda.gov* or by phone at 907–419–8347. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339, 24 hours a day, every day of the year, including holidays.

Information will be shared through electronic mailing lists, social media, and media outlets. If members of the public are interested in learning more, please visit the website listed above and select the link to subscribe to updates on the Tongass Plan Revision. The public can also sign up to receive regular updates by sending an email to *SM.FS.TNFRevision@usda.gov.*

SUPPLEMENTARY INFORMATION: The 2012 Planning Rule (36 CFR 219), which implements the National Forest Management Act (NFMA) of 1976, provides that the Forest Service develop, maintain and revise land management plans, often called a Forest Plan, for all national forests and grasslands. Land Management Plans provide a programmatic framework for management of forest resources and are amended as conditions change over time. The Tongass Land Management Plan was first approved in 1979, revised in 1997, and later amended in 2003, 2008, 2016, and 2020. The 2016 Land Management Plan amends the 2008 Tongass Land and Resource

Management Plan (2008 Forest Plan), incorporating changes made since 2008.

This notice announces initiates the assessment phase of the plan revision process, during which the Agency will identify and evaluate current information regarding the Tongass National Forest from the public, Tribes, Alaska Native Corporations, other government agencies, and non-governmental parties, 36 CFR 219.5(a)(1), 219.6, 219.19. The Tongass National Forest has initiated consultation with Tribes and Alaska Native Corporations for all phases of the planning process and will consult as part of the assessment phase of revision, 36 CFR 219.4. The Forest Service, Alaska Region, will build on the engagement efforts and the relationships developed as part of the Southeast Alaska Sustainability Strategy to ensure that a broad range of local voices contribute to the assessment and throughout the planning process. Information collected during the formation of the Sustainability Strategy will be utilized in the assessment where appropriate.

The 2012 Planning Rule requires the assessment to include information regarding the status and trends of ecological, social, and economic conditions within the planning area and across the broader landscape. In particular, the Agency must identify and evaluate information relevant to the plan area for the following: (1) Terrestrial ecosystems, aquatic ecosystems, and watersheds; (2) Air, soil, and water resources and quality; (3) System drivers, including dominant ecological processes, disturbance regimes, and stressors, such as natural succession, wildland fire, invasive species, and climate change, and the ability of terrestrial and aquatic ecosystems in the plan area to adapt to change; (4) Baseline assessment of carbon stocks; (5) Threatened, endangered, proposed, and candidate species, and potential species of conservation concern present in the plan area; (6) Social, cultural, and economic conditions; (7) Benefits people obtain from the National Forest System planning area (ecosystem services); (8) Multiple uses and their contributions to local, regional, and national economies; (9) Recreation settings, opportunities and access, and scenic character; (10); Renewable and nonrenewable energy and mineral resources; (11) Infrastructure, such as recreational facilities and transportation and utility corridors; (12) Areas of tribal importance; (13) Cultural and historic resources and uses; (14) Land status and ownership and access patterns; and (15) Existing designated areas located in the plan area including wilderness and wild and scenic rivers and potential need and opportunity for additional designated areas. (36 CFR 219.6.)

During this assessment phase, the Forest Service invites other government agencies, Tribes, Alaska Native Corporations, non-governmental parties, and the public to share information about social, economic, and environmental conditions of the Tongass National Forest and the broader landscape. Existing information about conditions on the Tongass National Forest, including information gathered through public engagement and tribal consultation, will be integrated into a draft resource assessment.

At 16.7 million acres, the Tongass National Forest is integral to social, ecological, economic and cultural values in Southeast Alaska. The Tongass is of immense cultural significance for Alaska Native peoples, and is within the traditional homelands of the Tlingit, Haida and Tsimshian peoples. It plays an important role in economic opportunity and social well-being for people and communities in Southeast Alaska. It also represents the largest intact coastal temperate rainforest on earth and is considered critical for carbon sequestration and carbon storage to help mitigate climate change. During this assessment phase, the Forest Service invites input on these and other distinctive roles and contributions of the Tongass to the local area, region, and nation (36 CFR 219.2(b)).

The Forest Service will review and incorporate public comments and additional information from tribal consultation on the draft assessment and produce a final assessment that will inform the Agency's understanding of the need to change the plan for the Tongass National Forest. The Forest Service may then initiate the planning phase, which will include development of an environmental impact statement, pursuant to the National Environmental Policy Act (NEPA).

Responsible Official: The responsible official for the revision of the land management plan for the Tongass National Forest is Frank Sherman, Forest Supervisor.

Dated: April 22, 2024.

Troy Heithecker,

Associate Deputy Chief, National Forest System.

[FR Doc. 2024–08957 Filed 4–25–24; 8:45 am]

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Forest Service

Kootenai National Forest; Montana; Kootenai National Forest Over-Snow Motorized Use Travel Plan

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service (Forest Service), United States Department of Agriculture, will prepare an environmental impact statement (EIS) to inform a decision about the designation of trails and areas of the Kootenai National Forest which would be open to motorized over-snow use. The environmental impact statement will also inform a decision about the classes of vehicles and times of year for which motorized over-snow use will be allowed on designated trails and areas. Trails and areas designated for motorized over-snow vehicle use will be identified on an Over-Snow Vehicle Use Map which will specify the classes of vehicles and the time of year for which use is designated on the Kootenai National Forest.

DATES: The draft environmental impact statement is expected early in 2025, with a 45-day public comment period immediately following publication of this project's Notice of Availability of Draft Environmental Impact Statement in the **Federal Register**. The final environmental impact statement is expected by summer of 2025.

FOR FURTHER INFORMATION CONTACT: Kootenai National Forest, *SM.FS.knfcontactus@usda.gov,* 406–283–7740, or Stephani Rust, *stephani.rust@usda.gov.* Individuals may also visit the project's web page at *https://www.fs.usda.gov/project/kootenai/?project=64358.* Individuals who use telecommunication devices for the deaf and hard of hearing (TDD) may call the Federal Relay Service at 800–877–8339, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Action

Pursuant to the Travel Management Rule at 36 CFR 212 subpart C, the Forest Service must designate trails and areas to be open for motorized over-snow vehicle use. Once designated, trails and areas open to motorized over-snow vehicle use need to be identified on an Over-Snow Vehicle Use Map (36 CFR 212.81). Over-Snow Vehicle Use Maps must specify the classes of vehicles and the time of year for which use is

designated (36 CFR 212.81(c)). The public shall be allowed to participate in the designation of National Forest System roads, trails, and areas, consistent with the National Environmental Policy Act (36 CFR 212.52).

On the 2.2-million-acre Kootenai National Forest, there is a need to designate trails and areas which would be open to motorized over-snow vehicle use. There is also a need to designate trails and areas open to motorized over-snow vehicle use within the Ten Lakes Wilderness Study Area of the Kootenai National Forest.

Proposed Action

The Forest Service proposes to designate approximately 1,302,000 acres of the Kootenai National Forest, including the Ten Lakes Wilderness Study Area, as areas open to cross-country motorized over-snow vehicle use. Approximately 987,000 acres are proposed as areas open for all classes of cross-country motorized over-snow travel from December 1 to May 31 each year. Approximately 315,000 acres are proposed as areas open for all classes of cross-country motorized over-snow travel from December 1 to March 31 and would be closed to motorized over-snow vehicle use on March 31 each year to accommodate grizzly bear den emergence. Areas designated for over-snow vehicle use would be identified on an Over-Snow Vehicle Use Map, in accordance with 36 CFR 212.81. Over-Snow Vehicle Use Maps would specify the classes of vehicles and the time of year for which use is designated (36 CFR 212.81(c)).

Additionally, the Forest Service proposes to designate approximately 380 miles of trails in the Kootenai National Forest, including in the Ten Lakes Wilderness Study Area, as open to motorized over-snow vehicle use. Approximately 285 miles of groomed over-snow trails and approximately 49 miles of ungroomed over-snow trails are proposed to be open to any over-snow vehicle class between December 1 and March 31 each year. Approximately 16 miles of groomed over-snow trails and 30 miles of ungroomed over-snow trails are proposed to be open to any over-snow vehicle class between December 1 and March 31 each year. Trails designated for over-snow vehicle use would be identified with the publication of an Over-Snow Vehicle Use Map, in accordance with 36 CFR 212.81.

An amendment to the Kootenai National Forest 2015 Land Management Plan may be considered to modify the boundaries of management area 5a (Backcountry-Non-motorized Year-round).

Expected Impacts

The minimization criteria were applied to the identification of the National Forest System areas and trails. Impacts to wolverine, grizzly bear, Canada lynx, and whitebark pine will be assessed in a biological assessment, and consultation with U.S. Fish and Wildlife Service is expected to occur. An amendment to the Kootenai National Forest 2015 Land Management Plan may be considered to modify the boundaries of management area 5a (Backcountry-Non-motorized Year-round) as it currently is mapped in the 2015 Land Management Plan. The following substantive requirements are likely to apply (219.13(b)(2)) to the potential amendment: 36 CFR 219.8(b) to guide the plan area's contribution to social and economic sustainability, taking into account: (1) social, cultural, and economic conditions relevant to the area influenced by the plan; (2) sustainable recreation; (3) multiple uses that contribute to local, regional, and national economies in a sustainable manner; and 36 CFR 219.9(a)(2) the plan must include plan components that maintain or restore the diversity of ecosystems and habitat types throughout the plan area.

Responsible Official

Kootenai National Forest Supervisor.

Scoping Comments and the Objection Process

Public scoping of this project occurred in April 2015 and July through September 2023; those scoping efforts have informed this proposed action. Public scoping will not be repeated; however, additional opportunities for public comment will be provided when the Draft EIS is available.

Any decision about this project may be subject to 36 CFR 218 and/or 36 CFR 219 pre-decisional review (objection). Unless received anonymously, public comments received during the scoping period from July 13, 2023 through September 29, 2023 or other designated opportunities for public comment may establish eligibility for participation in pre-decisional administrative review. Issues raised in an objection must be based on previously submitted comments, unless based on new information arising after designated opportunities.

Nature of Decision To Be Made

The decision will determine the designation of trails and areas of the Kootenai National Forest which will be open to motorized over-snow use, as well as determining the classes of vehicles and times of year for which motorized over-snow use will be allowed on designated trails and areas.

Substantive Provisions

An amendment to the Kootenai National Forest 2015 Land Management Plan may be considered to modify the boundaries of management area 5a (Backcountry-Non-motorized Year-round) as it currently is mapped in the 2015 Land Management Plan. The following substantive requirements are likely to apply (219.13(b)(2)) to the potential amendment: 36 CFR 219.8(b) to guide the plan area's contribution to social and economic sustainability, taking into account: (1) social, cultural, and economic conditions relevant to the area influenced by the plan; (2) sustainable recreation; (3) multiple uses that contribute to local, regional, and national economies in a sustainable manner; and 36 CFR 219.9(a)(2) the plan must include plan components that maintain or restore the diversity of ecosystems and habitat types throughout the plan area.

Dated: April 22, 2024.

Troy Heithecker,

Associate Deputy Chief, National Forest System.

[FR Doc. 2024–08951 Filed 4–25–24; 8:45 am]

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Forest Service

Nez Perce-Clearwater National Forests; Idaho; End of the World Project

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service (''Forest Service''), United States Department of Agriculture, is giving notice of its intent to prepare an environmental impact statement (EIS) for the End of the World Project on the Salmon River Ranger District of the Nez Perce-Clearwater National Forests in Idaho. The Forest received an unpublished order in Friends of the Clearwater v. Cheryl F. Probert. The court ordered the environmental assessment (EA), decision notice (DN), and finding of no significant impact (FONSI) for the End of the World project to be remanded to the United States Forest Service for further evaluation under the National Forest Management Act (NFMA) and National Environmental Policy Act

(NEPA). The EIS will further analyze old growth in the project area and evaluate the cumulative impacts with the neighboring Hungry Ridge Project to ensure old growth was retained per the 1987 Nez Perce National Forest land management plan requirements.

DATES: The Forest Service is not conducting a scoping period because we are using the information we collected during the development of the previous EA. The draft EIS will be published for public comment as required by 40 CFR 1503.1. Notice of the draft EIS availability will be announced for public review and comment in the **Federal Register** and on the Nez Perce-Clearwater National Forests' project website, as well as other local media. The comment period for the draft EIS will be 45 days from the date the Environmental Protection Agency publishes the notice of availability in the **Federal Register**. The Forest Service anticipates that the draft EIS will be available for public review in spring/summer 2024.

ADDRESSES: Nez Perce Clearwater National Forests, 1008 Highway 64, Kamiah, Idaho 83536.

FOR FURTHER INFORMATION CONTACT: Jeff Shinn, Salmon District Ranger, *jeffrey.shinn@usda.gov* or 208–839–2103. Individuals who use telecommunications devices for the hearing impaired may call 711 to reach the Telecommunications Relay Service, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION: The End of the World project area is located approximately six (6) miles south of Grangeville, Idaho. The name of this project is a tribute to local community members who often gather at the previous Fish Creek Lookout site (located prominently within the project area) which they affectionately call ''The End of the World'' because of the extensive viewscape. The EIS will expand the analysis from the End of the World Final EA (January 2021) by providing an updated analysis of the environmental effects related to old growth and analysis of cumulative effects of the Hungry Ridge and End of the World projects. The End of the World Final EA evaluated the potential effects of three alternatives, including No Action and two action alternatives. The final Decision Notice was signed January 25, 2021. The EIS will provide updated information about the project's ability to meet Forest Plan standards for old growth in the project area and the cumulative effects between the End of the World and Hungry Ridge projects. Other resources will be addressed by following 40 CFR 1502.2(b).

The Forest Supervisor of the Nez Perce-Clearwater National Forests will issue a Record of Decision (ROD) after evaluating the EIS and public comments.

Purpose and Need for Action

The End of the World Project area is designated as part of an insect and disease treatment program in accordance with Title VI, Section 602, Healthy Forest Restoration Act (HFRA), as amended by Section 8204 of the Agriculture Act (Farm Bill) of 2014. Based on observed existing conditions, as well as other supporting information (*e.g.,* annual insect and disease aerial detection surveys, national insect and disease risk maps, community wildfire protection plan (CWPP), and input from local community members), there is a need to:

- Change the nature and arrangement of fuels to reduce wildfire risk to the local communities and surrounding Federal lands;
- Reduce the risk or extent of, or increase resilience to, insect or disease infestation;
- Restore forest vegetation, dry meadows, and grasslands to a healthy condition; and
- Improve water quality and aquatic habitats.

This project is in the heart of the Forests' Wildland Fire Crisis Emergency Landscape. The project lies entirely within the Wildland Urban Interface (WUI) for the Grangeville area as defined by the CWPP of Idaho County. It was originally authorized as part of an insect and disease treatment program in accordance with title VI, section 602, HFRA, as amended by section 8204 of the Agriculture Act (Farm Bill) of 2014. This project meets Executive Order (E.O.) 14072 because it was created using science-based modelling that indicated that this area is in high need for treatment through sustainable forest and land management activities. The project conserves America's mature and old-growth forests through authorization under title VI, section 602, HFRA as well as application of the 1987 Nez Perce Forest Plan Standards. Proposed activities will improve the resilience of our lands, waters, wildlife, and communities in the face of increasing disturbances and chronic stress arising from climate impacts.

Proposed Action

The goal of this project is to treat at a landscape scale to increase the resilience of the forest to insects, disease, fire, and future climate impacts. The project is also designed to improve water quality, aquatic habitats, and resources important to the Nez Perce Tribe (project area is fully within the ceded territory). Finally, the project is adjacent to the community of Grangeville, Idaho, and actions are designed to reduce the threat of catastrophic wildfires to both private residences in and adjacent to the Forest and to the community of Grangeville.

Pre-commercial thinning, intermediate harvest, regeneration harvest, and aquatic improvements are proposed to change the nature and arrangement of fuels and reduce wildfire risk. The project proposes to remove hazard trees in campgrounds and dispersed camping areas, create a fuel break on Forest Service Road 221, conduct prescribed landscape burning, treat invasive plant species, improve range conditions and restore dry meadows, conduct trail restoration or reconstruction, decommission roads, replace culverts, improve cross drains, and complete stream crossing hardening. There will be no regeneration harvest in old growth. Project activities will maintain or promote old growth characteristics consistent with the regional definition of old growth.

The EIS will provide updated information about the project's ability to meet the 1987 Forest Plan standards for old growth in the project area and the cumulative effects on old growth between the End of the World and Hungry Ridge projects as directed by the court.

Preliminary Alternatives

The alternatives from the EA will be incorporated into the EIS. The End of the World EA (January 2021) evaluated the potential effects of three alternatives, including No Action and two action alternatives. Both the Proposed Action and Alternative B meet the purpose and need of the project. Alternative B was created in direct response to collaboration and public comments that requested alternative treatments near private properties, less harvest, fewer temporary roads, and less potential sediment production. The No Action alternative provided the baseline for the comparison of the environmental effects of the action alternatives to the existing condition. The No Action Alternative would continue to elevate the risk of uncharacteristic wildfire and would not address fuel accumulations in the WUI, nor would it respond to the priority landscapes identified by the Governor of Idaho. It would not further implementation of the National Wildfire Crisis or National Cohesive Strategies.

Expected Impacts

The Forest Service will evaluate potential impacts to old growth in the project area and cumulative effects on old growth by the End of the World and Hungry Ridge projects.

Responsible Official

Cheryl F. Probert, Nez Perce—Clearwater Forest Supervisor, Nez Perce-Clearwater National Forests Supervisor's Office, 1008 Highway 64, Kamiah, Idaho 83536.

Comments and the Objection Process

A legal notice was published in the *Lewiston Tribune* on February 16, 2018. This notice started a 30-day scoping/comment period. In accordance with 40 CFR 1502.9(d)(3), there will be no scoping conducted for this EIS. The scope of the End of the World final EA established the scope for this EIS. The Forest Service will be seeking comments on the draft EIS. The Forest Supervisor will be requesting Emergency Action Determination authority under the Bipartisan Infrastructure Law, section 40807, since the project is within two of the 250 high-risk western firesheds. If the Emergency Action Determination authority is approved, the End of the World project would not be subject to the pre-decisional objection review process pursuant to 36 CFR 218 subparts A and B.

The Forest Service will be soliciting future participation via the GovDelivery email notification system, rather than postal mail. Details about the upcoming project will be sent through GovDelivery. To sign up for GovDelivery and take advantage of electronic notifications, visit the End of the World Project web page at: *https://www.fs.usda.gov/project/?project=52541.* On the right side of the screen, under ''Get Connected,'' select ''Subscribe to Email Updates.'' When you click on that item, you will be prompted to provide your email address and select a password in the GovDelivery program. Once you have logged in, you will be able to manage your account by subscribing to projects by National Forest, Ranger District, project type, or project purpose. Select the Nez Perce-Clearwater National Forests, Salmon River Ranger District, and/or End of the World Project to receive any updates on the project. Once you are subscribed, you will continue to receive all project information and updates via email. Updates will not be sent via postal mail.

Nature of Decision To Be Made

The Responsible Official will review the information and analysis in the EIS to determine whether direct, indirect, and cumulative effects on old growth in the End of the World project area meet the requirements of appendix N of the 1987 Nez Perce National Forest Land and Resource Management Plan (Plan); if there are cumulative impacts to old growth by the End of the World Restoration Project and the Hungry Ridge Restoration Project; and which alternative best meets the purpose and need of the project and complies with the Plan.

Dated: April 22, 2024.

Troy Heithecker,

Associate Deputy Chief, National Forest System.

[FR Doc. 2024–08954 Filed 4–25–24; 8:45 am]

BILLING CODE 3411–15–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD878]

Fisheries of the South Atlantic; South Atlantic Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The South Atlantic Fishery Management Council (Council) will host a Seminar Series presentation on Electronic Self-Reporting Programs in Recreational Fisheries via webinar on May 14, 2024.

DATES: The webinar presentation will be held on Tuesday, May 14, 2024, from 1 p.m. until 2:30 p.m.

ADDRESSES: The presentation will be provided via webinar. The webinar is open to members of the public. Information, including a link to webinar registration will be posted on the Council's website at: *https://safmc.net/safmc-seminar-series/* as it becomes available.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Kim Iverson, Public Information Officer, SAFMC; phone: (843) 302–8439 or toll free: (866) SAFMC–10; fax: (843) 769–4520; email: *kim.iverson@safmc.net.*

SUPPLEMENTARY INFORMATION: The Council will host a presentation on electronic self-reporting programs in U.S. marine recreational fisheries by staff from The Nature Conservancy. The presentation will present information on the ''appscape'' used to collect information from recreational fisheries and identify successes, challenges, and lessons learned. A question-and-answer session will follow the presentation. Members of the public will have the opportunity to participate in the discussion. The presentation is for informational purposes only and no management actions will be taken. The presentation is part of an ongoing Seminar Series hosted by the Council featuring scientific studies relevant to fisheries in federal waters of the South Atlantic.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for auxiliary aids should be directed to the Council office (see **ADDRESSES**) 5 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 22, 2024.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD897]

Permanent Advisory Committee To Advise the U.S. Commissioners to the Western and Central Pacific Fisheries Commission; Meeting Announcement

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: NMFS announces a public meeting of the Permanent Advisory Committee (PAC) to advise the U.S. Commissioners to the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (WCPFC) on May 13, 2024. Meeting topics are provided under the **SUPPLEMENTARY INFORMATION** section of this notice.

DATES: The meeting of the PAC will be held via web conference on May 13, 2024, from 10 a.m. to 1 p.m. Hawaii standard time (HST) (or until business is concluded). Members of the public

may submit written comments on meeting topics or materials; comments must be received by May 6, 2024.

ADDRESSES: The public meeting will be conducted via web conference. For details on how to call into the web conference or to submit comments, please contact Katrina Poremba, NMFS Pacific Islands Regional Office; telephone: 808–725–5096; email: *katrina.porembas@noaa.gov.* Documents to be considered by the PAC will be sent out via email in advance of the conference call. Please submit contact information to Katrina Poremba (telephone: 808–725–5096; email: *katrina.poremba@noaa.gov*) at least 3 days in advance of the call to receive documents via email. The audio portion of this meeting may be recorded for the purposes of generating notes of the meeting. As public comments will be made publicly available, participants and public commenters are urged not to provide personally identifiable information (PII) at this meeting. Participation in the meeting by web conference, or by telephone, constitutes consent to the audio recording.

FOR FURTHER INFORMATION CONTACT: Katrina Poremba, NMFS Pacific Islands Regional Office; 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818; telephone: 808–725–5096; email: *katrina.poremba@noaa.gov.*

SUPPLEMENTARY INFORMATION: In accordance with the Western and Central Pacific Fisheries Convention Implementation Act (16 U.S.C. 6901 *et seq.*), the PAC has been formed to advise the U.S. Commissioners to the WCPFC. The PAC is composed of: (i) no less than 15 nor more than 20 individuals appointed by the Secretary of Commerce in consultation with the U.S. Commissioners to the WCPFC; (ii) the chair of the Western Pacific Fishery Management Council's Advisory Committee (or the chair's designee); and (iii) officials from the fisheries management authorities of American Samoa, Guam, and the Northern Mariana Islands (or their designees). The PAC supports the work of the U.S. National Section to the WCPFC in an advisory capacity. The U.S. National Section is made up of the U.S. Commissioners, the Department of State, and the U.S. head of delegation. NMFS Pacific Islands Regional Office provides administrative and technical support to the PAC in cooperation with the Department of State. More information on the WCPFC, established under the Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean, can be found on the WCPFC website: *https://www.wcpfc.int.*

Meeting Topics

The purpose of the May 13, 2024 meeting is to discuss U.S. objectives and priorities leading up to WCPFC 21 and its Subsidiary Body Meetings.

Special Accommodations

The web conference is accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Katrina Poremba at 808–725–5096 by May 6, 2024.

Authority: 16 U.S.C. 6902 *et seq.*

Dated: April 23, 2024.

Everett Wayne Baxter,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD886]

South Atlantic Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The South Atlantic Fishery Management Council (Council) will hold four port meetings gathering input on Atlantic king mackerel and Atlantic Spanish mackerel as managed by the Fishery Management Plan for Coastal Migratory Pelagic Resources in the Gulf of Mexico and Atlantic Region.

DATES: The port meetings will take place May 14–16, 2024, and June 4, 2024. The port meetings will begin at 6 p.m., local time. For specific dates and times, see **SUPPLEMENTARY INFORMATION**.

ADDRESSES:

Meeting addresses: The port meetings will be held via webinar May 14–16, 2024 and in-person in Riverhead, New York on June 4, 2024 in conjunction with the Mid-Atlantic Fishery Management Council Meeting. For specific locations, see **SUPPLEMENTARY INFORMATION**.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Christina Wiegand, Fishery Social Scientist, SAFMC; phone: (843) 571–4366 or toll free: (866) SAFMC–10; fax: (843) 769–4520; email: *christina.wiegand@safmc.net.*

SUPPLEMENTARY INFORMATION: The Council is hosting a series of port meetings along the Atlantic coast throughout 2024 in order to take a focused look at the Atlantic king mackerel and Atlantic Spanish mackerel fisheries. The webinar port meetings on May 14–16, 2024 will focus on gathering input from fishermen in the New England region, specifically Connecticut, Rhode Island, and Massachusetts. The in-person port meeting on June 4, 2024 will focus on gathering input from fishermen in the state of New York.

The agenda for the port meetings is as follows:

Council staff will briefly introduce port meetings and the Council's goals and objectives. Attendees will then have the opportunity to provide input on a variety of issues related to the Atlantic king mackerel and Spanish mackerel fisheries including changing environmental conditions, needed management changes, commercial and recreational fishery dynamics, and the goals and objectives of the Coastal Migratory Pelagics Fishery Management Plan. Information provided during port meetings will be summarized and presented to the Council for use in management decision-making. Additional port meetings will be scheduled along the Atlantic coast throughout the remainder of 2024.

Webinar Information

The May 14–16, 2024 port meetings will be conducted via webinar. The port meetings will begin at 6 p.m. Registration for the webinars is required. Registration information will be posted on the Council's website at *https://safmc.net/king-and-spanish-mackerel-port-meetings/* as it becomes available.

In-Person Location

Tuesday, June 4, 2024: Atlantis Banquets and Events, 431 East Main Street, Riverhead, New York, 11901; phone: (631) 574–8008.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for auxiliary aid should be directed to the Council office (see **ADDRESSES**) 3 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD862]

Fisheries of the Gulf of Mexico and South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 79 Assessment Webinar III for Gulf of Mexico and South Atlantic Mutton Snapper.

SUMMARY: The SEDAR 79 assessment process of Gulf of Mexico and South Atlantic mutton snapper will consist of a Data Workshop, and a series of assessment webinars, and a Review Workshop. See **SUPPLEMENTARY INFORMATION.**

DATES: The SEDAR 79 Assessment webinar III will be held May 13, 2024, from 1 p.m. to 3 p.m., Eastern Time. The established times may be adjusted as necessary to accommodate the timely completion of discussion relevant to the assessment process. Such adjustments may result in the meeting being extended from or completed prior to the time established by this notice.

ADDRESSES:

Meeting address: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Julie A. Neer at SEDAR (see **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information. Please request webinar invitations at least 24 hours in advance of each webinar.

SEDAR address: 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Julie A. Neer, SEDAR Coordinator; (843) 571–4366; email: *Julie.neer@safmc.net.*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a multi-step process including: (1) Data Workshop, (2) a series of assessment webinars, and (3) A Review Workshop. The product of the Data Workshop is a report that compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The assessment webinars produce a report that describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The product of the Review Workshop is an Assessment Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, HMS Management Division, and Southeast Fisheries Science Center. Participants include data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and NGO's; International experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion during the Assessment webinar are as follows:

Panelists will review and discuss assessment modeling to date.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to the Council office (see **ADDRESSES**) at least 5 business days prior to each workshop.

Note: The times and sequence specified in this agenda are subject to change.

- *Mail:* Justin Isaac, Office of the Chief Administrative Officer, USPTO, P.O. Box 1450, Alexandria, VA 22313–1450.

The USPTO will make all comments it receives available for public inspection at the Federal e-Rulemaking Portal located at *https://www.regulations.gov.* Before including your address, phone number, email address, or other personal identifying information, you should be aware that your entire comment, including any personal identifying information you provide, may be made publicly available. You may request in your comment that the USPTO withhold your personal identifying information from public review; however, the USPTO cannot guarantee it will be able to do so. Therefore, do not submit personal identifying information, Confidential Business Information, or otherwise sensitive or protected information that you do not want made public.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Matthew Lee, Director of the Receipts Accounting Division, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450; by telephone at (571) 272–6343, by email to *Matthew.Lee@uspto.gov* with ''Fee Management Products—System of Records'' in the subject line.

SUPPLEMENTARY INFORMATION: In accordance with the requirements of the Privacy Act of 1974, as amended, and the Office of Management and Budget (OMB) Circular A–108, ''Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act,'' the USPTO is modifying the system of records currently listed under ''COMMERCE/PAT–TM–10, Deposit Accounts and Electronic Funds Transfer Profiles.'' This system of records was last amended on August 10, 2007 (72 FR 45009). The changes are needed to ensure that the notice for this system of records is up-to-date, accurate, and current, as required by the Privacy Act, 5 U.S.C. 552a(e)(4).

The USPTO is modifying this system of records due to changes in how it collects, uses, maintains, and retrieves personally identifiable information (PII) from its customers to administer transactions for services and processing fees related to patents, trademarks, and information products. The USPTO charges both service and processing fees, such as, but not limited to, patent and trademark application filing fees, patent examination fees, patent trial and appeal fees, trademark trial and appeal fees, and processing of refused payment and charge-back fees. Customers are able to choose from several methods of payment to pay for services and processing fees related to patents, trademarks, and information products. The USPTO is updating the system of records to include users of credit cards, debit cards, and paper checks, and/or their associated transactions.

To implement these updates, the USPTO is modifying this system of records to expand the categories of individuals covered by this system and the categories of records maintained in the system to reflect current users and the types of information collected. The USPTO also proposes modifying the record source categories to include records derived from financial entities and the Department of the Treasury or Bureau of the Fiscal Service-designated fiscal and financial agents of the United States that process payments and collections, and to update the appropriate sections to address credit card, debit card, and paper check users and/or the associated transactions.

The USPTO is modifying the routine uses for this system of records to expressly describe and consolidate all applicable routine uses into one notice instead of relying on a cross-reference to other **Federal Register** (FR) notices. In the last full publication of this system of records notice on July 6, 2006 at 71 FR 38387, the USPTO incorporated by reference some of the Prefatory Statement of General Routine Uses published on December 31, 1981 at 46 FR 63501–63502. Instead of relying on the incorporation by reference, the USPTO expressly incorporates in modified form eight General Routine Uses as Routine Uses 4 (formerly 3), 5 (formerly 2), 6 (formerly 1), 7 (formerly 10), 10 (formerly 4), 12 (formerly 9), 13 (formerly 5), and 14 (formerly 13) in this system of records. Of these eight, the USPTO is modifying Routine Uses 4, 5, 6, 7, 10, 13, and 14 to make administrative changes, address the expanded needs of the USPTO and reflect current authorities and practices; and Routine Use 12 to make non-substantive changes for clarity. Each

Routine Use has also been updated with minor editorial changes throughout, including the addition of descriptive headings. In addition, the USPTO proposes revising for clarity a previously unnumbered routine use (Routine Use 1) regarding the disclosure of financial information to financial institutions, including banks and credit unions, and credit card companies for the purpose of revenue collections and/or investigating the accuracy of information required to complete transactions. Also, the USPTO expressly incorporates, but in a modified form, a routine use published on August 10, 2007 at 72 FR 45009 (Routine Use 8) to comport with the USPTO's standards and routine disclosure practices and OMB guidance.

The USPTO is adding seven new routine uses to the system of records. The USPTO proposes adding a routine use (Routine Use 2) to cover the administrative needs of disclosing the information to the Department of Treasury. The USPTO is adding a new routine use (Routine Use 3) to disclose information to any agency, organization, or individual for audit/oversight functions of this system of records, such as to an accreditation entity, but only when such information is necessary and relevant to such function. The USPTO is adding a new routine use (Routine Use 9) to allow the USPTO to provide assistance to other agencies in responding to a data breach, if appropriate, in compliance with OMB Memorandum M–17–12. The USPTO is adding new routine uses (Routine Uses 11 and 15) to describe how the USPTO provides information to other Federal agencies for litigation purposes and in connection with the legislative coordination and clearance process. This includes providing the Department of Justice with information when litigation involves the USPTO (Routine Use 11) and allowing the USPTO to provide information related to private relief legislation to OMB in conjunction with that agency's legislative coordination and clearance functions (Routine Use 15). The USPTO is adding a routine use (Routine Use 16) to cover disclosures of information to officials of labor organizations, and a routine use (Routine Use 17) that describes how and when information may be disclosed to the news media and the public.

Finally, the USPTO is making minor administrative updates to certain sections to reflect current practice and enhance clarity; reorganizing the system of records in accordance with reissued OMB Circular A–108; and modifying the system of records name from ''COMMERCE/PAT–TM–10, Deposit Accounts and Electronic Funds Transfer Profiles'' to ''COMMERCE/USPTO–10, Fee Management Products'' to more accurately reflect the system and breadth of information maintained in the system of records.

The Privacy Act also requires each agency that proposes to establish or significantly modify a system of records to provide adequate advance notice of any such proposal to the OMB, the Committee on Oversight and Accountability of the House of Representatives, and the Committee on Homeland Security and Governmental Affairs of the Senate (5 U.S.C. 552a(r)). The USPTO filed a report describing the modified system of records covered by this notice with the Chair of the Senate Committee on Homeland Security and Governmental Affairs, the Chair of the House Committee on Oversight and Accountability, and the Deputy Administrator of the Office of Information and Regulatory Affairs at OMB.

The modified Privacy Act system of records, ''COMMERCE/USPTO–10, Fee Management Products,'' is published in its entirety below.

Charles R. Cutshall,

Senior Agency Official for Privacy, Chief Privacy Officer and Director of Open Government. Department of Commerce.

SYSTEM NAME AND NUMBER:

Fee Management Products, COMMERCE/USPTO–10.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

- Office of Finance, Receipts Accounting Division, USPTO, Madison East Building, 600 Dulany Street, Alexandria, VA 22314;
- Office of the Chief Information Officer, USPTO, Madison West Building, 600 Dulany Street, Alexandria, VA 22314.

SYSTEM MANAGER(S):

Director, Office of Finance, USPTO, Madison East Building, 600 Dulany Street, Alexandria, VA 22314.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

15 U.S.C. 1113, Public Law 112–29, and 35 U.S.C. 2 and 41.

PURPOSE(S) OF THE SYSTEM:

The purpose of this system is to collect, maintain, use, and retrieve personal and financial records of patent and trademark customers to process fees related to patents, trademarks, and information products.

This system of records contains the information necessary to allow customers to establish deposit accounts at USPTO, maintain existing accounts, charge the appropriate deposit account, or receive refunds if applicable. This system of records allows customers to establish and maintain a user profile to make fee payments from their bank accounts by electronic funds transfer (EFT), credit cards, debit cards, paper checks, or equivalent methods.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Registered patent attorneys and agents and other members of the public who maintain deposit accounts or submit payments, including those completed through their user profile, for the cost of products and services rendered by the USPTO.

CATEGORIES OF RECORDS IN THE SYSTEM:

Categories of records in the system include:

1. Biographic information, including the account holder's first and last name, company or organization.

2. Contact information, including account holder's address and email address.

3. User information, including the user identification (ID), file/case ID number, and username and password.

4. Financial information, including deposit account number, financial account, financial transaction, credit card number, debit card number, paper check, bank name, bank routing number, bank account number, type of account, and payment transaction irregularities.

RECORD SOURCE CATEGORIES:

Information in this system of records is derived from subject individuals, those authorized by the individual to furnish information, including appropriate financial entities, and the Department of the Treasury or Bureau of the Fiscal Service-designated fiscal and financial agents of the United States that process payments and collections.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under the Privacy Act of 1974, as amended, 5 U.S.C. 552a(b), records maintained as part of this system of records may be routinely disclosed pursuant to 5 U.S.C. 552a(b)(3) as follows:

1. *Financial Institutions*—A record from this system of records may be disclosed to financial institutions and other financial services companies, including banks, credit unions, and credit card companies, for the purpose of revenue collections, refunds, and/or

investigating the accuracy of information required to complete transactions using electronic methods and for administrative purposes, such as resolving questions, problems, or irregularities about a transaction.

2. *Department of the Treasury*—A record from this system of records may be disclosed to the Department of the Treasury, as well as its fiscal agents and financial agents, for the purpose of performing financial management services, including, but not limited to, processing payments, investigating and rectifying possible erroneous reporting information, creating and reviewing statistics to improve the quality of services provided, or conducting debt collection services.

3. *Audit Disclosure*—A record from this system of records may be disclosed to an agency, organization, or individual for the purpose of performing an audit or oversight operation as authorized by law, but only such information as is necessary and relevant to such audit or oversight function to accomplish an agency function related to this system of records. Individuals provided information under this routine use are subject to the same Privacy Act requirements and limitations on disclosure as are applicable to the USPTO officers and employees.

4. *Governments Disclosure*—A record from this system of records may be disclosed to a Federal, State, local, Tribal, or international agency, in response to its request, in connection with (1) the assignment, hiring, or retention of an individual, (2) the issuance of a security clearance, (3) the letting of a contract, or (4) the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

5. *Record Informational Inquiries*—A record in this system of records may be disclosed to a Federal, State, local, Tribal, or international agency, maintaining civil, criminal, or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a USPTO decision concerning (1) the assignment, hiring, or retention of an individual, (2) the issuance of a security clearance, (3) the letting of a contract, or (4) the issuance of a license, grant, or other benefit.

6. *Law Enforcement and Investigation*—A record in this system of records may be disclosed to a Federal, State, local, Tribal, or foreign agency or other appropriate entity where a record, either alone or in conjunction with other information, indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by (1) general statute or particular program statute or contract, (2) rule, regulation, or order issued pursuant thereto, or (3) the necessity to protect an interest of the USPTO or the Department of Commerce. The agency receiving the record(s) must be charged with the responsibility of investigating or prosecuting such violations or with enforcing or implementing the statute, rule, regulation, or order issued pursuant thereto, or protecting the interest of the USPTO or the Department of Commerce.

7. *Non-Federal Personnel*—A record in this system of records may be disclosed to individuals, contractors, agents, grantees, experts, consultants, student volunteers, and other workers who technically do not have the status of Federal employees, performing or working on a contract, service, grant, cooperative agreement, or other work assignment for the USPTO or the Department of Commerce, to the extent needed to perform their assigned functions. These individuals or entities may have a need for information from the system of records: (1) in the course of operating or administrating the system of records; (2) in the course of fulfilling an agency function, but only to the extent necessary to fulfill that function; or (3) in order to fulfill their contract(s), but who do not operate the system of records within the meaning of 5 U.S.C. 552a(m).

8. *Data Breach Notification*—A record in this system of records may be disclosed to appropriate agencies, entities, and persons when (1) the USPTO suspects or has confirmed that there has been a breach of the system of records; (2) the USPTO has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, USPTO (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the USPTO's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

9. Data Breach Assistance—A record in this system of records may be disclosed to another Federal agency or Federal entity when the USPTO determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

10. *Adjudication and Litigation*—A record in this system of records may be disclosed to a court, magistrate, or administrative tribunal during the course of presenting evidence, including disclosures to opposing counsel or witnesses in the course of civil discovery, litigation, or settlement negotiations where use of such records by the court or the USPTO is deemed by the USPTO to be relevant and necessary to the litigation, provided, however, that in each case, the USPTO determines that disclosure of the records to the court is a use of the information contained in the records that is compatible with the purpose for which the records were collected.

11. *Department of Justice Litigation*—To the U.S. Department of Justice (DOJ), or in a proceeding before a court, adjudicative body, or other administrative body in which the USPTO is authorized to appear, when

(1) The USPTO;

(2) Any employee of the USPTO in their official capacity; or

(3) Any employee of the USPTO in their individual capacity where the DOJ or the USPTO has agreed to represent the employee; or

(4) The United States, when the USPTO determines that litigation is likely to affect the USPTO; is a party to litigation or has an interest in such litigation, and the use of such records by the DOJ or the USPTO is deemed by the USPTO to be relevant and necessary to the litigation, provided, however, that in each case, the USPTO determines that disclosure of the records to DOJ is a use of the information contained in the records that is compatible with the purpose for which the records were collected.

12. *Freedom of Information Act Assistance from Department of Justice*—A record in this system of records may be disclosed to the Department of Justice in connection with determining whether disclosure thereof is required by the Freedom of Information Act (5 U.S.C. 552).

13. *Congressional Inquiries*—A record in this system of records may be disclosed to a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

14. *National Archives and Records Administration*—A record in this

system of records may be disclosed to the Administrator of the National Archives and Records Administration (NARA), or said administrator's designee, during an inspection of records conducted by NARA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with NARA regulations governing inspection of records for this purpose, and any other relevant directive. Such disclosure shall not be used to make determinations about individuals.

15. *Office of Management and Budget*—A record in this system of records may be disclosed to the Office of Management and Budget (OMB) in connection with the review of private relief legislation as set forth in OMB Circular No. A–19 at any stage of the legislative coordination and clearance process.

16. *Labor Organizations*—A record in this system of records may be disclosed to officials of labor organizations recognized under 5 U.S.C. chapter 71 when relevant and necessary to their duties of exclusive representation.

17. *Media and the Public*—A record in this system of records may be disclosed to the news media and the public, with the approval of the USPTO's Chief Privacy Officer in consultation with counsel, when there exists a legitimate public interest in the disclosure of the information or when disclosure is necessary to preserve confidence in the integrity of USPTO or is necessary to demonstrate the accountability of USPTO's officers, employees, or individuals covered by the system; except to the extent the USPTO determines that release of the specific information in the context of a particular case would constitute an unwarranted invasion of personal privacy.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

The USPTO maintains records in this system in electronic form.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

The USPTO retrieves records in this system by one or more of the following: registered user name or email address, account holder name, deposit account number, bank account number, bank routing number, credit or debit card number, name on card, check number, and by other transaction numbers or information. The files are searchable in a database available only to authorized personnel.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records in the system are maintained in accordance with the NARA approved USPTO Records Controls Schedules N1–241–05–001:5; N1–241–06–002:4; N1–241–06–002:6; N1–241–10–001:10.3; and General Records Schedules 1.1 and 3.2.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

The USPTO safeguards records in this system according to applicable rules and policies, including all applicable automated systems security and access policies. Information systems are maintained in areas accessible only to authorized personnel and in buildings protected by security systems and security guards. The electronic records stored in this system of records can be accessed for maintenance only by authorized personnel. The USPTO has imposed strict controls to minimize the risk of compromising the information that is being stored. Access to the information system containing the records in this system is limited to those individuals who have a need to know the information for the performance of their official duties and who have appropriate clearances or permissions.

RECORD ACCESS PROCEDURES:

Individuals can access their records by logging into their account to view, modify, or retrieve records.

Individuals can also request access to their records by mailing a written request to the Privacy Act Officer, Office of General Law, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313–1450. The request should include the information requested pursuant to the provisions for making requests for records appearing at 37 CFR 102.24.

CONTESTING RECORD PROCEDURES:

The procedures for contesting or requesting amendment of information by the individual concerned appear in 37 CFR 102.27. Requests from individuals should be submitted as stated in the Record Access Procedures section above.

NOTIFICATION PROCEDURES:

Individuals seeking to determine whether this system of records contains information about themselves can send a written request to the System Manager at the address above or to the address provided in 37 CFR 102.23, which sets forth procedures for making inquiries about records covered by the Privacy Act. Requesters should include all required information in accordance with 37 CFR 102.23.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

COMMERCE/PAT–TM–10, Patent Deposit Accounts System, 72 FR 45009 (August 10, 2007); COMMERCE/PAT–TM–10, Deposit Accounts and Electronic Funds Transfer Profiles, 71 FR 38387 (July 6, 2006).

BILLING CODE 3510–16–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Deletions from the Procurement List.

SUMMARY: This action deletes product(s) and service(s) to the Procurement List that were furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: *Date deleted from the Procurement List:* May 26, 2024.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 355 E Street SW, Suite 325, Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 785–6404, or email *CMTEFedReg@AbilityOne.gov*.

SUPPLEMENTARY INFORMATION:

Deletions

On March 22, 2024 (89 FR 20456), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List. This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3.

After consideration of the relevant matter presented, the Committee has determined that the product(s) and service(s) listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the product(s) and service(s) to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the product(s) and service(s) deleted from the Procurement List.

End of Certification

Accordingly, the following product(s) and service(s) are deleted from the Procurement List:

Product(s)

NSN(s)—Product Name(s):
7910–00–685–3910—Pad, Machine, Polishing, Floor, 18″ × 1/4″
Authorized Source of Supply: Beacon Lighthouse, Inc., Wichita Falls, TX
Contracting Activity: GSA/FSS GREATER SOUTHWEST ACQUISITI, FORT WORTH, TX

Service(s)

Service Type: Embroidery Service
Mandatory for: Embroidery of Urban Name Tapes: U.S. Marine Corps, Arlington, VA
Authorized Source of Supply: LIONS INDUSTRIES FOR THE BLIND, INC, Kinston, NC
Contracting Activity: DEPT OF THE ARMY, W40M RHCO–ATLANTIC USAHCA
Service Type: Management of State Dept High Threat Division Kit
Mandatory for: Department of State, High Threat Division, 2216 Gallows Road, Dunn Loring, VA
Authorized Source of Supply: Virginia Industries for the Blind, Charlottesville, VA
Contracting Activity: STATE, DEPARTMENT OF, ACQUISITIONS—AQM MOMENTUM

Michael R. Jurkowski,

Director, Business Operations.

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from the Procurement List.

SUMMARY: The Committee is proposing to add service(s) to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes product(s) previously furnished by such agencies.

DATES: *Comments must be received on or before:* May 26, 2024.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 355 E Street SW, Suite 325, Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 785–6404, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

In accordance with 41 CFR 51–5.3(b), the Committee intends to add this services requirement to the Procurement List as a mandatory purchase only for DEPT OF THE NAVY at NAVSUP FLT LOG CTR PEARL HARBOR with the proposed qualified nonprofit agency as the authorized source of supply. Prior to adding the service to the Procurement List, the Committee will consider other pertinent information, including information from Government personnel and relevant comments from interested parties regarding the Committee's intent to geographically limit this services requirement.

Service(s)

Service Type: Verbatim Transcription Service
Mandatory for: COMPACFLT, Commander, U.S. Pacific Fleet, Pearl Harbor, HI
Designated Source of Supply: Lighthouse for the Blind of Houston, Houston, TX
Contracting Activity: DEPT OF THE NAVY, NAVSUP FLT LOG CTR PEARL HARBOR

Deletions

The following product(s) are proposed for deletion from the Procurement List:

Product(s)

NSN(s)—Product Name(s): 7510–01–383–7680—Grips, Pencil, Cusheeze
Authorized Source of Supply: West Texas Lighthouse for the Blind, San Angelo, TX
Contracting Activity: GSA/FAS ADMIN SVCS ACQUISITION BR(2, NEW YORK, NY

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Changes

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed changes to the Procurement List.

SUMMARY: The Committee is proposing to change requirements for products already existing on the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Comments must be received on or before: May 26, 2024.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 355 E Street SW, Suite 325, Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 489–1322, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Changes

If the Committee approves the proposed changes, the entities of the Federal Government identified in this notice will be required to procure the product(s) listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

Product(s)

Authorized Source of Supply: Goodwill Industries of South Florida, Inc., Miami, FL

Authorized Source of Supply: ReadyOne Industries, Inc., El Paso, TX

Contracting Activity: DEFENSE LOGISTICS AGENCY, DLA TROOP SUPPORT

The Unisex Improved Hot Weather Combat Uniform (IHWCU) Permethrin Trousers were administratively added to the Procurement List 11/20/2017 in accordance with 41 CFR 51–6.13(b), as an additional size, color or other variation) of an existing PL product to meet 50% of the requirement for the Army Contracting Command—Aberdeen Proving Ground, Natick Contracting Division, with DLA Troop Support added later. However, when possible and to ensure clarity on existing PL requirements for military garments, or other applicable products, the Committee is departing from stating the mandatory purchase requirement as a percentage of a contracting activity's overall requirement and is instead stating the mandatory purchase requirement as a specified annual quantity of a garment or product. For the Trouser, IHWCU, Permethrin, Unisex, the contracting activity and the authorized sources of supply, assisted by the central nonprofit agency, have agreed that the mandatory purchase requirement is 94,896 units annually for the Unisex trousers and 151,104 units annually for the Women's trousers. The Committee intends to amend the Procurement List and reflect the agreed annual quantity. Additionally, for administrative purposes, the Committee is assigning a new PL number to the IHWCU Trouser, Unisex, which will sever the Unisex IHWCU garments as a legacy from garments no longer being produced and increase the Committee's overall efficiency when processing future transactions.

Michael R. Jurkowski,

Director, Business Operations.

DEPARTMENT OF EDUCATION

National Board for Education Sciences

AGENCY: National Board for Education Sciences, U.S. Department of Education, Institute of Education Sciences (IES).

ACTION: Notice of an open meeting.

SUMMARY: This notice sets forth the agenda, time, and instructions to access or participate in the National Board for Education Sciences (hereafter referred to as NBES or Board) open virtual meeting scheduled for May 13, 2024. This notice provides information about the meeting to members of the public who may be interested in virtually attending the meeting and/or how to provide written comment(s).

DATES: The NBES meeting will be held on Monday, May 13, 2024, from 11:00 a.m. to 12:30 p.m. (EDT).

ADDRESSES: The meeting will be conducted virtually via Microsoft Teams.

FOR FURTHER INFORMATION CONTACT: Ellie Pelaez, DFO for NBES, U.S. Department of Education, IES: 550 12th Street SW, Office 4126–1, Washington, DC 20202, telephone: (202) 987–0359, email: *ellie.pelaez@ed.gov.*

SUPPLEMENTARY INFORMATION:

Statutory Authority and Function: The Board is authorized by § 116 of the Education Sciences Reform Act of 2002 (20 U.S.C. 9516). The Board is established as part of the U.S. Department of Education, IES, and shall, consistent with 20 U.S.C. 9514, 9515(b)–(c), and 9516 function as a board of directors for IES. The mission of IES is to provide national leadership in expanding fundamental knowledge and understanding of education from early childhood through postsecondary study, in order to provide parents, educators, students, researchers, policymakers, and the general public with reliable information about the condition and progress of education in the United States; educational practices that support learning and improve academic achievement and access to educational opportunities for all students; and the effectiveness of Federal and other education programs.

The Board's responsibilities are: (1) advise and consult with the Director of IES (Director) on the policies of IES; (2) consider and approve priorities proposed by the Director under 20 U.S.C. 9515 to guide the work of IES; (3) transmit approved priorities to the appropriate congressional committee (20 U.S.C. 9515(b)); (4) ensure that the priorities of IES and the National Education Centers are consistent with the mission of IES (20 U.S.C. 9515(c)); (5) review and approve procedures for technical and scientific peer review of the activities of IES; (6) advise the Director on the establishment of activities to be supported by IES, including the general areas of research to be carried out by the National Center for Education Research (NCER) and the National Center for Special Education Research (NCSER) (20 U.S.C. 9567); (7) present to the Director such recommendations as it may find appropriate for (a) the strengthening of education research, and (b) the funding of IES; (8) advise the Director on the funding of applications for grants, contracts, and cooperative agreements for research, after the completion of peer review; (9) review and regularly evaluate the work of IES, to ensure that scientifically valid research, development, evaluation, and statistical analysis are consistent with the standards for such activities under this title; (10) advise the Director on ensuring that activities conducted or supported by IES are objective, secular, neutral, and non-ideological, and are free of partisan political influence and racial, cultural, gender, or regional bias; (11) solicit advice and information from those in the educational field, particularly practitioners and researchers, to recommend to the Director topics that require long-term, sustained, systematic, programmatic, and integrated research efforts, including knowledge utilization and wide dissemination of research, consistent with the priorities and mission of IES; (12) advise the Director on opportunities for the participation in, and the advancement of, women, minorities, and persons with disabilities in education research, statistics, and evaluation activities of IES; (13) recommend to the Director ways to enhance strategic partnerships and collaborative efforts among other Federal and State research agencies; (14) recommend to the Director individuals to serve as Commissioners of the National Education Centers; and (15) make recommendations to the President with respect to the appointment of the Director. Notice of this meeting is required by Section 1009(a)(2) of 5 U.S.C. Chapter 10 (Federal Advisory Committees).

Meeting Agenda: The agenda for the meeting is as follows: (1) Call to order and welcome remarks by the Chairwoman of the Board; (2) Member roll call; (3) Board member approval of meeting transcript from the March 29, 2024 meeting; (4) Board member approval of meeting agenda; (5) Discussion of NBES recommendations for the criteria to select a new permanent IES Director; (6) Discussion of the Board's views on Senator and Ranking Member Bill Cassidy's Report to the Senate Health, Education, Labor, and Pensions Committee; (7) Closing remarks and adjournment.

Instructions for Accessing the Meeting: Members of the public interested in virtually attending this meeting may email the DFO listed in this notice no later than 11:59 p.m. Eastern Time (ET) on Thursday, May 9, 2024. The DFO will provide a link and instructions on how to access the meeting via Microsoft Teams.

Public Comment: Members of the public interested in submitting written comments related to the work of NBES may do so by emailing their comments to the DFO listed in this notice no later than 11:59 p.m. ET on Thursday, May 9, 2024. Written comments should pertain to the mission and function of NBES.

Reasonable Accommodations: The virtual meeting is accessible to individuals with disabilities. If you will need an auxiliary aid or service for the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the DFO listed in this notice no later than Thursday, May 9, 2024.

Access to Records of the Meeting: The official transcript of this meeting will be available for public review on the IES website, *https://ies.ed.gov/director/board/index.asp,* no later than 90 days after the meeting. Pursuant to 5 U.S.C.

1009(b), the public may also inspect NBES records at the U.S. Department of Education, IES, 550 12th Street SW, Washington, DC 20202, Monday–Friday, 8:30 a.m. to 5:00 p.m. ET. Please email *ellie.pelaez@ed.gov* to schedule an appointment.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: *www.gpo.gov/fdsys.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site. You also may access documents of the Department published in the **Federal Register** by using the article search feature at: *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Authority: § 116 of the Education Sciences Reform Act of 2002 (20 U.S.C. 9516).

Matthew Soldner,

Acting Director, Institute of Education Sciences.

DEPARTMENT OF ENERGY

Weatherization Assistance Program: Notice of Listening Session

AGENCY: Office of State and Community Energy Programs, Department of Energy.

ACTION: Notice of virtual listening session.

SUMMARY: This notice announces an upcoming listening session hosted by the U.S. Department of Energy's (DOE) Weatherization Assistance Program (WAP). This session will be held virtually via webinar.

DATES: DOE will hold a listening session via webinar on Wednesday, May 8, 2024, from 2 p.m.–5 p.m. ET.

ADDRESSES: For webinar registration information, participant instructions, and information about the capabilities available to webinar participants, please visit *https://us06web.zoom.us/webinar/register/WN_W7RoXnkTTG-jsLdrvzaOLg*

FOR FURTHER INFORMATION CONTACT: Ms. Carrie Smith, Program Manager Readiness and Retrofit, Weatherization Assistance Program, U.S. Department of Energy, Weatherization Assistance Program, 1000 Independence Avenue SW, Washington, DC 20585–0121, email: *Carrie.Smith@hq.doe.gov,* Phone: (240) 982–0033.

SUPPLEMENTARY INFORMATION: The primary focus of this listening session will be to discuss potential updates to WAP's regulations at 10 CFR part 440. WAP is in the process of considering various regulatory updates in response to recent congressional direction and previously received stakeholder feedback. The listening session will be held virtually via webinar.

Signing Authority

This document of the Department of Energy was signed on April 22, 2024, by David Crane, Under Secretary for Infrastructure, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 23, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–124–000]

Colorado Interstate Gas Company, L.L.C.; Notice of Application and Establishing Intervention Deadline

Take notice that on April 8, 2024, Colorado Interstate Gas Company, L.L.C., (CIG), P. O. Box 1087, Colorado Springs, Colorado 80944, filed an application under sections 7(b) and 7(c) of the Natural Gas Act (NGA), and part 157 of the Commission's regulations requesting authorization for its Totem Enhanced Deliverability Project (Project) at its Totem Storage Field (Totem) in Adams County, Colorado. The Project consists of: (1) the installation of six new injection and withdrawal (I/W) wells and connecting lateral pipelines; (2) replacement and installation of various sections of storage field pipeline; (3) reclassification of an existing I/W well to an observation well and abandon in-place the associated connecting lateral pipeline; (4) installation of various appurtenant and auxiliary facilities; and (5) injection of approximately one billion cubic feet (Bcf) of additional base gas into Totem. CIG states that the Project will improve the overall performance of Totem and increase both the maximum total inventory and base gas capacity of the field by one Bcf and maximum withdrawal rate by approximately 50 million cubic feet per day. CIG estimates the total cost of the Project to be $79,528,414 and proposes to make the new additional incremental withdrawal deliverability available to customers through a new rate schedule, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

Any questions regarding the proposed project should be directed to Francisco Tarin, Director, Regulatory, P. O. Box 1087, Colorado Springs, Colorado 80944, by phone at (719) 667–7517, or by email at *francisco_tarin@kindermorgan.com.*

Pursuant to section 157.9 of the Commission's Rules of Practice and Procedure,[1] within 90 days of this

[1] 18 CFR (Code of Federal Regulations) 157.9.

Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on May 13, 2024. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[2] and 385.211[3] of the Commission's regulations under the NGA, any person[4] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001[5] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before May 13, 2024.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please reference the Project docket number CP24–124–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number (CP24–124–000).

To file via USPS: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other courier: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list, and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. However, the filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses, municipalities, and other entities,[6] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure[7] and the regulations under the NGA[8] by the intervention deadline for the project, which is May 13, 2024. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP24–124–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit

[2] 18 CFR 157.10(a)(4).

[3] 18 CFR 385.211.

[4] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[5] 18 CFR 385.2001.

[6] 18 CFR 385.102(d).

[7] 18 CFR 385.214.

[8] 18 CFR 157.10.

https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf; or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP24–124–000.

To file via USPS: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other courier: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail or email at: Francisco Tarin, Director, Regulatory, P. O. Box 1087, Colorado Springs, Colorado 80944 or at *francisco_tarin@kindermorgan.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed [9] motions to intervene are automatically granted by operation of Rule 214(c)(1).[10] Motions to intervene that are filed after the intervention deadline are untimely, and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[11] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Intervention Deadline: 5:00 p.m. Eastern Time on May 13, 2024.

Dated: April 22, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG24–164–000.

Applicants: High River Energy Center, LLC.

Description: High River Energy Center, LLC submits Notice of Self-Certification of Exempt Wholesale Generator Status.

Filed Date: 4/19/24.

Accession Number: 20240419–5198.

Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: EG24–165–000.

Applicants: Liberty County Solar Project, LLC.

Description: Liberty County Solar Project, LLC submits Notice of Self-Certification of Exempt Wholesale Generator Status.

Filed Date: 4/19/24.

Accession Number: 20240419–5238.

Comment Date: 5 p.m. ET 5/10/24.

Take notice that the commission received the following electric rate filings:

Docket Numbers: ER11–2376–003.

Applicants: Orange and Rockland Utilities, Inc.

Description: Notice of Non-Material Change in Status of Orange and Rockland Utilities, Inc.

Filed Date: 4/19/24.

Accession Number: 20240419–5232.

Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER19–289–008; ER19–2462–006; ER18–2264–002.

Applicants: Macquarie Energy Trading LLC, Energy LLC, Cleco Cajun LLC.

Description: Amendment to June 30, 2022 Triennial Market Power Analysis for the Northwest Region of Cleco Cajun LLC, et al.

Filed Date: 4/19/24.

Accession Number: 20240419–5231.

Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–609–002.

Applicants: PJM Interconnection, L.L.C.

Description: Tariff Amendment: Amendment to Filing, WMPA SA No. 5545; Queue No. AE2–125 to be effective 2/7/2024.

Filed Date: 4/19/24.

Accession Number: 20240419–5195.

Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1278–001.

Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.

Description: Tariff Amendment: Alabama Power Company submits tariff filing per 35.17(b): Amber Meadow Solar LGIA Amendment Filing to be effective 2/7/2024.

Filed Date: 4/18/24.

Accession Number: 20240418–5206.

Comment Date: 5 p.m. ET 5/9/24.

Docket Numbers: ER24–1791–000.

Applicants: Public Service Company of New Mexico.

Description: § 205(d) Rate Filing: Certificate of Concurrence to Rate Schedule No. 160 to be effective 5/1/2024.

Filed Date: 4/18/24.

Accession Number: 20240418–5232.

Comment Date: 5 p.m. ET 5/9/24.

Docket Numbers: ER24–1792–000.

Applicants: Cald BESS LLC.

Description: Baseline eTariff Filing: Baseline FERC Market-Based Rate Tariff to be effective 4/19/2024.

Filed Date: 4/18/24.

Accession Number: 20240418–5243.

Comment Date: 5 p.m. ET 5/9/24.

Docket Numbers: ER24–1793–000.

Applicants: Northern Indiana Public Service Company LLC.

Description: § 205(d) Rate Filing: Timmons CIAC Agreement to be effective 4/21/2024.

Filed Date: 4/18/24.

Accession Number: 20240418–5245.

Comment Date: 5 p.m. ET 5/9/24.

Docket Numbers: ER24–1794–000.

Applicants: New York Independent System Operator, Inc.

Description: Tariff Amendment: Notice of Cancellation of LGIA SA 2672 among NYISO, LIPA, and Peconic to be effective 6/19/2024.

Filed Date: 4/19/24.

Accession Number: 20240419–5065.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1795–000.
Applicants: ESV Energy Management, LLC.
Description: Baseline eTariff Filing: ESV Energy Management, LLC MBR Tariff to be effective 6/19/2024.
Filed Date: 4/19/24.
Accession Number: 20240419–5083.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1796–000.
Applicants: Midcontinent Independent System Operator, Inc.
Description: § 205(d) Rate Filing: 2024–04–19_Schedule 27 DAMAP STR Correction to be effective 6/19/2024.
Filed Date: 4/19/24.
Accession Number: 20240419–5087.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1797–000.
Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.
Description: § 205(d) Rate Filing: Alabama Power Company submits tariff filing per 35.13(a)(2)(iii: Perry Alabama Solar (Perry Solar) LGIA Filing to be effective 4/5/2024.
Filed Date: 4/19/24.
Accession Number: 20240419–5105.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1798–000.
Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.
Description: § 205(d) Rate Filing: Alabama Power Company submits tariff filing per 35.13(a)(2)(iii: Russell County Solar (Russell Solar) LGIA Filing to be effective 4/5/2024.
Filed Date: 4/19/24.
Accession Number: 20240419–5107.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1799–000.
Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.
Description: § 205(d) Rate Filing: Alabama Power Company submits tariff filing per 35.13(a)(2)(iii: Alabama Creek Solar LGIA Filing to be effective 4/5/2024.
Filed Date: 4/19/24.
Accession Number: 20240419–5110.
Comment Date: 5 p.m. ET 5/10/24.

Docket Numbers: ER24–1800–000.
Applicants: New York Independent System Operator, Inc.
Description: New York Independent System Operator filed Prospective Waiver Request of MST 5.11.4 and 5.11.4(c) clarifying NYISO may revise Locational Minimum Installed Capacity Requirement for Load Zone J for the 2024–2025 Capability Year.
Filed Date: 4/18/24.
Accession Number: 20240418–5321.
Comment Date: 5 p.m. ET 4/23/24.

Docket Numbers: ER24–1801–000.
Applicants: Public Service Company of Colorado.
Description: Formula Rate Charges and Transmission Formula Rate Charges for 2023 Post-Retirement Benefits Other than Pensions of Public Service Company of Colorado.
Filed Date: 4/16/24.
Accession Number: 20240416–5288.
Comment Date: 5 p.m. ET 5/7/24.

Take notice that the commission received the following electric securities filings:

Docket Numbers: ES24–25–000.
Applicants: PJM Settlement, Inc.
Description: Amendment to Application Under Section 204 of the Federal Power Act for Authorization to Issue Securities of PJM Settlement, Inc and Update to Exbibits, C, D & E.
Filed Date: 4/18/24.
Accession Number: 20240418–5324.
Comment Date: 5 p.m. ET 4/29/24.

Docket Numbers: ES24–35–000; ES24–36–000.
Applicants: ATC Management Inc., American Transmission Company LLC.
Description: Application Under Section 204 of the Federal Power Act for Authorization to Issue Securities of American Transmission Company LLC, et al.
Filed Date: 4/18/24.
Accession Number: 20240418–5326.
Comment Date: 5 p.m. ET 5/9/24.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf*. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 6055–008]

Jeffersonville Hydroelectric Co.; Notice of Intent To Prepare an Environmental Assessment

On January 3, 2023, and supplemented May 23, 2023, August 18, 2023, September 19, 2023, and November 6, 2023, Jeffersonville Hydroelectric Co. filed an application for surrender of exemption for the Lake Jefferson Project No. 6055. The project is located on the East Branch Callicoon Creek, in Sullivan County, New York, and does not occupy Federal lands.

The exemptee proposes to surrender the exemption by: (1) leaving the turbines and all generating equipment disconnected from the grid and (2) securing the power generation area of the powerhouse/residence by means of a locked barricade. The exemptee filed the surrender application in response to an ongoing compliance proceeding for the project. The exemptee has been working with the U.S. Fish and Wildlife Service and American Rivers to develop its surrender application. On December 20, 2023, the Commission issued a public notice of the surrender application. On January 19, 2024, the Department of the Interior, on behalf of its component bureau, the Fish and Wildlife Service (FWS), the New York Department of Environmental Conservation, and American Rivers filed notices of intervention. Also on January 19, 2024, the FWS, Markus Booms, and Patrick Boittiaux filed comments.

This notice identifies Commission staff's intention to prepare an environmental assessment (EA) for the project. The planned schedule for the completion of the EA is April 19, 2025.[1]

[1] 42 U.S.C. 4336a(g)(1)(B) requires lead Federal agencies to complete EAs within 1 year of the agency's decision to prepare an EA. This notice

Revisions to the schedule may be made as appropriate. The EA will be issued and made available for review by all interested parties. All comments filed on the EA will be reviewed by staff and considered in the Commission's final decision on the proceeding.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members, and others to access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Any questions regarding this notice may be directed to Jeremy Jessup at (202) 502–6779 or *Jeremy.Jessup@ferc.gov*.

Dated: April 19, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2736–046]

Idaho Power Company; Notice of Intent To Prepare an Environmental Assessment

On February 14, 2023, Idaho Power Company filed an application for a new major license for the 67.5-megawatt American Falls Hydroelectric Project (American Falls Project; FERC No. 2736). The American Falls project is located on the Snake River in Power County, Idaho, near the city of American Falls, about 25 miles southwest of Pocatello. The project is located at the American Falls Dam, owned and operated by the United States Bureau of Reclamation. The project occupies 7.37 acres of United States land administered by the U.S. Bureau of Reclamation in Power County, Idaho.

In accordance with the Commission's regulations, on February 7, 2024, Commission staff issued a notice that the project was ready for environmental analysis (REA Notice). Based on the information in the record, including comments filed on the REA Notice, staff does not anticipate that licensing the project would constitute a major Federal action significantly affecting the quality of the human environment. Therefore, staff intends to prepare a draft and final Environmental Assessment (EA) on the application to relicense the American Falls Project.

The EA will be issued and circulated for review by all interested parties. All comments filed on the EA will be analyzed by staff and considered in the Commission's final licensing decision.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202)502–6595 or *OPP@ferc.gov.*

The application will be processed according to the following schedule. Revisions to the schedule may be made as appropriate.

establishes the Commission's intent to prepare an EA for the project; therefore, the EA must be issued within 1 year of the issuance date of this notice.

Milestone	Target date
Commission issues draft EA.	October 2024.
Comments on draft EA due	November 2024.
Commission issues final EA.	April 2025.[1]

Any questions regarding this notice may be directed to Golbahar Mirhosseini at *Golbahar.Mirhosseini@ferc.gov*.

Dated: April 22, 2024.

Federal Energy Regulatory Commission

[Docket No. ER24–1792–000]

Cald BESS LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Cald BESS LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is May 13, 2024.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov*. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. [Docket No. EL24–94–000]

Glover Creek Solar, LLC; Notice of Institution of Section 206 Proceeding and Refund Effective Date

On April 22, 2024, the Commission issued an order in Docket No. EL24–94–000, pursuant to section 206 of the Federal Power Act (FPA), 16 U.S.C. 824e, instituting an investigation to determine whether Glover Creek Solar, LLC's Rate Schedule is unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful. *Glover Creek Solar, LLC,* 187 FERC ¶ 61,029 (2024).

The refund effective date in Docket No. EL24–94–000, established pursuant to section 206(b) of the FPA, will be the date of publication of this notice in the **Federal Register**.

Any interested person desiring to be heard in Docket No. EL24–94–000 must file a notice of intervention or motion to intervene, as appropriate, with the Federal Energy Regulatory Commission, in accordance with Rule 214 of the Commission's Rules of Practice and Procedure, 18 CFR 385.214 (2023), within 21 days of the date of issuance of the order.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. From FERC's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field. User assistance is available for eLibrary and the FERC's website during normal business hours from FERC Online Support at 202–502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202)502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

The Commission strongly encourages electronic filings of comments, protests, and interventions in lieu of paper using the ''eFile'' link at *http://www.ferc.gov.* In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: April 22, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG24–166–000.

Applicants: North Fork Solar Project, LLC.

Description: North Fork Solar Project, LLC submits Notice of Self-Certification of Exempt Wholesale Generator Status.

Filed Date: 4/19/24.

Accession Number: 0240419–5246.

Comment Date: 5 p.m. ET 5/10/24.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER06–613–000; ER06–613–012.

Applicants: ISO New England Inc., New England Power Pool.

Description: ISO New England Inc. and New England Power Pool Submit semi-annual compliance report re forward reserve market with a motion to terminate.

Filed Date: 4/18/24.

Accession Number: 20240418–5320.

Comment Date: 5 p.m. ET 5/9/24.

Docket Numbers: ER24–1763–001.

Applicants: FRP Tupelo Solar, LLC.

Description: Tariff Amendment: Cost-Based PPA with Seminole Electric Coop., Inc. (ER24–1763–) Amend Metadata to be effective 8/15/2024.

Filed Date: 4/22/24.

Accession Number: 20240422–5138.

Comment Date: 5 p.m. ET 5/13/24.

Docket Numbers: ER24–1780–000.

Applicants: Lake Erie Connector Transmission, LLC.

Description: Lake Erie Connector Transmission, LLC submits a Request for Order Confirming Negotiated Rate Authority and waiver of previously granted reporting requirements.

Filed Date: 4/12/24.

Accession Number: 20240412–5378.

Comment Date: 5 p.m. ET 5/3/24.

Docket Numbers: ER24–1803–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Implementation of Capacity Market Rules Applicable to DER Under Order No. 2222 to be effective 7/1/2023.

Filed Date: 4/22/24.

Accession Number: 20240422–5081.

Comment Date: 5 p.m. ET 5/13/24.

Docket Numbers: ER24–1804–000.

Applicants: Clearwater Wind III, LLC.

Description: Baseline eTariff Filing: Clearwater Wind III, LLC Application for Market-Based Rate Authorization to be effective 6/22/2024.

Filed Date: 4/22/24.

Accession Number: 20240422–5133.

Comment Date: 5 p.m. ET 5/13/24.

Docket Numbers: ER24–1805–000.

Applicants: ISO New England Inc., New England Power Company.

Description: § 205(d) Rate Filing: ISO New England Inc. submits tariff filing per 35.13(a)(2)(iii: NEP; Filing of Revisions to Schedule 20A–NEP to be effective 5/1/2024.

Filed Date: 4/22/24.

Accession Number: 20240422–5165.

Comment Date: 5 p.m. ET 5/13/24.

Docket Numbers: ER24–1806–000.

Applicants: Tri-State Generation and Transmission Association, Inc.

Description: § 205(d) Rate Filing: Initial Filing of Letter Agreement Related to Last Hour to be effective 4/30/2024.

Filed Date: 4/22/24.

Accession Number: 20240422–5166.

Comment Date: 5 p.m. ET 5/13/24.

Docket Numbers: ER24–1807–000.

Applicants: Consolidated Edison Company of New York, Inc.

Description: § 205(d) Rate Filing: Combined RDM Update and Idlewild Cost Recovery 4–2024 to be effective 4/22/2024.

Filed Date: 4/22/24.

Accession Number: 20240422–5182.

Comment Date: 5 p.m. ET 5/13/24.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project Nos. 703–001, 20–117]

PacifiCorp; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission or FERC) regulations, 18 CFR part 380, Commission staff reviewed PacifiCorp's applications, filed with the Commission on March 16, 2023, to decommission project facilities and surrender the Paris Hydroelectric Project (P–703) conduit exemption, and to amend Article 408(b) of its license for the Bear River Hydroelectric Project (P–20) to adjust minimum instream flows in the Grace Development's bypass reach. Commission staff have prepared a single Environmental Assessment (EA) for the proposed surrender of conduit exemption and amendment of license given the inter-relatedness of the proposals. The Paris Hydroelectric Project is located on Paris Creek in Bear Lake County, Idaho and does not occupy Federal lands. The Bear River Hydroelectric Project is located on Bear River is Franklin and Caribou counties, Idaho and occupies Federal lands administered by the Bureau of Land Management.

The EA contains Commission staff's analysis of the potential environmental effects of the proposed surrender of conduit exemption and amendment of license, alternatives to the proposed action, and concludes that the proposed surrender and amendment, with appropriate environmental protective measures, would not constitute a major Federal action that would significantly affect the quality of the human environment.

The EA may be viewed on the Commission's website at *http://www.ferc.gov* using the ''elibrary'' link. Enter the docket numbers (P–703–001 for the Paris Hydroelectric Project, or P–20–117 for the Bear River Hydroelectric Project) in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov* or toll-free at 1–866–208–3676, or for TTY, (202) 502–8659.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

For further information, contact Jennifer Ambler at 202–502–8586 or *jennifer.ambler@ferc.gov,* or Holly Frank at 202–502–6833 or *holly.frank@ferc.gov.*

Dated: April 22, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–1–000]

Cameron Interstate Pipeline, LLC; Notice of Availability of the Environmental Assessment for the Proposed Holbrook Expansion Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared an environmental assessment (EA) for the Holbrook Expansion Project, proposed by Cameron Interstate Pipeline, LLC

(CIP) in the above-referenced docket. CIP requests authorization to construct and operate two new natural gas compressor units (42,000 horsepower and 5,350 horsepower), associated aboveground facilities, 1,100 feet of 36-inch-diameter pipeline, and ancillary and auxiliary equipment at its existing Holbrook Compressor Station in Calcasieu Parish, Louisiana. CIP's stated purpose for this Project is to provide up to 1,079,000 dekatherms per day of firm natural gas transportation capacity to the CIP system. This capacity would supply feed gas to the Cameron LNG Terminal (in Cameron Parish, Louisiana) to meet shippers' incremental demand.

The EA assesses the potential environmental effects of the construction and operation of the Holbrook Expansion Project in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the proposed project, with appropriate mitigating measures, would not constitute a major Federal action significantly affecting the quality of the human environment.

The Commission mailed a copy of the *Notice of Availability* of the EA to Federal, State, and local government representatives and agencies; elected officials; environmental and public interest groups; potentially interested Native American Tribes; affected landowners; and newspapers and libraries in the Project area. The EA is only available in electronic format. It may be viewed and downloaded from the FERC's website (*www.ferc.gov*), on the natural gas environmental documents page (*https://www.ferc.gov/industries-data/natural-gas/environment/environmental-documents*). In addition, the EA may be accessed by using the eLibrary link on the FERC's website. Click on the eLibrary link (*https://elibrary.ferc.gov/eLibrary/search*), select ''General Search'' and enter the docket number in the ''Docket Number'' field, excluding the last three digits (*i.e.,* CP24–1). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659.

The EA is not a decision document. It presents Commission staff's independent analysis of the environmental issues for the Commission to consider when addressing the merits of all issues in this proceeding. Any person wishing to comment on the EA may do so. Your comments should focus on the EA's disclosure and discussion of potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that the Commission has the opportunity to consider your comments prior to making its decision on this project, it is important that we receive your comments in Washington, DC on or before 5 p.m. eastern time on May 20, 2024.

For your convenience, there are three methods you can use to file your comments to the Commission. The Commission encourages electronic filing of comments and has staff available to assist you at (866) 208–3676 or *FercOnlineSupport@ferc.gov.* Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the eComment feature on the Commission's website (*www.ferc.gov*) under the link to FERC Online. This is an easy method for submitting brief, text-only comments on a project;

(2) You can also file your comments electronically using the eFiling feature on the Commission's website (*www.ferc.gov*) under the link to FERC Online. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You must select the type of filing you are making. If you are filing a comment on a particular project, please select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments by mailing them to the Commission. Be sure to reference the project docket number (CP24–1–000) on your letter. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Filing environmental comments will not give you intervenor status, but you do not need intervenor status to have your comments considered. Only intervenors have the right to seek rehearing or judicial review of the Commission's decision. At this point in this proceeding, the timeframe for filing timely intervention requests has expired. Any person seeking to become a party to the proceeding must file a motion to intervene out-of-time pursuant to Rule 214(b)(3) and (d) of the Commission's Rules of Practice and Procedures (18 CFR 385.214(b)(3) and (d)) and show good cause why the time limitation should be waived. Motions to intervene are more fully described at *https://www.ferc.gov/how-intervene.*

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website (*www.ferc.gov*) using the eLibrary link. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *https://www.ferc.gov/ferc-online/overview* to register for eSubscription.

Dated: April 19, 2024.

Debbie-Anne A. Reese.

Acting Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2022–0971; FRL–10181–02–OLEM]

Response to Petition To Classify Discarded Polyvinyl Chloride as RCRA Hazardous Waste

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final petition response.

SUMMARY: The Environmental Protection Agency (EPA or the Agency) is responding to a rulemaking petition

from the Center for Biological Diversity requesting that discarded polyvinyl chloride be listed as a hazardous waste under the Resource Conservation and Recovery Act. The Agency published a tentative denial of the rulemaking petition on January 12, 2023. Today, after review of the public comments, EPA is affirming that decision. The petition is denied.

DATES: This final action is effective on April 26, 2024.

FOR FURTHER INFORMATION CONTACT: Daniel Lowrey, Materials Recovery and Waste Management Division, Office of Resource Conservation and Recovery, (5304T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: 202–566–1015; email address: *lowrey.daniel@epa.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. General Information

A. Does this action apply to me?

The Agency is not proposing any regulatory changes at this time. Entities that may be interested in this denial of the petition include any facility that manufactures, uses, or generates as waste any materials containing polyvinyl chloride (PVC) or its components. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

B. How can I get copies of this document and other related information?

1. Docket. EPA has established a docket for this action under Docket ID No. EPA–HQ–OLEM–2022–0971. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays). For further information on the EPA Docket Center services and the current status, see: *https://www.epa.gov/dockets.*

2. Electronic Access. You may access this **Federal Register** document electronically from *https://www.federalregister.gov/documents/current.*

C. List of Abbreviations and Acronyms

CBD Center for Biological Diversity
BBP Butyl benzyl phthalate
DBP Dibutyl phthalate
DEP Diethyl phthalate
DEHP Diethylhexyl phthalate
DIDP Diisodecyl phthalate
DINP Diisononyl phthalate
DMP Dimethyl phthalate
DnOP Di-n-octyl phthalate
EPA Environmental Protection Agency
L liter
mg milligram
PVC Polyvinyl chloride
RCRA Resource Conservation and Recovery Act
TC Toxicity characteristic
TCLP Toxicity characteristic leaching procedure

D. What action is the EPA taking?

The EPA is providing notice of and finalizing its denial of CBD's 2014 rulemaking petition concerning the regulation of discarded polyvinyl chloride (PVC) and associated chemical additives under the Resource Conservation and Recovery Act (RCRA). With this action, the Agency is also publishing its response to public comments on the tentative denial.

E. What is the EPA's authority for taking this action?

On July 24, 2014, the Center for Biological Diversity (CBD) petitioned the EPA to list discarded PVC as a hazardous waste under RCRA (''Petition''). The Agency is responding to this Petition for rulemaking pursuant to 42 U.S.C. 6903, 6921 and 6974, and EPA's implementing regulations at 40 CFR part 260.20, 261.3, 261.10, and 261.11. Authority for the identification and listing of hazardous wastes is granted pursuant to 42 U.S.C. 6903 and 6921, and implementing regulations 40 CFR parts 260 and 261.

F. What are the incremental costs and benefits of this action?

As this action proposes no regulatory changes, this action will have neither incremental costs nor benefits.

II. Background

A. Background on Polyvinyl Chloride

PVC is one of the most common plastics, used in a variety of applications—primarily in the construction industry, but also in packaging and consumer goods (OECD 2022). PVC is formed from the polymerization of vinyl chloride monomer and additives. Additives include stabilizers that limit degradation from sources such as oxygen, heat, light, and flame, and plasticizers that make the PVC more flexible.

All PVC contains stabilizers. Some PVC contains stabilizers containing metals such as barium, cadmium, and/or lead. Other PVC contains stabilizers based on calcium, zinc, and/or tin (Hahladakis et al. 2018; European Commission 2022).

PVC may contain plasticizers, with the concentration and identity of plasticizers varying widely based on the desired properties of the final material. Plasticizers that are phthalates include but are not limited to: di(2-ethylhexyl) phthalate (DEHP), dibutyl phthalate (DBP), diethyl phthalate (DEP), dimethyl phthalate (DMP), di-n-octylphthalate (DnOP), benzyl butyl phthalate (BBP), diisononyl phthalate (DINP) and diisodecyl phthalate (DIDP) (Hahladakis et al. 2018; Czogała, Pankalla, and Turczyn 2021). Other plasticizers that are not phthalates include adipates and trimellitates. Rigid forms of PVC contain little to no plasticizers while more flexible forms require the addition of more plasticizers.

It is difficult to determine the proportion of PVC products that contain plasticizers because PVC manufacturers and PVC product manufacturers are not generally required to report this information. Typically, plasticizers constitute from zero up to about 50 percent of the product by weight, although higher concentrations have been reported (Hahladakis et al. 2018; Kim et al. 2020; European Commission 2022). Voluntary data from 2000 indicates at least two thirds of PVC is of rigid grades that do not typically contain any amount of plasticizers (Borrelli et al. 2005).

B. How is the EPA addressing discarded PVC?

Separate from the Petition and EPA's action on it, the EPA regulates the management of solid waste, including discarded plastics such as PVC, under RCRA. EPA has established different standards for units accepting different types of non-hazardous waste, see 40

CFR parts 257–258, and RCRA generally prohibits non-compliant ''open dumping'' of non-hazardous solid waste. 42 U.S.C. 6945(a).

The EPA Strategic Plan of 2022–2026 (U.S. EPA 2022) sets forth priorities to reduce waste and prevent environmental contamination (Objective 6.2) including that ''EPA will administer grant programs to improve Tribal, state, and local solid waste management programs and infrastructure and education and outreach on waste prevention. EPA also will address land-based contributions to the mismanagement of post-consumer materials and plastic waste.'' Further information about the management of discarded plastic, including discarded PVC, can be found at *https://www.epa.gov/facts-and-figures-about-materials-waste-and-recycling/advancing-sustainable-materials-management.*

The EPA Strategic Plan also sets priorities to protect and restore waterbodies and watersheds (Objective 5.2) including that ''EPA also will engage in both domestic and international partnerships to support trash pollution prevention programs, recycling efforts in rural and suburban communities, and waterfront revitalization'' and that EPA will ''[i]mplement programs to prevent or reduce nonpoint source pollution, including nutrients and plastic pollution.'' Further information about the EPA's actions on plastic pollution in bodies of water, including marine plastic pollution as directed by the Save Our Seas 2.0 Act of 2020 (Pub. L. 116–224) signed into law in December 2020, can be found at *https://www.epa.gov/trash-free-waters/trash-free-waters-projects* (EPA 2024a).

In April of 2023 the EPA released for public comment and peer review a draft national strategy to prevent plastic pollution (EPA 2023). Proposed actions from the draft national strategy to prevent plastic pollution (EPA 2024b) include to:

- Reduce the production and consumption of single-use, unrecyclable, or frequently littered plastic products.
- Minimize pollution across the life cycle of plastic products.
- Increase public understanding of the impact of plastic mismanagement and how to appropriately manage plastic products and other waste.
- Identify and implement policies, programs, technical assistance, and compliance assurance actions that effectively prevent trash/microplastics from getting into waterways or remove such waste from waterways once it is there.

C. Regulatory Background

EPA defines hazardous waste for purposes of the RCRA hazardous waste regulations in 40 CFR 261.3. There are three ways by which a solid waste may be listed as hazardous waste under the RCRA hazardous waste regulations. See 40 CFR 261.11(a). Two of these are relevant to the Petition: 40 CFR 261.11(a)(1) and (a)(3).

A solid waste may be listed as a hazardous waste pursuant to 40 CFR 261.11(a)(1) if it ''exhibits any of the characteristics of a hazardous waste.'' The four characteristics of a hazardous waste are found in 40 CFR 261.21–24. The most relevant to the Petition is the toxicity characteristic, found in 40 CFR 261.24. A solid waste exhibits the characteristic of toxicity if it leaches specified toxic contaminants in the toxicity characteristic leaching procedure (TCLP) in excess of the regulatory limit listed in Table 1 of 40 CFR 261.24. See 40 CFR 261.24(a).

A solid waste may be listed as a hazardous waste pursuant to 261.11(a)(3) if ''it contains any of the toxic constituents listed in Appendix VIII [to 40 CFR part 261],'' and the Administrator concludes, after considering eleven factors, that it ''is capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed.'' 40 CFR 261.11(a)(3). EPA lists hazardous constituents on Appendix VIII to 40 CFR part 261.

Pursuant to 42 U.S.C. 6974, any person may petition the Administrator to conduct a RCRA rulemaking, including requesting a listing of a hazardous waste. EPA's regulations require that ''[a]fter evaluating all public comments the Administrator will make a final decision [on the petition] by publishing in the **Federal Register** a regulatory amendment or a denial of the petition.'' 40 CFR 260.20(e). The regulations require that every petition must include ''a statement of the need and justification for the proposed action, including any supporting tests, studies, or other information.'' 40 CFR 260.20(b)(4). While 40 CFR 260.20 does not provide specific information requirements for hazardous waste listing petitions, EPA has clarified that the information relevant to the listing criteria set forth in 261.11(a) is useful for petitioners to include in such a petition. See 45 FR 33070. Therefore, when a petition requesting a listing of a substance as a hazardous waste, as supplemented by the public comments, provides insufficient information to consider all of the relevant listing criteria under 261.11(a), EPA is not required to grant the petition and may deny the petition as a matter of its discretion for having provided an insufficient justification as required by 260.20(b)(4). EPA's discretion under 260.20 includes the choice of whether to pursue a matter beyond what is provided in the petition and any subsequent public comments, where they fail to provide sufficient indicia of a hazard to human health or the environment.

III. Petition for Rulemaking, EPA's Tentative Denial, and Comments Received

A. Summary of the Petitioner's Requested Changes and EPA's Tentative Denial

On July 24, 2014, the Center for Biological Diversity (CBD) petitioned the EPA to ''promulgate regulations governing the safe treatment, storage and disposal of PVC, vinyl chloride and associated dialkyl- and alkylarylesters of 1,2-benzenedicarboxylic acid, commonly known as phthalate plasticizers.'' In doing so, CBD requested that discarded PVC be listed as a hazardous waste, which would require a narrative listing of discarded PVC from non-specific sources be added to the ''F'' list under 40 CFR 261.31.

On January 12, 2023, the Agency published a tentative denial of the Petition. In the denial, the Agency explained that petitioners had not provided sufficient evidence to support a listing of discarded PVC as a RCRA hazardous waste as the Petition did not provide sufficient information that discarded PVC, under current waste management practices, ''present[s] a substantial present or potential hazard to human health or the environment when solid waste is improperly treated, stored, transported or disposed of, or otherwise managed (40 CFR 261.11).'' Rather, much of the information provided in the Petition concerned potential exposures during the use of PVC as a product. Based on the information provided in the Petition, the Agency proposed to determine that a listing of discarded PVC was unwarranted at this time.

B. Summary of Comments Received

The Agency received public comments on the tentative denial during the 30-day comment period that ran from January 12, 2023, through February 13, 2023. On February 23, 2023, after the comment period had closed, the

Agency received a request to extend the comment period for an additional thirty days following the train derailment in East Palestine, Ohio. The Agency chose not to reopen the comment period because the release in East Palestine, Ohio did not have a direct bearing on the Petition. Furthermore, the Agency had entered into a consent decree with the Center for Biological Diversity (see docket EPA–HQ–OGC–2022–0406) in which the EPA had committed to sign the final determination on the Petition by April 12, 2024 (which the parties subsequently stipulated to extend to April 26, 2024). The requested extension of the comment period could have interfered with meeting that commitment.

The Agency received 4,543 comments on the tentative denial. 63 comments supported the tentative denial, including 2 letter writing campaigns representing approximately 52 of the comments, with 10 substantive and distinct comments. 4,480 comments were opposed to the denial, including a letter writing campaign covering approximately 4464 of the comments, with 3 substantive and distinct comments.

The comments supporting the tentative denial largely echoed the language of EPA's tentative denial, including the lack of evidence in the Petition that discarded PVC meets the 40 CFR 261.11 listing criteria, Agency discretion, the variable composition of PVC, other EPA efforts addressing plastic pollution, and the existing regulations on landfills, incinerators, and toxic contaminants. These commenters also cited recent EPA actions under the Toxic Substances Control Act (TSCA) related to the risk evaluations of vinyl chloride and phthalates and noted that the studies provided by the petitioner related to direct phthalate exposure which, the commenters argued, cannot substitute for evidence of potential exposure or effects from discarded PVC. Additional comments expressed concern about the potential regulatory burden and/or complexity of complying with the changes requested by the Petition, particularly with regard to generator status, regulated medical waste, and recycling/sustainability efforts.

The comments opposed to the denial of the Petition echoed the language of CBD's petition, expressing concern about potential releases of toxic constituents during the manufacture, use, and disposal of PVC. Specific concerns regarding disposal of PVC included plastic pollution and its effect on the environment, the scope of existing regulations, presence in landfills and incinerators, and potential release of hazardous constituents from landfill leachate and incineration. Commenters expressed concern about the potential toxicity of discarded PVC resin apart from any consideration of additives (*i.e.,* phthalate plasticizers and metals from heat stabilizers). Additionally, the petitioner submitted 30 additional scientific studies as support.

Responses to specific comments may be found in the response to comments document published separately in this docket.

IV. Reasons for EPA's Final Denial of the Petition

Pursuant to 40 CFR 260.20, the Petition, as supplemented by public comments, must provide sufficient information to justify the listing of discarded PVC as a hazardous waste. The Petition and public comments fail to do so.

The Petition does not specifically request that EPA list discarded PVC as a hazardous waste pursuant to 40 CFR 261.11(a)(1). However, it does provide some information that could be construed as relevant to a request for such a listing. The Petition does specifically request that EPA conduct a hazardous waste listing pursuant to 40 CFR 261.11(a)(3). Accordingly, EPA has considered information to be relevant to the Petition if it is relevant to either 261.11(a)(1) or (a)(3). EPA proposed to deny the Petition based on the lack of information provided by Petitioners. After considering public comment on the tentative denial, EPA concludes that the Petition, even as supplemented by the information received through the public comment period, still provides insufficient information to justify a listing of discarded PVC as a hazardous waste at this time under either 261.11(a)(1) or 261.11(a)(3).

With respect to 40 CFR 261.11(a)(1), the Petition states that PVC may contain any of the following hazardous contaminants found in Table 1 of 40 CFR 261.24: vinyl chloride monomer (D043), barium (D005), cadmium (D006), and lead (D008). Under EPA's regulations, a solid waste exhibits the hazardous waste characteristic of toxicity (TC) when the values in Method 1311 (TCLP) exceed 0.2 milligrams per liter (mg/L), 100 mg/L, 1 mg/L, and 5 mg/L, respectively, for these contaminants. However, the Petition and comments are insufficient because they do not provide evidence that discarded PVC leaches these hazardous contaminants in excess of their TC regulatory levels. Additionally, EPA is also aware of at least one study suggesting that discarded PVC may not exhibit the hazardous waste characteristic of toxicity for vinyl chloride. Specifically, a survey of American vinyl producers conducted in 2000 found concentrations of residual vinyl chloride monomer to be too low to exceed the vinyl chloride TC regulatory level (Borrelli et al. 2005). That is, the study found that residual vinyl chloride concentrations were less than twenty times the TC regulatory level for vinyl chloride (20×0.2 mg/L = 4 mg/L), which according to agency guidance may be classified as non-hazardous with respect to the presence of vinyl chloride without having to conduct a TCLP test (*https://www.epa.gov/hw-sw846/hazardous-waste-characteristics#question23*). Therefore, given the insufficient information to determine whether hazardous contaminants in discarded PVC exceed their TC regulatory levels, EPA denies the Petition to the extent it requests a listing under 40 CFR 261.11(a)(1).

With respect to 40 CFR 261.11(a)(3), the Petition does provide some evidence that discarded PVC may contain one or more toxic constituents listed in Appendix VIII. Specifically, petitioner provided evidence that discarded PVC contains residual vinyl chloride monomer, and may contain barium, cadmium, lead, DEHP, DBP, DEP, DMP, DnOP, and BBP.

Nevertheless, the Petition, even as supplemented by the information received through the public comment period, does not provide sufficient information that discarded PVC is ''capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed'' based on the eleven factors provided in 40 CFR 261.11(a)(3). 40 CFR 261.11(a)(3). To determine whether discarded PVC meets the 261.11(a)(3) criteria, EPA must consider eleven factors. The discussion below focusses on factors (ii), (iii), (vii), and (ix), detailing how the Petition and comments received provide insufficient information relevant to these criteria. Petitioner's failure to provide compelling information on these factors is sufficient to support EPA's final denial. EPA is not relying on an evaluation of, and does not intend to imply the sufficiency of, the evidence provided to support the other factors.

EPA received mixed information relevant to factor (ii). Factor (ii) specifies that EPA will consider the concentration of the Appendix VIII constituent in the waste. The petitioner

provided some evidence that discarded PVC may contain residual vinyl chloride monomer, and that the following toxic constituents may be present due to additives: barium, cadmium, lead, DEHP, DBP, DEP, DMP, DnOP, and BBP. To support this, petitioner claimed that barium, cadmium and lead additives are often present in PVC. Petitioner also made generalized claims from a number of limited sources that the listed phthalates are often used by the PVC industry and may constitute up to eighty percent by weight of certain PVC products. However, EPA also received public comments explaining that all of the toxic constituents that petitioners describe have been largely phased out of PVC in the United States over decades, such that, for example, less than 9 percent of new PVC contains any phthalates (including phthalates not listed on Appendix VIII), and the concentration of residual vinyl chloride monomer may be so low as to not be detectable (Vinyl Institute 2023 p 4, 13–14). Given the conflicting information on the prevalence and concentrations constituents in PVC, EPA has determined that the Petition and comments received provide insufficient information to consider the concentration of Appendix VIII constituents in discarded PVC.

EPA received insufficient information relevant to factor (vii). Factor (vii) specifies that EPA will consider plausible types of improper management to which discarded PVC could be subjected. In evaluating this factor, EPA does not consider spills, accidents, or other unlikely scenarios. *See Dithiocarbamate Task Force* v. *EPA,* 98 F.3d 1394, 1400–1401 (D.C. Cir. 1996); 63 FR 64383. Rather, EPA considers the current management practices for the waste at-issue and must identify ''some factual support for a conclusion that a particular mismanagement scenario is plausible.'' *Dithiocarbamate Task Force* at 1400. The Petition relies on the presence of plastic pollution and evidence of phthalate exposure as evidence that mismanagement of discarded PVC has occurred and characterizes—without further elaboration—a limited number of sources for the proposition that marine pollution results from flawed waste management techniques.

These claims are insufficiently supported in several respects. First, management of discarded PVC depends on the type and source of PVC, but may include disposal in construction and demolition landfills, municipal solid waste landfills, or incineration as municipal solid waste. The Petition fails to distinguish between the management practices applicable to the different sources of this PVC waste,[1] and therefore, fails to properly identify potential improper management scenarios, or evaluate their plausibility. Second, the Petition fails to explain what amount of plastic pollution, including marine litter, can be attributed to PVC, as opposed to other forms of plastic. Third, the Petition also fails to explain the extent that this pollution has resulted from mismanagement of discarded PVC, as opposed to other sources such as uncontrolled litter or product use that occurs outside of the current waste management regime.[2] For all of these reasons, the Petition and comments received provide insufficient evidence for EPA to consider the plausible types of improper management to which discarded PVC could be subjected.

EPA also received insufficient information relevant to factors (iii) and (ix). Factor (iii) specifies that EPA will consider the potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in factor (vii); and factor (ix) specifies that EPA will consider the nature and severity of the human health and environmental damage that has occurred as a result of the improper management of wastes containing the constituent(s). Both of these factors require consideration of plausible mismanagement scenarios. However, as explained above, EPA received insufficient information about the plausible types of mismanagement to which discarded PVC could be subjected. The Petition and comments provided information about potential exposures from the use of PVC products. However, they did not explain why the information is germane to evaluating the potential of the constituent or any toxic degradation product of the constituent to migrate from waste (*i.e.,* discarded PVC) into the environment under the particular environments found in waste management scenarios. Nor did they explain how it is relevant to human health or environmental damage occurring as a result of improper waste management. Finally, the Petition and comments fail to identify any cases or situations where substantial human health or environmental damage has occurred from exposure to hazardous constituents in PVC resulting from the management of discarded PVC.

As such, the Petition fails to provide enough information to compel EPA to list discarded PVC as a hazardous waste. Nor do the Petition and comments include sufficient information of a potential hazard to human health or the environment that would otherwise justify, in the Agency's discretion, initiating a rulemaking procedure to supplement the insufficient information provided in the petition and public comments. Accordingly, EPA has determined that the Petition, even as supplemented by the information received through the public comment period, provides insufficient information to justify granting the petition under 260.20. The petition is denied.

[1] For example, as noted in unit II.B. of this notice, different federal standards apply to different classifications of non-hazardous waste landfills.

[2] See Figure 10 of OECD 2022 for sources of aquatic plastic including product use; See also Table 8 of U.S. EPA 2020, which shows that discarded PVC is less than 3% of the plastic in municipal solid waste.

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Modification of Secondary Treatment Requirements for Discharges Into Marine Waters (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Modification of Secondary Treatment Requirements for Discharges into Marine Waters (EPA ICR Number 0138.13, OMB Control Number 2040–0088) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2024. Public comments were previously requested via the **Federal Register** on August 4, 2023, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 28, 2024.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OW–2003–0033, to EPA online using *www.regulations.gov* (our preferred method), by email to *OW-Docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Virginia Fox-Norse, Oceans, Wetlands and Communities Division, Office of Water, (4504T), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202 566–1266; email address: *fox-norse.virginia@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on August 4, 2023, during a 60-day comment period (88 FR 51813). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: The Clean Water Act (CWA) section 301(h) allows for a case-by-case review of treatment requirements for publicly owned treatment works (POTW) discharges to marine waters. Eligible POTWs that met the set of environmentally stringent criteria in CWA section 301(h) received a modified National Pollutant Discharge Elimination System permit waiving the secondary treatment requirements for the conventional pollutants-biochemical oxygen demand, suspended solids, and pH. CWA section 301(h) only applies to the 25 POTWs that currently hold CWA 301(h) modified permits. No new applications are accepted. The CWA section 301(h) program involves collecting information from two sources: 1) the POTW, and 2) the state in which the POTW is located. The POTW holding or seeking to renew or revise a CWA section 301(h) modified permit provides application, reapplication, monitoring, and toxic control program information to demonstrate that its discharge meets and continues to meet all the CWA section 301(h) environmental criteria. The state provides state determination and certification information.

Form Numbers: None.

Respondents/affected entities: Municipalities that currently have CWA section 301(h) modifications from secondary treatment, or have applied for

a renewal of a CWA section 301(h) modified permit, and the states within which these municipalities are located.

Respondent's obligation to respond: Voluntary, required to obtain or retain a benefit. (40 CFR part 125 subpart G, 40 CFR 124.53 and 124.54).

Estimated number of respondents: 30 (total).

Frequency of response: From once every five years, to varies case-by-case, depending on the category of information.

Total estimated burden: 44,985 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $1,418,675 (per year), which includes no annualized capital or operation & maintenance costs.

Changes in the Estimates: There is no increase in hours in the total estimated respondent burden compared with the ICR currently approved by OMB. There is no change in program requirements, nor program status, information needs, and use of technology.

Courtney Kerwin,

Director, Information Engagement Division.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–10891–01–OAR]

California State Nonroad Engine Pollution Control Standards; In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets and In-Use Off-Road Diesel Fueled Fleets; Requests for Authorization; Opportunity for Public Hearing and Comment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of opportunity for public hearing and comment.

SUMMARY: The California Air Resources Board (CARB) has notified the EPA that it has adopted amendments to its In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets (collectively, ''TRU'') regulations. By letter dated December 29, 2022, CARB requested that the EPA authorize the amendments pursuant to section 209(e) of the Clean Air Act (CAA). CARB has also notified EPA that it has adopted amendments to its In-Use Off-Road Diesel-Fueled Fleets (''Offroad Fleets'') regulations. By letter dated November 2, 2023, CARB requested that the EPA authorize the amendments pursuant to section 209(e) of the CAA. This notice announces that the EPA will hold a public hearing to consider California's authorization requests and that the EPA is now accepting written comments on the requests.

DATES:

Comments: Written comments must be received on or before June 19, 2024.

Public Hearing: The EPA will hold public hearings on May 16, 2024, regarding each of CARB's authorization requests. See **SUPPLEMENTARY INFORMATION** for further information on the virtual public hearings, the specific time of day associated with each authorization request, and registration. Additional information regarding the virtual public hearing and the TRU action can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-tru.* Additional information regarding the virtual public hearing and the Offroad Fleets action can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-use-road-diesel.*

ADDRESSES:

Comments: You may submit your comments, identified by Docket ID No. EPA–HQ–OAR–2024–0030 (for the TRU action) and by Docket ID. No. EPA–HQ–OAR–2023–0581 (for the Offroad Fleets action) by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov* (our preferred method). Follow the online instructions for submitting comments.
- *Email: a-and-r-docket@epa.gov.*
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, OAR, Docket EPA–HQ–OAR–2024–0030 (for the TRU action) or Docket EPA–HQ–OAR–2023–0581 (for the Offroad Fleets action), Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery or Courier (by scheduled appointment only:* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except federal holidays).

Instructions: All submissions received must include the Docket ID No. for one or both of these actions. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on the process for these actions, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. For the full EPA public comment policy, information about confidential business information (CBI) or multimedia submissions, and general guidance on making effective comments, please visit: *http://www.epa.gov/dockets/commenting-epa-dockets.*

Public Hearing: The virtual public hearings will be held on May 16, 2024. The hearing for the TRU authorization request will begin at 10:00 a.m. Eastern Daylight Time and will end approximately at 1:00 p.m. or when all parties who wish to speak have had an opportunity to do so. The hearing for the Offroad Fleets authorization request will begin at 2:00 p.m. Eastern Daylight Time and will end when all parties who wish to speak have had an opportunity to do so. All hearing attendees, for those wishing to attend either the morning hearing or afternoon hearing for the TRU or Offroad Fleets authorization request, respectively (including even those who do not intend to provide testimony), should register for the respective public hearing(s) by May 9, 2024. Information on how to register for the virtual public hearing regarding the TRU authorization request can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-tru.* Information on how to register for the virtual public hearing regarding the Offroad Fleets authorization request can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-use-road-diesel.*

SUPPLEMENTARY INFORMATION:

I. CARB's TRU Authorization Request

CARB's December 29, 2022, letter to the EPA Administrator notified the EPA that CARB had amended its In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets (collectively, ''TRU'') regulations (the TRU Amendments).[1] The TRU Amendments, adopted by the Board on

[1] Title 13, California Code of Regulations, section 2477. EPA granted an authorization for California's initial set of TRU regulations on January 16, 2009. EPA also granted a within-the-scope authorization for amendments to the TRU regulations, adopted in 2010, on June 28, 2013 (78 FR 38970).

February 24, 2022, contain several provisions including, but not limited to, a requirement that certain TRUs manufactured after a certain date use a refrigerant less than or equal to a specified global warming potential (GWP), a requirement that non-truck TRUs meet specified particulate matter (PM) standards, a requirement that TRU owners transition a percentage of their truck fleet TRUs to zero-emission technology, and a requirement that owners of certain facilities are subject to registration and reporting requirements.[2]

II. CARB's Offroad Fleets Authorization Request

CARB's November 2, 2023, letter to the EPA Administrator notified the EPA that CARB had amended its In-Use Off-Road Diesel-Fueled Fleets regulations (Offroad Fleets Amendments).[3] The Offroad Fleets Amendments, adopted by the Board on December 8, 2022, primarily require fleets of in-use off-road diesel-fueled vehicles to phase out the operation of their oldest and highest-emitting diesel vehicles and prohibit such fleets from acquiring high-emitting vehicles. The Offroad Fleets Amendments also require fleets to fuel their vehicles with specified renewable diesel. Further, the Amendments establish administrative requirements for prime contractors and public works awarding bodies.[4]

III. Scope of Preemption and Criteria for an Authorization Under the Clean Air Act

Section 209(e)(1) of the CAA prohibits all states and local governments from adopting or attempting to enforce any standard or other requirement relating to the control of emissions from certain types of new nonroad engines or nonroad vehicles, including both ''(A) New engines which are used in construction equipment or vehicles or used in farm equipment or vehicles and which are smaller than 175 horsepower'' and ''(B) New locomotives or new engines used in locomotives.'' [5] Section 209(e)(2)(A) of the CAA, however, requires the Administrator, after notice and opportunity for public hearing, to authorize California to adopt and enforce standards and other requirements relating to the control of emissions from nonroad engines and vehicles otherwise not prohibited under section 209(e)(1) if California determines that California standards will be, in the aggregate, at least as protective of public health and welfare as are applicable Federal standards. However, the EPA shall not grant such authorization if it finds that (1) the determination of California is arbitrary and capricious; (2) California does not need such California standards to meet compelling and extraordinary conditions; or (3) California standards and accompanying enforcement procedures are not consistent with [CAA section 209].[6]

On July 20, 1994, the EPA promulgated a rule that sets forth, among other things, regulations providing the criteria, as found in section 209(e)(2)(A), that the EPA must consider before granting any California authorization request for nonroad engine or vehicle emission standards.[7] The EPA revised these regulations in 1997.[8] The criteria for granting California authorization requests, as reflected in section 209(e)(2)(A), can be found at 40 CFR 1074.105.

As stated in the preamble to the 1994 rule, the EPA has historically interpreted the section 209(e)(2)(A)(iii) ''consistency'' inquiry (see 40 CFR 1074.105(b)(3)) to require, at minimum, that California standards and enforcement procedures be consistent with section 209(a), section 209(e)(1), and section 209(b)(1)(C) (as the EPA has interpreted that subsection in the context of section 209(b) motor vehicle waivers).[9]

In order to be consistent with section 209(a), California's nonroad standards and enforcement procedures must not apply to new motor vehicles or new motor vehicle engines. To be consistent with section 209(e)(1), California's nonroad standards and enforcement procedures must not attempt to regulate engine categories that are permanently preempted from state regulation (such as ''. . . any standard or other requirement relating to the control of emissions from . . . (A) New engines which are used in construction equipments or vehicles or used in farm equipment or vehicles and which are smaller than 175 horsepower. (B) New locomotives or new engines used in locomotives.'').

To determine consistency with section 209(b)(1)(C), EPA typically reviews nonroad authorization requests under the same ''consistency'' criteria that are applied to motor vehicle waiver requests. Pursuant to section 209(b)(1)(C), the Administrator shall not grant California a motor vehicle waiver if he finds that California ''standards and accompanying enforcement procedures are not consistent with section 202(a)'' of the Act. Previous decisions granting waivers and authorizations have noted that state standards and enforcement procedures are inconsistent with section 202(a) if: (1) there is inadequate lead time to permit the development of the necessary technology giving appropriate consideration to the cost of compliance within that time, or (2) the federal and state testing procedures impose inconsistent certification requirements.[10]

III. EPA's Request for Comments

We request comment on whether the TRU Amendments meet the criteria for an EPA authorization. Specifically, we request comment on: (a) whether CARB's determination that its standards, in the aggregate, are at least as protective of public health and welfare as applicable federal standards is arbitrary and capricious, (b) whether California needs such standards to meet compelling and extraordinary conditions, and (c) whether California's standards and accompanying enforcement procedures are consistent with section 209 of the Act. As explained above, the EPA considers several provisions with regard to the consistency with section 209 of the Act criterion.

We also request comment on whether the Offroad Fleets Amendments meet the criteria for an EPA authorization. Specifically, we request comment on: (a) whether CARB's determination that its standards, in the aggregate, are at least as protective of public health and welfare as applicable federal standards is arbitrary and capricious, (b) whether California needs such standards to meet compelling and extraordinary conditions, and (c) whether California's standards and accompanying enforcement procedures are consistent with section 209 of the Act. As

[2] CARB's Authorization Support Document at 4–9 (EPA Docket: EPA–HQ–OAR–2024–0030). A description of CARB's 2022 TRU Amendments can be found in the Authorization Support Document submitted by CARB along with associated attachments that can be found in the EPA docket for this matter.

[3] Title 13, California Code of Regulations, sections 2449, 2449.1, and 2449.2. In 2013, EPA issued an authorization for CARB's initial Offroad Fleets adopted in 2007 and amended in 2009 and 2010 (78 FR 58090 (Sept. 20, 2013)).

[4] CARB's Authorization Support Document at 4–10 (EPA Docket: EPA–HQ–OAR–2023–0581). A description of CARB's Offroad Fleets Amendments can be found in the Authorization Support Document submitted by CARB along with associated attachments that can be found in the EPA docket for this matter.

[5] 42 U.S.C 7543(e)(1).

[6] 42 U.S.C. 7543(e)(2)(A).

[7] 59 FR 36969 (July 20, 1994).

[8] 62 FR 67733 (December 30, 1997). The preemption regulations were later transcribed at 40 CFR part 1074; see 73 FR 59034 (Oct. 8, 2008).

[9] 59 FR 36969 (July 20, 1994).

[10] 78 FR 58090, 58092 (September 20, 2013).

explained above, the EPA considers several provisions with regard to the consistency with section 209 of the Act criterion.

IV. Procedures for Public Participation

The virtual public hearings will be held on May 16, 2024. The hearing for the TRU authorization request will begin at 10:00 a.m. Eastern Daylight Time and will end approximately at 1:00 p.m. or when all parties who wish to speak have had an opportunity to do so. The hearing for the Offroad Fleets authorization request will begin at 2:00 p.m. Eastern Daylight Time and will end when all parties who wish to speak have had an opportunity to do so.

All hearing attendees, for those wishing to attend either the morning or afternoon hearings for TRU or Offroad Fleets, respectively (including even those who do not intend to provide testimony,) should register for the respective public hearing(s) by May 9, 2024. Information on how to register for the virtual public hearing regarding the TRU authorization request can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-tru.* Information on how to register for the virtual public hearing regarding the Offroad Fleets authorization request can be found at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-use-road-diesel.*

Those seeking to register should do so by May 9, 2024. If you require the services of a translator or special accommodations such as American Sign Language, please pre-register for the hearing and describe your needs by May 9, 2024. The EPA may not be able to arrange accommodations without advance notice. Please note that any updates made to any aspect of the TRU authorization hearing will be posted online at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-tru.* Please also note that any updates to any aspect of the Offroad Fleets authorization hearing will be posted online at: *https://www.epa.gov/regulations-emissions-vehicles-and-engines/virtual-public-hearing-californias-use-road-diesel.* While the EPA expects the hearings to go forward as set forth above, please monitor the respective hearing websites or contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to determine if there are any updates. The EPA does not intend to publish a document in the **Federal Register** announcing updates.

Each commenter will have 3 minutes to provide oral testimony. The EPA may ask clarifying questions during the oral presentations but will not respond to the presentations at that time. The EPA recommends submitting the text of your oral comments as written comments to the docket for the respective authorization request. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral comments and supporting information presented at the public hearing for the respective authorization request. The Agency will make a verbatim record of the proceedings at each hearing that will be placed in the respective TRU and Offroad Fleets dockets. The EPA will keep the record open until June 19, 2024, for each authorization request. After expiration of the comment period, the Administrator will render decisions on CARB's requests based on the record of the public hearing, relevant written submissions, and other information that he deems pertinent.

William Charmley,

Director, Assessment and Standards Division, Office of Transportation and Air Quality.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OGC–2024–0192; FRL–11917–01–OGC]

Proposed Consent Decrees, Toxic Substances Control Act Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed consent decrees; request for public comment.

SUMMARY: Notice is given of proposed consent decrees to address lawsuits filed by Community In-Power and Development Association Inc., Learning Disabilities Association of America, Louisiana Environmental Action Network, Sierra Club, and Texas Environmental Justice Advocacy Services (collectively, ''CIDA Plaintiffs'') in the United States District Court for the District of Columbia on September 18, 2023: *Community In-Power and Development Association Inc.* v. *EPA,* Case No. 1:23-cv-02715 (D.D.C.) (the ''CIDA action'') and by American Chemistry Council (''ACC'') in the same court on December 19, 2023: *ACC* v. *EPA,* Case No. 1:23-cv-03726 (D.D.C.) (the ''ACC action''). The cases were consolidated on January 17, 2024. The CIDA Plaintiffs and ACC filed the cases pursuant to the Toxic Substances Control Act (''TSCA''), alleging that EPA failed to perform non-discretionary duties under TSCA to timely complete several risk evaluations. EPA is providing notice of the proposed consent decrees, which would resolve all claims in both cases by establishing deadlines for EPA to take action on the subject risk evaluations.

DATES: Written comments on the proposed consent decrees must be received by May 28, 2024.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–OGC–2024–0192, online at *https://www.regulations.gov* (EPA's preferred method). Follow the online instructions for submitting comments.

Instructions: All submissions received must include the Docket ID number for this action. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Additional Information about Commenting on the Proposed Consent Decrees'' heading under the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Stephanie Schwarz, Pesticides and Toxic Substances Law Office, Office of General Counsel, U.S. Environmental Protection Agency; telephone (202) 564–8496; email address *schwarz.stephanie@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Copies of the Proposed Consent Decrees

The official public docket for this action (Docket ID No. EPA–HQ–OGC–2024–0192) contains copies of the proposed consent decrees. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744 and the telephone number for the OEI Docket is (202) 566–1752.

The electronic version of the public docket for this action contains copies of the proposed consent decrees and is available through *https://www.regulations.gov.* You may use *https://www.regulations.gov* to submit

or view public comments, access the index listing of the contents of the official public docket, and access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select ''search.''

II. Additional Information About Commenting on the Proposed Consent Decrees

Submit your comments, identified by Docket ID No. EPA–HQ–OGC–2024–0192, via *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from this docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* For additional information about submitting information identified as CBI, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this document. Note that written comments containing CBI and submitted by mail may be delayed and deliveries or couriers will be received by scheduled appointment only.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the *https://www.regulations.gov* website to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an ''anonymous access'' system, which means EPA will not know your identity, email address, or other contact information unless you provide it in the body of your comment.

In accordance with the EPA's ''Consent Decrees and Settlement Agreements to Resolve Environmental Claims Against the Agency'' (March 18, 2022), for a period of thirty (30) days following the date of publication of this document, the Agency will accept written comments relating to a proposed consent decrees for these claims. EPA or the Department of Justice may withdraw or withhold consent to the proposed consent decrees if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, or inadequate.

Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked ''late.'' EPA is not required to consider these late comments.

Randolph L. Hill,

Associate General Counsel.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–11921–01–R1]

2024 Annual Joint Meeting of the Ozone Transport Commission and the Mid-Atlantic Northeast Visibility Union

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; public meeting.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing the 2024 Annual Joint Meeting of the Ozone Transport Commission (OTC) and the Mid-Atlantic Northeast Visibility Union (MANEVU). The meeting agenda will include topics covering OTC and MANEVU activities to reduce regional ground-level ozone precursors and visibility-impairing fine particles.

DATES: The public meeting will be held on June 13, 2024, starting at 9 a.m. and ending at 3 p.m.

Location: Portland, Maine. Further information on the details is available at *http://otcair.org.*

FOR FURTHER INFORMATION CONTACT:

For documents and press inquiries contact: Ozone Transport Commission, 89 South St., Suite 602, Boston, MA 02111; (617) 259–2005; email: *ozone@otcair.org;* website: *http://www.otcair.org.*

For registration: To register for the meeting, please use the online registration form available at *http://otcair.org,* or contact the OTC at (617) 259–2005 or by email at *ozone@otcair.org.*

SUPPLEMENTARY INFORMATION: The Clean Air Act Amendments of 1990 contain section 184 provisions for the Control of Interstate Ozone Air Pollution. Section 184(a) establishes an Ozone Transport Region (OTR) comprised of the States of Connecticut, Delaware, Maine,[1] Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, parts of Virginia, and the District of Columbia. The purpose of the OTC is to address ground-level ozone formation, transport, and control within the OTR.

MANEVU was formed in 2001, in response to EPA's issuance of the Regional Haze Rule. MANEVU's members include Connecticut, Delaware, the District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, the Penobscot Indian Nation, and the St. Regis Mohawk Tribe, along with EPA and Federal Land Managers.

Type of Meeting: Open.

Agenda: Copies of the final agenda are available from the OTC office at (617) 259–2005, by email: *ozone@otcair.org,* or via the OTC website at *http://www.otcair.org.*

Dated: April 22, 2024.

David Cash,

Regional Administrator, EPA Region 1.

[FR Doc. 2024–08929 Filed 4–25–24; 8:45 am]

BILLING CODE 6560–50–P

[1] The geographic scope of Maine within the OTR was subsequently reduced to the portion of Maine encompassing 111 towns and cities comprising the Androscoggin Valley, Down East, and Metropolitan Portland Air Quality Control Regions, commonly referred to as the ''Portland and Midcoast Ozone Areas.'' 87 FR 7734 (February 10, 2022).

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2019–0558, FRL–11931–01–OMS]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; RCRA Subtitle C Reporting Instructions and Forms (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), RCRA Subtitle C Reporting Instructions and Forms (EPA ICR Number 0976.20, OMB Control Number 2050–0024) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through April 30, 2024. Public comments were previously requested via the **Federal Register** on September 6, 2023, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before May 28, 2024.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OLEM–2018–0534, to EPA online using *www.regulations.gov* (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Peggy Vyas, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202–566–0453; *vyas.peggy@epa.gov.*

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through December 31, 2023. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on September 6, 2023 during a 60-day comment period (88 FR 60939). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: Under the authority of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, Congress directed the U.S. Environmental Protection Agency to implement a comprehensive program for the safe management of hazardous waste. In addition, Congress wrote that ''[a]ny person may petition the Administrator for the promulgation, amendment or repeal of any regulation'' under RCRA (section 7004(a)). 40 CFR parts 260 and 261 contain provisions that allow regulated entities to apply for petitions, variances, exclusions, and exemptions from various RCRA requirements.

The following are some examples of information required from petitioners under 40 CFR part 260. Under § 260.20(b), all rulemaking petitioners must submit basic information with their demonstrations, including name, address, and statement of interest in the proposed action. Under § 260.21, all petitioners for equivalent testing or analytical methods must include specific information in their petitions and demonstrate to the satisfaction of the Administrator that the proposed method is equal to, or superior to, the corresponding method in terms of its sensitivity, accuracy, and reproducibility. Under § 260.22, petitions to amend part 261 to exclude a waste produced at a particular facility (more simply, to delist a waste) must meet extensive informational requirements. When a petition is submitted, the Agency reviews materials, deliberates, publishes its tentative decision in the **Federal Register**, and requests public comment. The EPA also may hold informal public hearings (if requested by an interested person or at the discretion of the Administrator) to hear oral comments on its tentative decision. After evaluating all comments, the EPA publishes its final decision in the **Federal Register**.

With this renewal, this ICR will no longer include the burden associated with the disposal of coal combustion residuals (CCR) from electric utilities as solid waste under Subtitle D of RCRA, found at 40 CFR part 257, subpart D. That burden is covered by OMB Control No. 2050–0223.

Form Numbers: 8700–12; 8700–13 A/B; 8700–23.

Respondents/affected entities: Entities potentially affected by this action are the private sector, as well as State, Local, or Tribal Governments.

Respondent's obligation to respond: Required to obtain or retain a benefit (RCRA Sections 1008, 4004, 4005(a)).

Estimated number of respondents: 59,418.

Frequency of response: Biennially.

Total estimated burden: 730,323 hours. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $282,918 in annualized capital or O&M costs.

Changes in the Estimates: There is a decrease of 79,059 hours and $60,098 from the previously finalized/approved ICR. The reason for the decrease is largely because the burden associated with the CCR program was removed from this ICR and merged with OMB Control No. 2050–0223.

Courtney Kerwin,

Director, Information Engagement Division.

Clean Air Act Operating Permit Program; Order on Petition for Objection to State Operating Permits for Bonanza Creek Energy Operating Company, LLC: Antelope CPF 13–21 Production Facility, State Antelope O–1 Central Production Facility, State North Platte 42–26 Central Production Facility and State Pronghorn 41–32 Central Production Facility

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final order on petition.

SUMMARY: The Environmental Protection Agency (EPA) Administrator signed an order dated January 30, 2024, granting a petition dated August 7, 2023, from the Center for Biological Diversity, Public Employees for Environmental Responsibility, 350 Colorado, Sierra Club and Green Latinos. The petition requested that the EPA object to the Clean Air Act (CAA) operating permits issued by the Colorado Department of Public Health and Environment (CDPHE) to Bonanza Creek Energy Operating Company, LLC for its Antelope CPF 13–21 Production Facility, State Antelope O–1 Central Production Facility, State North Platte 42–26 Central Production Facility and State Pronghorn 41–32 Central Production Facility, all located in Weld County, Colorado.

FOR FURTHER INFORMATION CONTACT: Donald Law, EPA Region 8, telephone number: (303) 312–7015, email address: *law.donald@epa.gov*. The final order and petition are available electronically at: *https://www.epa.gov/title-v-operating-permits/title-v-petition-database.*

SUPPLEMENTARY INFORMATION: The EPA received a petition from the Center for Biological Diversity, Public Employees for Environmental Responsibility, 350 Colorado, Sierra Club and Green Latinos dated August 7, 2023, requesting that the EPA object to the issuance of operating permits no. 20OPWE417, 20OPWE418, 20OPWE419 and 20OPWE420 issued by CDPHE to Bonanza Creek Energy Operating Company, LLC in Weld, Colorado. On January 30, 2024, the EPA Administrator issued an order granting the petition. The order itself explains the basis for the EPA's decision.

Sections 307(b) and 505(b)(2) of the CAA provide that a petitioner may request judicial review of those portions of an order that deny issues in a petition. Any petition for review shall be filed in the United States Court of Appeals for the appropriate circuit no later than June 25, 2024.

KC Becker,

Regional Administrator, Region 8.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0678; FR ID 216076]

Information Collection Being Submitted for Review and Approval to Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Pursuant to the Small Business Paperwork Relief Act of 2002, the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

DATES: Written comments and recommendations for the proposed information collection should be submitted on or before May 28, 2024.

ADDRESSES: Comments should be sent to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Your comment must be submitted into *www.reginfo.gov* per the above instructions for it to be considered. In addition to submitting in *www.reginfo.gov* also send a copy of your comment on the proposed information collection to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.* Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Cathy Williams at (202) 418–2918. To view a copy of this information collection request (ICR) submitted to OMB: (1) go to the web page *http://www.reginfo.gov/public/do/PRAMain,* (2) look for the section of the web page called ''Currently Under Review,'' (3) click on the downward-pointing arrow in the ''Select Agency'' box below the ''Currently Under Review'' heading, (4) select ''Federal Communications Commission'' from the list of agencies presented in the ''Select Agency'' box, (5) click the ''Submit'' button to the right of the ''Select Agency'' box, and (6) when the list of FCC ICRs currently under review appears, look for the Title of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION: The Commission may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the FCC invited the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: (a)

whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

OMB Control Number: 3060–0678.

Title: Part 25 of the Federal Communications Commission's Rules Governing the Licensing of, and Spectrum Usage by, Commercial Earth Stations and Space Stations.

Form Number: FCC Form 312 (Main Form and Schedules A, B, and S), FCC Form 312–R.

Type of Review: Revision of an existing collection.

Respondents: Business or other for-profit entities, not-for-profit institutions.

Number of Respondents and Responses: 3,515 respondents and 3,567 responses.

Estimated Time per Response: 0.5–80 hours.

Frequency of Response: On occasion, one time, and annual reporting requirements; third-party disclosure requirement; recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. The Commission has statutory authority for the information collection requirements under 47 U.S.C. 154, 301, 302, 303, 307, 309, 310, 319, 332, 605, and 721.

Total Annual Burden: 27,176.

Annual Cost Burden: $3,923,887.

Needs and Uses: The Federal Communications Commission requests that the Office of Management and Budget (OMB) approve a revision of the information collection titled ''Part 25 of the Federal Communications Commission's Rules Governing the Licensing of, and Spectrum Usage By, Commercial Earth Stations and Space Stations'' under OMB Control No. 3060–0678, as a result of three recent rulemakings, as well as an update to the Commission's filing system for earth station and space station applications filed pursuant to part 25 of the Commission's rules.

On September 27, 2019, the Commission released a Report and Order, FCC 19–93, in IB Docket No. 06–160, titled ''Amendment of the Commission's Policies and Rules for Processing Applications in the Direct Broadcast Satellite Service'' (*DBS Licensing Report and Order*). The *DBS Licensing Report and Order* adopted a new licensing process for space stations in the Direct Broadcast Satellite Service (DBS). This new process allows applicants for DBS space station licenses to take advantage of a licensing process that parallels the Commission's streamlined part 25 satellite licensing rules for geostationary orbit (GSO) space stations in the fixed-satellite service (FSS). The Commission limited the regulatory burdens borne by applicants, while promoting new opportunities for efficient use of orbital spacing and spectrum by DBS licensees.

The Commission's action supports and encourages the increasing innovation in the DBS sector and helps to preserve U.S. leadership in space-based services and operations. This information collection will provide the Commission and the public with necessary information about this area of satellite operations. While this information collection represents an overall increase in the burden hours, the increase is due to an anticipated overall increase in number of applications as a result of additional applications being filed under the process adopted in the *DBS Licensing Report and Order.* This information collection serves the public interest by streamlining the collection of information and allowing the Commission to authorize DBS space stations under the new process established in the Report and Order. Specifically, the *DBS Licensing Report and Order* contains the following new or modified information collection requirements: space station applications for GSO space stations operating in the frequencies of the International Telecommunication Union (ITU) Appendices 30 and 30A (incorporated by reference, see 47 CFR 25.108) must include a statement that the proposed operation will take into account the applicable requirements of these Appendices of the ITU Radio Regulations and a demonstration that it is compatible with other U.S. ITU filings under Appendices 30 and 30A or, for any affected filings, a letter signed by the affected operator indicating that it consents to the new application. The changes adopted in the *DBS Licensing Report and Order* will result in a very small net annualized increase in burden hours to certain applicants and licensees under part 25. A request for revisions to the information collection resulting from *DBS Licensing Report and Order* was previously published in the **Federal Register** (see 85 FR 41980), but it has been updated and is now included in this revision request.

On November 19, 2020, the Commission released a Report and Order, FCC 20–159, in IB Docket No. 18–314, titled ''Further Streamlining Part 25 Rules Governing Satellite Services'' (*Satellite Services Report and Order*). The *Satellite Services Report and Order* streamlined the Commission's rules governing satellite services by creating an optional framework for authorizing both the blanket-licensed earth stations and space stations of a satellite system through a unified license. The *Satellite Services Report and Order* also permitted earth station applicants to certify compliance with relevant satellite licenses in lieu of providing duplicative or unnecessary technical demonstrations, aligned the build-out requirements for earth stations and space stations, and eliminated unnecessary reporting rules. These changes reduce regulatory burdens, simplify the Commission's licensing of satellite systems, and provide additional operational flexibility. The *Satellite Services Report and Order* affected two information collections: OMB Control Numbers 3060–1215 and 3060–0678. The Commission received OMB approval for changes under OMB Control No. 3060–1215 on August 26, 2021, as reported in 86 FR 52102. The Commission seeks approval for changes under OMB Control No. 3060–0678 through this request. The changes adopted in the *Satellite Services Report and Order* will result in a net annualized decrease in burden hours to applicants and licensees under part 25. This submission amends the previous submission to the OMB to reflect these changes.

On August 3, 2022, the Commission released a Report and Order, FCC 22–63, in IB Docket Nos. 20–330 and 22–273, titled ''Amendment of Parts 2 and 25 of the Commission's Rules to Enable GSO Fixed-Satellite Service (Space-to-Earth) Operations in the 17.3–17.8 GHz Band, to Modernize Certain Rules Applicable to 17/24 GHz BSS Space Stations, and to Establish Off-Axis Uplink Power Limits for Extended Ka-Band FSS Operations'' (*17 GHz Report and Order*). In the *17 GHz Report and Order,* the Commission amended its rules to permit geostationary satellite orbit (GSO) space stations to use the 17.3–17.7 GHz band by geostationary satellite orbit (GSO) space stations in the fixed-satellite

service (FSS) in the space-to-Earth direction on a co-primary basis with incumbent services and permit limited GSO FSS (space-to-Earth) use of the 17.7–17.8 GHz band on an unprotected basis with respect to fixed service operations. Specifically, the *17 GHz Report and Order* contains the following new or modified information collection requirements:

- Certification of frequency coordination with the operator of the co-frequency space station or submission of an interference analysis demonstrating the compatibility of the proposed system with the co-frequency space station;
- Information as to earth station antenna characteristics to ensure that antennas are properly aimed and configured and that their signals are not likely to interfere with other systems; and
- Information pertaining to implementation of interference detection and mitigation plans to prevent and resolve interference issues.

The changes adopted in the *17 GHz Report and Order* will result in a small net annualized increase in burden hours to certain applicants and licensees under part 25.

Finally, the Commission has updated the International Communications Filing System (ICFS)—which was formerly named the International Bureau Filing System, see 88 FR 21424—including updates to the Form 312, including Schedules A, B, and S, and Form 312–R. Applicants will be required to submit Form 312 (including Schedules A, B, and S) and Form 312–R through the updated, integrated web-based program. The updated version of Form 312 (including Schedules A, B, and S) and Form 312–R will include several minor changes to the information collection designed to provide clarity to applicants and Commission staff, reduce errors, and make overall improvements to the applicants' experience in completing the forms. Therefore, this supporting statement is being revised to reflect the new requirements, which are include the addition of several questions designed to better convey the overall information being requested in the form.

The changes will result in a very small net annualized increase in burden hours to certain applicants under part 25.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

FEDERAL ELECTION COMMISSION

Sunshine Act Meetings

TIME AND DATE: Wednesday, May 1, 2024, at 10:00 a.m.

PLACE: Hybrid meeting: 1050 First Street NE Washington, DC (12>TH floor) and virtual.

Note: For those attending the meeting in person, current COVID–19 safety protocols for visitors, which are based on the CDC COVID–19 hospital admission level in Washington, DC, will be updated on the Commission's contact page by the Monday before the meeting. See the contact page at *https://www.fec.gov/contact/.* If you would like to virtually access the meeting, see the instructions below.

STATUS: This meeting will be open to the public, subject to the above-referenced guidance regarding the COVID–19 hospital admission level and corresponding health and safety procedures. To access the meeting virtually, go to the Commission's website *www.fec.gov* and click on the banner to be taken to the meeting page.

MATTERS TO BE CONSIDERED:

Draft Advisory Opinion 2024–03: PoliticalMeetings.com LLC
Draft Advisory Opinion 2024–04: Independence Blue Cross LLC Political Action Committee
Draft Advisory Opinion 2024–05: Nevadans for Reproductive Freedom
Management and Administrative Matters

CONTACT PERSON FOR MORE INFORMATION: Judith Ingram, Press Officer Telephone: (202) 694–1220

Individuals who plan to attend in person and who require special assistance, such as sign language interpretation or other reasonable accommodations, should contact Laura E. Sinram, Secretary and Clerk, at (202) 694–1040 or *secretary@fec.gov,* at least 72 hours prior to the meeting date. (Authority: Government in the Sunshine Act, 5 U.S.C. 552b)

Laura E. Sinram,

Secretary and Clerk of the Commission.

BILLING CODE 6715–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the reporting, recordkeeping, and disclosure requirements associated with the Market Risk Capital Rule (FR 4201; OMB No. 7100–0314).

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements (which contain more detailed information about the information collections and burden estimates than this notice), and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collection

Collection title: Market Risk Capital Rule (see the *current actions* section for information about a change to the collection title and collection identifier).

Collection identifier: FR 4201.

OMB control number: 7100–0314.

Dates: The revisions are applicable as of April 26, 2024.

General description of collection: The market risk rule, which requires banking organizations to hold capital to cover their exposure to market risk, is a component of the Board's regulatory capital framework, Regulation Q—Capital Adequacy of Bank Holding

Companies, Savings and Loan Holding Companies, and State Member Banks (12 CFR part 217). The rule includes information collections that permit the Board to monitor the market risk profile of Board-regulated banking organizations that have significant market risk. These information collections provide current statistical data identifying market risk areas on which to focus onsite and offsite examinations. They also allow the Board to assess the levels and components of each reporting institution's risk-based capital requirements for market risk and the adequacy of the institution's capital under the market risk rule.

Frequency: Annual, quarterly, and on occasion.

Respondents: Bank holding companies, covered savings and loan holding companies,[1] U.S. intermediate holding companies of foreign banking organizations, and state member banks (collectively, banking organizations) that meet certain risk thresholds. The market risk rule applies to any such banking organization with aggregate trading assets and trading liabilities equal to (1) 10 percent or more of quarter-end total assets or (2) $1 billion or more.

Total estimated number of respondents: 37.

Total estimated change in burden: 592.

Total estimated annual burden hours: 36,236.[2]

Current actions: On December 4, 2023, the Board published a notice in the **Federal Register** (88 FR 84141) requesting public comment for 60 days on the extension, with revision, of the FR 4201. The Board proposed revising the FR 4201 to account for a recordkeeping requirement in section 217.203(b)(2) of Regulation Q that had not been previously cleared by the Board. The comment period for this notice expired on February 2, 2024. The Board did not receive any comments. The revisions will be implemented as proposed. This information collection is currently titled ''Market Risk Capital Rule'' with a collection identifier of ''FR 4201.'' As part of this clearance, the collection title will be changed to ''Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation Q (Market Risk Capital Rule)'' and the collection identifier will be updated to ''FR Q–2.'' The purpose of this non-substantive change is to implement consistent nomenclature for information collections contained within a rule. This change would not modify the reporting, recordkeeping, or disclosure requirements in any way.

Board of Governors of the Federal Reserve System, April 23, 2024.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2024–09020 Filed 4–25–24; 8:45 am]

BILLING CODE P

[1] For the definition of ''covered savings and loan holding company,'' see 12 CFR 217.2.

[2] More detailed information regarding this collection, including more detailed burden estimates, can be found in the OMB Supporting Statement posted at *https://www.federalreserve.gov/apps/reportingforms/review.* On the page displayed at the link, you can find the OMB Supporting Statement by referencing the collection identifier, FR 4201.

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation WW (FR WW; OMB No. 7100–0367).

FOR FURTHER INFORMATION CONTACT:

Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements (which contain more detailed information about the information collections and burden estimates than this notice), and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportingforms/review* or may be requested from the agency clearance officer, whose name appears above.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collection

Collection title: Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation WW.

Collection identifier: FR WW.

OMB control number: 7100–0367.

Dates: The revisions are applicable as of April 26, 2024.

General description of collection: The Board, Federal Deposit Insurance Corporation (FDIC), and Office of the Comptroller of the Currency (OCC) (collectively, the agencies) implemented a liquidity coverage ratio (LCR) requirement and a net stable funding ratio (NSFR) requirement, consistent with the international liquidity standards published by the Basel Committee on Banking Supervision (BCBS), for large and internationally active banking organizations. For the Board, these standards are implemented through Regulation WW—Liquidity Risk Measurement, Standards, and Monitoring (12 CFR part 249). The NSFR and LCR requirements in Regulation WW apply to certain large state member banks, covered depository institution holding companies, and U.S. intermediate holding companies of foreign banking organizations, as well as covered nonbank companies (together, covered companies). The reporting, recordkeeping, and disclosure requirements contained in FR WW are used to monitor covered companies' compliance with the LCR and NSFR.

Frequency: The reporting requirements of the FR WW information collection are submitted on an event-generated basis. The recordkeeping requirements of the FR WW information collection are both event-generated and ongoing. The disclosure requirements of the FR WW information collection must be met on a quarterly basis (relating to the LCR) as well as every second and fourth calendar quarter (relating to the NSFR) and must remain publicly available for at least five years after the initial disclosure date.

Respondents: The FR WW panel comprises covered companies, as defined above. Certain requirements apply only to covered holding and nonbank companies.

Total estimated number of respondents: 21.

Total estimated change in burden: (446).

Total estimated annual burden hours: 2,483.[1]

Current actions: On December 5, 2023, the Board published a notice in the **Federal Register** (88 FR 84328) requesting public comment for 60 days on the extension, with revision, of the FR WW. The Board proposed to revise the FR WW to account for three recordkeeping requirements in Regulation WW, contained in section 249.4(a) and sections 249.22(a)(1) and (a)(4), which had not been previously cleared by the Board under the PRA. In addition, the Board revised the estimated hours per response for several requirements which lead to a net decrease in the total burden hours. The comment period for this notice expired on February 5, 2024. The Board did not receive any comments. The revisions will be implemented as proposed.

Board of Governors of the Federal Reserve System, April 23, 2024.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2024–09018 Filed 4–25–24; 8:45 am]

BILLING CODE 6210–01–P

GENERAL SERVICES ADMINISTRATION

[Notice-MEG–2024–01; Docket No.2024–0002; Sequence No.15]

Notice of Intent To Establish a Federal Advisory Committee and Call for Nominations

AGENCY: Office of Government-wide Policy, General Services Administration (GSA).

ACTION: Notice.

SUMMARY: The General Services Administration (GSA) announces its intent to establish the Open Government Federal Advisory Committee (hereinafter ''the Committee'' or ''the OG FAC'') and is requesting member nominations.

DATES: GSA will consider nominations that are submitted via email or postmarked by May 28, 2024.

ADDRESSES: Please submit nominations to Arthur Brunson, Designated Federal Officer (DFO), General Services Administration, Office of Government-wide Policy, 1800 F Street, NW Washington, DC 20405; or send by email having a subject line of ''OG FAC Nomination'' to *ogfac@gsa.gov.*

FOR FURTHER INFORMATION CONTACT: Arthur Brunson, DFO, Office of Government-wide Policy, 202–501–1126, or email having a subject line of ''OG FAC Nomination'': *ogfac@gsa.gov*

SUPPLEMENTARY INFORMATION: The Administrator of the U.S. General Services Administration (GSA) intends to establish the Open Government Federal Advisory Committee (OG FAC) as a discretionary advisory committee under agency authority in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. 10.

GSA's Open Government Secretariat supports ensuring a more transparent, responsive and inclusive Federal Government. This is done by providing channels for members of the public to regularly engage with their government. The OG FAC will advise GSA in its endeavor to increase the public's access to data, to better advance equity, engage the public in the regulatory process, make government records more accessible, and improve the delivery of government services and benefits through expert advice.

The OG FAC will serve as an advisory body to GSA on GSA Open Government initiatives including GSA's creation, implementation and monitoring of U.S. Open Government National Action Plans (NAPs)and commitment themes. The initial focus for the OG FAC will be to provide advice to GSA on the development of NAP 6, Open Government Policy, and Public Engagement. The OG FAC will advise GSA's Administrator on emerging open government issues, challenges and opportunities to support GSA's Open Government Secretariat.

The OG FAC is essential to conduct agency business for GSA and bring together civil society, Federal agencies, academia, industry, and other interested stakeholders. GSA needs a wide diversity of views on Open Government initiatives.

It is anticipated that the OG FAC will be comprised of no less than ten (10) and no more than twenty (20) Federal and non-Federal members, with a strong background and expertise in open government themes such as Access to Information, Anti-Corruption, Civic Space, Climate and Environment, Digital Governance, Fiscal Openness, Gender and Inclusion, Justice, Media Freedom, Public Participation, and improving the delivery of government services and benefits. The GSA Administrator will appoint all members. Members serve one (1) to three (3) year terms. No member will serve for more than six (6) consistent years. Membership balance is not static given the broad nature of the work, and the expertise or experience relevant to the function of this Committee may change over time, depending on the work of the Committee. GSA values opportunities to increase diversity, equity, inclusion and accessibility on its federal advisory committees.

Committee

The OG FAC will operate in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, (5 U.S.C. 10). The OG FAC will be solely advisory in nature. Consistent with FACA and its requirements, each meeting of the OG FAC will be open to the public unless otherwise notified in accordance with the Government in the Sunshine Act. A notice of each meeting will be published in the **Federal Register** at least fifteen (15) days in advance of the meeting. Records will be maintained for each meeting and made available for public inspection. All activities of the OG FAC will be conducted in an open, transparent, and accessible manner.

The OG FAC is expected to be a continuing entity with charter renewals every two years. The first meeting date and agenda topics will be announced in the **Federal Register** at least fifteen (15) days prior to the first meeting date. In addition, as needed, working groups or subcommittees will be established to facilitate the OG FAC's work. Special accommodations for meetings will be made available to individuals with disabilities upon request.

Members will be designated as Regular Government Employees (RGEs), Special Government Employees (SGEs), or Representative members as appropriate. GSA's Office of General Counsel will assist the DFO to determine the advisory committee member designations. In general, SGEs are experts in their field who provide Federal advisory committees with their own best independent judgment based on their individual expertise. Representatives are members selected to represent a specific point of view held by a particular group, organization, or association. Members who are full-time or permanent part-time Federal civilian officers or employees shall be appointed to serve as Regular Government Employee (RGE) members.

In accordance with OMB Final Guidance published in the **Federal**

[1] More detailed information regarding this collection, including more detailed burden estimates, can be found in the OMB Supporting Statement posted at *https://www.federalreserve.gov/apps/reportingforms/review.* On the page displayed at the link, you can find the OMB Supporting Statement by referencing the collection identifier, FR WW.

Register on October 5, 2011 and revised on August 13, 2014, federally registered lobbyists may not serve on the Committee in an individual capacity to provide their own individual best judgment and expertise, such as SGEs and RGEs members. This ban does not apply to lobbyists appointed to provide the Committee with the views of a particular group, organization, or association, such as a representative member.

Member Nominations

GSA invites nominations to serve on the Committee in the disciplines related to Open Government policy and initiatives such as, but not limited to: Access to Information, Anti-Corruption, Civic Space, Climate and Environment, Digital Governance, Fiscal Openness, Gender and Inclusion, Justice, Media Freedom, Public Participation, and improving the delivery of government services and benefits. In the selection of members for the Committee, GSA will consider a cross-section of those directly affected, interested, and qualified, as appropriate to the nature and functions of the Committee.

Membership will depend upon several factors, including: (i) The Committee's mission; (ii) The geographic, ethnic, social, economic, or scientific impact of the Committee's recommendations; (iii) The types of specific perspectives required, for example, such as those of consumers, technical experts, the public at-large, academia, business, or other sectors; (iv) The need to obtain divergent points of view on the issues before the Committee; and (v) The relevance of State, local, territorial, or Tribal governments to the development of the Committee's recommendations.

Member Selection Criteria

The following factors will be used to evaluate nominees:

Committee Members

a. Subject matter expertise in the key issue the OG FAC is examining for the current period;

b. Professional experiences and accomplishments (*e.g.,* projects, nature of work, or publications);

c. Current employment and membership in associations or other activities (*e.g.,* industry, academia, and civil society organizations); and

d. Willingness to commit time to the Committee and demonstrated ability to work constructively and effectively on committees;

Committee Chair and Any Co-chairs or Vice-Chairs

- Demonstrated credentials and interdisciplinary expertise in the open government themes such as Access to Information, Anti-Corruption, Civic Space, Climate and Environment, Digital Governance, Fiscal Openness, Gender and Inclusion, Justice, Media Freedom, Public Participation, and improving the delivery of government services and benefits.
- Willingness to commit substantial time to the Committee and demonstrated ability to work constructively and effectively on committees;
- Background and experience helping engage people from different backgrounds work towards common objectives;
- Demonstrated ability to assess and analyze policy challenges with objectivity and integrity;
- Excellent interpersonal, oral, and written communication skills; and
- Excellent leadership and consensus-building skills.

All members will be appointed by the GSA Administrator, who will also select the Chair and any Co-Chairs or Vice-Chairs from among the members.

Miscellaneous

The OG FAC will meet at least four times per year. Such meetings will be open to the public unless an appropriate authority determines, in accordance with FACA, as amended, that a meeting shall be closed or partially closed. The Committee will meet virtually or in person as agreed to by the Committee Chair and DFO.

Committee members (including the Committee Chair and any Co-Chairs or Vice-Chairs) will not be compensated for their services and may be allowed travel expenses, including per diem, in accordance with 5 U.S.C. 5703. Regardless of the type of committee membership appointment, any travel expenses shall be paid at rates equivalent to that allowable to Federal employees.

The GSA Open Government Secretariat will host a virtual Question and Answer (Q&A) session on May 10, 2024 at 1:00pm ET. The purpose of the Q&A session is to answer questions on the selection process and timeline. The Q&A session will be recorded and will be posted to the GSA YouTube Channel, on the Open Government Secretariat Playlist. To attend this virtual session please complete and submit a registration form at *https://gsa.zoomgov.com/meeting/register/vJItduyurz0jEvnY1VG4FD-PswDaufetOsc* or submit your contact information via email having a subject line of ''OG FAC Q&A Session Attendance'' to: *ogfac@gsa.gov.*

Nomination Submissions

Any interested person and/or organization may nominate qualified individuals for membership. Individuals are also encouraged to self-nominate. The following items must be submitted in a nomination package:

(1) A letter of nomination stating the nominee's name and organizational affiliation(s), nominee's field of expertise, specific qualifications to serve on the Committee, and a brief statement of interest, including if the nominee is interested in serving as the Chair of the Committee;

(2) A professional resume or curriculum vitae (CV); and

(3) A short biography (no more than two paragraphs) describing the nominee's professional and educational qualifications, including a list of relevant activities and any current or previous/current service on advisory committees.

The letter of nomination, resume or CV, and a short biography should include the candidate's full name, address of the current organization, position title, email address, and daytime telephone number(s) of the nominee and nominator.

In preparing the letter of nomination, please describe how the nominee's background, knowledge, and experience will bring value to the work of the Committee and how these qualifications would contribute to the overall diversity of the Committee. Also, describe any previous involvement with GSA through employment, grant funding, and/or contracting sources, if applicable.

