Advanced Energy United (AEU), Alan Leiserson, American Clean Power Association (ACP), American Council on Renewable Energy (ACORE), American Electric Power Service Corporation (AEP), Americans for a Clean Energy Grid (ACEG), Arizona Game and Fish Department (AZGFD), Arizona State Historic Preservation Office (Arizona SHPO), California Energy Commission and California Public Utilities Commission (CEC/CPUC), Center for Biological Diversity (CBD), Clean Air Task Force (CATF), Clean Energy Buyers Association (CEBA), ClearPath, Colorado Governor's Office, Conrad Ko, Conservation and Renewable Energy Coalition (CARE—comprised of the National Wildlife Federation, The National Audubon Society, Environmental Law and Policy Center, and The Nature Conservancy), Delaware Division of Historical and Cultural Affairs (Delaware SHPO), EarthGrid PBC, Edison Electric Institute (EEI), Environmental Defense Fund (EDF), Gallatin Power Partners, LLC (Gallatin Power), Grid United LLC (Grid United), Idaho Governor's Office of Energy and Mineral Resources, Idaho Power, James Birdwell, Kentucky SHPO, Kris Pastoriza, Land Trust Alliance (LTA), Large Public Power Council, Los Angeles Department of Water and Power (LADWP), mkron mkron, National Association of Manufacturers, National Association of Tribal Historic Preservation Officers (NATHPO), New Mexico Department of Cultural Affairs Historic Preservation Division (NM SHPO), New York Transmission Owners (NYTO), New York University School of Law Institute for Policy Integrity (Policy Integrity), Niskanen Center, Oceti Sakowin Power Authority (OSPA), Pew Charitable Trusts, PJM Interconnection, LLC (PJM), Public Interest Organizations (PIOs, comprised of Earthjustice, Natural Resources Defense Council, NW Energy Coalition, Southern Environmental Law Center, Sustainable FERC Project, and WeACT for Environmental Justice) (PIO), Santa Rosa Rancheria Tachi Yokut Tribe, Scott Cooley, Solar Energy Industries Association (SEIA), State of Colorado Governor's Office, State of Idaho Energy Office, Stoel Rives, LLP, StopPATH WV, Todd Simmons, VEIR, Inc, and an anonymous commenter.

Of the 50 comments, 27 expressed general support for the proposed rule and many supported specific aspects, including the IIP Process, the Federal decision-making timelines, and the requirement for the thirteen resource reports.[7] Commenters specifically

[7] Advanced Energy United; American Clean Power Association; American Council on Renewable Energy; American Electric Power Service Corporation; American Electric Power Service Corporation; Americans for a Clean Energy Grid; Arizona Game and Fish Department; California Energy Commission joint with California Public Utilities Commission; Clean Air Task Force; Clean Energy Buyers Association; Colorado Energy Office; Conrad Ko; Delaware State Historic Preservation Office; Edison Electric Institute; Environmental Defense Funds; Gallatin Power

lauded the resource reports for their early and meaningful public engagement components, their effectiveness in coordinating decision-making across different Federal agencies, and their essential role in streamlining environmental permitting processes to two years.

Six commenters, NATHPO, Santa Rosa Rancheria Tachi Yokut Tribe, StopPath WV, James Birdwell, ClearPath, and mkron mkron were not supportive of the rulemaking.

The comments and DOE's responses are discussed in detail in the subsequent subsections.

B. Purpose and Scope of Rule

DOE's Proposal

In the NOPR, DOE proposed to establish the CITAP Program; made the IIP Process a mandatory precondition to participate in the CITAP Program; described the procedures and timing of the IIP Process; provided a process to set deadlines and milestones for projects; designated DOE as the lead NEPA agency for the purposes of preparing a single environmental impact statement; provided for earlier coordination of and consultation between relevant Federal entities, relevant non-Federal entities, and others pursuant to section 106 of the NHPA; designated DOE as a co-lead agency for the section 106 process; and clarified applicability to qualifying projects. Finally, DOE proposed to include a provision stating that participation in the IIP Process does not alter any requirements to obtain necessary Federal authorizations for electric transmission facilities nor does it alter any responsibilities of the relevant Federal entities for environmental review or consultation under applicable law.

Summary of Public Comments

DOE received several comments regarding DOE's authority to establish the CITAP Program, the ability of the proposed CITAP Program to meet the goals established by Congress in EPAct 2005, and the scope of the proposed CITAP Program.

Regarding DOE's authority to establish the CITAP Program, EDF, PIOs, and CATF observed that the CITAP Program is consistent with the statutory language of section 216(h) of the FPA and with the 2023 MOU. Pew Charitable Trusts expressed their support for several key elements of the proposed rule, including the creation of a new framework for coordinated Federal authorizations.

PIOs commented that DOE's proposed rule appropriately effectuates the congressional intent underlying section 216(h) of the FPA, and that DOE has sufficiently explained its proposed changes in the rule text by demonstrating awareness of changing its policies and providing sound reasons for doing so. PIOs also noted that although agencies do not need to demonstrate that the reasons for the new policies are better than the reasons for the old policies, they believed DOE has done so in the proposed rule. On the other hand, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe requested that DOE withdraw the proposed rule. NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe found the proposed rule ''opaque'' and stated that they were unable to determine if the rule represented a threat to Tribal Nations' cultural resources and sacred places. Additionally, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe objected to the rule on the grounds that it contained ''numerous fundamental flaws,'' but only provided two examples, one concerning the Communities of Interest report and one concerning the Tribal Interests report. Specifically, regarding Communities of Interest, the commenters expressed concern not with the proposed rule text, but with a comment from DOE staff which the commenters believed indicated this resource report would fulfill NHPA ''Section 106 responsibilities for determining the impact of projects on Tribal Nations' cultural resources and sacred places.'' Regarding Resource Report 13, the commenters expressed concerns with a comment from DOE staff which the commenters believe indicated, contrary to the proposed rule text, that this resource report would not include ''the effect of projects on Tribal Nations' cultural resources.'' These concerns are discussed in further detail and addressed in sections VI.J and VI.L.xiii of this document. Finally, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe argued that DOE did not effectively engage with Tribal Historic Preservation Officers (THPOs) while drafting the proposed rule.

Regarding the ability of the proposed CITAP Program to meet the stated goals of coordinating Federal authorizations and completing environmental review within a 2-year schedule, PIOs stated they believe the proposed rule will improve efficiency in Federal permitting for transmission projects that are urgently needed to address the climate crisis, improve reliability, and reduce congestion, and that the rule will accelerate the development of infrastructure that will provide the foundation for a clean and equitable energy grid. Pew Charitable Trusts stated that it believes that the proposed rule offers an appropriately streamlined approach to coordinating and facilitating transmission project authorizations. Pew Charitable Trusts further noted that previous studies of various types of infrastructure projects and environmental reviews suggest that an open, transparent, and comprehensive review process can work to the benefit of the public and developers. Pew Charitable Trusts supported that the schedule can be altered by DOE depending on the complexity of the review and other factors. ACEG recommended adding ''prompt and binding'' to describe the milestones and deadlines DOE will set in the schedule for Federal decision-making. The State of Idaho agreed that Federal efforts to reduce the time required for transmission project developers to receive decisions on Federal authorizations are needed and agreed that such actions should be encouraged. However, it also cautioned that those efforts should be implemented in a way that avoids diminishing the benefits of such reform by the addition of new permitting processes or requirements. In contrast, StopPATH WV asked why the NOPR was written in a way that presumes project approval, expressed concern that it was not clear how this rulemaking would speed up timelines, and asserted that if agencies could not change the project or deny it, then this would be a bureaucratic waste of time. Kris Pastoriza requested clarification on how the CITAP Program would change the jurisdiction of the Federal Energy Regulatory Commission (FERC).

Regarding DOE's role as a lead agency for environmental review and preparation of a single EIS, DOE received several comments in support of the role and the consistency of this designation with existing regulations and legislation. EDF commented that the rule is consistent with Section 107 of the Fiscal Responsibility Act of 2023, which amended NEPA to require the designation of a lead agency to coordinate and schedule environmental review, as well as the related amendments to NEPA implementing regulations proposed by the Council for Environmental Quality. AEP, SEIA, Pew Charitable Trusts, EEI, and CEBA each

Partners, LLC; Grid United, LLC; New York Transmission Owners; Niskanen Center; PJM Interconnection, L.L.C.; Public Interest Organizations; Scott Cooley; Solar Energy Industries Association; State of Idaho; Stoel Rives; The Pew Charitable Trusts; and Todd Simmons.

commented in support of DOE serving as the lead agency for developing a single environmental review document. SEIA noted that currently a lack of coordination among agencies causes unpredictability and inefficiency in the environmental review process and effective coordination will provide a more predictable and efficient process, a reduction in unnecessary delays and costs, and heightened allowance for more robust environmental reviews. ACEG recommended replacing the phrase ''environmental impact statement'' with ''NEPA document'' because that phrasing more closely matches the statutory language in section 216(h)(5)(A) and because it accounts for the breadth of reviews organized under the CITAP Program. EEI recommended that DOE must also rely on the expertise of Federal agencies to ensure certainty and minimize risk of post record decision litigation.

Regarding the authority of the Director of the Grid Deployment Office to waive requirements, PIOs recommended establishing specific, transparent criteria by which the Director of the Grid Deployment Office can waive the review requirements for a proposed project that are deemed unnecessary, duplicative, or impracticable and further argued for the establishment of an appeal process for said waivers. PIOs further provided that if DOE declines to implement criteria and an appeals process that this final rule should eliminate the waiver provision.

DOE Response

In this final rule, DOE retains the proposal in the NOPR to establish the CITAP Program, which requires the IIP Process for CITAP Program participation, sets binding schedules for Federal decision making, and through which DOE will serve as lead agency for environmental review and document preparation. In response to comments, DOE makes minor changes to this final rule for clarification but retains the full intent and scope of the proposed rule.

With respect to NATHPO's comment regarding outreach, DOE believes that it engaged with appropriate entities regarding the rulemaking. DOE met with the Advisory Council for Historic Preservation in developing the language of the proposed rule and specifically with respect to addressing potential impacts on cultural resources and consistency of the CITAP Program with the requirements of the NHPA. Further, DOE developed the NOPR with substantive engagement from other Federal entities through the interagency review process. DOE then provided a 45-day public comment period during which DOE noticed and provided a public webinar open to anyone to attend, and organized briefings with interested groups to introduce the proposed rule and listen to comments, to which NATHPO, THPOs, and State Historical Preservation Officers (SHPOs) were invited. In this final rule, DOE has made changes to provide additional clarity in the rule text and resolve ambiguity when possible. In particular, DOE clarifies certain issues relating to Tribal sovereignty, cultural resources, and the section 106 process in response to specific concerns raised by NATHPO, Santa Rosa Rancheria Tachi Yokut Tribe, and other commenters.

In response to the State of Idaho's concerns and Kris Pastoriza's question regarding DOE implementing its coordinating authority, this final rule neither establishes new permitting requirements nor alters FERC's siting authority over transmission lines. Rather, DOE will be coordinating agencies' exercise of their existing authorities. This final rule maintains the NOPR provision that the IIP Process does not alter any requirements to obtain necessary Federal or non-Federal authorizations for electric transmission facilities. Similarly, DOE disagrees with the assertion that the proposed rule presumes project approval. The CITAP Program as described in the proposed rule and confirmed in this final rule coordinates and sets a schedule for Federal decision-making for qualified projects; it does not presume or require the outcome of such Federal decisions. Regarding DOE's schedule setting role in the CITAP Program, DOE agrees with ACEG's recommendation to align the language of this final rule with the authorizing statute and includes ''prompt and binding'' in the description of milestones in this final rule.

Regarding DOE serving as lead agency for environmental review and development of a single EIS designed to serve the needs of all relevant Federal agencies and inform all Federal authorization decisions on the proposed qualifying project, DOE acknowledges that it will rely on other Federal agencies' expertise and believes the CITAP Program and IIP Process confirmed in this final rule will ensure this occurs. DOE agrees with ACEG's recommendation to align the language with the authorizing statute and changes ''EIS'' to ''environmental review document'' throughout this final rule.

DOE makes no changes to the proposal to allow the Director of the Grid Deployment Office to waive requirements of the CITAP Program, nor does DOE adopt specific criteria for such waivers. The purpose of the CITAP Program and IIP Process is to allow DOE to perform a coordinating function for electric transmission facilities seeking Federal authorizations. Giving the Director the discretion to waive requirements of the CITAP Program helps ensure that this coordination function promotes efficiency and reduces duplication, as Congress intended in FPA section 216(h). In addition, it is important to note that a waiver granted by the Director under the CITAP Program would not waive Federal requirements for authorizations or permits. For these reasons, DOE is not persuaded that a lack of specific criteria for waivers in this final rule will substantively harm any entity or party.

C. Qualifying Projects

DOE's Proposal

Section 216(h) of the FPA authorizes DOE to perform its coordinating function for all transmission facilities seeking Federal authorizations. In the NOPR, DOE proposed to prioritize the subset of these facilities that benefit the most from DOE's coordinating role and provide the most benefits to the American public from expeditious environmental review.

In the NOPR, DOE proposed to define the subset of proposed electric transmission facilities for which to perform its coordinating function—called ''qualifying projects''—by defining two types of qualification: qualification by attribute and qualification by request. For qualification by attribute (set out in paragraph (1) of the proposed definition of ''qualifying project''), DOE proposed in the NOPR to categorize a proposed electric transmission facility as a ''qualifying project'' based on the presence of certain enumerated attributes: it must be high-voltage (defined as 230 kV or above) *or* ''regionally or nationally significant''; it will be used for the transmission of electric energy in interstate or international commerce for sale at wholesale; it will need one or more Federal authorizations expected to require preparation of an environmental impact statement (EIS) pursuant to NEPA; it will not require authorization under section 8(p) of the Outer Continental Shelf Lands Act; the developer will not require a construction or modification permit from FERC pursuant to section 216(b) of the FPA; and the proposed transmission facility will not be wholly located within the Electric Reliability Council of Texas interconnection.

DOE proposed that, if a proposed electric transmission facility did not qualify for the CITAP Program by attribute it could still qualify by request, as provided by paragraph (2) of the proposed definition of qualifying project and under the process set out in proposed § 900.3 of the NOPR. Under that process, DOE proposed that the project proponent file a request for coordination under the CITAP Program with the Director of the Grid Deployment Office. Then, the Director of the Grid Deployment Office, in consultation with the relevant Federal entities, determine, within 30 calendar days of receipt of the request, whether the proposed electric transmission facility is a ''qualifying project.'' In the NOPR, DOE proposed that proposed electric transmission facilities requiring a permit from FERC could be qualifying projects if the request came from the FERC Chair. DOE also proposed that projects proposed for authorization under section 8(p) of the Outer Continental Shelf Lands Act (43 U.S.C. 1331 *et seq.*) independent of any generation project may be qualifying projects at the discretion of MOU signatory agencies.

DOE proposed to exclude from both types of qualification, and from the CITAP Program altogether, any project proposed to be authorized under section 8(p) of the Outer Continental Shelf Lands Act in conjunction with a generation project and any project for which the proposed transmission facility is wholly located within the Electric Reliability Council of Texas interconnection.

Summary of Public Comments

DOE received several comments on the proposed definition of ''qualifying project.''

Starting with the qualification by attribute in paragraph (1) of the definition, DOE received several comments on the specific proposed attributes. Both AEP and Niskanen Center supported the proposed high-voltage threshold of 230 kV or above. On the other hand, CEC/CPUC opposed limiting eligibility based on a voltage threshold and instead suggest expanding eligibility to proposed electric transmission facilities at any voltage level.

With regard to DOE's proposal for qualification by attribute to require that a proposed electric transmission facility that does not satisfy the voltage threshold must be ''regionally or nationally significant,'' both Niskanen Center and ClearPath asserted that this alternative criterion is ambiguous. ClearPath recommended removing the alternative criterion altogether and only allowing for high-voltage transmission lines (*i.e.,* those that satisfy the 230 kV or above threshold) to be ''qualifying projects.'' Niskanen Center recommended instead that DOE adopt factors that it will consider when determining whether a proposed transmission facility is ''regionally or nationally significant.'' Specifically, Niskanen Center suggested these factors: ''(i) a reduction in the congestion costs for generating and delivering energy; (ii) a mitigation of weather and variable generation uncertainty; (iii) an enhanced diversity of supply; (iv) any reduced or avoided carbon emissions from the increased use of clean energy; and (v) an increased market liquidity and competition.''

Moving to the other attributes, CEC/CPUC asked DOE to clarify how it will determine whether all or part of a proposed electric transmission facility will be ''used for the transmission of electric energy in interstate or international commerce for sale at wholesale.'' Further, CEC/CPUC recommended that DOE expand the attribute list to include a proposed electric transmission facility that will be used in intrastate commerce because, according to CEC/CPUC, intrastate transmission lines can traverse lands managed by several Federal agencies, such that DOE coordination under the CITAP Program would provide benefits to these projects as well. In the alternative, CEC/CPUC asked that DOE clarify how a proposed intrastate transmission facility, such as an onshore, intrastate transmission facility built to support offshore wind development, that traverses Federal lands, could be a ''qualifying project.''

On the proposed attribute that the proposed electric transmission facility would need one or more Federal authorizations that require preparation of an EIS pursuant to NEPA, AEP supported the proposal whereas Niskanen Center and PIOs recommended expanding the proposal to include proposed electric transmission facilities for which preparation of either an environmental assessment (EA) or an EIS is anticipated. PIOs also encouraged DOE to define which proposed electric transmission facilities are ''expected'' to require preparation of an EIS and which are expected to require preparation of an EA. In support of the recommendation to expand eligibility to include proposed electric transmission facilities for which preparation of an EA is expected (in addition to those for which preparation of an EIS is expected), PIOs argued that FERC regulations only require preparation of an EA for proposed electric transmission facilities sited within an existing right-of-way. If DOE adopts the proposal without PIOs' recommended expansion, PIOs explained that such proposed electric transmission facilities may be excluded from the CITAP Program, resulting in the CITAP Program not providing its full purported benefits. Similar to Niskanen Center and PIOs, CEC/CPUC recommended that DOE expand the definition of ''qualifying project'' such that any proposed electric transmission facility for which multiple Federal agency approvals will be required are eligible, regardless of what type of document is required under NEPA.

On qualification by request—*i.e.,* when a project proponent seeks qualifying-project status through a request to the Director of the Grid Deployment Office—several commenters expressed concern about DOE's level of discretion in the proposal. EEI requested examples of the types of proposed electric transmission facilities that may be deemed ''qualifying projects'' by request. PIOs argued that the proposal appears to be wholly discretionary, making it difficult for project proponents, relevant regulators, and members of the public to understand what proposed electric transmission facilities may be eligible to participate in the CITAP Program. PIOs suggested that DOE establish criteria for how DOE will evaluate requests, which would assist project proponents in making well-grounded requests for participation in the CITAP Program. According to PIOs, these criteria should be: if the proposed electric transmission facility will benefit from DOE's coordination in terms of expeditious authorizations; if DOE's coordination will provide benefits that exceed the costs; and, if Federal and non-Federal regulators have sufficient resources to dedicate to the project's participation in the CITAP Program. PIOs also suggested that DOE require project proponents to explain what portions of their proposed electric transmission facility do not meet the ''qualifying project'' definition (*i.e.,* the attributes) and how the CITAP Program will facilitate Federal authorizations for the project or be otherwise beneficial. Further, PIOs recommended that DOE adopt a requirement that the Director of the Grid Deployment Office explain in writing the determination of whether a project is deemed a ''qualifying project'' by request. PIOs also recommended that if DOE rejects a request to participate in the CITAP Program, project proponents should be allowed to appeal the

decision to the Secretary of Energy. Similarly, ACP commented that the proposed rule lacked clarity regarding what can qualify as an ''other project'' and recommended that DOE provide further detail on the aspects which it will consider when making this determination.

As proposed, qualification by request included a limitation in § 900.3(d): for a proposed electric transmission facility seeking a permit from FERC pursuant to section 216(b) of the Federal Power Act, DOE may only consider a request for coordination if the requestor is FERC acting through its chair. ACORE recommended that DOE provide more detailed guidance for this category of proposed electric transmission facilities and for DOE to authorize relevant project proponents to submit a petition requesting such a request from the FERC Chair. Likewise, CEBA urged DOE to clarify the relationship between the section 216(b) and section 216(h) processes and to explain how the FERC Chair can request that a proposed electric transmission facility be eligible to participate in the CITAP Program under section 216(h). Both qualification by attribute and qualification by request included limitations related to offshore transmission facilities. For qualification by attribute, one listed attribute provided that the proposed electric transmission facility would not require authorization under section 8(p) of the Outer Continental Shelf Lands Act. Likewise, for qualification by request, DOE proposed to exclude electric transmission facilities proposed to be authorized under section 8(p) of the Outer Continental Shelf Lands Act in conjunction with a generation project. However, projects proposed to be authorized under section 8(p) of the Outer Continental Shelf Lands Act could be allowed at the discretion of the MOU signatory agencies (as defined in the proposed rule) if the proposed offshore transmission facility is independent of any generation project.

A number of commenters expressed concerns regarding DOE's treatment of proposed offshore transmission facilities. Broadly, ACP, ACORE, and PIOs contended that DOE must explain why the limitations on offshore transmission facilities are included and how the CITAP Program will apply to offshore transmission facilities in practice. ACP and ACORE suggested that DOE establish a process to allow potential State-proposed transmission facilities to participate in the CITAP Program before a project developer is selected and include a process to enable the Bureau of Ocean Energy Management or a State to engage or request that a project participate in the CITAP Program.

More specific to DOE's proposal, NYTOs opposed the offshore transmission facility-related attribute, asserting that its inclusion prevents proposed offshore transmission facilities from benefiting from the CITAP Program for project sections located closer to shore as well as for project sections that fall under the scope of the Outer Continental Shelf Lands Act. PIOs suggested removing the limitations in qualification by request and instead allowing for proposed offshore transmission facilities to take advantage of the CITAP Program without the approval of the MOU signatories. At a minimum, PIOs suggested removing the limitation that proposed offshore transmission facilities tied to generation projects cannot participate in the CITAP Program. Moreover, both PIOs and ACORE requested that DOE revise its proposal from requiring agreement from all MOU signatories and instead only requiring agreement from relevant MOU signatories participating in the environmental review or authorization.

Finally, other commenters proposed revisions to DOE's proposed definition of ''qualifying project'' based on advanced transmission technologies and undergrounding. VEIR recommended that DOE include superconductors in its definition of ''qualifying projects'' because, according to VEIR, a superconductor can transfer more power at lower voltages than qualifying high-voltage transmission lines. EarthGrid asserted that underground transmission projects should be considered as a distinct category. And CBD suggested that DOE require that a proposed electric transmission facility be strictly necessary and that non-transmission alternatives could not adequately address the issue addressed by the proposed electric transmission facility before allowing the project to participate in the CITAP Program.

DOE Response

In this final rule, DOE retains the proposal in the NOPR to provide two types of qualification (qualification by attribute and qualification by request) for proposed electric transmission facilities to be ''qualifying projects.'' In response to commenters, DOE is making the following revisions to the details of those two types of qualification.

First, consistent with commenters' suggestions, DOE has adopted factors that DOE may consider when determining that a proposed electric transmission facility is a qualifying project. For qualification by attribute, this final rule includes factors that DOE may consider when assessing if a proposed electric transmission facility is regionally or nationally significant. Similarly, for qualification by request, this final rule includes factors that DOE may consider when assessing if a proposed electric transmission facility is a qualifying project. Second, this final rule removes the requirement that projects seeking a permit from FERC under FPA section 216(b) may only be accepted into the CITAP Program if requested by FERC acting through its chair and states that the coordination between FERC and DOE on projects seeking permits under FPA section 216(b) will be consistent with the relevant delegation order governing DOE's coordination authority under FPA section 216(h), which may change from time to time. Third, this final rule also states that if DOE does not determine that a project is qualifying project, DOE will provide the reasons for its finding in writing.

DOE believes that the definition of ''qualifying project'' adopted in this final rule appropriately balances the value of focusing DOE's resources on those proposed electric transmission facilities for which Federal coordination will be most impactful with the aims of the broad grant of authority to DOE under FPA section 216(h). By initially limiting the definition of ''qualifying project'' to those proposed electric transmission facilities that qualify by attribute, *i.e.,* those that are high-voltage or regionally or nationally significant and that possess the other listed attributes, DOE is targeting for Federal coordination those complex proposed electric transmission facilities that will reap the greatest benefits from the CITAP Program. DOE believes that these proposed electric transmission facilities are also likely to provide substantial benefits to consumers in the form of congestion relief, emissions reductions, and increased reliability and resilience, among other benefits, to ensure reliable, affordable power can be delivered to consumers when and where they need it. Qualification by request provides DOE with additional flexibility to consider whether projects that do not meet the targeted attributes may be appropriate for participation in the CITAP Program as well, consistent with DOE's authority under section 216(h) to coordinate for all transmission facilities seeking Federal authorizations.

As for specific aspects of the NOPR proposal, starting with qualification by attribute and the voltage threshold therein (*i.e.,* proposed electric transmission facilities must be 230 kV or above), DOE declines to adopt the suggestion by CEC/CPUC to expand

eligibility to proposed transmission facilities at any voltage level. Such an expansion, although permissible by the statute, would not be the most effective use of DOE's authority because it would likely result in DOE providing coordination for proposed transmission facilities that would benefit less from the program. For example, DOE could be obligated to provide coordination for less complex proposed electric transmission facilities for which there is a low risk of protracted Federal authorization and review timelines and thereby have fewer resources to dedicate to those transmission facilities with more complex permitting requirements and/or more Federal authorizations and thus more risk of protracted review timelines in the absence of DOE coordination. Nonetheless, DOE acknowledges that voltage alone does not determine complexity nor whether the proposed transmission facility may benefit from participation in the CITAP Program. That is why this final rule provides multiple avenues for lower-voltage proposed transmission facilities to be ''qualifying projects,'' whether because they are ''regionally or nationally significant'' or because they are determined to be qualifying projects by request to the Director of the Grid Deployment Office, on a case-by-case basis. In addition, satisfying the high-voltage threshold alone does not make a proposed transmission facility a ''qualifying project;'' it still must demonstrate the attributes listed in this final rule.

As for the alternative criterion under qualification by attribute—whether the proposed transmission facility is ''regionally or nationally significant''—DOE declines to remove this criterion but agrees that the proposal was ambiguous and therefore adopts clarifying revisions in this final rule. DOE believes that this alternative to the voltage threshold is important to ensure that lower-voltage transmission facilities that may benefit from participation in the CITAP Program have an avenue to be ''qualifying projects,'' as explained in the prior paragraph. Nevertheless, DOE appreciates commenters' requests for greater transparency and thus adopts factors to guide DOE's determination whether a proposed transmission facility is ''regionally or nationally significant.''

In particular, DOE adopts regulations in this final rule that provide that, in determining whether a proposed transmission facility is ''regionally or nationally significant,'' DOE will consider whether a proposed transmission facility will reduce congestion costs, mitigate uncertainty, and enhance supply diversity. These factors are consistent with the overarching goals of focusing the CITAP Program on proposed transmission facilities for which DOE's coordination will be most impactful. The adopted regulations provide that DOE may consider other factors as well. This discretion is important to ensure that DOE has flexibility to best use its resources to provide Federal coordination where consistent with the goals of the CITAP Program and available resources. As explained in DOE's 2023 Needs Study, transmission infrastructure improvements can benefit consumers by improving grid reliability, resource adequacy, and resilience of the power system, as well as reducing congestion and losses and enabling access to clean, diverse energy supply. While transmission that addresses unnecessarily high costs to consumers may be regionally or nationally significant, so too may be transmission that reduces the vulnerability of the electric system to disruptive events, which risk high costs and service interruptions. The benefits of transmission also extend beyond the power system—to increased employment, tax revenues, and other economic development benefits. These benefits are all relevant to DOE's determination of whether a transmission line is ''regionally or nationally significant.''

Although Niskanen Center suggested two additional factors for DOE to list as part of its determination as to whether a proposed electric transmission facility is ''regionally or nationally significant'' beyond those adopted herein (specifically focused on reduced or avoided carbon emissions and increased market liquidity and competition from the proposed electric transmission facility), DOE declines to adopt additional factors. For one, project proponents are unlikely to have substantial information at the stage of development recommended for initiation of the IIP Process for DOE to evaluate vis-à-vis these recommended factors. If such information is available, though, DOE may nevertheless consider it because, as explained above, DOE is maintaining discretion to consider other factors as part of its assessment of whether a proposed transmission facility is ''regionally or national significant.''

As for the proposed attribute concerning whether all or part of a proposed transmission facility will be ''used for the transmission of electric energy in interstate or international commerce for sale at wholesale,'' DOE declines to provide further clarification in this final rule because this determination will be made based on the facts and circumstances of the proposed electric transmission facility seeking DOE coordination at the time of application. DOE expects that this determination will be informed by relevant precedent interpreting similar language in other provisions of the FPA, though DOE is not bound by that precedent in interpreting its own regulatory language.

DOE declines to expand the listed attributes of a qualifying proposed electric transmission facility to also include intrastate transmission facilities. As previously explained, DOE's intent in defining a subset of electric transmission facilities for which DOE will conduct Federal coordination is to focus on where the CITAP Program is likely to be most impactful. While intrastate transmission facilities can have significant benefits, they are generally less likely to be the types of facilities that DOE expects will reap the greatest benefits from DOE's coordination or that would provide the greatest benefits to consumers as a result of more efficient permitting of critical transmission infrastructure. Nonetheless, DOE does not prohibit proponents of intrastate transmission facilities (*e.g.,* high-voltage intrastate transmission facilities that may require multiple Federal authorizations) from seeking qualification by request.

Regarding the proposed attribute that a proposed electric transmission facility would need one or more Federal authorizations that require preparation of an EIS pursuant to NEPA, DOE declines to make the changes suggested by Niskanen Center, PIOs, and CEC/CPUC. As explained above, DOE is aiming to identify as ''qualifying projects'' those proposed electric transmission facilities for which DOE coordination under the CITAP Program is likely to be most impactful and to yield the greatest benefits for consumers. DOE believes that focusing on proposed electric transmission facilities for which preparation of an EIS is expected is an appropriate factor for narrowing the list of potential electric transmission facilities for DOE coordination because an EIS is typically needed for more complex projects. Preparation of an EIS is also a longer, more involved process and one that poses a greater risk of delays absent interagency coordination. Note that, although qualification by attribute is limited to those for which an EIS is likely required, qualification by request does not have this limitation, such that a project proponent is permitted to request DOE coordination even if an EIS

is not expected and seek a determination from the Director of the Grid Deployment Office on eligibility for the CITAP Program. As for the request that DOE define which proposed transmission facilities are expected to require an EIS, DOE declines to do so in this final rule. DOE and its fellow agencies will apply NEPA and its implementing regulations and will follow applicable regulations pursuant to NEPA, as will other relevant Federal agencies, to determine whether an EIS needs to be prepared, and those same regulations will inform any expectations as to whether an EIS is likely to be required.

Regarding qualification by request, DOE agrees with commenters that criteria regarding the types of proposed electric transmission facilities that may be deemed ''qualifying projects'' under this process would be beneficial to project proponents, and ultimately to DOE in identifying the subset of projects that best suit the CITAP Program's goals. Consequently, DOE adopts criteria in this final rule that the Director of the Grid Deployment Office may consider when evaluating a request to determine whether a proposed electric transmission facility is a ''qualifying project.'' DOE will consider whether a proposed electric transmission facility will benefit from coordination under the CITAP program, reduce congestion costs, mitigate uncertainty, and enhance supply diversity. These factors are consistent with the overarching goals of focusing the CITAP Program on proposed electric transmission facilities for which DOE's coordination will be most impactful, to the ultimate benefit of consumers via reduced congestion and enhanced reliability and resilience, among other benefits. DOE believes the remaining discretion for DOE to determine which proposed electric transmission facilities are ''qualifying projects'' is consistent with the statutory framework that permits DOE to coordinate the Federal authorizations necessary for any transmission facility and the aim of the section 216(h) itself, notably the timely permitting of transmission projects.

DOE agrees that it should explain its determinations of whether qualification by request is granted in writing and consequently establishes a requirement for such an explanation in this final rule.

DOE makes no revisions in response to the suggestion that an appeals process be incorporated into the rule text for non-qualifying projects. DOE notes that any project not accepted under qualification by attribute may seek qualification by request of the Director of the Grid Deployment Office, and that this final rule does not disallow projects from resubmitting materials.

Turning to the proposed limitation to qualification by request for a proposed electric transmission facility seeking a permit from FERC pursuant to section 216(b) of the FPA, which stated that DOE may only consider a request for coordination if the requestor is FERC acting through its chair, DOE revises its proposal in this final rule to clarify that the request for Federal coordination for proposed transmission facilities seeking a permit from FERC under section 216(b) must be consistent with Delegation Order No. 1–DEL–FERC–2006 or any similar, subsequent delegation to FERC, which depend on the mutual and continuing agreement of both agencies. With respect to CEBA and ACORE's requests for more detail on the procedures for the FERC Chair to request that a proposed electric transmission facility be eligible to participate in the CITAP Program, such procedures will depend on the state of any delegations of DOE's authority under FPA section 216(h); therefore, DOE finds that clarifying these procedures is best done through guidance outside the rulemaking process. Similarly, with respect to ACORE's request to be able to submit a petition for the FERC Chair to request DOE to consider a request for assistance under the proposed section, the removal of that section in this final rule obviates the need for such a process to be established by DOE and the establishment of any processes at FERC are outside the scope of this rulemaking.

With respect to the treatment of offshore transmission facilities, commenters expressed concerns with the limitations related to offshore transmission facilities and sought further explanation, at a minimum. DOE adopts the proposal to exclude transmission facilities proposed to be authorized under section 8(p) of the Outer Continental Shelf Lands Act in conjunction with a generation project. DOE and the 2023 MOU signatories determined that offshore transmission facilities connected to generation projects should not be eligible for participation in the CITAP Program because the authorizations of, and permits for, these transmission facilities are typically included in the authorizations and permits for the connected generation projects. Coordinating Federal authorizations for generation projects, and reducing timelines for joint transmission-generation projects with interdependent permitting requirements, are beyond the scope of the 2023 MOU and the CITAP Program. This limitation allows DOE to focus its resources on addressing known challenges for transmission facility permitting.

With respect offshore transmission facilities whose Federal authorizations and project development are independent of generation development, DOE is finalizing an approach consistent with the 2023 MOU. For qualification by attribute, DOE declines to remove the requirement that the proposed electric transmission facility will not require authorization under section 8(p) of the Outer Continental Shelf Lands Act. Excluding offshore transmission from the qualification by attribute will facilitate a more efficient allocation of resources. Shared offshore transmission is a nascent industry with unique and unsettled permitting issues. Considering proposed offshore transmission facilities as potentially eligible for the CITAP Program in consultation with the MOU signatories, which is provided under qualification by request, will allow DOE to adopt a more tailored and responsive approach to this new industry.