Nominations are due by May 28, 2024 and must be submitted to Arthur Brunson, Designated Federal Officer (DFO), General Services Administration, Office of Government-wide Policy, 1800 F Street, NW Washington, DC 207405 having a postmarked date of no later than the due date or via email having a subject line of ''OG FAC Nomination'' to: *ogfac@gsa.gov.*

Krystal J. Brumfield,

Associate Administrator, Office of Government-wide Policy, General Services Administration.

BILLING CODE 6820–UA–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–1500/1490S and CMS–R–234]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by June 25, 2024.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number: _____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.*

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–1500/1490 Health Insurance Common Claims Form and Supporting Regulations at 42 CFR part 424, subpart C

CMS–R–234 Subpart D—Private Contracts and Supporting Regulations in 42 CFR 405.410, 405.430, 405.435, 405.440, 405.445, 405.455, 410.61, 415.110, and 424.24

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension without change of a currently approved collection; *Title of Information Collection:* Health Insurance Common Claims Form and Supporting Regulations at 42 CFR part 424, subpart C; *Use:* The CMS–1500 and the CMS–1490S forms are used to deliver information to CMS for CMS to reimburse for provided services. Medicare Administrative Contractors use the data collected on the CMS–1500 and the CMS–1490S to determine the proper amount of reimbursement for Part B medical and other health services (as listed in section 1861(s) of the Social Security Act) provided by physicians and suppliers to beneficiaries. The CMS–1500 is submitted by physicians/suppliers for all Part B Medicare. Serving as a common claim form, the CMS–1500 can be used by other third-party payers (commercial and nonprofit health insurers) and other Federal programs (*e.g.,* TRICARE, RRB, and Medicaid). *Form Number:* CMS–1500/1490S (OMB control number: 0938–1197); *Frequency:* Occasionally; *Affected Public:* Private Sector: Business or other for-profit and not-for-profit institutions; *Number of Respondents:* 2,507,992; *Total Annual Responses:* 994,038,623; *Total Annual Hours:* 17,328,912. (For policy questions regarding this collection contact Sadaf Ali-Simpson at 667–414–0004.)

2. *Type of Information Collection Request:* Reinstatement without change of a previously approved collection; *Title of Information Collection:* Subpart D-Private Contracts and Supporting Regulations in 42 CFR 405.410, 405.430, 405.435, 405.440, 405.445, 405.455, 410.61, 415.110, and 424.24; *Use:* Section 4507 of the Balanced Budget Act of 1997 (BBA 1997) amended section 1802 of the Social Security Act (the Act) to permit certain physicians and practitioners to opt-out of Medicare and to provide—through private contracts—services that Medicare would otherwise cover. Under such contracts, the mandatory claims submission and limiting charge rules of section 1848(g) of the Act would not apply. CMS–R–234 allows certain physicians and practitioners to opt out of Medicare and furnish covered services to Medicare beneficiaries through private contracts. Physicians and practitioners use this information collection to comply with the applicable regulations. Physicians and practitioners entering private contracts with beneficiaries must file an affidavit with Medicare in which they agree to opt-out of Medicare for 2 years and to meet certain other criteria. In general, the applicable regulations require that during that 2-year period, physicians and practitioners who have filed affidavits opting out of Medicare must sign private contracts with all Medicare beneficiaries to whom they furnish services that Medicare would otherwise cover (except those who need emergency or urgently needed care). In addition, Medicare Administrative Contractors (MACs) use this information to determine if benefits should be paid or continued. *Form Number:* CMS–R–234 (OMB control number: 0938–0730);

Frequency: Occasionally; *Affected Public:* Business or other for-profit and not-for-profit institutions; *Number of Respondents;* 78,258; *Total Annual Responses;* 78,258; *Total Annual Hours:* 22,780. (For policy questions regarding this collection contact Frank Whelan at 410–786–1302.)

William N. Parham, III

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

[CMS–3464–PN]

Medicare Program; Application by the National Association of Boards of Pharmacy (NABP) for Continued CMS Approval of its Home Infusion Therapy (HIT) Accreditation Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice with request for comment.

SUMMARY: This notice acknowledges the receipt of an application from the National Association of Boards of Pharmacy (NABP) for continued approval by the Centers for Medicare & Medicaid Services (CMS) of NABP's national accrediting organization program for suppliers providing home infusion therapy (HIT) services and that wish to participate in the Medicare or Medicaid programs. The statute requires that within 60 days of receipt of an organization's complete application, CMS will publish a notice that identifies the national accrediting body making the request, describes the nature of the request, and provides at least a 30-day public comment period.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, by May 28, 2024.

ADDRESSES: In commenting, refer to file code CMS–3464–PN.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–3464–PN, P.O. Box 8016, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–3464–PN, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Shannon Freeland, (410) 786–4348.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that website to view public comments. We will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. We continue to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

I. Background

Home infusion therapy (HIT) is a treatment option for Medicare beneficiaries with a wide range of acute and chronic conditions. Section 5012 of the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016) added section 1861(iii) to the Social Security Act (the Act), establishing a new Medicare benefit for HIT services. Section 1861(iii)(1) of the Act defines ''home infusion therapy'' as professional services, including nursing services; training and education not otherwise covered under the Durable Medical Equipment (DME) benefit; remote monitoring; and other monitoring services. HIT must be furnished by a qualified HIT supplier and furnished in the individual's home. The individual must:

- Be under the care of an applicable provider (that is, physician, nurse practitioner, or physician assistant); and
- Have a plan of care established and periodically reviewed by a physician in coordination with the furnishing of home infusion drugs under Part B, that prescribes the type, amount, and duration of infusion therapy services that are to be furnished.

Section 1861(iii)(3)(D)(i)(III) of the Act requires that a qualified HIT supplier be accredited by an accrediting organization (AO) designated by the Secretary in accordance with section 1834(u)(5) of the Act. Section 1834(u)(5)(A) of the Act identifies factors for designating AOs and in reviewing and modifying the list of designated AOs. These statutory factors are as follows:

- The ability of the organization to conduct timely reviews of accreditation applications.
- The ability of the organization to take into account the capacities of suppliers located in a rural area (as defined in section 1886(d)(2)(D) of the Act).
- Whether the organization has established reasonable fees to be charged to suppliers applying for accreditation.
- Such other factors as the Secretary determines appropriate.

Section 1834(u)(5)(B) of the Act requires the Secretary to designate AOs to accredit HIT suppliers furnishing HIT no later than January 1, 2021. Section 1861(iii)(3)(D)(i)(III) of the Act requires a ''qualified home infusion therapy supplier'' to be accredited by a CMS-approved AO, pursuant to section 1834(u)(5) of the Act.

On March 1, 2019, we published a solicitation notice entitled, ''Medicare Program; Solicitation of Independent Accrediting Organizations to Participate in the Home Infusion Therapy Supplier Accreditation Program'' (84 FR 7057). This notice informed national AOs that accredit HIT suppliers of an opportunity to submit applications to participate in the HIT supplier accreditation program. We stated that complete applications would be considered for the January 1, 2021 designation deadline if received by February 1, 2020. Regulations for the approval and oversight of AOs for HIT organizations are located at 42 CFR part 488, subpart L. The requirements for HIT suppliers are located at 42 CFR part 486, subpart I.

II. Approval of Deeming Organization

Section 1834(u)(5) of the Act and regulations at 42 CFR 488.1010 require that our findings concerning review and approval of a national accrediting

organization's requirements consider, among other factors, the applying accrediting organization's requirements for accreditation; survey procedures; resources for conducting required surveys; capacity to furnish information for use in enforcement activities; monitoring procedures for provider entities found not in compliance with the conditions or requirements; and ability to provide CMS with the necessary data.

Our rules at 42 CFR 488.1020(a) require that we publish, after receipt of an organization's complete application, a notice that identifies the national accrediting body making the request, describes the nature of the request, and provides at least a 30-day public comment period. Pursuant to our rules at 42 CFR 488.1010(d), we have 210 days from the receipt of a complete application to publish notice of approval or denial of the application.

The purpose of this proposed notice is to inform the public of the National Association of Boards of Pharmacy's (NABP's) request for CMS' continued recognition of its HIT accreditation program. This notice also solicits public comment on whether NABP's requirements meet or exceed the Medicare requirements of participation for HIT services.

III. Evaluation of Deeming Authority Request

In the April 28, 2020 **Federal Register**, we published NABP's initial application for recognition as an accreditation organization for HIT (85 FR 23519). On September 28, 2020, we published notification of their approval as such an organization, effective September 26, 2020 through September 26, 2024 (85 FR 60793). NABP has since submitted all the necessary materials to enable us to make a determination concerning its request for continued recognition of its HIT accreditation program. This application was determined to be complete on February 28, 2024. Under section 1834(u)(5) of the Act and 42 CFR 488.1010 (Application and re-application procedures for national home infusion therapy accrediting organizations), our review and evaluation of NABP will be conducted in accordance with, but not necessarily limited to, the following factors:

- The equivalency of NABP's standards for HIT as compared with CMS' HIT requirements for participation in the Medicare program.
- NABP's survey process to determine the following:

++ The composition of the survey team, surveyor qualifications, and the ability of the organization to provide continuing surveyor training.

++ The comparability of NABP's to CMS' standards and processes, including survey frequency, and the ability to investigate and respond appropriately to complaints against accredited facilities.

++ NABP's processes and procedures for monitoring a HIT supplier found out of compliance with NABP's program requirements.

++ NABP's capacity to report deficiencies to the surveyed facilities and respond to the facility's plan of correction in a timely manner.

++ NABP's capacity to provide CMS with electronic data and reports necessary for effective assessment and interpretation of the organization's survey process.

++ The adequacy of NABP's staff and other resources, and its financial viability.

++ NABP's capacity to adequately fund required surveys.

++ NABP's policies with respect to whether surveys are announced or unannounced, to ensure that surveys are unannounced.

++ NABP's agreement to provide CMS with a copy of the most current accreditation survey together with any other information related to the survey as CMS may require (including corrective action plans).

++ NABP's policies and procedures to avoid conflicts of interest, including the appearance of conflicts of interest, involving individuals who conduct surveys, audits or participate in accreditation decisions.

++ NABP's agreement or policies for voluntary and involuntary termination of HIT suppliers.

++ NABP's agreement or policies for voluntary and involuntary termination of the HIT AO program.

IV. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping, or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

V. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Trenesha Fultz-Mimms, who is the **Federal Register** Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Trenesha Fultz-Mimms,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–P–0015A Medicare Current Beneficiary Survey (MCBS)

Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Revision of previously approved collection; *Title of Information Collection:* Medicare Current Beneficiary Survey (MCBS); *Use:* The Medicare Current Beneficiary Survey (MCBS) is the most comprehensive and complete survey available on the Medicare population and is essential in capturing data not otherwise collected through our operations. The MCBS is a nationally-representative, longitudinal survey of Medicare beneficiaries that we sponsor and is directed by the Office of Enterprise Data and Analytics (OEDA). MCBS data collection includes both in-person and phone interviewing. The survey captures beneficiary information whether aged or disabled, living in the community or facility, or serviced by managed care or fee-for-service. Data produced as part of the MCBS are enhanced with our administrative data (*e.g.,* fee-for-service claims, prescription drug event data, enrollment, etc.) to provide users with more accurate and complete estimates of total health care costs and utilization. The MCBS has been continuously fielded for more than 30 years, encompassing over 1.2 million interviews and more than 140,000 survey participants. Respondents participate in up to 11 interviews over a four-year period. This gives a comprehensive picture of health care costs and utilization over a period of time.

The MCBS continues to provide unique insight into the Medicare program and helps CMS and our external stakeholders better understand and evaluate the impact of existing programs and significant new policy initiatives. In the past, MCBS data have been used to assess potential changes to the Medicare program. For example, the MCBS was instrumental in supporting the development and implementation of the Medicare prescription drug benefit by providing a means to evaluate prescription drug costs and out-of-pocket burden for these drugs to Medicare beneficiaries. *Form Number:* CMS–P–0015A (OMB control number: 0938–0568); *Frequency:* Occasionally; *Affected Public:* Business or other for-profits and Not-for-profits institutions; *Number of Respondents:* 35,015; *Total Annual Responses:* 35,015; *Total Annual Hours:* 35,212. (For policy questions regarding this collection contact: William Long at 410–786–7927.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10437 Generic Social Marketing & Consumer Testing Research

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Generic Social Marketing & Consumer Testing Research; *Use:* The purpose of this submission is to extend the approval of the generic clearance for a program of consumer research aimed at a broad audience of those affected by CMS programs including Medicare, Medicaid, Children's Health Insurance Program (CHIP), and health insurance exchanges. This program extends strategic efforts to reach and tailor communications to beneficiaries, caregivers, providers, stakeholders, and any other audiences that would support the Agency in improving the functioning of the health care system, improve patient care and outcomes, and reduce costs without sacrificing quality of care. The information collected will be used to create a streamlined and proactive process for collection of data and utilizing the feedback on service delivery for continuous improvement of communication activities aimed at diverse CMS audiences. The generic clearance will allow rapid response to inform CMS initiatives using a mixture of qualitative and quantitative consumer research strategies (including formative research studies and methodological tests) to improve communication with key CMS audiences. As new information resources and persuasive technologies are developed, they can be tested and evaluated for beneficiary response to the materials and delivery channels. Results will inform communication development and information architecture as well as allow for continuous quality improvement. The overall goal is to maximize the extent to which consumers have access to useful sources of CMS program information in a form that can help them make the most of their benefits and options The activities under this clearance involve social marketing and consumer research using samples of self-selected customers, as well as convenience samples, and quota samples, with respondents selected either to cover a broad range of customers or to include specific characteristics related to certain products or services. All collection of information under this clearance will utilize a subset of items drawn from a core collection of customizable items referred to as the Social Marketing and Consumer Testing Item Bank. This item bank is designed to establish a set of pre-approved generic question that can be drawn upon to allow for the rapid turn-around consumer testing required for us to communicate more effectively with our audiences. The questions in the item bank are divided into two major categories. One set focuses on characteristics of individuals and is intended primarily for participant screening and for use in structured quantitative on-line or telephone surveys. The other set is less structured and is designed for use in qualitative one-on-one and small group discussions or collecting information related to subjective impressions of test materials. Results will be compiled and disseminated so that future communication can be informed by the testing results. We will use the findings to create the greatest possible public benefit. Form Number: CMS–10437 (OMB control number: 0938–1247); Frequency: Yearly; Affected Public: Individuals; Number of Respondents: 7,732; Number of Responses: 61,992; Total Annual Hours: 26,688. (For policy questions regarding this collection contact Hemalgiri Gosai at 410–786–0000.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–4597]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Shortages Data Collections

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by May 28, 2024.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or

by using the search function. The OMB control number for this information collection is 0910–0491. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Shortages Data Collections

OMB Control Number 0910–0491—Extension

Under section 1003(d)(2) of the FD&C Act (21 U.S.C. 393(d)(2)), the Commissioner of Food and Drugs is authorized to implement general powers (including conducting research) to carry out effectively the mission of FDA. After the events of September 11, 2001, and as part of broader counterterrorism and emergency preparedness activities, FDA's Center for Devices and Radiological Health (CDRH) began developing operational plans and interventions that would enable CDRH to anticipate and respond to medical device shortages that might arise in the context of federally declared disasters/emergencies or regulatory actions. In particular, CDRH identified the need to acquire and maintain detailed data on domestic inventory, manufacturing capabilities, distribution plans, and raw material constraints for medical devices that would be in high demand and/or would be vulnerable to shortages in specific disaster/emergency situations or following specific regulatory actions. Such data could support prospective risk assessment, help inform risk mitigation strategies, support real-time decision making by the Department of Health and Human Services during actual emergencies or emergency preparedness exercises, and mitigate or prevent harm to the public health.

This voluntary data collection process consists of outreach to firms that have been identified as producing or distributing medical devices that may be considered essential to the response effort. In this initial outreach, the intent and goals of the data collection effort will be described, and the specific data request made. Data are collected, using the least burdensome methods, in a structured manner to answer specific questions. After the initial outreach, we will request updates to the information periodically to keep the data current and accurate. Additional followup correspondence may occasionally be needed to verify/validate data, confirm receipt of followup correspondence(s), and/or request additional details to further inform FDA's public health response.

The Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116–136) was enacted on March 27, 2020. Section 3121 of the CARES Act amended the FD&C Act by adding section 506J to the FD&C Act (21 U.S.C. 356j). Section 506J of the FD&C Act provides FDA with new authorities intended to help prevent or mitigate medical device shortages by requiring medical device manufacturers to inform FDA about changes in device manufacturing that could potentially lead to a device shortage. Apprised with that information, section 506J of the FD&C Act authorizes FDA to take several actions that may help to mitigate or avoid supply disruptions.

Section 506J of the FD&C Act requires manufacturers of certain devices,[1] to notify FDA ''of a permanent discontinuance in the manufacture of the device'' or ''an interruption of the manufacture of the device that is likely to lead to a meaningful disruption in supply of that device in the United States'' during or in advance of a declared public health emergency, and the reason for such discontinuance or interruption.[2] Section 506J of the FD&C Act requires FDA to take action based on that information, including (1) publicly posting a list of devices it determines to be in shortage, (2) publicly posting the reasons for the shortage, and (3) issuing letters to manufacturers that fail to comply with the notification requirements of section 506J of the FD&C Act.

On December 29, 2022, the Prepare for and Respond to Existing Viruses, Emerging New Threats, and Pandemics Act was signed into law as part of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328) (hereafter referred to as the ''FY 2023 Omnibus''). Section 2514(c) of the fiscal year (FY) 2023 Omnibus directed FDA to issue or revise guidance regarding requirements under section 506J of the FD&C Act and include a list of each device product code for which a manufacturer of such device is required to notify FDA in accordance with section 506J. Section 2514 of the FY 2023 Omnibus amended section 506J of the FD&C Act to add section 506J(h), ''Additional Notifications'' and directed FDA to issue guidance ''to facilitate voluntary notifications.''

In the **Federal Register** of November 17, 2023 (88 FR 80310), FDA announced the availability of the final guidance entitled ''Notifying FDA of a Permanent Discontinuance or Interruption in Manufacturing of a Device Under Section 506J of the FD&C Act'' [3] and the draft guidance entitled ''Select Updates for the 506J Guidance: 506J Device List and Additional Notifications.'' [4] The final guidance, ''Notifying FDA of a Permanent Discontinuance or Interruption in Manufacturing of a Device Under Section 506J of the FD&C Act'' (hereafter referred to as the ''506J Guidance'') assists stakeholders in the Agency's implementation of section 506J of the FD&C Act. This final guidance serves as the baseline for information about notifications under section 506J of the FD&C Act during or in advance of any public health emergency (PHE). FDA provides additional clarification on who is required to notify FDA, when such notifications are required, what information FDA expects manufacturers to include in such notifications, and how to submit notifications. Additionally, FDA describes how FDA determines that a device is in shortage and additional actions FDA may take to help prevent or mitigate a potential device shortage.

In the draft guidance ''Select Updates for the 506J Guidance: 506J Device List and Additional Notifications,'' FDA proposes updates to the 506J Guidance. Specifically, FDA has developed a list of devices, by FDA product code, for which a manufacturer of such devices is required to notify FDA in accordance with section 506J of the FD&C Act (hereafter referred to as the ''506J Device List''). The 506J Device List is based on the requirements under section 506J(a) of the FD&C Act. In section 2514 of the FY 2023 Omnibus, Congress directed FDA to issue guidance on the requirements under section 506J of the FD&C Act and to include ''a list of each device product code for which a manufacturer of such device is required

[1] Under section 506J of the FD&C Act, manufacturers of the following devices must notify FDA of an interruption or permanent discontinuance in manufacturing:

- Devices that are critical to public health during a public health emergency, including those that are life-supporting, life-sustaining, or intended for use in emergency medical care or during surgery; or
- Devices for which FDA determines information on potential meaningful supply disruptions is needed during a public health emergency. See section 506J(a)(1), (2) of the FD&C Act.

[2] See section 506J(a) of the FD&C Act.

[3] *https://www.fda.gov/media/155245/download.*

[4] *https://www.fda.gov/media/173800/download.*

to notify the Secretary in accordance with section 506J.'' Thus, manufacturers of a device on the 506J Device List must notify FDA in accordance with 506J of the FD&C Act for each such device. For more information, manufacturers should see the 506J Device List web page, available at *https://www.fda.gov/medical-devices/medical-device-supply-chain-and-shortages/506j-device-list.* Additionally, consistent with section 506J(h) of the FD&C Act, FDA is proposing to clarify for stakeholders that manufacturers may submit, and FDA may receive, voluntary notifications regarding supply chain issues at any time, unrelated to the declaration or potential declaration of a PHE.

The guidance documents include additional voluntary items that manufacturers could provide the Agency, including additional information about device manufacturing and supply, and updates to initial notifications.

Respondents may notify FDA about an interruption or permanent discontinuance in device manufacturing (506J notification) on our website at *https://fda-cdrh.my.salesforce-sites.com/shortages/.*

In the **Federal Register** of November 28, 2023 (88 FR 83134), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response (hours)	Total hours
Shortages outreach data collection	1,000	4	4,000	1	4,000
Information collection under section 506J	8,400	1	8,400	0.25 (15 minutes)	2,100
Additional voluntary collections related to section 506J	8,400	1	8,400	0.25 (15 minutes)	2,100
Total			20,800		8,200

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

I. Shortages Outreach Data Collection

FDA bases these estimates on our recent experience and informal direct contact with respondents. We estimate up to 1,000 manufacturers, distributors, healthcare systems, healthcare providers, group purchasing organizations, and sterilizers for which there may be targeted outreach because their devices may be essential to the response effort. This targeted outreach will be conducted periodically either to obtain primary data or to verify/validate updated data (although additional outreach may be undertaken as needed). The data being requested represent common data elements that respondents monitor and track as part of routine business operations and, therefore, are readily available. It is anticipated that for most respondents, the estimated time to fulfill CDRH's data request will not exceed 1 hour per request, or 4 hours per year.

II. Information Collection Under Section 506J of the FD&C Act and Related Voluntary Collections

Based on current registration and listing data (approved under OMB control number 0910–0625), we estimate the number of respondents that will submit a notification under section 506J of the FD&C Act to be approximately 20 percent of currently registered manufacturers. Data from our Registration and Listing system indicate that there are approximately 42,000 unique FDA Establishment Identification registered manufacturers. Therefore, we estimate 8,400 respondents per year. We believe that the burden, including the provision of required information under section 506J of the FD&C Act, as well as additional voluntary information (including additional issues that may impact the availability of the device, such as information about critical suppliers, potential mitigations, production capacity and market share, and notification updates), is minimal and such information is readily available to respondents. Therefore, we estimate the burden of this information collection to be 15 minutes or less per notification.

Since the last OMB approval, we have updated the Number of Respondents and Average Burden per Response for the Shortages Outreach Data Collection element based on our recent experience with the information collection and informal direct contact with respondents. The updates result in an adjustment of an additional 3,000 hours and 2,000 responses annually.

Dated: April 23, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–3743]

Agency Information Collection Activities; Announcement of Office of Management and Budget Approval; Electronic Records: Electronic Signatures

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing that a collection of information entitled ''Electronic Records: Electronic Signatures'' has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: On January 22, 2024, the Agency submitted a proposed collection of information entitled ''Electronic Records: Electronic Signatures'' to OMB for review and clearance under 44 U.S.C. 3507. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control

number. OMB has now approved the information collection and has assigned OMB control number 0910–0303. The approval expires on March 31, 2027. A copy of the supporting statement for this information collection is available on the internet at *https://www.reginfo.gov/public/do/PRAMain.*

Dated: April 22, 2024.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–D–1376]

Cancer Clinical Trial Eligibility Criteria: Washout Periods and Concomitant Medications; Draft Guidance for Industry, Institutional Review Boards, and Clinical Investigators; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry, institutional review boards (IRBs), and clinical investigators entitled ''Cancer Clinical Trial Eligibility Criteria: Washout Periods and Concomitant Medications.'' This draft guidance is one in a series of guidances that provide recommendations regarding eligibility criteria for clinical trials of investigational drugs regulated by the Center for Drug Evaluation and Research (CDER) and the Center for Biologics Evaluation Research (CBER) for the treatment of cancer. Specifically, this draft guidance includes recommendations regarding the appropriate use of washout periods and concomitant medication exclusions.

DATES: Submit either electronic or written comments on the draft guidance by June 25, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–1376 for ''Cancer Clinical Trial Eligibility Criteria: Washout Periods and Concomitant Medications.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- *Confidential Submissions*—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Jamie Brewer, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2319, Silver Spring, MD 20993, 240–402–4463; or Vishal Bhatnagar, Oncology Center of Excellence, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2113, Silver Spring, MD 20993, 240–402–3696; or James Myers, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry, IRBs, and clinical investigators entitled ''Cancer Clinical Trial Eligibility Criteria: Washout Periods and Concomitant Medications.'' The purposes of eligibility criteria are to select the intended patient population and reduce potential risks to trial participants. However, eligibility criteria are sometimes more restrictive than necessary, and expanding eligibility criteria to be more inclusive is one trial design consideration that may improve the diversity of clinical trial populations. This draft guidance is one in a series of guidances that provide recommendations regarding eligibility criteria for clinical trials of investigational drugs regulated by CDER and CBER for the treatment of cancer. Specifically, this draft guidance includes recommendations regarding the appropriate use of washout periods and concomitant medication exclusions and is intended to assist interested parties, including sponsors and IRBs, who are responsible for the development and oversight of clinical trials.

A clinical trial's eligibility criteria (for inclusion and exclusion) are essential components of the trial, defining the characteristics of the study population. Because there is variability in investigational drugs and trial objectives, eligibility criteria should be developed taking into consideration the mechanism of action of the drug, the targeted disease or patient population, the anticipated safety of the investigational drug, the availability of adequate safety data, and the ability to recruit trial participants from the patient population to meet the objectives of the clinical trial. The Agency recognizes that some eligibility criteria may have become commonly accepted over time or used as a template across trials, but such criteria should be carefully considered and be appropriate for a specific trial context. Unnecessarily restrictive eligibility criteria may slow patient accrual, limit patients' access to clinical trials, and lead to trial results that do not fully represent treatment effects in the patient population that will ultimately use the drug.

Appropriately broadening cancer trial eligibility criteria can improve the generalizability of trial results and provide a more detailed characterization of the therapy's benefit-risk profile across the patient population likely to use the drug in clinical practice.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Cancer Clinical Trial Eligibility Criteria: Washout Periods and Concomitant Medications.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 312 have been approved under OMB control number 0910–0014; the collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001; and the collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338.

III. Electronic Access

Persons with access to the internet may obtain the guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–D–5303]

Recommendations for Collecting Representative Samples for Food Testing Used as Evidence for Release of Certain Fish and Fishery Products Subject to Detention Without Physical Examination and Removal of a Foreign Manufacturer's Goods From Detention Without Physical Examination; Draft Guidance for Industry; Reopening of the Comment Period

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability; reopening of the comment period.

SUMMARY: The Food and Drug Administration is reopening the comment period for the draft guidance for industry entitled ''Recommendations for Collecting Representative Samples for Food Testing Used as Evidence for Release of Certain Fish and Fishery Products Subject to Detention Without Physical Examination and Removal of a Foreign Manufacturer's Goods From Detention Without Physical Examination; Draft Guidance for Industry; Availability'' that published in the **Federal Register** of February 12, 2024. We are taking this action in response to a request to extend the comment period to allow additional time for interested parties to submit comments.

DATES: FDA is reopening the comment period for the draft guidance for industry announced in the **Federal Register** on February 12, 2024 (89 FR 9852). Submit either electronic or written comments on the draft guidance by June 25, 2024, to ensure that we consider your comments before we begin work on the final guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted,

such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–D–5303 for ''Recommendations for Collecting Representative Samples for Food Testing Used as Evidence for Release of Certain Fish and Fishery Products Subject to Detention Without Physical Examination and Removal of a Foreign Manufacturer's Goods From Detention Without Physical Examination; Draft Guidance for Industry.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Steven Bloodgood, Division of Seafood Safety (HFS–325), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–5316, email: *Steven.Bloodgood@fda.hhs.gov;* or Holli Kubicki, Center for Food Safety and Applied Nutrition, Office of Regulations and Policy (HFS–024), Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2378.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of February 12, 2024 (89 FR 9852), the Food and Drug Administration (FDA or we) published a notice announcing the availability of a draft guidance for industry entitled ''Recommendations for Collecting Representative Samples for Food Testing Used as Evidence for Release of Certain Fish and Fishery Products Subject to Detention Without Physical Examination and Removal of a Foreign Manufacturer's Goods From Detention Without Physical Examination; Draft Guidance for Industry.'' We provided a 60-day comment period for the draft guidance.

We have received a request for a 60-day extension of the comment period for the draft guidance to provide additional time to review and comment on the rationale for the sampling recommendations in the draft guidance. In the interest of balancing the public health importance of the sampling recommendations in the draft guidance and granting additional time to submit comments before we finalize the draft guidance, we have concluded that it is reasonable to reopen the comment period for 60 days, until June 25, 2024. We are reopening the comment period because the request for an extension of the comment period arrived too late for us to extend the comment period. We believe that an additional 60 days allows adequate time for interested persons to submit comments.

Dated: April 22, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

• *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–1377 for ''Cancer Clinical Trial Eligibility Criteria: Performance Status.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Paul Kluetz, Oncology Center of Excellence, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2223, Silver Spring, MD 20993, 301–796–9567; or Harpreet Singh, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2137, Silver Spring, MD 20993, 240–402–3561; or James Myers, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry, IRBs, and clinical investigators entitled ''Cancer Clinical Trial Eligibility Criteria: Performance Status.'' The purposes of eligibility criteria are to select the intended patient population and reduce potential risks to trial participants. However, eligibility criteria are sometimes more restrictive than necessary, and expanding eligibility criteria to be more inclusive is one trial design consideration that may improve the diversity of clinical trial populations. This draft guidance is one in a series of guidances that provide recommendations regarding eligibility criteria for clinical trials of investigational drugs regulated by CDER and CBER for the treatment of cancer. This draft guidance includes recommendations regarding expanding eligibility criteria to include patients with a wider range of performance status, and is intended to assist interested parties, including sponsors and IRBs, who are responsible for the development and oversight of clinical trials.

A clinical trial's eligibility criteria (for inclusion and exclusion) are essential components of the trial, defining the characteristics of the study population. Because there is variability in investigational drugs and trial objectives, eligibility criteria should be developed taking into consideration the mechanism of action of the drug, the targeted disease or patient population, the anticipated safety of the investigational drug, the availability of adequate safety data, and the ability to recruit trial participants from the patient population to meet the objectives of the clinical trial. The Agency recognizes that some eligibility criteria may have become commonly accepted over time or used as a template across trials, but such criteria should be carefully considered and be appropriate for a specific trial context. Unnecessarily restrictive eligibility criteria may slow patient accrual, limit patients' access to clinical trials, and lead to trial results that do not fully represent treatment effects in the patient population that will ultimately use the drug.

Appropriately broadening cancer trial eligibility criteria can improve the generalizability of trial results and characterize the therapy's benefit-risk profile across the patient population

likely to use the drug in clinical practice.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Cancer Clinical Trial Eligibility Criteria: Performance Status.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 312 have been approved under OMB control number 0910–0014; the collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001; and the collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

Dated: April 23, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–1592]

Promoting Effective Drug Development: Identifying Opportunities and Priorities for the Food and Drug Administration's Office of Clinical Pharmacology; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; establishment of a public docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA or Agency) is establishing a public docket entitled ''Promoting Effective Drug Development: Identifying Opportunities and Priorities for the Food and Drug Administration's Office of Clinical Pharmacology.'' The purpose of this docket is to solicit input from interested parties on specific and actionable policy topics that could be prioritized, developed, and implemented by the staff of the Center for Drug Evaluation and Research's (CDER's) Office of Clinical Pharmacology (OCP) to support effective drug development programs.

DATES: Although you can comment at any time, to ensure that the Agency considers your comment, submit either electronic or written comments by June 25, 2024.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–1592 for ''Promoting Effective Drug Development: Identifying Opportunities and Priorities for the Food and Drug Administration's Office of Clinical Pharmacology.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Anuradha Ramamoorthy, Office of

Clinical Pharmacology, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–1688, *anuradha.ramamoorthy@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Clinical pharmacology impacts many important aspects of drug development including, but not limited to, dose selection and optimization, clinical trial inclusion and exclusion criteria, and evidence generation for safety and effectiveness determinations. Clinical pharmacology derived recommendations are also critical for optimizing pharmacotherapy in clinical practice (*e.g.,* by informing patient-specific treatment strategies).

Within CDER, OCP leverages clinical pharmacology information on drug disposition, disease biology, pharmacology, and determinants of response variability to support risk/benefit determinations and therapeutic individualization recommendations for patients and practitioners. OCP's mission is to advance the development of innovative new medicines by applying state-of-the-art scientific principles and promoting therapeutic optimization and individualization. OCP fulfills this mission through its core functions of regulatory review, regulatory research, and development and implementation of scientific guidances and policies.

To facilitate effective and efficient drug development, FDA is engaged in multiple, high-priority policy initiatives. Consistent with FDA's broader initiatives and modernization efforts, OCP works collaboratively with stakeholders to develop and implement contemporary guidance and policy in the multidisciplinary field of clinical pharmacology to share the current regulatory thinking on a topic and promote effective drug development programs. FDA is establishing a public docket to solicit input from interested parties on specific and actionable clinical pharmacology-relevant policy topics that could be prioritized, developed, and implemented by OCP staff.

II. Request for Comments

FDA is soliciting specific, actionable policy suggestions that could be prioritized, developed, and implemented in the near-term by OCP staff to promote effective drug development programs. We emphasize that the focus of this request is to seek input in the multidisciplinary field of clinical pharmacology. The Agency welcomes any relevant information that interested parties wish to share in a submission to the docket. We are particularly interested in seeking input on:

1. Topics for development of new clinical pharmacology/translational medicine guidances to improve clarity and promote effective drug development. Please provide a rationale to support your suggestion and highlight relevant aspects that could be considered in guidance development.
2. Topics and concepts where further clarity on OCP's existing guidances may be warranted. Please provide a rationale to support your suggestions and actionable recommendations.
3. Topics that promote patient centricity in drug development and regulatory assessment. For FDA, patient-centric drug development and providing patient-centered clinical recommendations are important priorities.

III. Electronic Access

Persons with access to the internet may obtain relevant clinical pharmacology guidances at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents.*

Dated: April 22, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–1382]

Agency Information Collection Activities; Proposed Collection; Comment Request; Electronic User Fee Payment Request Forms

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on electronic user fee payment request forms.

DATES: Either electronic or written comments on the collection of information must be submitted by June 25, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 25, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–

2024–N–1382 for ''Electronic User Fee Payment Request Forms.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Electronic User Fee Payment Request Forms—Form FDA 3913 and Form FDA 3914

OMB Control Number 0910–0805—Extension

This information collection supports FDA user fee programs. Form FDA 3913, User Fee Payment Refund Request, is designed to provide the minimum necessary information for FDA to review and process a user fee payment refund. The information collected includes the organization, contact, and payment information. The information is used to determine the reason for the refund, the refund amount, and who to contact if there are any questions regarding the refund request. A submission of the User Fee Payment Refund Request form does not guarantee that a refund will be issued. FDA estimates an average of 0.40 hours per response, including the time to review instructions, search existing data sources, gather and maintain the data needed, and complete and review the collection of information. The estimated hours are based on past FDA experience with the user fee payment refund request.

In fiscal year 2023, approximately 1,856 user fee refunds were processed for cover sheets and invoices including 2 for Animal Drug User Fees, 2 for Animal Generic Drug User Fees, 3 for Biosimilar Drug User Fees, 1 for Color Additive Certification Fees, 1 for Compounding Quality fees, 32 for Export Certificate Program Fees, 7 for Freedom of Information Act requests, 94 for Generic Drug User Fees, 730 for Medical Device User Fees, 219 for Medical Device Federal Unified Registration and Listing fees, 666 for Mammography inspection fees, 19 for Over-The-Counter Monograph Drug User Fees, 77 for Prescription Drug User Fees, and 3 for Tobacco product fees.

Form FDA 3914, User Fee Payment Transfer Request, is designed to provide the minimum necessary information for FDA to review and process a user fee payment transfer request. The information collected includes payment and organization information. The information is used to determine the reason for the transfer, how the transfer should be performed, and who to contact if there are any questions regarding the transfer request. A submission of the User Fee Payment Transfer Request form does not guarantee that a transfer will be performed. FDA estimates an average of 0.25 hours per response, including the time to review instructions, search existing data sources, gather and maintain the data needed, and complete and review the collection of information. FDA estimated hours are based on past FDA experience with the user fee payment transfer requests.

In fiscal year 2023, approximately 86 user fee payment transfers were processed for cover sheets and invoices including 0 for Animal Drug User Fees, 0 for Animal Generic Drug User Fees, 1 for Biosimilar Drug User Fees, 2 for Compounding Quality fees, 4 for Export Certificate Program Fees, 20 for Generic Drug User Fees, 6 for Medical Device User Fees, 37 for Medical Device Federal Unified Registration and Listing fees, 8 for Mammography inspection fees, 8 for Over-The-Counter Monograph Drug User Fees, 0 for Prescription Drug User Fees, and 0 for Tobacco product fees.

Respondents for the electronic request forms include domestic and foreign firms (including pharmaceutical, biological, medical device firms, etc.). Specifically, refund request forms target respondents who submitted a duplicate payment or overpayment for a user fee cover sheet or invoice. Respondents

may also include firms that withdrew an application or submission. Transfer request forms target respondents who submitted payment for a user fee cover sheet or invoice and need that payment to be re-applied to another cover sheet or invoice (transfer of funds).

The electronic user fee payment request forms streamline the refund and transfer processes, facilitate processing, and improve the tracking of refund or transfer requests. The burden for this collection of information is the same for all customers (small and large organizations). The information being requested or required has been held to the absolute minimum required for the intended use of the data. Respondents are able to request a user fee payment refund or transfer online at *https://www.fda.gov/forindustry/userfees/default.htm.* This electronic submission is intended to reduce the burden for customers to submit a user fee payment refund and transfer request.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1] [2]

FDA Form No.	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
User Fee Payment Refund Request—Form FDA 3913.	1,856	1	1,856	0.40 (24 minutes)	742
User Fee Payment Transfer Request—Form FDA 3914.	86	1	86	0.25 (15 minutes)	22
Total	.....	.....	.....	.....	764

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.
[2] Numbers have been rounded.

Our estimated burden for the information collection reflects an overall increase of 525 hours and a corresponding increase of 1,274 responses. We attribute this adjustment to an increase in the number of submissions we received over the last few years.

Dated: April 22, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–1057]

Agency Information Collection Activities; Proposed Collection; Comment Request; Pregnancy Exposure Registry Enrollment Project: A Survey of Healthcare Providers To Advance Pregnancy Safety Data Collection and Improve Health Communications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information and to allow 60 days for public comment in response to the notice. This notice solicits comments on a proposed study entitled ''Pregnancy Exposure Registry Enrollment Project: A Survey of Healthcare Providers To Advance Pregnancy Safety Data Collection and Improve Health Communications.''

DATES: Either electronic or written comments on the collection of information must be submitted by June 25, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 25, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–1057 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Pregnancy Exposure Registry Enrollment Project: A Survey of Healthcare Providers To Advance Pregnancy Safety Data Collection and Improve Health Communications.'' Received comments, those filed in a timely manner (see ADDRESSES), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the

Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Rachel Showalter, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 240–994–7399, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Pregnancy Exposure Registry Enrollment Project: A Survey of Healthcare Providers To Advance Pregnancy Safety Data Collection and Improve Health Communications

(OMB Control Number 0910—NEW)

I. Background

FDA has a need for data on pregnancy exposure registries (registries). The goal of the proposed Pregnancy Exposure Registry Enrollment Project survey is to determine healthcare providers' (HCPs) perceived barriers to sufficient patient enrollment in pregnancy exposure registries. FDA's authority to conduct research related to drugs and other FDA-regulated products is set forth in the Federal Food, Drug, and Cosmetic Act (FD&C Act), (21 U.S.C. 393(d)(2)(C) and (D)).

To ensure that pregnancy information in product labeling is accurately communicated to HCPs so that they can make informed decisions about treatment options for their patients, human pregnancy safety data are collected postapproval. Registries are an important tool for pregnancy safety data collection in the postmarketing setting. Their prospective design and ability to collect detailed patient information are critical to obtain human data to inform pregnancy labeling in a timely manner.

The pharmaceutical industry typically sponsors registries often as a result of a postmarketing requirement (PMR) or commitment (PMC) FDA issues at the time of drug approval under section 505(o)(3) of the FD&C Act (21 U.S.C. 355(o)(3)). Under a PMR or PMC, pharmaceutical industry sponsors often work with private companies, nonprofits, and/or academic health centers to operate registries. Other times, private companies, nonprofits, Federal agencies other than FDA, or academic health centers may develop registries without FDA involvement to facilitate pregnancy-related research with other scientific goals. When developing registry protocols, sponsors and those who operate registries must comply with 45 CFR part 46 and meet the Criteria for IRB approval of research under 45 CFR 46.111, which provides protection of human research subjects, subjects' privacy, and the confidentiality of subjects' data.

Although registries are crucial to understanding the safety and potential toxicity of prescription products in the perinatal population, many registries fail to adequately enroll pregnant individuals. HCPs are a trusted source of information about health, and they serve as gatekeepers for recruiting pregnant individuals to enroll in clinical studies such as registries. Thus, HCPs are integral to the registry enrollment process. Publications suggest that low enrollment in registries may be related to HCPs' lack of awareness, time, incentives, and comfort with discussing clinical research with patients. Despite this speculation about the barriers that HCPs face, however, researchers have not surveyed HCPs to understand their challenges. FDA reviewed existing literature and engaged with other Offices and Centers within FDA and external experts and determined that this data collection is not duplicative.

During this voluntary, FDA-funded, qualitative survey, we will recruit through an existing panel of HCPs currently licensed to practice in clinical settings in the United States who routinely care for or counsel pregnant patients. We will engage three groups of HCPs: (1) primary HCPs (obstetrician/gynecologists, family practice physicians, certified nurse-midwives, physician assistants); (2) consulting HCPs (neurologists, infectious disease specialists, psychiatrists, rheumatologists, cardiologists, pulmonologists, dermatologists), and (3) pharmacists. To be eligible for the study, primary HCPs must routinely care for or counsel five or more pregnant patients per month, and consulting HCPs and pharmacists must routinely care for or counsel three or more pregnant patients per month. All eligible HCPs must have either a degree

as a Doctor of Medicine, a Doctor of Osteopathic Medicine, or a Doctor of Pharmacy. Although we will recruit with representativeness in mind, we will weigh the data to ensure a nationally representative sample of HCPs. Generated tables will compare the weighted distributions of the variables used for weighting against their corresponding benchmarks.

A contracted research firm will collect data through internet administration. One hundred percent (100%) of participants will self-administer the internet survey via a computer, which will record responses and provide appropriate probes when needed. We will use automated technology in data collection, data reduction, and analyses. To identify eligible HCPs, we will send a recruitment email that links to a prequalifying screener on the internet. The screener will include questions about the HCP's specialty, number of years in practice, number of pregnant patients counseled per month, and demographics (age, race/ethnicity, and gender) and will confirm that the respondent does not work for FDA or a pharmaceutical company. We will invite all respondents who meet eligibility requirements to participate in the survey within 24 hours of completing the screener and obtain informed consent from all survey participants. The survey will assess experienced HCPs' knowledge of registries, their attitudes toward them, the barriers they face to recruiting patients, and their ideas about improving registry enrollment. Results from this project will advance pregnancy safety data collection from registries and ultimately improve health communications through inclusion of human safety data in pregnancy labeling. The survey is available on request at *pedsdrugs@fda.hhs.gov.*

We have the following specific research questions:

1. What proportion of HCPs know about pregnancy exposure registries?
2. What proportion of HCPs have referred patients to pregnancy exposure registries?
3. What proportion of HCPs have provided information from patient medical records to pregnancy exposure registries?
4. What barriers to patient enrollment in pregnancy exposure registries are identified by HCPs?
5. What ideas do HCPs have to improve enrollment in pregnancy exposure registries?

The target sample size for this study is 400 completed surveys. The sample will include an equal number of primary HCPs, consulting HCPs, and pharmacists. Such a design will help to ensure assessment of not only HCPs' perceptions generally, but also potential variations between different types of HCPs. HCPs are a difficult group to recruit, so several strategies will be put into place to achieve a high response rate. These strategies include tailoring contact materials, disclosing FDA sponsorship on survey materials, and providing a cash incentive.

To obtain 400 completed surveys, we estimate that 2,000 experienced HCPs will need to be screened. We estimate that participation in the study will take 17 minutes.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	No. of respondents	No. of responses per respondent	Total annual responses	Average burden per response	Total hours
Screener	2,000	1	2,000	0.0333 (2 minutes)	67
Main Study Survey	400	1	400	0.25 (15 minutes)	100
Total	2,000				167

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Prior to the main analysis, an outlier analysis will be performed for the time spent on any screen visited and total time to complete the survey. Extreme survey time will be identified and appropriate adjustments will be made prior to the final data analysis. The extent of any missing information will also be assessed to determine the data quality. Descriptive statistics will afford a look at the frequency of responses. Assessment of potential differences between primary HCPs, consulting HCPs, and pharmacists can be accomplished with pairwise comparisons between groups. We will also produce national-level estimates about attitudes toward pregnancy exposure registries and other key questions.

An analysis of item nonresponse will be made in the screener, if needed, and in the main survey. Item nonresponse rates will be tabulated for the questionnaire items, allowing for skip patterns. An analysis will be made of any questionnaire items that register unusually high item nonresponse rates. Multivariate item nonresponse relationships will be evaluated, including monotonicity patterns such as breakoffs (all items dropped after a particular item), and other types of ''blocks'' of multivariate item nonresponse. High levels of item nonresponse in particular items will have their correlations with other questionnaire item results in both the screener and main survey analyzed (tabulating how much the item nonresponse is concentrating in a particular subgroup of health providers).

The FDA anticipates disseminating the results of the study after final analyses of the data are completed, reviewed, and cleared. The information gathered on this topic will be used to inform regulatory guidance to sponsors and investigators designing pregnancy exposure registry protocols.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–D–1402]

Cancer Clinical Trial Eligibility Criteria: Laboratory Values; Draft Guidance for Industry, Institutional Review Boards, and Clinical Investigators; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry, institutional review boards (IRBs), and clinical investigators entitled ''Cancer Clinical Trial Eligibility Criteria: Laboratory Values.'' This draft guidance is one in a series of guidances that provide recommendations regarding eligibility criteria for clinical trials of investigational drugs regulated by the Center for Drug Evaluation and Research (CDER) and the Center for Biologics Evaluation Research (CBER) for the treatment of cancer. Specifically, this draft guidance includes recommendations for selecting appropriate laboratory values as trial eligibility criteria to avoid unjustified exclusions of diverse trial participants.

DATES: Submit either electronic or written comments on the draft guidance by June 25, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–1402 for ''Cancer Clinical Trial Eligibility Criteria: Laboratory Values.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Elaine Chang, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2169, Silver Spring, MD 20993, 240–302–2942; or Abhilasha Nair, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 2362, Silver Spring, MD 20993, 301–796–8317; or James Myers, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry, IRBs, and clinical investigators entitled ''Cancer Clinical Trial Eligibility Criteria: Laboratory Values.'' The purposes of eligibility criteria are to select the intended patient population and reduce potential risks to trial participants. However, eligibility criteria are sometimes more restrictive than necessary, and expanding eligibility criteria to be more inclusive is one trial design consideration that may improve the diversity of clinical trial populations. This draft guidance is one in a series of guidances that provide recommendations regarding eligibility criteria for clinical trials of investigational drugs regulated by CDER and CBER for the treatment of cancer. Specifically, this draft guidance includes recommendations to consider appropriate use of laboratory values as trial eligibility criteria and intends to assist interested parties, including sponsors and IRBs, who are responsible for the development and oversight of clinical trials.

A clinical trial's eligibility criteria (for inclusion and exclusion) are essential components of the trial, defining the characteristics of the study population. Because there is variability in investigational drugs and trial objectives, eligibility criteria should be developed taking into consideration the mechanism of action of the drug, the targeted disease or patient population, the anticipated safety of the investigational drug, the availability of adequate safety data, and the ability to recruit trial participants from the patient population to meet the objectives of the clinical trial. The Agency recognizes that some eligibility criteria may have become commonly accepted over time or used as a template across trials, but such criteria should be carefully considered and be appropriate for a specific trial context. Unnecessarily restrictive eligibility criteria may slow patient accrual, limit patients' access to clinical trials, and lead to trial results that do not fully represent treatment effects in the patient population that will ultimately use the drug.

Appropriately broadening cancer trial eligibility criteria can improve the generalizability of trial results and provide a more detailed characterization of the drug's benefit-risk profile across the patient population likely to use the drug in clinical practice.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Cancer Clinical Trial Eligibility Criteria: Laboratory Values.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 312 have been approved under OMB control number 0910–0014; the collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001; and the collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338.

III. Electronic Access

Persons with access to the internet may obtain the guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

Dated: April 23, 2024.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Proposed Inclusion of Terrain Factors in the Definition of Rural Area for Federal Office of Rural Health Policy Grants

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

ACTION: Request for public comment.

SUMMARY: HRSA's Federal Office of Rural Health Policy (FORHP) utilizes clear, consistent, and data-driven methods of defining rural areas in the United States for the purposes of determining eligibility for its rural health grant programs. FORHP monitors ongoing national research and, as appropriate, considers updates to its definition. Because access to needed health care is likely to be reduced when roads are most difficult to traverse, with this notice, FORHP proposes to modify the definition of rural areas by integrating the new Road Ruggedness Scale (RRS) released in 2023 by the Economic Research Service (ERS) of the U.S. Department of Agriculture, which characterizes topographic variability, or ruggedness, of roads. This proposal does not impact rural areas included in the current FORHP definition. This notice seeks public comment on FORHP's proposal. This notice also includes a technical clarification explaining how FORHP will use Census data to identify outlying Metropolitan Statistical Area counties that qualify as rural in future updates given the U.S. Census Bureau's 2020 Census terminology changes that removed the categories of Urban Clusters and Urbanized Areas.

DATES: Submit comments no later than May 28, 2024.

ADDRESSES: Comments should be submitted to *ruralpolicy@hrsa.gov.*

FOR FURTHER INFORMATION CONTACT: Greta Stuhlsatz, Statistician, Policy Research Division, FORHP, HRSA, 5600 Fishers Lane, Rockville, Maryland 20857; (301) 443–0835; and *ruralpolicy@hrsa.gov.*

SUPPLEMENTARY INFORMATION:

Background

Section 711 of the Social Security Act (42 U.S.C. 912) directs FORHP to advise the Secretary of HHS on policies affecting rural hospitals and health care and coordinating activities within HHS that relate to rural health care. Since the 1990s, FORHP has administered grants that support activities related to increasing access to health care in rural areas. FORHP's authorizing statute does not, however, include a definition of ''rural area.'' To carry out this charge, FORHP monitors ongoing national research and analysis efforts related to defining geographic areas and rurality. As new methods and data become available, FORHP may consider revisions to the definition.

Historically, there have been two principal definitions of ''rural'' that were in use by the Federal Government: The U.S. Census Bureau urban-rural classification (*https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural.html*) and the Office of Management and Budget's definition of metropolitan, also called metro, areas (*https://www.census.gov/programs-surveys/metro-micro.html*). Neither definition defined ''rural'' directly, but rather defined areas as either ''urban,'' with all other territory being ''rural,'' or as ''metro,'' with all other territory being ''non-metro.''

Current FORHP Definition of Rural Area

FORHP currently designates the following areas as rural for purposes of FORHP's grant programs: [1]

(1) All non-metro counties,

(2) All outlying metro counties without an Urbanized Area,

(3) All metro census tracts with Rural Urban Commuting Area (RUCA) codes 4–10, and

(4) Metro census tracts of at least 400 square miles in area with population density of 35 or less per square mile with RUCA codes 2–3.

FORHP's current definition finds that 19.7 percent of the population, or approximately 60.8 million people, live in rural areas, and classifies 86 percent of the land area of the United States as rural (based on 2010 Census data; all data will be updated when updated RUCA codes are available using data from the 2020 Census). Information on whether individual addresses are within a rural area can be identified in a search tool at the HRSA Data Warehouse.[2] HRSA updates the search tool as needed to assist rural health grant applicants.

Adding Rugged Terrain Data to the Definition of Rural Area

FORHP's definition of rural area was last updated in 2021.[3] At that time, some commenters suggested that FORHP should further modify the definition of rural area to account for difficult and mountainous terrain because travel on roads through such terrain is more difficult and time-consuming. FORHP did not have national data that could consistently identify areas of difficult terrain.

In 2023, the ERS published a report, *Characterizing Rugged Terrain in the United States,*[4] which describes the measurement of topographic variation using the Terrain Ruggedness Index. The ERS conducted a study to analyze how population, population density, and income vary by ruggedness and rurality. The ERS produced two scales:

(1) The Area Ruggedness Scale (ARS) measures the changes in elevation for all terrain and classifies census tracts as: (1) level, (2) nearly level, (3) slightly rugged, (4) moderately rugged, (5) highly rugged, and (6) extremely rugged. This characterizes overall ruggedness in the entire tract.

(2) The RRS measures the changes in elevation beneath roads and classifies census tracts as: (1) level, (2) nearly level, (3) slightly rugged, (4) moderately rugged, and (5) highly rugged. This characterizes overall ruggedness along roads in the tract.[5]

The RRS, or roads-only scale, helps to study the impact of rugged terrain on travel by vehicle. Based on the ERS analysis of the RRS, population density was highest, on average, for nearly level census tracts (5,514 people per square mile) and lowest for highly rugged census tracts (3,390 people per square mile).

TABLE 1—RRS CATEGORIES AND CENSUS TRACTS

RRS category	Number of census tracts	Percent of census tracts
1—Level	47,740	65.6
2—Nearly level	16,297	22.4
3—Slightly rugged	5,518	7.6
4—Moderately rugged	1,956	2.7
5—Highly rugged	1,254	1.7
Total	72,765	100.0

FORHP is proposing to expand its definition of rural by incorporating the RRS into the definition for purposes of FORHP's grant programs. All areas included in the current definition would remain included. The RRS focuses on roads and the difficulty of travelling in mountainous terrain, while the ARS more generally classifies the topography of the tract's terrain. Access to needed health care is likely to be reduced when the roads are most difficult to traverse. FORHP proposes including census tracts of at least 20 square miles in area in metro counties

[1] See the notice ''Revised Geographic Eligibility for Federal Office of Rural Health Policy Grants,'' 85 FR 59806 (Sept. 23, 2020), for a full description of the methods and data sources used to develop FORHP's definition of rural areas. See the notice ''Response to Comments on Revised Geographic Eligibility for Federal Office of Rural Health Policy Grants,'' 86 FR 2418 (Jan. 12, 2021), for FORHP's current definition of rural areas. See Defining Rural Population, *https://www.hrsa.gov/rural-health/about-us/what-is-rural.*

[2] HRSA Data Warehouse: *https://data.hrsa.gov/tools/rural-health.*

[3] ''Response to Comments on Revised Geographic Eligibility for Federal Office of Rural Health Policy Grants.'' 86 FR 2418 (Jan. 12, 2021).

[4] Research Report No. ERR–322, August 2023. Available at *https://www.ers.usda.gov/publications/pub-details/?pubid=107027.*

[5] ARS and RRS data are available at *https://www.ers.usda.gov/data-products/area-and-road-ruggedness-scales/.*

with RRS 5 (highly rugged) and RUCA code 2 or 3 in our definition of rural area (tracts with RUCA codes 4–10 regardless of RRS are already included). Some small area tracts within or on the edge of cities can have rugged terrain (*e.g.,* State or local parks), but they are very small size and adjacent to major population centers.

FORHP estimates that including census tracts that are at least 20 square miles in area with RRS 5 and RUCA 2–3 in the definition of rural area would add 84 census tracts and approximately an additional 304,834 people to the 60,758,275 people currently living in FORHP-designated rural areas, an increase of 0.5 percent in the total number of people living in rural areas. The number of eligible census tracts by State is included in table 2.

Only tracts that meet all criteria—RRS 5 and RUCA 2–3 with an area over 20 square miles—would be newly eligible under this proposed update. Tracts with RRS 5 and RUCA code 1 could not be classified as rural areas as tracts with RUCA code 1 contain populations from urban areas with over 50,000 residents. Additionally, the RUCA code 1 tracts located in metro counties are part of the metropolitan area core and have primary commuting flow within the urban area.[6] For example, San Francisco, California has 31 census tracts with RRS 5 and RUCA code 1, and these small areas with rugged terrain inside the metropolitan area core are not rural in character.

TABLE 2—NUMBER OF CENSUS TRACTS WITH RRS 5 AND RUCA CODE 2 OR 3 AND AREA OVER 20 SQ. MILES, BY STATE

State	New tracts
CA	24
OR	16
NC	12
WA	9
TN	7
CO	6
WV	6
MT	2
AK	1
MD	1
Total	84

Note: Data in this table are based on 2010 census tract geographies. For a complete list of impacted census tracts see: *https://www.hrsa.gov/rural-health/about-us/what-is-rural/data-files.*

FORHP's proposal to modify our definition of rural area for purposes of FORHP's grant programs reflects efforts to be responsive to stakeholder feedback and target programs towards the intended communities. Other rural definitions for other purposes may be set by statute or regulation or be designed to meet different program goals.

Notification of FORHP's Technical Clarification in Response to the U.S. Census Bureau's 2020 Census Terminology Changes Removing Urban Clusters and Urbanized Areas

Prior to the 2020 Census, the U.S. Census Bureau designated two categories of urban areas—Urban Clusters (with a population of 2,500 to 49,999) and Urbanized Areas (with a population of 50,000 or more). With the elimination of these sub-categories to differentiate urban areas with large and small populations, the U.S. Census Bureau now only designates urban areas (population of 5,000 and up or housing units of 2,000 or more) and does not sub-categorize urban areas by size. FORHP's rural definition excludes outlying metro counties with an *Urbanized Area.* To retain the distinction between urban areas with population over and under 50,000 in FORHP's definition of rural area, FORHP will identify and categorize urban areas based on population size. With this technical clarification, the definition, ''all outlying metro counties with no urban population from an urban area of 50,000 or more people,'' will replace ''all outlying metro counties without an urbanized area.''

FORHP will use the urban area population counts published by the U.S. Census Bureau in the list of qualifying urban areas for the 2020 Census (*https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural.html*) to sub-categorize urban areas as less than 50,000 people (*e.g.,* a population of 49,999 or fewer) and as 50,000 or more people in the next update to rural area data files. Consistent with our current definition, FORHP will consider outlying metro counties without population from urban areas with 50,000 or more people as rural areas, and the entire county would be considered a rural area for our grant programs.

There are 327 outlying metro counties in the Office of Management and Budget's Bulletin No. 23–01, released July 21, 2023, that have no population part of an urban area with 50,000 or more people. Outlying metro counties with any population from urban areas with 50,000 or more people would not be considered rural areas, however census tracts within those counties would be considered rural areas if they meet the RUCA criteria or the RUCA and RRS criteria, as applicable.

Proposed FORHP Definition of Rural Area Incorporating the RRS and the Technical Clarification in Response to Census Terminology Changes

FORHP proposes to designate the following areas as rural for purposes of FORHP's grant programs:

(1) Non-metro counties,

(2) Outlying metro counties with no urban population from an urban area of 50,000 or more people,

(3) Census tracts in metro counties with RUCA codes 4–10,

(4) Census tracts in metro counties of at least 400 square miles in area with population density of 35 or less per square mile with RUCA codes 2–3, and

(5) Census tracts in metro counties with RRS 5 and RUCA codes 2–3 that are at least 20 square miles in area.

Request for Public Comment

FORHP is proposing to modify the current definition of rural area for purposes of FORHP's grant programs. FORHP seeks comments from the public on the proposed use of the RRS to identify rural areas as described above.

This request for comments is issued solely for information and planning purposes; it does not constitute a Request for Proposal, applications, proposal abstracts, or quotations. This request does not commit the Government to contract for any supplies or services or make a grant or cooperative agreement award or take any other official action. Further, HRSA is not seeking proposals through this request for comments and will not accept unsolicited proposals.

Carole Johnson,

Administrator.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

Notice of Interest Rate on Overdue Debts

Section 30.18 of the Department of Health and Human Services' claims collection regulations (45 CFR part 30) provides that the Secretary shall charge an annual rate of interest, which is determined and fixed by the Secretary of the Treasury after considering private consumer rates of interest on the date that the Department of Health and Human Services becomes entitled to

recovery. The rate cannot be lower than the Department of Treasury's current value of funds rate or the applicable rate determined from the ''Schedule of Certified Interest Rates with Range of Maturities'' unless the Secretary waives interest in whole or part, or a different rate is prescribed by statute, contract, or repayment agreement. The Secretary of the Treasury may revise this rate quarterly. The Department of Health and Human Services publishes this rate in the **Federal Register**.

The current rate of 12½%, as fixed by the Secretary of the Treasury, is certified for the quarter ended March 31, 2024. This rate is based on the Interest Rates for Specific Legislation, ''National Health Services Corps Scholarship Program (42 U.S.C. 254o(b)(1)(A))'' and ''National Research Service Award Program (42 U.S.C. 288(c)(4)(B)).'' This interest rate will be applied to overdue debt until the Department of Health and Human Services publishes a revision.

David C. Horn,

Director, Office of Financial Policy and Reporting.

National Institutes of Health

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The invention listed below is owned by an agency of the U.S. Government and is available for licensing to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

FOR FURTHER INFORMATION CONTACT: Licensing information may be obtained by communicating with the Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases, 5601 Fishers Lane, Rockville, MD 20852 by contacting Dawn Taylor-Mulneix at 301–451–8021 or *dawn.taylor-mulneix@nih.gov.* A signed Confidential Disclosure Agreement will be required to receive copies of unpublished information related to the invention.

SUPPLEMENTARY INFORMATION: Technology description follows:

Human Monoclonal Antibodies That Target the RH5 Complex of Blood-Stage Plasmodium Falciparum

Description of Technology

249 million people were afflicted with malaria in 2022. There are five *Plasmodium* parasite species that cause malaria in humans. Of the five, *Plasmodium falciparum* causes most of the incidence of human disease. Most advanced malaria vaccine candidates can confer only partial, short-term protection in malaria-endemic areas. The pathogenesis of malaria is associated with blood-stage infection and antibodies specific to the parasite blood-stage antigens may be able to control parasitemia. To address this public health need, NIAID inventors have developed 35 human monoclonal antibodies that target the RH5 complex of blood-stage *Plasmodium falciparum* and were found to have potent activity in *in vitro* growth inhibition assays.

This technology is available for licensing for commercial development in accordance with 35 U.S.C. 209 and 37 CFR part 404, as well as for further development and evaluation under a research collaboration.

Potential Commercial Applications

- Method of prophylactic and/or therapeutic treatment by targeting blood-stage antigens of *Plasmodium.*

Competitive Advantages

- Most other commercially available antibodies targeting against *Plasmodium* target circumsporozoite protein (CSP) present in the sporozoite stage. These novel antibodies instead target a conserved and essential antigen present in the blood stage: RH5.
- These monoclonal antibodies can be used alone or in combination with existing antibodies.

Developmental Stage

- Pre-clinical.

Inventors: Joshua Tan, Ph.D., Lawrence Wang, Ph.D. and Andrew Cooper, Ph.D., all of NIAID.

Publications: Wang, L., Cooper, A., et al. ''Natural malaria infection elicits rare but potent neutralizing antibodies to the blood-stage antigen RH5.'' bioRxiv. *https://www.biorxiv.org/content/10.1101/2023.10.04.560669v1,* October 06, 2023.

Intellectual Property: HHS Reference No. E–014–2023; Provisional Patent Application No.: 63/468,740.

Licensing Contact: To license this technology, please contact Dawn Taylor-Mulneix at 301–451–8021 or *dawn.taylor-mulneix@nih.gov,* and reference E–014–2023.

Collaborative Research Opportunity: The National Institute of Allergy and Infectious Diseases is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize this technology. For collaboration opportunities, please contact Dawn Taylor-Mulneix at 301–451–8021 or *dawn.taylor-mulneix@nih.gov.*

Dated: April 19, 2024.

Surekha Vathyam,

Deputy Director, Technology Transfer and Intellectual Property Office, National Institute of Allergy and Infectious Diseases.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket Number USCG–2024–0281]

Operational Adjustments Resulting From Workforce Shortages

AGENCY: Coast Guard, DHS.

ACTION: Notice and request for comments.

SUMMARY: We are requesting your comments on planned actions that will allow the Coast Guard to prioritize lifesaving missions and protection of the Marine Transportation System in light of current personnel shortages. Like other military services, the Coast Guard is facing an unprecedented workforce shortage that is impacting Service readiness. The current and forecasted extent of the shortage is prompting significant actions to best protect the American public and maintain Service readiness. If actions are not taken to adjust operations, we can anticipate longer-term impacts to mission effectiveness and increased risk to our service members, as well as to commercial mariners and private boaters. In addition to leveraging technology and enhancing recruitment and retention efforts, operational adjustments must be executed within the existing response system while maintaining standards and an adherence to core mission execution. These adjustments fall into two categories: First, in regions where multiple units could respond if they were resourced appropriately, boats and people will be consolidated at one or more units to ensure a robust response. Secondly, in areas where the Coast Guard operates

limited, or seasonal units that do not have sufficient personnel to respond, operations will be temporarily paused as resources are moved to higher priority areas. These adjustments will remain in effect until the Coast Guard has sufficient personnel to reconstitute these units.

DATES: Written comments and related material may be submitted to the Coast Guard personnel specified below. Your comments and related material must reach the Coast Guard on or before May 24, 2024.

ADDRESSES: You may submit comments identified by docket number USCG–2024–0281 using the Federal rulemaking portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: For information about this document, please email Kiesha Miller (202–372–4632) at *SMB-COMDT-TempOpsAdjust@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
GAO Government Accountability Office

II. Background and Purpose

The Coast Guard continues to experience recruiting challenges, leading to workforce shortages impacting frontline operations and Service readiness. Personnel in impacted areas are largely boat operators and engineers, who form the bedrock of Coast Guard operations. The Coast Guard is proactively adjusting operations and prioritizing personnel assignments to specific operational units to ensure the Service remains always ready to serve the American public. This notice meets the requirements for 14 U.S.C. 910.

III. Discussion

The following units will transition for use as a forward operating location (*i.e.,* a staging area at unit commander discretion): Stations-Small Scituate, MA; East Moriches, NY; Great Egg, NJ; Beach Haven, NJ; Townsends Inlet, NJ; Stillpond, MD; Fortescue, NJ; Sodus Point, NY; Ashtabula, OH; Lorain, OH; Harbor Beach, MI; Muskegon, MI; Alpena, MI; Frankfort, MI; Ludington, MI; DuSable Harbor, IL; Wilmette Harbor, IL; Two Rivers, WI; Washington Island, WI; Green Bay, WI; Santa Cruz, CA; Coquille River, OR; and Rogue River, OR. These units already consolidate for some portion of the year.

The following units currently do not maintain a duty crew to conduct response operations, and will temporarily pause boat operations altogether: Stations Paducah, KY; Pittsburgh, PA; St. Louis, MO; Louisville; KY, and Memphis; TN and boat operations in Huntington, WV.

IV. Public Participation and Request for Comments

We encourage you to submit comments through the Federal portal at *https://www.regulations.gov.* If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. In your submission, please include the docket number for this notice and provide a reason for each suggestion or recommendation. We will review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Jason C. Aleksak,

Captain, U.S. Coast Guard, Chief, Office of Boat Forces.

BILLING CODE 9110–04–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6382–N–02]

Federal Housing Administration (FHA): Home Equity Conversion Mortgage (HECM) for Purchase-Acceptable Monetary Investment Funding Sources and Interested Party Contributions

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, Department of Housing and Urban Development (HUD).

ACTION: Notice.

SUMMARY: On October 24, 2023, HUD published a **Federal Register** notice (October FR Notice) announcing and seeking public comment on changes to the Federal Housing Administration's (FHA) Home Equity Conversion Mortgage (HECM) for Purchase Program—Acceptable Monetary Investment Funding Sources and Interested Party Contributions requirements. The proposed changes from HUD's October FR Notice were included in an update to HUD's Single Family Housing Policy Handbook, which was published October 31, 2023, and becomes effective on April 29, 2024. After consideration of the public comments received in response to the notice of the proposed changes, FHA has decided not to implement some of the changes proposed in the October FR Notice at this time. HUD will publish a Mortgagee Letter or update the Single Family Housing Policy Handbook to align HUD's policy with this **Federal Register** notice. All other changes previously included in the Handbook will go into effect on April 29, 2024, as planned.

FOR FURTHER INFORMATION CONTACT: Brian Faux, Director, Office of Single Family Program Development, Office of Housing, Department of Housing and Urban Development, 451 7th Street SW, Room 9266, Washington, DC 20410–9000, telephone number 202–402–2378 (this is not a toll-free number); email address *sffeedback@hud.gov*. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit: *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

SUPPLEMENTARY INFORMATION:

I. Public Comments in Response to HUD's October Federal Register Notice

HUD's regulations at 24 CFR 206.44(b)(4) and 206.44(c)(2) provide the FHA Commissioner authority to permit additional funding sources for a borrower's monetary investment and interested party contributions for HECM for Purchase transactions through notice in the **Federal Register**. HUD relied on these authorities in making the proposed changes described in HUD's October FR Notice published on October 24, 2023, at 88 FR 73040. The changes proposed in that October FR Notice also were prospectively included in an update to HUD's Single Family Housing Policy Handbook, published October 31, 2023, and becoming effective on April 29, 2024.

FHA received two public comments in response to the October FR Notice. One commenter was broadly supportive of the proposed changes to the HECM for Purchase program. The commenter supported HUD's effort to align the HECM for Purchase program with FHA's

forward mortgage programs by permitting the interested party contributions explained in HUD's October FR Notice up to six percent of the sales price. The commenter stated that these changes would help more seniors qualify for and receive the benefits of the HECM for Purchase program, especially in downsizing or otherwise changing the size of their current homes before and during retirement. The commenter concluded that the changes would improve and strengthen seniors' financial status.

The other commenter raised significant concerns about allowing HECM for Purchase borrowers to use lender credits, including premium pricing, to satisfy the monetary investment requirement for a HECM for Purchase. The commenter noted that, because HECMs are negative amortization loans where the loan balance increases over time and interest costs are added to the loan balance each month, accepting a higher interest rate in return for a credit at closing would be very costly for the borrower. The use of premium pricing may result in HECM for Purchase borrowers being steered into more expensive products that do not meet their long-term financial needs.

The commenter further noted that HECM for Purchase borrowers are not likely to understand the true, long-term cost of the higher interest rate nor are they likely to receive a credit at closing that will fully compensate them for paying the higher interest rate because the termination date of a HECM loan is unknown at the time of origination, so the cost calculation can only be an estimate. Additionally, in light of recent enforcement actions by state authorities against mortgage lenders in the forward mortgage market that failed to refund surplus lender credits to borrowers, the commenter also raised concerns that HECM for Purchase borrowers may not receive the full benefit of premium pricing credits.

Finally, the commenter disagreed that FHA should allow mortgagees and third-party originators (TPOs) to contribute to closing costs. The commenter noted that allowing mortgagees and TPOs to contribute toward closing costs would increase the chances of undue influence, fraud, and unaffordable loans for HECM for Purchase borrowers.

II. This Notice

HUD has carefully considered the comments received and has determined that the potential harms to borrowers are significant enough that it would be imprudent to make these changes at this time. Thus, pursuant to the abovementioned authorities, HUD will remove the following changes from HUD's Single Family Housing Policy Handbook 4000.1: (1) permitting premium pricing as an additional funding source used to satisfy a HECM for Purchase borrower's monetary investment; (2) including discount points in the definition of ''interested party contribution''; (3) permitting interested party payment for permanent and temporary interest rate buydowns as an interested party contribution; (4) allowing mortgagees and third parties to make any interested party contributions; and (5) allowing discount points and interest rate buydowns as permissible closing costs for HECM for Purchase transactions. Removing these changes means that the use of premium pricing to help satisfy the borrower's monetary investment and including discount points and permanent and temporary interest rate buydowns as interested party contributions for a HECM for Purchase will not be permissible, that mortgagees and third party originators (TPOs) will be prohibited from making interested party contributions, and that discount points and interest rate buydowns as permissible closing costs will not be allowed after the effective date of HUD's Mortgagee Letter or update to the Single Family Housing Policy Handbook.

Julia R. Gordon,

Assistant Secretary for Housing—Federal Housing Commissioner.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2024–0063; FXIA16710900000–245–FF09A30000]

Foreign Endangered Species; Receipt of Permit Application

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit application; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on an application to conduct certain activities with a foreign species that is listed as endangered under the Endangered Species Act (ESA). With some exceptions, the ESA prohibits activities with listed species unless Federal authorization is issued that allows such activity. The ESA also requires that we invite public comment before issuing permits for any activity otherwise prohibited by the ESA with respect to any endangered species.

DATES: We must receive comments by May 28, 2024.

ADDRESSES: *Obtaining Documents:* The application, application supporting materials, and any comments and other materials that we receive will be available for public inspection at *https://www.regulations.gov* in Docket No. FWS–HQ–IA–2024–0063.

Submitting Comments: When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. You may submit comments by one of the following methods:

- *Internet: https://www.regulations.gov.* Search for and submit comments on Docket No. FWS–HQ–IA–2024–0063.
- *U.S. mail:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2024–0063; U.S. Fish and Wildlife Service Headquarters, MS: PRB/3W; 5275 Leesburg Pike; Falls Church, VA 22041–3803.

For more information, see Public Comment Procedures under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Brenda Tapia, by phone at 703–358–2185 or via email at *DMAFR@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I comment on submitted applications?

We invite the public and local, State, Tribal, and Federal agencies to comment on this application. Before issuing the requested permit, we will take into consideration any information that we receive during the public comment period.

You may submit your comments and materials by one of the methods in **ADDRESSES.** We will not consider comments sent by email or to an address not in **ADDRESSES.** We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**).

When submitting comments, please specify the name of the applicant and the permit number at the beginning of

your comment. Provide sufficient information to allow us to authenticate any scientific or commercial data you include. The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) those that include citations to, and analyses of, the applicable laws and regulations.

B. May I review comments submitted by others?

You may view and comment on others' public comments at *https://www.regulations.gov* unless our allowing so would violate the Privacy Act (5 U.S.C. 552a) or Freedom of Information Act (5 U.S.C. 552).

C. Who Will See My Comments?

If you submit a comment at *https://www.regulations.gov,* your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, such as your address, phone number, or email address, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(c) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), we invite public comments on permit applications before final action is taken. With some exceptions, the ESA prohibits certain activities with listed species unless Federal authorization is issued that allows such activities. Permits issued under section 10(a)(1)(A) of the ESA allow otherwise prohibited activities for scientific purposes or to enhance the propagation or survival of the affected species. Service regulations regarding prohibited activities with endangered species, captive-bred wildlife registrations, and permits for any activity otherwise prohibited by the ESA with respect to any endangered species are available in title 50 of the Code of Federal Regulations in part 17.

III. Permit Application

We invite comments on the following application.

Applicant: San Diego Zoo Wildlife Alliance, dba Zoological Society of San Diego, San Diego, CA; Permit No. PER10054100

The applicant requests a permit to import one male and one female captive-bred giant panda (*Ailuropoda melanoleuca*) from the China Conservation and Research Centre for the Giant Panda, Sichuan, the People's Republic of China, for the purpose of enhancing the propagation or survival of the species. This notification is for a single import.

IV. Next Steps

After the comment period closes, we will make decisions regarding permit issuance. If we issue a permit to the applicant listed in this notice, we will publish a notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching *https://www.regulations.gov* for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to regulations.gov and search for ''12345A''.

V. Authority

We issue this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and its implementing regulations.

Brenda Tapia,

Supervisory Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

[FR Doc. 2024–09000 Filed 4–25–24; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_AK_FRN_MO4500178463]

Notice of Availability for the Central Yukon Proposed Resource Management Plan/Environmental Impact Statement, Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended, and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) has prepared a Proposed Resource Management Plan (RMP) and Final Environmental Impact Statement (EIS) for the Central Yukon Planning Area, and by this notice is announcing the start of a 30-day protest period of the Proposed RMP.

DATES: This notice announces the beginning of a 30-day protest period to the BLM on the Proposed RMP. Protests must be postmarked or electronically submitted on the BLM's ePlanning site within 30 days of the date that the Environmental Protection Agency (EPA) publishes its Notice of Availability (NOA) in the **Federal Register**. The EPA usually publishes its NOAs on Fridays.

ADDRESSES: The Proposed RMP/Final EIS is available on the BLM's ePlanning project website at *https://eplanning.blm.gov/eplanning-ui/project/35315/510.* Documents pertinent to this proposal may be examined online at *https://eplanning.blm.gov/eplanning-ui/project/35315/570* and at the BLM Alaska State Office, BLM Alaska Public Information Center, 222 West 7th Avenue (1st Floor), Anchorage, Alaska, 99513; or at the Fairbanks District Office, 222 University Avenue, Fairbanks, Alaska 99709.

Instructions for filing a protest with the BLM for the Central Yukon Proposed RMP/Final EIS can be found at: *https://www.blm.gov/programs/planning-and-nepa/public-participation/filing-a-plan-protest* and in the Code of Federal Regulations (CFR) at 43 CFR 1610.5–2.

FOR FURTHER INFORMATION CONTACT: Melinda Bolton, BLM Alaska Planning and Environmental Specialist, telephone: (907) 271–3342 or email: *mbolton@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Ms. Bolton. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Central Yukon Proposed RMP/Final EIS is a comprehensive framework for future public land management actions in the Central Yukon region of Alaska. The planning area consists of about 55.7 million acres of land, including approximately 13.3 million acres of public lands managed by the BLM Central Yukon Field Office.

The Central Yukon RMP will guide management of these public lands for the benefit of current and future generations as part of the BLM's

multiple-use mission. This planning effort updates management decisions for public land uses and resources, including subsistence resources, mineral exploration and development, and recreation. When complete, the updated Central Yukon RMP will replace the Utility Corridor RMP (1991), the original Central Yukon RMP (1986), and portions of the Southwest Management Framework Plan (1981), as well as provide RMP-level decisions for unplanned lands west of Fairbanks. The proposed plan provides consolidated direction under one resource management plan to address land and resource use and development on BLM-managed public lands within the planning area.

The Central Yukon Proposed RMP/EIS evaluates six alternatives for managing the planning area. Alternatives B, C1, C2 (preferred alternative from Draft RMP/EIS), and D were developed using input from the public, Tribes, stakeholders, and cooperating agencies. Alternative E is the BLM's Proposed RMP. This alternative was developed after considering public comments on the Draft RMP/EIS and provided in the ANILCA section 810 hearings, internal BLM discussions, government-to-government consultation, and cooperating agency input.

The Proposed RMP is drawn from components of the Alternatives analyzed in the Draft RMP/EIS and, as such, the management provisions are within the range of alternatives presented to the public. Alternative A, the no action alternative, represents existing management described by current land use plans and provides the benchmark against which to compare the other alternatives. Alternative B emphasizes reducing the potential for competition between development uses and subsistence resources by identifying key areas for additional management actions. Alternative C1 emphasizes a blend of resource protection and development at the planning level to maintain the long-term sustainability of resources while providing for multiple resource uses. Alternative C2 emphasizes management to facilitate resource development while applying habitat management and administrative designations to accommodate multiple uses. Alternative D focuses on maximizing BLM-managed public lands for development potential with fewer management restrictions at the planning level. Unlike the action alternatives from the Draft RMP/EIS, the Proposed RMP (Alternative E) recommends retention of Public Land Order (PLO) 5150. The Proposed RMP also does not recommend full revocation of the ANCSA 17(d)(1) PLOs, but does recommend revoking the withdrawals in part to allow for selection by Alaska Native Vietnam-era veterans where the PLOs currently do not allow for it. For most resources, the Proposed RMP is similar to Alternative C (either Alternative C1 or Alternative C2). The Proposed RMP designates twenty-one Areas of Critical Environmental Concern (ACECs) or Research Natural Areas, encompassing approximately 3,601,000 acres. For a detailed comparison of Alternatives, including ACEC acreages proposed for designation, see Table 2–1 and corresponding maps in Appendix A of the Proposed RMP/Final EIS.

Major planning issues addressed include subsistence resources, subsistence access, water resources, fisheries, wildlife, forestry, minerals, mining, recreation, travel management, and ACECs.

Protest of the Proposed RMP: The BLM planning regulations state that any person who participated in the preparation of the RMP and has an interest which will or might be adversely affected by approval of the Proposed RMP may protest its approval to the BLM Director. Protest on the Proposed RMP constitutes the final opportunity for administrative review of the proposed land use planning decisions prior to the BLM adopting an approved RMP. Instructions for filing a protest regarding the Proposed RMP with the BLM Director may be found online at *https://www.blm.gov/programs/planning-and-nepa/public-participation/filing-a-plan-protest* and at 43 CFR 1610.5–2. All protests must be in writing and mailed to the appropriate address, as set forth in the **ADDRESSES** section earlier, or submitted electronically through the BLM ePlanning project website as described previously. Protests submitted electronically by any means other than the ePlanning project website or by fax will be invalid unless a protest is also submitted as a hard copy.

The BLM Director will render a written decision on each protest. The Director's decision shall be the final decision of the Department of the Interior. Responses to valid protest will be compiled and documented in a Protest Resolution Report made available following the protest resolution online at: *https://www.blm.gov/programs/planning-and-nepa/public-participation/protest-resolution-reports.* Upon resolution of protests, the BLM will issue a Record of Decision and Approved RMP.

Before including your phone number, email address, or other personal identifying information in your protest, you should be aware that your entire protest– including your personal identifying information—may be made publicly available at any time. While you can ask us in your protest to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

BILLING CODE 4331–10–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_AK_FRN_MO4500174927]

Notice of Availability of the Ambler Road Final Supplemental Environmental Impact Statement, Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) announces the availability of a Final Supplemental Environmental Impact Statement (EIS) for the proposed Ambler Road project.

DATES: The BLM will issue a Record of Decision (ROD) for the project no earlier than 30 days from the date the EPA publishes its notice of availability of the Final Supplemental EIS in the **Federal Register**.

ADDRESSES: To access the Final Supplemental EIS please visit: *https://www.blm.gov/AmblerRoadEIS.* To request an electronic or paper copy of the Final Supplemental EIS, please reach out to the BLM Alaska State Office, BLM Alaska Public Information Center, 222 West 7th Avenue (First Floor), Anchorage, Alaska 99513; or the Fairbanks District Office, 222 University Avenue, Fairbanks, Alaska 99709.

Documents pertinent to this proposal may be examined online on the BLM ePlanning website at *https://www.blm.gov/AmblerRoadEIS.*

FOR FURTHER INFORMATION CONTACT: Stacie McIntosh, Ambler Road Supplemental EIS Project Manager, telephone: 907–474–2398; email address: *s05mcint@blm.gov.*

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Ms. McIntosh. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The BLM has prepared the Ambler Road Supplemental EIS in response to an application for an industrial road right-of-way (ROW) in north-central Alaska across Federal public lands and other lands. The area involved lies south of the Brooks Range, north of the Yukon River, west of the Dalton Highway, and east of the Purcell Mountains. The Alaska Industrial Development and Export Authority, a public corporation of the State of Alaska, is the applicant.

The road was initially analyzed in an EIS published in March 2020, and a BLM ROW was approved in a Joint Record of Decision (JROD) issued in July 2020. In May 2022, in two lawsuits challenging the JROD and associated environmental analyses, the U.S. District Court for the District of Alaska (District Court) granted a voluntary remand at the request of the Department of the Interior (DOI) due to, among other things, deficiencies in the BLM's analysis of subsistence impacts under the Alaska National Interest Lands Conservation Act (ANILCA) section 810, and in the consultation with Tribes conducted pursuant to section 106 of the National Historic Preservation Act (NHPA). In the motion for voluntary remand, the DOI committed to address these issues, including the identified legal deficiencies, consider new information about declines in salmon and caribou populations, reconsider the appropriate scope of the area of potential effects for purposes of the NHPA, and supplement the EIS, as appropriate, to more thoroughly assess the impacts and resources identified as areas of concern in the two lawsuits challenging the remanded JROD.

The Final Supplemental EIS analyzes: the No Action Alternative; Alternative A, the applicant's 211 mile-long proposed road alignment beginning at Mile 161 of the Dalton Highway, extending west, and ending at the Ambler River; Alternative B, which starts and ends in the same location as Alternative A but follows a shorter route through Gates of the Arctic National Preserve; and Alternative C, which starts at Mile 59.5 of the Dalton Highway and extends 332 miles northwest, ending at the Ambler River. The BLM has identified the No Action Alternative as its preferred alternative.

Section 810 of ANILCA requires the BLM to evaluate the effects of the alternatives presented in the Supplemental EIS on subsistence uses and needs and to hold public hearings if it finds that any alternative may significantly restrict subsistence uses. The BLM found in the evaluation of subsistence impacts that Alternatives A, B, and C and the cumulative case as analyzed in the Draft Supplemental EIS may significantly restrict subsistence uses in multiple communities. Therefore, the BLM held public hearings on subsistence resources and activities in conjunction with the public meetings on the Draft Supplemental EIS in the vicinity of potentially affected communities. In consideration of public comments received on the Draft Supplemental EIS and at the public hearings, BLM revised the ANILCA Section 810 evaluation, published as Appendix M of the Final Supplemental EIS, but did not change its ''may significantly restrict subsistence uses'' findings for the identified communities.

The input of Alaska Native Tribes and Corporations was of critical importance to this Supplemental EIS. Therefore, during the NEPA process, the BLM consulted with potentially affected federally recognized Tribes on a government-to-government basis and with affected Alaska Native Corporations in accordance with Executive Order 13175, as well as Pub. L. 108–199, Div. H, sec. 161, 118 Stat. 452, as amended by Pub. L. 108–447, Div. H, sec. 518, 118 Stat. 3267, and other Department and Bureau policies.

Authority: 40 CFR 1506.6(b).

Steven M. Cohn,

State Director, Alaska.

BILLING CODE 4331–10–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1399]

Certain Fiber-Optic Connectors, Adapters, Jump Cables, Patch Cords, Products Containing the Same, and Components Thereof; Notice of Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on March 22, 2024, under section 337 of the Tariff Act of 1930, as amended, on behalf of US Conec, Ltd. of Hickory, North Carolina. Supplements to the complaint were filed on April 12, 2024. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain fiber-optic connectors, adapters, jump cables, patch cords, products containing the same, and components thereof by reason of the infringement of certain claims of U.S. Patent No. 11,733,466 (''the '466 patent''); U.S. Patent No. 11,808,994 (''the '994 patent''); U.S. Patent No. 11,906,794 (''the '794 patent''); U.S. Patent No. 11,880,075 (''the '075 patent''); U.S. Patent No. 11,385,415 (''the '415 patent''); and U.S. Patent No. 10,495,823 (''the '823 patent''). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainant requests that the Commission institute an investigation and, after the investigation, issue a general exclusion order, or in the alternative a limited exclusion order, and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Pathenia M. Proctor, The Office of Unfair Import Investigations, U.S. International Trade Commission, telephone (202) 205–2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2024).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on April 22, 2024, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1–3, 6, 7, and 14–17 of the '466 patent; claims 1–7 and 11–13 of the '994 patent; claims 1–3, 5, 6, 9, 12, and 16–18 of the '794 patent; claims 1, 5, 8–10, 12, 15, and 17–21 of the '075 patent; claims 1, 3, 5, and 12–14 of the '415 patent; and claims 1–5 and 8–10 of the '823 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is ''fiber-optic connectors, fiber-optic adapters, fiber-optic interconnects, fiber-optic cables, fiber-optic patch cables, fiber-optic cords, and fiber-optic patch cords, including any of the foregoing sold under the monikers SN, SN–MT, SN EZ-Flip, and MPO Plus'';

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainant is:

US Conec, Ltd., 1138 25th Street SE, Hickory, NC 28602

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Senko Advance Co., Ltd., 510–0833 2–5–23 Nakagawara, Yokkaichi City, Mie Prefecture, Japan

Senko Advanced Components, Inc., 2 Cabot Road, Suite 103, Hudson, MA 01749

Eaton Corp., 30 Pembroke Road, Dublin 4, Ireland D04 Y0C2

Tripp Lite Holdings, Inc., 10000 Woodward Avenue, Woodridge, IL 60517

FS.com Inc., 380 Centerpoint Boulevard, New Castle, DE 19720

Infinite Electronics, Inc., 17792 Fitch, Irvine, CA 92614

L-com, Inc., 50 High Street, West Mill, Suite 30, North Andover, MA 01845

Sumitomo Electric Industries, Ltd., 4–5–33, Kitahama, Chuo-ku, 541–0041, Osaka, Japan

Sumitomo Electric Lightwave Corp., 201 South Rogers Lane, Suite 100, Raleigh, NC 27610

Sumitomo Electric U.S.A., Inc., 21241 S Western Avenue, Suite 120, Torrance, CA 90501

EZconn Corp., 13F, No. 27–8, Zhongzheng E. Rd., Sec. 2, New Taipei City, 25170 Taiwan

Flexoptix GmbH, Muehltalstr. 153, 64297, Darmstadt, Germany

Changzhou Co-Net Electronic Technology Co., Ltd., 3rd Floor, Building 3, No. 92, Renmin East, Road, Yaoguan Town, Economic, Development Zone, 213161 Changzhou, Jiangsu, China

Shenzhen UnitekFiber Solution Ltd., 8F, Datang Shidai Building, No. 2203, Meilong Road, Longhua District, Shenzhen, Guangdong province, China

Hubbell Inc., 40 Waterview Drive, Shelton, CT 06484

Hubbell Premise Wiring, Inc., 40 Waterview Drive, Shelton, CT 06484

Shenzhen IH Optics Co., Ltd., G608–609, Baoanzhigu, Yintian Rd., Xixiang, Baoan Dist., Shenzhen, China 518126

Rayoptic Communication Co., Ltd, Floor 3, Building E, Dahong Science And Technology Park, No. B–10, Baihua Community, Guangming Street, Guangming New District, Shenzhen, China

HuNan Surfiber Technology Co., Ltd., 3rd Floor, Building A8, Desiqin Venture Street, No. 686 Yingxin Road, l Yuhua District, Changsha, Hunan, China

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW, Suite 401, Washington, DC 20436; and

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: April 22, 2024.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Comprehensive Environmental Response, Compensation, and Liability Act

On April 22, 2024, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the Southern District of California in the lawsuit entitled *United States* v. *City of San Diego, San Diego Unified Port District, and San Diego County Regional Airport Authority,* Civil Action No. 3:23–cv–00541–LL–BGS.

The Consent Decree resolves claims against the San Diego Unified Port District and the San Diego County Regional Airport Authority pursuant to section 107 of the Comprehensive Environmental Response, Compensation, and Liability Act for reimbursement of response costs incurred for response actions taken in connection with the release of hazardous substances at the Installation Restoration Site 12, the Boat Channel Sediments Site, at the former Naval Training Center in San Diego, California. The proposed Consent Decree requires a payment by both parties collectively of $2,412,029.89, in exchange for a covenant not to sue and contribution protection. The City of San Deigo is not a party to the Consent Decree.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Assistant Attorney

General, Environment and Natural Resources Division, and should refer to *United States* v. *City of San Diego, San Diego Unified Port District, and San Diego County Regional Airport Authority,* D.J. Ref. No. 90–11–3–11826. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Any comments submitted in writing may be filed by the United States in whole or in part on the public court docket without notice to the commenter.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department website: *https://www.justice.gov/enrd/consent-decrees.* If you require assistance accessing the Consent Decree you may request assistance by email or by mail to the addresses provided above for submitting comments.

Scott Bauer,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

LEGAL SERVICES CORPORATION

Sunshine Act Meetings

TIME AND DATE: The Legal Services Corporation (LSC) Board of Directors will hold a virtual meeting on Thursday, May 2, 2024. The meeting will commence at 4:30 p.m. Eastern Time, continuing until the conclusion of the Board's agenda.

PLACE: The meeting will be held virtually via Zoom.

STATUS: Closed to public observation.

A verbatim written transcript will be made of the closed session of the Board meeting. The transcript of any portions of the closed session falling within the relevant provisions of the Government in the Sunshine Act, 5 U.S.C. 552b(c)(2) and(c)(6) will not be available for public inspection. A copy of the General Counsel's certification that, in his opinion, the closing is authorized by law will be available upon request.

MATTERS TO BE CONSIDERED:

Closed Session

Matters to be discussed include approval of the meeting agenda; Management briefing; discussion on program review; and a proposal to convene in Executive Session without LSC Management present.

CONTACT PERSON FOR MORE INFORMATION: Jessica Wechter, Special Assistant to the President, at (202) 295–1626. Questions may also be sent by electronic mail to *wechterj@lsc.gov.*

Non-Confidential Meeting Materials: Non-confidential meeting materials will be made available in electronic format at least 24 hours in advance of the meeting on the LSC website, at *https://www.lsc.gov/about-lsc/board-meeting-materials.*

(Authority: 5 U.S.C. 552b.)

Dated: April 23, 2024.

Stefanie Davis,

Deputy General Counsel, Legal Services Corporation.

BILLING CODE 7050–01–P

OFFICE OF MANAGEMENT AND BUDGET

Office of Federal Procurement Policy

Cost Accounting Standards Board Meeting Agenda

AGENCY: Cost Accounting Standards Board, Office Federal Procurement Policy, Office of Management and Budget.

ACTION: Notice of agenda for closed Cost Accounting Standards Board meetings.

SUMMARY: The Office of Federal Procurement Policy (OFPP), Cost Accounting Standards Board (CAS Board) is publishing this notice to advise the public of its upcoming meetings. The meetings are closed to the public.

ADDRESSES: New Executive Office Building, 725 17th Street NW, Washington, DC 20503.

FOR FURTHER INFORMATION John L. McClung, Manager, Cost Accounting Standards Board (telephone: 202–881–9758; email: *john.l.mcclung2@omb.eop.gov*).

SUPPLEMENTARY INFORMATION: The CAS Board is issuing this notice to inform the public of the discussion topics for upcoming meetings scheduled for April 29, 2024 and June 27, 2024. The list of agenda items for these meetings is set forth below. While CAS Board meetings are closed to the public, the Board welcomes comments and inquiries, which may be directed to the manager using the contact information provided above.

Agenda for CAS Board Meetings During the Third Quarter, Fiscal Year 2024

1. *Conformance of CAS to Generally Accepted Accounting Principles (GAAP).* 41 U.S.C. 1501(c)(2) requires the CAS Board to review and conform Cost Accounting Standards (CAS), where practicable, to GAAP. In furtherance of section 1501(c)(2), the CAS Board will consider issuance of an advanced notice of proposed rulemaking (ANPRM) to address conformance of CAS 404, *Capitalization of Tangible Assets,* and CAS 411, *Accounting for Acquisition Costs of Material,* to GAAP based on public comments received in response to the Staff Discussion Paper (85 FR 58399, September 2020).

2. *Review of Court and Board Decisions Related to CAS.* 41 U.S.C 1501(c)(3) requires the CAS Board to annually review disputes brought before the Boards of Contract Appeals (BCAs) or federal courts involving its standards and consider whether greater clarity in CAS could avoid such disputes. The Board will discuss decisions by the BCAs and courts involving its standards since the last formal review conducted by the previous Board in 2019.

3. *Pension Harmonization for Extraordinary Events.* The Board will discuss an ANPRM to modify CAS 412 and CAS 413. The ANPRM would be a follow-on to a rulemaking issued in 2011 required by the Pension Protection Act (PPA) of 2006. The purpose of the ANPRM is to reconcile the application of the PPA and the CAS adjustment of pension costs for extraordinary events (*i.e.,* curtailment of pension plan benefits, termination of plans, and the accounting of pension plan assets or liabilities following the sale or closing of a corporate segment).

4. Public input. The Board will reserve time to discuss any suggestions that may be received from the public in response to the February 27, 2024 notice (89 FR 14523) and this notice.

The notice is published pursuant to 41 U.S.C. 1501(d), which requires the CAS Board to publish agendas of its meetings in the **Federal Register**.

Christine J. Harada,

Senior Advisor, Office of Federal Procurement Policy, and Chair, Cost Accounting Standards Board, Performing, by Delegation, the Duties of the Administrator for Federal Procurement Policy.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–611 and 50–612; NRC–2023–0138]

Kairos Power, LLC; Hermes 2; Draft Environmental Assessment and Draft Finding of No Significant Impact

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of availability and request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft environmental assessment (EA) and draft finding of no significant impact (FONSI) for proposed issuance of construction permits (CP) to Kairos Power, LLC (Kairos). The CPs would authorize the construction of two non-power test reactors termed Hermes 2, adjacent to the Hermes test reactor (Hermes), on a 185-acre site located in Oak Ridge, Tennessee. Kairos was issued a CP for Hermes, Construction Permit No. CPTR–6, on December 14, 2023. The Hermes 2 test reactors would demonstrate additional key elements of the Kairos Power Fluoride Salt-Cooled, High Temperature Reactor technology for possible future commercial deployment. The technology is an advanced nuclear reactor technology that leverages TRI-structural ISOtropic (TRISO) particle fuel in pebble form combined with a low-pressure fluoride salt coolant. The NRC has prepared a draft EA and draft FONSI that consider the environmental impacts associated with issuing the CPs.

DATES: Submit comments by May 28, 2024. Comments received after this date will be considered if it is practicable to do so, but the NRC is able to ensure consideration only for comments received before this date.

ADDRESSES: You may submit comments by using any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to *https://regulations.gov* and search for Docket ID NRC–2023–0138. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Email:* Comments may be submitted to the NRC electronically using the email address: *Kairos-Hermes2Environmental@nrc.gov.*
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Peyton Doub, telephone: 301–415–6703, email: *Peyton.Doub@nrc.gov* and Mary Richmond, telephone: 301–415–7218, email: *Mary.Richmond@nrc.gov.* Both are staff of the Office of Nuclear Material Safety and Safeguards at the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2023–0138 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://regulations.gov* and search for Docket ID NRC–2023–0138.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.

B. Submitting Comments

The NRC encourages electronic comment submission through any of the methods outlined in **ADDRESSES** section of this document. Please include Docket ID NRC–2023–0138 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Introduction

On July 14, 2023, Kairos submitted, pursuant to part 50 of title 10 of the *Code of Federal Regulations* (10 CFR), ''Domestic Licensing of Production and Utilization Facilities,'' an application for CPs for the Hermes 2 test reactor facility (a ''testing facility'' as defined in 10 CFR 50.2), that would consist of two fluoride salt-cooled test reactor units at the East Tennessee Technology Park in Oak Ridge, Tennessee. A notice of receipt and availability of the application was published in the **Federal Register** on August 4, 2023 (88 FR 51876). The Hermes 2 site, adjacent to the Hermes test reactor, is situated in the Heritage Center Industrial Park of the East Tennessee Technology Park that was established by the City of Oak Ridge on land formerly owned by the U.S. Department of Energy (DOE) for the Oak Ridge Gaseous Diffusion Plant (ORGDP). The site was occupied by DOE Buildings K–31 and K–33, both of which were part of the ORGDP.

The NRC staff determined that Kairos submitted the application in accordance with 10 CFR 2.101(a)(5), and a notice of the acceptability of docketing of Kairos's CP application was published in the **Federal Register** on September 15, 2023 (88 FR 63632). The docket numbers established for this application are 50–611 and 50–612 for Units 1 and 2, respectively. A notice of opportunity to request a hearing and petition for leave to intervene (88 FR 81439) was published in the **Federal Register** on November 22, 2023.

Section 104 of the Atomic Energy Act of 1954, as amended, and its implementing regulations authorize the NRC to issue CPs for testing facilities. To issue a CP, the NRC is required to consider the environmental impacts of the proposed action under the National Environmental Policy Act of 1969 (NEPA). The NRC's environmental protection regulations that implement NEPA in 10 CFR part 51 identify actions for which the NRC prepares an environmental impact statement (EIS). CPs for test reactors are an action identified as requiring an EIS.

However, based on a review of the environmental report (ER) submitted as part of the CP application for Hermes 2 and the results of the EIS recently issued for the Hermes test reactor, the NRC staff concluded that it would be prudent to first prepare a draft environmental assessment (EA) to determine whether preparation of an EIS would be necessary or whether a finding of no significant impact (FONSI) could be issued for the Hermes 2 CP based on factors unique to the Hermes 2 CP application. These factors include: (1) the similar design of Hermes 2 and Hermes, (2) the proposed siting of Hermes 2 within a few hundred feet of Hermes, (3) the industrial nature and heavy prior disturbance of the site, (4) the recent thorough NEPA review performed by the staff as published in its final EIS for Hermes, and (5) the staff's final EIS for Hermes covering the same site as Hermes 2 and documenting all impacts as SMALL.

The NRC staff has prepared a draft EA and draft FONSI documenting its environmental review of the Hermes 2 CP application. Based on the environmental review, the NRC staff has made a preliminary determination that the proposed action would not significantly affect the quality of the human environment. Therefore, the NRC staff has made a preliminary determination that it will not prepare an EIS and that a draft FONSI appears warranted.

The staff will consider comments received on the draft EA and draft FONSI over a 30-day public comment period from Federal, State, local, and Tribal officials, and members of the public. After consideration of these public comments, the NRC staff will make a final determination as to whether preparation of an EIS is necessary or whether a FONSI can be issued for the Hermes 2 CP application. However, exemptions from certain regulations in 10 CFR part 51 would be necessary to issue a final EA and final FONSI to support issuance of the Hermes 2 CPs. In accordance with 10 CFR 51.6, the NRC may grant exemptions from the requirements of 10 CFR part 51 if it determines that the exemptions are authorized by law and are otherwise in the public interest.

III. Summary of Draft Environmental Assessment

Description of the Proposed Action and Need

The proposed action is for the NRC to issue CPs to Kairos authorizing construction of the two proposed Hermes 2 reactors. The NRC issuance of CPs would constitute authorization for Kairos to proceed with the construction of the Hermes 2 reactors, two fluoride salt-cooled test reactor units, at the East Tennessee Technology Park in Oak Ridge, Tennessee.

The issuance of a CP is a separate licensing action from the issuance of an operating license (OL). If the NRC issues CPs for Hermes 2 and Kairos were to seek NRC approval to operate Hermes 2, then Kairos would have to submit a separate application for OLs pursuant to the NRC's regulations, and Kairos would have to obtain NRC approval before it could operate the Hermes 2 test reactors. The NRC staff would review any application for an OL for Hermes 2 for new and significant information related to the environmental impacts of operating and decommissioning Hermes 2 that might alter the staff's conclusions made in the EA for the CP application.

The need for Hermes 2 is to demonstrate key elements of the Kairos Power Fluoride Salt-Cooled, High Temperature Reactor technology for possible future commercial deployment. The technology is an advanced nuclear reactor technology that leverages TRI-structural ISOtropic particle fuel in pebble form combined with a low-pressure fluoride salt coolant. Hermes 2 would support Kairos's reactor development program, which relies on learning and risk reduction by narrowing the design space through progressive test cycles. Construction and operation of Hermes 2 also would provide validation and qualification data to support potential future commercial reactors using the Kairos

Power Fluoride Salt-Cooled, High Temperature Reactor technology.

Environmental Impacts of the Proposed Action

In the draft EA, the NRC staff assessed the potential direct and indirect environmental impacts from the proposed action associated with the following relevant resource areas: land use and visual resources; air quality and noise; hydrogeology and water resources; ecological resources; historic and cultural resources; socioeconomics and environmental justice; human health; nonradiological waste management; uranium fuel cycle and radiological waste management; transportation of radioactive material; and postulated accidents. The NRC staff also considered the cumulative impacts from past, present, and reasonably foreseeable future actions when combined with the proposed action.

The NRC staff determined that the environmental impacts of the proposed action would be SMALL for each potentially affected environmental resource, meaning that the environmental effects are not detectable or are so minor that they will neither destabilize nor noticeably alter any important attribute of the resource. In addition, the NRC staff determined that the projected effects of climate change would not alter any of the impact determinations described in the EA. Furthermore, the NRC staff found that there would be no significant negative cumulative impact to any resource area from the proposed action when added to other past, present, and reasonably foreseeable future actions.

Environmental Impacts of the Alternatives to the Proposed Action

The NRC staff identified a range of reasonable alternatives to the proposed action and the environmental impacts of the alternatives as appropriate. The NRC staff determined that there are no alternatives that meet the need for the proposed action and that are environmentally preferrable to the proposed action.

IV. Draft Finding of No Significant Impact

The proposed action before the NRC is whether to issue CPs (one for each unit) to Kairos to authorize construction of the two proposed reactors (units) making up the Hermes 2 project. The NRC has conducted an environmental review of a request for NRC issuance of CPs for the Hermes 2 project and prepared an EA. This draft FONSI incorporates by reference the EA summarized in Section II of this notice and referenced in Section V of this notice. On the basis of the EA, and its determination that the environmental impacts would be SMALL for each potentially affected resource area, the NRC staff has preliminarily determined that the proposed action would not have a significant effect on the quality of the human environment. Accordingly, the NRC staff has made a preliminary determination that preparation of an EIS is not required for the proposed action and that a FONSI is appears warranted.

This finding and the related environmental documents referenced throughout the EA are available for public inspection as discussed in the EA and Section I of this notice. The NRC's staff's determination is tentative. Before making a final determination, the NRC staff also will consider comments received on the draft EA and draft FONSI over a 30-day public comment period from Federal, State, local, and Tribal officials, and members of the public. Once NRC makes a final determination, it will publish the final EA and final FONSI or proceed to prepare an EIS.

V. Availability of Documents

The documents identified in the following table are available to interested persons through one or more of the following methods, as indicated.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100004; File No. SR–CboeBYX–2024–012]

Self-Regulatory Organizations; Cboe BYX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule Related to Physical Port Fees

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 9, 2024, Cboe BYX Exchange, Inc. (the ''Exchange'' or ''BYX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BYX Exchange, Inc. (the ''Exchange'' or ''BYX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BYX/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The physical ports may also be used to access the Systems for the following affiliate exchanges and only one monthly fee currently (and will continue) to apply per port: the Cboe BZX Exchange, Inc. (options and equities), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe EDGA Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[6] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[9] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities.

The Exchange believes the proposed fee change is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports. Further, the current 10 Gb physical port fee has remained unchanged since June 2018.[10] Since its last increase over 5 years ago however, there has been notable inflation. Particularly, the dollar has had an average inflation rate of 3.9% per year between 2018 and today, producing a cumulative price increase of approximately 21.1% inflation since the fee for the 10 Gb physical port was last modified.[11] Moreover, the Exchange historically does not increase fees every

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeBYX–2023–010). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–013. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP''). On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeBYX–2023–014). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–015. On December 12, 2023, Exchange filed the proposed fee change (SR–CboeBYX–2023–018). On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeBYX–2023–019. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBYX–2024–006. On April 9, 2024, the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[11] *See https://www.officialdata.org/us/inflation/2010?amount=1.*

year, notwithstanding inflation. Accordingly, the Exchange believes the proposed fee is reasonable as it represents only an approximate 13% increase from the rates adopted five years ago, notwithstanding the cumulative rate of 21.1%. The Exchange is also unaware of any standard that suggests any fee proposal that exceeds a certain yearly or cumulative inflation rate is unreasonable, and in any event, in this instance the increase is well below the cumulative rate. The Exchange also believes its offerings are more affordable as compared to similar offerings at competitor exchanges.[12]

Additionally, the Exchange believes the proposed fee increase is reasonable in light of recent and anticipated connectivity-related upgrades and changes. The Exchange and its affiliated exchanges recently launched a multi-year initiative to improve Cboe Exchange Platform performance and capacity requirements to increase competitiveness, support growth and advance a consistent world class platform. The goal of the project, among other things, is to provide faster and more consistent order handling and matching performance for options, while ensuring quicker processing time and supporting increasing volumes and capacity needs. For example, the Exchange recently performed switch hardware upgrades. Particularly, the Exchange replaced existing customer access switches with newer models, which the Exchange believes resulted in increased determinism. The recent switch upgrades also increased the Exchange's capacity to accommodate more physical ports by nearly 50%. Network bandwidth was also increased nearly two-fold as a result of the upgrades, which among other things, can lead to reduce message queuing. The Exchange also believes these newer models result in less natural variance in the processing of messages. The Exchange notes that it incurred costs associated with purchasing and upgrading to these newer models, of which the Exchange has not otherwise passed through or offset.

As of April 1, 2024, market participants also having the option of connecting to a new data center (*i.e.,* Secaucus NY6 Data Center (''NY6'')), in addition to the current data centers at NY4 and NY5. The Exchange made NY6 available in response to customer requests in connection with their need for additional space and capacity. In order to make this space available, the Exchange expended significant resources to prepare this space, and will also incur ongoing costs with respect to maintaining this offering, including costs related to power, space, fiber, cabinets, panels, labor and maintenance of racks. The Exchange also incurred a large cost with respect to ensuring NY6 would be latency equalized, as it is for NY4 and NY5.

The Exchange also has made various other improvements since the current physical port rates were adopted in 2018. For example, the Exchange has updated its customer portal to provide more transparency with respect to firms' respective connectivity subscriptions, enabling them to better monitor, evaluate and adjust their connections based on their evolving business needs. The Exchange also performs proactive audits on a weekly basis to ensure that all customer cross connects continue to fall within allowable tolerances for Latency Equalized connections. Accordingly, the Exchange expended, and will continue to expend, resources to innovate and modernize technology so that it may benefit its Members and continue to compete among other equities markets. The ability to continue to innovate with technology and offer new products to market participants allows the Exchange to remain competitive in the equities space which currently has 16 equities markets and potential new entrants.

The Exchange also believes the proposed fee is reasonable as it is still in line with, or even lower than, amounts assessed by other exchanges for similar connections.[13] Indeed, the Exchange believes assessing fees that are a lower rate than fees assessed by other exchanges for analogous connectivity (which were similarly adopted via the rule filing process and filed with the Commission) is reasonable. As noted above, the proposed fee is also the same as is concurrently being proposed for its Affiliate Exchanges. Further, Members are able to utilize a single port to connect to any of the Affiliate Exchanges with no additional fee assessed for that same physical port. Particularly, the Exchange believes the proposed monthly per port fee is reasonable, equitable and not unfairly discriminatory as it is assessed only once, even if it connects with another affiliate exchange since only one port is being used and the Exchange does not wish to charge multiple fees for the same port. Indeed, the Exchange notes that several ports are in fact purchased and utilized across one or more of the Exchange's affiliated Exchanges (and charged only once).

The Exchange also believes that the proposed fee change is not unfairly discriminatory because it would be assessed uniformly across all market participants that purchase the physical ports. The Exchange believes increasing the fee for 10 Gb physical ports and charging a higher fee as compared to the 1 Gb physical port is equitable as the 1 Gb physical port is 1/10th the size of the 10 Gb physical port and therefore does not offer access to many of the products and services offered by the Exchange (*e.g.,* ability to receive certain market data products). Thus, the value of the 1 Gb alternative is lower than the value of the 10 Gb alternative, when measured based on the type of Exchange access it offers. Moreover, market participants that purchase 10 Gb physical ports utilize the most bandwidth and therefore consume the most resources from the network. The Exchange also anticipates that firms that utilize 10 Gb ports will benefit the most from the Exchange's investment in offering NY6 as the Exchange anticipates there will be much higher quantities of 10 Gb physical ports connecting from NY6 as compared to 1 Gb ports. Indeed, the Exchange notes that 10 Gb physical ports account for approximately 90% of physical ports across the NY4, NY5, and NY6 data centers, and to date, 80% of new port connections in NY6 are 10 Gb ports. As such, the Exchange believes the proposed fee change for 10 Gb physical ports is reasonably and appropriately allocated.

The Exchange also notes Members and non-Members will continue to choose the method of connectivity based on their specific needs and no broker-dealer is required to become a Member of, let alone connect directly to, the Exchange. There is also no regulatory requirement that any market participant connect to any one particular exchange. Market participants may voluntarily choose to become a

[12] *See e.g., See e.g.,* [sic] The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Connectivity Fee Schedule, which provides that 10 Gbps LX LCN Circuits (which are analogous to the Exchange's 10 Gbps physical port) are assessed $22,000 per month, per port.

[13] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

member of one or more of a number of different exchanges, of which, the Exchange is but one choice. Additionally, any Exchange member that is dissatisfied with the proposal is free to choose not to be a member of the Exchange and send order flow to another exchange. Moreover, direct connectivity is not a requirement to participate on the Exchange. The Exchange also believes substitutable products and services are available to market participants, including, among other things, other equities exchanges that a market participant may connect to in lieu of the Exchange, and/or trading of any equities product, such as within the Over-the-Counter (OTC) markets which do not require connectivity to the Exchange. Indeed, there are currently 16 registered equities exchanges that trade equities (12 of which are not affiliated with Cboe), some of which have similar or lower connectivity fees.[14] Based on publicly available information, no single equities exchange has more than approximately 16% of the market share.[15] Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers. For example, in 2020 alone, three new exchanges entered the market: Long Term Stock Exchange (LTSE), Members Exchange (MEMX), and Miami International Holdings (MIAX Pearl).

As noted above, there is no regulatory requirement that any market participant connect to any one equities exchange, nor that any market participant connect at a particular connection speed or act in a particular capacity on the Exchange, or trade any particular product offered on an exchange. Moreover, membership is not a requirement to participate on the Exchange. Indeed, the Exchange is unaware of any one equities exchange whose membership includes every registered broker-dealer. By way of example, while the Exchange has 110 members that trade equities, Cboe EDGX has 124 members that trade equities, Cboe EDGA has103 members and Cboe BZX has 132 members. There is also no firm that is a Member of BYX Equities only. Further, based on publicly available information regarding a sample of the Exchange's competitors, NYSE has 143 members,[16] IEX has 129 members,[17] and MIAX Pearl has 51 members.[18]

Vigorous competition among national securities exchanges provides many alternatives for firms to voluntarily decide whether direct connectivity to the Exchange is appropriate and worthwhile, and as noted above, no broker-dealer is required to become a Member of the Exchange, let alone connect directly to it. In the event that a market participant views the Exchange's proposed fee change as more or less attractive than the competition, that market participant can choose to connect to the Exchange indirectly or may choose not to connect to that exchange and connect instead to one or more of the other 12 non-Cboe affiliated equities markets. Indeed, market participants are free to choose which exchange to use to satisfy their business needs. Moreover, Moreover [sic], if the Exchange were to assess supracompetitve rates, members and non-members alike, may decide not to purchase, or to reduce its use of, the Exchange's direct connectivity. Disincentivizing market participants from purchasing Exchange connectivity would only serve to discourage participation on the Exchange which ultimately does not benefit the Exchange. For example, if the Exchange charges excessive fees, it may stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity. Notwithstanding the foregoing, the Exchange still believes that the proposed fee increase is reasonable, equitably allocated and not unfairly discriminatory, even for market participants that determine to connect directly to the Exchange for business purposes, as those business reasons should presumably result in revenue capable of covering the proposed fee.

The Exchange lastly notes that it is not required by the Exchange Act, nor any other rule or regulation, to undertake a cost-of-service or rate-making approach with respect to fee proposals. Moreover, Congress's intent in enacting the 1975 Amendments to the Act was to enable competition—rather than government order—to determine prices. The principal purpose of the amendments was to facilitate the creation of a national market system for the trading of securities. Congress intended that this ''national market system evolve through the interplay of *competitive forces* as unnecessary regulatory restrictions are removed.'' [19] Other provisions of the Act confirm that intent. For example, the Act provides that an exchange must design its rules ''to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.'' [20] Likewise, the Act grants the Commission authority to amend or repeal ''[t]he rules of [an] exchange [that] impose any burden on competition not necessary or appropriate in furtherance of the purposes of this chapter.'' [21] In short, the promotion of free and open competition was a core congressional objective in creating the national market system.[22] Indeed, the Commission has historically interpreted that mandate to promote competitive forces to determine prices whenever compatible with a national market system. Accordingly, the Exchange believes it has met its burden to demonstrate that its proposed fee change is reasonable and consistent with the immediate filing process chosen by Congress, which created a system whereby market forces determine access fees in the vast majority of cases, subject to oversight only in particular cases of abuse or market failure. Lastly, and importantly, the Exchange believes that, even if it were possible as a matter of economic theory, cost-based pricing for the proposed fee would be so complicated that it could not be done practically.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (i.e., all market participants that

[20] 15 U.S.C. 78f(b)(5).

[21] 15 U.S.C. 78f(8).

[22] *See* also 15 U.S.C. 78k–l(a)(1)(C)(ii) (purposes of Exchange Act include to promote ''fair competition among brokers and dealers, among exchange markets, and between exchange markets and markets other than exchange markets''); Order, 73 FR at 74781 (''The Exchange Act and its legislative history strongly support the Commission's reliance on competition, whenever possible, in meeting its regulatory responsibilities for overseeing the SROs and the national market system.'').

choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing). While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The Exchange's proposed fee is also still lower than some fees for similar connectivity on other exchanges and therefore may stimulate intermarket competition by attracting additional firms to connect to the Exchange or at least should not deter interested participants from connecting directly to the Exchange. Further, if the changes proposed herein are unattractive to market participants, the Exchange can, and likely will, see a decline in connectivity via 10 Gb physical ports as a result. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect directly to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative venues that they may participate on and direct their order flow, including 12 non-Cboe affiliated equities markets, as well as off-exchange venues, where competitive products are available for trading. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [23] The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[24] Accordingly, the Exchange does not believe its proposed change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [25] and paragraph (f) of Rule 19b–4 [26] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act.

[23] See Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBYX–2024–012 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBYX–2024–012. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBYX–2024–012 and should be submitted on or before May 17, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[27]

SECURITIES AND EXCHANGE COMMISSION

[Release No. IA–6595]

Notice of Intention To Cancel Registrations of Certain Investment Advisers Pursuant to Section 203(H) of the Investment Advisers Act of 1940

April 23, 2024.

Notice is given that the Securities and Exchange Commission (the ''*Commission*'') intends to issue an order, pursuant to section 203(h) of the Investment Advisers Act of 1940 (the ''*Act*''), cancelling the registrations of the investment advisers whose names appear in the attached Appendix, hereinafter referred to as the ''registrants.''

Section 203(h) of the Act provides, in pertinent part, that if the Commission finds that any person registered under section 203, or who has pending an application for registration filed under that section, is no longer in existence, is not engaged in business as an investment adviser, or is prohibited from registering as an investment adviser under section 203A, the Commission shall by order cancel the registration of such person.

Each registrant listed in the attached Appendix either (a) has not filed a Form ADV amendment with the Commission as required by rule 204–1 under the Act [1] and appears to be no longer engaged in business as an investment adviser or (b) has indicated on Form ADV that it is no longer eligible to remain registered with the Commission as an investment adviser but has not filed Form ADV–W to withdraw its registration. Accordingly, the Commission believes that reasonable grounds exist for a finding that these registrants are no longer in existence, are not engaged in business as investment advisers, or are prohibited from registering as investment advisers under section 203A, and that their registrations should be cancelled pursuant to section 203(h) of the Act.

Notice is also given that any interested person may, by May 20, 2024, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the cancellation of the registration of any registrant listed in the attached Appendix, accompanied by a statement as to the nature of such person's interest, the reason for such person's request, and the issues, if any, of fact or law proposed to be controverted, and the writer may request to be notified if the Commission should order a hearing thereon. Any such communication should be emailed to the Commission's Secretary at *Secretarys-Office@sec.gov.*

At any time after May 20, 2024, the Commission may issue an order or orders cancelling the registrations of any or all of the registrants listed in the attached Appendix, upon the basis of the information stated above, unless an order or orders for a hearing on the cancellation shall be issued upon request or upon the Commission's own motion. Persons who requested a hearing, or who requested to be advised as to whether a hearing is ordered, will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof. Any registrant whose registration is cancelled under delegated authority may appeal that decision directly to the Commission in accordance with rules 430 and 431 of the Commission's rules of practice (17 CFR 201.430 and 431).

ADDRESSES: The Commission: *Secretarys-Office@sec.gov*.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100009; File No. SR–OCC–2024–001]

Self-Regulatory Organizations; Options Clearing Corporation; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change by the Options Clearing Corporation Concerning Its Process for Adjusting Certain Parameters in Its Proprietary System for Calculating Margin Requirements During Periods When the Products It Clears and the Markets It Serves Experience High Volatility

April 22, 2024.

I. Introduction

On January 10, 2024, the Options Clearing Corporation (''OCC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–OCC–2024–001 pursuant to Section 19(b) of the Securities Exchange Act of 1934 (''Exchange Act'') [1] and Rule 19b–4 [2] thereunder to codify OCC's process for adjusting certain parameters in its proprietary system for calculating margin requirements during periods when the products OCC clears and the markets it serves experience high volatility.[3] The proposed rule change was published for public comment in the **Federal Register** on January 25, 2024.[4] The Commission has received comments regarding the proposed rule change.[5]

On February 23, 2024, pursuant to Section 19(b)(2) of the Exchange Act,[6] the Commission designated a longer period within which to approve, disapprove, or institute proceedings to determine whether to approve or disapprove the proposed rule change.[7] This order institutes proceedings, pursuant to Section 19(b)(2)(B) of the Exchange Act,[8] to determine whether to approve or disapprove the proposed rule change (hereinafter defined as ''Proposed Rule Change'').

[8] 15 U.S.C. 78s(b)(2)(B).

II. Summary of the Proposed Rule Change

OCC is a central counterparty (''CCP''), which means that as part of its function as a clearing agency, it interposes itself as the buyer to every seller and the seller to every buyer for financial transactions. As the CCP for the listed options markets and for certain futures in the United States, OCC is exposed to the risk that one or more of its Clearing Members may fail to make a payment or to deliver securities. OCC addresses such risk exposure, in part, by requiring its members to provide collateral, including margin collateral. Margin is the collateral that CCPs collect to cover potential changes in a member's positions over a set period of time. Typically, margin is designed to cover such exposures during normal market conditions, which means that margin collateral should be sufficient to cover exposures at least 99 out of 100 days.

OCC's methodology for calculating margin collateral is called the System for Theoretical Analysis and Numerical Simulations (''STANS''). The STANS Methodology Description is a single document describing OCC's system for calculating daily and intra-day margin requirements for its Clearing Members.[9] The STANS Methodology Description briefly discusses margin methodology parameter controls that OCC uses during periods of high volatility.[10] The STANS Methodology Description does not, however, describe OCC's process for implementing, changing, and terminating the high-volatility parameter controls. As such, OCC is filing the Proposed Rule Change to codify and describe this process. More specifically, OCC proposes to amend its existing Margin Policy to include material details regarding its high-volatility parameter control setting process. Although the Proposed Rule Change would amend OCC's Margin Policy, the proposal does not significantly change OCC's existing high-volatility parameter control setting practices.

Proposed additions to the Margin Policy regarding OCC's high-volatility control setting process include the following: (1) setting and reviewing regular and high-volatility control settings; (2) monitoring the volatility of products being cleared and markets served, and establishing thresholds to escalate the results of such monitoring to senior decisionmakers; and (3) internal governance for implementing and terminating high-volatility control settings.

III. Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Exchange Act [11] to determine whether the Proposed Rule Change should be approved or disapproved. Institution of proceedings is appropriate at this time in view of the legal and policy issues raised by the Proposed Rule Change. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, the Commission seeks and encourages interested persons to comment on the Proposed Rule Change, providing the Commission with arguments to support the Commission's analysis as to whether to approve or disapprove the Proposed Rule Change.

Pursuant to Section 19(b)(2)(B) of the Exchange Act,[12] the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of, and input from commenters with respect to, the Proposed Rule Change's consistency with Section 17A of the Exchange Act,[13] and the rules thereunder, including the following provisions:

- Section 17A(b)(3)(F) of the Exchange Act,[14] which requires, among other things, that the rules of a clearing agency are designed to promote the prompt and accurate clearance and settlement of securities transactions and derivative agreements, contracts, and transactions; and to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency or for which it is responsible;
- Rule 17Ad–22(e)(2) of the Exchange Act,[15] which requires that a covered clearing agency provide for governance arrangements that, among other things, specify clear and direct lines of responsibility; and
- Rule 17Ad–22(e)(6) of the Exchange Act,[16] which requires that a covered clearing agency establish, implement, maintain, and enforce written policies and procedures reasonably designed to cover, if the covered clearing agency provides central counterparty services, its credit exposures to its participants by establishing a risk-based margin system that, among other things, (1) considers, and produces margin levels commensurate with, the risks and particular attributes of each relevant product, portfolio, and market,[17] and (2) calculates sufficient margin to cover its potential future exposure to participants in the interval between the last margin collection and the close out of positions following a participant default.[18]

IV. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the Proposed Rule Change. In particular, the Commission invites the written views of interested persons concerning whether the Proposed Rule Change is consistent with Section 17A(b)(3)(F),[19] Rule 17Ad–22(e)(2),[20] and Rule 17Ad–22(e)(6) [21] of the Exchange Act, or any other provision of the Exchange Act, or the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4(g) under the Exchange Act,[22] any request for an opportunity to make an oral presentation.[23]

[23] Section 19(b)(2) of the Exchange Act grants to the Commission flexibility to determine what type of proceeding—either oral or notice and opportunity for written comments—is appropriate for consideration of a particular proposal by a self-regulatory organization. *See* Securities Act Amendments of 1975, Senate Comm. on Banking, Housing & Urban Affairs, S. Rep. No. 75, 94th Cong., 1st Sess. 30 (1975).

Interested persons are invited to submit written data, views, and arguments regarding whether the Proposed Rule Change should be approved or disapproved by May 17, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by May 31, 2024.

The Commission asks that commenters address the sufficiency of OCC's statements in support of the Proposed Rule Change, which are set forth in the Notice of Filing,[24] in addition to any other comments they may wish to submit about the Proposed Rule Change.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–OCC–2024–001 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–OCC–2024–001. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the Proposed Rule Change that are filed with the Commission, and all written communications relating to the Proposed Rule Change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of OCC and on OCC's website at *https://www.theocc.com/Company-Information/Documents-and-Archives/By-Laws-and-Rules.*

Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to File Number SR–OCC–2024–001 and should be submitted on or before May 17, 2024. Rebuttal comments should be submitted by May 31, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100001; File No. SR–CboeEDGX–2024–020]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Fees Schedule Related to Physical Port Fees

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 9, 2024, Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The physical ports may

[24] *See* Notice of Filing, *supra* note 4.

[25] 17 CFR 200.30–3(a)(31).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeEDGX–2023–044). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–057. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP''). On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeEDGX–2023–62). On October 13, 2023, the Exchange withdrew that filing and on business date October 16, 2023 submitted SR–CboeEDGX–2023–065. On December 12, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–079. On December 20, the Exchange withdrew that filing and submitted SR–CboeEDGX–2023–081. On February 12, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGX–2024–013. On April 9, 2024, the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the

Continued

also be used to access the Systems for the following affiliate exchanges and only one monthly fee currently (and will continue) to apply per port: the Exchange's options platform (EDGX Options), Cboe BZX Exchange, Inc. (options and equities platforms), Cboe BYX Exchange, Inc., Cboe EDGA Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[6] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[9] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities.

The Exchange believes the proposed fee change is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports. Further, the current 10 Gb physical port fee has remained unchanged since June 2018.[10] Since its last increase over 5 years ago however, there has been notable inflation. Particularly, the dollar has had an average inflation rate of 3.9% per year between 2018 and today, producing a cumulative price increase of approximately 21.1% inflation since the fee for the 10 Gb physical port was last modified.[11] Moreover, the Exchange historically does not increase fees every year, notwithstanding inflation. Accordingly, the Exchange believes the proposed fee is reasonable as it represents only an approximate 13% increase from the rates adopted five years ago, notwithstanding the cumulative rate of 21.1%. The Exchange is also unaware of any standard that suggests any fee proposal that exceeds a certain yearly or cumulative inflation rate is unreasonable, and in any event, in this instance the increase is well below the cumulative rate.

Additionally, the Exchange believes the proposed fee increase is reasonable in light of recent and anticipated connectivity-related upgrades and changes. The Exchange and its affiliated exchanges recently launched a multi-year initiative to improve Cboe Exchange Platform performance and capacity requirements to increase competitiveness, support growth and advance a consistent world class platform. The goal of the project, among other things, is to provide faster and more consistent order handling and matching performance for options, while ensuring quicker processing time and supporting increasing volumes and capacity needs. For example, the Exchange recently performed switch hardware upgrades. Particularly, the Exchange replaced existing customer access switches with newer models, which the Exchange believes resulted in increased determinism. The recent switch upgrades also increased the Exchange's capacity to accommodate more physical ports by nearly 50%. Network bandwidth was also increased nearly two-fold as a result of the upgrades, which among other things, can lead to reduce message queuing. The Exchange also believes these newer models result in less natural variance in the processing of messages. The Exchange notes that it incurred costs associated with purchasing and upgrading to these newer models, of which the Exchange has not otherwise passed through or offset.

As of April 1, 2024, market participants also having the option of connecting to a new data center (*i.e.,* Secaucus NY6 Data Center (''NY6'')), in addition to the current data centers at NY4 and NY5. The Exchange made NY6 available in response to customer requests in connection with their need for additional space and capacity. In order to make this space available, the Exchange expended significant resources to prepare this space, and will also incur ongoing costs with respect to maintaining this offering, including costs related to power, space, fiber, cabinets, panels, labor and maintenance of racks. The Exchange also incurred a large cost with respect to ensuring NY6 would be latency equalized, as it is for NY4 and NY5.

The Exchange also has made various other improvements since the current physical port rates were adopted in 2018. For example, the Exchange has updated its customer portal to provide more transparency with respect to firms' respective connectivity subscriptions, enabling them to better monitor, evaluate and adjust their connections based on their evolving business needs. The Exchange also performs proactive audits on a weekly basis to ensure that all customer cross connects continue to fall within allowable tolerances for Latency Equalized connections. Accordingly, the Exchange expended, and will continue to expend, resources to innovate and modernize technology so that it may benefit its Members and continue to compete among other equities markets. The ability to continue to innovate with technology and offer new products to market participants allows the Exchange to remain competitive in the equities space which currently has 16 equities markets and potential new entrants.

The Exchange also believes the proposed fee is reasonable as it is still in line with, or even lower than, amounts assessed by other exchanges for similar connections.[12] Indeed, the Exchange believes assessing fees that are a lower rate than fees assessed by other exchanges for analogous connectivity

Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port; *see also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[11] *See https://www.officialdata.org/us/inflation/2010?amount=1.*

[12] *See, e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port; *see also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

(which were similarly adopted via the rule filing process and filed with the Commission) is reasonable. As noted above, the proposed fee is also the same as is concurrently being proposed for its Affiliate Exchanges. Further, Members are able to utilize a single port to connect to any of the Affiliate Exchanges with no additional fee assessed for that same physical port. Particularly, the Exchange believes the proposed monthly per port fee is reasonable, equitable and not unfairly discriminatory as it is assessed only once, even if it connects with another affiliate exchange since only one port is being used and the Exchange does not wish to charge multiple fees for the same port. Indeed, the Exchange notes that several ports are in fact purchased and utilized across one or more of the Exchange's affiliated Exchanges (and charged only once).

The Exchange also believes that the proposed fee change is not unfairly discriminatory because it would be assessed uniformly across all market participants that purchase the physical ports. The Exchange believes increasing the fee for 10 Gb physical ports and charging a higher fee as compared to the 1 Gb physical port is equitable as the 1 Gb physical port is 1/10th the size of the 10 Gb physical port and therefore does not offer access to many of the products and services offered by the Exchange (*e.g.,* ability to receive certain market data products). Thus, the value of the 1 Gb alternative is lower than the value of the 10 Gb alternative, when measured based on the type of Exchange access it offers. Moreover, market participants that purchase 10 Gb physical ports utilize the most bandwidth and therefore consume the most resources from the network. The Exchange also anticipates that firms that utilize 10 Gb ports will benefit the most from the Exchange's investment in offering NY6 as the Exchange anticipates there will be much higher quantities of 10 Gb physical ports connecting from NY6 as compared to 1 Gb ports. Indeed, the Exchange notes that 10 Gb physical ports account for approximately 90% of physical ports across the NY4, NY5, and NY6 data centers, and to date, 80% of new port connections in NY6 are 10 Gb ports. As such, the Exchange believes the proposed fee change for 10 Gb physical ports is reasonably and appropriately allocated.

The Exchange also notes Members and non-Members will continue to choose the method of connectivity based on their specific needs and no broker-dealer is required to become a Member of, let alone connect directly to, the Exchange. There is also no regulatory requirement that any market participant connect to any one particular exchange. Market participants may voluntarily choose to become a member of one or more of a number of different exchanges, of which, the Exchange is but one choice. Additionally, any Exchange member that is dissatisfied with the proposal is free to choose not to be a member of the Exchange and send order flow to another exchange. Moreover, direct connectivity is not a requirement to participate on the Exchange. The Exchange also believes substitutable products and services are available to market participants, including, among other things, other equities exchanges that a market participant may connect to in lieu of the Exchange and/or trading of any equities product, such as within the Over-the-Counter (OTC) markets which do not require connectivity to the Exchange. Indeed, there are currently 16 registered equities exchanges that trade equities (12 of which are not affiliated with Cboe), some of which have similar or lower connectivity fees.[13] Based on publicly available information, no single equities exchange has more than approximately 16% of the market share.[14] Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers. For example, in 2020 alone, three new exchanges entered the market: Long Term Stock Exchange (LTSE), Members Exchange (MEMX), and Miami International Holdings (MIAX Pearl).

As noted above, there is no regulatory requirement that any market participant connect to any one equities exchange, nor that any market participant connect at a particular connection speed or act in a particular capacity on the Exchange, or trade any particular product offered on an exchange. Moreover, membership is not a requirement to participate on the Exchange. Indeed, the Exchange is unaware of any one equities exchange whose membership includes every registered broker-dealer. By way of example, while the Exchange has 124 members that trade equities, Cboe BZX has 132 members that trade equities, Cboe EDGA has103 members and Cboe BYX has 110 members. There is also no firm that is a Member of EDGX Equities only. Further, based on publicly available information regarding a sample of the Exchange's competitors, NYSE has 143 members,[15] IEX has 129 members,[16] and MIAX Pearl has 51 members.[17]

Vigorous competition among national securities exchanges provides many alternatives for firms to voluntarily decide whether direct connectivity to the Exchange is appropriate and worthwhile, and as noted above, no broker-dealer is required to become a Member of the Exchange, let alone connect directly to it. In the event that a market participant views the Exchange's proposed fee change as more or less attractive than the competition, that market participant can choose to connect to the Exchange indirectly or may choose not to connect to that exchange and connect instead to one or more of the other 12 non-Cboe affiliated equities markets. Moreover, if the Exchange charges excessive fees, it may stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity. Notwithstanding the foregoing, the Exchange still believes that the proposed fee increase is reasonable, equitably allocated and not unfairly discriminatory, even for market participants that determine to connect directly to the Exchange for business purposes, as those business reasons should presumably result in revenue capable of covering the proposed fee.

The Exchange lastly notes that it is not required by the Exchange Act, nor any other rule or regulation, to undertake a cost-of-service or rate-making approach with respect to fee proposals. Moreover, Congress's intent in enacting the 1975 Amendments to the Act was to enable competition—rather than government order—to determine prices. The principal purpose of the amendments was to facilitate the creation of a national market system for the trading of securities. Congress intended that this ''national market system evolve through the interplay of *competitive forces* as unnecessary regulatory restrictions are removed.'' [18] Other provisions of the Act confirm that intent. For example, the Act provides that an exchange must design its rules

[18] *See* H.R. Rep. No. 94–229, at 92 (1975) (Conf. Rep.) (emphasis added)

''to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.'' [19] Likewise, the Act grants the Commission authority to amend or repeal ''[t]he rules of [an] exchange [that] impose any burden on competition not necessary or appropriate in furtherance of the purposes of this chapter.'' [20] In short, the promotion of free and open competition was a core congressional objective in creating the national market system.[21] Indeed, the Commission has historically interpreted that mandate to promote competitive forces to determine prices whenever compatible with a national market system. Accordingly, the Exchange believes it has met its burden to demonstrate that its proposed fee change is reasonable and consistent with the immediate filing process chosen by Congress, which created a system whereby market forces determine access fees in the vast majority of cases, subject to oversight only in particular cases of abuse or market failure. Lastly, and importantly, the Exchange believes that, even if it were possible as a matter of economic theory, cost-based pricing for the proposed fee would be so complicated that it could not be done practically.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (i.e., all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing). While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The Exchange's proposed fee is also still lower than some fees for similar connectivity on other exchanges and therefore may stimulate intermarket competition by attracting additional firms to connect to the Exchange or at least should not deter interested participants from connecting directly to the Exchange. Further, if the changes proposed herein are unattractive to market participants, the Exchange can, and likely will, see a decline in connectivity via 10 Gb physical ports as a result. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect directly to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative venues that they may participate on and direct their order flow, including 12 non-Cboe affiliated equities markets, as well as off-exchange venues, where competitive products are available for trading. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [22] The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[23] Accordingly, the Exchange does not believe its proposed change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [24] and paragraph (f) of Rule 19b–4 [25] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100006; File No. SR–FINRA–2024–004]

Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc.; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change To Amend FINRA Rule 6730 (Transaction Reporting) To Reduce the 15-Minute TRACE Reporting Timeframe to One Minute

April 22, 2024.

I. Introduction

On January 11, 2024, the Financial Industry Regulatory Authority, Inc. (''FINRA'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Exchange Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend FINRA Rule 6730 to reduce the 15-minute reporting timeframe for transactions reported to FINRA's Trade Reporting and Compliance Engine (''TRACE'') system to one minute, with exceptions for FINRA member firms with de minimis reporting activity and for manual trades. The proposed rule change was published for comment in the **Federal Register** on January 25, 2024.[3] The Commission received comments in response to the proposal.[4] On February 29, 2024, the Commission extended until April 24, 2024, the time period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] This order institutes proceedings pursuant to Section 19(b)(2)(B) of the Exchange Act[6] to determine whether to approve or disapprove the proposed rule change.

II. Summary of the Proposed Rule Change

As described in more detail in the Notice, FINRA rules currently specify the applicable outer-limit reporting timeframe for different types of TRACE-Eligible Securities.[7] Most transactions in corporate bonds, agency debt securities,[8] asset-backed securities (''ABS''),[9] and agency pass-through mortgage-backed securities (''MBS'') traded to-be-announced (''TBA'') for good delivery (''GD'')[10] must be reported within 15 minutes.[11] The 15-

[6] 15 U.S.C. 78s(b)(2)(B).

[7] ''TRACE-Eligible Security'' means a debt security that is United States (''U.S.'') dollar-denominated and is: (1) issued by a U.S. or foreign private issuer, and, if a ''restricted security'' as defined in Rule 144(a)(3) under the Securities Act of 1933 (''Securities Act''), sold pursuant to Securities Act Rule 144A; (2) issued or guaranteed by an Agency as defined in Rule 6710(k) or a Government-Sponsored Enterprise as defined in Rule 6710(n); (3) a U.S. Treasury Security as defined in Rule 6710(p); or (4) a Foreign Sovereign Debt Security as defined in Rule 6710(kk). ''TRACE-Eligible Security'' does not include a debt security that is a Money Market Instrument as defined in Rule 6710(o). *See* Rule 6710(a).

[8] ''Agency Debt Security'' means a debt security (i) issued or guaranteed by an Agency as defined in Rule 6710(k); (ii) issued or guaranteed by a Government-Sponsored Enterprise as defined in Rule 6710(n); or (iii) issued by a trust or other entity that was established or sponsored by a Government-Sponsored Enterprise for the purpose of issuing debt securities, where such enterprise provides collateral to the trust or other entity or retains a material net economic interest in the reference tranches associated with the securities issued by the trust or other entity. The term excludes a U.S. Treasury Security as defined in Rule 6710(p) and a Securitized Product as defined in Rule 6710(m), where an Agency or a Government-Sponsored Enterprise is the Securitizer as defined in Rule 6710(s) (or similar person), or the guarantor of the Securitized Product. *See* Rule 6710(l).

[9] ''Asset-Backed Security'' means a type of Securitized Product where the Asset-Backed Security is collateralized by any type of financial asset, such as a consumer or student loan, a lease, or a secured or unsecured receivable, and excludes: (i) a Securitized Product that is backed by residential or commercial mortgage loans, mortgage-backed securities, or other financial assets derivative of mortgage-backed securities; (ii) an SBA-Backed ABS as defined in Rule 6710(bb) traded To Be Announced as defined in Rule 6710(u) or in a Specified Pool Transaction as defined in Rule 6710(x); and (iii) a collateralized debt obligation. *See* Rule 6710(cc).

[10] ''Agency Pass-Through Mortgage-Backed Security'' means a type of Securitized Product issued in conformity with a program of an Agency as defined in Rule 6710(k) or a Government-Sponsored Enterprise (''GSE'') as defined in Rule 6710(n), for which the timely payment of principal and interest is guaranteed by the Agency or GSE, representing ownership interest in a pool (or pools) of mortgage loans structured to ''pass through'' the principal and interest payments to the holders of the security on a pro rata basis. *See* Rule 6710(v). ''To Be Announced'' means a transaction in an Agency Pass-Through Mortgage-Backed Security or an SBA-Backed ABS as defined in Rule 6710(bb) where the parties agree that the seller will deliver to the buyer a pool or pool(s) of a specified face amount and meeting certain other criteria but the specific pool or pool(s) to be delivered at settlement is not specified at the Time of Execution, and includes TBA transactions ''for good delivery'' and TBA transactions ''not for good delivery'' (''NGD''). *See* Rule 6710(u).

[11] *See* Rule 6730(a). However, a ''List or Fixed Offering Price Transaction,'' as defined in Rule 6710(q), and a ''Takedown Transaction,'' as defined in Rule 6710(r) are required to be reported to

Continued

minute reporting timeframe has been in place for corporate bonds since 2005 [12] and was implemented later for agency debt (2010),[13] ABS (2015),[14] and MBS TBA GD (2013).[15] In 2015, the Commission approved FINRA rule amendments generally requiring firms to report transactions in these TRACE-Eligible Securities as soon as practicable but no later than 15 minutes from the time of execution,[16] and FINRA publicly disseminates information on these transactions immediately upon receipt. According to FINRA, 82.9 percent of trades in the TRACE-Eligible Securities that are currently subject to the 15-minute outer-limit reporting timeframe are reported within one minute of execution.[17]

According to FINRA, since the implementation of TRACE, fixed income markets have changed dramatically, including a significant increase in the use of electronic trading platforms or other electronic communication protocols to facilitate the execution of transactions. In light of these advances and consistent with FINRA's goals of increasing transparency and improving access to timely transaction data, FINRA is proposing updates to modernize the reporting timeframes and provide timelier transparency.

A. One-Minute Reporting

FINRA is proposing amendments to Rule 6730 to reduce the reporting timeframe for securities currently subject to the 15-minute reporting outer limit to one minute, with exceptions for FINRA member firms with de minimis reporting activity and for manual trades. FINRA would continue to make information on the transactions publicly available immediately upon receipt of the trade reports.

Under existing Rule 6730(a)(1), transactions in corporate bonds, agency debt, ABS, and MBS TBA GD generally must be reported as soon as practicable, but no later than within 15 minutes of execution.[18] Specifically, transactions executed on a business day at or after 12:00:00 a.m. ET through 7:59:59 a.m. ET must be reported the same day no later than 15 minutes after the TRACE system opens. Transactions executed on a business day at or after 8:00:00 a.m. ET through 6:29:59 p.m. ET must be reported no later than within 15 minutes of the Time of Execution,[19] except for transactions executed on a business day less than 15 minutes before 6:30:00 p.m. ET, which must be reported no later than 15 minutes after the TRACE system opens the next day (and, if reported on T+1, designated ''as/of'' with the date of execution). Finally, transactions executed on a business day at or after 6:30:00 p.m. ET through 11:59:59 p.m. ET, or trades executed on a Saturday, a Sunday, a federal or religious holiday, or other day on which the TRACE system is not open at any time during that day, must be reported on the next business day no later than 15 minutes after the TRACE system opens (and must be designated ''as/of'' and include the date of execution).

Amended Rule 6730(a)(1) would provide that transactions must be reported as soon as practicable, but no later than within one minute of the Time of Execution. Amended Rule 6730(a)(1)(B) would require that a transaction executed on a business day at or after 8:00:00 a.m. ET through 6:29:59 p.m. ET must be reported as soon as practicable, but no later than one minute from the Time of Execution, except that, a transaction executed on a business day less than one minute before 6:30:00 p.m. ET, must be reported no later than 15 minutes after the TRACE system opens the next business day (T+1) (and, if reported on T+1, designated ''as/of'' with the date of execution). Any trades executed on a business day prior to the open of the TRACE system, on a business day at or after 6:30:00 p.m. ET through 11:59:59 p.m. ET, or on a Saturday, a Sunday, a federal or religious holiday or other day on which the TRACE system is not open at any time during that day would continue to be reportable as soon as practicable on the next business day (T+1), but no later than within 15 minutes after the TRACE system opens (and must be designated ''as/of,'' as appropriate, and include the date of execution).

B. Exceptions From One-Minute Reporting

FINRA is proposing two exceptions from the one-minute reporting timeframe for: (1) FINRA member firms with ''limited trading activity'' in the TRACE-Eligible Securities that are subject to one-minute reporting; and (2) manual trades.[20]

1. Exception for FINRA Members With ''Limited Trading Activity''

New Supplementary Material .08 would provide an exception to the one-minute reporting timeframe for FINRA members with ''limited trading activity.'' A FINRA member with ''limited trading activity'' would be defined as one that, during one of the prior two calendar years, reported to TRACE fewer than 4,000 transactions in the TRACE-Eligible Securities that are subject to paragraphs (a)(1)(A) through (a)(1)(D) of Rule 6730 (*i.e.,* corporate bonds, agency debt, ABS and MBS TBA GD), including any manual trades. Supplementary Material .08(b) would require FINRA members relying on the exception to confirm annually their qualification for the exception.[21] As outlined in Supplementary Material .08(c), qualifying FINRA members would be required to report these trades as soon as practicable, but no later than within 15 minutes of the Time of Execution.[22]

FINRA members exceeding the 4,000-trade threshold for each of two consecutive calendar years would need to comply with the one-minute reporting requirements of paragraphs

TRACE by the next business day (T+1). *See* Rule 6730(a)(2).

[17] *See* Notice at Table 1.

[18] *See supra* notes 12–16.

[19] Under Rule 6710(d), the ''Time of Execution'' generally means the time when the parties to a transaction agree to all of the terms of the transaction that are sufficient to calculate the dollar price of the trade. For transactions involving TRACE-Eligible Securities that are trading ''when issued'' on a yield basis, the ''Time of Execution'' is when the yield for the transaction has been agreed to by the parties to the transaction.

[20] FINRA is also proposing a conforming amendment to Supplementary Material .03 to refer to Rule 6730 generally rather than ''paragraph (a)'' to reflect that members reporting pursuant to one of the exceptions in new Supplementary Material .08 and .09 are still required to report their trades ''as soon as practicable.''

[21] Evidence of this confirmation should be retained as part of the member's books and records. However, members eligible for the exception would not need to take other affirmative steps to have their trade reports processed pursuant to the exception's 15-minute reporting timeframe, such as submitting a certification of eligibility to FINRA or adding a modifier or indicator to their trade reports.

[22] However, a trade executed outside of TRACE system hours, less than 15 minutes before 6:30 p.m. ET, or on a Saturday, Sunday, federal or religious holiday, or other day on which the TRACE system is not open at any time during that day, would need to be reported as soon as practicable, but no later than within 15 minutes after the TRACE system opens the next business day (T+1).

(a)(1)(A) through (a)(1)(D) of amended Rule 6730 beginning 90 days after the firm no longer meets the criteria for the exception (*i.e.,* beginning 90 days after January 1 of the next calendar year). If a FINRA member's reporting activity subsequently dropped below the 4,000-trade threshold, the member would again be eligible for the exception.[23]

2. Manual Trades Exception

New Supplementary Material .09 would provide an exception for manual trades that are not electronic from end to end. Where a trade qualifies for the manual trades exception, a 15-minute outer limit would apply for the first year following implementation; a 10-minute outer limit would apply for the second year; and a five-minute outer limit would apply thereafter.

The manual trades exception would apply to ''transactions that are manually executed'' or where a ''[FINRA] member must manually enter any of the trade details or information necessary for reporting the trade through the TRAQS website or into a system that facilitates trade reporting to TRACE.'' [24] A trade that requires manual intervention at any point to complete the trade execution or reporting process would qualify. FINRA provided the following non-exhaustive list of situations in which trades would be considered to have a manual component:

- where a FINRA member executes a trade [25] by manual or hybrid means, such as by telephone, email, or through a chat/messaging function,[26] and subsequently must manually enter into a system that facilitates trade reporting all or some of the information required to book the trade and report it to TRACE;
- where allocations to individual accounts must be manually input in connection with a trade by a dually-registered broker-dealer/investment adviser;
- where an electronic trade is subject to manual review for risk management or regulatory compliance purposes and, as part of or following the review, the trade must be manually approved, amended, or released before the trade is reported to TRACE (*e.g.,* a firm's risk management procedures require a secondary approver for trades over a certain threshold; a firm's best execution procedures require manually checking another market to confirm that a better price is not available to the customer);
- where a FINRA member trades a bond for the first time and additional manual steps are necessary to set the bond up in the firm's systems to book and report the trade (*e.g.,* entering the CUSIP number and associated bond data into the firm's system); and
- where a FINRA member agrees to trade a basket of securities at a single price and manual action is required to calculate the price of component securities in the basket or to book and report the trade in component securities to TRACE.

According to FINRA, the above examples are illustrative of the types of circumstances in which, due to the manual nature of components of the trade execution or reporting process, reporting a transaction within one minute of the Time of Execution may be unfeasible, even where a FINRA member makes reasonable efforts to report the trade as soon as practicable (as required). FINRA also would assess FINRA members' trade reporting in connection with manual trades to determine whether the five-minute trade reporting timeframe (to become applicable after two years) is appropriate, and would be prepared to adjust, as necessary.

FINRA would review use of the manual trades exception for abuse. FINRA members would not, in any case, be allowed to purposely delay the execution or reporting of a transaction by handling any aspect of a trade manually or introducing manual steps following the Time of Execution. Additionally, considering the overarching obligation to report trades as soon as practicable, FINRA members would be encouraged to consider the types of transactions in which they regularly engage and whether they can reasonably reduce the time between a trade's Time of Execution and its reporting, and more generally must make a good faith effort to report their trades as soon as practicable.

Under amended Rule 6730(d)(4), any FINRA member that executes or reports a trade manually would be required to append a manual trade indicator to the trade report. The indicator must be included in any manual trade, regardless of whether the FINRA member reports outside of the one-minute timeframe in reliance on the manual trades exception. Application of the indicator would give FINRA greater insight into manual trading and the use of the exception. The indicator would not be included in publicly disseminated TRACE data.

Finally, FINRA is proposing to amend Rule 6730(f) to provide that a pattern or practice of late reporting may be considered conduct inconsistent with high standards of commercial honor and just and equitable principles of trade, in violation of Rule 2010, absent ''reasonable justification'' (in addition to the rule's existing reference to ''exceptional circumstances'').[27] Recurring issues in the systems of a FINRA member firm or its vendor would not be considered a reasonable justification or exceptional circumstance that excuses a pattern or practice of late trade reporting.[28]

III. Summary of Comments

The Commission received comments on the proposed rule change.[29] Commenters generally address the one-minute reporting timeframe, the exceptions to the timeframe (both in general and specifically discussing the manual trades and de minimis exceptions), the gradual five-minute decreases in the manual trades exception, consistent application of reporting requirements, the proposed implementation period, and the proposed rule's consistency with the Exchange Act.

Several commenters support the proposal to shorten the 15-minute TRACE reporting timeframe to one minute and its aim of increasing transparency in fixed income markets.[30]

[23] For example, a member that reported 3,000 trades in the relevant TRACE-Eligible Securities to TRACE in 2022 and then 4,150 trades in 2023 would continue to be eligible for the exception in 2024; however, if the member then reported 4,100 trades in 2024, the member would be required to comply with the one-minute reporting requirements starting 90 days after January 1, 2025 (with January 1 being day one of 90). If the member proceeded to report 3,500 trades in 2025, the member would once again be eligible for the exception from one-minute reporting for 2026 under the two-year lookback. FINRA believes the two-year lookback period for eligibility for the exception will accommodate fluctuations in trading activity that may be due to unusual market-wide events or unique client demands.

[24] *See* Supplementary Material .09(a).

[25] As noted above, for purposes of Rule 6730, the reporting timeframe is measured from the Time of Execution as defined by Rule 6710(d), which generally refers to the time that the parties have agreed to all of the terms of the transaction sufficient to calculate the dollar price of the trade (or yield, in the case of when-issued securities priced to a spread).

[26] FINRA reminds members of their obligation to retain these electronic communications as part of their books and records, consistent with FINRA and Commission recordkeeping requirements. *See, e.g.,* Notice to Members 03–33 (July 2003).

[27] *See, e.g.,* Rule 6623 describing ''exceptional circumstances'' as instances of system failure by a member or service bureau, or unusual market conditions, such as extreme volatility in a security, or in the market as a whole.

[28] *See, e.g.,* FINRA Trade Reporting Frequently Asked Questions, Q206.21, available at *https://www.finra.org/filing-reporting/market-transparency-reporting/trade-reporting-faq.*

Continued

Some commenters support increasing price transparency in general but caution restraint and the need for broad exceptions, citing the potential for reduced liquidity and execution quality.[31] Some commenters oppose one minute reporting, questioning the feasibility and cost of compliance due to technical limitations and the prevalence of manual processes.[32]

Commenters express varied views on the proposed exceptions to one minute reporting. Some commenters state the exceptions are essential to the success of the rule.[33] These commenters cite the burdens of compliance with one-minute reporting on broker-dealers which rely on manual processes.[34] Others state that the exceptions are too narrow [35] or too broad.[36] One commenter that states the exceptions are too narrow also states that anything less than 15-minute reporting is infeasible and cites the concern that compliance costs associated with faster reporting could price small broker-dealers out of fixed income markets.[37] Two commenters that state the exceptions are too broad suggest FINRA withdraw the proposal and instead require market participants to report trades as soon as practicable but no later than five minutes after execution.[38] Another commenter that states the exceptions are too broad also states that the exceptions ''create significant risk to the efficacy and legal durability of the entire rule.'' [39] Finally, one commenter encourages FINRA to phase out both exceptions completely over time, which it states would incentivize firms to modernize their execution processes.[40]

Several commenters specifically address the de minimis exception. Some commenters state support for the de minimis exception.[41] One of these commenters states the de minimis exception is appropriately tailored to protect minority, veteran, and women owned business enterprises and small dealers from incurring significant costs.[42] The commenter also states the proposed two-year look back period will prevent surprise application of the rule and allow newly impacted broker-dealers time to comply.[43] Some commenters state opposition to the de minimis exception.[44] One of these commenters supports the logic behind the de minimis exception but states the proposed 4,000-trade report threshold is too low and insufficiently justified.[45] This commenter also requests FINRA expand the threshold or at minimum provide more analysis to support its proposed limit.[46] Another commenter that opposes the de minimis exception states FINRA did not sufficiently justify the need for the exception, nor its decisions to set the exception's threshold at 4,000 annual trades and the lookback period for applicability of the threshold at two years.[47] This commenter suggests the de minimis exception be abandoned or more narrowly tailored.[48]

Several commenters offer specific views about the manual trades exception. Some commenters characterize the manual trades exception as essential to ensuring compliance with the rule.[49] Some commenters state it would be more operationally feasible to flag trades subject to one-minute reporting, rather than flagging all manual trades.[50] One commenter states that the exception should be expanded to include certain fully electronic transactions that cannot feasibly be reported within one minute, such as large post-trade allocations, batch-processed trades, and trades involving multiple systems in trade workflow.[51] This commenter states that post-trade allocations are especially difficult to report within one minute for broker-dealers also registered as investment advisers.[52] Another commenter states support for FINRA's proposal to apply the exception to a scenario where a firm has not previously traded a bond.[53] This commenter also notes a similar proposal by the Municipal Securities Rulemaking Board (''MSRB'') that would apply to transactions in municipal securities and states that FINRA and MSRB should harmonize the scope of the manual trades exceptions.[54] Finally, the commenter describes certain scenarios that could be experienced by a reporting firm, questioning whether the manual trades exception would apply, and suggesting a dialogue with industry about such scenarios.[55]

Several comments address the gradual phase-in of five-minute reporting written into the proposed rule for manual trades.[56] One commenter requests FINRA propose for notice and comment each time it seeks to reduce the timeframe.[57] The commenter also states FINRA must consider that the proposed rule will be implemented

[57] *See* ICI Letter at 3; *see also* Falcon Letter at 4 (stating that FINRA must produce supporting data before proposing a mandatory phase-in period for the manual trades exception); SIFMA Letter at 6 (stating that FINRA should conduct an impact assessment before reducing the reporting window for manual trades to five minutes).

alongside other regulatory initiatives.[58] Another commenter states support for the phase-in approach, but asks FINRA to maintain close communication with industry during the phase-in period and to remain sensitive to operational roadblocks that market participants could confront.[59]

Several commenters state the manual trades exception is too broad.[60] Two of these commenters question the lack of estimates in the proposal of the number of transactions expected to qualify for the manual trades exception.[61] These commenters raise the concern that a large proportion of the total number of trades currently reported outside of one minute could fall within the proposed rule's manual trades exception, undermining the goal of increasing post-trade transparency.[62] These commenters also raise concerns that firms could build manual steps into the trade execution process as a means of qualifying for the longer manual trades reporting window.[63]

Several commenters raise concerns related to consistent application of reporting requirements. One commenter describes the potential negative consequences of applying different levels of post-trade transparency depending on a trade's mode of execution.[64] Another commenter raises concern about different reporting requirements under the proposal depending on a trade's time of execution.[65] The commenter states that under the current rule, trades executed when TRACE is closed must be reported within 15 minutes of TRACE being open, mirroring the deadline for reporting of trades executed when TRACE is open.[66] But, the commenter continues, under the proposal, trades executed outside of the hours when TRACE is open will still be subject to the deadline to report within 15 minutes of TRACE being open while trades executed when TRACE is open will be subject to the new one minute requirement.[67] The commenter urges consistent reporting times in this scenario.[68]

Some comments address the proposed implementation period. Two commenters request an implementation period of two years from the time of adoption due to the high cost of compliance.[69] Another commenter states the cost of implementing the proposal is anticipated to be especially high for smaller firms and suggests an implementation period of at least 18 months from the date of FINRA and MSRB publishing updated technical specifications and guidance.[70] The commenter also requests that FINRA provide an expanded free testing period of 90 days instead of the standard free testing period of 30 days.[71]

Several commenters question the proposed rule's consistency with the Exchange Act. Two commenters state that FINRA failed to meet its burden to demonstrate consistency with the Exchange Act, particularly by failing to estimate the number of transactions captured by the manual trades exception.[72] These commenters also state that the differing reporting windows for manual and electronic trades violate the Exchange Act by discriminating based on the mode of execution and unduly burdening competition.[73]

IV. Proceedings To Determine Whether To Approve or Disapprove the FINRA Proposal and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2) of the Exchange Act[74] to determine whether the proposed rule change should be approved or disapproved. Institution of proceedings is appropriate at this time in view of the legal and policy issues raised by the proposal. Institution of proceedings does not indicate, however, that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Exchange Act,[75] the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of the proposed rule change's consistency with: (1) Section 15A(b)(6) of the Exchange Act, which requires, among other things, that FINRA rules promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, remove impediments to and perfect the mechanism of a free and open market, and, in general, protect investors and the public interest,[76] and (2) Section 15A(b)(9) of the Exchange Act, which requires that FINRA rules not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.[77] The Commission asks that commenters address the sufficiency of FINRA's statements in support of the proposal, which are set forth in the Notice, in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission is instituting proceedings to allow for additional analysis of, and input from commenters with respect to, the scope and implementation of the proposed exceptions to the one-minute reporting timeframe.

V. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their data, views, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposed rule change is consistent with the Exchange Act and the rules and regulations thereunder.

Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of data, views, and arguments, the Commission will consider, pursuant to Rule 19b–4 under the Exchange Act,[78] any request for an opportunity to make an oral presentation.[79]

[79] Section 19(b)(2) of the Exchange Act, as amended by the Securities Acts Amendments of 1975, Public Law 94–29 (Jun. 4, 1975), grants to the Commission flexibility to determine what type of proceeding—either oral or notice and opportunity for written comments—is appropriate for

Continued

Interested persons are invited to submit written data, views, and arguments regarding whether the proposed rule change should be approved or disapproved by May 17, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by May 31, 2024.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–FINRA–2024–004 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–FINRA–2024–004. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of FINRA. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–FINRA–2024–004 and should be submitted on or before May 17, 2024. Rebuttal comments should be submitted by May 31, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[80]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99997; File No. SR–PEARL–2024–21]

Self-Regulatory Organizations; MIAX PEARL LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 404, Series of Option Contracts Open for Trading To Amend the Short Term Option Series Program

April 19, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 18, 2024, MIAX PEARL, LLC (''MIAX Pearl'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the Short Term Option Series Program.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-equities/pearl-equities/rule-filings,* at MIAX Pearl's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Interpretations and Policies .02 of Exchange Rule 404, ''Series of Options Contracts Open for Trading.'' The Exchange proposes to expand the Short Term Option Series program to permit the listing and trading of options series with Tuesday and Thursday expirations for options on iShares Russell 2000 ETF (''IWM''), specifically permitting two expiration dates for the proposed Tuesday and Thursday expirations in IWM. These proposed rule changes are based on a similar proposal submitted by Nasdaq ISE, LLC (''ISE'') and approved by the Commission.[3]

Currently, Table 1 in Interpretations and Policies .02 of Exchange Rule 404 specifies each symbol that qualifies as a Short Term Option Daily Expiration.[4] Today, Table 1 permits the listing and trading of Monday Short Term Option Daily Expirations and Wednesday Short Term Option Daily Expirations for IWM. At this time, the Exchange proposes to expand the Short Term Option Series Program to permit the listing and trading of no more than a total of two IWM Short Term Option Daily Expirations beyond the current week for each of Monday, Tuesday, Wednesday, and Thursday expirations at one time.[5]

consideration of a particular proposal by a self-regulatory organization. *See* Securities Acts Amendments of 1975, Senate Comm. on Banking, Housing & Urban Affairs, S. Rep. No. 75, 94th Cong., 1st Sess. 30 (1975).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 99946 (April 11, 2024), File No. SR–ISE–2024–06 (Order Approving a Proposed Rule Change to Amend the Short Term Option Program).

[4] The Exchange may open for trading on any Thursday or Friday that is a business day series of options on that class that expire at the close of business open each of the next five Fridays that are business days and are not Fridays in which standard expiration options series, Monthly Options Series, or Quarterly Options Series. Of these series of options, the Exchange may have no more than a total of five Short Term Option Expiration Dates. In addition, the Exchange may open for trading series of options on certain symbols that expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire (''Short Term Option Daily Expirations''). See Interpretations and Policies .02 of Exchange Rule 404.

[5] The Exchange would amend the Tuesday and Thursday expirations for IWM in Table 1 in Interpetations and Policies .02 of Exchange Rule 404 from ''0'' to ''2'' to permit Tuesday and Thursday expirations for options on IWM listed

The listing and trading of Tuesday and Thursday Short Term Option Daily Expirations would be subject to Interpretations and Policies .02 of Exchange Rule 404.

Today, Tuesday Short Term Option Daily Expirations in SPDR S&P 500 ETF Trust (''SPY'') and Invesco QQQ Trust (''QQQ'') may open for trading on any Monday or Tuesday that is a business day series of options on the symbols provided in Table 1 that expire at the close of business on each of the next two Tuesdays that are business days and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire (''Tuesday Short Term Option Expiration Date'').[6] Also, today, Thursday Short Term Option Daily Expirations in SPY and QQQ may open for trading on any Tuesday or Wednesday that is a business day series of options on the symbols provided in Table 1 that expire at the close of business on each of the next two Wednesdays that are business days and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire (''Wednesday Short Term Option Expiration Date'').

In the event that options on IWM expire on a Tuesday or Thursday and that Tuesday or Thursday is a business day in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire, the Exchange would skip that week's listing and instead list the following week; the two weeks would therefore not be consecutive. With this proposal, the Exchange would be able to open for trading series of options on IWM that expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire.[7]

The interval between strike prices for the proposed Tuesday and Thursday IWM Short Term Option Daily Expirations will be the same as those for Tuesday and Thursday Short Term Option Daily Expirations in SPY and QQQ, applicable to the Short Term Option Series Program.[8] Interpretations and Policies .10 of Exchange Rule 404 provides that, notwithstanding any other provision regarding the interval of strike prices of series of options on Exchange-Traded Fund Shares in Exchange Rule 404, the interval of strike prices on options on IWM will be $1 or greater.[9] Further, Interpretations and Policies .02(e) of Exchange Rule 404 provides that the strike price interval for Short Term Option Series may be $0.50 or greater for option classes that trade in $1 strike price intervals and are in the Short Term Option Series Program. Therefore, the Tuesday and Thursday IWM Short Term Option Daily Expirations will have a $0.50 strike interval minimum. As is the case with other equity options series listed pursuant to the Short Term Option Series Program, the Tuesday and Thursday IWM Short Term Option Daily Expiration series will be P.M.-settled.

Pursuant to Exchange Rule 100,[10] with respect to the Short Term Option Series Program, a Tuesday or Thursday expiration series shall expire on the first business day immediately prior to that Tuesday or Thursday, *e.g.,* Monday or Wednesday of that week, respectively, if the Tuesday or Thursday is not a business day.

Currently, for each option class eligible for participation in the Short Term Option Series Program, the Exchange is limited to opening thirty (30) series for each expiration date for the specific class.[11] The thirty (30) series restriction does not include series that are open by other securities exchanges under their respective weekly rules; the Exchange may list these additional series that are listed by other options exchanges.[12] This thirty (30) series restriction would apply to Tuesday and Thursday IWM Short Term Option Daily Expiration series as well.

With this proposal, Tuesday and Thursday IWM Expirations would be treated the same as Tuesday and Thursday Expirations in SPY and QQQ. With respect to standard expiration option series, Short Term Option Daily Expirations may expire in the same week in which standard expiration option series on the same class expire. In the case of Monthly Options Series and Quarterly Options Series, no Short Term Option Series may expire on the same day as an expiration of a Monthly Options Series or Quarterly Options Series, respectively, in the same class.[13] Therefore, all Short Term Option Daily Expirations would expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire.

The Exchange does not believe that any market disruptions will be encountered with the introduction of P.M.-settled Tuesday and Thursday IWM Short Term Option Daily Expirations. The Exchange has the necessary capacity and surveillance programs in place to support and properly monitor trading in the proposed Tuesday and Thursday Short Term Option Daily Expirations. The Exchange currently trades P.M.-settled Short Term Option Series that expire Tuesday and Thursday for SPY and QQQ and has not experienced any market disruptions nor issues with capacity. Today, the Exchange has surveillance programs in place to support and properly monitor trading in Short Term Option Series that expire

pursuant to the Short Term Option Series. The Exchange notes that Cboe Exchange, Inc. (''Cboe'') began listing Tuesday and Thursday expirations in the Russell 2000 Index Weeklys® (''RUTW'') and Mini-Russell 2000 Index Weeklys® (''MRUT'') on January 8, 2024. *See* Securities Exchange Act Release No. 98621 (September 28, 2023), 88 FR 68896 (October 4, 2024) (SR–CBOE–2023–054) (a Proposed Rule Change To Amend Rule 4.13); Securities Exchange Act Release No. 98957 (November 15, 2023), 88 FR 81130 (November 21, 2023) (SR–CBOE–2023–054) (Order Approving a Proposed Rule Change To Amend Rule 4.13 To Expand the Nonstandard Expirations Program To Include P.M.-Settled Options on Broad-Based Indexes That Expire on Tuesday or Thursday); *See also* Cboe Global Markets, Inc., Cboe To Offer Daily Expiries For Russell 2000 Index Options Suite, Beginning January 8, 2024, available at *https://ir.cboe.com/news/news-details/2023/Cboe-TO-OFFER-DAILY-EXPIRIES-FOR-RUSSELL-2000-INDEX-OPTIONS-SUITE-BEGINNING-JANUARY-8-2024/default.aspx* (last visit February 14, 2024).

[6] *See* Interpretations and Policies .02 of Exchange Rule 404.

[7] Today, IWM may trade on Mondays and Wednesdays in addition to Fridays, as is the case for all options series.

[8] *See* Interpretations and Policies .10 of Exchange Rule 404.

[9] Options on SPY, iShares Core S&P 500 ETF (''IVV''), QQQ, IWM, and the SPDR Dow Jones Industrial Average ETF (''DIA'') are also subject to Interpretations and Policies .10 of Exchange Rule 404.

[10] The term ''Short Term Option Series'' means a series in an option class that is approved for listing and trading on the Exchange in which the series is opened for trading on any Monday, Tuesday, Wednesday, Thursday or Friday that is a business day and that expires on the Monday, Tuesday, Wednesday, Thursday, or Friday of the next business week, or, in the case of a series that is listed on a Friday and expires on a Monday, is listed one business week and one business day prior to that expiration. If a Tuesday, Wednesday, Thursday or Friday is not a business day, the series may be opened (or shall expire) on the first business day immediately prior to that Tuesday, Wednesday, Thursday or Friday, respectively. For a series listed pursuant to this section for Monday, expiration, if a Monday is not a business day, the series shall expire on that first business day immediately following that Monday. *See* Exchange Rule 100.

[11] *See* Interpretations and Policies .02(c) and (d) of Exchange Rule 404.

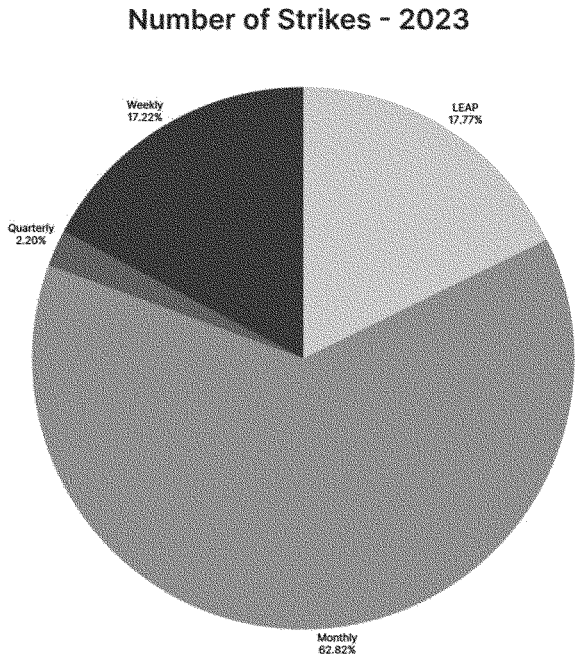
[12] *See* Interpretations and Policies .02 of Exchange Rule 404.

[13] *See* Interpretations and Policies .02(b) of Exchange Rule 404.

Tuesday and Thursday for SPY and QQQ.

Impact of Proposal

The Exchange notes that listings in the Short Term Option Series Program comprise a significant part of the standard listing in options markets. The below diagram taken from the Nasdaq ISE proposal demonstrates the percentage of weekly listings as compared to monthly, quarterly, and Long-Term Option Series in 2023 in the options industry.[14] The Exchange notes that during this time period all options exchanges mitigated weekly strike intervals.



Similar to SPY and QQQ, the Exchange would limit the number of Short Term Option Daily Expirations for IWM to two expirations for Tuesday and Thursday expirations while expanding the Short Term Option Series Program to permit Tuesday and Thursday expirations for IWM. Expanding the Short Term Option Series Program to permit the listing of Tuesday and Thursday expirations in IWM will account for the addition of 6.77% of strikes for IWM.[15] With respect to the impact to the Short Term Option Series Program on IWM overall, the impact would be a 20% increase in strikes.[16] With respect to the impact to the Short Term Options Series Program overall, the impact would be a 0.1% increase in strikes.[17]

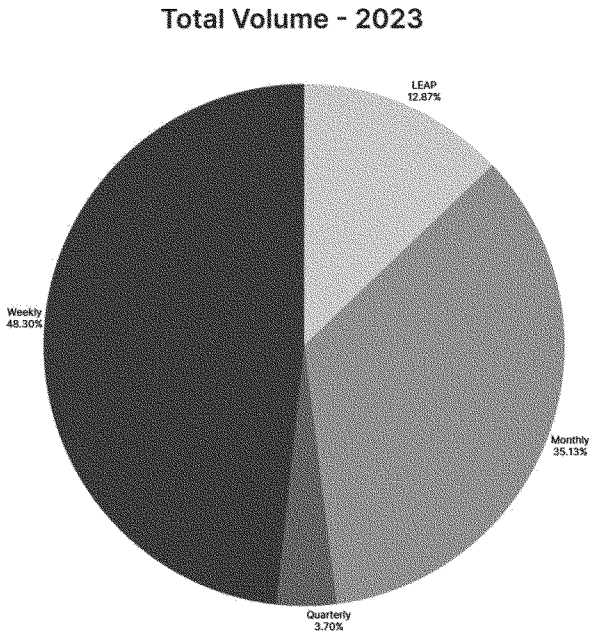
Members will continue to be able to expand hedging tools because all days of the week would be available to permit Members to tailor their investment and hedging needs more effectively in IWM.

[14] *See* Securities Exchange Act Release No. 99604 (February 26, 2024), 89 FR 15235 (March 1, 2024) (SRISE–2024–06) (Notice of Proposed Rule Change to Amend the Short Term Option Series Program). (ISE sourced this information from The Options Clearing Corporation (''OCC''). The information includes time averaged data (the number of strikes by maturity date divided from the number of trading days) for all 17 options markets through December 8, 2023.)

[15] See supra note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)

[16] *See supra* note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)

[17] *See supra* note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)



Weeklies comprise 48.30% of the total volume of options contracts.[18] The Exchange believes that inner weeklies (first two weeks) represent high volume as compared to outer weeklies (the last three weeks) and would be more attractive to market participants.

The introduction of IWM Tuesday and Thursday expirations will, among other things, expand hedging tools available to market participants and continue the reduction of the premium cost of buying protection. The Exchange believes that IWM Tuesday and Thursday expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Section 6(b)(5) of the Act,[20] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest.

The Exchange believes that IWM Tuesday and Thursday Short Term Daily Expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. Further, the proposal to permit Tuesday and Thursday Short Term Daily Expirations for options on IWM listed pursuant to the Short Term Option Series Program, subject to the proposed limitation of two nearest expirations, would protect investors and the public interest by providing the investing public and other market participants more flexibility to closely tailor their investment and hedging decisions in IWM options, thus allowing them to better manage their risk exposure.

In particular, the Exchange believes the Short Term Option Series Program has been successful to date and that Tuesday and Thursday IWM Short Term Daily Expirations should simply expand the ability of investors to hedge risk against market movements stemming from economic releases or market events that occur throughout the month in the same way that the Short Term Option Series Program has expanded the landscape of hedging. Similarly, the Exchange believes Tuesday and Thursday IWM Short Term Daily Expirations should create greater trading and hedging opportunities and provide customers the flexibility to tailor their investment objectives more effectively. The Exchange currently lists SPY and QQQ Tuesday and Thursday Short Term Daily Expirations.[21]

With this proposal, Tuesday and Thursday IWM Expirations would be treated similar to existing Tuesday and Thursday SPY and QQQ Expirations and would expire in the same week that standard monthly options expire on Fridays.[22] Further, today, Tuesday and Thursday Short Term Option Daily Expirations do not expire on a business day in which monthly options series or Quarterly Options Series expire.[23] Today, all Short Term Option Daily Expirations expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days and are not business days in which monthly options series or Quarterly Options Series expire. There are no material differences in the treatment of Tuesday and Thursday SPY and QQQ Short Term Daily Expirations as compared to the proposed Tuesday and Thursday IWM Short Term Daily Expirations.

Finally, the Exchange represents that it has an adequate surveillance program in place to detect manipulative trading in the proposed Tuesday and Thursday IWM Short Term Daily Expirations, in the same way that it monitors trading in the current Short Term Option Series and trading in Tuesday and Thursday SPY and QQQ Expirations. The Exchange also represents that it has the necessary systems capacity to support the new options series. Finally, the Exchange does not believe that any market disruptions will be encountered with the introduction of Tuesday and

[18] *See supra* note 14. (The chart represents industry volume in terms of overall contracts. Weeklies comprise 48.30% of volume while only comprising 17.22% of the strikes. ISE sourced this information from OCC. The information includes data for all 17 options markets through December 8, 2023.)

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(5).

[21] *See* Interpretations and Policies .02 of Exchange Rule 404.

Thursday IWM Short Term Daily Expirations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Similar to SPY and QQQ Tuesday and Thursday Expirations, the introduction of IWM Tuesday and Thursday Short Term Daily Expirations does not impose an undue burden on competition. The Exchange believes that it will, among other things, expand hedging tools available to market participants and continue the reduction of the premium cost of buying protection. The Exchange believes that IWM Tuesday and Thursday Short Term Daily Expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. The Exchange notes that Cboe began listing Tuesday and Thursday expirations in RUTW and MRUT on January 8, 2024.[24]

The Exchange does not believe the proposal will impose any burden on inter-market competition, as nothing prevents other options exchanges from proposing similar rules to list and trade Short-Term Option Series with Tuesday and Thursday Short Term Daily Expirations. The Exchange notes that having Tuesday and Thursday IWM expirations is not a novel proposal, as SPY and QQQ Tuesday and Thursday Expirations are currently listed on the Exchange.[25]

Further, the Exchange does not believe the proposal will impose any burden on intramarket competition, as all market participants will be treated in the same manner under this proposal.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[26] and Rule 19b–4(f)(6) thereunder.[27] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[28] and subparagraph (f)(6) of Rule 19b–4 thereunder.[29]

A proposed rule change filed under Rule 19b–4(f)(6)[30] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[31] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. According to the Exchange, the proposed rule change is a competitive response to a filing submitted by Nasdaq ISE that was recently approved by the Commission.[32] The Exchange has stated that waiver of the 30-day operative delay would permit the Exchange to implement the proposal at the same time as at least one other exchange, thus enhancing competition among exchanges by allowing Tuesday and Thursday IWM expirations to be traded on multiple exchanges. The Commission believes that the proposed rule change presents no novel issues and that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.[33]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–PEARL–2024–21 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–PEARL–2024–21. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–PEARL–2024–21 and should be submitted on or before May 17, 2024.

[24] *See supra* note 5.

[25] *See* Interpretations and Policies .02 of Exchange Rule 404.

[26] 15 U.S.C. 78s(b)(3)(A)(iii).

[27] 17 CFR 240.19b–4(f)(6).

[28] 15 U.S.C. 78s(b)(3)(A)(iii).

[29] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[30] 17 CFR 240.19b–4(f)(6).

[31] 17 CFR 240.19b–4(f)(6)(iii).

[32] *See supra* note 3.

[33] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[34]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100003; File No. SR–MSRB–2024–01]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change Consisting of Proposed Rule Change To Amend MSRB Rule G–14 To Shorten the Timeframe for Reporting Trades in Municipal Securities to the MSRB

April 22, 2024.

I. Introduction

On January 12, 2024, the Municipal Securities Rulemaking Board (''MSRB'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''Exchange Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to (1) amend MSRB Rule G–14 (''Rule G–14''), on reports of sales or purchases, to (i) shorten the amount of time within which brokers, dealers, and municipal securities dealers (collectively, ''dealers,'' and each individually, a ''dealer'') must report most transactions to the MSRB; and (ii) require dealers to report certain transactions with a new trade indicator, and make certain clarifying amendments, and (2) make conforming amendments to MSRB Rule G–12, on uniform practice (''Rule G–12''), and the MSRB's Real-Time Transaction Reporting System (''RTRS'') Information Facility (''IF–1'') to reflect the shortened reporting timeframe (collectively, the ''proposed rule change'').[3] The proposed rule change was published for comment in the **Federal Register** on January 26, 2024.[4] The Commission received comments in response to the proposed rule change.[5] This order institutes proceedings under Section 19(b)(2)(B) of the Act[6] to determine whether to approve or disapprove the proposed rule change.

II. Description of the Proposed Rule Change

Rule G–14 on reports of sales or purchases requires dealers to report their transactions to RTRS within 15 minutes of the Time of Trade,[7] absent an exception,[8] in accordance with Rule G–14, the Rule G–14 RTRS Procedures, and the RTRS Users Manual.[9] Since the current 15-minute requirement went into effect in 2005, the fixed income markets have changed dramatically, including a significant increase in the use of electronic trading platforms or other electronic communication protocols to facilitate the execution of transactions. As described in more detail in the Notice, the proposed rule change is intended to bring about greater market transparency through more timely disclosure and dissemination of information to market participants and market-supporting vendors so that the information better reflects current market conditions on a real-time basis, while carefully balancing the considerations raised by commenters throughout the rulemaking process.[10] Additionally, the proposed rule change would also make certain conforming technical changes to Rule G–12(f)(i) and IF–1. The MSRB has stated that it will review the available trade reporting information and data arising from implementation of the changes to trade reporting introduced by the proposed rule change, including but not limited to the two exceptions to the one-minute reporting requirement,[11] to inform any further potential changes by the MSRB, through future rulemaking, to the trade reporting requirements due to increasing marketplace and technology efficiencies, process improvements, continuing or new barriers to accelerated reporting, unanticipated market impacts, or other factors.[12]

A. New Baseline Reporting Requirement: One Minute After the Time of Trade

The proposed amendments to Rule G–14 RTRS Procedures Section (a)(ii) generally would provide that transactions effected with a Time of Trade during the hours of an RTRS Business Day[13] must be reported to an RTRS Portal[14] ''as soon as practicable, but no later than one minute'' (rather than within the current 15-minute standard) after the Time of Trade, subject to several existing reporting exceptions, which would be retained in the amended rule,[15] and two new intra-day reporting exceptions relating to dealers with limited trading activity and trades with a manual component that would be added by the proposed rule change.[16] Except for those trades that would qualify for a reporting exception, all trades currently required to be reported within 15 minutes after the Time of Trade would, under the proposed rule change, be required to be reported no later than one minute after the Time of Trade.

i. New Requirement To Report Trades ''as Soon as Practicable''

Section (a)(ii) of the proposed amendment to Rule G–14 RTRS Procedures adds a new requirement that, absent an exception, trades must be reported as soon as practicable (but no later than one minute after the Time of Trade).[17] This ''as soon as practicable'' requirement would also apply to trades subject to longer trade reporting deadlines under the two new exceptions for dealers with limited trading activity pursuant to Rule G–14 RTRS Procedures Section (a)(ii)(C)(1) and Supplementary Material .01, or trades with a manual component pursuant to Rule G–14 RTRS Procedures Section (a)(ii)(C)(2) and Supplementary Material .02.[18] Although Rule G–14 RTRS Procedures do not currently explicitly prohibit a dealer from waiting until the existing 15-minute deadline to report a trade notwithstanding the fact that the dealer could reasonably have reported such

[18] *Id.*

trade more rapidly, the MSRB notes that under the proposed rule change a dealer could not simply await the deadline to report a trade if it were practicable to report such trade more rapidly.[19]

As provided in more detail in the Notice, proposed Supplementary Material .03 would provide guidance relating to policies and procedures for complying with the ''as soon as practicable'' reporting requirement.[20] The MSRB noted that dealers must not purposely withhold trade reports, for example, by programming their systems to delay reporting until the last permissible minute or by otherwise delaying reports to a time just before the deadline if it would have been practicable to report such trades more rapidly.[21] For trades with a manual component, and consistent with Supplementary Material .03(b) of FINRA Rule 6730, the MSRB recognized that the trade reporting process may not be completed as quickly as, for example, where an automated trade reporting system is used.[22] The MSRB explained that it expected that the regulatory authorities that examine dealers and enforce compliance with this requirement would take into consideration the manual nature of the dealer's trade reporting process in determining whether the dealer's policies and procedures are reasonably designed to report the trade ''as soon as practicable'' after execution.[23]

ii. Time of Trade Discussion

The ''Time of Trade'' is the time at which a contract is formed for a sale or purchase of municipal securities at a set quantity and set price.[24] For transaction reporting purposes, the Time of Trade is the same as the time that a trade is ''executed'' and, generally, is consistent with the ''time of execution'' for recordkeeping purposes.[25]

iii. Valid Contract Discussion

In general, to form a valid contract, there must be at least an offer and acceptance of that offer. As a result, the MSRB noted that dealers should consider the point in time at which an offer to buy or sell municipal securities was met with an acceptance of that offer. This ''meeting of the minds,'' [26] cannot occur before the final material terms, such as the exact security, price and quantity, have been agreed to and such terms are known by the parties to the transaction.[27] The MSRB further explained that dealers should be clear in their communications regarding the final material terms of the trade and how such terms would be conveyed between the parties [28] to ensure that such a valid trade contract has been formed.[29]

iv. Exceptions to the Baseline Reporting Requirement

Proposed amendments to Rule G–14 RTRS Procedures Section (a)(ii) add two new exceptions to the proposed one-minute reporting requirement: (a) New Section (C)(1) provides an exception for a dealer with ''limited trading activity,'' and (b) new Section (C)(2) provides an exception for a dealer reporting a ''trade with a manual component.'' [30]

a. Exception for Dealers With Limited Trading Activity

New Section (a)(ii)(C)(1) would except a dealer with ''limited trading activity'' from the one-minute reporting requirement and would instead be required to report its trades as soon as practicable, but no later than 15 minutes after the Time of Trade for so long as the dealer remains qualified for the limited trading activity exception, as further specified in new Supplementary Material .01.[31] Proposed Section (d)(xi) of Rule G–14 RTRS Procedures would define a dealer with limited trading activity as a dealer that, during at least one of the prior two consecutive calendar years, reported to an RTRS Portal fewer than 1,800 transactions, excluding transactions exempted under Rule G–14(b)(v) and transactions specified in Rule G–14 RTRS Procedures Sections (a)(ii)(A) and (B) (*i.e.,* transactions having an end-of-trade-day reporting exception).[32] A dealer relying on this exception to report trades within the 15-minute timeframe, rather than the new standard one-minute timeframe, would have to confirm that it meets the criteria for a dealer with limited trading activity for each year during which it continues to rely on the exception (*e.g.,* the dealer could confirm its eligibility based on its internal trade records and by checking MSRB compliance tools which would indicate a dealer's transaction volume for a given year).[33] Notwithstanding the foregoing, the MSRB reminded dealers with limited trading activity of the new overarching obligation to report trades as soon as practicable.[34]

b. Exception for Trades With a Manual Component

Rule G–14 RTRS Procedures Section (a)(ii)(C)(2) would except a ''trade with a manual component'' as defined in new Section (d)(xii) of Rule G–14 RTRS Procedures from the one-minute reporting requirement. Dealers with such trades would be required to report such trades as soon as practicable and within the time periods specified in new Supplementary Material .02, unless another exception from the one-minute reporting requirement applies under proposed Rule G–14 RTRS Procedures Sections (a)(ii)(A) and (B) (*i.e.,* transactions having an end-of-trade-day or post-trade-day reporting exception) or (a)(ii)(C)(1) (*i.e.,* transactions by dealers with limited trading activity).[35] Section (d)(xii) of Rule G–14 RTRS Procedures would define a ''trade with a manual component'' as a transaction that is

[19] *Id.*

[20] *Id.* Where a dealer has reasonably designed policies, procedures and systems in place, the dealer generally would not be viewed as violating the ''as soon as practicable'' requirement because of delays in trade reporting due to extrinsic factors that are not reasonably predictable and where the dealer does not intend to delay the reporting of the trade (for example, due to a systems outage).

[27] *See generally* MSRB Notice 2004–18 (Notice Requesting Comment on Draft Amendments to Rule G–34 to Facilitate Real-Time Transaction Reporting and Explaining Time of Trade for Reporting New Issue Trades) (June 18, 2004); 2016 RTRS FAQs at question 1.

[28] Notice, 89 FR at 5386 n.26.

[29] *See* Notice 89 FR at 5387 (discussing the particulars for when transactions have been executed, confirmed, and reported).

[30] Notice, 89 FR at 5387 (explaining how these exceptions have a narrowly tailored purpose).

[31] The MSRB noted that transactions effected by such a dealer with a Time of Trade outside the hours of an RTRS Business Day would be permitted to be reported no later than 15 minutes after the beginning of the next RTRS Business Day pursuant to Rule G–14 RTRS Procedures Section (a)(iii). The MSRB also noted that, as is the case today, transactions for which an end-of-trade-day or post-trade-day reporting exception is available under redesignated Sections (A) and (B) would continue to have that exception available. Notice, 89 FR at 5387 n.29.

[32] This number of transactions is expected to capture approximately 1.5 percent of the trades in the municipal securities markets in a given calendar year. Notice, 89 FR at 5387 n.30.

[33] *See* Notice, 89 FR at 5387–5388 (using a hypothetical to illustrate variations in dealer eligibility for the limited trading exception).

[34] *See* Notice, 89 FR at 5386 discussing the new requirement to report trades as soon as practicable.

[35] As explained by the MSRB, transactions effected with a Time of Trade outside the hours of an RTRS Business Day would be permitted to be reported no later than 15 minutes after the beginning of the next RTRS Business Day pursuant to Rule G–14 RTRS Procedures Section (a)(iii). Notice, 89 FR at 5387 n.38.

manually executed or where the dealer must manually enter any of the trade details or information necessary for reporting the trade directly into an RTRS Portal (for example, by manually entering trade data into the RTRS Web Portal) or into a system that facilitates trade reporting (for example, by transmitting the information manually entered into a dealer's in-house or third-party system) to an RTRS Portal. As described below and in the Notice, a dealer reporting to the MSRB a trade meeting the definition for a ''trade with a manual component'' would be required to append a new trade indicator so that the MSRB can identify manual trades.[36]

As explained by the MSRB, this ''manual'' exception would apply narrowly, and would normally encompass any human participation, approval or other intervention necessary to complete the initial execution and reporting of trade information after execution, regardless of whether undertaken by electronic means (*e.g.,* keyboard entry), physical signature or other physical action. To qualify as a trade with a manual component, the manual aspect(s) of the trade generally would occur after the relevant Time of Trade (*i.e.,* the time at which a contract is formed for the transaction). As further explained by the MSRB, any manual aspects that precede the time of trade (*e.g.,* phone calls to locate bonds to be sold to a customer before the dealer agrees to sell such bonds to a purchasing customer) would normally not be relevant for purposes of the exception unless they have a direct impact on the activities that must be undertaken post-execution to enter information necessary to report the trade.[37]

The MSRB provided the following non-exhaustive list of situations in which trades would be considered to have a manual component: where a dealer executes a trade by manual or hybrid means, such as voice or negotiated trading by telephone, email, or through a chat/messaging function, and subsequently must manually enter into a system that facilitates trade reporting all or some of the information required to book the trade and report it to RTRS; where a dealer executes a trade (typically a larger-sized trade) that requires additional steps to negotiate and confirm details of the trade with a client and manually enters the trade into risk and reporting systems; where a dually-registered broker-dealer/investment adviser executes a block transaction that requires allocations of portions of the block trade to the individual accounts of the firm's advisory clients that must be manually inputted in connection with a trade; where an electronically or manually executed trade is subject to manual review by a second reviewer for risk management (*e.g.,* transactions above a certain dollar or par amount or other transactions meriting heightened risk review) and, as part of or following the review, the trade must be manually approved, amended or released before the trade is reported to RTRS; where a dealer's trade execution processes may entail further diligence following the Time of Trade involving a manual step (*e.g.,* manually checking another market to confirm that a better price is not available to the customer); [38] where a dealer trades a municipal security, whether for the first time or under other circumstances where the security master information may not already be populated (*e.g.,* information has been removed or archived due to a long lapse in trading the security), and additional manual steps are necessary to set up the security and populate the associated indicative data in the dealer's systems prior to executing and reporting the trade; where a dealer receives a large order or a trade list resulting in a portfolio of trades with potentially numerous unique securities involving rapid execution and frequent communications on multiple transactions with multiple counterparties, and the dealer must then book and report those transactions manually, one by one; [39] where a broker's broker engages in mediated transactions that involve multiple transactions with multiple counterparties; and where a dealer reports a trade manually through the RTRS Web Portal.

The MSRB stated that the appropriateness of treating any step in the trade execution and reporting process as being manual must be assessed in light of the anti-circumvention provision included in the proposed rule change with regard to the delay in execution or insertion of manual tasks for the purpose of meeting this new exception.[40] New Supplementary Material .02(a) would require all trades with a manual component to be reported as soon as practicable and would specify that in no event may a dealer purposely delay the execution of an order, introduce any manual steps following the Time of Trade, or otherwise modify any steps prior to executing or reporting a trade for the purpose of utilizing the exception for manual trades.[41]

New Supplementary Material .03 would require that dealers adopt policies and procedures for complying with the as soon as practicable reporting requirement, including by implementing systems that commence the trade reporting process without delay upon execution and provides for additional guidance for regulatory authorities that enforce and examine dealers for compliance with this requirement to take into consideration the manual nature of the dealer's trade reporting process.[42]

The MSRB also noted that dealers should consider the types of transactions in which they regularly engage and whether they can reasonably reduce the time between a transaction's Time of Trade and its reporting, and more generally should make a good faith effort to report their trades as soon as practicable.[43] The MSRB currently collects and analyzes data regarding dealers' historic reporting of transactions to RTRS under various scenarios and such data will continue to be available to the regulators for analysis under the proposed one-minute

[36] Such new indicator would be required for any trade with a manual component, whether the dealer reports such trade within the new one-minute timeframe or the dealer seeks to take advantage of the longer timeframes permitted for trades with a manual component. Notice, 89 FR at 5388 n.39.

[37] The MSRB provided various scenarios to illustrate application of the manual exception would apply. *See generally* Notice, 89 FR at 5389 n.40 and 5390 n.50.

[38] The MSRB noted that dealers experiencing significant levels of post-Time of Trade price adjustments due to such post-trade best execution processes should consider whether these processes are well suited to the dealer's obligations under MSRB Rule G–18 and whether the dealer is appropriately evaluating when a contract has in fact been formed with its customer. Notice, 89 FR at 5389 n.41.

[39] The MSRB explained that in instances where a dealer trades a basket of securities at a single price for the full basket, rather than individual prices for each security based on its then-current market price, such price likely would be away from the market, requiring inclusion of the ''away from market'' special condition indicator and qualifying for an end-of-trade-day reporting exception under proposed Rule G–14 RTRS Procedures Section (a)(ii)(A)(3). Notice, 89 FR at 5389 n.42.

[40] *See* Notice, 89 FR at 5390 (discussing the prohibition on purposeful insertion of manual steps in trade reporting process).

[41] *Id.*

[42] For trades with a manual component, the MSRB explained that it recognized that the trade reporting process may not be completed as quickly as, for example, where an automated trade reporting system is used. The MSRB further explained that in these cases, the MSRB expects that the regulatory authorities that examine dealers and enforce compliance with this requirement would take into consideration the manual nature of the dealer's trade reporting process in determining whether the dealer's policies and procedures are reasonably designed to report the trade ''as soon as practicable'' after execution. Notice, 89 FR at 5388.

[43] *Id.* at 5389.

standard. Subject to Commission approval of the proposed rule change, the MSRB explained that it would be reviewing the use of the manual exception and would share with the examining authorities any analyses resulting from such reviews.[44]

1. Phase-In Period for Trades With a Manual Component

New Supplementary Material .02(b) would subject trades with a manual component to a phase-in period for timely reporting over three years (''phase-in period''). During the first year of effectiveness of the exception, trades meeting this definition would be required to be reported as soon as practicable, but no later than 15 minutes after the Time of Trade.[45] During the second year, such trades would be required to be reported as soon as practicable, but no later than 10 minutes after the Time of Trade. After the second year and thereafter, such trades would be required to be reported as soon as practicable, but no later than five minutes after the Time of Trade. Dealers should remember that the ''as soon as practicable'' reporting obligation may, depending on the facts and circumstances, require quicker reporting than the applicable outer reporting obligation during and after the phase-in period.

The MSRB explained that it would be reviewing the available trade reporting information and data arising from implementation of the proposed rule, as well as marketplace developments, feedback from market participants, and examination or enforcement findings from the Commission, FINRA and the other appropriate regulatory agencies to inform any further potential changes to the trade reporting requirements.[46]

2. Prohibition on Purposeful Insertion of Manual Steps in Trade Reporting Process

New Supplementary Material .02(a) would specifically prohibit dealers from purposely delaying the execution of an order, introducing any manual steps following the Time of Trade, or otherwise purposefully modifying any steps to execute or report a trade to utilize the exception for manual trades. This requirement would not prohibit reasonable manual steps that are taken for legitimate purposes and would not apply to any steps that are taken prior to the time of trade that do not have the effect of delaying the subsequent reporting of such trade.[47]

3. Manual Trade Indicator

Proposed amendments to Rule G–14 RTRS Procedures Section (b)(iv) would require the report of a trade meeting the MSRB's definition for a ''trade with a manual component,'' as defined in proposed Section (d)(xii) of Rule G–14 RTRS Procedures,[48] to append a new trade indicator[49] to such a trade report. This indicator would be mandatory for every trade that meets the standard to append the indicator,[50] regardless of whether the trade is actually reported within one minute after the Time of Trade, is reported within the applicable timeframe under the manual trade exception or is otherwise subject to another reporting exception.

v. Pattern or Practice of Late Trade Reporting

Current Rule G–14 RTRS Procedures Section (a)(iv) requires that transaction data that is not submitted in a timely and accurate manner must be submitted or corrected as soon as possible—even when a dealer is late in reporting a trade, the dealer remains obligated to report such trade as soon as possible. The proposed amendments further provide that any transaction that is not reported within the applicable time period shall be designated as ''late.''[51] The MSRB stated that a pattern or practice of late reporting without exceptional circumstances or reasonable justification may be considered a violation of Rule G–14. The MSRB further noted that the determination of whether exceptional circumstances or reasonable justifications exist for late trade reporting is dependent on the particular facts and circumstances and whether such circumstances are addressed in the dealer's systems and procedures.[52] The MSRB explained that it expected that the regulatory authorities that examine dealers and enforce compliance with the reporting timeframes established under Rule G–14 RTRS Procedures would focus their examination for and enforcement of the rule's timing requirements on the consistency of timely reporting and the existence of effective controls to limit late reporting to exceptional circumstances or where reasonable justifications exist for a late trade report, rather than on individual late trade report outliers.[53] Notwithstanding such expectation, where facts and circumstances indicate that an individual late report was intentional or otherwise egregious, or could reasonably be viewed as potentially giving rise to an associated fair practice, fair pricing, best execution or other material regulatory concern under MSRB or Commission rules with respect to that or a related transaction, the MSRB noted that the regulatory authorities could reasonably determine to take action with respect to such late trade in the examination or enforcement context.[54]

vi. Compliance Tools

The MSRB explained that it would continue to provide various compliance tools to assist dealers with compliance and for examining authorities to monitor for compliance.[55]

vii. Proposed Technical Amendments

a. Non-Substantive Amendments

Non-substantive amendments to Rule G–14 RTRS Procedures Section (a)(ii) regroup and renumber its current Sections (A) through (C) to new Sections (A)(1) through (A)(3), renumber current Sections (D) and (E) to new Sections (B)(1) and B(2), and correct a cross-reference in Section (b)(iv) to certain of these Sections to be consistent with such renumbering.[56] In addition, a technical amendment to Rule G–14 RTRS Procedures Section (a)(ii) changes the word ''of'' to ''after'' and omits the word ''within'' in the phrase ''within 15 minutes of Time of Trade'' for clarity and consistency of usage throughout the Rule G–14 RTRS Procedures as amended.[57]

[44] *Id.* at 5390.

[45] While the deadline for reporting during this first year would remain the same as the current 15-minute timeframe, such trade reports would also be subject to the new requirement that they be reported as soon as practicable. *See* Notice, 89 FR at 5390 n.48.

[46] Notice, 89 FR at 5390.

[47] Notice, 89 FR at 5890.

[48] *See generally* Notice, 89 FR at 5388–90.

[49] *See* Notice, 89 FR at 5391 n.51 (discussing how the manual trade indicator would be used for regulatory purposes).

[50] Current Rule G–14 RTRS Procedures Section (a)(iv) requires that transaction data that is not submitted in a timely and accurate manner must be submitted or corrected as soon as possible. The manual trade indicator is not intended to be used to reflect the manual nature of any correction to a prior trade report. Notice, 89 FR at 5390 n.50.

[51] *See generally id.* at 5391 n.52 (MSRB explaining that late trade designations are currently, and would continue to be, available to regulators and, through the MSRB compliance tool described below in the Notice under ''Purpose—Proposed Rule Change—Compliance Tools,'' to the dealer submitting the late trade).

[52] *See* Notice, 89 FR at 5391 for non-exhaustive list of factors that would be considered in determining whether a rule violation has occurred.

b. Clarifying Amendments—Special Condition Indicators and Trades on an Invalid RTTM Trade Date

Rule G–14 RTRS Procedures Section (b)(iv) currently sets forth information regarding certain existing special condition indicators while also referencing the existence of other special condition indicators in Section 4.3.2 of the Specifications for Real-Time Reporting of Municipal Securities Transactions. The proposed clarifying amendments to Section (b)(iv) of Rule G–14 RTRS Procedures would incorporate into the language thereof reference to all applicable special condition indicators, including the new trade with a manual component indicator and existing special condition indicators previously adopted by the MSRB but that are currently only documented explicitly in the Specifications for Real-Time Reporting of Municipal Securities Transactions.[58] Other than the addition of the new trade with a manual component indicator, the proposed clarifying amendments to this provision would not make any changes to the types or usage of existing special condition indicators.[59] Rule G–14 RTRS Procedures Section (a)(iii) would be amended to reflect that, in addition to trades effected outside the hours of the RTRS Business Day, inter-dealer trades may be executed on certain holidays (other than those recognized as non-RTRS Business Days) that are not valid RTTM trade dates (''invalid RTTM trade date''), and in either case such trades are to be reported no later than within 15 minutes after the beginning of the next RTRS Business Day. Such invalid RTTM trade date transactions are already subject to this same next RTRS Business Day reporting requirement.[60] The proposed clarifying amendment to this provision would not make any changes to the circumstances or timing of reporting of such trades.[61]

c. Proposed Conforming Amendments to Rule G–12 and RTRS Information Facility

Proposed amendments to Rule G–12, on uniform practice, would make conforming changes to Section (f)(i) thereof to require that each transaction effected during the RTRS Business Day shall be submitted for comparison as soon as practicable, but no later than one minute after the Time of Trade unless an exception applies. The proposed rule change would also modify the IF–1 to clarify lateness checking against the applicable reporting deadline(s) provided for in proposed amendments to Rule G–14 RTRS Procedures, as opposed to the current 15-minute requirement.[62]

III. Summary of Comments Received

The Commission received thirteen comment letters on the proposed rule change.[63] Commenters generally supported the MSRB's goal of facilitating equal access to information and market transparency.[64] However, many commenters expressed concern that the MSRB failed to demonstrate how a one-minute reporting requirement would clearly and substantially benefit the municipal securities market.[65] To this end, several commenters raised concern that the one-minute reporting requirement would increase costs of new technology infrastructure which, commenters argued, could impair municipal market liquidity by putting small and mid-size firms out of business.[66] Commenters maintained that the exceptions to the one-minute reporting requirement were requisite to implementing the proposed rule change.[67] Otherwise, commenters asserted that a general one-minute reporting requirement would be unworkable.[68] One commenter, however, strongly encouraged the MSRB to fully phase-out the exceptions.[69] Another commenter noted a similar proposal[70] by the Financial Industry Regulatory Authority, Inc. (''FINRA''), and requested that the MSRB and FINRA harmonize the scope of the manual trade exception.[71]

Commenters offered several views relating to the exceptions. Some commenters noted that the manual trade exception balances shortening reporting requirements while avoiding undue disruptions to the municipal securities market.[72] However, one commenter argued that the MSRB had not provided any data to support a reduction in reporting time for manual trades or any evidence that firms that are currently reporting manually are not already reporting as soon as practicable.[73] This commenter also maintained that the phase-in period could eliminate small firms which are incapable of meeting the phased-in time periods.[74] Another commenter remained troubled by the language of the manual trade exception as it suggested the possibility of leading to further reductions or even the elimination of the manual trade exception.[75] As a potential solution, commenters noted that the MSRB could collect data and conduct impact assessments prior to each phase-in period to ensure continued market integrity.[76] Some commenters stated that the proposed use of the manual trade indicator could not be effectively implemented or monitored for compliance and proposed that trades subject to the one-minute reporting requirement should be flagged

instead.[77] Commenters generally viewed the limited trading activity exception favorably.[78] One commenter, however, argued that the proposed 1,800-trade threshold was far too low and requested that the MSRB either significantly expand the threshold or conduct further analysis to justify the 1,800 threshold.[79]

Some commenters addressed the proposed implementation period. Two commenters requested a two-year implementation and requested that the MSRB and FINRA remain open to the creation of FAQs or the provision of implementation guidance to achieve greater compliance.[80] One commenter requested an eighteen-month implementation period from the date the MSRB and FINRA publish updated technical specifications and guidance.[81]

Commenters also challenged the proposed rule change as circumventing regulatory obligations pursuant to the Exchange Act and requested that the MSRB conduct further analysis before implementing the proposed rule change.[82]

IV. Proceedings To Determine Whether To Approve or Disapprove SR–MSRB–2024–01 and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act[83] to determine whether the proposed rule change should be approved or disapproved. Institution of proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change. Institution of proceedings does not indicate, however, that the Commission has reached any conclusion with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to comment on the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,[84] the Commission is providing notice of the grounds for disapproval under consideration. The Commission believes it is appropriate to institute proceedings at this time in view of the legal and policy issues raised by the proposal. In particular, Section 15B(b)(2) of the Act[85] requires that the MSRB propose and adopt rules to effect the purposes of the Act with respect to transactions in municipal securities effected by brokers, dealers, and municipal securities dealers and advice provided to or on behalf of municipal entities or obligated persons by brokers, dealers, municipal securities dealers, and municipal advisors with respect to municipal financial products, the issuance of municipal securities, and solicitations of municipal entities or obligated persons undertaken by brokers, dealers, municipal securities dealers, and municipal advisors. In addition, Section 15B(b)(2)(C) of the Act[86] requires, among other things, that the MSRB's rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanisms of a free and open market in municipal securities and municipal financial products, and, in general, to protect investors, municipal entities, obligated persons, and the public interest. The Commission asks that commenters address the sufficiency of MSRB's statements in support of the proposed rule change, which are set forth in the Notice, in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission is instituting proceedings to allow for additional analysis of, and input from commenters with respect to, the scope and implementation of the proposed exceptions to the one-minute reporting timeframe.

V. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their data, views, and arguments with respect to the issues identified above, as well as any others concerns they may have with the proposed rule change. In particular, the Commission invites the written views of interested persons concerning whether the proposed rule change is inconsistent with the Exchange Act and the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval which would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4 under the Act,[87] any request for an opportunity to make an oral presentation.[88]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposed rule change should be approved or disapproved by May 17, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by May 31, 2024.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MSRB–2024–01 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–MSRB–2024–01. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the MSRB. All comments received will be posted without change;

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99996; File No. SR–MIAX–2024–23]

Self-Regulatory Organizations; MIAX Exchange LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 404, Series of Option Contracts Open for Trading To Amend the Short Term Option Series Program

April 19, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 18, 2024, Miami International Securities Exchange, LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the Short Term Option Series Program.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-options/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Interpretations and Policies .02 of Exchange Rule 404, ''Series of Options Contracts Open for Trading.'' The Exchange proposes to expand the Short Term Option Series program to permit the listing and trading of options series with Tuesday and Thursday expirations for options on iShares Russell 2000 ETF (''IWM''), specifically permitting two expiration dates for the proposed Tuesday and Thursday expirations in IWM. These proposed rule changes are based on a similar proposal submitted by Nasdaq ISE, LLC (''ISE'') and approved by the Commission.[3] MIAX notes that Exchange Rule 404 as proposed to be amended by this filing, is incorporated by reference into the MIAX Emerald, LLC (''MIAX Emerald'') rulebook, and is thus a MIAX Emerald rule applicable to MIAX Emerald members.

Currently, Table 1 in Interpretations and Policies .02 of Exchange Rule 404 specifies each symbol that qualifies as a Short Term Option Daily Expiration.[4] Today, Table 1 permits the listing and trading of Monday Short Term Option Daily Expirations and Wednesday Short Term Option Daily Expirations for IWM. At this time, the Exchange proposes to expand the Short Term Option Series Program to permit the listing and trading of no more than a total of two IWM Short Term Option Daily Expirations beyond the current week for each of Monday, Tuesday, Wednesday, and Thursday expirations at one time.[5] The listing and trading of Tuesday and Thursday Short Term Option Daily Expirations would be subject to Interpretations and Policies .02 of Exchange Rule 404.

Today, Tuesday Short Term Option Daily Expirations in SPDR S&P 500 ETF Trust (''SPY'') and Invesco QQQ Trust℠ (''QQQ'') may open for trading on any Monday or Tuesday that is a business day series of options on the symbols provided in Table 1 that expire at the close of business on each of the next two Tuesdays that are business days and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire (''Tuesday Short Term Option Expiration Date'').[6] Also, today, Thursday Short Term Option Daily Expirations in SPY and QQQ may open for trading on any Tuesday or Wednesday that is a business day series of options on the symbols provided in Table 1 that expire at the close of business on each of the next two Wednesdays that are business days and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options

[89] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 99946 (April 11, 2024), File No. SR–ISE–2024–06 (Order Approving a Proposed Rule Change to Amend the Short Term Option Program).

[4] The Exchange may open for trading on any Thursday or Friday that is a business day series of options on that class that expire at the close of business on each of the next five Fridays that are business days and are not Fridays in which standard expiration options series, Monthly Options Series, or Quarterly Options Series. Of these series of options, the Exchange may have no more than a total of five Short Term Option Expiration Dates. In addition, the Exchange may open for trading series of options on certain symbols that expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire (''Short Term Option Daily Expirations''). See Interpretations and Policies .02 of Exchange Rule 404.

[5] The Exchange would amend the Tuesday and Thursday expirations for IWM in Table 1 in Interpretations and Policies .02 of Exchange Rule 404 from ''0'' to ''2'' to permit Tuesday and Thursday expirations for options on IWM listed pursuant to the Short Term Option Series. The Exchange notes that Cboe Exchange, Inc. (''Cboe'') began listing Tuesday and Thursday expirations in the Russell 2000 Index Weeklys® (''RUTW'') and Mini-Russell 2000 Index Weeklys® (''MRUT'') on January 8, 2024. *See* Securities Exchange Act Release No. 98621 (September 28, 2023), 88 FR 68896 (October 4, 2023) (SR–CBOE–2023–054) (a Proposed Rule Change To Amend Rule 4.13); Securities Exchange Act Release No. 98957 (November 15, 2023), 88 FR 81130 (November 21, 2023) (SR–CBOE–2023–054) (Order Approving a Proposed Rule Change To Amend Rule 4.13 To Expand the Nonstandard Expirations Program To Include P.M.-Settled Options on Broad-Based Indexes That Expire on Tuesday or Thursday); *See also* Cboe Global Markets, Inc., Cboe To Offer Daily Expiries For Russell 2000 Index Options Suite, Beginning January 8, 2024, *available at https://ir.cboe.com/news/news-details/2023/Cboe-T-OOFFER-DAILY-EXPIRIES-FOR-RUSSELL-2000-INDEX-OPTIONS-SUITE-BEGINNING-JANUARY-8-2024/default.aspx* (last visit February 14, 2024).

[6] *See* Interpretations and Policies .02 of Exchange Rule 404.

Series expire (''Wednesday Short Term Option Expiration Date'').

In the event that options on IWM expire on a Tuesday or Thursday and that Tuesday or Thursday is a business day in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire, the Exchange would skip that week's listing and instead list the following week; the two weeks would therefore not be consecutive. With this proposal, the Exchange would be able to open for trading series of options on IWM that expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire.[7]

The interval between strike prices for the proposed Tuesday and Thursday IWM Short Term Option Daily Expirations will be the same as those for Tuesday and Thursday Short Term Option Daily Expirations in SPY and QQQ, applicable to the Short Term Option Series Program.[8] Interpretations and Policies .10 of Exchange Rule 404 provides that, notwithstanding any other provision regarding the interval of strike prices of series of options on Exchange-Traded Fund Shares in Exchange Rule 404, the interval of strike prices on options on IWM will be $1 or greater.[9] Further, Interpretations and Policies .02(e) of Exchange Rule 404 provides that the strike price interval for Short Term Option Series may be $0.50 or greater for option classes that trade in $1 strike price intervals and are in the Short Term Option Series Program. Therefore, the Tuesday and Thursday IWM Short Term Option Daily Expirations will have a $0.50 strike interval minimum. As is the case with other equity options series listed pursuant to the Short Term Option Series Program, the Tuesday and Thursday IWM Short Term Option Daily Expiration series will be P.M.-settled.

Pursuant to Exchange Rule 100,[10] with respect to the Short Term Option Series Program, a Tuesday or Thursday expiration series shall expire on the first business day immediately prior to that Tuesday or Thursday, *e.g.,* Monday or Wednesday of that week, respectively, if the Tuesday or Thursday is not a business day.

Currently, for each option class eligible for participation in the Short Term Option Series Program, the Exchange is limited to opening thirty (30) series for each expiration date for the specific class.[11] The thirty (30) series restriction does not include series that are open by other securities exchanges under their respective weekly rules; the Exchange may list these additional series that are listed by other options exchanges.[12] This thirty (30) series restriction would apply to Tuesday and Thursday IWM Short Term Option Daily Expiration series as well.

With this proposal, Tuesday and Thursday IWM Expirations would be treated the same as Tuesday and Thursday Expirations in SPY and QQQ. With respect to standard expiration option series, Short Term Option Daily Expirations may expire in the same week in which standard expiration option series on the same class expire. In the case of Monthly Options Series and Quarterly Options Series, no Short Term Option Series may expire on the same day as an expiration of a Monthly Options Series or Quarterly Options Series, respectively, in the same class.[13] Therefore, all Short Term Option Daily Expirations would expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days beyond the current week and are not business days in which standard expiration options series, Monthly Options Series, or Quarterly Options Series expire.

The Exchange does not believe that any market disruptions will be encountered with the introduction of P.M.-settled Tuesday and Thursday IWM Short Term Option Daily Expirations. The Exchange has the necessary capacity and surveillance programs in place to support and properly monitor trading in the proposed Tuesday and Thursday Short Term Option Daily Expirations. The Exchange currently trades P.M.-settled Short Term Option Series that expire Tuesday and Thursday for SPY and QQQ and has not experienced any market disruptions nor issues with capacity. Today, the Exchange has surveillance programs in place to support and properly monitor trading in Short Term Option Series that expire Tuesday and Thursday for SPY and QQQ.

Impact of Proposal

The Exchange notes that listings in the Short Term Option Series Program comprise a significant part of the standard listing in options markets. The below diagram taken from the Nasdaq ISE proposal demonstrates the percentage of weekly listings as compared to monthly, quarterly, and Long-Term Option Series in 2023 in the options industry.[14] The Exchange notes that during this time period all options exchanges mitigated weekly strike intervals.

[7] Today, IWM may trade on Mondays and Wednesdays in addition to Fridays, as is the case for all options series.

[8] *See* Interpretations and Policies .10 of Exchange Rule 404.

[9] Options on SPY, iShares Core S&P 500 ETF (''IVV''), QQQ, IWM, and the SPDR Dow Jones Industrial Average ETF (''DIA'') are also subject to Interpretations and Policies .10 of Exchange Rule 404.

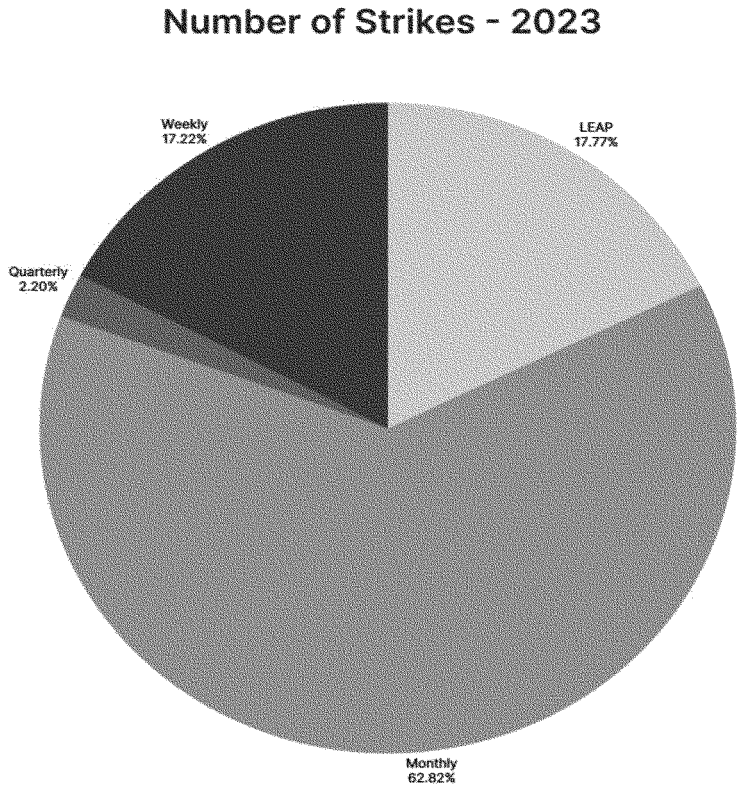
[10] The term ''Short Term Option Series'' means a series in an option class that is approved for listing and trading on the Exchange in which the series is opened for trading on any Monday, Tuesday, Wednesday, Thursday or Friday that is a business day and that expires on the Monday, Tuesday, Wednesday, Thursday, or Friday of the next business week, or, in the case of a series that is listed on a Friday and expires on a Monday, is listed one business week and one business day prior to that expiration. If a Tuesday, Wednesday, Thursday or Friday is not a business day, the series may be opened (or shall expire) on the first business day immediately prior to that Tuesday, Wednesday, Thursday or Friday, respectively. For a series listed pursuant to this section for Monday expiration, if a Monday is not a business day, the series shall expire on the first business day immediately following that Monday. *See* Exchange Rule 100.

[11] *See* Interpretations and Policies .02(c) and (d) of Exchange Rule 404.

[12] *See* Interpretations and Policies .02 of Exchange Rule 404.

[13] *See* Interpretations and Policies .02(b) of Exchange Rule 404.

[14] *See* Securities Exchange Act Release No. 99604 (February 26, 2024), 89 FR 15235 (March 1, 2024) (SR–ISE–2024–06) (Notice of Proposed Rule Change to Amend the Short Term Option Series Program). (ISE sourced this information from The Options Clearing Corporation (''OCC''). The information includes time averaged data (the number of strikes by maturity date divided from the number of trading days) for all 17 options markets through December 8, 2023.)



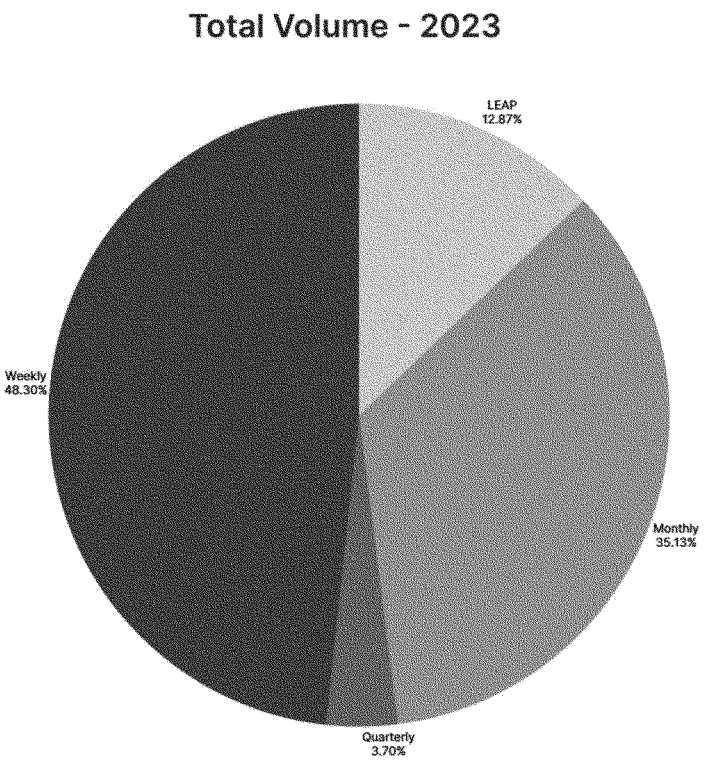
Similar to SPY and QQQ, the Exchange would limit the number of Short Term Option Daily Expirations for IWM to two expirations for Tuesday and Thursday expirations while expanding the Short Term Option Series Program to permit Tuesday and Thursday expirations for IWM. Expanding the Short Term Option Series Program to permit the listing of Tuesday and Thursday expirations in IWM will account for the addition of 6.77% of strikes for IWM.[15] With respect to the impact to the Short Term Option Series Program on IWM overall, the impact would be a 20% increase in strikes.[16] With respect to the impact to the Short Term Options Series Program overall, the impact would be a 0.1% increase in strikes.[17]

Members will continue to be able to expand hedging tools because all days of the week would be available to permit Members to tailor their investment and hedging needs more effectively in IWM.

[15] *See supra* note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)

[16] *See supra* note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)

[17] *See supra* note 14. (ISE sourced this information, which are estimates, from LiveVol®. The information includes data for all 17 options markets as of January 3, 2024.)



Weeklies comprise 48.30% of the total volume of options contracts.[18] The Exchange believes that inner weeklies (first two weeks) represent high volume as compared to outer weeklies (the last three weeks) and would be more attractive to market participants.

The introduction of IWM Tuesday and Thursday expirations will, among other things, expand hedging tools available to market participants and continue the reduction of the premium cost of buying protection. The Exchange believes that IWM Tuesday and Thursday expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Section 6(b)(5) of the Act,[20] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest.

The Exchange believes that IWM Tuesday and Thursday Short Term Daily Expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. Further, the proposal to permit Tuesday and Thursday Short Term Daily Expirations for options on IWM listed pursuant to the Short Term Option Series Program, subject to the proposed limitation of two nearest expirations, would protect investors and the public interest by providing the investing public and other market participants more flexibility to closely tailor their investment and hedging decisions in IWM options, thus allowing them to better manage their risk exposure.

In particular, the Exchange believes the Short Term Option Series Program has been successful to date and that Tuesday and Thursday IWM Short Term Daily Expirations should simply expand the ability of investors to hedge risk against market movements stemming from economic releases or market events that occur throughout the month in the same way that the Short Term Option Series Program has expanded the landscape of hedging. Similarly, the Exchange believes Tuesday and Thursday IWM Short Term Daily Expirations should create greater trading and hedging opportunities and provide customers the flexibility to tailor their investment objectives more effectively. The Exchange currently lists SPY and QQQ Tuesday and Thursday Short Term Daily Expirations.[21]

With this proposal, Tuesday and Thursday IWM Expirations would be treated similar to existing Tuesday and Thursday SPY and QQQ Expirations and would expire in the same week that standard monthly options expire on Fridays.[22] Further, today, Tuesday and Thursday Short Term Option Daily Expirations do not expire on a business day in which monthly options series or Quarterly Options Series expire.[23] Today, all Short Term Option Daily Expirations expire at the close of business on each of the next two Mondays, Tuesdays, Wednesdays, and Thursdays, respectively, that are business days and are not business days in which monthly options series or Quarterly Options Series expire. There are no material differences in the treatment of Tuesday and Thursday SPY and QQQ Short Term Daily Expirations as compared to the proposed Tuesday and Thursday IWM Short Term Daily Expirations.

Finally, the Exchange represents that it has an adequate surveillance program

[18] *See supra* note 14. (The chart represents industry volume in terms of overall contracts. Weeklies comprise 48.30% of volume while only comprising 17.22% of the strikes. ISE sourced this information from OCC. The information includes data for all 17 options markets through December 8, 2023.)

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(5).

[21] *See* Interpretations and Policies .02 of Exchange Rule 404.

[22] *See* Interpretations and Policies .02(b) of Exchange Rule 404.

[23] *See* Interpretations and Policies .02 of Exchange Rule 404.

in place to detect manipulative trading in the proposed Tuesday and Thursday IWM Short Term Daily Expirations, in the same way that it monitors trading in the current Short Term Option Series and trading in Tuesday and Thursday SPY and QQQ Expirations. The Exchange also represents that it has the necessary systems capacity to support the new options series. Finally, the Exchange does not believe that any market disruptions will be encountered with the introduction of Tuesday and Thursday IWM Short Term Daily Expirations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Similar to SPY and QQQ Tuesday and Thursday Expirations, the introduction of IWM Tuesday and Thursday Short Term Daily Expirations does not impose an undue burden on competition. The Exchange believes that it will, among other things, expand hedging tools available to market participants and continue the reduction of the premium cost of buying protection. The Exchange believes that IWM Tuesday and Thursday Short Term Daily Expirations will allow market participants to purchase IWM options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. The Exchange notes that Cboe began listing Tuesday and Thursday expirations in RUTW and MRUT on January 8, 2024.[24]

The Exchange does not believe the proposal will impose any burden on inter-market competition, as nothing prevents other options exchanges from proposing similar rules to list and trade Short-Term Option Series with Tuesday and Thursday Short Term Daily Expirations. The Exchange notes that having Tuesday and Thursday IWM expirations is not a novel proposal, as SPY and QQQ Tuesday and Thursday Expirations are currently listed on the Exchange.[25]

Further, the Exchange does not believe the proposal will impose any burden on intramarket competition, as all market participants will be treated in the same manner under this proposal.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[26] and Rule 19b–4(f)(6) thereunder.[27] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[28] and subparagraph (f)(6) of Rule 19b–4 thereunder.[29]

A proposed rule change filed under Rule 19b–4(f)(6)[30] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[31] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. According to the Exchange, the proposed rule change is a competitive response to a filing submitted by Nasdaq ISE that was recently approved by the Commission.[32] The Exchange has stated that waiver of the 30-day operative delay would permit the Exchange to implement the proposal at the same time as at least one other exchange, thus enhancing competition among exchanges by allowing Tuesday and Thursday IWM expirations to be traded on multiple exchanges. The Commission believes that the proposed rule change presents no novel issues and that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.[33]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2024–23 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2024–23. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public

[24] *See supra* note 5.

[25] *See* Interpretations and Policies .02 of Exchange Rule 404.

[26] 15 U.S.C. 78s(b)(3)(A)(iii).

[27] 17 CFR 240.19b–4(f)(6).

[28] 15 U.S.C. 78s(b)(3)(A)(iii).

[29] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[30] 17 CFR 240.19b-4(f)(6).

[31] 17 CFR 240.19b-4(f)(6)(iii).

[32] *See supra* note 3.

[33] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MIAX–2024–23 and should be submitted on or before May 17, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[34]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100008; File No. SR–ICC–2024–003]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change Relating to the ICC Collateral Risk Management Framework

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934,[1] and Rule 19b–4,[2] notice is hereby given that on April 16, 2024, ICE Clear Credit LLC (''ICC'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared primarily by ICC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The principal purpose of the proposed rule change is to revise the Collateral Risk Management Framework (''CRMF''). These revisions do not require any changes to the ICC Clearing Rules[3] (the ''Rules'').[4]

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements.

(A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

(a) Purpose

ICC proposes to revise its CRMF. The CRMF describes ICC's collateral assets risk management methodology, including a description of ICC's quantitative risk management approach that accounts for the risk associated with fluctuations of collateral asset prices. ICC believes the proposed revisions will facilitate the prompt and accurate clearance and settlement of securities transactions and derivative agreements, contracts, and transactions for which it is responsible. ICC proposes to make such changes effective following Commission approval of the proposed rule change. The proposed revisions are discussed in detail as follows.

The primary purpose of the proposed revisions is to address an internal audit recommendation to remove the 2-day 99.9% Value-at-Risk (''VaR'') risk measure from ICC's ''haircut'' model approach as such measure does not contribute to the determination of the collateral ''haircut'' factors and re-scale certain figures to accompany changes in the axis'.[5] In addition, ICC proposes revisions to the CRMF to correct errors in certain figures contained in the CRMF, typographical errors, and to update the revision history.

Under the current CRMF, the computation of the ''haircut'' factors is achieved by comparing two risk measures: (i) the 5-day 99% Expected Shortfall risk measure and (ii) the 2-day 99.9% VaR risk measure, and then utilizing the more conservative of these two risk measures to determine the ''haircut'' factors that capture potential collateral value losses.[6] In general, the 5-day 99% Expected Shortfall risk measure is a more conservative measurement than the 2-day 99.9% VaR risk measure, given the nature of the calculation (*i.e.,* expected shortfall versus VaR) and the longer measurement period (*i.e.,* 5 days versus 2 days). As a result, the 5-day 99% Expected Shortfall risk measure is the more conservative risk measurement as compared to the 2-day 99.9% VaR risk measure, and it is expected that the 5-day 99% Expected Shortfall risk measure will continue to be the more conservative of these two risk measures. Therefore, the inclusion of the 2-day 99.9% VaR risk measure has not in the past contributed to the determination of collateral ''haircut'' factors, nor is it expected to in the future. As a result, removal of the 2-day 99.9% VaR risk measure will not impact ICC's determination of collateral ''haircut'' factors and the removal of this unnecessary risk measure will simplify the CRMF.

Furthermore, the 2-day 99.9% VaR risk measure is inspired by the general regulatory margin-period-of-risk[7] (''MPOR'') for exchange-traded instruments, while the 5-day 99% Expected Shortfall risk measure is inspired by the MPOR for over-the-counter traded instruments. As ICC clears only over-the-counter swaps with a minimum MPOR of five days and does not clear exchange-traded instruments (with a 2-day MPOR), references to 2-day MPOR in the CRMF are not necessary.

To achieve the foregoing, ICC proposes revisions to the CRMF to remove all references to the 2-day 99.9% VaR risk measure and references

[34] 17 CFR 200.30–3(a)(12), (59).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] A copy of the ICC Clearing Rules can be found here: *https://www.ice.com/publicdocs/clear_clear/ICE_Clear_Credit_Rules.pdf.*

[4] Capitalized terms used but not defined herein have the meanings specified in the Rules.

[5] Haircuts are a risk management tool where assets are priced and posted as collateral at a discount, otherwise known as the 'haircut' for the purpose of taking into account their native market risks (*i.e.,* the risk of a decrease in value of the asset posted as collateral) as well as cross-currency risks (*i.e.,* the risk of the change in value of one currency as compared to the value of another currency) when the collateral is to be used to cover an obligation denominated in a different currency.

[6] The 1-day 99% VaR and the 1-day 99% ES risk measures are preserved in current figures 10, 24, 25 and 37. This is because under the statistical model, underpinning the 2-day 99.9% VaR and the 5-day 99% ES risk measures, are calibrated on the 1-day changes as discussed further in Section I, Paragraphs 2 and 3 of the CRMF, which summarizes (that the above-named current figures are still relevant as they preserve the 1-day risk horizon along with the 99% VaR back-testing results since they reflect the same quantile that is ultimately used to estimate collateral haircuts, namely the 99% quantile.

[7] Margin-period-of-risk or 'MPOR' is a maturity factor that is applied to reflect the length of exposure period over which the defaulted portfolio is exposed to changes in value.

the exchange-traded 2-day MPOR, which appear in the following sections of the CRMF: Section I.; Section 1.a. (including removal from Eq. 3); Section I.b. (including removal from Eq.5); Section III.; Section IV.a.; Section IV.b.; and Section IV.c. With the removal of the 2-day 99.9% VaR risk measure from the current two risk measure comparison, it is necessary to change plural nouns to singular nouns throughout the CRMF. In connection with the removal of the 2-day 99.9% VaR risk measure, ICC proposes to delete Figure 11, Figure 12, Figure 26, Figure 27, Figure 28, Figure 29, Figure 38 and Figure 39 from the CRMF as all such figures relate to the 2-day 99.9% VaR risk measure, including 1-day 99.9% VaR which was preserved to calculate 2-day 99.9% VaR.

As a consequence of deleting the figures discussed in the immediately prior paragraph, it is necessary to renumber the remaining figures, and references to the remaining figures, in the CRMF as follows:

- renumber Figure 13 to Figure 11;
- renumber Figure 14 to Figure 12;
- renumber Figure 15 to Figure 13;
- renumber Figure 16 to Figure 14;
- renumber Figure 17 to Figure 15;
- renumber Figure 18 to Figure 16;
- renumber Figure 19 to Figure 17;
- renumber Figure 20 to Figure 18;
- renumber Figure 21 to Figure 19;
- renumber Figure 22 to Figure 20;
- renumber Figure 23 to Figure 21;
- renumber Figure 24 to Figure 22;
- renumber Figure 25 to Figure 23;
- renumber Figure 30 to Figure 24;
- renumber Figure 31 to Figure 25;
- renumber Figure 32 to Figure 26;
- renumber Figure 33 to Figure 27;
- renumber Figure 34 to Figure 28;
- renumber Figure 35 to Figure 29;
- renumber Figure 36 to Figure 30;
- renumber Figure 37 to Figure 31; and
- renumber Figure 40 to Figure 32.

In addition to the foregoing proposed revisions related to the removal of the 2-day 99.9% VaR risk measure and the exchange-traded 2-day MPOR, ICC proposes the following additional revisions to the CRMF to re-scale certain figures and correct typographical errors. Specifically, ICC proposes to re-scale Figure 12, Figure 13, and Figure 26 to adjust the chart from percentage to bps. The change from percentage to bps does not affect the data, but it affects the visualization of the chart because when re-scaling from percentage to bps, the scale will be larger as 1 bps equals 1/100 of a percentage point. The figure numbers below reflect the figure renumbering as described above:

- Updated footnote 1 to the most current link to the ICC Collateral Management presentation on the Intercontinental Exchange, Inc. Website;
- Revised Figure 5: re-scaled Figure 5 to adjust bin sizes [8] (which relate to the thickness of each bar in the histogram) and re-scaled from bps to the correct label of percentage (''%'') on the x-axis; [9]
- Corrected and consistent use of defined term US TIPS;
- Corrected typographical error in label to Figure 8 which was incorrectly labeled Figure 5;
- Corrected and consistent use of defined term BTLS;
- Revised Figure 12: re-scaled Figure 12 from % to bps and added the correct label to x-axis; [10]
- Revised Figure 13: re-scaled Figure 13 from % to bps and added the correct label to x-axis; [11]
- Revised Figure 16: corrected the label in the y-axis from % to bps;
- Revised Figure 17: corrected the label in the y-axis from % to bps;
- Revised Figure 20: corrected the label in the y-axis from % to bps;
- Revised Figure 21: corrected the label in the y-axis from % to bps;
- Revised Figure 26: re-scaled Figure 26 from % to bps and added the correct label to the x-axis; [12]
- Revised Figure 28: corrected the label in the y-axis from % to bps; and
- Revised Figure 30: corrected the label in the y-axis from % to bps.

Lastly, ICC proposes to revise Section VI of the CRMF to update the revision history.

(b) Statutory Basis

ICC believes that the proposed rule change is consistent with the requirements of Section 17A of the Act [13] and the regulations thereunder applicable to it, including the applicable standards under Rule 17Ad–22.[14] In particular, Section 17A(b)(3)(F) of the Act [15] requires that the rule change be consistent with the prompt and accurate clearance and settlement of securities transactions and derivative agreements, contracts and transactions cleared by ICC, the safeguarding of securities and funds in the custody or control of ICC or for which it is responsible, and the protection of investors and the public interest.

As discussed herein, the proposed revisions to update the CRMF to remove the 2-day 99.9% VaR risk measure that does not contribute to the estimate of the collateral ''haircut'' factors and removes the unnecessary references to exchange-traded 2-day MPOR. The proposed revisions also correct errors and re-scale certain figures in the CRMF among other typographical errors. The proposed revisions would not amend ICC's methodology and will not impact ICC's determination of collateral ''haircut'' factors. In addition, the removal of the 2-day 99.9% VaR risk measure would simplify the CRMF and would promote effective operation of the collateral assets risk management model by eliminating an unused risk measure. In ICC's view, such changes promote transparency by removing an unused risk measure and only including relevant parameters, computations, equations, definitions, and figures to describe relevant processes, which would also ensure that responsible parties carry out their assigned duties effectively and aid them in doing so. Further, the correction and clarification changes ensure transparency, readability, and clarity by avoiding unnecessary repetition and duplication in the defined terms in the CRMF and correcting drafting errors. ICC believes that having policies and procedures that clearly and accurately document its risk measurements associated with fluctuations of collateral asset prices is an important component to the effectiveness of ICC's risk management system and support ICC's ability to maintain adequate financial resources and collateral management resources. Accordingly, ICC believes that the proposed rule change is consistent with the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions, the safeguarding of securities and funds in the custody or control of ICC or for which it is responsible, and the protection of investors and the public interest, within

[8] 'Bin size' in risk data refers to the width of intervals used to group similar data points when analyzing risk. The underlying data remains the same regardless of the bin size. A change in bin size, while not including different data, might apportion the data more widely or more narrowly across the chart within newly created intervals. As the distributions change, so could the trend lines across the intervals change.

[9] While the visual illustration of Figure 5 has changed (it is merely illustrative), the underlying data and estimations have remained unchanged.

[10] Figure 12's underlying data and estimates have remained constant with the correction from % to bps, however, the histogram is merely illustrative and the plots have been adjusted to reflect the correct estimations.

[11] Figure 13's underlying data and estimates have remained constant with the correction from % to bps, however, the histogram is merely illustrative and the plots have been adjusted to reflect the correct estimations.

[12] Figure 26's underlying data and estimates have remained constant with the correction from % to bps, however, the histogram is merely illustrative and the plots have been adjusted to reflect the correct estimations.

[13] 15 U.S.C. 78q–1.

[14] 17 CFR 240.17Ad–22.

[15] 15 U.S.C. 78q–1(b)(3)(F).

the meaning of Section 17A(b)(3)(F) of the Act.[16]

Rule 17Ad–22(e)(4)(ii) [17] requires ICC to establish, implement, maintain, and enforce written policies and procedures reasonably designed to effectively identify, measure, monitor, and manage its credit exposures to participants and those arising from its payment, clearing, and settlement processes, including by maintaining additional financial resources at the minimum to enable it to cover a wide range of foreseeable stress scenarios that include, but are not limited to, the default of the two participant families that would potentially cause the largest aggregate credit exposure for ICC in extreme but plausible market conditions. The proposed revisions enhance ICC's ability to manage its financial resources by providing further clarity and transparency on its collateral assets risk management approach through the updated risk measures in the CRMF, which will promote the effective and accurate function of the collateral assets risk management model. The proposed rule change would also enhance the implementation of various processes and procedures associated with the collateral assets risk management methodology to ensure that responsible parties effectively carry out their associated duties, including by providing relevant parameters, computations, equations, definitions, and figures. As such, the proposed amendments would support ICC's ability to maintain its financial resources and withstand the pressures of defaults, consistent with the requirements of Rule 17Ad–22(e)(4)(ii).[18]

Rule 17Ad–22(e)(5) [19] requires ICC to establish, implement, maintain, and enforce written policies and procedures reasonably designed to limit the assets it accepts as collateral to those with low credit, liquidity, and market risks, and set and enforce appropriately conservative haircuts and concentration limits if the covered clearing agency requires collateral to manage its or its participants' credit exposure; and require a review of the sufficiency of its collateral haircuts and concentration limits to be performed not less than annually. ICC would continue to limit the assets that ICC accepts as collateral to those with low credit, liquidity, and market risks under the proposed rule change. Collateral haircut factor estimations are executed daily, and the ICC Risk Department reviews the results and determines any updates, at least monthly. Haircut factors can be updated more frequently at the discretion of the CRO or designee. Furthermore, the CRMF continues to provide a clear framework for ICC to set and enforce appropriately conservative haircuts for acceptable collateral assets. The proposed revisions will improve clarity of the process of calculating the conservative collateral haircut factors that are executed daily. As such, the amendments would satisfy the requirements of Rule 17Ad–22(e)(5).[20]

(B) Clearing Agency's Statement on Burden on Competition

ICC does not believe the proposed rule change would have any impact, or impose any burden, on competition. The proposed changes to remove the 2-day 99.9% VaR risk measure and exchange-traded 2-day MPOR language do not amend ICC's methodology and would result in no change to market participants. ICC does not believe these amendments would affect the costs of clearing or the ability of market participants to access clearing. Therefore, ICC does not believe the proposed rule change imposes any burden on competition that is inappropriate in furtherance of the purposes of the Act.

(C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed rule change have not been solicited or received. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–ICC–2024–003 on the subject line.

Paper Comments

Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to file number SR–ICC–2024–003. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filings will also be available for inspection and copying at the principal office of ICE Clear Credit and on ICE Clear Credit's website at *https://www.ice.com/clear-credit/regulation.*

Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–ICC–2024–003 and should be submitted on or before May 17, 2024.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–647, OMB Control No. 3235–0697]

Proposed Collection; Comment Request; Extension: Form SD

Upon Written Request Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Form SD (17 CFR 249b–400) is required by section 13(p) (15 U.S.C. 78m(p)) of the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) (''Exchange Act'') and Rule 13p–1 thereunder (17 CFR 240.13p–1) and is filed by issuers to provide disclosures regarding the source and chain of custody of certain minerals used in their products. Section 13(q) was added by Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (''Dodd-Frank Act''). We estimate that, when used by filers to comply with section 13(p), Form SD takes approximately 480.61265 hours per response to prepare and is filed by approximately 1,009 issuers. We estimate that 75% of the 480.61265 hours per response (360.46 hours) is prepared by the issuer internally for a total annual burden of 363,704 hours (360.46 hours per response × 1009 responses).

Form SD is also used by filers to comply with section 13(q) of the Exchange Act (15 U.S.C. 78m(q)) and Rule 13q–1 thereunder (17 CFR 240.13q–1). Section 13(q) was added by section 1504 of the Dodd-Frank Act. Form SD is used by resource extraction issuers to disclose information relating to certain payments made by the issuer, a subsidiary of the issuer, or an entity under the control of the issuer, to a foreign government or the Federal Government for the purpose of the commercial development of oil, natural gas, or minerals. We estimate that, when used by filers to comply with section 13(q), Form SD takes approximately 296.9202 hours per response to prepare and is filed by approximately 414 issuers. We estimate that 75% of the 296.9202 hours per response (222.69 hours) is prepared by the issuer internally for a total annual burden of 192,194 hours (222.69 hours per response × 414 issuers responses).

For purposes of the Paperwork Reduction Act (''PRA''), we estimate that Form SD take approximately 427.1701 hours per response to comply with collection information requirements of sections 13(p) and 13(q) under the Exchange Act and is filed by 1,423 issuers. We estimate that 75% of the 427.1701 of hours per response (320.3775 hours) is prepared by the issuer internally for a total annual burden of 455,897 hours (320.3775 hours per response × 1,423 issuers). The estimated burden hours are made solely for the purposes of the Paperwork Reduction Act and are not derived from a comprehensive or even a representative survey or study of the costs of Commission rules and forms.

Written comments are invited on: (a) whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden imposed by the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication by June 25, 2024.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number.

Please direct your written comment to David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549 or send an email to: *PRA_Mailbox@sec.gov.*

Dated: April 23, 2024.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100010; File No. SR–CBOE–2024–019]

Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 10, 2024, Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of

[21] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Fees Schedule.[3] Specifically, the Exchange proposes to amend the Regular Trading Hours (''RTH'') XSP Lead Market-Makers (''LMMs'') Incentive Program (the ''Program'').

By way of background, the Exchange offers several LMM Incentive Programs which provide a rebate to Trading Permit Holders (''TPHs'') with LMM appointments to the respective incentive program that meet certain quoting standards in the applicable series in a month.[4] The Exchange notes that meeting or exceeding the quoting standards in each of the LMM incentive program products to receive the applicable rebate is optional for an LMM appointed to a program. Particularly, an LMM appointed to an incentive program is eligible to receive the corresponding rebate if it satisfies the applicable quoting standards, which the Exchange believes encourages appointed LMMs to provide liquidity in the applicable class and trading session (*i.e.,* RTH or Global Trading Hours). The Exchange may consider other exceptions to the programs' quoting standards based on demonstrated legal or regulatory requirements or other mitigating circumstances. In calculating whether an LMM appointed to an incentive program meets the applicable program's quoting standards each month, the Exchange excludes from the calculation in that month the business day in which the LMM missed meeting or exceeding the quoting standards in the highest number of the applicable series.

The Exchange proposes to amend the current Program. Currently, the Program provides that if an LMM appointed to the Program provides continuous electronic quotes during RTH that meet or exceed the proposed heightened quoting standards (below) in at least 95% of the series 93% of the time in a given month, the LMM will receive (i) a payment for that month in the amount of $40,000 (or pro-rated amount if an appointment begins after the first trading day of the month or ends prior to the last trading day of the month) and (ii) a rebate of $0.27 per XSP contract that is executed in RTH in Market-Maker capacity and adds liquidity electronically contra to non-customer capacity.

The Exchange now proposes to amend the time requirement for the Program. Specifically, the Exchange proposes to update the time requirement to require an appointed LMM to provide continuous electronic quotes during RTH that meet or exceed the heightened quoting standards in at least 95% of the XSP series 90% of the time in a given month in order to receive the rebate, thereby decreasing the time requirement by 3%.

Further, the Exchange proposes to amend the heightened quoting requirements offered by the Program. The current heightened quoting requirements are as follows in the table below:

WIDTH

Moneyness *	Expiring option	1 day	2 days to 5 days	6 days to 14 days	15 days to 35 days
VIX Value at Prior Close ≤30:					
[>3% ITM)	$0.20	$0.25	$0.25	$0.50	$1.00
[3% ITM to 2% ITM)	0.10	0.15	0.15	0.25	0.75
[2% ITM to 0.25% ITM)	0.04	0.05	0.05	0.06	0.10
[0.25% ITM to ATM)	0.02	0.03	0.04	0.05	0.08
[ATM to 1% OTM)	0.02	0.02	0.02	0.03	0.06
[>1% OTM]	0.02	0.02	0.02	0.02	0.04
VIX Value at Prior Close >30:					
[>3% ITM)	0.25	0.30	0.30	0.55	1.05
[3% ITM to 2% ITM)	0.15	0.20	0.20	0.30	0.80
[2% ITM to 0.25% ITM)	0.05	0.06	0.06	0.07	0.11
[0.25% ITM to ATM)	0.03	0.04	0.05	0.06	0.09
[ATM to 1% OTM)	0.03	0.03	0.03	0.04	0.07
[>1% OTM]	0.03	0.03	0.03	0.03	0.05

* Moneyness is calculated as 1 − strike/index for calls, strike/index − 1 for puts. Negative numbers are Out of the Money (''OTM'') and positive values are In the Money (''ITM''). A Moneyness value of zero for either calls or puts is considered At the Money (''ATM''). For example, if the index is at 400, the 396 call = 1 − 396/400 = 0.01 = 1% ITM, whereas the 396 put = 396/400 − 1 = −0.01 = 1% OTM.

Moneyness	Size (0 to 35 days to expiry)
[>3% ITM)	5
[3% ITM to 2% ITM)	10
[2% ITM to 0.25% ITM)	15
[0.25% ITM to ATM)	20
[ATM to 1% OTM)	20
[>1% OTM]	20

The Exchange proposes to restructure the Program and adopt a new set of heightened quoting standards. The heightened quoting standards proposed for XSP options are as follows in the table below:

[3] The Exchange initially filed the proposed fee changes on April 1, 2024 (SR–CBOE–2024–016). On April 2, 2024, the Exchange withdrew that filing and submitted SR–CBOE–2024–018. On April 10, 2024, the Exchange withdrew that filing and submitted this proposal.

[4] *See* Exchange Rule 3.55(a). In advance of the LMM Incentive Program effective date, the Exchange will send a notice to solicit applications from interested TPHs for the LMM role and will, from among those applications, select the program LMMs. Factors to be considered by the Exchange in selecting LMMs include adequacy of capital, experience in trading options, presence in the trading crowd, adherence to Exchange rules and ability to meet the obligations specified in Rule 5.55.

The amended time requirement and proposed heightened quoting standards are designed to incentivize LMMs appointed to the Program to provide significant liquidity in XSP options during the RTH session, which, in turn, would provide greater trading opportunities, added market transparency and enhanced price discovery for all market participants in XSP.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[5] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[6] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4) of the Act,[8] which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Trading Permit Holders and other persons using its facilities.

The Exchange believes it is reasonable to decrease the time requirement for the Program, as the change is reasonably designed to slightly ease the difficulty in meeting the heightened quoting standards offered under the Program (for which an appointed LMM receives the respective rebates), which, in turn, provides increased incentive for LMMs appointed to the program to provide significant liquidity in XSP options. Such liquidity benefits all market participants by providing more trading opportunities, tighter spreads, and added market transparency and price discovery, and signals to other market participants to direct their order flow to the market, thereby contributing to robust levels of liquidity.

Additionally, the Exchange believes that it is reasonable to amend the Program's heightened quoting standards, as the proposed new quoting requirements are overall reasonably designed to continue to encourage LMMs appointed to the Program to provide significant liquidity in XSP options, which benefits investors overall by providing more trading opportunities, tighter spreads, and overall enhanced market quality to the benefit of all market participants.

The Exchange believes that the proposed changes to width and quote sizes for the Program's heightened quoting requirements eases the heightened quoting standards in a manner that makes it easier for appointed LMMs to achieve such requirements and will incentivize an increase in quoting activity in XSP options. Particularly, by increasing certain quote widths and decreasing certain quote sizes, the Exchange believes the proposed changes will encourage appointed LMMs to post more aggressive quotes in XSP options, in order to meet the heightened quoting standards, as amended, and receive the rebates offered under the incentive program, resulting in tighter spreads and increased liquidity to the benefits of investors. The Exchange also believes that the proposed width and quote sizes are reasonable because they remain generally aligned with the current heightened standards in each program, as the proposed width and quote sizes are only marginally changed in order to incentivize an increase in quoting activity.

The Exchange believes that the proposed changes to the Program are equitable and not unfairly discriminatory. Specifically, the changes to the Program will apply equally to any and all TPHs with LMM

[5] 15 U.S.C. 78f(b).

[6] 15 U.S.C. 78f(b)(5).

[7] *Id.*

[8] 15 U.S.C. 78f(b)(4).

appointments to the Program that seek to meet the Programs' quoting standards in order to receive the rebates offered. The Exchange additionally notes that, if an LMM appointed to the Program does not satisfy the corresponding heightened quoting standard for any given month, then it simply will not receive the rebate offered by the Program for that month.

Regarding the Program generally, the Exchange believes it is reasonable, equitable and not unfairly discriminatory to continue to offer financial incentives to LMMs appointed to the Program, because it benefits all market participants trading in XSP options during RTH. The incentive program encourages the appointed LMMs to satisfy the applicable quoting standards, which may increase liquidity and provide more trading opportunities and tighter spreads. Indeed, the Exchange notes that these LMMs serve a crucial role in providing quotes and the opportunity for market participants to trade XSP options, which can lead to increased volume, providing robust markets. The Exchange ultimately offers the Program, as amended, to sufficiently incentivize LMMs appointed to the Program to provide key liquidity and active markets in the XSP options during RTH and believes that the incentive program, as amended, will continue to encourage increased quoting to add liquidity in XSP options, thereby protecting investors and the public interest. The Exchange also notes that an LMM appointed to an incentive program may undertake added costs each month to satisfy that heightened quoting standards (*e.g.,* having to purchase additional logical connectivity).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. First, the Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the proposed changes to the Program will apply to all appointed LMMs in a uniform manner. To the extent LMMs appointed to the incentive program receive a benefit that other market participants do not, as stated, these LMMs in their role as Market-Makers on the Exchange have different obligations and are held to different standards. For example, Market-Makers play a crucial role in providing active and liquid markets in their appointed products, thereby providing a robust market which benefits all market participants. Such Market-Makers also have obligations and regulatory requirements that other participants do not have. The Exchange also notes that an LMM appointed to an incentive program may undertake added costs each month to satisfy that heightened quoting standards (*e.g.,* having to purchase additional logical connectivity). The Exchange also notes that the incentive programs are designed to attract additional order flow to the Exchange, wherein greater liquidity benefits all market participants by providing more trading opportunities, tighter spreads, and added market transparency and price discovery, and signals to other market participants to direct their order flow to those markets, thereby contributing to robust levels of liquidity. As a result, the Exchange believes that the proposed change furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes ''more efficient pricing of individual stocks for all types of orders, large and small.'' [9]

The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act as the Program applies only to transactions in a product exclusively listed on the Exchange. As noted above, the incentive program is designed to attract additional order flow to the Exchange, wherein greater liquidity benefits all market participants by providing more trading opportunities, tighter spreads, and added market transparency and price discovery, and signals to other market participants to direct their order flow to those markets, thereby contributing to robust levels of liquidity. The Exchange notes that it operates in a highly competitive market. TPHs have numerous alternative venues that they may participate on and direct their order flow, including 16 other options exchanges, as well as off-exchange venues, where competitive products are available for trading. Based on publicly available information, no single options exchange has more than 15% of the market share.[10] Therefore, no exchange possesses significant pricing power in the execution of option order flow. Indeed, participants can readily choose to send their orders to other exchanges, and, additionally off-exchange venues, if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [11] The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[12] Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [13] and paragraph (f) of Rule 19b–4 [14] thereunder. At any time within 60 days of the filing of the proposed rule

[9] *See* Securities Exchange Act Release No. 51808, 70 FR 37495, 37498–99 (June 29, 2005) (S7–10–04) (Final Rule).

change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CBOE–2024–019 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CBOE–2024–019. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CBOE–2024–019 and should be submitted on or before May 17, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[15]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100005; File No. SR–CboeBZX–2024–027]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule Related to Physical Port Fees

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 9, 2024, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BZX/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The physical ports may

[15] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeBZX–2023–046). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–067. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP''). On October 2, 2023, the Exchange filed the proposed fee change (SR–CboeBZX–2023–080). On October 13, 2023, the Exchange withdrew that filing and on business date October 16, 2023 submitted SR–CboeBZX–2023–084. On December 12, 2023, the Exchange withdrew that filing and submitted SR–CboeBZX–2023–103. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeBZX–2024–016. On April 9, 2024, the Exchange withdrew that filing and submitted this filing.

also be used to access the Systems for the following affiliate exchanges and only one monthly fee currently (and will continue) to apply per port: the Exchange's options platform (BZX Options), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe BYX Exchange, Inc., Cboe EDGA Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5]

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[6] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[9] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities.

The Exchange believes the proposed fee change is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports. Further, the current 10 Gb physical port fee has remained unchanged since June 2018.[10] Since its last increase over 5 years ago however, there has been notable inflation. Particularly, the dollar has had an average inflation rate of 3.9% per year between 2018 and today, producing a cumulative price increase of approximately 21.1% inflation since the fee for the 10 Gb physical port was last modified.[11] Moreover, the Exchange historically does not increase fees every year, notwithstanding inflation. Accordingly, the Exchange believes the proposed fee is reasonable as it represents only an approximate 13% increase from the rates adopted five years ago, notwithstanding the cumulative rate of 21.1%. The Exchange is also unaware of any standard that suggests any fee proposal that exceeds a certain yearly or cumulative inflation rate is unreasonable, and in any event, in this instance the increase is well below the cumulative rate.

Additionally, the Exchange believes the proposed fee increase is reasonable in light of recent and anticipated connectivity-related upgrades and changes. The Exchange and its affiliated exchanges recently launched a multi-year initiative to improve Cboe Exchange Platform performance and capacity requirements to increase competitiveness, support growth and advance a consistent world class platform. The goal of the project, among other things, is to provide faster and more consistent order handling and matching performance for options, while ensuring quicker processing time and supporting increasing volumes and capacity needs. For example, the Exchange recently performed switch hardware upgrades. Particularly, the Exchange replaced existing customer access switches with newer models, which the Exchange believes resulted in increased determinism. The recent switch upgrades also increased the Exchange's capacity to accommodate more physical ports by nearly 50%. Network bandwidth was also increased nearly two-fold as a result of the upgrades, which among other things, can lead to reduce message queuing. The Exchange also believes these newer models result in less natural variance in the processing of messages. The Exchange notes that it incurred costs associated with purchasing and upgrading to these newer models, of which the Exchange has not otherwise passed through or offset.

As of April 1, 2024, market participants also having the option of connecting to a new data center (*i.e.,* Secaucus NY6 Data Center (''NY6'')), in addition to the current data centers at NY4 and NY5. The Exchange made NY6 available in response to customer requests in connection with their need for additional space and capacity. In order to make this space available, the Exchange expended significant resources to prepare this space, and will also incur ongoing costs with respect to maintaining this offering, including costs related to power, space, fiber, cabinets, panels, labor and maintenance of racks. The Exchange also incurred a large cost with respect to ensuring NY6 would be latency equalized, as it is for NY4 and NY5.

The Exchange also has made various other improvements since the current physical port rates were adopted in 2018. For example, the Exchange has updated its customer portal to provide more transparency with respect to firms' respective connectivity subscriptions, enabling them to better monitor, evaluate and adjust their connections based on their evolving business needs. The Exchange also performs proactive audits on a weekly basis to ensure that all customer cross connects continue to fall within allowable tolerances for Latency Equalized connections. Accordingly, the Exchange expended, and will continue to expend, resources to innovate and modernize technology so that it may benefit its Members and continue to compete among other equities markets. The ability to continue to innovate with technology and offer new products to market participants allows the Exchange to remain competitive in the equities space which currently has 16 equities markets and potential new entrants. The Exchange also believes the proposed fee is reasonable as it is still in line with, or even lower than, amounts assessed by other exchanges for similar connections.[12] Indeed, the Exchange believes assessing fees that are a lower rate than fees assessed by other exchanges for analogous connectivity (which were similarly adopted via the rule filing process and filed with the Commission) is reasonable. As noted above, the proposed fee is also the same as is concurrently being proposed for its Affiliate Exchanges. Further, Members are able to utilize a single port to connect to any of the Affiliate

Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

[11] *See https://www.officialdata.org/us/inflation/2010?amount=1.*

[12] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

Exchanges with no additional fee assessed for that same physical port. Particularly, the Exchange believes the proposed monthly per port fee is reasonable, equitable and not unfairly discriminatory as it is assessed only once, even if it connects with another affiliate exchange since only one port is being used and the Exchange does not wish to charge multiple fees for the same port. Indeed, the Exchange notes that several ports are in fact purchased and utilized across one or more of the Exchange's affiliated Exchanges (and charged only once).

The Exchange also believes that the proposed fee change is not unfairly discriminatory because it would be assessed uniformly across all market participants that purchase the physical ports. The Exchange believes increasing the fee for 10 Gb physical ports and charging a higher fee as compared to the 1 Gb physical port is equitable as the 1 Gb physical port is 1/10th the size of the 10 Gb physical port and therefore does not offer access to many of the products and services offered by the Exchange (*e.g.,* ability to receive certain market data products). Thus, the value of the 1 Gb alternative is lower than the value of the 10 Gb alternative, when measured based on the type of Exchange access it offers. Moreover, market participants that purchase 10 Gb physical ports utilize the most bandwidth and therefore consume the most resources from the network. The Exchange also anticipates that firms that utilize 10 Gb ports will benefit the most from the Exchange's investment in offering NY6 as the Exchange anticipates there will be much higher quantities of 10 Gb physical ports connecting from NY6 as compared to 1 Gb ports. Indeed, the Exchange notes that 10 Gb physical ports account for approximately 90% of physical ports across the NY4, NY5, and NY6 data centers, and to date, 80% of new port connections in NY6 are 10 Gb ports. As such, the Exchange believes the proposed fee change for 10 Gb physical ports is reasonably and appropriately allocated.

The Exchange also notes Members and non-Members will continue to choose the method of connectivity based on their specific needs and no broker-dealer is required to become a Member of, let alone connect directly to, the Exchange. There is also no regulatory requirement that any market participant connect to any one particular exchange. Market participants may voluntarily choose to become a member of one or more of a number of different exchanges, of which, the Exchange is but one choice. Additionally, any Exchange member that is dissatisfied with the proposal is free to choose not to be a member of the Exchange and send order flow to another exchange. Moreover, direct connectivity is not a requirement to participate on the Exchange. The Exchange also believes substitutable products and services are available to market participants, including, among other things, other equities exchanges that a market participant may connect to in lieu of the Exchange and/or trading of any equities product, such as within the Over-the-Counter (OTC) markets which do not require connectivity to the Exchange. Indeed, there are currently 16 registered equities exchanges that trade equities (12 of which are not affiliated with Cboe), some of which have similar or lower connectivity fees.[13] Based on publicly available information, no single equities exchange has more than approximately 16% of the market share.[14] Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers. For example, in 2020 alone, three new exchanges entered the market: Long Term Stock Exchange (LTSE), Members Exchange (MEMX), and Miami International Holdings (MIAX Pearl).

As noted above, there is no regulatory requirement that any market participant connect to any one equities exchange, nor that any market participant connect at a particular connection speed or act in a particular capacity on the Exchange, or trade any particular product offered on an exchange. Moreover, membership is not a requirement to participate on the Exchange. Indeed, the Exchange is unaware of any one equities exchange whose membership includes every registered broker-dealer. By way of example, while the Exchange has 132 members that trade equities, Cboe EDGX has 124 members that trade equities, Cboe EDGA has103 members and Cboe BYX has 110 members. There is also no firm that is a Member of BZX Equities only. Further, based on publicly available information regarding a sample of the Exchange's competitors, NYSE has 143 members,[15] IEX has 129 members,[16] and MIAX Pearl has 51 members.[17]

Vigorous competition among national securities exchanges provides many alternatives for firms to voluntarily decide whether direct connectivity to the Exchange is appropriate and worthwhile, and as noted above, no broker-dealer is required to become a Member of the Exchange, let alone connect directly to it. In the event that a market participant views the Exchange's proposed fee change as more or less attractive than the competition, that market participant can choose to connect to the Exchange indirectly or may choose not to connect to that exchange and connect instead to one or more of the other 12 non-Cboe affiliated equities markets. Indeed, market participants are free to choose which exchange to use to satisfy their business needs. Moreover, if the Exchange charges excessive fees, it may stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity. Notwithstanding the foregoing, the Exchange still believes that the proposed fee increase is reasonable, equitably allocated and not unfairly discriminatory, even for market participants that determine to connect directly to the Exchange for business purposes, as those business reasons should presumably result in revenue capable of covering the proposed fee.

The Exchange lastly notes that it is not required by the Exchange Act, nor any other rule or regulation, to undertake a cost-of-service or rate-making approach with respect to fee proposals. Moreover, Congress's intent in enacting the 1975 Amendments to the Act was to enable competition—rather than government order—to determine prices. The principal purpose of the amendments was to facilitate the creation of a national market system for the trading of securities. Congress intended that this ''national market system evolve through the interplay of *competitive forces* as unnecessary regulatory restrictions are removed.'' [18] Other provisions of the Act confirm that intent. For example, the Act provides that an exchange must design its rules ''to remove impediments to and perfect

the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.'' [19] Likewise, the Act grants the Commission authority to amend or repeal ''[t]he rules of [an] exchange [that] impose any burden on competition not necessary or appropriate in furtherance of the purposes of this chapter.'' [20] In short, the promotion of free and open competition was a core congressional objective in creating the national market system.[21] Indeed, the Commission has historically interpreted that mandate to promote competitive forces to determine prices whenever compatible with a national market system. Accordingly, the Exchange believes it has met its burden to demonstrate that its proposed fee change is reasonable and consistent with the immediate filing process chosen by Congress, which created a system whereby market forces determine access fees in the vast majority of cases, subject to oversight only in particular cases of abuse or market failure. Lastly, and importantly, the Exchange believes that, even if it were possible as a matter of economic theory, cost-based pricing for the proposed fee would be so complicated that it could not be done practically.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (i.e., all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing). While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The Exchange's proposed fee is also still lower than some fees for similar connectivity on other exchanges and therefore may stimulate intermarket competition by attracting additional firms to connect to the Exchange or at least should not deter interested participants from connecting directly to the Exchange. Further, if the changes proposed herein are unattractive to market participants, the Exchange can, and likely will, see a decline in connectivity via 10 Gb physical ports as a result. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect directly to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative venues that they may participate on and direct their order flow, including 12 non-Cboe affiliated equities markets, as well as off-exchange venues, where competitive products are available for trading. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [22] The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition* v. *Securities and Exchange Commission,* the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[23] Accordingly, the Exchange does not believe its proposed change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [24] and paragraph (f) of Rule 19b–4 [25] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2024–027 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange

All submissions should refer to file number SR–CboeBZX–2024–027. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2024–027 and should be submitted on or before May 17, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[26]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–99998; File No. SR–MEMX–2024–14]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Exchange's Fee Schedule Regarding Options Market Data Products

April 19, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 15, 2024, MEMX LLC (''MEMX'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to amend the Market Data section of its fee schedule applicable to its equity options platform (''MEMX Options'') to adopt fees for certain of its market data products, which are currently offered free of charge, pursuant to MEMX Rules 15.1(a) and (c). The Exchange proposes to implement the changes to the Fee Schedule pursuant to this proposal immediately. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Market Data section of the Exchange's fee schedule applicable to MEMX Options (''MEMX Options Fee Schedule'') to adopt fees for certain of its options market data products which are currently offered free of charge, namely MEMOIR Options Depth and MEMOIR Options Top (collectively, the ''Options Data Feeds''). As set forth below, the Exchange believes that the proposed fees are fair and reasonable and has based its proposal on the fact that competitive forces exist with respect to Options Data Feeds, the fact that Options Data Feeds are optional data products for which there are substitutes, a comparison to competitor pricing, and a detailed cost analysis. The Exchange is proposing to implement the proposed fees on April 15, 2024. The Exchange previously filed this proposal on March 28, 2024 (SR–MEMX–2024–11) (the ''Initial Proposal''). The Exchange has withdrawn the Initial Proposal and replaced the proposal with the current filing (SR–MEMX–2024–14).

Before setting forth the additional details regarding the proposal as well as the cost analysis conducted by the Exchange, immediately below is a description of the proposed fees.

Proposed Market Data Pricing

MEMX Options offers two separate data feeds to subscribers—MEMOIR Options Depth and MEMOIR Options Top. The Exchange notes that there is no requirement that any subscribing entity (''Firm'') subscribe to a particular Options Data Feed or any Options Data Feed whatsoever, but instead, a Firm may choose to maintain subscriptions to those Options Data Feeds they deem appropriate based on their business model. The proposed fee will not apply differently based upon the size or type of Firm, but rather based upon the subscriptions a Firm has to Options Data Feeds. The proposed pricing for each of the Options Data Feeds is set forth below.

MEMOIR Options Depth

The MEMOIR Options Depth feed is a MEMX-only market data feed that contains depth of book quotations and execution information based on options orders entered in the System.[3] For the

[3] *See* MEMX Rule 21.15(b)(1).

receipt of access to the MEMOIR Options Depth feed, the Exchange proposes to charge $1,500 per month. This proposed access fee would be charged to any data recipient that receives a data feed of the MEMOIR Options Depth feed for purposes of internal distribution (*i.e.,* an ''Internal Distributor''), for external redistribution (*i.e.* an ''External Distributor''), or both. The Exchange proposes to define an Internal Distributor as ''a Distributor that receives an Exchange Data product and then distributes that data to one or more data recipients within the Distributor's own organization,'' [4] and an External Distributor as ''a Distributor that receives an Exchange Data product and then distributes that data to a third party or one or more data recipients outside the Distributor's own organization.'' [5] The proposed access fee will be charged only once per month per Firm regardless of whether the Firm uses the MEMOIR Options Depth feed for internal distribution, external distribution, or both.[6]

MEMOIR Options Top

The MEMOIR Options Top feed is a MEMX-only market data feed that contains top of book quotations and executions based on options orders entered into the System.[7] For the receipt of access to the MEMOIR Options Top feed, the Exchange proposes to charge $750 per month. This proposed access fee would be charged to any data recipient that receives a data feed of the MEMOIR Options Top feed for purposes of internal distribution (*i.e.,* an Internal Distributor), external redistribution (*i.e.* an External Distributor), or both. The proposed access fee for internal and external distribution will be charged only once per month per Firm regardless of whether the Firm uses the MEMOIR Options Top feed for internal distribution, external distribution, or both.

Billing Process

The Exchange proposes to bill for the Options Data Feeds in the same manner as it does for the market data products it provides for its equities Exchange, (the ''Equities Data Feeds''), and to make this clear on the Fee Schedule. Specifically, the Fee Schedule would state that ''[f]ees for Market Data products are assessed based on each active product at the close of business on the first day of each month,'' and that ''[i]f a product is cancelled by a subscriber's submission of a written request or via the MEMX User Portal prior to such fee being assessed, then the subscriber will not be obligated to pay the applicable product fee. MEMX does not return pro rated fees if a product is not used for an entire month.'' The Exchange believes that this billing methodology has been efficient with respect to the Equities Data Feeds and is well understood by market participants.

Additional Discussion—Background

The Exchange launched MEMX Options on September 27, 2023. As a new entrant in the equity options trading space, MEMX has not yet charged fees for options market data provided by the Exchange. The objective of this approach was to eliminate any fee-based barriers for Members to join the Exchange, which the Exchange believes has been helpful in its ability to attract order flow as a new options exchange. Further, the Exchange did not initially charge for options market data because MEMX believes that any exchange should first deliver meaningful value to Members and other market participants before charging fees for its products and services.

The Exchange also did not begin charging for the Equities Data Feeds until 2022, nearly two years after it launched as a national securities exchange in 2020. In connection with the adoption of fees for the Equities Data Feeds, the Exchange conducted an extensive cost analysis (the ''2022 Cost Analysis''),[8] and the Exchange's proposal herein to adopt fees for Options Data Feeds stems from the same cost analysis, which it has reviewed and updated for 2024 (the ''2024 Cost Analysis''). As discussed more fully below, the Exchange recently calculated its annual aggregate costs for providing market data for both its equities and options trading platforms (*i.e.* the ''Exchange Data Feeds'') at approximately $3.6 million.[9] In order to establish fees that are designed to recover the aggregate costs of providing the Exchange Data Feeds with a reasonable profit margin, the Exchange is proposing to modify its Fee Schedule, as described above. In addition to the 2024 Cost Analysis, described below, the Exchange believes that its proposed approach to market data fees is reasonable based on a comparison to competitors.

Additional Discussion—Comparison With Other Exchanges

The proposed fee structure for the Options Data Feeds is not novel but is instead comparable to the fee structure currently in place for the options exchanges operated by MIAX, in particular, MIAX Pearl Options (''MIAX Pearl''),[10] and the options exchanges operated by Nasdaq, in particular, Nasdaq BX Options (''BX Options'').[11] The Exchange is proposing fees for its Options Data Feeds that are similar in structure to MIAX Pearl and BX Options and rates that are equal to, or lower than, than the rates data recipients pay for comparable data feeds from those exchanges, in a more simplified fashion.[12] The Exchange notes that other competitors maintain fees applicable to options market data that are considerably higher than those proposed by the Exchange, including Cboe BZX Options (''BZX Options''), NYSE Arca Options and NYSE American Options.[13] However, the

[4] *See* Market Data Definitions under the proposed MEMX Options Fee Schedule. The Exchange also proposes to adopt a definition for ''Distributor'', which would mean any entity that receives an Exchange Data product directly from the Exchange or indirectly through another entity and then distributes internally or externally to a third party.

[5] *See* Market Data Definitions under the proposed MEMX Options Fee Schedule.

[6] The proposed definitions of Internal Distributor and External Distributor are the same definitions used in the Exchange's Equities Fee Schedule.

[7] *See* MEMX Rule 21.15(b)(2).

[8] *See* Securities Exchange Act Release No. 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR–MEMX–2023–04).

[9] As described more fully below, the Exchange's Cost Analysis combines costs and revenues for Equities and Options in order to not double count any allocations, among other reasons.

[10] See MIAX Pearl Options Fee Schedule, available at: *https://www.miaxglobal.com/markets/us-options/pearl-options/fees* (the ''MIAX Pearl Fee Schedule'').

[11] See the Nasdaq BX Options Fee Schedule, available at: *https://listingcenter.nasdaq.com/rulebook/bx/rules/bx-options-7.*

[12] As noted below, based on its review of MIAX Pearl's Fee Schedule, the Exchange believes that MIAX Pearl charges separate fees for Internal and External Distribution of its options data feeds, and while its External Distribution fees are identical to the Exchange's proposed flat fee for all uses for both comparable products, its Internal Distribution Fees are slightly lower than what the Exchange is proposing for access to the Exchange's Options Data Feeds. Nevertheless, given that the Exchange allows both Internal and External Distribution for a single fee for a single data feed, the Exchange believes its proposed fees remain comparable and competitive with MIAX Pearl.

[13] Fees for BZX Options Depth, which is the comparable product to MEMOIR Options Depth, are $3,000 for internal distribution and $2,000 for external distribution compared to the Exchange's proposed fee of $1,500 for all uses. In addition, BZX Options charges professional user fees of $30 per month and non-professional user fees of $1.00 per month for each entity to which it distributes the feed (alternatively, it offers distributors an option to purchase a monthly Enterprise Fee of $3,500 to distribute to an unlimited number of users), which the Exchange is not proposing to charge. Fees for BZX Options Top, which is the comparable product to MEMOIR Options Top, are $3,000 for internal distribution, $2,000 for external distribution, with Professional User Fees of $5 per month, Non-Professional Fees of $0.10 per month per user, or an Enterprise Fee ranging anywhere from $20,000 to $60,000 per month depending on the number of

Exchange has focused its comparison on MIAX Pearl and BX Options because their similar market data products are offered at prices lower than several other incumbent exchanges, which is a similar approach to that proposed by the Exchange.[14]

The fees for the MIAX Pearl Liquidity Feed—which like the MEMOIR Options Depth feed, includes top of book, depth of book, trades, and administrative messages—consist of an internal distributor access fee of $1,250 per month and an external distributor access fee of $1,500 per month. As such, the Exchange's proposed rate for all uses of $1,500 per month is equal to what MIAX Pearl charges for external distribution, and $250 higher than what it charges for internal distribution only.[15]

The fees for the MIAX Pearl Top of Market Feed—which is the comparable product to MEMOIR Options Top, consist of an internal distributor access fee of $500 per month and an external distributor access fee of $750. Again, the Exchange's proposed rate for all uses of $750 per month is identical to what MIAX Pearl charges for external distribution, and $250 higher than what it charges for internal distribution.

While the Exchange's proposed fee is slightly higher than what MIAX Pearl charges for internal distribution of its similar products, the Exchange believes that the simplicity of a single fee is preferable, specifically by reducing audit risk and simplifying reporting, both for the Exchange and its customers. Further, to the extent MIAX Pearl assesses both fees for both uses, it would cost more overall to receive and provide both internal and external distribution of MIAX Pearl's comparable options data feeds than it does to receive and provide both internal and external distribution of the Exchange's Options Data Feeds.

As an additional cost comparison, the fees for both Nasdaq BX Options Depth of Market Feed (''BX Depth'') and Top of Market Feed (''BX Top'') are $1,500 per month for internal distribution and $2,000 for external distribution, with an added $2,500 fee for a non-Display Enterprise License.[16] While one distributor fee allows access to both BX Top and BX Depth, (for example, $1,500 per month would allow a BX Options customer internal distribution of both BX Top and BX Depth) if a BX Options Customer wanted the same access provided under the Exchange's proposed fees, (*i.e.* for all uses) it would need to pay an additional $2,000 for external distribution and $2,500 per month for a non-display enterprise license fee. In addition, BX Options charges monthly per subscriber fees for professional or non-professional use[17] which the Exchange will not charge for its similar market data products.

Additional Discussion—Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs. Accordingly, in proposing to charge fees for Options Data Feeds, the Exchange has sought to be especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and also carefully and transparently assessing the impact on Members—both generally and in relation to other Members, *i.e.,* to assure the fee will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange does not believe it needs to otherwise address questions about market competition in the context of this filing because the proposed fees are so clearly consistent with the Act based on its 2024 Cost Analysis. The Exchange also believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[18] and Rule 19b–4 thereunder,[19] with respect to the types of information self-regulatory organizations (''SROs'') should provide when filing fee changes, and Section 6(b) of the Act,[20] which requires, among other things, that exchange fees be reasonable and equitably allocated,[21] not designed to permit unfair discrimination,[22] and that they not impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[23] This rule change proposal addresses those requirements, and the analysis and data in this section are designed to clearly and comprehensively show how they are met.[24]

As noted above, MEMX has conducted and recently updated a study of its aggregate costs to produce the Exchange Data Feeds—the 2024 Cost Analysis. The 2024 Cost Analysis required a detailed analysis of MEMX's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services and trading permits, regulatory services, physical connectivity, and application sessions (which provide order entry, cancellation and modification functionality, risk functionality, ability to receive drop copies, and other functionality). MEMX separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers''). Next, MEMX adopted an allocation methodology with various principles to guide how much of a particular cost should be allocated to

users to which the distributer plans to distribute the feed. Again, the Exchange is not proposing any additional User Fees for MEMOIR Options Top, but rather, a flat fee of $750 for all uses. *See* the BZX Options Fee Schedule, available at: *https://www.cboe.com/us/options/membership/fee_schedule/bzx/.* Fees for NYSE Arca Options Deep and NYSE American Options Deep, which are the comparable products to MEMOIR Options Depth, are $3,000 for access (internal use) and $2,000 for redistribution (external distribution), and $5,000 for non-display use, compared to the Exchange's proposed fee of $1,500 for all uses. NYSE Arca Options and NYSE American Options also charge professional user fees of $50 per User, and Non-Professional User Fees of $1.00 per user, capped at $5,000 per month. Again, the Exchange does not require any counting of users and has instead proposed a flat fee of $1,500 for all uses. Fees for the NYSE Arca Options Top and NYSE American Options Top, which are the comparable products to MEMOIR Options Top are the same as above ($3,000 for internal, $2,000 for external and $5,000 for non-display, with the additional Professional and Non-Professional User Fees), compared to the Exchange's proposed fee of $750 for all uses. *See* NYSE Proprietary Market Data Pricing Guide, available at: *https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Pricing.pdf.*

[24] In 2019, Commission staff published guidance suggesting the types of information that SROs may use to demonstrate that their fee filings comply with the standards of the Exchange Act (''Fee Guidance''). While MEMX understands that the Fee Guidance does not create new legal obligations on SROs, the Fee Guidance is consistent with MEMX's view about the type and level of transparency that exchanges should meet to demonstrate compliance with their existing obligations when they seek to charge new fees. *See* Staff Guidance on SRO Rule Filings Relating to Fees (May 21, 2019) available at *https://www.sec.gov/tm/staff-guidancesro-rule-filings-fees* [sic].

each core service. For instance, fixed costs that are not driven by client activity (*e.g.,* message rates), such as data center costs, were allocated more heavily to the provision of physical connectivity (80%), with smaller allocations to logical ports (11%), and the remainder to the provision of transaction execution, regulatory services, and market data services (9%). The allocation methodology was decided through conversations with senior management familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an estimated allocation of each cost driver to each core service, resulting in the cost allocations described below.

By allocating segmented costs to each core service, MEMX was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has four primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services, membership and regulatory fees, and market data fees. Accordingly, the Exchange generally must cover its expenses from these four primary sources of revenue.

Through the Exchange's extensive 2024 Cost Analysis, the Exchange analyzed every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of the Exchange Data Feeds, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of the Exchange Data Feeds, and thus bears a relationship that is, ''in nature and closeness,'' directly related to the Exchange Data Feeds. Based on its analysis, MEMX calculated its aggregate annual costs for providing the Exchange Data Feeds, at $3,683,375. This results in an estimated monthly cost for providing Exchange Data Feeds of $306,948. The Exchange notes that it utilized the same principles to generate the Cost Analysis in 2022 applicable to the Equities Data Feeds only, and at that time, the estimated annual aggregate cost to provide the Equities Data fees was $3,014,348. The differences between such estimated costs and the overall analysis are primarily based on: (1) the addition of MEMX Options, (ii) increased, and in some cases decreased, costs projected by the Exchange, (iii) and changes made to reallocate certain costs into categories that more closely align the Exchange's audited financial statements, as further described below.

Costs Related to Offering Exchange Data Feeds

The following chart details the individual line-item (annual) costs considered by MEMX to be related to offering the Exchange Data Feeds to its Members and other customers as well as the percentage of the Exchange's overall costs that such costs represent for such area (*e.g.,* as set forth below, the Exchange allocated approximately 8% of its overall Human Resources cost to offering Exchange Data Feeds).

COSTS DRIVER	COSTS	% of ALL
Human Resources	$ 2,606,282	8%
Data Center	$ 69,340	2%
Technology (Hardware, Software Licenses, etc.)	$ 287,141	7%
Depreciation	$ 397,471	5%
Allocated Shared Expenses	$ 323,141	4%
TOTAL	**$3,683,375**	**5.8%**

Human Resources

In allocating personnel (Human Resources) costs, in order to not double count any allocations, the Exchange first excluded any employee time allocated towards options regulation in order to recoup costs via the Options Regulatory Fee (''ORF'').[25] Of the remaining employee time left over, MEMX then calculated an allocation of employee time for employees whose functions include directly providing services necessary to offer the Exchange Data Feeds, including performance thereof, as well as personnel with ancillary functions related to establishing and providing such services (such as information security and finance personnel). The Exchange notes that it has fewer than 100 employees and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing the Exchange Data Feeds, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of their time such employees devote to tasks related to providing the Exchange Data Feeds. The Exchange notes that senior level executives were allocated Human Resources costs to the extent the Exchange believed they are involved in overseeing tasks related to providing the Exchange Data Feeds. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

In 2022, 6.9% of the Exchange's Human Resources costs were allocated towards the provision of the Equities Data Feeds, which is slightly lower than the 8% allocation in the 2024 Cost Analysis. The Exchange notes this increase is due to additional hiring necessary to support the launch of MEMX Options and the Options Data Feeds.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide the Exchange Data Feeds in the third-party data centers where the Exchange maintains its equipment as well as related costs (the Exchange does not own the Primary Data Center or the Secondary Data Center, but instead, leases space in data centers operated by third parties). As the Data Center costs are primarily for space, power, and cooling of servers, the Exchange allocated approximately 2% of the Data Center costs for the Exchange Data Feeds. This is a lower allocation than the 2022 Cost Analysis due to the fact that a greater portion of the Exchange's Data Center costs are now being allocated to the provision of Connectivity, as can be seen in the Exchange's recent proposal to adopt

[25] *See* Securities Exchange Act Release No. 99259 (January 2, 2024), 89 FR 965 (January 8, 2024) (SR–MEMX–2023–38).

Options Connectivity Fees (the ''Options Connectivity Filing'').[26]

Technology

The Technology category includes the Exchange's network infrastructure, other hardware, software, and software licenses used to operate and monitor physical assets necessary to provide the Exchange Data Feeds. Of note, certain of these costs were included in separate Network Infrastructure and Hardware and Software Licenses categories in the 2022 Cost Analysis; however, in order to align more closely with the Exchange's audited financial statements, these costs were combined into the broader Technology category. The Exchange allocated approximately 7% of its Technology costs to the Exchange Data Feeds in 2024.

Depreciation

The vast majority of the software the Exchange uses with respect to its operations, including the software used to generate and disseminate the Exchange Data Feeds has been developed in-house and the cost of such development is depreciated over time. Accordingly, the Exchange included Depreciation costs related to depreciated software used to generate and disseminate the Exchange Data Feeds. The Exchange also included in the Depreciation costs certain budgeted improvements that the Exchange intends to capitalize and depreciate with respect to the Exchange Data Feeds in the near-term, as well as the servers used at the Exchange's primary and back-up data centers specifically used for the Exchange Data Feeds. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost was therefore narrowly tailored to depreciation related to the Exchange Data Feeds. In the 2022 Cost Analysis, the Exchange allocated approximately 18% of its Depreciation costs towards the provision of the Equities Data Feeds, which is higher than the 5% allocated herein. This decrease is due to the overall reallocation of Depreciation to other revenue streams.

Allocated Shared Expenses

Finally, a limited portion of general shared expenses were allocated to the Exchange Data Feeds. The costs included in general shared expenses allocated to the Exchange Data Feeds include office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications costs. The cost of paying individuals to serve on the Exchange's Board of Directors or any committee was not allocated to providing Exchange Data Feeds. The Exchange allocated 4% of its Allocated Shared Expenses to the Exchange Data Feeds in 2024, which is slightly higher than the 1.8% allocated in 2022. This is due to the general increase in the costs included in this category overall, resulting in a higher allocation.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core service and did not double-count any expenses. Instead, as described above, the Exchange identified and allocated applicable cost drivers across its core services and used the same approach to analyzing costs to form the basis of the Options Connectivity Filing [27] and this filing proposing fees for the Options Data Feeds. Thus, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not double-counted across the core services or their associated revenue streams.

The Exchange anticipates that the projected 2024 revenue for Options Data Feeds ($34,675), in addition to what the Exchange anticipates it will collect for the Equities Data Feeds ($305,305), will generate approximately $339,980 monthly ($4,079,762 annually). The Exchange's method of revenue projection is in part based on its experience in charging for Equities Data Feeds (*i.e.* the Exchange anticipates that certain Firms may discontinue current subscriptions immediately upon the Exchange charging for Options Data Feeds, or sometime thereafter, as was the case when it began charging for Equities Data Feeds). The proposed fees for Exchange Data Feeds are designed to permit the Exchange to cover the costs allocated to providing Exchange Data Feeds with a profit margin that the Exchange believes is modest (approximately 9.7%),[28] which the Exchange believes is fair and reasonable after taking into account the costs related to creating, generating, and disseminating the Exchange Data Feeds and the fact that the Exchange will need to fund future expenditures (increased costs, improvements, etc.).

The Exchange like other exchanges is, after all, a for-profit business. Accordingly, while the Exchange believes in transparency around costs and potential margins, as well as periodic review of revenues and applicable costs (as discussed below), the Exchange does not believe that these estimates should form the sole basis of whether or not a proposed fee is reasonable or can be adopted. Instead, the Exchange believes that the information should be used solely to confirm that an Exchange is not earning supra-competitive profits, and the Exchange believes its Cost Analysis and related projections demonstrate this fact.

As a general matter, the Exchange believes that its costs will remain relatively similar in future years. It is possible however that such costs will either decrease or increase. To the extent the Exchange sees growth in use of Exchange Data Feeds it will receive additional revenue to offset future cost increases. However, if use of Exchange Data Feeds is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs with a reasonable profit margin.[29] Similarly, the Exchange expects that it would propose to decrease fees in the event that revenue materially exceeds current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and expects that it would propose to increase fees in the event that revenues fail to cover its costs and a reasonable margin, or decrease fees in the event that revenue or the profit margin materially exceeds current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange

[26] *See* Securities Exchange Act Release No. 99635 (February 29, 2024), 89 FR 16049 (March 6, 2024) (SR–MEMX–2024–06).

[27] *See* supra note 26.

[28] The Exchange calculated this profit margin by dividing the annual projected profit of $396,387 by the annual projected revenue of $4,079,762 and multiplying by 100.

[29] The Exchange notes that it does not believe that a 9.7% profit margin is necessarily competitive, and instead that this is likely significantly below the mark-up many businesses place on their products and services.

believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b) [30] of the Act in general, and furthers the objectives of Section 6(b)(4) [31] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, the Exchange believes that the proposed fees are consistent with the objectives of Section 6(b)(5) [32] of the Act in that they are designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to a free and open market and national market system, and, in general, to protect investors and the public interest, and, particularly, are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange notes prior to addressing the specific reasons the Exchange believes the proposed fees and fee structure are reasonable, equitably allocated and not unreasonably discriminatory, that the proposed definitions and fee structure described above are consistent with the definitions and fee structure used by most U.S. options exchanges, MIAX Pearl and BX Options in particular. As such, the Exchange believes it is adopting a model that is easily understood by Members and non-Members, most of which also subscribe to market data products from other exchanges. For this reason, the Exchange believes that the proposed definitions and fee structure described above are consistent with the Act generally, and Section 6(b)(5) [33] of the Act in particular.

One of the primary objectives of MEMX is to provide competition and to reduce fixed costs imposed upon the industry. Consistent with this objective, the Exchange believes that this proposal reflects a simple, competitive, reasonable, and equitable pricing structure, with fees that are discounted when compared to comparable data products and services offered by competitors.[34]

Reasonableness

Overall. With regard to reasonableness, the Exchange understands that the Commission has traditionally taken a market-based approach to examine whether the SRO making the fee proposal was subject to significant competitive forces in setting the terms of the proposal. The Exchange understands that in general the analysis considers whether the SRO has demonstrated in its filing that (i) there are reasonable substitutes for the product or service; (ii) ''platform'' competition constrains the ability to set the fee; and/or (iii) revenue and cost analysis shows the fee would not result in the SRO taking supracompetitive profits. If the SRO demonstrates that the fee is subject to significant competitive forces, the Exchange understands that in general the analysis will next consider whether there is any substantial countervailing basis to suggest the fee's terms fail to meet one or more standards under the Exchange Act. The Exchange further understands that if the filing fails to demonstrate that the fee is constrained by competitive forces, the SRO must provide a substantial basis, other than competition, to show that it is consistent with the Exchange Act, which may include production of relevant revenue and cost data pertaining to the product or service.

The Exchange has not determined its proposed overall market data fees based on assumptions about market competition, instead relying upon a cost-plus model to determine a reasonable fee structure that is informed by the Exchange's understanding of different uses of the products by different types of participants. In this context, the Exchange believes the proposed fees overall are fair and reasonable as a form of cost recovery plus the possibility of a reasonable return for the Exchange's aggregate costs of offering the Exchange Data Feeds. The Exchange believes the proposed fees are reasonable because they are designed to generate annual revenue to recoup some or all of Exchange's annual costs of providing market data in both Equities and Options with a reasonable profit margin. The Exchange also believes that performing the Cost Analysis by combining costs and revenues for Equities and Options is reasonable because in this manner the Exchange is able to ensure that it does not double count any allocations. The Exchange believes that this holistic approach is reasonable due to the fact that many of the costs associated with providing the Options Data Feeds are the same as those associated with providing the Equities Data Feeds, and the Exchange believes that separately analyzing them could potentially result in double-counting. As discussed in the Purpose section, the Exchange estimates that the fees proposed herein related to Options Data Feeds, coupled with the fees it already charges for Equities Data Feeds, will result in annual revenue of approximately $4 million, representing a profit margin of approximately 9.7% for the provision of market data on its platforms. Accordingly, the Exchange believes that this fee methodology is reasonable because it allows the Exchange to recoup some or all of its expenses for providing market data products (with any additional revenue representing no more than what the Exchange believes to be a reasonable rate of return). The Exchange also believes that the proposed fees are reasonable because they are generally less than the fees charged by competing options exchanges for comparable market data products, notwithstanding that the competing exchanges may have different system architectures that may result in different cost structures for the provision of market data.

The Exchange believes the proposed fees for the Options Data Feeds are reasonable when compared to fees for comparable products, such as the MIAX Pearl Top of Market Feed, the MIAX Pearl Liquidity Feed, and the BX Options Top and Depth Feeds, compared to which the Exchange's proposed fees are equivalent or lower, as well as other comparable data feeds priced significantly higher than the Exchange's proposed fees for the Exchange Data Feeds.[35] Additionally, the Exchange's single flat fee for each of its Options Data Feeds, regardless of use type, offers a more simplistic approach to market data pricing. Specifically with respect to the MEMOIR Options Depth feed, the Exchange believes that the proposed fee for such feed is reasonable because it represents not only the value of the data available from the MEMOIR Options Top feed, which has a lower proposed fee, but also the value of receiving the depth-of-book data on an order-by-order basis. The Exchange believes it is reasonable to have pricing based, in part, upon the amount of information contained in each data feed and the value of that information to market participants. The MEMOIR Options Top feed, as described above,

[30] 15 U.S.C. 78f.

[31] 15 U.S.C. 78f(b)(4).

[32] 15 U.S.C. 78f(b)(5).

[33] 15 U.S.C. 78f(b)(5).

[34] *See supra* note 13.

[35] *Id.*

can be utilized to trade on the Exchange but contains less information than that is available on the MEMOIR Options Depth feed. Thus, the Exchange believes it reasonable for the products to be priced as proposed, with MEMOIR Options Depth having a higher price than MEMOIR Options Top.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Options Data Feeds are reasonable.

Equitable Allocation

Overall. The Exchange believes that its proposed fees are reasonable, fair, and equitable, and not unfairly discriminatory because they are designed to align fees with services provided. The Exchange believes that the proposed fees are equitably allocated because they will apply uniformly to all data recipients that choose to subscribe to the Options Data Feeds. Any Firm that chooses to subscribe to one or both of the Options Data Feeds is subject to the same Fee Schedule, regardless of what type of business they operate, and the decision to subscribe to one or both of the Options Data Feeds is based on objective differences in usage of Options Data Feeds among different Firms, which are still ultimately in the control of any particular Firm. The Exchange believes the proposed pricing between Options Data Feeds is equitably allocated because it is based, in part, upon the amount of information contained in each data feed and the value of that information to market participants. The MEMOIR Options Top feed, as described above, can be utilized to trade on the Exchange but contains less information than that is available on the MEMOIR Options Depth feed. Thus, the Exchange believes it is an equitable allocation of fees for the products to be priced as proposed, with MEMOIR Options Top having the lower price of the two Options Data Feeds.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Exchange Data Feeds are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees for the Options Data Feeds are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between the feeds themselves.