In order for offshore transmission facilities to be eligible for the CITAP Program via qualification by request, DOE proposed, and adopts here, the requirement that the MOU signatories must agree to DOE coordination for offshore transmission facilities for the reasons explained in the prior paragraph. DOE declines to only require agreement from those MOU signatories that are authorizing Federal agencies. DOE is unpersuaded that a single, non-authorizing agency would unilaterally hold up a proposed offshore transmission facility's eligibility for the CITAP Program, such that those agencies should not be allowed to participate in the eligibility decision making. Instead, DOE believes that continuing the coordination demonstrated by the MOU is consistent with the spirit of the CITAP Program and important for keeping all relevant agencies involved in ongoing development of offshore transmission permitting.

DOE also declines to establish a process to allow potential State-awarded transmission facilities to participate and to enable the Bureau of Ocean Energy Management or a State to request that a project participate, as ACP and ACORE suggested. At this time, DOE is focusing the CITAP Program on addressing well-documented and understood Federal authorization issues via improved coordination for a subset of proposed electric transmission facilities for which DOE coordination is likely to be most impactful. DOE is not persuaded that

creating a process for entities other than the project proponent to request participation for a proposed project in the CITAP Program is necessary to provide the benefits of the program to a project. DOE may consider revising its approach to offshore transmission facilities in future rulemakings pursuant to FPA section 216(h).

Concerning commenters' proposed revisions to the definition of ''qualifying project'' based on advanced transmission technologies or undergrounding, DOE declines to adopt such revisions. As explained throughout this section, DOE's approach is targeted towards proposed transmission facilities that are likely facing the types of permitting challenges for which FPA section 216(h) and the CITAP Program were created. Commenters provide no evidence to suggest that superconductor permitting or undergrounding are unique as to warrant special recognition within the definition of ''qualifying project.'' This is not to say that a proponent of a transmission facility that contains these features cannot also be a ''qualifying project'' under DOE's adopted definition.

Finally, DOE declines to adopt CBD's suggestion that DOE impose a necessity test for proposed electric transmission facilities compared to non-transmission alternatives as a gateway to participation in the CITAP Program. Congress directed DOE to coordinate the authorizations necessary for the siting of transmission lines. DOE understands that to mean that Congress believes transmission lines are necessary and that Congress did not intend to supplant existing transmission planning processes. Through the CITAP Program, DOE will coordinate authorizations for transmission lines, which remain subject to the statutes relevant to their authorization, including NEPA. Through these statutes and their associated environmental review processes that DOE will coordinate, reasonable alternatives will be considered by the appropriate Federal agency as appropriate, which may or may not include non-transmission alternatives.

D. Purpose and Scope of the IIP Process

DOE's Proposal

Under the proposed rule, the IIP Process is intended for qualifying project proponents who have sufficiently advanced their project such that they have identified potential study corridors and/or potential routes and the proposed locations of any intermediate substations. DOE proposed to establish the IIP Process as a mandatory prerequisite for coordination under the CITAP Program and require the submission of thirteen project proponent resource reports that will serve as inputs, as appropriate, into the relevant Federal analyses and facilitate early identification of project issues. Within these resource reports, DOE proposed to require reasonably foreseeable information in three of them: in the General Project Summary, DOE proposed to require reasonably foreseeable plans for future expansion of facilities and specific generation resources that are known or reasonably foreseen to be developed or interconnected; in the air quality and noise effects report, DOE proposed to require estimates on reasonably foreseeable emissions construction, operation, and maintenance, and reasonably foreseeable changes in greenhouse gas emissions and indirect emissions; and in the Reliability, Resilience, and Safety report, DOE proposed to require a description of the reasonably foreseeable impacts from a failure of the proposed facility.

DOE also proposed to also establish the IIP Process as an iterative process anchored by three meetings, which function as milestones in the process: the initial meeting, review meeting, and close-out meeting. DOE proposed in the NOPR to require the project proponent to submit an initiation request containing certain information to DOE to initiate the IIP Process, including a summary of the qualifying project not to exceed 10 single-spaced pages and a project participation plan not to exceed 10 single-spaced pages. DOE also proposed to require the proponent to submit meeting review requests containing certain information to DOE prior to each of the three meetings. DOE proposed that the project proponent submit incomplete information so long as an acceptable reason for the absence of the information and an acceptable timeline for filing it is provided, and it provided the Director with discretion to waive any requirement imposed on a project proponent if the Director determines that that the requirement is unnecessary, duplicative, or impracticable under the relevant circumstances.

The proposed rule explained that the IIP Process would ensure early interaction between the project proponent, relevant Federal entities, and relevant non-Federal entities, and that DOE would, to the maximum extent practicable and consistent with Federal law, coordinate the IIP Process with any relevant non-Federal entities. DOE also proposed in the NOPR that the IIP Process did not preclude additional communications between the project proponent and relevant Federal entities outside the IIP Process meetings.

Additionally, the NOPR proposed to provide a process by which a person may submit confidential information during the IIP Process or to request designation of information containing Critical Electric Infrastructure Information (CEII); these provisions established the mechanisms through which the IIP Process complied with 10 CFR 1004.11 and 1004.13.

In the NOPR, DOE specifically sought comment on the page limitations and on the resource report requirements to avoid, to the maximum extent practicable, duplication in these requirements.

Summary of Public Comments

DOE received several comments that addressed the purpose and scope of the IIP Process including comments on the IIP Process as a prerequisite for DOE coordination; the level of detail required during the IIP Process and in resource reports, including page limits and reasonably foreseeable impacts; the role of the three anchor meetings; participation of Federal and non-Federal entities; and protection of confidential information and/or CEII. Comments to specific resource report requirements are addressed in section VI.L of this document on an individual report basis.

DOE received many comments in support of the proposed IIP Process. Grid United, PIOs, State of Colorado Governor's Office, EEI, ACP, ACORE, PJM, and CEBA expressed support for the revitalized IIP Process proposed in the NOPR. PIOs stated that the IIP Process will help Federal agencies coordinate information exchange that is necessary to fulfill their individual statutory mandates, avoid duplication of cost and effort for project proponents, and reduce the potential for unexpected delays later in the permitting process. PIOs also agreed with DOE that, by increasing the pace of transmission development through the IIP Process, the proposed rule will confer significant public benefits. The State of Colorado Governor's Office recognized that the IIP Process would provide developers a uniform mechanism for projects to identify siting constraints and opportunities, engage with Indian Tribes, local communities, and other stakeholders, and to gather information that would serve as inputs, as appropriate, into Federal authorization decisions. EEI and ACP recognized the potential benefits to be gained from the IIP Process and encouraged DOE to move swiftly to both finalize the proposed approach and commit to

working closely with project proponents to ensure that the IIP Process produces the promised results. EEI stated its belief that by collaborating with electric companies, DOE can significantly increase the efficiency of the process and reduce the time needed for NEPA reviews while ensuring environmental integrity and project deployment.

ACP and ACORE both supported the mandatory nature of the IIP Process as a prerequisite to participation in the CITAP Program, provided that it serves its intended objective of enhancing coordination, reducing permitting timelines, and minimizing duplication. ACP and ACORE noted that the IIP Process's early environmental review could conserve resources for public and private participations. PJM noted that the requirement should help avoid the current multi-agency piecemeal approach.

DOE also received comments generally in support of the establishment of the resource reports. AEU and the CARE Coalition expressed support for the thirteen resource reports proposed by DOE. AEU commented that the resource reports provided a comprehensive and wide-ranging analysis of the project. CARE Coalition commented that the resource reports were sufficiently comprehensive and detailed to enable Federal agencies, State and Tribal authorities, stakeholders, and the public to adequately review the project. AZGFD explained that the heightened consideration for resources through submitting 13 resource reports early in the process enables coordination and prevents implementation delays. It also stated that in some cases, adequate assessment of resources could take multiple years and multiple revisions before Federal environmental review is complete.

However, while commenters were broadly supportive, some commenters suggested changes to the level of detail required during the IIP Process and resource reports, indicating these would add flexibility and avoid what they perceived as unnecessary or burdensome tasks. Pew Charitable Trusts, in response to potential opposition to the level of information required in the pre-application phase, cited previous studies that conclude that a transparent and thorough siting process can benefit both the public and developers. AEP emphasized that an IIP Process should only be mandatory if it (1) informs the NEPA process and (2) minimizes duplication by project proponents and Federal entities. AEP noted that the IIP Process should also conserve the resources of project developers by actively encouraging permitting authorities to rely on the IIP Process's early environmental review. AEP also urged DOE to coordinate with transmission developers to enhance efficiency and protect environmental objectives. ACP cautioned against a burdensome pre-application phase and encouraged DOE to demand a level of information that is appropriate for NEPA scoping and consistent with the project's development. ACEG agreed with these assertions, adding that the level of information required in the IIP Process should be appropriate to support the relevant Federal entities' reviews and consultations, including under NEPA, ESA, and NHPA. ACEG emphasized the importance of reasonable and flexible demands. Similarly, CEBA cautioned against an IIP Process that was too complicated or time consuming. ACORE noted that the timeline for the submission of information in the IIP Process should align with when developers have the needed information and recommended that DOE provide some flexibility in those instances when the full scope of the information required in the IIP reports is not yet available. The NYTOs also suggested DOE should ensure that its data requests and sufficiency determinations align with the reliable data and information standards now set forth in sections 102(E) and 106(b)(3) of NEPA. These NEPA standards emphasize the use of reliable data and explicitly provide in NEPA section 106(b)(3)(B) that in making a determination regarding the level of review under NEPA, an agency ''is not required to undertake new scientific or technical research unless the new scientific or technical research is essential to a reasoned choice among alternatives, and the overall costs and time frame of obtaining it are not unreasonable.'' Similarly, Grid United recommended that DOE should consider section 106(b)(3) of NEPA in determining the level of information that is sufficient for each IIP Process meeting. AEP cautioned against a CITAP or IIP Process that duplicates or exceeds State regulatory application requirements.

Several comments addressed the level of detail required in the resource reports and the burden this would represent to the project proponent. ACP expressed concerns with the level of time and effort required for the development and submission of DOE's proposed resource reports so early in the process, when their usefulness in NEPA's EIS review process is uncertain, and urged DOE to consider that there may be limited information available in the early stages of permitting. ACP requested that the mandatory ''shall'' language be changed to ''should'' or ''to the extent practicable.'' ACEG, SEIA, and CEBA noted that DOE needs to strike a balance between requiring enough information to be helpful in streamlining the review but not making requirements so strict that project proponents are discouraged. ACEG stated that information required in the resource reports must be limited to the information available at the time of submission, as this is a preliminary stage and developers should not be discouraged from applying if they do not yet have all the information. ACEG recommended that the detail of each resource report must be commensurate with the level of available information at the time of the submission.

Relatedly, DOE received several comments regarding the requirements that project proponents account for reasonably foreseeable effects. PIOs commented in support of the proposed rule's requirement to assess climate impacts. PIOs explained that the proposed rule's requirements that resource reports account for generation resources that are reasonably foreseen to be developed or interconnected and for reasonably foreseeable changes in emissions will ensure a rigorous environmental analysis that properly accounts for the project's climate impacts and are well-founded in NEPA's plain text and implementing regulations, CEQ guidance, and judicial precedent. Policy Integrity provided similar rationale and additionally indicated that providing such data would be ''relatively easy'' for proponents. Policy Integrity elaborated that FERC has historically required such estimates from transmission developers, that developers have previously submitted these data and analysis to both DOE and FERC, and that power system emissions estimates are accessible through readily available modeling software. Along similar lines, AEU commented that the resource reports are comprehensive and require a wide-ranging analysis of the project, and that the requirement to describe reasonably foreseeable generation resources is especially beneficial because it illustrates the project's value and benefits to the larger regional and interregional grid.

On the other hand, CATF suggested that instead of requiring project proponents to describe reasonably foreseeable generation resources, DOE should request this specific information only for generator interconnections designed to connect specific generation resources to the bulk power system.

CATF explained that it may be difficult for certain qualifying projects to determine the scope of what generation resources are reasonably foreseeable. Accordingly, CATF recommended that DOE not require project proponents to determine associated generation resources where burdensome, speculative, and of limited value to decision makers, and revise the provision to include only ''specific'' generation resources. CATF cited to judicial decisions to support the proposition that an analysis of foreseeable generation is not required where the generation would likely have occurred even absent the project. ClearPath offered additional criticisms of the foreseeable generation requirement. ClearPath urged DOE not to exceed its jurisdiction to conduct environmental reviews by including additional requirements without consulting CEQ, and stated that DOE's requirements to consider indirect impacts of the project and identify effects from existing or reasonably foreseeable projects are beyond DOE's statutory authority and are contrary to CEQ Guidance. ClearPath recommended that DOE limit IIP Process requirements, and subsequent review in an EIS, to only an electric transmission line and its attendant facilities within Federal jurisdiction. Finally, the NM SHPO inquired generally about foreseeable generation, and whether foreseeable development will be considered in the assessment of historic properties under NHPA section 106 and its implementing regulations.

DOE also received comments on the iterative nature of the IIP Process and the role and scope of the three anchor meetings. While ACP approved of the general structure of anchor meetings, ACP emphasized the importance of flexibility in order to accommodate proposed projects that already have conducted significant Federal and State outreach or have agency-specific reporting that may differ in approach and timing to the IIP. ACP also suggested that DOE clarify how potential route changes can be accommodated without restarting the process, and that the final rule provide specific criteria that DOE and relevant Federal entities would follow in their consideration of adding, deleting, or modifying these routes.

ACEG suggested that DOE amend the proposed rule to strike or significantly modify its ''sufficiency'' standard for scheduling meetings, which DOE proposed to be required for scheduling each of the three required anchor meeting requests. ACEG and NYTOs commented that DOE should only find a meeting request insufficient when the information provided in the meeting request is insufficient to support a productive meeting, *e.g.,* a review meeting request should only require sufficient information to hold a productive discussion on the initial resource reports. For an example, NYTOs stated that as an ''initial review meeting'' is intended to identify issues of concern, information gaps or data needs—the existence of information gaps or the need for additional data, itself, should not be an appropriate basis for declining to proceed with a review meeting. ACEG expressed concerns that the current approach could allow an application to be indefinitely ''parked'' by unreasonable or overly burdensome demands for more information for purposes of a sufficiency determination. Similarly, Idaho Power asked, recognizing that review under the IIP Process is iterative, what controls there are to avoid continued and repeated refinement of analysis. Idaho Power also asked if the resource report requirement change infers the project proponent will have already identified potential resource concerns by consulting with relevant, Federal land managers.

DOE requested comments on page limits for certain submission in the NOPR and received seven responses. CBD and the CARE Coalition both expressed a general concern with page limits on environmental reviews, with CBD stating that arbitrary limits risk sacrificing detail, undermining public participation, and causing delays. The Kentucky SHPO stated that page limits may be applicable if resource reports will serve only as background information, but page limits may not comply with NHPA or applicable State statutes if documentation is intended to be utilized by the project proponent or Federal agency for section 106 consultation materials. AZGFD noted that the NOPR only mentions page limits in the documents Summary of the Qualifying Project and Project Participation Plan, required by § 900.5, and recommended that DOE not include page limits for resource reports. ACP expressed concern with imposing page limits on project summaries and participations plans required by § 900.5 and instead recommended that DOE allow for flexibility and allow for page-limit carve outs for appendices where appropriate. Gallatin Power stated that the page limits for the Summary of the Qualifying Project and Project Participation Plan are reasonable but noted that the scope of transmission projects will vary greatly and suggested that DOE allow project proponents to request additional pages if deemed necessary. The CEC/CPUC stated that the page limit for the Summary of the Qualifying Project is appropriate but the limit for the Project Participation Plan may be limiting. Similarly, EDF raised a concern that the ten-page limitation for a Project Participation Plan might constrain the level of detail needed to comprehensively and holistically assess the project's impact and may signal to project proponents that only a cursory assessment is needed.

DOE received one comment regarding the participation of relevant Federal entities. EEI noted that transmission projects that interconnect, parallel, or cross facilities owned or operated by Federal power marketing administrations, such as Bonneville Power Administration and the Western Area Power Administration, may also be qualifying projects under the CITAP Program as proposed. EEI suggested that in such cases, the Federal power marketing administrations must be involved in some manner as relevant Federal entities, either as joint lead agency with DOE or otherwise, and should remain actively involved in the coordination process. EEI further noted that providing a coordination role for Federal power marketing administrations is consistent with section 216(h).

DOE received comments from ACEG, AEP, and PIOs that addressed participation of relevant non-Federal entities. AEP urged DOE to be mindful of the important and necessary roles State and local decisionmakers play in the proposed transmission project approval process. ACEG and PIOs generally supported the clear and increased role for non-Federal entities, including Indian Tribes, SHPOs, and THPOs, in the IIP Process but noted that the important role of these additional entities in the process can also complicate reviews. ACEG recommended that DOE ensure that these non-Federal entities not only have but also use their seat at the IIP Process table and have necessary resources to fully participate in the process. PIOs stated that such improved coordination will be essential to ensure that resource reports provide all the necessary analysis and information to enable project proponents to receive all relevant authorizations. ACEG also noted that one way DOE can facilitate this participation is by effectively implementing its grant funding opportunities for transmission siting and permitting participation.

Regarding confidential information and/or CEII, the CARE Coalition recommended that DOE specifically

invite comments from Indian Tribes regarding best practices around outreach by project proponents and prioritize Tribal recommendations. The CARE Coalition also recommended that DOE create a list of best practices; add free, prior, and informed consent (FPIC) to that list; and add language stating agencies must apply FPIC to all interactions between agencies and Tribal governments. The CARE Coalition believes that these changes will ensure that agencies adhere to both the United Nations Declaration on the Rights of Indigenous Peoples and the Federal trust responsibility to Tribal governments. Relatedly, PIOs recommended that DOE adopt language from the Washington State Attorney General's Centennial Accord Plan, Indigenous Knowledge requirements, and requirements from the 2022 Biden Memorandum on Uniform Consultation Standards. The CARE Coalition recommended that DOE add a separate provision requiring agencies to clearly articulate the levels of confidentiality afforded to the public and governmental engagement for the information shared therein. The CARE Coalition recommended that DOE ensure that sacred sites, locations, and Indigenous Knowledge are protected from public disclosure to the greatest extent practicable. The NM SHPO added that agency officials should address concerns about confidentiality with Tribes.

DOE received comments requesting clarification on how the proposed rule would affect transmission projects that are already in the permitting process from Stoel Rives LLP and Idaho Power and a comment from Gallatin Power regarding the interaction of the IIP Process with other permitting processes. Stoel Rives argued that these projects should also be eligible for DOE's improved and expedited approval process, under the CITAP Program or otherwise. Stoel Rives encouraged DOE to consider these projects in this final rule and provide a roadmap detailing how they can be integrated into the process. Gallatin Power raised a concern that under the current provisions, a project proponent will not be able to submit applications to relevant Federal agencies for necessary Federal authorizations until after the completion of the IIP Process. Gallatin Power contended that the submission of an authorization application and supporting materials allows for the developer to identify its interest in a right-of-way path impacting Federal land and be designated the ''first-in-line'' for review. Forcing the application submittal to later in the process could result in multiple developers attempting to complete the IIP Process, including the intensive resource reports, for the same lands at the same time. This would create substantial inefficiencies for both the project proponents and the agencies involved. Gallatin Power suggested that to avoid this, DOE should either continue to allow developers to submit applications to Federal agencies prior to initiating the IIP Process or institute a similar ''first-in-line'' approach based on when projects are proposed for the CITAP Program. Gallatin Power also proposed that the transmission projects that have already submitted applications for authorizations to relevant Federal agencies should not be forced to redo their application process or have their applications invalidated until the IIP Process is completed. They argued that doing so would be highly disruptive to development efforts and counterproductive to DOE's goals.

DOE also received comments regarding studies that may be undertaken during the IIP Process. The CEC/CPUC encouraged early coordination and review of a project proponent's supporting study methods for the IIP Process because reviewing study methods and securing necessary approvals for field review, before a proponent has conducted its studies, could reduce later delays. Additionally, the CEC/CPUC encouraged DOE to help other Federal agencies set schedules for timely study authorizations and afford exemptions to allow project proponents to initiate the IIP/CITAP Process if other Federal agency authorizations are delayed. Idaho Power asked DOE to clarify if the level of study is assumed to be desktop/GIS-informed or if there an expectation that field surveys will be completed for all project alternatives. Idaho Power also asked if DOE would be the final arbiter of completeness for studies or if each relevant Federal land management agency would have the authority to request additional information. Gallatin Power commented that DOE should clarify when the project proponent will receive authorization from Federal agencies to complete field resource surveys. Gallatin Power further stated that a lack of structure could allow for the permitting timelines to remain the same since uncertainty would be shifted to before the start of the rule's proposed two-year NEPA deadline.

Five commenters provided responses to DOE's request regarding the duplicative aspects of the NOPR. ACP commented that project proponents should be permitted to incorporate by reference existing data, environmental reviews, and public engagement efforts to streamline the process. ACEG recommended that the specific language regarding incorporation by reference be clarified so that incorporation by reference is permissible for all data, not just material in other resource reports and provided some suggested edits to the provision. CEC/CPUC stated that duplicative aspects of reports should be eliminated to limit inconsistencies in review, providing as an example that the Cultural Resources resource report, the Tribal Resources resource report, the Communities of Interest resource report, and the Socioeconomic resource report all overlap but may not be reviewed by the same agency subject matter experts, which may result in inconsistent evaluations.

ClearPath stated that the requirement for project proponents to list and describe all dwellings and related structures or other structures normally or intended to be inhabited by humans within a 0.5-mile-wide corridor centered on the proposed transmission line was duplicative of information regarding affected landowners required in General Project Description resource report and should be omitted.

ACP recommended that DOE not require the public disclosure of names of people project proponents spoke to in preparing the resource reports, as this is overly onerous and lack of detail in this section should not be a basis to legally challenge DOE's eventual determination.

DOE Response

In this final rule, DOE retains the purpose and scope of the IIP Process as proposed in the NOPR, including the three-anchor-meeting structure and information requirements for progressing through the process, with minor revisions. DOE revises this final rule for clarity and to reduce burdensome and duplicative requirements in response to comments, as described below. DOE revises the page limits in this final rule to allow for project proponents to request a waiver. DOE makes no other revisions in response to these comments but notes that revisions to resource reports and IIP Process meetings in response to other, specific comments received on those aspects are addressed in sections VI.N and G of this document.

DOE declines to act on those comments urging greater flexibility in the IIP Process and in the content of resource reports because it believes such measures are unnecessary. This final rule confirms the provisions in the NOPR that provide for sufficient

flexibility: the three anchor meetings, which provide structured opportunities to discuss and establish expectations; the provision permitting the project proponent to submit resource reports missing discrete pieces of information so long as the project proponent provides an acceptable reason for the omission and an acceptable timeline for curing the omission; and the provision granting the Director of the Grid Deployment Office with discretion to waive any requirement imposed on a project proponent if the Director of the Grid Deployment Office determines that that it is unnecessary, duplicative, or impracticable under the relevant circumstances. DOE finds that together these provisions provided the flexibility necessary to respond to a wide variety of circumstances.

Regarding comments from ACP, ACEG, ACORE, SEIA, and CEBA on the level of detail requested in resource reports and specifically the availability of information based on project maturity and compliance with NEPA regulations, DOE makes no revisions in response to these comments. First, DOE believes the level of detail in the resource reports is necessary for DOE to implement its authority under section 216(h), which includes both environmental review and the coordination of decision making with relevant Federal entities. Second, this final rule adopts the proposed provision that project proponents may address and justify omissions or incomplete information. DOE believes this provides sufficient flexibility to accommodate project differences without further revision. Regarding ACP's request to modify language from shall to ''should'' or ''to the extent practicable'', where DOE intends to impose a mandatory obligation, it uses appropriate language, including ''shall.''

Regarding the inclusion of reasonably foreseeable effects, DOE declines to make changes to the requirements that project proponents identify certain reasonably foreseeable effects. DOE's obligations under NEPA, as well as corresponding obligations under section 106 of the NHPA and the ESA, require the Department to consider the reasonably foreseeable effects of major Federal actions affecting the quality of the human environment, as noted in PIOs' comment. While the scope of any NEPA review will be determined at the close of the IIP Process and on a case-by-case basis, the information required for inclusion within the resource reports discussed in this section is likely to be relevant for preparation of environmental review documents necessary for authorizations subject to this rule. In order to assist DOE in fully considering this relevant information, DOE seeks input from project proponents to identify reasonably foreseeable generation projects that may be caused by a Federal authorization. Even when DOE determines a particular generation resource to be outside the scope of review DOE may still need to identify the resource and explain its conclusion. The language of the rule tracks these statutory obligations, and is consistent with the Secretary of Energy's authority under section 216(h) to require the submission of all data considered necessary.

Regarding the iterative nature and level of information requested for the three anchor meetings, DOE makes minor changes in this final rule regarding the discussion of and criteria for modifying study corridors in response to comments. DOE restates that the IIP Process is designed to allow for flexibility throughout the process while maintaining sufficient review periods to ensure that the project proponent is taking the steps necessary to complete the required Federal authorization processes.

In response to ACP's concern on how route changes will be accommodated without restarting the IIP Process, DOE believes the iterative nature of the IIP Process provides mechanisms to account for route changes, including: meetings, the use of analysis areas for resource report assessments (discussed in section VI.K.ii of this document in detail), study corridors that may contain multiple routes, and the resubmission of resources reports, none of which require a restart to the IIP Process. Accordingly, DOE makes no changes in response. Regarding ACP's request for criteria on adding or deleting routes, DOE revises the rule for clarity. First, DOE relocates the list of criteria from the initial meeting to § 900.4, Purpose and Scope of the IIP Process, and clarifies in the text that these are the initial list of criteria the project proponent should consider when developing potential study corridors and potential routes for the IIP Process. The change encourages the project proponent to utilize the criteria in identifying routes and corridors throughout the IIP Process, rather than just after the initial meeting. Second, DOE removes ''deleting'' from the initial meeting discussion topic to clarify that the IIP Process does not include a Federal entity deleting any corridors or routes. This final rule retains the requirement for DOE and other agencies to identify other criteria for adding or modifying potential routes and includes that the agencies should also identify criteria for potential study corridors as well. DOE makes no further revisions as these changes sufficiently clarify the criteria recommended and how they will be considered, and any additional criteria will be discussed on a project-by-project basis.

DOE makes no changes to the final rule in response to comments from ACEG and NYTO regarding establishing a standard for determining the sufficiency of materials required for each IIP Process meeting. DOE requests the information it deems necessary and sufficient for each meeting as described in the rule and has chosen not to provide a specific standard in order to maintain flexibility to evaluate submitted materials depending on the specific needs and circumstances of each project. As previously noted, IIP Process materials may be submitted with omissions provided that the omission is noted, a reason is given, and reasonable timeline for curing the omission is provided. Additionally, the final rule confirms the proposed provisions through which DOE will provide reasons for finding the submissions deficient and how such deficiencies may be addressed by the project proponent. DOE believes these provisions provide flexibility for a wide range of project circumstances.

Regarding concerns from Idaho Power and ACEG that projects could be ''parked'' in the IIP Process, DOE makes no revisions to the final rule. This final rule confirms the intended iterative nature of the IIP Process and the interests of DOE in engaging in communications that are not limited to the three anchor meetings. These provisions are intended to prevent the situation described by the commenters where a request is rejected due to information or knowledge gaps or continued study refinement, by providing a communication mechanism through which such gaps could be discussed in advance. Additionally, as previously explained, DOE provides sufficient flexibility to the IIP Process to accommodate unique circumstances.

Regarding Idaho Power's question as to whether project proponents are expected to engage with agencies prior to the IIP Process, DOE responds that project proponents may choose to consult with relevant entities prior to IIP Process at their discretion, but are not required or expected to do so.

Regarding page limits, DOE believes that the limitation on the number of pages in the Summary of the Qualifying Project and the Project Participation Plan is generally useful and appropriate, but agrees with commenters that some complex projects may require additional pages to address pertinent information for the project and the project

proponent's outreach. Accordingly, DOE revises this final rule to allow for project proponents to request waivers to the page limitations of the Summary of the Qualifying Project and the Project Participation Plan. As the proposed rule established no specific page limitations on the environmental review document or resource reports, DOE makes no additional revisions in response to comments on those documents but acknowledges that relevant statutory page limits for environmental review documents will be followed.

Regarding the participation of relevant Federal entities, DOE has made no changes in response to EEI's suggestion to include Federal power marketing administrations because DOE has determined that such a scenario is already allowed by the regulatory text in the definition of relevant Federal entity.

Regarding the participation of relevant non-Federal entities, DOE agrees that not all relevant non-Federal entities will have the resources available to participate in the IIP Process. DOE makes no changes to this final rule, however, because provisions for cost-recovery and contribution of funds, which may assist in those entities' participation, are already included in the IIP Process. The recommendation of coordination of grant funding is outside the scope of this rulemaking, which is limited to implementation of DOE's coordinating authority under section 216(h) of the FPA. DOE has made no changes in response to this comment. DOE encourages non-Federal entities with authority to make permitting decisions regarding proposed electric transmission projects (*e.g.,* State siting authorities) to actively participate in the CITAP Program, and will continue to seek ways to support such participation as the Program is implemented.

Regarding confidentiality of information and recommendations from the CARE Coalition among others, DOE makes no changes to this final rule. DOE finds that existing statutory provisions referenced in the proposed rule and confirmed in this final rule provide a framework for the protection of certain sensitive information from public disclosure. DOE recognizes that Indian Tribes are entitled to decline to provide information potentially at issue in the resource reports and IIP Process, and notes that this final rule does not mandate that Indian Tribes provide any material or information to project proponents. DOE will work with Indian Tribes to access relevant material and incorporate it into relevant decision-making while protecting the confidential and sensitive nature of that information as necessary and legally permitted. Additionally, as noted in section IV of this document, DOE affirms the sovereignty of Federally recognized Indian Tribes and confirms that the rule makes no changes to Federal agencies' government-to-government responsibilities. DOE commits to undertake Tribal consultation as appropriate, including as required by applicable authorities such as Executive Order 13007 or the Presidential Memorandum on Uniform Standards for Tribal Consultation, and commits to designate Indian Tribes with special expertise regarding a qualifying project, including knowledge about sacred sites that the project could affect, that are eligible, to become cooperating agencies under NEPA. DOE declines to include in the final rule best practices around outreach by project proponents or to import existing requirements related to Tribal engagement into this rule. The form and scope of outreach may vary by project and DOE believes these issues are best addressed on a project-by-project basis or in guidance outside of this rule.

Regarding participation of projects already undergoing a permitting process, DOE notes that nothing in the definition of qualifying project excludes such projects from participation and that the flexibility provided for in the IIP Process will allow DOE to determine accommodations for such projects on a project-by-project basis. DOE disagrees with Gallatin Power's interpretation that the CITAP Program would disallow or invalidate permitting applications previously submitted prior to initiation of the IIP Process or submitted during the IIP Process. DOE acknowledges that some applications for authorizations may already be submitted prior to initiation of the IIP Process or may be submitted during the IIP Process and accommodates for such scenarios in the rule. For example, this final rule confirms the NOPR provisions that the initiation request and the review meeting request require the project proponent to provide a list of anticipated and completed dates of applications for authorizations or permits. Further, the rule specifically provides in § 900.5(h)(2) that at the initial meeting DOE will identify any Federal applications that must be submitted during the IIP Process to enable relevant Federal entities to begin work on the review process. DOE finds that these provisions sufficiently provide that this final rule will not impede developers' strategies for seeking authorizations for their projects. Nowhere in the rule does DOE indicate that these applications will be invalidated or require resubmission, nor does DOE have authority to do so.

Regarding study methods and approvals as raised by CEC/CPUC, Idaho Power, and Gallatin Power, DOE revises this final rule to provide clarity on the extent to which analysis of alternatives is expected (discussed in more detail in section VI.L.xi of this document) and to specify that required or recommended surveys or studies will be discussed in the IIP Process during the initial and review meeting. DOE makes no further revisions to this final rule in response to these comments as study methods and authorization timelines are specific to project circumstances and DOE will address these on a project-by-project basis. DOE clarifies here that DOE leads the IIP Process and will determine the completeness of documents and studies for the purpose of progressing through the milestones, while relevant Federal entities maintain statutory authority for determining the completeness of information needed for their decision-making.

Regarding the duplicative nature of some resources reports, DOE makes minor revisions in response to these comments. DOE agrees that incorporation by reference should extend to publicly available sources, such as existing data and environmental reviews, but only if they exist in electronic form (to ensure relevant entities can reasonably access the material), and revises this final rule to allow for such references. In response to the request to combine resource reports to assure consistent review, DOE makes no revisions in response to this comment as DOE believes the division of resource reports will provide specific information pertinent to that resource topic that is necessary for DOE to implement its coordination authority. Further DOE believes the coordination of reviews within the IIP Process with relevant Federal entities will provide consistency of evaluation, and notes that the review of project proponent resource reports does not replace or supplant Federal entities' responsibilities to evaluate necessary information for decision making on authorizations and permits under their purview. Regarding the request to remove duplication in reporting of affected landowners and dwellings proximate to the proposed route, DOE makes no revisions in this final rule. DOE does not agree that these are duplicative requests, as affected landowner describes a person or entity and dwelling describes a building.

In response to ACP's concern about the burden of providing detailed information on all persons contacted in

development of the resource reports, DOE agrees that this provision represents an unnecessary burden on project proponents and removes it from this final rule.

E. Public Participation in the IIP Process

DOE's Proposal

The proposed rule included several provisions addressing public participation. In the NOPR, DOE proposed the project proponent submit, as part of the initiation request, a project participation plan. The proposed project participation plan included the project proponent's history of engagement with communities of interest and stakeholders, and a public engagement plan for the project proponent's future engagement with communities of interest and with Indian Tribes that would be affected by a proposed qualifying project. Before the review and close-out meetings, DOE proposed that the project proponent provide an updated public engagement plan to reflect any activities during the IIP Process. Additionally, the proposed rule required the standard schedule to take into consideration the need for early and meaningful consultation with Indian Tribes and engagement with stakeholders and communities of interest. Likewise, the project-specific schedule was required to account for early and meaningful consultation with Indian Tribes and engagement with stakeholders.

Summary of Public Comments

DOE received several comments addressing public participation during the IIP Process, including the requirement of project proponents to plan for and report on engagement with various groups, and recommendations for modifications, clarifications, expansions, and reductions of the proposed public engagement reporting requirements.

Many commenters supported DOE's requirement to have a project proponent submit project participation and engagement plans. ACP, AEU, ACEG, SEIA, Pew Charitable Trusts, CEBA, and PIOs all expressed support for the requirement, expressing that such engagement would build trust and allow prompt response to concerns. PIOs expressed that they believe DOE is correct to require project proponents to furnish ''specific information on the proponent's engagement with communities of interest and with Indian Tribes'' and that requiring a public participation plan is well-grounded in binding Federal authorities. Additionally, PIOs expressed appreciation to DOE for noting that project proponent outreach efforts are merely complementary and not substitutive for Federal agencies' own engagement with communities and Indian Tribes nor are they substitutive for formal requirements under NEPA or other laws that provide formal avenues for community input. ACP supported DOE's efforts to encourage early and consistent engagement by project proponents with affected communities, as this represents a best practice for identifying, mitigating, and avoiding risks of sometimes-contentious transmission project development.

DOE received several comments recommending changes to the role of public participation and the scope of participants. EDF stated that the project participation plan is too narrowly focused, as public input should be expansive and not limited to ''project engineering and route planning.'' The CARE Coalition encouraged DOE to require that project participation and public engagement plans include information about engagement with advocates for the public interest, such as advocates for wildlife protection, who may not be covered under the definition of ''communities of interest.'' The CARE Coalition argued that the inclusion of these groups and individuals in the project participation and public engagement plans would help develop resource reports, reduce litigation risk, reduce delays, and reduce overall project costs. PIOs recommended that DOE require separate engagement plans for Indian Tribes and communities of interest.