Overall. The Exchange believes that the proposed fees are not unfairly discriminatory because they would apply to all data recipients that choose to subscribe to the same Options Data Feed(s). Any Firm that chooses to subscribe to the Options Data Feeds is subject to the same Fee Schedule, regardless of what type of business they operate. Because the proposed fee for MEMOIR Options Depth is higher, Firms seeking lower cost options may instead choose to receive data through the MEMOIR Options Top feed for a lower cost. Alternatively, Firms can choose to receive data solely from the Options Price Reporting Authority (''OPRA'') for a lower cost. The Exchange notes that Firms can also choose to subscribe to a combination of data feeds for redundancy purposes or to use different feeds for different purposes. In sum, each Firm has the ability to choose the best business solution for itself. The Exchange does not believe it is unfairly discriminatory to base pricing upon the amount of information contained in each data feed, which may have additional value to a market participant. As described above, the MEMOIR Options Top feed can be utilized to trade on the Exchange but contains less information than that is available on the MEMOIR Options Depth feed. Thus, the Exchange believes it is not unfairly discriminatory for the products to be priced as proposed, with MEMOIR Options Top having a lower price than MEMOIR Options Depth.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the Exchange Data Feeds are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[36] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange does not believe that the proposed fees for Options Data Feeds place certain market participants at a relative disadvantage to other market participants because, as noted above, the proposed fees are associated with usage of Options Data Feeds by each market participant based on the type of business they operate, and the decision to subscribe to one or both Options Data Feeds is based on objective differences in usage of Options Data Feeds among different Firms, which are still ultimately in the control of any particular Firm, and such fees do not impose a barrier to entry to smaller participants. Accordingly, the proposed fees for Options Data Feeds do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation of the proposed fees reflects the types of Options Data Feeds consumed by various market participants.

Inter-Market Competition

The Exchange does not believe the proposed fees place an undue burden on competition on other SROs that is not necessary or appropriate. In particular, market participants are not forced to subscribe to any of the Options Data Feeds, as described above. Additionally, other exchanges have similar market data fees in place for their participants, but with comparable and in many cases higher rates for options market data feeds.[37] The proposed fees are based on actual costs and are designed to enable the Exchange to recoup its applicable costs with the possibility of a reasonable profit on its investment as described in the Purpose and Statutory Basis sections. Competing options exchanges are free to adopt comparable fee structures subject to the SEC rule filing process.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act[38] and Rule 19b–4(f)(2)[39] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing,

[36] 15 U.S.C. 78f(b)(8).

[37] *See supra* note 13.

[38] 15 U.S.C. 78s(b)(3)(A)(ii).

[39] 17 CFR 240.19b–4(f)(2).

including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MEMX–2024–14 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MEMX–2024–14. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MEMX–2024–14 and should be submitted on or before May 17, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[40]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100002; File No. SR–CboeEDGA–2024–013]

Self-Regulatory Organizations; Cboe EDGA Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule Related to Physical Port Fees

April 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 9, 2024, Cboe EDGA Exchange, Inc. (the ''Exchange'' or ''EDGA'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGA Exchange, Inc. (the ''Exchange'' or ''EDGA Equities'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/edga/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its fee schedule relating to physical connectivity fees.[3]

By way of background, a physical port is utilized by a Member or non-Member to connect to the Exchange at the data centers where the Exchange's servers are located. The Exchange currently assesses the following physical connectivity fees for Members and non-Members on a monthly basis: $2,500 per physical port for a 1 gigabit (''Gb'') circuit and $7,500 per physical port for a 10 Gb circuit. The Exchange proposes to increase the monthly fee for 10 Gb physical ports from $7,500 to $8,500 per port. The Exchange notes the proposed fee change better enables it to continue to maintain and improve its market technology and services and also notes that the proposed fee amount, even as amended, continues to be in line with, or even lower than, amounts assessed by other exchanges for similar connections.[4] The physical ports may also be used to access the Systems for the following affiliate exchanges and only one monthly fee currently (and will continue) to apply per port: the Cboe BZX Exchange, Inc. (options and equities), Cboe EDGX Exchange, Inc. (options and equities platforms), Cboe BYX Exchange, Inc., and Cboe C2 Exchange, Inc., (''Affiliate Exchanges'').[5]

[3] The Exchange initially filed the proposed fee changes on July 3, 2023 (SR–CboeEDGA–2023–011). On September 1, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGA–2023–015. On September 29, 2023, the Securities and Exchange Commission issued a Suspension of and Order Instituting Proceedings to Determine whether to Approve or Disapprove a Proposed Rule Change to Amend its Fees Schedule Related to Physical Port Fees (the ''OIP''). On September 29, 2023, the Exchange filed the proposed fee change (SR–CboeEDGA–2023–016). On October 13, 2023, the Exchange withdrew that filing and submitted SR–CboeEDGA–2023–017. On December 12 2023, the Exchange withdrew that filing and submitted SR–CboeEDGA–2023–022. On February 9, 2024, the Exchange withdrew that filing and submitted SR–CboeEDGA–2024–006. On April 9, 2024, the Exchange withdrew that filing and submitted this filing.

[4] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

[5] The Affiliate Exchanges are also submitting contemporaneous identical rule filings.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[6] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[7] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[8] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4)[9] of the Act, which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among its Members and other persons using its facilities.

The Exchange believes the proposed fee change is reasonable as it reflects a moderate increase in physical connectivity fees for 10 Gb physical ports. Further, the current 10 Gb physical port fee has remained unchanged since June 2018.[10] Since its last increase over 5 years ago however, there has been notable inflation. Particularly, the dollar has had an average inflation rate of 3.9% per year between 2018 and today, producing a cumulative price increase of approximately 21.1% inflation since the fee for the 10 Gb physical port was last modified.[11] Moreover, the Exchange historically does not increase fees every year, notwithstanding inflation. Accordingly, the Exchange believes the proposed fee is reasonable as it represents only an approximate 13% increase from the rates adopted five years ago, notwithstanding the cumulative rate of 21.1%. The Exchange is also unaware of any standard that suggests any fee proposal that exceeds a certain yearly or cumulative inflation rate is unreasonable, and in any event, in this instance the increase is well below the cumulative rate.

Additionally, the Exchange believes the proposed fee increase is reasonable in light of recent and anticipated connectivity-related upgrades and changes. The Exchange and its affiliated exchanges recently launched a multi-year initiative to improve Cboe Exchange Platform performance and capacity requirements to increase competitiveness, support growth and advance a consistent world class platform. The goal of the project, among other things, is to provide faster and more consistent order handling and matching performance for options, while ensuring quicker processing time and supporting increasing volumes and capacity needs. For example, the Exchange recently performed switch hardware upgrades. Particularly, the Exchange replaced existing customer access switches with newer models, which the Exchange believes resulted in increased determinism. The recent switch upgrades also increased the Exchange's capacity to accommodate more physical ports by nearly 50%. Network bandwidth was also increased nearly two-fold as a result of the upgrades, which among other things, can lead to reduce message queuing. The Exchange also believes these newer models result in less natural variance in the processing of messages. The Exchange notes that it incurred costs associated with purchasing and upgrading to these newer models, of which the Exchange has not otherwise passed through or offset.

As of April 1, 2024, market participants also having the option of connecting to a new data center (*i.e.,* Secaucus NY6 Data Center (''NY6'')), in addition to the current data centers at NY4 and NY5. The Exchange made NY6 available in response to customer requests in connection with their need for additional space and capacity. In order to make this space available, the Exchange expended significant resources to prepare this space, and will also incur ongoing costs with respect to maintaining this offering, including costs related to power, space, fiber, cabinets, panels, labor and maintenance of racks. The Exchange also incurred a large cost with respect to ensuring NY6 would be latency equalized, as it is for NY4 and NY5.

The Exchange also has made various other improvements since the current physical port rates were adopted in 2018. For example, the Exchange has updated its customer portal to provide more transparency with respect to firms' respective connectivity subscriptions, enabling them to better monitor, evaluate and adjust their connections based on their evolving business needs. The Exchange also performs proactive audits on a weekly basis to ensure that all customer cross connects continue to fall within allowable tolerances for Latency Equalized connections. Accordingly, the Exchange expended, and will continue to expend, resources to innovate and modernize technology so that it may benefit its Members and continue to compete among other equities markets. The ability to continue to innovate with technology and offer new products to market participants allows the Exchange to remain competitive in the equities space which currently has 16 equities markets and potential new entrants.

The Exchange also believes the proposed fee is reasonable as it is still in line with, or even lower than, amounts assessed by other exchanges for similar connections.[12] Indeed, the Exchange believes assessing fees that are a lower rate than fees assessed by other exchanges for analogous connectivity (which were similarly adopted via the rule filing process and filed with the Commission) is reasonable. As noted above, the proposed fee is also the same as is concurrently being proposed for its Affiliate Exchanges. Further, Members are able to utilize a single port to connect to any of the Affiliate Exchanges with no additional fee assessed for that same physical port. Particularly, the Exchange believes the proposed monthly per port fee is reasonable, equitable and not unfairly discriminatory as it is assessed only once, even if it connects with another affiliate exchange since only one port is being used and the Exchange does not wish to charge multiple fees for the same port. Indeed, the Exchange notes that several ports are in fact purchased and utilized across one or more of the

[11] *See https://www.officialdata.org/us/inflation/2010?amount=1.*

[12] *See e.g.,* The Nasdaq Stock Market LLC (''Nasdaq''), General 8, Connectivity to the Exchange. Nasdaq and its affiliated exchanges charge a monthly fee of $15,000 for each 10Gb Ultra fiber connection to the respective exchange, which is analogous to the Exchange's 10Gb physical port. *See also* New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., NYSE Chicago Inc., NYSE National, Inc. Connectivity Fee Schedule, which provides that 10 Gb LX LCN Circuits (which are analogous to the Exchange's 10 Gb physical port) are assessed $22,000 per month, per port.

Exchange's affiliated Exchanges (and charged only once).

The Exchange also believes that the proposed fee change is not unfairly discriminatory because it would be assessed uniformly across all market participants that purchase the physical ports. The Exchange believes increasing the fee for 10 Gb physical ports and charging a higher fee as compared to the 1 Gb physical port is equitable as the 1 Gb physical port is 1/10th the size of the 10 Gb physical port and therefore does not offer access to many of the products and services offered by the Exchange (*e.g.,* ability to receive certain market data products). Thus, the value of the 1 Gb alternative is lower than the value of the 10 Gb alternative, when measured based on the type of Exchange access it offers. Moreover, market participants that purchase 10 Gb physical ports utilize the most bandwidth and therefore consume the most resources from the network. The Exchange also anticipates that firms that utilize 10 Gb ports will benefit the most from the Exchange's investment in offering NY6 as the Exchange anticipates there will be much higher quantities of 10 Gb physical ports connecting from NY6 as compared to 1 Gb ports. Indeed, the Exchange notes that 10 Gb physical ports account for approximately 90% of physical ports across the NY4, NY5, and NY6 data centers, and to date, 80% of new port connections in NY6 are 10 Gb ports. As such, the Exchange believes the proposed fee change for 10 Gb physical ports is reasonably and appropriately allocated.

The Exchange also notes Members and non-Members will continue to choose the method of connectivity based on their specific needs and no broker-dealer is required to become a Member of, let alone connect directly to, the Exchange. There is also no regulatory requirement that any market participant connect to any one particular exchange. Market participants may voluntarily choose to become a member of one or more of a number of different exchanges, of which, the Exchange is but one choice. Additionally, any Exchange member that is dissatisfied with the proposal is free to choose not to be a member of the Exchange and send order flow to another exchange. Moreover, direct connectivity is not a requirement to participate on the Exchange. The Exchange also believes substitutable products and services are available to market participants, including, among other things, other equities exchanges that a market participant may connect to in lieu of the Exchange and/or trading of any equities product, such as within the Over-the-Counter (OTC) markets which does not require connectivity to the Exchange. Indeed, there are currently 16 registered equities exchanges that trade equities (12 of which are not affiliated with Cboe), some of which have similar or lower connectivity fees.[13] Based on publicly available information, no single equities exchange has more than approximately 16% of the market share.[14] Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers. For example, in 2020 alone, three new exchanges entered the market: Long Term Stock Exchange (LTSE), Members Exchange (MEMX), and Miami International Holdings (MIAX Pearl).

As noted above, there is no regulatory requirement that any market participant connect to any one equities exchange, nor that any market participant connect at a particular connection speed or act in a particular capacity on the Exchange, or trade any particular product offered on an exchange. Moreover, membership is not a requirement to participate on the Exchange. Indeed, the Exchange is unaware of any one equities exchange whose membership includes every registered broker-dealer. By way of example, while the Exchange has 103 members that trade equities, Cboe EDGX has 124 members that trade equities, Cboe BYX has 110 members and Cboe BZX has 132 members. There is also no firm that is a Member of EDGA Equities only. Further, based on publicly available information regarding a sample of the Exchange's competitors, NYSE has 143 members,[15] IEX has 129 members,[16] and MIAX Pearl has 51 members.[17]

Vigorous competition among national securities exchanges provides many alternatives for firms to voluntarily decide whether direct connectivity to the Exchange is appropriate and worthwhile, and as noted above, no broker-dealer is required to become a Member of the Exchange, let alone connect directly to it. In the event that a market participant views the Exchange's proposed fee change as more or less attractive than the competition, that market participant can choose to connect to the Exchange indirectly or may choose not to connect to that exchange and connect instead to one or more of the other 12 non-Cboe affiliated equities markets. Moreover, if the Exchange charges excessive fees, it may stand to lose not only connectivity revenues but also revenues associated with the execution of orders routed to it, and, to the extent applicable, market data revenues. The Exchange believes that this competitive dynamic imposes powerful restraints on the ability of any exchange to charge unreasonable fees for connectivity. Notwithstanding the foregoing, the Exchange still believes that the proposed fee increase is reasonable, equitably allocated and not unfairly discriminatory, even for market participants that determine to connect directly to the Exchange for business purposes, as those business reasons should presumably result in revenue capable of covering the proposed fee.

The Exchange lastly notes that it is not required by the Exchange Act, nor any other rule or regulation, to undertake a cost-of-service or rate-making approach with respect to fee proposals. Moreover, Congress's intent in enacting the 1975 Amendments to the Act was to enable competition—rather than government order—to determine prices. The principal purpose of the amendments was to facilitate the creation of a national market system for the trading of securities. Congress intended that this ''national market system evolve through the interplay of *competitive forces* as unnecessary regulatory restrictions are removed.'' [18] Other provisions of the Act confirm that intent. For example, the Act provides that an exchange must design its rules ''to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.'' [19] Likewise, the Act grants the Commission authority to amend or repeal ''[t]he rules of [an] exchange [that] impose any burden on competition not necessary or appropriate in furtherance of the purposes of this chapter.'' [20] In short, the promotion of free and open competition was a core congressional objective in creating the national market system.[21] Indeed, the Commission has

[20] 15 U.S.C. 78f(8).

[21] *See* also 15 U.S.C. 78k–l(a)(1)(C)(ii) (purposes of Exchange Act include to promote ''fair competition among brokers and dealers, among exchange markets, and between exchange markets

historically interpreted that mandate to promote competitive forces to determine prices whenever compatible with a national market system. Accordingly, the Exchange believes it has met its burden to demonstrate that its proposed fee change is reasonable and consistent with the immediate filing process chosen by Congress, which created a system whereby market forces determine access fees in the vast majority of cases, subject to oversight only in particular cases of abuse or market failure. Lastly, and importantly, the Exchange believes that, even if it were possible as a matter of economic theory, cost-based pricing for the proposed fee would be so complicated that it could not be done practically.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed fee change will not impact intramarket competition because it will apply to all similarly situated Members equally (i.e., all market participants that choose to purchase the 10 Gb physical port). Additionally, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing is associated with relative usage of the various market participants. For example, market participants with modest capacity needs can continue to buy the less expensive 1 Gb physical port (which cost is not changing). While pricing may be increased for the larger capacity physical ports, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed connectivity fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation reflects the network resources consumed by the various size of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pays the most.

The Exchange's proposed fee is also still lower than some fees for similar connectivity on other exchanges and therefore may stimulate intermarket competition by attracting additional firms to connect to the Exchange or at least should not deter interested participants from connecting directly to the Exchange. Further, if the changes proposed herein are unattractive to market participants, the Exchange can, and likely will, see a decline in connectivity via 10 Gb physical ports as a result. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect directly to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative venues that they may participate on and direct their order flow, including 12 non-Cboe affiliated equities markets, as well as off-exchange venues, where competitive products are available for trading. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [22] The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . . .''.[23] Accordingly, the Exchange does not believe its proposed change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [24] and paragraph (f) of Rule 19b–4 [25] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–CboeEDGA–2024–013 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeEDGA–2024–013. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the

and markets other than exchange markets''); Order, 73 FR at 74781 (''The Exchange Act and its legislative history strongly support the Commission's reliance on competition, whenever possible, in meeting its regulatory responsibilities for overseeing the SROs and the national market system.'').

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

ACTION: 60-Day notice and request for comments

SUMMARY: The Small Business Administration (SBA) intends to request approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before June 25, 2024.

FOR FURTHER INFORMATION CONTACT: Adrienne Grierson, Small Business Administration, Office of Financial Program Operations, *adrienne.grierson@sba.gov* or Curtis B. Rich, Agency Clearance Officer *curtis.rich@sba.gov* 202–205–7030.

SUPPLEMENTARY INFORMATION: SBA received funds under the American Rescue Plan Act of 2021 (ARPA), Public Law 117–2, title V, sec. 5003 (March 11, 2021), to provide direct funds to Eating and Drinking establishments that meet certain conditions. Specifically, Section 5003 of ARPA establishes the Restaurant Revitalization Fund (RRF) program to provide direct funds of up to $10 million dollars and limited to $5 million dollars per location to certain eligible persons or entities: A restaurant, food stand, food truck, food cart, caterer, saloon, inn, tavern, bar, lounge, brewpub, tasting room, taproom, licensed facility or premise of a beverage alcohol producer where the public may taste, sample, or purchase products, or other similar place of business in which the public or patrons assemble for the primary purpose of being served food or drink. Section 5003(c)(6) of ARPA requires recipients to return to the Treasury any funds that the recipient did not use for allowable expenses by the end of the covered period, or if the recipient permanently ceased operations, not later than March 11, 2023. SBA plans to update the information collection under OMB control number 3245–0424 to extend the record retention requirements.

Solicitation of Public Comments

SBA is requesting comments on (a) whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

Summary of Information Collection

PRA Number: 3245–0424

(1) Title: Restaurant Revitalization Fund Program Post Award Report.

Description of Respondents: Recipients of RRF awards.

Form Number: SBA Form 3173.

Total Estimated Annual Responses: 131,306.

Total Estimated Annual Hour Burden: 63,127.

Curtis B. Rich,

Agency Clearance Officer.

SMALL BUSINESS ADMINISTRATION

National Small Business Development Center Advisory Board

AGENCY: Small Business Administration.

ACTION: Notice of open Federal Advisory Committee meeting.

SUMMARY: The SBA is issuing this notice to announce the date, time and agenda for a meeting of the National Small Business Development Center Advisory Board. The meeting will be open to the public; however, advance notice of attendance is required.

DATES: Tuesday, May 14, 2024, at 2:00 p.m. EDT.

ADDRESSES: Meeting will be held via Microsoft Teams.

FOR FURTHER INFORMATION CONTACT: Rachel Karton, Office of Small Business Development Centers, U.S. Small Business Administration, 409 Third Street SW, Washington, DC 20416; *Rachel.newman-karton@sba.gov;* 202–619–1816.

If anyone wishes to be a listening participant or would like to request accommodations, please contact Rachel Karton at the information above.

SUPPLEMENTARY INFORMATION: Pursuant to section l0(a) of the Federal Advisory Committee Act (5 U.S.C. appendix 2), the SBA announces the meetings of the National SBDC Advisory Board. This Board provides advice and counsel to the SBA Administrator and Associate Administrator for Small Business Development Centers.

Purpose

The purpose of the meeting is to discuss the following pertaining to the SBDC Program:

- Annual Plan/White Paper
- Outreach and Engagement with the SBDC State Directors

Andrienne Johnson,

Committee Management Officer.

DEPARTMENT OF STATE

[Public Notice: 12381]

Notice of Determinations; Culturally Significant Objects Being Imported for Exhibition—Determinations: ''Life Dances On: Robert Frank in Dialogue'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that certain objects being imported from abroad pursuant to an agreement with their foreign owner or

[26] 17 CFR 200.30–3(a)(12).

custodian for temporary display in the exhibition ''Life Dances On: Robert Frank in Dialogue'' at The Museum of Modern Art, New York, New York, and at possible additional exhibitions or venues yet to be determined, are of cultural significance, and, further, that their temporary exhibition or display within the United States as aforementioned is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Reed Liriano, Program Coordinator, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, 2200 C Street NW (SA–5), Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000, and Delegation of Authority No. 523 of December 22, 2021.

Nicole L. Elkon,

Deputy Assistant Secretary for Professional and Cultural Exchanges, Bureau of Educational and Cultural Affairs, Department of State.

[FR Doc. 2024–08916 Filed 4–25–24; 8:45 am]

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36736]

Youngstown & Southeastern Railroad, LLC—Trackage Rights Exemption—Ohio and Pennsylvania Railroad Company

The Youngstown & Southeastern Railroad, LLC (YS), a Class III common carrier railroad, has filed a verified notice of exemption under 49 CFR 1180.2(d)(7) for acquisition of overhead trackage rights over approximately 1.1 miles of rail line, known as the River Track, owned by Ohio and Pennsylvania Railroad Company (OHPA) between milepost 0.4 at Youngstown, Ohio, and milepost 1.5 in Lowellville, Ohio.

Youngstown & Southeastern Railroad Company, a YS predecessor, obtained overhead trackage rights over OHPA incidental to acquisition of certain rail lines between Youngstown and Darlington, Pennsylvania. According to the verified notice, the new overhead trackage rights on the River Track will formalize YS's interchange point with CSX Transportation, Inc. (CSXT) at CSXT's Lowellville Yard. The new rights derive from an amending agreement [1] to an earlier trackage rights agreement governing YS's operations over two related segments of railroad, the Canfield Segment and the Struthers Segment.[2]

As a condition to this exemption, any employees affected by the acquisition of the trackage rights will be protected by the conditions imposed in *Norfolk & Western Railway—Trackage Rights—Burlington Northern, Inc.,* 354 I.C.C. 605 (1978), as modified by *Mendocino Coast Railway—Lease & Operate—California Western Railroad,* 360 I.C.C. 653 (1980).

The transaction may be consummated on or after May 11, 2024, the effective date of the exemption. If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than May 3, 2024 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36736, must be filed with the Surface Transportation Board via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on YS's representative, Robert A. Wimbish, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

According to YS, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: April 23, 2024.

[1] Redacted versions of the trackage rights agreement and amending agreement were filed with the verified notice. Unredacted versions of the agreements were submitted to the Board under seal concurrently with a motion for protective order, which was granted in a decision served on April 23, 2024.

[2] According to the verified notice, the amending agreement refers to a rail customer, Lally Pipe, but only to provide that YS may serve that customer strictly for the account of (and as agent for) OHPA. YS states that it will have no rights independent of OHPA to serve Lally Pipe.

By the Board, Mai T. Dinh, Director, Office of Proceedings.

Eden Besera,

Clearance Clerk.

[FR Doc. 2024–08976 Filed 4–25–24; 8:45 am]

BILLING CODE 4915–01–P

TENNESSEE VALLEY AUTHORITY

Notice of Determinations on the Demand Response and Electric Vehicle Standards

AGENCY: Tennessee Valley Authority.

ACTION: Notice of determinations on the PURPA Standards set forth in the Infrastructure Investment and Jobs Act of 2021.

SUMMARY: At its meeting on November 9, 2023, in Tupelo, Mississippi, the TVA Board made its determinations on the PURPA standards as set forth in the Public Utility Regulatory Policies Act of 1978 (PURPA), as amended by the Infrastructure Investment and Jobs Act of 2021 (IIJA). The TVA Board considered the standards in accordance with PURPA and the objectives and requirements of the Tennessee Valley Authority Act of 1933, as amended (TVA Act).

FOR FURTHER INFORMATION CONTACT: Troy Eichenberger (Demand Response), (423) 751–6187, or Andrew Frye (Electric Vehicles), (423) 751–7060, Tennessee Valley Authority.

SUPPLEMENTARY INFORMATION: The Public Utility Regulatory Policies Act of 1978 (Pub. L. 95–617) (PURPA), as amended by the Infrastructure Investment and Jobs Act of 2021 (Pub. L. 117–58) (IIJA), requires TVA to consider adopting for itself and the distributors of TVA power two new PURPA standards. The standards considered are listed in subsections 111(d)(20)–(21) of PURPA, as amended by the IIJA of 2021. These two standards are identified as Demand-Response Practices and Electric Vehicle Charging Programs. The TVA Board is charged with considering and making determinations on whether or not it is appropriate to implement each standard.

Data, views, and comments were requested from the public as to the need and desirability of adopting the standards. In addition to posting a notice in the **Federal Register** on November 15, 2022 (87 FR 68569), which described the standards and solicited public input on the standards, TVA also provided a PURPA website (*www.tva.com/purpa*) for purposes of educating the public on the standards and soliciting public input. TVA also

provided an overview of the Demand Response and Electric Vehicle standards to the Regional Energy Resource Council (RERC), an advisory committee established under the authority of the TVA in accordance with the provisions of the Federal Advisory Committee Act. All public input received on the standards has been included in the official record and made available to the public through the website.

TVA's process for considering and making determinations on the new PURPA standards was carried out pursuant to the provisions of (a) PURPA, under which TVA is identified as the regulatory authority for electric utilities over which TVA has ratemaking authority, and (b) the Tennessee Valley Authority Act of 1933, 48 Stat. 58, as amended, 16 U.S.C. 831–831dd (2007) (TVA Act). After consideration of the initial comments and materials received, TVA staff developed recommendations on each of the standards. All comments from the public, as well as the TVA staff recommendations, have been made a part of the official record and have been made available to the public through the website.

The TVA Board considered these standards on the basis of the PURPA purposes, which are the (1) conservation of energy, (2) efficient use of facilities and resources, and (3) equity among electric consumers, and the objectives and requirements of the TVA Act. The Board took into account these considerations as well as the official record developed during the consideration process in reaching the determinations below.

The Board's determinations are as follows.

Standard 20: Demand-Response Practices

I. Standard Under Consideration

(A) In General

Each electric utility shall promote the use of demand-response and demand flexibility practices by commercial, residential, and industrial consumers to reduce electricity consumption during periods of unusually high demand.

(B) Rate Recovery

(i) In general—Each State regulatory authority shall consider establishing rate mechanisms allowing an electric utility with respect to which the State regulatory authority has ratemaking authority to timely recover the costs of promoting demand-response and demand flexibility practices in accordance with subparagraph (A).

(ii) Nonregulated electric utilities—A nonregulated electric utility may establish rate mechanisms for the timely recovery of the costs of promoting demand response and demand flexibility in accordance with subparagraph (A).

II. Observations

Demand response (DR) focuses on reduction of peak demand. To reduce peak demand, TVA contracts with local power companies (LPCs) that distribute TVA power, TVA directly served customers, and LPC end-use customers to reduce energy use to specific levels when dispatched by TVA Operations. Through broad internal and external collaboration, TVA has developed a portfolio of program offerings that are designed to benefit TVA's resource planning resources as well as the growing energy needs and reserve requirements. These resources currently provide up to 1,700 MW of carbon-free, dispatchable capacity achieved by three programs: Interruptible Power, Peak Power Partners, and Voltage Optimization. The programs help manage system demand load during peak hours.

Current programs achieve demand reduction targets identified by TVA's long-range planning and annual power supply plans, and demand response is an essential component of the Integrated Resource Plan (IRP), which is a comprehensive study of how TVA can best deliver clean, reliable, and low-cost energy for the Valley's future. These plans each recommend continuing to add capacity to TVA's existing DR programs and to develop new DR programs.

Existing demand response programs, and others that TVA may develop in the future, will continue to be an integral part of TVA's resource planning and system operations. TVA's existing approach to demand response is consistent with the intent of the standard that is under consideration. TVA has a process for LPCs to request cost recovery, which can include the costs associated with promoting demand response. LPC rate requests are reviewed and, where appropriate, approved through a TVA Board-approved rate review procedure. Costs associated with participating in a TVA program would generally be considered appropriate costs for recovery. TVA also factors its own demand response costs into its long-term financial planning.

Because TVA's approach to DR depends upon collaboration with customers and encouraging participation in DR programs, the proposed demand-response practices standard under consideration was revised to build upon historical success and reflect the importance of this collaborative approach.

III. Determination by the TVA Board

The standard under consideration is revised and adopted as follows:

TVA will leverage the public power model and its decades of experience in offering demand response programs to maximize demand response benefits for its power system, local power companies that distribute TVA power, and directly served customers. TVA will consider adding capacity to its existing demand response programs and developing additional demand response programs, when economic, reliability, and decarbonization needs merit changes to the demand response portfolio. As the nation's largest public power producer with a mission to deliver affordable and reliable power, TVA will continue to work with local power companies, directly served customers, federal customers, and end-use customers to ensure demand response programs are effective and meet the needs of the Valley.

Standard 21: Electric Vehicle Charging Programs

I. Standard Under Consideration

Each State shall consider measures to promote greater electrification of the transportation sector, including the establishment of rates that—

(A) promote affordable and equitable electric vehicle charging options for residential, commercial, and public electric vehicle charging infrastructure;

(B) improve the customer experience associated with electric vehicle charging, including by reducing charging times for light-, medium-, and heavy-duty vehicles;

(C) accelerate third-party investment in electric vehicle charging for light-, medium-, and heavy-duty vehicles; and

(D) appropriately recover the marginal costs of delivering electricity to electric vehicles and electric vehicle charging infrastructure.

II. Observations

The importance of electricity and TVA power has had a profound impact on the region. Today, the electrification of transportation offers similar transformative growth with environmental and economic benefits for the region. TVA is partnering with state agencies, local power companies (LPCs) that distribute TVA power, automotive manufacturers and other stakeholders to promote the adoption of electric vehicles (EVs) by addressing the major market barriers facing consumers: improving charging infrastructure availability, setting innovative and supportive policies, expanding EV availability and offerings, and increasing consumer awareness.

TVA is heavily involved in promoting the adoption of EVs, including leading

a collaboration with LPCs and other regional partners to develop one of the nation's most comprehensive publicly accessible EV fast charging networks. TVA also works with LPCs to offer affordable rate options for public EV fast charging that remove demand charges and are designed to accelerate public and private investment in EV infrastructure. Additionally, TVA is focused on increasing awareness and education of electric transportation through resources to educate and support residents with their residential, commercial, and public charging needs.

EV programs are executed in conjunction with and support from LPCs based on the unique relationship between TVA and its wholesale customers and because EV charging deployment occurs at the distribution level. TVA will continue to promote EV adoption in a manner that is consistent with TVA's obligations under the TVA Act. The proposed electric vehicle charging programs standard under consideration was revised to build on existing efforts of TVA and LPCs and to account for the respective roles of TVA and LPCs. TVA will also continue to examine and develop other programs that promote adoption of EVs, including consideration in future rate actions and various energy programs.

III. Determination by the TVA Board

The standard under consideration is revised and adopted as follows:

TVA will continue to leverage its role as a leader in innovation and economic development for the benefit of the Tennessee Valley region. As the wholesale provider of electric power to local power companies (LPCs) that distribute TVA power, TVA will serve as a catalyst for electric vehicle adoption. TVA will also continue to collaborate with LPCs to ensure that affordable energy is available for residential, commercial, and public customers consistent with the requirements of the TVA Act. The public power model will provide the foundation for an improved customer charging experience and competitive charging market to expand electric vehicle adoption in the Tennessee Valley.

Dated: April 18, 2024.

The Executive Vice President, General Counsel & Corporate Secretary of Tennessee Valley Authority, David Fountain, having reviewed and approved this document, is delegating the authority to sign this document to Edward C. Meade, Assistant Corporate Secretary, Associate General Counsel, Director of Commercial Law for publication in the **Federal Register**.

Edward C. Meade,

Assistant Corporate Secretary, Associate General Counsel, Director of Commercial Law, Tennessee Valley Authority.

BILLING CODE 8120–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2024–1228]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Passenger Facility Charge (PFC) Application

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves the FAA's administration of the Passenger Facility Charge (PFC) program. The information to be collected will be used to authorize public agencies to impose PFCs and use PFC revenue on airport-related projects and to ensure compliance with PFC program requirements.

DATES: Written comments should be submitted by June 25, 2024.

ADDRESSES: Please send written comments.

By Electronic Docket: www.regulations.gov (Enter docket number into search field).

By mail: Denise Roper, Office of Airport Planning and Programming. Federal Aviation Administration, 800 Independence Ave. SW, Suite 620, Washington, DC 20591.

By fax: 202–267–5302.

FOR FURTHER INFORMATION CONTACT: Amanda J Shotto by email at: *amanda.j.shotto@faa.gov;* phone: 202–267–8744.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0557.

Title: Passenger Facility Charge (PFC) Application.

Form Numbers: FAA Form 5500–1.

Type of Review: Renewal of an information collection.

Background: The DOT/FAA will use any information submitted in response to this collection to carry out the intent of 49 U.S.C. 40117. This statute authorizes public agencies controlling airports to impose PFCs and use PFC revenues. The information collected enables the FAA to approve the collection of PFC revenue for projects which preserve or enhance safety, security, or capacity of the national air transportation system, or which reduce noise or mitigate noise impacts resulting from an airport, or which furnish opportunities for enhanced competition between or among air carriers, and to provide oversight of the PFC program, as required by statute.

Respondents: Approximately 615 respondents annually.

Frequency: On occasion.

Estimated Average Burden per Response: 2 Hours.

Estimated Total Annual Burden: 33,014 Hours.

Issued in Washington, DC, on April 22, 2024.

David F. Cushing,

Manager, Airports Financial Assistance Division, APP–500.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2024–0030]

Agency Information Collection Activities: Notice of Request for Reinstatement of a Previously Approved Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of request for reinstatement of a previously approved information collection.

SUMMARY: The FHWA has forwarded the information collection request described in this notice to the Office of Management and Budget (OMB) to reinstate an information collection. We are required to publish this notice in the

Federal Register by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by May 28, 2024.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 0030 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Melissa Corder, 202–366–5853, *melissa.corder@dot.gov;* Office of Real Estate Services, Federal Highway Administration, Department of Transportation, New Jersey Avenue SE, Washington, DC 20590–0001. Office hours are from 7 a.m. to 3 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: We published a **Federal Register** Notice with a 60-day public comment period on this information collection on May 23, 2023 at 88 FR 33188.

Title: Fixed Residential Moving Cost Schedule.

OMB Control: 2125–0616.

Background: Relocation assistance payments to owners and tenants who move personal property for a Federal or federally assisted program or project are governed by the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (Uniform Act). 49 Code of Federal Regulations (CFR), part 24, is the implementing regulation for the Uniform Act. 49 CFR 24.301 addresses payments for actual and reasonable moving and related expenses. The fixed residential moving cost schedule is an administrative alternative to reimbursement of actual moving costs addressed in 49 CFR 24.302. This option provides flexibility for the agency and affected property owners and tenants. The FHWA requests the State Departments of Transportation (State DOTs) to analyze moving cost data periodically to assure that the fixed residential moving cost schedules accurately reflect reasonable moving and related expenses. The regulation allows State DOTs flexibility in determining how to collect the cost data in order to reduce the burden of government regulation. Updated State fixed residential moving costs are submitted to the FHWA electronically.

Respondents: 56 respondents (50 State DOTs, District of Columbia, Puerto Rico, Guam, American Samoa, N Marina Island, and the Virgin Islands).

Frequency: Once every 3 years.

Estimated Average Burden per Response: 24 hours per respondent.

Estimated Total Annual Burden Hours: 56 respondents × 24 hours = 1,344 burden total burden hours, once every 3 years, or 448 hours annually.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.48.

Issued on: April 23, 2024.

Jazmyne Lewis,

Information Collection Officer.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

U.S. Merchant Marine Academy Board of Visitors; Public Meeting

AGENCY: Maritime Administration, DOT

ACTION: Notice of public meeting.

SUMMARY: The U.S. Department of Transportation, Maritime Administration announces a meeting of the U.S. Merchant Marine Academy (USMMA) Board of Visitors (Board).

DATES: May 13, 2024, from 2:00 p.m. to 4:30 p.m. EST.

Written statements to be considered during the meeting must be received via email to *ExternalAffairs@usmma.edu* no later than May 6, 2024. Requests for accommodations for a disability must be received via email to *ExternalAffairs@usmma.edu* no later than May 3, 2024.

ADDRESSES: The meeting will be held through a virtual forum located on the USMMA Board of Visitors' web page at *https://www.usmma.edu/about/leadership/board-visitors.* A link to the virtual forum will be made available on the USMMA Board of Visitors' web page no later than May 6, 2024. General information about the Board is available at *https://www.usmma.edu/about/leadership/board-visitors.*

FOR FURTHER INFORMATION CONTACT: The Board's Designated Federal Officer and Point of Contact, Veronica Barry, 516–726–5594 or *ExternalAffairs@usmma.edu.*

SUPPLEMENTARY INFORMATION:

Background

The Board is a Federal Advisory Committee originally established as a Congressional Board by section 51312 of title 46, United States Code ''to provide independent advice and recommendations on matters relating to the United States Merchant Marine Academy.'' The Board was originally chartered under the Federal Advisory Committee Act (FACA) on October 24, 2017.

Agenda

The meeting agenda will cover, but is not limited to, the following proposed topics:

1. Welcome remarks and Board maintenance items (elections, Charter, etc.).
2. Update on the six priorities from the USMMA Strategic Plan (including educational and athletic programs, Institutional Culture, Sea Year, Sexual Assault Prevention and Response program status, and Academy infrastructure progress);
3. Update on the state of the Regiment of Midshipmen and Midshipman Fee Schedule; and
4. Public comment period (not to exceed 10 minutes).

Public Participation

This meeting is open to the public and will be held through a virtual forum. The U.S. Department of Transportation is committed to providing equal access to this meeting for all participants. If you need alternative formats or services because of a disability, such as sign language, interpretation, or other ancillary aids, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Any member of the public is permitted to file a written statement with the Board. Written statements should be sent to the Designated Federal

Officer listed in the **FOR FURTHER INFORMATION CONTACT** section no later than May 6, 2024.

Only written statements will be considered by the Board; no member of the public will be allowed to present questions or speak during the meeting unless requested to do so by a member of the Board.

(Authority: 46 U.S.C. 51312; 5 U.S.C. 552b; 5 U.S.C. Ch.10; 41 CFR parts 102–3.140 through 102–3.165)

By Order of the Maritime Administrator.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Actions

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of one or more persons that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See Supplementary Information section for effective date(s).

FOR FURTHER INFORMATION CONTACT: OFAC: Bradley Smith, Director, tel.: 202–622–2490; Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel.: 202–622–4855; or Assistant Director for Compliance, tel.: 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available on OFAC's website (*ofac.treasury.gov*).

Notice of OFAC Action(s)

On April 23, 2024, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authority listed below.

Individuals

1. HITTA, Sidan Ag (a.k.a. HITTA, Asidan Ag; a.k.a. HITTA, Siddan Ag; a.k.a. ''ABU 'ABD AL–HAKIM''; a.k.a. ''Abu Abdelhakim al-Kidali''; a.k.a. ''Abu Qarwani''; a.k.a. ''AL–QAYRAWANI, Abd-al-Hakim''), Kidal Region, Mali; DOB 1976; POB Kidal, Mali; nationality Mali; Gender Male; Secondary sanctions risk: section 1(b) of Executive Order 13224, as amended by Executive Order 13886 (individual) [SDGT] [HOSTAGES–EO14078] (Linked To: JAMA'AT NUSRAT AL–ISLAM WAL–MUSLIMIN).

Designated pursuant to section 6(a)(ii)(A)(1) of Executive Order 14078, ''Bolstering Efforts to Bring Hostages and Wrongfully Detained United States Nationals Home,'' 87 FR 43389 (E.O. 14078), for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, an act of hostage-taking of a United States national or the wrongful detention of a United States national abroad.

2. DICKO, Jafar (a.k.a. DICKO, Abdoul Salam), Burkina Faso; DOB 1980; nationality Burkina Faso; Gender Male (individual) [HOSTAGES–EO14078].

Designated pursuant to section 6(a)(ii)(A)(1) of E.O. 14078, for having materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, an act of hostage-taking of a United States national or the wrongful detention of a United States national abroad.

Dated: April 23, 2024.

BILLING CODE 4810–AL–C

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Agency Collection Activities; Requesting Comments on Form 1094–C, Form 1095–C, and Form 4423

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Form 1094–C, Transmittal of Employer-Provided Health Insurance Offer and Coverage Information Returns, Form 1095–C, Employer-Provided Health Insurance Offer and Coverage, and Form 4423, Application for Filing Affordable Care Act (ACA) Information Returns.

DATES: Written comments should be received on or before June 25, 2024 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Include OMB Control No. 1545–2251 in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this collection should be directed to Jason Schoonmaker, (801) 620–2128, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *jason.m.schoonmaker@irs.gov*.

SUPPLEMENTARY INFORMATION: The IRS is currently seeking comments concerning the following information collection tools, reporting, and record-keeping requirements:

Title: Information Reporting by Applicable Large Employers on Health Insurance Coverage Offered Under Employer-Sponsored Plans.

OMB Number: 1545–2251.

Form Number: Forms 1099–C, 1095–C, and 4423.

Abstract: Applicable Large Employer Members (ALE Members) use Forms 1094–C and 1095–C to report the information required under Internal Revenue Code sections 6055 and 6056 regarding offers of health coverage and enrollment in health coverage for their full-time employees.

Form 4423 is used when a company is a foreign filer that does not have an Employer Identification Number (EIN) and cannot use the electronic application process to apply for an Affordable Care Act Transmitter Control Code.

Current Actions: There is no change to the existing collection. However, the estimated number of responses was updated based on current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, Business or other for-profit, and not-for-profit entities.

Estimated Number of Responses: 123,234,664.

Estimated Time per Respondent: 4 hours for 1094–C, 12 minutes for 1095–C, 20 minutes for Form 4423.

Estimated Total Annual Burden Hours: 26,890,001.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: April 19, 2024.

Jason M. Schoonmaker,

Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Multiple Internal Revenue Service (IRS) Information Collection Requests

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The public is invited to submit comments on these requests.

DATES: Comments should be received on or before May 28, 2024 to be assured of consideration.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained from Melody Braswell by emailing *PRA@treasury.gov,* calling (202) 622–1035, or viewing the entire information collection request at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

Internal Revenue Service (IRS)

1. Title: Excise Tax on Repurchase of Corporate Stock.

OMB Number: 1545-New.

Form Project Number: Form 7208.

Abstract: Section 4501 was added to a new chapter 37 of the Code by the enactment of Public Law 117–169, 136 Stat. 1818 (August 16, 2022), commonly referred to as the Inflation Reduction Act of 2022 (IRA). Form 7208 is used to figure the excise tax on stock repurchases. If more lines for any part of the form are needed, taxpayers are to prepare a continuation sheet using the same format as the form. Form 7208 and any continuation sheet is to be attached to Form 720, *Quarterly Federal Excise Tax Return.*

Current Actions: This is a request for new OMB approval.

Type of Review: This is a new collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 2700.

Estimated Number of Responses per Respondent: 1.

Estimated Time per Response: 6 hours 30 minutes.

Estimated Total Annual Burden Hours: 2,700.

2. Title: Revenue Procedure 2024–4 (and successor guidance).

OMB Number: 1545–1520.

Revenue Procedure Number: 2024–4.

Abstract: Internal Revenue Code (IRC) § 601.201(a)(1)) provides that it is the practice of the Internal Revenue Service (IRS) to answer inquiries of individuals and organizations, whenever appropriate in the interest of sound tax administration, as to their status for tax purposes and as to the tax effects of their acts or transactions. Under this revenue procedure 2024–4 (and successor guidance), taxpayers can request determination letters and letter rulings from the Commissioner, Tax Exempt and Government Entities, Employee Plans Office (''Employee Plans'') on how the tax laws apply to them. Employee Plans requires information from taxpayers in order to process these requests.

Current Actions: There is no change to the burden previously approved.

Type of Review: Reinstatement without change of a previously approved collection.

Affected Public: Individuals or households, business or other for-profit organizations, not-for-profit institutions, farms, and state, local or tribal governments.

Estimated Number of Respondents: 12,733.

Estimated Number of Responses per Respondent: 1.

Estimated Time per Response: 6 hrs. for the *Letter Ruling* and 3 hrs. for the *Determination Letter.*

Estimated Total Annual Burden Hours: 38,836.

Authority: 44 U.S.C. 3501 *et seq.*

Melody Braswell,

Treasury PRA Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

Notice of Request for Information on the Department of Veterans Affairs; Marriage and Family Therapist Standard of Practice

AGENCY: Department of Veterans Affairs.

ACTION: Request for information.

SUMMARY: The Department of Veterans Affairs (VA) is requesting information to assist in developing a national standard of practice for VA Marriage and Family Therapists. VA seeks comments on various topics to help inform VA's development of this national standard of practice.

DATES: Comments must be received on or before June 25, 2024.

ADDRESSES: Comments must be submitted through *https://www.regulations.gov* Except as provided below, comments received before the close of the comment period will be available at *https://www.regulations.gov/* for public viewing, inspection, copying, including any personally identifiable or confidential business information that is included in a comment. We post the comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov/.* VA will not post on *https://www.regulations.gov/* public comments that make threats to individuals or institutions or suggest that the commenter will take actions to harm the individual. VA encourages individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments. Any public comment received after the comment period's closing date will not be considered.

FOR FURTHER INFORMATION CONTACT: Ethan Kalett, Office of Regulations, Appeals and Policy (10BRAP), Veterans Health Administration, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, 202–461–0500. This is not a toll-free number.

SUPPLEMENTARY INFORMATION:

Authority

Chapters 73 and 74 of 38 U.S.C. and 38 U.S.C. 303 authorize the Secretary to regulate VA health care professions to make certain that VA's health care system provides safe and effective health care by qualified health care professionals to ensure the well-being of those veterans who have borne the battle.

On November 12, 2020, VA published an interim final rule confirming that VA health care professionals may practice their health care profession consistent with the scope and requirements of their VA employment, notwithstanding any State license, registration, certification, or other State requirements that unduly interfere with their practice. 38 CFR 17.419; 85 FR 71838. Specifically, this rulemaking confirmed VA's current practice of allowing VA health care professionals to deliver health care services in a State other than the health care professional's State of licensure, registration, certification, or other State requirement, thereby enhancing beneficiaries' access to critical VA health care services. The rulemaking also confirmed VA's authority to establish national standards of practice for its health care professionals, which would standardize a health care professional's practice in all VA medical facilities, regardless of conflicting State laws, rules, regulations, or other State requirements.

The rulemaking explained that a national standard of practice describes the tasks and duties that a VA health care professional practicing in the health care profession may perform and may be permitted to undertake. Having a national standard of practice means that individuals from the same VA health care profession may provide the same type of tasks and duties regardless of the State where they are located or the State license, registration, certification, or other State requirement they hold. We emphasized in the rulemaking and reiterate here that VA will determine, on an individual basis, that a health care professional has the proper education, training, and skills to perform the tasks and duties detailed in the national standard of practice, and that they will only be able to perform such tasks and duties after they have been incorporated into the individual's privileges, scope of practice, or functional statement. The rulemaking explicitly did not create any such national standards and directed that all national standards of practice would be subsequently created via policy.

Preemption of State Requirements

The national standard of practice will preempt any State laws, rules, regulations, or requirements that both are and are not listed in the national standard as conflicting, but that do conflict with the tasks and duties as authorized in VA's national standard of practice. In the event that a State changes their requirements and places new limitations on the tasks and duties it allows in a manner that would be inconsistent with what is authorized under the national standard of practice, the national standard of practice will preempt such limitations and authorize the VA health care professional to continue to practice consistent with the tasks and duties outlined in the national standard of practice.

In cases where a VA health care professional's license, registration,

certification, or other State requirement allows a practice that is not included in a national standard of practice, the individual may continue that practice so long as it is permissible by Federal law and VA policy, is not explicitly prohibited by the national standard of practice and is approved by the VA medical facility.

Need for National Standards of Practice

It is critical that VA, the Nation's largest integrated health care system, develops national standards of practice to ensure, first, that beneficiaries receive the same high-quality care regardless of where they enter the system and, second, that VA health care professionals can efficiently meet the needs of beneficiaries when practicing within the scope of their VA employment. National standards are designed to increase beneficiaries' access to safe and effective health care, thereby improving health outcomes. The importance of this initiative has been underscored by the coronavirus disease 2019 (COVID–19) pandemic. The increased need for mobility in VA's workforce, including through VA's Disaster Emergency Medical Personnel System, highlighted the importance of creating uniform national standards of practice to better support VA health care professionals who practice across State lines. Creating national standards of practice also promotes interoperability of medical data between VA and the Department of Defense (DoD), providing a complete picture of a veteran's health information and improving VA's delivery of health care to the Nation's veterans. DoD has historically standardized practice for certain health care professionals, and VA has closely partnered with DoD to learn from their experience.

Process To Develop National Standards of Practice

As authorized by 38 CFR 17.419, VA is developing national standards of practice via policy. There is one overarching directive to describe Veterans Health Administration (VHA) policy on national standards of practice. The directive is accessible on the VHA Publications website at *https://vaww.va.gov/vhapublications/* (internal) and *https://www.va.gov/vhapublications/* (external). As each individual national standard of practice is finalized, it is published as an appendix to the directive and accessible at the same websites.

To develop these national standards, VA is using a robust, interactive process that adheres to the requirements of Executive Order (E.O.) 13132 to preempt conflicting State laws, rules, regulations, or other requirements. The process includes consultation with internal and external stakeholders, including State licensing boards, VA employees, professional associations, Veterans Service Organizations, labor partners, and others. For each VA occupation, a workgroup comprised of VA health care professionals in the identified occupation conducts research to identify internal best practices that may not be authorized under every State license, certification, or registration, but would enhance the practice and efficiency of the profession throughout VA. If a best practice is identified that is not currently authorized by every State, the workgroup determines what education, training, and skills are required to perform such tasks and duties. The workgroup then drafts a proposed VA national standard of practice using the data gathered during the research and incorporates internal stakeholder feedback into the standard. The workgroup may consult with internal or external stakeholders at any point throughout the process.

The proposed national standard of practice is then internally reviewed, to include by an interdisciplinary VA workgroup consisting of representatives from Quality Management, VA medical facility Chief of Staff, Academic Affiliates, Veterans Integrated Services Network (VISN) Chief Nursing Officer, Ethics, Workforce Management and Consulting, Surgery, Credentialing and Privileging, VISN Chief Medical Officer, and Electronic Health Record Modernization.

Externally, VA hosts listening sessions for members of the public, professional associations, and VA employees to provide comments on the variance between State practice acts for specific occupations and what should be included in the national standard of practice for that occupation. The listening session for Marriage and Family Therapists was held on September 21, 2023. At the listening session, there was one presenter who represented the American Association of Marriage and Family Therapy. The presenter supported the Marriage and Family Therapy national standard of practice and urged VA to allow all providers to practice to the full extent of their license and education. The presenter stated that maximizing utilization of provider skills would make access to care more efficient and would lower costs. VA appreciates the thoughtful presentation and considers the information presented at the listening session when drafting the proposed VA national standard of practice.

VA has developed a robust process to engage with partners, members of the public, States, and employees on the proposed national standard of practice. VA provides the proposed national standard of practice to our DoD partners as an opportunity to flag inconsistencies with DoD standards. VA also engages with labor partners informally as part of a pre-decisional collaboration. Consistent with E.O. 13132, VA sends a letter to each State board and certifying organization or registration organization, as appropriate, which includes the proposed national standard and offers the recipient an opportunity to discuss the national standard with VA. After the State boards, certifying organizations, or registration organizations have received notification, the proposed national standard of practice is posted in the **Federal Register** for 60 days to obtain feedback from the public, professional associations, and any other interested parties. At the same time, the proposed national standard is posted to an internal VA site to obtain feedback from VA employees. Responses received through all vehicles—from State boards, professional associations, unions, VA employees, and any other individual or organization who provides comments via the **Federal Register**—will be reviewed. VA will make appropriate revisions in light of the comments, including those that present evidence-based practice and alternatives that help VA meet our mission and goals. VA will publish a collective response to all comments at *https://www.va.gov/standardsofpractice/.*

After the national standard of practice is finalized, approved, and published in VHA policy, VA will implement the tasks and duties authorized by that national standard of practice. Any tasks or duties included in the national standard will be properly incorporated into individual health care professionals' privileges, scope of practice, or functional statement once it has been determined by their VA medical facility that the individual has the proper education, training, and skills to perform the task or duty. Implementation of the national standard of practice may be phased in across all VA medical facilities, with limited exemptions for health care professionals as needed.

Format for the Proposed National Standard for Marriage and Family Therapist

The format for the proposed national standards of practice when there are

State licenses is as follows. The first paragraph provides general information about the profession and what the health care professionals can do. For this national standard, Marriage and Family Therapists are licensed professionals who provide psychotherapy to couples, families, individuals, and groups. We reiterate that the proposed standard of practice does not contain an exhaustive list of every task and duty that each VA health care professional can perform. Rather, it is designed to highlight generally what tasks and duties the health care professionals perform and how they will be able to practice within VA notwithstanding their State license, certification, registration, or other State requirements.

The second paragraph references the education and State license, or other requirement, needed to practice this profession at VA. Qualification standards for employment of health care professionals by VA are outlined in VA Handbook 5005, Staffing, dated November 8, 2023. VA follows the requirements outlined in the VA qualification standards even if the requirements conflict with or differ from a State requirement. National standards of practice do not affect those requirements. For Marriage and Family Therapists, VA qualification standards require an active, current, full, and unrestricted State license.

The second paragraph also notes whether the national standard of practice explicitly excludes individuals who practice under ''grandfathering'' provisions. Qualification standards may include provisions to permit employees who met all requirements prior to revisions to the qualification standards to maintain employment at VA even if they no longer meet the new qualification standards. This practice is referred to as grandfathering. Marriage and Family Therapists have grandfathering provisions included within its qualification standards, and VA proposes to have those individuals be authorized to follow the Marriage and Family Therapist national standard of practice. Therefore, there would be no notation regarding grandfathered employees in the national standard of practice as they would be required to adhere to the same standard as any other VA Marriage and Family Therapist who meets the current qualification standards.

The third paragraph describes what tasks and duties the profession will be able to perform within the scope of their VA employment. It includes whether the profession can practice all duties covered by their State license. For Marriage and Family Therapists, VA reviewed State license requirements and found no variance in how VA Marriage and Family Therapists practice in any State.

This national standard of practice does not address training because it will not authorize VA Marriage and Family Therapists to perform any tasks or duties not already authorized under their State license.

Following public and VA employee comments and revisions, each national standard of practice that is published into policy will also include the date for recertification of the standard of practice and a point of contact for questions or concerns.

Proposed National Standard of Practice for Marriage and Family Therapist

1. Marriage and Family Therapists provide psychotherapy to couples, families, individuals, and groups. These professionals are licensed to diagnose and treat mental health disorders such as depression, post-traumatic stress disorder, anxiety, and other mental health disorders. Marriage and Family Therapists have specialized training in family systems theory and are well qualified to treat relationships issues, including marriage or couples counseling, and child-parent challenges.

2. Marriage and Family Therapists in the Department of Veterans Affairs (VA) possess the education and license required by VA qualification standards. See VA Handbook 5005, Staffing, Part II, Appendix G44, dated April 18, 2018.

3. VA Marriage and Family Therapists can practice all duties covered by their license. VA reviewed license requirements for this occupation in February 2024 and confirmed there is no variance in how VA Marriage and Family Therapists practice in any State.

Request for Information

1. Is VA's assessment of what States allow and do not allow accurate?

2. Are there any other areas of variance between State licenses, certification, or registration that VA should preempt that are not listed?

3. Is there anything else you would like to share with us about this VA national standard of practice?

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, approved and signed this document on April 5, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Luvenia Potts,

Regulation Development Coordinator, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0209]

Agency Information Collection Activity Under OMB Review: Application for Work Study Allowance, Student Work Study Agreement-Advance Payment, Extended Student Work Study Agreement, Student Work Study Agreement

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice by clicking on the following link *www.reginfo.gov/public/do/PRAMain, select* ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–0209.''

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20420, (202) 266–4688 or email *Maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0209'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 U.S.C. 3485; 38 CFR 21.4145.

Title: Application for Work Study Allowance [VA Form 22–8691]; Student Work Study Agreement-Advance Payment [VA Form 22–8692]; Extended Student Work Study Agreement [VA

Form 22–8692a]; Student Work Study Agreement [VA Form 22–8692b].

OMB Control Number: 2900–0209.

Type of Review: Revision of a currently approved collection.

Abstract: VA uses the information collected to determine the individual's eligibility for the work-study allowance, the number of hours the individual will work, the amount payable, whether the individual desires an advance payment, and whether the individual wants to extend the work-study contract.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 12946 on Tuesday, February 20, 2024, page(s) 12946–12947.

Affected Public: Individuals and households.

Estimated Annual Burden: 7,542 hours.

Estimated Average Burden Time per Respondent: 23 minutes [15 min. VAF 22–8691]; [5 min. VAFs 22–8692 and 22–8692b]; [3 min. VAF 22–8692a].

Frequency of Response: Annually.

Estimated Number of Respondents: 75,451.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

RIN 2040–AG18

PFAS National Primary Drinking Water Regulation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: In March 2023, the U.S. Environmental Protection Agency (EPA) proposed and requested comment on the National Primary Drinking Water Regulation (NPDWR) and health-based Maximum Contaminant Level Goals (MCLGs) for six per- and polyfluoroalkyl substances (PFAS): perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic acid (PFHxS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO–DA, commonly known as GenX Chemicals), and perfluorobutane sulfonic acid (PFBS). After consideration of public comment and consistent with the provisions set forth under the Safe Drinking Water Act (SDWA), the EPA is finalizing NPDWRs for these six PFAS. Through this action, the EPA is finalizing MCLGs for PFOA and PFOS at zero. Considering feasibility, the EPA is promulgating individual Maximum Contaminant Levels (MCLs) for PFOA and PFOS at 4.0 nanograms per liter (ng/L) or parts per trillion (ppt). The EPA is also finalizing individual MCLGs and is promulgating individual MCLs for PFHxS, PFNA, and HFPO–DA at 10 ng/L. In addition to the individual MCLs for PFHxS, PFNA, and HFPO–DA, in consideration of the known toxic effects, dose additive health concerns and occurrence and likely co-occurrence in drinking water of these three PFAS, as well as PFBS, the EPA is finalizing a Hazard Index (HI) of 1 (unitless) as the MCLG and MCL for any mixture containing two or more of PFHxS, PFNA, HFPO–DA, and PFBS. Once fully implemented, the EPA estimates that the rule will prevent thousands of deaths and reduce tens of thousands of serious PFAS-attributable illnesses.

DATES: This final rule is effective on June 25, 2024. The incorporation by reference of certain publications listed in the rule is approved by the Director of the **Federal Register** as of June 25, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2022–0114. All documents in the docket are listed on the *http://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Alexis Lan, Office of Ground Water and Drinking Water, Standards and Risk Management Division (Mail Code 4607M), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number 202–564–0841; email address: *PFASNPDWR@epa.gov*.

SUPPLEMENTARY INFORMATION:

Executive Summary

The Environmental Protection Agency (EPA) is issuing an adaptive and flexible National Primary Drinking Water Regulation (NPDWR) under the Safe Drinking Water Act (SDWA) to manage risks of per- and polyfluoroalkyl substances (PFAS) in drinking water. The EPA is establishing drinking water standards for six PFAS in this NPDWR to provide health protection against these individual and co-occurring PFAS in public water systems. The EPA's final rule represents data-driven drinking water standards that are based on the best available science and meet the requirements of SDWA. For the six PFAS, the EPA considered PFAS health effects information, evidence supporting dose-additive health concerns from co-occurring PFAS, as well as national and state data for the levels of multiple PFAS in finished drinking water. SDWA provides a framework for the EPA to regulate emerging contaminants of concern in drinking water. Under the statute, the EPA must act based on the ''best available'' science and information. Thus, the statute recognizes that the EPA may act in the face of imperfect information. It also provides a mechanism for the EPA to update standards as more science becomes available. For the PFAS covered by this rule, the EPA concluded that the state of the science and information has sufficiently advanced to the point to satisfy the statutory requirements and fulfill SDWA's purpose to protect public health by addressing contaminants in the nation's public water systems.

PFAS are a large class of thousands of organic chemicals that have unique physical and chemical properties. These compounds are designed to be stable and non-reactive because of the applications in which they are used: certain industrial and manufacturing processes; stain and water repellants in clothing, carpets, and other consumer products, as well as certain types of fire-fighting foams. PFAS tend to break down slowly and persist in the environment, and consequently, they can accumulate in the environment and the human body over time. Current scientific research and available evidence have shown the potential for harmful human health effects after being exposed to some PFAS. Although some PFAS have been phased out of use in the United States, they are still found in the environment and in humans based on biomonitoring data.

Drinking water is one of several ways people can be exposed to PFAS. The EPA's examination of drinking water data shows that different PFAS can often be found together and in varying combinations as mixtures. Additionally, decades of research demonstrates that exposure to mixtures of different chemicals can elicit dose-additive health effects: even if the individual chemicals are each present at levels considered ''safe,'' the mixture may cause significant adverse health effects. The high likelihood for different PFAS to co-occur in drinking water; the additive health concerns when present in mixtures; the diversity and sheer number of PFAS; and their general presence and persistence in the environment and the human body are reflective of the environmental and public health challenges the American public faces with PFAS, which poses a particular threat for overburdened communities that experience disproportionate environmental impacts. The final NPDWR includes:

1. Individual Maximum Contaminant Levels (MCLs)
   a. Perfluorooctanoic acid (PFOA) MCL = 4.0 nanograms per liter or parts per trillion (ng/L or ppt)
   b. Perfluorooctane sulfonic acid (PFOS) MCL = 4.0 ng/L
   c. Perfluorohexane sulfonic acid (PFHxS) MCL = 10 ng/L
   d. Perfluorononanoic acid (PFNA) MCL = 10 ng/L
   e. Hexafluoropropylene oxide dimer acid (HFPO–DA) MCL = 10 ng/L
2. A Hazard Index MCL to account for dose-additive health effects for mixtures that could include two or more of four

PFAS (PFHxS, PFNA, HFPO–DA, and perfluorobutane sulfonic acid (PFBS)). The Hazard Index MCL defines when the combined levels of two or more of these four PFAS requires action. A PFAS mixture Hazard Index less than or equal to 1 (unitless) indicates a level at which no known or anticipated adverse effects on the health of persons occur and allows for an adequate margin of safety with respect to health risk associated with a mixture of PFAS in finished drinking water. A PFAS mixture Hazard Index greater than 1 (unitless) indicates an exceedance of the health protective level. To calculate the Hazard Index, a ratio is developed for each PFAS by dividing the measured level of the PFAS in drinking water by the level (in ng/L or ppt) below which adverse health effects are not likely to occur (*i.e.,* the Health Based Water Concentration or HBWC). The HBWCs for each PFAS in the Hazard Index are:

a. PFHxS = 10 ng/L or ppt

b. PFNA = 10 ng/L

c. HFPO–DA = 10 ng/L

d. PFBS = 2,000 ng/L

The individual PFAS ratios are then summed across the mixture to yield the Hazard Index MCL as follows:

$$HI\ MCL = \left(\frac{[HFPO\text{–}DA_{water} ng/L]}{[10\ ng/L]}\right) + \left(\frac{[PFBS_{water} ng/L]}{[2000\ ng/L]}\right) + \left(\frac{[PFNA_{water} ng/L]}{[10\ ng/L]}\right) + \left(\frac{[PFHxS_{water} ng/L]}{[10\ ng/L]}\right) = 1$$

Based on the administrative record for the final PFAS NPDWR and as discussed above, certain PFAS (including PFHxS, PFNA, HFPO–DA, and PFBS) have been shown to be toxicologically similar; *i.e.,* elicit the same or similar profile of adverse effects in several biological organs and systems (see USEPA, 2000a; USEPA, 2007; USEPA, 2024a; USEPA, USEPA, 2024c; and section IV.B of this preamble). Studies with PFAS and other classes of chemicals support the health-protective conclusion that chemicals that have similar observed adverse effects following individual exposure should be assumed to act in a dose-additive manner when in a mixture unless data demonstrate otherwise (USEPA, 2024a). Additionally, the record further supports that there is a substantial likelihood that PFBS, PFHxS, PFNA, and HFPO–DA co-occur as mixtures in drinking water at levels of public health concern (see USEPA, 2024b and sections VI.C and D of this preamble). Though the EPA is not promulgating an individual MCL or Maximum Contaminant Level Goal (MCLG) for PFBS at this time as it is for PFHxS, PFNA, and HFPO–DA (see section III.A of this preamble for specific discussion), based on these evaluations, the agency is establishing a Hazard Index MCL that addresses PFBS as part of mixtures where its co-occurrence with other PFAS (PFHxS, HFPO–DA, and/or PFNA) can affect health endpoints when present in these mixtures.

The individual and Hazard Index MCLs are independently applicable for compliance purposes.

Additionally, the EPA is finalizing important public ''right to know'' provisions of the EPA's SDWA regulations, specifically, public notification (PN) and Consumer Confidence Report (CCR) requirements. The changes under this rule will strengthen risk communication and education for the public when elevated levels of these PFAS are found. Finally, the EPA is finalizing monitoring and reporting requirements that enable public water systems (PWSs) and primacy agencies to implement and comply with the NPDWR.

Consistent with the timelines set out under SDWA, PWSs are required to conduct their initial monitoring by April 26, 2027, and to conduct PN and include PFAS information in the CCR. After carefully considering public comment, the EPA is extending the compliance deadline for all systems nationwide to meet the MCL to allow additional time for capital improvements. As such, PWSs are required to make any necessary capital improvements and comply with the PFAS MCLs by April 26, 2029.

As part of its *Health Risk Reduction and Cost Analysis* (HRRCA), the EPA evaluated quantifiable and nonquantifiable health risk reduction benefits and costs associated with the final NPDWR. At a two percent discount rate, the EPA estimates the quantifiable annual benefits of the final rule will be $1,549.40 million per year and the quantifiable costs of the rule will be $1,548.64 million per year. The EPA's quantified benefits are based on the agency's estimates that that there will be 29,858 fewer illnesses and 9,614 fewer deaths in the communities in the decades following actions to reduce PFAS levels in drinking water. While the modeled quantified net benefits are nearly at parity, under SDWA, the EPA must consider whether the costs of the rule are justified by the benefits based on all statutorily prescribed costs and benefits, not just the quantified costs and benefits (see SDWA 1412(b)(3)(c)(i)).

The EPA expects that the final rule will result in additional nonquantifiable costs, including costs with generally greater uncertainty, which the EPA has examined in quantified sensitivity analyses in the Economic Analysis for the final rule. First, the EPA had insufficient nationally representative data to precisely characterize occurrence of HFPO–DA, PFNA, and PFBS. In an effort to better consider and understand the costs associated with treatment of these regulated compounds at systems both with and without PFOA, PFOS and PFHxS occurrence in exceedance of the MCLs, the EPA performed a quantitative sensitivity analysis of the costs associated with Hazard Index and/or MCL exceedances resulting from HFPO–DA, PFNA, and PFBS. The EPA expects that the quantified national costs, which do not include HFPO–DA, PFNA, and PFBS treatment costs are marginally underestimated (on the order of 5 percent). Second, stakeholders have expressed concern to the EPA that a hazardous substance designation for certain PFAS may limit their disposal options for drinking water treatment residuals (*e.g.,* spent media, concentrated waste streams) and/or potentially increase costs. The EPA has conducted a sensitivity analysis and found that should all water systems use hazardous waste disposal options national costs would increase by 7 percent.

The EPA anticipates significant additional benefits that cannot be quantified, will result from avoided negative developmental, cardiovascular, liver, immune, endocrine, metabolic, reproductive, musculoskeletal, and carcinogenic effects as a result of reductions in the levels of the regulated PFAS and other co-removed contaminants. For example, elevated

concentrations of both PFOA and PFOS negatively impact the immune and endocrine systems, impacts which the agency is unable to quantify at this time. As another example, the EPA assessed the developmental benefits associated with PFNA exposure reductions semi-quantitively in sensitivity analysis, and the analysis demonstrates significant additional benefits associated with reductions in PFNA. There are other nonquantifiable benefits for other PFNA health endpoints, and numerous endpoints for PFHxS, HFPO–DA, PFBS, and other PFAS that are anticipated to be removed as a result of the final NPDWR. Additionally, as a result of the ability for available treatment technologies to remove co-occurring contaminants, there are benefits not quantified for removal of co-occurring contaminants for this regulation (*e.g.,* certain pesticides, volatile organic compounds). Considering both quantifiable and nonquantifiable costs and benefits of the rule, the EPA is reaffirming the Administrator's determination at the time of proposal, that the quantifiable and nonquantifiable benefits of the final rule justify the quantifiable and nonquantifiable costs.

To help communities on the frontlines of PFAS contamination, the passage of the Infrastructure Investment and Jobs Act (IIJA), also referred to as the Bipartisan Infrastructure Law (BIL), invests billions of dollars over a 5-year period. BIL appropriates over $11.7 billion in the Drinking Water State Revolving Fund (DWSRF) General Supplemental; $4 billion to the DWSRF for Emerging Contaminants; and $5 billion in grants to the Emerging Contaminants in Small or Disadvantaged Communities. These funds will assist many disadvantaged communities, small systems, and others with the costs of installation of treatment when it might otherwise be cost-challenging.

Table of Contents

I. General Information

A. What are the EPA's final rule requirements?

The Safe Drinking Water Act (SDWA) provides a framework for the Environmental Protection Agency (EPA) to regulate emerging contaminants of concern in drinking water. Under the statute, the EPA may act based on the ''best available'' science and information. Thus, the statute recognizes that the EPA may act in the face of imperfect information and provides a mechanism for the EPA to update standards as more science becomes available. For the per- and polyfluoroalkyl substances (PFAS) covered by this rule, the EPA concluded that the state of the science and information has sufficiently advanced to the point to satisfy the statutory requirements and fulfill SDWA's purpose to protect public health by addressing contaminants in the nation's public water systems. In this final action, the EPA is finalizing the PFAS National Primary Drinking Water Regulation (NPDWR) that is based upon the best available peer-reviewed

science. The final NPDWR for PFAS establishes Maximum Contaminant Level Goals (MCLGs) and enforceable Maximum Contaminant Levels (MCLs) for six PFAS compounds: perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic acid (PFHxS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO–DA, commonly known as GenX Chemicals), and perfluorobutane sulfonic acid (PFBS). The final rule requirements and references to where additional discussion can be found on these topics are summarized here:

The EPA is finalizing MCLGs for PFOA and PFOS at zero (0) and enforceable MCLs for PFOA and PFOS at 4.0 ng/L (ng/L or ppt). Please see section IV of this preamble on the MCLG derivation for PFOA and PFOS. Additionally, please see section V of this preamble for discussion on the MCL for PFOA and PFOS.

The EPA is finalizing individual regulatory determinations to regulate PFHxS, PFNA, and HFPO–DA (commonly known as ''GenX Chemicals''). The EPA is deferring the individual regulatory determination to regulate PFBS in drinking water. Concurrent with the final determinations, the EPA is promulgating individual MCLGs and MCLs for PFHxS, PFNA, and HFPO–DA at 10 ng/L each.

Additionally, the EPA is finalizing a regulatory determination for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS due to their substantial likelihood for co-occurrence and dose-additive health concerns when present as a mixture in drinking water. Concurrent with this final determination, the EPA is finalizing a Hazard Index (HI) of 1 as the MCLG and enforceable MCL to address mixtures of PFHxS, PFNA, HFPO–DA, and PFBS where they co-occur in drinking water. Please see section III of this preamble for discussion on the EPA's final regulatory determinations; section IV of this preamble for discussion on the MCLG derivation for these additional compounds; and section V of this preamble for a discussion on the final MCLs.

This action also lists feasible technologies for public water systems (PWSs) that can be used to comply with the MCLs. The EPA notes that systems are not required to use the listed technologies to meet the MCL; rather, the MCL is a numeric regulatory limit systems must meet that is developed while considering treatment feasibility and cost. Please see section X for additional discussion on feasible treatment technologies.

The EPA is finalizing SDWA Right-to-Know requirements for the final rule, including Consumer Confidence Report (CCR) and Public Notification (PN) requirements. Community water systems (CWSs) must prepare and deliver to its customers an annual CCR in accordance with 40 CFR part 141, subpart O. Under this rule, CWSs will be required to report detected PFAS in their CCRs and provide health effects language in the case of MCL violations. Additionally, under the final rule, MCL violations require Tier 2 public notification, or notification provided as soon as practicable but no later than 30 days after a system learns of the violation, as per 40 CFR 141.203. Additionally, monitoring and testing procedure violations require Tier 3 notification, or notice no later than one year after the system learns of the violation. Please see section IX of this preamble for additional discussion on SDWA Right-to-Know requirements.

Additionally, the EPA is finalizing monitoring and reporting requirements for PWSs to comply with the NPDWR. PWSs are required to sample each EP using a monitoring regime generally based on the EPA's Standard Monitoring Framework (SMF) for Synthetic Organic Contaminants (SOCs). As a part of these requirements, to establish baseline levels of regulated PFAS, water systems must complete initial monitoring within three years following rule promulgation and/or use results of recent, previously acquired monitoring to satisfy the initial monitoring requirements. Following initial monitoring, beginning three years following rule promulgation, to demonstrate that finished drinking water does not exceed the MCLs for regulated PFAS, PWSs will be required to conduct compliance monitoring for all regulated PFAS at a frequency specifically based on sample results. Compliance with the NPDWRs will be based on analytical results obtained at each sampling point. PWSs are required to report to primacy agencies the results of all initial and compliance monitoring to ensure compliance with the NPDWRs. Please see section VIII of this preamble for additional discussion on these requirements.

Finally, the EPA is exercising its authority under SDWA section 1412(b)(10) to implement a nationwide capital improvement extension to comply with the MCL. All systems must comply with the MCLs by April 26, 2029. All systems must comply with all other requirements of the NPDWR, including initial monitoring, by April 26, 2027. For additional discussion on extensions and exemptions, please see section XI.

B. Does this action apply to me?

Entities regulated by this action are CWSs and non-transient non-community water systems (NTNCWSs). A PWS, as defined in 40 CFR 141.2, provides water to the public for human consumption through pipes or ''other constructed conveyances, if such system has at least fifteen service connections or regularly serves an average of at least twenty-five individuals daily at least 60 days out of the year.'' A PWS is either a CWS or a non-community water system (NCWS). A CWS, as defined in § 141.2, is ''a public water system which serves at least fifteen service connections used by year-round residents or regularly serves at least twenty-five year-round residents.'' The definition in § 141.2 for a NTNCWS is ''a public water system that is not a [CWS] and that regularly serves at least 25 of the same persons over 6 months per year.'' The following table provides examples of the regulated entities under this rule:

Category	Examples of potentially affected entities
Public water systems	CWSs; NTNCWSs.
State and Tribal agencies	Agencies responsible for drinking water regulatory development and enforcement.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this action. This table includes the types of entities that the EPA is now aware could potentially be regulated by this action. To determine whether your entity is regulated by this action, this final rule should be carefully examined. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

All new systems that begin operation after, or systems that use a new source of water after, April 26, 2024, must demonstrate compliance with the MCLs

within a period of time specified by the Primacy Agency. The EPA has defined in 40 CFR chapter I, subchapter D, part 141, § 141.2, a wholesale system as a PWS that supplies finished PWSs and a consecutive system as a PWS that buys or otherwise receives some or all its finished water from a wholesale system. In this action, the EPA reiterates that all CWS and NTNCWS must comply with this regulation. This includes consecutive CWS and NTNCWS systems; however, the requirements these consecutive systems must implement to comply with the regulation may be, and often are, much less extensive. For finished water that is provided through a system interconnection, the wholesale systems will be responsible for conducting the monitoring requirements at the entry point (EP) to the distribution system. The final regulation does not require that any monitoring be conducted at a system interconnection point. Where a violation does occur, the wholesale system must notify any consecutive systems of this violation and it is the responsibility of the consecutive system to provide PN to their customers pursuant to § 141.201(c)(1). In addition, wholesale systems must also provide information in Subpart O to consecutive systems for developing CCRs (§ 141.201(c)(1)). Consecutive systems are responsible for providing their customers with the reports (§ 141.153(a)).

II. Background

A. What are PFAS?

Per- and polyfluoroalkyl substances (PFAS) are a large class of thousands of synthetic chemicals that have been in use in the United States and around the world since the 1940s (USEPA, 2018a). The ability for PFAS to withstand heat and repel water and stains makes them useful in a wide variety of consumer, commercial, and industrial products, and in the manufacturing of other products and chemicals. This rule applies directly to six specific PFAS: perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO–DA, commonly known as GenX Chemicals), perfluorohexane sulfonic acid (PFHxS), and perfluorobutane sulfonic acid (PFBS). Due to their widespread use, physicochemical properties, and prolonged persistence, many PFAS co-occur in air, water, ice, and soil, and in organisms, such as humans and wildlife. Exposure to some PFAS can lead to bioaccumulation in tissues and blood of aquatic as well as terrestrial organisms, including humans (Domingo and Nadal, 2019; Fromme et al., 2009). Pregnant and lactating women, as well as infants and children, may be more sensitive to the harmful effects of certain PFAS, such as PFOA, PFOS, PFNA, and PFBS. For example, studies indicate that PFOA and PFOS exposure above certain levels may result in adverse health effects, including developmental effects to fetuses during pregnancy or to breast- or formula-fed infants, increased risk for certain cancers, and negative immunological effects, among others (USEPA, 2024c; USEPA, 2024d). It has been documented that exposure to other PFAS are associated with a range of adverse health effects (USEPA, 2021a; USEPA, 2021b; ATSDR, 2021; NASEM, 2022).

The Environmental Protection Agency (EPA) is aware that PFAS still enter the environment and there are viable pathways for human exposure. Most United States production of PFOA, PFOS, and PFNA, along with other long-chain PFAS, was phased out and then generally replaced by production of PFHxS, HFPO–DA, PFBS, and other PFAS. The EPA is also aware of ongoing use of PFOA, PFOS, PFNA, and other long-chain PFAS (USEPA, 2000b; ATSDR, 2021). Long-chain PFAS are typically defined as including perfluoroalkyl sulfonic acids containing ≥ 6 carbons, and perfluoroalkyl carboxylic acids with ≥7 carbons. While domestic production and import of PFOA has been phased out in the United States by the companies participating in the 2010/2015 PFOA Stewardship Program, small quantities of PFOA may be produced, imported, and used by companies not participating in the PFOA Stewardship Program (USEPA, 2021c). The EPA is also aware of ongoing use of PFAS available from existing stocks or newly introduced via imports (see USEPA, 2022a). Additionally, the environmental persistence of these chemicals and formation as degradation products from other compounds may contribute to their ongoing release in the environment (ATSDR, 2021).

The six PFAS in this rule and their relevant Chemical Abstract Service registry numbers (CASRNs) are:

- PFOA ($C_8F_{15}O_2^-$; CASRN: 45285–51–6)
- PFOS ($C_8F_{17}SO_3^-$; CASRN: 45298–90–6)
- PFHxS ($C_6F_{13}SO_3^-$; CASRN: 108427–53–8)
- PFNA ($C_9F_{17}O_2^-$; CASRN: 72007–68–2)
- HFPO–DA ($C_6F_{11}O_3^-$; CASRN: 122499–17–6)
- PFBS ($C_4F_9SO_3^-$; CASRN: 45187–15–3)

These PFAS may exist in multiple forms, such as isomers or associated salts, and each form may have a separate CAS registry number or no CASRN at all. Additionally, these compounds have various names under different classification systems. However, at environmentally relevant pHs, these PFAS are expected to dissociate in water to their anionic (negatively charged) forms. For instance, International Union of Pure and Applied Chemistry substance 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy) propanoate (CASRN: 122499–17–6), also known as HFPO–DA, is an anionic molecule which has an ammonium salt (CASRN: 62037–80–3), a conjugate acid (CASRN: 13252–13–6), a potassium salt (CASRN: 67118–55–2), and an acyl fluoride precursor (CASRN: 2062–98–8), among other variations. At environmentally relevant pHs these all dissociate into the propanoate/anion form (CASRN: 122499–17–6). Each PFAS listed has multiple variants with differing chemical connectivity, but the same molecular composition (known as isomers). Commonly, the isomeric composition of PFAS is categorized as 'linear,' consisting of an unbranched alkyl chain, or 'branched,' encompassing a potentially diverse group of molecules including at least one, but potentially more, offshoots from the linear molecule. While broadly similar, isomeric molecules may have differences in chemical properties. This rule covers all salts, isomers and derivatives of the chemicals listed, including derivatives other than the anionic form which might be created or identified.

B. Human Health Effects

The publicly available landscape of human epidemiological and experimental animal-based exposure-effect data from repeat-dose studies across PFAS derive primarily from carboxylic and sulfonic acid species such as PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS (ATSDR, 2021; USEPA, 2021a; USEPA, 2021b; USEPA, 2024c; USEPA, 2024d). Many other PFAS have some human health effects data available (Mahoney et al., 2022) and some PFAS, such as PFBS, HFPO–DA, PFNA, and PFHxS, have sufficient data that has allowed Federal agencies to publish toxicity assessments (USEPA, 2021a; USEPA, 2021b; USEPA, 2024c; USEPA, 2024d; ATSDR, 2021) and derive toxicity values (*e.g.,* a reference dose), which is an estimate of daily exposure to the human population

(including sensitive populations) that is likely to be without an appreciable risk of deleterious effects during a lifetime). The adverse health effects associated with exposure to such PFAS include (but are not limited to): effects on the liver (*e.g.,* liver cell death), growth and development (*e.g.,* low birth weight), hormone levels, kidney, the immune system (reduced response to vaccines), lipid levels (*e.g.,* high cholesterol), the nervous system, and reproduction, as well as increased risk of certain types of cancer.

Exposure to PFAS may have disproportionate health effects on children. Adverse health effects relevant to children associated with exposure to some PFAS include developmental effects to fetuses during pregnancy or to breast-fed infants, cardiovascular effects, immune effects, endocrine effects, and reproductive effects. Additionally, PFAS are known to be transmitted to the fetus via the placenta and to the newborn, infant, and child via breast milk (USEPA, 2021a; USEPA, 2021b; USEPA, 2024c; USEPA, 2024d; ATSDR, 2021).

Please see sections III.B and IV of this rule for additional discussion on health considerations for the six PFAS the EPA is regulating in this document.

C. Statutory Authority

Section 1412(b)(1)(A) of SDWA requires the EPA to establish National Primary Drinking Water Regulations (NPDWRs) for a contaminant where the Administrator determines that the contaminant: (1) may have an adverse effect on the health of persons; (2) is known to occur or there is a substantial likelihood that the contaminant will occur in PWSs (public water systems) with a frequency and at levels of public health concern; and (3) in the sole judgment of the Administrator, regulation of such contaminant presents a meaningful opportunity for health risk reduction for persons served by PWSs.

D. Statutory Framework and PFAS Regulatory History

Section 1412(b)(1)(B)(i) of the Safe Drinking Water Act (SDWA) requires the EPA to publish a Contaminant Candidate List (CCL) every five years. The CCL is a list of contaminants that are known or anticipated to occur in PWSs, are not currently subject to any proposed or promulgated NPDWRs and may require regulation under the drinking water program. In some cases, developing the CCL may be the first step in evaluating drinking water contaminants. The EPA uses the CCL to identify priority contaminants for regulatory decision-making (*i.e.,* regulatory determinations), and for data collection. Publishing a CCL does not impose any requirements on PWSs. The EPA included PFOA and PFOS on the third and fourth CCLs published in 2009 (USEPA, 2009a) and 2016 (USEPA, 2016a). The EPA then included PFAS as a chemical group in its most recent list, the fifth CCL (CCL 5) (USEPA, 2022b). This group is inclusive of the PFAS the EPA is regulating through this action; however, the fifth CCL did not include PFOA and PFOS as they had already had final positive regulatory determinations completed for them in March 2021 (USEPA, 2021d).

The EPA collects data on the CCL contaminants to better understand their potential health effects and to determine the levels at which they occur in PWSs. SDWA 1412(b)(1)(B)(ii) requires that, every five years and after considering public comments on a ''preliminary'' regulatory determination, the EPA issues a determination to regulate or not regulate at least five contaminants on each CCL. In addition, section 1412(b)(1)(B)(ii)(III) authorizes the EPA to make a determination to regulate a contaminant not listed on the CCL at any time so long as the contaminant meets the three statutory criteria based on available public health information. SDWA 1412(b)(1)(B)(iii) requires that ''each document setting forth the determination for a contaminant under clause (ii) shall be available for public comment at such time as the determination is published.'' To implement these requirements, the EPA issues preliminary regulatory determinations subject to public comment and then issues a final regulatory determination after consideration of public comment. Section 1412(b)(1)(E) requires that the EPA propose an NPDWR no later than 24 months after a final determination to regulate. The statute also authorizes the EPA to issue a proposed rule concurrent with a preliminary determination to regulate. The EPA must then promulgate a final regulation within 18 months of the proposal (which may be extended by 9 additional months).

The EPA also implements a monitoring program for unregulated contaminants under SDWA 1445(a)(2) that requires the EPA to issue a list once every five years of priority unregulated contaminants to be monitored by PWSs. This monitoring is implemented through the Unregulated Contaminant Monitoring Rule (UCMR), which collects data from community water systems (CWSs) and non-transient community water systems (NTNCWSs) to better improve the EPA's understanding of the frequency of unregulated contaminants of concern occurring in the nation's drinking water systems and at what levels. The first four UCMRs collected data from a census of large water systems (serving more than 10,000 people) and from a statistically representative sample of small water systems (serving 10,000 or fewer people).

Between 2013–2015, water systems collected monitoring data for six PFAS (PFOA, PFOS, PFHxS, PFNA, PFBS, and perfluoroheptanoic acid (PFHpA)) as part of the third UCMR (UCMR 3) monitoring program. The fifth UCMR (UCMR 5), published December 2021, requires sample collection and analysis for 29 PFAS, including PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS, to occur between January 2023 and December 2025 using drinking water analytical methods developed by the EPA. Section 2021 of America's Water Infrastructure Act of 2018 (AWIA) (Pub. L. 115–270) amended SDWA and specifies that, subject to the availability of the EPA appropriations for such purpose and sufficient laboratory capacity, the EPA must require all public water systems (PWSs) serving between 3,300 and 10,000 people to monitor and ensure that a nationally representative sample of systems serving fewer than 3,300 people monitor for the contaminants in UCMR 5 and future UCMR cycles. All large water systems continue to be required to participate in the UCMR program. Section VI of this preamble provides additional discussion on PFAS occurrence. While the complete UCMR 5 dataset was not available to inform this rule and thus not a basis for informing the agency's decisions for the final rule, the EPA acknowledges that the small subset of data released (7 percent of the total results that the EPA expects to receive) as of July 2023 confirms the EPA's conclusions supported by the extensive amount of data utilized in its UCMR 3, state data, and modelling analyses. This final rule allows utilities and primacy agencies to use the UCMR 5 data to support implementation of monitoring requirements. Sections VI and VIII of this preamble further discusses these occurrence analyses as well as monitoring and compliance requirements, respectively.

After careful consideration of public comments, the EPA issued final regulatory determinations for contaminants on the fourth CCL (CCL 4) in March of 2021 (USEPA, 2021d) which included determinations to regulate two contaminants, PFOA and PFOS, in drinking water. The EPA found that PFOA and PFOS may have

an adverse effect on the health of persons; that these contaminants are known to occur, or that there is a substantial likelihood that they will occur, in PWSs with a frequency and at levels that present a public health concern; and that regulation of PFOA and PFOS presents a meaningful opportunity for health risk reduction for persons served by PWSs. As discussed in the final Regulatory Determinations 4 Notice for CCL 4 contaminants (USEPA, 2021d) and the EPA's *PFAS Strategic Roadmap* (USEPA, 2022c), the agency has also evaluated additional PFAS chemicals for regulatory consideration as supported by the best available science. The agency finds that additional PFAS compounds also meet SDWA criteria for regulation. The EPA's regulatory determination for these additional PFAS is discussed in section III of this preamble.

Section 1412(b)(1)(E) provides that the Administrator ''may publish such proposed regulation concurrent with the determination to regulate.'' The EPA interprets this provision as allowing concurrent processing of a preliminary determination with a proposed rule, not a final determination (as urged by some commenters—see responses in section III of this preamble). Under this interpretation, section 1412(b)(1)(E) authorizes the EPA to issue a preliminary determination to regulate a contaminant and a proposed NPDWR addressing that contaminant concurrently and request public comment at the same time. This represents the only interpretation that accounts for the statutory language in context and is the only one that fulfills Congress's purpose of permitting the agency to adjust its stepwise processes where appropriate to avoid any unnecessary delay in regulating contaminants that meet the statutory criteria. To the extent the statute is ambiguous, the EPA's interpretation is the best interpretation of this provision for these same reasons. As a result, this rule contains both a final determination to regulate four PFAS contaminants (individually and/or as part of a PFAS mixture), and regulations for those contaminants as well as the two PFAS contaminants (PFOA and PFOS) for which the EPA had already issued a final Regulatory Determination. The EPA developed an MCLG and an NPDWR for six PFAS compounds pursuant to the requirements under section 1412(b)(1)(B) of SDWA. The final Maximum Contaminant Level Goals (MCLGs) and NPDWR are discussed in more detail in the following section.

E. Bipartisan Infrastructure Law

The passage of the Infrastructure Investment and Jobs Act (IIJA), often referred to as the Bipartisan Infrastructure Law or BIL, invests over $50 billion to improve drinking water, wastewater, and stormwater infrastructure—the single largest investment in water by the Federal Government. This historic investment specific to safe drinking water includes $11.7 billion in the Drinking Water State Revolving Fund (DWSRF) General Supplemental (referred to as BIL DWSRF General Supplemental); $4 billion to the Drinking Water SRF for Emerging Contaminants (referred to as BIL DWSRF EC); and $5 billion in grants for Emerging Contaminants in Small or Disadvantaged Communities (referred to as EC–SDC) from Federal fiscal years 2022 through 2026 (USEPA, 2023a). For the BIL DWSRF General Supplemental and BIL DWSRF EC, states must provide 49% and 100%, respectively, as additional subsidization in the form of principal forgiveness and/or grants. The EC–SDC grant has no cost-share requirement. Together, these funds will assist many disadvantaged communities, small systems, and others with the costs of addressing emerging contaminants, like PFAS, when it might otherwise be cost-challenging. This financial assistance can be used to address emerging contaminants in drinking water through actions such as technical assistance, certain water quality testing, operator and contractor training and equipment, and treatment upgrades and expansion. Investments in these areas which will allow communities additional funding to meet their obligations under this regulation and help ensure protection from PFAS contamination of drinking water. The Drinking Water SRF can be used by water systems to reduce the public health concerns around PFAS in their drinking water and is already being successfully utilized. Additionally, to support BIL implementation, the EPA is offering water technical assistance (WaterTA) to help communities identify water challenges and solutions, build capacity, and develop application materials to access water infrastructure funding (USEPA, 2023b). The EPA collaborates with states, Tribes, territories, community partners, and other stakeholders with the goal of more communities with applications for Federal funding, quality water infrastructure, and reliable water services.

F. EPA PFAS Strategic Roadmap

In October 2021, the EPA published the *PFAS Strategic Roadmap* (or *Roadmap*) that outlined the whole-of-agency approach to ''further the science and research, to restrict these dangerous chemicals from getting into the environment, and to immediately move to remediate the problem in communities across the country'' (USEPA, 2022c). The *Roadmap* offers timelines by which the EPA acts on key commitments the agency made toward addressing these contaminants in the environment, while continuing to safeguard public health. These include the EPA proposing to designate certain PFAS as Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) hazardous substances; issuing advance notice of proposed rulemakings on various PFAS under CERCLA; and issuing updated guidance on destroying and disposing of certain PFAS and PFAS-containing materials. Additionally, the EPA is issued a memorandum to states in December 2022 that provides direction on how to use the National Pollutant Discharge Elimination System (NPDES) program to protect against PFAS (USEPA, 2022d; USEPA, 2022e). The EPA also announced revisions to several Effluent Limitation Guidelines (ELGs) including, Organic Chemical, Plastic, Synthetic Fibers manufacturing, Metal Finishing & Electroplating, and Landfills to address PFAS discharge from these point source categories. These ELGs collectively will, if finalized, restrict and reduce PFAS discharges to waterways used as sources for drinking water. The EPA is taking numerous other actions to advance our ability to understand and effectively protect people from PFAS, such as the October 11, 2023, rule finalized under the Toxic Substances Control Act (TSCA) that will provide the EPA, its partners, and the public with a dataset of PFAS manufactured and used in the United States. The rule requires all manufacturers (including importers) of PFAS and PFAS-containing articles in any year since 2011 to report information to the extent known or reasonably ascertainable: chemical identity, uses, volumes made and processed, byproducts, environmental and health effects, worker exposure, and disposal to the EPA. With this final NPDWR, the EPA is delivering on another key goal in the *Roadmap* to ''establish a National Primary Drinking Water Regulation'' for PFAS. This rule will protect the American people directly from everyday PFAS exposures that might otherwise occur from PFAS-contaminated drinking water,

complementing the many other actions in the *Roadmap* to protect public health and the environment from PFAS.

III. Final Regulatory Determinations for Additional PFAS

A. Agency Findings

As noted earlier, in 2021, the EPA made a determination to regulate two per- and polyfluoroalkyl substances—perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS)—in drinking water under the Safe Drinking Water Act. This section describes the EPA's regulatory determination findings with respect to three additional PFAS and mixtures of four PFAS.

Pursuant to sections 1412(b)(1)(A) and 1412(b)(1)(B)(ii)(II) of SDWA, the EPA is making a final determination to individually regulate as contaminants PFHxS, PFNA, and HFPO–DA and is publishing Maximum Contaminant Level Goals (MCLGs) and promulgating National Primary Drinking Water Regulations (NPDWRs) for these compounds individually. Under this authority, the EPA is also making a final determination to regulate as a contaminant a mixture of two or more of the following: perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO–DA, commonly known as GenX Chemicals), perfluorohexane sulfonic acid (PFHxS), and perfluorobutane sulfonic acid (PFBS), and is publishing an MCLG and promulgating an NPDWR for mixtures of these compounds. The agency has determined that PFHxS, PFNA, and HFPO–DA may have individual adverse health effects, and any mixture of these three PFAS and PFBS may also have dose-additive adverse effects on the health of persons; that there is a substantial likelihood that PFHxS, PFNA, and HFPO–DA occur individually with a frequency and at levels of public health concern and that mixtures of these three PFAS and PFBS occur and co-occur in public water systems (PWSs) with a frequency and at levels of public health concern; and that, in the sole judgment of the Administrator, individual regulation of PFHxS, PFNA, and HFPO–DA, and regulation of mixtures of these three PFAS and PFBS, presents a meaningful opportunity for health risk reduction for persons served by PWSs. The EPA refers to ''mixtures'' in its regulatory determinations to make clear that its determinations cover all the combinations of PFHxS, PFNA, HFPO–DA, and PFBS that could co-occur in a mixture but that each regulated mixture is itself a contaminant.

While the final determination includes mixtures of PFBS in combinations with PFHxS, HFPO–DA, and PFNA, the EPA is deferring the final individual regulatory determination for PFBS to further evaluate it individually under the three SDWA regulatory determination criteria; consequently, the agency is not promulgating an individual MCLG or NPDWR for PFBS in this action. The EPA is deferring its final individual regulatory determination because after considering the public comments, the EPA has decided to further consider whether occurrence information supports a finding that there is a substantial likelihood that PFBS will individually occur in public water systems and at levels of health concern. However, as stated previously, when evaluating PFBS in mixtures combinations with PFHxS, PFNA, and/or HFPO–DA, the EPA has determined that based on the best available information it does meet all three statutory criteria for regulation when a part of these mixtures, including that it is anticipated to have dose-additive adverse health effects (see sections III.B and IV.B.1), there is a substantial likelihood of its co-occurrence in combinations with PFHxS, PFNA, and/or HFPO–DA with a frequency and at levels of public health concern (see sections III.C, VI.C, VI.D, and USEPA 2024b), and there is a meaningful opportunity for health risk reduction by regulating mixture combinations of these four PFAS (see section III.D of this preamble). Hence, although the agency is deferring the individual final regulatory determination for PFBS, it is included in the final determination to regulate mixture combinations containing two or more of PFHxS, PFNA, HFPO–DA, and PFBS.

This section describes the best available science and public health information used by the agency to support the regulatory determinations. The MCLGs and NPDWR, including the MCLs, are discussed further in sections IV and V of this preamble.

1. Proposal

The agency proposed preliminary determinations to regulate PFHxS, PFNA, HFPO–DA, and PFBS individually, and to regulate mixtures of these four PFAS contaminants, in drinking water. In the proposal, the agency concluded that PFHxS, PFNA, HFPO–DA, and PFBS, and mixtures of these PFAS, may cause adverse effects on the health of persons; there is a substantial likelihood that they will occur and co-occur in PWSs with a frequency and at levels of public health concern, particularly when considering them in a mixture; and in the sole judgment of the Administrator, regulation of PFHxS, PFNA, HFPO–DA, PFBS, and mixtures of these PFAS, presents a meaningful opportunity for health risk reductions for people served by PWSs.

Within the proposal, the agency described section 1412(b)(1)(E) which provides that the Administrator may publish a proposed drinking water regulation concurrent ''with the determination to regulate.'' This provision authorizes a more expedited process by allowing the EPA to make concurrent the regulatory determination and rulemaking processes. As a result, for the proposal, the EPA interpreted the relevant reference to ''determination to regulate'' in section 1412(b)(1)(E) as referring to the regulatory process in 1412(b)(1)(B)(ii) that begins with a preliminary determination. Under this interpretation, section 1412(b)(1)(E) authorizes the EPA to issue a preliminary determination to regulate a contaminant and a proposed NPDWR addressing that contaminant concurrently and request public comment at the same time. This allows the EPA to act expeditiously where appropriate to issue a final determination to regulate concurrently with a final NPDWR to avoid delays to address contaminants that meet the statutory criteria.

Additionally, as part of the proposal, the EPA explained why mixtures of PFAS qualify as a ''contaminant'' for purposes of section 1412. SDWA section 1401(6) defines the term ''contaminant'' to mean ''*any* physical, chemical or biological or radiological substance or matter in water.'' A mixture of two or more of the regulated PFAS qualifies as a ''contaminant'' because the mixture itself is ''*any* physical, chemical or biological or radiological substance or matter in water'' (emphasis added). Therefore, pursuant to the provisions outlined in section 1412(b)(1)(A) and 1412(b)(1)(B) of SDWA, the agency made a preliminary determination to regulate PFHxS, PFNA, HFPO–DA, PFBS, and any mixtures of these PFAS as a contaminant in drinking water. In the past and in this instance, the EPA's approach to regulating contaminant groups or mixtures under SDWA considers several factors, including health effects, similarities in physical and chemical properties, contaminant co-occurrence, ability for treatment technology co-removal, or where such a regulatory structure presents a meaningful opportunity to improve public health protection.

2. Summary of Major Public Comments and EPA Responses

The EPA requested comments on its preliminary regulatory determinations for PFHxS, PFNA, HFPO–DA, and PFBS, and mixtures of these PFAS, including the agency's evaluation of the statutory criteria and any additional data or studies the EPA should consider that inform the preliminary regulatory determinations for these contaminants and their mixtures. The EPA also requested comment on its preliminary determination that regulation of PFHxS, PFNA, HFPO–DA, PFBS, and their mixtures, in addition to regulation of PFOA and PFOS, will also provide protection from PFAS (*e.g.,* PFDA, PFDoA, PfHpA, PFHxA, PFHpS, PFPeS) that will not be regulated because the treatment technologies that would be used to ensure compliance for these PFAS are also effective in reducing concentrations of other unregulated PFAS.

Many commenters expressed support for the EPA's preliminary regulatory determinations, including that the EPA has appropriately determined that the three statutory criteria for regulation have been met for all four contaminants and their mixtures using the best available information. Many other commenters did not agree that the agency presented sufficient information to make a preliminary determination to regulate PFHxS, PFNA, HFPO–DA, PFBS, and their mixtures, with some commenters recommending that that the agency withdraw the portion of the proposed rule associated with these four PFAS because in their view there is insufficient health effects and/or occurrence data at this time to support the EPA's action. For some of the four contaminants and their mixtures, a few commenters stated that the EPA had not met the statutory criteria for regulation or that data suggests a determination not to regulate is more appropriate. The EPA disagrees with these commenters because there is information to support individual regulation of PFHxS, PFNA, and HFPO–DA, as well as mixtures of these three PFAS and PFBS, based on the three statutory criteria (these findings are discussed in this section).

As discussed earlier in this section, after consideration of all the public comments on this issue, the agency is deferring the determination to individually regulate PFBS for further evaluation under the statutory criteria. This determination is informed by public comment suggesting that the three statutory criteria for individual regulation of PFBS, particularly related to the occurrence criterion have not been met. The EPA will continue to consider other available occurrence information, including from UCMR 5, to determine whether the information supports a finding that there is a substantial likelihood that PFBS will individually occur in PWSs and at a level of public health concern. The record demonstrates that exposure to a mixture with PFBS may cause adverse health effects; that there is a substantial likelihood that PFBS co-occurs in mixtures with PFHxS, PFNA, and/or HFPO–DA in PWSs with a frequency and at levels of public health concern; and that, in the sole judgment of the Administrator, regulation of PFBS in mixtures with PFHxS, PFNA, and/or HFPO–DA presents a meaningful opportunity for health risk reduction for persons served by PWSs.

Furthermore, the EPA is making a final determination to regulate PFHxS, PFNA, and HFPO–DA individually. While the EPA recognizes there will be additional health, occurrence, or other relevant information for these PFAS and others in the future, the EPA has determined that there is sufficient information to make a positive regulatory determination and the agency concludes that these three PFAS currently meet all of the statutory criteria for individual regulatory determination. Therefore, the agency is proceeding with making final determinations to regulate these contaminants both individually and as part of mixtures with PFBS and is concurrently promulgating individual MCLs for PFHxS, PFNA, and HFPO–DA (see section V of this preamble). For detailed information on the EPA's evaluation of the three regulatory determination statutory criteria for PFHxS, PFNA, and HFPO–DA individually and mixtures of these three PFAS and PFBS, as well as more specific comments and the EPA responses related to each of the three statutory criteria, see subsections III.B, C, and D.

Several commenters requested that the EPA evaluate additional occurrence data to further inform its analysis for the regulatory determinations. In response to public comments on the proposal, the EPA evaluated updated and new occurrence data and the updates are presented within subsection III.C. and section VI of this preamble. These additional occurrence data further confirm that the SDWA criteria for regulation have been met for PFHxS, PFNA, and HFPO–DA as individual contaminants and for mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS.

A couple of commenters questioned the EPA's rationale for selecting PFHxS, PFNA, HFPO–DA, and PFBS for regulation. The agency's process is allowable under SDWA and, as described within this section of the preamble, there is available health, occurrence, and other meaningful opportunity information for three PFAS (PFHxS, PFNA, and HFPO–DA) to meet the SDWA statutory criteria for regulation individually and four PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) as a mixture. The EPA disagrees with commenters who suggested that the agency should not develop national regulations that differ from state-led actions. While states may establish drinking water standards for systems in their jurisdiction prior to regulation under SDWA, once an NPDWR is in place, SDWA 1413(a)(1) requires that states or Tribes adopt standards that are no less stringent than the NPDWR to maintain primacy. Moreover, the agency further notes that all four PFAS the EPA is regulating individually or as a mixture are currently regulated by multiple states as shown in table 4–17 of USEPA, 2024e.

The EPA received several comments related to the EPA's interpretation in the proposal that the agency may, as it did here, issue a preliminary regulatory determination concurrent with a proposed NPDWR. Many stated that the EPA is authorized under SDWA to process these actions concurrently and agreed with the EPA's interpretation of the statute, noting that the EPA has followed all requirements under SDWA including notice and opportunity for public comment on both the preliminary regulatory determination and proposed NPDWR, and that simultaneous public comment periods are not precluded by SDWA. Several other commenters expressed disagreement with the EPA's interpretation. These dissenting commenters contend that the statute only allows the EPA to ''publish such proposed regulation concurrent with the determination to regulate'' (*i.e.,* in their view, the final determination), not the ''preliminary determination to regulate.'' Moreover, some of these commenters further indicated that they believe the EPA's final determination to regulate must precede the EPA's proposed regulation. The EPA disagrees with commenters who stated that the EPA cannot issue a preliminary determination concurrent with a proposed NPDWR. Section 1412(b)(1)(e) states that ''[t]he Administrator shall propose the maximum contaminant level goals and national primary drinking water regulation for a contaminant *not later than 24 months*

after the determination to regulate under subparagraph (B), and may publish such proposed regulation *concurrent with the determination to regulate*'' (emphasis added). The EPA maintains its interpretation that ''determination to regulate'' in the second phrase of 1412(b)(1)(E) allows for concurrent processing of a preliminary determination and proposed rule, not a final determination and proposed rule.

The first clause of the provision provides an enforceable 24-month deadline for the EPA to issue a proposed rule once it has decided to regulate. Contrary to the suggestion of some commenters, the statutory language providing that the EPA ''shall'' propose an NPDWR ''not later than 24 months *after* the determination to regulate'' states when the 24 months to issue a proposed rule begins, *i.e.,* the deadline is 24 months *after* making a final determination to issue a proposed regulation. The phrase ''after the determination to regulate'' here simply identifies when SDWA's deadline begins to run; there is no textual or other indication in the language that Congress meant it to constitute the beginning of an exclusive 24-month window in which the EPA is permitted to propose an NPDWR. Further, though the EPA's reading is clear on the face of the provision, it is also supported by language elsewhere in SDWA illustrating that when Congress intends to provide a window for action (as opposed to a deadline for action) it knows how to do so clearly. In fact, Congress did so in this very provision when it required the EPA to ''publish a maximum contaminant level goal and promulgate a national primary drinking water regulation *within* 18 months after the proposal thereof.'' See also, 42 U.S.C. 1448 (providing, among other things, that petitions for review of the EPA regulations under SDWA ''shall be filed *within* the 45-day period *beginning on* the date of the promulgation of the regulation . . .'') (emphasis added). In addition, the phrase ''not later than,'' expressly acknowledges that the EPA may issue a proposed rule concurrent with a final determination. And because this language only provides a deadline without a beginning trigger, the language in the first clause of this provision would also not preclude the EPA from issuing a proposed rule at any time prior to the expiration of the 24 months after a final regulatory determination, including issuing the proposed rule on the same day as the preliminary regulatory determination.

The second clause, which states that the Administrator ''may publish such proposed regulation concurrent with the determination to regulate'' should not be read to limit when the EPA can issue a proposed rule *prior* to a final determination. First, Congress's use of the phrase ''determination to regulate'' elsewhere in SDWA is not consistent, requiring the agency to discern its meaning based on statutory context. Second, reading ''determination to regulate'' to refer to a final determination would, without good reason, hinder Congress' goal in enacting this provision, to accelerate the EPA action under SDWA. Finally, the EPA's interpretation to allow for concurrent processes is fully consistent with, and indeed enhances, the deliberative stepwise process provided in the statute for regulating new contaminants.

Language throughout the statute demonstrates that Congress did not use the term ''determination to regulate'' consistently. In fact, ''preliminary determination'' only appears once in the entire provision, ''final determination'' is never used, and the remainder of the references simply refer to ''determination.'' Specifically, section 1412(b)(1)(B)(ii)(I) expressly requires public comment on a ''preliminary'' regulatory determination made as part of the contaminant candidate listing process. The rest of section 1412(b)(1)(B)(ii) and (iii) as well as the title of the provision only refer to a ''determination to regulate'' or ''determination.'' For example, 1412(b)(1)(B)(iii) states that ''[e]ach document setting forth the determination for a contaminant under clause (ii) shall be available for public comment at such time as the determination is published.'' [1] Although this provision only refers to a ''determination for a contaminant under clause (ii),'' this language clearly refers to public comment on a preliminary determination and not a final determination to regulate. The EPA has interpretated ''determination'' in this paragraph to refer to ''preliminary determination'' because that is the best interpretation to effectuate Congressional intent to provide public comment prior to issuing a final determination. The EPA has done the same with section 1412(b)(1)(E) here, as only a reading that allows for, in appropriate cases, concurrent processing of a preliminary determination to regulate and proposed NPDWR allows for rulemaking acceleration by the EPA as Congress envisioned. To the extent there is ambiguity, the EPA's reading of section 1412(b)(1)(E) is the best one to effectuate these purposes.

The EPA could issue a proposed rule concurrent with a final determination; there is nothing in the statute or the APA that requires the EPA to wait. The SDWA gives the EPA 24 months to act after a final determination but does not require the agency to wait 24 months. The ''no later than'' language in the first clause of section 1412(b)(1)(E), expressly acknowledges that the EPA may issue a proposed rule concurrent with a final determination. Therefore, construing the second phrase of section 1412(b)(1)(E) simply to authorize the EPA to issue a proposed rule concurrent with a final determination renders that provision of the statute authorizing the EPA to publish such proposed regulation concurrent with the determination to regulate a nullity. The well-known tools of statutory construction direct the agencies and courts not to construe statutes so as to render Congress's language mere surplusage, yet that it is what commenters' interpretation would do. The EPA's construction is the one which gives meaning to that language.

Moreover, the EPA's interpretation of ''determination to regulate'' in the phrase ''may publish such proposed regulation concurrent with the determination to regulation'' in section 1412(b)(1)(E) to be a preliminary determination best effectuates Congress' goal in enacting this provision, to accelerate the EPA action under SDWA when the EPA determines such a step is necessary and the EPA has, as it does here, a sufficient record to proceed with both regulatory determination and regulation actions concurrently. In addition to authorizing concurrent processes, Congress' intent to expedite regulatory determinations when necessary is evidenced more generally by the text and structure of section 1412(b)(1)(B)(ii). The statute contemplates regulatory determinations could be made as part of the 5-year cycle for the contaminant candidate list under section 1412(b)(1)(B)(ii)(I) but may also be made at any time under section 1412(b)(1)(B)(ii)(III). The fact that Congress provided the EPA with express authority to make a regulatory determination at any time is a recognition that the EPA may need to act expeditiously to address public

[1] Even the first clause of section 1412(b)(1)(E) setting the 24-month deadlines use ''regulatory determination'' without further clarifying whether it is preliminary or final. Again, it is clear when viewed in context that the term refers to a final determination, as triggering a deadline to propose regulations on a preliminary decision to regulate would not be reasonable, as the agency may change its mind after reviewing publicv comment, obviating the need for a proposed NPDWR.

health concerns between the statutory periodic 5-year cycle. The EPA's interpretation of the relevant language in section 1412(b)(1)(E) best effectuates all provisions of the statute because simultaneous public processes for off-cycle regulatory determinations and NPDWRs allow for administrative efficiency that may be needed to address pressing public health concerns.

Finally, the EPA's interpretation of the statute allowing for concurrent processes is fully consistent with the stepwise process for issuing an NPDWR set out by the statute. Here, the EPA provided for public comment on an extensive record for both the regulatory determinations and the proposed regulatory levels and it is not clear what further benefit would be provided by two separate public comment periods. This is especially true given the D.C. Circuit's ruling in *NRDC* v. *Regan,* 67 F.4th 397 (D.C. Cir 2023), which held that the EPA cannot withdraw a final determination to regulate a contaminant. Thus, even if the EPA were to provide two separate comment periods, the information provided on a proposed rule cannot be used to undo a final regulatory determination. Indeed, although not required by the statute, the EPA in proposing actions concurrently provides commenters with much more information to evaluate the preliminary regulatory determinations. This is because the EPA has provided not just the information to support the preliminary determinations to regulate but also the full rulemaking record and supporting risk, cost, occurrence, and benefit analysis that supports the proposed Maximum Contaminant Levels (MCLs). Further, the EPA has a much more comprehensive record for the regulatory determinations to ensure that the final determination, which cannot be withdrawn, is based on the comprehensive record provided by the rulemaking and Health Risk Reduction and Cost Analysis (HRRCA) development processes.

The EPA received comments on its statutory authority to regulate mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS, specifically the agency's interpretation under section 1401(6) that a mixture of two or more contaminants also qualifies as the definition of a contaminant under SDWA since a mixture itself meets the same definition. A few commenters disagreed and contended that a mixture does not meet the definition of being a single contaminant under SDWA. The EPA disagrees with these commenters, as the SDWA definition of a contaminant does not specify that a contaminant is only a singular chemical. The SDWA definition is very broad, specifically stating that a contaminant is ''*any* physical, chemical or biological or radiological substance or matter'' (emphasis added), with no specific description or requirement for how it is formed. Matter for example, by definition, is comprised of either pure substances or mixtures of pure substances. A pure substance is either an element or compound, which would include any PFAS chemical. The statute encompasses ''matter'' which is a broad term that includes mixtures and therefore definitionally includes PFAS mixtures, comprised of a combination of PFAS (chemical substances), as itself qualifying as a ''contaminant'' under SDWA. Moreover, other provisions of the statute, would be restricted in a manner inconsistent with Congressional intent if the EPA were to adopt the cabined approach to ''contaminant'' suggested by some commenters. For example, section 1431 of SDWA provides important authority to the EPA to address imminent and substantial endangerment to drinking water supplies posed by ''a contaminant'' that is present in or threatened those supplies. Congress clearly intended this authority to be broad and remedial, but it would be significantly hampered if the EPA would be restricted to only addressing individual chemicals and not mixtures threatening a water supply. For these reasons, the EPA's interpretation of the definition of contaminant is the only reading that is consistent with the statutory definition and use of the term in context and at to the extent the definition of contaminant is ambiguous, the EPA's interpretation represents the best interpretation of that term. Finally, even if a mixture is considered a group, as some commenters suggest, Congress clearly contemplated that the EPA could regulate contaminants as groups. *See* H.R. Rep. No 93–1185 (1974), reprinted in 1974 U.S.C.C.A.N. 6454, 6463–64) (noting the tens of thousands of chemical compounds in use commercially, with many more added each year, of which many will end up in the nation's drinking water and finding that ''[i]t is, of course, impossible for EPA to regulate each of these contaminants which may be harmful to health on a contaminant-by-contaminant basis. Therefore, the Committee anticipates that the Administrator will establish primary drinking water regulations for some groups of contaminants, such as organic and asbestos.'') Thus, the EPA has the authority to regulate a mixture as a contaminant under SDWA.

The commenters also suggested that the EPA has not followed its *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* (USEPA, 2000a), specifically that the agency did not use a ''sufficiently similar mixture'' where ''components and respective portions exist in approximately the same pattern'' and suggested that there has to be consistent co-occurrence of the mixture components. The EPA disagrees with these comments. It is not possible or necessary to use a whole-mixture approach for PFHxS, PFNA, HFPO–DA, and PFBS or a ''sufficiently similar mixture.'' Instead, the EPA is using a longstanding component-based mixture approach called the Hazard Index, which was endorsed in the context of assessing potential risk associated with PFAS mixtures by the Science Advisory Board (SAB) during its 2021 review of the EPA's *Draft Framework for Estimating Noncancer Health Risks Associated with Mixtures of Per- and Polyfluoroalkyl Substances (PFAS)* (USEPA, 2021e) (see section IV of this preamble). The goal of this component-based approach is to approximate what the whole-mixture toxicity would be if the whole mixture could be tested and relies on toxicity information for each individual component in a mixture (USEPA, 2000a). A whole-mixture approach for regulating these four PFAS in drinking water is not possible because it would entail developing a single toxicity value (*e.g.,* a reference dose (RfD)) for one specific mixture of PFHxS, PFNA, HFPO–DA, and PFBS with defined proportions of each PFAS. Toxicity studies are typically conducted with only one test substance to isolate that particular substance's effects on the test organism, and whole-mixture data are exceedingly rare. There are no known whole-mixture studies for PFHxS, PFNA, HFPO–DA, and PFBS, and even if they were available, the corresponding toxicity value (*i.e.,* a single RfD for a specific mixture of these four PFAS) would only be directly applicable to that specific mixture. Thus, a more flexible approach that takes into account the four component PFAS in different combinations and at different concentrations (*i.e.,* the Hazard Index approach) is necessary. The Hazard Index indicates risk from exposure to a mixture and is useful in this situation to ensure a health-protective MCLG in cases where the mixture is spatially and/or temporally variable. For a more detailed discussion on whole-mixture and component-based approaches for PFAS health assessment, please see the EPA's *Framework for*

Estimating Noncancer Health Risks Associated with Mixtures of Per- and Polyfluoroalkyl Substances (PFAS) (USEPA, 2024a).

Many other commenters supported the EPA's interpretation of regulating a mixture as a ''contaminant'' that consists of a combination of certain PFAS, citing the EPA's broad authority under SDWA to set regulatory standards for groups of related contaminants and the EPA precedent for doing so under other NPDWRs including disinfection byproducts (DBPs; for total trihalomethanes [TTHMs] and the sum of five haloacetic acids [HAA5] (USEPA, 1979; USEPA, 2006a)), as well as radionuclides (USEPA, 2000c) and polychlorinated biphenyls (PCBs). The EPA also noted some of these examples within the proposed rule. One commenter disagreed that these previous EPA grouping approaches are applicable to the mixture of the four PFAS, noting that TTHMs and HAA5 are byproducts of the disinfection process and are the result of naturally occurring compounds reacting with the disinfectants used in drinking water treatment; thus, their formation cannot be controlled and is dependent on the presence and amount of disinfectant. As a result of these factors, measuring them as a class is required; however, the four PFAS are not byproducts, and the presence of one PFAS does not change the presence of the other PFAS. Moreover, the commenter provided that related to radionuclides, alpha particles are identical regardless of their origination and using this example for PFAS is not supported since the four PFAS are fundamentally different. The EPA disagrees with this commenter. As noted above, the SDWA definition of contaminant is very broad (''*any* physical, chemical or biological or radiological substance or matter'' (emphasis added)) with no limitations, specific description or requirement for how it is formed. The statute therefore easily encompasses a mixture, comprised of a combination of PFAS (chemical substances), as itself qualifying as a ''contaminant'' under SDWA. Moreover, as also noted above, to the extent the mixture is considered a ''group,'' Congress clearly anticipated that the EPA would regulate contaminants by group. As a result, even if the PFAS ''group'' is different than other SDWA regulatory groupings, such a regulation is clearly authorized under the statute. Furthermore, it makes sense to treat these mixtures as a ''contaminant'' because the four PFAS share similar characteristics: it is substantially likely that they co-occur; the same treatment technologies can be used for their removal; they are measured simultaneously using the same analytical methods; they have shared adverse health effects; and they have similar physical and chemical properties resulting in their environmental persistence.

3. The EPA's Final Determination

The EPA is making determinations to regulate PFHxS, PFNA, and HFPO–DA individually and to regulate mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS. A mixture of PFHxS, PFNA, HFPO–DA, and PFBS can contain any two or more of these PFAS. The EPA refers to ''mixtures'' in its final regulatory determinations to make clear that its determinations cover all of the combinations of PFHxS, PFNA, HFPO–DA, and PFBS that could co-occur in a mixture but that any combination itself qualifies as a contaminant.

In this preamble, as discussed earlier, the EPA is deferring the final determination to regulate PFBS individually to further evaluate the three criteria specified under SDWA 1412(b)(1)(A), particularly related to its individual known or likely occurrence, but is making a final determination to regulate PFBS as part of a mixture with PFHxS, PFNA, and/or HFPO–DA.

To support the agency's regulatory determinations, the EPA carefully considered the public comments and examined health effects information from available final peer-reviewed human health assessments and studies, as well as drinking water monitoring data collected as part of the UCMR 3 and state-led monitoring efforts. The EPA finds that oral exposure to PFHxS, PFNA, and HFPO–DA individually, and combinations of these three PFAS and PFBS in mixtures, may result in a variety of adverse health effects, including similar or shared adverse effects on several biological systems including the endocrine, cardiovascular, developmental, immune, and hepatic systems (USEPA, 2024f). Based on the shared toxicity types, exposure to PFHxS, PFNA, or HFPO–DA individually, or combinations of these three PFAS and PFBS in a mixture, is anticipated to affect common target organs, tissues, or systems to produce dose-additive effects from co-exposures. Additionally, based on the agency's evaluation of the best available science, including a review of updated data from state-led drinking water monitoring efforts discussed in subsection III.C of this preamble, the EPA finds that PFHxS, PFNA, and HFPO–DA each have a substantial likelihood to occur in finished drinking water and that these three PFAS and PFBS are also likely to co-occur in mixtures and result in increased total PFAS exposure above levels of public health concern. Therefore, as discussed further in this section, the agency is determining that:

- exposure to PFHxS, PFNA, or HFPO–DA individually, and any mixture of these three PFAS and PFBS, may have adverse effects on the health of persons;
- there is a substantial likelihood that PFHxS, PFNA, and HFPO–DA will occur and there is a substantial likelihood that combinations of these three PFAS plus PFBS will co-occur in mixtures in PWSs with a frequency and at levels of public health concern; and
- in the sole judgment of the Administrator, individual regulation of PFHxS, PFNA, and HFPO–DA, and mixtures of the three PFAS plus PFBS, presents a meaningful opportunity for health risk reductions for persons served by PWSs.

The EPA is making a final individual regulatory determination for PFHxS, HFPO–DA, and PFNA and promulgating individual MCLGs and NPDWRs for PFHxS, HFPO–DA, and PFNA. These NPDWRs ensure public health protection when one of these PFAS occurs in isolation above their MCLs and also support risk communication efforts for utilities (see section V of this preamble for more information). The EPA is also making a final mixture regulatory determination and promulgating a Hazard Index MCLG and NPDWR for mixtures containing two or more of PFHxS, PFNA, HFPO–DA, and PFBS. The Hazard Index is a risk indicator and has been shown to be useful in chemical mixtures decision contexts (USEPA, 2023c).[2] Individual NPDWRs do not address dose additive risks from co-occurring PFAS. However, the Hazard Index NPDWR accounts for PFAS co-occurring in mixtures where the individual concentrations of one or more PFAS may not exceed their individual levels of public health concern, but the combined levels of these co-occurring PFAS result in an overall exceedance of the health-protective level. In this way, the Hazard Index NPDWR protects against dose-additive effects. This approach also recognizes that exposure to the PFAS included in the Hazard Index is associated with adverse health effects at differing potencies (*e.g.,* the toxicity reference value for PFHxS is lower than

[2] Some describe the Hazard Index as an indicator of potential hazard because it does not estimate the probability of an effect; others characterize the Hazard Index as an indicator of potential risk because the measure integrates both exposure and toxicity (USEPA 2000c; USEPA, 2023c).

the one for PFBS) and that, regardless of these potency differences, all co-occurring PFAS are included in the hazard calculation (*i.e.,* the health effects and presence of lower toxicity PFAS are neither ignored nor are they over-represented). Furthermore, the approach accounts for all the different potential combinations of these PFAS that represent a potential public health concern that would not be addressed if the EPA only finalized individual NPDWRs and considered individual PFAS in isolation.

B. Statutory Criterion 1—Adverse Health Effects

The agency finds that exposure to PFHxS, PFNA, and HFPO–DA individually, and any mixture of these three PFAS and PFBS, may have an adverse effect on the health of persons. Following is a discussion of health effects information for each of these four individual PFAS and the levels at which those health effects may be adverse. The agency developed health reference levels (HRLs) for PFHxS, PFNA, HFPO–DA, and PFBS as part of its effort to identify the adverse effects each contaminant may have on the health of persons. In this instance, the EPA identified the HRL as the level below which adverse health effects over a lifetime of exposure are not expected to occur, including for sensitive populations and life stages, and allows for an adequate margin of safety. The HRLs are also used as health-based water concentrations (HBWCs) in the calculation of the Hazard Index MCLG (see section IV).

1. PFHxS

Studies have reported adverse health effects, including on the liver, thyroid, and development, after oral exposure to PFHxS (ATSDR, 2021). For a detailed discussion on adverse effects associated with oral exposure to PFHxS, please see ATSDR (2021) and USEPA (2024f).

The EPA derived the individual HRL/HBWC for PFHxS using a chronic reference value of 0.000002 (2E–06) mg/kg/day based on adverse thyroid effects (follicular epithelial hypertrophy/hyperplasia), a sensitive noncancer effect determined to be adverse and relevant to humans, observed in male rats after oral PFHxS exposure during adulthood (ATSDR, 2021; USEPA, 2024f). The EPA applied a bodyweight-adjusted drinking water intake (DWI–BW) exposure factor for adults within the general population (0.034 L/kg/day; 90th percentile direct and indirect consumption of community water, consumer-only two-day average, adults 21 years and older) and a relative source contribution (RSC) of 0.20 to calculate the HRL/HBWC (USEPA, 2024f). The HRL/HBWC for PFHxS is 10 ng/L which was used to evaluate individual occurrence of PFHxS for the final regulatory determination as discussed in section III.C of this preamble.

2. PFNA

Studies have reported adverse health effects, including on development, reproduction, immune function, and the liver, after oral exposure to PFNA (ATSDR, 2021). For a detailed discussion of adverse effects associated with oral exposure to PFNA, please see ATSDR (2021) and USEPA (2024f).

The EPA derived the HRL/HBWC for PFNA using a chronic reference value of 0.000003 (3E–06) mg/kg/day based on decreased body weight gain and impaired development (*i.e.,* delayed eye opening, delayed sexual maturation) in mice born to mothers that were orally exposed to PFNA during gestation (with presumed continued indirect exposure of offspring via lactation) (ATSDR, 2021; USEPA, 2024f). These sensitive noncancer effects were determined to be adverse and relevant to humans (ATSDR, 2021; USEPA, 2024f). The EPA applied a DWI–BW exposure factor for lactating women (0.0469 L/kg/day; 90th percentile direct and indirect consumption of community water, consumer-only two-day average) and an RSC of 0.20 to calculate the HRL/HBWC (USEPA, 2024f). The HRL/HBWC for PFNA is 10 ng/L which was used to evaluate individual occurrence of PFNA for the final regulatory determination as discussed in section III.C of this preamble.

3. HFPO–DA

Animal toxicity studies have reported adverse health effects after oral HFPO–DA exposure, including liver and kidney toxicity and immune, hematological, reproductive, and developmental effects (USEPA, 2021b). The EPA determined that there is Suggestive Evidence of Carcinogenic Potential after oral exposure to HFPO–DA in humans, but the available data are insufficient to derive a cancer risk concentration for oral exposure to HFPO–DA. For a detailed discussion of adverse effects of oral exposure to HFPO–DA, please see USEPA (2021b).

The most sensitive noncancer effects observed among the available data were the adverse effects on liver (*e.g.,* increased relative liver weight, hepatocellular hypertrophy, apoptosis, and single-cell/focal necrosis), which were observed in both male and female mice and rats across a range of exposure durations and dose levels, including the lowest tested dose levels and shortest exposure durations. The EPA derived the HRL/HBWC for HFPO–DA from a chronic oral RfD of 0.000003 (3E–06) mg/kg/day that is based on adverse liver effects, specifically a constellation of liver lesions including cytoplasmic alteration, single-cell and focal necrosis, and apoptosis, observed in parental female mice following oral exposure to HFPO–DA from pre-mating through day 20 of lactation (USEPA, 2021b). The EPA applied a DWI–BW exposure factor for lactating women (0.0469 L/kg/day; 90th percentile direct and indirect consumption of community water, consumer-only two-day average) and an RSC of 0.20 to calculate the HRL/HBWC (USEPA, 2024f). The HRL/HBWC for HFPO–DA is 10 ng/L which was used to evaluate individual occurrence of HFPO–DA for the final regulatory determination as discussed in section III.C of this preamble.

4. PFBS

Toxicity studies of oral PFBS exposure in animals have reported adverse health effects on development, as well as on the thyroid and kidneys (USEPA, 2021a). Human and animal studies evaluated other health effects following PFBS exposure including effects on the immune, reproductive, and hepatic systems and lipid and lipoprotein homeostasis, but the evidence was determined to be equivocal (USEPA, 2021a). No studies evaluating the carcinogenicity of PFBS in humans or animals were identified. The EPA concluded that there is Inadequate Information to Assess Carcinogenic Potential for PFBS and its potassium salt (K + PFBS) by any route of exposure based on the EPA's *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a). For a detailed discussion on adverse effects after oral exposure to PFBS, please see USEPA (2021a).

As noted previously, the agency is deferring the final individual regulatory determination for PFBS. For the purposes of evaluating PFBS in mixture combinations with PFHxS, PFNA, and HFPO–DA (see section III.B.5 of this preamble), the EPA derived the HRL/HBWC for PFBS from a chronic RfD of 0.0003 (3E–04) mg/kg/day that is based on adverse thyroid effects (decreased serum total thyroxine) observed in newborn mice following gestational exposure to the potassium salt of PFBS (USEPA, 2021a). The EPA applied a DWI–BW exposure factor for women of child-bearing age (0.0354 L/kg/day; 90th percentile direct and indirect consumption of community water, consumer-only two-day average) and an

RSC (relative score contribution) of 0.20 to calculate the HRL/HBWC (USEPA, 2024f). The HRL/HBWC for PFBS is 2000 ng/L.

5. Mixtures of PFHxS, PFNA, HFPO–DA, and PFBS

Exposure to per- and polyfluoroalkyl acids (PFAAs), a subclass of PFAS that includes PFHxS, PFNA, HFPO–DA, and PFBS, can disrupt signaling of multiple biological pathways, resulting in a shared set of adverse effects, including effects on thyroid hormone levels, lipid synthesis and metabolism, development, and immune and liver function (ATSDR, 2021; EFSA et al., 2018; EFSA et al., 2020; USEPA, 2021a; USEPA, 2021b; USEPA, 2024f; see further discussion in section III.B.6.e of this preamble).

Studies with PFAS and other classes of chemicals support the health-protective conclusion that chemicals that have similar observed adverse effects following individual exposure should be assumed to act in a dose-additive manner when in a mixture unless data demonstrate otherwise (USEPA, 2024a). Dose additivity means that the combined effect of the component chemicals in the mixture (in this case, PFHxS, PFNA, HFPO–DA, and/or PFBS) is equal to the sum of their individual doses or concentrations scaled for potency (USEPA, 2000a). In other words, exposure to these PFAS, at doses that individually would not likely result in adverse health effects, when combined in a mixture may result in adverse health effects. See additional discussion of PFAS dose additivity in section IV of this preamble.

The EPA used a Hazard Index (HI) HRL of 1 (unitless) to evaluate co-occurrence of combinations PFHxS, PFNA, HFPO–DA, and PFBS in mixtures for the final regulatory determination as discussed in section III.C of this preamble. For technical details on the Hazard Index approach, please see section IV of this preamble, USEPA (2024a), and USEPA (2024f).

6. Summary of Major Public Comments and EPA Responses

Commenters referred to the HRLs and HBWCs interchangeably, so comments related to those topics are addressed in this section. (Other comments related to the MCLGs are addressed in section IV of this preamble.)

Many commenters expressed support for the EPA's derivation of HRLs/HBWCs and use of best available peer-reviewed science, specifically the use of the final, most recently published Agency for Toxic Substances and Disease Registry (ATSDR) minimal risk levels for PFHxS and PFNA as chronic reference values. Other commenters criticized the EPA for using ATSDR minimal risk levels and stated that they are inappropriate for SDWA rulemaking.

The EPA finds that the ATSDR minimal risk levels for PFHxS and PFNA currently represent the best available, peer-reviewed science for these chemicals. SDWA specifies that agency actions must rely on ''the best available, peer-reviewed science and supporting studies conducted in accordance with sound and objective scientific practices.'' At this time, the 2021 ATSDR *Toxicological Profile for Perfluoroalkyls,* which covers 10 PFAS including PFHxS and PFNA, represents the best available peer-reviewed scientific information on the human health effects of PFHxS and PFNA. ATSDR minimal risk levels for PFHxS and PFNA are appropriate for use under SDWA because ATSDR uses scientifically credible approaches, its work is internally and externally peer-reviewed and undergoes public comment, and its work represents the current best available science for these two chemicals. The 2021 ATSDR *Toxicological Profile for Perfluoroalkyls* underwent intra- and interagency review and subsequent external peer review by seven experts with knowledge of toxicology, chemistry, and/or health effects.

The agency acknowledges that ATSDR minimal risk levels and EPA RfDs are not identical. The two agencies sometimes develop toxicity values for different exposure durations (*e.g.,* intermediate, chronic) and/or apply different uncertainty/modifying factors to reflect data limitations. Additionally, ATSDR minimal risk levels and EPA RfDs are developed for different purposes: ATSDR minimal risk levels are intended to serve as screening levels and are used to identify contaminants and potential health effects that may be of concern at contaminated sites, whereas EPA RfDs are used to support regulatory and nonregulatory actions, limits, and recommendations in various environmental media. However, from a practical standpoint, an oral minimal risk level and an oral RfD both represent the level of daily oral human exposure to a hazardous substance for a specified duration of exposure below which adverse health effects are not anticipated to occur. The EPA has routinely used and continues to use ATSDR minimal risk levels in human health assessments when they represent the best available science—for example, in the context of Clean Air Act section 112(f)(2) risk assessments in support of setting national emission standards for Hazardous Air Pollutants (HAPs), developing Clean Water Act ambient water quality criteria, evaluating contaminants for the CCL, and site evaluations under the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Some commenters questioned the EPA's external peer-review process for the four underlying final toxicity assessments used to calculate the HRLs/HBWCs. Some commenters noted that the EPA does not yet have completed Integrated Risk Information System (IRIS) assessments for PFHxS and PFNA, questioning the EPA's use of non-EPA assessments (see above). The EPA notes that all four toxicity assessments containing the toxicity values (RfD or minimal risk level) used to calculate the HRLs/HBWCs (*i.e.,* the EPA human health toxicity assessments for HFPO–DA and PFBS (USEPA, 2021a; USEPA, 2021b) and the ATSDR toxicity assessments of PFNA and PFHxS (ATSDR, 2021)) underwent rigorous, external peer review (ATSDR, 2021; USEPA, 2021a; USEPA, 2021b). The EPA is not required under SDWA to exclusively use EPA assessments to support an NPDWR, and in fact, SDWA's clear direction in section 1412(b)(3)(A)(i) is to use the best *available,* peer-reviewed science when developing NPDWRs (emphasis added). Final EPA assessments for PFHxS and PFNA are under development but are not currently available; final, peer reviewed ATSDR assessments are available.

Other commenters offered critical comments on the HRLs/HBWCs for PFHxS, PFNA, HFPO–DA, and PFBS and raised technical and process concerns with the underlying human health assessments. Some commenters asserted that the human health toxicity values (EPA RfDs, ATSDR minimal risk levels) upon which the HRLs/HBWCs are based have too much uncertainty (*e.g.,* inappropriately apply a composite uncertainty factor (UF) of 3,000) and are therefore inadequate to support a SDWA regulatory determination. The EPA disagrees with these comments. The HRLs/HBWCs are data-driven values that incorporate UFs based on the EPA guidance and guidelines thus, represent the levels below which adverse health effects are not expected to occur over a lifetime. According to the EPA guidelines and longstanding practices (USEPA, 2002a; USEPA, 2022f), UFs reflect the limitations of the data across the five areas used in the current EPA human health risk assessment development: (1) human interindividual

variability (UF_H); (2) extrapolation from animal to human (UF_A); (3) subchronic-to-chronic duration extrapolation (UF_S); (4) lowest-observed-adverse-effect level-to-no-observed-adverse-effect level (LOAEL-to-NOAEL) extrapolation (UF_L); and (5) database uncertainty (UF_D). In minimal risk level development, ATSDR also applies uncertainty factors as appropriate to address areas of uncertainty, with the exception of subchronic-to-chronic duration extrapolation (ATSDR, 2021). For the ATSDR minimal risk levels on which the HRLs/HBWCs for PFNA and PFHxS are based, ATSDR utilized UF_Hs, UF_As, and what ATSDR calls a modifying factor to address database deficiencies (equivalent to the EPA's UF_D) (ATSDR, 2021). The EPA carefully reviewed ATSDR's application of uncertainty and modifying factors for PFNA and PFHxS and applied additional uncertainty factors as warranted. Specifically, the EPA applied an additional UF (UF_S) for PFHxS to extrapolate from subchronic to chronic duration per agency guidelines (USEPA, 2002a) and standard practice because the critical effect was not observed during a developmental lifestage (*i.e.,* the effect was in parental male rats). A chronic toxicity value (*i.e.,* RfD, MRL) represents the daily exposure to the human population (including sensitive subgroups) that is likely to be without an appreciable risk of deleterious effects during a lifetime; the EPA is using a chronic toxicity value to derive the MCLG to ensure that it is set at a level at or below which no known or anticipated adverse effects on human health occur and allowing an adequate margin of safety. The EPA guidelines indicate that the composite (total) UF may be equal to or below 3,000; composite UFs greater than that represent ''excessive uncertainty'' (USEPA, 2002a; USEPA, 2022f). In the case of this final NPDWR, a composite UF of 3,000 was appropriately applied to derive toxicity values used to develop HRLs/HBWCs for two of the four PFAS (HFPO–DA and PFHxS) following peer-reviewed agency guidance and longstanding practice (see USEPA (2024f) for complete discussion of UF application for all four PFAS). The EPA has previously developed an MCLG for a chemical that had a composite UF of 3,000 applied to derive a toxicity value (*e.g.,* thallium [USEPA, 1992]). Further, a composite uncertainty factor of 3,000 has been applied in the derivation of oral RfDs for several chemicals that have been evaluated within the EPA's IRIS (Integrated Risk Information System) program (*e.g.,* fluorene, cis- and trans-1,2-dichloroethylene, 2,4-dimethylphenol; please see the EPA's IRIS program website [*https://www.epa.gov/iris*] for further information).

Some commenters opposed the EPA's application of a 20 percent RSC (relative source contribution) in the HRL/HBWC calculations and stated that it was a ''conservative default'' approach not supported by available information and that adequate exposure data exist to justify an RSC other than 20 percent (although commenters did not offer a suggested alternative RSC). The EPA disagrees with these comments. The EPA applies an RSC to account for potential aggregate risk from exposure routes and exposure pathways other than oral ingestion of drinking water to ensure that an individual's total exposure to a contaminant does not exceed the daily exposure associated with toxicity (*i.e.,* threshold level or reference dose). Application of the RSC in this context is consistent with EPA methods (USEPA, 2000d) and long-standing EPA practice for establishing drinking water MCLGs and NPDWRs (*e.g.,* see USEPA, 1989; USEPA, 2004; USEPA, 2010). The RSC represents the proportion of an individual's total exposure to a contaminant that is attributed to drinking water ingestion (directly or indirectly in beverages like coffee, tea, or soup, as well as from dietary items prepared with drinking water) relative to other exposure pathways. The remainder of the exposure equal to the RfD (or minimal risk level) is allocated to other potential exposure sources (USEPA, 2000d). The purpose of the RSC is to ensure that the level of a contaminant (*e.g.,* MCLG) in drinking water, when combined with other identified potential sources of exposure for the population of concern, will not result in total exposures that exceed the RfD (or minimal risk level) (USEPA, 2000d). This ensures that the MCLG under SDWA meets the statutory requirement that it be a level of a contaminant in drinking water at or below which no known or anticipated adverse effects on human health occur and allowing an adequate margin of safety.

To determine the RSCs for the four HRLs/HBWCs, the agency assessed the available scientific literature on potential sources of human exposure other than drinking water. The EPA conducted literature searches and reviews for each of the four HRLs/HBWCs to identify potential sources of exposure and physicochemical properties that may influence occurrence in environmental media (Deluca et al., 2022; USEPA, 2024f). Considering this exposure information, the EPA followed its longstanding, peer-reviewed Exposure Decision Tree Approach in the EPA's *Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health* (USEPA, 2000d) to determine the RSC for each PFAS. As discussed by the EPA in the Hazard Index MCLG document (USEPA, 2024f), the EPA carefully evaluated studies that included information on potential exposure to these four PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) via sources other than drinking water, such as food, soil, sediment, and air. For each of the four PFAS, the findings indicated that there are significant known or potential uses/sources of exposure beyond drinking water ingestion (*e.g.,* food, indoor dust) (Box 6 in the EPA Exposure Tree; USEPA, 2000d), but that data are insufficient to allow for quantitative characterization of the different exposure sources (Box 8A in USEPA, 2000d). The EPA's Exposure Decision Tree approach states that when there are insufficient environmental and/or exposure data to permit quantitative derivation of the RSC, the recommended RSC for the general population is 20 percent (Box 8B in USEPA, 2000d). This means that 20 percent of the exposure equal to the RfD is allocated to drinking water, and the remaining 80 percent is attributed to all other potential exposure sources.

Some commenters disagreed with the bodyweight-adjusted drinking water intake (DWI–BWs) that the EPA used to calculate the HRLs/HBWCs and thought the selected DWI–BWs were too high (overly health protective). One commenter stated that the DWI–BW used in the calculation of the HRL/HBWC for HFPO–DA is inappropriate and that the EPA should have used a DWI–BW for general population adults instead of for lactating women. The EPA disagrees with this comment. To select an appropriate DWI–BW for use in derivation of the HRL/HBWC for HFPO–DA, the EPA considered the HFPO–DA exposure interval used in the oral reproductive/developmental toxicity study in mice that served as the basis for chronic RfD derivation (the critical study). In this study, parental female mice were dosed from pre-mating through lactation, corresponding to three potentially sensitive human adult life stages that may represent critical windows of HFPO–DA exposure: women of childbearing age, pregnant women, and lactating women (Table 3–63 in USEPA, 2019a). Of these three, the highest DWI–BW, for lactating women (0.0469 L/kg/day), is anticipated to be protective of the other two sensitive life

stages and was used to calculate the HRL/HBWC for HFPO–DA (USEPA, 2024f).

Other commenters urged the EPA to consider infants as a sensitive life stage for PFHxS, PFNA, and PFBS and use the DWI–BW for infants to calculate the HRLs/HBWCs. The EPA disagrees with this comment. The EPA's approach to DWI–BW selection includes a step to identify the sensitive population(s) or life stage(s) (*i.e.,* those that may be more susceptible or sensitive to a chemical exposure) by considering the available data for the contaminant, including the adverse health effects observed in the toxicity study on which the RfD/minimal risk level was based (known as the critical effect within the critical or principal study). Although data gaps can complicate identification of the most sensitive population (*e.g.,* not all windows or life stages of exposure and/or health outcomes may have been assessed in available studies), the critical effect and point of departure (POD) that form the basis for the RfD (or minimal risk level) can provide some information about sensitive populations because the critical effect is typically observed at the lowest tested dose among the available data. Evaluation of the critical study, including the exposure window, may identify a sensitive population or life stage (*e.g.,* pregnant women, formula-fed infants, lactating women). In such cases, the EPA can select the corresponding DWI–BW for that sensitive population or life stage from the *Exposure Factors Handbook* (USEPA, 2019a). DWI–BWs in the *Exposure Factors Handbook* are based on information from publicly available, peer-reviewed studies, and were updated in 2019. In the absence of information indicating a sensitive population or life stage, the DWI–BW corresponding to the general population may be selected. Following this approach, the EPA selected appropriate DWI–BWs for each of the four PFAS included in the Hazard Index MCLG (see USEPA, 2024f). The EPA did consider infants as a sensitive life stage for all four PFAS; however, the agency did not select the infant DWI–BW because the exposure intervals of the critical studies supporting the chronic toxicity values did not correspond to infants. Instead, the exposure intervals were relevant to other sensitive target populations (*i.e.,* lactating women or women of childbearing age) or the general population. (See also comments related to DWI–BW selection under PFBS section III.B.6.d. of this preamble).

a. PFHxS

Some commenters noted a typographical error in the HRL/HBWC calculation for PFHxS which was reported as 9.0 ng/L in the proposal. The agency has corrected the value in this NPDWR and within the requirements under 40 CFR part 141, subpart Z. The correct HRL/HBWC for PFHxS is 10 ng/L.

Two commenters questioned the human relevance of thyroid effects (*i.e.,* changes in tissue structure (*e.g.,* enlarged cells; increased numbers of cells) in the thyroids of adult male rats) observed in the critical study used to derive the ATSDR minimal risk level and the EPA's PFHxS HRL/HBWC because, as noted in the ATSDR *Toxicological Profile for Perfluoroalkyls,* this observed effect may have been secondary to liver toxicity and, therefore, the commenters state that its significance is unclear. The EPA disagrees with this comment. SDWA requires that the EPA use ''the best available, peer reviewed science'' to inform decision making on drinking water regulations. Although there is some uncertainty regarding the selection of thyroid alterations as the critical effect (as the ATSDR toxicological profile notes), at this time, the 2021 ATSDR toxicological profile represents the best available peer reviewed scientific information regarding the human health effects of PFHxS. As the most sensitive known effect as supported by the weight of the evidence, the thyroid effect was appropriately selected by ATSDR as the critical effect. Additionally, published studies in rats have shown that PFHxS exposure results in other thyroid effects, including decreases in thyroid hormone (primarily T4) levels in serum (NTP, 2018a; Ramhøj et al., 2018). Similarly, peer-reviewed final EPA assessments of other PFAS, including PFBS (USEPA, 2021a) and perfluorobutanoic acid (PFBA) (USEPA, 2022g), have concluded that these changes in rodents are adverse and human-relevant, and appropriate for RfD derivation. Furthermore, it is appropriate to use other health protective (toxicity) values developed by other authoritative governmental agencies, including ATSDR minimal risk levels, if available, as these agencies use scientifically credible approaches and their work is peer-reviewed (the ATSDR toxicological profile underwent intra- and interagency review and external peer review by seven experts with knowledge of toxicology, chemistry, and/or health effects). The ATSDR minimal risk levels reflect the best available, peer-reviewed science.