Commenters requested more guidance on public engagement, including parameters, minimum requirements, metrics, and best practices. EDF commented that proposed rule does not require the project proponent to strictly define communities of interest and recommended that the communities considered should be based on CEQ's Climate and Economic Justice Screening Tool or a comparable tool. EDF further recommended refining the public engagement plan to include mandatory deadlines or frequency of outreach requirements, to specify when communities of interest will have an opportunity to raise concerns, and to list additional tools that would facilitate communication in order to improve the efficacy of the plan. EDF expressed concern that the project participation plan did not require project proponents to engage with communities before substantive plans were solidified or require that input from communities of interest is taken into account in the beginning stages of plan development. Similarly, Niskanen Center was concerned that the proposed rule did not have sufficient notification or consultation requirements regarding the proposed public engagement plan, such that a project proponent would actually have to engage early or meaningfully with impacted parties or communities of interest. Niskanen Center accordingly recommended adopting notice requirements with defined timing and linked to specific milestones such as the notice of an initiation request. The CARE Coalition recommended that DOE adopt a definition of ''early and meaningful engagement'' similar to EPA's definition of ''meaningful involvement'' in its Environmental Justice 2020 Glossary and stated that providing a definition will ensure that engagement with communities does not simply consist of ''check-the-box'' exercises without meaningfully engaging with communities that are disproportionately and adversely affected by certain Federal activities. ACP suggested that DOE should provide additional clarity as to what specific steps are required for engagement, and what DOE considers as ''successful'' engagement, and AEU echoed this comment. ACP, AEU and ACEG requested that DOE expressly recognize that engagement with potentially affected parties does not necessarily mean that all parties will reach a consensus on all issues. The CARE Coalition suggested DOE require submission of an ''Applicant Code of Conduct'' with additional information collection and sharing requirements for engagement, which would bring the rule into better alignment with FERC's proposed backstop permitting rule. Similarly, PIOs suggested that DOE require project proponents to adhere to a rigorous ethical code of conduct. Additionally, EDF suggested that the proposed rule might benefit from the expertise of DOE's Office of Economic Impact and Diversity.

The CARE Coalition, CBD, and CEBA suggested including best practices for public engagement and providing guidelines for project proponents as to what activities are considered engagement.

Commenters also expressed concern about the extent and approach to public engagement. AEP cautioned against a CITAP Program or IIP Process that duplicates or exceeds the RTO stakeholder process or required State and local permitting functions that ensure robust community and landowner engagement and outreach. ClearPath expressed opposition to requirements in the project participation plan and public engagement plan that

create duplicative engagement requirements and institute different standards of engagement for different population segments. ClearPath specifically took issue with the different standards for ''communities of interest'' and ''stakeholders'' in the plans and suggested that the distinction was counterproductive to development of transmission projects and possibly unconstitutional. ClearPath also recommended amending the requirement that a project participation plan must include ''[a] description of . . . any entities and organizations interested in the proposed undertaking.'' ClearPath stated that it was impossible to describe *any* interested entities and organizations because DOE did not provide a threshold for what actions constitute a demonstration of interest. ClearPath recommended reevaluating whether this requirement was feasible and overly burdensome. StopPATH WV expressed its view that the project participation plan described in the NOPR is one-sided given that the developer and agencies have primary decision-making power and suggested that the name should be changed.

DOE received three comments regarding the role of community benefits plans. Alan Leiserson commented that the public engagement plans should require that the project proponent propose a community benefit plan and consider affected communities' suggestions for it. EDF also proposed that CITAP project participation plans and public engagement plans be required to include information on any potential community benefits agreements and the process that would be used to work with communities of interest in developing such agreements. EDF reasoned that information about any community benefit agreement or plan would support the CITAP review process and allow for coordinated review of the compliance of those plans with any other legal requirements. ACP supported DOE's efforts to encourage early and consistent engagement by project sponsors with affected communities. ACP expressed that DOE should consider environmental mitigation and community benefits developed under this community engagement process as project mitigation and/or design features in NEPA reviews.

PIOs, CARE Coalition, CBD, and Policy Integrity recommended that DOE incorporate additional opportunities for public participation in the IIP Process. PIOs stated that communities and organizations with relevant expertise should be allowed to participate in the three required meetings. CARE Coalition and PIOs suggested that DOE add an opportunity for public comment on project proponents' compliance with their participation plans and provide a mechanism for affected communities to make concerns known if proponents interact with the communities in a manner that is aggressive, coercive, dishonest, or otherwise unethical or if stakeholders disagree with project proponents over the scope or nature of a project's impacts. Similarly, CBD suggested including junctures at which the public could provide input into the resource reports and public participation plan. Policy Integrity also recommended that DOE modify the proposed IIP Process to allow for early public comments, arguing that early community feedback and expert opinion could reveal pitfalls in a project in the pre-application stage. Without this step, Policy Integrity expressed concern that the public would have no voice until after the participating agencies have deliberated and potentially come to a consensus on certain issues in the pre-application stage. For example, Policy Integrity noted that agencies may deem project proponents' Alternatives Report as complete once they ratify it during the IIP Process, without any consideration for public input. Additionally, Policy Integrity argued that its proposed revision would bring the IIP Process into closer alignment with the pre-filing process for natural gas infrastructure at FERC, which accepts formal public comment, and suggested the consolidated administrative docket be allowed to provide public feedback.

DOE Response

In this final rule, DOE retains the proposals in the NOPR to require a project participation plan and a public engagement plan, and the provisions in the NOPR addressing engagement with communities of interest, Indian Tribes, potentially affected landowners, and stakeholders. In response to these comments, DOE makes minor changes to this final rule to clarify the scope of topics on which project proponents should seek public engagement, for the reasons discussed below. Revisions to the definitions of communities of interest, potentially affected landowners, stakeholders, and to the resource reports are addressed in sections VI.J and VI.K of this document in response to other comments.

Regarding the role of public participation and the scope of participants, DOE makes minor changes in response to these comments. DOE clarifies that the project participation plan may include—but is not limited to—engagement related to project engineering and route planning and strikes ''project engineering and route planning'' from this final rule to reflect this. DOE makes no changes in response to the request to require engagement with advocates for the public interest because DOE believes further expanding the required engagement creates an undue burden on project proponents without substantial benefit to communities of interest. Furthermore, DOE understands that these advocates may, and often do, act as representatives on behalf of communities of interest and are therefore likely to be engaged through those relationships. DOE is unpersuaded that two public engagement plans, one for communities of interest and another for Tribal engagement, are necessary and believes that the proposed resource report requirements for communities of interest and Tribal interests allow for sufficient differentiation on the topics for DOE's consideration.

Regarding requests for minimum standards, deadlines, frequency, specific steps, use of tools for identifying communities of interest, and notice requirements, from CARE Coalition, CBD, CEBA, EDF, and Niskanen Center, DOE makes no revisions in this final rule in response to these comments. DOE believes the provisions for public engagement in the proposed rule and confirmed here establish sufficiently clear expectations for project proponent activities while maintaining flexibility for the project proponent to shape engagement consistent with the project circumstances and development. These provisions as proposed and now finalized sufficiently support the goals of the CITAP Program by encouraging engagement on the part of the project proponent to identify concerns early and to allow for the project proponent to consider adjustments in a timely and responsive manner. Additionally, these provisions are complementary and additional to Federal agencies' own engagement with communities and Indian Tribes and the requirements under NEPA or other laws that provide formal avenues for public input including notice and consultation requirements. DOE is not persuaded that additional requirements are necessary or appropriate for the IIP Process.

Regarding codes of conduct, DOE has determined that defining a singular code within the regulatory text is unnecessary at this time. In its role coordinating the IIP Process and the CITAP Program, DOE will work closely with project proponents, relevant

Federal entities, communities, and other stakeholders. In that role, DOE will endeavor to ensure that project proponents engage in good faith with all participants. In contrast to FERC, DOE does not have specific statutory authority regarding eminent domain and thus alignment with all aspects of FERC's proposed rulemaking pursuant to engagement practices is not appropriate but may be addressed on a project-by-project basis where relevant. With experience, DOE may find it appropriate to provide code-of-conduct or ethical guidance and may rely on the resources provided by commenters. DOE also clarifies, in response to EDF's concern, that offices across the agency, including the Office of Energy Justice and Equity (formerly Economic Impact and Diversity), were consulted in the development of the rule.

DOE declines to define ''successful,'' as requested by ACP, or ''early and meaningful'' engagement as requested by the CARE Coalition, because DOE believes the required information on engagement (including what groups and individuals were engaged, how they were identified, topics that were raised, and the project proponent's responses) provides sufficient clarity and additional definitions are unnecessary. DOE declines to include the statement requested by ACP, AEU and ACEG that engagement with potentially affected parties does not necessarily mean that all parties will reach a consensus on all issues because DOE is not persuaded that the proposed rule indicates that all parties will reach a consensus on all issues and therefore finds such a statement unnecessary.

DOE believes that best practices are best provided in guidance rather than regulatory text to allow for flexibility and evolution of such practices and makes no changes in this final rule in response to the comments by CARE Coalition, CBD, and CEBA. In the future, DOE may issue guidance for community-led engagement, measuring engagement, identifying communities of interest, and ethical and meaningful engagement, which may include or reference the sources provided by commenters as necessary for implementation of the CITAP Program.

In response to ClearPath's concern about different standards of engagement, DOE reiterates that the various requirements, including the resource reports and public engagement plan, are tailored to fulfill various, not mutually exclusive, purposes to facilitate transmission authorizations pursuant to the CITAP Program, and are not intended to, nor do they, establish a hierarchy of treatment and consideration of impacts across population segments.

In response to StopPath WV's objection to the project participation plan, DOE declines to change the name of the project participation plan because DOE is not persuaded that the phrase implies any decision-making authority.

Regarding the role of community benefits and community benefits plans, DOE makes no changes to this final rule. DOE believes that the public participation provisions proposed and confirmed here are sufficient to allow project proponents to engage with communities in the development of plans or agreements and for compliance to be evaluated in the CITAP Program where relevant for Federal permitting or authorization decisions. DOE does not agree that additional requirements are needed, as the comments suggest that the situations described are not universal but rather depend on the project, and therefore are best addressed on a project-by-project basis.

Regarding recommendations for inclusion of expert groups in the IIP Process meetings and providing avenues for public comments, DOE makes no changes in this final rule in response to these comments. First, as noted previously, DOE believes the provisions in the proposed rule and confirmed here are sufficient to support the goals of the CITAP Program. DOE has structured the three IIP Process meetings to serve as milestones for coordination between the project proponent and the relevant Federal and non-Federal entities to ensure DOE can meet its obligations under FPA section 216(h) and DOE does not intend to use these meetings to solicit feedback from communities of interest or receive expert input from other organizations. The public participation plan is designed with the intent to identify issues well ahead of the IIP Process meetings for this reason, as the meetings themselves are not intended to serve as avenues for broader input. Second, as noted by DOE throughout the rule and supported by commenters, the CITAP Program public participation requirements are complementary and additional to Federal agencies' own engagement with communities and Indian Tribes and the requirements under NEPA or other laws that provide formal avenues for public input and public comment, including on project impacts.

DOE disagrees with Policy Integrity's interpretation that agencies will make decisions on Federal authorizations during the IIP Process. Federal agency decisions remain subject to distinct decision-making processes with requirements under NEPA and other laws that provide formal avenues for public input. Furthermore, with respect to Policy Integrity's specific concern regarding project proponent's Alternatives resource report, as discussed in further detail below, *see* section VI.K.xi of this document, the project proponent's Alternatives resource report must discuss alternatives identified and considered by the project proponent. However, while a project proponent's study corridors, potential routes, and range of potential routes are relevant information, they do not displace the overall alternatives development process that must take place in consultation with relevant Federal and non-Federal entities, stakeholders, and the public. That process remains subject to public comment pursuant to NEPA and other laws.

F. Timing of IIP Process and NOI Issuance

DOE's Proposal

The proposed rule included several provisions addressing the IIP Process timeline. In the NOPR, DOE proposed to, within 15 calendar days of receiving an IIP Process initiation request, notify relevant Federal entities and relevant non-Federal entities of the initiation request along with a determination that the recipient is either a relevant Federal entity or a relevant non-Federal entity and whether the project proponent should participate in the IIP Process. Also, DOE proposed to, within 30 calendar days of receiving the request, notify the project proponent and all relevant Federal entities and relevant non-Federal entities whether the initiation request meets the applicable requirements. If the request is found to meet the applicable requirements, DOE proposed, in consultation with the identified relevant Federal entities, to convene the IIP Process initial meeting within 30 days of providing notice to the project proponent.

In the NOPR, DOE proposed to, within 15 calendar days after the initial meeting with the project proponent and relevant entities, prepare and deliver a draft initial meeting summary to the project proponent, relevant federal entities, and any non-Federal entities that participated in the meeting. The proposed rule provided a period of 15 calendar days after receipt of the draft initial meeting summary for relevant entities to review and provide corrections to DOE.

In the NOPR, DOE proposed, within 15 calendar days of the close of the 15-day review period, to prepare a final meeting summary that incorporates

received corrections, as appropriate, and incorporate the final summary into the consolidated administrative docket.

DOE proposed in the NOPR to, within 60 calendar days after receiving a project proponent's review meeting request, notify the project proponent and all relevant Federal entities and relevant non-Federal entities that the review meeting request has been accepted. In the NOPR, DOE proposed, within 30 calendar days after DOE provides notice that the review meeting request has been accepted, to convene the review meeting with the project proponent and relevant Federal agencies.

DOE proposed in the NOPR to, within 15 calendar days after the review meeting, prepare and deliver a draft review meeting summary to the project proponent, relevant Federal entities, and any non-Federal entities that participated in the meeting. In the NOPR, DOE proposed to provide a period of 15 calendar days after receipt of the draft review meeting summary for relevant entities to review and provide corrections to DOE.

DOE proposed in the NOPR to, within 15 calendar days of the close of the 15-day review period, prepare a final review meeting summary that incorporates received corrections, as appropriate, and to incorporate the final summary into the consolidated administrative docket.

In the NOPR, DOE proposed to, within 60 calendar days after receipt of the close-out meeting request, notify the project proponent and all relevant Federal entities and relevant non-Federal entities that the close-out meeting request has been accepted. DOE also proposed to, within 30 calendar days of DOE notifying the project proponent that the close-out meeting request has been accepted, convene the close-out meeting with the project proponent and all relevant Federal entities.

DOE proposed in the NOPR to, within 15 calendar days after the close-out meeting, prepare and deliver a draft close-out meeting summary to the project proponent, relevant federal entities, and any non-Federal entities that participated in the meeting. In the NOPR, DOE provided a period of 15 calendar days after receipt of the draft close-out meeting summary for relevant entities to review and provide corrections to DOE.

In the NOPR, DOE proposed to, within 15 calendar days of the close of the 15-day review period, prepare a final close-out meeting summary that incorporates received corrections, as appropriate, and to incorporate the final summary into the consolidated administrative docket.

Summary of Public Comments

DOE received comments from PIOs, SEIA, ClearPath, and AEU that expressed general support for DOE's proposed IIP Process timelines.

Several commenters suggested specific changes to the IIP Process timelines proposed in the NOPR. Grid United and ACP recommended reducing the time between receipt of an initiation request and the date of the initial meeting to no more than 30 calendar days. NYTOs recommended that DOE adopt a 60-day maximum period between receipt of a review meeting request and the convening of the review meeting because a significant amount of the information would have already been reviewed as part of the initial meeting.

ACEG suggested that DOE reduce the 45-day summary and report process after each of the three anchor meetings (initial meeting, the review meeting, and the close-out meeting) and further suggested that DOE require a real-time wrap-up at the end of each meeting during which DOE would provide a meeting summary and participating entities would immediately make any needed corrections. ACEG also recommended that DOE reduce the number of days between the initiation request and initial meeting to 15 days, and reduce the number of days between the close out meeting request and that meeting to 30 days. Grid United also suggested shortening the meeting summary process by emphasizing close-out and action item discussions at the meeting and designating a 15-day period, thereafter, for finalizing the meeting report.

Several commenters requested more information on the total timeline for the IIP Process and the CITAP Program. ACP recommended that the IIP Process include a general timetable to ensure that it does not add unnecessary costs or delays. Similarly, ACEG and CEBA recommended that the rule establish a presumptive one-year limit for completion of the IIP Process. ACORE commented that it supports ACEG's recommendation that DOE commit that any transmission project will be fully authorized in under three years and not longer than five years (from initiation of the pre-application process through issuance of all required Federal authorizations, including any required notice to proceed). CEBA argued that, ideally, the IIP Process and application process, including all environmental review procedures, would be completed within three years. CEBA added that DOE should work with the project developer on a joint schedule that may better accommodate the unique nature of the proposed project. Similarly, ClearPath suggested that the IIP Process timeline in the rule could serve as a baseline and that DOE should allow a project proponent to submit a proposed IIP Process schedule. EDF noted that the IIP Process could take more than one year given the lack of specific deadlines for specific IIP Process steps. EDF stated that there are IIP Process requirements such as the project participation plan that require significant effort and time to develop and that this development time is not captured in the IIP Process schedule. EDF recommended that DOE consider specifying a time period for when a developer must resubmit its review meeting request and close-out meeting request if either request does not meet the specified requirements.

CEBA noted that the burden of completing the IIP Process in a timely manner is highly dependent on the level of effort and resources brought to bear by the project proponent and suggested that DOE should anticipate and recognize a broad diversity of project proposals and afford maximum flexibility for the developer. CEBA further encouraged DOE to ensure that the IIP Process does not become too complicated and time consuming, which could undermine the objective reflected in recent law to shorten the Federal authorization process. Gallatin Power stated that a lack of structure could allow for the permitting timelines to remain the same because timeline uncertainty would be shifted to before the start of the rule's proposed two-year NEPA deadline.

PJM noted that although the NOPR describes the CITAP Program deadlines as ''binding,'' the May 2023 MOU contemplates a process to modify the project-specific deadlines. PJM believes that due to this and the fact that the extensive, mandatory IIP Process is not factored into the two-year timeline, the actual review and approval process will most likely take longer than two years. Hence, PJM requested that DOE carefully reexamine that the proposed revisions will actually aid in accelerating the current process in a way that will ensure that, at a minimum, the CITAP Program is able, in all but the most unusual of cases, to be completed within the two-year time frame or less.

Four commenters, NYTOs, Grid United, ACEG, and ClearPath, expressed concern over the lack of a deadline for DOE to issue the NOI. Grid United recommended that the presumptive deadline should be 90 days after the

close-out meeting. The NYTOs recommended a presumptive deadline of 45 days after either the close-out meeting or the project proponent's completion of applicable filing procedures for each involved Federal agency. ACEG suggested that DOE require the NOI to be issued within 90 days of the project proponent filing all applications and resource reports. ACP recommended that DOE ensure that as little time as possible elapses between submittal of an application for an EIS Scoping NOI, and the subsequent publication in the **Federal Register**.

DOE Response

This final rule makes several revisions to the DOE decision-making timelines that reduce the total time for DOE reviews and responses in the IIP Process by 55 days and the total time for all IIP Process steps by 100 days. DOE also revises this final rule to establish a deadline for DOE and any NEPA joint lead agency to issue an NOI to prepare an environmental review document for the proposed project. That deadline is established as within 90 days of the later of the IIP Process close-out meeting or the receipt of a complete application for a Federal authorization for which NEPA review will be required. DOE makes no revisions to establish timelines for project proponents or to set a timeline for the IIP Process or overall CITAP Program. DOE recognizes that some of the IIP Process is within the government's control, and, where reasonable, for those pieces of the process this final rule adopts shorter timelines. For other pieces of the process, however, the pace is dictated by the project proponent (or factors outside anyone's control, like inclement weather). For those pieces, DOE has not set timelines.

Regarding reducing time between meeting requests and meeting convenings, DOE makes several revisions. DOE agrees that the deadlines for determining the sufficiency of the initiation request and convening the initial meeting can be moved forward to streamline evaluation and coordination. To simplify the initiation request review and reduce the timeline, in this final rule DOE is combining the deadline for providing notice to Federal and non-Federal entities under § 900.5(f) of the NOPR with the deadline for providing notice of the sufficiency determination. Further, this final rule reduces the timeline for making a sufficiency determination on the initiation request from 30 calendar days after receiving the initiation request to 20 calendar days. Finally, DOE revises the timeline for convening the initial meeting from 30 calendar days after providing notice of the sufficiency determination to 15 calendar days. In sum, the revisions reduce the maximum time period between receiving the initiation request and the initial meeting from 60 calendar days to 35 calendar days.

DOE also agrees that the other IIP Process meetings can be convened in less time. Accordingly, the final rule revises the timeline for convening the review meeting and close-out meeting from within 30 calendar days of sufficiency determination to within 15 calendar days. Regarding NYTO's comment that the time between a review meeting request and the review meeting could be reduced, in this final rule DOE shortens the period from 90 days to 75 days by convening the review meeting within 15 days rather than 30 days. However, DOE maintains the review period for the meeting request at a maximum of 60 days because DOE and the relevant Federal and relevant non-Federal entities will be reviewing both the meeting request and the draft submission of the 13 resource reports, which will be substantial and will benefit from careful review. The review meeting timeline may be significantly reduced if the project proponent chooses to submit resource reports in advance, and communicates with DOE, as provided for in the IIP Process.

DOE declines to adopt an immediate meeting summary review process as suggested by ACEG and Grid United because the content of each of the meetings is likely to be substantial, with multiple subject matter experts likely to attend from the relevant Federal entities and relevant non-Federal entities. DOE does not agree that immediate summaries will adequately capture an initial draft of the meeting outcomes. DOE also wishes to clarify that the meeting summary timelines do not add to the total time of the IIP Process because they are not precursors to any subsequent milestones. That is, while DOE is preparing summaries of each meeting, preparation or revisions to the resource reports or other materials needed for subsequent IIP Process steps can and should continue. Nonetheless, DOE does agree that these timelines should be reduced. Consequently, this final rule changes the deadline for DOE to deliver a meeting summary from 15 calendar days after the meeting to 10 calendar days after the meeting, for all three of the IIP Process meetings. Similarly, this final rule shortens the deadline for a project proponent and other entities to review the meeting summary from 15 calendar days after receiving the summary to 10 calendar days after receiving the summary. Finally, the deadline for DOE to provide the final meeting summary is changed from 15 calendar days after the period for corrections to 10 calendar days after the period for corrections. DOE notes that since these deadlines are expressed as calendar days, not work days, DOE is declining additional reductions to ensure the expectations can be met. In sum, the revisions reduce the maximum time period between the conclusion of an IIP Process meeting and the finalization of the meeting summary from 45 calendar days to 30 calendar days.

In response to comments requesting a general timetable or presumptive timeline for the IIP Process or the CITAP Program, DOE makes no changes in this final rule. In the proposed rule and confirmed here, DOE provides decision-making timelines for DOE's responsibilities in the IIP Process, leaving the timing of project proponent actions to trigger the next milestone flexible to account for differences in projects. When factoring the changes described above, the maximum total time for DOE reviews and responses in the IIP Process in this final rule is 185 days. Based on that timeline for DOE decision-making, DOE expects that a prepared and responsive project proponent could readily complete the IIP Process within a year.

DOE does not agree that this final rule should set a total time for the IIP Process or CITAP Program. DOE has chosen to set expeditious timelines for the actions it and its fellow agencies can control. But the time required for each IIP process will ultimately depend on the needs and capabilities of the project proponent. Some projects will be able to move quickly and complete the process well within a year, while others may need more time. Even the best-prepared project proponents may need time to accommodate re-routing or design changes that result from unforeseen developments in the land acquisition process, the interconnection process, or other activities that they pursue in parallel to the IIP Process and that are not entirely within their control. DOE makes no revisions to establish timelines for project proponents to resubmit materials in response to EDF's request to accommodate project proponents with different capabilities. DOE is also declining to make revisions in response to ClearPath's or CEBA's recommendations to allow for individualized IIP Process schedules; again, the overall schedule for the IIP Process will ultimately be determined by the project proponent. Regarding PJM's comment that the IIP Process is not accounted for in the two-year

schedule described in the 2023 MOU, DOE confirms that this is accurate and reflects the agreement in the 2023 MOU. DOE clarifies that the two-year timeline begins with the publication of an NOI to prepare an environmental review document; the IIP Process is intended to precede the publication of the NOI. As discussed in this section and section VI.H addressing the standard schedule and project-specific schedules, DOE has reviewed the timelines set out in this rule and modified certain timelines in the IIP Process to further streamline where appropriate.

In response to comments requesting a timeline for NOI issuance, DOE revises this final rule to state that DOE will issue an NOI within 90 days of the later of the IIP Process close-out meeting or the receipt of a complete application for a Federal authorization for which NEPA review will be required. This 90-day timeline aligns with recommended performance schedules established by the Federal Permitting Improvement Steering Council (FPISC). DOE does not adopt the recommendation to time the issuance of the NOI on the receipt of all applications, because some applications may require more information or project development before filing. For instance, both the FPISC-recommended performance schedules [8] and DOE's draft standard schedule indicate that applications for Clean Water Act (33 U.S.C. 1251 *et seq.*) (CWA) or Rivers and Harbors Act (33 U.S.C. 401 *et seq.*) permit applications may be filed after the NOI is issued.[9]

G. IIP Process Initiation Request

DOE's Proposal

To participate in the CITAP Program, DOE proposed to require a project proponent to submit an IIP Process initiation request to DOE that included a summary of the qualifying project; associated maps, geospatial information, and studies (provided in electronic format); a project participation plan; and a statement regarding the proposed qualifying project's status pursuant to Title 41 of the Fixing America's Surface Transportation Act (FAST–41) (42 U.S.C. 4370m–2(b)(2)).

Summary of Public Comments

DOE received two comments on the contents of the initiation request for the IIP Process. LTA recommended that DOE add sufficient and satisfactory title work for the real property through which an electric transmission facility will pass to the list of required materials for an initiation request in order to identify conserved lands. ACEG stated that additional clarity is needed on how the CITAP program will align with FAST–41 and stated that a project proponent might not be able to state whether the project is covered under FAST–41 in the IIP Process initiation request. ACEG also stated it is unclear how DOE will coordinate with FPISC if the project is covered under the CITAP Program and FAST–41.

DOE Response

In this final rule DOE maintains the required initiation request materials proposed in the NOPR with no revisions.

In response to the request to add title work to the requirements, DOE does not make this revision because DOE believes this would be overly burdensome on the project proponent at the initiation stage of the IIP Process, when a project proponent may not have a finalized route.

In response to the request for more information on alignment with FAST–41, DOE first provides clarification on the provision in the proposed rule. In the proposed rule, DOE would request the status of a project under FAST–41 at the time of the initiation request. But this provision would not ask the project proponent to speculate as to whether the project may be covered in the future. DOE believes the project proponent will be able to state if the project has applied for coverage under FAST–41 and if a coverage determination has been made at the time of the initiation request, and therefore DOE makes no changes in this final rule. Additionally, DOE provides no revisions regarding coordination with the Permitting Council because, as noted by the commenter, a project's FAST–41 status may change during the CITAP Program and therefore DOE expects that coordination between the Permitting Council and DOE will vary on a project-by-project basis. Examples of such coordination are described in the 2023 MOU, and DOE designed the CITAP Program timelines to work in harmony with the Permitting Council processes accordingly.

H. Standard and Project-Specific Schedules

DOE's Proposal

In the NOPR, DOE proposed to establish intermediate milestones and ultimate deadlines for Federal authorizations and related environmental reviews through the introduction of standard and project-specific schedules in accordance with the terms of FPA section 216(h)(4) and of the 2023 MOU. Specifically, DOE proposed to periodically publish a standard schedule identifying the steps needed to complete decisions on all Federal environmental reviews and authorizations for a qualifying project along with the recommended timing for each step. In addition, DOE proposed to establish project-specific schedules for each project participating in the IIP Process, to set binding deadlines by which Federal authorizations and related environmental reviews for a particular project must be completed. DOE proposed to base the project-specific schedule on the standard schedule, to develop it in consultation with the project proponent and other Federal agencies, and to finalize it at the conclusion of the IIP Process.

Summary of Public Comments

DOE received several comments regarding the standard schedule and the development of project-specific schedules. Two commenters supported these provisions. The State of Colorado Governor's Office stated its belief that the standard schedule and the project-specific schedule will provide added flexibility to each project and expressed hope that doing so will minimize the time of the approval process. ClearPath expressed its support for the development of the standard schedule to serve as a baseline for developing project-specific schedules.

Three commenters raised concerns that the two-year timeline in the standard schedule and presumed for the project-specific schedules was too long, and a fourth commenter, PJM, commented in favor of the two-year timeline, but expressed concerns that it may still not adequately expedite the Federal permitting process. OSPA stated that the proposed two-year EIS process is still too long. Alan Leiserson recommended that the standard schedule deadline should be set at one year, or as soon thereafter as practicable, to be consistent with section 216(h). AEP recommended setting one-year timelines for environmental assessments and two years for environmental impact statements. PJM proposed that DOE clarify in the proposed revisions that

[8] ''Recommended Performance Schedules.'' *Permitting Dashboard: Federal Infrastructure Projects,* FEDERAL PERMITTING IMPROVEMENT STEERING COUNCIL, Nov. 2023, *www.permits.performance.gov/sites/permits.dot.gov/files/2023-11/RPS_November%202023.pdf.*

[9] ''Draft Standard Schedule.'' *Grid Deployment Office,* United States Department of Energy, Aug. 2023, *www.energy.gov/sites/default/files/2023-08/CITAP-Standard-Schedule-Draft.pdf.*

while developing the binding, project-specific milestones the relevant agencies will endeavor to shorten the two-year timeline based on the proposed project's scope and location in conjunction with the relevant statutory requirements.

On the other hand, two commenters raised concerns that the two-year timeline was too short. CBD cautioned against setting any timelines for environmental reviews because it could cause agencies to cut corners and result in increased opposition to proposed projects. Similarly, AZGFD expressed concerns that expediting the approval process to facilitate rapid transmission infrastructure development may have unforeseen impacts on wildlife resources. AZGFD argued that although establishing a standard schedule would help in streamlining the process, some projects might require additional time for completion of the NEPA analysis and identification of appropriate conservation measures. AZGFD encouraged DOE to have provisions for independent process-specific timeframes, rather than a standard schedule, to allow adequate time for evaluation and assessment of potential impacts. AZGFD requested DOE to provide clear guidelines on establishment of review times for cooperating or participating agencies with statutory authority or special expertise related to proposed actions. AZGFD further mentioned that it is unclear whether the proposed two-year timeframe applies to the IIP Process, the NEPA process, or the combined process.

Three commenters suggested the project proponent provide more input into the development of the project-specific schedule. ClearPath recommended that DOE allow project proponents to propose a project-specific schedule. Similarly, ACEG and Grid United proposed that the project proponent have the opportunity to provide DOE and the relevant entities with a draft project-specific schedule before the initial meeting, which would be discussed at the initial meeting. Grid United also suggested requiring ongoing consultation between the project proponent, DOE, and the relevant agencies as part of finalizing the project-specific schedule. PJM suggested that DOE include a provision for revisiting the CITAP Program at least every two years to gauge whether the process is meeting its intended goals.

DOE Response

In this final rule, DOE retains without revision the proposal in the NOPR to publish a standard schedule for completing environmental review and decision making for Federal authorizations for qualifying projects within two-years and to develop a proposed schedule with the NEPA joint lead agency and the relevant Federal entities on a project-specific basis during the IIP Process.

Regarding requests to reduce the two-year time frame to complete environmental reviews, DOE makes no changes to this final rule because DOE maintains its conviction that, as a general matter, for transmission projects of the type that meet the qualifying project definition, a two-year timeframe is the shortest practicable length of time necessary to consider applications for authorizations under relevant Federal laws and complete the necessary environmental reviews. Accordingly, DOE concludes that a two-year timeline is likely to be consistent with DOE's statutory obligations under FPA section 216(h). However, DOE notes that the rule does not preclude DOE, in consultation with relevant agencies, from setting project-specific timelines that are shorter than the two-year timeline, should such a timeline be practicable.

Regarding concerns that the two-year timeframe is too short and could reduce the quality of environmental review or impact wildlife resources, DOE makes no changes to final rule because the CITAP Program does not alter any Federal environmental review standards or responsibilities towards wildlife resources. Additionally, this two-year timeline is consistent with the timelines established by the Fiscal Responsibility Act of 2023. Further, DOE notes that the standard schedule is a general framework for environmental review and authorizations, but that the proposed and now this final rule require that DOE develop a schedule specific to each project that addresses the unique permitting and review requirements for that project. In addition, as explained in the proposed rule, DOE anticipates that the IIP Process will inform the environmental review process, such that a two-year timeline is reasonable. DOE believes this structure sufficiently addresses AZGFD's concerns.

Regarding the request to establish a standard schedule for EAs, DOE makes no changes to this final rule because the CITAP Program focuses DOE resources on projects expecting to complete an EIS, and adjustments, including to schedules, for any project requiring an EA will be addressed on a project-specific basis. Accordingly, DOE finds it unnecessary to establish a timeline for EAs in the text of this final rule but notes that the rule does not prevent DOE from publishing a standard schedule for EAs if the agency finds it necessary.

Regarding the suggestions that DOE allow the project proponent to propose a project-specific schedule or provide additional opportunities for the project proponent to discuss the project-specific schedule with DOE and the relevant Federal entities, DOE notes that nothing in the rule prevents the project proponent from proposing a schedule but DOE maintains the statutory authority to set and maintain the schedule. Additionally, as proposed and finalized here, DOE requires the project proponent to submit information on the intended or desired timelines for various Federal applications as part of each meeting request during the IIP Process. DOE is required to present a proposed project-specific schedule at the review meeting and a final project-specific schedule at the close-out meeting. Project proponents are encouraged to communicate with DOE and relevant entities throughout the IIP Process. Project proponents are welcome to submit any information they believe will help DOE create the project-specific schedule, including a draft schedule, through any of these mechanisms. DOE believes these requirements provide sufficient opportunity for the project proponent to give input on the schedule and therefore makes no changes to the rule in response to these comments.

In response to PJM's suggestion that DOE revisit the CITAP Program every two years, DOE makes no revisions in this final rule. DOE will evaluate the CITAP Program as appropriate, which may be based on time, the number of projects DOE has coordinated in the process, or other relevant factors.

I. Selection of NEPA Lead and Joint Lead Agencies and Environmental Review

DOE's Proposal

Section 216(h)(2) of the FPA authorizes DOE to act as the lead agency to coordinate Federal authorizations and related environmental reviews required to site an interstate electric transmission facility. DOE proposed in the NOPR that DOE serve as the NEPA lead agency to prepare an EIS to serve the needs of all relevant entities. In the NOPR, DOE proposed that a NEPA joint lead agency may be designated no later than the IIP Process review meeting. The NEPA joint lead agency, if any, would be the Federal entity with the most significant interest in the management of the Federal lands or waters that would be traversed or affected by the qualifying project, and DOE would make this determination in consultation with all Federal entities that manage Federal

lands or waters affected. The proposed rule also provided that for all qualifying projects, DOE and the relevant Federal entity or entities would serve as co-lead agencies for consultation under the ESA and for compliance with section 106 of the NHPA.

After the IIP Process close-out meeting and once an application has been received in accordance with the project-specific schedule, the proposed rule would require DOE and the NEPA joint lead agency to prepare an EIS for the qualifying project, which is meant to serve the needs of all relevant Federal entities. The proposed rule would also require DOE and the NEPA joint lead agency to consider the materials developed throughout the IIP Process; consult with relevant Federal entities and relevant non-Federal entities; draft the EIS, working with contractors, as appropriate; publish all completed environmental review documents; and identify the full scope of alternatives for analysis in consultation with the relevant Federal entities.

Finally, the proposed rule would also require the Federal entities or non-Federal entities that are responsible for issuing a Federal authorization for the qualifying project to identify all information and analysis needed to make the authorization decision, identify all alternatives that need to be included, and to use the EIS as the basis for their Federal authorization decision on the qualifying project to the extent permitted by law.

Summary of Public Comments

DOE received several comments addressing NEPA lead and joint lead designation and the environmental review DOE will undertake following the IIP Process.

Regarding the proposal to establish DOE as the NEPA lead agency, PJM and the State of Colorado Governor's Office expressed support. The State of Colorado Governor's Office noted that DOE as the lead NEPA agency could effectively lead an iterative, interagency process to ensure applications for Federal authorizations are ready for review and can meet the specified timelines. It also noted that having one agency leading the NEPA process reduces duplication of work and improves efficiency.

DOE received comments from CBD, PIOs, and Gallatin Power regarding the process for designation of a joint lead agency. CBD expressed concern that DOE would not have the expertise to evaluate impacts of transmission projects on ecosystems, species, and the environment, and recommended that the rules should require the designation of a land use agency as the NEPA joint lead agency. Gallatin Power commented that DOE should designate a joint lead agency that has experience permitting transmission projects during the promulgation of the rule and should implement a practice of identifying a joint lead agency prior to an IIP Initial Meeting instead of after the completion of the IIP Process. Gallatin Power argues that these joint lead agency designations will allow DOE to rely on Federal agencies with substantial experience in permitting and enable DOE to expedite approvals through the adoption of invaluable insights and best practices. PIOs challenged the proposed rule's assumption that only one agency can serve as a joint lead agency on the basis that the assumption is a departure from the statute and CEQ regulations both of which allow multiple agencies to serve as ''joint lead agencies.'' PIOs encouraged DOE to consider whether allowing multiple joint lead agencies could better comport with NEPA and CEQ regulations and better realize the proposed rule's goal of improving efficiency in Federal analysis and decision-making.

Three commenters suggested that the CITAP Program issue a joint record of decision for projects. CATF, PIOs, and SEIA recommended that DOE should ensure that the CITAP Program is in alignment with the congressional direction and best practices for NEPA. They recommended that DOE provide that, where feasible, agency decisions should be issued together in a joint record of decision, or provide greater clarity as to why DOE declines to require a joint record of decision. These commenters noted that requiring a joint record of decision aligns with recent revisions to NEPA and CEQ's NEPA regulations and promotes efficiency and coordination. They also suggested that a joint record of decision effectuates Congressional direction that the basis for all decisions under Federal law use DOE's environmental review and reduces confusion about how to seek judicial review.

Multiple commenters submitted comments on the scope of environmental reviews and considerations. AEP agreed that DOE should carry out its statutory obligation to prepare a single EIS sufficient for the purposes of all Federal authorizations necessary to site a qualifying project. AEP further added that, to the extent practicable, the EIS should also include any relevant information to satisfy state permitting requirements to avoid duplication of reporting requirements. PIOs noted that the rule's inclusion of a requirement to assess climate impacts is well-founded in NEPA's plain text, its implementing regulations, authoritative guidance, and judicial precedent. PIOs further stated that DOE has both the authority and the responsibility to require assessments of climate related impacts, as NEPA's plain text explicitly includes ''reasonable foreseeable environment effects.'' However, PIOs also stated that DOE should use existing regulatory and scientific tools that CEQ makes available to assist other Federal agencies with their legally required analysis, and that the resulting analysis of climate impacts need not be perfect. AZGFD noted that when completing the IIP Process and developing the EIS, it is important to ensure that adequate consideration is given to wildlife and wildlife habitat resources along the project route, that effects to those resources and areas are not generalized for the full project route, and that, as necessary, suitable conservation measures are identified for specific areas and resources. AZGFD stated that it is also important to consider the varying purposes, management plans, and land use goals or mandates for lands managed by different Federal agencies. Hence, AZGFD requested further information on how the proposed rule and development of a single EIS by DOE will ensure that wildlife and wildlife habitat resources are considered and accommodated through the IIP Process. ACP mentioned that CEQ is simultaneously conducting revisions to its regulations implementing NEPA and suggested that DOE should ensure that the CITAP Program and any potential DOE rulemaking aligns with CEQ's NEPA rulemaking.

DOE received multiple recommendations for streamlining environmental review. OSPA asserted that a Programmatic Environmental Impact Statement (PEIS) would dramatically speed the deployment of transmission in chronically underserved areas of the Upper Great Plains. Similarly, ACP suggested that DOE develop resource-specific programmatic NEPA reviews to reduce the administrative burden and legal risk of project-specific reviews. AEP recommended allowing for greater use of programmatic reviews and categorical exclusions. Alan Leiserson said DOE should use more categorical exclusions for clean energy projects. AEP recommended modifying thresholds for Federal agencies when determining what requires development of an environmental document. OSPA additionally recommended that DOE should expressly make EIS underlying

data available to Federal and non-Federal permitting entities for purposes of developing a PEIS. OSPA recommended that THPOs explicitly have access to this data as well as well as any consultants hired by THPOs.

Three commenters suggested DOE include statements about what information or resources could be used in the environmental review. ACP argued that the resource reports are useful beyond the IIP Process and so this final rule should require that materials and findings in resource reports be used in the NEPA EIS process. ACP further noted that ideally this authority for consideration of the resource reports would be DOE's alone rather than DOE and the joint lead agency. AEP recommended stating that Federal agencies can use existing data and studies in determining when to develop an environmental document. AEP also recommended allowing for greater project proponent involvement in preparing environmental documents. DOE received the following additional comments:

CBD recommended that DOE prioritize development on already degraded lands, existing rights of way, and other areas where communities will not object to new infrastructure. ACORE noted that there may be projects that do not participate in the CITAP Program, but that will still have DOE as the lead agency. Accordingly, ACORE recommended that DOE clarify which of CEQ's NEPA provisions, including timing requirements, would apply to these types of projects.

DOE Response

In this final rule, DOE confirms its role as NEPA lead agency, the process for selecting a joint lead agency, and the responsibilities DOE will undertake for environmental review, with minor revisions in response to these comments. DOE revises this final rule to state that DOE and relevant Federal entities shall issue, except where inappropriate or inefficient, a joint decision document.

Regarding the joint lead agency selection process, DOE makes no revisions in response to these comments. As proposed and confirmed here, the designation of a joint lead agency will be determined by DOE and Federal entities that manage Federal lands or waters by no later than the IIP Process review meeting. DOE believes the process for designating a joint lead, if any, is consistent with NEPA implementing regulations and provides flexibility to identify the relevant expertise among the relevant entities. Further, since the rule requires DOE to engage Federal land- and water-management agencies in the process, DOE is not persuaded that including a joint lead requirement is necessary, as suggested by CBD and Gallatin Power, and instead believes it is best to leave that determination up to the Federal entities on a project-specific basis. Regarding the timing of the designation, DOE notes that this final rule confirms the same timing as the proposed rule, requiring the designation by the review meeting, not the completion of the IIP Process as indicated by the commenter. DOE does not agree that a designation requirement is appropriate before the initial meeting because DOE believes the initial meeting provides important project information that could inform any joint lead designation. In response to the PIO's comment about multiple joint leads, DOE maintains the presumption in the rule that no more than one joint lead agency will be designated to ensure efficiency and effectiveness, which will enable DOE to meet its coordination and scheduling obligations under FPA section 216(h).

In response to the recommendation that the CITAP Program issue joint records of decision, DOE agrees with the commenters that this would be consistent with NEPA as amended by the Fiscal Responsibility Act of 2023. DOE also agrees that a policy in favor of joint records of decision would be consistent with the purpose of FPA section 216(h) and would enhance DOE's coordinating function. Accordingly, DOE revises this final rule to provide that, except where inappropriate or inefficient, the Federal agencies shall issue a joint record of decision that includes all relevant Federal authorizations and, to ensure consistency with the requirements of section 216(h), includes, if applicable, the determination by the Secretary of Energy of a duration for each land use authorization issued under section 216(h)(8)(A)(i).

Regarding the scope of environmental reviews, DOE makes no changes to this final rule because the rule as proposed did not change any of DOE or other Federal entities' responsibilities to comply with existing NEPA regulations and environmental review laws. DOE will endeavor to incorporate State requirements in the environmental review and makes no revisions to address this because DOE believes this will be accomplished through the inclusion of relevant non-Federal entities in the IIP Process. Similarly, DOE will endeavor to follow NEPA best practices and use available tools and does not find that these comments require any revisions to the rule.

Regarding ACP's request to require the use of resource reports in the preparation of the environmental review document, AEP's request that DOE include a provision that existing data can be used, and AEP's recommendation that DOE allow for greater project proponent involvement in preparing environmental documents, DOE makes no changes in this final rule. Data requirements for environmental reviews are outside of scope of this rulemaking, which concerns only the implementation of DOE's coordinating authority under FPA section 216(h) and does not address the substance of NEPA compliance by DOE or its fellow agencies. But DOE reiterates that the purpose of the resource reports is to inform environmental review (and agency authorizations), and affirms its commitment to adhering to best practices for leveraging existing data sources. Comments suggesting revised environmental review thresholds, the use of categorical exclusions, and PEISs, are likewise outside the scope of this rulemaking.

In response to CBD's request that DOE prioritize development on already degraded lands, DOE makes no changes to this final rule as this is beyond the scope of DOE's coordinating authority. While DOE and its fellow agencies may encourage development on degraded lands, DOE lacks authority to impose any requirement to that effect in the final rule. In response to ACORE's request for more information on how DOE will serve as lead agency for projects that are not in the CITAP Program, DOE makes no changes to this final rule as this is beyond the scope of the rulemaking, which is the implementation of DOE's coordinating authority under FPA section 216(h).

J. Section 106 of the NHPA

DOE's Proposal

In the NOPR, DOE explained that the project proponent resource reports are intended to develop data and materials that will facilitate Federal entities' review of the project proponent's applications under a number of Federal statutes, including section 106 of the NHPA. DOE also explained that this initial information-gathering phase precedes the formal consultation process under section 106. DOE proposed to authorize project proponents, as applicants to the CITAP Program, to begin section 106 consultation during the IIP Process, but only at such time as a project is sufficiently well developed to allow formal consultation to begin. DOE proposed to make this determination

within 45 days of the IIP Process review meeting. Finally, DOE affirmed that DOE would remain legally responsible for all findings and determinations charged to the agency under section 106.

Summary of Public Comments

DOE received multiple comments related to section 106 of the NHPA. First, multiple commenters requested clarification regarding whether, and the extent to which, the resource reports would fulfill agencies' and project proponents' section 106 obligations. For instance, the Kentucky SHPO sought clarification of whether the resource reports will serve as only background information, or if they are intended to be utilized by the project proponent or agencies for section 106 consultation materials, as their purpose would affect DOE's ability to impose page limits. It also stated that it is unclear whether DOE proposes to frontload NPS National Historic Landmarks (NHL) review under section 106, and that doing so is not feasible from a regulatory standpoint. The NM SHPO commented that it is not clear, as proposed, whether the rule authorizes the project proponent to initiate consultation with the SHPO and elicit comments on the resource reports, and noted that it may not be possible to account for all of the section 106 impacts of a project at the initiation stage. The NM SHPO suggested that this may need to be stipulated in a Programmatic Agreement and asked how other agency reviews will be conducted. Relatedly, the Arizona SHPO stated that DOE intends to authorize all project proponents to act on its behalf and with procedures that deviate from the standard 36 CFR 800 Subpart B compliance process, and hence it advised that DOE consult with the National Conference of State Historic Preservation Officers (NCSHPO), NATHPO, and ACHP to develop a CITAP Program Alternative in accordance with 36 CFR 800.14. DOE also received comments from the Delaware SHPO and NM SHPO suggesting that DOE consult with ACHP and other entities regarding NHPA compliance.

DOE also received comments on the resource reports as they relate to section 106. The Delaware SHPO recommended that the requirements of the proposed ''Resource Report 4: Cultural Resources'' be explicitly defined as cultural resources identification and evaluation level surveys, determined necessary through consultation with consulting parties, that meet the relevant Secretary of the Interior Standards and applicable State and Tribal guidelines. The Delaware SHPO expressed concern that the provision in its current form might lead to a scenario wherein the project proponent could be required to redo cultural resource reports if initiation occurs after the submission and review of resource reports, which would cause duplication of effort, leading to unnecessary delays and frustration for all parties. Conversely, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe expressed concern regarding a comment by Department of Energy staff because they believed it indicated that the Communities of Interest resource report would satisfy section 106 conditions for examining the impacts of projects on Tribal Nations' cultural resources and sacred places. The commenters also stated that the proposed resource reports are not a Program Alternative approved by the ACHP under 36 CFR 800 and cannot be used to satisfy DOE requirements under NHPA section 106.

DOE received comments on the timing of the section 106 process in relation to the CITAP Program process. The Delaware SHPO noted that the current CITAP Program's schedule would cause the project to experience significant delays when complying with section 106 of NHPA. The Delaware SHPO explained that, as proposed, project proponents would be required to complete resource reports to allow DOE to determine whether there is an undertaking. But, the Delaware SHPO argued, the presence of historic properties is not a determining factor to establish an undertaking. Rather, the Delaware SHPO noted that, per 36 CFR 800.3(a) and 800.16(y), an undertaking is an action with a Federal nexus, which is the type of activity with the potential to cause an effect on historic property. The Delaware SHPO stated that all above-ground transmission lines eligible for the CITAP Program would be undertakings and the initiation of consultation should occur concurrently with or immediately after the first CITAP Program meeting for a project. This process would set up the project proponent, DOE, and all consulting parties to begin consultation on the level of survey needed to identify historic properties early in the process. The Delaware SHPO noted that earlier consultation will allow the project to meet CITAP and NEPA deadlines and further noted that, with larger transmission projects, multiple SHPOs and numerous consulting parties will be involved and that property access would need to be arranged for surveys and longer reports, all of which may require longer review times. In addition, if a memorandum of agreement is needed due to any adverse effects to historic properties, negotiating and executing such an agreement could be time-consuming.

DOE received comments from the Arizona SHPO and the Kentucky SHPO indicating that only one agency could be selected as lead agency for section 106 consultations as the process did not allow for co-lead agencies.

Finally, DOE received comments regarding SHPOs' resource constraints. The Arizona SHPO expressed concerns that due to staffing and budgeting constraints it would not have adequate resources to conduct preliminary review of NHPA section 106 for project proponents prior to the establishment of a Federal undertaking by Federal agency.

DOE Response

In this final rule, DOE maintains the structure and purpose of the resource reports. DOE revises this final rule as discussed below to adjust the timeline for DOE to make a determination of an undertaking pursuant to section 106 and to designate DOE as the lead agency for section 106.

DOE clarifies that the resource reports are not intended to fulfill the agencies' section 106 responsibilities. Instead, the information provided in the Cultural Resources resource report, and the other resource reports as applicable, will contribute to the satisfaction of DOE's and relevant Federal entities' obligations under section 106. As the lead agency for section 106, DOE remains legally responsible for all findings and determinations charged to the agency under section 106. The function of the resource reports is to gather information to contribute to DOE's subsequent section 106 compliance. DOE appreciates that project proponents may not have access to all information required for DOE's section 106 compliance at the time the proponents submit their resource reports. This final rule adopts, as proposed, that a project proponent may file incomplete information but must address the reason for the omission. The final rule also provides the Director of the Grid Deployment Office the discretion to allow the project to proceed to the next milestone and provides that the Director of the Grid Deployment Office may waive requirements as appropriate, providing flexibility to the IIP Process to accommodate unique circumstances.

Regarding the comments on particular resource reports, DOE declines to revise the definition of cultural resources in the Cultural Resources resource report

in this final rule. That resource report is intended to inform not only DOE's section 106 compliance but also the environmental review document. Given that the timing of consultation under section 106 may vary based on the project and that this resource report is intended to fulfill multiple purposes, DOE necessarily retains its broader scope. Additionally, as previously noted, neither the Communities of Interest resource report nor any other resource report is intended to fulfill DOE's or relevant Federal entities' obligations under section 106.

As for the comments related to program alternatives, DOE submitted the proposed and final rules for interagency review under E.O. 12866 and intends to work collaboratively with ACHP and other relevant entities to develop mechanisms for efficient and effective implementation of section 106, which may include program alternatives. DOE, however, does not modify this final rule to provide for a particular program alternative under the section 106 implementing regulations [10] nor does DOE intend for the resource reports to serve as a program alternative; DOE wishes to inform its approach through initial implementation and further collaboration with relevant entities. DOE believes this part provides sufficient flexibility to allow for an appropriate alternative without specifying one at this time.

DOE agrees that initiating the NHPA section 106 consultation process earlier than DOE had proposed may be feasible and beneficial for certain project proposals that are sufficiently mature for DOE to determine there is an undertaking pursuant to the regulations implementing section 106.[11] DOE has accordingly revised this final rule to remove the requirement that DOE make the undertaking determination only after the IIP Process review meeting. As revised, the final rule allows DOE to make the determination at any point in the IIP Process, but no later than 10 calendar days following the close of the 10-day review period.

Regarding resource constraint concerns, DOE understands the staffing and budgeting constraints that SHPOs and THPOs may face. DOE does not intend for the IIP Process to create additional or preliminary review requirements for SHPOs and THPOs, and has designed the IIP Process with the intention of avoiding doing so. Rather, the intent of the IIP Process is to align the NHPA section 106 review with other Federal permitting and authorization processes. DOE notes that SHPOs and THPOs may consult with DOE and other relevant Federal agencies as to the range of possible assistance and resources that may be available.

Finally, DOE modifies this final rule to indicate that DOE intends to serve as lead agency for section 106 of the NHPA as section 106 does not provide for a co-lead agency. The modification aligns this final rule and regulatory path with section 106's statutory language and procedures.

K. Definitions

i. Affected Landowner

DOE's Proposal

In the NOPR, DOE proposed to define ''affected landowner'' as an owner of real property interests who is usually referenced in the most recent county or city tax records, and whose real property (1) is located within either 0.25 miles of a proposed study corridor or route of a qualifying project or at a minimum distance specified by State law, whichever is greater; or (2) contains a residence within 3,000 feet of a proposed construction work area for a qualifying project.

Summary of Public Comments

Commenters made multiple suggestions for revisions to the definition.

ACP recommended that DOE use the term ''potentially impacted landowner'' instead of ''affected landowner,'' given that ''affected landowner'' might carry some implication of an obligation for compensation.

ClearPath recommended that DOE adopt the definition of ''affected landowner'' used in FERC's natural gas pipeline permitting regulations and FERC's proposed rule for implementing section 216(b) of the FPA. ClearPath suggested that the effective use of ''affected landowner'' in FERC's natural gas pipeline permitting demonstrates that definition's legal durability and thereby bolsters the legal durability and predictability of this final rule.

Some commenters recommended that DOE revise the distances included in the proposed definition of affected landowner. To that end, SEIA, for instance, expressed support for a rule that considers the proposed project scale, geographic considerations, and resource usage of landowners to determine if a landowner falls under an ''affected landowner.'' Niskanen Center described the definition of ''affected landowner'' as nebulous and thus impracticable and overly burdensome, and recommended proximity qualifiers and a measure of immediate impact to the definition. LTA recommended that the rule should move away from a one-size-fits-all distance for the definition of landowner, and instead require project proponents to engage with communities of interest to assist in identifying potential impacts to landowners and the distance within which notifications to landowners would be appropriate. LTA specifically proposed that DOE expand the definition of ''affected landowner'' to include areas that a community of interest has identified as having one or more resources likely to be impacted by a proposed project. Grid United commented that the specific distances expressed in the definition of ''analysis area'' were not standard for high voltage transmission lines and could result in unnecessary data collection, burdens, and complexity for the project. Grid United suggested lowering the distances in the definition to 500 feet and likewise recommended establishing 500 feet as a presumptive radius for identification of affected resources unless existing practices dictated otherwise. ACP commented that the 0.25-mile distance provided is both too broad and too rigid and proposed that DOE remove references to a particular distance from the definition and instead base the required distance on the physical characteristics of the project and resource evaluated in each report.

Commenters also recommended that DOE include or omit certain considerations from the definition. LTA recommended that DOE remove the reference to county and city tax records because many owners of real property interests are not listed in these records. LTA also suggested that DOE explicitly include in the definition of ''affected landowner'' conservation easement holders and landowners whose viewshed or other ecosystem services may be impacted by the transmission facility. ACP requested that DOE explicitly exclude landowners affected through owning mineral estate property interests, given the possibility of a project involving broad areas of potentially unoccupied land, and exclude additional areas of potential construction work, including roads and ancillary facilities, that may be preliminary prior to completion of a NEPA review.

Finally, PIOs recommended that DOE require project proponents to provide a landowner bill of rights in transmission permitting processes to ensure affected landowners are informed of their rights in dealings with the proponent and attached a draft landowner bill of rights they submitted for FERC's proposed backstop permitting rule for reference. PIOs outlined that the landowner bill of

[10] See 36 CFR 800.14.

[11] See 36 CFR 800.3(a) and 800.16(y).

rights should include any information on requirements to obtain party status prior to appeal, how to obtain such status, and if and how a party can participate in the presidential appeal process.

DOE Response

In this final rule, DOE revises the definition of affected landowner, for the reasons described below, to the following:

Potentially affected landowner means an owner of a real property interest that is potentially affected directly (*e.g.,* crossed or used) or indirectly (*e.g.,* changed in use) by a project right-of-way, potential route, or proposed ancillary or access site, as identified in § 900.6.

At the outset, DOE clarifies that the project proponent is responsible for identifying potentially affected landowners based on the definition provided in this final rule. Nevertheless, as provided in this final rule, the project proponent must provide, as part of the IIP Process, the methodology by which potentially affected landowners were identified, which will allow DOE to evaluate the completeness of the process. Additionally, while the project proponent makes this determination, this final rule provides avenues for communities of interest and stakeholders to comment on the proposed project and engage with the project proponent; this definition does not limit those avenues.

DOE has also made edits to this definition in response to comments. First, DOE agrees with ACP that, at this stage, landowners are not necessarily affected, but are only ''potentially'' affected. Accordingly, DOE changes the defined term from ''affected landowner'' to ''potentially affected landowner'' and includes a reference to ''potential indirect and direct effects'' in the new definition.

Second, in response to ClearPath's comment, DOE has also revised the definition in this final rule to broaden how real property interests can be potentially impacted by the proposed project, which aligns more closely with FERC's definition of ''affected landowner.'' DOE declines to adopt the exact same definition as FERC, reflecting that FERC's permitting and siting rules do not have an identical purpose to this final rule, which is to coordinate Federal authorizations for transmission facilities.

Relatedly, DOE agrees with the commenters that suggested DOE revise the distance referenced in the affected landowner definition. DOE agrees that in certain instances the distances in the proposed rule will be overinclusive and overly burdensome, but also that a one-size-fits-all distance will not adequately capture all landowners that are potentially affected by the transmission project. Because a single distance does not provide sufficient flexibility to account for differences in projects, DOE declines to adopt the 500-foot presumptive distance proposed by Grid United. Instead, DOE has removed distances from the definition of ''potentially affected landowner,'' and provides that a potentially affected landowner is one whose real property interest is either potentially affected directly or indirectly by the proposed project. In addition, this final rule requires the project proponent to describe the methodology used to identify potentially affected landowners. This definition allows project proponents to more precisely identify landowners who are most likely to be potentially affected by the project, because those real property interests may not always align with the distances included in the proposed rule and any prescribed distances may be under or overinclusive depending on the particulars of a project.

Additionally, DOE agrees with LTA's comment that the reference to county and city tax records should be removed. As LTA noted, tax records may not, depending on the circumstances, accurately include the potentially affected real property interests. Accordingly, DOE has revised this final rule to remove the requirement that the owner of the real property interests is one who is usually referenced in the most recent county or city tax records. However, this final rule does not preclude the project proponent from referencing recent tax records. DOE declines to require the involvement of communities of interest in the identification of potentially affected landowners because this is an unnecessary step for identifying real property interests. The term ''potentially affected landowners'' is not intended to refer to all potential impacts; therefore, additional engagement on impacts of a proposed project is not needed to satisfy this definition. Stakeholders and communities of interest are among the terms that capture a broader scope of potential impacts. This final rule also does not preclude project proponents from involving communities of interest in this process.

DOE also declines LTA's suggestion to include conservation easement holders and landowners whose viewshed or other ecosystem services may be impacted by the proposed electric transmission facility. DOE defines potentially affected landowners in the context of real property interests. In some cases, conservation easements may be considered a real property interest and certain landowners whose viewshed or other ecosystem services may be affected may fall within the definition of a potentially affected landowner, but DOE declines to require that project proponents always include these landowners since these landowners may not always be owners of real property interests that are potentially affected. Additionally, DOE has not adopted ACP's suggestion to explicitly exclude mineral interest holders from the definition, as notice to such parties is still important for understanding reasonably foreseeable effects related to mineral entry and exploration. Nor has DOE adopted ACP's recommendation to exclude additional areas of potential construction work, because these areas are potentially relevant for environmental review and these landowners could be affected by the project.

Finally, DOE declines to require project proponents to provide a landowner bill of rights. DOE disagrees with PIOs that a landowner bill of rights is needed or useful for this process, because DOE's exercise of its authority under section 216(h) does not confer eminent domain authority. Although DOE declines to require the provision of a landowner bill of rights, in response to PIOs' request that such a bill of rights include information on the rehearing and review process and the presidential appeals process, DOE notes that these topics are discussed in Sections VI.O.i and ii of this document, respectively. However, in response to both PIOs and LTA, DOE encourages all interested parties to proactively engage transparently and in good faith with appropriate stakeholders, including potentially affected landowners, and may issue best practices on engagement as discussed in section VI.E of this document.

ii. Analysis Area

DOE's Proposal

The NOPR did not provide a definition for ''analysis area'' nor did it use this specific term. However, DOE sought comment from the public on whether distances included in the proposed rule were appropriate, which informed the definition of this term and are discussed below.

Summary of Public Comments

DOE requested specific comment on whether distances included in the

proposed rule were appropriate and received numerous recommendations on changes to distances in this final rule.

ACEG commented that the 0.25-mile distance is too narrow in some contexts or overly broad in others (*e.g.,* affected landowners), and that the distance should be determined by the impacts of the project. Pew Charitable Trusts recommended that DOE allow greater flexibility, stating that while the proposed distance comports with the distance FERC would use for project notification requirements in the context of National Interest Electric Transmission Corridors (NIETCs), some cases warrant a wider area of review, including in areas that include National Wildlife Refuges, designated wilderness areas, cultural resources, or indigenous sacred sites. Pew Charitable Trusts suggested that the distance proposal could be managed like the standard template schedule, which is open to change depending on the project.

DOE received three comments specifically on the Land Use, Recreation, and Aesthetics resource report. LTA supported the use of a 0.25-mile distance, but because the distance will vary based on the specifics of each project and site, proposed that project proponents also consider an area that a community of interest, including experts from local conservation organizations, has identified as having one or more resources likely to be impacted by a proposed project.

PIOs submitted that whether 0.25 miles is a sufficient distance is largely dependent on the nature of the impacts that DOE is attempting to identify. PIOs stated that wilderness areas are particularly vulnerable to visual impacts and proposed that DOE use distances of 5–10 miles for when considering visual impacts of proposed projects. Relatedly, PIOs noted that certain areas preserved for wildlife habitat may be vulnerable to adverse impacts from transmission projects at distances greater than 0.25 miles, and accordingly, recommended that areas with valuable habitat for migratory birds, such as National Wildlife Refuges, should generally be identified no less than 10 miles from the proposed transmission project, and that DOE should consult with the relevant agencies and organizations to identify appropriate distances.

The CARE Coalition stated that the 0.25-mile distance in the Land Use, Recreation, and Aesthetics resource report is arbitrary and unsuitable for several of the resources listed in that section, including visual resources and wildlife habitat. Referencing research at Argonne National Laboratory, the CARE Coalition suggested that a minimum distance of 10 miles for 500 kV or greater lines and at least five miles for 230–500 kV lines be used to identify sensitive visual resources. Additionally, citing concerns over project impacts to bird species, the CARE Coalition recommended DOE require proponents to identify key habitats for migratory birds and mammals, such as National Parks and National Wildlife Refuges, within 10 miles of proposed projects or consult with the U.S. Fish and Wildlife Service (USFWS) to identify adequate distances for critical migratory bird nesting and stopover habitats, as well as for large mammal migration corridors.

The CEC/CPUC also stated that a 0.25-mile distance is often too narrow and may not capture all indirect impacts, including visual impacts on National Historical Landmarks. CEC/CPUC recommended that distances should be developed with consideration to the scale and scope of the proposed project and the specific resources evaluated.

The Arizona SHPO and CEC/CPUC proposed that DOE align distance requirements with the Area of Potential Effect (APE) under section 106 of the NHPA. The Arizona SHPO recommended that DOE provide guidance to project proponents to develop study areas that conform to the NEPA definition of affected environment as applicable to resource type, and for cultural resource assessments, includes the definition of an APE. Relatedly, the Kentucky SHPO further noted that an APE of 0.25 miles may be acceptable, depending on the type of transmission activities proposed, whether it is new construction or a rebuild, the applicable SHPO's guidance/standards, and any known resources near the proposed project area. On the other hand, the NM SHPO stated that the 0.25-mile distance is not adequate to address effects to cultural resources and landscapes, National Historic Trails, and National Monuments, especially in western states where the viewshed is expansive.

DOE Response

In this final rule, DOE removes the distances proposed, and adds a defined term, ''analysis area.'' This approach allows the participants in the IIP Process to determine the appropriate analysis area based on project-specific factors.

DOE agrees with the many commenters who indicated the distances should allow for more flexibility. Accordingly, DOE has determined that specific distances should be removed from the final rule, as the appropriate distances for various analyses depend on the relevant physical characteristics and needs of the given project and resource at issue. Instead, as discussed in the revisions to §§ 900.5 and 900.8, DOE and the project proponent must, at the initial meeting, establish initial analysis areas for each resource as determined by project-specific factors like ecology, land use and ownership, and other physical characteristics of the landscape. The proposed analysis areas for each resource may then be refined and finalized during the IIP Process review meeting. DOE confirms that establishment of such analysis areas for wildlife, fish, and plant life will involve not only the project proponent but the appropriate Federal and non-Federal entities, like the USFWS and relevant State and local agencies, to ensure analysis areas are adequate and consistent with those agencies' requirements and appropriate guidance. Relatedly, DOE declines to align the distance requirements with the APE under section 106 of the NHPA or to add any other method of identifying distances, including relying on distances identified by communities of interest, in favor of providing greater flexibility for the reasons stated above. DOE notes that where a legal standard exists for defining the area of analysis for a particular resource, as in the case of the APE for historic properties, the determination of the analysis area for that resource will take into account that legal standard.

DOE is adding the defined term ''analysis area'' to account for the removal of the distances, and provide a consistent use of terminology throughout the final rule that accounts for the project's characteristics and needs and the resources at issue. DOE defines analysis area to mean an area established for a resource report at the IIP Process initial meeting and modified at the IIP Process review meeting, as applicable. Discussion of specific uses of this term is included in section VII of this document.

iii. Communities of Interest

DOE's Proposal

In the NOPR, DOE proposed to add a definition for ''communities of interest'' to ensure broad coverage of potentially impacted populations during the public engagement process and establishment of the public engagement plan. In the NOPR, DOE also proposed to define communities of interest to include disadvantaged, fossil energy, rural, Tribal, indigenous, geographically proximate, or communities with environmental justice concerns that

could be affected by the qualifying project.

Summary of Public Comments

DOE received multiple comments suggesting amendments or clarifications to the definition of ''communities of interest'' in the proposed rule.

ClearPath opposed DOE's definition of communities of interest, commenting that the definition is ambiguous and lacks ''legal durability.'' ClearPath pointed specifically to the phrase ''geographically proximate'' as ambiguous and commented that the phrase, ''communities with environmental justice concerns'' provides no methodology for project proponents to adequately identify these communities. Niskanen Center proposed that further guidance on the term might include precise parameters such as defining it as being within 0.25 miles of a study corridor or potential route. Niskanen Center also indicated that the precise meaning of the terms ''disadvantaged,'' ''fossil energy,'' ''rural,'' ''geographically proximate,'' or ''communities with environmental justice concerns'' is unclear, potentially leading to confusion and litigation in the IIP Process and CITAP Program.

EDF stated that the broad proposed definition of ''communities of interest'' could potentially overlook key differences among and within the identified communities. Referencing several White House commitments and executive orders concerning impacts on communities with environmental justice concerns, EDF advised DOE to ensure it carefully addresses the concerns of those communities in the proposed rule.

PIOs lauded the proposed rule's definition of communities of interest for broadly including Indigenous communities. Similar to EDF's comments, PIOs maintained that DOE revise its definition of ''communities of interest'' to better reflect environmental justice issues. PIOs recommended that DOE remove the term ''disadvantaged,'' specifically include ''communities of Color'' and ''low-income or low-wealth communities'' in the definition, and capitalize the terms ''Color'' and ''Indigenous.''

PIOs also suggested that DOE clarify and ''equitably describe'' the definition of ''fossil energy'' and align the definition of ''overburdened'' with the U.S. Environmental Protection Agency (EPA) EJ 2020 Glossary. PIOs then urged DOE to specifically require project proponents to describe how they will reach out to communities of interest about mitigation and require the resource report to describe proposed measures or community concerns. PIOs also recommended that DOE require project proponents to solicit community comments regarding their preferred form of mitigation and to respond to those comments.

Policy Integrity suggested that for project proponents to identify communities of interest more accurately—especially given that DOE does not define ''disadvantaged,'' ''fossil energy,'' ''rural,'' or ''communities with ''environmental justice concerns''—DOE should provide administrable criteria, such as project proponents locating ''disadvantaged'' communities via the Climate and Economic Justice Screening Tool. Policy Integrity also recommended that DOE consider allowing communities to self-identify, which would ensure that communities are not excluded because of limitations of existing identification tools or methods. The commenter also indicated it would be more appropriate for DOE to adjudicate whether a community should be considered as having environmental justice concerns based on evidence submitted rather than allowing the project proponent to make this determination.

LTA suggested that the definition of communities of interest should include local nonprofit conservation organizations to ensure that the conservation and working lands community is included early in the IIP Process.

Finally, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe commented that categorizing Tribal Nations as ''Communities of Interest'' fails to recognize the sovereignty of Tribal Nations. By doing so, NATHPO and the Santa Rosa Rancheria Tachi Yokut Tribe argued that the proposed rule neglects distinct nation-to-nation responsibilities.