Furthermore, the EPA's draft *IRIS Toxicological Review of Perfluorohexanesulfonic Acid (PFHxS) and Related Salts (Public Comment and External Review Draft)* (USEPA, 2023d), which is in the public domain, preliminarily provides confirmatory evidence that PFHxS significantly affects human development (emphasis added): ''Overall, the available evidence indicates that *PFHxS exposure is likely to cause thyroid and developmental immune effects in humans,* given sufficient exposure conditions. For thyroid effects, the primary supporting evidence for this hazard conclusion included evidence of decreased thyroid hormone levels, abnormal histopathology results, and changes in organ weight in experimental animals. For immune effects, the primary supporting evidence included decreased antibody responses to vaccination against tetanus or diphtheria in children.'' Although the EPA did not rely on this draft IRIS toxicological review for PFHxS in this rule, the draft is available to the public and offers confirmation that PFHxS elicits developmental effects in humans.

b. PFNA

Some commenters questioned the human relevance of developmental effects observed in PFNA animal studies (*i.e.,* decreased body weight gain, delayed eye opening, delayed sexual maturation) used to derive the ATSDR minimal risk level and the EPA's PFNA HRL/HBWC. The EPA disagrees with this comment. At this time, the 2021 ATSDR *Toxicological Profile for Perfluoroalkyls* represents the best available peer-reviewed scientific information regarding the human health effects of PFNA. In addition, according to the March 2023 *Interagency PFAS Report to Congress,* PFNA is documented to affect the developmental health domain (United States OSTP, 2023), and a recently published meta-analysis (Wright et al., 2023) specifically supports decreases in birth weight as an effect of PFNA exposure in humans. Published studies have shown that PFNA exposure results in statistically significant, dose-responsive developmental effects, including reduced fetal/pup bodyweight, reduced fetal/pup survival, changes in fetal/pup liver gene expression, increased fetal/pup liver weight, and delayed onset of puberty. Also, the EPA's 1991 *Guidelines for Developmental Toxicity Risk Assessment* (USEPA, 1991a; pp. vii-ix and pp. 1–2) cites evidence that, in the absence of clear evidence to the

contrary, developmental effects observed in experimental animals are interpreted as relevant to humans.

c. HFPO–DA

A few commenters submitted critical comments related to the adverse health effects associated with exposure to HFPO–DA and how these health effects are quantified to derive the RfD in the human health toxicity assessment for HFPO–DA (USEPA, 2021b). Commenters claimed that the RfD for HFPO–DA is not scientifically sound, and cited one or more of the following reasons why: (1) the selected critical effect from the study (constellation of liver lesions) includes different liver effects that were not consistently observed across male and female mice and were not necessarily all adverse; (2) the hepatic effects in mice (the selected critical effect) are mediated by a rodent specific MOA, peroxisome proliferator-activated receptor alpha (PPARα), and therefore not relevant to humans; (3) the EPA incorporated results of a pathology working group which misapplied diagnostic criteria classifying apoptotic and necrotic lesions; and (4) the EPA misapplied uncertainty factors (UFs) (*i.e.,* the subchronic to chronic UF and database UF) according to agency guidance resulting in the maximum possible UF of 3,000 (USEPA, 2002a; USEPA, 2022f). Another commenter thought that the interspecies UF should be further increased. Also, some commenters stated that the EPA did not properly consider all available epidemiological data. These comments are addressed in this preamble.

Overall, the EPA disagrees with the commenters and maintains that the final published peer-reviewed human health toxicity assessment that derived the RfD for HFPO–DA is appropriate and sound, reflects the best available peer-reviewed science, and is consistent with agency guidance, guidelines, and best practices for human health risk assessment. Notably, the EPA sought external peer review of the toxicity assessment *twice* (USEPA, 2018b; USEPA, 2021f), released the draft toxicity assessment for public comment and provided responses to public comment (USEPA, 2021g), and engaged a seven-member pathology working group at the National Institutes of Health—an entirely separate and independent organization—to re-analyze pathology slides from two critical studies (USEPA, 2021b, appendix D), all of which supported the EPA's conclusions in the toxicity assessment, including the RfD derivation.

Regarding critical effect selection: the EPA's approach to critical effect selection for the RfD derivation considers a range of factors, including dose at which effects are observed, biological variability (which can produce differences in effects observed between sexes), and relevance of the effect(s) seen in animals to human health. The EPA maintains that selection of the constellation of liver lesions as the critical effect for HFPO–DA RfD derivation is appropriate and scientifically justified, and that the constellation of liver lesions represents an adverse effect. The EPA engaged a pathology working group within the National Toxicology Program (NTP) at the National Institutes of Health to perform an independent analysis of the liver tissue slides. The pathology working group determined that the tissue slides demonstrated a range of adverse effects and that the constellation of liver effects caused by HFPO–DA exposure, which included cytoplasmic alteration, apoptosis, single cell necrosis, and focal necrosis, constitutes an adverse liver effect in these studies (USEPA, 2021b, appendix D). The EPA evaluated the results of the pathology working group and determined that the effects were relevant to humans according to the best available science (*e.g.,* Hall et al., 2012). Additionally, the EPA convened a second independent peer-review panel of human health risk assessment experts to review the EPA's work on HFPO–DA, including critical effect selection. The panel unanimously agreed with the selection of the constellation of liver lesions as the critical effect, the adversity of this effect and its relevance to humans (USEPA, 2021f).

The commenters' assertion that the hepatic effects observed in mice are not relevant to humans because they are PPARα-mediated is unsupported. The commenter claims that one specific effect—apoptosis—can be PPARα-mediated in rodents (a pathway that some data suggest may be of limited or no relevance to humans). However, in supporting studies cited by commenters, a decrease in apoptosis is associated with a PPARα MOA, with Corton et al. (2018) stating, ''[t]he data indicate that a physiological function of PPARα activation is to increase hepatocyte growth through an increase in hepatocyte proliferation or a decrease in apoptosis or a combination of both effects'' while HFPO–DA is associated with increased apoptosis (USEPA, 2021b). Therefore, the commenter's claim that apoptosis is associated with the known PPARα MOA is unsupported. the critical study selected by the EPA, and indeed other studies as well, reported not only apoptosis but also other liver effects such as necrosis that are not associated with a PPARα MOA and therefore are relevant for human health (Hall et al., 2012). Further, according to the available criteria, effects such as cytoplasmic alteration in the presence of liver cell necrosis are considered relevant to humans (Hall et al., 2012). Additionally, commenters asserted that a 2020 study by Chappell et al. reported evidence demonstrating that the rodent liver effects are not relevant to humans, and that the EPA failed to consider this study. It is important to note that while Chappell et al. (2020) was published after the assessment's literature search cut-off date (USEPA, 2021b, appendix A; USEPA, 2022h), the EPA considered this paper initially through the Request for Correction process (USEPA, 2022h) and noted that this study specifically assessed evidence for PPARα-driven apoptosis and did not investigate other potential modes of action or types of cell death, specifically necrosis. The authors state that they could ''not eliminate the possibility that necrotic cells were also present.'' The EPA again considered Chappell et al., (2020), in addition to other studies submitted through public comment (Heintz et al., 2022; Heintz et al., 2023; Thompson et al., 2023), and determined that these studies do not fully explore a necrotic/cytotoxic MOA with Thompson et al., 2023 stating that ''there are no gene sets for assessing necrosis in transcriptomic databases.'' Critically, the commenter and these cited studies fail to recognize that increased apoptosis is a key criterion to establish a cytotoxic MOA. As outlined in the toxicity assessment (USEPA, 2021b), Felter et al., (2018) ''identified criteria for establishing a cytotoxicity MOA, which includes: . . . (2) clear evidence of cytotoxicity by histopathology, such as presence of necrosis and/or increased apoptosis.'' Overall, the EPA has determined that these studies support the mechanistic conclusions of the toxicity assessment ''that multiple MOAs could be involved in the liver effects observed after GenX chemical exposure'' including PPARα and cytotoxicity (USEPA, 2021b).

With respect to claims that the EPA misapplied diagnostic criteria classifying apoptotic and necrotic lesions: as mentioned above, the EPA engaged a pathology working group within the NTP at the National Institutes of Health to perform an independent analysis of the liver tissue slides. Seven pathologists—headed by Dr. Elmore, who was the lead author of the pathology criteria that the

commenter cites (Elmore et al., 2016)—concluded that exposure to HFPO–DA caused a ''constellation of liver effects'' that included cytoplasmic alteration, apoptosis, single cell necrosis, and focal necrosis, and that this full ''constellation of lesions'' should be considered the adverse liver effect within these studies. The EPA then used the established Hall criteria (Hall et al., 2012) to determine that since liver cell death was observed, all effects, including cytoplasmic alteration, were considered adverse and relevant to humans.

The EPA disagrees with the commenters' assertion about UF application. As noted above, agency guidance (USEPA, 2002a; USEPA, 2022f) have established the appropriateness of the use of UFs to address uncertainty and account for data limitations. UFs reflect the limitations of the data across the five areas used in the current EPA human health risk assessment development (referenced above); all individual UFs that are applied are multiplied together to yield the composite or total UF. The EPA guidance dictates that although a composite UF greater than 3,000 represents ''excessive uncertainty'' (USEPA, 2002a; USEPA, 2022f), a composite UF can be equal to 3,000. For HFPO–DA, a composite UF of 3,000 was appropriately applied to account for uncertainties, including variability in the human population, database uncertainties, and possible differences in the ways in which humans and rodents respond to HFPO–DA that reaches their tissues. Furthermore, the composite UF of 3,000 and specifically the database UF and subchronic-to-chronic UF used for HFPO–DA was peer-reviewed by a panel of human health risk assessment experts, and the panel supported the application of the database UF of 10 and the subchronic-to-chronic UF of 10 (USEPA, 2021f). Additionally, a UF_A of 3 was appropriately applied, consistent with peer-reviewed EPA methodology (USEPA, 2002a), to account for uncertainty in characterizing the toxicokinetic and toxicodynamic differences between rodents and humans. As noted in the toxicity assessment for HFPO–DA (USEPA, 2021b), in the absence of chemical-specific data to quantify residual uncertainty related to toxicokinetics and toxicodynamic processes, the EPA's guidelines recommend use of a UF_A of 3.

Finally, some commenters claimed that the EPA did not consider available epidemiological evidence showing no increased risk of cancers or liver disease attributable to exposure to HFPO–DA. The EPA disagrees with this comment because the agency considered all available scientific evidence, including epidemiological studies (USEPA, 2021b). The exhibit submitted by the commenter presents an observational analysis comparing cancer and liver disease rates in North Carolina to rates in other states. It does not present the results of a new epidemiological study that included HFPO–DA exposure measures, health outcome measures, or an assessment of association between exposure and health outcome. The exhibit submitted by the commenter consists of a secondary analysis of disease rate information that was collected from various sources and does not provide new, high-quality scientific information that can be used to assess the impact of exposure to concentrations of HFPO–DA on human health.

d. PFBS

A few commenters suggested that the EPA lower the HRL/HBWC for PFBS to account for thyroid hormone disruption during early development and cited the Washington State Action Level for PFBS, which is 345 ng/L. Washington State used the same RfD (3E–04 mg/kg-d) but a higher DWI–BW to develop their Action Level as compared to the EPA's HRL/HBWC (Washington State used the 95th percentile DWI–BW of 0.174 L/kg/day for infants, whereas the EPA selected the 90th percentile DWI–BW of 0.0354 L/kg/day for women of child-bearing age). The EPA disagrees that the infant DWI–BW is more appropriate for HRL/HBWC calculation. The EPA selected the thyroid hormone outcome (decreased serum total thyroxine in newborn mice seen in a developmental toxicity study) as the critical effect in its PFBS human health toxicity assessment (USEPA, 2021a). Notably, the RfD derived from this critical effect included application of a 10X UF to account for life-stage-specific susceptibility (UF_H). To select a DWI–BW for use in deriving the HRL/HBWC for PFBS, the EPA followed its established approach of considering the PFBS exposure interval used in the developmental toxicity study in mice that was the basis for chronic RfD derivation. In this study, pregnant mice were exposed throughout gestation, which is relevant to two human adult life stages: women of child-bearing age who may be or become pregnant, and pregnant women and their developing embryos or fetuses (Table 3–63 in USEPA, 2019a). To be clear, the critical study exposed mice to PFBS only during pregnancy and not during postnatal development; newborn mice in early postnatal development, which would correspond to the human infancy life stage, were not exposed to PFBS. Of the two relevant adult stages, the EPA selected the 90th percentile DWI–BW for women of child-bearing age (0.0354 L/kg/day) to derive the HRL/HBWC for PFBS because it is the higher of the two, and therefore more health-protective. Please see additional information related to DWI–BW selection above.

Other commenters stated that the EPA's human health toxicity assessment for PFBS is overly conservative, uncertain, and that the confidence in the chronic RfD is low. The EPA disagrees with these comments. Confidence in the critical study (Feng et al., 2017) and corresponding thyroid hormone critical effect in newborn mice was rated by the EPA as 'High;' this rating was a result of systematic study evaluation and risk of bias analysis by a team of EPA experts. The Feng et al. (2017) study, the critical effect of thyroid hormone disruption in offspring, dose-response assessment, and corresponding RfD were subjected to extensive internal EPA, interagency, and public/external peer review. While confidence in the critical study was rated 'High,' the 'Low' confidence rating for the PFBS chronic RfD was in part a result of the lack of a chronic exposure duration study in any mammalian species; this lack of a chronic duration study was one of the considerations that resulted in the EPA applying a UF of 10 to account for database limitations (UF_D). Based on the EPA's human health assessment practices, the lowest confidence rating across the areas of consideration (*e.g.,* existent hazard/dose-response database) is assigned to the corresponding derived reference value (*e.g.,* RfD). Thus, the EPA has high confidence in the critical study (Feng et al., 2017) and critical effect/thyroid endpoint, but the database is relatively limited. Although the PFBS RfD was based on best available peer-reviewed science, there is uncertainty as to the hazard profile associated with PFBS after prolonged (*e.g.,* lifetime) oral exposure. In the toxicity assessment for PFBS (USEPA, 2021a), the EPA noted data gaps in specific health effects domains, as is standard practice. Toxicity assessments for most chemicals identify data gaps; the issue of uncertainty due to toxicological study data gaps is not unique to PFBS. Data gaps are considered when selecting the UF_D because they indicate the potential for exposure to lead to adverse health effects at doses lower than the POD derived from the assessment's critical

study. There is a potential that effects with greater dose-response sensitivity (*i.e.,* occurring at lower daily oral exposures) might be discovered from a chronic duration exposure study. Due to this uncertainty, the EPA applied a UF_D of 10.

One commenter questioned the EPA's approach to estimating the human equivalent dose (HED) from the animal data using toxicokinetic (TK) data rather than using default body-weight scaling and suggested that the default allometric approach is more appropriate for estimating an HED. The EPA disagrees with this comment. In human health risk assessment practice, the EPA considers a hierarchical approach to cross-species dosimetric scaling consistent with technical guidance to calculate HEDs (USEPA, 2011; see pp. X–XI of the Executive Summary in '*Recommended Use of Body Weight$^{3/4}$ as the Default Method in Derivation of the Oral Reference Dose*'). The preferred approach is physiologically based toxicokinetic (PBTK) modeling; however, there are rarely sufficient chemical-specific data to properly parameterize such a model. In the absence of a PBTK model, the EPA considers an intermediate approach in which chemical-specific data across species, such as clearance or plasma half-life, are used to calculate a dosimetric adjustment factor (DAF) (USEPA, 2011). If chemical-specific TK data are not available, only then is a default approach used wherein allometric scaling, based on body weight raised to the ¾ power, is used to calculate a DAF. The human health toxicity assessment for PFBS invoked the intermediate approach, consistent with guidance, as TK data were available for humans and rodents.

e. Mixtures of PFHxS, PFNA, HFPO–DA, and PFBS

Comments on the EPA's preliminary regulatory determination on the mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS were varied. Many commenters supported the EPA's proposal to regulate a mixture of these PFAS and agreed with the EPA's scientific conclusions about PFAS dose additivity. Many commenters urged the EPA to consider making a determination to regulate for additional PFAS (in a mixture) or all PFAS as a class. As described throughout section III of this preamble, the agency is required to demonstrate a contaminant meets the SDWA statutory criteria to make a regulatory determination. In this preamble, in addition to PFOA and PFOS which the EPA has already made a final determination to regulate, the agency is making final determinations for all PFAS with sufficiently available information to meet these statutory criteria either individually and/or as part of mixture combinations. As information becomes available, the agency will continue to evaluate other PFAS for potential future preliminary regulatory determinations.

Many commenters opposed the EPA's conclusion about PFAS dose additivity and use of the Hazard Index approach to regulate co-occurring PFAS. A few commenters agreed with the EPA's decision to regulate mixtures of certain PFAS and the EPA's conclusion about dose additivity but questioned the EPA's use of the general Hazard Index, and instead, suggested alternative approaches. Please see section IV of this preamble for a summary of comments and the EPA responses on the Hazard Index MCLG and related topics.

There is substantial evidence that PFHxS, PFNA, HFPO–DA, and PFBS act in a dose additive manner, that these four PFAS elicit similar health effects, and that exposure to mixtures of these PFAS may have adverse health effects. Following is a discussion of dose additivity and similarity of adverse effects of PFHxS, PFNA, HFPO–DA, and PFBS.

As noted in this section, the available data indicate that PFHxS, PFNA, HFPO–DA, and PFBS, while not necessarily toxicologically identical, elicit many of the same or similar adverse health effects across different levels of biological organization, tissues/organs, lifestages, and species (ATSDR, 2021; EFSA et al., 2018; EFSA et al., 2020; USEPA, 2021d; USEPA, 2021f; USEPA, 2024f). Each of these PFAS disrupts signaling of multiple biological pathways, resulting in a shared set of adverse effects including effects on thyroid hormone levels, lipid synthesis and metabolism, development, and immune and liver function (ATSDR, 2021; EFSA et al., 2018; EFSA et al., 2020; USEPA, 2021d; USEPA, 2021f; USEPA, 2024f). Please also see USEPA (2024a) for an overview of recent studies that provide supportive evidence of similar effects of PFAS.

Available health effects studies indicate that PFAS mixtures act in a dose-additive manner when the individual components share some health endpoints/outcomes. Individual PFAS, each at doses that are not anticipated to result in adverse health effects, when combined in a mixture may result in adverse health effects. Dose additivity means that when two or more of the component chemicals (in this case, PFHxS, PFNA, HFPO–DA, and/or PFBS) exist in one mixture, the risk of adverse health effects following exposure to the mixture is equal to the sum of the individual doses or concentrations scaled for potency (USEPA, 2000a). Thus, exposure to these PFAS, at doses that individually would not likely result in adverse health effects, when combined in a mixture may pose health risks.

Many commenters supported the EPA's scientific conclusions about PFAS dose additivity and agreed that considering dose-additive effects is a health-protective approach. Many other commenters disagreed with the EPA's scientific conclusions regarding PFAS dose additivity and a few commenters questioned the agency's external peer-review process and whether the agency sufficiently responded to SAB (Science Advisory Board) comments. For example, these commenters stated that the evidence base of PFAS mixture studies is too limited to support dose additivity for these four PFAS and recommended that the EPA re-evaluate its conclusion about dose additivity as new data become available. A few commenters stated that the EPA failed to adequately follow the SAB recommendation that ''discussion of studies of toxicological interactions in PFAS mixtures in the EPA mixtures document be expanded to also include studies that do not indicate dose additivity and/or a common MOA [mode of action] for PFAS.'' The EPA's responses to these comments are summarized in this section.

The EPA continues to support its conclusion that PFAS that elicit similar adverse health effects following individual exposure should be assumed to act in a dose-additive manner when in a mixture unless data demonstrate otherwise. Numerous published studies across multiple chemical classes, biological effects, and study designs support a dose-additive mixture assessment approach for PFAS because they demonstrate that experimentally observed responses to exposure to PFAS and other chemical mixtures are consistent with modeled predictions of dose additivity (see the EPA's *Framework for Estimating Noncancer Health Risks Associated with Mixtures of Per- and Polyfluoroalkyl Substances (PFAS)* (USEPA, 2024a)). Since the EPA's draft PFAS Mixtures Framework underwent SAB review in 2021, new studies from the EPA and others have published robust evidence of combined toxicity of PFAS in mixtures, corroborating and confirming earlier findings (*e.g.,* Conley et al., 2022a; Conley et al., 2022b; USEPA, 2023c; see USEPA, 2024a for additional examples). Additionally, the National Academies of

Sciences, Engineering, and Medicine (NASEM, 2022) recently recommended that clinicians apply an additive approach for evaluating patient levels of PFAS currently measured in the National Health and Nutrition Examination Survey (NHANES) in order to protect human health from additive effects from PFAS co-exposure.

The EPA directly asked the SAB for feedback on PFAS dose additivity in the charge for the 2021 review of the EPA's draft PFAS Mixtures Framework. Specifically, the EPA asked the SAB to, ''[p]lease comment on the appropriateness of this approach for a component-based mixture evaluation of PFAS under an assumption of dose additivity'' (USEPA, 2022i). The SAB strongly supported the scientific soundness of this approach when evaluating PFAS and concurred that it was a health protective conclusion. For example, the SAB said:

> . . . The information included in the draft framework supports the conclusion that toxicological interactions of chemical mixtures are frequently additive or close to additive. It also supports the conclusion that dose additivity is a public health protective assumption that typically does not underestimate the toxicity of a mixture . . . (USEPA, 2022i)
>
> The SAB Panel agrees with use of the default assumption of dose additivity when evaluating PFAS mixtures that have similar effects and concludes that this assumption is health protective. (USEPA, 2022i)

Regarding the commenters' assertion that the agency did not adequately follow the SAB recommendation to expand its discussion of PFAS mixtures study results that did not show evidence of dose additivity and/or a common MOA, the EPA disagrees. The EPA reviewed all studies provided by the SAB and in response, included a discussion of relevant additional studies in its public review draft PFAS Mixtures Framework (see section 3 in USEPA, 2023w). Since then, the EPA has included additional published studies and those findings further confirm dose additive health concerns associated with PFAS mixtures (see section 3 in USEPA, 2024a). Data from *in vivo* studies that rigorously tested accuracy of Dose Additivity (DA), Integrated Addition (IA), and Response Additivity (RA) model predictions of mixtures with components that disrupted common pathways demonstrated that DA models provided predictions that were better than or equal to IA and RA predictions of the observed mixture effects (section 3.2 in USEPA, 2024a). The National Academy of Sciences (NAS) conclusions on phthalates (and related chemicals) (NRC, 2008) and systematic reviews of the published literature (Boobis et al., 2011 and Martin et al., 2021; see also section 3.2 in USEPA, 2024a) support DA as the default model for estimating mixture effects in some circumstances, even when the mixtures included chemicals with diverse MOAs (but common target organs/effects) (Boobis et al., 2011; Martin et al., 2021; USEPA, 2024a). Recent efforts to investigate *in vitro* and *in vivo* PFAS mixture effects have provided robust evidence that PFAS behave in a dose-additive manner (see section 3 in USEPA, 2024a).

As supported by the best available science, the SAB, the agency's chemical mixtures guidance (USEPA, 1991b; USEPA, 2000a), and the EPA Risk Assessment Forum's *Advances in Dose Addition for Chemical Mixtures: A White Paper* (USEPA, 2023c), the EPA proposed a Hazard Index MCLG for a mixture of up to four PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) based on dose additivity because published studies show that exposure to each of these individual four PFAS elicits some of the same or similar adverse health effects/outcomes. As noted above, many commenters, as well as the SAB (USEPA, 2022i), supported this conclusion of dose additivity based on similarity of adverse effects.

While the SAB also noted that there remain some questions about PFAS interaction in mixtures (USEPA, 2022i), the available data justify an approach that accounts for PFAS dose additivity. Studies that have assessed PFAS mixture-based effects do not offer evidence for synergistic/antagonistic effects (USEPA, 2024a). For example, Martin et al. (2021), following a review of more than 1,200 mixture studies (selected from > 10,000 reports), concluded that there was little evidence for synergy or antagonism among chemicals in mixtures and that dose additivity should be considered as the default. Experimental data demonstrate that PFAS disrupt signaling in multiple biological pathways resulting in common adverse effects on several of the same biological systems and functions including thyroid hormone signaling, lipid synthesis and metabolism, developmental toxicity, and immune and liver function (USEPA 2024a). Additionally, several EPA Office of Research and Development (ORD) studies provide robust evidence that PFAS behave in a dose-additive manner (Conley et al., 2022a; Conley et al., 2022b; Conley et al., 2023; Gray et al., 2023).

Several commenters opposed the conclusion of dose additivity based on similarity of adverse effects and stated that the EPA failed to establish that the four PFAS included in the Hazard Index (PFHxS, PFNA, HFPO–DA, and PFBS) elicit similar adverse health effects. The EPA disagrees with these comments because the available epidemiology and animal toxicology studies demonstrate that these four PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) have multiple health endpoints and outcomes in common (USEPA, 2024f). Further, these four PFAS are well-studied PFAS for which the EPA or ATSDR have developed human health assessments and toxicity values (*i.e.,* RfDs, minimal risk levels). As shown in Table 1, available animal toxicological data and/or epidemiological studies demonstrate that PFHxS, PFNA, HFPO–DA, and PFBS are documented to affect at least five (5) of the same health outcomes for this evaluation: lipids, developmental, immune, endocrine, and hematologic (USEPA, 2024g). Similarly, according to the 2023 Interagency PFAS Report to Congress (United States OSTP, 2023), available animal toxicological data show that PFHxS, PFNA, HFPO–DA, and PFBS are documented to significantly affect at least eight (8) of the same major health effect domains: body weight, respiratory, hepatic, renal, endocrine, immunological, reproductive, and developmental. In short, multiple evaluation efforts have clearly demonstrated that each of the PFAS regulated by this NPDWR impact numerous of the same or similar health outcomes or domains.

Table 1: Affected health outcomes in animal toxicity and/or epidemiological studies for the four PFAS included in the Hazard Index MCLG (adapted from Table 6-7 in USEPA, 2024g)

Health Outcome	PFNA	PFHxS	PFBS	HFPO-DA
Lipids	X	X	X	X
Developmental	X	X	X	X
Hepatic	X	X	-	X
Immune	X	X	X	X
Endocrine	X	X	X	X
Renal	-	-	X	X
Hematologic	X	X	X	X

Notes: (X) Health outcome examined, evidence of association; (-) health outcome examined, no evidence of association.

In summary, there is substantial evidence that mixtures of PFHxS, PFNA, HFPO–DA, and PFBS act in a dose-additive manner and elicit multiple similar toxicological effects. Studies by the EPA and others provide evidence that corroborates the dose-additive toxicity of PFAS mixtures, and data on different chemical classes and research also provide support for dose additivity. Additionally, numerous *in vivo* and *in vitro* studies demonstrate that these four PFAS share many common health effects across diverse health outcome categories (*e.g.,* developmental, immunological, and endocrine effects), and that they induce some of the same effects at the molecular level along biological pathways (USEPA, 2024f).

C. Statutory Criterion 2—Occurrence

The EPA has determined that there is a substantial likelihood that PFHxS, PFNA, and HFPO–DA will individually occur and combinations of these three PFAS and PFBS will co-occur in mixtures in PWSs with a frequency and at levels of public health concern based on the EPA's evaluation of the best available occurrence information. In this preamble, while the EPA is making a final determination to regulate PFBS in mixtures with PFHxS, PFNA, and/or HFPO–DA, the agency is deferring the final individual regulatory determination for PFBS so that the agency can continue to evaluate this contaminant relative to the SDWA criteria for regulation, particularly related to its individual known or likely occurrence. For the other three PFAS, the EPA is making a final determination to regulate them individually in this preamble (*i.e.,* PFHxS, PFNA, and HFPO–DA). The EPA recognizes there will be additional occurrence or other relevant information for these and other PFAS in the future. The EPA has, however, determined that there is more than sufficient occurrence information to satisfy the statutory criterion to regulate PFNA, PFHxS, and HFPO–DA.

The EPA's evaluation of the second statutory criterion for regulation of PFHxS, PFNA, and HFPO–DA individually and regulation of combinations of these PFAS and PFBS in mixtures follows a similar process to previous rounds of regulatory determinations including the written Protocol developed under Regulatory Determination 3 (USEPA, 2014a) and also described in detail in the Preliminary Regulatory Determination 4 (USEPA, 2020a). Using the Protocol, and as conducted for the regulatory determinations in this action, the agency compares available occurrence data relative to the contaminant HRL, a health-based concentration against which the agency evaluates occurrence data when making regulatory determinations, as a preliminary factor in informing the level of public health concern. For both this regulatory determination and previous regulatory determinations, this is the first screening factor in informing if there is a substantial likelihood the contaminant will occur at a frequency and level of public health concern. Consistent with the Protocol and similar to all past regulatory determinations, these regulatory determinations are also based on other factors, not just the direct comparison to the HRL. As described clearly in the proposal, the EPA has not been able to determine a simple threshold of public health concern for all contaminants the agency considers for regulation under SDWA; rather, it is a contaminant-specific decision which ''involves consideration of a number of factors, some of which include the level at which the contaminant is found in drinking water, the frequency at which the contaminant is found and at which it co-occurs with other contaminants, whether there is an sustained upward trend that these contaminant will occur at a frequency and at levels of public health concern, the geographic distribution (national, regional, or local occurrence), the impacted population, health effect(s), the potency of the contaminant, other possible sources of exposure, and potential impacts on sensitive populations or lifestages.'' (USEPA, 2023f). It also includes consideration of production and use trends and environmental fate and transport parameters which may indicate that the contaminant would persist and/or be mobile in water. Appropriately, the EPA has considered these relevant factors in its evaluation

that there is a substantial likelihood that PFHxS, PFNA, and HFPO–DA will individually occur and combinations of these three PFAS and PFBS will co-occur in mixtures in PWSs with a frequency and at levels of public health concern.

The EPA's evaluation of the second statutory criterion is based on the best available health information, which includes UCMR 3 data and more recent PFAS drinking water data collected by several states. Based on suggestions in public comments to update state occurrence data, the EPA supplemented the data used to inform the rule proposal with new data from states included in the original proposal and additional states that have made monitoring data publicly available since the rule proposal (USEPA, 2024b). Consistent with section 1412(b)(1)(B)(II), this information combined represents best available occurrence data. It includes results from tens of thousands of samples and the assembled data represent one of the most robust occurrence datasets ever used to inform development of a drinking water regulation of a previously unregulated contaminant. The state data were primarily gathered after the UCMR 3 using improved analytical methods that could measure more PFAS at lower concentrations. These additional data demonstrate greater occurrence and co-occurrence of the PFAS monitored under UCMR 3 (PFHxS, PFNA, and PFBS) at significantly greater frequencies than UCMR 3 and the data initially included in the analysis. Furthermore, the state data show the co-occurrence of PFAS at levels of public health concern, as well as the demonstrated occurrence and co-occurrence of HFPO–DA which was not included within UCMR 3. As discussed subsequently, these data demonstrate that there is a substantial likelihood PFHxS, PFNA, and HFPO–DA will occur and combinations of PFHxS, PFNA, HFPO–DA, and PFBS will co-occur in mixtures with a frequency and at levels of public health concern. When determining that there is a substantial likelihood PFHxS, PFNA, and HFPO–DA will occur and PFHxS, PFNA, HFPO–DA, and/or PFBS will co-occur at levels of public health concern, the EPA considered both the occurrence concentration levels for PFHxS, PFNA, and HFPO–DA individually, as well as their collective co-occurrence and corresponding dose additive health concerns from co-exposures with PFBS for purposes of considering a regulatory determination for mixtures of these four PFAS. The EPA also considered other factors in evaluating the second criterion and informing level of public health concern for PFHxS, PFNA, and HFPO–DA individually and combinations of these three PFAS and PFBS in mixtures, including the frequency at which the contaminant is found, the geographic representation of the contaminant's occurrence, and the environmental fate and transport characteristics of the contaminant. As the EPA noted previously, while the agency is not making an individual regulatory determination for PFBS at this time, PFBS is an important component in mixtures with PFHxS, PFNA, and HFPO–DA and the EPA presents occurrence information for PFBS as part of section III.C.5 and its co-occurrence analyses in sections VI.C and D of this preamble.

The EPA focused the evaluation of the state data on the non-targeted or non-site specific (*i.e.,* monitoring not conducted specifically in areas of known or potential contamination) monitoring efforts from 19 states. Non-targeted or non-site-specific monitoring is likely to be more representative of general occurrence because its framework and monitoring results will be less likely to potentially over-represent concentrations at locations of known or suspected contamination. Sixteen (16) of 19 states reported detections of at least three of PFHxS, PFNA, HFPO–DA, or PFBS.

The EPA considered the targeted state monitoring data separately since a higher rate of detections may occur as a result of specifically looking in areas of suspected or known contamination. For the targeted state data nearly all these states also reported detections at systems serving millions of additional people, as well as at levels of public health concern, both individually for PFHxS, PFNA, and HFPO–DA, and as mixtures of these three PFAS and PFBS. State data detection frequency and concentration results vary for PFHxS, PFNA, HFPO–DA, and PFBS, both between these four different PFAS and across different states, with some states showing much higher reported detections and concentrations of these PFAS than others. The overall results demonstrate the substantial likelihood that individually PFHxS, PFNA, and HFPO–DA and mixtures of these three PFAS with PFBS will occur and co-occur at frequencies and levels of public health concern. Tables 2 and 3 show the percent of samples with state reported detections of PFHxS, PFNA, HFPO–DA, and PFBS, and the percentage of monitored systems with detections of PFHxS, PFNA, HFPO–DA, and PFBS, respectively, across the non-targeted state finished water monitoring data. The EPA notes that Alabama is not included in Tables 2 and 3 as only detections were reported and there was no information on the total number of samples collected to determine percent detection.

BILLING CODE 6560–50–P

Table 2. Non-Targeted State PFAS Finished Water Data – Summary of Samples with State Reported Detections[1] of PFHxS, PFNA, HFPO-DA, and PFBS

State	PFHxS	PFNA	PFBS	HFPO-DA
Colorado	10.8%	0.9%	11.0%	0.2%
Illinois	13.4%	0.6%	17.6%	0.0%
Indiana	1.5%	0.2%	5.6%	0.0%
Kentucky	8.6%	2.5%	12.3%	13.6%
Maine	3.0%	3.5%	10.1%	N/A[2]
Maryland	18.2%	2.3%	19.3%	0.0%
Massachusetts	23.6%	2.9%	39.8%	0.1%
Michigan	4.3%	0.6%	7.5%	0.1%
Missouri	3.3%	0.0%	6.1%	0.0%
New Hampshire	16.8%	3.3%	32.1%	3.8%
New Jersey	26.2%	7.7%	28.1%	N/A[2]
New York	21.6%	8.6%	28.8%	0.7%
North Dakota	5.3%	0.0%	8.8%	0.0%
Ohio	6.6%	0.3%	5.0%	0.1%
South Carolina	8.1%	0.1%	13.7%	1.3%
Tennessee	0.0%	0.0%	0.0%	N/A[2]
Vermont	4.2%	2.5%	7.1%	0.2%
Wisconsin	27.2%	2.2%	28.0%	0.0%

Notes:

[1] Detections determined by individual state reported limits which are not defined consistently across all states.

[2] N/A indicates the analyte was not sampled as part of the state monitoring.

BILLING CODE 6560–50–C

As shown in Tables 2 and 3, all states except three report sample and system detections for at least three of the four PFAS. For those states that reported detections, the percentage of samples and systems where these PFAS were found ranged from 1 to 39.8 percent and 0.1 to 38.1 percent, respectively. While these percentages show occurrence variability across states, several of these states demonstrate that a significant number of samples (*e.g.,* detections of PFHxS in 26.2 percent of New Jersey samples) and systems (*e.g.,* detections of HFPO–DA in 12.2 percent of monitored systems in Kentucky) contain some or all four PFAS. This occurrence information, as well as the specific discussion related to individual occurrence for PFHxS, PFNA, and HFPO–DA and co-occurrence of these three PFAS and PFBS, supports the agency's determination that there is a substantial likelihood that PFHxS, PFNA, HFPO–DA occur and PFHxS, PFNA, HFPO–DA, and PFBS co-occur in combinations of mixtures with a frequency of public health concern. Additionally, the agency emphasizes that occurrence and co-occurrence of these PFAS is not only at a regional or local level, rather it covers many states throughout the country; therefore, a national level regulation is necessary to ensure all Americans served by PWSs are equally protected.

1. PFHxS

The occurrence data presented above, throughout section VI of this preamble and discussed in the USEPA (2024b) support the agency's final determination that there is a substantial likelihood PFHxS occurs with a frequency and at levels of public health concern in drinking water systems across the United States. PFHxS was found under UCMR 3 in approximately 1.1 percent of systems, serving 5.7 million people across 25 states, Tribes, and U.S. territories. However, under UCMR 3, the minimum reporting level for PFHxS was 30 ng/L. As this reporting level is three times greater than the health-based HRL for PFHxS (10 ng/L), it is extremely likely there is significantly greater occurrence and associated population exposed in the range between the HRL of 10 ng/L and the UCMR 3 minimum reporting level of 30 ng/L (as demonstrated by both the more recent state data and the EPA's occurrence model discussed in this section and in section VI of this preamble showing many results in this concentration range). Through analysis of available state data, which consisted of approximately 48,000 samples within 12,600 systems, 18 out of the 19 states that conducted non-targeted monitoring had reported detections of PFHxS in 1.3 to 32.9 percent of their systems (Tables 2 and 3). These same systems reported concentrations ranging from 0.2 to 856

ng/L with median sample concentrations ranging from 1.17 to 12.1 ng/L, demonstrating concentrations above the HRL of 10 ng/L.

Targeted state monitoring data of PFHxS show similar results. For example, in its targeted monitoring efforts, California reported 38.5 percent of monitored systems found PFHxS, where concentrations ranged from 1.1 to 160 ng/L, also demonstrating concentrations above the HRL. In total, considering both the non-targeted and targeted state data, PFHxS was found above the HRL in at least 184 PWSs in 21 states serving a population of approximately 4.3 million people.

The EPA also evaluated PFHxS in a national occurrence model that has been developed and utilized to estimate national-scale PFAS occurrence for four PFAS that were included in UCMR 3 (Cadwallader et al., 2022). The model has been peer reviewed and is described extensively in Cadwallader et al. (2022). The model and results are described in section VI.E of this preamble; briefly, both the UCMR 3 and some state data were incorporated into a Bayesian hierarchical model which supported exposure estimates for select PFAS at lower levels than were measured under UCMR 3. Hundreds of systems serving millions of people were estimated to have mean concentrations exceeding the PFHxS HRL (10 ng/L). Therefore, the UCMR 3 results, the national occurrence model results, and the substantial state data demonstrate the substantial likelihood PFHxS occurs at a frequency and level of public health concern. Finally, UCMR 5 data are being reported to the EPA while this final rule is being prepared. See section VI of this preamble for more information on the preliminary results. While these UCMR 5 PFHxS data are too preliminary to provide the basis for the regulatory determination, these preliminary UCMR 5 results appear to confirm state data and model results.

Further supporting this final determination, PFHxS is very stable and persistent in the environment. While PFHxS was phased out in the U.S. in the early 2000's there are still detections as previously demonstrated. In addition, legacy stocks may also still be used, production continues in other countries, and products containing PFHxS may be imported into the U.S. (USEPA, 2000b). Since PFHxS is environmentally persistent and products containing PFHxS are still in use and may be imported into the United States, the EPA anticipates environmental contamination to sources of drinking water will continue. To illustrate this point further, PFOA and PFOS, two of the most extensively sampled PFAS, are also very environmentally persistent and have similarly been phased out in the U.S. for many years, though these two contaminants continue to often be found at levels of public health concern as discussed in section VI of this preamble. Currently, this also appears to be a similar trend for PFHxS occurrence, where the drinking water sample data demonstrates it continues to occur at levels of public health concern. Therefore, in consideration of factors relating to the environmental persistence of PFHxS, its presence in consumer products and possible continued use, and the observed occurrence trend of PFOA and PFOS, the EPA finds that there is a substantial likelihood PFHxS occurs or will occur at a frequency and level of public health concern.

2. PFNA

The occurrence data presented above, throughout section VI of this preamble, and discussed in USEPA (2024b) support the agency's final determination that there is a substantial likelihood PFNA occurs with a frequency and at levels of public health concern in drinking water systems across the U.S.

PFNA was found under UCMR 3 in approximately 0.28 percent of systems, serving 526,000 people in 7 states, Tribes, and U.S. territories, using a minimum reporting level of 20 ng/L. As this reporting level is two times greater than the health-based HRL of 10 ng/L, the EPA expects there is even greater occurrence and exposed population in the range between 10 and 20 ng/L. Additionally, through analysis of the extensive amount of available state data, which consisted of approximately 57,000 samples within approximately 12,400 systems, 16 of 19 non-targeted monitoring states reported detections of PFNA within 0.3 to 16.5 percent of their systems (Tables 2 and 3). These same states reported sample results ranging from 0.23 to 330 ng/L, demonstrating levels above the HRL of 10 ng/L, with median sample results ranging from 0.35 to 7.5 ng/L.

Targeted state monitoring data of PFNA are also consistent with non-targeted state data; for example, Pennsylvania reported 5.8 percent of monitored systems found PFNA, where concentrations ranged from 1.8 to 18.1 ng/L, also showing concentrations above the HRL. When considering all available state data, there are at least 480 systems in 19 states serving more than 8.4 million people that reported any concentration of PFNA, and at least 52 systems in 12 states within different geographic regions serving a population of 177,000 people with reported concentrations above the HRL of 10 ng/L. Furthermore, when evaluating only a subset of the available state data representing non-targeted monitoring, PFNA was reported in approximately 3.6 percent of monitored systems; if these results were extrapolated to the nation and those system subject to the final rule requirements, the agency estimates that PFNA would be detectable in over 2,300 PWSs serving 24.9 million people. If those results were further compared to the HRL for PFNA (10 ng/L), PFNA would be detected above the HRL in 228 systems with 830,000 people exposed. Thus, in addition to the UCMR 3 results, these extensive state data also reflect there is a substantial likelihood PFNA occurs at a frequency and level of public health concern because it is observed or likely to be observed within numerous water systems above levels of public health concern across a range of geographic locations. Finally, UCMR 5 data are being reported to the EPA while this final rule is being prepared. See section VI of this preamble for more information on the preliminary results. While these PFNA UCMR 5 data are too preliminary to provide the basis for the regulatory determination, these preliminary UCMR 5 results appear to confirm state data discussed above.

Further supporting this final determination, PFNA is very stable and persistent in the environment. While it has generally been phased out in the U.S. there are still detections as demonstrated previously. Additionally, legacy stocks may still be used and products containing PFNA may still be produced internationally and imported to the U.S. (ATSDR, 2021). Since PFNA is environmentally persistent and products containing PFNA are still in use and may be imported into the U.S., there is a substantial likelihood that environmental contamination of sources of drinking water will continue. To illustrate this point further, PFOA and PFOS, two of the most extensively sampled PFAS, are also very environmentally persistent and have similarly been phased out in the U.S. for many years, though these two contaminants continue to often be found at levels of public health concern as discussed in section VI of this preamble. Currently, this also appears to be a similar trend for PFNA occurrence, where the drinking water sample data demonstrates it continues to occur at levels of public health concern. Therefore, in consideration of factors relating to the environmental persistence of PFNA, its presence in

consumer products and possible continued use, and the observed occurrence trend of PFOA and PFOS, the EPA finds that there is a substantial likelihood PFNA occurs or will co-occur at a frequency and level of public health concern.

3. HFPO–DA

The occurrence data presented above, throughout section VI of this preamble, and discussed in the USEPA (2024b) support the agency's final determination that there is a substantial likelihood HFPO–DA occur with a frequency and at levels of public health concern in drinking water systems across the U.S. HFPO–DA was not included as a part of the UCMR 3; however, through analysis of available state data, which consisted of approximately 36,000 samples within approximately 10,100 systems, 10 of the 16 states that conducted non-targeted monitoring had state reported detections of HFPO–DA within 0.1 to 12.2 percent of their systems (Tables 2 and 3). These same states reported sample results ranging from 0.7 to 100 ng/L and median sample results ranging from 1.7 to 29.6 ng/L, demonstrating concentrations above the HRL of 10 ng/L.

Additionally, targeted state monitoring in North Carolina included sampling across six finished drinking water sites and 438 samples with HFPO–DA. Concentrations ranged from 9.52 to 1100 ng/L, a median concentration of 40 ng/L, and 433 (99 percent) samples exceeding the HRL (10 ng/L). When considering all available state data, there are at least 75 systems in 13 states serving more than 2.5 million people that reported any concentration of HFPO–DA, and at least 13 systems in 5 states within different geographic regions of the country serving a population of 227,000 people with reported concentrations above the HRL of 10 ng/L. Additionally, when evaluating only a subset of the available state data representing non-targeted monitoring to ensure that the data were not potentially over-represented by sampling completed in areas of known or suspected contamination, HFPO–DA was reported in approximately 0.48 percent of monitored systems; if these results were extrapolated to the nation and those system subject to the final rule requirements, the agency estimates that HFPO–DA would be detectable in over 320 PWSs serving 9.9 million people. If those results were further compared to the HRL for HFPO–DA (10 ng/L), HFPO–DA would be detected above the HRL in 42 systems with at least 495,000 people exposed. Finally, UCMR 5 data are being reported to the EPA while this final rule is being prepared. See section VI of this preamble for more information on the preliminary results. While these HFPO–DA UCMR 5 data are too preliminary to provide the basis for the regulatory determination, these preliminary UCMR 5 results appear to confirm the state data discussed above.

Further supporting this final determination, HFPO–DA is very stable and persistent in the environment. Additionally, unlike PFOA, PFOS, PFHxS, and PFNA which have been phased out in the U.S, HFPO–DA continues to be actively produced and used within the country and is generally considered to have replaced the production of PFOA. Since HFPO–DA is environmentally persistent and products containing HFPO–DA are still being actively produced and used, the EPA anticipates that contamination will continue, if not increase, due to disposal and breakdown in the environment. To illustrate this point further, PFOA and PFOS, two of the most extensively sampled PFAS, are also very environmentally persistent and have been phased out in the United States for many years, though these two PFAS continue to often be found at levels of public health concern as discussed in section VI of this preamble. Therefore, in consideration of factors relating to the environmental persistence of HFPO–DA, its continued and possibly increasing presence in consumer products and use, and the observed occurrence trend of PFOA and PFOS, the EPA anticipates that occurrence levels of HFPO–DA will similarly continue to be found at least to the levels described in this preamble demonstrating that there is a substantial likelihood HFPO–DA will occur at a frequency and level of public health concern.

As discussed, HFPO–DA continues to be actively produced and used throughout the U.S., it currently occurs at levels above its HRL, and it occurs within geographically diverse areas of the country demonstrating it is not a local or regional issue only. While the current individual occurrence profile of HFPO–DA is not as pervasive and is found at somewhat lower frequency as the currently observed levels of PFOA, PFOS, or PFHxS, based upon the available substantial amount of state occurrence data and given factors previously described, the EPA has determined that there is a substantial likelihood HFPO–DA occurs or will occur at a frequency and level of public health concern.

4. PFBS

The agency is deferring the final individual regulatory determination for PFBS to further consider whether occurrence information supports a finding that there is substantial likelihood that PFBS will individually occur in PWSs and at a level of public health concern. While current information demonstrates that PFBS frequently occurs, it has not been observed to exceed its HRL of 2,000 ng/L in isolation. However, when considered in mixture combinations with other PFAS, including PFHxS, PFNA, and HFPO–DA, PFBS is anticipated to have dose-additive adverse health effects (based on available data on PFAS and dose additivity) and there is a substantial likelihood of its co-occurrence in combinations of mixtures with PFHxS, PFNA, and HFPO–DA with a frequency and at levels of public health concern. This is described further in sections III.C.5 and VI.C. and VI.D of this preamble.

5. Mixtures of PFHxS, PFNA, HFPO–DA, and PFBS

Through the information presented within this section and in USEPA (2024b), along with the co-occurrence information presented in sections VI.C and VI.D of this preamble, the EPA's evaluation of all available UCMR 3 and state occurrence data demonstrates that there is a substantial likelihood that combinations of PFHxS, PFNA, HFPO–DA, and PFBS (collectively referred to as ''Hazard Index PFAS'') co-occur or will co-occur in mixtures at a frequency and level of public health concern.

As discussed throughout section III.C of this preamble, the EPA has determined that PFHxS, PFNA, and HFPO–DA each meet the second statutory criterion for individual regulation. Additionally, as demonstrated in sections VI.C. and D. of this preamble, the EPA has determined that these three PFAS also meet the second statutory criterion when present in mixture combinations. PFBS has not been observed to exceed its HRL of 2,000 ng/L in isolation; therefore, the EPA is deferring the individual regulatory determination for this PFAS to further consider future occurrence information. However, the agency has determined that PFBS frequently occurs (as shown in Table 2 and Table 3), and that when considering dose additivity there is a substantial likelihood of its co-occurrence in mixtures of PFHxS, PFNA, and/or HFPO–DA with a frequency and at a level of public health concern. Therefore, the agency has

determined that PFBS also meets the criterion when present in mixture combinations with PFHxS, PFNA, and/or HFPO–DA.

In sections VI.C and D of this preamble, the EPA has presented its evaluation and findings related to the likelihood and frequency of co-occurrence of the four Hazard Index PFAS, including both through groupwise and pairwise analyses for the Hazard Index PFAS, in non-targeted state monitoring datasets. The groupwise co-occurrence analysis established the broad occurrence frequency of Hazard Index PFAS through a linkage to the presence of PFOA and PFOS. Because not as many states have monitored for the Hazard Index PFAS as compared to PFOA and PFOS, their occurrence information is less extensive than the occurrence information for PFOA and PFOS. Therefore, though the agency has previously made a final regulatory determination for PFOA and PFOS, establishing co-occurrence of Hazard Index PFAS with PFOA and PFOS is important to better understand the likelihood of Hazard Index PFAS occurrence. In this analysis, the six PFAS were separated into two groups—one consisted of PFOS and PFOA and the other group included the four Hazard Index PFAS. The analysis broke down the systems and samples according to whether chemicals from the two respective groups were detected. Given that the groupwise co-occurrence analysis established that there is a substantial likelihood that the Hazard Index PFAS frequently occur, particularly alongside PFOA or PFOS, the pairwise co-occurrence was relevant for understanding how the Hazard Index PFAS co-occur with each other instead of occurring independently. Pairwise co-occurrence analysis explored the odds ratios for each unique pair of PFAS included in the regulation. For every pair of PFAS chemicals included in the final regulation, the odds ratio, a statistic that, in this context, quantifies the strength of association between two PFAS being present, was found to be statistically significantly greater than 1. This means there was a statistically significant increase in the odds of reporting a chemical as present after knowing that the other chemical was detected. In most instances the odds appeared to increase in excess of a factor of ten. Thus, based on the large amount of available data, the chemicals are clearly demonstrated to frequently co-occur rather than occur independently of one another, supporting the agency's determination for mixtures of the four PFAS.

For the groupwise analysis, results generally indicated that when PFOA and PFOS were found, Hazard Index PFAS were considerably more likely to also be present. Additionally, for systems that only measured PFOA and/or PFOS and did not measure the Hazard Index PFAS, it can be assumed that the Hazard Index PFAS are more likely to be present in those systems, and that Hazard Index occurrence may be underestimated. Moreover, while PFOA and PFOS are not included within the Hazard Index PFAS or the determination to regulate mixtures of these PFAS, the pervasive occurrence of PFOA and PFOS shown in section VI of this preamble is a strong indicator that these other Hazard Index PFAS are also more likely to be found than what has been reported in state monitoring data to date. In this analysis, comparisons were also made between the number of Hazard Index PFAS analyzed and the number of Hazard Index PFAS reported present. As more Hazard Index PFAS were analyzed, more Hazard Index PFAS were reported present. Systems and samples where Hazard Index PFAS were found were more likely to find multiple Hazard Index PFAS than a single Hazard Index PFAS (when monitoring for three or four Hazard Index PFAS), demonstrating an increased likelihood of their co-occurrence. Additionally, for both system-level and sample-level analyses where PFOA and/or PFOS were reported present and all four Hazard Index PFAS were monitored, two or more Hazard Index PFAS were reported present more than half of the time, exhibiting they are more likely to occur together than in isolation. Furthermore, the EPA notes that when evaluating only a subset of the available state data representing non-targeted monitoring where either three or four Hazard Index PFAS were monitored, regardless of whether PFOA or PFOS were reported present, two or more of the Hazard Index PFAS were reported in approximately 12.1 percent of monitored systems; if these results were extrapolated to the nation, two or more of these four PFAS would co-occur in about 8,000 PWSs (see section VI.C.1 of this preamble for additional information).

The EPA uses a Hazard Index of 1 as the HRL to further evaluate the substantial likelihood of the Hazard Index PFAS co-occurring at a frequency and level of public health concern. As discussed in greater detail in section VI.D, of this preamble based on available state data the EPA finds that across 21 states there are at least 211 PWSs serving approximately 4.7 million people with results above a Hazard Index of 1 for mixtures including two or more of the Hazard Index PFAS. Specifically evaluating the presence of PFBS, in these same 211 systems where the Hazard Index was found to be greater than 1, PFBS was observed at or above its PQL in mixtures with one or more of the other three Hazard Index PFAS in at least 72 percent (152) of these systems serving approximately 4.5 million people. Additionally, as described previously in sections III.C.1–3, PFHxS, PFNA, HFPO–DA, and PFBS are all very stable and persistent in the environment. All are either still being actively used or legacy stocks may be used and imported into the U.S. Consequently, there is a substantial likelihood that environmental contamination of sources of drinking water from these PFAS will continue to co-occur to at least the levels described in this preamble.

Therefore, in consideration of the environmental persistence of these PFAS, their presence in consumer products and continued use, the findings of both the pairwise and groupwise co-occurrence analyses, and demonstration of combinations of Hazard Index PFAS mixtures exceeding the Hazard Index of 1, the EPA has determined there is sufficient occurrence information available to support the second criterion that there is a substantial likelihood that combinations of the four Hazard Index PFAS in mixtures co-occur at frequencies and levels of public health concern.

6. Summary of Major Public Comments and EPA Responses

The EPA requested comment on its preliminary regulatory determination for all four PFAS and their mixtures and its evaluation of the statutory criteria that supports the finding. The EPA also requested comment on additional occurrence data the agency should consider regarding its decision that PFHxS, PFNA, HFPO–DA, and PFBS and their mixtures occur or are substantially likely to occur in PWSs with a frequency and at levels of public health concern. The EPA received many comments on the agency's evaluation of the second statutory criterion under section 1412(b)(1)(A) of SDWA. Many commenters supported the EPA's preliminary determination that PFHxS, PFNA, HFPO–DA, and PFBS and mixtures of these four contaminants meet the second statutory occurrence criterion under SDWA.

A couple of commenters claimed that the EPA does not have a robust understanding of available occurrence data that supports any of the regulatory determinations for the four PFAS in this rule. Additionally, some commenters suggested that the preliminary determinations were ''rushed'' and ''non-scientific,'' and that the agency should wait until some or all of the UCMR 5 data is available and considered. The EPA disagrees. Sufficient occurrence data are available to establish a substantial likelihood of occurrence at frequencies and levels of health concern. Per the intent of the statute, the agency used the best available data in an expeditious manner, which, as the agency described earlier, was also a very large dataset consisting of tens of thousands of samples and representing one of the most robust occurrence datasets ever used to inform development of a drinking water regulation of a previously unregulated contaminant. The agency also disagrees that the occurrence analyses undertaken and available in the preamble as well as the technical support document for occurrence were non-scientific. Based on publicly available information within the state data, the EPA verified that the very large majority of samples (at least 97 percent) were collected using EPA-approved methods; the slight percentage the agency was unable to verify would not result in different agency conclusions. Additionally, the EPA notes that the aggregated data were assessed using precedented statistical metrics and analyses. In addition, the Cadwallader et al. (2022) model uses a robust, widely accepted Bayesian statistical approach for modeling contaminant occurrence. Based on these analyses, the EPA has a clear understanding of the occurrence of the modeled contaminants. As discussed in section III.C of this preamble and USEPA, 2024b, the EPA also has sufficient state data which consist of a greater number of total systems and samples than that included within the monitoring under UCMR 3, to confidently establish that there is a substantial likelihood of occurrence at frequencies and levels of public health concern.

As discussed above, the agency believes that the best currently available occurrence data demonstrate substantial likelihood of occurrence for the chemicals included in the final rule as they are demonstrated at frequencies and levels of public health concern. UCMR 5 data are being reported to the EPA while this final rule is being prepared. See section VI of this preamble for more information on the EPA's evaluation of the preliminary results. While these data are too preliminary to provide the basis for a regulatory determination, these preliminary UCMR 5 results appear to support the data discussed previously.

Several commenters disagreed that the available occurrence information supports a preliminary determination for HFPO–DA, with a few citing a lack of nationally representative data and suggesting a delay until UCMR 5 data is collected. The EPA disagrees with these comments, as the state monitoring data for the proposed rule demonstrates HFPO–DA occurrence in 13 geographically diverse states, including at 75 systems serving at least 2.5 million people. Moreover, non-national datasets may serve to demonstrate occurrence of a contaminant to warrant a positive determination and subsequent development of an NPDWR. For example, the best available HFPO–DA state data consists of approximately 36,000 samples within 10,000 systems and is representative of multiple geographic locations.

One commenter stated that a regulatory determination for PFNA was unnecessary as they do not believe it occurred with frequency under UCMR 3 monitoring, and a couple of other commenters suggested that a negative determination was appropriate for PFNA citing occurrence levels. The EPA disagrees that a negative determination is appropriate for PFNA as it has been demonstrated to occur at levels of public health concern in at least 52 water systems across 12 states. Furthermore, as described previously, when evaluating only a subset of the available state data representing non-targeted monitoring, PFNA was reported in approximately 3.6 percent of monitored systems and if those results were extrapolated across the country, PFNA would be detectable at any concentration in over 2,300 PWSs serving 21.2 million people and detectable above 10 ng/L in 227 systems serving 711,000 people. Additionally, PFNA frequently co-occurs with other PFAS, and as previously discussed in this section, presents dose additive health concerns with other PFAS demonstrating it is also an important component of the determination to regulate it in mixtures with PFHxS, HFPO–DA, and/or PFBS.

Commenters both agreed and disagreed with the EPA's individual preliminary determination for PFBS. With respect to commenters who suggested that the EPA has not met the occurrence criterion, while PFBS occurs at significant frequency, the agency is deferring the individual determination to regulate PFBS when it occurs individually until it conducts further evaluation under the statutory criteria. The EPA further finds that PFBS exposure may cause dose additive adverse health effects in mixtures with PFHxS, PFNA, and/or HFPO–DA; that there is a substantial likelihood that PFBS co-occurs in mixtures with PFHxS, PFNA, and/or HFPO–DA in PWSs with a frequency and at levels of public health concern; and that, in the sole judgment of the Administrator, regulation of PFBS in mixtures with PFHxS, PFNA, and/or HFPO–DA presents a meaningful opportunity for health risk reduction for persons served by PWSs. Therefore, PFBS will be regulated as part of a mixture with PFHxS, PFNA, and HFPO–DA.

A few commenters provided feedback on occurrence thresholds the agency should consider when evaluating the second statutory criterion for regulatory determinations. Particularly, these commenters recommended that the EPA should define a threshold for frequency and level of public health concern that warrants a specific regulatory determination. A few commenters cited other previous regulatory determinations where the agency made a determination not to regulate contaminants with similar or lower levels of occurrence suggesting that this should be the same for some or all of these four PFAS. Furthermore, some of these commenters stated that it would be arbitrary and capricious and conflict with the SDWA if the EPA did not use the level of adverse health effect (*i.e.,* the HRL) to represent the level at which a contaminant is considered a public health concern.

The EPA disagrees with these commenters and as demonstrated in the proposal and noted earlier in section III of this preamble, for this regulatory determination, as well as past determinations, the agency did compare available occurrence data relative to the contaminant HRL as a factor in informing the occurrence level of public health concern. However, the level of public health concern for purposes of the second criterion is a contaminant-specific analysis that include consideration of the HRL, as well as other factors and not solely based on the direct comparison to the HRL. There is not just one simple threshold used for public health concern for all contaminants. In the case of PFAS, this is particularly relevant given the dose-additivity of mixtures.

The EPA also disagrees with these commenters as SDWA does not define the occurrence level of public health

concern for contaminants, nor does it prescribe the level of adverse health effects that must be used for a regulatory determination. Ultimately, the overall decision to regulate a contaminant considers all three statutory criteria, including the comprehensive assessment of meaningful opportunity which is in the Administrator's sole discretion. In previous EPA regulatory determinations, the agency has considered the occurrence criteria unique to the contaminant it is evaluating and has made decisions not to regulate contaminants both where there was substantial likelihood of occurrence at frequency and/or at levels of public health concern and where there was limited or no substantial likelihood of occurrence at frequency and/or at levels of public health concern. Consistent with this past regulatory history and the Administrator's authority under the terms of the statute, the decision considers all three criteria and cannot be determined in the exact same manner for different contaminants. While the EPA may have made negative determinations for other contaminants demonstrating occurrence at different frequencies and levels of public health concern, the basis for those decisions was specific to those contaminants and does not apply to these PFAS or any other future contaminants for which the EPA would make regulatory determinations. Therefore, the statute does not require, and the EPA does not use a minimum or one-size-fits-all occurrence thresholds (for either frequency or precise level) for regulatory determinations.

As described in section VI of this preamble, many commenters supported the EPA's proposal to regulate mixtures of PFAS. Specific to occurrence, some of these commenters particularly expressed support for the EPA's preliminary determination that mixtures of these four PFAS meet the second statutory occurrence criterion under SDWA, citing that the agency has used the best available information to determine that there is a substantial likelihood that combinations of these PFAS will co-occur in mixtures at a frequency and level of public health concern. One commenter stated that the additional occurrence data presented by the EPA in the proposal for the Hazard Index PFAS supports the EPA's proposed determination that these PFAS should be regulated under the SDWA. Conversely, several other commenters stated that there was not supporting evidence for the co-occurrence of the four Hazard Index PFAS. The EPA disagrees; the extent to which Hazard Index PFAS chemicals co-occur in the non-targeted state dataset is discussed extensively in the record for this rule and made evident through the system level analysis in section VI.C. of this preamble. As also discussed elsewhere in the record for this rule, in both system level and sample level analyses where PFOA and/or PFOS were reported present and all four Hazard Index PFAS were monitored, two or more Hazard Index PFAS were reported present more than half of the time. Further, the odds ratios tables in Exhibit 11 provide a statistical examination of pairwise co-occurrence. The odds ratio is a statistic that quantifies the strength of association between two events. In the context described here, an ''event'' is the reported presence of a specific PFAS contaminant. The odds ratio between PFOA and PFHxS, for example, reflects the strength of association between PFHxS being reported present and PFOA being reported present. If an odds ratio is greater than 1, the two events are associated. The higher the odds ratio, the stronger the association. For every pair of PFAS chemicals included in the proposed regulation, the odds ratio was found to be statistically significantly greater than 1. This means there was a statistically significant increase in the odds of a PFAS being present if the other PFAS compound was detected (*e.g.,* if PFOA is detected, PFHxS is more likely to also be found). In most instances the odds appeared to increase in excess of a factor of ten. Thus, based on the large amount of available data, the chemicals are clearly demonstrated to co-occur rather than occur independently of one another, further supporting the agency's determination for combinations of mixtures of the four PFAS.

After considering the public comments and additional occurrence data evaluated as requested by public commenters, the EPA finds that PFHxS, PFNA, and HFPO–DA individually and mixtures of these three PFAS and PFBS, meet the second statutory criterion for regulatory determinations under section 1412(b)(1)(A) of SDWA that the contaminant is known to occur or co-occur or there is a substantial likelihood that the contaminant will occur or co-occur in PWSs with a frequency and at levels of public health concern (USEPA, 2024b).

D. Statutory Criterion 3—Meaningful Opportunity

The agency has determined that individual regulation of PFHxS, PFNA, and HFPO–DA and regulation of combinations of PFHxS, PFNA, HFPO–DA, and PFBS in mixtures presents a meaningful opportunity for health risk reduction for persons served by PWSs. As discussed in section III.C. of this preamble, the EPA evaluated this third statutory criterion similarly to previous regulatory determinations using the Protocol developed under Regulatory Determination 3 (USEPA, 2014b) and also used in the Regulatory Determination 4. This evaluation includes a comprehensive assessment of meaningful opportunity for each unique contaminant including the nature of the health effects, sensitive populations affected, including infants, children and pregnant and nursing women, number of systems potentially affected, and populations exposed at levels of public health concern, geographic distribution of occurrence, technologies to treat and measure the contaminant, among other factors. The agency further reiterates that, per the statute, this determination of meaningful opportunity is in the Administrator's sole discretion.

Accordingly, the EPA is making this determination of meaningful opportunity after evaluating health, occurrence, treatment, and other related information and factors including consideration of the following:

- PFHxS, PFNA, and HFPO–DA and combinations of these three PFAS and PFBS in mixtures may cause multiple adverse human health effects, often at very low concentrations, on several biological systems including the endocrine, cardiovascular, developmental, renal, hematological, reproductive, immune, and hepatic systems as well as are likely to produce dose-additive effects from co-exposures.
- The substantial likelihood that PFHxS, PFNA, and HFPO–DA individually occur or will occur and that mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS co-occur or will co-occur together at frequencies and levels of public health concern in PWSs as discussed in section III of this preamble above and in section VI of this preamble, and the corresponding significant populations served by these water systems which potentially include sensitive populations and lifestages, such as pregnant and lactating women, as well as children.
- PFHxS, PFNA, HFPO–DA and combinations of these three PFAS and PFBS in mixtures are expected to be persistent in the environment, with some (*e.g.,* PFHxS, PFNA) also demonstrated to be very persistent in the human body.
- Validated EPA-approved measurement methods are available to measure PFHxS, PFNA, HFPO–DA, and

PFBS. See section VII of this preamble for further discussion.

- Treatment technologies are available to remove PFHxS, PFNA, and HFPO–DA and combinations of these three PFAS and PFBS from drinking water. See section X of this preamble for further discussion.
- Even though PFBS is very likely to be below its corresponding individual HRL when it occurs in a mixture, the record indicates that there is a substantial likelihood that it co-occurs with the regulated PFAS throughout public water systems nationwide. See sections III.C.5 and VI.C. of this preamble for further discussion. According to the 2023 Interagency PFAS Report to Congress (United States OSTP, 2023), PFBS has been shown to affect the following health endpoints: body weight, respiratory, cardiovascular, gastrointestinal, hematological, musculoskeletal, hepatic, renal, ocular, endocrine, immunological, neurological, reproductive, and developmental. Thus, including PFBS as a mixture component represents a meaningful opportunity to reduce PFBS' contributions to the overall hazard of the mixture and resulting dose additive health concerns. This is particularly relevant where the exposures of the other three PFAS in the mixture are also below their respective HRLs but when the hazard contributions of each mixture component are summed, the total exceeds the mixture HRL. In this scenario, the inclusion of PFBS allows for a more accurate picture of the overall hazard of the mixture so that PFBS can be reduced along with associated dose additive health concerns. In short, hazard would be underestimated if PFBS was not included in the regulated mixture. The EPA also considered the situation where PFHxS, PFNA, or HFPO–DA exceed one or more of their corresponding HRLs and co-occur with PFBS below its corresponding HRL. Although the exceedance of the mixture HRL is driven by a PFAS other than PFBS, PFBS is contributing to the overall hazard of the mixture and resulting dose additive health concerns. Including PFBS in the regulated mixture offers a meaningful opportunity to reduce dose additive health concerns because, when PFBS and other Hazard Index PFAS are present, public water systems will be able to better design and optimize their treatment systems to remove PFBS and any other co-occurring Hazard Index PFAS. This optimization will be even more effective knowing both that PFBS is present in source waters and its measured concentrations.
- Regulating PFHxS, PFNA, and HFPO–DA and combinations of these three PFAS and PFBS in mixtures is anticipated to reduce the overall public health risk from other PFAS, including PFOA and PFOS, that co-occur and are co-removed. Their regulation is anticipated to provide public health protection at the majority of known PWSs with PFAS-impacted drinking water.
- There are achievable steps to manage drinking water that can be taken to reduce risk.

As described in sections III.C, VI.C, VI.D, and USEPA (2024b), data from both the UCMR 3 and state monitoring efforts demonstrates the substantial likelihood of individual occurrence of PFHxS, PFNA, and HFPO–DA and co-occurrence of mixture combinations of PFHxS, PFNA, HFPO–DA, and PFBS at frequencies and levels of public health concern. Under UCMR 3, 5.7 million and 526,000 people had reported detections (greater than or equal to their minimum reporting levels which were two to three times their HRLs of 10 ng/L), of PFHxS and PFNA, respectively. Additionally, based on the more recent available state monitoring data presented earlier in this section, a range of geographically diverse states monitored systems that reported individual detections of PFHxS, PFNA, and HFPO–DA and serve approximate populations of 26.5 million, 2.5 million, and 8.4 million, respectively. Of these same systems, detections above the EPA's HRLs for PFHxS, PFNA, and HFPO–DA were seen in systems that serve approximate populations of 4.3 million, 227,000, and 177,000 people, respectively. As discussed previously, if these monitored systems were extrapolated to the nation, the EPA estimates that thousands of additional systems serving millions of people could have detectable levels of these three PFAS and hundreds of these systems may show values above the EPA's HRLs. Lastly, in evaluating the available state data, the EPA has found that mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS occur with a Hazard Index greater than 1 in systems serving approximately 4.7 million people. The agency further notes that while it has demonstrated through sufficient data that these four PFAS co-occur in mixtures at a frequency and level of public health concern in PWSs, throughout the nation it is extremely likely that additional systems and associated populations served would also demonstrate a Hazard Index greater than 1 if data for all PWSs were evaluated.

Analytical methods are available to measure PFHxS, PFNA, HFPO–DA, and PFBS in drinking water. The EPA has published two multi-laboratory validated drinking water methods for individually measuring PFHxS, PFNA, HFPO–DA, and PFBS. Additional discussion on analytical methods can be found in section VII of this preamble.

The EPA's analysis, summarized in section X of this preamble, found there are available treatment technologies capable of reducing PFHxS, PFNA, HFPO–DA, and PFBS. These technologies include granular activated carbon (GAC), anion exchange (AIX) resins, reverse osmosis (RO), and nanofiltration (NF). These treatment technologies remove PFHxS, PFNA, HFPO–DA, and PFBS and their mixtures. They also have been documented to co-remove other PFAS (Sörengård et al., 2020; McCleaf et al., 2017; Mastropietro et al., 2021). Furthermore, as described in section VI of this preamble, PFHxS, PFNA, HFPO–DA, and PFBS also co-occur with PFAS for which the agency is not currently making a regulatory determination. Many of these other emergent co-occurring PFAS are likely to also pose hazards to public health and the environment (Mahoney et al., 2022). Therefore, based on the EPA's findings that PFHxS, PFNA, HFPO–DA, and PFBS have a substantial likelihood to co-occur in drinking water with other PFAS and treating for PFHxS, PFNA, HFPO–DA, and PFBS is anticipated to result in removing these and other PFAS, individual regulation of PFHxS, PFNA, and HFPO–DA and regulation of mixtures of these three PFAS and PFBS also presents a meaningful opportunity to reduce the overall public health risk from all other PFAS that co-occur and are co-removed with PFHxS, PFNA, HFPO–DA, and PFBS.

With the ability to monitor for PFAS, identify contaminated drinking water sources and contaminated finished drinking water, and reduce PFAS exposure through management of drinking water, the EPA has identified meaningful and achievable actions that can be taken to reduce the human health risk of PFAS.

1. Proposal

The EPA made a preliminary determination that regulation of PFHxS, PFNA, HFPO–DA, and PFBS, both individually and in a mixture, presents a meaningful opportunity for health risk reduction for persons served by PWSs. The EPA made this preliminary determination after evaluating health, occurrence, treatment, and other related information against the three SDWA statutory criteria including consideration of the factors previously

described in section III.D of this preamble above.

2. Summary of Major Public Comments and EPA Responses

The EPA received many comments on the agency's evaluation of the third statutory criterion under section 1412(b)(1)(A) of SDWA. Most commenters supported the EPA's evaluation under the preliminary determination that regulation of PFHxS, PFNA, HFPO–DA, PFBS and mixtures of these four contaminants presents a meaningful opportunity for health risk reduction and that the EPA had sufficiently justified this statutory criterion as well as the health and occurrence criterion. This included comments highlighting the extensive amount of work done by several states developing regulatory and non-regulatory levels for several PFAS compounds, including the PFAS for which the EPA is making regulatory determinations either individually or as a mixture. These commenters also noted the need for a consistent national standard for use in states where a state-specific standard has not yet been developed. Several commenters have also noted that although some states have developed or are in the process of developing their own state-level PFAS drinking water standards, regulatory standards currently vary across states. These commenters expressed concern that absence of a national drinking water standard has resulted in risk communication challenges with the public and disparities with PFAS exposure. Some commenters noted there are populations particularly sensitive or vulnerable to the health effects of these PFAS, including newborns, infants, and children. The EPA agrees with commenters that there is a need for a national PFAS drinking water regulation and that moving forward with a national-level regulation for PFHxS, PFNA, HFPO–DA, mixtures of these three PFAS and PFBS, as well as PFOA and PFOS, will provide improved national consistency in protecting public health and may reduce regulatory uncertainty for stakeholders across the country.

A few commenters expressed support for the EPA's evaluation of meaningful opportunity based on the treatment technologies which can remove the six PFAS for which the EPA is finalizing regulation. Furthermore, these commenters noted the meaningful opportunity to not only provide protection from the six regulated PFAS, but also other PFAS that will not be regulated as a part of this action.

Several commenters did not support the EPA's evaluation of the third statutory criterion, offering that in their opinion the EPA failed to justify that there is a meaningful opportunity for health risk reduction for the PFAS both individually and for their mixtures and stating that the EPA should consider other factors such as costs. A few of these commenters wrote that the EPA provided limited rationale and factors for its meaningful opportunity determination. The EPA disagrees with these commenters that the agency failed to justify that there is meaningful opportunity for health risk reduction or that the EPA provided limited rationale and factors in its meaningful opportunity evaluation for these contaminants individually and as mixtures. As described in the EPA's March 2023 proposal (USEPA, 2023f) and summarized previously, the EPA fully considered many factors both individually and within mixtures including individual contaminant and dose additive toxicity and health concerns, individual contaminant occurrence and co-occurrence of mixtures at frequencies and levels of public health concern, availability of similar treatment technologies to remove these four PFAS and analytical methods to measure them, and their individual and collective chemical and physical properties leading to their environmental persistence. Additionally, the EPA notes in this preamble, and as demonstrated through representative occurrence data, for the three contaminants individually and mixtures of the four, occurrence and co-occurrence is not only at a regional or local level, rather it covers multiple states throughout the country; therefore, a national level regulation is necessary to ensure all Americans served by PWSs are equally protected.

Some comments indicate that the health and occurrence information do not support that establishing drinking water standards presents a meaningful opportunity for health risk reduction. The agency disagrees with the commenters' assertion that the health and occurrence information are insufficient to justify a drinking water standard as supported in sections III.B. and III.C. of this preamble, and the agency finds that there is a meaningful opportunity for health risk reduction potential based upon multiple considerations including the population exposed to PFHxS, PFNA, HFPO–DA, and mixtures of these three PFAS and PFBS including sensitive populations and lifestages, such as newborns, infants and children.

Other comments assert that the EPA must evaluate the potential implementation challenges and cost considerations of regulation as part of the meaningful opportunity evaluation. The EPA disagrees with these commenters. The SDWA states that that the meaningful opportunity for overall health risk reduction for persons served by PWSs is in the sole judgement of the Administrator and does not require that the EPA consider costs for a regulatory determination. The SDWA does require that costs and benefits are presented and considered in the proposed rule's Health Risk Reduction Cost Analysis which the EPA did for the proposal and has updated as a part of the final rule within section XII.

A few other commenters provided that due to all of the additional human health exposure pathways other than drinking water for these PFAS, that regulation of drinking water would not represent a meaningful opportunity for overall health risk reduction. While the EPA recognizes that drinking water is one of several exposure routes, the EPA disagrees with these commenters. Removing the PFAS that have been found to occur or are substantially likely to occur from drinking water systems will result in a significant improvement in public health protection. The EPA also notes that through its *PFAS Strategic Roadmap* and associated actions, the agency is working expeditiously to address PFAS contamination in the environment and reduce human health PFAS exposure through all pathways. While beyond the scope of this rule, the EPA is making progress implementing many of the commitments in the Roadmap, including those that may significantly reduce PFAS source water concentrations.

E. The EPA's Final Determination Summary

The SDWA provides the EPA significant discretion when making a regulatory determination under section 1412(b)(1)(A). This decision to make a regulatory determination to individually regulate PFHxS, PFNA, and HFPO–DA and to regulate combinations of these three PFAS and PFBS in mixtures is based on consideration of the evidence supporting the factors individually and collectively.

The EPA's determination that PFHxS, PFNA, and HFPO–DA individually and mixtures of these three PFAS and PFBS ''may have an adverse effect on the health of persons'' is strongly supported by numerous studies. These studies demonstrate several adverse health effects, such as immune, thyroid, liver,

kidney and developmental effects, and increased cholesterol levels, may occur following exposure to individual PFAS, and dose-additive health effects can occur following exposure to multiple PFAS at doses that likely would not individually result in these adverse health effects, but may pose health risks when combined in mixtures. Importantly, the best available peer reviewed science documents that these PFAS may have multiple adverse human health effects even at relatively low levels individually and when combined in mixtures (see section III.B.6.e f of this preamble or further information on studies supporting the conclusion of dose additivity).

The EPA's determination there is a substantial likelihood that the contaminant will occur in PWS with a frequency and at levels of public health concern is supported by evidence documenting the measured occurrence of PFHxS, PFNA, and HFPO–DA, and co-occurrence of these three PFAS and PFBS above the HRL, the stability and persistence of the contaminant in humans and/or the environment, and the current or legacy production and use in commerce.

Finally, the EPA's determination that individual regulation of PFHxS, PFNA, and HFPO–DA and regulation of these three PFAS and PFBS in mixtures presents a meaningful opportunity for health risks reductions is strongly supported by numerous factors, including the potential adverse human health effects at low levels and potential for exposure and co-exposure of these PFAS on sensitive populations and lifestages such as lactating and pregnant women and children, their persistence, and the availability of both analytical methods and treatment technologies to remove these contaminants in drinking water.

After considering these factors individually and together, the EPA has determined that PFHxS, PFNA, and HFPO–DA individually and mixtures of these three PFAS and PFBS meet the statutory criteria for regulation under SDWA. The EPA has an extensive record of information to make this determination now and recognizes the public health burden of these PFAS as well as PFOA and PFOS. The EPA notes the public urgency to reduce PFAS concentrations in drinking water described in the public comments. A PFAS NPDWR provides a mechanism to reduce these PFAS expeditiously for these impacted communities. In addition to making this final regulatory determination, the EPA is exercising its discretion to concurrently finalize MCLGs and NPDWRs for these PFAS as individual contaminants and for the specified PFAS mixtures in part to allow utilities to consider these PFAS specifically as they design systems to remove PFAS and to ensure that they are reducing these PFAS in their drinking water to the extent feasible and as quickly as practicable.

IV. MCLG Derivation

Section 1412(a)(3) of the Safe Drinking Water Act (SDWA) requires the Administrator of the Environmental Protection Agency (EPA) to publish a final MCLG simultaneously with the NPDWR. The MCLG is set, as defined in section 1412(b)(4)(A), at ''the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.'' Consistent with SDWA section 1412(b)(3)(C)(i)(V), in developing the MCLG, the EPA considers ''the effects of the contaminant on the general population and on groups within the general population such as infants, children, pregnant women, the elderly, individuals with a history of serious illness, or other subpopulations that are identified as likely to be at greater risk of adverse health effects due to exposure to contaminants in drinking water than the general population.'' Other factors considered in determining MCLGs can include health effects data on drinking water contaminants and potential sources of exposure other than drinking water. MCLGs are not regulatory levels and are not enforceable. The statute does not dictate that the MCLG take a particular form; however, it must represent a ''level'' that meets the MCLG statutory definition. Given that the MCL must be ''as close as feasible'' to the MCLG, and that the MCL is defined as the ''maximum permissible level of a contaminant in water which is delivered to any user of a public water system,'' the MCLG can take any form so long as it is a maximum level of a contaminant in water.

Due to their widespread use and persistence, many PFAS are known to co-occur in drinking water and the environment—meaning that these contaminants are often together and in different combinations as mixtures (see sections III.C and VI of this preamble for additional discussion on occurrence). PFAS exposure can disrupt signaling of multiple biological pathways resulting in common adverse effects on several biological systems and functions, including thyroid hormone levels, lipid synthesis and metabolism, development, immune function, and liver function. Additionally, the EPA's examination of health effects information found that exposure through drinking water to a mixture of PFAS can act in a dose-additive manner (see sections III.B and IV.B of this preamble for additional discussion on mixture toxicity). Dose additivity means that exposure to multiple PFAS, at doses that individually would not be anticipated to result in adverse health effects, may pose health risks when combined in a mixture.

A. MCLG Derivation for PFOA and PFOS

To establish an MCLG for individual contaminants, the EPA assesses the peer-reviewed science examining cancer and noncancer health effects associated with oral exposure to the contaminant. For known or likely linear carcinogenic contaminants, where there is a proportional relationship between dose and carcinogenicity at low concentrations or where there is insufficient information to determine that a carcinogen has a threshold dose below which no carcinogenic effects have been observed, the EPA has a long-standing practice of establishing the MCLG at zero (see USEPA, 1998a; USEPA, 2000c; USEPA, 2001; *See* S. Rep. No. 169, 104th Cong., 1st Sess. (1995) at 3). For nonlinear carcinogenic contaminants, contaminants that are designated as *Suggestive Human Carcinogens* (USEPA, 2005a), and non-carcinogenic contaminants, the EPA typically establishes the MCLG based on a noncancer RfD. An RfD is an estimate of a daily oral exposure to the human population (including sensitive populations) that is likely to be without an appreciable risk of deleterious effects during a lifetime. A nonlinear carcinogen is a chemical agent for which the associated cancer response does not increase in direct proportion to the exposure level and for which there is scientific evidence demonstrating a threshold level of exposure below which there is no appreciable cancer risk.

1. Proposal

To support the proposed rule, the EPA published PFOA and PFOS draft toxicity assessments and the proposed MCLGs for public comment (USEPA, 2023g; USEPA, 2023h). Prior to conducting the systematic review for the PFOA and PFOS draft toxicity assessments, the EPA established the internal protocols for the systematic review steps of literature search, Population, Exposure, Comparator, and Outcomes (PECO) development, literature screen, and study quality evaluation. The EPA incorporated detailed, transparent, and complete protocols for all steps of the systematic

review process (USEPA, 2023g; USEPA, 2023h; USEPA, 2023i; USEPA, 2023j). Additionally, the EPA updated and expanded the protocols and methods based on SAB recommendations to improve the transparency of the process the EPA used to derive the MCLGs for PFOA and PFOS and to improve consistency with the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f). The EPA followed this transparent systematic review process to evaluate the best available peer-reviewed science and to determine the weight of evidence for carcinogenicity and the cancer classifications for PFOA and PFOS according to agency guidance (USEPA, 2005a).

Based on the EPA's analysis of the best available data and following agency guidance, the EPA determined that both PFOA and PFOS are *Likely to be Carcinogenic to Humans* based on sufficient evidence of carcinogenicity in humans and animals (USEPA, 2005a; USEPA, 2023g; USEPA, 2023h). The EPA also determined that a linear default extrapolation approach is appropriate for PFOA and PFOS as there is no evidence demonstrating a threshold level of exposure below which there is no appreciable cancer risk for either compound (USEPA, 2005a). Therefore, the EPA concluded that there is no known threshold for carcinogenicity. Based upon a consideration of the best available peer-reviewed science and the statute's directive that the MCLG be ''set at the level at which no known or anticipated adverse effects on the health of persons occur and which allow an adequate margin of safety,'' the EPA proposed MCLGs of zero for both PFOA and PFOS in drinking water. Setting the MCLG at zero under these conditions is also supported by long standing practice at the EPA's Office of Water for *Likely* or *Known Human Carcinogens* (see USEPA, 1998a; USEPA, 2000c; USEPA, 2001; USEPA, 2016b; *See* S. Rep. No. 169, 104th Cong., 1st Sess. (1995) at 3).

2. Summary of Major Public Comments and EPA Responses

The EPA requested comment on both the toxicity assessment conclusions and the proposed MCLG derivation for PFOA and PFOS. In this section the EPA focuses the summary of public comments and responses on comments related to the cancer classification determinations for PFOA and PFOS because that was the basis for the proposed MCLG derivations (USEPA, 2023g; USEPA, 2023h). The noncancer health effects that the EPA identified as hazards in the draft toxicity assessments (*i.e.,* decreased immune response in children, increased alanine aminotransferase (ALT), decreased birth weight and increased cholesterol) were not the basis for the proposed MCLG derivation. Importantly, an MCLG of zero is also protective of noncancer endpoints which were evaluated in the EPA's HRRCA (Health Risk Reduction and Cost Analysis). Comments related to the benefits the EPA quantified that are associated with noncancer health effects are described in section XII.

A few commenters agreed with the systematic review protocol the EPA used to evaluate the studies that supported the PFOA and PFOS cancer classification determinations in the draft toxicity assessments (USEPA, 2023g; USEPA, 2023h; USEPA, 2023i; USEPA, 2023j), with one commenter stating that the approach was ''thorough and well-reasoned.'' Commenters stated that the systematic review protocol was clear because the EPA had addressed all concerns highlighted during the peer review process.

One commenter stated that the EPA did not conduct a systematic review of the literature and did not follow the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) to develop the toxicity assessments for PFOA and PFOS. This commenter stated the EPA lacked ''a predefined protocol'' and that the ''systematic review methods lack[ed] transparency and consistency.'' The commenter took particular issue with the EPA's protocols for study quality evaluations, stating that they were inconsistent and not aligned with the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f). The EPA disagrees with this commenter's claims. The EPA adopted the overall approach and steps in the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) and the *Systematic Review Protocol for the PFAS IRIS Assessments* (USEPA, 2021h) to develop PFOA- and PFOS-specific protocols that then formed the basis for performing study quality evaluations, evidence integration, and critical study selection (see appendix A in USEPA, 2023g; USEPA, 2023h; USEPA, 2023i; USEPA, 2023j). This predefined protocol was made available for public comment as appendix A of the toxicity assessments (USEPA, 2023i; USEPA, 2023j). Importantly, the EPA's Office of Water collaborated with the EPA's Office of Research and Development in conducting study quality evaluations, evidence integration, and selection of critical studies to ensure consistency with the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) and the *Systematic Review Protocol for the PFAS IRIS Assessments* (USEPA, 2021h).

A few commenters claimed that the EPA did not use the best available science when developing the toxicity assessments for PFOA and PFOS, asserting that the EPA did not follow its own guidance or data quality standards and that the EPA's systematic review process was flawed (see discussion above). The EPA disagrees with these commenters' claims. The EPA has followed statutory requirements to use the best available peer-reviewed science in two respects: by (1) considering relevant peer-reviewed literature identified by performing systematic searches of the scientific literature or identified through public comment and (2) relying on peer-reviewed, published EPA human health risk assessment methodology as well as systematic review best practices (USEPA, 2021h; USEPA, 2022f). The risk assessment guidance and best practices serve as the basis for the PFOA and PFOS health effects systematic review methods used to identify, evaluate, and quantify the available data. Not only did the EPA incorporate literature identified in previous assessments, as recommended by the SAB (USEPA, 2022i), but the EPA also conducted several updated systematic literature searches, the most recent of which was completed in February 2023. This approach ensured that the literature under review encompassed studies included in the 2016 *Health Effects Support Documents* (HESDs) (USEPA, 2016c; USEPA, 2016d) and recently available studies. The results of the most recent literature search provide further support for the conclusions made in the draft toxicity assessments for PFOA and PFOS (USEPA, 2023g; USEPA, 2023h) and are described in appendix A of the final toxicity assessments (USEPA, 2024h; USEPA, 2024i).

As described above, the PFOA and PFOS systematic review protocol is consistent with the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) and also considers PFOA- and PFOS-specific protocol updates outlined in the *Systematic Review Protocol for the PFBA, PFHxA, PFHxS, PFNA, and PFDA (anionic and acid forms) IRIS Assessments* (USEPA, 2021h). The EPA additionally followed human health risk assessment methods for developing toxicity values (*e.g.,* USEPA, 2002a), conducting benchmark dose (BMD) modeling (USEPA, 2012), and other analyses. In the PFOA and PFOS toxicity assessments and the appendices, the EPA clearly describes

the methods used and how those methods and decisions are consistent with the EPA practices and recommendations (*i.e.,* through quotes and citations) described in various guidance documents.

One commenter stated that the EPA did not use the best available peer-reviewed science because the assessments did not follow methodological or statistical guidance. Specifically, this commenter stated the EPA did not follow *A Review of the Reference Dose and Reference Concentration Processes* (USEPA, 2002a) when selecting uncertainty factors and claimed the EPA did not follow guidance on data quality (USEPA, 2003; USEPA, 2006b; USEPA, 2014b). The commenter stated they believed the assessments contained flaws including exclusion of covariates in modeling, reliance on peer-reviewed studies published by non-EPA employees, and an inability to replicate results. The EPA disagrees with these comments. Regarding data quality control, data quality objectives are an integral part of the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) and many of the concepts outlined in data quality guidance recommended by the commenter (USEPA, 2003; USEPA, 2006b; USEPA, 2014b) are addressed through the EPA's use of the *ORD Handbook* (USEPA, 2022f). Furthermore, this work was conducted under a programmatic quality assurance project plan (QAPP) which ensures that all EPA data quality guidance is followed, including those cited by the commenter. Additionally, by developing and implementing a systematic review protocol consistent with the *ORD Handbook* (USEPA, 2022f), the EPA reduced potential confirmation bias, a concern raised by another commenter, by conducting multiple independent evaluations of studies, relying on a data-driven, weight of evidence approach, and by incorporating expertise from across the agency.

In many cases the commenters have misinterpreted the methods and decisions the EPA used to analyze the data or misinterpreted the guidance itself. For example, one commenter mistakenly suggested that the EPA did not consider covariates in its analyses of epidemiological studies; the EPA described which covariates were considered in each analysis in several sections of the draft toxicity assessments and appendices (USEPA, 2023g; USEPA, 2023h; USEPA, 2023i; USEPA, 2023j), including in descriptions of the studies in section 3 and modeling of the studies in appendix E. The EPA also notes that the primary studies that provide the data describe covariate adjustments in their published analyses.

A couple of commenters suggested that the toxicity assessments for PFOA and PFOS were not adequately peer-reviewed because changes were made post peer review (*i.e.,* after publication of the final report by the SAB PFAS Review Panel (USEPA, 2022i)), the most significant of which was the updated cancer classification for PFOS, but also included the addition of figures and mechanistic syntheses. The EPA disagrees with this assertion. The toxicity assessments, including the conclusions that are material to the derivation of the MCLGs, were peer-reviewed by the SAB PFAS review panel (USEPA, 2022i). Notably, this panel ''agreed with many of the conclusions presented in the assessments, framework and analysis'' (USEPA, 2022i). The only assessment conclusion that changed and impacted MCLG derivation between SAB review and rule proposal was that the cancer classification for PFOS of *Suggestive Evidence of Carcinogenicity* was updated to *Likely to be Carcinogenic to Humans* according to the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a). This conclusion for PFOS was based on a reevaluation of the available data in response to multiple comments from the SAB PFAS review panel stating that ''[s]everal new studies have been published that warrant further evaluation to determine whether the 'likely' designation is appropriate'' for PFOS and that the EPA's ''interpretation of the hepatocellular carcinoma data from the Butenhoff et al. (2012) study in the 2016 HESD is overly conservative in dismissing the appearance of a dose-response relationship for this endpoint, particularly in females'' (USEPA, 2022i). In responding to the SAB's recommendation that the EPA provide an ''explicit description of why the available data for PFOS do not meet the EPA *Guidelines for Carcinogen Risk Assessment* (2005) criterion for the higher designation as 'likely carcinogenic,' '' and taking into consideration recently published peer-reviewed epidemiological studies demonstrating concordance in humans identified through the final updated literature search recommended by the SAB, the EPA determined that PFOS meets the criterion for the higher designation of *Likely to Be Carcinogenic to Humans* (USEPA, 2005a). This decision was described in sections 3.5.5 and 6.4 of the draft assessment (USEPA, 2023h). Additional discussion regarding the PFOS cancer descriptor decision is provided here.

One commenter stated that the EPA addressed the SAB's concerns regarding the systematic review protocol in the documents supporting the proposed rulemaking. A few commenters reiterated the importance of the SAB's recommendations, including to more thoroughly describe systematic review methods used in the assessment (*e.g.,* study inclusion and exclusion criteria), incorporate additional epidemiological studies, provide rationale for critical study selection, and derive candidate toxicity values from both human and animal data. In contrast, a few commenters claimed that the EPA did not adequately consider several recommendations made by the SAB PFAS Review Panel in their final report (USEPA, 2022i), including that the EPA did not incorporate studies from the 2016 HESDs (USEPA, 2016c; USEPA, 2016d) or develop multiple cancer slope factors (CSFs). One commenter requested clarification on whether the EPA had implemented the feedback from the SAB.

The EPA disagrees with the comments that the agency did not ''meaningfully implement'' SAB feedback. The EPA agrees with commenters that highlighted the importance of the SAB's suggestions, and notes that the EPA addressed the SAB's recommendations to more thoroughly explain the systematic review protocol and expand the systematic review protocol beyond study quality evaluation and data extraction in the draft toxicity assessments published at the time of rule proposal (USEPA, 2023g; USEPA, 2023h; USEPA, 2023i; USEPA, 2023j). As outlined in the *EPA Response to Final Science Advisory Board Recommendations (August 2022) on Four Draft Support Documents for the EPA's Proposed PFAS National Primary Drinking Water Regulation* (USEPA, 2023k), the EPA considered all of the comments and recommendations from the SAB and made substantial improvements to address the reported concerns prior to publishing the public comment draft assessments (USEPA, 2023g; USEPA, 2023h). The EPA published a response to SAB comments document that detailed how the agency considered and responded to the SAB PFAS Review Panel's comments at the time of rule proposal (USEPA, 2023k). The resulting draft toxicity assessments and protocol released for public comment along with the proposed rule reflect improvements including thorough and detailed descriptions of the methods used during assessment development, inclusion of

epidemiological studies from the 2016 HESDs for PFOA and PFOS in the systematic review (USEPA, 2016c; USEPA, 2016d), updates to the literature, implementation of an evidence integration framework, expansion of rationale for critical study and model selections, development of toxicity values from both animal toxicological and epidemiological data, when warranted, and many other actions. The EPA appreciated the SAB's engagement, extensive review, and comments on the *Proposed Approaches* documents (USEPA, 2021i; USEPA, 2021j). Furthermore, the EPA provided its consideration of every recommendation the SAB provided when updating and finalizing the assessments for PFOA and PFOS at the time of rule proposal (USEPA, 2023k).

Many commenters agreed that that available data indicate that exposure to either PFOA or PFOS is associated with cancer in humans and supported the EPA's determination that PFOA and PFOS are *Likely to be Carcinogenic to Humans* according to the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a). Multiple commenters agreed that studies published since the 2016 HESDs (USEPA, 2016c; USEPA, 2016d) have strengthened this conclusion. In particular, one commenter supported the EPA's conclusions regarding the human relevance of hepatic and pancreatic tumors observed in rats administered PFOS, citing their own independent health assessment conclusion that ''several lines of evidence do not support a conclusion that liver effects due to PFOS exposure are PPARα-dependent'' and therefore, may be relevant to humans (NJDWQI, 2018).

Several commenters disagreed with the EPA's determinations that PFOA and PFOS are each *Likely to be Carcinogenic to Humans.* Two commenters claimed that the tumor types observed in rats (*e.g.,* hepatic tumors) after PFOA or PFOS administration are not relevant to humans. Some commenters also stated that the human data do not support an association between PFOS exposure and cancer. One commenter specifically claimed that Shearer et al. (2021) does not provide sufficient evidence for changing PFOS's cancer classification from *Suggestive Evidence of Carcinogenicity* to *Likely to be Carcinogenic to Humans* because it did not report associations between PFOS exposure and risk of renal cell carcinoma (RCC). Two commenters stated that the EPA's discussion using structural similarities between PFOA and PFOS to support evidence of the carcinogenicity of PFOS was inconsistent with the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a). A few commenters additionally questioned or disagreed with the determination that PFOA is *Likely to be Carcinogenic to Humans* because of uncertainties in the epidemiological database and a lack of evidence indicating that PFOA is genotoxic.

The EPA disagrees with these comments. With respect to the human relevance of the animal tumors observed in rats after chronic oral exposure to either PFOA or PFOS, the EPA considered all hypothesized modes of action (MOAs) and underlying carcinogenic mechanisms in its cancer assessments, including those that some commenters have argued are irrelevant to humans (*e.g.,* peroxisome proliferator-activated receptor α (PPARα) activation), the discussion for which is available in section 3.5.4.2 of the toxicity assessments for PFOA and PFOS (USEPA, 2024c; USEPA, 2024d). After review of the available mechanistic literature for PFOA and PFOS, the EPA concluded that there are multiple plausible mechanisms, including some that are independent of PPARα, that may contribute to the observed carcinogenicity of either PFOA or PFOS in rats. Further confirmatory support for the EPA's conclusions regarding multiple plausible mechanisms of carcinogenicity comes from literature reviews published by state and global health agencies which concluded that the liver tumors associated with PFOA and/or PFOS exposure may not entirely depend on PPARα activation and therefore may be relevant to humans (CalEPA, 2021; IARC, 2016; NJDWQI, 2017; NJDWQI, 2018).

Additionally, the EPA did not rely on results reported by Shearer et al. (2021) as a rationale for updating the cancer classification for PFOS to *Likely to be Carcinogenic to Humans* (USEPA, 2005a) and acknowledges uncertainties in the results from this study, including that the effect in the third PFOS exposure quartile was null, the effects were attenuated (*i.e.,* reduced in magnitude) when adjusted for exposure to other PFAS, and there was no association when exposure to PFOS was considered as a continuous variable, rather than when PFOS exposure levels were stratified by quartiles (USEPA, 2023h). As described in sections 3.5.5 and 6.4 of the draft PFOS toxicity assessment, the available information exceeds the characteristics for the classification of *Suggestive Evidence of Carcinogenic Potential* (USEPA, 2005a) because there is statistically significant evidence of multi-sex and multi-site tumorigenesis from a *high* confidence animal toxicological study, as well as mixed but plausible evidence of carcinogenicity in humans and mechanistic data showing potential human relevance of the observed tumor data in animals (USEPA, 2023h). The EPA notes that the recently published studies reporting associations between PFOS exposure and hepatocellular carcinoma in humans (Goodrich et al., 2022; Cao et al., 2022) further strengthen the epidemiological database and support the cancer classification of *Likely to be Carcinogenic to Humans* for PFOS.

Regarding commenters' claims that the EPA used the structural similarities between PFOA and PFOS as supporting evidence of the carcinogenic potential of PFOS, the EPA did not rely on structural similarities to draw conclusions about the cancer classification (see rationale listed above) but instead used this information as supplemental support for the *Likely* classification. The EPA originally included this supplemental line of evidence because the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a) explicitly states that ''[a]nalogue effects are instructive in investigating carcinogenic potential of an agent as well as in identifying potential target organs, exposures associated with effects, and potential functional class effects or modes of action.'' PFOA and PFOS differ in their chemical structure by a single functional group; nevertheless, since a full structure-activity relationship analysis was not conducted, the EPA removed discussion on this supplemental line of evidence from the final toxicity assessment for PFOS (USEPA, 2024d).

Further, the EPA disagrees with comments stating that the epidemiological database for PFOA is too uncertain to support a classification of *Likely to be Carcinogenic to Humans* (USEPA, 2005a). As described in both the draft (USEPA, 2023g) and final toxicity assessments for PFOA (USEPA, 2024c), as well as the *Maximum Contaminant Level Goals for Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonic Acid (PFOS)* document (USEPA, 2024j) the available data support an increased risk of both kidney and testicular cancers associated with PFOA exposure. There is also evidence that PFOA exposure may be associated with an increased breast cancer risk, based on studies in populations with specific polymorphisms and for specific types of breast tumors. Taken together, these results provide consistent and plausible

evidence of PFOA carcinogenicity in humans. Additionally, the EPA notes that while genotoxicity is one potential MOA leading to carcinogenicity, there is no requirement that a chemical be genotoxic for the EPA to classify it as either *Carcinogenic to Humans, Likely to be Carcinogenic to Humans,* or *Suggestive Evidence of Carcinogenic Potential* according to the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a). Importantly, the SAB PFAS Review Panel supported the *Likely to be Carcinogenic to Humans* designation for PFOA in its final report (USEPA, 2022i).

Many commenters supported the EPA's proposed MCLGs of zero for both PFOA and PFOS, citing well-documented health effects, including cancer, resulting from exposure to either PFOA or PFOS as rationale for their support of the proposed rulemaking. Several commenters also agreed with the EPA's long-standing practice of establishing the MCLG at zero (see USEPA, 1998a; USEPA, 2000c; USEPA, 2001; *See* S. Rep. No. 169, 104th Cong., 1st Sess. (1995) at 3) for known or likely linear carcinogenic contaminants, with one commenter stating that it is ''appropriate based on the weight of evidence for carcinogenicity and other adverse health impacts of PFOA and PFOS at very low exposures.''

Two commenters disagreed with MCLGs of zero for PFOA and PFOS, with one commenter claiming that the EPA's determinations were ''not consistent with the evidence the EPA presents nor with its own guidance'' (*i.e.,* the EPA's cancer assessment was not consistent with assessment approaches recommended in the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a)). The EPA disagrees with these commenters' assertions because there is sufficient weight of evidence for carcinogenic risk of both PFOA and PFOS exposures supporting a classification of *Likely to be Carcinogenic to Humans* according to the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a) from the available epidemiological and animal toxicological studies. Consistent with the guidelines, the EPA provided a narrative to ''explain the case for choosing one descriptor and discuss the arguments for considering but not choosing another'' (USEPA, 2005a) in the draft and final toxicity assessments (USEPA, 2024c; USEPA, 2024d; USEPA, 2023g; USEPA, 2023h).

3. Final Rule

Based on the best available peer-reviewed science and consistent with agency guidance (USEPA, 2005a), the EPA has determined that both PFOA and PFOS are *Likely to be Carcinogenic to Humans.* Therefore, following established agency practice regarding contaminants with this classification and consistent with the statutory directive to set an MCLG ''at the level at which no known or anticipated adverse effects on the health of persons occur and which allows for an adequate margin of safety,'' the EPA set individual MCLGs for both PFOA and PFOS at zero. As described above, the EPA used the best available peer-reviewed science, followed agency guidance and current human health risk assessment methodology, including the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f) and the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a), and adequately peer-reviewed (USEPA, 2022i) the science underlying the MCLG derivation for both PFOA and PFOS (USEPA, 2024c; USEPA, 2024d; USEPA, 2024j).

Consistent with the *Guidelines for Carcinogen Risk Assessment* (USEPA, 2005a), the EPA reviewed the weight of evidence and determined that PFOA and PFOS are each designated as *Likely to Be Carcinogenic to Humans,* because ''the evidence is adequate to demonstrate carcinogenic potential to humans but does not reach the weight of evidence for the descriptor Carcinogenic to Humans.'' For PFOA, this determination was based on the evidence of kidney and testicular cancer in humans and Leydig cell tumors, pancreatic acinar cell tumors, and hepatocellular tumors in rats as described in USEPA (2024c). For PFOS, this determination was based on the evidence of hepatocellular tumors in male and female rats, which is further supported by recent evidence of hepatocellular carcinoma in humans (Goodrich et al., 2022; Cao et al., 2022), pancreatic islet cell carcinomas in male rats, and mixed but plausible evidence of bladder, prostate, kidney, and breast cancers in humans (USEPA, 2024d). The EPA has updated and finalized the toxicity assessment for PFOS to reflect the new epidemiological evidence (USEPA, 2024d; USEPA, 2024i).

Consistent with the statutory definition of MCLG, the EPA establishes MCLGs of zero for carcinogens classified as either *Carcinogenic to Humans* or *Likely to be Carcinogenic to Humans* where there is a proportional relationship between dose and carcinogenicity at low concentrations or where there is insufficient information to determine that a carcinogen has a threshold dose below which no carcinogenic effects have been observed. In these situations, the EPA takes the health protective approach of assuming that carcinogenic effects should therefore be extrapolated linearly to zero. This is called the linear default extrapolation approach. This approach ensures that the MCLG is set at a level where there are no known or anticipated adverse health effects, allowing for an adequate margin of safety. Here, the EPA has determined that PFOA and PFOS are *Likely to be Carcinogenic to Humans* based on sufficient evidence of carcinogenicity in humans and animals (USEPA, 2024c; USEPA, 2024d). The EPA has also determined that a linear default extrapolation approach is appropriate as there is no evidence demonstrating a threshold level of exposure below which there is no appreciable cancer risk (USEPA, 2005a). Based on this lack of evidence, the EPA concluded that there is no known threshold for carcinogenicity. Based upon a consideration of the best available peer-reviewed science and statutory directive to set the MCLG ''at the level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety,'' the EPA has finalized MCLGs of zero for PFOA and PFOS in drinking water.

While not a basis for the EPA's MCLG, the EPA notes that its toxicity assessments indicate either PFOA or PFOS exposure are also associated with multiple non-cancer adverse health effects. The PFOA and PFOS candidate non-cancer RfDs based on human epidemiology studies for various health outcomes (*i.e.,* developmental, cardiovascular, immune, and hepatic) range from 2×10^{-7} to 3×10^{-8} mg/kg/day (USEPA, 2024c; USEPA, 2024d; USEPA, 2024h; USEPA, 2024i).

B. MCLG Derivation for Additional PFAS

Section 1412(b)(4)(A) requires the EPA to set the MCLG at a ''level at which no known or anticipated adverse effects on the health of persons occur and which allows an adequate margin of safety.'' In this action, the EPA is setting MCLGs (and MCLs) for five individual PFAS (section IV.C of this preamble) as well as for mixtures of three of these PFAS plus PFBS. In the context of this NPDWR, the Hazard Index is a method which determines when a mixture of two or more of four PFAS—PFHxS, PFNA, HFPO–DA, and PFBS—exceeds the level of health concern with a margin of safety and thus the Hazard Index (equal to 1) is the MCLG for any mixture of those four PFAS. Based on the scientific record, each PFAS within the mixture has a HBWC, which is set at the level below which adverse effects

are not likely to occur and allows for an adequate a margin of safety. See USEPA, 2024f and section IV.B. of this preamble. The scientific record also shows that PFHxS, PFNA, HFPO–DA, and PFBS elicit the same or similar profiles of adverse health effects in several biological organs and systems, but with differing potencies for effect(s) (see USEPA, 2022i and 2024a; and section IV.B of this preamble). As a result, as discussed elsewhere in the preamble, PFAS that elicit similar observed adverse health effects following individual exposure should be assumed to act in a dose-additive manner when in a mixture unless data demonstrate otherwise (USEPA, 2024a). See USEPA, 2024a and section II and IV.B of this preamble. This means that where drinking water contains any combination of two or more of these PFAS, the hazard associated with each PFAS in the mixture must be added up to determine whether the mixture exceeds a level of public health concern.

The Hazard Index is the method for calculating this level (*i.e.,* the mixture MCLG) and reflects both the measured amount of each of the four PFAS in the mixture and the toxicity (represented by the HBWC) of each of the four PFAS. The PFAS mixture Hazard Index is an approach to determine whether any mixture of two or more of these four PFAS in drinking water exceeds a level of health concern by first calculating the ratio of the measured concentration of each of the four PFAS divided by its toxicity (the HBWC). This results in the ''hazard quotient'' (HQ) for each of the four PFAS. Because the health effects of these PFAS present dose additive concerns (USEPA, 2024a), the four HQs are added together, and if the result exceeds 1, then the hazard from the combined amounts of the four PFAS in drinking water exceeds a level of public health concern.

1. MCLG Derivation for a PFAS Mixture

a. Proposal

The EPA proposed a Hazard Index MCLG to protect public health from exposure to mixtures of any combination of PFHxS, PFNA, HFPO–DA, and/or PFBS, four PFAS that elicit a shared set of adverse effects and co-occur in drinking water. The Hazard Index is an approach based on dose additivity that has been validated and used by the EPA to assess chemical mixtures in several contexts (USEPA, 1986; USEPA, 2000a; USEPA, 2022i). The EPA's proposal was based on the agency's finding that the Hazard Index approach is the most practical approach for establishing an MCLG for PFAS mixtures that meets the statutory requirements outlined in section 1412(b)(1)(A) of SDWA. This is because the Hazard Index assesses the exposure level of each component PFAS relative to its HBWC, which is based on the most sensitive known adverse health effect (based on the weight of evidence) and considers sensitive population(s) and life stage(s) as well as potential exposure sources beyond drinking water. Furthermore, the Hazard Index accounts for dose additive health concerns by summing the hazard contribution from each mixture component to ensure that the mixture is not exceeding the level below which there are no known or anticipated adverse health effects and allows for an adequate margin of safety.

The proposal defined a mixture as containing one or more of the four PFAS and therefore covered each contaminant individually if only one of the four PFAS occurred. Thus, the Hazard Index as proposed ensures that the level of exposure to an individual PFAS remains below that which could impact human health because the exposure for that measured PFAS is divided by its corresponding HBWC. For example, if the mixture only included PFNA, then under the Hazard Index approach as proposed any measured concentrations over 10.0 ng/L divided over the 10.0 ng/L HBWC would be greater than the 1.0 Hazard Index MCLG. The proposed Hazard Index MCLG was 1.0 and the HBWCs of each mixture component were as follows: 9.0 ng/L [3] for PFHxS; 10.0 ng/L for HFPO–DA; 10.0 ng/L for PFNA; and 2000.0 ng/L for PFBS (USEPA, 2023e).

b. Summary of Major Public Comments and EPA Responses

Many commenters supported the EPA's proposal to regulate a mixture of PFAS and agreed with the EPA's scientific conclusions about PFAS dose additivity and the agency's use of the Hazard Index approach to develop an MCLG for a mixture of PFHxS, PFNA, HFPO–DA, and/or PFBS. Many commenters opposed the EPA's conclusion about dose additivity and the use of the Hazard Index approach to regulate co-occurring PFAS. A few commenters opposed the EPA's use of shared or similar health endpoints/outcomes rather than a shared MOA as a basis for assessing risks of PFAS mixtures. A few commenters agreed with the EPA's decision to regulate these PFAS as a mixture (that some commenters referred to as a ''group'') and supported the EPA's conclusion about dose additivity but questioned the EPA's use of the Hazard Index and suggested alternative approaches such as development of individual MCLGs or a target organ-specific Hazard Index (TOSHI). Some commenters claimed that the EPA did not appropriately seek review from the SAB, particularly on the application of the Hazard Index as an approach to regulate PFAS under SDWA. Comments on the number of significant digits applied in the HBWCs and the Hazard Index were varied. For a discussion of comments and the EPA responses on dose additivity and similarity of toxic effects, see section III.B of this preamble. Commenters referred to the HRLs and the HBWCs interchangeably; see section III of this preamble for comments on HBWCs and the EPA's responses. Responses to the other topics raised are discussed in the following paragraphs.

The EPA disagrees with commenters that the agency did not seek adequate consultation from the EPA SAB in the development of the NPDWR. SDWA section 1412(e) requires that the EPA ''request comments'' from the SAB ''prior to proposal'' of the MCLG and NPDWR. Consistent with this statutory provision, the EPA consulted with the SAB from 2021–2022. As discussed in the proposed rule, the SAB PFAS Review Panel met virtually via a video meeting platform on December 16, 2021, and then had three (3) subsequent meetings on January 4, 6 and 7, 2022 to deliberate on the agency's charge questions, which included a question specifically focused on the utility and scientific defensibility of the Hazard Index approach in the context of mixtures risk assessment in drinking water. Another virtual meeting was held on May 3, 2022, to discuss the SAB PFAS Review Panel's draft report. Oral and written public comments were considered throughout the advisory process. The SAB provided numerous recommendations to the EPA which can be found in the SAB's final report (USEPA, 2022i). The EPA addressed the SAB's recommendations and described the EPA's responses to SAB recommendations in its *EPA Response to Final Science Advisory Board Recommendations (August 2022) on Four Draft Support Documents for the EPA's Proposed PFAS National Primary Drinking Water Regulation* (USEPA, 2023k) and also in the EPA's Response to Comments document in response to public comments on the proposed PFAS

[3] Some commenters noted an error in the HBWC calculation for PFHxS which was reported as 9.0 ng/L in the proposal. The agency has corrected the value in this NPDWR and within the requirements under 40 CFR part 141 subpart Z. The correct HRL/HBWC for PFHxS is 10 ng/L.

NPDWR (USEPA, 2024k). Further discussion on the EPA consultations and stakeholder engagement activities can be found in section XIII of this preamble.

The agency also disagrees with commenters who contend that the EPA must seek advice from the SAB on all aspects of the NPDWR. The statute does not dictate on which scientific issues the EPA must request comment from the SAB. In this case, the EPA sought comments on four documents: *Proposed Approaches to the Derivation of a Draft Maximum Contaminant Level Goal for Perfluorooctanoic Acid (PFOA) in Drinking Water* (USEPA, 2021i); *Proposed Approaches to the Derivation of a Draft Maximum Contaminant Level Goal for Perfluorooctanesulfonic Acid (PFOS) in Drinking Water* (USEPA, 2021j); *Analysis of Cardiovascular Disease Risk Reduction as a Result of Reduced PFOA and PFOS Exposure in Drinking Water* (USEPA, 2021k); and *Draft Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS* (USEPA, 2021e).

The approach of the EPA's *Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS* (USEPA, 2024a) and this rule is to evaluate risks from exposure to mixtures of PFAS that elicit the same or similar adverse health effects (but with differing potencies for effect(s)) rather than similarity in MOA. This is consistent with the EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* (USEPA, 2000a) and expert opinion from the NAS National Research Council (NRC, 2008). MOA, which describes key changes in cellular or molecular events that may cause functional or structural changes that lead to adverse health effects, can be a useful metric by which risk can be assessed. It is considered a key determinant of chemical toxicity, and chemicals can often be classified by their type of toxicity pathway(s) or MOAs. However, because PFAS are an emerging chemical class, MOA data can be limited or entirely lacking for many PFAS. Therefore, the EPA's approach for assessing risks of PFAS mixtures is based on the conclusion that PFAS that share one or more adverse outcomes produce dose-additive effects from co-exposures. This evidence-based determination supports a health-protective approach that meets the statute's directive to set the MCLG at a level at which there are no known or anticipated adverse health effects and which allows for an adequate margin of safety (1412(b)(4)(A)). The EPA's evidence-based determination regarding dose additivity, based on similarity of adverse health effects rather than MOA, and use of the Hazard Index approach to assess risks of exposure to PFAS mixtures were supported by the SAB in its review of the *Draft Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS* (USEPA, 2022i). For a detailed description of the evidence supporting dose additivity as the default approach for assessing mixtures of PFAS, see the final *Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS* (USEPA, 2024a).

A few commenters supported the EPA's approach to assessing risks of PFAS mixtures based on similarity of toxicity effect rather than similarity in MOA. A few commenters opposed the EPA's use of same or similar adverse health effects/outcomes rather than MOA as a basis for the approach to assessing risks of PFAS mixtures and suggested that the agency is not following its own chemical mixtures guidance (USEPA, 2000a). The EPA disagrees with these commenters' assertions. The EPA's approach, to evaluate health risks of exposure to mixtures of these four PFAS based on shared or similar adverse health effects of the mixture components rather than a common MOA, is consistent with the EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* (USEPA, 2000a). Although a conclusion about dose additivity can be based on mixture components sharing a common MOA, dose additivity can also be based on ''toxicological similarity, but for specific conditions (endpoint, route, duration)'' (see the EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures,* USEPA, 2000a). The EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* indicates that although basing a conclusion about dose additivity on a common MOA across mixture components is optimal, there is flexibility in the level of biological organization at which similarity among mixture components can be determined.

The EPA directly asked the SAB for feedback on this issue during its 2021 review of the EPA's draft *Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS.* Specifically, the EPA asked the SAB, ''If common toxicity endpoint/health effect is not considered an optimal similarity domain for those PFAS with limited or no available MOA-type data, please provide specific alternative methodologies for integrating such chemicals into a component-based mixture evaluation(s)'' (USEPA, 2022i). The SAB strongly supported the EPA's approach of using a similar toxicity endpoint/health effect instead of a common MOA as a default approach for evaluating mixtures of PFAS using dose additivity and did not offer an alternative methodology. For example, the SAB panel stated that:

> The Panel agreed with use of a similar toxicity endpoint/health effect instead of a common MOA as a default approach for evaluating mixtures of PFAS. This approach makes sense because multiple physiological systems and multiple MOAs can contribute to a common health outcome. Human function is based on an integrated system of systems and not on single molecular changes as the sole drivers of any health outcome. The Panel concluded that rather than the common MOA, as presented in the EPA draft mixtures document, common physiological outcomes should be the defining position (USEPA, 2022i).

The SAB panel also stated:

> Furthermore, many PFAS, including the four used in the examples in the draft EPA mixtures document and others, elicit effects on multiple biological pathways that have common adverse outcomes in several biological systems (*e.g.,* hepatic, thyroid, lipid synthesis and metabolism, developmental and immune toxicities) (USEPA, 2022i).

Some commenters expressed support for the EPA's proposed Hazard Index approach to regulating a mixture of one or more of the four PFAS in drinking water. The commenters also stated that occurrence and co-occurrence of these four PFAS in PWSs, as well as individual and dose-additive effects of these PFAS, justify the general Hazard Index approach. The EPA agrees that the general Hazard Index approach is the most scientifically sound and health-protective approach to deriving a PFAS mixtures MCLG which considers both their dose additive health concerns and co-occurrence in drinking water (see additional discussion in the following paragraphs).

Some commenters opposed the EPA's use of a general Hazard Index as opposed to a target organ-specific Hazard Index (TOSHI) and suggested the use of a TOSHI instead. As discussed in this section, the EPA disagrees with these comments because the use of the general Hazard Index approach to develop an MCLG for a mixture of PFHxS, PFNA, HFPO–DA, and/or PFBS is scientifically sound, supported by external peer review (SAB), and consistent with the EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* (USEPA, 2000a).

The EPA considered the two main types of Hazard Index approaches: (1)

the general Hazard Index, which allows for component chemicals in the mixture to have different health effects or endpoints as the basis for their toxicity reference values (*e.g.,* RfDs, minimal risk levels), and (2) the TOSHI, which relies on toxicity reference values based on the same specific target organ or system effects (*e.g.,* effects on the liver or thyroid; effects on developmental or reproductive systems) (USEPA, 2000a). The general Hazard Index approach uses the most health-protective RfD (or minimal risk levels) available for each mixture component, irrespective of whether the RfDs for all mixture components are based on effects in the same target organs or systems. These ''overall'' RfDs (as they are sometimes called) are protective of all other adverse health effects because they are based on the most sensitive known endpoints as supported by the weight of the evidence. As a result, this approach is protective of all types of toxicity/adverse effects, and thus ensures that the MCLG is the level at and below which there are no known or anticipated adverse human health effects with an adequate margin of safety with respect to certain PFAS mixtures in drinking water. The TOSHI produces a less health protective indicator of risk than the general Hazard Index because the basis for the component chemical toxicity reference values has been limited to a specific target organ or system effect, which may occur at higher exposure levels than other effects (*i.e.,* be a less sensitive endpoint). Additionally, since a TOSHI relies on toxicity reference values aggregated for the same specific target organ or system endpoint/effect, an absence or lack of data on the specific target organ or system endpoint/effect for a mixture component may result in that component not being adequately accounted for in this approach (thus, underestimating health risk of the mixture). A TOSHI can only be derived for those PFAS for which the same target organ or system endpoint/effect-specific RfDs have been calculated. Many PFAS have data gaps in epidemiological or animal toxicological dose-response information for multiple types of health effects, thus limiting derivation of target organ-specific toxicity reference values; target organ-specific toxicity reference values are not currently available for PFHxS, PFNA, HFPO–DA, and PFBS. The EPA's *Supplementary Guidance for Conducting Health Risk Assessment of Chemical Mixtures* recognizes the potential for organ- or system-specific data gaps and supports use of overall RfDs in a general Hazard Index approach, stating, ''The target organ toxicity dose (TTD) is not a commonly evaluated measure and currently there is no official EPA activity deriving these values, as there is for the RfD and RfC'' . . . ''Because of their much wider availability than TTDs, standardized development process including peer review, and official stature, the RfD and RfC are recommended for use in the default procedure for the HI'' (USEPA, 2000a). The EPA determined that the general Hazard Index approach is the most scientifically defensible and health protective approach for considering PFAS mixtures in this rule because it is protective of all adverse health effects rather than just those associated with a specific organ or system, consistent with the statutory definition of MCLG.

The EPA directly asked the SAB about the utility and scientific defensibility of the general Hazard Index approach (in addition to other methods, including TOSHI) during the 2021 review of the EPA's draft *Framework for Estimating Noncancer Health Risks Associated with Mixtures of PFAS.* Specifically, the EPA asked the SAB to ''Please provide specific feedback on whether the HI approach is a reasonable methodology for indicating potential risk associated with mixtures of PFAS. If not, please provide an alternative;'' and ''Please provide specific feedback on whether the proposed HI methodologies in the framework are scientifically supported for PFAS mixture risk assessment'' (USEPA, 2022i). In its report (USEPA, 2022i), the SAB stated its support for the general Hazard Index approach:

> In general, the screening level Hazard Index (HI) approach, in which Reference Values (RfVs) for the mixture components are used regardless of the effect on which the RfVs are based, is appropriate for initial screening of whether exposure to a mixture of PFAS poses a potential risk that should be further evaluated. Toxicological studies to inform human health risk assessment are lacking for most members of the large class of PFAS, and mixtures of PFAS that commonly occur in environmental media, overall. For these reasons, the HI methodology is a reasonable approach for estimating the potential aggregate health hazards associated with the occurrence of chemical mixtures in environmental media. The HI is an approach based on dose additivity (DA) that has been validated and used by the EPA. The HI does not provide quantitative risk estimates (*i.e.,* probabilities) for mixtures, nor does it provide an estimate of the magnitude of a specific toxicity. This approach is mathematically straightforward and may readily identify mixtures of potential toxicological concern, as well as identify chemicals that drive the toxicity within a given mixture.

A few commenters stated that it is inappropriate to use the general Hazard Index in the context of a drinking water rule because it is a screening tool. The EPA guidance (*e.g., Risk Assessment Guidance for Superfund* [RAGS], USEPA, 1991b) and the SAB does characterize the general Hazard Index as appropriate for screening, but the SAB did not say that the methodology's use was limited to screening, nor that the agency would or should be prohibited from considering its use in any regulatory or nonregulatory application. The general Hazard Index is a well-established methodology that has been used for several decades in at least one other regulatory context to account for dose additivity in mixtures. The EPA routinely uses the Hazard Index approach to consider the risks from multiple contaminants of concern in the Remedial Investigations and Feasibility Studies for cleanup sites on the Superfund National Priorities List under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Noncarcinogenic effects are summed to provide a Hazard Index that is compared to an acceptable index, generally 1. This procedure assumes dose additivity in the absence of information on a specific mixture. These assessments of hazards from multiple chemical exposures are important factors to help inform the selection of remedies that are ultimately captured in the Superfund Records of Decision. Moreover, the EPA has determined that in the context of SDWA, the Hazard Index is also an appropriate methodology for determining the level at and below which there are no known or anticipated adverse human health effects with an adequate margin of safety with respect to certain PFAS mixtures in drinking water. The Hazard Index approach is the most practical approach for establishing an MCLG for PFAS mixtures that meets the statutory requirements outlined in section 1412(b)(1)(A) of SDWA. This is because the Hazard Index assesses the exposure level of each component PFAS relative to its HBWC, which is based on the most sensitive known adverse health effect (based on the weight of evidence) and considers sensitive population(s) and life stage(s) as well as potential exposure sources beyond drinking water. Furthermore, the Hazard Index accounts for dose additive health concerns by summing the hazard contribution from each mixture component to ensure that the mixture is not exceeding the level below which there are no known or anticipated adverse health effects and allows for an

adequate margin of safety. In addition, given the temporal and spatial variability of PFAS occurrence in drinking water across the nation (USEPA, 2024b), this methodology allows the EPA to regulate these chemicals in drinking water by taking into account site-specific data at each PWS. Component PFAS HQs (hazard quotients) are expected to differ across time and space depending on the actual measured concentrations of each of the four PFAS at each PWS. This approach thus allows for flexibility beyond a one-size-fits-all approach and is tailored to address risk at each PWS. The EPA has made a final regulatory determination for mixtures of two or more of these PFAS. The EPA's application of the Hazard Index approach to regulate such mixtures accounts for the dose additivity that was the basis for the EPA's final determination to regulate such mixtures.

A Hazard Index greater than 1 is generally regarded as an indicator of adverse health risks associated with a specific level of exposure to the mixture; a Hazard Index less than or equal to 1 is generally regarded as not being associated with any appreciable risk (USEPA, 1986; USEPA,1991b; USEPA, 2000a). Thus, in the case of this drinking water rule, a Hazard Index greater than 1 indicates that occurrence of two or more of these four component PFAS in a mixture in drinking water exceeds the health protective level(s) (*i.e.,* HBWC(s)), indicating health risks.

The EPA proposed a Hazard Index MCLG of 1.0, expressed with two significant digits. The EPA's proposal expressed the HBWCs to the tenths place, as follows: 9.0 ng/L for PFHxS, 10.0 ng/L for HFPO–DA; 10.0 ng/L for PFNA; and 2000.0 ng/L for PFBS. The EPA's draft Hazard Index MCLG document expressed all of the HBWCs with one significant digit (9, 10, 10, 2000 ng/L, respectively) (USEPA, 2023e). A few commenters supported the use of two significant digits for the HBWCs, individual HQs, and the Hazard Index MCLG and stated that the use of two significant digits would not be expected to result in issues related to analytical methods precision. One commenter supported using all digits of precision in calculations but rounding to two significant digits for the final reported value of the Hazard Index, noting that the number of significant digits used only affects rounding during steps prior to the point at which a Hazard Index MCL is reached. Commenters noted the importance of clearly communicating the number of significant digits to be used in the documents, and that the choice of the number of significant digits could impact implementation of an MCL based on the Hazard Index. For example, a Hazard Index of 1 (*i.e.,* using one significant digit) would not be exceeded unless the value is calculated to be at 1.5 or above. Alternatively, a Hazard Index of 1.0 (reporting with more than one significant digit) would be exceeded when the Hazard Index is calculated to be 1.05 or above. For additional discussion on significant digit usage, please see sections V and VIII.

A few commenters did not support more than a single significant digit for the HBWCs and Hazard Index MCLG, with some stating that using two or more significant digits for the Hazard Index contradicts the EPA chemical mixtures guidance (USEPA, 2000a) and the RAGS (USEPA, 1991b). The EPA agrees that one (1) significant digit is appropriate for the HBWCs and the Hazard Index MCLG (*i.e.,* 1 rather than 1.0, as in the proposal) because although there is sufficient analytical precision for two significant digits at these concentrations, the RfVs (RfDs and minimal risk levels) used to derive the HBWCs have one significant digit. According to the EPA chemical mixtures guidance (USEPA, 2000a), ''Because the RfDs (and by inference the TTDs) are described as having precision no better than an order of magnitude, the HI should be rounded to no more than one significant digit.'' This approach of using a Hazard Index of 1 is consistent with agency chemical mixtures guidance (USEPA, 1986; USEPA, 2000a) and RAGS (USEPA, 1991b; USEPA, 2018c). The EPA's *Risk Assessment Guidance for Superfund Volume 1 Human Health Evaluation Manual* states, ''For noncarcinogenic effects, a concentration is calculated that corresponds to an HI of 1, which is the level of exposure to a chemical from all significant exposure pathways in a given medium below which it is unlikely for even sensitive populations to experience adverse health effects,'' and ''The total risk for noncarcinogenic effects is set at an HI of 1 for each chemical in a particular medium'' (USEPA, 1991b). Finally, ''Cancer risk values and hazard index (HI) values may express more than one significant figure, but for decision-making purposes one significant figure should be used'' (USEPA, 2018c).

c. Final Rule

The EPA has made a final determination to regulate mixtures containing two or more of PFHxS, PFNA, HFPO–DA, and/or PFBS. For the final determination, the EPA's evaluation utilized an HRL as part of a general Hazard Index approach (for additional discussion on the EPA's *Final Regulatory Determinations,* please see section III of this preamble). The EPA's proposal included individual preliminary regulatory determinations for PFHxS, PFNA, HFPO–DA, and PFBS and a mixture regulatory determination for mixtures of those PFAS. The EPA's proposal addressed these regulatory determinations through the Hazard Index MCLG and MCL that would apply to a mixture containing one or more of PFHxS, PFNA, HFPO–DA, and PFBS. If two or more of these PFAS were present then the MCLG and MCL would account for dose additivity of all of the contaminants present, but if only one of the contaminants were present then the Hazard Index would operate as an individual MCLG and MCL. In this final rule, the EPA is promulgating individual MCLGs and MCLs to address the individual final regulatory determinations (PFHxS, PFNA, and HFPO–DA) and is promulgating a Hazard Index MCLG and MCL to address the final mixtures regulatory determination for two or more Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) present.

The EPA used the same general Hazard Index approach for the mixture MCLG. In the general Hazard Index approach, individual PFAS HQs are calculated by dividing the measured concentration of each component PFAS in water (*e.g.,* expressed as ng/L) by the corresponding HBWC for each component PFAS (*e.g.,* expressed as ng/L), as shown in the following equation (and described in USEPA, 2024f). For purposes of this NPDWR, the EPA is using the term ''health-based water concentration'' or ''HBWC'' given its role in calculating the Hazard Index (see the Executive Summary of this preamble). The EPA notes that the Hazard Index MCLG applies to the entire mixture but the EPA's technical justification for the HBWCs for the mixture components is the same as for the individual MCLGs provided in this rule. In this final rule, component PFAS HQs are summed across the PFAS mixture to yield the Hazard Index MCLG. The final PFAS mixture Hazard Index MCLG is set at 1 (one significant digit). A Hazard Index greater than 1 (rounded to one significant digit) indicates that exposure (*i.e.,* PFAS occurrence in drinking water) exceeds the health protective level (*i.e.,* HBWC) for two or more of the individual PFAS mixture components, and thus indicates health risks. The Hazard Index MCLG ensures that even when the individual

components are below a level of concern, the components when added together in the mixture do not result in a mixture that itself exceeds a level of concern. A Hazard Index less than or equal to 1 indicates that occurrence of these four PFAS in drinking water does not exceed the health protective level and is therefore generally regarded as unlikely to result in any appreciable risk (USEPA, 1986; USEPA, 1991b; USEPA, 2000a). For more details, please see USEPA (2024a; USEPA, 2024f). The final Hazard Index MCLG for a mixture of PFHxS, PFNA, HFPO–DA, and/or PFBS is derived as follows:

$$HI\ MCLG\ = \left(\frac{[HFPO\text{-}DA_{water}]}{[HFPO\text{-}DA_{HBWC}]}\right) + \left(\frac{[PFBS_{water}]}{[PFBS_{HBWC}]}\right) + \left(\frac{[PFNA_{water}]}{[PFNA_{HBWC}]}\right) + \left(\frac{[PFHxS_{water}]}{[PFHxS_{HBWC}]}\right) = 1$$

$$HI\ MCLG\ = \left(\frac{[HFPO\text{-}DA_{ng/L}]}{[10\ ng/L]}\right) + \left(\frac{[PFBS_{ng/L}]}{[2000\ ng/L]}\right) + \left(\frac{[PFNA_{ng/L}]}{[10\ ng/L]}\right) + \left(\frac{[PFHxS_{ng/L}]}{[10\ ng/L]}\right) = 1$$

Where

[$PFAS_{water}$] = the measured component PFAS concentration in water and

[$PFAS_{HBWC}$] = the HBWC of a component PFAS.

2. MCLG Derivation for PFHxS, PFNA, and HFPO–DA

a. Proposal

As described in section IV.B.1.a of this preamble, in March 2023, the EPA proposed a Hazard Index MCLG to protect public health from exposure to mixtures of PFHxS, PFNA, HFPO–DA, and PFBS, four PFAS that affect many similar health endpoints/outcomes and that occur and co-occur in drinking water. At that time, the EPA also considered setting individual MCLGs for these PFAS either instead of or in addition to using a mixtures-based approach for PFHxS, PFNA, HFPO–DA, and PFBS. The EPA ultimately proposed the Hazard Index approach for establishing an MCLG for a mixture of these four PFAS.

b. Summary of Major Public Comments and EPA Responses

Several commenters favored finalization of individual MCLGs (and MCLs) for some or all of the PFAS included in the proposed Hazard Index, with or without a Hazard Index approach to address mixtures of these PFAS. Specifically, commenters supported establishing individual MCLGs for PFHxS, PFNA, HFPO–DA, and PFBS because they questioned the EPA's scientific conclusions regarding PFAS dose additivity and raised concerns about potential risk communication issues and confusion about the EPA's use of the Hazard Index to establish drinking water standards (for additional discussion on MCLs, please see section V of this preamble). The EPA agrees with commenters who favored finalization of individual MCLGs for some of the PFAS included in the Hazard Index, and to do so in addition to the Hazard Index MCLG being finalized for the mixture of the four PFAS. The EPA believes this provides clarity for purposes of implementation of the rule. The EPA is finalizing individual MCLGs for PFHxS, PFNA, and HFPO–DA (for additional discussion on the final regulatory determinations, please see section III of this preamble). Regarding risk communication and potential confusion about the use of the Hazard Index, the EPA acknowledges that effective risk communication is important, and the agency will develop communication materials to facilitate understanding of all aspects of this NPDWR, including the Hazard Index MCL (for additional discussion on MCLs, please see section V of this preamble). The EPA has provided language for consumer notifications as part of CCR (see section IX of this preamble).

One commenter stated that developing individual MCLGs (and MCLs) in addition to the Hazard Index mixture MCLG (and MCL) would have no practical impact, since an exceedance of an HBWC for an individual PFAS within a mixture would result in an exceedance of the Hazard Index even if none of the other PFAS included in the Hazard Index are detected. The EPA clarifies the final rule promulgates individual MCLs for PFHxS, PFNA and HFPO–DA as well as a mixture Hazard Index MCL for two or more of these PFAS and PFBS. There may be a practical impact of these individual MCLs (for PFHxS, PFNA and HFPO–DA) where one of these three PFAS occur in isolation (*i.e.,* without one of the other four Hazard Index PFAS present) above their individual MCLs. The EPA notes that this regulatory structure is consistent with the intended effect of the proposed regulation, where as proposed, a single PFAS above its HBWC would have caused an exceedance of the MCL. Based on public comment, the EPA has restructured the rule such that two or more of these regulated PFAS would be necessary to cause an exceedance of the Hazard Index and instead will regulate individual exceedances of PFNA, PFHxS, and HFPO–DA as individual MCLs to improve risk communication. Risk communication is an important focus for water systems and the EPA believes that finalizing individual MCLs for PFHxS, PFNA, and HFPO–DA can support risk communication as utilities and the public may be more familiar with this regulatory framework. Additionally, the final individual MCLs for PFHxS, PFNA and HFPO–DA will address and communicate health concerns for these compounds where they occur in isolation. At the same time, since those individual MCLs do not address additional risks from co-occurring PFAS, the EPA is finalizing a Hazard Index MCL that provides a framework to address and communicate dose additive health concerns associated with mixtures of PFHxS, PFNA, HFPO–DA, and PFBS that co-occur in drinking water. For the EPA's discussion on the practical impact of the establishment of stand-alone standards in lieu of or in addition to the Hazard Index MCL, please see sections V and IX.A of this preamble. The EPA's discussion on the practical impact of the establishment of stand-alone standards in lieu of or in addition to the Hazard Index MCL, please see sections V and IX.A of this preamble.

A few commenters questioned why the EPA is developing an NPDWR for contaminants that do not have EPA Drinking Water Health Advisories (PFHxS, PFNA), and stated that the EPA should wait to propose an NPDWR for PFHxS and PFNA until after Health Advisories are finalized for these PFAS. The EPA disagrees with this comment. Health Advisories are not a pre-requisite for an NPDWR under SDWA and there is nothing in the statute or the EPA's historical regulatory practice that suggests that the agency must or should

delay regulation of a contaminant in order to develop a health advisory first.

c. Final Rule

As described in section III of this preamble, the EPA has made a final determination to individually regulate PFHxS, PFNA, and HFPO–DA.

The EPA is finalizing individual MCLGs for PFHxS, PFNA, and HFPO–DA as follows: PFHxS MCLG = 10 ng/L; HFPO–DA MCLG = 10 ng/L; and PFNA MCLG = 10 ng/L. The technical basis for why each of these levels satisfies the statutory definition for MCLG is described in section III of this preamble (and is the same technical basis the EPA used to explain the levels identified as the HBWCs). These MCLGs are expressed with one significant digit and are based on an analysis of each chemical's toxicity (*i.e.,* RfD/minimal risk level) and appropriate exposure factors (*i.e.,* DWI–BW, RSC) (USEPA, 2024f).

The EPA is deferring its individual regulatory determination for PFBS and not finalizing an individual MCLG for PFBS at this time (please see section III of this preamble, *Final Regulatory Determinations for Additional PFAS,* for further information).

V. Maximum Contaminant Levels

Under current law and as described in the proposed rule (USEPA, 2023f), the Environmental Protection Agency (EPA) establishes drinking water standards through a multi-step process. *See* S. Rep. No. 169, 104th Cong., 1st Sess. (1995) at 3. First, the agency establishes a non-enforceable Maximum Contaminant Level Goals (MCLG) for the contaminant in drinking water at a level which no known or anticipated adverse effects to the health of persons will occur and which allow for an adequate margin of safety. Second, the agency generally sets an enforceable Maximum Contaminant Level (MCL) as close to that public health goal as feasible, taking costs into consideration.

In this second step, consistent with the definition of ''feasible'' in section 1412(b)(4)(D), the EPA evaluates the availability and performance of Best Available Technologies (BATs) for treating water to minimize the presence of the contaminant consistent with the MCLG (see section X for additional discussion on BATs) as well as the costs of applying those BATs to large metropolitan water systems when treating to that level (1412(b)(4)(E) and (5)).[4] The definition of ''feasible'' means *feasible* with the use of the best technology . . . ''which includes consideration of the analytical limits of best available treatment and testing technology.'' *see* S. Rep. No. 169, 104th Cong., 1st Sess. (1995) at 3; *see also* section 1401(1)(C)(i) stating that a NPDWR includes an MCL only ''if, in the judgment of the Administrator, it is economically and technologically feasible to ascertain the level of such contaminant in water in public water systems.'' In addition, the MCL represents ''the maximum permissible level of a contaminant in water which is delivered to any user of a public water system,'' section 1401(3). Thus, in setting the MCL level, the EPA also identifies the level at which it is technologically feasible to measure the contaminant in the public water system. To identify this level, the EPA considers (1) the availability of analytical methods to reliably quantify levels of the contaminants in drinking water and (2) the lowest levels at which contaminants can be reliably quantified within specific limits of precision and accuracy during routine laboratory operating conditions using the approved methods (known as the practical quantitation levels (PQLs)). The ability of laboratories to measure the level of the contaminant with sufficient precision and accuracy using approved methods is essential to ensure that any public water system nationwide can monitor, determine compliance, and deliver water that does not exceed the maximum permissible level of a contaminant in water to any of its consumers. (See section VII of this preamble for additional discussion on analytical methods and PQLs for the per- and polyfluoroalkyl substances (PFAS) regulated in this rule.)

In practice this means that where the MCLG is zero, the EPA typically sets MCLs at the PQLs when treatment is otherwise feasible, based on cost and treatment availability, because the PQL is the limiting factor. Conversely, for contaminants where the MCLG is higher than the PQL, the EPA generally sets the MCL at the MCLG when treatment is otherwise feasible, based on costs and treatment availability, because the PQL is not a limiting factor.

The Safe Drinking Water Act (SDWA) defines an MCL as ''the maximum permissible level of a contaminant in water which is delivered to any user of a public water system.'' Like the MCLG, SDWA does not dictate that the MCL take a particular form; however, given this definition, an MCL establishes a ''maximum permissible level of a contaminant in water'' and as a practical matter the identified ''level'' must be capable of being validated so that it can be determined whether that public water systems are delivering water to any user meeting or exceeding that ''level.''

A. PFOA and PFOS

1. Proposal

In the March 2023 proposal, the EPA proposed individually enforceable MCLs for PFOA and PFOS at the PQL which is 4.0 ng/L (USEPA, 2023f). Section 1412(b)(4)(E) of SDWA requires that the agency ''list the technology, treatment techniques, and other means which the Administrator finds to be feasible for purposes of meeting [the MCL],'' which are referred to as Best Available Technologies (BATs). The EPA found multiple treatment technologies to be effective and available to treat PFOA and PFOS to at or below the proposed standards (please see and section X (10) of this preamble and USEPA, 2024l for additional discussion on feasible treatment technologies including BAT/SSCT identification and evaluation). In addition, the EPA found that there are analytical methods available to reliably quantify PFOA and PFOS at the PQL. The EPA requested comment on regulatory alternatives for both compounds at 5.0 ng/L and 10.0 ng/L. The EPA also requested comment on whether setting the MCL at the PQL for PFOA and PFOS is implementable and feasible.

2. Summary of Major Public Comments and EPA Responses

The EPA received many comments that strongly support the proposed MCLs of 4.0 ng/L and the agency's determination that the standards are as close as feasible to the MCLG. These commenters request the agency to finalize the standards as expeditiously as possible. Consistent with these comments, through this action, the agency is establishing drinking water standards for PFOA and PFOS (and four other PFAS) to provide health protection against these contaminants found in drinking water.

Many commenters assert that implementation of the PFOA and PFOS standards would be challenging because the MCLs are set at the PQLs for each compound, and some commenters recommended alternative standards (*e.g.,* 5.0 ng/L or 10.0 ng/L). These commenters contend that by setting the

[4] Based on legislative history, the EPA interprets ''taking cost into consideration'' in section 1412(b)(4)(D) to be limited to ''what may be reasonably be afforded by large metropolitan or regional public water systems.'' H.R. Rep. No 93–1185 (1974), *reprinted in* 1974 U.S.C.C.A.N. 6454, 6470–71.

MCLs at the PQLs, utilities would not be able to reliably measure when the concentration of contaminants in their drinking water is approaching the MCLs. Some of these commenters suggest that having a buffer between the PQLs and the MCLs may allow utilities to manage treatment technology performance more efficiently because utilities generally aim to achieve lower than the MCLs to avoid a violation and that this buffer would provide some level of operational certainty for systems treating for PFAS. The EPA disagrees that the PFOA and PFOS standards are not implementable because the MCLs are set at their respective PQLs.

As the agency noted in the proposed rule preamble, the EPA has promulgated, and both the EPA and water systems have successfully implemented, several NPDWRs with MCLs equal to the contaminant PQLs. As examples, in 1987, the EPA finalized the Phase I Volatile Organic Compounds (VOC) rule (USEPA, 1987), where the agency set the MCL at the PQL for benzene, carbon tetrachloride, trichloroethylene, vinyl chloride, and 1,2-dichloroethane (52 FR 25690). Other examples where MCLs were set at the PQL include benzo(a)pyrene, di(2-ethylhexyl) phthalate, dioxin, dichloromethane, hexachlorobenzene, and PCBs (see USEPA, 1991c and USEPA, 1992). Some commenters at the time stated they believed implementation would be challenging because the MCLs were set at the PQL in these examples; however, the EPA notes that those rules have been implemented successfully despite commenters initial concerns. The agency does not agree with commenters that operational flexibility (*i.e.,* the inclusion of a 'buffer' between the PQL and MCL) is relevant for purposes of setting an MCL. That is because the PQL is the lowest level that can be reliably achieved within specified limits of precision and accuracy and is therefore the metric by which the agency uses to evaluate the most feasible MCL pursuant to SDWA requirements. Considerations for operational flexibility may be relevant to other parts of the rule, such as determining monitoring and compliance with the rule. First, for purposes of determining compliance with the MCL, water systems must calculate the running annual average (RAA) of results, which could allow some results to exceed 4.0 ng/L for single measurements if the overall annual average is below the MCL. In other words, there is a buffer built into determining compliance with the MCL. Second, when calculating the RAA, zero will be used for results less than the PQL which provides an additional analytic buffer for utilities in their compliance calculations. This monitoring and compliance framework allows for temporal fluctuations in concentrations that may occur because of unexpected events such as premature PFOA and PFOS breakthrough or temporary elevated source water concentrations. Thus, periodic occurrences of PFOA or PFOS that are slightly above the PQLs do not necessarily result in a violation of the MCL if other quarterly samples are below the PQL. The agency notes that in general, PQLs are set above the limit of detection; for PFAS specifically, all the PQLs are well above their limits of detection. The PQL is also different than detection limits because the PQL is set considering a level of precision, accuracy, and quantitation. Systems may be able to use sample results below the PQL to understand whether PFOA and PFOS are present. While the EPA has determined that results below the PQL are insufficiently precise for determining compliance with the MCL, results below the PQL can be used to determine analyte presence or absence in managing a system's treatment operations and to determine monitoring frequency. See discussion in section VII of this preamble for further discussion of the PQL, results below the PQL, and how those results provide useful information.

Some commenters contend that the PQLs for PFOA and PFOS are not set at an appropriate level (*e.g.,* the PQLs are either too high or too low for laboratories to meet). Specifically, these commenters question whether enough laboratories have the ability to analyze samples at 4.0 ng/L and, as a result, contend it is not a ''reasonable quantitation level.'' The EPA disagrees with commenters who suggest the PQLs for PFOA and PFOS are not set at an appropriate level or that they should be either higher or lower levels than that proposed. As discussed above and in the March 2023 proposal, the EPA derives PQLs that reflect the level of contaminants that laboratories can reliably quantify within specific limits of precision and accuracy during routine laboratory operating conditions. The ability to reliably measure is an important consideration for feasibility to ensure that water systems nationwide can monitor and dependably comply with the MCLs and deliver drinking water that does not exceed the maximum permissible level. In the rule proposal (USEPA, 2023f), the EPA explained that the minimum reporting levels under UCMR 5 reflect ''a minimum quantitation level that, with 95 percent confidence, can be achieved by capable lab analysts at 75 percent or more of the laboratories using a specified analytical method'' (USEPA, 2022k). The PQLs for the regulated PFAS are based on the UCMR 5 minimum reporting levels. The EPA calculated the UCMR 5 minimum reporting levels using quantitation-limit data from multiple laboratories participating in multi-lab method validation studies conducted in the 2017–2019 timeframe, prior to the UCMR 5 Laboratory Approval Program (see appendix B of USEPA, 2020b). The calculations account for differences in the capability of laboratories across the country. Laboratories approved to analyze UCMR samples must demonstrate that they can consistently make precise measurements of PFOA and PFOS at or below the established minimum reporting levels. Therefore, the EPA finds that the UCMR 5 minimum reporting levels are appropriate for using as PQLs for this rule: the EPA estimates that laboratories across the nation can precisely and accurately measure PFOA and PFOS at this quantitation level. After reviewing data from laboratories that participated in the minimum reporting level setting study under UCMR 5 and in consideration of public comment, the EPA finds that the minimum reporting levels set in UCMR 5 of 4.0 ng/L for PFOA and PFOS, that are also the PQLs, are as close as feasible to the MCLG. While lower quantitation levels may be achievable for some laboratories, it has not been demonstrated that these lower quantitation levels can be achieved for ''at 75 percent or more of the laboratories using a specified analytical method'' across laboratories nationwide. Moreover, though the EPA is confident of sufficient laboratory capacity to implement this PFAS National Primary Drinking Water Regulation (NPDWR) as finalized, a lower PQL could potentially limit the number of laboratories available to support analytical monitoring that would be otherwise available to support analytical monitoring with PFOA and PFOS PQLs of 4.0 ng/L.