DOE Response

In this final rule DOE has revised the definition of ''communities of interest'' to improve readability and ensure consistency with the Inflation Reduction Act (Pub. L. 117–169) (IRA) but has retained the communities identified in the proposed rule, as discussed below. DOE notes that the project proponent is responsible for identifying communities of interest and taking the required actions with respect to these communities for purposes of complying with the proponent's responsibilities under these regulations, but through the IIP Process, DOE and the relevant Federal entities and relevant non-Federal entities will have the opportunity to assess the processes by which proponents identify and engage with communities of interest.

To improve the readability of the definition, DOE has revised the structure of the definition to provide a list of the types of communities that are communities of interest. To that end, to clarify that the communities listed in the definition is the exclusive set of communities to which this definition applies, this final rule edits the definition to note that communities of interest ''means'' rather than ''includes'' the listed communities. Finally, DOE has changed the reference to ''fossil energy'' communities to ''energy communities'' to align the terminology with that used throughout the IRA's programs.

DOE appreciates the comments regarding the scope of ''communities of interest'' and the communities included in the definition. DOE declines to revise the communities included within the definition beyond the revision to ''fossil energy'' communities discussed above. DOE declines to prescribe a particular distance for ''geographically proximate'' communities for reasons similar to those explained above in connection with ''analysis area.'' For any given project or community, a set 0.25-mile distance could be over- or under-inclusive. Instead, the current definition provides flexibility and broad coverage for the project proponent to identify the communities that could be affected by a given project.

DOE also declines to provide definitions for the terms used in the definition of communities of interest, or to otherwise narrow the definition. As written, the definition of communities of interest provides broad coverage of various communities and flexibility to consider relevant groups that may fall within such communities. Because the ways in which a project may affect certain communities varies, DOE believes that the definition in this final rule appropriately provides flexibility to encompass the potentially varied affected communities of interest. Relatedly, DOE declines to provide particular criteria that a project proponent must consider in identifying communities of interest, to permit communities to self-identify or to require that proponents engage further with community members, or to administer in the first instance whether a particular community qualifies, in favor of providing flexibility to the project proponent and the ability of DOE and the relevant Federal entities and relevant non-Federal entities to assess and refine the identification as needed throughout the IIP Process.

DOE declines to remove or replace the term ''disadvantaged'' and declines to include ''communities of Color'' and

''low-income or low-wealth communities.'' The term provides flexibility for the project proponent to consider a broad range of disadvantaged communities that could be affected by the proposed project. Consistent with its usage throughout this rule, as well as in rules promulgated by other agencies such as FERC, DOE declines to capitalize the term ''indigenous.'' Whether or not the term is capitalized, project proponents have the same responsibilities to these communities.

Additionally, DOE declines to include nonprofit groups, as requested by LTA, as the definition is focused on communities, not organizations or entities. Nevertheless, this final rule does not preclude an organization from representing a community during IIP Process engagement, and additionally provides a definition of stakeholder that could include the type of organization LTA describes.

Lastly, DOE affirms the sovereignty of Indian Tribes. DOE clarifies that the inclusion of Tribal communities in the definition of communities of interest is not intended to, nor does it, neglect the nation-to-nation responsibilities of Federal agencies when engaging with Indian Tribes, which are distinct from the project proponent's responsibilities under the CITAP Program. The CITAP Program and final rule make no changes to Federal agencies' nation-to-nation responsibilities. DOE's intent in including Tribal communities in the definition is to establish an expectation that project proponents engage with and consider the impacts of proposed projects on Tribal communities.

iv. Other Definition Changes

1. Mitigation Approach and Mitigation Strategies or Plans

DOE's Proposal

The NOPR included definitions for two terms, ''landscape mitigation approach'' and ''landscape mitigation strategies or plans.'' In the NOPR, DOE proposed to define landscape mitigation approach to mean an approach that applies the mitigation hierarchy to develop mitigation measures for impacts to resources from a qualifying project at the relevant scale, however narrow or broad, that is necessary to sustain those resources, or otherwise achieve established resources. Among other things, the definition explained that the mitigation hierarchy refers to an approach that first seeks to avoid, then minimize impacts, and then, when necessary, compensate for residual impacts; while a landscape mitigation approach identifies the needs and baseline conditions of targeted resources, potential impacts from the qualifying project, cumulative impacts of past and likely projected disturbances to those resources, and future disturbance trends, then uses this information to identify priorities for mitigation measures across the relevant area to provide the maximum benefit to the impacted resources.

In the NOPR, DOE proposed to define landscape mitigation strategies or plans as documents developed through, or external to, the NEPA process that apply a landscape mitigation approach to identify appropriate mitigation measures in advance of potential impacts to resources from qualifying projects.

Summary of Public Comments

ACP recommended that DOE cabin the definition of landscape mitigation approach. Specifically, ACP suggested that the definition include a materiality threshold for all references to impacts to limit overreach and include language regarding the practicability of such an approach. ACP elaborated that the definition should also permit mitigation efforts to be conducted following stakeholder engagement, allow for a deferral of such approach to mitigation in lieu of agency-driven mitigation approaches, and, where stakeholder engagement efforts are ongoing, allow for those processes to fully inform the selected mitigation measures.

DOE Response

In this final rule, DOE has revised ''landscape mitigation approach'' to a more general term ''mitigation approach'' and removed the defined term ''landscape mitigation strategies or plans.''

DOE revised the definition for ''landscape mitigation approach'' because limiting mitigation approaches to only landscape-level approaches and strategies may not be sufficiently flexible to account for the variety of needs implicated by this rule. Rather than prescribe a single approach, DOE believes that this final rule should create an opportunity for consideration and discussion of multiple types of proposed mitigation for a given proposed project. In addition, DOE has revised this definition for clarity and to more closely align with existing NEPA regulations regarding mitigation.

DOE declines to implement ACP's suggestion to include a materiality threshold and a discussion of the practicability of any proposed mitigation approaches to limit overreach, because no decisions are being made on mitigation during the IIP Process. Instead, as part of the IIP Process, the project proponent is expected to bring to DOE and any relevant Federal entities and relevant non-Federal entities a proposed mitigation approach, which will facilitate the development of a shared understanding of project needs and expectations.

DOE also disagrees with ACP's suggestion to include stakeholder engagement in development of proposed mitigation approaches both ongoing and future. This final rule encourages stakeholder engagement by the project proponent throughout the IIP Process and the rule does not preclude the engagement described in ACP's comment. DOE avoids codifying a particular mitigation approach process in regulatory text, as this process may inaccurately indicate a preference or priority for the approach.

Because the revisions to mitigation approach rendered ''landscape mitigation strategies or plans'' redundant, DOE has removed this defined term from this final rule.

2. MOU Signatory Agency

DOE's Proposal

In the NOPR, DOE proposed to define ''MOU Signatory Agency'' to mean a signatory of the interagency Memorandum of Understanding executed in May 2023, titled ''Memorandum of Understanding among the U.S. Department of Agriculture, Department of Commerce, Department of Defense, Department of Energy, the Environmental Protection Agency, the Council on Environmental Quality, the Federal Permitting Improvement Steering Council, Department of the Interior, and the Office of Management and Budget Regarding Facilitating Federal Authorizations for Electric Transmission Facilities.''

Summary of Public Comments

ACP submitted that, in addition to the nine agencies that signed the 2023 MOU, the definition should include any signatories to similar or subsequent MOUs entered into in the future.

DOE Response

DOE agrees with ACP's comment that MOU Signatory Agency should be sufficiently broad to cover not only those signatories to the MOU executed in May 2023, but also to cover signatories to potential similar or subsequent MOUs entered into pursuant to section 216(h)(7)(B)(i) of the FPA later in time. This final rule revises this definition to provide this flexibility, such that if a future MOU includes additional or different agencies, the

definition in this final rule will not need to be revised accordingly.

3. Relevant Non-Federal Entity

DOE's Proposal

In the NOPR, DOE proposed to define ''non-Federal entity'' as an Indian Tribe, multi-State governmental entity, State agency, or local government agency, and to define ''relevant non-Federal entity'' as a non-Federal entity with relevant expertise or jurisdiction within the project area, that is responsible for issuing an authorization for the qualifying project, that has special expertise with respect to environmental and other issues pertinent to or potentially affected by the qualifying project, or that provides funding for the qualifying project. The NOPR also proposed to provide that term includes an entity with either permitting or non-permitting authority, such as an Indian Tribe, Native Hawaiian Organization, or State or Tribal Historic Preservation Offices, with whom consultation must be completed in accordance with section 106 of the NHPA prior to approval of a permit, right-of-way, or other authorization required for a Federal authorization.

Summary of Public Comments

DOE received two comments on the definition of relevant non-Federal entity. AZGFD recommended that DOE include State wildlife agencies as standard non-Federal entities engaged in the IIP Process. AZGFD noted that State wildlife agencies can provide project-specific special expertise on wildlife species occurrence and distributions, areas of potential concern, wildlife connectivity, and more, as well as advise on potential conservation measures to avoid, minimize, or offset potential impacts. PIOs commented that DOE should expand the definition to allow certain members of the public to participate in the IIP Process. PIOs noted that, as drafted, the definition excludes community groups or public interest organizations because they are not regulators, even if they have special expertise with respect to environmental and other issues pertinent to or potentially affected by the qualifying project. Instead, the proposed rule would consider these entities as stakeholders, who, as PIOs argued, have significantly less access to the IIP Process compared with relevant non-Federal entities. PIOs believe that allowing community and public interest groups with special expertise to participate in the IIP Process would further the rule's aim to create an opportunity to identify as early as possible potential environmental and community impacts associated with a proposed project. Relatedly, PIOs recommended that DOE define the term ''special expertise'' to help project proponents, affected communities, and public interest organizations in better understanding what groups may meet this definition and allow community or public interest groups to request that they be permitted to participate in the IIP/CITAP Process by explaining what special expertise they possess.

DOE Response

DOE revises the definition of relevant non-Federal entity to replace ''special expertise'' with ''relevant expertise'' to avoid confusion with the NEPA-defined term ''special expertise.'' DOE declines any further revisions to the definition of relevant non-Federal entity that would expand its scope in this final rule.

First, DOE notes that because State wildlife agencies are likely to have relevant expertise or jurisdiction within the proposed project area, may be responsible for issuing an authorization for the qualifying project, may have relevant expertise with respect to environmental and other issues pertinent to or potentially affected by the qualifying project, or may provide funding for the qualifying project, such agencies may meet the definition of a relevant non-Federal entity. The list of non-Federal entities included in the definition merely provides examples and is not a comprehensive list.

Next, DOE appreciates the expertise of community groups and public interest organizations. Rather than expand the definition of relevant non-Federal entity, DOE believes that the IIP Process, coupled with existing avenues for public comment, will best integrate the expertise and input of community groups and public interest organizations. The IIP Process provides for timely and focused pre-application meetings with relevant Federal entities and relevant non-Federal entities, as well as for early identification of potential siting constraints and opportunities, and seeks to promote thorough and consistent stakeholder engagement by a project proponent. The IIP process is not, however, intended to supplant existing public comment processes afforded by relevant statutes, such as NEPA. DOE believes that it has appropriately defined relevant non-Federal entity to provide the necessary information to fulfill its obligations under section 216(h) and facilitate the pre-application process, while still providing sufficient avenues for others to participate as stakeholders and through those existing public-comment processes. DOE declines to provide a definition for special expertise because the term has been removed from the rule. DOE does not expand the definition of non-Federal entity to explicitly include non-regulating or non-permitting entities as the current definition may already include those entities as long as they meet additional criteria.

4. Stakeholder

DOE's Proposal

In the NOPR, DOE proposed to define the term ''stakeholder'' to mean any relevant non-Federal entity, any non-governmental organization, affected landowner, or other person potentially affected by a proposed qualifying project.

Summary of Public Comments

ACP commented that the proposed definition of ''stakeholder'' is overly broad, including its reference to anyone ''potentially affected by the proposed qualifying project.'' ACP suggested that DOE narrow the definition to a party able to show some cognizable interest potentially being affected by the project.

DOE Response

In this final rule, DOE revises the definition of ''stakeholder'' to provide that the term means any relevant non-Federal entity, interested non-governmental organization, potentially affected landowner, or other interested person or organization.

In part, DOE has revised this definition to reflect the revision to terminology used in this final rule, *i.e.,* replacing ''affected landowner'' with ''potentially affected landowner,'' for the reasons explained above. DOE has also revised the definition to provide more precise parameters for who is a stakeholder for purposes of this final rule, in some instances narrowing the definition and in others, broadening it. Specifically, the definition clarifies that only ''interested,'' rather than ''all,'' non-governmental organizations are stakeholders, which appropriately limits coverage to only those non-governmental organizations that have interest in the proposed project. Additionally, DOE revises the definition to provide that any other stakeholders must be ''interested'' and provides that stakeholders may be interested persons or organizations. This revision broadens the scope of other stakeholders beyond only persons, allowing those organizations that do not fall within the scope of relevant non-Federal entity, non-governmental organization, or potentially affected landowner to be considered stakeholders. DOE believes

this revision is appropriate given the diversity of entities that may be affected by or interested in a proposed project. Additionally, the revision broadens the definition beyond those who are potentially affected to those who are interested. Again, DOE believes this expansion is appropriate in light of various entities that may have equities in a proposed project. For instance, LTA raised in its comment that local conservation organizations may have relevant expertise and views on a proposed project.

DOE disagrees with ACP's proposal to narrow the definition to only those parties able to show some cognizable interest potentially being affected by the project. First, DOE does not discern a practical difference in requiring that an interest be ''cognizable,'' and believes that DOE's definition is consistent with ACP's intent to ensure stakeholders have an interest in or are potentially affected by a proposed project. Second, DOE believes ACP's proposal is unnecessarily narrow and may potentially exclude relevant persons, organizations, or entities from the CITAP Program, including relevant non-Federal entities. Finally, DOE clarifies that this definition does not determine who is a party or has standing to challenge a relevant authorization or related environmental review document issued under section 216(h).

5. Study Corridor

DOE's Proposal

DOE proposed to define study corridor as a contiguous area (not to exceed one mile in width) within the project area where alternative routes or route segments may be considered for further study.

Summary of Public Comments

DOE received two comments on the definition of the term study corridor. ACP recommended that the definition regarding consideration of NEPA alternative routes should be restricted to only those within the study corridor. ACP also recommended that the definition of study corridor be limited to alternative routes already within consideration of the study corridors, because, as ACP argued, this would cabin the scope of review and is necessary to avoid potential litigation risk if the rule were to require proponents to consider all potential alternative routes. OSPA requested that this final rule allow for study corridors wider than one mile to consider more alternative transmission paths. OSPA described that the one-mile width restriction is inconsistent with the broad definition of ''project area,'' which may limit the evaluation of potential transmission sites. OSPA therefore urged DOE to either change the definition or allow proponents to request exemptions from the one-mile restriction.

DOE Response

In this final rule, DOE revises the definition of study corridor to clarify the role of study corridors and the relationship between this term and other NEPA-related terms, as provided in section IV of this document.

DOE declines to revise the definition as ACP recommended. First, DOE clarifies that the project area may contain multiple study corridors and that those study corridors may include multiple potential routes. Additionally, DOE notes that study corridors are proposed by the project proponent, and the number of such study corridors will be driven by the project proponent, depending on the level of development of the project design at the time of IIP Process initiation. While these study corridors are developed by the project proponent, nothing in this rule commits DOE to limiting NEPA alternatives to these study corridors. The definition suffices to allow DOE and the relevant Federal entities to evaluate the study corridor and potential NEPA alternatives through the IIP Process.

DOE declines to implement OSPA's recommendation that the definition allow for study corridors wider than one mile. DOE assesses that the one-mile distance suffices to provide DOE and the relevant Federal entities with the information necessary to make the relevant determinations and issue the relevant authorizations, while avoiding overburdening the project proponent.

6. Resilience

DOE's Proposal

As noted, DOE proposed to require the submission of 13 resource reports, one of which would be titled Reliability, Resilience, and Safety.

Summary of Public Comments

One anonymous commenter noted that DOE did not provide a definition of the term ''resilience'' and requested that DOE define the term.

DOE Response

DOE declines in the final rule to provide a definition for the term ''resilience.'' This term does not appear outside of the Reliability, Resilience, and Safety resource report and its meaning is evident from the substance of that report.

7. Proposed Facility

DOE's Proposal

In the NOPR, DOE used the term ''proposed facility'' to delineate the scope of certain information project proponents would be required to submit. For instance, the NOPR proposed in § 900.3(b) to require the project proponent to provide a concise description of the proposed facility and a list of anticipated relevant Federal and non-Federal entities involved in the proposed facility.

Summary of Public Comments

CARE Coalition requested that DOE provide a definition of the term ''proposed facility.''

DOE Response

DOE declines in the final rule to provide a definition for proposed facility. DOE believes that the meaning of this term is sufficiently clear from the context and notes that through the IIP Process, project proponents will be able to refine the scope of the proposed facility as needed.

L. Resource Reports

The PIOs noted that DOE's resource reports are similar to the resource reports required under FERC's proposed rule regarding FERC's siting authority in NIETCs, per FPA section 216(b). The PIOs recommended that DOE align the numbering of resource reports with the numbering in FERC's proposed rule. DOE agrees with the suggested numbering change and has renumbered the reports accordingly. The following table catalogs the renumbering.

Resource report name	Proposed rule numbering	Final rule numbering
General Project Description	Resource Report 1	Resource Report 1.
Water Use and Quality	Resource Report 2	Resource Report 2.
Fish, Wildlife, and Vegetation	Resource Report 3	Resource Report 3.
Cultural Resources	Resource Report 4	Resource Report 4.
Socioeconomics	Resource Report 5	Resource Report 5.
Geological Resources	Resource Report 6	Resource Report 8.

Resource report name	Proposed rule numbering	Final rule numbering
Soil Resources	Resource Report 7	Resource Report 9.
Land Use, Recreation, and Aesthetics	Resource Report 8	Resource Report 10.
Communities of interest	Resource Report 9	Resource Report 7.
Air Quality and Noise Effects	Resource Report 10	Resource Report 11.
Alternatives	Resource Report 11	Resource Report 12.
Reliability, Resilience, and Safety	Resource Report 12	Resource Report 13.
Tribal Interests	Resource Report 13	Resource Report 6.

In this final rule, DOE also makes non-substantive edits to the proposed rule text of the resource reports to clarify the intent of the reports and clearly state the information that must be included in the reports. Across the resource reports, DOE reorganizes the proposed paragraphs to state the purpose of the resource report in the introductory paragraph (*e.g.,* paragraph (j)) and list all requirements for the resource report in subparagraphs (*e.g.,* paragraphs (j)(1), (2), etc.).

DOE's responses to comments on the resource report requirements as well as additional changes to the resource report requirements are discussed as follows. The ordering of the discussion follows the ordering of the resource reports in the NOPR.

i. General Project Description Resource Report

DOE's Proposal

In the NOPR, DOE proposed to require the submission of a resource report containing a general project description. The NOPR proposed that this report describe facilities associated with the project, special construction and operation procedures, construction timetables, future plans for related construction, compliance with regulations and codes, and permits that must be obtained.

In the NOPR, DOE proposed 12 topics that would be required as part of the report. The NOPR required that the project proponent: describe and provide location maps of all relevant facilities, access roads, and infrastructure; describe specific generation resources that are known or reasonably foreseen to be developed or interconnected; identify other companies that may construct facilities related to the project and where those facilities would be located; provide certain information regarding the facilities identified; provide certain information if the project is considering abandonment of certain resources; describe proposed construction and restoration methods; describe estimated workforce requirements; describe reasonably foreseeable plans for future expansion of facilities; describe all authorizations required and identify environmental mitigation requirements; provide the names and mailing addresses of all affected landowners; summarize any relevant potential avoidance, minimization, and conservation measures; and describe how the project will reduce capacity constraints and congestion on the transmission system, meet unmet demand, or connect generation resources to load, as appropriate.

Summary of Public Comments

DOE received one comment addressing the General Project Description resource report that is not already addressed in other sections of the discussion. ClearPath opposed the requirement that project proponents ''describe how the project will reduce capacity constraints and congestion on the transmission system, meet unmet demand, or connect generation resources (including the expected type of generation, if known) to load, as appropriate,'' arguing that this information is outside the scope of Federal jurisdiction under FPA 216(h).

That comment and others addressing reasonable and foreseeable generation are discussed in section VI.D of this document.

DOE Response and Summary of Other Changes

In this final rule, DOE retains the scope and purpose of this resource report with no revisions in response to ClearPath's comment because information may be helpful for understanding the project proponent's purpose and need and the potential scope of the environmental review, consistent with DOE's coordinating obligations under FPA section 216(h).

Additionally, DOE is eliminating a requirement from the NOPR for this report to include correspondence with the USFWS and National Marine Fisheries Service regarding potential impacts of the proposed facility on federally listed threatened and endangered species and their designated critical habitats because that correspondence is already required in Resource Report 3: Fish, Wildlife, and Vegetation, thereby reducing duplication of requirements.

ii. Water Use and Quality Resource Report

DOE's Proposal

In the NOPR, DOE proposed requiring project proponents to submit a report on existing water resources that may be impacted by the proposed project, the impacts of the proposed project on those resources, and proposed mitigation, enhancement, or protective measures to address those impacts.

Summary of Changes

DOE did not receive any comments on the Water Use and Quality Report that have not been addressed in another section of this final rule. However, DOE has made several changes to the requirements for the resource report between the NOPR and this final rule.

In keeping with the discussion in section VI.K.ii of this document, DOE is replacing two distances included in the proposed rule with ''in the applicable analysis area'' to give DOE, the project proponent, and appropriate Federal and non-Federal entities flexibility to set these distances based on the physical characteristics and needs of the project. A project proponent must now identify the location of known public and private groundwater supply wells or springs within the applicable analysis area rather than within ''150 feet of proposed construction areas.'' A project proponent must now identify any downstream potable water intake sources within the applicable analysis area, rather than ''three miles downstream'' of a surface water crossing.

DOE is making several terminology changes to clarify the scope of the analyses required by the report. The report now requires the project proponent to identify surface water resources crossed by a ''potential route'' rather than ''the project.'' The report also requires wetland maps showing ''study corridors and potential routes'' rather than just a ''proposed route.'' Finally, the report requires identification of aquifers and wellhead protection area crossed by a ''potential route,'' rather than ''proposed facilities.''

Lastly, DOE is relocating a requirement to indicate whether a water quality certification under section 401 of the CWA will be required for any potential routes. This requirement was proposed for the General Project Description resource report but has been moved into the requirements for this report because it deals directly with water resources.

iii. Fish, Wildlife, and Vegetation Resource Report

DOE's Proposal

In the NOPR, DOE proposed to require the submission of a resource report on fish, wildlife, and vegetation. As proposed, DOE required this report to include a description of aquatic life, wildlife, and vegetation in the proposed project area; expected impacts on these resources including potential effects on biodiversity; and proposed mitigation, enhancement, avoidance, or protection measures. DOE also proposed that this resource report may require species surveys to determine significant habitats or communities of species of special concern to Federal, Tribe, State or local agencies, or field surveys to determine the presence of suitable habitat. Finally, DOE proposed requiring the project proponent to provide a description of the proposed measures to avoid and minimize incidental take of Federally protected species, including eagles and migratory birds as part of this resource report.

Summary of Public Comments

DOE received two comments on the Fish, Wildlife, and Vegetation resource report, from AZGFD and the CARE Coalition.

AZGFD encouraged DOE to include State wildlife sensitive species, especially those classified as of Greatest Conservation Need in individual State Wildlife Action Plans. AZGFD also recommended that potential impacts from habitat loss and fragmentation, including potential impacts on wildlife connectivity, identified habitat linkages or wildlife corridors, be analyzed in the report, considering that transmission infrastructure affects wildlife movements and habitat use. It suggested that DOE provide guidance in the rule regarding coordination with State wildlife agencies on conservation measures necessary for adequate wildlife connectivity.

The CARE Coalition suggested that the report should describe known migratory corridors for large mammals within three kilometers of the proposed line. The CARE Coalition also suggested that project proponents should consult with USFWS to determine a distance at which the project proponent should identify Federally listed or proposed endangered or threatened species and critical habitats in the report.

DOE Response and Summary of Other Changes

DOE makes minor revisions in response to these comments. In response to AZGFD's request to include classifications like ''Greatest Conservation Need,'' DOE revises this final rule to request relevant information on ''State, Tribal, and local species of concern and those species' habitats'' because DOE believes this broader terminology addresses the concern raised by the commenter and additionally extends to consider species, habitats, or communities of species of concern to Federal, Tribal, State, or local agencies. DOE also agrees that habitat fragmentation impacts are relevant to the resource report and revises this final rule to include information on the potential effects of the proposed project on habitats, including effects related to habitat loss and fragmentation. Regarding AZGFD's request for guidance on coordination with State wildlife agencies, DOE makes no changes to this final rule as such coordination will depend on project specific circumstances, for example if a wildlife agency in the State participates as a relevant non-Federal entity in the IIP Process.

In response to CARE Coalition's request to include mammalian migratory corridors, DOE makes no revisions to this final rule. DOE believes the detail requested in the resource report is sufficient to provide such information if it is relevant to the project.

DOE is also making changes to the proposed rule text that are not in response to a specific comment. DOE is making several changes to clarify the scope of the analyses required in the report. The rule now requires the project proponent to identify aquatic habitats in the ''applicable analysis area'' rather than in the ''affected area'' and cabins the requirement to identify terrestrial habitats to only those terrestrial habitats in the project area. The rule also requires information on essential fish habitat which may be adversely affected by ''potential routes,'' rather than ''the project.''

In keeping with the discussion in section VI.K.ii of this document, DOE is replacing four distances and areas included in the proposed rule with ''in the applicable analysis area'' to give DOE, the project proponent, and appropriate Federal and non-Federal entities flexibility to set these distances based on the physical characteristics and needs of the project. DOE is now requiring a project proponent to identify aquatic habitats that occur in the ''applicable analysis area'' rather than in the ''affected area.'' Additionally, DOE is requiring the project proponent to identify proposed or designated critical habitats that potentially occur in the ''applicable analysis area'' rather than the ''project area.'' DOE is also now requiring a project proponent to identify the location of potential bald and golden eagle nesting and roosting sites, migratory bird flyways, and any sites important to migratory bird breeding, feeding, and sheltering within the ''applicable analysis areas,'' rather than within ''10 miles of the proposed project area.'' While 10 miles is currently the USFWS standard, DOE opts to leave establishment of these boundaries flexible for future project needs as well as any future updates to USFWS requirements. Likewise, DOE is requiring the project proponent to identify all Federally designated essential fish habitat that occurs in the ''applicable analysis area'' whereas in the proposed text, the scope of that identification was undefined.

Lastly, the rule clarifies the role of surveys in the resource report. The rule provides that the project proponent must include the results of any appropriate surveys that have already been conducted and provide protocols for future surveys. The rule maintains the provision that if potentially suitable habitat is present, species-specific surveys may be required.

iv. Cultural Resources Resource Report

DOE's Proposal

In the NOPR, DOE proposed to require the submission of a resource report on cultural resources, which would contribute to the satisfaction of DOE's and other relevant Federal entities' obligations under section 106 of the NHPA. The NOPR required the resource report to describe known cultural and historic resources in the affected environment, including those listed or eligible for listing on the National Register of Historic Places (NRHP), potential adverse effects to those resources, and recommended avoidance and minimization measures to address those potential effects. It also required the resource report to document the project proponent's initial communications and engagement with and comments from Indian Tribes, indigenous peoples, THPOs, SHPOs, communities of interest, and other relevant entities, and provide details

regarding surveys. Finally, the NOPR required that the project proponent request confidential treatment for all materials filed with DOE containing location, character, and ownership information about cultural resources.

Summary of Public Comments

DOE received one comment on the Cultural Resources Resource Report from NM SHPO that is not otherwise addressed in section VI.J of this document.

NM SHPO appreciated DOE's requirement for project proponents to consider treatments to avoid, minimize, or mitigate harmful impacts to the landscape, but encouraged DOE to also require project proponents to consider these treatments for individual historic properties eligible for or listed in the NRHP. This inclusion would require that resource reports begin with historic contexts for landscape-level evaluations and that other Federal agencies examine landscape-level eligibility and effects during the review of resource reports. The NM SHPO noted that in New Mexico, consultants are required to meet State documentation guidelines before accessing cultural resource records to produce a cultural resources report, and subsequently questioned whether DOE's regulation will acknowledge or supersede State statutes, regulations, or guidelines.

DOE Response and Summary of Other Changes

DOE makes no revisions in response to NM SHPO's comment. DOE clarifies that while the CITAP Program is intended to facilitate coordination with relevant State statutes, regulations, and guidelines, the rule does not supersede State statutes, regulations, or guidelines. Regarding the NM SHPO's request that the rule should consider treatments to mitigate harmful impacts on certain individual properties, DOE notes that the rule does not preclude this sort of action, but makes no revisions to mandate a particular approach to mitigation because DOE believes these approaches are more appropriate to discuss in the context of project-specific circumstances. The updated definition of mitigation approach in this final rule is intended to create an opportunity for consideration and discussion of multiple types of mitigation strategies for a proposed project. DOE also notes that no decisions are made on mitigation during the IIP Process; rather, the IIP Process facilitates the development of a shared understanding of project needs and expectations.

DOE is also making several changes to the proposed rule text that are not in response to a specific comment. In keeping with the discussion in section VI.K.ii of this document, DOE is now requiring a summary of known cultural and historic resources in the ''applicable analysis area'' rather than in the ''affected environment.''

Furthermore, in the requirement to provide a summary of known cultural and historic resources, DOE is adding as an example of those resources, properties of religious and cultural significance to Indian Tribes, and any material remains of past human life or activities that are of an archeological interest. This change was made to broaden and clarify the definition of cultural resources included in the rule.

v. Socioeconomics Resource Report

DOE's Proposal

In the NOPR, DOE proposed to require the submission of a resource report on socioeconomics. DOE proposed to require in this resource report the identification and quantification of the impacts of constructing and operating the proposed project on the demographics and economics of communities in the project area, including minority and underrepresented communities.

Summary of Public Comments

DOE received one comment addressing the required elements of the Socioeconomics resource report. ClearPath recommended that DOE exclude the requirement for project proponents to ''evaluate the impact of any substantial migration of people into the proposed project area on governmental facilities and services and describe plans to reduce the impact on the local infrastructure'' because it is ambiguous and beyond DOE's statutory authority. Furthermore, ClearPath noted the project proponent is not responsible for minimizing the impact on local infrastructure from the significant migration of people.

DOE Response

DOE makes no revisions in response to this comment because DOE finds this information is commonly requested for evaluating the impacts of infrastructure permitting.[12]

DOE is making several changes to the proposed rule text that are not in response to a specific comment. In keeping with the discussion in section VI.K.ii of this document, DOE is replacing multiple areas of study included in the proposed rule with ''in the applicable analysis area'' to give DOE, the project proponent, and appropriate Federal and non-Federal entities flexibility to set these distances based on the physical characteristics and needs of the project. The rule now requires the project proponent to describe the socioeconomic resources that may be affected in the ''applicable analysis area'' rather than in the ''project area.'' Likewise, the rule requires the project proponent to evaluate the impact of any substantial migration of people into the ''applicable analysis area'' rather than the ''proposed project area.'' Finally, the rule replaces ''impact area'' with ''applicable analysis area'' in several instances because ''impact area'' is not defined in the rule.

vi. Geological Resources and Hazards Resource Report

DOE's Proposal

The NOPR proposed requiring project proponents to submit a resource report on geological resources that might be affected by the proposed project and geological hazards that might put the proposed project at risk. As written, the NOPR required the resource report to include a description of methods to reduce the effects on geological resources and reduce the risks posed by the hazards.

Summary of Changes

DOE did not receive any comments on the Geological Resources resource report that have not been addressed in another section of this final rule. However, DOE has made minor changes to the requirements and description for the resource report between the NOPR and this final rule.

The title of this resource report has been updated to ''Geological Resources and Hazards'' to better reflect the scope of the report. Additionally, in keeping with the discussion in section VI.K.ii of this document, DOE is clarifying that the project proponent only needs to describe geological resources and hazards ''in the applicable analysis area.'' The proposed rule did not provide a definite boundary for these identifications.

vii. Soil Resources Resource Report

DOE's Proposal

The NOPR proposed requiring project proponents to submit a resource report on soil resources that might be affected by the proposed project, the effect on those soils, and measures proposed to avoid, minimize, or mitigate impact.

Summary of Changes

DOE did not receive any comments on the Soil Resources resource report that have not been addressed in another

[12] See, for example, 10 CFR 380.16(g).

section of this final rule. However, DOE has made one substantive change to the requirements for the resource report between the NOPR and this final rule.

The NOPR proposed that a project proponent would need to list and describe soil series for any ''site larger than five acres.'' However, because almost all projects in the CITAP Program would cover more than five acres, this distinction would not set an effective boundary on the area of the requirement. Therefore, this final rule requires identification and description of soil series within ''the applicable analysis area'' to allow DOE, the project proponent, and relevant Federal and non-Federal entities to determine the scope of the analysis needed.

viii. Land Use, Recreation, and Aesthetics Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on land use, recreation, and aesthetics. DOE also proposed to require in this resource report a description of the existing uses of land on, and within various distances, the proposed project and changes to those land uses and impacts to inhabitants and users that would occur if the project were approved. The NOPR also required the report to describe proposed mitigation measures, including protection and enhancement of existing land use.

DOE sought comment on whether further revisions were needed to proposed § 900.6(m)(8), which proposed that the project proponent identify, by milepost and length of crossing, the area of direct effect of each proposed facility and operational site on lands owned or controlled by Federal or State agencies with special designations not otherwise mentioned in other resource reports, as well as lands controlled by private preservation groups (examples include sugar maple stands, orchards and nurseries, landfills, hazardous waste sites, nature preserves, game management areas, remnant prairie, old-growth forest, national or State forests, parks, designated natural, recreational or scenic areas, registered natural landmarks, or areas managed by Federal entities under existing land use plans as Visual Resource Management Class I or Class II areas), and identify if any of those areas are located within 0.25 mile of any proposed facility.

Summary of Public Comments

DOE received several comments on required elements of the Land Use, Recreation, and Aesthetics Resource Report. LTA expressed support for the inclusion of this resource report and commented specifically in support of retaining multiple provisions of this report.

DOE received responses on whether revisions were needed to paragraph (m)(8) from LTA and CEC/CPUC. The CEC/CPUC advised DOE to divide § 900.6(m)(8) into two sections: one about conservation lands and another about lands with protective covenants due to distinct management practices. LTA recommended adding ''conservation or agricultural lands subject to state statutorily enabled conservation or agricultural easements or restrictions'' to the list of examples. CEC/CPUC recommended DOE include lands conserved and held by local focus on land use restrictions, and include more specific provisions that agricultural conservation lands described should only include those with formal designations.

LTA recommended requiring the project proponent to describe ''an area a Community of Interest has identified as having one or more resources likely to be impacted by a proposed project'' in addition to the specifically listed areas under the list of Federal designations in paragraph (10). LTA also recommended adding to the specifically listed areas ''National Forests and Grasslands'' and ''lands in easement programs managed by the Natural Resource Conservation Service or the U.S. Forest Service'' to this paragraph.

LTA recommended DOE revise its request for a detailed operations and maintenance plan for vegetation management to include, ''that utilizes native species to the maximum extent practical.''

ACP stated that the requirement that proponents identify all residences and buildings within 200 feet of the edge of the proposed transmission line construction right-of-way was ''excessively onerous'' and impractical. ACP suggested that the transmission right-of-way is a more appropriate boundary than the construction right-of-way.

AZGFD recommended that this resource report identify potential impacts to access for State wildlife agencies to carry out their responsibilities, outdoor recreation, and recreational access. AZGFD urged DOE to coordinate with State wildlife agencies to ensure actions do not prevent State agencies from conducting their responsibilities.

DOE Response and Summary of Other Changes

DOE retains the scope and purpose of the Land Use, Recreation, and Aesthetics Resource Report with minor revisions in response to these comments.

In response to the comments on revisions to paragraph (8), which includes a list of example specially designated areas, DOE has made overall changes to the structure and language of the paragraph to improve the clarity and readability of the requested information, to reduce emphasis on the specific types of land ownership or use, and to clarify that the resource report provides details regarding lands with explicit status through Federal, state, or local formal designation, as well as lands owned or controlled by Federal, State or local agencies or private preservation groups. DOE has also added that the proposed list is not exhaustive of the types of lands that should be identified in this section, but rather identifies examples of the types of lands that may meet the criteria now more clearly listed. DOE disagrees with CEC/CPUC that this resource report should only include lands with a formal agricultural conservation designations because the intent of this provision and its list of examples is to capture lands with special status not typically contemplated by Federal or State law but agrees with LTA that ''conservation or agricultural lands subject to State statutorily enabled conservation or agricultural easements or restrictions'' is a helpful additional example and includes this in this final rule.

In response to comments on the list of Federal statutory designations in paragraph (10), DOE makes minor revisions to include forests and grasslands. DOE agrees that specifically listed areas should include Forest and Grasslands and lands in easement programs managed by the Natural Resource Conservation Service or the U.S. Forest Service and includes those in this final rule. DOE does not include areas identified by communities of interest because the intent of this resource report requirement is to identify areas that fall under specific Federal statutes and regulations to assist DOE in implementing its environmental review and coordination authority. In response to LTA's request that the vegetation management provision include a prioritization of the use of native species, DOE makes no revisions in this final rule because DOE believes specific prescriptions for project management practices should be addressed on a project-specific basis.

In response to ACP's comment on the appropriate area for building identification DOE revises the proposed distance-based requirement but maintains construction right-of-way

because the effects of construction on buildings is information that DOE believes is necessary to inform DOE's environmental review.

In response to AZGFD's request that this final rule consider impacts to State wildlife agencies, DOE makes no revisions because the agency believes that the text is sufficiently clear on the need for project proponents to provide such information in the resource report. Further, DOE believes that the coordination with non-Federal entities in the IIP Process sufficiently addresses the concern of coordination with State wildlife agencies and makes no further revisions.

DOE is also making several changes to the proposed rule text that are not in response to a specific comment. DOE significantly reorganizes portions of the resource report requirements for clarity but does not make any substantive changes through the reorganization.

In keeping with the discussion in section VI.K.ii of this document, DOE is replacing multiple distances included in the proposed rule with ''in the applicable analysis area'' to give DOE, the project proponent, and appropriate Federal and non-Federal entities flexibility to set these distances based on the physical characteristics and needs of the project. A project proponent must now identify certain planned development within ''the applicable analysis area'' rather than within ''0.25 mile of proposed facilities.'' Likewise, the requirement for a project proponent to identify directly affected areas that are owned or controlled by a governmental entity or private preservation group within ''0.25 miles of any proposed facility'' has been changed to within ''applicable analysis areas.'' The final rule also requires the project proponent to identify resources within ''the applicable analysis area'' that are included in or designated for study for inclusion in certain Federal land and water management statutes. The proposed rule asked for the project proponent to identify the same types of resources ''crossed by or within 0.25 mile of the proposed transmission project facilities.''

ix. Communities of Interest Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on communities of interest. DOE proposed to require in this resource report a summary of known information about the presence of communities of interest that could be affected by the qualifying project; identification and description of the potential impacts of constructing, operating, and maintaining the project on communities of interest; a description of any proposed measures intended to avoid, minimize, or mitigate such impacts or community concerns; and a discussion of any disproportionate and/or adverse human health or environmental impacts to communities of interest.

Summary of Public Comments

DOE received three comments on the Communities of Interest Resource Report that are not already addressed in the discussion regarding the definition of communities of interest in section VI.K.iii of this document.

LTA expressed support for retaining this resource report. ClearPath opposed the addition of this resource report because ''by proposing separate requirements for Communities of Interest in Project Participation plans and outreach plans, the DOE is conceding that stakeholder engagement requirements are deficient.'' ClearPath claims that the proposal represents duplicative requirements and paperwork for project proponents and establishes a hierarchy of treatment and consideration of project impacts across population segments that could have concerns regarding equal treatment and discrimination.

Regarding the requirement that the project proponent ''[s]ummarize known information about the presence of communities of interest that could be affected by the qualifying project,'' EDF noted that the phrase ''known information'' may present a loophole, and instead the project proponent should be required to investigate, observe, and understand the concerns of communities of interest. EDF also indicated that regulations should specify that there is a responsibility to avoid, minimize, or mitigate any health or environmental impacts identified.

DOE Response

DOE retains the Communities of Interest resource report with minor revisions in response to these comments. DOE does not agree that this resource report is duplicative with the public engagement plan and clarifies that this resource report is aimed at identifying negative impacts to communities of interest and mitigation measures while the public participation plan is aimed at ensuring sufficient engagement. ClearPath's concerns about the disparate treatment in the public engagement plan are discussed in further detail in section VI.E of this document.

DOE agrees with EDF that ''known'' is not consistent with the intent of the information request and revises this final rule to require ''best available information on'' rather than EDF's proposed cure because this is consistent with the standard of information gathering for environmental reviews.

x. Air Quality and Noise Effects Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on air quality and noise effects. DOE proposed to require in this resource report the identification of the effects of the project on the existing air quality and noise environment and describe proposed measures to mitigate the effects.

Summary of Public Comments

DOE received three comments in response to the Air Quality and Noise Effects resource report proposal.

Policy Integrity stated that the NOPR is unclear regarding local air pollutants and non-power-sector emissions and advised DOE to require project proponents to comprehensively estimate the associated changes to GHG emissions and local air pollution from their transmission project and alternatives, such as indirect upstream GHG emissions from methane leakage. Additionally, the commenter suggested that the need to estimate and describe impacts from changes to criteria pollutants should not depend on whether they remain below the Clean Air Act's National Ambient Air Quality Standards (NAAQS), stating that the EPA has recognized that there is no safe level of exposure. In contrast, ClearPath strongly opposed Air Quality and Noise Effects resource report's proposed requirement that project proponents estimate direct, indirect, and ''reasonably foreseeable'' generation resource-related project emissions. ClearPath described the proposed requirements as vague and as lacking a robust process for proponents to follow, such that proponents are unlikely to understand and comply.

AZGFD recommended that DOE require the identification of air and noise related potential impacts on all wildlife resources, in addition to the Federally-listed species or sensitive wildlife habitats currently identified.

DOE Response and Summary of Other Changes

DOE retains the Air Quality and Noise Effects resource report in full in this final rule with no changes in response to these comments.

Regarding local air pollutants and emissions, DOE makes no changes in response to the comment. DOE believes the rule makes clear that it requires information regarding non-GHG emissions and non-power-sector emissions. In this resource report, project proponents must identify reasonably foreseeable emissions caused by the project, regardless of whether those emissions occur in NAAQS non-attainment areas. DOE believes that requirement provides adequate guidance to project proponents.

Regarding the impacts on wildlife resources, DOE believes the impacts to wildlife are sufficiently addressed in the Fish, Wildlife, and Vegetation resources report and makes no revisions to this report.

DOE is making several changes to the proposed rule text that are not in response to a specific comment. DOE significantly reorganizes portions of the resource report requirements for clarity but does not make any substantive changes through the reorganization.

In keeping with the discussion in section VI.K.ii of this document, DOE is replacing multiple areas of study included in the proposed rule with ''in the applicable analysis area'' to give DOE, the project proponent, and appropriate Federal and non-Federal entities flexibility to set these distances based on the physical characteristics and needs of the project. A project proponent is now required to describe existing air quality in ''the applicable analysis area'' rather than in the ''project area.'' Likewise, a project proponent is required to identify air quality impacts on communities and the environment in the ''applicable analysis area,'' rather than the ''project area.'' Finally, the proposed rule clarifies that a project proponent is required to describe existing noise levels at noise-sensitive areas in the ''applicable analysis area,'' instead of leaving the study area undefined.

xi. Alternatives Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on alternatives. DOE proposed to require this resource report to include a description of alternatives identified by the project proponent during its initial analysis, which may inform the relevant Federal entities' subsequent analysis of alternatives, address alternative routes and alternative design methods, and compare the potential environmental impacts and potential impacts to cultural and historic resources of such alternatives to those of the proposed project. DOE also proposed that the project proponent include all of the alternatives identified by the project proponent, including those the proponent chose not to examine or not examine in greater detail, and an explanation for the project proponent's choices regarding the identification and examination of alternatives. The NOPR proposed to require that project proponents demonstrate whether and how environmental benefits and costs were weighed against economic benefits and costs to the public, and technological and procedural constraints in developing the alternatives, as well as explain the costs to construct, operate, and maintain each alternative, the potential for each alternative to meet project deadlines, and the potential environmental impacts of each alternative.

Summary of Public Comments

DOE received three comments addressing the Alternatives Resource Report that are not already addressed in other sections.

Niskanen Center noted that the alternatives report would benefit from clarifying language and revisions to avoid ambiguity regarding the definition of alternatives and the extent to which they should be included in the resource report and provided recommendations. Niskanen Center also requested clarifying language if the Alternatives resource report is the only report that is required to include an alternatives analysis, and that if not, DOE should clearly state its request for such analysis in each report.

ACP expressed concerns regarding the NOPR not reflecting the intersections between state, Tribal, and Federal siting authorities, specifically noting the overlapping timetables that can be difficult to predict. ACP provided as an example that if State siting precedes Federal siting, only a single route might be approved which would materially limit the required NEPA alternative and potentially increase overall legal risk if opponents claim that the failure to adequately consider proposed alternatives violates NEPA or the Administrative Procedure Act. ACP recommended that DOE explicitly address these limited alternatives that may be established through a State siting process, as well as ensure that Federal reviews account for the potential scope of State siting determinations and not require consideration of alternatives that are impossible or implausible.

The CARE Coalition urged DOE to specifically require the consideration of alternative transmission technologies (ATTs), such as dynamic line ratings, power flow controllers, advanced conductors, and battery storage, in the report. The commenter explained that failure to consider ATTs excludes a potentially low-cost alternative that may prevent or reduce environmental harm.

DOE Response

DOE maintains the Alternatives resource report but makes substantial revisions in response to these comments to reduce ambiguity on the scope and purpose.

In response to Niskanen Center's comment, DOE confirms that this resource report is the only resource report that requires an alternatives analysis. Other resource reports are intended to address the potential study corridors or routes along which the project proponent is considering siting the electric transmission facility. Those resource reports do not need to address alternative study corridors or alternative routes that the project proponent has eliminated from consideration.

The Alternatives resource report is intended to provide an overview of the study corridors and routes that were initially considered for the proposed project, but that ultimately were not chosen for further study by the project proponent. In keeping with this intent, in this final rule, DOE is requiring a project proponent to identify all study corridors that were considered as part of the proposed project, as well as all routes contained within those study corridors. Within that broad group of study corridors and routes, DOE requires the project proponent to identify those alternative study corridors and routes that the project proponent eliminated from further study under an initial screening, and the reasons why those corridors and routes were eliminated.

For the remaining alternative study corridors and routes, DOE requires analyses of certain impacts of siting the electric facility in the corridor or along the route. Likewise, DOE requires a discussion of the costs, timelines, and technological and procedural constraints of siting the electric facility in the corridor or along the route. Finally, DOE requires the project proponent to demonstrate whether and how environmental benefits and costs were weighed against economic benefits and costs to the public for the route or corridor.

In response to ACP's concern about overlapping timetables and limitations to alternatives, DOE makes no additional revisions because, as clarified above, the Alternatives resource report addresses the project proponent's

approach to Alternatives which may inform, but does not supplant, DOE's consideration of appropriate alternatives for its environmental review.

In response to CARE Coalition's request that DOE include ATTs, DOE declines to specify the consideration of specific evolving technologies in its regulatory test.

xii. Reliability, Resilience, and Safety Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on potential hazards to the public from failures of the proposed electric transmission facility due to accidents, intentional destructive acts, and natural catastrophes. DOE also proposed requiring the report to describe how these events would affect reliability, benefits to reliability from the project, and what procedures and design features could be used to reduce risks to the facility and the public.

Summary of Changes

DOE did not receive any comments on the Reliability, Resilience, and Safety resource report that have not been addressed in another section of this final rule. However, in this final rule DOE significantly reorganizes portions of the proposed resource report requirements for clarity but does not make any substantive changes through the reorganization.

xiii. Tribal Interests Resource Report

DOE's Proposal

DOE proposed to require the submission of a resource report on Tribal interests. DOE proposed to require in this resource report the identification of the Indian Tribes, indigenous communities, and their respective interests that may be affected by the proposed transmission facilities, including those Indian Tribes and indigenous communities that may attach religious and cultural significance to historic properties within the right-of-way or in the project area as well as any underlying Federal land management agencies. DOE also proposed to require in this resource report a discussion of potential impacts on Indian Tribes and Tribal interests and of traditional cultural and religious resources that could be affected by the proposed project, to the extent Indian Tribes are willing to share this information. Additionally, DOE proposed that certain specific site or location information that may create a risk of harm, theft, or destruction, or otherwise violate Federal law should be submitted separately, and that the project proponent must request confidential treatment for all material filed with DOE containing location, character, and ownership information about Tribal resources.

Summary of Public Comments

DOE received four comments regarding the Tribal Interests Resource Report that are not already addressed in previous discussions. Most comments are addressed in section VI.J of this document in response to the approach to compliance with section 106 of the NHPA.

LTA expressed support for this resource report and urged DOE to collaborate with Indian Tribes to ensure that the language used in the report adequately protects their interests. The Santa Rosa Rancheria Tachi Yokut Tribe and NATHPO expressed concern with a comment by DOE staff, which the commenters believe indicated, contrary to the proposed rule text, that the Tribal Interests resource report would not contain cultural resources, examples of Tribal resources provided in the proposed rule (*e.g.,* water rights, access to property, wildlife and ecological resources) are Tribal cultural resources. The commenters stated that this comment reflects a fundamental lack of understanding about what is a Tribal cultural resource. Relatedly, the NM SHPO noted that resources identified in other resource reports, such as the Water Use and Quality resource report and the Fish, Wildlife, and Vegetation resource report, may also be of traditional and cultural significance and eligible for the NRHP.

DOE Response

In this final rule DOE retains the Tribal Interests resource report with minor revisions for clarity in response to comments. First, DOE did not intend to indicate that the Tribal Interests resource report would not contain cultural resources. Second, DOE sought comment from Indian Tribes and will coordinate with Indian Tribes in accordance with the Federal Government's nation-to-nation responsibilities, pursuant to DOE's authority under FPA 216(h).

In response to the concern raised by Santa Rosa Rancheria Tachi Yokut Tribe and NATHPO that the resource report requirements reflect a misunderstanding about tribal cultural resources, DOE revises the report for clarity. DOE acknowledges that the Tribal Interests and Cultural Resources resource reports may contain some resources that overlap in part but clarifies that they are intended to support different purposes and request different details. DOE expects that certain cultural resources may be described in both resource reports and revises the Cultural Resources resource report to clarify that cultural and historic resources include, among other things, properties of religious and cultural significance to Indian Tribes.

M. Administrative Docket

DOE's Proposal

To better coordinate Federal authorizations, DOE proposed to maintain a consolidated administrative docket containing meeting requests, meeting summaries, resource reports, other information assembled during the IIP Process, and all information assembled by relevant Federal entities for authorizations and reviews after completion of the IIP Process.

Summary of Public Comments

Commenters, such as EEI, PJM, and the CARE Coalition, expressed support for a consolidated administrative docket. PJM believes that a consolidated administrative docket will ensure all Federal entities are working from a single, complete record for reviews and decisions. One commenter, Niskanen Center, proposed that the administrative docket be public, while the CARE Coalition proposed the rule provide more details to clarify access to the administrative docket to ensure stakeholder participation. Another commenter, StopPATH WV, proposed DOE make the administrative docket information available to landowners that may be impacted by the proposed project.

DOE Response

DOE maintains the features and purpose of the administrative docket in this final rule with minor revisions. DOE agrees that the public should have access to the administrative docket for the proposed project and revises this final rule to provide that ''Upon request, any member of the public may be provided materials included in the docket, excluding any materials protected as CEII or as confidential under other processes (*e.g.,* confidential business information and information developed during consultation with Tribes).''

N. Interaction With FPA 216(a) and FPA 216(b)

Summary of Public Comments

Seven commenters provided comments on the interaction of the proposed rule with DOE's process for designating NIETCs, per FPA section

216(a), and FERC's pending regulations regarding its siting authority in NIETCs, per FPA section 216(b), referred to by some commenters as ''backstop siting.''

PIOs praised DOE's proposed rule for its alignment with FERC's proposed backstop permitting rule. PIOs anticipated that this coordination would support a consistent, predictable, and rigorous Federal review and permitting process and offer certainty to project proponents, as they seek necessary authorizations. Additionally, PIOs anticipated that alignment would ensure project proponents could easily engage in both processes if necessary, citing potential scenarios in which a project seeking a FERC permit needs multiple Federal authorizations and could benefit from the IIP Process or a project undergoing the IIP Process decides it needs a FERC permit. PIOs argued that in these cases, alignment across processes would allow project proponents to effectively engage in both processes, while reducing duplication. PIOs identified several similarities between proposed requirements under DOE's CITAP Program and FERC's proposed rule. PIOs stated that DOE's proposed IIP Process plays a similar role to FERC's pre-filing process. Additionally, PIOs noted that DOE's resource reports are similar to those required under FERC's rule and recommended that DOE align the numbering of resource reports with the numbering in FERC's proposed rule.

Several commenters supported alignment of the CITAP Program's requirements with FPA sections 216(a) and 216(b) regulations. ACEG, CEBA and the CARE Coalition urged DOE to align the CITAP Program with NIETC designation and FERC's backstop siting authority. CEBA suggested this would avoid duplication and ensure processes are clear and remain streamlined across relevant Federal agencies. ACEG stated it would ensure effective and efficient implementation; the CARE Coalition argued that this coordination would provide certainty and transparency for stakeholders, predictability for project proponents, and a reduction in associated project permitting costs. LADWP recommended that DOE align the information required by the resource reports during the IIP Process with the information required by the resource reports under FERC's proposed backstop permitting rule. LADWP suggested that alignment of this information would result in a more efficient permitting process. Similarly, ACORE recommended that DOE provide a mechanism for any information submitted under the NIETC program to be incorporated into the IIP Process.

ACP commented that since proposed electric transmission projects seeking Federal ''backstop'' siting authority under section 216(b) of the FPA would not be eligible for the CITAP Program, DOE should ensure, in conjunction with FERC, that any subsequent NEPA rulemakings will allow for each agency to use an EIS prepared by the other agency as this would help to minimize the potential for duplicative reviews. Similarly, EDF recommended that in the event a transmission facility requires a construction or modification permit from FERC pursuant to section 216(b) of the FPA, DOE should conduct a single coordinated environmental review with FERC. EDF explained that the benefits of such a coordinated review have already been recognized by DOE in its ''Building a Better Grid Initiative to Upgrade and Expand the Nation's Electric Transmission Grid To Support Resilience, Reliability, and Decarbonization'' NOI, wherein DOE states that ''DOE and FERC intend to work together, as appropriate, to establish coordinated procedures that facilitate efficient information gathering related to the scope of activities under review pursuant to these authorities.'' EDF believes that by coordinating, to the greatest extent practicable, pre-filing and application processes, DOE and FERC can work with project proponents to identify and resolve issues as quickly as possible, share information in a timely fashion, and expedite reviews conducted pursuant to these authorities, NEPA, and other requirements. ACEG added that to avoid fragmentation in the review process, and to comply with section 216(h) of the FPA, DOE must prepare a single document for the project's NEPA review, which will serve as the basis for decision-making under both NIETC and CITAP.

Two comments requested more information. ACEG and CEBA requested clarification on how a project proponent can initiate the CITAP Program while seeking project-specific NIETC designation and how a CITAP Program project can apply for backstop siting. ACEG explained that a project in a NIETC could need to transition to backstop siting years into the CITAP Program review process, and CEC/CPUC similarly requested clarification on what will happen to a CITAP Program application once a project becomes eligible for backstop siting. CEBA offered its interpretation of the NOPR, understanding that projects could participate in the section 216(h) process if the project has not triggered or received section 216(b) FERC backstop authority. ACEG explained that project proponents are likely to seek NIETC designation to unlock funding opportunities available to projects in designated corridors. ACEG encouraged DOE to streamline the processes by allowing project proponents to submit a single application to initiate both processes.

Conrad Ko suggested the routes of any applicant for a transmission line construction permit to be automatically designated as a NIETC and for the entire United States should be designated a NIETC.

DOE Response

DOE makes no revisions to the rule in response to these comments, except to renumber the resource reports to align with the numbering in FERC's proposed rule. DOE intends to coordinate interagency efforts to the greatest extent possible, pursuant to its authority under FPA section 216(h). The responsibility for coordinating Federal authorization under section 216(h) for projects seeking a permit under FPA section 216(b) has been delegated to FERC, pursuant to Delegation Order No. S1–DEL–FERC–2006. DOE's current approach to the environmental analysis for designation of NIETCs under section 216(a) may be found in the Guidance on Implementing Section 216(a) of the Federal Power Act to Designate National Interest Electric Transmission Corridors issued in December 2023.[13]

DOE does not find that any provisions in this rule would preclude the use of an EIS prepared by another agency, including FERC, should such a circumstance arise. DOE agrees with commenters that projects within a NIETC may qualify for the CITAP Program; however, if a project within a NIETC seeks a permit from FERC under FPA section 216(b), FPA section 216(h) coordination will proceed consistent with Delegation Order No. S1–DEL–FERC–2006. DOE has endeavored to align the environmental review procedures for NIETC designation and the CITAP Program to the greatest extent possible, and additionally align with FERC's proposed procedures for implementing section 216(b), as observed by PIOs, to minimize the chance that such transitions create duplicative work or unnecessary delay. Deviations among the regulations,

[13] ''U.S. Department of Energy Grid Deployment Office Guidance on Implementing Section 216(a) of the Federal Power Act to Designate National Interest Electric Transmission Corridors.'' *National Interest Electric Transmission Corridor Designation Process,* United States Department of Energy, 19 Dec. 2023, *www.energy.gov/sites/default/files/2023-12/2023-12-15GDONIETCFinalGuidance Document.pdf.*

particularly the specific contents of the thirteen resource reports, reflect the differences in authorizations and permits DOE expects to coordinate and provide for in its single environmental review under FPA section 216(h).

This final rule maintains the provision that the Director of the Grid Deployment Office may waive requirements of the CITAP Program, which provides flexibility for transitioning between processes without requiring duplicative work. Nothing in this final rule precludes the reuse or concurrent submission of resource reports or other project materials for a proposed project in a NIETC, whether under consideration for designation or already designated, seeking CITAP Program participation. DOE declines to further specify the coordination between NIETCs and the CITAP Program because it is outside the scope of the rulemaking. DOE has sufficiently established the requirements and restrictions on qualifying project designation and further details on interactions with other DOE programs are implementation issues that will be determined as needed. DOE may provide additional guidance outside of this rule regarding the interactions of various DOE and FERC authorities in section 216 of the FPA.

O. Miscellaneous

i. Presidential Appeal

Summary of Public Comments

DOE received comments regarding the presidential appeals process and review. PIOs commented that the language in the proposed rule was consistent with the FPA but requested clarification on the process to inform project proponents and members of the public. PIOs requested that DOE clarify how the appeal to the President might work, and whether and how a project proponent might appeal the President's decision. AEU explained that the FPA section 216(h) allows for an appeal to the President of the United States which appears to be an extreme step in a process that should be handled through a judicial or administrative hearing. The association emphasized that transmission developers should have the ability to appeal if the approval process is not proceeding according to the schedule set by DOE through no fault of their own and the proposed rule should either describe how an appeal to the President would proceed or lay out a specific appeal process for a project developer. AEU also expressed concerns regarding recourse if the timeframe from NOI through issuance of the EIS is not met. AEP similarly recommended enabling project proponents to petition the court if Federal agencies fail to comply with applicable deadlines.

DOE Response

Section 216(h) of the FPA authorizes the President to hear and consider appeals under that section. The 2023 MOU describes the procedures for Presidential appeals. The Presidential appeals provision of section 216 of the FPA and the procedures described in the MOU, including any process by which such a decision may be appealed, are outside the scope of DOE's authority and thus outside the scope of this rulemaking.

In response to AEP's request that DOE enable project proponents to petition a court if Federal agencies fail to comply with applicable deadlines, DOE notes that it does not, through this rule, have the authority to authorize, or prohibit, project proponents from filing court petitions regarding of Federal agency adherence to applicable deadlines.

ii. Rehearing and Judicial Review

Summary of Public Comments

PIOs urged DOE to explain the implications of section 313 of the FPA, including (1) the FPA's judicial review provision, in which challenges are first brought to the agency, and then litigated in a court of appeals under shorter timelines than most Federal agency decisions, which are subject to review in district courts within six years, and (2) the exhaustion requirements of the FPA, under which courts only recognize claims raised in a rehearing application. PIOs also asked DOE to explain whether the FPA's judicial review provisions require a potential challenger to intervene before DOE, to raise any substantive concerns during the DOE process even if DOE lacks substantive expertise with the challenger's concerns, to seek rehearing within thirty days, and to seek judicial review in a court of appeals within sixty days of a rehearing decision. PIOs also recommended that DOE (1) encourage parties, in both pre- and post-application outreach, to provide comment on transmission applications, (2) provide language for doing so, and (3) grant party status to any party that submits a timely comment.

DOE Response

Section 313 of the FPA contains rehearing and judicial review provisions applicable to orders issued by DOE under the FPA, including any order issued under section 216(h). 16 U.S.C. 825l.[14] Section 313(a) provides that any person aggrieved by an order must first apply for rehearing within 30 days of the issuance of such order. Upon receiving the application, section 313 authorizes DOE to grant or deny rehearing or to abrogate or modify its order without a further hearing. DOE has 30 days to act upon the application for rehearing or the application is deemed to have been denied. Under section 313(b), a party may then proceed to seek judicial review in the courts of appeals, by filing a petition for review in such a court within 60 days of the order on the application for rehearing.

Thus, any party that wishes to ensure the availability of judicial review of any relevant authorization or related environmental review document issued under section 216(h) should raise in rehearing before DOE all challenges to such authorization or document, including those actions undertaken by DOE in its role as the lead agency for purposes of environmental review. Subject to any further process, DOE intends to treat as a party any person or entity that comments on any relevant authorization or related environmental review document. Because these topics relate to procedures outside the scope of this rule and may depend on specific factual circumstances, DOE declines at this time to establish model language regarding rehearing and review. Nevertheless, DOE supports interested parties making comments on transmission applications in the CITAP Program, including pursuant to NEPA and other review processes that afford opportunities for comment and participation. Because of the various avenues for comment and participation and because the CITAP Program does not limit the public comments that can be made through the existing avenues for public input, DOE finds it is unnecessary to provide standardized language for providing comments as suggested by commenters.

iii. Role of States

Summary of Public Comments

DOE received two comments related to the roles of states in siting

[14] Section 313 refers to ''an order issued by the [Federal Power] Commission.'' 16 U.S.C. 825l(a)–(b). In 1977, Congress dissolved the Federal Power Commission and transferred its authorities to DOE and FERC. *See* Department of Energy Organization Act, Public Law 95–91, 91 Stat. 565 (Aug. 4, 1977). The rehearing and judicial review provisions of section 313 apply to DOE as a successor to the Federal Power Commission. *See Ctr. for Biological Diversity* v. *Dep't of Energy,* No. CV 08–168AHM(MANX), 2008 WL 4602721, at *5–6 (C.D. Cal. Oct. 16, 2008); *Pa. Pub. Util. Comm'n* v. *Bodman,* No. CIV. 1:CV–07–2002, 2008 WL 3925840, at *3–5 (M.D. Pa. Aug. 21, 2008).

transmission lines. AEP emphasized the importance of respecting the roles and responsibilities of states and localities in transmission project approval. CEC/CPUC encouraged the coordination of Federal and State permitting processes, explaining that most major transmission facilities in California will require both Federal and State environmental review and approval. To align these processes and inform coordination, CEC/CPUC recommended that DOE support project-specific MOUs between State and Federal permitting authorities.

DOE Response

DOE agrees with the commenters on the importance of states in the siting of transmission lines. Accordingly, and consistent with section 216(h), the IIP Process is designed to encourage and facilitate states' participation. Moreover, nothing in the IIP Process supersedes any State siting or permitting authority. DOE may develop project-specific MOUs as appropriate and necessary; such individual decisions are outside the scope of this rulemaking.

iv. Effective Date

Summary of Public Comments

Idaho Power requested clarification on when the CITAP Program outlined in the proposed rule would go into effect.

DOE Response

DOE intends for the CITAP Program to take effect on the day this final rule takes effect: 30 days after publication of the rule in the **Federal Register**.

v. Costs and Benefits of Conservation

Summary of Public Comment

AZGFD requested additional information about DOE's assessment of potential costs and benefits of the CITAP program. AZGFD stated that it was unclear whether DOE has assessed and evaluated the costs associated with implementation of conservation measures for offsetting potential impacts to resources. If DOE did not include this analysis, AZGFD recommends that DOE account for the cost of conservation measures.

DOE Response

DOE makes no changes in this final rule in response to this comment. DOE believes that the CITAP Program, as finalized in this rulemaking, is designed to enhance coordination of decision-making efforts for the purposes of improved speed and efficiency of Federal permitting and authorizations overall, but will not materially impact the outcomes of specific decisions, which would include any conservation measures required to be undertaken. DOE's assessment of the final rule's anticipated costs and benefits is presented in section VIII of this document.

vi. Burden Estimates Under the Paperwork Reduction Act of 1995

Summary of Public Comment

Gallatin Power expressed concern that the cost burden estimated in the NOPR seemed ''significantly lower than current market rates.'' Gallatin Power acknowledged that the median hourly rate was used to calculate the cost burden, but explained that, in its experience, ''these hourly wages are significantly more when contracting with a subject matter expert, at an industry-accepted firm.'' Gallatin Power also expressed concern that the cost and time estimates did not identify a size for the transmission project given that ''these costs and time estimates would vary greatly among project lengths and locations.''

DOE Response

DOE makes no changes in this final rule in response to this comment. Although Gallatin Power expressed concern about the burden analysis, it did not challenge DOE's approach as unreasonable nor did it provide an alternative approach for DOE to consider. As Gallatin Power acknowledges, costs and time estimates can vary widely among projects. Given that estimates can vary widely by project, DOE believes it was reasonable to use the most recently available median hourly wage for management analysts according to the Bureau of Labor Statistics, for the proposed rulemaking and in this final rule, consistent with DOE's previous burden analysis for this collection. Though this revised collection changes the volution and subject matter of the information collection, including requesting analysis from a range of experts, many of the median wages reported by BLS for environmental and scientific consultants are below the management analysis median wage proposed by DOE, further supporting DOE's use of this occupation as a basis for estimation. Regarding the size of transmission project, DOE estimated an average burden for a qualifying project under CITAP, which represents a wide range of length and size, based on the special expertise in environmental evaluation of transmission projects within DOE. DOE's assessment of the final rule's estimated burden is in section VIII of this document.

P. Out of Scope Comments

Summary of Public Comments

DOE received six additional comments not addressed above. NAM noted it supports a diverse approach to powering communities and operations, and urged DOE to follow its findings in the draft National Transmission Needs Study released in February 2023.

The State of Colorado Governor's Office stated that the proposed rule does not consider the need to minimize the potential of the challenges from private citizens and groups alleging deficiencies in project review under NEPA and other statutes nor DOE's ability to facilitate interstate transmission development in the face of opposition from certain states or organizations.

EEI suggested DOE consider how its implementation of section 216(h) can support electric companies working to meet State timelines for reducing emissions in the electric grid through its implementation of section 216(h) and for DOE and other agencies to consider IRA funds to increase the training of personnel or to provide grants to other agencies.

Kris Pastoriza requested clarification on a statement on FERC's website, a definition for or list of ''interstate transmission lines.''

Gallatin Power asked DOE to clarify whether designated DOE staff would be assigned to qualifying projects who could help move the permitting process along and would facilitate knowledge retention.

EDF recommended DOE consider co-location of transmission projects within abandoned rights-of-way. In addition, EDF recommended DOE develop a record of right-of-way locations and to consider publishing this information on an interactive map for ease of use by the public. EDF believes the CITAP Program presents the perfect opportunity to develop this information. EDF believes this proposal would be consistent with the objective to ensure NEPA reviews are not duplicative because the information about rights-of-way would be more readily available for transmission projects.

DOE Response

DOE finds these comments to be out of scope of the rulemaking, which addresses the implementation of DOE's authority to coordinate Federal environmental review and decision-making on transmission project authorizations and permits. The findings of the Needs Study are outside the scope of this rulemaking, as are the potential of challenges alleging deficiencies in NEPA review, as well as

any interpretations of FERC's authority. Regarding EEI's request that DOE consider State emissions reductions statutes in its implementation of section 216(h), DOE's authority is limited to coordination of environmental reviews and decision-making; project proponents remain responsible for meeting or complying with any State emissions reductions statutes. Additionally, regarding Gallatin Power's request that DOE clarify which DOE staff will be assigned to qualifying projects, whether there will be certain designated staff assigned to these projects will depend on the particular project and is best addressed on a project-by-project basis. Regarding EDF's recommendation for DOE to consider co-location within abandoned rights-of-way, project proponents remain responsible for proposed routes, and they may consider co-location as appropriate. Regarding EDF's recommendation for DOE to use the CITAP Program as an opportunity to develop a database of rights-of-way, DOE finds it unnecessary to adopt any regulatory text to address this recommendation but may, through implementation of the program, develop various tools to inform the public.

VII. Section-by-Section Analysis

§ 900.1 Purpose and Scope

Section 900.1 provides a process for the timely and coordinated submission of information necessary for decision-making for Federal authorizations for siting of proposed electric transmission facilities pursuant to section 216(h) of FPA. This final rule revises § 900.1 to update the purpose of part 900, reference the establishment of the CITAP Program, and improve readability. These changes reflect DOE's understanding that Congress intended DOE to make the process to obtain multiple Federal authorizations more efficient and reduce administrative delays, which requires clear authority, process, and timelines. The changes in this section reflect DOE's intent to carry out the full scope of the authority that Congress provided. Paragraph (a) is added to establish the overarching CITAP Program and provide a roadmap to authorities and processes throughout part 900. This paragraph states that DOE will act as a lead agency for preparing an environmental review document for any qualifying project. Paragraph (a), as well as revised paragraph (d), identify DOE's role in establishing and monitoring adherence to intermediate milestones and final deadlines, as required by section 216(h).