In the proposal, the EPA discussed how utilities may be able to use sample results below the PQL to determine analyte presence or absence in managing their treatment operations; however, a few commenters contend that this is not practical to determine compliance with the MCL as these values are less precise and violations may result in expensive capital

improvements. Commenters are conflating two different issues. While commenters are referring to quantitation of a sampling result for compliance with the rule, the EPA's discussion on results below the PQL refers to determining simple presence or absence of a contaminant for other purposes. Sampling results below the PQL may not have the same precision as a sampling result at or above the PQL but they are useful for operational purposes such as understanding that PFOA and PFOS may be present, which can inform treatment decisions and monitoring frequency. For example, a utility may use sampling results below 4.0 ng/L as a warning that they are nearing the PFOA and PFOS MCLs of 4.0 ng/L prior to an exceedance. Then, the utility can make informed treatment decisions about managing their system (*e.g.,* replacing GAC). Additionally, the EPA evaluated data submitted as part of the UCMR 5 Laboratory Approval Program (LAP) and found that 47 of 53 laboratories (89 percent) that applied for UCMR 5 approval generated a minimum reporting level confirmation at 2 ng/L (one-half the proposed MCL) or less for Method 533 (USEPA, 2022j). This suggests that the majority of laboratories with the necessary instrumentation to support PFAS monitoring have the capability to provide useful screening measurement results below the PQL. Further, as discussed in section VII of this preamble, all labs are required per the approved methods to demonstrate whether laboratory reagent blank (LRB) quality control (QC) samples have background concentrations of less than one-third the minimum reporting level (*i.e.,* the minimum concentration that can be reported as a quantitated value for a method analyte in a sample following analysis). Therefore, for a laboratory to be compliant with the methods, they must be able to detect, not necessarily quantify, analytes at or above ⅓ the minimum reporting level.

The EPA agrees with commenters that it is inappropriate to make potentially costly compliance decisions based on measurements below the PQL because they do not have the same level of precision and accuracy as results at or above the PQL. As previously discussed, for MCL compliance purposes, results less than the PQL will be recorded as zero. For additional details on monitoring and compliance requirements, please see section VIII of this preamble.

Some commenters argue that the EPA did not sufficiently consider cost in the agency's feasibility analysis of the proposed MCLs and therefore disagreed with the EPA that the standards are feasible. In particular, these commenters suggest that the agency did not adequately consider costs associated with implementation (*e.g.,* costs for labor, materials, and construction of capital improvements) and compliance (*e.g.,* costs to monitor) with the proposed MCLs. Based on these factors, many of these commenters suggest either raising the MCLs or re-proposing the standard in its entirety. The EPA did consider these costs and therefore disagrees with commenters' assertions that the agency did not consider these issues in establishing the proposed MCLs for PFOA and PFOS (USEPA, 2024g; USEPA, 2024l; USEPA, 2024m). The EPA considers whether these costs are reasonable based on large metropolitan drinking water systems. H.R. Rep. No 93–1185 (1978), *reprinted in* 1974 U.S.C.C.A.N. 6454, 6470–71. The EPA considered costs of treatment technologies that have been demonstrated under field conditions to be effective at removing PFOA and PFOS and determined that the costs of complying with an MCL at the PQL of 4.0 are reasonable for large metropolitan water systems at a system and national level (USEPA, 2024e; USEPA, 2024g). To designate technologies as BATs, the EPA evaluated each technology against six BAT criteria, including whether there is a reasonable cost basis for large and medium water systems. The EPA evaluated whether the technologies are currently being used by systems, whether there were treatment studies available with sufficient information on design assumptions to allow cost modeling, and whether additional research was needed (USEPA, 2024l). In considering the results of this information, the EPA determined that these costs are reasonable to large metropolitan water systems.

Pursuant to SDWA section 1412(b)(4)(E)(ii), the agency also evaluated ''technolog[ies], treatment technique[s], or other means that is affordable'' for small public water systems. In this evaluation, the agency determined that the costs of small system compliance technologies (SSCTs) to reach 4.0 ng/L are affordable for households served by small drinking water systems. Additionally, the EPA notes that SDWA section 1412(b)(4)(D) states that ''granular activated carbon is feasible for the control of synthetic organic chemicals'' which the agency lists as a BAT for this rule (section X). All PFAS, including PFOA and PFOS, are SOCs, and therefore, GAC is BAT as defined by the statute. For additional discussion on BATs and SSCTs, please see section X of this preamble.

Some commenters disagreed with the EPA's determination that the rule is feasible under SDWA asserting that there is insufficient laboratory capacity and other analytic challenges to measure samples at these thresholds. As described above in the agency's approach toward evaluating feasibility, the EPA assesses (1) the availability of analytical methods to reliably quantify levels of the contaminants in drinking water and (2) the lowest levels at which contaminants can be reliably quantified within specific limits of precision and accuracy during routine laboratory operating conditions using the approved methods (*i.e.,* the PQLs). This framework inherently considers both the capacity and capability of labs available to meet the requirements of the NPDWR. Based on the EPA's analysis of these factors, the EPA disagrees with commenter assertions that there is insufficient laboratory capacity at this time to support implementation of the NPDWR. Currently, there are 53 laboratories for PFAS methods (Method 533 or 537.1) in the EPA's Unregulated Contaminant Monitoring Rule (UCMR) 5 Laboratory Approval Program, more than double the participation in UCMR 3 (21 laboratories), with several laboratory requests to participate after the lab approval closing date. At a minimum, these 53 labs alone have already demonstrated sufficient capacity for current UCMR 5 monitoring, which requires monitoring for all systems serving above 3,300 or more persons and 800 systems serving less than 3,300 persons over a three-year period. The 21 laboratories participating in UCMR 3 provided more than sufficient capacity for that monitoring effort, which required monitoring for all systems serving greater than 10,000 persons and 800 systems serving less than 10,000. Further, a recent review of state certification and third-party accreditation of laboratories for PFAS methods found an additional 25 laboratories outside the UCMR 5 LAP with a certification or accreditation for EPA Method 533 or 537.1. Additionally, as has happened with previous drinking water regulations, the EPA anticipates laboratory capacity to grow once the rule is finalized to include an even larger laboratory community, as the opportunity for increased revenue by laboratories would be realized by filling the analytical needs of the utilities (USEPA, 1987; USEPA, 1991c; USEPA, 1991d; USEPA, 1992; USEPA, 2001). Finally, with the use of a reduced monitoring schedule to once every three years for eligible systems, and the

ability for systems that are reliably and consistently below the MCLs of 4.0 ng/L to only monitor once per year, the EPA anticipates that the vast majority of utilities may be able to take advantage of reduced or annual monitoring, and will not require a more frequent monitoring schedule, thus easing the burden of laboratory capacity as well.

The EPA also disagrees with commenter assertions that there is insufficient laboratory capability at this time. As discussed above and in the proposed rule preamble, the EPA proposed a PQL of 4.0 ng/L for both PFOA and PFOS based on current analytical capability and from the minimum reporting levels generated for the UCMR 5 program. The EPA evaluated data submitted as part of the UCMR 5 LAP and found that 47 of 53 laboratories (89 percent) that applied for UCMR 5 approval generated a minimum reporting level confirmation at 2 ng/L (one-half the proposed MCL) or less for Method 533. The MCLs for PFOA and PFOS were also set at 4.0 ng/L as a result of the analytical capability assessment under the minimum reporting level setting study for UCMR 5, as well as consideration of other factors (*e.g.,* treatment, costs) as required under SDWA. For UCMR 5, all UCMR-approved laboratories were able to meet or exceed the PFOS and PFOA UCMR minimum reporting levels, set at 4 ng/L, the proposed MCL for both. The UCMR 5 minimum reporting levels of 4 ng/L for PFOS and PFOA are based on a multi-laboratory minimum reporting level calculation using lowest concentration minimum reporting level (LCMRL) data. The LCMRL and minimum reporting level have a level of confidence associated with analytical results. More specifically, the LCMRL calculation is a statistical procedure for determining the lowest true concentration for which future analyte recovery is predicted with 99% confidence to fall between 50 and 150% recovery (Martin et al., 2007). The multi-laboratory minimum reporting level is a statistical calculation based on the incorporation of LCMRL data collected from multiple laboratories into a 95% one-sided confidence interval on the 75th percentile of the predicted distribution referred to as the 95–75 upper tolerance limit. This means that 75% of participating laboratories will be able to set a minimum reporting level with a 95% confidence interval. The quantitation level of 4 ng/L has been demonstrated to be achieved with precision and accuracy across laboratories nationwide, which is important to ensure that systems can dependably comply with the MCL and deliver drinking water that does not exceed the maximum permissible level. The agency anticipates that these quantitation levels for labs will continue to improve over time, as technology advances and as laboratories gain experience with the PFAS Methods. The EPA's expectation is supported by the record borne out by the significant improvements in analytical capabilities for measuring certain PFAS, including PFOA and PFOS, between UCMR 3 and UCMR 5. For example, the minimum reporting levels calculated for UCMR 3 (2012–2016) were 40 ng/L and 20 ng/L for PFOS and PFOA, respectively, the minimum reporting levels calculated for UCMR 5 (2022–2025) were 4 ng/L each for PFOA and PFOS.

Some commenters recommend a different regulatory framework than what the EPA proposed to alleviate perceived implementation concerns (*e.g.,* reduce the potential of inundating laboratories or providing more time to plan and identify opportunities for source water reduction). For example, a few commenters suggest a phased-in MCL, where systems demonstrating higher concentrations are addressed first in the NPDWR, or MCL approaches where interim targets are set for compliance. Upon consideration of information submitted by commenters, particularly issues related to supply chain complications that are directly or indirectly related to the COVID–19 pandemic residual challenges, the EPA has determined that a significant number of systems subject to the rule will require an additional 2 years to complete the capital improvements necessary to comply with the MCLs for PFAS regulated under this action. Thus, the EPA also disagrees with recommendations to create a phased schedule for rule implementation based on the concentrations of PFAS detected because the EPA has granted a two-year extension for MCL compliance to all systems. For additional discussion on this extension and the EPA responses to public comment on this issue, please see section XI.D.

Some commenters argue for a lower PFOA and PFOS MCL due to the underlying health effects of these contaminants. These commenters suggest the EPA establish MCLs lower than the agency's proposed standard of 4.0 ng/L due to the capability of some laboratories to quantitate lower concentrations. Some of these commenters also argue that since PFOA and PFOS are likely human carcinogens, the EPA should consider an MCL at zero. While the EPA agrees with the health concerns posed by PFAS that are the basis for the proposed health based MCLGs for these contaminants, the agency disagrees with commenters on these alternative MCL thresholds given the EPA's consideration of feasibility as required by SDWA. These commenters did not provide evidence demonstrating the feasibility of achieving lower MCL thresholds (including an MCL at zero) consistent with SDWA requirements in establishing an MCL. For example, commenters did not provide evidence to support a lower PQL that can be consistently achieved by laboratories across the country. They also did not provide arguments supporting why the EPA should accept less than 75% of participating laboratories will be able to set a minimum reporting level with a 95% confidence interval. Thus, the agency is finalizing the MCLs for PFOA and PFOS at 4.0 ng/L (at the PQL) as this is the closest level to the MCLG that is feasible due to the ability of labs using approved analytical methods to determine with sufficient precision and accuracy whether such a level is actually being achieved. The record supports the EPA's determination that the lowest feasible MCL for PFOA and PFOS at this time is 4.0 ng/L.

A few commenters suggest the EPA did not appropriately consider disposal concerns for spent treatment media as part of the agency's feasibility determination. These commenters state that they believe disposal options are currently limited for liquid brine, reject waters resulting from RO, or solid waste from GAC treatment and that disposal capacity will be further limited should the EPA designate PFAS waste as hazardous. These commenters contend that these limitations increase operating expenses for utilities and should be factored in the establishment of the PFOA and PFOS MCLs. The EPA disagrees with these commenters that the agency did not adequately consider disposal of spent treatment media in the rule. First, disposal options for PFAS are currently available. These destruction and disposal options include landfills, thermal treatment, and underground injection. Systems are currently disposing of spent media, such as activated carbon, through thermal treatment, to include reactivation, and at landfills. While precautions should be taken to minimize PFAS release to the environment from spent media, guidance exists that explains the many disposal options with relevant precautions. See section X for further discussion. Furthermore, the EPA has provided guidance for pretreatment and wastewater disposal to manage PFAS

that enters the sanitary sewer system and must be managed by publicly owned treatment works (POTWs) (USEPA, 2022d; USEPA, 2022e). As discussed in the proposed rule (USEPA, 2023f), the EPA assessed the availability of studies of full-scale treatment of residuals that fully characterize residual waste streams and disposal options. Although the EPA anticipates that designating chemicals as hazardous substances under CERCLA generally should not result in limits on the disposal of PFAS drinking water treatment residuals, the EPA has estimated the treatment costs for systems both with the use of hazardous waste disposal and non-hazardous disposal options to assess the effects of potentially increased disposal costs. Specifically, the EPA assessed the potential impact on public water system (PWS) treatment costs associated with hazardous residual management requirements in a sensitivity analysis. The EPA's sensitivity analysis demonstrates that potential hazardous waste disposal requirements may increase PWS treatment costs marginally; however, the increase in PWS costs is not significant enough to change the agency's feasibility determination nor the determination made at proposal that benefits of the rulemaking justify the costs. These estimates are discussed in greater detail in the HRRCA section of this final rule and in appendix N of the *Economic Analysis* (EA) (USEPA, 2024e). For the discussion on management of treatment residuals and additional responses to stakeholder concerns on this topic, please see section X of this preamble. While beyond the scope of this rule, the EPA further notes that the agency is proposing to amend its regulations under the Resource Conservation and Recovery Act (RCRA) by adding nine specific per-and polyfluoroalkyl substances (PFAS), their salts, and their structural isomers, to the list of hazardous constituents at 40 CFR part 261, appendix VIII (89 FR 8606). The scope of the proposal is limited and does not contain any requirements that would impact disposal of spent drinking water treatment residuals. This is because listing these PFAS as RCRA hazardous constituents does not make them, or the wastes containing them, RCRA hazardous wastes. The principal impact of the proposed rule, if finalized, will be on the RCRA Corrective Action Program. Specifically, when corrective action requirements are imposed at a RCRA treatment, storage, and disposal facility (TSDF), these specific PFAS would be among the hazardous constituents expressly identified for consideration in RCRA facility assessments and, where necessary, further investigation and cleanup through the RCRA corrective action process.

Some commenters suggest that the EPA failed to consider the costs and impacts of the proposed MCLs in non-drinking water contexts, such as its potential uses as CERCLA clean-up standards. As required by SDWA, this rule and analyses supporting the rulemaking only includes costs that ''are likely to occur solely as a result of compliance with the [MCL].'' (SDWA section 1412(b)(3)(C)(i)(III)) Thus, the EPA's cost analyses focused on the compliance costs of meeting the MCL to public water systems that are directly subject to this regulation. The same provision expressly directs the EPA to exclude ''costs resulting from compliance with other proposed or promulgated regulations.'' Thus, the EPA cannot consider the costs of use of the MCLs under other EPA statutes (such as CERCLA) as part of its EA because SDWA specifically excludes such consideration (42 U.S.C. 300g–1(b)(3)(C)(i)(III)). See also *City of Waukesha* v. *EPA,* 320 F.3d 228, 243–244 (D.C. Cir. 2003) (finding that SDWA excludes consideration of the costs of, for example, CERCLA compliance, as part of the required cost/benefit analysis). In addition, whether and how MCLs might be used in any particular clean-up is very site-specific and as a practical matter cannot be evaluated in this rule.

Many commenters compared the proposed MCLs to existing state and international standards, regulations, and guidelines. In particular, these commenters acknowledge the fact that several states have conducted their own rulemakings to promulgate MCLs and suggest that the EPA's analysis in support of the proposed MCLs are inconsistent with these state approaches. Further, these commenters ask the EPA to explain why certain states' cost-benefit analyses supported their respective levels and why the EPA's analysis is different. Regarding state PFAS regulations, the EPA disagrees with commenters who suggested that the agency should develop regulations consistent with current state-led actions in setting a national standard in accordance with SDWA. While some states have promulgated drinking water standards for various PFAS prior to promulgation of this NPDWR, this rule provides a nationwide, health protective level for PFOA and PFOS (as well as four other PFAS) in drinking water and reflects regulatory development requirements under SDWA, including the EPA's analysis of the best available and most recent peer-reviewed science; available drinking water occurrence, treatment, and analytical feasibility information relevant to the PQL; and consideration of costs and benefits. After the NPDWR takes effect, SDWA requires primacy states to have a standard that is no less stringent than the NPDWR. Additionally, analyses conducted by the agency in support of an NPDWR undergo a significant public engagement and peer review process. The EPA notes that the EA for this rule accounts for existing state standards at the time of analysis. Specifically, to estimate the costs and benefits of the final rule, the EPA assumed that occurrence estimates exceeding state limits are equivalent to the state-enacted limit. For these states, the EPA assumed that the state MCL is the maximum baseline PFAS occurrence value for all EP in the state. Additionally, while states may establish drinking water regulations or guidance values absent Federal regulation as they deem appropriate, the presence of state regulations does not preclude the EPA from setting Federal regulations under the authority of SDWA that meets that statute's requirements. For additional information on the EPA's EA, please see section XII.

3. Final Rule

After considering public comments, the EPA is finalizing enforceable MCLs for PFOA and PFOS at 4.0 ng/L as the closest feasible level to the MCLG. First, the agency is establishing non-enforceable MCLGs at zero for contaminants where no known or anticipated adverse effects to the health of persons will occur, allowing for an adequate margin of safety. The EPA then examined the treatment capability of BATs and the accuracy of analytical techniques as reflected in the PQL in establishing the closest feasible level. In evaluating feasibility, the agency has determined that multiple treatment technologies (*e.g.,* GAC, AIX) ''examined for efficacy under field conditions and not solely under laboratory conditions'' are found to be both effective and available to treat PFOA and PFOS to the standards and below. The EPA also determined that there are available analytical methods to measure PFOA and PFOS in drinking water and that the PQLs for both compounds reflect a level that can be achieved with sufficient precision and accuracy across laboratories nationwide using such methods. Since limits of analytical measurement for PFOA and PFOS require the MCL to be set at some

level greater than the MCLG, the agency has determined that 4.0 ng/L (the PQL for each contaminant) represents the closest feasible level to the MCLG and the level at which laboratories using these methods can ensure, with sufficient accuracy and precision, that water systems nationwide can monitor and determine compliance so that they are ultimately delivering water that does not exceed the maximum permissible level of PFOA and PFOS to any user of their public water system. The EPA evaluates the availability and performance of BATs for treating water to minimize the presence of the contaminant consistent with the MCLG as well as the costs of applying those BATs to large metropolitan water systems when treating to that level. In consideration of these factors, the EPA is therefore establishing the MCL of 4.0 ng/L for both PFOA and PFOS. The EPA further notes that the agency has determined that the costs of SSCTs to reach 4.0 ng/L are affordable for households served by small drinking water systems. For additional discussion on the EPA's EA, please see section XII of this preamble. For additional discussion on the PQLs for the PFAS regulated as part of this NPDWR, please see section VII of this preamble. The EPA notes that upon consideration of information submitted by commenters regarding the implementation timeline for the rule, the agency is also exercising its authority under SDWA section 1412(b)(10) to allow two additional years for systems to comply with the MCL. For additional discussion on this extension, please see section XI.

The EPA clarifies that the MCLs for PFOA and PFOS are set using two significant digits in this final rule. In the proposed rule, the EPA proposed MCLGs for PFOA and PFOS at zero (0) and an enforceable MCL for PFOA and PFOS in drinking water with two significant digits at 4.0 ng/L. As previously discussed in section IV of this preamble, the MCLG for PFOA and PFOS is zero because these two PFAS are likely human carcinogens. Because the MCLGs are zero, the number of significant digits in the MCLGs are not the appropriate driver for considering the number of significant digits in the MCLs. This approach is consistent with other MCLs the EPA has set with carcinogenic contaminants, including for arsenic and bromate.

By setting the MCLs at 4.0, the EPA is setting the MCLs as close as feasible to the MCLGs. The EPA guidance states that all MCLs should be expressed in the number of significant digits permitted by the precision and accuracy of the specified analytical procedure(s) and that data reported should contain the same number of significant digits as the MCL (USEPA, 2000h). The EPA determined that two significant digits were appropriate for PFOA and PFOS considering existing analytical feasibility and methods. The EPA drinking water methods typically use two or three significant digits to determine concentrations. The EPA methods 533 and 537.1, those authorized for use in determining compliance with the MCLs, state that ''[c]alculations must use all available digits of precision, but final reported concentrations should be rounded to an appropriate number of significant digits (one digit of uncertainty), typically two, and not more than three significant digits.'' The EPA has determined that both methods 533 and 537.1 provide sufficient analytical precision to allow for at least two significant digits.

B. PFAS Hazard Index: PFHxS, PFNA, HFPO–DA, and PFBS

1. Proposal

The EPA proposed an MCL for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS expressed as a Hazard Index to protect against additive health concerns when present in mixtures in drinking water. As discussed in the March 2023 proposal (USEPA, 2023f), a Hazard Index is the sum of hazard quotients (HQs) from multiple substances. An HQ is the ratio of exposure to a substance and the level at which adverse effects are not anticipated to occur. The EPA proposed the MCL for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS as the same as the MCLG: as proposed, the Hazard Index must be equal to or less than 1.0. This approach would set a permissible level for the contaminant mixture (*i.e.,* a resulting PFAS mixture Hazard Index greater than 1.0 is an exceedance of the health protective level and has potential human health risk for noncancer effects from the PFAS mixture in water). The proposal defined a mixture as containing one or more of the four PFAS and therefore covered each contaminant individually if only one of the four PFAS occurred. Thus, the Hazard Index as proposed ensures that the level of exposure to an individual PFAS remains below that which could impact human health because the exposure for that measured PFAS is divided by its corresponding HBWC. The EPA proposed HBWCs of 9.0 ng/L[5] for PFHxS; 10.0 ng/L for HFPO–DA; 10.0 ng/L for PFNA; and 2000.0 ng/L for PFBS (USEPA, 2023e).

The EPA requested comment on the feasibility of the proposed Hazard Index MCL, including analytical measurement and treatment capability, as well as reasonable costs, as defined by SDWA.

2. Summary of Major Public Comments and EPA Responses

The EPA received many comments supporting the use of the Hazard Index approach and regulation of additional PFAS. Consistent with these comments, through this action, the agency is establishing drinking water standards for PFHxS, PFNA, HFPO–DA, and PFBS (as well as PFOA and PFOS) to provide health protection against these contaminants found in drinking water. The EPA considered PFAS health effects information, evidence supporting dose additive health concerns from co-occurring PFAS, as well as national and state data for the levels of multiple PFAS in finished drinking water.

A few commenters disagreed with the EPA's feasibility evaluation in setting the MCL at the MCLG (*i.e.,* Hazard Index value of 1.0). Some of these commenters assert that technologies to remove the Hazard Index PFAS are not the same as those that effectively remove PFOA and PFOS. A couple of commenters were concerned that meeting the Hazard Index MCL may require more frequent media change-outs (*e.g.,* GAC), thereby increasing operating costs such that the Hazard Index MCL of 1.0 is not feasible. The agency disagrees with these commenters. As described above in part A of this section for PFOA and PFOS, the agency similarly considered feasibility as defined by SDWA for PFHxS, PFNA, HFPO–DA, and PFBS. First, the EPA established a Hazard Index MCLG as a Hazard Index of 1 for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS. As part of setting the Hazard Index MCLG, the agency defined an HBWC for PFHxS, PFNA, HFPO–DA, and PFBS used in the calculation (see discussion in section IV of this preamble for further information).[6]

In considering the feasibility of setting the MCLs as close as feasible to the MCLG, the EPA first evaluated the (1) the availability of analytical methods to reliably quantify levels of the contaminants in drinking water and (2)

[5] Some commenters noted an error in the HBWC calculation for PFHxS which was reported as 9.0 ng/L in the proposal. The agency has corrected the value in this NPDWR and within the requirements under 40 CFR part 141 subpart Z. The correct HRL/HBWC for PFHxS is 10 ng/L.

[6] The EPA notes that the HBWC are akin to an MCLG in that they reflect a level below which there are no known or anticipated adverse effects over a lifetime of exposure, including for sensitive populations and life stages, and allows for an adequate margin of safety.

the lowest levels at which contaminants can be reliably quantified within specific limits of precision and accuracy during routine laboratory operating conditions using the approved methods (*i.e.,* the PQLs). The EPA determined that there are available analytical methods approved (*i.e.,* Methods 533 and 537.1, version 2.0) to quantify levels below these HBWC levels. In addition, the PQLs for PFHxS, PFNA, HFPO–DA, and PFBS (between 3.0 to 5.0 ng/L) are all lower than the respective HBWCs used in setting the Hazard Index MCLG for each of these PFAS (10 ng/L for PFHxS, PFNA, and PFHxS, and 2000 ng/L for PFBS). Thus, the PQLs are not a limiting factor in determining the MCL. Second, the EPA evaluated the availability and performance of Best Available Technologies (BATs) for treating water to minimize the presence of these contaminants consistent with the MCLGs (see section X for additional discussion on BATs) as well as the costs of applying those BATs to large metropolitan water systems when treating to that level. The EPA has found the same technologies identified for PFOA and PFOS are also both available and have reliably demonstrated PFAS removal efficiencies that may exceed >99 percent and can achieve concentrations less than the proposed Hazard Index MCL for PFHxS, PFNA, HFPO–DA, and PFBS, and that the cost of applying those technologies is reasonable for large metropolitan water systems. As discussed above, for contaminants where the MCLG is higher than the PQL, the EPA sets the MCL at the MCLG if treatment is otherwise feasible because the PQL is not a limiting factor. In consideration of the availability of feasible treatment technologies, approved analytical methods to reliably quantify levels of the contaminants in drinking water, the EPA's cost analysis, and the fact that the PQLs are below the HBWCs used in setting the Hazard Index MCLG, the agency determines that setting the MCL at the same level as the MCLG for mixtures of PFHxS, PFNA, HFPO–DA and PFBS is feasible. Thus, the EPA is setting the Hazard Index MCL of 1 for mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS. For additional discussion and considerations surrounding BATs, please see section X.A of this preamble. For more information about the EPA's cost estimates, please see section XII of this preamble.

Many commenters support excluding PFOA and PFOS from the Hazard Index MCL. The EPA agrees with these commenters as there are analytical limitations that would complicate including PFOA and PFOS in the Hazard Index. As discussed in section IV of this preamble of the Hazard Index approach, individual PFAS hazard quotients (HQs) are calculated by dividing the measured concentration of each component PFAS in water (*e.g.,* expressed as ng/L) by the corresponding health-based water concentration (HBWC) for each component PFAS (*e.g.,* expressed as ng/L). The HBWC is akin to an MCLG in that they reflect a level below which there are no known or anticipated adverse effects over a lifetime of exposure, including for sensitive populations and life stages, and allows for an adequate margin of safety. Since PFOA and PFOS are likely human carcinogens, the MCLG (and if included in the Hazard Index, the HBWC) for each contaminant is zero. The only feasible way to represent PFOA and PFOS in the Hazard Index approach would be to only consider values for PFOA and PFOS at or above the PQL of 4.0 ng/L, however the level at which no known or anticipated adverse effects on the health of persons would occur is well below the PQL. As a result, any measured concentration above 4.0 ng/L for PFOA and PFOS would result in an exceedance of the Hazard Index MCL. The Hazard Index is intended to capture the aggregate risks of the Hazard Index PFAS when the monitored concentration is above the PQL but below the HBWC. These risks are not relevant to PFOA and PFOS given their PQLs. Because of the PQL considerations discussed in the preceding section V.A of this preamble, the EPA is not including PFOA and PFOS in the final rule Hazard Index. Therefore, the EPA is finalizing individual MCLs for PFOA and PFOS but not including these contaminants in the Hazard Index.

A few commenters provided feedback on the EPA's request for comment regarding the usage of significant figures to express the MCLs. See discussion on this issue in section IV of this preamble above. In summary, after considering public comment, the EPA agrees that one (1) significant digit is appropriate for the individual PFAS for PFHxS, PFNA and HFPO–DA (*i.e.,* 10 ng/L rather than 10.0 ng/L), and Hazard Index MCL (*i.e.,* 1 rather than 1.0).

Some commenters asked about inclusion of other PFAS in the Hazard Index in future revisions. The agency believes the Hazard Index approach can be an adaptive and flexible framework for considering additional PFAS. The EPA is required to review NPDWRs every six years and determine which, if any, need to be revised (*i.e.,* the Six-Year Review Process). The purpose of the review is to evaluate current information for regulated contaminants and to determine if there is any new information on health effects, treatment technologies, analytical methods, occurrence and exposure, implementation and/or other factors that provides a health or technical basis to support a regulatory revision that will improve or strengthen public health protection. This process allows the agency to consider these and other information as appropriate in deciding whether existing NPDWRs should be identified as candidates for revision as required by SDWA.

Many commenters compared the proposed MCLs to existing state and international standards, regulations, and guidelines. In particular, these commenters acknowledge that several states have conducted their own rulemakings to promulgate MCLs and suggest that the EPA's analysis in support of the proposed MCLs is inconsistent with these state approaches. Further, these commenters ask the EPA to explain why certain states' cost-benefit analyses supported their respective levels and why the EPA's analysis is different. Regarding state PFAS regulations, the EPA disagrees with commenters who suggested that the agency should not develop regulations different from state-led actions. SDWA mandates Federal regulation where the EPA determines that a contaminant meets the criteria for regulation under the statute. Moreover, the EPA's rule sets a national standard in accordance with SDWA for certain PFAS in drinking water that provides important protections for all Americans served by PWSs. Please see discussion above in part A under this section for consideration for existing state and international standards.

A few commenters suggest a need for effective data management systems to implement the Hazard Index. These commenters indicated that it will be challenging to implement the Hazard Index as proposed due to the tracking of multiple contaminants and automating these data into existing data management systems. For discussion on rule implementation issues, including primacy agency record keeping and reporting requirements, please see section XI of this preamble.

Some commenters raised concerns that the EPA did not consider a sufficient range of regulatory alternatives. For example, a few commenters contend that the EPA violated 1412(b)(3)(C)(i) of SDWA and the Unfunded Mandates Reform Act (UMRA) because the agency did not identify and consider what they deem a

reasonable number of regulatory alternatives for PFHxS, PFNA, HFPO–DA and its ammonium salts, and PFBS. Specifically, these commenters cite that the EPA only considered a single HBWC and did not consider any alternatives to the Hazard Index MCL of 1 itself. The EPA disagrees with these commenters.

SDWA does not require the agency to consider any certain number of alternative MCLs or a range of alternatives. SDWA 1412(b)(3)(C)(i)(IV) only requires that in developing the HRRCA, the agency must consider the ''incremental costs and benefits associated with each alternative maximum contaminant level considered.'' Thus, the agency must conduct a cost-benefit analysis with each alternative MCL that is considered, if any. The EPA maintains that the proposed rule and regulatory alternatives considered at proposal met all requirements to consider alternatives. In the proposed rule, the EPA did not separately present changes in quantified costs and benefits for these approaches because the agency described that including individual MCLs in addition to the Hazard Index approach will be not change costs and benefits relative to the proposal (*i.e.,* the same number of systems will incur identical costs to the proposed option and the same benefits will be realized). For the final rule, the EPA has also estimated the marginal costs for the individual PFHxS, PFNA, and HFPO–DA MCLs in the absence of the Hazard Index (See chapter 5.1.3 and appendix N.4 of the EA for details). The EPA notes that the costs for the individual PFHxS, PFNA, and HFPO–DA MCLs have been considered in this final rule. For further discussion of how the EPA considered the costs of the five individual MCLs and the HI MCL, see section XII.A.4 of this preamble.

The EPA identified and analyzed a reasonable number of regulatory alternatives to determine the MCL requirement in the proposed rule as required by UMRA. UMRA's requirement to identify and consider a reasonable number of regulatory alternatives builds on the assessment of feasible alternatives required in E.O. 12866.[7] Specifically, as described in the proposed rule, the EPA considered an alternative approach to the one proposed that only used the Hazard Index MCL. The proposal took comment on establishing individual MCLs instead of and in addition to using a mixture-based approach for PFHxS, PFNA, HFPO–DA, and/or PFBS in mixtures. In that proposal, the EPA described how a traditional approach may be warranted should the EPA not finalize a regulatory determination for mixtures of these PFAS. Under this alternative, ''the proposed MCLG and MCL for PFHxS would be 9.0 ng/L; for HFPO–DA the MCLG and MCL would be 10.0 ng/L; for PFNA the MCLG and MCL would be 10.0 ng/L; and for PFBS the MCLG and MCL would be 2000.0 ng/L.'' The agency requested comment on these alternatives for PFHxS, PFNA, HFPO–DA, and PFBS and whether these individual MCLs instead of or in addition to the Hazard Index approach would change public health protection, improve clarity of the rule, or change costs. Additionally, the EPA considered alternative mixture-based approaches such as a target organ-specific Hazard Index (TOSHI) or relative potency factor (RPF) approach. The agency requested comment on these approaches. Based on the EPA's technical expertise, the agency determined that the Hazard Index is the most cost-effective and least burdensome alternative for purposes of UMRA because this approach for mixtures that achieves the objectives of the rule because of the level of protection afforded for the evaluation of chemicals with diverse (but in many cases shared) health endpoints. The EPA followed agency chemical mixture guidance (USEPA, 1986; USEPA, 1991b; USEPA, 2000a, which explain that when the Hazard Index value is greater than one (1) then risk is indicated (because exposure exceeds toxicity). The agency did not propose alternative Hazard Index values (*i.e.,* higher Hazard Index values) because the EPA determined that a Hazard Index MCL of 1 is feasible: multiple treatment technologies are available and are found effective to treat to or below the MCL; the costs of applying these technologies to large metropolitan water systems are reasonable; and there are analytical methods available to reliably quantify the four PFAS captured in the Hazard Index MCL. In addition, these alternative Hazard Index or mixture-based approaches would not provide sufficient protection against dose-additive health concerns from co-occurring PFAS. For example, a higher Hazard Index value (*e.g.,* Hazard Index equal to 2) allows for exposure to be greater than the toxicity and will not result in a sufficient health-protective standard that is close as feasible to the MCLG, which is a level at which there are no known or anticipated adverse effects on human health and allows for an adequate margin of safety. The EPA notes that commenters have not provided support justifying an alternative MCL standard for the Hazard Index. For additional discussion on UMRA, please see chapter 9 of USEPA (2024g).

3. Final Rule

Through this action, the EPA is promulgating the Hazard Index MCL for mixtures of two or more of PFHxS, PFNA, HFPO–DA and PFBS. The following equation provides the calculation of the PFHxS, PFNA, HFPO–DA, and PFBS Hazard Index MCL as finalized:

$$HI\ MCL = \left(\frac{[HFPO-DA_{ng/L}]}{[10\ ng/L]}\right) + \left(\frac{[PFBS_{ng/L}]}{[2000\ ng/L]}\right) + \left(\frac{[PFNA_{ng/L}]}{[10\ ng/L]}\right) + \left(\frac{[PFHxS_{ng/L}]}{[10\ ng/L]}\right)$$

Where:

$HFPO\text{–}DA_{water}$ = monitored concentration of HFPO–DA in ng/L;

$PFBS_{water}$ = monitored concentration of PFBS;

$PFNA_{water}$ = monitored concentration of PFNA and

$PFHxS_{water}$ = monitored concentration of PFHxS

The presence of PFBS can only trigger an MCL violation if it is present as part of a mixture with at least one of the other three PFAS (PFHxS, PFNA and

[7] See OMB Memorandum M–95–09, Guidance for Implementing Title II of S.1.

HFPO–DA). As such, elevated PFBS concentrations that would normally cause a Hazard Index exceedance in isolation will not cause a violation if none of the other three PFAS are present in the mixture. The EPA is promulgating individual MCLs for PFHxS, PFNA, and HFPO–DA as well the Hazard Index MCL for mixtures of PFHxS, PFNA, HFPO–DA and PFBS concurrent with final regulatory determinations for these contaminants (please see section III of this preamble for additional discussion on the EPA's regulatory determinations).

The EPA has determined that it is feasible to set the MCL at the same level as the MCLG for mixtures of PFHxS, PFNA, HFPO–DA and PFBS as current BATs can remove each contaminant to a level equal to or below their respective HBWC. In addition, there are analytical methods available for these contaminants and the PQL for each contaminant is below the level established by the MCLG. The EPA also considered costs and determined that establishing a Hazard Index MCL of 1 is reasonable based on consideration of the costs to large metropolitan water systems. These considerations support a determination that a Hazard Index MCL of 1 for mixtures of two or more of PFHxS, PFNA, HFPO–DA and PFBS is feasible and therefore the EPA is setting the MCL at the same level as the MCLG. The EPA's MCL of 1 establish a ''maximum permissible level of contaminant in water'' because it is a limit for a mixture with PFAS components that must be met before the water enters the distribution system. Public water systems use their monitoring results as inputs into the Hazard Index equation to determine whether they are delivering water to any user that meets the MCL. For additional discussion regarding the derivation of the individual HBWCs and MCLGs, please see discussion in section III and IV of this preamble above.

C. Individual MCLs: PFHxS, PFNA and HFPO–DA

1. Proposal

As described in section V.B of this preamble above, the EPA proposed an MCL for mixtures of PFHxS, PFNA, HFPO–DA and PFBS based on a Hazard Index. The EPA proposed to address its preliminary regulatory determinations for PFHxS, PFNA, HFPO–DA, and/or PFBS and mixtures of these PFAS together through the Hazard Index approach. The proposal defined a mixture as containing one or more of the four PFAS and therefore covered each contaminant individually if only one of the four PFAS occurred. The EPA considered and took comment on establishing individual MCLGs and MCLs in lieu of or in addition to the Hazard Index approach for mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS.

2. Summary of Major Public Comments and EPA Responses

Commenters were mixed on the EPA's request for public comment on the establishment of stand-alone MCLs in lieu of or in addition to the Hazard Index MCL. Many of the comments were related to risk communications and messaging to consumers. While several commenters favored stand-alone MCLs in lieu of the Hazard Index to improve communications to their customers, several other commenters recommended stand-alone MCLs in addition to the Hazard Index MCL to achieve this purpose. Several commenters opposed individual MCLs for some or all of the PFAS because they believe it may complicate risk communication. After consideration of public comments, the EPA is addressing the final individual regulatory determination for PFHxS, HFPO–DA, and PFNA by promulgating individual MCLGs and NPDWRs for PFHxS, HFPO–DA, and PFNA. The EPA is addressing the final mixture regulatory determination by promulgating a Hazard Index MCLG and NPDWR for mixtures containing two or more of PFHxS, PFNA, HFPO–DA, and PFBS. This approach avoids confusion caused by the EPA's proposal that covered all the preliminary regulatory determinations in one Hazard Index standard. The EPA agrees that proper risk communication is an important focus for water systems and believes that finalizing individual MCLs for PFHxS, PFNA and HFPO–DA may help support risk communication as utilities and the public may be more familiar with this regulatory framework. At the same time, since those individual MCLs do not address additional risks from co-occurring PFAS, the EPA is finalizing a Hazard Index MCL to address dose additive health concerns associated with mixtures of two or more of PFHxS, PFNA, HFPO–DA, and PFBS that co-occur in drinking water. For additional discussion on the Hazard Index approach and other mixture-based approaches (*e.g.,* TOSHI), please see section IV of this preamble above.

3. Final Rule

The EPA is promulgating individual MCLs for PFHxS, PFNA and HFPO–DA at the same level as their respective MCLGs (which are equivalent to the HBWCs). The EPA is finalizing individual MCLs as follows: HFPO–DA MCL = 10 ng/L; PFHxS MCL = 10 ng/L; and PFNA MCL = 10 ng/L. The EPA is promulgating individual MCLs for PFHxS, PFNA, and HFPO–DA as well the Hazard Index MCL for mixtures of PFHxS, PFNA, HFPO–DA and PFBS concurrent with final determinations for these contaminants (please see section III of this preamble for additional discussion on the EPA's regulatory determinations).

The agency considered feasibility as defined by SDWA and the EPA's feasibility justification for these individual PFHxS, PFNA and HFPO–DA MCLs are the same and based on the same information as the Hazard Index MCL discussed in V.B above. The EPA further notes that the Hazard Index MCLG applies to the entire mixture but the EPA's technical justification for the underlying values (*i.e.,* HBWCs) are the same as the individual MCLGs in this rule. In summary, the EPA has determined that it is feasible to set the individual MCLs at the MCLGs for PFHxS, PFNA and HFPO–DA because current BATs can remove each contaminant to a level equal to or below their respective MCLGs. In addition, there are analytical methods available for these contaminants and the practical quantitation level (PQL) for each contaminant is below the level established by the MCLG. The EPA also considered costs and determined that establishing individual MCLs of 10 ng/L for PFHxS, PFNA, and HFPO–DA is reasonable based on consideration of the costs to large metropolitan water systems. These considerations support a determination that individual MCLs of 10 ng/L for PFHxS, PFNA, and HFPO–DA are feasible and therefore the EPA is setting the MCL at the same level as the MCLG. For additional discussion regarding the derivation of the individual HBWCs and MCLGs, please see section III and IV of this preamble above.

VI. Occurrence

The EPA relied on multiple data sources, including Unregulated Contaminant Monitoring Rule (UCMR) 3 and state finished water data, to evaluate the occurrence of PFOA, PFOS, PFHxS, PFNA, and HFPO–DA and probability of co-occurrence of these PFAS and PFBS. The EPA also incorporated both the UCMR 3 and some state data into a Bayesian hierarchical model which supported exposure estimates for select PFAS at lower levels than were measured under UCMR 3. The EPA has utilized similar statistical approaches in past regulatory actions to inform its decision making, particularly where a contaminant's occurrence is at low concentrations

(USEPA, 2006c). The specific modeling framework used to inform this regulatory action is based on the peer-reviewed model published in Cadwallader et al. (2022). Collectively, these data and the occurrence model informed estimates of the number of water systems (and associated population) expected to be exposed to levels of the final and proposed alternative MCLs for PFOA and PFOS, the final MCLs for PFHxS, PFNA, and HFPO–DA, and the final Hazard Index MCL for PFHxS, PFNA, HFPO–DA, and PFBS.

The EPA notes that, as described in sections III and V of this preamble, the EPA is finalizing individual Maximum Contaminant Levels (MCLs) for three of the four Hazard Index PFAS (PFHxS, PFNA, and HFPO–DA) at 10 ng/L each. An analysis of occurrence relative to HRLs for PFHxS, PFNA, and HFPO–DA (which are the same as the final individual MCLs for these compounds at 10 ng/L) using UCMR 3 data and updated state datasets is presented in section III.C of this preamble and further described in the *Occurrence Technical Support Document* (USEPA, 2024b). The information in the following sections supports the agency's finding that PFHxS, PFNA, and HFPO–DA occur at a frequency and level of public health concern as discussed in section III.C of this preamble.

A. UCMR 3

1. Proposal

UCMR 3 monitoring occurred between 2013 and 2015 and is currently the best nationally representative finished water dataset for any PFAS, including PFOA, PFOS, PFHxS, PFNA, and PFBS. Under UCMR 3, 36,972 samples from 4,920 public water systems (PWSs) were analyzed for these five PFAS. PFOA was found above the UCMR 3 minimum reporting level (20 ng/L) in 379 samples at 117 systems serving a population of approximately 7.6 million people located in 28 states, Tribes, or U.S. territories. PFOS was found in 292 samples at 95 systems above the UCMR 3 minimum reporting level (40 ng/L). These systems serve a population of approximately 10.4 million people located in 28 states, Tribes, or U.S. territories. PFHxS was found above the UCMR 3 minimum reporting level (30 ng/L) in 207 samples at 55 systems that serve a population of approximately 5.7 million located in 25 states, Tribes, and U.S. territories. PFBS was found in 19 samples at 8 systems above the UCMR 3 minimum reporting level (90 ng/L). These systems serve a population of approximately 350,000 people located in 5 states, Tribes, and U.S. territories. Lastly, PFNA was found above the UCMR 3 minimum reporting level (20 ng/L) in 19 samples at 14 systems serving a population of approximately 526,000 people located in 7 states, Tribes, and U.S. territories.

2. Summary of Major Public Comments and EPA Responses

Some commenters supported the EPA's use of the best available public health information including data from UCMR 3 and state occurrence data. A few commenters criticized the use of UCMR 3 data, stating that the data suffer from limitations. These commenters expressed concern over the high minimum reporting levels, the exclusion of many small systems, and the lack of national monitoring of HFPO–DA. Some of these commenters assert that UCMR 3 does not represent best available occurrence data for this rule. The EPA disagrees with these commenters. While UCMR 3 does have higher reporting limits than those available through current analytical methods, the data still provides the best available nationwide occurrence data to inform the occurrence and co-occurrence profile for the regulated PFAS for which monitoring was conducted. These data are also a critical component of the EPA's model to estimate national level occurrence for certain PFAS and ensure it is nationally representative (see subsection E of this section). The EPA also disagrees that the UCMR 3 excludes small water systems as it included a statistically selected, nationally representative sample of 800 small drinking water systems. Regarding commenter concerns for lack of UCMR monitoring data on HFPO–DA, the agency notes that the EPA examined recent data collected by states who have made their data publicly available. A discussion of these data and public comments on this information is presented in sections III.C and VI.B of this preamble.

3. Final Rule

After considering public comment, the EPA maintains that UCMR 3 data are the best available, complete nationally representative dataset and they play an important role in supporting the EPA's national occurrence analyses, demonstrating occurrence and co-occurrence of the monitored PFAS in drinking water systems across the country that serve millions of people.

B. State Drinking Water Data

1. Proposal

The agency has supplemented the UCMR 3 data with more recent data collected by states who have made their data publicly available. In general, the large majority of these more recent state data were collected using newer EPA-approved analytical methods and state results reflect lower reporting limits than those in the UCMR 3. State results show continued occurrence of PFOA, PFOS, PFHxS, PFNA, and PFBS in multiple geographic locations. These data also show these PFAS occur at lower concentrations and significantly greater frequencies than were measured under the UCMR 3 (likely because the more recent monitoring was able to rely on more sensitive analytical methods). Furthermore, these state data include results for more PFAS than were included in the UCMR 3, including HFPO–DA.

At the time of proposal, the EPA evaluated publicly available state monitoring data from 23 states, representing sampling conducted on or before May 2021. The EPA acknowledged that the available data were collected under varying circumstances; for example, targeted vs. non-targeted monitoring (*i.e.,* monitoring not conducted specifically in areas of known or potential contamination). Due to the variability in data quality, the EPA further refined this dataset based on representativeness and reporting limitations, resulting in detailed technical analyses using a subset of the available state data. A comprehensive discussion of all the available state PFAS drinking water occurrence data was included in the *Occurrence Technical Support Document* (USEPA, 2023l).

2. Summary of Major Public Comments and EPA Responses

Commenters generally supported the use of state datasets. A few commenters discussed their own PFAS occurrence data, some of which were provided to the EPA, relative to the EPA's proposed regulatory levels and/or provided summaries of other monitoring efforts. Where possible, the EPA presents this information within its occurrence analysis—see the *Other Data* sections of USEPA (2024b). A few commenters recommended that the EPA expand the datasets used for the final rule to include additional and updated state sampling information. The EPA agrees with these suggestions to rely on additional and updated sampling information in order to evaluate PFAS occurrence in drinking water. Therefore,

the agency has included updated information in its occurrence analyses as described in section VI.B.3 of this preamble. The EPA notes that this information is consistent with the analyses contained in the proposal for this action.

A few commenters criticized the use of state datasets in occurrence analyses. These commenters claimed that the state datasets were insufficient for national extrapolation and not dependable due to being collected under variable circumstances. These commenters expressed the need for enhanced quality control (QC) by the EPA to exclude data below reasonable reporting thresholds. The agency disagrees with commenters who contend that state datasets are insufficient for national extrapolation. For both the rule proposal and this final action, the EPA took QC measures to ensure the EPA used the best available data for national extrapolation. For example, the EPA acknowledged in the proposal that states used various reporting thresholds when presenting their data, and for some states there were no clearly defined reporting limits. The EPA identified state reporting thresholds where possible and, when appropriate, incorporated individual state-specific thresholds when conducting data analyses. For other states, the EPA presented the data as provided by the state. Due to the reporting limitations of some of the available state data (*e.g.,* reporting combined analyte results rather than individual analyte results), the EPA did not utilize all of these data in the subsequent occurrence analyses/co-occurrence analyses. Specific data analysis criteria (*e.g.,* separation of non-targeted and targeted monitoring results) were also applied. Additionally, the agency also verified that the vast majority of the data were collected using EPA-approved methods. Further, the EPA reviewed all available data thoroughly to ensure that only finished drinking water data were presented. A description of the scope and representativeness of the state data was provided in the proposal of this action in the *PFAS Occurrence and Contaminant Background Support Document* (USEPA, 2023l). These include describing the states the EPA found to have publicly available data, identifying the reporting thresholds where possible, and distinguishing whether monitoring was non-targeted or targeted (*i.e.,* monitoring in areas of known or potential PFAS contamination). These QC measures ensured that the EPA utilized the best available data for national extrapolation.

3. Final Rule

In the proposed rule preamble, the EPA discussed how states may have updated data available and that additional states have or intend to conduct monitoring of finished drinking water and that the agency would consider these additional data to inform this final regulatory action. After consideration of all the public comments on this issue, the EPA has updated its analysis of state monitoring data by including results that were available as of May 2023. This updated state dataset includes publicly available data from 32 states: Alabama, Arizona, California, Colorado, Delaware, Georgia, Idaho, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin. The dataset includes data from 9 states that were not available at the time of proposal.

Tables 4 and 5 in this section demonstrate the number and percent of samples with PFOA and PFOS based on state-reported detections, and the number and percent of systems with PFOA and PFOS based on state-reported detections, respectively, for the non-targeted state finished water monitoring data. Section III.B. of this preamble describes the state reported finished water occurrence data for PFHxS, PFNA, HFPO–DA, and PFBS data.

Vermont	38	6.7%	49	8.7%
Wisconsin	70	29.3%	66	27.6%

Notes:

[1] Detections determined by individual state reported limits which are not defined consistently across all states.

[2] State only reported detections (i.e., there was no information on total number of samples collected)

As illustrated in Tables 4 and 5, there is a wide range in PFOA and PFOS results between states. Nonetheless, more than one-third of states that conducted non-targeted monitoring observed PFOA and/or PFOS at more than 25 percent of systems. Among the detections, PFOA concentrations ranged from 0.21 to 650 ng/L with a range of median concentrations from 1.27 to 5.61 ng/L, and PFOS concentrations ranged from 0.24 to 650 ng/L with a range of median concentrations from 1.21 to 12.1 ng/L.

Monitoring data for PFOA and PFOS from states that conducted targeted monitoring efforts, including 15 states, demonstrate results consistent with the non-targeted state monitoring. For example, in Pennsylvania, 26.3 and 24.9 percent of monitored systems found PFOA and PFOS, respectively, with reported concentrations of PFOA ranging from 1.7 to 59.6 ng/L and PFOS ranging from 1.8 to 94 ng/L. California reported 35.8 and 39.0 percent of monitored systems found PFOA and PFOS, respectively, including reported concentrations of PFOA ranging from 0.9 to 190 ng/L and reported concentrations of PFOS from 0.4 to 250 ng/L. In Maryland, PFOA and PFOS were found in 57.6 and 39.4 percent of systems monitored, respectively, with reported concentrations of PFOA ranging from 1.02 to 23.98 ng/L and reported concentrations of PFOS ranging from 2.05 to 235 ng/L. In Iowa,

PFOA and PFOS were found in 11.2 and 12.1 percent of systems monitored, respectively, with reported concentrations of PFOA ranging from 2 to 32 ng/L and reported concentrations of PFOS ranging from 2 to 59 ng/L.

As discussed above in section V of this preamble, the EPA is finalizing individual MCLs of 4.0 ng/L for PFOA and PFOS, individual MCLs for PFHxS, PFNA, and HFPO–DA, and a Hazard Index level of 1 for PFHxS, PFNA, HFPO–DA, and PFBS. The EPA also evaluated occurrence for the regulatory alternatives discussed in section V of this preamble, including alternative MCLs for PFOA and PFOS of 5.0 ng/L and 10.0 ng/L. Table 6, Table 7, and Table 8 demonstrate, based on available state data, the total reported number and percentages of monitored systems that exceed these proposed and alternative MCL values across the non-targeted state finished water monitoring data.

Table 6: Non-Targeted State PFOS and PFOA Finished Water Data – Summary of Monitored Systems with State Reported Detections[1] ≥ 4.0 ng/L

State	PFOS Monitored Systems with State Reported Detections	PFOS Monitored Systems with State Reported Detections (Percent)	PFOA Monitored Systems with State Reported Detections	PFOA Monitored Systems with State Reported Detections (Percent)

Notes:

[1] Detections determined by individual state reported limits which are not defined consistently across all states.

[2] State only reported detections (i.e., there was no information on total number of samples collected)

BILLING CODE 6560–50–C

Based on the available state data presented in Table 6, Table 7, and Table 8, within 20 states that conducted non-targeted monitoring there are 1,260 systems with results above the PFOS MCL of 4.0 ng/L and 1,577 systems with results above the PFOA MCL of 4.0 ng/L. These systems serve populations of 12.5 and 14.4 million people, respectively. As expected, the number of systems exceeding either of the proposed alternative MCLs decreases as the values are higher; however, even at the highest alternative PFOS and PFOA MCL values of 10.0 ng/L, there are still 491 and 612 systems with exceedances, serving populations of approximately 5.3 and 6.0 million people, respectively.

Monitoring data for PFOA and PFOS from states that conducted targeted sampling efforts shows additional systems that would exceed the final and alternative MCLs. For example, in California, Maine, Maryland, and Pennsylvania, 30.9 percent (38 PWSs), 27.8 percent (5 PWSs), 25 percent (18 PWSs), and 19.3 percent (66 PWSs) of monitored systems reported results above the proposed PFOS MCL of 4.0 ng/L, respectively, and 29.3 percent (36 PWSs), 27.8 percent (5 PWSs), 25 percent (18 PWSs), and 21.1 percent (72 PWSs) of monitored systems reported results above the proposed PFOA MCL of 4.0 ng/L, respectively. While these frequencies may be anticipated given the sampling locations, within only these four states that conducted limited, targeted monitoring, the monitored

systems with results above the proposed PFOS MCL and proposed PFOA MCL serve significant populations of approximately 5.7 million people and approximately 5.6 million people, respectively.

C. PFAS Co-Occurrence

While the discussions in sections III.B, VI.A. and VI.B of this preamble describe how PFOA, PFOS, PFHxS, PFNA, and HFPO–DA occur individually, numerous studies and analyses have documented that PFAS co-occur in finished drinking water (Adamson et al., 2017; Cadwallader et al., 2022; Guelfo and Adamson, 2018). As discussed in section V of this preamble, the EPA is finalizing regulation of mixtures that include at least two of PFHxS, PFNA, HFPO–DA, and PFBS (collectively referred to as ''Hazard Index PFAS'') as part of a Hazard Index approach.

1. Proposal

In the March 2023 proposal preamble, the EPA presented occurrence data that illustrated the extent to which PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS co-occur in drinking water. Co-occurrence analyses primarily utilized available non-targeted state PFAS finished drinking water data, though UCMR 3 data analysis is presented in the *PFAS Occurrence and Contaminant Background Support Document* (USEPA, 2024b). The EPA also conducted two separate analyses using state datasets to determine the extent to which these six PFAS co-occur: a groupwise analysis and a pairwise analysis.

When analyzing PFAS co-occurrence, groupwise analysis is important for determining whether the presence of PFOA and PFOS provides insight regarding the likelihood of Hazard Index PFAS being present as well, which has broad implications for public health. This is because occurrence information for the Hazard Index PFAS is less extensive than the occurrence information for PFOA and PFOS due to fewer states monitoring the Hazard Index PFAS; therefore, establishing co-occurrence with PFOA and PFOS helps with understanding the extent of general Hazard Index PFAS occurrence. For the groupwise analysis, the six PFAS were separated into two groups—one consisted of PFOS and PFOA and the other group included the four Hazard Index PFAS. The analysis broke down the systems and samples according to whether chemicals from the respective groups were detected. Results were also shown separated by state. Results generally indicated that when PFOA or PFOS were found, Hazard Index PFAS were considerably more likely to also be found. This implies that, for systems that only measured PFOA and/or PFOS, detected those PFAS, and did not measure the Hazard Index PFAS, the Hazard Index PFAS are more likely to also be present than if PFOA and/or PFOS were not detected. At a national level, since many systems monitored for PFOA and PFOS only and detected these PFAS, this means that estimates of Hazard Index PFAS occurrence based on state Hazard Index PFAS data alone are likely to be underestimated. Given that the state datasets varied in the specific PFAS that were monitored, the analysis also compared the number of Hazard Index PFAS analyzed with the number of Hazard Index PFAS reported present. As more Hazard Index PFAS were analyzed, more Hazard Index PFAS were found. Further, systems and samples where Hazard Index PFAS were found were more likely to find multiple Hazard Index PFAS than a single Hazard Index PFAS (when monitoring for 3 or 4 Hazard Index PFAS).

Given that the groupwise co-occurrence analysis established that the Hazard Index PFAS, as a group, occur with a substantial level of frequency, particularly alongside PFOA or PFOS, the pairwise co-occurrence is relevant for understanding how the individual PFAS included in the rule co-occur with each other. The pairwise co-occurrence analysis explored the odds ratios for each unique pair of PFAS included in the regulation. Pairwise co-occurrence through odds ratios showed statistically significant relationships between nearly all unique pairs of PFAS included in the proposed rule. Odds ratios reflect the change in the odds of finding one chemical (*e.g.,* Chemical A) given that the second chemical (*e.g.,* Chemical B) is known to be present compared to the odds of finding it if the second chemical is not present. For example, an odds ratio of 2 would indicate that the presence of the second chemical would be expected to double the odds of the first chemical being reported present. An odds ratio of 1 indicates that there is no association between the two chemicals. At the system level, point odds ratios estimates ranged from 1.7–142.7, indicating that in some instances the odds of finding one PFAS increased by more than two orders of magnitude if the other PFAS was reported present (in other words, for some PFAS combinations, if one PFAS is present, there is more than 100 times the odds of certain other PFAS being present). HFPO–DA and PFHxS was the only pair of PFAS chemicals included in the proposed regulation that did not have a statistically significant relationship; 1 fell within the 95 percent confidence interval, indicating that the odds ratio was not determined to be statistically significantly different from 1.

In the proposed rule, the agency determined that, both as a group and as individual chemicals, the Hazard Index PFAS had a higher likelihood of being reported if PFOS or PFOA were present, First, the groupwise analysis established that the Hazard Index PFAS, in addition to PFOA and PFOS, occur at a significant frequency in drinking water. Then, the pairwise analysis demonstrated that PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS (the individual PFAS) generally co-occur with each other, as opposed to occurring independently. These data further support the EPA's finding that these PFAS are likely to occur, and that there is a substantial likelihood that combinations of PFHxS, PFNA, HFPO–DA, and PFBS co-occur in mixtures with a frequency of public health concern in drinking water systems.

2. Summary of Major Public Comments and EPA Responses

Some commenters agreed with the agency's conclusion in the March 2023 proposal that the PFAS included in the regulation appeared to meaningfully co-occur. However, some other commenters stated that they believed the data used to assess PFAS co-occurrence were too limited to make substantive conclusions. The EPA disagrees that the data were too limited or that the co-occurrence analysis was inconclusive. Based on the non-targeted state monitoring data used in the co-occurrence analysis (from 11 states), findings of the pairwise and groupwise analyses established a strong likelihood that these chemicals meaningfully co-occur in drinking water. This was observed through odds ratios statistically significantly greater than 1 in the pairwise analysis as well as frequency at which multiple chemicals were detected in the groupwise analysis. Based on public comment, the agency has updated its analysis to include more recent non-targeted state data that became publicly available after the proposal analyses were finalized. This ensures that findings are up to date; as discussed further in the following subsection, the more recent data confirms the proposal analysis.

3. Final Rule

After considering public comment and updating analyses, the EPA concluded that the co-occurrence analyses continue to support the

premise in the proposed rule that PFAS are likely to co-occur and support the EPA's final rule approach. Following is a discussion and presentation of information related to the EPA's co-occurrence analysis for this final rule effort. These data include all data from the rule proposal, in addition to the updated data the EPA incorporated based on public comment. As discussed elsewhere in this preamble, the newer data confirm the EPA's conclusions from proposal.

a. Groupwise Chemical Co-Occurrence

Table 9 shows the distribution of systems and samples according to whether states reported detections for any Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS) and whether they also reported detections of PFOS or PFOA. USEPA (2024b) provides additional information for this analysis.

Table 9: Non-Targeted State PFAS Finished Water Data – Samples and Systems Binned According to Whether PFOS or PFOA were Reported by States and Whether Additional Hazard Index PFAS were Reported

Type	No PFOS or PFOA Reported		PFOS or PFOA Reported		Total Count
	No HI PFAS Reported	At Least One HI PFAS Reported	No HI PFAS Reported	At Least One HI PFAS Reported	
Samples	28,249 (57.8%)	1,321 (2.7%)	7,365 (15.1%)	11,954 (24.5%)	48,889
Systems	8,576 (70.6%)	401 (3.3%)	1,079 (8.9%)	2,089 (17.2%)	12,145

Considering eligible samples and systems within the aggregated state dataset, states reported either PFOA, PFOS, or one or more Hazard Index PFAS in 42.2 percent (20,640 of 48,889) of samples and 29.4 percent (3,569 of 12,145) of systems. When any PFAS (among PFOA, PFOS, and the Hazard Index PFAS) were reported, at least one Hazard Index PFAS was also reported in 64.3 percent (13,275 of 20,640) of samples and at 69.8 percent (2,490 of 3,569) of systems. Further, among samples and systems that reported PFOS or PFOA, at least one Hazard Index PFAS was reported in 61.9 percent (11,954 of 19,319) of samples and at 65.9 percent (2,089 of 3,168) of systems. This demonstrated strong co-occurrence of Hazard Index PFAS with PFOA and PFOS and a substantial likelihood (over 60 percent) of at least one Hazard Index PFAS being present at systems reporting the presence of PFOS or PFOA. Overall, one or more Hazard Index PFAS were reported at about 20.5 percent (2,490 of 12,145) of systems included in the aggregated state dataset of non-targeted monitoring. If this percentage were extrapolated to the nation, one or more Hazard Index PFAS would be found in over 13,000 systems. Table 10 shows the distribution of systems in a similar manner but provides a breakdown by state and includes only systems that monitored for either three or four of the Hazard Index PFAS.

BILLING CODE 6560–50–P

Table 10: Non-Targeted State PFAS Finished Water Data – Systems that Sampled for 3 or 4 Hazard Index PFAS Binned According to Whether PFOS or PFOA were Reported and Whether Any Additional Hazard Index PFAS were Reported by State

SC	187 (62.8%)	11 (3.7%)	28 (9.4%)	72 (24.2%)	298
TN	1 (100.0%)	0 (0.0%)	0 (0.0%)	0 (0.0%)	1
VT	492 (87.2%)	14 (2.5%)	26 (4.6%	32 (5.7%)	564
WI	140 (60.1%)	24 (10.3%)	10 (4.3%)	59 (25.3%)	233

Tennessee only had data from one system which did not report the presence of any of the six PFAS. Otherwise, the percentage of systems included in Table 10 that reported any Hazard Index PFAS ranged from 3.9 to 52.4 percent of systems when broken down by state, with eight states exceeding 20 percent of systems. The percentage of systems that reported any PFAS ranged from 5.5 to 73.0 percent. Many systems and/or samples that were included in the aggregated state dataset did not monitor for all four Hazard Index PFAS. It is possible that more systems would have reported the presence of Hazard Index PFAS if they had monitored for all four Hazard Index PFAS. Additionally, as demonstrated in Table 10, when PFOA and/or PFOS were reported, at least one of the Hazard Index PFAS chemicals were also frequently reported. For systems that did not measure Hazard Index PFAS but measured and detected PFOA and/or PFOS, the groupwise analysis demonstrates that the Hazard Index PFAS were more likely to have been present in those systems as well. Table 11 presents system counts for systems where PFOS or PFOA were reported according to a) how many Hazard Index PFAS were monitored and b) how many Hazard Index PFAS were reported present.

Table 11: Non-Targeted State PFAS Finished Water Data – System Counts According to Hazard Index PFAS Analyzed and Reported Present for Systems Where PFOS and PFOA were Reported

HI Analyzed	HI Reported Present					Total
	0	1	2	3	4	
1	148 (65.5%)	78 (34.5%)	-	-	-	226
2	138 (48.6%)	85 (29.9%)	61 (21.5%)	-	-	284
3	282 (36.5%)	183 (25.0%)	183 (25.0%	84 (11.5%)	-	732
4	511 (26.5%)	449 (23.3%)	668 (34.7%)	278 (14.4%)	20 (1.0%)	1,926
Total	1,079	795	912	362	20	

Among systems that reported the presence of PFOS and/or PFOA, the fraction of systems that also reported any Hazard Index PFAS tended to increase as systems monitored for more of the Hazard Index PFAS. At systems monitoring for a single Hazard Index PFAS, 34.5 percent reported a positive result at some point during sampling. This increased to 73.5 percent of systems reporting the presence of at least one Hazard Index PFAS when monitoring for all four Hazard Index PFAS. Not only did the fraction of systems reporting the presence of any Hazard Index PFAS increase as the number of Hazard Index PFAS monitored increased, so did the number of Hazard Index PFAS that were reported as present. When four Hazard Index PFAS were monitored, nearly 50 percent of systems reported the presence of two to three of the Hazard Index PFAS. Thus, if PFOS or PFOA are reported, there is a reasonable likelihood that multiple Hazard Index PFAS would be present as well.

b. Pairwise Chemical Co-Occurrence

In addition to considering the co-occurrence of six PFAS as two groups, the EPA conducted a pairwise analysis to further explore co-occurrence relationships. Table 12 shows the calculated system-level odds ratios for every unique pair of PFAS chemicals evaluated. The equation for calculating odds ratios is symmetrical. Because of this, in a given row it does not matter which chemical is ''Chemical A'' and which is ''Chemical B.'' Additional information on odds ratios may be found in USEPA (2024b) and a brief explanation is described following Table 12 as well as in section III.C of this preamble.

Table 12: Non-Targeted State PFAS Finished Water Data – System-level Counts of Pairwise Chemical Occurrence and Odds Ratios Calculated from Aggregated State Dataset PFAS Samples for PFOA, PFOS, and HI PFAS

Chem A	Chem B	Chems A and B Reported	Only Chem B Reported	Only Chem A Reported	Neither Chem Reported	Odds Ratio [95% CI]
HFPO-DA	PFBS	33	1,532	21	7,614	7.8 [4.5-13.5]
HFPO-DA	PFHxS	23	1,137	31	8,007	5.2 [3.1-8.9]
HFPO-DA	PFNA	20	327	34	8,818	15.9 [9.1-27.7]
HFPO-DA	PFOA	39	1,665	16	7,480	11.0 [6.2-19.5]
HFPO-DA	PFOS	37	1,530	18	7,613	10.2 [5.9-17.9]
PFBS	PFHxS	1,282	245	721	9,093	66.0 [56.4-77.2]
PFBS	PFNA	423	85	1,510	8,735	28.8 [22.7-36.6]
PFBS	PFOA	1,605	852	401	8,485	39.9 [35.0-45.4]
PFBS	PFOS	1,497	692	509	8,645	36.7 [32.4-41.7]
PFHxS	PFNA	415	108	1,115	9,455	32.6 [26.1-40.7]
PFHxS	PFOA	1,374	1,259	230	8,820	41.9 [35.9-48.7]
PFHxS	PFOS	1,369	939	235	9,140	56.7 [48.6-66.2]
PFNA	PFOA	575	2,190	23	8,764	100.1 [65.9-151.8]
PFNA	PFOS	555	1,864	43	9,089	62.9 [46.0-86.1]
PFOA	PFOS	2,304	341	729	9,972	92.4 [80.6-106.0]

BILLING CODE 6560–50–C

Odds ratios reflect the change in the odds of finding one chemical (*e.g.,* Chemical A) given that the second chemical (*e.g.,* Chemical B) is known to be present compared to the odds of finding it if the second chemical is not present. For example, as shown in Table 12, the point estimate of 92.4 for the odds ratio between PFOA and PFOS indicates that the odds of finding PFOA after knowing that PFOS has been observed are 92.4 times what the odds would have been if PFOS was not observed, and vice versa. For every pair of chemicals, both the point estimate and 95 percent confidence interval (CI) were above 1, indicating significant increases in the likelihood of detecting one chemical if the other is present.

Both as a group and as individual chemicals, the Hazard Index PFAS had a higher likelihood of being reported if PFOS or PFOA were present. PFHxS, PFNA, HFPO–DA, and PFBS (the individual Hazard Index PFAS) are demonstrated to generally co-occur with each other, as well. These data support that there is a substantial likelihood that PFHxS, PFNA, HFPO–DA, and PFBS co-occur in mixtures with a frequency of public health concern in drinking water systems as discussed in section III.C of this preamble.

D. Occurrence Relative to the Hazard Index

1. Proposal

In the proposed rule, the EPA analyzed the available state data in comparison to the proposed Hazard Index MCL of 1.0 to evaluate the co-occurrence of PFHxS, PFNA, HFPO–DA, and PFBS. The EPA requested comment on the number of systems estimated to solely exceed the Hazard Index (but not the PFOA or PFOS MCLs) according to the approach outlined in USEPA (2024b).

2. Summary of Major Public Comments and EPA Responses

The EPA received comments on the analyses presented in the proposal of occurrence relative to the Hazard Index. Many commenters agreed that the Hazard Index PFAS co-occurred in mixtures at levels of health concern. Two of these comments came from states that conducted monitoring of Hazard Index PFAS post-UCMR 3 and stated that those occurrence data supported the EPA's findings. Several state agencies provided a summarized analysis of the number of systems expected to exceed the proposed Hazard Index of 1.0 in their state. The EPA notes that these estimates were based on the proposed Hazard Index, which included two significant figures. Since the EPA has determined to finalize the Hazard Index with one significant figure, these estimations are likely high. Nonetheless, these state data and the analyses provided by commenters provide illustrative confirmatory insight of the EPA's Hazard Index analyses (please see section IV of this preamble for additional discussion on the usage of significant figures).

One commenter suggested that a national dataset and model complete with all four Hazard Index PFAS are necessary to accurately estimate the number of systems that may exceed the Hazard Index. The EPA disagrees with the commenter; as described in section F, state data and model outputs were appropriately combined to estimate exceedance of the Hazard Index on a national level. Several commenters stated that there was a limited amount of available data to determine the prevalence of co-exposure of the Hazard Index compounds, and that further review would be needed prior to establishing the Hazard Index. The EPA disagrees with these commenters and believes that sufficient data were available to reasonably assess the occurrence of Hazard Index PFAS. An analysis of co-occurrence of Hazard Index compounds using a substantial amount of data encompassing tens of thousands of samples across over 10,000 systems is provided in section VI.C. of this preamble above and demonstrates that the four Hazard Index PFAS co-occur with each other as well as with PFOA and PFOS. One commenter suggested that more systems may exceed the Hazard Index than the PFOA and PFOS MCLs, since current treatment technologies have been optimized for PFOA and PFOS and not for other PFAS. The EPA's analysis of state datasets clearly contradicts this claim; using the best available data and scientifically robust analytical approaches, the EPA estimates more systems will exceed the PFOA and PFOS MCLs than the Hazard Index MCL. The use of a single significant figure for the Hazard Index MCL in this final rule will further increase the likelihood of this being the case.

3. Final Rule

The EPA used its updated state dataset to update analyses related to Hazard Index occurrence and found the analyses generally consistent with the proposal analyses. In the final rule, the EPA is reducing the number of significant figures used to determine Hazard Index exceedance following all calculations and rounding from two to one; this change had the effect of reducing system counts expected to exceed the Hazard Index. For purposes of the final analyses, only systems with an unrounded Hazard Index of 1.5 or greater were counted as an exceedance. Table 13 presents the total number and percentage of monitored systems with results above the proposed Hazard Index MCL based on state reported Hazard Index PFAS data for the states that conducted non-targeted monitoring and that sampled all four Hazard Index PFAS as a part of their overall monitoring efforts. The EPA notes that for equivalent comparison purposes Table 13 only accounts for samples that included reported values (including non-detects) of all four Hazard Index PFAS. As shown within the table, the majority of states evaluated had monitored systems with results above the proposed Hazard Index MCL, ranging from 0.35 to 3.17 percent of total monitored systems. For additional discussion on the usage of significant figures in this rule, please see section IV of this preamble.

Table 13: Non-Targeted State PFAS Finished Water Data – Summary of Total Number and Percent of Monitored Systems Exceeding the Hazard Index with Samples Containing Reported Values of All Four Hazard Index PFAS

State	Total Monitored Systems > Final HI of 1	Percent Systems > Final HI of 1
Colorado	2	0.50%
Illinois	7	0.70%
Indiana	0	0.00%
Kentucky	2	2.70%
Maryland	2	3.17%
Massachusetts	23	1.76%
Michigan	17	0.68%
Missouri	1	0.91%
New York	7	1.28%
New Hampshire	3	2.17%
North Dakota	0	0.00%
Ohio	16	1.08%
South Carolina	2	0.68%
Vermont	2	0.35%
Wisconsin	7	3.03%

Further evaluating the available state data related to the proposed Hazard Index MCL of 1, Table 14 presents the total number of systems that exceed the final Hazard Index of 1 based on state reported Hazard Index PFAS results for the same states shown in Table 13. However, in this case, the EPA also analyzed the same non-targeted state data, including additional samples even if those samples did not contain reported values (including non-detects) for all four Hazard Index PFAS (*i.e.,* exceeding the Hazard Index based on two or three Hazard Index PFAS with reported values included within a sample). Moreover, while these states did monitor for all four Hazard Index PFAS as a part of their overall monitoring, in a subset of those states some samples did not include reported data on all four Hazard Index PFAS (*i.e.,* values of one or more of the Hazard Index PFAS were not reported as non-detect, rather no value was reported). This analysis, presented in Table 14, shows an increase in the number of monitored systems exceeding the proposed Hazard Index of 1 and demonstrates prevalence of these PFAS at levels of concern, even when all four PFAS may not be included within a sample.

Table 14: Non-Targeted State PFAS Finished Water Data – Summary of Total Monitored Systems Exceeding the Hazard Index with Samples Containing Reported Values of 2 or More Hazard Index PFAS

State	Total Monitored Systems > Final HI of 1	Percent Systems > Final HI of 1
Colorado	2	0.50%
Illinois	7	0.70%
Indiana	0	0.00%
Kentucky	2	2.70%
Maine	4	0.62%
Maryland	7	5.19%
Massachusetts	31	2.34%
Michigan	17	0.68%
Missouri	1	0.87%
New Jersey	27	4.06%
New York	18	2.67%
New Hampshire	17	3.04%
North Dakota	0	0.00%
Ohio	16	1.08%
South Carolina	2	0.67%
Vermont	2	0.35%
Wisconsin	7	2.95%

Combining the non-targeted monitoring results shown previously with targeted state monitoring conducted for all four Hazard Index PFAS showed at least 864 samples from 211 PWSs in 21 states had results above the final Hazard Index of 1. These systems serve approximately 4.7 million people. More information on occurrence in state monitoring is available in section III.C of this preamble and in USEPA (2024b).

In summary, the finished water data collected under both non-targeted and targeted state monitoring efforts from 32 states showed there are at least 1,772 PWSs serving a total population of approximately 24.3 million people that have at least one result exceeding the final PFOA MCL of 4.0 ng/L. In those same 32 states, there are also at least 1,432 PWSs serving a total population of approximately 21.0 million people that have at least one result exceeding the final PFOS MCL of 4.0 ng/L. Finished water data showed that there are at least 187 systems in 23 states serving a total population of approximately 4.4 million people with at least one result exceeding the final PFHxS MCL of 10 ng/L. Finished water data from 12 states showed there are at least 52 systems serving a total population of approximately 176,000 people that have at least one result exceeding the final PFNA MCL of 10 ng/L. Finished water data showed 13 systems from 5 states serving over 226,000 people have at least one result exceeding the final HFPO–DA MCL of 10 ng/L. Related to the Hazard Index, finished water data collected under both non-targeted and targeted state monitoring efforts in 21 states showed there are at least 211 systems serving a total population of approximately 4.7 million people with results above the final Hazard Index value of 1 for PFHxS, PFNA, HFPO–DA, and PFBS. Samples that only had monitoring results for one Hazard Index PFAS were not included. USEPA (2024b) presents a detailed discussion on state PFAS monitoring information.

E. Occurrence Model

A Bayesian hierarchical occurrence model was developed to characterize national occurrence of the four PFAS that were most frequently detected in the UCMR 3: PFOA, PFOS, PFHxS, and PFHpA.[8] This model was used to generate the baseline national occurrence estimates for PFOA, PFOS, and PFHxS, which were used in the subsequent economic analysis in USEPA (2024g). Bayesian hierarchical models are a widely used statistical approach in which subsets of data may be recognized as more related than others (such as samples from the same PWS are more related than samples between different PWSs) to capture complex relationships between levels of data and can aid in understanding the factors that influence outcomes. The objective of this model was to use both UCMR 3 data and supplemental state data to develop national estimates of

[8] PFHpA was included in the model because of its UCMR 3 occurrence data availability.

PFAS occurrence that inform occurrence distributions both within and across PWSs. Supplemental state data were incorporated to improve the model's ability to estimate PFAS occurrence at levels below the UCMR 3 minimum reporting levels (20 ng/L for PFOA, 40 ng/L for PFOS, and 30 ng/L for PFHxS). The state data incorporated to supplement the model came from publicly available datasets. In order to maintain the statistically robust UCMR 3 sampling framework, thereby enabling the agency to make conclusions about national representativeness of the model results, incorporation of state data into the model was limited only to data from systems that took part in the UCMR 3. The model does not include PFNA and PFBS due to data limitations; PFNA and PFBS lacked sufficient reported values above the UCMR 3 minimum reporting levels to be incorporated into the model. The model has been peer reviewed and is described extensively in Cadwallader et al. (2022).

The model uses Markov chain Monte Carlo (MCMC) simulation and the assumption of lognormality in PFAS chemical occurrence. Markov chain Monte Carlo is a powerful statistical tool used to understand uncertainty and making informed decisions when analyzing data. The EPA has used similar hierarchical models to inform regulatory decision making in the past, such as for development of the NPDWR for Arsenic and *Cryptosporidium parvum* (USEPA, 2006c; USEPA, 2000e).

After log-transformation of data informing the model, system-level means (where each system has a mean concentration for each chemical) were assumed to be distributed multivariate normally. Further, within-system occurrence was assumed to be distributed normally for each chemical. Since system-level means were modeled multivariate normally, correlation between estimated system-level means across chemicals could also be assessed. The assumption of lognormality as well as the incorporation of state data with lower reporting limits allowed the model to generate reasonable estimates for PFAS occurrence at levels below the UCMR 3 minimum reporting levels.

After the model was fit with available data from PWSs that were included in the UCMR 3, it was used to simulate occurrence at an inventory of active community water systems (CWS) and non-transient non-community water systems (NTNCWS) extracted from the Safe Drinking Water Information System (SDWIS). System-level means for non-UCMR 3 systems were simulated by sampling from the multivariate normal distribution of system-level means that was produced during the model fitting process. For systems that were included in the UCMR 3, the fitted system-level mean was used directly. This approach allowed national occurrence distributions to be estimated alongside the associated populations when combined with population data from SDWIS.

1. Proposal

In the March 2023 proposal preamble, model estimates of contaminant occurrence were presented. For the analysis presented in the proposal, UCMR 3 data were supplemented with 23,130 analytical results from 771 systems across 17 states that were available from public state websites through August 2021. Key model results that were presented directly included correlation coefficients across pairs of chemicals included in the model, extrapolated estimates of the number of system level means anticipated to exceed various threshold, and the estimated population associated with systems that had mean concentrations exceeding the various thresholds. The results indicated that system-level mean concentrations were moderately to strongly correlated across the modeled PFAS and that thousands of systems were estimated to have mean PFAS concentrations in the range of single digit ng/L.

2. Summary of Major Public Comments and EPA Responses

A few commenters stated that they believed the model was an overly complicated approach to characterizing chemical occurrence and found it difficult to understand. Further, a few commenters stated that they believed the model was not transparent. The EPA disagrees; the occurrence approach used by the agency in this rule is based on a widely utilized and accepted statistical approach which is used in a variety of fields from education to health care and from business to the environment. These models allow exploration of the relationships among groups of data and the EPA used this model to better inform the agency's understanding of probable PFAS occurrence. For more information about Bayesian statistics and the wide variety of potential applications, see, for example, Hoff (2009); van de Schoot et al. (2021); Aguilera et al. (2011); and Messner et al. (2001). While the model uses an advanced statistical method and requires some statistical background to fully understand, Bayesian hierarchical models have previously been employed to assess occurrence for drinking water contaminants, as was discussed in the March 2023 proposal preamble as well as Cadwallader et al. (2022). Cadwallader et al. (2022) describes the model structure while the annotated model code and inputs were provided directly as supporting information alongside the manuscript. This information was incorporated into the docket for this rule's proposal. Sufficient information to replicate the model run was provided. Thus, the agency disagrees with the assertion that the model was not transparent.

Regarding the model complexity, the core structure of this specific model is comparatively simple among Bayesian hierarchical models. The model uses a multivariate normal distribution of system-level means (of log transformed data) for the four modeled PFAS. It also includes a parameter for small systems to assess whether they appear to have systematically different (higher or lower) concentrations than large systems. As stated in Cadwallader et al. (2022), the model extrapolates to the nation by sampling from the multivariate normal distribution and accounting for whether the system being simulated was small. The multivariate normal distribution and the parameter to distinguish small systems from large systems are two simple but important pieces of the model structure.

Many commenters stated that the model relied on insufficient data and produced substantial underestimates of the number of systems that would fail to meet MCL requirements. The agency disagrees both that the approach taken would systematically underestimate PFAS occurrence and that the data were insufficient inform the model. The Bayesian approach used here makes a precedented assumption about drinking water contaminant occurrence distributions (lognormality) and uses the available data to generate iterative estimates of distribution parameters that capture uncertainty through MCMC simulation. Across these iterations, the density of the posterior distribution for model parameters is proportionate to the likelihood that a given value would have produced the observed data. The subsequent national extrapolations also reflect this uncertainty.

For the results presented in the March 2023 proposal preamble, the model was fit using 171,017 analytical results across the 4,920 UCMR 3 systems. This was a nationally representative set of systems. 147,887 of the analytical results were collected as part of UCMR 3 while 23,130 were aggregated from 17 subsequently collected state datasets. The model was designed to utilize both results reported as observed concentrations (8,209 results) and

results reported as less than a reporting limit (162,808 results). While the UCMR 3 used higher reporting limits than are currently available, both reported concentrations and values reported as below the minimum reporting level cumulatively make substantial contributions to informing the model's estimates of the PFAS occurrence distribution because of this statistically robust framework. Due to this efficient use of data, and the steps taken to maintain a nationally representative set of systems, the agency believes that the over 170,000 analytical results were sufficient to generate reasonable estimates of occurrence for the modeled contaminants.

Several commenters expressed concern with model bias resulting from the supplemental state data that was incorporated when fitting the model. The hierarchical structure of the model minimizes the bias impact of introducing additional state data for only some UCMR 3 systems (those with additional data available) because the data are explicitly linked to their parent systems rather than being pooled with all other data informing the model. The primary impact that these data have is on the model's estimate of specific system means for those systems that had additional data and informing the within-system variability parameters in the model. Refinement of a single system's mean estimate has a much smaller impact on the high-level distribution of system-level means and such shifts are proportionate to the added evidence derived from the supplemental data.

The addition of data from systems not included in the UCMR 3 would pose a much greater concern for bias, since not all states have publicly available data. States with additional data would become disproportionately represented in the fit of the high-level distribution, since each system acts as a data point in fitting the distribution. The resulting high-level distribution would shift to resemble the states more closely with higher system representation in the source dataset. This would also be reflected in the subsequent national extrapolation. This same bias concern applies to national extrapolation approaches where some fraction of systems in a subset are identified as exceeding a given threshold and the national inventory of systems is multiplied by that fraction to generate a national estimate of systems that would exceed the threshold. If certain states have a disproportionate number of systems included in the subset compared to in the nation as a whole, the national estimate will be biased towards the tendencies of those states. In addition to this bias, the simple example approach discussed above would not naturally reflect uncertainty. Thus, for the purpose of national extrapolation, a nationally representative set of systems is more appropriate, even if data from other systems are available.

While the EPA believes the model design and data selected for the analysis presented in the March 2023 proposal remain appropriate given the data availability at the time, the EPA has also continued to collect newly available data from publicly available state datasets, as the agency committed to in the proposed rulemaking (USEPA, 2023f). The Bayesian hierarchical model has been refit using the updated dataset with the same methods and criteria for data selection that were used for the analysis presented in the March 2023 proposal.

3. Final Rule

After considering public comment, the agency has used the Bayesian statistical model described in Cadwallader et al. (2022) to support the economic analysis for this final regulation by combining the available occurrence information from UCMR 3 and state data subsequently collected at UCMR 3 systems to maintain the nationally representative nature of the set of drinking water systems informing the model, utilizing those data to compute estimates of national occurrence for PFAS contaminants, and providing estimates on the number of systems impacted by this final rule. These estimates directly informed the economic analysis in USEPA (2024g). For the final rule, the model was updated with additional state data collected through May 2023. In total, based on public comment, the EPA supplemented the state dataset with 65,537 analytical results from 1,156 systems across 28 states. Of these supplemental data, 24,950 analytical results were observed concentrations while 40,587 results were reported as below some reporting limit. The previously presented results have been updated and are presented in Table 15. The EPA notes that results from the updated dataset and model were confirmatory of its proposal analyses and did not result in changes to the EPA's final decisions. Median estimates and 90 percent credible intervals are shown for counts of systems with system-level means at or above various PFAS concentrations in Table 15 and the population served by those systems in Table 16.

Table 15: National Occurrence Model Estimate – Estimated Number of Systems With System-level Means at or Above Various Concentrations

Concentration (ng/L)	PFHxS [90% CI]	PFOA [90% CI]	PFOS [90% CI]
4.0	1,828 [1,226-2,689]	3,260 [2,416-4,349]	3,368 [2,461-4,566]
5.0	1,252 [823-1,888]	2,194 [1,588-2,994]	2,447 [1,757-3,386]
10.0	340 [209-555]	523 [354-771]	793 [537-1,166]

Table 16: National Occurrence Model Estimate – Estimated Population Served by Systems with System-level Means at or Above Various Concentrations

Concentration (ng/L)	PFHxS [90% CI]	PFOA [90% CI]	PFOS [90% CI]
4.0	20,386,000 [17,436,000-24,351,000]	34,343,000 [30,897,000-40,600,000]	34,313,000 [30,703,000-41,110,000]
5.0	15,436,000 [12,524,000-18,458,000]	24,287,000 [21,551,000-28,222,000]	26,594,000 [23,793,000-31,240,000]
10.0	4,645,000 [3,557,000-7,205,000]	7,132,000 [4,871,000-8,987,000]	10,205,000 [7,552,000-12,232,000]

For PFOA, PFOS, and PFHxS, thousands of systems were estimated to have mean concentrations over the lowest thresholds (*i.e.,* 4.0 and 5.0 ng/L) presented in Tables 15 and 16 with the total population served estimated to be in the tens of millions. The populations shown here represent the entire populations served by systems estimated to have system-level means over the various thresholds. It is likely that different subpopulations would be exposed to different mean PFAS concentrations if multiple source waters are used.

In addition to the estimates of individual chemical occurrence, the multivariate normal distribution of system-level means allowed the model to provide insight on estimated co-occurrence. The model results support the co-occurrence of PFOA, PFOS and Hazard Index PFAS. The model evaluated whether untransformed (*i.e.,* expressed in the original units of measurement) estimates of system-level means were correlated across each unique pair of the four modeled chemicals included in the model. Estimates of the Pearson correlation coefficient are shown in Table 17. The Pearson correlation coefficient serves as an indicator of the strength of the linear relationship between two variables and may range from −1 to 1. Positive values indicate a positive relationship (*i.e.,* as one variable increases, so does the other). shown in Table 17. The Pearson correlation coefficient serves as an indicator of the strength of the linear relationship between two variables and may range from −1 to 1. Positive values indicate a positive relationship (*i.e.,* as one variable increases, so does the other).

Table 17: National Occurrence Model Estimate – Median Estimated Pearson Correlation Coefficient and 90% Credible Interval Among System-level Means

Chemical Pair	Pearson Correlation Coefficient [90% CI]
PFOS-PFOA	0.73 [0.63-0.80]
PFOS-PFHpA	0.67 [0.56-0.75]
PFOS-PFHxS	0.82 [0.72-0.89]
PFOA-PFHpA	0.83 [0.79-0.87]
PFOA-PFHxS	0.51 [0.39-0.60]
PFHpA-PFHxS	0.58 [0.44-0.67]

The EPA considered a moderate strength correlation as greater than 0.5 and a strong correlation as greater than 0.7. Each point estimate of correlation coefficients between two chemicals was above the threshold for a moderate strength correlation. The carboxylic acids (PFOA–PFHpA) and sulfonic acids (PFOS–PFHxS) had the highest estimated correlation strengths, with both the point estimate and the 90 percent credible interval above the threshold for a strong correlation. PFOS–PFOA and PFOS–PFHpA had similar point estimates and 90 percent credible interval ranges, spanning the moderate-to-strong correlation range. Both PFOA–PFHxS and PFHpA–PFHxS had the bulk of their posterior distributions fall in the range of a moderate strength correlation. Thus, the

model predicted significant positive relationships among system-level means of all four chemicals that were included. These results support the co-occurrence discussion presented in section VI.C of this preamble that indicated extensive co-occurrence of PFOA, PFOS, and the Hazard Index PFAS observed in state datasets from both groupwise and pairwise chemical perspectives.

F. Combining State Data With Model Output To Estimate National Exceedance of Either MCLs or Hazard Index

In order to broadly estimate the number of systems that would be impacted by the regulation, including MCLs of 4.0 ng/L for PFOA and PFOS alongside a Hazard Index of 1 for PFHxS, PFNA, HFPO–DA, and PFBS, findings from non-targeted monitoring in state datasets were combined with model estimates. Specific details on the methodology can be found in USEPA (2024b). Briefly, information collected from non-targeted state datasets included the fractions of systems that reported a measurement at or above the UCMR 5 minimum reporting level for a given analyte and an empirical cumulative distribution function (eCDF) consisting of system-level maximum observed concentrations of that chemical at these systems. The UCMR 5 minimum reporting levels for PFNA, HFPO–DA, and PFBS are equivalent to 4 ng/L, 5 ng/L, and 3 ng/L, respectively (USEPA, 2022j). This applies the assumption that the fraction of systems that observed PFNA, HFPO–DA, and PFBS at or above UCMR 5 minimum reporting levels and the maximum concentrations observed at those systems are reasonably representative of the nation.

1. Proposal

The model was used to simulate EP-level concentrations of the four modeled PFAS (PFOA, PFOS, PFHpA, and PFHxS) under the assumption that within-system concentrations are lognormally distributed (a common assumption for drinking water contaminants, see (Cadwallader et al. (2022)) and that variability in concentrations is entirely across EP (thus a given EP is assumed to have a constant concentration). For each system, the maximum estimated EP PFOA or PFOS concentration was selected to determine whether the system exceeded either of the proposed MCLs of 4.0 ng/L. The EP with the maximum concentration is the point that determines whether a system has an EP that is above an MCL. Estimates of the system-level maximum for PFHxS were also selected for the Hazard Index calculation. The maximum value of the sum of the four modeled PFAS at each system was selected and used as a basis for determining which systems would receive superimposed concentrations of the three remaining Hazard Index chemicals (PFNA, HFPO–DA, and PFBS). This approach was selected due to the extensive observed co-occurrence of PFAS in the UCMR 3, state data, and modeled estimates.

Multiple methods of system selection were used that reflected different degrees of co-occurrence. The chemical concentration that was applied to selected systems were randomly sampled from the eCDF for each chemical. Based on the model output, this assumes that system-level maximums for PFNA, HFPO–DA, and PFBS would occur at the same location within a system. Given the substantial co-occurrence among PFAS observed and estimated across various analyses, combination of system-level maximums independently pulled from chemical eCDFs is a reasonable simplifying assumption. This is particularly true since systems selected for each chemical are not necessarily the same and in most cases were probability weighted. Estimates of the range of systems impacted were developed by taking Q5 and Q95 estimates for each method. The low end of the range was taken as the lowest Q5 estimate across methods, rounded down, while the high end of the range was taken as the highest Q95 estimate across methods, rounded up. This was also done for the total population served by these systems.

The analysis to support the March 2023 proposal estimated that 100–500 systems that were not already exceeding an MCL for PFOA or PFOS would exceed the Hazard Index. This resulted in a total of 3,400–6,300 systems estimated to be exceeding either the Hazard Index, the MCL for PFOA, or the MCL for PFOS.

2. Summary of Major Public Comments and EPA Responses

One commenter stated that they believed it is difficult to determine whether the estimated number of systems exceeding the Hazard Index is a reasonable estimate until a complete national dataset is available. The EPA disagrees with this commenter. The agency believes that it has taken steps to produce reasonable estimates using a robust set of available data, and that the data and analyses are sufficient to inform the EPA's regulatory decisions. Namely, this includes the use of non-targeted state datasets and multiple scenarios reflecting varying degrees of co-occurrence as described in USEPA (2024b). Among other important uses for these data, the EPA considered them to inform the regulatory determination for the mixture of the Hazard Index PFAS and the EA. The EPA has used these data to clearly demonstrate that there is a substantial likelihood that combinations of the Hazard Index PFAS co-occur as mixtures in public water systems with a frequency and at levels of public health concern. See section III of this preamble for additional discussion. Additionally, these data support the EPA's EA, and considerations of costs and benefits consistent with SDWA's requirements. See section XII of this preamble for further discussion.

3. Final Rule

The method to combine state data for non-modeled Hazard Index PFAS with model estimates has largely remained the same for this final rule as it was for the March 2023 proposal. One key change, based on public comments, was to use an updated set of non-targeted state data to inform Hazard Index contaminant prevalence above UCMR 5 minimum reporting levels and eCDFs. Another key alteration, also based on public comments, was accounting for significant figures when counting systems exceeding the MCL for PFOA, the MCL for PFOS or the Hazard Index. For a system to be exceeding the Hazard Index, it must be greater than or equal to 2 (*i.e.,* greater than 1) after rounding (for additional discussion on significant figure usage in the final rule, please see section IV of this preamble). To exceed the MCLs for PFOA or PFOS, the concentration must be greater than or equal to 4.1 ng/L after rounding. Finally, model estimates of PFHxS were converted to zero for the purposes of calculating the Hazard Index if they fell below the PQL of 3 ng/L.

The total number of systems estimated to be exceeding one or more MCLs in the rule was 4,100–6,700 (compared to 3,400–6,300 in the proposal) serving a total population of 83–105 million people. Among these systems, 100–300 are estimated to be exceeding the Hazard Index without exceeding the PFOA or PFOS MCLs. The EPA used these modeled estimates to inform the costs and benefits determination as described in section XII of this preamble. Additional details regarding the approach used here can be found in USEPA (2024b).

G. UCMR 5 Partial Dataset Analysis

1. Summary of Major Public Comments and EPA Responses

UCMR 5 occurrence data were not available to inform the proposal, but the agency discussed that additional nationwide monitoring data would be available for systems participating in the monitoring program. Some commenters called for the EPA to delay issuance of the final PFAS rule until the complete UCMR 5 occurrence dataset can be analyzed, and some commenters stated that rule promulgation should be delayed until at least a portion of the UCMR 5 data is obtained. The EPA disagrees with these commenters. The EPA is not required under the statute to wait for another round of UCMR data to be collected before proposing or finalizing a regulation; in this case, the completion of UCMR 5 data reporting is expected at the end of 2025, with the final dataset not being available until 2026. Rather, SDWA section 1412(b)(1)(B)(ii)(II) expressly provides that the EPA must use the ''best *available* public health information'' in making a regulatory determination (emphasis added). The EPA has sufficiently robust occurrence information to make regulatory determinations and promulgate a regulation for the six PFAS in this regulation. In addition to serving as a significant way for helping many utilities reduce initial monitoring costs, the final full UCMR 5 dataset will also be valuable for informing future regulatory decisions for the 23 PFAS included in UCMR 5 that are not directly addressed by this rulemaking. The agency believes that the best currently available occurrence data demonstrate sufficient occurrence or substantial likelihood of occurrence for the contaminants included in the final rule.

2. Final Rule

While the EPA is under no legal obligation to consider the preliminary, partial UCMR 5 dataset prior to rule promulgation, based on public comment and interest, the agency examined UCMR 5 data released as of February 2024 (USEPA, 2024n). While these data were not available for this rule's proposal, are not complete, and are not a basis for informing the agency's decisions for the final rule, the EPA notes that they generally confirm the extensive occurrence analyses the agency has conducted: namely, that all six regulated PFAS occur in finished drinking water and that the six regulated PFAS co-occur with one another. The EPA notes some important caveats when considering these data. First, as of February 2024, the partial UCMR 5 dataset is a subset of data that will be collected, representing approximately 24 percent of the total data that might be collected under that effort. Additionally, under UCMR 5, systems must collect either 2 or 4 samples, depending on their source water characteristics. In this preliminary dataset, systems have varying degrees of completeness in their sample collection and results may shift at the system level as additional samples are collected. Analyses included examination of sample-level results as well as EP mean-level results.

The UCMR 5 data publicly available as of February 2024 included a combined total of 100,629 analytical results for PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS ranging from 16,766 to 16,778 analytical results for each chemical. 16,743 complete sample sets where an analytical result was reported for each chemical were available. 9,528 EPs and 3,719 PWS had at least one analytical result for each of the six PFAS and one sample for which the Hazard Index could be calculated. As mentioned previously, this partial dataset is estimated to contain approximately 24 percent of the data that will be available once the dataset is completed and finalized.

The preliminary dataset was assessed for sample-level threshold exceedances of PFOA (4.0 ng/L), PFOS (4.0 ng/L), PFHxS (10 ng/L), PFNA (10 ng/L), HFPO–DA (10 ng/L), and the Hazard Index (1). Note that for PFOA and PFOS, two significant figures were considered (*i.e.,* analytical results had to meet or exceed 4.05 to be considered exceedances) while for PFHxS, PFNA, HFPO–DA, and the Hazard Index one significant figure was considered (*i.e.,* an analytical result had to meet or exceed 15 to be considered an exceedance for PFHxS, PFNA, and HFPO–DA and 1.5 to be considered an exceedance for the Hazard Index). Sample-level analysis only included complete sample sets while EP and system-level analysis included only systems that provided sufficient data to determine maximum PFOA, PFOS, PFHxS, PFNA, and HFPO–DA, and Hazard Index (which required at least one sample set where the Hazard Index could be calculated). The EPA notes that this analysis does not represent an estimate for the number of systems that will be in compliance with the MCL; as discussed in section V of this preamble, MCL compliance is determined based on an RAA. Additionally, samples below the PQL would be treated as zero in the compliance calculation. In the preliminary UCMR 5 dataset, PFOA exceeded 4.0 ng/L in 6.1 percent of samples (1,024 samples), at 7.5 percent of EPs (719 EPs), and at 11.2 percent of systems (415 systems). PFOS exceeded 4.0 ng/L in 6.6 percent of samples (1,100 samples), at 8.0 percent of EPs (766 EPs), and at 12.4 percent of systems (462 systems). PFHxS exceeded 10 ng/L in 0.4 percent of samples (66 samples), at 0.6 percent of EPs (53 EPs), and at 1.1 percent of systems (42 systems). PFNA exceeded 10 ng/L in <0.1 percent of samples (5 samples), at <0.1 percent of EPs (5 EPs), and at 0.1 percent of systems (5 systems). HFPO–DA exceeded 10 ng/L in <0.1 percent of samples (2 samples), at <0.1 percent of EPs (1 EP), and at <0.1 percent of systems (1 system). The Hazard Index exceeded 1 in 0.5 percent of samples (76 samples), at 0.6 percent of EPs (60 EPs), and at 1.3 percent of systems (48 systems). When the thresholds were considered simultaneously, 9.0 percent of samples (1,504 samples), 10.9 percent of EPs (1,043 EPs), and 15.8 percent of systems (589 systems) exceeded a threshold. Note that single sample exceedances of thresholds do not necessarily reflect the averages that might be observed in the completed dataset. Specifically, the EPA notes that it is likely that many of the 15.8 percent of systems with an exceedance would not exceed the MCLs because additional samples used to determine an RAA may produce lower results.

To further illustrate this point, though there is insufficient data to fully evaluate RAAs,[9] EP-level means and systems with EP-level means exceeding an MCL threshold were also assessed with the preliminary dataset. For this analysis, only complete sample sets and EPs with multiple complete sample sets were included. 5,269 EPs and 2,498 systems had data that met these criteria. When calculating EP means, results reported as less than the minimum reporting limit were treated as zero. Note that for PFOA and PFOS, two significant figures were considered (*i.e.,* calculated means had to meet or exceed 4.05 to be considered exceedances) while for PFHxS, PFNA, HFPO–DA, and the Hazard Index one significant figure was considered (*i.e.,* calculated mean had to meet or exceed 15 to be considered an exceedance for PFHxS, PFNA, and HFPO–DA and 1.5 to be considered an exceedance for the Hazard Index). Mean PFOA concentration exceeded 4.0 ng/L at 4.8

[9] An RAA is calculated using results for samples taken at a particular monitoring location during the previous four consecutive quarters (see section XIII.B for more information).

percent of EPs (253 EPs) and at 6.0 percent of systems (149 systems). Mean PFOS concentration exceeded 4.0 ng/L at 5.3 percent of EPs (278 EPs) and at 7.2 percent of systems (179 systems). Mean PFHxS concentration exceeded 10 ng/L at 0.3 percent of EPs (15 EPs) and at 0.4 percent of systems (11 systems). Mean PFNA concentration exceeded 10 ng/L at <0.1 percent of EPs (1 EP) and at <0.1 percent of systems (1 system). Mean HFPO–DA concentration exceeded 10 ng/L at <0.1 percent of EPs (1 EP) and at <0.1 percent of systems (1 system). Mean Hazard Index exceeded 1 at 0.3% of EPs (18 EPs) and at 0.6% of systems (14 systems). Considered simultaneously, an MCL was exceeded at 7.2 percent of EPs (381 EPs) and 9.4 percent of systems (235 systems). While the EP means described above include multiple sample sets, observed mean concentrations are likely to change as systems complete UCMR 5 sampling.

Among 16,743 completed sample sets and 9,529 EPs and 3,719 systems which had at least one result for each analyte, 13.9 percent of samples (2,335 samples), 16.5 percent of EPs, and 22.6 percent of systems (842 systems) had an observed concentration at or above the minimum reporting level for at least one of the 6 PFAS. Table 18 shows counts of samples, EPs, and systems according to how many of the 6 PFAS included in this final rule were present at or above the minimum reporting level. As shown in Table 18, about 7.5 percent of samples, 9.4 percent of EPs, and 14.2 percent of systems observed multiple PFAS at or above the minimum reporting level.

Table 18: Preliminary UCMR 5 Dataset[1] – Samples, EPs, and Systems Binned According to Number of PFAS Among PFOA, PFOS, PFHxS, PFNA, HFPO-DA and PFBS That Were Reported at or Above the Minimum Reporting Level

PFAS Observed	Samples	EPs	Systems
0	14,408 (86.1%)	7,954 (83.5%)	2,877 (77.4%)
1	1,077 (6.4%)	676 (7.1%)	313 (8.4%)
2	541 (3.2%)	379 (4.0%)	191 (5.1%)
3	393 (2.3%)	289 (3.0%)	172 (4.6%)
4	303 (1.8%)	215 (2.3%)	148 (4.0%)
5	21 (0.1%)	16 (0.2%)	18 (0.5%)
6	0 (0.0%)	0 (0.0%)	0 (0.0%)

Notes:

1 The preliminary UCMR 5 dataset contains approximately 24 percent of the samples anticipated to be available once the dataset is complete.

Groupwise co-occurrence was also examined in the preliminary UCMR 5 dataset. Table 19 provides the counts and percentages of systems, EPs, and samples where PFOA and/or PFOS were reported as well as whether any of the Hazard Index PFAS were reported. Sample-level results only included completed sample sets while system-level results only included systems which provided one analytical result for each of the 6 PFAS.

Table 19: Preliminary UCMR 5 Dataset[1] – Samples, EPs, and Systems Binned According to Whether PFOS or PFOA were Reported by States and Whether Additional Hazard Index PFAS were Reported

Type	No PFOS or PFOA Reported		PFOS or PFOA Reported		Total Count
	No HI PFAS Reported	At Least One HI PFAS Reported	No HI PFAS Reported	At Least One HI PFAS Reported	
Samples	14,408 (86.1%)	786 (4.7%)	498 (3.0%)	1,051 (6.3%)	16,743
EPs	7,954 (83.5%)	508 (5.3%)	317 (3.3%)	750 (7.9%)	9,529
Systems	2,877 (77.4%)	242 (6.5%)	145 (3.9%)	455 (12.2%)	3,719

Notes:

[1] The preliminary UCMR 5 dataset contains approximately 24 percent of the samples anticipated to be available once the dataset is complete.

In samples, at EPs, and at systems where PFOA and/or PFOS were reported present, one or more Hazard Index contaminant was reported at or above the minimum reporting level about 68, 70, and 76 percent of the time, respectively. As UCMR 5 monitoring continues, it is possible that additional systems from this subset will report the presence of PFOA, PFOS or a Hazard Index PFAS. The percentage of systems detecting neither PFOA, PFOS, nor a Hazard Index PFAS would then decrease. Table 20 shows the number of Hazard Index PFAS that were observed in samples, at EPs, and at systems where PFOA and/or PFOS were reported.

Table 20: Preliminary UCMR 5 Dataset[1] – Sample, EP, and System Counts According Number of Hazard Index PFAS Reported Present for Systems Where PFOS and/or PFOA were Reported

HI Observed	Samples	EPs	Systems
0	498 (32.1%)	317 (29.7%)	145 (24.2%)
1	573 (37.0%)	403 (37.8%)	223 (37.2%)
2	453 (29.2%)	329 (30.8%)	214 (35.7%)
3	25 (1.6%)	18 (1.7%)	18 (3.0%)
4	0 (0.0%)	0 (0.0%)	0 (0.0%)
Total	1,549	1,067	600

Notes:

[1] The preliminary UCMR 5 dataset contains approximately 24 percent of the samples anticipated to be available once the dataset is complete.

At systems where Hazard Index PFAS were reported in addition to PFOA/PFOS, about 51.0 percent of systems reported multiple Hazard Index PFAS. As described above, it is possible that systems may detect additional PFAS as sample collection continues under UCMR 5. System-level pairwise odds ratios based on the first release of UCMR 5 data are shown in Table 21.

Table 21: Preliminary UCMR 5 Dataset[1] – System-level Counts of Pairwise Chemical Occurrence and Odds Ratios Calculated from Aggregated State Dataset PFAS Samples for PFOA, PFOS, and Hazard Index PFAS

Chem A	Chem B	Chems A and B Reported	Only Chem B Reported	Only Chem A Reported	Neither Chem Reported	Odds Ratio [95% CI]
HFPO-DA	PFBS	10	560	7	3,143	8.0 [3.1-20.5]
HFPO-DA	PFHxS	3	371	14	3,333	1.9 [0.6-6.3]
HFPO-DA	PFNA	0	26	17	3,679	0.0 [0.0-32.6]
HFPO-DA	PFOA	12	417	5	3,286	18.9 [6.9-51.8]
HFPO-DA	PFOS	13	464	4	3,239	22.7 [7.7-66.4]
PFBS	PFHxS	259	115	311	3,034	22.0 [17.1-28.2]
PFBS	PFNA	19	7	551	3,143	15.5 [6.6-36.1]
PFBS	PFOA	290	139	280	3,011	22.4 [17.7-28.4]
PFBS	PFOS	327	150	243	2,999	26.9 [21.3-34.0]
PFHxS	PFNA	17	9	357	3,338	17.7 [8.0-39.2]
PFHxS	PFOA	204	225	170	3,120	16.6 [13.0-21.2]
PFHxS	PFOS	273	204	101	3,142	41.6 [31.8-54.5]
PFNA	PFOA	22	407	4	3,287	44.4 [15.9-123.9]
PFNA	PFOS	20	457	6	3,237	23.6 [9.7-57.4]
PFOA	PFOS	306	171	123	3,119	45.4 [35.0-58.9]

Notes:

[1] The preliminary UCMR 5 dataset contains approximately 24 percent of the samples anticipated to be available once the dataset is complete.

Except for two chemical pairings with HFPO–DA, each pairwise odds ratio estimate between PFAS is statistically significantly greater than one. As previously described, this indicates an increased likelihood of reporting one chemical given that the other chemical is known to be present. HFPO–DA odds ratios with PFBS, PFOS, and PFOA were also statistically significantly above 1. Given that the UCMR 5 dataset is not complete, it is important to note that, for chemical pairs where very few systems have fallen into one or more of the categories of chemical pairings, subsequent sampling may result in substantial shifts in the odds ratio estimate and the associated CI. For example, if one more system reported both HFPO–DA and PFHxS, the odds ratio estimate would increase by 33 percent. On the other hand, if one more system detected both PFOA and PFOS, the odds ratio estimate would shift by less than 1 percent. As the count of systems in each category increases, the odds ratio estimate becomes more stable with subsequent sampling. This may be particularly relevant for relationships with HFPO–DA and other Hazard Index PFAS, given the relatively low number of systems (17 systems) that reported HFPO–DA at or above the minimum reporting level in the preliminary UCMR 5 dataset as of February 2024.

After the release of approximately 24 percent of the data that will be available in the full UCMR 5 dataset, there appears to be considerable PFAS occurrence and co-occurrence demonstrated (USEPA, 2024n). Over 15 percent of systems with appropriate data described above have observed a sample-level exceedance of any of the MCLs while over 9 percent of systems have had an EP with a mean concentration exceeding an MCL. Approximately 75 percent of systems that reported the presence of PFOA or PFOS also observed at least one Hazard Index contaminant. Over half of these systems reported the presence of multiple Hazard Index contaminants. The national PFAS occurrence model estimated between about 6.2 percent and 10.1 percent of all CWS and NTNCWS would have an exceedance of an MCL. The 9.4 percent of UCMR 5 systems that had an EP mean concentration over an MCL is not a direct comparison to this because not all EPs have sampled a year worth of quarterly data and because large systems make up a larger fraction of UCMR systems than systems in the national inventory (the model estimated generally higher concentrations at larger systems). However, separating these UCMR 5 results by system size and weighting according to system counts in the national inventory of systems would result in an estimation of 7.8 percent of all systems having an EP with a mean concentration exceeding an MCL threshold. These estimates are likely to shift as UCMR 5 sampling continues and system sampling regimes are completed.

VII. Analytical Methods

A. Analytical Methods and Practical Quantitation Levels (PQLs) for Regulated PFAS

1. Proposal

The agency proposed two EPA methods to support the monitoring requirements of this regulation. The EPA developed the two liquid chromatography/tandem mass spectrometry (LC/MS/MS) analytical methods to quantitatively monitor drinking water for targeted PFAS: EPA Method 533 (USEPA, 2019b) and EPA Method 537.1, Version 2.0 (USEPA, 2020c). The agency found that all six PFAS proposed for regulation can be measured by both EPA Methods 533 and 537.1, ver. 2.0 and both methods are acceptable for meeting the monitoring requirements of this regulation.

Additionally, the EPA proposed PQLs for the six PFAS proposed for regulation, as outlined in Table 22.

Table 22: PQLs for Regulated PFAS

Contaminant	PQL (ng/L)
PFOA	4.0
PFOS	4.0
HFPO-DA	5.0
PFHxS	3.0
PFNA	4.0
PFBS	3.0

In the proposed rule preamble (USEPA, 2023f), the EPA discussed laboratory performance in the EPA's Unregulated Contaminant Monitoring Rule (UCMR) 5 Laboratory Approval Program (LAP) and found that the UCMR 5 minimum reporting levels are appropriate as the basis for the practical quantitation level (PQL) in this rule. These quantitation levels account for the measurement precision and accuracy that the EPA estimates can be achieved across laboratories nationwide.

2. Summary of Major Public Comments and EPA Responses

Several commenters note analytical differences between EPA Methods 533 and 537.1 such as differences in the quality control (QC) acceptance levels between the methods, sample preservation and holding times, as well as variability in sample and spike duplicates. In some instances, these commenters request specific modification to the methods, revisions to the EPA laboratory certification manual, or for the agency to develop guidance that laboratories and state accreditation/certification bodies could use. These commenters note that while both methods are valid under the proposed rule, variability between the two may lead to differences in sampling results and may impact a water system's compliance status. The EPA agrees that Methods 533 and 537.1 have some differences that allow for analysis of varying chain lengths and molecular structures of PFAS. Method 533 generally captures ''short chain'' PFAS (*i.e.,* those with carbon chain lengths of 4 to 12) and fluorotelomer sulfonic acids. Method 537.1 includes some overlap with Method 533's analyte list while including some longer-chain PFAS. However, the agency notes that

all six PFAS proposed for regulation can be analyzed by either Method 533 or 537.1 and neither method has inherent QC issues that lead to significant variation in sampling results when followed. While there are differences between the methods and how they measure their respective target analytes, both EPA Methods 533 and 537.1 perform comparably. The methods are clear and outline specific instructions regarding requirements that are needed for compliance monitoring measurements.

Some public commenters suggested that the EPA allow alternate analytical procedures or modifications to the two published EPA methods for meeting the monitoring requirements in the final rule. The EPA continues to specify the use of Methods 533 and 537.1 because consistent, reliable compliance data are necessary for implementation of the regulation at the maximum contaminant level (MCL) However, the EPA recognizes that improvements in analytical technology and methodology occur. The EPA's Drinking Water Alternate Test Procedure (ATP) Program provides a mechanism for submission and review of alternative methods to measure a contaminant for nationwide use under 40 CFR 141.27. A method developer may apply for the EPA review of a method modification or a new method through the ATP Program. In the meantime, the agency has concluded that Methods 533 and 537.1 are reliable for use in compliance monitoring with respect to accuracy and recovery (lack of bias) and precision (good reproducibility) at the MCL levels.

Several commenters requested that all laboratories be required to identify their quantitation limits (*i.e.,* the smallest detectable concentration of an analyte greater than the detection limit where the accuracy (precision and bias) achieves the objectives of the intended purpose) and/or method detection limits (*i.e.,* the minimum result which can be reliably discriminated from a blank). Specifically, some commenters note if labs have to demonstrate they can get below the PQL, the EPA should establish reporting or detection limits demonstrating they can get to these levels. The EPA is finalizing rule trigger levels below the PQL to support the monitoring provisions discussed in section VIII of this preamble. The EPA disagrees with these commenters that such reporting is needed to support compliance monitoring for the rule and that such reporting would be a cost burden on laboratories. All labs are required per the approved methods to demonstrate whether laboratory reagent blank (LRB) QC samples have background concentrations of less than one-third the minimum reporting level (*i.e.,* the minimum concentration that can be reported as a quantitated value for a method analyte in a sample following analysis). Therefore, for a laboratory to be compliant with the methods, they must be able to detect, not necessarily quantify, analytes at or above ⅓ the minimum reporting level.

Some commenters sought clarity on which methods are approved for use in compliance monitoring for the final PFAS National Primary Drinking Water Regulation (NPDWR). Some of these commenters requested that only Method 533 be approved for monitoring under the final NPDWR, noting that it may be more suitable should additional PFAS analytes within its scope be targeted for regulation at the future date. Others requested that they be permitted to use Method 537, version 1.1. The EPA disagrees and reaffirms that Methods 537.1, version 2.0 and Method 533 are both applicable and suitable for use in compliance monitoring in the final rule. The EPA notes that HFPO–DA is one of the PFAS regulated under this action and only Method 537.1, version 1.0 and version 2.0, and Method 533 support the collection of data for HFPO–DA. The agency notes that the primary difference between Method 537.1, version 1.0 and Method 537.1, version 2.0 is the field reagent blank (FRB) preparation: version 2.0 exposes the FRB to the preservative (Trizma) at the time of field sample collection. Version 1.0 combines the lab reagent water and the preservative together in the FRB prior to field sampling. Version 2.0 was created to more-closely mimic the FRB process used in Method 533. Additionally, Version 2.0 explicitly states that the solid phase extraction (SPE) cartridge sorbents may not be modified with monomers other than styrene divinylbenzene (SDVB).

A few commenters critiqued how the proposed PQLs were established for the rule. Some of these commenters provided feedback on the feasibility of the proposed PQL and suggested that it may be too low, resulting in recurring QC failures that will necessitate repeat sample analysis, increased cost, and reduced laboratory capacity. Other commenters suggest that lower PQLs can be attainable by larger labs with advanced analytical instruments. The agency disagrees that PQLs should be established at either a higher or lower level than that proposed. As discussed in the proposed rule preamble, the PQLs are based on a multi-laboratory assessment of analytical capacity. The EPA derives PQLs which reflect the level that can be reliably quantified within specific limits of precision and accuracy during routine laboratory operating conditions. Based on the multi-laboratory data acquired for the UCMR 5 rule, the EPA has defined the PQL for the PFAS regulated in this rule (Table 22). This quantitation level considers the precision and accuracy that the EPA estimates can be achieved across laboratories nationwide. The EPA anticipates that over time, as technology advances and as laboratories gain experience with the PFAS Methods, laboratories will generally improve their capability to measure at lower levels.

3. Final Rule

The EPA is establishing the following approved methods for use in compliance monitoring in the final PFAS NPDWR: EPA Method 533 (USEPA, 2019b) and EPA Method 537.1, Version 2.0 (USEPA, 2009b; USEPA, 2020c). The PFAS addressed by this regulation can be measured by both EPA Methods 533 and 537.1 and either method is acceptable for meeting the monitoring requirements of this regulation. Table 1 to paragraph (f)(1)(iv) of § 141.903 of subpart Z lists the PQLs for the PFAS regulated under this action.

VIII. Monitoring and Compliance Requirements

A. What are the Monitoring Requirements?

1. Proposal

The EPA proposed requirements for community water systems (CWS) and non-transient non-community water systems (NTNCWSs) to monitor for six PFAS. The agency proposed to amend 40 CFR part 141 by adding a new subpart to incorporate the regulated PFAS discussed in this preamble. Under this new subpart, public water systems (PWSs) would be required to sample EP using a monitoring regime based on the EPA's Standard Monitoring Framework (SMF) for Synthetic Organic Contaminants (SOCs).

The EPA proposed the following requirements for initial monitoring, which systems would be required to complete by the date three years after the date of rule promulgation (see section VIII.F of this preamble for more information). The EPA proposed that, consistent with the SMF for SOCs, groundwater systems serving greater than 10,000 persons and all surface water systems would be initially required to monitor quarterly within a 12-month period for regulated PFAS. To provide additional flexibilities for small groundwater systems, the EPA proposed to modify the SMF for SOCs such that

groundwater systems serving 10,000 or fewer persons would be initially required to monitor only twice for regulated PFAS within a 12-month period, each sample at least 90 days apart. In the proposal, all systems would be allowed to use previously acquired monitoring data to satisfy the initial monitoring requirements (see section VIII.C of this preamble for additional details about using previously acquired monitoring data to satisfy initial monitoring requirements). Based on the SMF, the EPA also proposed that primacy agencies be able to use initial monitoring results to reduce compliance monitoring frequency for a system to once or twice every three years (depending on system size) if the monitoring results are below the proposed rule trigger level (defined in the following paragraphs).

The EPA proposed that, after initial monitoring, water systems would conduct compliance monitoring to demonstrate that finished drinking water does not exceed the maximum contaminant levels (MCLs) for regulated PFAS. The EPA proposed that systems with multiple EP may establish different compliance monitoring schedules for those EP depending on their monitoring results.

The EPA proposed to base compliance monitoring requirements on initial monitoring results and on system size. Then subsequent monitoring requirements would be based on results from compliance monitoring and, for systems on triennial monitoring, also on system size. To determine compliance monitoring frequency only, the EPA proposed a rule trigger level of one-third the MCLs (1.3 ng/L for PFOA and PFOS and 0.33 for Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS)). If results for an EP are below the trigger level, systems would be eligible for reduced monitoring. To implement this provision, the EPA proposed to include the ''trigger level'' concept in the new subpart.

As proposed, each water system would be eligible for reduced compliance monitoring at each EP for which all PFAS results are below the rule trigger level, according to the following schedule:

- A water system that serves 3,300 or fewer customers would be required to analyze one sample for all regulated PFAS per three-year compliance period at each EP where the water system does not have results for any regulated PFAS at or above the rule trigger level (1.3 ng/L for PFOA and PFOS and 0.33 for the Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS)),
- A water system that serves more than 3,300 persons would be required to analyze two samples for all regulated PFAS at least 90 days apart in one calendar year per three-year compliance period at each EP where the water system does not have results for any regulated PFAS at or above the rule trigger level (1.3 ng/L for PFOA and PFOS and 0.33 for the Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS).

In the proposal, if any result for an EP is at or above the rule trigger level for regulated PFAS, the water system would be required to monitor at that EP for all regulated PFAS quarterly. For compliance monitoring collection schedules, the EPA did not specify the required number of days between sampling events and only required collection during a quarter. Systems monitoring an EP less frequently than quarterly whose sample result is at or above the rule trigger level would also be required to begin quarterly sampling at the EP where regulated PFAS were observed at or above the trigger level. In either case, the primacy agency would be able to allow a system to move an individual EP to a reduced monitoring frequency when the primacy agency determines that the EP is below the rule trigger level and reliably and consistently below the MCL. However, primacy agencies would not be permitted to determine that the EP is below the rule trigger level and reliably and consistently below the MCL until at least four consecutive quarters of quarterly compliance monitoring have occurred with all sample results below the rule trigger level.

Additionally, related to laboratory capacity considerations, the EPA described in the proposal that it anticipates that laboratories will be able to adjust to demand and that the demand will be distributed across the three-year implementation period.

2. Summary of Major Public Comments and EPA Responses

The following discussion details numerous comments the EPA received on the proposed monitoring requirements, both for initial monitoring and long-term compliance monitoring.

The majority of comments the EPA received on the initial monitoring requirements related to the number of initial samples systems would be required to collect and the intervals between required samples. Most commenters were generally supportive of the EPA's proposed initial monitoring requirements, including the flexibilities to use previously acquired monitoring data to satisfy some or all the initial monitoring requirements and, for those groundwater systems serving 10,000 or fewer that do not have this data, that they be required to only collect two samples at each EP to satisfy initial monitoring requirements. For a discussion of comments and final rule requirements specific to the use of previously acquired monitoring data to satisfy the initial monitoring requirements see section VIII.C of this preamble.

While most commenters were supportive of the number of initial monitoring samples the EPA proposed, a few commenters indicated they thought the EPA should not allow the flexibility for groundwater systems serving 10,000 or fewer to collect only two samples and instead require quarterly samples be collected by all systems to meet initial monitoring requirements, which would be fully consistent with the SMF framework for other SOCs. A couple of these commenters suggested that there are no data demonstrating that smaller systems are less likely to have elevated levels of PFAS than large systems or that groundwater systems are less likely to have elevated levels of PFAS than surface water systems. Additionally, other commenters generally suggested that two samples may not generate enough data to accurately capture the level of PFAS in drinking water and any potential seasonal variability. Related to potential seasonal changes in measured PFAS concentrations, some commenters from state agencies indicated that they have not observed seasonal variations in concentrations of PFAS measured by groundwater systems, whereas other commenters suggested the opposite and that they have seen changes seasonally based on their state's monitoring data.

The EPA disagrees with commenters that suggest two samples for small groundwater systems would not accurately capture the baseline level of regulated PFAS in drinking water. The EPA determined the initial monitoring requirements based on both source water type and system size considerations. First, from a national-level perspective, the EPA's model for estimating national PFAS drinking water occurrence (see section VI.E of this preamble) indicates that, regardless of source water type, small systems generally have lower mean PFAS concentrations and lower within-system variability than large systems. Further accounting for source water type, as compared to all groundwater systems, all surface water systems potentially have a larger number of sources of contamination and greater hydrology variability so more monitoring data is

necessary to ensure an appropriately protective monitoring schedule. Both the differences in the occurrence estimations for large and small sized systems as well as the general source water characteristics of groundwater systems were collectively considered as part of establishing the proposed initial monitoring requirements for small groundwater systems. Consequently, the agency expects that small groundwater systems would be less likely to experience variations throughout a year and, where there may be seasonal variations, requiring the samples to be collected in different parts of a year would provide sufficient information to determine the appropriate compliance monitoring schedule. Furthermore, given the different experiences cited by commenters, possible seasonal variation is likely based on the specific geographic location and other localized factors. If there are regional factors that suggest more frequent sampling is warranted, the rule provides that primacy agencies may increase the required monitoring frequency, where necessary, to detect variations within the system (*e.g.,* fluctuations in concentrations due to seasonal use or changes in water source).

In response to comments about the alignment of Unregulated Contaminant Monitoring Rule (UCMR) 5 sampling with initial monitoring requirements, a couple of commenters indicated that requiring larger groundwater systems to collect four samples would translate into these systems needing to collect two additional samples beyond those collected for the UCMR 5 monitoring effort. The EPA acknowledges that while the initial monitoring requirements generally align with the UCMR 5 sampling requirements, groundwater systems serving greater than 10,000 would need to collect two additional samples and notes that they have the three years following rule promulgation to complete this monitoring. As described previously, the model for estimating national PFAS drinking water occurrence indicates that larger systems have greater within-system variability than smaller systems, therefore it is appropriate that these larger groundwater systems collect four initial monitoring samples; this is consistent with initial monitoring requirements for groundwater systems under existing SOC National Primary Drinking Water Regulations (NPDWRs).

In addition, a couple of commenters recommended that the number of required samples for initial monitoring be based on the results of the first two samples, with subsequent monitoring only required if regulated PFAS are detected in those earlier samples. The EPA recognizes there is some logic to this approach; however, there would be challenges implementing it. Specifically, it could be challenging for primacy agencies to track and implement the proposed approach, particularly for groundwater systems serving 10,000 or fewer which would require the additional samples to occur in quarters not represented by the first two samples. Furthermore, tracking this varying monitoring would result in additional administrative burden and oversight challenges for primacy agencies, rather than having a consistently defined schedule for monitoring requirements as is used for other SOCs.

The EPA also received several comments from state agencies about the required intervals associated with initial quarterly and semiannual sample collection. In its proposal, the EPA specified that samples be collected at least 90 days apart, whether the samples were required of a system monitoring on a quarterly basis or a system monitoring semi-annually. A couple of commenters noted that they believed that semiannual samples should be separated by more than 90 days to better capture seasonal variations (*e.g.,* seasonal changes in the percent contributions of water blended from different sources, other fluctuations in concentrations). One commenter suggested semiannual samples should be collected at least 180 days apart, which would also be in better alignment with the required schedule for UCMR 5 semiannual sampling. The EPA agrees with these comments. In the final rule, the EPA is requiring that the samples be collected 5 to 7 months apart for semiannual initial monitoring (see table 2 to paragraph (a)(4)(i)(B) of the regulations governing the UCMR program in 40 CFR 141.40).

With respect to the sample collection timing requirements for quarterly initial monitoring (for all surface water systems and groundwater systems serving greater than 10,000), a few commenters indicated that they were opposed to the proposed requirement for samples to be spaced at least 90 days apart. These commenters indicated that such a requirement was unnecessarily prescriptive and would make sample collection logistically challenging for public water systems. These commenters suggested the EPA change the required spacing in a way that still satisfies the EPA's intent to not have samples collected only a few days apart, but in different quarters, so that quarterly samples are more representative of fluctuations in concentrations over time. The EPA agrees with these comments and sees the value of systems being able to use four existing samples collected in separate quarters but also allow flexibility that they are not all spaced at least 90 days apart. In the final rule, the EPA is modifying the required spacing of quarterly initial monitoring samples to be 2 to 4 months apart if samples are collected in a 12-month period. For systems that would need to supplement previously acquired data to satisfy all the initial monitoring requirements, the final rule requires that they must also be 2 to 4 months apart from the months of available pre-existing data. This will also better parallel the language outlining the required spacing of quarterly samples collected for the UCMR 5 monitoring effort.

Some commenters asked the EPA to clarify which systems would be subject to the initial monitoring requirements for surface water systems and which systems would be subject to the requirements for groundwater systems, in some cases presenting examples of specific scenarios. One example is when a system relies on surface water at some EP and groundwater at other EP. The EPA has modified the language of the final rule in § 141.902(b)(1)(ii) to clarify that initial monitoring requirements are to be determined based on the type(s) of water serving as the source for a given EP; thus, one system may have different initial monitoring requirements that apply to different EP. In response to questions, the EPA is clarifying in § 141.902(b)(1)(iv) that, if an EP uses water blended from multiple sources (some groundwater and some surface water), or if it uses different types of sources throughout the year, the system must follow the monitoring frequency for a surface water system (since water from surface water sources is used at least in part, for at least a portion of the year). This approach is more protective of public health because, as described earlier, generally surface water systems have more variable hydrology and potentially more sources of contamination so more monitoring data is necessary to ensure an appropriately protective monitoring schedule.

A couple of commenters asked for clarification about whether EP supplying groundwater under the direct influence of surface water (GWUDI) would qualify for semiannual initial monitoring. As noted in § 141.902(b)(1)(iii), GWUDI systems follow the requirements for surface water systems. GWUDI systems may be as susceptible to contamination as surface water systems; thus, these systems must use the sampling

requirements for surface water during the initial sampling phase to establish baseline levels of regulated PFAS.

Regarding the requirements for longer-term compliance monitoring, the comments the EPA received related primarily to the frequency with which sampling would occur under different circumstances, whether each EP would be allowed to be on a different compliance monitoring schedule, and the trigger levels that would support decisions about reduced triennial monitoring. Regarding the latter point, commenters also addressed laboratory capabilities to measure levels below practical quantitation levels (PQLs).

The EPA's proposal would allow systems eligible for reduced monitoring, and serving 3,300 or fewer, to collect one sample triennially and would allow eligible larger systems to collect two samples during a three-year compliance period. The EPA specifically requested comment on whether all water systems, regardless of system size, should be allowed to collect and analyze one sample per three-year compliance period if the system does not measure any regulated PFAS in their system at or above the rule trigger level. A few commenters stated that they did not agree with a different number of triennial samples eligible systems must collect based on the size of the population a system serves. These commenters indicated that they believe that one sample collected every three years is sufficient for systems of any size on reduced monitoring. The EPA agrees with these commenters that systems eligible for triennial monitoring should be allowed to collect one sample every three years, regardless of system size, especially considering other changes to the compliance monitoring framework, as described subsequently.

Several commenters recommended that an annual sampling frequency tier be added to the required monitoring framework for various reasons including the mobility and persistence of PFAS in the environment, to ensure that systems that have demonstrated elevated levels of regulated PFAS are not allowed to move directly from quarterly to triennial monitoring, and based on their concerns that some laboratories may not be able to produce results at or below the rule trigger levels (resulting in some systems remaining on quarterly monitoring indefinitely even if they can consistently demonstrate they are below the MCLs). A few commenters supported offering three possible monitoring frequencies: quarterly, annually, and triennially, whereas many other commenters recommended against allowing triennial sampling at all and recommended that sampling be required no less than annually, to best protect public health. Those commenters supportive of allowing both annual and triennial monitoring, depending on prior sample results, suggested that annual monitoring should be an option for systems with regulated PFAS concentrations that are reliably and consistently below the MCLs. This modification would parallel the three tiers of monitoring allowed for other organic chemicals under the SMF.

The EPA does not agree with the comments suggesting that no systems should be allowed to sample triennially and that the longest sampling interval at any location should be one year. Based on the EPA's national occurrence estimates, most water systems subject to the rule's requirements will not have results for regulated PFAS that exceed the MCLs, and many will not identify PFAS at or above the triggers for reduced monitoring. These systems, after demonstrating results below the trigger level and therefore no or very little presence of regulated PFAS during the initial monitoring period or through ongoing compliance monitoring, should be able to reduce their monitoring burden and conduct triennial sampling. These monitoring requirements will sufficiently maintain public health protection. If a system monitoring triennially did have a sample result with elevated levels of a regulated PFAS (at or above the trigger level), it would be required to immediately initiate quarterly monitoring. Additionally, the rule specifically provides that primacy agencies may increase the required monitoring frequency for compliance sampling for a variety of reasons, including to detect variations within specific systems (*e.g.,* fluctuations in concentrations due to seasonal use patterns or changes in water sources).

For any system that has regulated PFAS concentrations at or above the trigger level, but reliably and consistently below the applicable MCL, the EPA is introducing in the final rule an annual monitoring frequency within the compliance monitoring framework, consistent with the SMF for SOCs. A demonstration of reliably and consistently below the MCL would include consideration of at least four quarterly samples below the MCL. Annual samples would be collected during the quarter with the highest concentration measured during the prior round of quarterly sampling. The EPA expects this modification in the final rule to reduce the number of systems that are required to be on quarterly monitoring for extended periods of time, compared to the EPA's proposal.

In adopting a three-tiered monitoring framework, the EPA is modifying the required sampling frequency from triennial to annual for systems determined by states to be reliably and consistently below the MCL and changing the threshold for this determination from the trigger level to the MCL. To further reduce monitoring, any system that transitions into annual sampling will be required to collect three years of annual samples each of which show concentrations of regulated PFAS below trigger levels (*i.e.,* not an average of the three annual sample results) before then being eligible for triennial monitoring. Moreover, no system required to collect quarterly samples during compliance monitoring would be allowed to transition to triennial monitoring without first conducting three years of annual monitoring, with all results below the trigger level. If eligible for triennial monitoring, the sample collected triennially would need to be collected in the same quarter during which prior results were highest.

This additional tier is intended to create a gradual step-down schedule for affected EP to confirm levels of regulated PFAS are remaining consistently low or decreasing. The modifications to the requirements for a reliable and consistent determination and the creation of the new annual sampling tier in the final rule make the requirements for regulated PFAS more consistent with the NPDWR requirements for SOCs. They also represent flexibilities that address concerns about laboratory capability concerns. The EPA believes this three-tier approach, including the eligibility criteria for each outlined above, provides the best approach to protect public health and moderate the total cost of sampling borne by a system.

The EPA also received a few comments about the practice by systems that have installed treatment for PFAS to regularly sample finished water to ensure the efficacy of their treatment media (*e.g.,* filters), above and beyond what they would do for compliance monitoring. A few commenters suggested systems that have installed treatment would conduct this additional sampling voluntarily, typically for process control purposes. A few state agency commenters suggested that any system that is treating its water for PFAS should be required to sample more frequently than triennially (*e.g.,* annually) no matter the levels of previous PFAS detections, since the effectiveness of treatment media may decline over time, if not replaced. The EPA disagrees with the commenters

recommending a greater sampling frequency for systems that treat their water for PFAS and does not see a compelling reason to depart from the three-tier compliance monitoring program for a system that has installed treatment. In the final rule, the EPA is adding an annual tier of sampling for any system with concentrations reliably and consistently below the MCL but not consistently below the trigger level. The EPA believes this tier will likely apply to most systems treating their water for regulated PFAS, at least for the first three years of treatment, as the EPA estimates as part of its rule costs that systems needing to install treatment will assume a treatment target of 80 percent of the MCLs. The majority of systems with elevated levels of regulated PFAS contamination are likely to sample quarterly, at least initially (unless they have treatment for PFAS in place prior to the collection of initial monitoring samples). In practice, the result is that most systems with PFAS contamination will likely not be eligible for triennial sampling unless their PFAS treatment is consistently optimized and maintained. However, the rule provides that primacy agencies may increase the required monitoring frequency, where necessary to detect variations within the system, and this approach could be applied to those systems that have installed treatment. In addition, the EPA notes that, when systems are treating for other regulated chemicals pursuant to NPDWRs, no distinctions are made between the monitoring frequency required of a system that is treating for a chemical and a system that has not installed treatment. Thus, not establishing a different monitoring frequency specifically for systems that are treating their water for PFAS is consistent with existing NPDWRs.

The EPA requested comment on the proposed allowance of a water system to potentially have each EP on a different compliance monitoring schedule based on specific EP sampling results (*i.e.,* some EP being sampled quarterly and other EP sampled only once or twice during each three-year compliance period), or if compliance monitoring frequency should be consistent across all of a system's sampling points. A few commenters recommended that all EP used by a system monitor at the same frequency, or that doing so be optional, to reduce the complexity of monitoring requirements or the potential for mistakes to be made with respect to sampling windows. However, the overwhelming majority of those who commented on this topic indicated they supported allowing different sampling frequencies for different EP. The EPA agrees that it would be beneficial to allow different sampling frequencies for different EP because it would allow utilities to realize cost savings if only the EP with elevated levels of PFAS are required to sample most frequently. In addition, the EPA notes it allows systems to use different sampling frequencies for different EP for compliance with other NPDWRs.

The EPA requested comment on monitoring-related flexibilities that should be considered to further reduce burden while also maintaining public health protection, including setting a rule trigger level at different values than the proposed values of 1.3 ng/L for PFOA and PFOS and 0.33 for the Hazard Index PFAS (PFHxS, PFNA, HFPO–DA, and PFBS). Alternative values of 2.0 ng/L for PFOA and PFOS and 0.50 for the Hazard Index PFAS were identified as possibilities. The EPA received numerous comments on the proposed rule trigger levels. Comments addressed the proposed values, specifically for PFOA and PFOS, and their intended purpose for determination of compliance monitoring frequency. Several commenters suggested that the proposed values (*i.e.,* 1.3 ng/L for PFOA and PFOS and 0.33 for the Hazard Index) are too high and the EPA should instead set lower trigger level to ensure greater public health protection. Many other commenters suggested the opposite, stating that the proposed levels are too low, that laboratories will not be able to achieve these levels, and that it may exacerbate any laboratory capacity issues. Consequently, some of these commenters were concerned that water systems would be ineligible for reduced monitoring based on their laboratory's analytical limitations. Several commenters suggested that the proposed values are inconsistent with the SMF for SOCs.

Many who commented on the subject were fully supportive of the EPA's proposed alternative trigger level values of 2.0 ng/L for PFOA and PFOS and 0.50 for the Hazard Index, while others expressed support for the inclusion of trigger levels only if these higher levels were incorporated. Some noted that these higher trigger levels would better align with current laboratory capabilities and allow greater use of previously collected drinking water data (to demonstrate systems are eligible for reduced triennial monitoring under the rule's initial monitoring requirements). A few commenters recommended alternative values of 70–80 percent of the MCLs be used as the trigger levels.

The EPA agrees with commenters that the trigger levels should be finalized as one-half of the MCLs (*i.e.,* PFOA and PFOS at 2.0 ng/L each, PFHxS, PFNA, and HFPO–DA at 5 ng/L each, and Hazard Index at 0.5). Using data submitted as part of the UCMR 5 LAP as a reference point, the EPA notes that 47 of 53 laboratories (89 percent) that applied for UCMR 5 approval generated a minimum reporting level confirmation at 2 ng/L (one-half the proposed MCL) or less for Method 533. This suggests that most laboratories with the necessary instrumentation to support PFAS monitoring have the capability to provide screening measurement results at the revised trigger level of one-half of the MCL. This corresponds with other comments described in section VIII.C of this preamble that provided their experience that laboratories are capable of reliably quantifying values below the PQLs, particularly to 2.0 ng/L for PFOA and PFOS.

Additionally, based on the EPA's evaluation of state drinking water data, updating the final rule trigger levels (to one-half of the MCL) will result in a considerable number of additional water systems significantly reducing their ongoing monitoring frequency from quarterly or annual monitoring to triennial monitoring. Although this modification from one-third of the MCL to one-half of the MCLs may provide slightly less information on a water system's measured PFAS levels as a result of their less frequent monitoring, the trigger levels for the final rule (*i.e.,* one-half of the MCLs) will ensure sufficient public health protection while reducing burden for water systems.

Many other commenters stated that either trigger levels should be removed from the rule entirely or that trigger levels should not be set to any levels below PQLs since these represent the level that can be reliably measured with a high degree of precision and accuracy across all laboratories. Several of these commenters suggested that data below the PQL are unreliable, would result in higher costs, and should not be used as the basis for any regulatory decisions. Thus, they suggested that if trigger levels are incorporated, they should be the same as the PQLs. These commenters also cited laboratory challenges in achieving measurement below the PQLs and suggested that water systems would not be eligible for reduced triennial monitoring as a result of these limitations. Additionally, some of these commenters suggested that decision making based on any values below the PQLs may exacerbate laboratory capacity issues, claiming that such trigger levels would result in

errors, such as false positives, which would lead to increased monitoring where samples need to be re-tested.

The EPA emphasizes that the use of trigger levels set at values below the MCLs is consistent with other SOCs under the SMF and not novel for drinking water regulations (as described in the subsequent paragraph). Their use allows water systems the opportunity to reduce their monitoring schedule and burden where it can be demonstrated through sampling results that they are at low risk of PFAS contamination. In the absence of trigger levels, or some other threshold, all water systems would be deprived of the opportunity for reduced monitoring. At a national level, were the EPA to eliminate reduced monitoring options, this would result in a significant increase in costs to utilities. Consequently, the EPA is choosing to incorporate these levels to allow flexibility and reduce burden for water systems while maintaining health protection.

For commenters that suggest the trigger levels should be identical to the PQLs, particularly for PFOA and PFOS, the EPA disagrees as the agency must have greater assurance that the levels are below the regulatory standard, the systems are actually lower risk, and a reduced monitoring schedule is appropriate. Specifically, in the case of PFOA and PFOS, the EPA believes it would represent an unacceptable public health risk to set trigger levels at the PQLs because the EPA is setting the MCL at the PQL which means that it represents the ''maximum permissible level.'' Moreover, the approach of considering measured levels lower than PQLs for determining monitoring frequency is not novel but has been part of the drinking water standards for many years. Many drinking water standards even use a method detection limit, which by definition is lower than the PQL. Under the SMF for SOCs, for example, results both at or below detection limits and between detection limits and the MCL are utilized for monitoring frequency determination. Additionally, 40 CFR 141.24(h)(7) prescribes the monitoring frequency for organic contaminants based on sample results relative to detection limits (as defined in in paragraph (h)(18) of the same section). In each of these cases, detection limits are below their PQLs (often by a factor of 10). The approach in this rule—using levels lower than the PQL to determine monitoring frequency—is consistent with the EPA's approach for other NPDWRs (see section V of this preamble).

As described earlier, some commenters raised concerns about potential laboratory analytical and capacity issues. Some suggested that laboratories cannot achieve levels below the PQLs, which would result in water systems not being eligible for reduced monitoring based on not demonstrating results below trigger levels. The EPA recognizes that some laboratories may not be able to produce results at these lower levels with the same degree of accuracy and precision as results at or above the PQLs, and notes that there is not a requirement that they do so for these purposes. The EPA uses the PQL to inform the MCL feasibility determination and the same level of precision and accuracy is not required to determine monitoring frequency. Along these lines, several commenters questioned if the sample results must be quantified to be used for the determination of monitoring frequency, given the proposed trigger level values were set below the PQLs, requesting further clarity from the EPA on how to interpret and utilize quantified and non-quantified data. Furthermore, some commenters suggested that if values below the PQLs are used, only quantified results should be used for determining monitoring frequency. Other commenters stated there should not be a numerical value associated with results below the PQL (*e.g.,* results between the trigger levels and the PQLs) and instead such results should only be reported on an absence/presence basis.

The EPA agrees that results below the PQL may not have the same precision and accuracy as higher-level measurements; however, results below the PQL can be sufficiently determined for these purposes. Data below the PQL will be critical to ensuring that systems are monitoring at the correct frequency and whether a contaminant is present within a certain range. Moreover, while results near the trigger level may be less definitive than results at or above the PQL, such results are appropriate for establishing monitoring frequency, as well as for reporting as part of the annual Consumer Confidence Report (CCR). CCR reporting is based on *detected* contaminants and for the purposes of the PFAS NPDWR, § 141.151(d) defines ''detections'' as results at or above the rule trigger levels (see section IX of this preamble for more information on CCR requirements).

Under this final rule, for monitoring frequency determination purposes, systems are required to use all compliance sample results, including those below the PQLs and not quantified with the same precision and accuracy as is associated with the MCL compliance calculation determination. Additionally, the determination of monitoring frequency is not based on a running annual average result, but each individual sampling result. As an illustration of the approach, if a water system has quarterly sampling results at an EP from initial monitoring for PFOA that are 2.0, 1.5, 5.0, and 1.5 ng/L, there are two results (*i.e.,* 2.0 and 5.0 ng/L) at or above the EPA's final trigger level for PFOA (*i.e.,* 2.0 ng/L). Thus, the water system would not be eligible for triennial monitoring at this EP for all regulated PFAS when compliance monitoring begins. Providing a different example, if a water system that is currently required to conduct quarterly compliance monitoring has quarterly sampling results at an EP for PFOA that are 2.0, 3.5, 2.5, and 1.5 ng/L, all results are below the MCL for PFOA (*i.e.,* 4.0 ng/L), however three results are above the PFOA trigger level. In this case, because four quarters of data have been collected and assuming all other regulated PFAS sampling results are below their MCLs as well, the water system could be deemed reliability and consistently below the MCL by the primacy agency and be eligible to monitor annually at this EP. For all frequencies of ongoing compliance monitoring, including quarterly, annual and triennial, this determination would be done the same where all sample results are used, even those below the PQLs.

Many commenters requested that the EPA provide clarification on how laboratories and PWSs should report levels below the PQLs for monitoring frequency purposes. All results at or above the trigger level are to be reported as numeric values and used for determining monitoring frequency. Under the EPA approved analytical methods discussed in section XII, numeric values as low as the rule trigger levels will be available because of the need to meet ongoing QC requirements of the methods for blanks, demonstrating no background contamination. Within each analytical batch of samples, the laboratory must document passing blank QC criteria by attaining qualitative measurements of the regulated PFAS that are no higher than one-third of the laboratories reporting limit, which must be at or below the PQL. The EPA intends to provide guidance materials with details and examples on this to support successful implementation of the final rule.