This final rule revises the current regulatory text of § 900.1 by dividing it into paragraphs (b) through (d). Portions of the text dealing with the IIP Process have been updated to clarify that the process will require submission of materials necessary for Federal authorizations and that the IIP Process should be initiated prior to the submission of any application for a Federal authorization. The changes also clarify that the IIP Process is integrated into the CITAP Program.

In this final rule, DOE is adding paragraph (e) to clarify the intended relationship between the early coordination envisioned by the IIP Process and the duties prescribed by section 106 of the NHPA and the implementing regulations at 36 CFR part 800. In particular, this section clarifies that nothing in the IIP Process is intended to abrogate the obligations of Federal agencies under 36 CFR part 800. Additionally, this section authorizes a project proponent as an applicant to the CITAP Program to initiate section 106 consultation during that proponent's involvement in the IIP Process.

DOE redesignates paragraphs (a) and (e) of current § 900.2 as new paragraphs (f) and (g) of this section because the paragraphs contain general propositions regarding part 900 and are better suited to the general ''Purpose and Scope'' section. This final rule adds a new paragraph (f) to establish that DOE and the relevant Federal entities shall issue a joint decision document except where inappropriate or inefficient. This revision is to be consistent with NEPA regulations, including the Fiscal Responsibility Act of 2023, which codified processes to streamline the environmental review process and facilitate one Federal decision, be consistent with the Congressional intent of FPA 216(h), and enhance DOE's coordinating function. This final rule revises new paragraph (g) to clarify that DOE will serve as lead agency for consultation under section 7 of the ESA and section 106 of the NHPA unless the relevant Federal entities designate otherwise. This revision aligns the lead agency designation with the authorizing statutes.

This final rule also adds paragraph (h) to afford the Director of DOE's Grid Deployment Office, or that person's delegate, flexibility necessary to ensure that part 900 does not result in unnecessary, duplicative, or impracticable requirements. DOE added this paragraph to authorize the Director to waive any such requirements. Further, this paragraph specifically contemplates a scenario in which a Federal entity is the principal project developer. Under such circumstances, DOE has added language to indicate that the Director will consider modifications to the requirements under this part as may be necessary under the circumstances.

§ 900.2 Definitions

DOE redesignated § 900.3 as § 900.2 for the purpose of providing the definitions of terms before those terms occur in the body of the regulation. Section 900.2 provides definitions for various terms used throughout part 900. This final rule amends or adds the following definitions:

- Revises the term ''affected landowner'' to ''potentially affected landowner'' and revises the substance of that definition to include any owner of a real property interest whose interest is potentially affected by a project right-of-way, potential route, or proposed ancillary or access site. Adds a definition of ''analysis area'' to serve as a reference in locating the points in the IIP Process that analysis areas are established and modified.
- Adds a definition for ''authorization'' to provide clarity in several places where that term occurs. Amends the definition for ''Federal authorization'' to account for the new definition of ''authorization.''
- Adds a definition for ''communities of interest'' to ensure broad coverage of potentially impacted populations during the public engagement process and establishment of the public engagement plan. Adds a definition for ''participating agencies'' to serve as shorthand for the group of agencies that will serve various roles under the amendments to the coordination of Federal authorizations.
- Adds a definition of ''NEPA joint lead agency'' to identify where information about the designation of a NEPA joint lead agency occurs in the rule.
- Removes the term ''OE–1,'' meaning the Assistant Secretary for DOE's Office of Electricity Delivery and Energy Reliability, and replaces it with the definition for ''Director,'' meaning the Director of DOE's Grid Deployment Office or that person's delegate. Under section 1.14(D) of Delegation Order No. S1–DEL–S3–2023 and section 1.9(D) of Redelegation Order No. S3–DEL–GD1–2023 the Secretary of Energy delegated authority to exercise authority under section 216(h) to the Grid Deployment Office. That authority had previously been delegated to DOE's Office of Electricity Delivery and Energy Reliability. The same substitution is made throughout part 900 to reflect that delegation change.

• Revises the reference to the definition of ''Indian Tribe'' in the United States Code to the correct reference following the 2016 editorial reclassification. This change does not amend the definition. Adds the definitions for ''relevant Federal entity'' and ''relevant non-Federal entity'' using the substance of the definitions from ''Federal entity'' and ''non-Federal entity,'' respectively. These changes are intended to show that the terms only mean Federal or non-Federal entities with some relation to a particular qualifying project. These changes are updated throughout part 900.

• Revises the definition for ''regional mitigation approach'' to a more general term of ''mitigation approach.'' DOE revised this term because regional-level approaches and strategies may be too limiting for the needs at hand; instead, DOE wants to create the opportunity for discussion of all types of proposed mitigation for a given proposed project. In addition, DOE has revised the substance of this definition to clarify the meaning and more closely align with existing NEPA regulations regarding mitigation. Because the revisions to mitigation approach rendered ''regional mitigation strategies or plans'' redundant, DOE has removed that definition.

• Revises the definition for ''MOU signatory agency'' to mean any Federal entity that has entered into the currently effective MOU under section 216(h)(7)(B)(i) of the FPA. This change decouples the term from any particular MOU and keeps the rule current without requiring changes to the regulatory text. The term references the 2023 MOU as an example.

• Revises the definition for ''qualifying project'' in a number of ways. First, the revised definition removes the qualifier ''non-marine'' before high voltage transmission line and electric transmission line to match potential scope of the Program with that agreed to in the MOU. Second, the revised definition includes several factors for determining if a transmission line is regionally or nationally significant. Third, the revised definition limits the term to projects that are expected to require preparation of an EIS because the Federal coordination will be most impactful for such projects due to their complexity. Fourth, in accordance with the 2023 MOU, this final rule revises the definition to state that the term does not include any transmission facility authorized under section 8(p) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(p)). The exception to that restriction included in the 2023 MOU is provided for in the changes to § 900.3 and discussed further in that section. Fifth, in accordance with the 2023 MOU, the term excludes a transmission facility that are seeking a construction or modification permit from FERC pursuant to section 216(b) of the FPA. Sixth, the revised definition excludes projects located wholly within the Electric Reliability Council of Texas interconnection, as required by section 216(k) (16 U.S.C. 824p(k)). This exclusion is also located in § 900.2(c) of the current rule, but it is not replicated it in this definition for clarity. Seventh, the revision provides a mechanism under § 900.3 by which a project that does not meet the definition of a qualifying project under the first paragraph of the term may still participate in the Program. This change is discussed in more detail in the following section.

• Revises the definition for ''project area'' to clarify the scope of this term.

• Removes the definitions of ''DOE'' and ''NEPA'' because those terms are acronyms best addressed in the regulatory text rather than as definitions.

• Removes the definition of ''FPA'' because that term no longer occurs in the regulatory text.

• Removes the definitions for ''early identification of project issues,'' ''IIP resources report,'' ''IIP process administrative file,'' ''lead 216(h) agency,'' ''MOU principals,'' and ''other projects'' because those terms no longer occur in part 900.

• Removes the definition for ''NEPA Lead Agency'' because that term is self-explanatory in the context in which it occurs.

• Revises the term ''stakeholder'' for clarity and readability and includes ''organization'' in the definition to clarify that stakeholders are not just individuals.

• Revises the term ''study corridor'' to clarify that the term does not coincide with ''permit area,'' ''area of potential effect,'' ''action area,'' or other terms specific to certain types of regulatory review.

§ 900.3 Applicability to Other Projects

Section 900.2 of the current rule, titled ''Applicability,'' provides an application process by which a project proponent may seek DOE assistance under part 900 for an ''other project.'' This final rule redesignates § 900.2 as § 900.3 and retains a mechanism by which projects that do not otherwise qualify as ''qualifying projects'' may be treated.

Section 900.2(b) is revised and redesignated as § 900.3(a)–(c) to more clearly communicate the process by which a project proponent may request that a facility be approved as a qualifying project. In particular, this final rule removes the definition of the term ''other project'' and instead includes the substance of that term in paragraph (a) of the revised section.

Paragraphs (a) and (e) of current § 900.2 are redesignated as paragraphs § 900.1(f) and (g), respectively, because those paragraphs contain general propositions regarding part 900 and are better suited to the general ''Purpose and Scope'' section. This final rule removes the first sentence of current § 900.2(e) as it is unnecessary because part 900 does not purport to affect other Federal law requirements except in specific, articulated instances.

Current paragraphs § 900.2 (g) and (h) are relocated to § 900.4 as paragraphs (e) and (f), respectively, because § 900.4 provides a general background to the IIP Process, and the substance of those paragraphs is more relevant to the IIP Process than the rest of part 900. Current § 900.2(d) is redesignated as paragraph (e) and a new paragraph (d) is added. New paragraph (d) provides factors that the Director of GDO may consider when determining if a proposed electric transmission facility should be considered a qualifying project and accepted into the CITAP Program.

Redesignated paragraph (e) is further amended. Whereas the current version of that paragraph provides that the section does not apply to a transmission facility that will require a construction or modification permit from FERC, this final rule amends the paragraph to allow such projects to take advantage of part 900, provided that the request to be included in the CITAP Program is submitted by a person with relevant authority under Delegation Order No. S1–DEL–FERC–2006 or any subsequent, similar delegation.

In addition, this final rule removes paragraph (f), which describes the IIP process as a complementary process that does not supplant existing pre-application processes, because this final rule establishes the IIP Process as the mandatory precondition for coordination under section 216(h).

This final rule adds new paragraphs (f) and (g)(1) that allow a project proposed to be authorized under Section 8(p) of the Outer Continental Shelf Lands Act to receive coordination assistance under part 900, provided that the project is not to be authorized in connection to a generation project and that all 2023 MOU signatories agree to the project's inclusion in the CITAP Program. These additions reflect the terms of the 2023 MOU.

Finally, current paragraph (c) is moved to paragraph (g)(2) to improve the readability of the section.

§ 900.4 Purpose and Scope of IIP Process

Section 900.4 of the current rule states the purpose and structure of the IIP Process. This final rule divides this section into §§ 900.4, 900.5, 900.8, and 900.9 to improve readability. Section 900.4(a) of the current rule remains in § 900.4 but is further divided into paragraphs (a), (b), and (c) to improve readability.

Sections 900.4(j)(3)(i) through (iv) are redesignated as § 900.4(a)(1) through (8) and amended to reflect a new purpose. Current § 900.4(j)(3) requires the Federal entities at the initial meeting to identify reasonable criteria for adding, deleting, or modifying preliminary routes within the study corridors and lists nine criteria that should be included in the criteria that Federal entities identify. In contrast, new § 900.4(a) provides that those criteria should instead be used by the project proponent when identifying potential study corridors and potential routes. The change encourages the project proponent to utilize the criteria in identifying routes and corridors throughout the IIP Process, rather than just after the initial meeting. This final rule retains the requirement for DOE and other agencies to identify other criteria for adding or modifying potential routes and includes that the agencies should also identify criteria for potential study corridors as well.

Additionally, § 900.4(b) establishes the IIP Process as a prerequisite for coordination, consistent with the statutory language and the revisions to the purpose of part 900 in § 900.1. This final rule adds a new paragraph (d) to clarify that the IIP Process does not preclude additional communications between the project proponent and relevant Federal entities outside of the meetings envisioned by the IIP Process. The paragraph further emphasizes that DOE intends for the IIP Process to be an iterative process and that each milestone in the process is designed to improve upon the materials that Federal entities have available for authorization and environmental review decisions.

This rule redesignates § 900.2(g) and (h) as § 900.4(e) and (f), respectively, because § 900.4 provides a general background to the IIP Process, and the substance of those paragraphs is more relevant to the IIP Process than the rest of part 900. Section § 900.4 gives new authority to the Director to request additional information from a project proponent during the IIP Process to ensure that DOE can collect the information needed to adequately complete the IIP Process.

Finally, this final rule adds new paragraphs (h) and (i), which provide processes by which a person may submit confidential information during the IIP Process or to request designation of information containing Critical Electric Infrastructure Information (CEII). These provisions establish the mechanisms through which the IIP Process complies with 10 CFR 1004.11 and 1004.13.

§ 900.5 Initiation of IIP Process

Section 900.5 is composed of current § 900.4(b), (c), (e), (g), (h), (i), and (j). This final rule revises these provisions to enumerate the documents and information required to initiate the IIP Process, expedite that process, ensure that community impacts from the project are identified early, and improve the overall readability and clarity of the provisions.

Currently, an initiation request to begin the IIP Process must include a summary of the qualifying project; a summary of affected environmental resources and impacts, including associated maps, geospatial information, and studies; and a summary of early identification of project issues. This final rule revises the contents of the request. First, this final rule updates the contents required in the summary of the qualifying project in paragraph (b) to include project proponent details; identification of any environmental and engineering firms and subcontractors under contract to develop the qualifying project; and a list of anticipated relevant Federal and non-Federal entities to ensure sufficient information is provided for DOE to review and to include all necessary agencies in the process. This final rule also adds new requirements for additional maps as part of the initiation request, as detailed in paragraph (c). DOE believes the additional information in paragraphs (b) and (c) is necessary to properly identify the relevant agencies for efficient coordination.

Additional requirements are added in this final rule to require submission of a project participation plan as part of the initiation request. This plan is in place of the summary of early identification of project issues currently required under the current regulation. The project participation plan, as detailed in paragraph (d), will include the project proponent's history of engagement and a public engagement plan for the project proponent's future engagement with communities of interest and with Indian Tribes that would be affected by a proposed qualifying project. The plan would include specific information on the proponent's engagement with communities of interest and with Indian Tribes that would be affected by a proposed qualifying project. An updated public engagement plan would be required at the end of the IIP Process to reflect any activities during that process. The addition of a public engagement plan that includes communities of interest and Indian Tribes that could be affected by a proposed qualifying project, would ensure that the project proponent follows best practices around outreach. Moreover, by including this plan in the IIP Process, the regulation will provide relevant Federal entities an opportunity to provide input into the project proponent's engagement efforts, and to ensure that the project proponent engages with all communities of interest and Indian Tribes that could be affected by the proposed qualifying project. The engagement complements Tribal consultation and public engagement undertaken by the relevant Federal entities and would not substitute for Federal agencies engaging in Nation-to-Nation consultation with Indian Tribes and public engagement with stakeholders and communities of interest.

This final rule adds a new paragraph (e), to require submission of a statement regarding the project's status under Title 41 of the Fixing America's Surface Transportation Act (FAST–41) (42 U.S.C. 4370m *et seq.*) as part of the initiation request. This statement is intended to facilitate coordination between the IIP Process and the FAST–41 Process. This final rule adds requirements for project proponents to indicate whether their proposed project currently is a FAST–41 ''covered project.''

This final rule adds paragraph (f), which gives DOE 20 days from the receipt of the initiation request to determine whether the initiation request is sufficient and whether the proposed electric transmission facility is a qualifying project. In that same timeframe, paragraph (f) requires DOE to provide relevant Federal entities and relevant non-Federal entities with a copy of the initiation request and notify the project proponent and all relevant Federal entities and relevant non-Federal entities whether the initiation request is sufficient and whether the proposed facility is a qualifying project.

This final rule adds a new paragraph (g), to provide clarity to the process that DOE and the project proponent must follow if DOE determines that the initiation request is insufficient or that the proposed facility is not a qualifying

project. Paragraph (g) dictates that DOE must give the project proponent the rationales for the determinations. It also provides that the project proponent may file a request for coordination with the Director of the GDO as provided in § 900.3, if DOE determines that the proposed facility is not a qualifying project.

This final rule removes the requirement to submit an affected environmental resources and impacts summary as part of the initiation request. As discussed in more detail in the next section, that summary is replaced by thirteen resource reports submitted after the IIP Process initial meeting.

Section 900.5(j) is redesignated as § 900.5(h), and the content of that section is amended to reflect a new timeline for convening the IIP Process initial meeting and updates to the discussions that must occur at the meeting. The timeline for convening the initial meeting has been reduced from within 45 days of providing notice to the project proponent and the relevant Federal and non-Federal entities that it has received an IIP Process initiation request to within 15 days of providing notice under paragraph (f) that the initiation request meets the requirements of the section.

Likewise, the contents of the initial meeting have been updated. Section 900.5(h)(1) is added to require DOE and the relevant Federal entities to discuss the IIP Process and requirements with the project proponent, the different Federal authorization processes, and arrangements for the project proponent to contribute funds to DOE to cover costs in the IIP Process (in accordance with 42 U.S.C. 7278), establishment of cost recovery agreements or procedures in accordance with regulations of relevant Federal entities, where applicable, or the use of third-party contractors under DOE's supervision, where applicable. DOE believes an early discussion of the process and requirements will ensure efficient participation of the parties and early identification of potential issues.

This final rule adds § 900.5(h)(2) to require DOE to identify certain applications that need to be submitted to relevant Federal entities during the IIP Process (for example, Standard Form 299, which a project proponent would file to seek authorization for transmission lines crossing Federal property). The timing of the expected Federal applications, including which applications may be required during the IIP Process and which should be submitted following the conclusion of the IIP Process, will be covered in the initial meeting.

This final rule adds § 900.5(h)(3) requiring DOE to establish all analysis areas necessary for the completion of resource reports required under § 900.6. By requiring DOE to establish the analysis areas at this early stage of the IIP Process, this final rule enables and encourages the project proponent to begin assembling the resource reports soon after the proposed project is accepted into the CITAP Program.

As discussed in the previous section, § 900.4(j)(3)(i) through (iv) are redesignated as § 900.4(a)(1) through (8) to encourages the project proponent to utilize the criteria in those paragraphs when in identifying potential routes and study corridors. Section 900.5(h)(5) retains the requirement in § 900.4(j)(3) for DOE and other agencies to identify other criteria for adding or modifying potential routes but adds that the agencies should also identify criteria for potential study corridors as well. Section 900.5(h)(5) is further amended to include a requirement that DOE and the relevant Federal entities discuss study corridors and potential routes identified by the project proponent and the criteria used to identify those corridors and routes.

This final rule revises the requirement that DOE produce a draft initial meeting summary within 15 calendar days after the meeting to 10 calendar days, and the revises the time that participating Federal entities and Non-Federal entities, and the project proponent will then have to provide corrections to the draft summary from 15 calendar days to 10 calendar days. Additionally, this final rule revises the requirement that DOE produce a final initial meeting summary within 30 days of receiving corrections to the draft summary to 10 days. All three changes are intended to expedite the IIP Process.

This final rule revises this section to add the requirement in § 900.6 that requires DOE to add the final initial meeting summary to the consolidated administrative docket. Finally, this final rule removes portions of paragraph (j)(3)(v) because the contents are addressed elsewhere.

§ 900.6 Project Proponent Resource Reports

This final rule adds a new § 900.6 to add requirements for project proponents to develop, in collaboration with relevant Federal entities, thirteen resource reports that will serve as inputs, as appropriate, into the relevant Federal entities' own environmental analysis and authorization processes. This pre-application material will provide for earlier collection of critical information to inform the future application process relating to the proposed transmission line and facilities, including preliminary information to support DOE's and the relevant Federal entities' compliance with section 106 of the NHPA, the ESA, and NEPA. The thirteen resource reports are: General project description; Water use and quality; Fish, wildlife, and vegetation; Cultural resources; Socioeconomics; Geological resources and hazards; Soil resources; Land use, recreation, and aesthetics; Communities of interest; Air quality and noise effects; Alternatives; Reliability, resilience, and safety; and Tribal interests. This final rule renumbers the resource reports in response to a comment, as discussed in section VI.L of this document.

This final rule adds requirements for project proponents to develop these resource reports as part of the pre-application process instead of the affected environmental resources and impacts summary document required from project proponents under the existing rule at section 900.4(d). The resource reports identify information needed to complete NEPA and other review and authorization requirements. However, the topics identified and the reports do not limit the information relevant Federal entities may need, require from project proponents, or develop independently, as necessary to satisfy each relevant Federal entity's applicable statutory and regulatory obligations. To address possible differences in information required for onshore and offshore project environments, the final rule allows the Director to modify the requirements of resource reports to ensure that the reports adequately cover their intended purpose. Each resource report will comprehensively discuss the baseline conditions and anticipated impacts to resources relevant to DOE's required environmental review, namely under NEPA, ESA, and section 106 of the NHPA. NEPA requires Federal agencies to analyze and assess potential environmental effects of the proposed Federal agency action, and these effects can vary in significance and complexity. DOE anticipates that these reports will inform its work to meet its requirements under the various environmental laws referenced above. In addition, proper assessment of the resources potentially affected by the proposed action can also help DOE identify resource conflicts, missing information, and needs from other agencies, and inform the project-specific schedule. These conflicts and needs can then be discussed and

addressed during the review meeting and throughout the IIP Process.

These resource reports will be developed by project proponents during the IIP Process with input and feedback from the Federal and non-Federal entities involved in authorization decisions. This procedure better matches the IIP Process with the project development and Federal review timelines. Under these changes, a project proponent may initiate the IIP Process without detailed environmental resources information, but the detailed information required by this section must be developed to complete the IIP Process. The more detailed pre-application information, presented in the resource reports, will allow project proponents and the relevant Federal entities to coordinate and identify issues prior to submission of applications for authorizations, inform project design, and expedite relevant Federal entities' environmental reviews by providing environmental information that relevant Federal entities can use after submission of applications to inform their own reviews and by ensuring those applications are complete.

§ 900.7 Standard and Project-Specific Schedules

This final rule adds a new § 900.7 to amend how DOE will carry out its obligation to ''establish prompt and binding intermediate milestones and ultimate deadlines for the review of, and Federal authorization decisions relating to, the proposed facility'' pursuant to section 216(h). 16 U.S.C. 824p(h)(4)(A). Specifically, this final rule adds a description for the ''standard schedule,'' which DOE will publish as guidance and update from time to time. The standard schedule is not project specific. Rather, it will describe, as a general matter, the steps necessary to review applications for Federal authorizations, and the related environmental reviews necessary to site qualifying projects. This schedule will contemplate that authorizations and related environmental reviews be completed within two years.

Paragraph (b) describes the project-specific schedule. As discussed further below, DOE will develop this schedule with the NEPA joint lead agency and the relevant Federal entities on a per-project basis during the IIP Process. This schedule would provide the ''binding intermediate milestones and ultimate deadlines'' required by section 216(h). This provision is intended to specify the considerations that DOE will incorporate into its determination of the appropriate project-specific schedule including joint lead and other agency-specific regulations and schedules. Section 216(h)(4)(B) requires DOE to set a project-specific schedule under which all Federal authorizations may be completed within one year of the filing of a complete application unless other requirements of Federal law require a longer schedule. DOE intends to determine the project-specific schedule based on the considerations specified in paragraph (b).

§ 900.8 IIP Process Review Meeting

This final rule amends the IIP Process to ensure that DOE and the Federal and non-Federal entities involved have meaningful opportunities to identify issues of concern prior to the project proponent's submission of applications for authorizations. In addition to the initial and close-out meetings included in the current text of part 900, this final rule establishes an IIP Process review meeting, to be held at the request of the project proponent following initial submission of the requisite thirteen resource reports. In addition, this final rule adds a requirement for a project proponent requesting the review meeting to update DOE on the status of the project's public engagement and provide updated environmental information.

This final rule adds that the IIP Process review meeting will ensure that DOE and the relevant Federal and non-Federal entities involved have meaningful opportunities to identify issues of concern prior to the close of the IIP Process and submission of applications for Federal authorizations. To this end, this final rule adds a requirement in paragraph (f) that at the review meeting the relevant Federal entities should discuss any remaining issues of concern, information gaps, data needs, potential issues or conflicts, statutory and regulatory standards, and expectations for complete applications for Federal authorizations. Additionally, the meeting participants will provide updates on the siting process, including stakeholder outreach and input. To facilitate these discussions, paragraph (a) is added to state that a project proponent should submit a request for the review meeting containing helpful documents and information such as a summary table of changes made to the project since the initial meeting, maps of proposed routes within study corridors, a conceptual plan for implementation and monitoring of mitigation measures, an updated public engagement plan and timeline information including dates on which any applications were already filed, estimated dates for filing remaining applications with Federal and non-Federal entities, and a proposed duration for each Federal land use authorization expected to be required for the proposed project.

Additionally, the IIP Process review meeting will provide an opportunity for DOE and the relevant Federal and non-Federal entities to review the detailed resource reports prepared pursuant to § 900.6. Therefore, the review meeting will only be held after submission of the reports. Section 900.8(f)(8) is added to state that during the IIP Process review meeting, DOE and the relevant Federal and non-Federal entities will identify any updates to the information included in those reports that the project proponent must make before the conclusion of the IIP Process. Finally, this final rule adds in § 900.8(k) the requirement that the project proponent revise resource reports based on feedback received during the meeting. DOE believes that identifying and addressing issues in the reports during the IIP Process instead of at the end of that process would expedite DOE's preparation of a single environmental review document and increase the likelihood of readiness of the project proponent's application(s) for Federal authorization(s).

Furthermore, the IIP Process review meeting will integrate DOE's statutory schedule-setting function discussed in the previous section into the IIP Process. For this purpose, the review meeting request under paragraph (a) should include a schedule for completing upcoming field resource surveys, if known, and estimated dates that the project proponent will file requests for Federal and non-Federal authorizations and consultations. These resources will assist DOE in preparing the proposed project-specific schedule, which DOE would be required to present at the review meeting under § 900.8(f)(9). At the meeting, the relevant Federal entities would discuss the process for, and estimated time to complete, required Federal authorizations. These discussions, along with other matters discussed at the review meeting would, in turn, allow DOE to continue refining the project-specific schedule.

This final rule adds a requirement in paragraph (b) that within 10 days of receiving the review meeting request, DOE must provide relevant Federal entities and relevant non-Federal entities with materials included in the request and the initial resource reports submitted under § 900.6. In paragraph (c), DOE believes a 60-day period is necessary to review the request for sufficiency and provide notice to the proponent and relevant Federal and non-Federal agencies and provides in

paragraph (d) that it will provide reasons for any findings of insufficiency and how the project proponent may address them for reconsideration. Furthermore, this final rule adds a requirement in paragraph (e) that the review meeting will convene within 15 days of providing notice that the request has been accepted. These timelines will ensure that the IIP Process is pursued expeditiously while affording the relevant Federal entities sufficient time to review the relevant materials. The requirement to share the review meeting request and initial resources reports in paragraph (b) will ensure that all entities participating in the meeting have access to the materials being discussed at the meeting.

This final rule adds requirements in paragraphs (g), (h), and (i) that the IIP Process review meeting will conclude with a draft and, subsequently, a final review meeting summary, to be prepared by DOE. This summary will be included in the consolidated administrative docket described by § 900.10. It will serve as a docket of the issues identified by the parties to the review meeting, and to ensure that the project proponent, the relevant Federal and non-Federal entities, and DOE, have a shared understanding of the work remaining to be done during the IIP Process.

This final rule adds paragraph (j) to include a mechanism by which it may determine whether the project proponent has developed the scope of its proposed project and alternatives sufficiently for DOE to determine that there exists an undertaking with the potential to affect historic properties for purposes of section 106 of the NHPA. If DOE so determines, DOE will initiate its section 106 review of the undertaking and authorize project proponents as CITAP Program applicants to initiate consultation with SHPOs, THPOs, and others consistent with 36 CFR 800.2(c)(4). This provision is intended to allow initiation of section 106 consultation during the IIP Process, prior to submission of applications for authorizations, but with sufficient opportunity for the project proponent, the relevant Federal entities, and DOE, to determine the scope of the proposed project.

§ 900.9 IIP Process Close-Out Meeting

This final rule amends the close-out meeting provisions of the current rule at § 900.4(k) and (l). The IIP Process will conclude with the close-out meeting. This final rule adds the requirement of submission of a close-out meeting request to specify the modifications to the project since the review meeting. This final rule removes the requirement in this section that states that the request may be submitted no less than 45 days after the initial meeting. DOE removes that requirement because changes to the IIP Process in this final rule no longer allow for a request to be submitted within that timeframe.

This final rule removes paragraphs (k)(3), (5), (8), and (9). The information required under those paragraphs will be submitted with the review meeting request under § 900.8(a). Likewise, DOE removed paragraphs (k)(4), (6), and (7) because the information required under those paragraphs would be submitted in the resources reports under § 900.6. Finally, paragraph (k)(1) is removed because the submission of close-out meeting request materials is presumed to indicate that a close-out meeting is being requested.

Paragraphs (a)(2) and (3) require a description of all changes made to the proposed project since the review meeting and a final public engagement plan. In paragraph (a)(4) DOE added a requirement that the project proponent provide the requests for Federal authorizations for the proposed project. These will be included in the close-out meeting request to ensure that the project proponent is ready to begin the Federal authorization process.

This final rule revises the timelines for requesting and convening a close-out meeting. In current paragraphs (1), (2), and (3), DOE has 30 days to respond to a close-out meeting request and 60 days from the date of providing a response to convene the close-out meeting. DOE provides in paragraph (b) that within 10 days of receiving the request, DOE must provide relevant Federal entities and relevant non-Federal entities with materials included in the request and any updated resource reports submitted as required under § 900.8. Paragraph (c) provides that DOE has 60 days to review the request for sufficiency and notify the project proponent and all relevant Federal and non-Federal entities of DOE's decision. Under paragraph (d), if DOE determines that the meeting request or updated resource reports are insufficient then DOE will provide reasons and how deficiencies may be addressed. Under paragraph (e), DOE will convene the close-out meeting within 15 days of notifying the project proponent that the request and updated resource reports have been accepted. These new timelines will ensure that the IIP Process is pursued expeditiously. Furthermore, the requirement to share the close-out meeting request materials in paragraph (b) would ensure that all entities participating in the meeting have access to the materials being discussed at the meeting.

DOE removed the requirement that the substance of the close-out meeting include a description of remaining issues of concern, information gaps, data needs, and potential issues or conflicts that could impact the time it will take relevant Federal entities to process applications for Federal authorizations. This information is covered at the review meeting under § 900.8(d). Likewise, DOE eliminated paragraphs (l)(3)(ii), (iii), (iv), and (v) because that information is now required to be discussed at the review meeting. DOE added in paragraph (e) that DOE will present the final project-specific schedule at the meeting, in keeping with DOE's statutory schedule-setting function discussed previously. As previously explained, the project-specific schedule will include the intermediate milestones and final deadlines for review of the project proponent's application and related environmental reviews.

This final rule removes the portion of paragraph (l) of the current regulation which states that ''The IIP Process Close-Out Meeting will also result in the identification of a potential NEPA Lead Agency pursuant to § 900.6 described.'' This final rule adds a provision to select the NEPA joint lead agency earlier in the IIP Process to allow for sufficient coordination.

DOE removed paragraph (l)(3)(vi) because the information covered by the Final IIP Resources Report will be covered by the thirteen resources reports. Additionally, DOE removed paragraph (l)(3)(vii), which encourages agencies to use the Final IIP Resources Report to inform the NEPA Process. Instead, this final rule adds a new requirement at § 900.12(f) to require all relevant Federal entities to use the single environmental review document as the basis for Federal authorization decisions. That requirement is discussed in more detail as follows.

This final rule removes paragraph (l)(3)(viii), which requires relevant Federal entities to identify a preliminary schedule for authorizations for the proposed project, because now DOE will set a project-specific schedule for all relevant Federal entities in consultation with such entities.

Paragraphs (g), (h), and (i) provide that the IIP Process close-out meeting will conclude with a draft and, subsequently a final close-out meeting summary, to be prepared by DOE. This summary will be included in the administrative docket. It would serve as a summary of the issues identified by the parties to the close-out meeting, and

ensure that the project proponent, the relevant Federal and non-Federal entities, and DOE, have a shared understanding of the conclusion of the IIP Process.

In paragraph (i)(4), in accordance with the 2023 MOU, DOE will notify the FPISC Executive Director that the project should be included on the FPISC Dashboard as a transparency project if the project is not identified as a covered project pursuant to § 900.5(e).

In paragraph (j), DOE and the NEPA joint lead agency shall issue a notice of intent to publish an environmental review document within 90 days of the later of the IIP Process close-out meeting or the receipt of a complete application for a Federal authorization for which NEPA review will be required, as consistent with the final project-specific schedule to enable DOE to implement its coordinating authority under FPA section 216(h).

Finally, in paragraph (k), in accordance with section 313(h)(8)(A)(i) of the FPA, DOE shall issue, for each Federal land use authorization for a proposed electric transmission facility, a preliminary duration determination commensurate with the anticipated use of the proposed facility.

§ 900.10 Consolidated Administrative Docket

Current § 900.6 requires DOE to maintain an IIP Process Administrative File with all relevant documents and communications between the project proponent and the agencies and encourages agencies to work with DOE to create a single record. To better integrate and coordinate Federal authorizations, the new section dispenses with the IIP Process Administrative File and combines all documents that were previously included in that file along with all information assembled by relevant Federal entities for authorizations and reviews after completion of the IIP Process into a single, consolidated administrative docket.

To this end, this final rule amends and redesignates paragraph (b) as a new paragraph (a) to articulate more clearly the information that should be included in the docket, including requests made during the IIP Process, IIP Process meeting summaries, resources reports, and the final project-specific schedule. The sentence in current paragraph (b) regarding the Freedom of Information Act is removed because that law applies to requests for information from the public on its own terms.

Current paragraph (b) also requires DOE to share the IIP Process Administrative File with the joint lead NEPA agency. However, this final rule adds in paragraph (c) the requirement that DOE make the consolidated administrative docket available to both the NEPA joint lead agency and any Federal or non-Federal entity that will issue an authorization for the project. This change ensures that other entities are able to use the docket for their own authorizations. Consequently, this final rule removes paragraph (d), which says that Federal entities are strongly encouraged to maintain information developed during the IIP Process.

This final rule adds a new paragraph (d) providing notice that, as necessary and appropriate, DOE may require a project proponent to contract with a qualified docket-management consultant to assist DOE and the NEPA joint lead agency in compiling and maintaining the administrative docket. Such a contractor may assist DOE and the relevant Federal entities in maintaining a comprehensive and readily accessible docket. DOE is also proposing that any such contractor shall operate at the direction of DOE, and that DOE shall retain responsibility and authority over the content of the docket to ensure the integrity and completeness of the docket.

This final rule adds a new paragraph (e) providing that upon request, any member of the public may be provided materials included in the docket, excluding any materials protected as CEII or as confidential under other processes. This addition is to support stakeholder engagement in the IIP Process.

Finally, this final rule relocates paragraph (a) of the current rule to paragraph (b) for organizational purposes.

§ 900.11 NEPA Lead Agency and Selection of NEPA Joint Lead Agency

This section states that DOE serves in the NEPA lead agency role contemplated in section 216(h) except where a joint lead is designated, in which case DOE serves as a joint lead. DOE coordinates the selection of a NEPA lead agency in compliance with NEPA, CEQ implementing regulations at 40 CFR part 1500, and each agency's respective NEPA implementing regulations and procedures.

This final rule redesignates § 900.5 to a new § 900.11 and amends this section to reflect that DOE, in accordance with section 216(h)(5)(A) and the 2023 MOU, will serve as lead agency for purposes of NEPA along with any NEPA joint lead agency as designated pursuant to the MOU and § 900.11 consistent with its obligation as lead agency to coordinate with relevant Federal entities.

In the 2023 MOU, the MOU signatory agencies agreed to a process by which a NEPA joint lead agency could be designated. Under that process, DOE and the agency with the most significant interest in the management of Federal lands or waters that would be traversed or affected by the proposed project would serve as lead agencies jointly responsible for preparing an EIS under NEPA. Section 900.11(b) reflects that agreed-upon process.