Some commenters suggested the potential for confusion related to the differences in how results less than PQLs are used in monitoring frequency determination and the MCL compliance determination. Several commenters

suggested that there should be a consistent approach. Most commenters suggested that the approach should follow that of the MCL compliance determination, where zero is used in the calculation of annual averages when measured values are below PQLs. The EPA reiterates that the trigger levels are used for establishing appropriate monitoring frequency. For certain regulated PFAS, they are set at a defined threshold that shows if these PFAS are present or absent. The PQLs, which are used for the MCL compliance determination, are set at specific concentrations that laboratories nationwide can measure with high certainty. To alleviate possible confusion, the EPA intends to provide communication materials on these monitoring requirements to support successful implementation of the final rule. Nevertheless, the difference in approach (between data used for compliance monitoring determinations and data used to determine monitoring frequency) reflects the most appropriate application of the data for each of the intended purposes and assures that adequate monitoring is occurring in systems where the regulated PFAS have been shown to be present at the trigger level or higher. The EPA's rationale is described in detail in section VIII.B of this preamble.

Several other issues related to monitoring flexibilities were raised in public comments. One commenter asked, if one EP has a result for a single regulated PFAS at a concentration above the trigger level, but other regulated PFAS are below trigger levels, must the system initiate quarterly sampling for all regulated PFAS at the EP or are they only required to initiate quarterly sampling for PFAS observed at or above the trigger level. As described in the rule proposal, if a regulated PFAS is detected at or above a trigger level, the system must monitor quarterly at that sampling point for all regulated PFAS. This is appropriate as the same analytical methods are used for the analysis of all regulated PFAS (no extra analyses need to be performed to measure the other PFAS) and the regulated PFAS have been shown to significantly co-occur.

In addition, commenters questioned whether quarterly sampling would be triggered when a result is equal to but does not exceed the trigger level for systems monitoring triennially. One commenter pointed out that the language proposed for inclusion in § 141.905(b)(2) stated that systems monitoring triennially whose sample result is at or exceeds the trigger level must begin quarterly sampling, whereas § 141.902(b)(2)(ii) stated the trigger level must be exceeded before quarterly monitoring is required. The EPA is clarifying this point in the final rule to reflect the EPA's intent that quarterly sampling would be triggered when a result is at or above the trigger level as prescribed in § 141.905(b)(2). This same approach has been used in other NPDWRs (*e.g.,* for SOC trigger levels).

3. Final Rule

This final rule establishes initial monitoring requirements and reflects minor modifications to the proposed approach. Groundwater CWS and NTNCWS serving 10,000 or fewer must collect two (semiannual) samples in a consecutive 12-month period and must collect the samples 5 to 7 months apart, to better capture seasonal variation. Groundwater CWS and NTNCWS serving greater than 10,000 and all surface water CWS and NTNCWS must collect four (quarterly) samples 2 to 4 months apart in a consecutive 12-month period. The EPA is maintaining the provision described in the proposed rule that allows PWSs to use previously collected data to satisfy initial monitoring requirements; see § 141.902(b)(1)(vi). Systems that need to collect additional quarterly samples to meet the initial monitoring requirements may sample outside of a 12-month period, if all quarters are represented with sample months 2 to 4 months apart. This 2-to-4-month interval also aligns with UCMR 5 sampling requirements for surface water systems subject to this rule and better captures possible seasonal variability establishing a well-informed baseline. In addition, the EPA is modifying the proposed initial monitoring requirements to now specify that if the water source for the EP is surface water, a blend of surface water and groundwater, or GWUDI, the initial monitoring requirements for surface water source (4 quarterly samples) apply. If the EP source is only groundwater, initial semiannual monitoring is required.

The EPA is modifying the number of samples required for some systems with sampling locations eligible for triennial monitoring. Regardless of the population served, all systems with sampling locations eligible for triennial sampling will collect one sample every three years. The sample is to be collected during the quarter with the highest prior concentration identified in the most recent year when samples were collected.

In the final rule the EPA is establishing a third tier for monitoring frequencies and updating the proposed requirements for each tier. The new monitoring frequency tier provides for annual monitoring at sampling locations that have collected at least four consecutive quarterly samples following initial monitoring if the primacy agency determines the results at that EP are reliably and consistently below the MCL. In establishing this tier, the EPA is removing the proposed rule requirement for a state to determine that the running annual average (RAA) concentration is below the trigger levels to reach this reliably and consistently below the MCL determination. Instead, in the final rule, reliably and consistently below the MCL means that each of the sample results for the regulated PFAS are below the applicable MCLs. In this new annual monitoring tier, if EP receive the reliably and consistently below the MCL determination and remain below the MCLs in subsequent sampling, even if above a trigger level, they may continue on an annual monitoring schedule.

The criteria eligibility for triennial monitoring have been changed accordingly. EP with all results below the trigger levels during initial monitoring are eligible for triennial monitoring, as described in the proposed rule. But, under the final rule, if an EP is required to conduct quarterly sampling during the compliance monitoring period, then triennial monitoring is only available after the EP has three consecutive annual samples that each contain concentrations below the trigger level. For EP that consistently have results between the trigger levels and the MCLs, as described previously most would remain on annual monitoring, rather than quarterly monitoring, which provides a sufficient indication of contaminant level while reducing the total sampling costs.

With respect to whether different EP for a particular water system may be sampled at different compliance monitoring frequencies, based on specific EP sampling results, the final NPDWR affirms this flexibility, as proposed. In addition, there is no change to the language in the final rule discussing the timing for taking quarterly samples during the long-term compliance monitoring period. The EPA does not specify a required interval between samples; the requirement is quarterly.

The EPA is finalizing rule trigger levels for compliance monitoring frequency purposes only at one-half of the MCLs for regulated PFAS (*i.e.,* 2.0 ng/L for PFOA and PFOS, 5 ng/L for PFHxS, PFNA, and HFPO–DA, and 0.5 for Hazard Index). If all PFAS results for an EP are below these levels, the EP

would be eligible for triennial monitoring, with the following exception. If sampling location is under an annual monitoring schedule, it would be eligible for triennial monitoring following three consecutive annual samples with all sample results below the trigger levels.

The EPA's proposed rule included monitoring requirements specific to PFAS. To avoid possible confusion, the EPA is amending 40 CFR 141.24(h) to clarify that the applicable monitoring requirements for PFAS are in 40 CFR 141.902 and that the monitoring requirements for non-PFAS SOCs in 40 CFR 141.24(h) do not apply to PFAS.

B. How are PWS compliance and violations determined?

1. Proposal

Consistent with existing rules for determining compliance with NPDWRs, the EPA proposed that compliance would be determined based on the analytical results obtained at each sampling point. For systems monitoring quarterly, compliance with the proposed MCLs would be determined by calculating RAAs for each sampling point. As proposed, eligibility for reduced monitoring would be determined by the sample result(s) at the sampling point. If the sample result(s) are at or exceed the rule trigger level, the system would be required to revert to quarterly sampling, for all regulated PFAS, at each EP where a result is at or above the trigger level. In such case, the sample event that included a result(s) at or above the trigger level would be considered the first quarter of monitoring in calculating the RAA.

An RAA is calculated using results for samples taken at a particular monitoring location during the previous four consecutive quarters. As proposed, if a system takes more than one compliance sample during each quarter at a particular monitoring location, the system must average all samples taken in the quarter at that location to determine the quarterly average, which would then be used in calculating the RAAs. Conversely, if a system does not collect required samples for a quarter, the RAA would be based on the total number of samples collected for the quarters in which sampling was conducted. As proposed, MCL compliance determinations would not be made until a system has completed one year of quarterly sampling, except in the case where a quarterly sampling result is high enough that it will clearly cause the RAA to exceed an MCL (*i.e.,* the analytical result is greater than four times the MCL). In that case, the system would be in violation with the MCL immediately.

In the proposal, when calculating the RAAs, if a sample result is less than the PQL for the monitored PFAS, the EPA proposed to use zero to calculate the average for compliance purposes.

2. Summary of Major Public Comments and EPA Responses

The agency received a few different types of comments on how the compliance determination and violations were proposed to be assessed. Many commenters supported the EPA's approach to assess violations, including that violations are only assessed through an RAA for systems conducting quarterly monitoring. A couple of commenters suggested that in a scenario where a particular high quarterly sample (*i.e.,* result greater than four times the MCL) would cause the RAA to exceed an MCL, the system should not be deemed out of compliance until the end of the quarter (to allow utilities to conduct additional monitoring during that quarter and average the results from the multiple samples). The EPA disagrees with commenters that suggest additional voluntary sampling be used in calculating the quarterly average. The final rule requires that a compliance sample be taken during each quarter for those systems conducting quarterly monitoring. Further, as prescribed under 141.902(b)(2)(v), the state may require a confirmation sample for any sampling results and, if this sample is required, the result must be averaged with the first sampling results and used for the compliance determination. Therefore, any samples other than a state-required confirmation sample should not be averaged within the quarterly compliance result which will be assessed at the end of the quarter.

A couple of other commenters suggested changing the time periods for determining compliance (for both systems conducting quarterly monitoring and those conducting triennial monitoring). These recommendations included assessing compliance based on the results from eight consecutive quarterly samples (rather than four). For those systems conducting triennial monitoring, some commenters proposed that the compliance determination be based on one triennial sample result. For systems determining compliance through an RAA calculation, the EPA believes four consecutive quarterly samples is an adequate representation of the regulated PFAS levels while also assessing compliance in a timely manner. For systems conducting triennial monitoring, if a water system has a sample result at or above the EPA's trigger levels, the system will immediately be required to begin quarterly monitoring. This is consistent with other monitoring requirements for other SOCs and, given the change in measured concentration, will provide additional information over a consistent and longer period of time to better assess the average level of regulated PFAS within the water supply and ensure the water system is reliably and consistently below the MCL.

In the proposed rule, the EPA requested comment on whether the agency should consider an alternative to the approach of using zero when calculating the RAAs if a sample result is less than the PQL. Specifically, in the case where a regulated PFAS is detected but the result is below its proposed PQL, the proposed rule invited comment on whether the trigger level (proposed as one third of the PQL) should be used as the value in calculating the RAA for compliance purposes.

The EPA received numerous comments related to the proposed approach for calculating the RAA for compliance with the NPDWRs, particularly on the incorporation of sample results below the PQLs for the regulated PFAS (see sections V and VII for more information on PQLs.) Many commenters, including some states, supported the EPA's proposed approach to utilize zero for results below PQL to calculate the average for compliance purposes. These commenters cited the definition of the PQL as the lowest concentration of an analyte that can be reliably measured within specified limits of precision and accuracy during routine laboratory conditions and noted that this is a level that all laboratories should be able to achieve. Consequently, they suggested that values below these PQLs should not be used for the compliance calculation. Several of these commenters expressed concern that using estimated or other values with less precision in the compliance calculation could result in utilities needing to take actions to address levels of regulated PFAS that are not well-quantified and may not be representative of regulated PFAS levels. Many commenters suggested that since all laboratories cannot achieve values less than the PQLs, this would result in equity issues with respect to disparate laboratories capabilities. Some also suggested that the approach could exacerbate any potential laboratory capacity issues.

The EPA agrees with these commenters that values below the PQLs

for the regulated PFAS should not be used in the compliance calculation. As cited previously by commenters and the EPA in sections V and VII, PQLs are the lowest concentration that can be reliably measured within specified limits of precision and accuracy during routine laboratory operations. As noted in the rule proposal, ''the agency must have a high degree of confidence in the quantified result as it may compel utilities to make potentially costly compliance decisions in order to comply with the MCL.'' Moreover, because compliance with the MCL is determined by analysis with approved analytical techniques, the ability to analyze consistently and accurately for a contaminant is important to enforce a regulatory standard. The EPA recognizes the potential for minor analytical variabilities within sampling procedures and laboratory analyses below the PQL and this approach offers operational certainty to utilities, provides assurances of precision and accuracy in the concentrations at or above the PQL that are achievable for all laboratories, ensures equitable access to all laboratories with comparable analytical capabilities for the purposes of compliance sample results, and reduces the potential for laboratory capacity issues.

Many other commenters did not support the EPA's proposed approach and offered that all sample results between method detection limits and PQLs, even if estimated, should be used. Alternatively, some suggested that any results that laboratories are able to quantify should be used in calculating the RAA for compliance. A subset of these commenters suggested that using zero (instead of an estimated or semi-quantitative value) biases the RAA compliance calculation, is even less precise and accurate than using the values below the PQLs, is contrary to the RAA compliance calculation for other SOC NPDWRs and demonstrates a reduction in public health protection. Some commenters also suggested that this could result in public communication challenges if laboratories are able to estimate or quantify values below the PQLs and zero is instead used in the calculation. Further, several commenters submitted that, in their experiences, some laboratories are capable of reliably and accurately reporting below the PQLs.

While the EPA recognizes that using zero for values below the PQL would result in a differing RAA compliance calculation result than if the values below the PQL were instead used, on a national scale, these values below the PQL do not consistently represent values with the precision, accuracy, and reliability the EPA believes are necessary for compliance determination purposes. Therefore, the EPA's national approach to achieve consistency (recognizing that laboratories have varying analytical capabilities) is to judge compliance based on results at or above the PQL. Using inconsistent values below the PQL may result in MCL compliance determination inequities across systems.

The EPA agrees that some laboratories are capable of reliably measuring the regulated PFAS below the EPA's PQLs. This is supported by a subset of state PFAS monitoring data that represents some sampling with quantified values below the EPA's PQLs. Further, in the March 2023 proposal, the EPA recognized that ''quantitation of the contaminants can be achieved between the method detection limit and the PQL'' though the EPA also noted in the proposal that this is ''not necessarily with the same precision and accuracy that is possible at and above the PQL.'' The EPA must set requirements evaluating the circumstances of all PWSs and laboratory capabilities throughout the country. The agency notes that states must establish requirements at least as stringent as the EPA to maintain primacy; however, under the Safe Drinking Water Act (SDWA), states with primacy may establish more stringent requirements. In instances where a laboratory can demonstrate it is capable of precisely and accurately quantifying values below the PQLs, some states may choose to establish their own requirements that are more stringent and use these values for the compliance calculation.

The agency also received a few comments on the possible alternative approach of using the proposed trigger level as the value in calculating the RAA for compliance purposes when the result is estimated as between the trigger level and PQL. Most commenters did not agree with using the trigger levels as an estimate instead of zero when values are below the PQL and noted that these values could result in inequitable implementation of the rule based on laboratory analytical capabilities.

After consideration of all these comments and for the reasons described previously, the EPA does not believe it is appropriate to use trigger level values or any other values above defined detection limits but below the PQL as part of the RAA compliance calculation based on the information available to the agency today. Trigger levels are appropriate to determine if the contaminant is present (*i.e.,* detected) and for the determination of reduced monitoring frequency, however the EPA concludes that values below the PQL would not consistently and reliably demonstrate the accuracy and reliability necessary for compliance determination purposes that can result in make potentially costly expenditures for PWSs.

3. Final Rule

For the final rule, the EPA is maintaining the proposed compliance calculation determination approach. For systems with sampling locations monitoring quarterly, compliance with the MCLs for regulated PFAS is determined by calculating RAAs using compliance results for particular sampling points. Based on final rule changes to the compliance monitoring requirements previously described in section VIII.A of this preamble above, systems with sampling locations monitoring less frequently than quarterly are required to revert to quarterly sampling for *all* regulated PFAS in the next quarter at each EP with the exceedance where either the sample result(s) are at or above the rule trigger level (for those on triennial monitoring) or the sample result(s) are at or exceed the MCL (for those on annual monitoring). In both cases, the triggered sample result is required to be used for the first quarter of monitoring in calculating the RAA. If a system takes more than one compliance sample during each quarter at a particular monitoring location, the system must average all samples taken in the quarter at that location to determine the quarterly average and this will be used in calculating the RAAs. Conversely, if a system does not collect the required compliance samples for a quarter, the RAA will be based on only those quarters where samples were collected during the past four quarters. A system will generally not be considered in violation of an MCL until it has completed one year of quarterly sampling (*i.e.,* a system on an annual or triennial monitoring schedule with an exceedance of the MCL is not in violation until it completes one year of quarterly sampling with the sample exceeding the MCL used as the sample result for the first quarter of the RAA). However, regardless of the result of subsequent monitoring, if a quarterly sample result will cause the RAA to exceed an MCL at any sampling point (*e.g.,* the first quarter sample result is greater than twice the MCL and the second quarter sample result is also greater than twice the MCL) or if an annual or triennial sample result causes the RAA to exceed an MCL at any sampling point (*i.e.,* the analytical result

is greater than four times the MCL), then the system is out of compliance with the MCL immediately.

The EPA is also retaining the proposed approach for the MCL compliance calculation where, if a sample result is less than the PQL for the monitored PFAS, zero will be used to calculate the RAA (if monitoring quarterly). To clarify how to implement approach, the EPA is providing a few different examples related to calculating the RAA for the PFOA/PFOS MCLs, the individual MCLs for PFHxS, PFNA, and HFPO–DA, and the Hazard Index MCL for the mixtures of PFHxS, PFNA, HFPO–DA, and PFBS.

If a system conducting quarterly monitoring has sample results for PFOA that are 2.0, 1.5, 5.0, and 1.5 ng/L for their last four quarters at a sample location, the values used to calculate the RAA for that sample location would be 0, 0, 5.0, and 0 ng/L with a resulting PFOA RAA of 1.3 ng/L (*i.e.,* (0 + 0 + 5.0 + 0)/4 = 1.3 ng/L). For PFOA and PFOS, as described in section V of this preamble, the MCLs of 4.0 ng/L are promulgated with two significant figures and must be expressed as such in the calculation with any rounding not occurring until the end of the calculation. Data reported to the primacy agency must contain the same number of significant digits as the MCL. In calculating data for compliance purposes, the number must be rounded to two significant digits. The last significant digit should be increased by one unit if the digit dropped is 5, 6, 7, 8, or 9, and if the digit is 0, 1, 2, 3, or 4, the preceding number does not change (*e.g.,* 1.37 is reported as 1.4).

As described in section V of this preamble, the EPA is finalizing individual MCLs and Health Based Water Concentrations (HBWCs) for PFHxS (10 ng/L), HFPO–DA (10 ng/L), and PFNA (10 ng/L), the HBWC for PFBS (2000 ng/L), and the Hazard Index MCL (1 unitless) with one significant figure. Similar to PFOA and PFOS, if a sample result is less than the respective PQLs for these PFAS (*i.e.,* 3.0 ng/L for PFHxS, 5.0 ng/L for HFPO–DA, and 4.0 ng/L for PFNA), zero will be used to calculate compliance both for the PFHxS, PFNA, and HFPO–DA MCLs and the Hazard Index MCL for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS. As an example, for the HFPO–DA MCL compliance calculation (which would be the same for the PFHxS and PFNA MCLs using their respective PQLs), if a system conducting quarterly monitoring has HFPO–DA sample results that are 3.2, 6.1, 5.5, and 2.7 ng/L for the last four quarters at a sample location, the values used to calculate the RAA for that sample location would be 0, 6.1, 5.5, and 0 ng/L with a resulting HFPO–DA RAA of 3 ng/L after rounding to one significant figure at the end of the calculation (*i.e.,* (0 + 6.1 + 5.5 + 0)/4 = 2.9 ng/L). Therefore, this system has not violated the MCL for HFPO–DA. The EPA notes that for all MCL RAA calculations, water systems are required to retain the unrounded RAA value (2.9 ng/L in this example) for use in the next RAA calculation as no rounding should occur until the end of the overall compliance calculation (*i.e.,* 2.9 ng/L, not 3 ng/L, should be used).

To provide an example calculation for determining compliance with the Hazard Index MCL for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS, if the quarterly sample results at a sample location are 2.1 ng/L for PFHxS, 3.4 for HFPO–DA, 4.1 for PFNA, and 20.0 for PFBS, the water system would first determine the Hazard Index value for that quarter, which is 0.42 (*i.e.,* ((0/10) + (0/10) + (4.1/10) + (20.0/2000) = 0.42). To then calculate the RAA Hazard Index MCL, if the preceding three quarters had unrounded Hazard Index values of 0.76, 1.10, and 0.53 at the same sample location, the resulting RAA Hazard Index MCL would be 0.7 after rounding to one significant figure at the end of the calculation (*i.e.,* (0.76 + 1.10 + 0.53 + 0.42)/4 = 0.70). Consequently, this system has not violated the Hazard Index MCL.

C. Can systems use previously collected data to satisfy the initial monitoring requirement?

1. Proposal

The EPA proposed that systems be allowed to use previously collected monitoring data to satisfy the initial monitoring requirements. In general, a system with appropriate historical monitoring data for each EP, collected using EPA Methods 533 or 537.1 as part of UCMR 5 or a state-level or other appropriate monitoring campaign, could use that monitoring data to satisfy initial monitoring requirements. The EPA notes that for systems monitoring under UCMR 5, all surface water systems are required to collect four quarterly samples and all groundwater systems are required to collect two quarterly samples over a period of 12 months.

While the EPA expects most systems serving 3,300 or greater will have some UCMR 5 data, the EPA also proposed that systems with previously acquired monitoring data from outside UCMR 5, including state-led or other appropriate occurrence monitoring using EPA Methods 533 or 537.1 would also be permitted to use these other monitoring data in lieu of separate initial monitoring for regulated PFAS. The proposed approach may have allowed systems serving fewer than 3,300 (many of whom do not participate in UCMR 5) to otherwise satisfy the initial monitoring requirements. The EPA proposed that data collected after January 1, 2023, be accepted for EP samples, and data collected between January 1, 2019, and December 31, 2022, also be accepted if it is below the proposed rule trigger level of 1.3 ng/L for PFOA and PFOS and a Hazard Index of 0.33 for PFHxS, PFNA, HFPO–DA, and PFBS. Additionally, the EPA proposed that if systems have multiple years of data, the most recent data were to be used.

In the proposal, the EPA stated that if a system had conducted prior monitoring involving fewer than the number of samples required for initial monitoring under this PFAS NPDWR, then all surface water systems, GWUDI systems, and groundwater systems serving greater than 10,000 would be required to collect at least one sample in each quarter of a calendar year that was not acquired and groundwater systems serving 10,000 or fewer would be required to collect one sample in a different quarter of the calendar year than the one in which the previous sample was acquired.

2. Summary of Major Public Comments and EPA Responses

The EPA requested comment on the proposal to allow the use of previously acquired monitoring data to satisfy the initial monitoring requirements. This included a request for feedback on the data collection timeframe requirements and on whether particular QA requirements should be established for such data. Of commenters that provided input on the proposed allowance, nearly all supported the use of previously collected data to support the initial monitoring requirements. The EPA agrees with these commenters that appropriate, previously collected data should be allowed and notes that there will be significant data available from UCMR 5 monitoring and from the many states that have been proactively conducting PFAS drinking water monitoring. This will allow for a significant opportunity to reduce burden for numerous water systems, as well as decrease the potential for laboratory capacity issues. One commenter suggested that the use of this data may not be sufficiently representative of current PFAS concentrations in drinking water systems as the laboratory analyses previously used may not have been

sufficiently sensitive to detect the analytes, relative to the proposed PFAS regulatory standards. The EPA disagrees with this commenter as the analytical methods proposed for PFAS analysis were available for the majority of the time period (*i.e.,* 2019 and after) in which data are allowed to be used to satisfy the initial monitoring requirements. Furthermore, the rule provides that a primacy agency may choose to not allow these data to satisfy initial monitoring requirements and may require more frequent monitoring on a system-specific basis. Additionally, the EPA clarifies that previous monitoring does not automatically qualify water systems for reduced compliance monitoring; rather it is the results from that monitoring that determine the eligibility for a reduced compliance monitoring schedule.

Many commenters suggested that the use of these data should be at the state's discretion and requested that the EPA provide additional flexibility to the primacy agencies in the determination of which data are allowed, including the number of samples and the QA requirements. Moreover, several commenters asked that the EPA clarify how much additional data would be needed to satisfy the initial monitoring requirements if a previous monitoring campaign included less sampling than required under the rule initial monitoring requirements. Specifically, a few commenters noted that, under the requirements of UCMR 5 monitoring, groundwater systems serving greater than 10,000 would have results from two sampling events, not the four needed to satisfy the initial monitoring requirements of this rule. Commenters requested that the EPA explain if these UCMR 5 systems would need to collect additional (supplemental) samples. A few commenters suggested UCMR 5 monitoring should sufficiently meet the requirements for all systems, even though the proposed rule requires quarterly sampling for all groundwater systems serving greater than 10,000.

Having considered the public comments, the EPA is establishing in the final rule that water systems that have collected fewer samples (under UCMR or other programs) than required in this rule for initial monitoring must conduct supplemental monitoring that allows them to meet the minimum requirements. Additional details on this requirement are in section VIII.C.3 of this preamble. In the case of UCMR 5, for example, groundwater systems serving greater than 10,000 will be required to collect two additional samples beyond the two collected for UCMR 5. For more information on the initial monitoring requirements, please see section VIII.A of this preamble.

Several commenters requested that the EPA clarify whether only samples collected under UCMR 5 would be allowed to fulfill initial monitoring requirements, or if data under other monitoring efforts, such as state monitoring, would also be acceptable. As provided in the proposal and final rule, a state may accept results from all appropriate monitoring efforts, as determined by the state, including, but not limited to, UCMR 5 and other state-led efforts.

Several commenters provided various comments related to QA requirements for previously collected data, including data analysis methods, minimum reporting levels, and data collection timeframe. A few commenters expressed that the EPA should allow the use of results from modified EPA methods and/or other state-developed analytical methods. The EPA disagrees with these commenters. While there are other methods that have been used for data collection and analysis, the EPA is requiring that any data used for this rule be collected and analyzed using Methods 533 and 537.1 to ensure consistency across analytical results, as well as to align with the final rule analytical method requirements described in § 141.901. A few commenters requested that the EPA provide additional information on reporting level requirements of the data, with one commenter suggesting that the EPA should not allow this data to be used for initial monitoring purposes if the reporting limits of the laboratory are higher than the EPA's proposed PQLs. The rule provides that the available data can be used regardless of reporting or detection limits to satisfy the initial monitoring requirements; however, given these factors, the results may not support determinations for reduced compliance monitoring. Regarding data collection timeframes, a few commenters questioned why data collected prior to 2023 would not be accepted where the results are higher than the proposed rule trigger levels. In response, the EPA has modified the rule to allow data from January 1, 2019, and later to satisfy initial monitoring requirements, even if it is not below the final rule trigger levels if it meets all other requirements (including being analyzed using Methods 533 and 537.1). Data collected prior to 2019 may not be representative of water quality conditions and likely would not have been analyzed using these methods (given when they were published). The EPA notes if the results exceed the final rule trigger levels the system will not be eligible for a reduced monitoring schedule at that EP.

3. Final Rule

The EPA is retaining the proposed allowance of using previously collected monitoring data to satisfy some or all of the initial monitoring requirements. The agency notes that while use of this data is allowed, water systems may choose to conduct additional monitoring to satisfy their initial monitoring requirement in lieu of using pre-existing data. As described previously in section VIII.A of this preamble, the final rule initial monitoring requirements specify that all system sizes with surface water or GWUDI sources and groundwater systems serving greater than 10,000 are required to collect four quarterly samples, and groundwater systems serving 10,000 or fewer are required to collect two samples. The EPA is clarifying that the number of samples required is based at the EP; therefore, if a system serving 10,000 or fewer has EP with different source water types, the required monitoring is based on the source water type of that EP (*i.e.,* a system serving 10,000 or fewer that has surface water, groundwater, and/or GWUDI sources during the initial monitoring period must collect two samples at the EP sourced by groundwater and four samples at the EP sourced by surface water or GWUDI). For systems serving 10,000 or fewer that change the source water type at EP throughout the initial monitoring period (*i.e.,* one part of the year is surface water, and the remaining part of the year is groundwater and/or GWUDI), the EP must follow the sampling requirements of surface water systems.

In the final rule under § 141.902(b)(1)(viii), the EPA is maintaining that if a system has some previously collected results, but fewer than the number required to satisfy the initial monitoring requirements, they must conduct additional monitoring such that it, coupled with the previous monitoring, meets the requirements of this rule. All surface water and GWUDI systems, and groundwater systems serving greater than 10,000, must collect the required additional samples 2–4 months apart from the months with available data, without regard to year, such that all quarters are represented (see section VIII.A of this preamble for more information).

In § 141.902(b)(1)(vi), the final rule maintains the requirement that the data must have been collected and analyzed using EPA Methods 533 or 537.1, and eliminates the requirement that data collected between January 1, 2019, and December 31, 2022, must reflect the

laboratory's ability to measure at or below the rule trigger level to satisfy initial monitoring requirements. Data collected before January 1, 2019, cannot be used to satisfy these requirements. Additionally, any results above the final rule trigger levels of 2.0 ng/L each for PFOA and PFOS, 5 ng/L each for PFHxS, PFNA, and HFPO–DA, and a Hazard Index of 0.5 for PFHxS, PFNA, HFPO–DA, and PFBS would not allow the associated EP to be eligible for reduced monitoring.

D. Can systems composite samples?

1. Proposal

Subpart C of 40 CFR 141.24 describes instances where primacy agencies may reduce the samples a system must analyze by allowing samples to be composited. Composite sampling can potentially reduce analytical costs because the number of required analyses is reduced by combining multiple samples into one and analyzing the composited sample. However, in the proposal, the EPA noted that based on input the agency received from consulting with state regulators and small business entities (operators of small PWSs), PFAS are ubiquitous in the environment at low concentrations, which necessitates robust laboratory analytical precision at these low concentrations. Based on these potential implementation issues, the EPA proposed that compositing of samples would not be allowed.

2. Summary of Major Public Comments and EPA Responses

The EPA received comments related to composite sampling. The majority of these commenters agreed with the EPA's proposal to not allow samples to be composited due to analytical limitations and the increased potential for background contamination, along with the physical and chemical characteristics of PFAS. A few commenters suggested that they believed composite sampling could be implemented and would reduce the cost of analyses. Further, some of these commenters suggested that with proper guidelines and procedures for analyzing samples, possible contamination issues could be mitigated and asserted that issues with false negative and positive samples also impact discrete samples (*i.e.,* that they are not unique to composite sampling).

The EPA received other comments regarding the specifics of composite monitoring. One commenter noted grab samples as more appropriate and suggested that individual systems be permitted to request alternative sampling methodologies if needed. One other commenter suggested that compositing samples from varying EP should not be allowed. In addition, one commenter requested that the EPA provide information as to the increased risk of compositing samples, along with discussion of the proposed departure from the SMF for SOC ahead of rule finalization.

For commenters who offered that composite sampling could be implemented, the EPA agrees it would potentially decrease sampling analysis costs and that sampling errors can occur when handling and analyzing discrete samples. However, the compositing of samples necessarily involves additional handling, opening, and transfer steps than are required for the collection and analysis of individual samples. Therefore, the combining of samples that must be done for composite sample analysis represents an increased risk of sampling error, which could result in decreased public health protection and additional sampling costs. The agency also does not agree that alternative sampling methodologies should be permitted and requires the use of EPA Methods 533 and 537.1 for monitoring per the requirements of the rule. Please see section VII of this preamble for more information on methods.

As discussed previously, PFAS are pervasive in the environment and require robust laboratory analytical precision, particularly at low concentrations. Accordingly, the EPA agrees with commenters that do not support the allowance of composite sampling and maintains that discrete sampling is the most appropriate type of sampling for regulated PFAS.

3. Final Rule

Based on consideration of public comments (many of which supported the EPA's concerns about the ubiquitous nature of PFAS at low concentrations in the environment, the necessary robust laboratory analytical precision required, and potential implications for implementation), the final rule does not allow composite samples.

E. Can primacy agencies grant monitoring waivers?

1. Proposal

Subpart C of 40 CFR 141.24 describes instances where the primacy agency may grant waivers predicated on proximity of the system to contaminant sources (*i.e.,* susceptibility to contamination) and previous uses of the contaminant within the watershed (including transport, storage, or disposal). The EPA did not include a provision to allow primacy agencies to grant monitoring waivers as a regulatory flexibility in the proposed rule. The EPA did, however, request public comment on whether to allow systems to apply to the primacy agency for a monitoring waiver of up to nine years (one full compliance cycle) if, after at least one year of quarterly sampling, the results are below the rule trigger level, or for systems that may be approved for reduced monitoring, if at least two consecutive results are below the rule trigger level. The EPA also requested comment on allowing similar monitoring waivers to be granted based on previously acquired monitoring data as described in section VIII.C of the preamble for the proposed rulemaking. The EPA additionally sought comment on possible alternatives to traditional vulnerability assessments that should be considered in order to identify systems as low risk and potentially eligible for monitoring waivers.

2. Summary of Major Public Comments and EPA Responses

Several commenters suggested that monitoring waivers should not be allowed for this rule. Several additional commenters cited the persistence and mobility of PFAS in the environment and advised that reduced monitoring frequencies should be no less than every three years on the basis that drinking water consumers in unmonitored areas may unknowingly be exposed to these PFAS. Furthermore, many other commenters suggested that PFAS contamination can migrate significantly over a three-year period.

Many other commenters were supportive of monitoring waivers for this rule under certain circumstances. Several commenters indicated that waivers would be appropriate if they were based on monitoring results. A few commenters recommended that if monitoring waivers were to be allowed, that they should not be based solely on a traditional vulnerability assessment. A couple of commenters stated that waivers based on vulnerability alone should not be allowed during the initial monitoring period. One commenter recommended waiting until UCMR 5 monitoring is complete before allowing monitoring waivers to be granted through vulnerability assessments. A couple of commenters suggested that waivers be considered if they are based on a combination of vulnerability *and* monitoring results, while one other commenter suggested that assessing watershed characteristics to demonstrate eligibility for monitoring waivers would be protective of chronic health risks. One commenter noted that

merely allowing waivers to be granted would not necessarily reduce public health protection under the rule, as primacy agencies will retain the ability to deny waiver applications.

After consideration of these comments, and due to the mobility and persistence characteristics of the regulated PFAS, the final rule does not allow monitoring waivers. These specific properties of the regulated PFAS and their observed ubiquity in both drinking water and within many other sources make waivers impractical and complicate the ability to maintain public health protection if such a provision were included as part of this rule. Moreover, the EPA is not confident that allowing monitoring any less frequently than every three years or conducting vulnerability assessments will accurately capture potential concentration variations over the long term or protect against risks from new contamination sources.

3. Final Rule

Consistent with the proposal, the final rule does not include a provision that would allow primacy agencies to issue monitoring waivers. These waivers would increase the potential for public health risks and the EPA does not consider them necessary to reduce burdens on primacy agencies, water systems and communities given the other flexibilities provided in the rule.

F. When must systems complete initial monitoring?

1. Proposal

Pursuant to section 1412(b)(10), the proposed rule required compliance with all aspects of the NPDWR three years after promulgation. This included satisfying initial monitoring requirements as described in sections VIII.A and VIII.C within the three years following rule promulgation.

2. Summary of Major Public Comments and EPA Responses

In the proposal, the EPA requested public comment on the proposed initial monitoring timeframe, particularly for NTNCWS or all systems serving 3,300 or fewer. Many commenters expressed support for the EPA requiring initial monitoring as soon as possible with a few commenters explicitly supporting the EPA's proposed initial monitoring timeframe noting it allows sufficient time for water systems to comply with the initial monitoring requirements. However, other commenters suggested that water systems would not be able to utilize the full three years following rule promulgation to perform initial monitoring and take actions to ensure compliance with the MCL if monitoring results showed elevated levels of PFAS. While the agency agrees that it may be difficult to conduct initial monitoring and take necessary remedial actions (*e.g.,* treatment installation) within three years, the EPA finds that it is practicable for all systems to complete their initial monitoring within three years. This is particularly the case since the large majority of systems serving greater than 3,300 will have sufficient monitoring data from UCMR 5 and many other systems will have at least some data to satisfy the rule's initial monitoring requirements. Moreover, as described in section XI.D. of this preamble, the EPA is exercising its authority under SDWA section 1412(b)(10) to implement a nationwide two-year capital improvement extension to comply with MCL. Consequently, water systems will have up to the full three years following rule promulgation to plan and conduct monitoring and still have two additional years to complete any actions needed to comply with the MCLs.

Several commenters suggested that the EPA consider a staggered initial monitoring timeframe by system size, such as those used in other previous NPDWRs, where, for example, larger sized systems conduct monitoring first followed by smaller systems. In the examples provided by commenters, this staggered monitoring could also allow systems to achieve compliance on a staggered schedule. A few commenters suggested that this is necessary to address potential laboratory capacity issues and to allow smaller systems additional time to plan and obtain resources to conduct the monitoring. The EPA disagrees that staggering the monitoring requirements to allow different compliance dates is necessary. SDWA 1412(b)(10) specifies that all systems must demonstrate compliance three years following rule promulgation except where a state or the EPA may grant an extension of up to two additional years to comply with MCL(s) if the EPA or the state (for an individual system) needs additional time for capital improvements. Therefore, the intent of the statute is to allow extensions to complete the capital improvements necessary to comply with the MCL. The EPA considers the three years sufficient for completing the rule's initial monitoring requirement. The EPA's allowance of previously collected monitoring data will also significantly reduce the potential for laboratory capacity challenges. As previously noted in section VIII.A of this preamble, the EPA has revised the required intervals between samples collected for initial monitoring under this rule to closely parallel the intervals required for UCMR 5, to promote the useability of existing data.

The EPA is not prescribing any staggering of monitoring (*e.g.,* based on system size) but encourages primacy agencies to work with the systems they oversee to ensure their initial monitoring occurs and adjust schedules (within the three years following rule promulgation) as appropriate.

3. Final Rule

The EPA is finalizing the requirement that initial monitoring, or demonstration of previously collected data to satisfy initial monitoring requirements, must be completed within the three years following rule promulgation (*i.e.,* April 26, 2027) to ensure that water systems have the information needed to inform decisions to meet the MCL compliance date. As described previously and in section XI.D, the EPA is providing a two-year capital improvement extension under SDWA 1412(b)(10), allowing additional time for those systems to comply with the MCL. Requiring water systems to conduct initial monitoring within the three years following rule promulgation will ensure public health protection as soon as practicable and allow these water systems to maximize utilization of the capital-improvement extension time. Additionally, the flexibility in the final rule for systems to use previously acquired monitoring data to satisfy some or all of their initial monitoring will reduce the potential for laboratory capacity challenges. The EPA encourages systems that may not have available data and/or choose to conduct additional monitoring to conduct their initial monitoring as soon as practicable following rule promulgation to allow for remedial actions that may needed, based on monitoring results, and to comply with the MCL by the compliance date.

G. What are the laboratory certification requirements?

1. Proposal

The EPA proposed that laboratories demonstrate their capability to meet the objectives of this regulation. The proposal would require laboratories to analyze performance evaluation (PE) samples every year for each method and contaminant in order to achieve and maintain certification from their primacy agency.

2. Summary of Major Public Comments and EPA Responses

A few commenters requested that the EPA develop guidance and training for

drinking water laboratory certification programs to evaluate laboratories seeking certification. The EPA agrees that training for laboratory certification officers is appropriate. The EPA will develop training materials and guidance for drinking water certification programs to evaluate laboratories to ensure adherence to the requirements of EPA Methods 533 and 537.1 (USEPA, 2005b).

One commenter requested that the EPA establish reciprocity between laboratory certification programs to utilize all potential laboratory capacity available. As described in the EPA's *Manual for the Certification of Laboratories Analyzing Drinking Water,* laboratory certification programs may recognize drinking water laboratory certifications (or comparable ''accreditation'') from other laboratory certification programs, by reciprocity (USEPA, 2005b). Most laboratory certification programs do utilize the practice of reciprocal certification. Reciprocal certification can only be granted to laboratories utilizing EPA Methods 533 and 537.1.

3. Final Rule

Under the final rule, certified laboratories must demonstrate their capability to meet the objectives of this regulation. Laboratories are required to analyze PE samples every year for each method and contaminant in order to achieve and maintain certification from their primacy agency.

H. Laboratory Quality Assurance/ Quality Control

In the proposal, the EPA requested comment on other monitoring-related considerations including quality assurance/quality control (QA/QC) associated with drinking water sampling and analysis.

Many commenters suggested the potential for false positives to misrepresent actual levels of the regulated PFAS within the drinking water sample due to the ubiquity of PFAS and the possible background interference. The EPA is aware of the potential for background contamination due to the ubiquitous nature of PFAS in the environment. The EPA agrees that PFAS sampling is highly sensitive and there is potential for sample contamination. However, with proper training tools and communications, that potential can be mitigated, though not sufficiently enough to allow for composite sampling as discussed in section VIII.D of this preamble. For example, the UCMR program has released several sampling guidance documents and a small-systems sampling video to assist small and medium utilities with the PFAS sampling. These products have also been distributed to the UCMR laboratory community, which has been encouraged to share them with their PWS clients.

Also, Method 533 and Method 537.1 require the analysis of an LRB with each extraction batch. If method analytes are detected at or above ⅓ the minimum reporting level, suggestive of background contamination, all positive field sample results associated with that extraction batch are invalid for the impacted analytes. Both methods also require the analysis of an FRB (a blank that is prepared at the sampling location) when any PFAS are detected above the minimum reporting level in field samples. The use of laboratory and field blanks were incorporated into the methods as QC to reduce the potential for false positives due to background contamination.

IX. Safe Drinking Water Act (SDWA) Right To Know Requirements

A. What are the Consumer Confidence Report requirements?

1. Proposal

A community water system (CWS) must prepare and deliver to its customers an annual Consumer Confidence Report (CCR) in accordance with requirements in 40 CFR part 141, subpart O. A CCR provides customers with information about their local drinking water quality as well as information regarding the water system's compliance with drinking water regulations. The EPA proposed that CWSs be required to report detected PFAS in their CCRs, specifically, PFOA, PFOS, PFHxS, PFNA, HFPO–DA, and PFBS, and the Hazard Index for mixtures of PFHxS, PFNA, HFPO–DA, and PFBS. The EPA also proposed adding paragraph (g) to 40 CFR 141.154 that would require health effects language be provided when any regulated PFAS is measured above the maximum contaminant level (MCL), in addition to those with an MCL violation.

2. Summary of Major Public Comments and EPA Responses

A few commenters requested clarification of the health effects language included in the CCR. Specifically, a couple of commenters said the proposed standard health effects language included in the CCR for a Hazard Index MCL exceedance was not clear. Commenters found some of the language regarding the Hazard Index MCL to be confusing and offered suggestions for clarification. The EPA has considered this input and revised the health effects language associated with PFAS exposure, including the Hazard Index.

A few of commentors raised concerns about requiring reporting of results below the practical quantitation level (PQL) in the CCR as these data may not be quantified with what they deem is appropriate precision. One commentor requested that any detected PFAS, not just the six regulated contaminants, be reported in the CCR. The EPA disagrees with commenters who voice concern over reporting measurements below the PQLs for PFOA and PFOS as ''detected'' contaminants in the CCR. Reporting these measurements in the CCR will allow customers to understand that the contaminant was detected in the water supply. While measurements below the PQL will not be used to calculate compliance with MCLs for the final rule, measurements lower than the PQL are achievable by individual laboratories, and therefore these measurements can be used for screening, to determine compliance monitoring frequency, and to educate consumers about the existence of PFAS (for further discussion of PQLs for regulated PFAS, please see section VII of this preamble). As such, the EPA believes that measurements below the PQL can reasonably be reported as ''detected'' for purposes of the CCR. This requirement is consistent with the CCR Rule in 40 CFR 141.153(d) which requires CWSs to report information on detected contaminants for which monitoring was required by the EPA or the state. The CCR reporting requirement includes unregulated contaminants for which monitoring is required pursuant to the Unregulated Contaminant Monitoring Rule (UCMR) as well as regulated contaminants in accordance with SDWA (Safe Drinking Water Act) 1414(c)(4). If the system has performed additional monitoring, the EPA strongly encourages them to include the results in the CCR, consistent with 40 CFR 141.153(e)(3).

3. Final Rule

As part of this action, the EPA has modified the trigger level value for quarterly monitoring from one-third of the MCL to one-half of the MCL in response to concerns that laboratories would not have the capacity to consistently measure as low as the threshold of one-third of the MCL (for further discussion of the EPA's trigger levels for the final rule, please see section VIII of this preamble). To reflect this change in the trigger level, the EPA has modified 40 CFR 141.151(d), which identifies what is considered detected

for purposes of reporting in CCRs consistent with SDWA 1414(c)(4). The EPA had also proposed adding a provision to require CWSs that detect any PFAS above the MCL to include health effects language for PFAS and stated in the preamble for the rule proposal that CWSs would be required to report detected PFAS as part of their CCRs. Because SDWA 1414(c)(4)(B) specifies that the Administrator may only require health effects language be reported in the CCR for situations other than an MCL violation for not more than three regulated contaminants, the EPA has removed the amendment to paragraph (g) of 40 CFR 141.154 included in the proposed rule from the final rule and has instead updated appendix O to part 141 for the final rule to only require CWSs that have violations of the PFAS MCLs to include health effects language for PFAS. Since systems must complete initial monitoring within three years of rule promulgation, systems will be required to report results and other required information in CCRs beginning with 2027 reports. As the MCL compliance date is set at five years following rule promulgation, systems will be required to report MCL violations in the CCR, accompanied by the required health effects language and information about violations, starting in 2029.

The EPA acknowledges the need to protect public health with clear and concise language that outlines the risks associated with exposures exceeding the MCLs and Hazard Index. The EPA's broad review of the most current research provides a comprehensive understanding of how exposure to PFAS may result in adverse impacts on the health of individuals. In response to commenter requests for plain language explanations of the Hazard Index, the EPA is adding the following definition of the *Hazard Index* in 40 CFR 141.153(c)(3)(v) of the CCR Rule to improve clarity and understandability for consumers (for more information on how the Hazard Index is calculated for this rule, please see table to paragraph (b) under 40 CFR 141.50):

Hazard Index or HI: The Hazard Index is an approach that determines the health concerns associated with mixtures of certain PFAS in finished drinking water. Low levels of multiple PFAS that individually would not likely result in adverse health effects may pose health concerns when combined in a mixture. The Hazard Index MCL represents the maximum level for mixtures of PFHxS, PFNA, HFPO–DA, and/or PFBS allowed in water delivered by a public water system. A Hazard Index greater than one (1) requires a system to take action.

Additionally, in response to commenters' request for clearer mandatory health effects language, the final rule includes revised mandatory health effects language required as part of CCRs, in cases when MCL violations have occurred.[10] Identical mandatory health effects language is also required for public notification (PN) under the final rule (PN requirements are described further in section IX.B of this preamble). The mandatory health effects language in the final rule reads as follows:

Health effects language for PFOA: Some people who drink water containing PFOA in excess of the MCL over many years may have increased health risks such as cardiovascular, immune, and liver effects, as well as increased incidence of certain types of cancers including kidney and testicular cancer. In addition, there may be increased risks of developmental and immune effects for people who drink water containing PFOA in excess of the MCL following repeated exposure during pregnancy and/or childhood.

Health effects language for PFOS: Some people who drink water containing PFOS in excess of the MCL over many years may have increased health risks such as cardiovascular, immune, and liver effects, as well as increased incidence of certain types of cancers including liver cancer. In addition, there may be increased risks of developmental and immune effects for people who drink water containing PFOS in excess of the MCL following repeated exposure during pregnancy and/or childhood.

Health effects language for PFHxS: Some people who drink water containing PFHxS in excess of the MCL over many years may have increased health risks such as immune, thyroid, and liver effects. In addition, there may be increased risks of developmental effects for people who drink water containing PFHxS in excess of the MCL following repeated exposure during pregnancy and/or childhood.

Health effects language for PFNA: Some people who drink water containing PFNA in excess of the MCL over many years may have increased health risks such as elevated cholesterol levels, immune effects, and liver effects. In addition, there may be increased risks of developmental effects for people who drink water containing PFNA in excess of the MCL following repeated exposure during pregnancy and/or childhood.

Health effects language for HFPO–DA: Some people who drink water containing HFPO–DA in excess of the MCL over many years may have increased health risks such as immune, liver, and kidney effects. There is also a potential concern for cancer associated with HFPO–DA exposure. In addition, there may be increased risks of developmental effects for people who drink water containing HFPO–DA in excess of the MCL following repeated exposure during pregnancy and/or childhood.

Health effects language for Hazard Index PFAS: Per- and polyfluoroalkyl substances (PFAS) can persist in the human body and exposure may lead to increased risk of adverse health effects. Low levels of multiple PFAS that individually would not likely result in increased risk of adverse health effects may result in adverse health effects when combined in a mixture. Some people who consume drinking water containing mixtures of PFAS in excess of the Hazard Index (HI) MCL may have increased health risks such as liver, immune, and thyroid effects following exposure over many years and developmental and thyroid effects following repeated exposure during pregnancy and/or childhood.

B. What are the Public Notification (PN) requirements?

1. Proposal

As part of SDWA, the PN Rule ensures that consumers will know if there is a problem with their drinking water. Notices alert consumers if there is risk to public health. They also notify customers: if the water does not meet drinking water standards; if the water system fails to test its water; if the system has been granted a variance; or if the system has been granted an exemption (that is, more time to comply with a new regulation).

All public water systems (PWSs) must give the public notice for all violations of National Primary Drinking Water Regulations (NPDWRs) and for other situations. Under the EPA's PN Rule, the public notice requirements for each violation or situation are determined by the tier to which it is assigned. The EPA specifies three categories, or tiers, of PN requirements, to take into account the seriousness of the violation or situation and any potential adverse health effects that may occur (USEPA, 2000f). The

[10] The EPA has developed the existing mandatory health effects language to communicate accurate, clear health information to a non-technical audience. Although the EPA believes additional detail is not necessary to include in the mandatory health effects language which is required only where MCL violations have occurred, the EPA also recognizes that, in general, a single exposure at a critical time in development may produce an adverse developmental effect (see USEPA, 1991a).

EPA proposed that violations of the three MCLs in the proposal be designated as Tier 2 and as such, PWSs would be required to comply with 40 CFR 141.203. Per 40 CFR 141.203(b)(1), notification of an MCL violation should be provided as soon as practicable but no later than 30 days after the system learns of the violation. The proposed rule also designated monitoring and testing procedure violations as Tier 3, which would require systems to provide notice no later than one year after the system learns of the violation. The system would then be required to repeat the notice annually for as long as the violation persists.

2. Summary of Major Public Comments and EPA Responses

Many commenters support the Tier 2 PN requirement for MCL violations. Commenters assert that Tier 2 notification is appropriate and consistent with other MCLs for chemicals with chronic effects. Conversely, many commenters suggest that the PN tiering be raised from Tier 2 to Tier 1 or that the EPA consider other PN approaches given concerns about health impacts resulting from exposure on timescales shorter than chronic exposure. Commenters assert that raising PN for MCL violations from Tier 2 to Tier 1 would ensure that consumers are informed of potential harm associated with elevated PFAS levels in a timelier manner so they can make informed risk management decisions. Additionally, a few commenters request the EPA re-categorize repeat MCL violations to Tier 3 due to the expected length of time needed for a PWS to design and construct treatment. Commenters argue that quarterly PN would not offer added value and could possibly result in confusion for consumers.

The EPA agrees with commenters that Tier 2 PN is appropriate for MCL violations based on analysis of a wide range of scientific studies that shows that long-term exposure may have adverse health effects. The EPA disagrees with commenters who recommend issuing Tier 1 notification for MCL violations. Tier 1 notices must ''be distributed as soon as practicable, but no later than 24 hours, after the public water system learns of the violation'' pursuant to section 1414(c)(2)(C)(i) of SDWA. The PN Rule preamble characterizes contaminants with violations routinely requiring a Tier 1 notice as those with ''a significant potential for serious adverse health effects from short-term exposure'', stating that other violations do not require Tier 1 notice because elevated levels of these contaminants are not ''strongly or consistently linked to the occurrence of the possible acute health effects'' (USEPA, 2000f). The EPA has not characterized health risks resulting from acute exposure (*i.e.,* < or = 24 hours) to PFAS and the EPA believes that issuing Tier 2 PN for MCL violations constitutes a health protective approach given that the MCLG values are based on health effects that occur after chronic exposure to PFAS (*i.e.,* cancer). Based on the available health effects information, the EPA has characterized developmental effects, including immune impacts, associated with developmental PFAS exposure in addition to health effects that occur after chronic exposure. The agency considers it reasonable to notify consumers within 30 days of a PWS learning of an MCL violation because it generally provides protection of the adverse health effects that may occur from exposure to PFAS during sensitive lifestages such as gestation. The EPA typically reserves Tier 1 notifications for acutely toxic contaminants. For example, nitrate, nitrite, or total nitrate and nitrite require Tier 1 notice because exceedances can result in immediate life-threatening health impacts for infants (*i.e.,* methemoglobinemia). Based on the currently available information, the developmental and chronic effects associated with exposure to these PFAS are not known to represent immediate acute health effects. For more information on the EPA's characterization of health effects resulting from PFAS exposure, please see (USEPA, 2024c; USEPA, 2024d). This approach is also consistent with the PN requirements for other synthetic organic contaminants regulated under SDWA. The EPA acknowledges that there may be instances in which it is appropriate to elevate the tiering of PN on a case-by-case basis. Under the existing PN Rule in 40 CFR 141.202(a), a violation that routinely requires a Tier 2 notice but poses elevated risk from short-term exposure may be elevated to Tier 1 at the discretion of the primacy agency (USEPA, 2000f). Additionally, the EPA will develop appropriate implementation guidance to assist in the understanding of PN requirements among other final rule requirements.

The EPA disagrees with commenters that recommended reclassifying ongoing MCL violations to Tier 3 for repeat notices. The EPA believes there is sufficient flexibility in the existing PN Rule 40 CFR 141.203(b)(2) that allows primacy agencies to allow a less frequent repeat notice on a case-by-case basis for unresolved violations, but no less than once per year, and the determination must be in writing. The EPA believes repeat notices are valuable to consumers that may not receive the initial notice and allow water systems to provide any updates to consumers, such as actions being taken to resolve the situation and estimated timelines.

A few commenters recommended that the EPA update the proposed PN health effects language. Commenters stated that the proposed health effects language was confusing and needed to be clarified as it did not sufficiently explain the health effects resulting from PFAS exposure. Additionally, commenters stated that further clarifying the health effects language would mitigate confusion from customers when receiving PN from their water system.

The EPA agrees with commenters that additional explanation of the health effects of PFAS exposure will more effectively communicate risk to consumers when they receive PN from their water system. The EPA has considered this input and has revised health effects language for the final rule to further clarify the health effects associated with PFAS exposure.

3. Final Rule

The final rule requires the PN of violations of all MCLs promulgated under this final rule to be designated as Tier 2 and as such, PWSs would be required to comply with 40 CFR 141.203. The final rule also designates monitoring and testing procedure violations as Tier 3, requiring systems to provide notice no later than one year after the system learns of the violation. Systems are also required to repeat the notice annually for as long as the violation persists. As systems must comply with initial monitoring requirements within three years of rule promulgation, systems will be required to provide Tier 3 notification for monitoring and testing procedure violations starting in 2027. As the MCL compliance date is set at five years following rule promulgation, systems will be required to provide Tier 2 notification for MCL violations starting in 2029. However, the EPA acknowledges that primacy agencies have the authority in the existing PN Rule (table 1 to § 141.201) to require systems to provide notices to consumers prior to the MCL compliance date. The EPA encourages primacy agencies to use this flexibility to require systems to provide notices to consumers for PFAS detections that precede the date that MCL compliance will take effect, as they deem appropriate. By encouraging systems to provide timely notification, it

allows customers to take actions to protect their health, such as using a filter, while systems take necessary steps to apply treatment.

With respect to violations and reporting associated with the individual MCLs and Hazard Index MCL, the EPA recognizes that a utility may have two or more of these PFAS present that, over the course of four quarterly samples, may result in violation of multiple MCLs. For example, if, following four quarterly samples, a utility has PFHxS and HFPO–DA present and the RAA is above their respective MCLs and HBWCs of 10 ng/L, the system would be in violation of both the individual MCLs for PFHxS and HFPO–DA, as well as the Hazard Index MCL. Issuing multiple notifications (three in this example) for these violations may cause public confusion as the adverse health effects and exposure concern in this instance is not meaningfully different from either a Hazard Index or individual MCL perspective. To simplify implementation of PN in this scenario, the EPA is finalizing requirements in appendix A to subpart Q of part 141 such that utilities who violate the Hazard Index MCL and one or more individual MCLs because of the same compounds can issue one notification to satisfy the PN requirements for the multiple violations.

The EPA has also made edits to clarify the mandatory health effects language required in the PN of an MCL violation, as well as the CCR. The mandatory health effects language required for both PN and CCRs is summarized in section IX.A.3 of this preamble above.

X. Treatment Technologies

Section 1412(b)(4)(E) of the Safe Drinking Water Act (SDWA) requires that the agency ''list the technology, treatment techniques, and other means which the Administrator finds to be feasible for purposes of meeting [the MCL],'' which are referred to as best available technologies (BATs). The EPA generally uses the following criteria for identifying ''feasible'' BATs: (1) The capability of a high removal efficiency; (2) a history of full-scale operation; (3) general geographic applicability; (4) reasonable cost based on large metropolitan water systems; (5) reasonable service life; (6) compatibility with other water treatment processes; and (7) the ability to bring all the water in a system into compliance. Section 1412(b)(4)(E)(ii) of SDWA requires that the agency identify small system compliance technologies (SSCTs), which are affordable treatment technologies, or other means that can achieve compliance with the maximum contaminant level (MCL).

In the proposed rule, the EPA requested comments on: technologies designated as BATs, costs associated with nontreatment options; whether employing these treatment technologies are sound strategies to address PFAS as well as whether the BATs could feasibly treat to below the proposed MCLs; the type of assistance that would help public water systems (PWSs); potential benefits from co-removal; treatment residual disposal estimates; the capacity to address the increased demand for BATs as well as residuals disposal or reuse; impacts that PFAS residuals disposal may have in communities adjacent to the disposal facilities; the most appropriate disposal means for PFAS contaminated residuals and waste the systems may be generating; and SSCT selection as well as national affordability analysis, specifically on the methodologies.

A. What are the best available technologies?

1. Proposal

The agency proposed GAC, AIX, NF, and RO as BATs for the six PFAS under consideration in the proposed rule. The EPA also acknowledged that there are nontreatment options which may be used for compliance such as replacing a PFAS-contaminated drinking water source with a new uncontaminated source. The EPA also stated that conventional and most advanced water treatment methods are ineffective at removing PFAS.

2. Summary of Major Public Comments and EPA Responses

The vast majority of comments germane to the BAT designations support the EPA's designation of granular activated carbon (GAC), anion exchange resins (AIX), and high-pressure membranes (nanofiltration (NF) and reverse osmosis (RO)) as BATs that are technologically feasible for treating drinking water to the proposed standards or below. Many commenters shared practical experience with installed treatment including successes, costs, implementation considerations, challenges, and other areas. The EPA agrees that GAC, AIX, RO, and NF are BATs and consistent with the criteria outlined in the BAT/SSCT document for identifying ''feasible'' treatment for PFAS in this rule, and the comments providing information on practical full-scale experience with these technologies further support for this finding.

A few commenters suggested either that the designated BATs could not treat to or below the MCL or that not enough data was available to support the conclusion that the BATs could treat to at or below the proposed MCL. The EPA disagrees with these commenters based on the history of full-scale use as documented in the *Best Available Technologies and Small System Compliance for Per- and Polyfluoroalkyl Substances (PFAS) in Drinking Water* document (USEPA, 2024l), the information in the rule preamble, and in the comments that provided full-scale data as well as case studies. For example, commenters highlighted more than 45 military installations that have treated PFAS, including those in this rule, successfully for more than 15 years, a major water treatment company provided information on over 150 successful installations they had performed, and comments supported that there are significant numbers of industrial users successfully treating PFAS, including those in this rule. One commenter noted the example of the Chemours Fayetteville facility which used GAC to eliminate PFAS, including those in this rule, as high as 345,000 ng/L and has reduced PFAS in effluent to non-detect levels for several PFAS. Finally, the Water Quality Association reviewed proprietary performance data from its accredited laboratory demonstrating that this standard is feasible for the BATs selected to effectively remove the PFAS regulated in this rule from drinking water.

Many commenters pointed out site-specific issues with particular BATs. The EPA acknowledges that not every BAT represents the best treatment option for an individual system and site-specific considerations can limit BAT selection. For instance, residuals management considerations can limit the choice of RO/NF; particularly in states with limited water resources. While many commenters agreed that high pressure membranes such as RO and NF can remove the six PFAS included in the proposal, many commenters also suggested that high pressure membranes may not be the most feasible treatment option for some systems because of residual management considerations, which are discussed in the residuals management section. There are, however, documented RO/NF facilities for treating PFAS in California, Illinois, North Carolina, and Alabama (USEPA, 2024l). In response to public comment and residual management concerns surrounding high pressure membrane technologies, the EPA has adjusted RO/NF's technology projection compliance forecast to 0% in the EA. While the EPA

does not estimate any water systems will elect to install RO/NF to comply with the PFAS rule, it remains a BAT for water systems to consider. For additional details on the EPA's EA, please see section XII.

The EPA also acknowledges that due to technical site-specific considerations, some BATs may not be the best choice for particular water types. PFAS treatment option selection should consider conditions for a given utility including water quality, available space, disposal options, and currently installed unit operations. AIX may be the preferred technology for some utilities based on expected treatment needs, while others may select GAC or other technologies. However, as many commenters indicated, the BAT designations are appropriate for water systems across the country.

Several commenters pointed out that GAC may release arsenic at levels exceeding arsenic's MCL temporarily when installed and upon changing media, deleteriously impacting finished water quality. While the EPA has documented challenges surrounding GAC and arsenic (USEPA, 2024l), the EPA disagrees that the arsenic release poses an exposure concern so long as appropriate procedures are followed. Those procedures include discarding the initial bed volumes (BVs) after installation or replacement of media. A bed volume is the volume of liquid contained within a GAC contactor, it is the container volume minus the solids volume and void space. The quantity of treated water discarded can be significant (*e.g.,* as high as 350 BVs as one commenter noted). However, this amount of discarded water is low in comparison to the normal service life between GAC replacement, which is approximately 84,000 BVs or approximately about 0.5% of the total treated volume. The total water volume discarded is also low in comparison to water loss through leaks across the United States, which account for about 15% of treated water or what would be approximately 12,600 BV equivalents for this system. While conserving water is a significant issue, the water discarded due to GAC applications is relatively low. Systems can reduce water discard associated with BAT implementation by using acid washed and/or prerinsed GAC or using buffered/pre-flushed resins for AIX. Any treatment technology can create problems if improperly maintained and operated. Finally, GAC has been statutorily designated as ''feasible for the control of synthetic organic chemicals,'' such as PFAS, in SDWA section 1412(b)(5).

The EPA received many suggestions for additional BATs including powdered activated carbon (PAC), alternative sorbents, and new destructive technologies. However, these alternative BATs proposed, except for PAC, currently lack demonstrated full-scale removal of the six PFAS under consideration. The EPA notes that there are some reports of PAC use on a temporary basis and that it can reduce PFAS concentrations in drinking water. PAC may be an appropriate choice of technology in certain circumstances, however, its efficacy for trace removal tends to be variable due to factors such as carbon particle size, background organics, and plant efficiency. Therefore, PAC is not as effective as GAC overall, and the agency has not designated it as a BAT. The EPA periodically reevaluates treatment technologies and may add additional technologies based on updated information. It is important to note that water systems may use any technology or practice to meet the PFAS MCLs and are not limited to the BATs in this rule. Other technologies may be chosen in lieu of BAT because they may be more cost effective or better suited to the specific operating conditions of the particular site to meet the MCL. Electing not to use a BAT, however, means that a system will not be eligible for a variance under SDWA section 1415(a)(1)(A). For example, if a facility does not install GAC where it is the designated BAT, but uses PAC instead, and fails to meet the MCL, the facility would not be eligible for a variance under SDWA section 1415(a)(1)(A). On the other hand, the same facility may be eligible for an exemption under SDWA section 1416 if, for example, GAC could not be installed due to an inability to obtain financing and PAC was used instead, and the facility failed to meet the MCL.

Many commenters pointed out the need for increased research, technological innovation, and guidance in treating drinking water for PFAS. The available information is sufficient to finalize the BATs as proposed but the EPA agrees that more research may be beneficial (USEPA, 2022c). With respect to the EPA's request for public comment on additional guidance materials that would be helpful to support successful technical implementation of the rule, the EPA received many comments related to the need for technical materials to support rule implementation. The agency plans to collaborate with states, technical assistance providers, industry associations and interested stakeholders, including small systems, following the rule promulgation to provide technical materials that can assist water systems in complying with the regulations. The EPA is currently funding many technical assistance efforts associated with PFAS, including supporting treatment infrastructure projects through the Drinking Water State Revolving Fund (DWSRF) and the Emerging Contaminant grant program as designated and funded through the Bipartisan Infrastructure Law (BIL).

Many commenters supplied information related to capital as well as operations and maintenance costs. Many commenters expressed concerns over potential costs and capacity while some commenters expressed the opposite opinion. These issues are further addressed in the EPA cost analysis in section XII and within the EPA's *Response to Public Comments on the Proposed PFAS NPDWR* (USEPA, 2024k). For additional discussion regarding the feasibility of the final MCLs, please see section V of this preamble above.

Many comments pointed to potential supply chain issues in both material and technical capacity such as qualified personnel, including certified operators. While there may be some supply chain issues in the short-term, comments from BAT suppliers indicate excess capacity as well as investment in production. Furthermore, while there may be temporary difficulties in supply chain and technical capacity, the structural demand increase is expected to lead to supply increases as well as innovation such as proposed technologies which were not designated as BATs. This has been historically demonstrated multiple times in prior drinking water rules. For example, activated alumina was listed as one of the BATs and a SSCT for arsenic removal in the Arsenic Rule (USEPA, 2001), and acknowledgement was given to granular ferric hydroxide media as a developing technology. While the granular ferric hydroxide media was not selected as a BAT/SSCT at the time due to lack of full-scale demonstration, these media became the predominant approach to addressing arsenic: Rubel (2003) stated that new iron-based materials could be ''employed economically on a spent media basis without the incorporation of pH adjustment chemicals and equipment.'' McCullough et al. (2005) cited over a dozen demonstration sites across the US implementing granular iron media treatment technologies, providing further supporting evidence that new technologies evolved in the wake of the Arsenic rule to provide more efficient and economical treatment

systems. Additionally, the present statutory standard for ''best available technology'' under 1412(b)(4)(D) represents a change from the provision prior to 1986, which required the EPA to judge feasibility on the basis of ''best technologies generally available'' (BTGA). The 1986 Amendments to the SDWA changed BTGA to BAT and added the requirement that BAT must be tested for efficacy under field conditions, not just under laboratory conditions. The legislative history explains that Congress removed the term ''generally'' to assure that MCLs ''reflect the full extent of current technology capability'' [S. Rep. No. 56, 99th Cong., 1st Sess. at 6 (1985)]. Read together with the legislative history, the EPA has concluded that the statutory term ''best available technology'' is a broader standard than ''best technology generally available,'' and that this standard allows the EPA to select a technology that is not necessarily in widespread use, as long as its performance has been validated in a reliable manner. Indeed, the 1991 Lead and Copper Rule stated, ''as long as it has been tested beyond the laboratory under full-scale conditions for other contaminants, and the performance of the technology for lead and copper may reasonably be projected based upon other available treatment data (*i.e.,* laboratory or pilot scale), the EPA believes the technology can be established as BAT.''

With respect to the challenges raised by commenters surrounding capital improvement, the EPA has provided compliance flexibility by providing a two-year capital improvements extension of the MCL compliance deadline allowed by section 1412(b)(10) of SDWA. Additionally, the EPA will continue its research as well as outreach efforts to help develop technical and operator capacities. For comments and additional information regarding the implementation timeframe for this rule, please see section XI.D.

Many commenters stated that permitting needs to be streamlined and that more assistance should be proffered to primacy agencies, utilities, and other interested stakeholders. While SDWA does not require permits, state and local authorities often require permits for the installation of treatment facilities at water systems. The EPA has developed supporting rule documents such as the *Best Available Technologies and Small System Compliance for Per- and Polyfluoroalkyl Substances (PFAS) in Drinking Water* document (USEPA, 2024l) that can be used to help permitting authorities develop more familiarity with these technologies over time. After finalization of the PFAS National Primary Drinking Water Rule (NPDWR), the EPA also intends to work with stakeholders to provide support to utilities, primacy agencies, and other interested parties to ensure successful rule implementation.

3. Final Rule

In the final rule, the EPA is codifying GAC, AIX, NF, and RO as BATs. The record does not support including additional BATs at this time. A BAT designation is informational, and while installation of the BAT is a condition of a variance under section 1415(a)(1)(A), systems without a variance are not required to use a BAT for MCL compliance. The owner/operator of a PWS will need to consider site specific circumstances as well as technical, economic, and local regulatory considerations when choosing a compliance technology for this rule. To address the challenges raised by commenters surrounding capital improvement, the EPA has provided a two-year compliance extension for capital improvements which is discussed in greater detail in section XI (*Rule Implementation and Enforcement*) and will continue its research efforts. The two-year capital improvement extension should also provide time for development of technical capacities and qualified personnel including certified operators. In response to public comment and in acknowledgement of residuals management concerns surrounding high pressure membrane separation technologies, the EPA is lowering RO/NF's technology projection compliance forecast in the EA. For comments and additional information related to the EPA's cost analysis, please see section XII. For comments and additional information regarding the implementation timeframe for this rule, please see section XI.D.

B. PFAS Co-Removal

1. Proposal

The EPA stated that AIX and GAC are effective at removing PFAS and there is generally a linear relationship between PFAS chain length and removal efficiency shifted by functional group. The EPA also notes that perfluoroalkyl sulfonates (PFSA), such as PFOS, are removed with greater efficiency than the corresponding perfluoroalkyl carboxylic acid (PFCA), such as PFOA, of the same carbon backbone length. Additionally, the compounds with longer carbon chains display a smaller percentage decrease in average removal efficiency over time (McCleaf et al., 2017). These same technologies also remove other long-chain and higher carbon/higher molecular weight PFAS as well as total organic carbon (TOC, DBP precursors). RO and NF may also remove other contaminants including arsenic, TOC, and chromium-VI. In short, the EPA noted that this regulation, if finalized, would result in a reduction of the six PFAS proposed for regulation, other co-occurring PFAS, and other co-occurring contaminants.

2. Summary of Major Public Comments and EPA Responses

A significant majority of commenters supported the EPA's position that treatment technologies which remove PFAS provide ancillary benefits by removing other known or potential contaminants. One commenter disputed the ability of these technologies to provide ancillary benefits, and others suggested that the EPA's proposed regulation would provide only limited protection against the many PFAS not under consideration in the rule. The EPA disagrees with the commenters who state that the proposed regulation would not result in a reduction in co-occurring PFAS and other contaminants. Burkhardt et al. (2023) used a theoretical approach [11] to estimate that all but one of the PFAS that are quantified by EPA Methods 533 and 537.1 could be economically removed by GAC in typical water qualities and that of 428 PFAS evaluated, 76–87 percent could be cost-effectively treatable. The co-removal benefits are well documented in the scientific literature and in the evidence submitted by public comment. The *Best Available Technologies and Technologies and Cost* support documents summarize literature demonstrating the co-removal capabilities of treatment technologies.

Some commenters stated that treatment for one PFAS does not inherently imply removal of other PFAS. The EPA agrees, as discussed in the proposed rule preamble. In general, there is an inverse relationship between treatability and toxicity which is tied to the carbon backbone (Bellia et al., 2023). Generally, the longer the carbon backbone length, the more easily the PFAS is removed by a given treatment technology. For example, if PFOA (C8) is targeted for removal by the water system, perfluorodecanoic acid (PFDA, C10) would most likely be removed as well. However, the converse would not

[11] While PFAS are often discussed as a group, the individual PFAS species can have a range of different removal efficacies using GAC. A theoretical approach for PFAS fills information gaps where analytical methods do not exist for all PFAS and testing is expensive and time consuming

be true (*i.e.,* a system targeting PFNA (C9) removal would reduce PFHxA (C6) to a lesser extent).

Some commenters suggested that co-removal would decrease the removal efficiency of GAC or AIX and that removal efficiency of non-target contaminants is lower than it could otherwise be. The EPA agrees that the removal of non-targeted contaminants by GAC or AIX can lower the PFAS removal efficiency; the agency has accounted for this uncertainty in appendix N of the EA (USEPA, 2024e). The EPA also agrees that targeting contaminants for removal will be more effective than relying on other non-targeted removal. For example, a GAC facility designed to remove PFAS will not be as effective at removing DBP precursors as a facility designed for that; however, there will still be co-removal of DBP precursors which may lead to a reduction in DBPs. Ultimately, treatment facilities operate best when tailored to specific contaminants or mixture of contaminants unique to that location. For additional information on the EPA's co-benefit analysis, please see section XII.

Some commenters expressed concern about co-removal taking beneficial ions from water, specifically fluoride ions, and suggested that would be an added cost to the rule. The EPA notes that fluoride has a legally enforceable MCL of 4.0 mg/L, and a non-enforceable secondary standard of 2.0 mg/L to prevent mild or moderate dental fluorosis. The EPA also notes that while some PFAS do contain organic fluorine bound to carbon, fluorine and fluoride are not the same. The BATs identified for the removal of PFAS for drinking water are not optimized for the removal of fluoride and do not necessarily provide effective removal of naturally occurring fluoride. For example, GAC is ineffective for fluoride removal at environmentally relevant pHs (USEPA, 2024o).

Some commenters suggested that co-removal may make it more difficult to dispose of materials left over from the drinking water treatment processes, known as treatment residuals. For example, GAC may remove and concentrate radon or other contaminants to such an extent that the spent media is considered hazardous. The EPA believes that removing hazardous constituents from drinking water is generally beneficial even though it could complicate residual management. More details on treatment residuals, are discussed in part C of this section.

Some commenters also suggest more research may be beneficial to understanding co-removal. The EPA agrees (USEPA, 2022c).

3. Final Rule

GAC, AIX, NF, and RO are codified in the final rule as BATs. As discussed elsewhere in the record for this final rule, because of PFAS co-occurrence and the ability for treatment technologies to co-remove co-occurring PFAS and other contaminants, the EPA anticipates the final rule will result in significant co-removal public health benefits in addition to those benefits from removing the six PFAS being directly regulated by this action.

C. Management of Treatment Residuals

1. Proposal

As part of the BAT evaluation, the EPA reviews full-scale studies that fully characterize residual waste streams and disposal options. The EPA found that the most likely management options for spent material containing PFAS is reactivation for GAC, incineration for spent IX resin, and for disposal of RO/NF retentate, treatment and discharge via a NPDES compliant facility to surface water or, sanitary sewer, or in limited circumstances, underground injection. Large volumes of spent GAC and AIX containing PFAS are periodically generated and must be removed which does not lend itself to on-site storage over time. The EPA stated that the disposal options identified in the 2020 *Interim PFAS Destruction and Disposal Guidance* (USEPA, 2020d) are landfill disposal, thermal treatment, and in limited circumstances, underground injection.

The EPA recognizes that future actions through statutory authorities other than SDWA may have direct or indirect implications for the residuals from drinking water treatment. Future hazardous waste listings for certain PFAS may limit disposal options for spent drinking water treatment residuals containing PFAS and/or potentially increase costs. A CERCLA designation as a hazardous substance does not restrict, change, or recommend any specific activity or type of waste (USEPA, 2022l). The EPA evaluated the potential impact on PWS treatment costs to PWSs associated with hazardous residual management should PFAS be listed as a hazardous waste in the future. For comments and additional information related to the EPA's cost analysis, please see section XII.

2. Summary of Major Public Comments and EPA Responses

While some commenters stated that more research can be beneficial to further our understanding of managing PFAS treatment residuals, others urged the EPA to proceed with this rulemaking as expeditiously as possible in the interest of public health. Others argued that the EPA should delay this action until the *PFAS Destruction and Disposal Guidance* is updated. The National Defense Authorization Act for Fiscal Year 2020, Public Law 116–92, section 7361, directs the EPA to revise the *PFAS Destruction and Disposal Guidance* triennially; the new destruction and disposal guidance is anticipated to be released approximately concurrently with this rule and further revisions may be expected before the effective dates for this rule. The EPA disagrees that the projected significant and direct public health protections for drinking water consumers in this rule should be delayed for the revision of guidance on management of PFAS waste streams.

Many commenters expressed concern that not enough was being done to manage spent drinking water treatment residuals containing PFAS at the end of their useful working life and that residual management amounted to media shifting (*i.e.,* taking PFAS from water via sorption media then landfilling that media does nothing to reduce the overall amount of PFAS). Many commenters stated that landfills and thermal treatment facilities can potentially be PFAS sources as the BATs in this rule are separative as opposed to destructive technologies.

The EPA notes that from a mass balance perspective, PFAS removal from drinking water is generally anticipated to result in lower concentrations of PFAS in the environment. With appropriate controls, landfills, and thermal treatment of PFAS contaminated media can minimize PFAS releases to the environment (USEPA, 2020d). Sorptive media can be incinerated or reactivated. There is also ongoing research into destructive and sequestration technologies that may help quantify the extent to which PFAS may be destroyed some of which is funded by the EPA (USEPA, 2022c).

Furthermore, it is also important to distinguish between a potential environmental release and a direct exposure. A PFAS release does not inherently imply human exposure and a release is not inherently risky to specific populations. From a risk management perspective, while the EPA acknowledges that while each destruction and disposal technology has limitations, a potential environmental release under point source management is anticipated to be a more health

protective alternative than human exposure through drinking water.

Some commenters recommended the EPA consider additional destruction and disposal technologies. The EPA notes that disposal and destruction technologies are currently available to manage drinking water residuals. The EPA appreciates the example destructive technologies, and while beyond the scope of finalizing this NPDWR, the agency intends to consider additional destruction and disposal technologies in future destruction and disposal guidance.

Many commenters, including destruction and disposal trade associations, stated there would be difficulties managing spent residuals containing PFAS generated from drinking water treatment. In contrast, other commenters stated that there was existing national capacity and at least one company stated they were actively evaluating investment for additional capacity to handle residuals. The record demonstrates that there is existing national capacity to handle spent drinking water residuals containing PFAS in a manner that minimizes risk to human health. Destruction and disposal of PFAS-containing materials is currently not subject to certain hazardous waste regulation and therefore the materials may be managed in non-hazardous and hazardous waste treatment and disposal systems (USEPA, 2020d). Hazardous waste is regulated pursuant to RCRA authority 42 U.S.C. 6921–6939 (also known as RCRA ''Subtitle C''). The regulatory definition of hazardous waste is found in 40 CFR 261.3. PFAS are currently not a listed hazardous waste or characterized as a hazardous waste, but a PFAS-containing waste may meet the regulatory definition of hazardous waste if PFAS is mixed with a listed hazardous waste or if a PFAS-containing mixture exhibits a hazardous characteristic (*e.g.,* corrosivity or another characteristic stemming from the material that is mixed with PFAS). PFAS which are commingled with hazardous substances and/or hazardous wastes will be subject to the appropriate rules and regulations and may be included as Applicable or Relevant and Appropriate Requirements on a site-specific basis. Not all disposal sites may be appropriate for spent drinking water treatment residuals containing PFAS and the EPA strongly encourages owners and operators of treatment facilities to refer to appropriate and up-to-date guidance on treatment residual management such as the *2020 Interim Guidance on the Destruction and Disposal of Perfluoroalkyl and Polyfluoroalkyl Substances and Materials Containing Perfluoroalkyl and Polyfluoroalkyl Substances* (USEPA, 2020d) and subsequent updates.

The EPA anticipates approximately 226,500 short tons of spent drinking water media such as activated carbon and AIX resin to be generated annually as a result of this rule; in calendar year 2018 alone, the U.S. generated about 290 million short tons of waste (USEPA, 2022m). The increase in total waste caused by this action is approximately 0.08% of the total U.S. waste produced. This is a minor change in aggregate waste produced; the same amount as a pound contributes to a ton. Even if PFAS were to be designated in the future as regulatory hazardous waste, there is existing capacity to handle these waste streams through existing hazardous waste facilities in every state. Some water systems may have to ship hazardous wastes significant distances; however, the main cost driver is disposal fees not transportation. The EPA rejects the assertion that it has not evaluated if sufficient capacity exists for disposal and storage of PFOA and PFOS contaminated materials. The EPA also acknowledges that CERCLA section 104(c)(9) does not allow the agency to initiate a remedial action, unless the state first enters into a state Superfund State Contract or Cooperative Agreement (CA) that assures the availability of adequate capacity to manage hazardous wastes generated in the state for 20 years following the date of the response agreement. The EPA's rulemaking designating PFOA and PFOS as CERCLA hazardous substances, if finalized, does not impose any capacity concerns that require further action under section 104(c)(9). In that action, the EPA is designating PFOA and PFOS as CERCLA hazardous substances. No PFAS are currently listed, or being proposed to be listed, as hazardous wastes under RCRA. The 2021 *Biennial Report Summary Results* indicate about 18 million tons of hazardous wastes are normally generated annually. Drinking water treatment materials then would constitute about a 1.26% increase in hazardous wastes generated annually. Since there is over twenty years' capacity, the relatively small magnitude of the increase indicates that waste management capacity is sufficient in the short term should PFAS be designated as regulatory hazardous wastes.

Many commenters conveyed concern over the cost of drinking water residuals management resulting from finalizing this rule. The EPA conducted an EA to help address these concerns. For comments and additional information related to the EPA's cost analysis, please see section XII.

While no PFAS are currently listed as regulatory hazardous wastes under RCRA, in response to stakeholder feedback, the EPA included a sensitivity analysis to determine the impact on water systems should they be required to handle and dispose of PFAS treatment materials as hazardous waste in the future. The results of this analysis can be found in the EA for this rule (USEPA, 2024g). Some commenters suggested that accounting for future potential regulations is uncommon, and trying to account for all potential future contingencies would make economic analyses impossible. The EPA strongly agrees and has not attempted to do so here; this analysis was limited to looking at a hypothetical future hazardous waste listing situation because that has been of particular concern in this rule. Some commenters stated that the EPA should account for the public health benefits of treating PFAS as hazardous wastes, not just additional costs incurred. The EPA agrees and has modified the analysis to include a qualitative statement about the public health benefits which could potentially arise from treating PFAS as hazardous wastes. Many commenters stated that the EPA hazardous waste cost would drive the total cost higher than the 3–5% estimated by the EPA. After considering public comment, the EPA has revised the final cost estimates in this rule. The EPA estimated increased cost would be approximately $99M at the 2% discount rate. The increased cost was driven by updating the dollar year of cost curves from 2021 to 2022 which increased waste management unit costs by approximately 12%; implementing a cap on media life even if not indicated; changing the technology compliance forecast by eliminating RO/NF while increasing GAC and AIX (thereby increasing spent media volume); and increasing occurrence estimates for the final rule compared to the proposed rule, triggering more systems into treatment. The increased costs were not driven by changes to unit cost estimates for hazardous waste management. The EPA believes its assessment is accurate; the total cost encompasses capital costs, maintenance, design, and operations, including waste management. Waste management costs are thus a subset of operational cost which in turn is a subset of total costs; generally, changes in the cost of one subcomponent would not significantly influence total costs, and the record does not reflect that a change in waste disposal costs would

have a significant impact on total costs under this rule. These estimates are discussed in greater detail in the HRRCA section of this rule and in appendix N of the EA (USEPA, 2024e).

Many commenters suggested that regulations under other statutes, particularly a potential CERCLA hazardous substance designation, will increase disposal costs. The EPA disagrees that, if finalized, the CERCLA hazardous substance designation for PFOA and PFOS will increase disposal costs for water treatment facilities. The designation of PFOA and PFOS as CERCLA hazardous substances would not require waste (*e.g.,* biosolids, treatment residuals, etc.) to be treated in any particular fashion, nor disposed of at any specific particular type of landfill. The designation also does not restrict, change, or recommend any specific activity or type of waste at landfills. Along with other release notification requirements, CERCLA designation would require that any person in charge of a vessel or facility report a release of PFOA and/or PFOS of one pound or more within a 24-hour period. The EPA does not expect spent drinking water treatment residuals containing PFAS to be released into the environment at or above the reportable quantity as a part of standard residuals management practices used by water systems. This is because the PFAS loading onto sorptive media is very small. The weight percent of PFAS onto GAC under normal treating scenarios will vary widely; however, a reasonable order of magnitude estimate is 1×10^{-5} grams PFAS per gram of sorbent in full-scale applications. High pressure membranes split water into a treated stream and concentrated waste stream. The concentrated waste stream will contain about 5–12 times more PFAS than the influent which is likely to still be in the ng/L scale. A drinking water facility which takes reasonable precautions is unlikely to release enough low concentration residuals to release one pound of PFOA and/or PFOS within a 24-hour period. At the concentrations discussed above, to exceed a one-pound threshold, a facility using sorptive techniques would have to release approximately 50 tons of sorbent, within a 24-hour period. A one-pound uncontrolled release from RO or NF facilities, assuming 500 ng/L of PFAS in the reject water, would require approximately 240 million gallons of high-pressure membrane concentrate to be released within 24 hours. Additionally, neither a release nor a report of a release automatically requires any response action under CERCLA. The EPA makes CERCLA response decisions based on site-specific information, which includes evaluating the nature, extent, and risk to human health and/or the environment from the release. Hazardous substance designations do not automatically result in CERCLA liability for any specific release. Whether an entity may be subject to litigation or held liable under CERCLA are site-specific and fact-dependent inquiries. Likewise, CERCLA affords the Federal Government broad discretion as to whether or how to respond to a release. For those reasons, the EPA cannot assess with reasonable certainty what litigation or liability outcomes may indirectly result from this designation since those outcomes are often linked to the EPA's discretionary decisions with respect to CERCLA response actions as well as site-specific and fact-dependent court rulings.

Many commenters suggested that high pressure membranes, which separate PFAS from one stream and concentrate it in another stream, may not be feasible as a BAT because utilities treating and discharging reject water from high pressure membranes typically require a NPDES permit. The EPA disagrees because there are currently full-scale facilities which use this technology to treat PFAS and high-pressure membranes may be the best viable option in a multi-contaminant setting. The brine may undergo further pre-treatment as part of a process train to enable discharge, such as GAC or AIX treatment. Some RO/NF applications discharge directly to surface water or through an interconnection to a wastewater treatment plant. The EPA, however, does agree that brine treatment or disposal may be challenging and in 2022, the EPA issued memorandum that recommended NPDES and POTW pretreatment program permitting conditions for PFAS discharges (USEPA, 2022d; USEPA, 2022e). In conclusion, in limited applications, high pressure membranes may still serve as a viable treatment strategy, such as for facilities with access to brine treatment or disposal.

Some commenters suggested that reactivation was not permissible under the *2020 Interim PFAS Destruction and Disposal Guidance* or that interim storage was required. Commenters are incorrect in their interpretation of the plain language in that guidance. The guidance does not state that reactivation or thermal treatment are prohibited. The guidance does acknowledge a need for further refinement and research and that interim storage may be an option if the immediate dispensation of PFAS-containing materials is not imperative. However, nowhere does that guidance mandate interim storage or prohibit other forms of PFAS destruction and disposal.

3. Final Rule

The final rule does not specifically require any specific destruction or disposal practices for spent media containing PFAS. The EPA has considered residual waste streams and disposal options and found that management options exist for treatment residuals containing PFAS.

D. What are Small System Compliance Technologies (SSCTs)?

1. Proposal

Section 1412(b)(4)(E)(ii) requires that the agency identify SSCTs, which are affordable treatment technologies, or other means that can achieve compliance with the MCL. The EPA identified SSCTs using the affordability criteria methodology developed for drinking water rules (USEPA, 1998b) and proposed the following table which shows which of the BATs listed above are also affordable for each small system size category listed in section 1412(b)(4)(E)(ii) of SDWA.

Table 23: Proposed SSCTs for PFAS Removal

System Size (Population Served)	GAC	IX	RO/NF	Point of Use (POU) RO/NF [1]
25-500	Yes	Yes	No	Yes
501-3,300	Yes	Yes	No	Yes
3,301-10,000	Yes	Yes	Yes	not applicable [2]

Notes:

[1] POU RO is not currently listed as a compliance option.

[2] Implementing and maintaining a large-scale POU program is likely to be impractical.

Point-of-use (POU) and point-of-entry (POE) were not listed as compliance options because the regulatory options under consideration require treatment to concentrations below the current NSF International/American National Standards Institute (NSF/ANSI) certification standard for POU device removal of PFAS. As the EPA has determined that affordable SSCTs are available, the agency is not proposing any variance technologies.

2. Summary of Major Public Comments and EPA Responses

Many commenters stated that the POU/POE water treatment industry may already have multiple products that can reduce PFAS chemicals to below the proposed MCL. Additionally, some commenters stated that the influent used (*i.e.,* the challenge water) to test these POU/POE products often contains much higher concentrations of PFAS than would normally be found in most source waters. Commenters also pointed out that under NSF/ANSI, 53 and 58 certifications exist for total PFAS (PFOA, PFOS, PFHxS, PFHxA, and PFDA), as well as PFHpA, PFHxS, and PFNA individually. However, SDWA section 1412(b)(4)(E)(ii) requires that SSCTs achieve compliance with the MCL or treatment technique. While devices certified to the NSF/ANSI standards must be demonstrated to significantly reduce PFAS concentrations and, in many cases, can reasonably be expected to treat below this rule's MCLs, the current standards and certification procedures do not assure compliance with this rule. In particular, PFBS and HFPO–DA, have no certification standards at this time and the certification standards for PFOA, PFOS, and PFHxS are above this rule's MCL. The certification standards for PFOA, PFOS, and PFHxS are 20 ng/L, compared to the MCLs of 4.0 ng/L for PFOA and PFOS, as well as 10 ng/L for PFHxS; the total PFAS certification standard is 20 ng/L effluent comprised of PFOA, PFOS, PFHxS, PFHxA, and PFDA compared to a Hazard Index of 1 for mixtures of PFHxS, PFNA, HFPO–DA and PFBS. Since the NPDWR has standards that NSF/ANSI are currently unable to verify, POE/POU technologies could potentially not achieve compliance contrary to SDWA section 1412(b)(4)(E)(ii) which requires that SSCTs achieve compliance with the MCL. While POU/POE technologies may provide significant levels of protection, and the EPA anticipates they will eventually comply with the NPDWR, there is not yet a systematic verification process in place for the level of protection provided by these devices. As mentioned in the proposal, the EPA is aware that the NSF/ANSI Drinking Water Treatment Unit Joint Committee Task Group is in the process of updating their standards; should these future standards meet the NPDWR, the EPA could revise the SSCT list to include POE/POU.

Many commenters also correctly pointed out numerous challenges surrounding POU/POE as a compliance option for some PWSs such as resident cooperation, operation and maintenance, monitoring, and implementation of distributed treatment approaches. The EPA agrees implementation of POU/POE as a compliance option for any NPDWR can be challenging for some PWSs but also agrees with commenters who noted that POU/POE can provide flexibility and compliance options to very small water systems or certain NTNCWS such as schools, factories, office buildings, and hospitals that provide their own water.

The EPA received many comments that other POU devices other than RO/NF should be acceptable ways to meet the MCLs for small systems. For instance, commenters noted that a combination GAC/AIX device with filters could reduce PFAS concentrations to below the MCL values. The EPA agrees and has changed wording in the final rule preamble and related supporting documents that implied that only RO/NF POU devices would be able to meet a future certification standard. The EPA notes that for small systems, as long as the proposed POU/POE devices are certified by an appropriate third-party certifier (*e.g.,* ANSI/NSF) to meet the regulatory MCL, they would meet the requirements of this regulation. The EPA also received many requests to change the way data was displayed in tables 20 and 22 of the proposed rule which summarized proposed SSCTs for PFAS removal and total annual cost per household for candidate technologies. In the proposal, the EPA wrote that this data was ''Not Applicable'' because of the economies of scale for centralized treatment. While the EPA still believes that a POU program that large is likely to be impractical, the EPA has changed the way this is displayed by replacing the term ''Not Applicable'' with ''Data Unavailable.'' The EPA notes that neither of these changes imposes nor relieves any rule requirements and only serve to recharacterize the way the EPA reports available technologies.

The EPA asked for comment on the national level analysis of affordability of SSCTs and specifically on the potential methodologies presented in the EA for the proposed rule section 9.12. A couple of commenters recommended the EPA not use median household income (MHI) in the affordability analysis. The EPA decided to retain the MHI measure of income in its primary national level SSCT affordability methodology, and specifically use 2.5% of the MHI as the affordability threshold, given the value is easily understandable and available, providing a central tendency for income which is representative of a whole community's ability to pay and is not unduly influenced by outlier values. However, in this rule, the EPA

recognizes the value in examining alternative measures of a community's ability to afford an SSCT, so the agency chose to include supplemental analyses that use alternative metrics, specifically 1% of MHI, 2.5% of lowest quintile income (LQI), and an analysis accounting for financial assistance. See chapter 9.13.2 of the EA for more details. These supplemental analyses help to characterize affordability when considering the marginal impact, disadvantaged community groups, and subsidization.

Some commenters stated that the data the EPA used to inform current water rates from the 2006 Community Water System Survey (CWSS) is outdated. While dated, the data from the 2006 CWSS remains the best available dataset for this national level analysis and affordability determination for the following reasons: (1) the CWSS survey used a stratified random sample design to ensure the sample was representative and (2) these responses can be extrapolated to national estimates since the survey has a known sampling framework; and the data can be organized by system size, source, and ownership (USEPA, 2020e).

Some commenters recommended the EPA extend the affordability analysis to medium and large systems. The EPA disagrees with this recommendation, as the purpose of this analysis is to determine if available SSCTs are affordable, per SDWA section 1412(b)(4)C(ii). Therefore, the EPA chose to continue to analyze small system technologies rather than include medium and large systems.

Some commenters specifically disagreed with one of the EPA's supplemental affordability analyses that examined the impact of the rule when accounting for the financial assistance through BIL and other sources that are generally available to small systems. These commenters stated that the EPA should not assume that this funding will be available or enough to cover the small system capital costs associated with the rule. The EPA conducted this supplemental analysis in response to the recommendations of the SAB, which stated, ''[i]f this funding is readily available to many or most systems facing affordability problems, it seems appropriate to take the availability of this funding into account in determining national level affordability.'' (USEPA, 2002b) The EPA disagrees with these commenters as this significant funding will be generally available, and the EPA continues its efforts to help PWSs access it. It is therefore reasonable to consider the burden reduction in the supplemental affordability analysis.

Some commenters disagreed with the EPA's affordability determination because they stated it was based on inaccurate treatment cost information. A couple of commenters presented their own estimates for small system household costs and compared these estimates to the EPA's affordability threshold and concluded the rule is unaffordable. The EPA disagrees with many of the underlying assumptions in the commenters' cost estimates which, on whole, result in overestimated household costs, see section XII.A. These commenters cited cost information that is not representative of the range of treatment costs nationally, and the EPA disagrees with the commenter's cost model that systematically overestimates capital operation and treatment costs. The EPA updated the affordability analysis for the national affordability determination using the updated treatment cost curves (discussed in section XII.D) and found for systems serving between 25 and 500 people, that the upper bound estimated annual household treatment costs for GAC exceed the expenditure margin. Lower bound estimated annual household treatment costs for GAC do not exceed the expenditure margin; for more information see section XII. These exceedances are primarily driven by capital costs and attributable to the use of high-cost materials (*e.g.,* stainless steel) in the upper bound estimates. Systems using low-cost materials, but with source water characteristics otherwise set to the upper bound (*e.g.,* influent PFAS at approximately 7,000 ng/L, influent TOC at 2 mg/L), would fall below the expenditure margin. Although costs increase in some scenarios, the increases are not significant enough to change the conclusions about affordability. The small system compliance technologies available to meet the requirements of the final rule are affordable for all small systems when the technologies do not use the high-end materials. Technologies that do not use high end materials may be less durable but nonetheless are available for small systems and can meet the requirements of the final rule. For more information on the EPA's response to comments on treatment costs see section XII. The EPA also disagrees that there are no affordable compliance technologies for small systems as the EPA has demonstrated that SCCTs are available below the affordability threshold using the best available peer reviewed information to support the agency's cost estimates.

3. Final Rule

The final rule includes sorptive devices as well as combination devices, should they meet third party verification standards and the MCL. In USEPA, 2024l, the EPA also changed the way data are presented by replacing the term ''Not Applicable'' with ''Data Unavailable'' in response to public comment. Finally, the final affordability analysis reflects updates made to the unit cost curves after considering public comments. The EPA has determined that affordable SSCTs are available that meet the requirements of the final rule (see table 6 to paragraph (e) of 40 CFR 141.61).

The EPA's affordability determination for the final rule, using long standing EPA methodology and supplemental affordability analyses can be found in the EA chapter 9.12.

The EPA notes that POU RO devices are not currently listed as a SSCT because the NPDWR requires treatment to concentrations below the current NSF International/American National Standards Institute (NSF/ANSI) certification standard for POU device removal of PFAS. However, POU treatments are reasonably anticipated to become a compliance option for small systems in the future if NSF/ANSI develop a new certification standard that mirrors or is more stringent than the final regulatory standards. Other third-party entities including NSF can independently certify drinking water treatment units (DWTUs) that meet these standards. NSF/ANSI is considering lowering its current standard to levels closer to final standards in this NPDWR. Based on efficacy of reverse osmosis technology, RO POU devices can reasonably be anticipated to remove the majority of PFAS when they are properly designed and maintained. Other POU devices (*e.g.,* activated carbon) may also meet future EPA PFAS regulatory limits. These devices would also need third-party testing and certified against the regulatory standards. Further, the EPA notes that water systems may use any technology or practice to meet the MCLs promulgated in this NPDWR and are not limited to the BATs nor SSCTs discussed in this section. Other technologies or nontreatment options may be chosen in lieu of a BAT or SSCT because they may be more cost effective or better suited to the specific operating conditions of the particular site to meet any MCL.

XI. Rule Implementation and Enforcement

A. What are the requirements for primacy?

1. Proposal

SDWA section 1413 establishes requirements that primacy agencies (states, Tribes and territories) must meet to have primary enforcement responsibility (primacy) for its PWSs. These include: (1) adopting drinking water regulations that are no less stringent than Federal NPDWRs in effect under sections 1412(a) and 1412(b) of SDWA; (2) adopting and implementing adequate procedures for enforcement; (3) keeping records and making reports available on activities that the EPA requires by regulation; (4) issuing variances and exemptions (if allowed by the state) under conditions no less stringent than allowed by SDWA sections 1415 and 1416; and (5) adopting and being capable of implementing an adequate plan for the provision of safe drinking water under emergency situations. The regulations in 40 CFR part 142 set out the specific program implementation requirements for states to obtain primacy for the Public Water System Supervision (PWSS) Program, as authorized under section 1413 of the Act.

Under 40 CFR 142.12(b), all primacy agencies are required to submit a revised program to the EPA for approval within two years of promulgation of any final PFAS NPDWR or request an extension of up to two years in certain circumstances. To be approved for a program revision, primacy agencies are required to adopt revisions at least as stringent as the revised PFAS-related provisions. To obtain primacy for this rule, primacy applications must address the general requirements specified in subpart B of part 142. The EPA proposed special primacy requirements for the PFAS NPDWR (§ 142.16(r)), to outline additional requirements for a primacy agency related to identifying its plan for implementing the initial monitoring requirements.

2. Summary of Major Public Comments and EPA Responses

The EPA received one comment that most of the initial monitoring may occur before primacy applications will be submitted, which are not due until two years after final rule promulgation. A couple of commenters assert that it is unclear why states are required to include an initial monitoring plan in their primacy application and that states will not be able to implement and demonstrate that this monitoring plan is enforceable under state law until state regulations have been promulgated. The EPA recognizes that some initial monitoring by water systems may occur prior to a state, territory, or Tribe receiving the EPA approval for primacy and agrees with the commentor that for states to develop a monitoring plan that addresses when systems will be scheduled to conduct initial monitoring is not a necessary requirement for a primacy application. However, where states are approved for primacy before the compliance date for the water systems, primacy agencies should have procedures for evaluating whether data that a CWS or NTNCWS submits to satisfy the initial monitoring requirements are acceptable. It is therefore appropriate to require primacy agencies to include in their primacy application a description of their procedures for reviewing water system's use of pre-existing data to meet initial monitoring requirements, including the criteria that will be used to determine if the data are acceptable and the primacy agency's procedures for ensuring water system compliance within the required timeframes. The compliance deadline for this initial monitoring by systems is three-years from promulgation, by which time primacy agencies should have primacy or interim primacy. To address the possibility that a state, Tribe, or territory may get an extension to apply for primacy, the final rule provides that these special primacy requirements are not applicable after the initial monitoring deadline (*i.e.,* three years after publication of the rule in the **Federal Register**). When a primacy agency does not yet have primacy for a new drinking water rule, an NPDWR is nonetheless applicable to water systems and may be enforced by the EPA following the compliance dates specified in § 141.900(b).

3. Final Rule

The EPA is revising the requirements for primacy as proposed in 40 CFR 142.16(r) by removing the requirements to develop an initial monitoring plan, although the EPA is finalizing the proposed requirement for primacy agency procedures for ensuring all systems complete the initial monitoring period requirements, including for determining whether pre-existing data are acceptable, but clarifying that these requirements would not apply after the deadline for initial monitoring has passed (*i.e.,* three years after publication of the rule in the **Federal Register**). The EPA also corrected two grammatical errors. In the final rule, the EPA requires that a PWS complete the initial monitoring by three years following date of promulgation (for additional discussion on monitoring and compliance requirements, please see section VIII of this preamble). It is the EPA's expectation that primacy agencies will have completed the requirements for primacy within the two years (*i.e.,* without an extension) and in that case, they will have the authority in place to ensure that systems comply with the initial monitoring requirements. If a primacy agency is applying for primacy after the deadline for initial monitoring has passed, then the requirement is no longer applicable. In that case, an NPDWR is nonetheless applicable to water systems and implementation would be overseen and enforced by the EPA consistent with any agreements with the state pursuant to the primacy application extension approval.

B. What are the record keeping requirements?

1. Proposal

The current regulations in 40 CFR 142.14 require primacy agencies to keep records of analytical results to determine compliance, system inventories, sanitary surveys, state approvals, vulnerability and waiver determinations, monitoring requirements, monitoring frequency decisions, enforcement actions, and the issuance of variances and exemptions. The primacy agency record keeping requirements remain unchanged and would apply to PFAS as with any other regulated contaminant.

2. Summary of Major Public Comments and EPA Responses

The EPA received a few comments about the record keeping that primacy agencies must maintain for compliance determinations and reporting, storing PWS facility data, tracking monitoring schedules, and keeping the public informed of the quality of their drinking water. As noted in the comments, most primacy agencies rely on SDWIS, developed by the EPA, to support this record keeping requirement. It was recommended that the EPA develop a data system, either SDWIS or a replacement, that is capable of fully managing the data associated with the proposed rule. Further, it was recommended that the EPA develop data management solutions such as a mechanism for migrating UCMR data into SDWIS State to reduce or eliminate the burden of ensuring compliance with the initial monitoring. The EPA agrees that appropriate data management solutions are needed to effectively comply with SDWA requirements; however, the agency does not believe

these systems must be available at the time of rule promulgation. Additionally, while beyond the scope of this rulemaking itself, the EPA is actively working on PFAS data management solutions, including DW–SFTIES support and potentially updating the SDWIS suite of applications to manage data reported from this rule.

3. Final Rule

The primacy agency record keeping requirements in 40 CFR 142.14 remain unchanged and would apply to PFAS as with any other regulated contaminants. Water system recordkeeping requirements are referenced within subpart Z in § 141.904. In the final rule, the EPA updated this regulatory text to cross-reference the record retention provisions in § 141.33. The EPA is developing the Drinking Water State-Federal-Tribal Information Exchange System (DW–SFTIES) that will support all SDWA drinking water rules. The EPA plans to continue to provide support for necessary updates to SDWIS State, including for reporting requirements for new rules, until the DW–SFTIES is in production and in use by primacy agencies. SDWIS State support and updates will continue until the DW–SFTIES Board recommends a sunset date after DW–SFTIES is in production and in use by primacy agencies. The EPA will evaluate the migration of UCMR data into the suite of SDWIS applications.

C. What are the reporting requirements?

1. Proposal

Under 40 CFR 142.15, primacy agencies must report to the EPA information regarding violations, variances and exemptions, enforcement actions, and general operations of state PWS programs. The primacy agency reporting requirements remain unchanged and would apply to PFAS as with any other regulated contaminant. The water system reporting requirements are mentioned in § 141.904 and cross-reference the reporting timeframes and provisions in § 141.31.

2. Summary of Major Public Comments and EPA Responses

A few commenters recommended that the EPA provide Data Entry Instructions within six months of the promulgation of the rule to allow primacy agencies, particularly those that do not use SDWIS State, to implement their data systems for reporting to the EPA, prepare their PWS, and train staff. The EPA acknowledges this comment and will work to develop Data Entry Instructions as soon as possible. One commentor recommended that the EPA provide separate tracking of reporting and monitoring violations. The EPA acknowledges this comment and will consider this as data reporting tools are developed. A couple of commentors recommended that the reporting and recordkeeping requirements for compliance within the rule should provide an option for not requiring the RAA to be reported by the laboratories if the primacy agency performs the RAA calculations for the water system. In addition, one commenter requested that the primacy agency calculate the RAA, and another commentor inquired whether the EPA intended to allow the water systems not to perform the RAA calculations if the primacy agency performs the RAA calculations. The EPA disagrees with these comments. To ensure that the water system has immediate knowledge of their compliance status, the final rule requires that water systems calculate the RAA and report this to the primacy agency. Primacy agencies or laboratories may also calculate the RAA, to confirm the results of the water system, but it is not a required reporting element under this regulation. Lastly another commentor suggested that utilities be required to report the occurrence and concentration of other PFAS listed in the method (preferably 533) to facilitate data collection and to better inform water treatment objectives. The EPA notes that many water systems are currently collecting samples and reporting monitoring data for 29 PFAS that can be measured with EPA Methods 533 and 537.1 under UCMR 5 where EPA has the regulatory authority.

3. Final Rule

The reporting requirements for primacy agencies under 40 CFR 142.15 remain unchanged and apply to PFAS as with any other regulated contaminant. The EPA intends to develop and provide access to Data Entry Instructions within one year after rule publication. The EPA will follow the usual protocol of engaging with a State-EPA workgroup for drafting the Data Entry Instructions. In this process, the EPA will consider the use of separate monitoring and reporting violation codes, like is used for the Revised Total Coliform Rule (RTCR). In this final regulation, the cross-reference to the water system reporting timeframes and provisions in § 141.31 at the start of § 141.904 is retained, and, at 40 CFR 141.904(b), table 2, the EPA requires water systems to report PFAS RAAs to their primacy agency. As a general process, the laboratory will conduct the analysis of the sample and the system will use the result to calculate their RAA; the RAA calculation may subsequently be completed by the primacy agency as a compliance check. The EPA does recognize that state laboratories often directly report results to the state as allowed in 40 CFR 141.31(c) and that electronic reporting tools, such as the Compliance Monitoring Data Portal (CMDP), may be used by systems to comply with this reporting requirement.

D. Exemptions and Extensions

1. Proposal

Pursuant to SDWA section 1412(b)(10), the EPA proposed that all systems must comply with the NPDWR three years after rule promulgation. The EPA's proposal acknowledged that a primacy agency or the EPA may grant an extension of up to two additional years to comply with an NPDWR's MCL(s) if the primacy agency or the EPA determines an individual system needs additional time for capital improvements. The EPA stated that ''[a]t this time, the EPA does not intend to provide a two-year extension nationwide.'' 88 FR 18689. The proposal also discussed how a state which has primary enforcement responsibility may exempt any individual system facing compelling factors, such as economic factors, additional time to comply with any requirement respecting an MCL of any applicable NPDWR under SDWA section 1416 (USEPA, 2023f).

2. Summary of Major Public Comments and EPA Responses

SDWA section 1412(b)(10) requires that a ''NPDWR shall take effect ''3 years after the date on which the regulation is promulgated unless the administrator determines that an earlier date is practicable.'' Section 1412(b)(2) also authorizes ''the Administrator, or a State (in the case of an individual system), may allow up 2 additional years to *comply with a maximum contaminant level* . . . if the Administrator or the State . . . determines that additional time is necessary for capital improvements'' (emphasis added). Congress intended the extension under this provision to allow for a total of five years to comply with the MCL. Thus, if the EPA provides a two-year extension of the MCL compliance deadline for all systems based on the need for capital improvements, a state cannot provide an additional two-year extension under section 1412(b)(10) for capital improvements but may grant exemptions under section 1416

consistent with applicable requirements.

Many commenters, including utilities and state primacy agencies, expressed difficulty in meeting the three-year compliance deadline. Commenters expressed that it will be very challenging to both conduct initial monitoring and take actions (*e.g.,* installing treatment) to comply with the MCL within three years. Many of these commenters shared their on-the-ground experience in managing facilities that required capital improvements and provided evidence that additional time is needed to procure, design, pilot, permit, and ultimately construct treatment systems. Additionally, several commenters provided evidence of on-going labor and workforce challenges as well as recent experience with supply chain difficulties to obtain materials necessary to design and construct treatment facilities, which many attributed as a direct or indirect result of the COVID-pandemic residual impacts (AWWA, 2023).

The agency has evaluated the data and information shared by commenters regarding their experience with the time it takes to implement capital improvement projects. The EPA estimates that approximately 4,100–6,700 systems will be impacted by the MCLs in this final rule. Based on the EPA's initial compliance forecast, the agency anticipates that many of these systems will be installing advanced treatment technologies to meet the final PFAS standards (for additional discussion on the compliance forecast, please see section XII). The treatment technologies listed as BAT for the final rule include GAC, ion exchange resins, and centralized RO/NF (please see section X for more information). To ensure cost effective compliance with the PFAS MCLs, systems often need to evaluate their treatment technology options as a first step. Several commenters have noted that this planning step may include pilot studies with potential treatment systems, or it may be limited to an evaluation of the raw water characteristics. Further, some commenters have submitted data and project management plans for systems choosing to conduct pilot testing, indicating that it may take a year or more to contract with vendors and to perform pilot testing. Once the planning step is completed, systems must design and construct the treatment systems. Several commenters submitted information to the EPA indicating that the design and permitting of the treatment systems can take an additional year or longer, and construction of the treatment system can take another year or longer. Because systems will also need time to obtain funding, obtain local government approval of the project, or acquire the land necessary to construct these technologies, many commenters contend that systems will need additional time beyond the three-year effective date to comply with the MCLs.

While the EPA stated in the proposed rule that the agency did not intend to provide a two-year extension nationwide necessary for capital improvements, the EPA finds that the evidence submitted by commenters strongly supports that a significant number of systems covered by this rule will need two additional years to make capital improvements to meet the MCL. Specifically, the EPA reviewed data from applicants seeking DWSRF funding for capital improvement projects (*e.g.,* installation of advanced treatment technologies such as GAC or IX) and confirmed that these projects, on average, take about three or more years to complete (which excludes the time and activities that may occur to ensure these capital improvement projects are implemented successfully, such as the time it may take to secure funding or to conduct pilot testing). This evidence along with the breadth of practicable experience shared by utilities and primacy agencies demonstrate that additional time is necessary for a significant number of system sizes and types located throughout the country to make capital improvements. Additionally, the EPA notes that the number of systems estimated to be impacted by the MCLs are greater than what the agency anticipated in the proposal (*i.e.,* an increase from 3,400–6,300 systems to 4,100–6,700 systems nationally). This increase provides further evidence that a capital improvement extension is warranted as the agency expects that many of these systems will be installing advanced treatment technologies to meet the final PFAS standards. The agency also agrees with commenters that on-going labor and workforce challenges exist and can limit the ability to design, construct and operate treatment facilities. These workforce challenges facing water utilities and other sector organizations support the need for a capital improvement extension as a sufficient availability of qualified personnel is necessary to implement and sustain capital improvement projects. These issues may be attributed as a direct or indirect result of the recent COVID–19 pandemic and are clearly documented in data submitted to the agency as part of the public comment process (AWWA, 2023). Based upon these considerations, the EPA determined, in accordance with section 1412(b)(10) of SDWA, that the compliance date for the PFAS MCLs, regardless of system size, will be 5 years from the date of promulgation of the standard.

Some commenters recommend the EPA to follow a staggered implementation timeframe similar to what was done in some previous NPDWRs where compliance deadlines were staggered based on system size (USEPA, 2001; USEPA, 2006a). In these prior examples, larger systems typically conducted their monitoring and implemented the MCL first, followed by smaller systems. Upon consideration of information submitted by commenters, particularly issues related to supply chain complications that are directly or indirectly related to the COVID–19 pandemic residual challenges, the EPA has determined that a significant number of systems subject to the rule, including large systems, will require two additional years to complete the capital improvements necessary to comply with the MCLs for PFAS regulated under this action. For this reason, the EPA disagrees with commenters that staggered implementation based on system size is warranted for this rule. While large systems may have greater resources to implement capital improvements (*e.g.,* engineering and construction management staff to manage the projects), they still require time to design, pilot, permit, and construct treatment facilities.

Some commenters note that it will be challenging for systems to conduct their initial monitoring and install treatment within three years, particularly for those systems not conducting UCMR 5 monitoring that is ongoing until 2026. The EPA notes that the agency is finalizing a flexibility for systems to use previously acquired monitoring data from UCMR 5 or an equivalent state-led monitoring program for their initial monitoring which is intended to alleviate the burden placed on water systems in collecting additional data (see section VIII of this preamble for additional information on monitoring). While the agency agrees that systems need an additional two years to make capital improvements, the EPA finds that it is practicable for most systems to complete their initial monitoring within three years because all systems serving greater than 3,300 people will have appropriate monitoring data from UCMR 5. Many systems smaller than 3,300 people will also have appropriate monitoring data from state-led

monitoring programs that may be eligible to meet the rule's initial monitoring requirements, and some will have UCMR 5 or other data. If systems find elevated levels of PFAS, these systems have an additional two years to comply with the MCL. If a system does not have eligible previously collected monitoring data and are concerned about insufficient time to install capital improvements, the EPA encourages these facilities to collect monitoring data as soon as possible after rule promulgation, allowing them the bulk of the five-year period to plan for and install any capital improvements if necessary.

Some commenters point to concerns regarding laboratory capability and capacity in supporting the proposed three-year compliance timeline. Additionally, a couple of commenters noted that if additional time were allowed, water systems that are close to the MCL may have time to identify and address sources of PFAS in their watersheds rather than investing resources on treatment initially. Finally, a couple of commenters recommend the EPA consider implementation flexibilities for small and rural water systems and suggest that these types of utilities may not have staff capacity nor expertise to compete for funding to implement the rule. The EPA notes that these issues are not directly related to capital improvements and thus were not the basis for the EPA's decision to extend the compliance date for the PFAS MCLs. Although the EPA disagrees with assertions about insufficient laboratory capacity and capability at this time to support implementation of the NPDWR, to the extent there are initial implementation issues just after promulgation, extending the compliance date will also provide ancillary benefits toward addressing any such laboratory capability and capacity issues and may provide opportunities for systems who are close to exceeding the MCLs to investigate sources of contamination. Additionally, the extended compliance deadline may give smaller and rural water utilities more time to apply for funding under BIL (please see section II of this preamble above for a discussion on BIL). Further, other assistance programs such as the Environmental Justice Thriving Communities Technical Assistance Centers may provide additional fundamental training and capacity building activities for underserved and overburdened communities toward navigating Federal grant applications and managing funding opportunities.

The EPA requested comment as to whether there are specific conditions, in addition to the statutory conditions, that should be mandated for systems to be eligible for exemptions from the PFAS NPDWR under SDWA section 1416. Several commenters requested the EPA provide additional guidance to primacy Agencies on when exemptions are appropriate under SDWA section 1416 similar to what was done for the final Arsenic NPDWR (USEPA, 2002c). The EPA is not issuing additional guidance around implementation of SDWA section 1416 at this time but may consider it in the future. The EPA notes primacy agencies who have adopted the 1998 *Variance and Exemptions Regulation* (USEPA, 1998c) may choose to grant exemptions consistent with the requirements under this regulation to encourage systems facing compelling circumstances to come into compliance with the MCLs in an appropriate period of time.

3. Final Rule

Pursuant to SDWA section 1412(b)(10), the final PFAS NPDWR is effective June 25, 2024. The compliance date for the PFAS NPDWR, other than the MCLs, is April 26, 2027. As discussed above and upon consideration of information submitted by commenters, the EPA is exercising its authority under SDWA section 1412(b)(10) to implement a nationwide capital improvement extension to comply with the MCLs. All systems must comply with the MCLs by April 26, 2029. All systems must comply with other requirements of the NPDWR, including initial monitoring, by April 26, 2027.

Systems must comply with initial monitoring requirements within three years of rule promulgation and will be required to summarize PFAS monitoring results and applicable information beginning with CCRs delivered in 2027. As the MCL compliance date is set at five years from rule promulgation, systems must report MCL violations in the CCR, accompanied by the required health effects language and information about violations, starting in 2029. Monitoring and testing procedure violations require Tier 3 notification: systems must provide notice no later than one year after the system learns of the violation. Systems must repeat the notice annually for as long as the violation persists. Systems must comply with initial monitoring requirements within three years of rule promulgation and systems must provide Tier 3 notification for monitoring and testing procedure violations starting in 2027. As the MCL compliance date is set at five years from rule promulgation, systems must provide Tier 2 notification for MCL violations, starting in 2029. For more information on SDWA Right-to-Know requirements, please see section IX of this preamble above.

The agency notes that SDWA section 1416(a) and (b)(2)(C) describe how the EPA or states may also grant an exemption for systems meeting specified criteria that provides an additional period for compliance. PWSs that meet the minimum criteria outlined in the SDWA may be eligible for an exemption from the MCLs for up to three years. For smaller water systems (≤3,300 population), exemptions can provide up to six additional years to achieve compliance with the MCLs. States exercising primacy enforcement responsibility must have adopted the 1998 *Variance and Exemption Regulation* (USEPA, 1998c) for water systems in those jurisdictions to be eligible for an exemption.

XII. Health Risk Reduction and Cost Analysis

This section summarizes the final rule Health Risk Reduction and Cost Analysis (HRRCA) supporting document (USEPA, 2024g) for the per- and polyfluoroalkyl substances (PFAS) National Primary Drinking Water Regulation (NPDWR), which is prepared in compliance with section 1412(b)(3)(C) of the Safe Drinking Water Act (SDWA) and under Executive Order (E.O.) 12866. Section 1412(b)(3)(C)(i) lists the analytical elements required in a HRRCA applicable to an NPDWR that includes a Maximum Contaminant Level (MCL). The prescribed HRRCA elements include:

(1) Quantifiable and nonquantifiable health risk reduction benefits;

(2) quantifiable and nonquantifiable health risk reduction benefits from reductions in co-occurring contaminants;

(3) quantifiable and nonquantifiable costs that are likely to occur solely as a result of compliance;

(4) incremental costs and benefits of each alternative MCL considered;

(5) effects of the contaminant on the general population and sensitive subpopulations including infants, children, pregnant women, the elderly, and individuals with a history of serious illness;

(6) any increased health risks that may occur as a result of compliance, including risks associated with co-occurring contaminants; and

(7) other relevant factors such as uncertainties in the analysis and factors with respect to the degree and nature of the risk.

Based on this analysis, the Administrator confirms the finding

made at proposal under section 1412(b)(4)(C) of SDWA that the quantified and nonquantifiable benefits of the MCLs justify the costs. The complete HRRCA for the final NPDWR is commonly referred to as the ''Economic Analysis'' (or EA) in this final rule and can be found in the docket at USEPA (2024g).

Because this NPDWR is promulgated in 2024 and provides a 2-year nationwide extension of the date for MCL compliance, the EA assumes that capital improvements (*i.e.,* installation of treatment technologies) for systems taking action under the rule will be completed by five years from the date promulgated, or in 2029. All other requirements, including initial monitoring, are assumed to be completed within three years of rule promulgation, or by 2027. Based on an assumed mean human lifespan of 80 years, the Environmental Protection Agency (EPA) evaluates costs and benefits under the final rule through the year 2105.

The EPA selected this period of analysis to capture health effects from chronic illnesses that are typically experienced later in life (*i.e.,* cardiovascular disease [CVD] and cancer). Capital costs for installation of treatment technologies are spread over the useful life of the technologies. The EPA does not capture effects of compliance with the final rule after the end of the period of analysis. Costs and benefits discussed in this section are presented as annualized present values in 2022 dollars. The EPA determined the present value of these costs and benefits using a discount rate of 2 percent, which is the discount rate prescribed by the Office of Management and Budget (OMB; OMB, 2023). All future cost and benefit values are discounted back to the initial year of the analysis, 2024, providing the present value of the cost or benefit.

Estimates of PFAS occurrence used for cost-benefit modeling rely on a Bayesian hierarchical estimation model of national PFAS occurrence in drinking water (Cadwallader et al., 2022) discussed in section VI.E. of this preamble. The model was fitted using sample data from systems participating in PFAS sampling under the third Unregulated Contaminant Monitoring Rule (UCMR 3) and included all systems serving over 10,000 customers and a subset of 800 smaller systems. A best-fit model was selected using sample data to define occurrence and co-occurrence of perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), and perfluorohexane sulfonic acid (PFHxS [12]) in water systems stratified by system size and incorporating variations within and among systems. Sample data were derived from state-level datasets as well as from UCMR 3. For more information on the EPA's occurrence model, please see section VI.E. of this preamble.

In the EA, the EPA analyzes the costs and benefits of the final rule, which includes MCLs for PFOA and PFOS at 4.0 ng/L each and MCLs for PFHxS, perfluorononanoic acid (PFNA), and hexafluoropropylene oxide dimer acid (HFPO–DA) at 10 ng/L each and a unitless Hazard Index (HI) of 1 for any mixtures of PFHxS, PFNA, HFPO–DA, and PFBS. The EPA also analyzed the costs and benefits for several regulatory alternatives. The EPA analyzed the costs and benefits of setting individual MCLs for PFOA and PFOS at 4.0 ng/L, 5.0 ng/L, and 10.0 ng/L, referred to as regulatory alternative MCLs under option 1a, option 1b, and option 1c, respectively. The EPA assessed these regulatory alternative MCLs in the EA to understand the impact of less stringent PFOA and PFOS MCLs. Additionally, the EPA has separately estimated national level marginal costs associated with the individual MCL for PFHxS if this MCL were to be promulgated in the absence of the Hazard Index; see chapter 5.1.3 of the EA for details. The EPA has also estimated the marginal costs for the individual PFNA and HFPO–DA MCLs if there were no Hazard Index in the sensitivity analysis found in appendix N.4. The EPA notes that the costs for the individual PFHxS, PFNA, and HFPO–DA MCLs have been considered in this final rule.

Section A summarizes public comments received on the EA for the proposed rule and the EPA's responses to comments. Section B summarizes the entities which would be affected by the final rule and provides a list of key data sources used to develop the EPA's baseline water system characterization. Section C provides an overview of the cost-benefit model used to estimate the national costs and benefits of the final rule. Section D summarizes the methods the EPA used to estimate costs associated with the final rule. Section E summarizes the nonquantifiable costs of the final rule.[13] Section F summarizes the methods the EPA used to estimate quantified benefits associated with the final rule. Section G provides a summary of the nonquantifiable benefits associated with reductions in exposure to both PFOA and PFOS expected to result from the final rule. Section H provides a qualitative summary of benefits expected to result from the removal of PFAS included in the Hazard Index component of the final rule and additional co-removed PFAS contaminants. Section I of this preamble summarizes benefits expected to result from the co-removal of disinfection byproducts (DBPs). Section J provides a comparison of cost and benefit estimates. Section K summarizes and discusses key uncertainties in the cost and benefit analyses. Quantified costs and benefits for the final rule and regulatory alternative MCLs under options 1a-1c are summarized in section XII.J, specifically Tables 68–71. Tables 72–73 summarize the non-quantified costs and benefits and assess the potential impact of nonquantifiable costs and benefits on the overall cost and benefit estimates for the final rule.

A. Public Comment on the Economic Analysis for the Proposed Rule and EPA Response

1. Methods for Estimating Benefits

a. Methods for Estimating Benefits in the Proposed Rule

In the EA for the proposed rule, the EPA presented quantified and nonquantifiable health benefits expected from reductions in PFAS exposures. Quantified benefits are assessed as avoided cases of illness and deaths (or morbidity and mortality, respectively) associated with exposure to some of the regulated PFAS contaminants. The EPA provided a quantitative estimate of CVD, birth weight, and renal cell carcinoma (RCC) avoided morbidity and mortality associated with reductions in PFOA and PFOS consistent with the proposed rule. The EPA also developed a quantitative analysis for reductions in bladder cancer morbidity and mortality that stem from removal of DBP precursors as a function of PFAS treatment. Adverse human health outcomes associated with PFAS exposure that cannot be quantified and valued are assessed as nonquantifiable benefits.

The EPA qualitatively summarized potential health benefits associated with reduced exposure to PFAS other than PFOA and PFOS in drinking water. In the proposal, the EPA discussed non quantified benefits associated with health endpoints including developmental effects, cardiovascular effects, hepatic effects, immune effects,

[12] The EPA notes that perfluoroheptanoic acid (PFHpA) is not included in the proposed or final PFAS NPDWR; however, it was included in the occurrence model because of its UCMR 3 occurrence data availability; please see *Cadwallader et al., 2022* for additional details.

[13] This section includes costs with generally greater uncertainty that the EPA assesses in quantified sensitivity analyses.

endocrine effects, metabolic effects, renal effects, reproductive effects, musculoskeletal effects, hematological effects, other non-cancer effects, and COVID–19.

b. Summary of Major Public Comments on Method for Estimating Benefits and EPA Responses

Overestimation of Quantified Benefits

The EPA received comments from industry groups and organizations representing water utilities about the EPA's methodology for estimating quantitative benefits associated with the NPDWR. While some commenters supported the EPA's analysis, a few commenters stated that the agency overestimated quantified benefits. These commenters asserted that the EPA overstated the benefits of the rule and that the HRRCA is flawed because the existing health evidence does not support the quantified benefits. The EPA disagrees with commenters that the existing evidence does not support the EPA's estimate of quantified benefits from avoided adverse health effects likely to occur as a result of treatment and that these benefits are overstated. Among other things, the EPA has used the best available science in three key respects: by (1) considering relevant peer-reviewed literature identified by performing systematic searches of the scientific literature or identified through public comment, (2) relying on peer-reviewed, published EPA human health risk assessment methodology (USEPA, 2022f), and (3) utilizing peer-reviewed methodologies to valuing and quantifying avoided adverse health outcomes. Specifically, the EPA identified the full range of expected human health outcomes, including quantified benefits associated with co-removal of co-occurring contaminants (*i.e.,* DBPs). This process was built upon multidisciplinary research, including hazard identification and dose-response analysis, exposure assessment, and economic valuation methods recommended by the EPA's *Guidelines for Preparing Economic Analyses* (USEPA, 2016e) and updated Circular A–4 Guidance (OMB, 2023) to enumerate all beneficial outcomes, identify beneficiaries, and determine human health endpoints that can be valued. The EPA notes that the benefits analysis contains uncertainties associated with the modeling inputs in each of the steps listed above. In accordance with OMB Circular A–4 guidance (OMB, 2023), the EPA characterizes sources of uncertainty in its quantitative benefits analysis and reports uncertainty bounds for benefits estimated for each health endpoint category modeled in the final rule. See Table 75 and also section 6.1 of the EA for the final rule (USEPA, 2024g) for the list of quantified sources of uncertainty in benefits estimates. The reported uncertainty bounds reflect the best available data on health effect-serum slope factors, baseline PFAS occurrence, population size and demographic composition, and the magnitude of PFAS concentration reductions. In addition, some model inputs did not have sufficient distributional data to be included in the quantitative uncertainty analysis, and there are also uncertainties that could not be assessed quantitatively. These sources of uncertainty are described in Table 62 and also in section 6.8 of the EA for the final rule (USEPA, 2024g). Although some imprecision in the estimated benefits may be expected due to the lack of perfect information, the EPA has demonstrated, using the best science and data available, that there is sufficient health evidence to support the estimation of quantified benefit values and that these values are not systematic overestimates of the welfare improvements derived from implementation of the NPDWR.

Another commenter claimed that ''for the large majority of health endpoints discussed, the EPA has not provided a factual basis by which to conclude that such benefits are likely to occur when the EPA decreases the levels of PFAS in drinking water.'' The EPA disagrees with the commenter's assertion that the agency has not provided a factual basis for the benefits that are likely to occur as a result of the rule, which is amply supported in the HRRCA by the best available peer-reviewed science, consistent with SDWA section 1412(b)(3). Moreover, the commenter did not provide any additional or contrary factual information for the EPA to consider.

One commenter stated that the EPA did not provide data to support the analysis of benefits predicted from the implementation of the Hazard Index MCL. The EPA disagrees with commenter that the EPA did not provide evidence to support Hazard Index MCL benefits. In section XII of the preamble and in section 6.2 of the EA (USEPA, 2024g), the EPA qualitatively summarized and considered the potential health benefits resulting from reduced exposure to PFAS other than PFOA and PFOS in drinking water. These qualitative potential health benefits are based on summaries of a significant body of peer reviewed science. As summarized in the EA, the qualitatively discussed health effects of the Hazard Index PFAS are considerable; reducing human exposure to the Hazard Index PFAS is expected to reduce the incidence of multiple adverse health impacts. The qualitative benefits discussion of the impacts of the four PFAS which are regulated through the Hazard Index, as well as their co-occurrence in source waters containing PFOA and/or PFOS and additive health concerns, supports the EPA's decision to regulate them through the Hazard Index in this rulemaking.

Additionally, the EPA evaluated the impacts of PFNA (one of the Hazard Index PFAS) on birthweight in quantitative sensitivity analyses (USEPA, 2024e). The EPA notes that new evidence since the release of the current, best available peer reviewed scientific assessment for PFNA (ATSDR, 2021) provides further justification for the EPA's analysis of potential economic benefits of PFNA exposure reduction and avoided birthweight effects. Specifically, this new evidence confirms that in instances where PFNA is present, the national quantified benefits may be underestimated; however, birth weight benefits are considered quantitatively as part of this EA in the sensitivity analysis and support the EPA's decision to regulate PFNA.

The EPA received a number of comments on the quantitative analysis for CVD risk reduction. These commenters disagree with the EPA's assessment that cardiovascular benefits are likely to occur as a result of PFOA and PFOS exposure reduction. One commenter stated that the associations with total cholesterol (TC) are not biologically significant and criticized the EPA's use of linear models in the CVD meta-analysis, stating that this approach biases the analysis by excluding higher-quality studies. The EPA disagrees with the commenter's statement that associations between PFOA/PFOS and TC are not biologically significant. Such serum lipid changes may or may not result in a concentration considered clinically elevated in a particular individual; however, given the distribution of individual concentrations within the population, small changes in average serum lipid concentrations can result in substantial adverse health effects at the population level (Gilbert and Weiss, 2006). The EPA disagrees with the commenter's suggestions that linear assumptions are inappropriate for use in this context. The EPA presents the exposure-response estimates evaluated considering all studies, studies with linear models only, and a variety of sensitivity analyses in appendix F of the

EA (Tables F–2 and F–3, USEPA, 2024e). Meta-analyses of studies reporting linear associations had statistically significant relationships. These relationships are supported by the EPA's review of epidemiological studies showing positive associations between PFOA/PFOS and TC. The EPA used data from peer-reviewed studies, and the assumption of linear exposure-response function to explain associations between PFAS and serum lipids such as TC which are supported by data from numerous studies, including those used in the meta-analysis. Other studies have explored log-linear or linear-log relationships between PFAS and serum lipids, while acknowledging only ''slight improvements'' in model fit, especially for serum lipids with least skewed distributions (Steenland et al., 2009).

A couple of commenters stated that the downward trend in decreasing total and low-density lipid cholesterol since the 1970s coupled with the decreasing PFOA and PFOS serum levels suggests that there is a substantial likelihood that the proposed MCLs for PFOA and PFOS are unlikely to result in benefits as great as those reported in the proposal. The EPA disagrees with these comments asserting that decreasing trends in cholesterol levels over time indicate that PFAS exposure is unlikely to contribute to a measurable increase in CVD risk. The EPA relied on recent National Health and Nutrition Examination Study (NHANES) data (2011–2016) to inform baseline cholesterol and blood pressure conditions in the population evaluated under the proposed rule. These data reflect the current population and do not reflect cholesterol conditions in the population between 1970 and 2010. Therefore, the CVD benefits analysis examines how the probability of the current population might benefit from reduced incidence of hard CVD events.[14]

The EPA received a comment stating that the benefits associated with high-density lipoprotein cholesterol (HDLC, often referred to as the 'good cholesterol') changes are not likely to accrue because the evidence of the relationship between PFAS and the health outcome is not conclusive, and that this endpoint should not have been quantified. The EPA disagrees; although the evidence of a relationship between PFAS exposure and HDLC is not conclusive, the SAB recommended that the EPA evaluate how the inclusion of HDLC effects would influence results. Thus, the EPA evaluated how benefits results are affected by the inclusion of HDLC effects in a sensitivity analysis presented in appendix K of the EA for the proposed (USEPA, 2023f) and final rule (USEPA, 2024e). Additionally, the same commenter and one other commenter challenged the EPA's quantification of PFOS and blood pressure, stating that the EPA's finding that PFOS might have ''the potential'' to affect blood pressure does not meet the SDWA standard for inclusion in a benefits analysis and that the ''rationale for including changes in BP in relation to PFOS is not clear.'' Another comment identified a study that utilized NHANES data and ''did not observe an association'' between PFOA and blood pressure. Finally, another commenter mentioned that ''neither the ATSDR nor the National Academy of Sciences (NAS) have found an association between PFOA/PFAS and increased blood pressure.'' While the EPA is aware of this previous work, in the EPA's own, more recent assessment, the strength of the evidence is determined both by the number but also the quality of studies investigating the relationship. One high confidence study conducted using U.S. general population data from NHANES showed a relationship between PFOS exposure and systolic blood pressure in humans (Liao et al., 2020). In addition, several *medium* and *low* confidence studies provided evidence for an association between PFOS and blood pressure and/or hypertension (Mitro et al., 2020; Bao et al., 2017; Mi et al., 2020; Liu et al., 2018). Because blood pressure is an important component of the Atherosclerotic Cardiovascular Disease (ASCVD) model used to estimate hard CVD event risk, and because epidemiology reports show consistent evidence of an association between PFOS and blood pressure in general adult populations (*i.e.,* the populations evaluated using the ASCVD model), the EPA included the relationship between PFOS exposure and blood pressure in the analysis. The EPA further notes that the Science Advisory Board recommended modeling the impacts of changes in all ASCVD model predictors (including blood pressure and HDLC) for which there is evidence of a likely causal relationship (USEPA, 2022i).

A few commenters questioned the evidence or stated that the evidence supporting an association between exposure to PFOA and PFOS and CVD is insufficient. The EPA disagrees with these comments. The agency's approach to estimating reductions in CVD risk was reviewed and supported by SAB panelists (USEPA, 2022i). Numerous studies have shown consistent associations between PFOA/PFOS exposure and changes in TC and blood pressure which are biomarkers for CVD risk. TC and blood pressure are well-established CVD risk biomarkers, are clearly associated with CVD events, and are important inputs to the ASCVD model that the EPA used to estimate CVD outcomes.

The EPA received public comments on the benefits analysis for developmental effects. A few commenters claimed that the studies used for developmental modeling did not provide sufficient evidence of an association between PFOA and PFOS exposure and stated that the studies which the EPA used to model the developmental effects relationship did not consider confounders including pregnancy hemodynamics and other chemical and non-chemical stressors, including other PFAS. One commenter stated that the EPA's findings are inconsistent with other regulatory agency findings that small decreases in birth weight are associated with maternal exposure to PFOA and PFOS but not increased risk of low birth weight. Other commenters stated that the EPA did not address these concerns and inappropriately used these studies to support quantitative analysis, and one commenter stated that because of the shortcomings of the studies used and the modeling uncertainties, peer review of the developmental effects modeling should be completed. Although there are some uncertainties in the developmental epidemiological effects data (*e.g.,* differences seen across biomarker sample timing), the EPA disagrees with these comments: the developmental benefits analysis is supported by a wide body of peer reviewed science (Verner et al., 2015; Negri et al., 2017; ATSDR, 2021; Waterfield et al., 2020; USEPA, 2016c; USEPA, 2016d; USEPA, 2024c; USEPA, 2024d). Specifically, birth weight was determined to be a critical effect based on findings in the EPA's health assessments (see USEPA, 2024c; USEPA, 2024d), and low birth weight is linked to a number of health effects that may be a source of economic burden to society in the form of medical costs, infant mortality, parental and caregiver costs, labor market productivity loss, and education costs.

Discussion regarding the selection of decreased birth weight as a critical effect, including the selection of specific studies for candidate RfD derivation and the evidence supporting associations between PFOA or PFOS and

[14] Hard CVD events include fatal and non-fatal myocardial infarction (*i.e.,* heart attack), fatal and non-fatal stroke, and other coronary heart disease mortality.

developmental effects, is available in sections 3.4.4 and 4.1 of the final toxicity assessments for PFOA and PFOS (USEPA, 2024c; USEPA, 2024d). In estimating benefits of reducing PFOA and PFOS in drinking water, the agency selected results from Steenland et al. (2018) as the birth weight exposure-response function for PFOA and results from Dzierlenga et al. (2020) as the birth weight exposure-response function for PFOS. The agency chose the results from these studies because they include the most recent meta-analyses on PFOA- and PFOS-birth weight relationships, and they included a large number of studies, including multiple studies with first trimester samples (seven studies in Steenland et al., 2018 and eight studies in Dzierlenga et al., 2020). To provide insights into the potential effects of sample timing and pregnancy hemodynamics, the EPA also performed a sensitivity analysis considering only first trimester estimates from Steenland et al (2018) for PFOA and Dzierlenga et al. (2020) for PFOS in section K.4 of the EA appendices (USEPA, 2024e). While reports prior to 2019 found ''plausible'' or ''suggestive'' (USEPA, 2016d; ATSDR, 2018) evidence of relationships between PFOA and PFOS and developmental outcomes, the EPA's assessment found clear evidence of an association for PFOA and PFOS in both toxicological and epidemiological studies (USEPA, 2024h; USEPA, 2024i). The agency further disagrees with the commenter's statement that further peer review is needed, as the EPA relies extensively on peer-reviewed studies in its developmental benefits model. Furthermore, the EPA characterizes the uncertainty in the PFOA and PFOS exposure-response functions as described in appendix L of the EA (USEPA, 2024e). In short, the benefits analysis for developmental effects relies on a wide body of the best available, peer-reviewed science, and the epidemiological evidence provides a reliable basis for quantifying the risks of low birth weight.

A different commenter claimed that the EPA relied on equivocal epidemiological evidence to estimate developmental benefits, stating that the RfDs calculated from animal studies in the EPA's health assessment documents for PFOA and PFOS are significantly higher than those based on human studies used for benefits analysis and that the animal studies represent a more appropriate estimate of the risk of PFOA and PFOS exposure. The EPA disagrees with the commenter that the analysis relies on equivocal epidemiological evidence to estimate benefits. The systematic literature review and assessment conducted by the EPA, the most comprehensive evaluation of the current literature to date, concluded that there is moderate evidence for developmental effects based on consistent adverse effects for fetal growth restriction including birthweight measures which are the most accurate endpoint (USEPA, 2024c; USEPA, 2024d). One commenter raised concerns about the EPA's reliance on the study (Steenland et al., 2018) that the EPA uses to model PFOA dose response for benefits analysis, stating that the EPA's benefits analysis for PFOA and developmental effects is not supported by the underlying publication. The same commenter questioned the EPA's reliance on the study that is used to model PFOS dose response for benefits analysis (Dzierlenga et al., 2020), stating that the study found that there was no evidence of a relationship at the beginning of pregnancy. The commenter contended that the meta-analysis was not peer reviewed and thus the validity of the EPA's methods should be questioned. The EPA disagrees with the commenter's criticism of the studies used to assess dose response in developmental benefits analysis. The selected meta-analyses on the relationship between PFOA/PFOS exposure and birth weight produced statistically significant results, are based on recent data, and include a large number of studies in each meta-analysis.

One commenter stated that given the discussion about changes over time in infant mortality, a dataset containing only two years of data is insufficient to build infant mortality regression models. The EPA disagrees that two years of data is insufficient to build regression models relating infant birth weight to infant mortality. The EPA's regression analysis improves upon earlier analyses relating birth weight to infant mortality (Almond et al., 2005; Ma and Finch, 2010) by evaluating two years of recent data. Sample sizes among the Centers for Disease Control and Prevention (CDC) National Center for Health Statistics (NCHS) linked birth/infant death data per year are large (n = approximately 3.8 million infants) and contribute to the overall statistical significance of regression results. As described in appendix E of the EA (section E.2, USEPA, 2024e), there has been a notable decline in U.S. infant mortality rates since the analyses reported in Ma and Finch (2010) and Almond et al. (2005). Using recent data from two CDC NCHS linked birth/infant death data cohorts results is a more accurate and conservative characterization of recent infant mortality trends than if the EPA had included older CDC NCHS data.

The EPA received comments on the benefits analysis for RCC. Two commenters expressed concerns with the EPA's use of Shearer et al. (2021) to estimate RCC risk in benefits analysis and claimed flaws in the study related to outliers in the RCC group and inconsistent evidence of an association across epidemiological studies. One commenter stated that given what they perceive as SAB concerns and uncertainties in the modeling, further peer review is warranted. The EPA disagrees with the comments critical of the agency's use of information from the Shearer et al (2021) study for purposes of PFOA health assessment and benefits analysis. As noted in section 3.5.1 of the Final Toxicity Assessment for PFOA (USEPA, 2024c), the EPA determined that Shearer et al. (2021) is a *medium* confidence study after conducting study quality evaluation consistent with the *ORD Staff Handbook for Developing IRIS Assessments* (USEPA, 2022f). The biomonitoring measures of PFOA levels in Shearer et al. (2021) were reliable measures of PFOA exposure due to the chemical's well-established long half-life. The commenters failed to acknowledge multiple studies further supporting a positive association between PFOA exposure and RCC risk (Bartell and Vieira, 2021; Vieira et al., 2013; Steenland et al., 2022). Critically, the SAB PFAS Review Panel supported the *Likely to be Carcinogenic to Humans* designation for PFOA in its final report (USEPA, 2022i). Shearer et al (2021) has been sufficiently peer reviewed and it represents the best available science for purposes of health and benefits assessment in the PFAS NPDWR.

The EPA received comments on uncertainties associated with bladder cancer reductions. One commenter incorrectly stated that the ''EPA does not recognize the uncertainty that there is not always direct correlation between THM4 levels and TOC in all public water systems''. In response, the EPA notes that the THM concentrations in this co-removal analysis were not calculated based on TOC reduction. TOC was used to bin systems in the universe of PWSs using the fourth Six-Year Review (SYR4) database and PFAS occurrence model with the THM4 reduction calculated from the formation potential experiments before and after GAC treatment in the DBP Information Collection Rule Treatment Study Database. This dataset reflects the current best available data to determine THM4 reduction based on TOC removal

using GAC treatment. Another commenter stated that the causal link of DBPs and bladder cancer has not been established. The EPA notes that an extensive body of epidemiological studies have shown that increased exposure to chlorinated DBPs is associated with higher risk of bladder cancer and other adverse health outcomes (Cantor et al., 1998; Freeman et al., 2017). Weisman et al. (2022) found that approximately 8,000 of the 79,000 annual bladder cancer cases in the U.S. were potentially attributable to chlorinated DBPs in drinking water systems. While research has not established a causal link between THM4 and bladder cancer, there is strong evidence that there is a correlation between THM4 and bladder cancer.

One commenter stated that the DBP co-removal benefit analysis did not meet the standards required by SDWA for estimating benefits since it was not reviewed by the SAB. The commenter is incorrect. SDWA 1412(e) directs the EPA to request comments from the SAB prior to proposing an MCLG and NPDWR. The EPA sought and received comment from the SAB prior to proposing this NPDWR (see USEPA, 2022i). The statute does not dictate the precise level of scientific questions for which the EPA must seek comments from the SAB. The EPA sought SAB comment on the four most significant areas that informed derivation of the MCLGs for all six PFAS regulated by this action and for other parts of the benefits analysis that informed the overall development of the NPDWR. The EPA did seek additional peer review of its DBP co-removal benefit analysis prior to its inclusion in the EA for which it received overwhelmingly favorable comments from reviewers (see USEPA, 2023m). Furthermore, this rule is based on the EPA's consideration of a wide body of existing peer-reviewed science on this subject (*e.g.,* Regli et al., 2015; Weisman et al., 2022). In short, the EPA has used peer reviewed science and sought further peer review to support its DBP co-removal analysis, and as part of the supporting material for the rule proposal, the EPA included the comments from the expert peer reviewers as well as how each comment was addressed or the rationale for why it was not changed. Please see *Response to Letter of Peer Review for DBP Co-benefits* (USEPA, 2023m) for discussion of that peer review and the EPA's responses to peer reviewed comments.

Another commenter claimed that the EPA improperly quantified benefits of co-removed substances rather than co-occurring substances. The EPA disagrees with these assertions since the analysis of DBP co-removal is focused on co-occurring contaminants. As demonstrated elsewhere in the record for this action, PFAS commonly co-occur with each other. Additionally, in waters where disinfection is required, TOC (*i.e.,* a DBP precursor) and PFAS may co-occur. The DBP co-removal benefits analysis relied on DBP formation potential experiments that highlighted the changes to TOC with and without GAC treatment. Furthermore, as discussed above, the methodology to estimate THM4 reductions was externally peer reviewed by three experts in GAC treatment for PFAS removal and DBP formation potential.

A few commenters stated that the EPA already had initiatives to reduce THMs in drinking water and suggested that reduction of bladder cancer cases is better addressed through existing DBP rules. While the EPA agrees that there are existing DBP regulations to reduce DBP exposure and risks, this rule will provide additional health risk reduction benefits associated with enhanced DBP reduction. The EPA has considered those co-removal benefits as part of the EA. The EPA notes that it is required under the SDWA 1412(b)(3)(C)(i)(II) to assess quantifiable and nonquantifiable health risk reduction benefits for which there is a factual basis in the rulemaking record to conclude that such benefits are likely to occur from reductions in co-occurring contaminants that may be attributed solely to compliance with the MCL, excluding benefits resulting from compliance with other proposed or promulgated regulations. DBP reductions presented in the EPA's HRRCA are those that are anticipated to result solely from compliance with the PFAS MCLs. As required under the SDWA, any quantifiable and nonquantifiable benefits from future actions concerning DBPs in drinking water will be addressed at the time of those actions and are independent from benefits stemming as a result of the PFAS rulemaking. A couple of commenters supported the EPA's analysis of DBP benefits but recommended that the EPA also consider other co-removed contaminants. The EPA agrees with the commenters that multiple co-occurring contaminants will be removed as a result of this rule. Furthermore, the EPA acknowledges in the EA that additional co-removal benefits would be realized due to treatment for PFAS. With the exception of DBPs co-removed, the EPA has not quantified other co-removal benefits at this time because of data limitations, the agency included discussion of nonquantifiable benefits for multiple other PFAS and for other contaminants.

Nonquantifiable Benefits of PFAS Exposure Reduction

One commenter expressed that the EPA's characterization of benefits is inadequate and not supported by science. The commenter specifically discussed hepatic effects, endocrine effects, and musculoskeletal effects and asserted that the EPA's characterization is based on mixed findings and inconsistent evidence regarding PFAS exposures and specific health outcomes. The EPA disagrees with this comment, as the EPA has evaluated the best available peer reviewed science, as required under SDWA. The EPA did not quantify or monetize benefits where there are inadequate data. For hepatic effects, the EPA's toxicity assessments determined that there is moderate evidence supporting the association between exposure to PFOA/PFOS and hepatic toxicity in humans. However, the EPA did not quantify benefits for hepatic effects because although there will be benefits delivered by reducing PFOA and PFOS in drinking water, there is a lack of adequate data available to accurately quantify those benefits. Further information on health effects related to PFAS exposures is provided in the health assessments within the MCLG documents (USEPA, 2024c; USEPA, 2024d).

Conversely, some commenters expressed support for the quantification that the EPA has already performed, stated that the benefits of the rule are underestimated, and urged the EPA to quantify and monetize additional health endpoints, particularly mammary gland and lactational effects, immunotoxicity, and liver disease. These commenters also provided additional resources and information with the intention of the EPA using that information to update analyses regarding lactational effects, expand analyses to include immune effects, and adjust analyses to characterize hepatotoxicity as a quantifiable benefit, as opposed to a non-quantifiable one. Commenters also urged the EPA to quantify some of the benefit categories, even if monetization is not possible, and to highlight the magnitude of some of the qualitatively discussed benefits. The EPA agrees with these commenters that the quantified benefits of the rule are underestimated. Where appropriate, the EPA used medical cost information provided by the commenters to supplement qualitative discussion of adverse effects. Additionally, and based on these comments, the EPA considered

information in the record and added additional quantified benefits analysis in the sensitivity analysis evaluating the reductions in liver cancer cases expected by reducing concentrations of PFAS. This additional analysis was confirmatory of the EPA's previous analysis and did not result in changes to the NPDWR's requirements.

Some commenters also provided recommendations regarding the inclusion of additional costs and benefits beyond health endpoints. These included the opportunity cost of time, environmental benefits, and psychosocial benefits that are expected to result from the rule. The opportunity cost of time was suggested to be incorporated into morbidity estimates, while the other benefits were suggested to be encapsulated in a qualitative summary.

In the EA document, the EPA describes that the cost of illness (COI)-based approach does not account for the pain and suffering associated with non-fatal CVD events. Based on the above comments, for quantified cancer endpoints (*i.e.,* RCC and bladder cancers), the EPA has included a new sensitivity analysis using willingness to pay values for risk reductions which can inform the direction of benefits when opportunity cost is included. This additional analysis was confirmatory of the EPA's previous analysis and did not result in changes to the NPDWR's requirements.

c. Final Rule Analysis

For the final rule, the EPA retained the quantitative benefits analyses from the proposal for developmental, CVD, and cancer endpoints as well as the bladder cancer benefits from DBP exposure reduction as a result of the rule. In response to comments described above, the agency identified new information on willingness to pay values for non-fatal cancer risk reductions and added additional sensitivity analyses for RCC and bladder cancer in appendix K to the final rule EA (USEPA, 2024e). In light of new epidemiological studies on PFOS exposure and liver cancer that strengthened the weight of evidence and supported the toxicological information that was identified in the proposed rule, and comments received requesting that the EPA monetize additional health endpoints, the EPA developed a sensitivity analysis assessing the liver cancer impacts in appendix O of the final rule EA (USEPA, 2024e). The EPA estimates that PFOS liver cancer benefits would add $4.79 million annually to the national benefits estimates. The EPA retained discussion of nonquantifiable benefits associated with PFAS exposure reduction from the proposed rule for the final rule EA.

2. Treatment Costs

a. Treatment Cost Estimates in the Proposal

The EPA estimated costs associated with engineering, installing, operating, and maintaining PFAS removal treatment technologies, including treatment media replacement, and spent media destruction or disposal, as well as nontreatment actions that some PWSs may take in lieu of treatment, such as constructing new wells in an uncontaminated aquifer or interconnecting with and purchasing water from a neighboring PWS. To evaluate the treatment costs to comply with the proposed PFAS NPDWR, the EPA used the agency's Work Breakdown Structure (WBS) models, a spreadsheet-based engineering models for individual treatment technologies, linked to a central database of component unit costs. The WBS models are extensively peer-reviewed engineering models for individual treatment technologies and discussed in section XII.D of this preamble. The EPA used PFAS occurrence outputs from a Bayesian hierarchical estimation model of national PFAS occurrence in drinking water (Cadwallader et al., 2022), to estimate the number of water systems exceeding the proposed MCLs, and therefore triggered into action to comply with the proposed MCLs.

b. Summary of Major Public Comments on Treatment Costs and EPA Responses

Many commenters state that the EPA has underestimated the treatment costs required to comply with the proposed MCLs. One commenter suggested that the EPA has not complied ''with its statutory requirements by conducting an analysis that fully captures these costs.'' The EPA disagrees with the few commenters that suggested the EPA has not met its requirements under SDWA, and the EPA emphasizes the agency has used the best available peer reviewed science to inform it cost estimates, including treatment costs, of the MCLs. Specific aspects of comments related to treatment costs and the EPA's response are discussed further in this section.

Many commenters cited rising costs in the drinking water sector and discussed the effects of inflation and the COVID–19 pandemic on the costs of labor, construction, and capital, among other materials related to compliance with the MCLs. These commenters emphasized the significant impacts felt from supply chain and workforce issues. The EPA recognizes these impacts, and as recommended by commenters, adjusted the cost estimates by escalating unit costs using indices including the Bureau of Labor Statistics producer price indices (USBLS, 2010). The EPA updated each unit cost using the change in the relevant price index from year 2020 to 2022. For example, the EPA applied the percent increase of the price of metal tanks and vessels (50 percent increase from 2020 to 2022) to the price of metal tanks and vessels in the WBS cost models. The EPA also collected new vendor price quotes for cost driver equipment components (*e.g.,* pressure vessels, treatment media) and made several other adjustments to WBS model assumptions, described further in this section. Taken together, these adjustments increased the system level capital cost estimates in the EPA's cost assessment by a percentage that varied depending on the system size and treatment technology. For small systems using GAC and IX, the increase ranged from approximately 40 percent to 110 percent. For medium systems, the increase was approximately 20 to 60 percent; for large systems, 10 to 40 percent. Additionally, while revising the SafeWater model to incorporate new information from public comments, the EPA identified and corrected a coding error related to the discounting of future operation and maintenance costs resulting in increased estimated annualized treatment costs. The result of these changes are increased cost estimates for the final rule.

Some commenters state that while BIL funding is available, it is not enough to cover the compliance costs of the rule. For example, one commenter noted that, ''[t]his amount of funding support, while crucial, will come nowhere near the cost to ratepayers that must be borne to implement necessary compliance actions for these MCLs.'' The EPA disagrees with the commenter that BIL funding will be nowhere near the cost'' necessary to implement compliance actions. The EPA estimates that the initial capital costs of the rule in undiscounted dollars is approximately $14.4 billion (see appendix P of the EA for more information). Given the BIL appropriations of $11.7 billion in DWSRF and an additional $5 billion for emerging contaminants, the EPA reasonably anticipates BIL funding is likely to be able support a substantial portion of the initial capital costs of the final rule. BIL funding appropriations began in the Federal Fiscal Year (FFY) 2022 and appropriations are anticipated to continue through FFY 2026.

Many commenters shared some information about the costs that they

have incurred or estimated they would incur at a system level to install, operate, and maintain treatment to remove PFAS. Some system level cost information provided by commenters fell within the ranges of costs presented in the EPA's supporting documentation for the proposal and other information provided by commenters exceeded the EPA's system level cost ranges. The EPA does not dispute the commenters stated experience of costs to install, operate and maintain treatment to remove PFAS; however, many of these comments lacked supporting details. Many of the comments cited preliminary or conceptual estimates and did not specify the methods and assumptions used to develop the estimate. Furthermore, most comments did not include information to confirm that all of the reported or estimated costs were or would be directly associated with PFAS treatment, as opposed to other infrastructure improvements (*e.g.,* capacity expansion, administrative facilities, distribution system improvements) that happened to be completed as part of the same project. Most commenters also did not include information to confirm that key design and operating parameters (*e.g.,* empty bed contact time, media replacement frequency) would be similar to the typical values assumed in the EPA's estimates. To fully evaluate the commenters' reported or estimated costs in comparison to WBS model results, the EPA would need itemized line-item cost details and engineering design parameters. To inform the cost estimates of the proposed and final PFAS NPDWR, the EPA conducted an extensive review of the literature. The EPA has further validated the unit costs in the PFAS rule with equipment cost information from 2023 from a major supplier of treatment media. While the EPA recognizes there are likely site-specific instances where costs exceed the EPA's cost ranges, there are also likely site-specific instances where costs are less than the EPA's cost ranges, and this level of accuracy is appropriate for a national level analysis.

Other commenters compared state-level costs to the EPA's national level cost estimates, noting that the EPA's estimates appeared too low. Utilizing this permit data and project cost data submitted by water systems in applications to the DWSRF, one state estimated that total capital costs for installation of PFAS treatment to meet the EPA's proposed standards across the state could be as high as $1.065 billion. The EPA's EA analysis, however, presents national level cost estimates that are annualized over the period of analysis and are therefore not directly comparable to a single year estimate of capital costs.

A few commenters stated that the EPA incorrectly omitted the costs associated with performance monitoring, which commenters believe will be necessary because a water system needs to know how often it needs to replace its media. The EPA disagrees that large amounts of additional samples in performance monitoring will be required, and the commenter provided no data to support their assertion that this would be necessary. The EPA anticipates that many water systems will conduct a pilot test before implementing a full-scale treatment installation and that the operational results from the pilot test will be a sufficient indicator of performance; therefore, water systems should not have to collect large amounts of performance samples indefinitely during the full-scale operation of treatment technologies. The EPA includes the costs of pilot testing, and sampling during that time, in the treatment capital cost estimates. In response to public comments, the EPA increased the estimated length of the pilot study and the frequency of sampling during the pilot study. Additionally, the EPA added a full year of confirmation sampling after full-scale installation to the estimated pilot study costs. Taken together, these changes doubled to more than tripled the pilot study costs included in the EPA's estimates.

In response to public comments about residual management concerns for high pressure membrane technologies, the EPA has adjusted RO/NF's technology projection compliance forecast to zero percent in the EA for the final rule. Therefore, the EPA assumes that RO/NF will not generally be used solely for the purpose of complying with the final rule. For more information on public comments on residuals management and the EPA's response please see section X.

A few commenters stated that the EPA underestimated or insufficiently incorporated contingency in its cost estimates. For example, one commenter stated that the EPA's contingency assumptions in the proposal were ''. . . inconsistent with recommended best practices for cost estimators and [are] expected to be a major contributor to the EPA WBS' failure to accurately capture costs for PFAS treatment facility implementation.'' In response to these comments, the EPA changed its approach and incorporated contingency for all systems, not just high-cost systems. The EPA also increased the complexity factor applied to estimate contingency for systems using GAC. Taken together, these changes result in a contingency factor of 5 to 10 percent depending on total project cost at all cost levels for systems installing treatment. Additionally, the EPA includes a miscellaneous allowance of 10 percent. This allowance can be viewed as either as a form of contingency or a method to increase the level of project definition (thus reducing the amount of contingency required).

One commenter stated that the EPA underestimated the costs associated with interconnection.[15] This commenter stated that it was ''unrealistic to assume that booster pumps are unlikely to be necessary. Pressure loss associated with friction could be significant, especially for an interconnection that may span 10,000 feet or more,'' and recommended that the EPA include booster pumps in the cost estimate. Commenters also pointed out that ''. . . systems considering interconnections will need to thoroughly investigate this option and determine if it is both cost effective and appropriate given the water quality impacts.'' In response to these comments, the EPA made several changes to the assumptions used to estimate costs for interconnection in the WBS model for nontreatment options. The EPA agrees that booster pumps may be needed and added the costs of booster pumps designed to account for friction loss in interconnecting piping. The EPA also agreed that there are many considerations for water systems pursuing interconnections including elevated water age, nitrification, and DBPs, as pointed out by commenters, and therefore the EPA increased the complexity factor applied to estimate contingency for systems using nontreatment options. Taken together with the escalation to 2022 dollars, these changes increased the system level capital costs for interconnection by approximately 60 to 100 percent.

Many commenters cited and expressed agreement with the conclusions of a study conducted by Black & Veatch on behalf of the American Water Works Association (AWWA) (hereafter referred to as AWWA's B&V report) (AWWA, 2023). The EPA disagrees with many of the assumptions in AWWA's B&V report and the report's overall conclusions

[15] Interconnection is when a system replaces their contaminated water source by purchasing water from another nearby system that is in compliance. Booster pumps can be needed when the pressure from the supplying system is lower than required at the purchasing system and also to overcome pressure losses due to friction in interconnecting piping.

about the estimated national costs of the PFAS NPDWR. Tables 24–26 detail some of the key assumptions related to (1) PWSs that exceed the MCL, (2) capital costs and (3) operation and maintenance costs that overestimate national treatment costs in AWWA's B&V report and the EPA's response to those assumptions and resulting estimates. In combination, all these factors result in an overestimate of treatment costs. For example, AWWA's B&V report Table 6–1 reports an average capital cost per EP for the smallest size category of $900,000. Using AWWA's B&V report's (overestimated) design flow calculations, the treatment system design flow at each EP would be approximately 0.062 million gallons per day (mgd). For comparison, Forrester (2019) reports capital equipment costs of approximately $300,000 for a 1 mgd GAC PFAS treatment system. Even after adding indirect capital and building costs, the $900,000 estimate appears substantially overestimated, given that it is for a treatment system designed for approximately 1/16th of the flow of the system in the Calgon Carbon estimate (Forrester, 2019). When AWWA's B&V report's EP level results are aggregated nationally to an overestimated number of systems treating for PFAS, the overestimates are compounded at the national level.

BILLING CODE 6560–50–P

Table 24. EPA Response to assumptions about PWSs exceeding the MCLs in AWWA's B&V Report

Analytical Component	AWWA's B&V report	EPA response
PFAS occurrence estimates	Used an occurrence dataset comprised of UCMR 3 and information from state regulatory agencies. Estimates the following number of water systems will exceed 4.0 ng/L PFOA and/or PFOS: Serving 10,000 or less: 7,056 PWS (8,808 EP) Serving more than 10,000: 393 PWS (1,214 EP) Total PWSs: 7,449 PWSs (10,022 EP)	The dataset used is not appropriate for national extrapolation, for example, 90 percent of non-UCMR systems used in the report come from just 6 states. As a result, AWWA's B&V report likely overestimates the number of water systems exceeding the MCLs, particularly small water systems. After incorporating updated state monitoring data into its occurrence model, the EPA estimates the following number of water systems will exceed 4.0 ng/L of PFOA and/or PFOS (**mean** (5^{th} – 95^{th}) from chapter 4.4 of the EA): Serving 10,000 or less: **3,870** (2,795-5,097) PWS **5,115** (3,666-6,858) EP Serving more than 10,000: **1,266 (**1,203-1,328) PWS **3,878** (3,701-4,056) EP Total PWSs: **5,136** (4,018-6,441) PWSs **8,993** (7,497-10,711) EP AWWA's B&V report did not specify what measures, if any, were taken to ensure the data was nationally representative and this may be one cause of their overestimation of water systems exceeding the MCLs. The EPA used QC measures to ensure that the data represented finished drinking water and that the set of systems used to inform the model was nationally representative. Additional state data that were available at systems that were part of this nationally representative set of systems were used to fit the model. For more information see section VI of this preamble.

Number of EP installing treatment	Assumes every EP a system will require treatment regardless of whether a given EP exceeds the MCL.	This is an incorrect assumption and likely leads to a significant overestimate of national costs. A single water system often has EP that use different water sources, and therefore have different PFAS concentrations. The EPA conducted an EP-level cost analysis as compliance with the rule is determined at the EP-level and treatment is installed at the EP-level.
PWSs in states with existing PFAS regulations	Includes estimates of the costs to PWSs to comply with existing state PFAS regulations; and does not assume that PWSs are already in compliance with state standards.	This approach overestimates costs for water systems in states with existing state standards. The EPA adjusts the baseline by setting the maximum pre-regulation concentrations equal to the state MCL for systems in states with promulgated regulations. This allows the EPA to capture the incremental costs of the NPDWR MCLs more accurately.
Nontreatment options	Assumes all exceeding EP will install a treatment technology to comply with the MCLs.	This assumption overestimates costs, as the EPA is aware of a number of water systems that have elected to drill a new well to reduce PFAS concentrations in supplied water. Another commenter pointed out that Michigan expects up to 26 percent of water systems to interconnect with other systems to comply with their state standard. Other commenters pointed out the viability of interconnection and new wells as compliance options will vary regionally, and the EPA agrees. Nevertheless, the absence of these options entirely in AWWA's B&V report overestimates national costs.

Table 25. EPA Response to key capital cost assumptions in AWWA B&V Report

Analytical Component	AWWA B&V report	EPA response
Equipment lifespan	Assumes a fixed life cycle cost using a fixed 20-year lifespan for all capital equipment.	A 20-year lifespan may be reasonable for very small systems but based on the composite useful life of treatment systems derived from the useful lives of individual treatment system components and industry information, the EPA estimates that treatment system useful life can be 30 years or more for medium to larger systems using more durable materials of construction.
Contingency factors	Includes a contingency factor of 4 percent under contractor markup and an additional contingency factor of 30 percent under non-construction costs.	The inclusion of contingency twice is unusual and may not reflect actual realized contingency costs at project completion. A Construction Industry Institute (2001) study found that projects of $100 million or less incurred only 74 percent or less of the contingency initially budgeted. The EPA updated its approach to incorporate a contingency factor of 5 to 10 percent depending on total project cost at all cost levels for systems installing treatment. The EPA also included a miscellaneous allowance of 10 percent, which can be considered a form of contingency.
Building costs	Assumes a fixed unit cost of $200/square foot for buildings.	AWWA's fixed unit cost likely overestimates actual building costs, particularly for small systems that may not require complex or architecturally detailed buildings. The EPA estimates that building costs vary depending on building quality and square footage and range from $57/square foot to $204/square foot.
Pumping and backwash assumptions	Assumes that all GAC and IX treatment systems require a new influent pumping station, and all GAC and IX treatment systems require new backwash pumps. Except for the two smallest size categories, assumes all GAC and IX treatment systems require backwash recovery basins providing 20 feet of water depth.	AWWA's assumptions overestimate costs as many systems, including small groundwater systems, likely have sufficient existing influent pumping pressure to cover the additional head loss. Some systems using GAC (especially small systems) may not need a dedicated new backwash pump and may be able to accomplish backwash using existing influent or treated water pumps. In applications using PFAS-selective IX resins, periodic backwashing is not recommended (Berretta et al., 2021), so the need for these pumps is questionable and the assumption overestimates costs.

Capital equipment costs	The Association of Metropolitan Water Agencies (AMWA) and the AWWA surveyed its members to obtain recent cost data on installed PFAS treatment systems at drinking water treatment plants.	The EPA updated its equipment costs to 2022 dollars using current price indices. The EPA also collected new vendor price quotes for cost driver equipment components (e.g., pressure vessels, treatment media) and made several other adjustments to WBS model assumptions about pilot study costs and contingency costs that increased total capital costs. The B&V model, as presented in Figure 7-1 of AWWA's public comment letter, appears to overestimate costs for many of the case studies included in the B&V report. For example, it results in higher costs for 28 of the 32 case studies (88 percent) shown in Figure 7-1. The EPA assessed the WBS model results in comparison to the costs of GAC equipment packages from 2023 supplied by a nationally recognized vendor of GAC media and GAC treatment systems. Based on this assessment, the EPA concluded that the direct capital costs in the WBS model for comparable packages of equipment, excluding items the vendor does not supply, range from 23 percent lower to 19 percent higher than the vendor costs and with two exceptions, they are within 10 percent of the vendor costs.
Small system capital costs	Listed capital costs for small systems ranging from $900,000 to $5,300,000.	The EPA accounts for the use of package systems. AWWA appendix B, Table 3-1, indicates that their pressure GAC model accepts treatment capacity inputs from 1 to 12 mgd. It does not indicate how the model handles design flows less than 1 mgd. It is possible that the parametric estimates the model uses are not a good fit below this threshold and does not account for the use of package systems.
Average and design flow estimates	Service population data from SDWIS was used and the average flow for each PWS was assumed based on a per capita per day usage of 150 gallons. Peaking factors for different size systems from the EPA's *Cost and Technology Document for Final Groundwater Rule* were used.	Estimated design flow of a water system effects the size and cost of the capital equipment that will be installed on site. Average flow estimates are the driver for many operational costs. AWWA's approach to estimating design and average flow requirements overestimates the treatment system flow requirements, particularly for smaller systems. For the smallest systems, AWWA's approach overestimates flows by up to 30 percent. The EPA estimated the average daily flow and design flow for drinking water systems based on the empirical relationship between retail population served and flow. This relationship was derived using the data collected via the

		CWSS. It is reported in the EPA's *Geometries and Characteristics of Public Water Systems* report (USEPA, 2000g). As detailed in Table 4-34 of the EA for the final rule, water use efficiency has increased substantially since these relationships were developed, and therefore the trend of lower residential water use could result in lower flow per population and lower treatment costs as compared to predicted values in the EPA's analysis.

Table 26. EPA Response to key operation and maintenance cost assumptions in AWWA B&V Report

Analytical Component	AWWA B&V report	EPA response
Bed life	The BV values utilized for GAC were derived from data collected during a Black & Veatch GAC pilot study for Cape Fear Public Utility Authority (CFPUA). The values utilized for IX were derived partially from data collected during a Black & Veatch IX pilot study for CFPUA and partially from data collected during an IX pilot study for La Habra Height County Water District.	AWWA estimates bed life for all systems using parameters derived from one or two pilot studies. These site-specific pilot studies may not be representative of the range of water quality conditions experienced by systems across the country. For GAC in particular, using the parameters in AWWA's Table 5-9 results in estimated bed lives of less than 7,000 and 9,000 BVs for 90 percent removal of PFOA and PFOS, respectively. These short bed life estimates result in high annual operating costs and may be an artifact of the relatively high influent TOC in the CFPUA pilot study that is the basis of AWWA's estimates. Surface and groundwater systems with more moderate to low influent TOC would be expected to experience much longer GAC bed life and lower operating costs.
Disposal of treatment media	Assumed that spent GAC media would be incinerated "because of the unknown viability of GAC media reactivation under CERCLA." Replacement costs were therefore assumed to be virgin media.	The EPA has proposed PFOA and PFOS be designated as hazardous substances under CERCLA. If finalized, the designation of PFOA and PFOS as CERCLA hazardous substances would not require waste (e.g., biosolids, treatment residuals, etc.) to be treated in any particular fashion, nor disposed of at any specific particular type of landfill. The designation also would not restrict, change, or recommend any specific activity or type of waste at landfills. This action should not result in limiting disposal options and how PFAS containing waste, including spent GAC or resin, is required to be managed. However, drinking water treatment operations may choose to send spent GAC and resin containing PFAS to facilities permitted to treat and/or dispose of hazardous wastes. Even where reactivation is not feasible, disposal in a RCRA permitted hazardous waste disposal facility is expected to be a more cost-effective option than incineration. Therefore, the assumption of incineration and replacement with virgin media overestimates the disposal costs in the B&V report.

BILLING CODE 6560–50–C

c. Treatment Costs in the Final Rule Analysis

The cost estimates in the EA for the final PFAS NPDWR reflects the adjustments made to the WBS curves and decision tree based on public comments discussed above as well as the additional occurrence information available since the publication of the proposed PFAS NPDWR. For detailed information on the EPA's occurrence analysis, see section VI of this preamble. For detailed information on the EPA's cost analysis and the EPA's estimates of the national annualized costs of the final MCLs, see section XII.D.

3. Primacy Agency Costs

a. Primacy Agency Cost Estimates in the Proposal

In the EA for the proposed rule, the EPA estimated the costs incurred by primacy agencies associated with the rule, including up front implementation costs as well as costs associated with system actions related to sampling and treatment.

b. Summary of Major Public Comments on Primacy Agency Costs and EPA Responses

Many commenters state that the EPA has underestimated the costs to primacy agencies required to comply with the rule. One commenter stated, ''EPA's analysis of primacy agency costs does not accurately capture all the activities that primacy agencies will undergo for PFAS implementation and underestimates the number of hours for the primacy tasks.'' Commenters recommend that the EPA use findings from ASDWA's PFAS Cost of State Transactions Study (PCoSTS) to reevaluate the primacy agency costs estimated in the EA. The EPA's response to specific recommendations is discussed here.

The EPA agrees with commenters on the burdens associated with regulatory start up; primacy package adoption; technical, managerial, and financial (TMF) assistance to water systems; and reviewing and approving treatment. Commenters pointed out activities not explicitly accounted for in the regulatory start up estimate in the EA for proposal including accreditation of laboratories for PFAS testing; SDWIS updates; monitoring schedule updates; time spent responding to questions from members of the public; inquiries from public officials; and media requests immediately following the final publication of the NPDWR. Commenters also pointed out that adopting primacy packages is a significant undertaking with ''specific and very detailed administrative procedures that must be adhered to in order to adopt water quality regulations'' and that ''some primacy agencies have requirements for robust public comment periods as a component of new rule adoption.'' As recommended by commenters, the EPA created a new cost item for primacy package adoption. Commenters stated the EPA's assumption in the proposal that the amount of time a primacy agency will need to review treatment plans directly correlates with the size of the water system was inaccurate. Commenters noted that ''. . . small systems often take the most time as they need significant assistance to navigate the process for the design and construction of new treatment and get into compliance.'' After considering these comments, the EPA agrees that reviewing and approving treatment for small systems is likely to take more time given the assistance needed for these systems. Because small systems often lack the technical, managerial, and financial capacity, it is likely that primacy agencies will spend more time assisting these systems in navigating compliance with the PFAS NPDWR. As such, the EPA adjusted burden estimates in the final rule to reflect the largest primacy agency burden per EP at the smallest systems and decreased burden hours with increasing system size, as commenters suggested.

Several commenters disagreed with the EPA's exclusion of additional costs to primacy agencies associated with reporting regarding violations, variances and exemptions, enforcement actions, and other compliance related primacy agency activities in the national cost analysis. One commenter estimated the PFAS NPDWR will likely result in hundreds of violations once in effect. The EPA recognizes that these activities do have an associated burden for primacy agencies but disagrees that these costs should be included in the EA. The EPA assumed 100 percent compliance for its national level analysis in the EA for the final rule because the EPA has determined that the final rule is feasible given known occurrence concentrations and efficacy of the technologies available. Further, this is consistent with the approach taken in EAs for other NPDWRs (USEPA, 2005c; USEPA, 2019c; USEPA, 2020f). Commenters recommended that the EPA include hours for additional annual reporting. The EPA disagrees and expects that adding PFAS results to already-required reports will have no discernable incremental burden for quarterly or annual reports to SDWIS Fed.

Commenters recommended that the EPA include the costs associated with various compliance activities. Given the EPA's assumption of 100 percent compliance for its national level analysis in the EA discussed above, the EPA disagrees and did not take commenters' recommendations to include the costs associated with assisting out of compliance systems and assisting systems to remain in compliance, pursuing enforcement actions, staff time checking in with system violations and reviewing system variances and exemptions. The EPA did include the costs associated with compliance activities for systems in compliance, including updating inspection SOPs and additional sanitary survey burden at water systems that have installed treatment to comply with the PFAS NPDWR.

c. Primacy Agency Costs in the Final Rule Analysis

After considering public comments on the burden hours associated with primacy agency activities, the EPA made the following changes. The EPA increased the estimate from 416 hours to ''read and understand the rule as well as adopt reg requirements'' to 4,000 hours per primacy agency to conduct a suite of regulatory start up activities. Per commenters' recommendation, the EPA included a new line item for primacy package adoption and estimated 300 hours per primacy agency. The EPA lowered the water system operator TMF training from 2,080 hours to 1,500 hours per primacy agency based on commenter recommendations. The EPA added a one-time burden estimate of 20 hours to inspection SOPs and an additional 2–5 burden hours for the primacy agency, by water system size, per sanitary survey per system installing treatment to comply with the rule. For more information see section XII.D.

4. Costs of the Hazard Index

a. Hazard Index Cost Estimates in the Proposal

In the EA for the proposed rule, the EPA estimated national costs associated with PFOA, PFOS, and PFHxS. Given available occurrence data for the other compounds in the proposed rule (PFNA, HFPO–DA, and PFBS) and the regulatory thresholds under consideration, the EPA did not use SafeWater to model national costs associated with potential Hazard Index (HI) exceedances as a direct result of these contaminants. To assess the potential impact of these compounds in the proposed rule, the EPA conducted an analysis of the additional, or

incremental, system level impact that occurrence of these contaminants would have on treatment costs. The EPA estimated that the Hazard Index would increase costs by 0–77 percent at the system level, with costs varying due to PFAS occurrence scenario and treatment technology used.

b. Summary of Major Public Comments on Hazard Index Costs and EPA Responses

A few commenters recommended that the EPA further consider the costs associated with compliance with the Hazard Index (HI) MCL. Specifically, commenters stated that the EPA's analysis of system level costs associated with the Hazard Index does not adequately characterize the overall costs that will be incurred due to the Hazard Index standard. One commenter stated that ''EPA should not move forward with the Hazard Index until it has satisfied its statutory and policy obligation to conduct a cost-benefit analysis.'' Some commenters voiced concern regarding the EPA's assumption that costs associated with compliance with the Hazard Index MCL are insignificant and asserted that these costs must be reexamined, stating that this assessment ''requires more knowledge on the nationwide occurrence of these compounds'' and that the EPA ''cannot assume that addressing the costs of PFOA and PFOS is sufficient when the additional four PFAS will be driving treatment decisions at some PWSs.'' Conversely, one commenter asserted that available occurrence data demonstrate that few systems will be required to install treatment to comply with the Hazard Index MCL that would not already be treating to comply with the PFOA and PFOS MCLs.

The EPA disagrees with commenters who state that the agency did not meet its requirements under SDWA, which requires the agency to analyze ''quantifiable and nonquantifiable costs . . . that are likely to occur solely as a result of compliance with the maximum contaminant level.'' In the proposal, the EPA analyzed the quantifiable costs of the Hazard Index at the system level, using the best available information at the time of publication, and analyzed the nonquantifiable costs of the Hazard Index by including a qualitative discussion of the national level impacts and therefore met the statutory requirements under SDWA 1412(b)(3)(C). After considering recommendations from the public comments to further analyze the costs of the Hazard Index and the data available to support a quantitative analysis of the costs of the Hazard Index, the EPA decided to conduct a sensitivity analysis of the costs of the Hazard Index at the national level. The results of the sensitivity analysis supported the EPA's assumption in the proposal that quantified national costs are marginally underestimated as a result of this lack of sufficient nationally representative occurrence data. The EPA's consideration of Hazard Index costs in the final rule analysis are discussed in the following subsection.

c. Hazard Index and PFHxS, PFNA, and HFPO–DA MCL Costs in the Final Rule Analysis

To estimate quantified costs of the final rule presented in the national-level summary tables, the EPA first estimated baseline PFAS occurrence using a Bayesian hierarchical model fitted with sampling data collected from systems participating in UCMR 3. The model included three of the six PFAS compounds regulated through this NPDWR: PFOA, PFOS, and PFHxS (see section VI of this preamble). This permitted the agency to quantify costs at a national level with a higher degree of confidence and precision for these three PFAS than if simple extrapolations had been used. Since there are some limitations with nationally representative occurrence information for the other compounds that were either not included in UCMR 3 (HFPO–DA) or did not have a sufficient number of observed values above the UCMR 3 reporting limits (PFNA, PFBS), the EPA has a lesser degree of confidence and precision for its quantified estimates of these three PFAS, which are informed by a significant amount of available state-level data. Therefore, the EPA presented the cost estimates for PFNA, HFPO–DA, and PFBS in a sensitivity analysis in the EA (*i.e.,* national-level sensitivity analysis, see appendix N.3) instead of including these costs in the summary tables of quantified national level costs.[16]

In the EA for the proposed PFAS NPDWR, the EPA used a model system approach[17] to illustrate the potential incremental costs for removing PFAS not included in the national economic model (*i.e.,* PFNA, HFPO–DA, and PFBS). After considering public comments on the incremental cost analysis, many of which encouraged the EPA to further evaluate and consider quantified costs of the Hazard Index MCL where feasible, the EPA updated and combined existing analyses contained in the rule proposal to evaluate the incremental costs associated with the Hazard Index MCL and individual MCLs for PFNA and HFPO–DA with a quantified national level sensitivity analysis in the final rule. The updated analysis for the final rule builds on the proposal analysis by combining information that was presented separately at proposal. The analysis in appendix N of the final EA utilizes the system level treatment cost information presented at proposal (See appendix N of USEPA, 2023n, 2023o) with updates to the cost models for the final rule detailed in section XII.A.2. These treatment costs were applied to the number of systems expected to exceed the standards based on PFNA, PFBS, and HFPFO–DA occurrence using the approaches for estimating occurrence of these compounds presented at proposal (see section 10.3 of USEPA, 2023l). This modified analysis was primarily conducted to ensure that the EPA has not, as some commenters claim, substantially underestimated the potential magnitude of these costs. The EPA notes the approach presented in appendix N for the final rule and summarized here, by connecting analyses for proposed rule, allows the agency to consider and compare the relative degree of the potential overall costs of these otherwise nonquantifiable costs of the Hazard Index and PFNA and HFPO–DA MCLs relative to overall national rule costs. This analysis confirms the EPA's findings at proposal that the Hazard Index costs (and those costs for regulating PFNA and HFPO–DA individually) make up a small portion of

[16] When available, nationally representative occurrence information is preferable for an economic analysis of national level costs and benefits. In the case of PFOA, PFOS, and PFHxS, the EPA has a sufficiently robust nationally representative dataset from UCMR 3. The EPA used additional state data that were available at systems that were part of this UCMR 3 set of systems to fit the national occurrence model that informed cost estimates for PFOA, PFOS, and PFHxS (see Cadwallader et al., 2022). In the case of PFNA, HFPO–DA, and PFBS, the EPA lacks the same level of precision as described above for PFOA, PFOS, and PFHxS. State-led data collection efforts provided valuable information about occurrence for PFNA, HFPO–DA, and PFBS, however they did not provide the nationally representative foundation provided by UCMR3 for PFOA, PFOS, and PFHxS to be incorporated into the MCMC national occurrence model.

[17] At proposal, the EPA used a model system approach for estimating potential incremental treatment costs associated with co-occuring PFAS at systems already required to treat in the national model framework and the potential per system costs for the set of systems triggered into treatment as a result of Hazard Index MCL exceedances not already captured in the national analysis. For further detail on the assumptions and findings of the EPA's analysis of incremental costs of other PFAS at rule proposal, please see appendix N.3 in the Economic Analysis for the Proposed Per- and Polyfluoroalkyl Substances National Primary Drinking Water Regulation (USEPA, 2023n, 2023o).

the overall rule costs. Likewise, the EPA notes that while these costs are presented in appendix N because of the lesser degree of confidence and precision in the estimates, the EPA has considered these costs as part of this final regulation. It has done so by evaluating nonquantifiable costs and accounting for uncertainty, characterizing these otherwise nonquantifiable costs in appendix N to generate cost estimates that, while useful, are not as statistically robust as the national cost estimates presented in chapter 5 of the EA. Using this analysis, the agency has confirmed the Hazard Index and PFNA and HFPO–DA MCLs drive a relatively low percentage of the overall rule costs. The EPA has also considered these costs in the context that the Hazard Index and PFHxS, PFNA, and HFPO–DA MCLs are expected to deliver important nonquantifiable health benefits, including PFNA birth weight benefits [18] and other nonquantifiable benefits associated with the reduction of the Hazard Index PFAS (PFNA, PFHxS, HFPO–DA, and PFBS) [19] described in chapter 6.2 of the EA.

The proposed rule included a Hazard Index MCLG and MCL for any mixture of one or more of PFHxS, HFPO–DA, PFNA, and PFBS. The final rule includes a Hazard Index MCLG and MCL for any mixture of two or more of PFHxS, HFPO–DA, PFNA, and PFBS. The final rule also includes individual MCLGs and MCLs for PFHxS, PFNA, and HFPO–DA. The EPA's cost analysis at proposal considered the costs associated with the individual MCLs for PFHxS, PFNA, and HFPO–DA because the proposed Hazard Index MCL would function as individual MCLs when these contaminants occur in isolation. While the rule structure has changed in the final NPDWR, the costing framework used at proposal is still applicable in the final rule: what was considered a Hazard Index MCL exceedance at proposal would be an individual MCL exceedance under the final rule should those contaminants occur in isolation. Further, a Hazard Index exceedance in the final rule (defined as two or more of PFHxS, PFNA, HFPO–DA, and PFBS) is unchanged from a costing perspective to what the EPA proposed. Whether a system exceeds a Hazard Index MCL or individual MCL in the final rule, these costs are captured in the cost estimates the EPA considered and presented in appendix N.3 of the EA and summarized in this section. Specifically, if a system exceeds only one of the individual MCLs for PFHxS, PFNA, or HFPO–DA that exceedance is costed by estimating the removal needed to achieve compliance with a given individual MCL. If a system exceeds the Hazard Index MCL, that exceedance is costed by estimating the removal of the combination of contaminants needed to achieve compliance with the Hazard Index MCL. Therefore, the national level cost estimate for PFHxS is reflective of both the total national cost of the PFHxS individual MCL and instances of Hazard Index MCL exceedances where PFHxS is present above its HBWC while other Hazard Index PFAS are present.

To understand the totality of national-level cost impacts for the Hazard Index MCL, the EPA considered both the contribution of PFHxS (estimated as part of the national level cost analysis), as well as the costs for PFNA, HFPO–DA, and PFBS (estimated in the appendix N sensitivity analysis). Together, these provide information on the costs for the Hazard Index MCL and the individual MCLs for PFHxS, PFNA, and HFPO–DA, as a whole. Due to available data informing the Bayesian hierarchical occurrence model, the EPA was only able to quantify the portion of total costs for the Hazard Index MCL attributable to PFHxS [20] in the national level analysis. The EPA notes that this estimate also represents the national level quantified costs for the individual PFHxS MCL. The EPA acknowledges that this $11.6 million estimate is only a portion of the costs imposed by the Hazard Index MCL and also does not account for the costs imposed by the individual PFNA and HFPO–DA MCLs. The EPA accounted for those potential additional costs through the sensitivity analysis described in appendix N, in which the EPA found that costs of treating for PFNA, HFPO–DA, and PFBS to meet the Hazard Index MCL and individual MCLs for PFNA and HFPO–DA increased national costs by approximately 5 percent, from $1,549 million to $1,631 million. These costs represent the total costs of the final rule; in other words, this includes the costs associated with individual MCLs for PFOA, PFOS, PFHxS, HFPO–DA, and PFNA, as well as the Hazard Index MCL. Due to data limitations, the EPA has not separately estimated the costs of the Hazard Index in the absence of the individual MCLs. The sensitivity analysis demonstrates that the quantified national analysis cost estimate that includes only PFOA, PFOS, and PFHxS (where PFHxS represents only a portion of the Hazard Index costs) marginally underestimates total rule costs when also considering the potential cost impacts attributable to HFPO–DA, PFNA, and PFBS. The cost estimates stemming from both the quantified national estimate for PFOA, PFOS, and PFHxS, and from the sensitivity analysis conducted for PFNA, HFPO–DA, and PFBS together inform the impact of the Hazard Index MCL as required by the HRRCA under SDWA.

To fully weigh the costs and benefits of the action, the agency considered the totality of the monetized values, the potential impacts of the nonquantifiable uncertainties, the nonquantifiable costs and benefits, and public comments received by the agency related to the quantified and qualitative assessment of the costs and benefits. For the final rule, the EPA is reaffirming the Administrator's determination made at proposal that the quantified and nonquantifiable benefits of the rule justify its quantified and nonquantifiable costs.

In light of the individual MCLs, the EPA has separately presented national level marginal costs associated with the individual MCLs for PFHxS, PFNA and HFPO–DA in the absence of the Hazard Index MCL; see chapter 5.1.3 and appendix N.4 of the EA for details. Therefore, the costs for the individual PFHxS, PFNA, and HFPO–DA MCLs have been considered both in the

[18] As discussed in appendix K.4, a 1 ppt reduction in both PFOA and PFOS for a system serving a population of 100,000 would result in $0.101 million in annualized birth weight benefits. If including a 1 ppt PFNA reduction, in addition to a 1 ppt reduction in both PFOA and PFOS, for a system serving a population of 100,000, the resulting annualized birth weight benefits would increase by $0.464 to $0.689 million, depending on the slope factor used for PFNA. The EPA estimates that 208 water systems may exceed the PFNA MCL.

[19] The EPA also anticipates additional substantial benefits to PWS customers associated with reduced exposure to Hazard Index compounds (PFHxS, HFPO–DA, PFNA, and PFBS) not included in the primary analysis. The nonquantifiable benefits impact categories include developmental, cardiovascular, immune, hepatic, endocrine, metabolic, reproductive, musculoskeletal, and carcinogenic effects. See chapter 6.2 of the EA for more information.

[20] The EPA notes that there are anticipated to be circumstances where PFHxS exceeds its individual MCL and HBWC where PFNA, PFBS, and HFPO–DA do not co-occur. While resulting in an exceedance of the PFHxS MCL, if PFHxS exceeds its HBWC without other Hazard Index PFAS present, this would not result in an exceedance of the Hazard Index MCL. At rule proposal, a single exceedance of any of the four Hazard Index PFAS would have resulted in an exceedance of the Hazard Index MCL. However, to improve rule implementation and to support effective risk communication, the EPA has structured the final rule such that a Hazard Index exceedance only occurs when there are two or more of the Hazard Index PFAS present. Therefore, while for purposes of informing its quantified cost analysis the EPA is assuming that every PFHxS exceedance of the MCL also causes an exceedance of the Hazard Index MCL, this approach results in the EPA overestimating PFHxS-attributable Hazard Index costs in its national cost analysis.

proposed and final rule. For more information on the agency's methodology, findings, and limitations of the EPA's updated analysis of costs associated with compliance with the Hazard Index, please see appendix N.3 of the EA (USEPA, 2024e).

5. Benefit-Cost Determination

a. Benefit-Cost Determination in the Proposal

When proposing an NPDWR, the Administrator shall publish a determination as to whether the benefits of the MCL justify, or do not justify, the costs based on the analysis conducted under section 1412(b)(3)(C). For the proposed rule, the Administrator determined that the quantified and nonquantifiable benefits of the proposed PFAS NPDWR justified the costs.

b. Summary of Major Public Comments on Benefit-Cost Determination and EPA Responses

Many commenters agreed with the Administrator's determination that the benefits of the rule justify its costs. Specifically, commenters asserted that the EPA's estimation of the net benefits of enacting the MCLs is reasonable, stating that ''even if the costs are very substantial, the benefits associated with the anticipated drinking water improvements justify such expenditures.'' Commenters also stated that it is likely that ''the analysis understates the benefits'' of the rule, particularly given the ''significant unquantified risk reduction benefits and co-benefits'' that are anticipated to result from the rule.

In response to these comments, the EPA agrees that its quantified benefits likely significantly understate the benefits of the rule due to the large share of nonquantifiable benefits that are expected to be realized as avoided adverse health effects, in addition to the benefits that the EPA has quantified. The EPA anticipates additional benefits associated with developmental, cardiovascular, liver, immune, endocrine, metabolic, reproductive, musculoskeletal, and carcinogenic effects beyond those benefits associated with decreased PFOA and PFOS that the EPA has quantified. In response to commenters urging the EPA to quantify additional health endpoints associated with PFAS exposure, the EPA has developed a quantitative sensitivity analysis of PFOS effects and liver cancer, further strengthening the justification for this determination. Due to occurrence, health effects, and/or economic data limitations, the EPA is unable to quantitatively assess additional benefits of the rule.

Conversely, several commenters stated that the EPA has failed to demonstrate that the benefits of the rule justify its costs. Specifically, commenters disagreed with this determination because the EPA's analysis ''significantly underestimates the costs of the proposed MCLs. . .and overestimates its benefits.'' Commenters asserted that the EPA needs to update its EA to more accurately reflect the true costs of compliance of the rule to make the determination that the rule's costs are justified by its benefits. A few commenters urged the EPA to consider whether the benefits of finalizing the rule at regulatory alternative MCLs (*e.g.,* 5.0 or 10.0 ng/L) would better justify the costs of the rule.

After considering public comments, the EPA has made a number of adjustments to the cost model and collectively these changes have increased the agency's estimated annualized costs. The EPA has used the best available peer reviewed science to inform the cost estimates, including treatment costs, of the final PFAS NPDWR. For more information on the EPA's responses to comments on the rule costs, see sections XII.A.2–XII.A.4 of this preamble. The EPA disagrees with commenters that the EPA has overstated the benefits. As discussed in section XII.A.1, the EPA has used the best available peer reviewed science to quantify the benefits of the rule. The EPA also disagrees with commenters that suggested the benefits ''better justify'' the costs of PFOA and PFOS standards at 5.0 or 10.0 ng/L. These commenters pointed to the quantified net benefits of the regulatory alternatives and noted that net benefits are positive at 3 and 7 percent discount rates for a standard of 10.0 ng/L for PFOA and PFOS. The commenters' sole reliance on the quantified costs and benefits of the rule to support their argument is incorrect, as SDWA requires the agency to consider both the quantifiable and nonquantifiable impacts of the rule in the determination. Under SDWA 1412(b)(4)(B), the EPA is required to set an MCL as close as feasible to the MCLG, taking costs into consideration. In other words, SDWA does not mandate that the EPA establish MCLs at levels where the quantified benefits exceed the quantified costs. This was many commenters' justification for the recommendation to promulgate a standard of 10.0 ppt each for PFOA and PFOS in lieu of the proposed rule, and the EPA therefore disagrees that quantified costs and benefits can or should be the sole determinant of an MCL value. The Administrator's assessment that the benefits of the proposed rule justified its costs was based on the totality of the evidence, specifically the quantified and nonquantifiable benefits, which are anticipated to be substantial, as well as the quantified and nonquantifiable costs. Other commenters incorrectly stated that SDWA requires the EPA to set an MCL at a level ''. . . that maximizes health risk reduction benefits at a cost that is justified by the benefits.'' This test is found in section 1412(b)(6)(A) of SDWA and applies only when the Administrator determines based on the HRRCA that the benefits of a proposed MCL developed in accordance with paragraph (4) would not justify the costs of complying with the level. In the case of the proposed PFAS NPDWR, the Administrator determined that the benefits justify the costs for MCLs set as close as feasible to the MCLGs. For more information on the EPA's response to comments on the regulatory alternative MCLs considered in this rule, see section V of this preamble.

c. Benefit-Cost Determination in the Final Rule Analysis

For the final rule, considering both quantifiable and nonquantifiable costs and benefits of the rule as discussed in the EA and EA Appendices, the EPA is reaffirming the Administrator's determination made at proposal that the quantified and nonquantifiable benefits of the MCLs justify their costs.

B. Affected Entities and Major Data Sources Used To Develop the Baseline Water System Characterization

The entities potentially affected by the final rule are primacy agencies and PWSs. PWSs subject to final rule requirements are either CWSs or NTNCWSs. These water systems can be publicly or privately owned. PWSs subject to the rule would be required to meet the MCL and comply with monitoring and reporting requirements. Primacy agencies would be required to adopt and enforce the drinking water standard as well as the monitoring and reporting requirements.

Both PWSs and primacy agencies are expected to incur costs, including administrative costs, monitoring, and reporting costs, and in some cases, anticipated costs to reduce PFAS levels in drinking water to meet the final rule using treatment or nontreatment options. Section D of this preamble summarizes the method the EPA used to estimate these costs.

The systems that reduce PFAS concentrations will reduce associated

health risks. The EPA developed methods to estimate the potential benefits of reduced PFAS exposure among the service populations of systems with PFAS levels exceeding the final drinking water standard. Section E summarizes the method used to estimate these benefits.

In its *Guidelines for Preparing Economic Analyses,* the EPA characterizes the ''baseline'' as a reference point that reflects the world without the final regulation (USEPA, 2016e). It is the starting point for estimating the potential benefits and costs of the final NPDWR. The EPA used a variety of data sources to develop the baseline drinking water system characterization for the regulatory analysis. Table 27 lists the major data sources and the baseline data derived from them. Additional detailed descriptions of these data sources and how they were used in the characterization of baseline conditions can be found in chapter 4 of USEPA (2024g).

Table 27: Data Sources Used to Develop Baseline Water System Characterization

Data Source	Baseline Data Derived from the Source
SDWIS Federal version fourth quarter 2021 Q4 "frozen" dataset [1]	*Water System Inventory:* PWS inventory, including system unique identifier, population served, number of service connections, source water type, and system type. *Population and Households Served:* PWS population served. *Treatment Plant Characterization:* Number of unique treatment plant facilities per system, which are used as a proxy for EP when UCMR 3 sampling site data are not available.
UCMR 3 (USEPA, 2017)	*Treatment Plant Characterization*: Number of unique EP sampling sites, which are used as a proxy for EP. *Treatment Plant Characterization:* PFAS concentration data collected as part of UCMR 3.
Independent state sampling programs	*Treatment Plant Characterization:* PFAS concentration data collected by states. These data supplemented the occurrence modeling for systems included in UCMR 3.
Six-Year Review 4 Information Collection Request (SYR4 ICR) Occurrence Dataset (2012-2019)	*Treatment Plant Characterization:* TOC.
Geometries and Characteristics of Public Water Systems (USEPA, 2000g)	*Treatment Plant Characterization:* Design and average daily flow per system.
2006 CWSS (USEPA, 2009c)	*Public Water System Labor Rates:* PWS labor rates.

Notes:

C. Overview of the Cost-Benefit Model

The EPA's existing SafeWater Cost Benefit Model (CBX) was designed to calculate the costs and benefits associated with setting a new or revised MCL. Since the final rule simultaneously regulates multiple PFAS contaminants, the EPA developed a new model version called the SafeWater Multi-Contaminant Benefit Cost Model (MCBC) to efficiently handle more than one contaminant. SafeWater MCBC allows for inputs that include differing mixtures of contaminants based on available occurrence data as well as multiple regulatory thresholds. The model structure allows for assignment of compliance technology or technologies that achieve all regulatory requirements and estimates costs and benefits associated with multiple PFAS contaminant reductions. SafeWater MCBC is designed to model co-occurrence, sampling, treatment, and administrative costs, and simultaneous contaminant reductions and resultant benefits. The modifications to the SafeWater model are consistent with the methodology that was developed in the single MCL SafeWater CBX Beta version that was peer reviewed. More detail on the modifications to the SafeWater model can be found in section 5.2 of the EPA's EA.

The costs incurred by a PWS depend on water system characteristics; SDWIS

Fed provides information on PWS characteristics that typically define PWS categories, or strata, for which the EPA developed cost estimates in rulemakings, including system type (CWS, NTNCWS), number of people served by the PWS, the PWS's primary raw water source (ground water or surface water), the PWS's ownership type (public or private), and the state in which the PWS is located.

Because the EPA does not have complete PWS-specific data across the approximately 49,000 CWSs and 17,000 NTNCWSs in SDWIS Fed for many of the baseline and compliance characteristics necessary to estimate costs and benefits, such as design and average daily flow rates, water quality characteristics, treatment in-place, and labor rates, the EPA adopted a ''model PWS'' approach. SafeWater MCBC creates model PWSs by combining the PWS-specific data available in SDWIS Fed with data on baseline and compliance characteristics available at the PWS category level. In some cases, the categorical data are simple point estimates. In this case, every model PWS in a category is assigned the same value. In other cases, where more robust data representing system variability are available, the category-level data include a distribution of potential values. In the case of distributional information, SafeWater MCBC assigns each model PWS a value sampled from the distribution. These distributions are assumed to be independent.

For a list of PWS characteristics that impact model PWS compliance costs, please see chapter 5 of USEPA (2024g). These data include inventory data specific to each system and categorical data for which randomly assigned values are based on distributions that vary by category (*e.g.,* ground water and surface water TOC distributions or compliance forecast distributions that vary by system size category).

Once model PWSs are created and assigned baseline and compliance characteristics, SafeWater MCBC estimates the quantified costs and benefits of compliance for each model PWS under the final rule. Because of this model PWS approach, SafeWater MCBC does not output any results at the PWS level. Instead, the outputs are cost and benefit estimates for 36 PWS categories, or strata. Each PWS category is defined by system type (CWS and NTNCWS), primary water source (ground or surface), and size category. Note the EPA does not report state-specific strata although state location is utilized in the SafeWater MCBC model (*e.g.,* current state-level regulatory limits on PFAS in drinking water). The detailed output across these strata can be found in the chapter 5 of USEPA (2024g).

For each PWS category, the model then calculates summary statistics that describe the costs and benefits associated with final rule compliance. These summary statistics include total quantified costs of the final rule, total quantified benefits of the final rule, the variability in PWS-level costs (*e.g.,* 5th and 95th percentile system costs), and the variability in household-level costs.

D. Method for Estimating Costs

This section summarizes the cost elements and estimates total cost of compliance for the PFAS NPDWR discounted at 2 percent. The EPA estimated the costs associated with monitoring, administrative requirements, and both treatment and nontreatment compliance actions associated with the final rule (USEPA, 2024g).

1. Public Water System (PWS) Costs

a. PWS Treatment and Nontreatment Compliance Costs

The EPA estimated costs associated with engineering, installing, operating, and maintaining PFAS removal treatment technologies, including treatment media replacement and spent media destruction or disposal, as well as nontreatment actions that some PWSs may take in lieu of treatment, such as constructing new wells in an uncontaminated aquifer or interconnecting with and purchasing water from a neighboring PWS. The EPA used SafeWater MCBC to apply costs for one of the treatment technologies or nontreatment alternatives at each EP in a PWS estimated to be out of compliance with the final rule. For each affected EP, SafeWater MCBC selected from among the compliance alternatives using a decision tree procedure, described in more detail in USEPA (2024j). Next, the model estimated the cost of the chosen compliance alternative using outputs from the EPA's WBS cost estimating models. The WBS models are spreadsheet-based engineering models for individual treatment technologies, linked to a central database of component unit costs.

Specifically, the EPA used cost equations generated from the following models (USEPA, 2024m):

- the GAC WBS model (USEPA, 2024p);
- the PFAS-selective IX WBS model (USEPA, 2024q); and
- the nontreatment WBS model (USEPA, 2024r).

The *Technologies and Costs* (T&C) document (USEPA, 2024m) provides a comprehensive discussion of each of the treatment technologies, their effectiveness, and the WBS cost models as well as the equations used to calculate treatment costs. In total, there are more than 2,600 individual cost equations across the categories of capital and operation and maintenance (O&M) cost, water source, component level, flow, bed life (for GAC and IX), residuals management scenarios (for GAC and IX), and design type (for GAC). These models are available on the EPA's website at *https://www.epa.gov/sdwa/drinking-water-treatment-technology-unit-cost-models* as well as in the docket for this rule.

b. Decision Tree for Technology Selection

For EP at which baseline PFAS concentrations exceed regulatory thresholds, SafeWater MCBC selects a treatment technology or nontreatment alternative using a two-step process that both:

- Determines whether to include or exclude each alternative from consideration given the EP's characteristics and the regulatory option selected, and
- Selects from among the alternatives that remain viable based on percentage distributions derived, in part, from data on recent PWS actions in response to PFAS contamination.

Inputs to SafeWater MCBC used in Step 1 include the following:

- Influent concentrations of individual PFAS contaminants in ng/L (ppt)
- EP design flow in MGD
- TOC influent to the new treatment process in mg/L.

The EPA relied on information from the national PFAS occurrence model to inform influent PFAS concentrations. The EPA relied on *Geometries and Characteristics of Public Water Supplies* (USEPA, 2000g) and SDWIS inventory information to derive EP design flow. SafeWater MCBC selects influent TOC using the distribution shown in Table 28.

Table 28: Frequency Distribution to Estimate Influent TOC in mg/L

Percentile	Surface Water	Ground Water
0.05	0.65	0.35
0.15	1.1	0.48
0.25	1.38	0.5
0.35	1.6	0.5
0.45	1.85	0.58
0.5	1.97	0.69
0.55	2.14	0.75
0.65	2.54	1
0.75	3.04	1.39
0.85	3.63	2.01
0.95	4.81	3.8

Source: The EPA's analysis of TOC concentrations in the SYR4 ICR database.

In Step 1, SafeWater MCBC uses these inputs to determine whether to include or exclude each treatment alternative from consideration in the compliance forecast. For the treatment technologies (GAC and IX), this determination is based on estimates of each technology's performance given available data about influent water quality and the regulatory option under consideration.

The EPA assumes a small number of PWSs may be able to take nontreatment actions in lieu of treatment. The viability of nontreatment actions is likely to depend on the quantity of water being replaced because the ability to purchase from another water system is limited by the seller water system's capacity and the ability to drill another well is limited by the ability to find an accessible, sufficiently large source. Therefore, SafeWater MCBC considers nontreatment only for EP with design flows less than or equal to 3.536 MGD. The EPA estimates approximately 2 percent of systems of this size will develop new wells and approximately 6–7 percent of systems will elect to interconnect with another system to achieve compliance.

In Step 2, SafeWater MCBC selects a compliance alternative for each EP from among the alternatives that remain in consideration after Step 1. Table 29 shows the initial compliance forecast that is the starting point for this step. The percentages in Table 29 consider data presented in the T&C document (USEPA, 2024m) on actions PWSs have taken in response to PFAS contamination.

To date, the majority of PWSs for which data are available have installed GAC (USEPA, 2024m). USEPA (2024m) includes data for 52 systems, 34 of which (65%) have installed GAC. The data in USEPA (2024m) also suggest that an increasing share of PWSs have selected IX in response to PFAS since the first full-scale system treated with PFAS-selective IX in 2017. Specifically, for systems installed prior to 2017, 78% used GAC. The EPA expects this trend to continue, so the initial percentages include adjustments to account for this expectation. In addition, the performance of GAC is affected by the presence of TOC, as further described in the cost chapter of the EA (USEPA, 2024g). Accordingly, the table includes adjusted distributions for systems with higher influent TOC. Finally, while central RO/NF remains a BAT for the final rule, the EPA does not anticipate water systems will select this technology to comply with the rule, largely due to the challenges presented by managing the treatment residuals from this process.

The list of compliance alternatives in Table 29 does not include POU devices for small systems. At this time, the EPA is not including POU devices in the national cost estimates because the final rule require treatment to concentrations below the current NSF/ANSI certification standard for POU devices. However, POU treatment is reasonably anticipated to become a compliance option for small systems in the future if independent third-party certification organizations, such as NSF or ANSI develop a new certification standard that mirrors the EPA's final regulatory standard. Therefore, the decision tree excludes POU devices from consideration.

Table 29: Initial Compliance Forecast

Compliance Alternative	Design flow less than 1 MGD		Design flow 1 to less than 10 MGD		Design flow greater than or equal to 10 MGD	
	TOC less than or equal to 1.5 mg/L	TOC greater than 1.5 mg/L	TOC less than or equal to 1.5 mg/L	TOC greater than 1.5 mg/L	TOC less than or equal to 1.5 mg/L	TOC greater than 1.5 mg/L
GAC	79%	62%	81%	52%	89%	52%
PFAS-selective IX	12%	29%	11%	40%	11%	48%
Central RO/NF	0%	0%	0%	0%	0%	0%
Interconnection	7%	7%	6%	6%	0%	0%
New Wells	2%	2%	2%	2%	0%	0%

Source: The EPA's analysis of TOC concentrations in the SYR4 ICR database.

If all the compliance alternatives remain in consideration after Step 1, the decision tree uses the forecast shown in Table 29 above. If Step 1 eliminated one or more of the alternatives, SafeWater MCBC proportionally redistributes the percentages among the remaining alternatives and uses the redistributed percentages.

The EPA's approach to estimating GAC and IX performance for the final rule and all alternatives considered is discussed in detail within the cost chapter of the EA (USEPA, 2024g).

c. Work Breakdown Structure Models

The WBS models are spreadsheet-based engineering models for individual treatment technologies, linked to a central database of component unit costs. The EPA developed the WBS model approach as part of an effort to address recommendations made by the Technology Design Panel (TDP), which convened by the EPA in 1997 to review the agency's methods for estimating drinking water compliance costs (USEPA, 1997). The TDP consisted of nationally recognized drinking water experts from the EPA, water treatment consulting companies, public as well as private water utilities along with suppliers, equipment vendors, and Federal along with state regulators in addition to cost estimating professionals.

In general, the WBS approach involves breaking a process down into discrete components for the purpose of estimating unit costs. The WBS models represent improvements over past cost estimating methods by increasing comprehensiveness, flexibility, and transparency. By adopting a WBS-based approach to identify the components that should be included in a cost analysis, the models produce a more comprehensive, flexible, and transparent assessment of the capital and operating requirements for a treatment system.

Each WBS model contains the work breakdown for a particular treatment process and preprogrammed engineering criteria and equations that estimate equipment requirements for user-specified design requirements (*e.g.,* system size and influent water quality). Each model also provides unit and total cost information by component (*e.g.,* individual items of capital equipment) and totals the individual component costs to obtain a direct capital cost. Additionally, the models estimate add-on costs (*e.g.,* permits and land acquisition), indirect capital costs, and annual O&M costs, thereby producing the EPA's best estimates of complete compliance costs.

Primary inputs common to all the WBS models include design flow and average daily flow in MGD. Each WBS model has default designs (input sets) that correspond to specified categories of flow, but the models can generate designs for many other combinations of flows. To estimate costs for PFAS compliance, the EPA fit cost curves to the WBS estimates across a range of flow rates, which is described in chapter 5 of the EA (USEPA, 2024g).

Another input common to all the WBS models is ''component level'' or ''cost level.'' This input drives the selection of materials for items of equipment that can be constructed of different materials. For example, a low-cost system might include fiberglass pressure vessels and polyvinyl chloride (PVC) piping. A high-cost system might include stainless steel pressure vessels and stainless-steel piping. The component level input also drives other model assumptions that can affect the total cost of the system, such as building quality and heating and cooling. The component level input has three possible values: low cost, mid cost, and high cost. The components used in each of the estimated component/cost levels provide the treatment efficacy needed to meet the regulatory requirements. Note that the level of component (*e.g.,* plastic versus resin or stainless-steel piping and vessels) may impact the capital replacement rate but does not interfere with treatment efficacy. The EPA estimates the three levels of cost because it has found that the choice of materials associated with the installation of new treatment equipment often varies across drinking water systems. These systems may, for example, choose to balance capital cost with staff familiarity with certain materials and existing treatment infrastructure. Given this experience, the EPA models the potential variability in treatment cost based on the three component/cost levels. To estimate costs for PFAS treatment, the EPA generated separate cost equations for each of the three component levels, thus creating a range of cost estimates for use in national compliance cost estimates.

The third input common to all the WBS models is system automation, which allows the design of treatment systems that are operated manually or with varying degrees of automation (*i.e.,* with control systems that reduce the need for operator intervention). Cost

equations for system automation are described in chapter 5 of the EA (USEPA, 2024g).

The WBS models generate cost estimates that include a consistent set of capital, add-on, indirect, and O&M costs. Table 30 identified these cost elements, which are common to all the WBS models and included in the cost estimates. As described and summarized in Tables 31–34 the WBS models also include technology-specific cost elements. The documentation for the WBS models provides more information on the methods and assumptions in the WBS models to estimate the costs for both the technology-specific and common cost elements (USEPA, 2024p; USEPA, 2024q; USEPA, 2024r). WBS model accuracy as well as limitations and uncertainty are described in chapter 5 of the EA (USEPA, 2024g).

BILLING CODE 6560–50–P

Table 30: Cost Elements Included in All WBS Models

Cost Category	Components Included
Direct Capital Costs	Technology-specific equipment (e.g., vessels, basins, pumps, treatment media, piping, valves) Instrumentation and system controls Buildings Residuals management equipment
Add-on Costs	Land Permits Pilot testing
Indirect Capital Costs	Mobilization and demobilization Architectural fees for treatment building Equipment delivery, installation, and contractor's overhead and profit Sitework Yard piping Geotechnical Standby power Electrical infrastructure Process engineering Contingency Miscellaneous allowance Legal, fiscal, and administrative Sales tax Financing during construction Construction management
O&M Costs: Technology-specific	Operator labor for technology-specific tasks (e.g., managing backwash and media replacement) Materials for O&M of technology-specific equipment Technology-specific chemical usage Replacement of technology-specific equipment that occurs on an annual basis (e.g., treatment media) Energy for operation of technology-specific equipment (e.g., mixers)
O&M Costs: Labor	Operator labor for O&M of process equipment Operator labor for building maintenance Managerial and clerical labor
O&M Costs: Materials	Materials for maintenance of booster or influent pumps Materials for building maintenance
O&M Costs: Energy	Energy for operation of booster or influent pumps Energy for lighting, ventilation, cooling, and heating
O&M Costs: Residuals	Residuals management operator labor, materials, and energy Residuals disposal and discharge costs

The GAC model can generate costs for two types of design:

- Pressure designs where the GAC bed is contained in stainless steel, carbon steel, or fiberglass pressure vessel.
- Gravity designs where the GAC bed is contained in open concrete basins.

Table 31 shows the technology-specific capital equipment and O&M requirements included in the GAC model. These items are in addition to the common WBS cost elements listed in the Table 30 above.

Table 31: Technology-Specific Cost Elements Included in the GAC Model

Cost Category	Major Components Included
Direct Capital Costs	Booster pumps for influent water Contactors (either pressure vessels or concrete basins) that contain the GAC bed Tanks and pumps for backwashing the contactors GAC transfer and storage equipment Spent GAC reactivation facilities (if on-site reactivation is selected) Associated piping, valves, and instrumentation
O&M Costs: Labor	Operator labor for contactor maintenance (for gravity GAC designs) Operator labor for managing backwash events Operator labor for backwash pump maintenance (if backwash occurs weekly or more frequently) Operator labor for GAC transfer and replacement
O&M Costs: Materials	Materials for contactor maintenance (accounts for vessel relining in pressure designs, because GAC can be corrosive, and for concrete and underdrain maintenance in gravity designs) Materials for backwash pump maintenance (if backwash occurs weekly or more frequently) Replacement virgin GAC (loss replacement only if reactivation is selected)
O&M Costs: Energy	Operating energy for backwash pumps
O&M Costs: Residuals	Discharge fees for spent backwash Fees for reactivating spent GAC (if off-site reactivation is selected) Labor, materials, energy, and natural gas for regeneration facility (if on-site reactivation is selected) Disposal of spent GAC (if disposal is selected)

BILLING CODE 6560–50–C

For small systems (less than 1 MGD) using pressure designs, the GAC model assumes the use of package treatment systems that are pre-assembled in a factory, mounted on a skid, and transported to the site. These assumptions are based on common vendor practice for these technologies, for example, see Khera et al. (2013) which says ''. . . small systems are often built as packaged, pre-engineered, or skid-mounted systems.'' The model estimates costs for package systems by costing all individual equipment line items (*e.g.,* vessels, interconnecting piping and valves, instrumentation, and system controls) in the same manner as custom-engineered systems. This approach is based on vendor practices of partially engineering these types of package plants for specific systems (*e.g.,* selecting vessel size to meet flow and treatment criteria). The model applies a variant set of design inputs and assumptions that are intended to simulate the use of a package plant and that reduce the size and cost of the treatment system. USEPA (2024p) provides complete details on the variant design assumptions used for package plants.

To generate the GAC cost equations, the EPA used the following key inputs in the GAC model:

- For pressure designs, two vessels in series with a minimum total empty bed contact time (EBCT) of 20 minutes;
- For gravity designs, contactors in parallel with a minimum total EBCT of 20 minutes; and
- Bed life varying over a range from 5,000 to 75,000 BV.

The EPA generated separate cost equations for two spent GAC management scenarios:

- Off-site reactivation under current RCRA non-hazardous waste regulations;
- Off-site disposal as a hazardous waste in a RCRA Subtitle C landfill and replacement with virgin GAC (*i.e.,* single use operation).

The T&C document (USEPA, 2024m) provides a comprehensive discussion of

these and other key inputs and assumptions.

Table 32 shows the technology-specific capital equipment and O&M requirements included in the PFAS selective IX model. These items are in addition to the common WBS cost elements listed in the Table 30 above.

Table 32: Technology-Specific Cost Elements Included in the PFAS-Selective IX Model

Cost Category	Major Components Included
Direct Capital Costs	Booster pumps for influent water Pre-treatment cartridge filters Pressure vessels that contain the resin bed Tanks and pumps for initial rinse and (optionally) backwash of the resin bed Tanks (with secondary containment), pumps and mixers for delivering sodium hydroxide for use in post-treatment corrosion control (optional) Associated piping, valves, and instrumentation
O&M Costs: Labor	Operator labor for pre-treatment filters Operator labor for managing backwash/rinse events Operator labor for backwash pump maintenance (only if backwash occurs weekly or more frequently) Operator labor for resin replacement
O&M Costs: Materials	Replacement cartridges for pre-treatment filters Materials for backwash pump maintenance (only if backwash occurs weekly or more frequently) Chemical usage (if post-treatment corrosion control is selected) Replacement virgin PFAS-selective resin
O&M Costs: Energy	Operating energy for backwash/rinse pumps
O&M Costs: Residuals	Disposal of spent cartridge filters Discharge fees for spent backwash/rinse Disposal of spent resin

For small systems (less than 1 MGD), the PFAS-selective IX model assumes the use of package treatment systems that are pre-assembled in a factory, mounted on a skid, and transported to the site. The IX model estimates costs for package systems using an approach similar to that described for the GAC model, applying a variant set of inputs and assumptions that reduce the size and cost of the treatment system. USEPA (2024q) provides complete details on the variant design assumptions used for IX package plants.

To generate the IX cost equations, the EPA used the following key inputs in the PFAS-selective IX model:

- Two vessels in series with a minimum total EBCT of 6 minutes
- Bed life varying over a range from 20,000 to 260,000 BV

The EPA generated separate cost equations for two spent resin management scenarios:

- Spent resin managed as non-hazardous and sent off-site for incineration.
- Spent resin managed as hazardous and sent off-site for incineration.

The T&C document (USEPA, 2024m) provides a comprehensive discussion of these and other key inputs and assumptions.

USEPA (2024r) provides a complete description of the engineering design process used by the WBS model for nontreatment actions. The model can estimate costs for two nontreatment alternatives: interconnection with another system and drilling new wells to replace a contaminated source. Table 33 shows the technology-specific capital equipment and O&M requirements included in the model for each alternative.

Table 33: Technology-Specific Cost Elements Included in the Nontreatment Model

Cost Category	Major Components Included for Interconnection	Major Components Included for New Wells
Direct Capital Costs	Booster pumps or pressure reducing valves (depending on pressure at supply source) Concrete vaults (buried) for booster pumps or pressure reducing valves Interconnecting piping (buried) and valves	Well casing, screens, and plugs Well installation costs including drilling, development, gravel pack, and surface seals Well pumps Piping (buried) and valves to connect the new well to the system
O&M Costs: Labor	Operator labor for O&M of booster pumps or pressure reducing valves (depending on pressure at supply source) and interconnecting valves	Operator labor for operating and maintaining well pumps and valves
O&M Costs: Materials	Cost of purchased water Materials for maintaining booster pumps (if required by pressure at supply source)	Materials for maintaining well pumps
O&M Costs: Energy	Energy for operating booster pumps (if required by pressure at supply source)	Energy for operating well pumps

To generate the cost equations, the EPA used the following key inputs in the nontreatment model for interconnection:

- An interconnection distance of 10,000 feet
- Includes booster pumps designed to account for friction loss in interconnecting piping
- An average cost of purchased water of $3.35 per thousand gallons in 2022 dollars.

For new wells, the EPA used the following key inputs:

- A maximum well capacity of 500 gallons per minute (GPM), such that one new well is installed per 500 GPM of water production capacity required
- A well depth of 250 feet
- 500 feet of distance between the new wells and the distribution system.

The T&C document (USEPA, 2024m) provides a comprehensive discussion of these and other key inputs and assumptions.

d. Incremental Treatment Costs

The EPA has estimated the national level costs of the final rule associated with PFOA, PFOS, and PFHxS. As discussed in chapter 4 of the EA and detailed in the Technical Support Document for PFAS Occurrence and Contaminant Background chapter 10.1 and 10.3, there are limitations with nationally representative occurrence information for the other contaminants in the final rule (PFNA, HFPO–DA and PFBS). Specifically, HFPO–DA does not currently have a completed nationally representative dataset while PFNA and PFBS were not included in the national occurrence model because of limited results reported above the minimum reporting levels in UCMR 3. As described in the Technical Support Document for PFAS Occurrence and Contaminant Background chapter 10.3.2, non-targeted state monitoring datasets were used for extrapolation of PFNA, HFPO–DA, and PFBS in lieu of a nationally representative dataset. The EPA used conservative assumptions in this extrapolation to generate conservative cost estimates. As demonstrated in this analysis, the Hazard Index, PFNA, and HFPO–DA MCLs meaningfully increase public health protection at modest additional costs. Because of the increased uncertainty associated with PFNA, HFPO–DA and PFBS, the additional treatment cost from co-occurrence of PFNA, HFPO–DA, PFBS at systems already required to treat because of PFOA, PFOS, or PFHxS MCL and Hazard Index exceedances are not quantitatively assessed in the national cost estimates. These three PFAS' treatment costs are summarized here in this section and detailed in appendix N.3 of the EA (USEPA, 2024e). Likewise, treatment costs for systems that exceed the Hazard Index based on the combined occurrence of PFNA, HFPO–DA, PFBS, and PFHxS (where PFHxS itself does not exceed its HBWC of 10 ng/L) are not included in the national monetized cost estimates and are also summarized in this section and detailed in appendix N.3 of the EA (USEPA, 2024e).

In the EA for the proposed PFAS NPDWR, the EPA used a model system approach to illustrate the potential incremental costs for removing PFAS not included in the national economic model. After considering public comments on the incremental cost analysis, the EPA decided to further explore the incremental costs associated with the Hazard Index and MCLs with a national level sensitivity analysis for the final rule.

When the modeled occurrence data for PFNA, HFPO–DA, PFBS is incorporated into the SafeWater MCBC model, the estimated number of EP

exceeding one or more MCLs, and therefore required to treat or use a different water source, increases to 9,471 from 9,043. This results in an increase in the expected national costs. Under the primary analyses, the expected total national cost is $1,549 million over the EPA's period of analysis (2024–2105) for the PFOA, PFOS, and PFHxS MCLs. When considering the additional incremental national cost impacts of the Hazard Index MCL for, PFNA, HFPO–DA, and PFBS (and individual MCLs for PFNA and HFPO–DA) the expected national costs of the final rule increase to $1,631 million at, or approximately a 5 percent national cost increase.

For further detail on the assumptions and findings of the EPA's analysis of incremental costs of other PFAS, see appendix N.3 and section XII.A of this preamble.

e. PWS Implementation Administration Costs

The EPA estimated PWS costs associated with one-time actions to begin implementation of the rule including reading and understanding the rule and attending training provided by primacy agencies. The average unit costs for PWSs are based on the following burden assumptions: (1) The EPA anticipates that the majority of water systems will likely not read the entirety of the rule preamble (as they are not required to do so) but focus their time and attention on understanding the regulatory requirements through the CFR regulatory text, relevant portions of the preamble, the EPA provided fact sheets and small system guidance documents, and state provided summaries documents; (2) Additionally, the EPA anticipates that system staff will attend primacy agency PFAS rule trainings to reenforce the systems' understanding of the final rule. The EPA assumes that systems will conduct these activities during years one through three of the analysis period. Table 34 lists the data elements and corresponding values associated with calculating the costs of these one-time implementation administration actions.

Table 34: Implementation Administration Startup Costs ($2022)

Data element description	Data element value
The labor rate per hour for systems	$36.43 (systems ≤3,300) $38.84 (systems 3,301-10,000) $41.00 (systems 10,001-50,000) $42.81 (systems 50,001-100,000) $50.03 (systems >100,000)
The average hours per system to read and adopt the rule	4 hours per system
The average hours per system to attend one-time training provided by primacy agencies	16 hours per system (systems ≤3,300) 32 hours per system (systems >3,300)

Estimated national annualized PWS implementation and administration startup costs for the final rule are $1.33 million. National annualized PWS cost estimates are further summarized in Table 39.

f. PWS Monitoring Costs

The final rule requires initial and long-term monitoring. As Table 35 shows, surface and ground water systems serving greater than 10,000 people will collect one sample each quarter, at each EP, during the initial 12-month monitoring period. Surface water systems serving 10,000 or fewer people are also required to collect a quarterly sample at each EP during the initial 12-month period. Ground water systems that serve 10,000 or fewer people will be required to sample once at each EP on a semi-annual basis for the first 12-month monitoring period.

Long-term monitoring schedules are based on specific EP sampling results (*i.e.,* water systems can have different EP within the system on different monitoring schedules). Long-term monitoring requirements differ based on whether a system can demonstrate during the initial monitoring period or once conducting long-term monitoring that an EP is below the trigger levels for regulated PFAS. The trigger levels are set as one-half the MCLs: 2.0 ng/L for PFOA and PFOS, 5 ng/L each for PFHxS, PFNA, and HFPO–DA, and 0.5 for the Hazard Index. EP below the trigger level values during the initial 12-month monitoring period and in future long-term monitoring periods may conduct triennial monitoring and collect one triennial sample at that EP. For EP with concentration values at or above a trigger level, a quarterly sample must be taken at that EP following initial monitoring. EP that demonstrate they are ''reliably and consistently'' [21] below the MCLs following four consecutive quarterly samples are eligible to conduct annual monitoring. After three annual samples at that EP showing no results at or above a trigger level, the location can further reduce to triennial monitoring.

For any samples that are above detection, the system will analyze the FRB samples collected at the same time as the monitoring sample. Systems that have an MCL exceedance will collect one additional sample from the relevant EP to confirm the results.

[21] The definition of reliably and consistently below the MCL means that each of the samples contains regulated PFAS concentrations below the applicable MCLs. For the PFAS NPDWR, this demonstration of reliably and consistently below the MCL would include consideration of at least four quarterly samples at an EP below the MCL, but states will make their own determination as to whether the detected concentrations are reliably and consistently below the MCL.

Table 35: Modeled Initial and Long-Term Sampling Frequencies Per System EP

Initial Monitoring Period		Long-Term Monitoring[1]		
System Size Category	**Sample Number and Frequency**	**PFAS Detection ≥ MCLs**	**PFAS Detection ≥ trigger levels and < MCLs[2]**	**PFAS Detection < trigger levels**
≤ 10,000	Surface Water: 1 sample every quarter	1 sample every quarter	1 sample every year (following four consecutive quarterly samples reliably and consistently below the MCL)	1 triennial sample
	Ground Water: 1 sample every 6-month period			
>10,000	Surface Water and Ground Water: 1 sample every quarter	1 sample every quarter	1 sample every year (following four consecutive quarterly samples reliably and consistently below the MCL)	1 triennial sample

Notes:

[1] The EPA used the following thresholds to distinguish whether PFAS concentrations are reliably and consistently below the MCL: If after four consecutive quarterly samples, a system is below the MCLs (PFOA and PFOS – 4.0 ng/L, PFHxS, PFNA, HFPO-DA – 10 ng/L, Hazard Index – 1).

[2] Systems are not eligible for annual monitoring until after four consecutive quarterly samples are collected following initial monitoring.

For the national cost analysis, the EPA assumes that systems with either UCMR 5 data or monitoring data in the State PFAS Database (see section 3.1.4 in USEPA, 2024g) will not conduct the initial year of monitoring as allowed by the final rule. As a simplifying assumption for the cost analysis, the EPA assumes all systems serving a population of greater than 3,300 have UCMR 5 data and those with 3,300 or less do not. For the State PFAS Database, the EPA relied on the PWSIDs stored in the database and exempted those systems from the first year of monitoring in the cost analysis. Note these simplifying assumptions may result in a small underestimate of initial monitoring costs. Under UCMR 5, individual water systems would be able to request the full release of data from the labs for use in determining their compliance monitoring frequency. PWSs may be able to use these lab analyses to demonstrate a ''below trigger level'' concentration using the UCMR 5 analyses by following up with the lab for a more detailed results report.

The EPA used system-level distributions of PFOA, PFOS, and PFHxS, as described in Cadwallader et al. (2022), to simulate EP concentrations and estimate PFAS occurrence relative to the final rule MCLs and trigger levels. Based on these occurrence distributions, the EPA estimates that the large majority of water systems subject to the rule (approx. 52,000–57,000) will have EP with concentrations below the trigger levels and would conduct reduced monitoring on a triennial basis. The EPA estimates that the remainder of water systems subject to the rule (approx. 9,000–15,000) will have at least one or more EP exceed the trigger level and therefore would be required to conduct quarterly monitoring.

The EPA assumes that systems with an MCL exceedance will implement actions to comply with the MCL by the compliance date. The EPA assumes a treatment target,[22] for systems required to treat for PFAS, that includes a margin of safety so finished water PFAS levels at these systems are 80 percent of the MCLs. In the final rule, in order to reduce burden associated with monitoring, the EPA is adding an annual tier of sampling for any system with concentrations ''reliably and consistently'' [23] below the MCL but not consistently below the trigger level. The EPA believes this tier would likely

[22] A treatment target is a contaminant concentration that a PWS has designed and operated their water system to meet. The EPA assumes all PWS will target 80% of the MCLs.

[23] The definition of reliably and consistently below the MCL means that each of the samples contains regulated PFAS concentrations below the applicable MCLs. For the PFAS NPDWR, this demonstration of reliably and consistently below the MCL would include consideration of at least four quarterly samples at an EP below the MCL, but states will make their own determination as to whether the detected concentrations are reliably and consistently below the MCL.

apply to most systems treating their water for regulated PFAS, at least for the first three years of treatment. Therefore, in the model, the EPA assumes EP that have installed treatment will take one year of quarterly samples, then continue to sample on an annual basis after that. The final rule allows EP showing no results at or above a trigger level after three annual samples to further reduce to triennial monitoring. In the national cost analysis, the EPA does not model this possibility nor does the EPA model instances where water systems are triggered back into quarterly monitoring after installing treatment.

For all systems, the activities associated with the sample collection in the initial 12-month monitoring period are the labor burden and cost for the sample collection and analysis, as well as a review of the sample results. Table 36 presents the data elements and corresponding values associated with calculating sampling costs during the implementation monitoring period.

BILLING CODE 6560–50–P

Table 36: Sampling Costs ($2022)

Data Element Description	Data Element Value
The labor rate per hour for systems	$36.43 (systems ≤3,300) $38.84 (systems 3,301-10,000) $41.00 (systems 10,001-50,000) $42.81 (systems 50,001-100,000) $50.03 (systems >100,000)
The number of samples per EP per monitoring round for the initial monitoring in Year 1	2 samples (Ground Water systems ≤10,000) 4 samples (all systems) [1]
The number of samples per EP per long-term monitoring year for EPs that equal or exceed the MCLs	4 samples per year
The number of samples per EP per long-term monitoring year for EP < the MCLs and ≥ the trigger levels[2]	1 sample per year, following 4 quarterly samples reliably and consistently below the MCLs
The number of samples per EP per long-term monitoring round for EP < the trigger levels	1 sample every three years
The hours per sample to travel to sampling locations, collect samples, record any additional information, submit samples to a laboratory, and review results	1 hour
The laboratory analysis cost per sample for EPA Method 537.1	$309
The laboratory analysis cost per sample for the FRB under EPA Method 537.1	$273 [3]

Notes:

[1] Systems greater than 3,300 will rely on UCMR 5 data and a subset of other systems will rely on data in the State PFAS Monitoring Database discussed in USEPA, 2024g.

[2] The EPA used the following thresholds to distinguish whether PFAS concentrations are reliably and consistently below the MCL: If after four consecutive quarterly samples, a system is below the MCLs (PFOA and PFOS – 4.0 ng/L, PFHxS, PFNA, HFPO-DA – 10 ng/L, Hazard Index – 1).

[3] This incremental sample cost applies to all samples that exceed MDLs. The EPA used the Method 537.1 detection limits to apply this cost because Method 533 does not include detection limits.

BILLING CODE 6560–50–C

Estimated national annualized PWS sampling costs for the final rule have an expected value of $36.23 million. National annualized PWS cost estimates are further summarized in Table 39.

g. Treatment Administration Costs

Any system with an MCL exceedance adopts either a treatment or nontreatment alternative to comply with the rule. The majority of systems are anticipated to install treatment technologies while a subset of systems will choose alternative methods. The EPA assumes that systems will bear administrative costs associated with these treatment or nontreatment compliance actions (*i.e.,* permitting costs). The EPA assumes that systems will install treatment in the fifth year of the period of analysis. In addition, after installation of treatment, the EPA assumes that systems will spend an additional 2 hours per treating EP compiling data for and reviewing treatment efficacy with their primacy agency during their triennial sanitary survey. Table 37 presents the data elements and corresponding values associated with calculating treatment administration costs.

Table 37: Treatment Administration Costs ($2022)

Data element description	Data element value
The labor rate per hour for systems	$36.43 (systems ≤3,300) $38.84 (systems 3,301-10,000) $41.00 (systems 10,001-50,000) $42.82 (systems 50,001-100,000) $50.03 (systems >100,000)
The hours per EP for a system to notify, consult, and submit a permit request for treatment installation [a]	3 hours (systems ≤100) 5 hours (systems 101-500) 7 hours (systems 501-1,000) 12 hours (systems 1,001-3,300) 22 hours (systems 3,301-50,000) 42 hours (systems >50,000)
The additional hours per EP the system will spend every 3 years during a sanitary survey after PFAS related treatment is installed	2 hours, at EP that have installed treatment
The hours per EP for a system to notify, consult, and submit a permit request for source water change or alternative method[1]	6 hours

Notes:

[1] The EPA applied the cost per EP for this EA because the notification, consultation, and permitting process occurs for individual EP.

h. Public Notification (PN) Costs

The EPA's cost analysis assumes full compliance with the rule throughout the period of analysis and, as a result, the EPA does not estimate costs for the PN requirements in the final rule for systems with certain violations. The final rule designates MCL violations for PFAS as Tier 2, which requires systems to provide PN as soon as practical, but no later than 30 days after the system learns of the violation. The system must repeat notice every three months if the violation or situation persists unless the primacy agency determines otherwise. At a minimum, systems must give repeat notice at least once per year. The final rule also designates monitoring and testing procedure violations as Tier 3, which requires systems to provide public notice no later than one year after the system learns of the violation. The system must repeat the notice annually for as long as the violation persists. CWSs may deliver Tier 3 PNs in their CCR if the timing, content, and delivery requirements are met according to 40 CFR 141.204(d). Using the CCR to deliver Tier 3 PNs can minimize the burden on systems by reducing delivery costs. For approximate estimates of the potential burden associated with Tier 2 and 3 PNs, please see USEPA (2024g).

i. Primacy Agency Costs

The EPA assumes that primacy agencies will have upfront implementation costs as well as costs associated with system actions related to sampling and treatment. The activities that primacy agencies are expected to carry out under the final rule include:

- Reading and understanding the rule, providing internal primacy agency officials training for the rule implementation, updating sanitary survey standard operating procedures,
- Primacy package application, including making regulatory changes to the Federal rule where applicable,
- Providing systems with training and technical assistance during the rule implementation,
- Reporting to the EPA on an ongoing basis any PFAS-specific information under 40 CFR 142.15 regarding violations as well as enforcement actions and general operations of PWS programs,
- Performing inspection of PFAS related treatment during sanitary surveys every three years

- Reviewing the sample results during the implementation monitoring period and the SMF period, and
- Reviewing and consulting with systems on the installation of treatment technology or alternative methods, including source water change.

For the last three activities listed above, the primary agency burdens are incurred in response to action taken by PWSs; for instance, the cost to primacy agencies of reviewing sample results depends on the number of samples taken at each EP by each system under an agency's jurisdiction. Table 38 presents the data elements and corresponding values associated with calculating primacy agency costs.

BILLING CODE 6560–50–P

Table 38: Primacy Agency Costs ($2022)

Data element description	Data element value
The labor rate per hour for primacy agencies[1]	$59.69
The average hours per primacy agency to read and understand the rule, update sanitary survey standard operating procedures, and train internal staff.	4,020 hours per primacy agency
The average hours for a primacy agency to develop and adopt state-level regulations	300 hours per primacy agency
The average hours per primacy agency to provide initial training and technical assistance to systems	1,500 hours per primacy agency
The average hours per primacy agency to report annually to the EPA information under 40 CFR 142.15 regarding violations, variances and exemptions, enforcement actions and general operations of state PWS programs[2]	0
The hours per sample for a primacy agency to review sample results	1 hour
The hours per EP for a primacy agency to review and consult on installation of a treatment technology	80 hours (systems serving ≤3,300) 70 hours (systems serving 3,301 to 50,000) 50 hours (systems serving >50,000)
The additional hours per EP the primacy agency will spend every 3 years after PFAS-related treatment is installed during a sanitary survey	2 hours per EP that installs treatment every 3 years post installation
The hours per EP for a primacy agency to review and consult on a source water change	4 hours

Notes:

[1] In USBLS (2022), state employee wage rate of $33.91 from National Occupational Employment and Wage Estimates, United States, BLS SOC Code 19-2041, "State Government, excluding schools and hospitals - Environmental Scientists and Specialists, Including Health," hourly mean wage rate. May 2020 data (published in March 2021): https://www.bls.gov/oes/current/oes192041.htm. Wages are loaded using a factor of 62.2 from the Bureau of Labor Statistics (BLS) Employer Costs for Employee Compensation report, Table 3, March 2020. Percent of total compensation - Wages and Salaries - All Workers - State and Local Government Workers (https://www.bls.gov/news.release/archives/ecec_06182020.pdf). See worksheet BLS Table 3. The final loaded wage is adjusted for inflation.

[2] The EPA assumes that the final PFAS rule will have no discernable incremental burden for quarterly or annual reports to SDWIS Fed.

Estimated national annualized primacy agency costs for the final rule have an expected value of $4.65 million. National annualized cost estimates are further summarized in Table 39.

In addition to the costs described above, a primacy agency may also have to review the certification of any Tier 2 or 3 PNs sent out by systems. The EPA assumes full compliance with the final rule and therefore does not include this cost in national estimated cost totals but provides a brief discussion of the possible primacy agency burden associated with this component in USEPA (2024g).

In Table 39, the EPA summarizes the total annualized quantified cost of the final rule at a 2 percent discount rate expressed in millions of 2022 dollars. The first three rows show the annualized PWS sampling costs, the annualized PWS implementation and administrative costs, and the annualized PWS treatment costs. The fourth row shows the sum of the annualized PWS costs. The expected annualized PWS costs are $1,544 million. The uncertainty range for annualized PWS costs are $1,431 million to $1,667 million. Finally, annualized primacy agency implementation and administrative costs are added to the annualized PWS costs to calculate the total annualized cost of the final rule. The expected total annualized cost of the final rule is $1,549 million. The uncertainty range for the total annualized costs of the final rule is $1,436 million to $1,672 million. The EPA notes that treatment costs associated with the rule are the most significant contribution to overall rule costs for the final rule and the regulatory alternatives.

Table 39: National Annualized Costs, Final Rule (PFOA and PFOS MCLs of 4.0 ng/L each, PFHxS, PFNA, and HFPO-DA MCLs of 10 ng/L each, and Hazard Index of 1) (Million $2022)

	2% Discount Rate		
	5th Percentile[1]	Expected Value	95th Percentile[1]
Annualized PWS Sampling Costs	$33.63	$36.23	$39.03
Annualized PWS Implementation and Administration Costs	$1.33	$1.33	$1.33
Annualized PWS Treatment Costs	$1,395.23	$1,506.44	$1,627.65
Total Annualized PWS Costs[2,3,4]	$1,431.00	$1,544.00	$1,667.10
Primacy Agency Rule Implementation and Administration Cost	$4.35	$4.65	$4.97
Total Annualized Rule Costs[2,3,4]	$1,435.70	$1,548.64	$1,672.10

Notes:

Detail may not add exactly to total due to independent rounding. 5th and 95th percentile values for total rule costs are not additive across cost categories as the categories are not completely correlated.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 74. This range does not include the uncertainty described in Table 43.

[2] The national level cost estimates for PFHxS are reflective of both the total national cost for PFHxS individual MCL exceedances, and Hazard Index MCL exceedances where PFHxS is present above its HBWC while one or more other Hazard Index PFAS is also present in that same mixture. Total quantified national cost values do not include the incremental treatment costs associated with the co-occurrence of PFNA, HFPO-DA, and PFBS. The EPA has considered the additional national costs of the Hazard Index and individual MCLs associated with HFPO-DA, PFBS, and PFNA occurrence in a quantified sensitivity analysis; see appendix N.3 of the EA (USEPA, 2024e) for the analysis and more information.

[3] PFAS-contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes at this time and therefore total costs reported in this table do not include costs associated with hazardous waste disposal of spent filtration materials. To address stakeholder concerns about potential costs for disposing PFAS-contaminated wastes as hazardous should they be regulated as such in the future, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. See appendix N.2 of the EA (USEPA, 2024e) for additional detail.

[4] See Table 72 for a list of the nonquantifiable costs, and the potential direction of impact these costs would have on the estimated monetized total annualized costs in this table.

In Tables 40, 41, and 42, the EPA summarizes the total annualized quantified cost of options 1a, 1b, and 1c, respectively.

Table 40: National Annualized Costs, Option 1a (PFOA and PFOS MCLs of 4.0 ng/L; Million $2022)

	2% Discount Rate		
	5th Percentile[1]	**Expected Value**	**95th Percentile[1]**
Annualized PWS Sampling Costs	$33.37	$35.98	$38.77
Annualized PWS Implementation and Administration Costs	$1.33	$1.33	$1.33
Annualized PWS Treatment Costs	$1,383.33	$1,495.14	$1,616.15
Total Annualized PWS Costs[2,3]	$1,419.20	$1,532.44	$1,654.80
Primacy Agency Rule Implementation and Administration Cost	$4.34	$4.63	$4.95
Total Annualized Rule Costs[2,3]	$1,423.60	$1,537.07	$1,660.30

Notes:

Detail may not add exactly to total due to independent rounding. 5th and 95th percentile values for total rule costs are not additive across cost categories as the categories are not completely correlated.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 74. This range does not include the uncertainty described in Table 43.

[2] PFAS-contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes at this time and therefore total costs reported in this table do not include costs associated with hazardous waste disposal of spent filtration materials. To address stakeholder concerns about potential costs for disposing PFAS-contaminated wastes as hazardous should they be regulated as such in the future, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. See appendix N.2 of the EA (USEPA, 2024e) for additional detail.

[3] See Table 72 for a list of the nonquantifiable costs, and the potential direction of impact these costs would have on the estimated monetized total annualized costs in this table.

Table 41: National Annualized Costs, Option 1b (PFOA and PFOS MCLs of 5.0 ng/L; Million $2022)

	2% Discount Rate		
	5th Percentile[1]	**Expected Value**	**95th Percentile[1]**
Annualized PWS Sampling Costs	$31.07	$33.29	$35.71
Annualized PWS Implementation and Administration Costs	$1.33	$1.33	$1.33
Annualized PWS Treatment Costs	$1,065.30	$1,153.31	$1,250.22
Total Annualized PWS Costs[2,3]	$1,098.40	$1,187.92	$1,286.50
Primacy Agency Rule Implementation and Administration Cost	$3.98	$4.21	$4.47
Total Annualized Rule Costs[2,3]	$1,102.60	$1,192.13	$1,291.40

Notes:

Detail may not add exactly to total due to independent rounding. 5th and 95th percentile values for total rule costs are not additive across cost categories as the categories are not completely correlated.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 74. This range does not include the uncertainty described in Table 4f3.

[2] PFAS-contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes at this time and therefore total costs reported in this table do not include costs associated with hazardous waste disposal of spent filtration materials. To address stakeholder concerns about potential costs for disposing PFAS-contaminated wastes as hazardous should they be regulated as such in the future, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. See appendix N.2 of the EA (USEPA, 2024e) for additional detail.

[3] See Table 72 for a list of the nonquantifiable costs, and the potential direction of impact these costs would have on the estimated monetized total annualized costs in this table.

Table 42: National Annualized Costs, Option 1c (PFOA and PFOS MCLs of 10.0 ng/L; Million $2022)

	2% Discount Rate		
	5th Percentile[1]	**Expected Value**	**95th Percentile[1]**
Annualized PWS Sampling Costs	$26.11	$27.48	$28.97
Annualized PWS Implementation and Administration Costs	$1.33	$1.33	$1.33
Annualized PWS Treatment Costs	$431.37	$467.12	$507.50
Total Annualized PWS Costs[2,3]	$459.50	$495.93	$537.21
Primacy Agency Rule Implementation and Administration Cost	$3.27	$3.37	$3.48
Total Annualized Rule Costs[2,3]	$462.87	$499.29	$540.68

Notes:

Detail may not add exactly to total due to independent rounding. 5th and 95th percentile values for total rule costs are not additive across cost categories as the categories are not completely correlated.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 74. This range does not include the uncertainty described in Table 43.

[2] PFAS- contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes at this time and therefore total costs reported in this table do not include costs associated with hazardous waste disposal of spent filtration materials. To address stakeholder concerns about potential costs for disposing PFAS-contaminated wastes as hazardous should they be regulated as such in the future, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. See appendix N.2 of the EA (USEPA, 2024e) for additional detail.

[3] See Table 72 for a list of the nonquantifiable costs, and the potential direction of impact these costs would have on the estimated monetized total annualized costs in this table.

j. Data Limitations and Uncertainties in the Cost Analysis

Table 43 lists data limitations and characterizes the impact on the quantitative cost analysis. The EPA notes that in most cases it is not possible to judge the extent to which a particular limitation or uncertainty could affect the cost analysis. The EPA provides the potential direction of the impact on the cost estimates when possible but does not prioritize the entries with respect to the impact magnitude.

Table 43: Limitations that Apply to the Cost Analysis for the Final PFAS Rule

Uncertainty/ Assumption	Effect on Quantitative Analysis	Notes
WBS engineering cost model assumptions and component costs	Uncertain	The WBS engineering cost models require many design and operating assumptions to estimate treatment process equipment and operating needs. Chapter 5 of the EA (USEPA, 2024g) addressed the bed life assumption. The *Technologies and Costs* document (USEPA, 2024m) and individual WBS models in the rule docket provide additional information. The component-level costs approximate national average costs, which can over- or under-estimate costs at systems affected by the final rule.
Compliance forecast	Uncertain	The forecast probabilities are based on historical full-scale compliance actions. Site-specific water quality conditions, changes in technology, and changes in market conditions can result in future technology selections that differ from the compliance forecast.
TOC concentration	Uncertain	The randomly assigned values from the two national distributions are based on a limited dataset. Actual TOC concentrations at systems affected by the final rule can be higher or lower than the assigned values.
Insufficient UCMR 3 data for PFBS and PFNA and no UCMR 3 data for HFPO-DA were available to incorporate into the Bayesian hierarchical occurrence model	Underestimate	The final rule regulates PFNA, HFPO-DA, and PFBS in addition to the PFAS modeled in the primary analysis. In instances when concentrations of PFBS, PFNA, and/or HFPO-DA are high enough to cause or contribute to Hazard Index exceedances or PFNA and/or HFPO-DA are high enough to cause individual MCL exceedances, the modeled costs in the primary analysis may be underestimated. If these PFAS occur in isolation at levels that affect treatment decisions, or if they occur in sufficient concentration to result in an exceedance when the concentration of PFHxS alone would be below the HBWC, then costs would be underestimated. Note that the EPA has conducted a sensitivity analysis of and considered the potential changes in treatment cost associated with the occurrence of PFNA, HFPO-DA, and PFBS using which is discussed in detail in appendix N.3 of the EA (USEPA, 2024e).

Uncertainty/ Assumption	Effect on Quantitative Analysis	Notes
POU not included in compliance forecast	Overestimate	If POU devices can be certified to meet concentrations that satisfy the final rule, then small systems may be able to reduce costs by using a POU compliance option instead of centralized treatment or source water changes.
Process wastes not classified as hazardous	Underestimate	The national cost analysis reflects the assumption that PFAS-contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes. To address stakeholder concerns, including those raised during the SBREFA process, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. As part of this analysis, the EPA generated a second full set of unit cost curves that are identical to the curves used for the national cost analysis with the exception that spent GAC and spent IX resin are considered hazardous. If in the future PFAS-contaminated wastes require handling as hazardous wastes, the residuals management costs in the WBS treatment cost models are expected to be higher. See appendix N.2 of the EA (USEPA, 2024e) for a sensitivity analysis describing the potential increase in costs associated with hazardous waste disposal at 100 percent of systems treating for PFAS. The costs estimated in appendix N are consistent with the EPA OLEM's *Interim Guidance on the Destruction and Disposal of Perfluoroalkyl and Polyfluoroalkyl Substances and Materials Containing Perfluoroalkyl and Polyfluoroalkyl Substances* (USEPA, 2020d) and subsequent updates.
Population served held constant over time.	Uncertain	All PWS populations served were held constant over the period of analysis as not all locations have reliable information on population changes over time. If population served by affected PWSs increases (or decreases), then the estimated costs are likely underestimated (or overestimated).

BILLING CODE 6560–50–C

E. Nonquantifiable costs of the final rule

As described in section j. (*Data Limitations and Uncertainties in the Cost Analysis*) above, given the available occurrence data for the other compounds in the rule (PFNA, HFPO–DA, and PFBS) and the regulatory thresholds under consideration, the EPA considered national costs associated with potential Hazard Index exceedances as a direct result of these compounds in a sensitivity analysis; therefore, the additional treatment cost,

from co-occurrence of PFNA, HFPO–DA, PFBS, at systems already required to treat because of PFOA, PFOS, or PFHxS MCL and Hazard Index exceedances are not presented in the national cost estimates above. Nor are treatment costs for systems that exceed the Hazard Index based on the combined occurrence of PFHxS (where PFHxS itself does not exceed 10 ng/L), PFNA, HFPO–DA, and PFBS presented in the national monetized cost estimates above. Treatment costs for the individual PFNA and HFPO–DA MCLs are also not considered above. For further discussion of how the EPA considered the costs of the five individual MCLs and the HI MCL, see section XII.A.4 of this preamble. These potential additional costs are described in greater detail in section 5.3.1.4 of USEPA (2024g) and appendix N.3 of USEPA (2024e). When considering the national cost impacts of the Hazard Index MCL for PFNA, HFPO–DA, and PFBS (and individual MCLs for PFNA and HFPO–DA) the expected national costs increase from $1,549 million to $1,631 million, or approximately a 5 percent national cost increase.

PFAS-contaminated wastes are not considered RCRA regulatory or characteristic hazardous wastes at this time and therefore total costs reported in this table do not include costs associated with hazardous waste disposal of spent filtration materials. To address stakeholder concerns, including those raised during the Small Business Regulatory Enforcement Fairness Act (SBREFA) process, the EPA conducted a sensitivity analysis with an assumption of hazardous waste disposal for illustrative purposes only. As part of this analysis, the EPA generated a second full set of unit cost curves that are identical to the curves used for the national cost analysis with the exception that spent GAC and spent IX resin are considered hazardous. If in the future PFAS-contaminated wastes require handling as hazardous wastes, the residuals management costs are expected to be higher. See appendix N.2 of the EA for a sensitivity analysis describing the potential increase in costs associated with hazardous waste disposal (USEPA, 2024e).

F. Method for Estimating Benefits

The EPA's quantification of health benefits resulting from reduced PFAS exposure in drinking water was driven by PFAS occurrence estimates, PK model availability, information on exposure-response relationships, and economic data to monetize the impacts. In the EA, the EPA either quantitatively assesses or qualitatively discusses health endpoints associated with exposure to PFAS. The EPA assesses potential benefits quantitatively if there is evidence of an association between PFAS exposure and health effects, if it is possible to link the outcome to risk of a health effect, and if there is no overlap in effect with another quantified endpoint in the same outcome group. Particularly, the most consistent epidemiological associations with PFOA and PFOS include decreased immune system response, decreased birthweight, increased serum lipids, and increased serum liver enzymes (particularly alanine transaminase, ALT). The available evidence indicates effects across immune, developmental, cardiovascular, and hepatic organ systems at the same or approximately the same level of exposure.

Table 44 presents an overview of the categories of health benefits expected to result from the implementation of treatment that reduces PFAS levels in drinking water. Of the PFAS compounds included in the final rule, the EPA quantifies some of the adverse health effects associated with PFOA and PFOS. These compounds have likely evidence linking exposure to a particular health endpoint and have reliable PK models connecting the compound to PFAS blood serum. PK models are tools for quantifying the relationship between external measures of exposure and internal measures of dose. Benefits from avoided adverse health effects of PFHxS, PFNA, HFPO–DA, and PFBS are discussed qualitatively in this section.

As Table 44 demonstrates, only a subset of the potential health effects of reduced PFAS in drinking water can be quantified and monetized. The monetized benefits evaluated in the EA for the final rule include changes in human health risks associated with CVD and infant birth weight from reduced exposure to PFOA and PFOS in drinking water and RCC from reduced exposure to PFOA. The EPA also quantified benefits from reducing bladder cancer risk due to the co-removal of non-PFAS pollutants via the installation of drinking water treatment, discussed in greater detail in USEPA (2024g). The EPA quantified benefits associated with PFOS effects on liver cancer and PFNA effects on birth weight in sensitivity analyses.

The EPA was not able to quantify or monetize other benefits, including those related to other reported health effects including immune, liver, endocrine, metabolic, reproductive, musculoskeletal, or other cancers. The EPA discusses these benefits qualitatively in more detail in this section, as well as in section 6.2 of USEPA (2024g).

BILLING CODE 6560–50–P

Table 44: Overview of Health Benefits Categories Considered in the Analysis of Changes in PFAS Drinking Water Levels

Health Outcome		PFAS Compound[a,b,d]		Benefits Analysis	
Category	**Endpoint**	**PFOA**	**PFOS**	**Discussed Quantitatively**	**Discussed Qualitatively**
Lipids	Total cholesterol (TC)	X	X	X	
	High-density lipoprotein cholesterol (HDLC)	X[c]	X[c]	X	
	Low-density lipoprotein cholesterol (LDLC)	X	X		X
CVD	Blood pressure (BP)		X	X	
Developmental	Birth weight	X	X	X	
	Small for gestational age (SGA), non-birth weight developmental	X			X
Hepatic	Alanine transaminase (ALT)	X	X		X
Immune	Antibody response (tetanus, diphtheria)	X	X		X
Metabolic	Leptin	X			X
Musculoskeletal	Osteoarthritis, bone mineral density	X			X
Cancer	Renal Cell Carcinoma (RCC)	X		X	
	Liver		X	X[e]	
	Testicular	X			X

Notes:

[a]Fields marked with "X" indicate the PFAS compound for which there is evidence of an association with a given health outcome in humans.

[b]Outcomes with indicative evidence of an association between a PFAS compound and a health outcome are assessed quantitatively unless (1) there is an overlap within the same outcome group (e.g., LDLC overlaps with TC and SGA overlaps with low birth weight), or (2) it is not possible to link the outcome to the risk of the health effect (e.g., evidence is inconclusive regarding the relationship between PFOS exposure, leptin levels and associated health outcomes). Such health outcomes are discussed qualitatively.

[c]Although evidence of associations between HDLC and PFOA and PFOS was mixed, certain individual studies reported robust associations in general adult populations. Based on comments and recommendations from the EPA SAB, the EPA assessed HDLC in a sensitivity analysis.

[d]Note that only PFOA and PFOS effects were modeled in the assessment of benefits under the final rule. For another PFAS in the rule, PFNA, the best available finalized analysis is based on studies published before 2018 (ATSDR, 2021). The EPA notes that new evidence since the release of the current, best available peer reviewed scientific assessment for PFNA (ATSDR, 2021) provides further justification for the EPA's analysis of potential economic benefits of PFNA exposure reduction and avoided birth weight effects. More recent epidemiological studies that evaluated PFNA and birth weight, including key studies modeled for PFOA and PFOS (Sagiv et al., 2018; Wikström et al., 2020), as well as a recently published meta-analysis of mean birth weight that indicates the birth weight results for PFNA are robust and consistent, even if associations in some studies may be small in magnitude (Wright et al., 2023). PFNA was modeled in a sensitivity analyses of birth weight benefits. This modeling relied on epidemiological studies published before 2018, representing the current, best available peer reviewed scientific assessment for PFNA (ATSDR, 2021) and the PFAS serum calculator developed by Lu and Bartell (2020) was used to estimate PFNA blood serum levels resulting from PFNA exposures in drinking water.

[e]Liver cancer benefits are not included in the national-level quantified benefits analysis. See appendix O of the EA for the liver cancer benefit analysis results.

BILLING CODE 6560–50–C

The EPA developed PK models to evaluate blood serum PFAS levels in adults resulting from exposure to PFAS via drinking water. To date, the EPA has developed PK models for PFOA and PFOS. The EPA used baseline and regulatory alternative PFOA/PFOS drinking water concentrations as inputs to its PK model to estimate blood serum PFOA/PFOS concentrations for adult males and females. For further detail on the PK model and its application in the EPA's benefits analysis, please see the EPA's *Final Human Health Toxicity Assessments for PFOA and PFOS* (USEPA, 2024c; USEPA, 2024d) and section 6.3 of USEPA (2024g).

1. Quantified Developmental Effects

Exposure to PFOA and PFOS is linked to developmental effects, including decreased infant birth weight (Steenland et al., 2018; Dzierlenga et al., 2020; Verner et al., 2015; USEPA, 2016c; USEPA, 2016d; USEPA, 2024c; USEPA, 2024d; Negri et al., 2017; ATSDR, 2021; Waterfield et al., 2020). The route through which infants are exposed prenatally to PFOA and PFOS is through maternal blood via the placenta. Most studies of the association between maternal serum PFOA/PFOS and birth weight report inverse relationships (Verner et al., 2015; Negri et al., 2017; Steenland et al., 2018; Dzierlenga et al., 2020). The EPA's PK model assumes that mothers were exposed to PFOA/PFOS from birth to the year in which pregnancy occurred.

The EPA quantified and valued changes in birth weight-related risks associated with reductions in exposure to PFOA and PFOS in drinking water. EP-specific time series of the differences between serum PFOA/PFOS concentrations under baseline and regulatory alternatives are inputs into this analysis. For each EP, evaluation of the changes in birth weight impacts involves the following key steps:

1. Estimating the changes in birth weight based on modeled changes in serum PFOA/PFOS levels and exposure-response functions for the effect of serum PFOA/PFOS on birth weight;

2. Estimating the difference in infant mortality probability between the baseline and regulatory alternatives based on changes in birth weight under the regulatory alternatives and the association between birth weight and mortality;

3. Identifying the infant population affected by reduced exposure to PFOA/PFOS in drinking water under the regulatory alternatives;

4. Estimating the changes in the expected number of infant deaths under the regulatory alternatives based on the difference in infant mortality rates and

the population of surviving infants affected by increases in birth weight due to reduced PFOA/PFOS exposure; and

5. Estimating the economic value of reducing infant mortality based on the Value of a Statistical Life and infant morbidity based on reductions in medical costs associated with changes in birth weight for the surviving infants based on the cost of illness.

The EPA also considered the potential benefits from reduced exposure to PFNA that may be realized as a direct result of the final rule. The agency explored the birth weight impacts of PFNA in a sensitivity analysis based on epidemiological studies published before 2018 cited in the current, best available final human health analysis of PFNA (ATSDR, 2021), as well as a recently published meta-analysis of mean birth weight that indicates the birth weight results for PFNA are robust and consistent, even if associations in some studies may be small in magnitude (Wright et al., 2023). The EPA used a unit PFNA reduction scenario (*i.e.,* 1.0 ng/L change) and the PFAS serum calculator developed by Lu and Bartell (2020) to estimate PFNA blood serum levels resulting from PFNA exposures in drinking water. To estimate blood serum PFNA based on its drinking water concentration, the EPA used a first-order single-compartment model whose behavior was previously demonstrated to be consistent with PFOA pharmacokinetics in humans (Bartell et al., 2010). In addition to the PFOA-birth weight and PFOS-birth weight effects analyzed in the EA, the EPA examined the effect of inclusion of PFNA-birth weight effects using estimates from two studies (Lenters et al., 2016; Valvi et al., 2017). The EPA found that inclusion of a 1.0 ng/L PFNA reduction increased annualized birth weight benefits by between a factor of 5.6 to 7.8, relative to the scenario that quantifies a 1.0 ng/L reduction in PFOA and a 1.0 ng/L reduction in PFOS only. The range of estimated PFNA-related increases in benefits is driven by the exposure-response, with smaller estimates produced using the slope factors from Lenters et al. (2016), followed by Valvi et al. (2017). The EPA notes that the PFNA slope factor estimates are orders of magnitude larger than the slope factor estimates used to evaluate the impacts of PFOA/PFOS reductions. The EPA also notes that the PFNA slope factor estimates in this analysis are not precise, with 95 percent CIs covering wide ranges that include zero (*i.e.,* serum PFNA slope factor estimates are not statistically significant at 5 percent level). Caution should be exercised in making judgements about the potential magnitude of change in the national benefits estimates based on the results of these sensitivity analyses, although conclusions about the directionality of these effects can be inferred. The EPA did not include PFNA effects in the national benefits estimates for the final rule because there was insufficient data above the UCMR 3 MRL to reasonably fit model parameters for PFNA. For the EPA's PFNA sensitivity analysis, see appendix K of USEPA (2024g).

To estimate changes in birth weight resulting from reduced exposure to PFOA and PFOS under the regulatory alternatives, the EPA relied on the estimated time series of changes in serum PFOA/PFOS concentrations specific to women of childbearing age and serum-birth weight exposure-response functions provided in recently published meta-analyses. For more detail on the evaluation of the studies used in these meta-analyses, please see the EPA's *Final Human Health Toxicity Assessments for PFOA and PFOS* (USEPA, 2024c; USEPA, 2024d) and section 6.4 of USEPA (2024g).

Changes in serum PFOA and PFOS concentrations are calculated for each PWS EP during each year in the analysis period. The EPA assumes that, given the long half-lives of PFOS and PFOA (with median half-lives of 2.7 and 3.5 years, respectively (Li et al., 2018)), any one-time measurement during or near pregnancy is reflective of a critical exposure window and not subject to considerable error. In other words, blood serum concentrations in a single year are expected to correlate with past exposures and are reflective of maternal exposures regardless of the timing of pregnancy. The mean change in birth weight per increment in long-term PFOA and PFOS exposure is calculated by multiplying each annual change in PFOA and PFOS serum concentration (ng/mL serum) by the PFOA and PFOS serum-birth weight exposure-response slope factors (g birth weight per ng/mL serum) provided in Table 45, respectively. The mean annual change in birth weight attributable to changes in both PFOA and PFOS exposure is the sum of the annual PFOA and PFOS-birth weight change estimates. Additional detail on the derivation of the exposure-response functions can be found in appendix D in USEPA (2024e). appendix K in USEPA (2024e) presents an analysis of birth weight risk reduction considering slope factors specific to the first trimester.

Table 45: Serum Exposure-Birth Weight Response Estimates

Compound	g /ng/mL serum (95% CI)
PFOA [a]	-10.5 (-16.7, -4.4)
PFOS [b]	-3.0 (-4.9, -1.1)

Notes:

[a] The serum-birth weight slope factor for PFOA is based on the main random effects estimate from Steenland et al. (2018).

[b] The serum-birth weight slope factor for PFOS is based on the EPA reanalysis of Dzierlenga et al. (2020).

The EPA places a cap on estimated birth weight changes in excess of 200 g, assuming that such changes in birth weight are unreasonable based on existing studies that found that changes to environmental exposures result in relatively modest birth weight changes (Windham and Fenster, 2008; Klein and Lynch, 2018; Kamai et al., 2019). Modest changes in birth weight even as a result of large changes in PFOA/PFOS serum concentrations may be due to potential bias from studies only including live births (Liew et al., 2015). Additionally, the magnitude of birth

weight changes may be correlated with other developmental outcomes such as preterm birth, gestational duration, fetal loss, birth defects, and developmental delays.

Low birth weight is linked to a number of health effects that may be a source of economic burden to society in the form of medical costs, infant mortality, parental and caregiver costs, labor market productivity loss, and education costs (Chaikind and Corman, 1991; Behrman and Butler, 2007; Behrman and Rosenzweig, 2004; Joyce et al., 2012; Kowlessar et al., 2013; Colaizy et al., 2016; Nicoletti et al., 2018; Klein and Lynch, 2018). Recent literature also linked low birth weight to educational attainment and required remediation to improve student outcomes, childhood disability, and future earnings (Jelenkovic et al., 2018; Temple et al., 2010; Elder et al., 2020; Hines et al., 2020; Chatterji et al., 2014; Dobson et al., 2018).

The EPA's analysis focuses on two categories of birth weight impacts that are amenable to monetization associated with incremental changes in birth weight: (1) medical costs associated with changes in infant birth weight and (2) the value of avoiding infant mortality at various birth weights. The birth weight literature related to other sources of economic burden to society (*e.g.,* parental and caregiver costs and productivity losses) is limited in geographic coverage, population size, and range of birth weights evaluated and therefore cannot be used in the EA of birth weight effects from exposure to PFOA/PFOS in drinking water (ICF, 2021).

Two studies showed statistically significant relationships between incremental changes in birth weight and infant mortality: Almond et al. (2005) and Ma and Finch (2010). Ma and Finch (2010) used 2001 NCHS linked birth/infant death data for singleton and multiple birth infants among subpopulations defined by sex and race/ethnicity to estimate a regression model assessing the associations between 14 key birth outcome measures, including birth weight and infant mortality. They found notable variation in the relationship between birth weight and mortality across race/ethnicity subpopulations, with odds ratios for best-fit birth weight-mortality models ranging from 0.8–1 (per 100 g birth weight change). Almond et al. (2005) used 1989–1991 NCHS linked birth/infant death data for multiple birth infants to analyze relationships between birth weight and infant mortality within birth weight increment ranges. For their preferred model, they reported coefficients in deaths per 1,000 births per 1 g increase in birth weight that range from -0.420 to -0.002. However, the data used in these studies (Almond et al., 2005 and Ma and Finch, 2010) are outdated (1989–1991 and 2001, respectively). Given the significant decline in infant mortality over the last 30 years (ICF, 2020) and other maternal and birth characteristics that are likely to influence infant mortality (*e.g.,* average maternal age and rates of maternal smoking), the birth weight-mortality relationship estimates from Almond et al. (2005) and Ma and Finch (2010) are likely to overestimate the benefits of birth weight changes.

Considering the discernible changes in infant mortality over the last 30 years, the EPA developed a regression analysis to estimate the relationship between birth weight and infant mortality using the *Period/Cohort Linked Birth-Infant Death Data Files* published by NCHS from the 2017 period/2016 cohort and the 2018 period/2017 cohort (CDC, 2017; CDC, 2018). These data provide information on infants who are delivered alive and receive a birth certificate. The EPA selected variables of interest for the regression analysis, including maternal demographic and socioeconomic characteristics, maternal risk, and risk mitigation factors (*e.g.,* number of prenatal care visits, smoker status), and infant birth characteristics. The EPA included several variables used in Ma and Finch (2010) (maternal age, maternal education, marital status, and others) as well as additional variables to augment the set of covariates included in the analyses. In addition, the EPA developed separate models for different race/ethnicity categories (non-Hispanic Black, non-Hispanic White, and Hispanic) and interacted birth weight with categories of gestational age, similar to Ma and Finch (2010). Appendix E of USEPA (2024e) provides details on model development and regression results.

Table 46 presents the resulting odds ratios and marginal effects (in terms of deaths per 1,000 births for every 1 g increase in birth weight) estimated for changes in birth weight among different gestational age categories in the mortality regression models for non-Hispanic Black, non-Hispanic White, and Hispanic race/ethnicity subpopulations. Marginal effects for birth weight among gestational age categories vary across different race/ethnicity subpopulations. The marginal effects for birth weight among different gestational age categories are higher in the non-Hispanic Black model than in the non-Hispanic White and Hispanic models, particularly for extremely and very preterm infants, indicating that low birth weight increases the probability of mortality within the first year more so among non-Hispanic Black infants than among non-Hispanic White and Hispanic infants.

The EPA relies on odds ratios estimated using the birth weight-mortality regression model to assess mortality outcomes of reduced exposures to PFOA/PFOS in drinking water under the regulatory alternatives. To obtain odds ratios specific to each race/ethnicity and 100 g birth weight increment considered in the birth weight benefits model,[24] the EPA averaged the estimated odds ratios for 1 g increase in birth weight over the gestational age categories using the number of infants (both singleton and multiple birth) that fall into each gestational age category as weights. Separate gestational age category weights were computed for each 100 g birth weight increment and race/ethnicity subpopulation within the 2017 period/2016 cohort and 2018 period/2017 cohort *Linked Birth-Infant Death Data Files.* The weighted birth weight odds ratios are then used in conjunction with the estimated change in birth weight and baseline infant mortality rates to determine the probability of infant death under the regulatory alternatives, as described further in section 6.4 of USEPA (2024g).

BILLING CODE 6560–50–P

[24] The birth weight risk reduction model evaluates changes in birth weight in response to PFOA/PFOS drinking water level reductions for infants who fall into 100 g birth weight increments (*e.g.,* birth weight 0–99 g, 100–199 g, 200–299 g. . . 8,000–8,099 g, 8,100–8,165 g).

Table 46: Race/Ethnicity and Gestational Age-Specific Birth Weight Marginal Effects and Odds Ratios from the Mortality Regression Models [1]

Race	Gestational Age Category [2]	Marginal Effect per 1,000 births (95% CI)	Odds Ratio (95% CI)
Non-Hispanic Black	Extremely Preterm	-0.20400 (-0.21910, -0.18890)	0.99817 (0.99802, 0.99832)
	Very Preterm	-0.04580 (-0.04820, -0.04340)	0.99816 (0.99804, 0.99827)
	Moderately Preterm	-0.01030 (-0.01080, -0.009850)	0.99852 (0.99846, 0.99857)
	Term	-0.00453 (-0.00472, -0.00434)	0.99856 (0.99851, 0.9986)
Non-Hispanic White	Extremely Preterm	-0.12160 (-0.13080, -0.11240)	0.99866 (0.99855, 0.99878)
	Very Preterm	-0.03290 (-0.03430, -0.03140)	0.9985 (0.99842, 0.99858)
	Moderately Preterm	-0.00677 (-0.00702, -0.00652)	0.99867 (0.99863, 0.99872)
	Term	-0.00228 (-0.00236, -0.00221)	0.99865 (0.99861, 0.99868)
Hispanic	Extremely Preterm	-0.15260 (-0.16770, -0.13750)	0.99835 (0.99817, 0.99853)
	Very Preterm	-0.03290 (-0.03510, -0.03070)	0.99846 (0.99835, 0.99858)
	Moderately Preterm	-0.00626 (-0.00659, -0.00592)	0.99856 (0.99849, 0.99862)
	Term	-0.00219 (-0.00229, -0.00208)	0.99849 (0.99844, 0.99855)

Notes:

[1] Data based on the *2016/17 and 2017/18 CDC Period Cohort Linked Birth-Infant Death Data Files* obtained from NCHS/National Vital Statistics System (NVSS). Marginal effects and odds ratios are estimated using a regression model that also includes covariates representative of infant birth characteristics in addition to birth weight, maternal demographic characteristics, and maternal risk factors. All effects were statistically significant at the 5 percent level. Additional details are included in appendix E to the EA.

[2] Gestational age categories defined as extremely preterm (<=28 weeks), very preterm (>28 weeks and <=32 weeks), moderately preterm (>32 weeks and <=37 weeks), and term (>37 weeks).

The EPA weighted the race/ethnicity-specific odds ratios in Table 46 by the proportions of the infant populations who fell into each gestational age within a 100 g birth weight increment, based on the 2016/17 and 2017/18 period cohort data, to obtain a weighted odds ratio estimate for each modeled race/ethnicity subpopulation and 100 g birth weight increment.

Based on reduced serum PFOA/PFOS exposures under the regulatory alternatives and the estimated relationship between birth weight and infant mortality, the EPA estimates the subsequent change in birth weight for those infants affected by decreases in PFOA/PFOS and changes in the number of infant deaths. The EPA evaluated these changes at each PWS EP affected by the regulatory alternatives and the calculations are performed for each race/ethnicity group, 100 g birth weight category, and year of the analysis. Additional detail on the calculations the EPA used to estimate changes in birth

weight, the affected population size, and infant deaths avoided, and the number of surviving infants is provided in chapter 6 of USEPA (2024g).

The EPA used the Value of a Statistical Life to estimate the benefits of reducing infant mortality and the cost of illness to estimate the economic value of increasing birth weight in the population of surviving infants born to mothers exposed to PFOA and PFOS in drinking water. The EPA's approach to monetizing benefits associated with incremental increases in birth weight resulting from reductions in drinking water PFOA/PFOS levels relies on avoided medical costs associated with various ranges of birth weight. Although the economic burden of treating infants at various birth weights also includes non-medical costs, very few studies to date have quantified such costs (Klein and Lynch, 2018; ICF, 2021). The EPA selected the medical cost function from Klein and Lynch (2018) to monetize benefits associated with the estimated changes in infant birth weight resulting from reduced maternal exposure to PFOA/PFOS.[25]

Using the incremental cost changes from Klein and Lynch (2018), the EPA calculates the change in medical costs resulting from changes in birth weight among infants in the affected population who survived the first year following birth, provided in Table 47.

[25] The Klein and Lynch (2018) report was externally peer reviewed by three experts with qualifications in economics and public health sciences. The EPA's charge questions to the peer reviewers sought input on the methodology for developing medical cost estimates associated with changes in birth weight. The agency's charge questions, and peer reviewer responses are available in the docket.

Table 47: Simulated Cost Changes for Birth Weight Increases ($2022) (Based on Klein and Lynch, 2018 Table 8)

Birth Weight[a,b]	Simulated Cost Changes for Birth Weight Increases, Dollars per Gram ($2022)[c]		
	+0.04 lb (+18 g)	+0.11 lb (+50 g)	+0.22 lb (+100 g)
2 lb (907 g)	-$131.66	-$117.44	-$113.82
2.5 lb (1,134 g)	-$98.72	-$88.07	-$85.35
3 lb (1,361 g)	-$74.03	-$66.04	-$64.00
3.3 lb (1,497 g)	-$62.29	-$55.56	-$53.85
4 lb (1,814 g)	-$41.63	-$37.13	-$35.99
4.5 lb (2,041 g)	-$31.21	-$27.84	-$26.98
5 lb (2,268 g)	-$23.41	-$20.88	-$20.23
5.5 lb (2,495 g)	-$0.97	-$0.88	-$0.87
6 lb (2,722 g)	-$0.95	-$0.86	-$0.86
7 lb (3,175 g)	-$0.92	-$0.83	-$0.83
8 lb (3,629 g)	-$0.89	-$0.81	-$0.80
9 lb (4,082 g)	$3.28	$2.99	$3.01
10 lb (4,536 g)	$3.69	$3.37	$3.39

Notes:

[a]Values for birth weight have been converted from lb to g.

[b]Note that simulated medical costs increase, rather than decrease, in response to increased birth weight changes among high birth weight infants (those greater than 8 lb). Among high birth weight infants, there is a higher risk of birth trauma, metabolic issues, and other health problems (Klein and Lynch, 2018).

[c]Values scaled from $2010 to $2022 using the medical care Consumer Price Index (USBLS, 2022).

Tables 48 to 51 provide the health effects avoided and valuation associated with birth weight impacts. The EPA estimated that, over the evaluation period, the final rule will result in annualized benefits from avoided reductions in birth weight of $209 million.

Table 48: National Birth Weight Benefits, Final Rule (PFOA and PFOS MCLs of 4.0 ng/L each, PFHxS, PFNA, and HFPO-DA MCLs of 10 ng/L each, and Hazard Index of 1) (Million $2022)

Benefits Category	2% Discount Rate		
	5th Percentile[1]	Expected Benefits	95th Percentile[1]
Increase in Birth Weight (Millions of Grams)	129.6	216.8	304.1
Number of Birth Weight-Related Deaths Avoided	781.9	1,301.7	1,823.6
Total Annualized Birth Weight Benefits (Million $2022) [2]	$124.85	$209.00	$292.78

Notes:

Detail may not add exactly to total due to independent rounding. Quantifiable benefits are increased under final rule table results relative to the other options presented because of modeled PFHxS occurrence, which results in additional quantified benefits from co-removed PFOA and PFOS.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 75. This range does not include the uncertainty described in Table 62.

[2] See Table 72 for a list of the nonquantifiable benefits, and the potential direction of impact these benefits would have on the estimated monetized total annualized benefits in this table.

Table 49: National Birth Weight Benefits, Option 1a (PFOA and PFOS MCLs of 4.0 ng/L) (Million $2022)

Benefits Category	2% Discount Rate		
	5th Percentile[1]	Expected Benefits	95th Percentile[1]
Increase in Birth Weight (Millions of Grams)	128.8	215.6	302.1
Number of Birth Weight-Related Deaths Avoided	777.4	1,294.4	1,812.9
Total Annualized Birth Weight Benefits (Million $2022) [2]	$124.82	$207.82	$291.00

Notes:

Detail may not add exactly to total due to independent rounding.

BILLING CODE 6560–50–C

2. Quantified Cardiovascular Effects

CVD is one of the leading causes of premature mortality in the United States (D'Agostino et al., 2008; Goff et al., 2014; Lloyd-Jones et al., 2017). As discussed in the EPA's *Final Human Health Toxicity Assessments for PFOA and PFOS,* exposure to PFOA and PFOS through drinking water contributes to increased serum PFOA and PFOS concentrations and elevated levels of TC, as well as suggestive evidence of changes in levels of HDLC and elevated levels of systolic blood pressure (USEPA, 2024c; USEPA, 2024d). Changes in TC and blood pressure are associated with changes in incidence of CVD events such as myocardial infarction (*i.e.,* heart attack), ischemic stroke, and cardiovascular mortality occurring in populations without prior CVD event experience (D'Agostino et al., 2008; Goff et al., 2014; Lloyd-Jones et al., 2017).

The EPA recognizes that the epidemiologic literature that provides strong support for an effect of PFOA and PFOS on cholesterol and blood pressure does not provide direct support for an effect of PFOA and PFOS on the risk of CVD. Therefore, the EPA uses the approach outlined here to link changes in CVD risk biomarkers (*i.e.,* cholesterol and blood pressure) to changes in CVD risk.

For each EP, evaluation of the changes in CVD risk involves the following key steps:

1. Estimation of annual changes in TC and blood pressure levels using exposure-response functions for the potential effects of serum PFOA/PFOS on these biomarkers;

2. Estimation of the annual incidence of fatal and non-fatal first hard CVD events, defined as fatal and non-fatal myocardial infarction, fatal and non-fatal ischemic stroke or other coronary heart disease death occurring in populations without prior CVD event experience (D'Agostino et al., 2008; Goff et al., 2014; Lloyd-Jones et al., 2017), and post-acute CVD mortality corresponding to baseline and regulatory alternative TC and blood pressure levels in all populations alive during or born after the start of the evaluation period; and

3. Estimation of the economic value of reducing CVD mortality and morbidity from baseline to regulatory alternative levels, using the Value of a Statistical Life and cost of illness measures, respectively.

Given the breadth of evidence linking PFOA and PFOS exposure to effects on TC and blood pressure in general adult populations, the EPA quantified public health impacts of changes in these well-established CVD risk biomarkers (D'Agostino et al., 2008; Goff et al., 2014; Lloyd-Jones et al., 2017) by estimating changes in incidence of several CVD events. Specifically, the EPA assumed that PFOA/PFOS-related changes in TC and blood pressure had the same effect on the CVD risk as the changes unrelated to chemical exposure and used the Pooled Cohort ASCVD model (Goff et al., 2014) to evaluate their impacts on the incidence of myocardial infarction, ischemic stroke, and cardiovascular mortality occurring in populations without prior CVD event experience.

The ASCVD model includes TC as a predictor of first hard CVD events. The EPA did not identify any readily available relationships for PFOA or PFOS and TC that were specifically relevant to the age group of interest (40–89 years, the years for which the ASCVD model estimates the probability of a first hard CVD event). Therefore, the agency developed a meta-analysis of studies reporting associations between serum PFOA or PFOS and TC in general populations (*e.g.,* populations that are not a subset of workers or pregnant women). Statistical analyses that combine the results of multiple studies, such as meta-analyses, are widely applied to investigate the associations between contaminant levels and associated health effects. Such analyses are suitable for economic assessments because they can improve precision and statistical power (Engels et al., 2000; Deeks, 2002; Rücker et al., 2009).

The EPA identified 14 studies from which to derive slope estimates for PFOA and PFOS associations with serum TC levels. Appendix F of USEPA (2024e) provides further detail on the studies selection criteria, meta-data development, meta-analysis results, and discussion of the uncertainty and limitations inherent in the EPA's exposure-response analysis.

The EPA developed exposure-response relationships between serum PFOA/PFOS and TC for use in the CVD analysis using the meta-analyses restricted to studies of adults in the general population reporting similar models. When using studies reporting linear associations between TC and serum PFOA or PFOS, the EPA estimated a positive increase in TC of 1.57 (95 percent CI: 0.02, 3.13) mg/dL per ng/mL serum PFOA (p-value=0.048), and of 0.08 (95 percent CI: -0.01, 0.16) mg/dL per ng/mL serum PFOS (p-value=0.064). Based on the systematic review conducted by the EPA to develop the EPA's *Final Human Health Toxicity Assessments for PFOA and PFOS,* the available evidence supports a positive association between PFOS and TC in the general population. For more information on the systematic review and results, see USEPA (2024c) and USEPA (2024d).

PFOS exposure has been linked to other cardiovascular outcomes, such as systolic blood pressure and hypertension (Liao et al., 2020; USEPA, 2024d). Because systolic blood pressure is another predictor used by the ASCVD model, the EPA included the estimated changes in blood pressure from reduced exposure to PFOS in the CVD analysis. The EPA selected the slope from the Liao et al. (2020) study—a high confidence study conducted based on U.S. general population data from NHANES cycles 2003–2012. The evidence on the associations between PFOA and blood pressure is not as consistent as for PFOS. Therefore, the EPA is not including effect estimates for the serum PFOA-blood pressure associations in the CVD analysis.

The EPA relies on the life table-based approach to estimate CVD risk reductions because (1) changes in serum PFOA/PFOS in response to changes in drinking water PFOA/PFOS occur over multiple years, (2) CVD risk, relying on the ASCVD model, can be modeled only for those older than 40 years without prior CVD history, and (3) individuals who have experienced non-fatal CVD events have elevated mortality implications immediately and within at least five years of the first occurrence. Recurrent life table calculations are used to estimate a PWS EP-specific annual time series of CVD event incidence for a population cohort characterized by sex, race/ethnicity, birth year, age at the start of the PFOA/PFOS evaluation period (*i.e.,* 2024), and age- and sex-specific time series of changes in TC and blood pressure levels obtained by combining serum PFOA/PFOS concentration time series with exposure-response information. Baseline and regulatory alternatives are evaluated separately, with regulatory alternative TC and blood pressure levels estimated using baseline information on these biomarkers from external statistical data sources and modeled changes in TC and blood pressure due to conditions under the regulatory alternatives.

The EPA estimated the incidence of first hard CVD events based on TC serum and blood pressure levels using the ASCVD model (Goff et al., 2014), which predicts the 10-year probability of a hard CVD event to be experienced by a person without a prior CVD history. The EPA adjusted the modeled

population cohort to exclude individuals with pre-existing conditions, as the ASCVD risk model does not apply to these individuals. For blood pressure effects estimation, the EPA further restricts the modeled population to those not using antihypertensive medications for consistency with the exposure-response relationship. Modeled first hard CVD events include fatal and non-fatal myocardial infarction, fatal and non-fatal ischemic stroke, and other coronary heart disease mortality. The EPA has also estimated the incidence of post-acute CVD mortality among survivors of the first myocardial infarction or ischemic stroke within 6 years of the initial event.

The estimated CVD risk reduction resulting from reducing serum PFOA and serum PFOS concentrations is the difference in annual incidence of CVD events (*i.e.,* mortality and morbidity associated with first-time CVD events and post-acute CVD mortality) under the baseline and regulatory alternatives. Appendix G of USEPA (2024e) provides detailed information on all CVD model components, computations, and sources of data used in modeling.

The EPA uses the Value of a Statistical Life to estimate the benefits of reducing mortality associated with hard CVD events in the population exposed to PFOA and PFOS in drinking water. The EPA relies on cost of illness-based valuation that represents the medical costs of treating or mitigating non-fatal first hard CVD events (myocardial infarction, ischemic stroke) during the three years following an event among those without prior CVD history, adjusted for post-acute mortality.

The annual medical expenditure estimates for myocardial infarction and ischemic stroke are based on O'Sullivan et al. (2011). The estimated expenditures do not include long-term institutional and home health care. For non-fatal myocardial infarction, O'Sullivan et al. (2011) estimated medical expenditures are $53,246 ($2022) for the initial event and then $33,162, $14,635, $13,078 annually within 1, 2, and 3 years after the initial event, respectively. For non-fatal ischemic stroke, O'Sullivan et al. (2011) estimated medical expenditures are $16,503 ($2022) for the initial event and then $11,988, $788, $1,868 annually within 1, 2, and 3 years after the initial event, respectively. Annual estimates within 1, 2, and 3 years after the initial event include the incidence of secondary CVD events among survivors of first myocardial infarction and ischemic stroke events.

To estimate the present discounted value of medical expenditures within 3 years of the initial non-fatal myocardial infarction, the EPA combined O'Sullivan et al. (2011) myocardial infarction-specific estimates with post-acute survival probabilities based on Thom et al. (2001) (for myocardial infarction survivors aged 40–64) and Li et al. (2019) (for myocardial infarction survivors aged 65+). To estimate the present discounted value of medical expenditures within 3 years of the initial non-fatal ischemic stroke, the EPA combined O'Sullivan et al. (2011) ischemic stroke-specific estimates with post-acute survival probabilities based on Thom et al. (2001) (for ischemic stroke survivors aged 40–64, assuming post-acute myocardial infarction survival probabilities reasonably approximate post-acute ischemic stroke survival probabilities) and Li et al. (2019) (for ischemic stroke survivors aged 65+). The EPA did not identify post-acute ischemic stroke mortality information in this age group, but instead applied post-acute myocardial infarction mortality estimates for ischemic stroke valuation. Table 52 presents the resulting myocardial infarction and ischemic stroke unit values.

BILLING CODE 6560–50–P

Table 52: Cost of Illness of Non-Fatal First CVD Event Used in Modeling

Type of First Non-fatal Hard CVD Event	Age Group	Present Discounted Value of 3-Year Medical Expenditures ($2022, 2% discount rate)[a,b] Adjusted for Post-Acute Mortality[c]
MI	40-64 years	$110,040
	65+ years	$96,626
IS	40-64 years	$30,373
	65+ years	$27,954

Abbreviations: CVD – cardiovascular disease; MI – myocardial infarction (ICD9=410; ICD10=I21), IS – ischemic stroke (ICD9=433, 434; ICD10=I63).

Notes:

[a]Estimates of annual medical expenditures are from O'Sullivan et al. (2011).

[b]Original values from O'Sullivan et al. (2011) were inflated to $2022 using the medical care Consumer Price Index (USBLS, 2022).

[c]Post-acute MI mortality data for those aged 40-64 years is from Thom et al. (2001); probabilities to survive 1 year, 2 years, and 3 years after the initial event are 0.93, 0.92, and 0.90, respectively. The EPA applies these mortality values to derive the IS value in this age group. Post-acute MI mortality data and post-acute IS mortality data for persons aged 65 years and older are from Li et al. (2019). For MI, probabilities to survive 1 year, 2 years, and 3 years after the initial event are 0.68, 0.57, and 0.49, respectively. For IS, probabilities to survive 1 year, 2 years, and 3 years after the initial event are 0.67, 0.57, and 0.48, respectively.

Tables 53 to 56 provide the health effects avoided and valuation associated with CVD. The EPA estimated that, over the evaluation period, the final rule will result in annualized benefits from avoided CVD cases and deaths of $606 million.

Table 53: National CVD Benefits, Final Rule (PFOA and PFOS MCLs of 4.0 ng/L each, PFHxS, PFNA, and HFPO-DA MCLs of 10 ng/L each, and Hazard Index of 1) (Million $2022)

Benefits Category	2% Discount Rate		
	5th Percentile[1]	Expected Benefits	95th Percentile[1]
Number of Non-Fatal MI Cases Avoided	1,407.7	6,333.1	11,189.0
Number of Non-Fatal IS Cases Avoided	2,074.8	9,247.6	16,279.0
Number of CVD Deaths Avoided	845.5	3,715.8	6,555.6
Total Annualized CVD Benefits (Million $2022) [2]	$140.66	$606.09	$1,069.40

Notes:

Detail may not add exactly to total due to independent rounding. Quantifiable benefits are increased under final rule table results relative to the other options presented because of modeled PFHxS occurrence, which results in additional quantified benefits from co-removed PFOA and PFOS.

[1] The 5th and 95th percentile range is based on modeled variability and uncertainty described in section XII.J of this preamble and Table 75. This range does not include the uncertainty described in Table 62.

[2] See Table 72 for a list of the nonquantifiable benefits, and the potential direction of impact these benefits would have on the estimated monetized total annualized benefits in this table.

BILLING CODE 6560–50–C

3. Quantified Kidney Cancer Effects

Data on the association between PFOA exposure and kidney cancer (*i.e.,* RCC), particularly from epidemiological studies, indicate a positive association between exposure and increased risk of RCC. Epidemiology studies indicated that exposure to PFOA was associated with an increased risk of RCC (CalEPA, 2021; ATSDR, 2021; USEPA, 2016c; USEPA, 2024c, USEPA, 2024j). In the PFOA HESD (USEPA, 2016c), the EPA determined that PFOA is likely to be carcinogenic to humans (USEPA, 2005a) based in part on evidence of associations between PFOA exposure and kidney cancer in humans. A recent study of the relationship between PFOA and RCC in U.S. general populations found strong evidence of a positive association between exposure to PFOA and RCC in humans (Shearer et al., 2021). A meta-analysis of epidemiological literature also concluded that there was an increased risk of kidney cancer associated with increased PFOA serum concentrations (Bartell and Vieira, 2021). As such, the EPA selected RCC as a key outcome when assessing the health impacts of reduced PFOA exposures.

The EPA quantified and valued the changes in RCC risk associated with reductions in serum PFOA levels that are in turn associated with reductions in drinking water PFOA concentrations under the regulatory alternatives. PWS EP-specific time series of the differences between serum PFOA concentrations under baseline and regulatory alternatives are inputs into this analysis. For each PWS EP, evaluation of the changes in RCC impacts involves the following key steps:

1. Estimating the changes in RCC risk based on modeled changes in serum PFOA levels and the exposure-response function for the effect of serum PFOA on RCC;

2. Estimating the annual incidence of RCC cases and excess mortality among those with RCC in all populations corresponding to baseline and regulatory alternative RCC risk levels, as well as estimating the regulatory alternative-specific reduction in cases relative to the baseline, and

3. Estimating the economic value of reducing RCC mortality from baseline to regulatory alternative levels, using the Value of a Statistical Life and cost of illness measures, respectively.

To identify an exposure-response function, the EPA reviewed studies highlighted in the HESD for PFOA (USEPA, 2016c) and a recent study discussed in both the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment (OEHHA) *PFOA Public Health Goals* report (CalEPA, 2021) and the EPA's *Final Human Health Toxicity Assessment for PFOA* (USEPA, 2024c; USEPA, 2024j). Steenland et al. (2015) observed an increase in kidney cancer deaths among workers with high exposures to PFOA. Vieira et al. (2013) found that kidney cancer was positively associated with ''high'' and ''very high'' PFOA exposures. Barry et al. (2013) found a slight trend in cumulative PFOA serum exposures and kidney cancer among the C8 Health Project population. In a large case-control general population study of the relationship between PFOA and kidney cancer in 10 locations across the U.S., Shearer et al. (2021) found evidence that exposure to PFOA is associated with RCC, the most common form of kidney cancer, in humans.

To evaluate changes between baseline and regulatory alternative RCC risk resulting from reduced exposure to PFOA, the EPA relied on the estimated time series of changes in serum PFOA concentrations (section 6.3) and the

serum-RCC exposure-response function provided by Shearer et al. (2021): 0.00178 $(ng/mL)^{-1}$. The analysis reported in Shearer et al. (2021) was designed as a case-control study with population controls based on 10 sites within the U.S. population. Shearer et al. (2021) accounted for age, sex, race, ethnicity, study center, year of blood draw, smoking, and hypertension in modeling the association between PFOA and RCC. Results showed a strong and statistically significant association between PFOA and RCC. The EPA selected the exposure-response relationship from Shearer et al. (2021) because it included exposure levels typical in the general population and the study was found to have a low risk of bias when assessed in the EPA's *Final Human Health Toxicity Assessment for PFOA* (USEPA, 2024c; USEPA, 2024j).

The linear slope factor developed by the agency (see section 4.2 of USEPA, 2024c) based on Shearer et al. (2021) enables estimation of the changes in the lifetime RCC risk associated with reduced lifetime serum PFOA levels. Because baseline RCC incidence statistics are not readily available from the National Cancer Institute (NCI) public use data, the EPA used kidney cancer statistics in conjunction with an assumption that RCC comprises 90 percent of all kidney cancer cases to estimate baseline lifetime probability of RCC (USEPA, 2024c; American Cancer Society, 2020). The EPA estimated the baseline lifetime RCC incidence for males at 1.89 percent and the baseline lifetime RCC incidence for females at 1.05 percent. Details of these calculations are provided in appendix H of USEPA (2024e).

Similar to the EPA's approach for estimating CVD risk reductions, the EPA relies on the life table approach to estimate RCC risk reductions. The outputs of the life table calculations are the PWS EP-specific estimates of the annual change in the number of RCC cases and the annual change in excess RCC population mortality. For more detail on the EPA's application of the life table to cancer benefits analyses, please see appendix H of USEPA (2024e).

Although the change in PFOA exposure likely affects the risk of developing RCC beyond the end of the analysis period (the majority of RCC cases manifest during the latter half of the average individual lifespan; see appendix H of USEPA (2024e), the EPA does not capture effects after the end of the period of analysis, 2105. Individuals alive after the end of the period of analysis likely benefit from lower lifetime exposure to PFOA. Lifetime health risk model data sources include the EPA SDWIS, age-, sex-, and race/ethnicity-specific population estimates from the U.S. Census Bureau (2020), the Surveillance, Epidemiology, and End Results (SEER) program database (Surveillance Research Program—National Cancer Institute, 2020a; National Cancer Institute, 2020b), and the CDC NCHS. Appendix H of USEPA (2024e) provides additional detail on the data sources and information used in this analysis as well as baseline kidney cancer statistics. Appendix B of USEPA (2024e) describes estimation of the affected population.

The EPA uses the Value of a Statistical Life to estimate the benefits of reducing mortality associated with RCC in the population exposed to PFOA in drinking water. The EPA uses the cost of illness-based valuation to estimate the benefits of reducing morbidity associated with RCC.