These amendments also provide that, for projects that would traverse both USDA and DOI lands, DOE will request that USDA and DOI determine the appropriate NEPA joint lead agency.

§ 900.12 Environmental Review

Consistent with DOE's role as lead agency, a new § 900.12 is added to define DOE's responsibilities as lead agency for environmental reviews and the NEPA process, including by preparing a single environmental review document designed to serve the needs of all relevant Federal entities. In paragraph (a) of this section, this final rule clarifies that DOE will begin preparing an environmental review document following the conclusion of the IIP Process and after receipt of a relevant application. It also notes that DOE will do so in conjunction with any NEPA joint lead agency selected under § 900.11.

The other provisions of this section specify details of DOE's—and any NEPA joint lead agency's—role as lead NEPA agency, including to arrange for contractors, publish completed documents, and identify the full scope of alternatives for analysis. This final rule provides that except where inappropriate or inefficient to do so, the Federal agencies shall issue a joint record of decision, inclusive of all relevant Federal authorizations including the determination by the Secretary of Energy of a duration for each land use authorization issued under section 216(h)(8)(A)(i). This joint-decision provision is added to be consistent with NEPA regulations, including the Fiscal Responsibility Act of 2023, which codified processes to streamline the environmental review process and facilitate one Federal decision, be consistent with the Congressional intent of FPA 216(h), and enhance DOE's coordinating function.

Consistent with section 216(h)(5)(A), which requires that DOE's environmental review document serve as ''the basis for all decisions on the project under Federal law,'' paragraph (f) is added to establish that the relevant

Federal agencies will use the environmental review document as the basis for their respective decisions.

Finally, paragraph (g) is added to specify that DOE will serve as lead agency for purposes of consultation under the ESA and compliance with the NHPA unless the relevant Federal entities designate otherwise. This provision will allow DOE to meet its obligation under section 216(h)(2) to coordinate ''all . . . related environmental reviews of the facility.''

§ 900.13 Severability

Section § 900.13 provides that the provisions of this final rule are separate and severable from one another, and that if any provision is stayed or determined to be invalid by a court of competent jurisdiction, the remaining provisions would still function sensibly and shall continue in effect. This severability clause is intended to clearly express the Department's intent that should a provision be stayed or invalidated the remaining provisions shall continue in effect. The Department has carefully considered the requirements of this final rule, both individually and in their totality, including their potential costs and benefits to project proponents. In the event a court were to stay or invalidate one or more provisions of this rule as finalized, the Department would want the remaining portions of the rule as finalized to remain in full force and legal effect.

VIII. Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' 58 FR 51735 (Oct. 4, 1993), as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and amended by E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (OIRA) has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in the preamble, this regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this regulatory action constitutes a ''significant regulatory action'' within the scope of E.O. 12866. Accordingly, this action is subject to review under E.O. 12866 by OIRA of the Office of Management and Budget (OMB).

Section 6(a) of E.O. 12866 requires an agency issuing a ''significant regulatory action'' to provide an assessment of the potential costs and benefits of the regulatory action. To that end, DOE has further assessed the qualitative and quantitative costs and benefits of this final rule.

The societal costs of the action are the direct costs incurred by project proponents during the IIP Process. DOE discussed in the previous sections that most of the information required to be submitted during the IIP Process would likely be required absent these regulations and therefore the investment of time and resources required by this process are unlikely to be an additional burden on respondents. However, the full costs are considered in this analysis for transparency. These costs of $439,000 per year are detailed in the Paperwork Reduction Act burden analysis. The table below captures the 10-year and 20-year net present value of those annual costs under two discount rates (3% and 7%).

CITAP Program NPV Cost Estimates *

Discount rate	3%	7%
10-year NPV	$3,745,000	$3,083,000
20-year NPV	6,531,000	4,651,000

* 10-year analysis is 2024–2033, 20-year analysis is 2024–2043. NPV estimates provided in 2024$.

The benefits of the CITAP Program, designed to reduce the Federal authorization timelines for interstate electric transmission facilities and enable more rapid deployment of transmission infrastructure, include direct benefits to the project proponents in decreased time and expenditure on authorizations and a series of indirect social benefits.

Increasing the current pace of transmission infrastructure deployment will generate benefits to the public in multiple ways that can be categorized into grid operations, system planning, and non-market benefits. Grid operation benefits include a reduction in the congestion costs for generating and delivering energy; mitigation of weather and variable generation uncertainty, enhanced diversity of supply, which increases market competition and reduces the need for regional backup power options; and increased market liquidity and competition.[15] From a system planning standpoint, accelerated transmission investments will allow the development of new, low cost power plants in areas of high congestion which might not otherwise see investment due to capacity constraints, and additional grid hardening or resilience. Finally, non-market benefits to the public include reduced costs for meeting

[15] Millstein, A. *et al.* (2022) *Empirical estimates of transmission value using locational marginal prices, Empirical Estimates of Transmission Value using Locational Marginal Prices | Electricity Markets and Policy Group,* 6. Available at: *https://emp.lbl.gov/publications/empirical-estimates-transmission.*

public policy goals related to emissions and equitable energy access, as well as emissions reductions system wide.[16]

The DOE Grid Deployment Office released the 2023 National Transmission Needs Study (Needs Study), which identified significant need for the expansion of electric transmission across the contiguous United States.[17] The Needs Study and 2022 interconnection queue analysis by Berkeley Lab support DOE's analysis that the CITAP Program will provide substantial benefits by reducing authorization timelines for transmission projects and increasing the speed of transmission development and clean energy integration.[18]

The quantitative benefits of the CITAP Program will ultimately depend on the projects that are designed and developed by project proponents. However, the quantifiable benefits of transmission development can be estimated generally. These quantifiable benefits are the result of reductions in transmission congestion costs and avoided emissions from the increased use of clean energy enabled by additional transmission.

A 2023 analysis of transmission congestion costs by a consulting group found that congestion costs have risen from an average of $7.1 billion between 2016 and 2021 to $20.8 billion in 2022.[19] A 2022 study by Lawrence Berkeley National Lab found that between 2012 and 2021, a 1000 MW interregional transmission line could have provided $20 to $670 million dollars per year in value by providing congestion relief, which would have lowered energy costs to consumers.[20] Forward-looking projections for transmission value along these parameters are not available, and DOE is reluctant to project the complex changes to technical operations and market dynamics given the wide range in projected value. However, DOE notes that it has estimated that the CITAP Program will serve three projects a year that are each roughly equivalent to a 1000 MW line, an increase in the average number of these transmission projects authorized by a Federal agency in the past 17 years. With decreased authorization times after the CITAP Program is initialized, the additional capacity enabled by this action would likely provide substantial congestion relief, consistent with the studies cited previously.

A key driver of transmission congestion costs is that the growth of low-cost renewable energy projects is outpacing the rate of transmission expansion. Inadequate transmission capacity can lead to curtailment of available renewable energy in favor of thermal generators, which increases costs to consumers due to fuel prices and increases emissions.[21] A recent projection found that transmission capacity must expand by 2.3% annually to realize the full benefits of the clean energy investments in the IRA. However, in the last decade, transmission capacity has only increased an average of 1% per year.[22] The modeling projects that increasing the rate of transmission capacity expansion by even just 50% (1% to 1.5% annually) would significantly reduce emissions by enabling more clean energy on the grid, estimating nearly 600 million tons of avoided emissions (CO_2 equivalent) in 2030 alone.[23] An annual 1.5% increase in transmission capacity is estimated to add 7,000 MW to the grid in 2030 and provide an estimated $53.4 billion in societal benefits from avoided emissions that year, using a $89/ton social cost of carbon.[24] DOE estimates that the CITAP Program will increase the number of high-capacity projects seeking Federal authorizations, providing a portion of projected avoided emissions benefits through increased transmission capacity. These benefits would continue to grow in the following years as transmission capacity is increased.

While these estimates of quantitative benefits are necessarily approximate, the non-monetized benefits of the CITAP Program to the public are expected to far offset the monetized costs to project proponents. By enabling rapid development of enhanced transmission capacity, the CITAP Program will help increase access to a diversity of generation sources, offset transmission congestion and carbon costs, and deliver reliable, affordable power that future consumers will need when and where they need it.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires that an agency prepare an initial regulatory flexibility analysis for any regulation for which a general notice of proposed rulemaking is required, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities (5 U.S.C. 605(b)). As required by E.O. 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process (*see* 68 FR 7990). DOE has made its procedures and policies available on the Office of the General Counsel's website (*www.energy.gov/gc/office-general-counsel*).

DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003. DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is set forth.

DOE expects that the amendments to part 900 will not affect the substantive interests of such project proponents, including any project proponents that are small entities. DOE expects actions taken under the provisions to coordinate information and agency communication before applications for Federal

authorizations are submitted to Federal agencies for review and consideration would help reduce application review and decision-making timelines. Ensuring that all project proponents avail themselves of the benefits of the IIP Process will result in a clear, non-duplicative, process. Participation in the CITAP Program is optional. Thus, proposing to make the IIP Process a condition of the Program does not prevent project proponents from submitting application outside of the Program. DOE, however, encourages project proponents to take advantage of the Program based on the urgency and a consensus among 2023 MOU signatories of the anticipated benefits the Program will provide.

Furthermore, these changes are procedural and apply only to project proponents that develop electric transmission infrastructure. Historically, entities that develop transmission infrastructure are larger entities. Therefore, these procedures are unlikely to directly affect small businesses or other small entities. For these reasons, DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities. Accordingly, DOE has not prepared a regulatory flexibility analysis for this rulemaking. DOE's certification and supporting statement of factual basis will be provided to the Chief Counsel for Advocacy of the Small Business Administration for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act of 1995

This final rule contains information collection requirements subject to review and approval by OMB pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA) and the procedures implementing that Act (5 CFR 1320.1 *et seq.*). The request to approve and revise this collection requirement has been submitted to OMB for approval. The amendments are intended to improve the pre-application procedures and result in more efficient processing of applications.

This final rule modifies certain reporting and recordkeeping requirements included in OMB Control No. 1910–5185 which is an ongoing collection. The revisions to DOE's regulations associated with the OMB Control No. 1910–5185 information collection are intended to ensure that DOE may carry out its statutory obligations under section 216(h) of the FPA. Information supplied will be used to support an initiation request necessary to begin DOE's IIP Process. The revisions include requiring that a project proponent provide: (1) additional maps and information for the summary of proposed project; (2) a project participation plan; and (3) a statement regarding whether the project is a FAST–41 covered project. Additional information collection required includes thirteen resource reports describing the project and its impacts to allow DOE to complete a single environmental review document as part of the IIP Process. Those reports are: General project description; Water use and quality; Fish, wildlife, and vegetation; Cultural resources; Socioeconomics; Geological resources and hazards; Soil resources; Land use, recreation, and aesthetics; Communities of interest; Air quality and noise effects; Alternatives; Reliability, resilience, and safety; and Tribal interests. Additionally, during the review and close-out meetings, project proponents will provide updates to project documents and the project schedule. The revisions represent an increase in information collection requirements and burden for OMB No. 1910–5185.

The estimated burden and cost for the requirements contained in this final rule follow. Each entry indicates the time estimated for a meeting or the time estimated for the respondent to prepare the report or request.

ESTIMATE OF ANNUAL RESPONDENT REPORTING AND RECORDKEEPING BURDEN AND COST

* One response per respondent.
** estimated cost based on median hourly wage for a project manager from *https://www.bls.gov/oes/current/oes131111.htm* ($45.81/hr) and fully burdened scaling factor from *https://www.bls.gov/regions/southwest/news-release/employercostsforemployeecompensation_regions.htm.*

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

DOE has analyzed this final rule in accordance with NEPA and DOE's NEPA implementing regulations (10 CFR part 1021). DOE has determined that this final rule is covered under the categorical exclusion located at 10 CFR part 1021, subpart D, appendix A, Categorical Exclusion A5 because this final rule revises existing regulations at 10 CFR part 900. The changes would affect the process for the consideration of future proposals for electricity transmission, and potential environmental impacts associated with any particular proposal would be analyzed pursuant to NEPA and other applicable requirements. DOE has considered whether this action would result in extraordinary circumstances that would warrant preparation of an Environmental Assessment or EIS and has determined that no such extraordinary circumstances exist. Therefore, DOE has determined that this rulemaking does not require an Environmental Assessment or an EIS.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, Section 3(a) of E.O. 12988, ''Civil Justice Reform,'' 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Section 3(b) of E.O. 12988 specifically requires that agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; (6) specifies whether administrative proceedings are to be required before parties may file suit in court and, if so, describes those proceedings and requires the exhaustion of administrative remedies; and (7) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of E.O. 12988 requires agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met, or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of E.O. 12988.

F. Review Under Executive Order 13132

E.O. 13132, ''Federalism'', 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. E.O. 13132 also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations (*see* 65 FR 13735). DOE has examined this notice and has determined that this final rule will not preempt State law and will not have a substantial direct effect on the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government. No further action is required by E.O. 13132.

G. Review Under Executive Order 13175

Under E.O. 13175, ''Consultation and Coordination with Indian Tribal Governments,'' 65 FR 67249 (Nov. 6, 2000), DOE may not issue a discretionary rule that has Tribal implications or that imposes substantial direct compliance costs on Indian Tribal governments unless DOE provides funds necessary to pay the costs of the Tribal governments or consults with Tribal officials before promulgating the rule. This final rule aims to improve the coordination of Federal authorizations for proposed interstate electric transmission facilities pursuant to the FPA. Specifically, the amendments are intended to refine the pre-application procedures and result in more efficient processing of applications. As a result, the amendments to part 900 do not have substantial direct effects on one or more Indian Tribes, will not impose substantial direct compliance costs on Indian Tribal governments, and will not preempt Tribal laws. Accordingly, the funding and consultation requirements of E.O. 13175 do not apply, and a Tribal summary impact statement is not required.

H. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act (UMRA) of 1995 (Pub. L. 104–4) requires each Federal agency to assess the effects of a Federal regulatory action on State, local, and Tribal governments, and the private sector.

(Pub. L. 104–4, sec. 201 (codified at 2 U.S.C. 1531)). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy (2 U.S.C. 1532(a), (b)). UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed ''significant Federal intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA (see 62 FR 12820) (This policy is also available at: *www.energy.gov/gc/guidance-opinions*). DOE examined this final rule according to UMRA and its statement of policy and has determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any year. Accordingly, no further assessment or analysis is required under UMRA.

I. Review Under Executive Order 12630

DOE has determined, under E.O. 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights,'' 53 FR 8859 (March 18, 1988), that this this final rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Executive Order 13211

E.O. 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to the OMB a Statement of Energy Effects for any proposed significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgated or is expected to lead to promulgation of a final rule, and that: (1)(i) is a significant regulatory action under E.O. 12866, or any successor order; and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (2) is designated by the Administrator of OIRA as a significant energy action. For any proposed significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use. This final rule is intended to improve the pre-application procedures for certain transmission projects, and therefore result in the more efficient processing of applications, and thus this final rule will not have a significant adverse effect on the supply, distribution, or use of energy and is therefore not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

K. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This final rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

L. Review Under the Treasury and General Government Appropriations Act, 2001

The Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for Federal agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002).

DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

IX. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that the Office of Information and Regulatory Affairs has determined that the rule does not meet the criteria set forth in 5 U.S.C. 804(2).

X. Rehearing

This rule is a final order subject to section 313 of the FPA (16 U.S.C. 825l). Accordingly, any party seeking judicial review of this rule must first seek rehearing before the Department. A request for rehearing must be submitted in accordance with the **FOR FURTHER INFORMATION CONTACT** portion of this rule, within 30 days of the issuance of this rule. A request must concisely state the alleged errors in the final rule and must list each issue in a separately enumerated paragraph; any issue not so listed will be deemed waived.

XI. Approval by the Office of the Secretary of Energy

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 900

Electric power, Electric utilities, Energy, Reporting and recordkeeping requirements.

Signing Authority

This document of the DOE was signed on April 11, 2024, by Maria D. Robinson, Director, Grid Deployment Office, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 12, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

■ For the reasons stated in the preamble, the Department of Energy revises 10 CFR part 900 to read as follows:

PART 900—COORDINATION OF FEDERAL AUTHORIZATIONS FOR ELECTRIC TRANSMISSION FACILITIES

Sec.

Authority: 16 U.S.C. 824p(h).

§ 900.1 Purpose and scope.

(a) Pursuant to section 216(h) of the Federal Power Act (16 U.S.C. 824p(h)), the Department of Energy (DOE) establishes the Coordinated Interagency Transmission Authorizations and Permits Program (CITAP Program) under this part to coordinate the review and processes related to Federal authorizations necessary to site a proposed electric transmission facility. Pursuant to section 216(h)(4)(A), this part establishes the mechanism by which DOE will set prompt and binding intermediate milestones and ultimate deadlines for the processes related to deciding whether to issue such authorizations. In addition, as the lead agency and in collaboration with any National Environmental Policy Act (NEPA) joint lead agency and in consultation with the relevant Federal entities, as applicable, DOE will prepare a single environmental review document, which will be designed to serve the needs of all relevant Federal agencies and inform all Federal authorization decisions on the proposed electric transmission project.

(b) This part provides a process for the timely submission of information needed for Federal decisions related to authorizations for siting proposed electric transmission projects. This part seeks to ensure that these projects are developed consistent with the nation's environmental laws, including laws that address endangered and threatened species, critical habitats, and cultural and historic properties. This part provides a framework, called the Integrated Interagency Pre-Application (IIP) Process, by which DOE will coordinate submission of materials necessary for Federal authorizations and related environmental reviews required under Federal law to site proposed electric transmission facilities, and integrates the IIP Process into the CITAP Program.

(c) This part describes the timing and procedures for the IIP Process, which should be initiated prior to a project proponent's submission of any application for a required Federal authorization. The IIP Process provides for timely and focused pre-application meetings with relevant Federal and non-Federal entities. In addition, the IIP Process facilitates early identification of potential siting constraints and opportunities. The IIP Process promotes thorough and consistent stakeholder engagement by a project proponent. At the close-out of each IIP Process, DOE will establish the schedule for all Federal reviews and authorizations required to site a proposed electric transmission facility, in coordination with the relevant Federal entities.

(d) This part improves the Federal permitting process by facilitating the early submission, compilation, and documentation of information needed for coordinated review by relevant Federal entities under the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*). This part also facilitates expeditious action on necessary Federal authorizations by ensuring that relevant Federal entities coordinate their consideration of those applications and by providing non-Federal entities the opportunity to coordinate their non-Federal permitting and environmental reviews with the reviews of the relevant Federal entities.

(e) This part facilitates improved and earlier coordination of and consultation between relevant Federal entities, relevant non-Federal entities, and others pursuant to section 106 of the National Historic Preservation Act (54 U.S.C. 306108) (NHPA) and its implementing regulations found at 36 CFR part 800. Under this part, DOE may determine it has an undertaking with the potential to affect historic properties and may, at that time, authorize a project proponent, as a CITAP applicant, to initiate section 106 consultation for the undertaking consistent with 36 CFR 800.2(c)(4). Prior to that determination, this part requires project proponents to gather initial information and make recommendations relevant to the section 106 process to the extent possible. This part also establishes DOE as lead for the section 106 process, consistent with DOE's role as lead or joint lead agency for purposes of NEPA, in order to maximize opportunities for coordination between the NEPA and section 106 processes. Federal entities remain responsible for government-to-government consultation with Indian Tribes (and government-to-sovereign consultation in the context of Native Hawaiian relations) and for any findings and determinations required by and reserved to Federal agencies in 36 CFR part 800.

(f) This part applies only to qualifying projects as defined by § 900.2.

(g) Participation in the IIP Process does not alter any requirements to obtain necessary Federal authorizations for proposed electric transmission projects. Nor does this part alter any responsibilities of the relevant Federal entities for environmental review or consultation under applicable law.

(h) The Director may waive any requirement imposed on a project proponent under this part if, in the Director's discretion, the Director determines that the requirement is unnecessary, duplicative, or impracticable under the circumstances relevant to the proposed electric transmission project. Where the principal project developer is itself a Federal entity that would be otherwise expected to prepare an environmental review document for the project, the Director shall consider modifications to the requirements under this part as may be necessary under the circumstances.

§ 900.2 Definitions.

As used in this part:

Analysis area means a geographical area established for a resource report at the IIP Process initial meeting and modified at the IIP Process review meeting, if applicable.

Authorization means any license, permit, approval, finding, determination, or other administrative decision required under Federal, Tribal, State, or local law to site a proposed electric transmission facility, including special use authorization, certifications, opinions, or other approvals.

Communities of Interest means the following communities that could be affected by a proposed electric transmission project: disadvantaged communities; rural communities; Tribal communities; indigenous communities; geographically proximate communities; communities with environmental justice concerns; and energy communities.

Director means the Director of the DOE Grid Deployment Office, that person's delegate, or another DOE official designated to perform the functions of this part by the Secretary of Energy.

Federal authorization means any authorization required under Federal law.

Federal entity means any Federal agency or department.

Indian Tribe has the same meaning as provided by 25 U.S.C. 5304(e).

Mitigation approach means an approach that applies a conceptual plan to identify appropriate measures to avoid, minimize, or compensate for potential impacts to resources from a proposed electric transmission project, consistent with 40 CFR 1508.1(s) or any successor regulation. A mitigation approach identifies the needs and baseline conditions of targeted resources, potential impacts from the proposed project, cumulative impacts of past and reasonably foreseeable future

disturbances to those resources, and future disturbance trends, then uses this information to identify priorities for measures across the relevant area. Such an approach includes full consideration of the conditions of additionality (meaning that the benefits of a compensatory mitigation measure improve upon the baseline conditions in a manner that is demonstrably new and would not have occurred without the mitigation measure) and durability (meaning that the effectiveness of a mitigation measure is sustained for the duration of the associated direct and indirect impacts).

MOU signatory agency means a Federal entity that has entered into the currently effective memorandum of understanding (MOU) under section 216(h)(7)(B)(i) of the Federal Power Act, such as the interagency MOU executed in May 2023, titled ''Memorandum of Understanding among the U.S. Department of Agriculture, Department of Commerce, Department of Defense, Department of Energy, the Environmental Protection Agency, the Council on Environmental Quality, the Federal Permitting Improvement Steering Council, Department of the Interior, and the Office of Management and Budget Regarding Facilitating Federal Authorizations for Electric Transmission Facilities.''

NEPA joint lead agency means the Federal entity designated under § 900.11.

Non-Federal entity means an Indian Tribe, multi-State governmental entity, State agency, or local government agency.

Participating agencies means:

(1) The Department of Agriculture (USDA);

(2) The Department of Commerce;

(3) The Department of Defense (DOD);

(4) The Department of Energy;

(5) The Environmental Protection Agency (EPA);

(6) The Council on Environmental Quality;

(7) The Office of Management and Budget;

(8) The Department of the Interior (DOI);

(9) The Federal Permitting Improvement Steering Council (FPISC);

(10) Other agencies and offices as the Secretary of Energy may from time to time invite to participate; and

(11) The following independent agencies, to the extent consistent with their statutory authority and obligations, and determined by the chair or executive director of each agency, as appropriate:

(i) The Federal Energy Regulatory Commission (FERC); and

(ii) The Advisory Council on Historic Preservation.

Potentially affected landowner means an owner of a real property interest that is potentially affected directly (*e.g.,* crossed or used) or indirectly (*e.g.,* changed in use) by a project right-of-way, potential route, or proposed ancillary or access site, as identified in § 900.6.

Project area means the area located between the two end points of the proposed electric transmission facility containing the study corridors selected by the project proponent for in-depth consideration for the proposed project and the immediate surroundings of the end points of the proposed facility. The project area does not necessarily coincide with ''permit area,'' ''area of potential effect,'' ''action area,'' or other terms specific to a certain type of regulatory review.

Project proponent means a person or entity who initiates the IIP Process in anticipation of seeking a Federal authorization for a proposed electric transmission project.

Qualifying project means:

(1) A proposed electric transmission line and its attendant facilities:

(i) That will either be a high-voltage (230 kV or above) line or a regionally or nationally significant line, as determined by DOE based upon relevant factors, including but not limited to, reduction in congestion costs for generating and delivering energy, mitigation of weather and variable generation uncertainty, and enhanced diversity of supply;

(ii) Which is expected to be used, in whole or in part, for the transmission of electric energy in interstate or international commerce for sale at wholesale;

(iii) Which is expected to require preparation of an environmental impact statement (EIS) pursuant to NEPA to inform an agency decision on a Federal authorization;

(iv) Which is not proposed for authorization under section 8(p) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(p));

(v) Which is not seeking a construction or modification permit from FERC pursuant to section 216(b) of the Federal Power Act (16 U.S.C. 824p(b)); and

(vi) Which will not be wholly located within the Electric Reliability Council of Texas interconnection; or

(2) Any other proposed electric transmission facility that is approved by the Director under the process set out in § 900.3.

Relevant Federal entity means a Federal entity with jurisdictional interests that may have an effect on a proposed electric transmission project, that is responsible for issuing a Federal authorization for the proposed project, that has relevant expertise with respect to environmental and other issues pertinent to or potentially affected by the proposed project, or that provides funding for the proposed project. The term includes participating agencies. The term includes a Federal entity with either permitting or non-permitting authority; for example, those entities with which consultation or review must be completed before a project may commence, such as DOD for an examination of military test, training, or operational impacts.

Relevant non-Federal entity means a non-Federal entity with relevant expertise or jurisdiction within the project area, that is responsible for issuing an authorization for the proposed electric transmission project, that has relevant expertise with respect to environmental and other issues pertinent to or potentially affected by the proposed project, or that provides funding for the proposed project. The term includes an entity with either permitting or non-permitting authority, such as an Indian Tribe, Native Hawaiian Organization, or State or Tribal Historic Preservation Office with whom consultation must be completed in accordance with section 106 of the NHPA prior to approval of a permit, right-of-way, or other authorization required for a Federal authorization.

Route means an area along a linear path within which a proposed electric transmission facility could be sited that is:

(1) Wide enough to allow minor adjustments in the alignment of the proposed facility to avoid sensitive features or to accommodate potential engineering constraints; and

(2) Narrow enough to allow detailed study.

Stakeholder means any relevant non-Federal entity, interested non-governmental organization, potentially affected landowner, or other interested person or organization.

Study corridor means a contiguous area (not to exceed one mile in width) within the project area where potential routes or route segments may be considered for further study. A study corridor does not necessarily coincide with ''permit area,'' ''area of potential effect,'' ''action area,'' or other defined terms of art that are specific to types of regulatory review.

§ 900.3 Applicability to other projects.

(a) Following the procedures set out in this section, the Director may

determine that a proposed electric transmission facility that does not meet the description of a *qualifying project* under paragraph (1) of the definition in § 900.2 is a *qualifying project* under paragraph (2) of the definition.

(b) A requestor seeking DOE assistance under this part for a proposed electric transmission facility that does not meet the description of a *qualifying project* under paragraph (1) of the definition in § 900.2 must file a request for coordination with the Director. The request must contain:

(1) The legal name of the requester; its principal place of business; and the name, title, and mailing address of the person or persons to whom communications concerning the request for coordination are to be addressed;

(2) A concise description of the proposed facility sufficient to explain its scope and purpose;

(3) A list of anticipated relevant Federal entities involved in the proposed facility; and

(4) A list of anticipated relevant non-Federal entities involved in the proposed facility, including any agency serial or docket numbers for pending applications.

(c) Not later than 30 calendar days after the date that the Director receives a request under this section, the Director, in consultation with the relevant Federal entities, will determine if the proposed electric transmission facility is a qualifying project under this part and will notify the project proponent in writing of one of the following:

(1) If accepted, that the proposed facility is a qualifying project and the project proponent must submit an initiation request as set forth under § 900.5; or

(2) If not accepted, that the proposed facility is not a qualifying project, a justification of that determination, and an indication that the project proponent must follow the procedures of each relevant Federal entity that has jurisdiction over the proposed facility without DOE performing a coordinating function.

(d) In making the determination whether a proposed electric transmission facility is a qualifying project, the Director may consider:

(1) Whether the proposed facility would benefit from CITAP Program coordination;

(2) Whether the proposed facility would result in reduced congestion costs for generating and delivering energy;

(3) Whether the proposed facility would result in mitigation of weather and variable generation uncertainty;

(4) Whether the proposed facility would result in an enhanced diversity of supply; and

(5) Any other relevant factors, as determined by the Director.

(e) For a proposed facility that is seeking a construction or modification permit pursuant to section 216(b) of the Federal Power Act, DOE may only consider a request for assistance under this section if the request under paragraph (b) of this section is consistent with Delegation Order No. S1–DEL–FERC–2006 or any similar, subsequent delegation that the Secretary may order.

(f) At the discretion of the MOU signatory agencies, this section may be applied to a proposed electric transmission facility proposed for authorization under section 8(p) of the Outer Continental Shelf Lands Act, if the proposed authorization is independent of any generation project.

(g) This section does not apply to:

(1) A proposed electric transmission facility proposed to be authorized under section 8(p) of the Outer Continental Shelf Lands Act in conjunction with a generation project; or

(2) A proposed electric transmission facility wholly located within the Electric Reliability Council of Texas interconnection.

§ 900.4 Purpose and scope of IIP Process.

(a) The Integrated Interagency Pre-Application (IIP) Process is intended for a project proponent who has identified potential study corridors or potential routes and the proposed locations of any intermediate substations for a proposed electric transmission project. To the extent possible, the project proponent should use the following criteria to identify potential study corridors and potential routes:

(1) Potential environmental, visual, historic, cultural, economic, social, or health effects or harm based on the proposed project or proposed siting, and anticipated constraints (for instance, pole height and corridor width based on line capacity to improve safety and resiliency of the project);

(2) Potential cultural resources, sacred sites, and historic properties that may be eligible for or listed in the National Register of Historic Places;

(3) Areas under (or potentially under) special protection by State or Federal statute and areas subject to a Federal entity or non-Federal entity decision that could potentially increase the time needed for project evaluation and siting a transmission line route. Such areas may include, but are not limited to, properties or sites that may be of traditional religious or cultural importance to Indian Tribes, National Scenic and Historic Trails, National Landscape Conservation System units managed by the Bureau of Land Management (BLM), Land and Water Conservation Fund lands, National Wildlife Refuges, national monuments, National Historic Landmarks, units of the National Park System, national marine sanctuaries, and marine national monuments;

(4) Opportunities to site potential routes through designated corridors, previously disturbed lands, and lands with existing infrastructure as a means of potentially reducing impacts and known conflicts as well as the time needed for affected Federal land managers to evaluate an application for a Federal authorization if the route is sited through such areas (*e.g.,* colocation with existing infrastructure or location on previously disturbed lands, in energy corridors designated by the Department of the Interior or the Department of Agriculture under section 503 of the Federal Land Policy and Management Act (Pub. L. 94–579) or section 368 of the Energy Policy Act of 2005 (Pub. L. 109–58), existing rights-of-way, National Interest Electric Transmission Corridors designated under Federal Power Act section 216(a), or utility corridors identified in a land management plan);

(5) Potential constraints caused by impacts on military test, training, and operational missions, including impacts on installations, ranges, and airspace;

(6) Potential constraints caused by impacts on the United States' aviation system;

(7) Potential constraints caused by impacts to navigable waters of the United States; and

(8) Potential avoidance, minimization, offsetting, and compensatory (onsite and offsite) measures, developed through a mitigation approach to reduce or offset the potential impact of the proposed project to resources requiring mitigation.

(b) Participation in the IIP Process is a prerequisite for the coordination provided by DOE between relevant Federal entities, relevant non-Federal entities, and the project proponent.

(c) The IIP Process ensures early interaction between the project proponents, relevant Federal entities, and relevant non-Federal entities to enhance early understanding by those entities. Through the IIP Process, the project proponent will provide relevant Federal entities and relevant non-Federal entities with a clear description of the proposed electric transmission project, the project proponent's siting process, and the environmental and community setting being considered by

the project proponent for siting the proposed electric transmission facility; and will coordinate with relevant Federal entities to develop resource reports that will serve as inputs, as appropriate, into the relevant Federal analyses and facilitate early identification of project issues.

(d) The IIP Process is an iterative process anchored by three meetings: the initial meeting, review meeting, and close-out meeting. These meetings, defined in §§ 900.5, 900.8 and 900.9, are milestones in the process and do not preclude any additional meetings or communications between the project proponent and the relevant Federal entities. The iterative nature of the process is provided for in procedures for evaluating the completeness of submitted materials and the suitability of materials for the relevant Federal entities' decision-making before each milestone.

(e) DOE, in exercising its responsibilities under this part, will communicate regularly with FERC, electric reliability organizations and electric transmission organizations approved by FERC, relevant Federal entities, and project proponents. DOE will use information technologies to provide opportunities for relevant Federal entities to participate remotely.

(f) DOE, in exercising its responsibilities under this part, will to the maximum extent practicable and consistent with Federal law, coordinate the IIP Process with any relevant non-Federal entities. DOE will use information technologies to provide opportunities and reduce burdens for relevant non-Federal entities to participate remotely.

(g) The Director may at any time require the project proponent to provide additional information necessary to resolve issues raised by the IIP Process.

(h) Pursuant to 10 CFR 1004.11, any person submitting information during the IIP Process that the person believes to be confidential and exempt by law from public disclosure should submit two well-marked copies, one marked ''confidential'' that includes all the information believed to be confidential, and one marked ''non-confidential'' with the information believed to be confidential deleted or redacted. DOE will make its own determination about the confidential status of the information and treat it according to its determination, in accordance with applicable law. The project proponent must request confidential treatment for all material filed with DOE containing non-public location, character, and ownership information about cultural resources.

(i) Pursuant to 10 CFR 1004.13, any person submitting information during the IIP Process that the person believes might contain Critical Electric Infrastructure Information (CEII) should submit a request for CEII designation of information.

§ 900.5 Initiation of IIP Process.

(a) *Initiation request.* A project proponent shall submit an initiation request to DOE. The project proponent may decide when to submit the initiation request. The initiation request must include, based on best available information:

(1) A summary of the proposed electric transmission project, as described by paragraph (b) of this section;

(2) Associated maps, geospatial information, and studies (provided in electronic format), as described by paragraph (c) of this section;

(3) A project participation plan, as described by paragraph (d) of this section; and

(4) A statement regarding the proposed project's status pursuant to Title 41 of the Fixing America's Surface Transportation Act (FAST–41) (42 U.S.C. 4370m–2(b)(2)), as described by paragraph (e) of this section.

(b) *Summary of the proposed project.* The summary of the proposed electric transmission project may not exceed 10 single-spaced pages unless the project proponent requests a waiver of the page limit, including a rationale for the waiver, and DOE grants the waiver. The summary must include:

(1) The following information:

(i) The project proponent's legal name and principal place of business;

(ii) The project proponent's contact information and designated point(s) of contact;

(iii) Whether the project proponent is an individual, partnership, corporation, or other entity and, if applicable, the State laws under which the project proponent is organized or authorized; and

(iv) If the project proponent resides or has its principal office outside the United States, documentation related to designation by irrevocable power of attorney of an agent residing within the United States;

(2) A statement of the project proponent's interests and objectives;

(3) To the extent available, copies of or links to:

(i) Any regional electric transmission planning documents, regional reliability studies, regional congestion or other related studies that relate to the proposed project or the need for the proposed project; and

(ii) Any relevant interconnection requests;

(4) A description of potential study corridors and routes identified by the project proponent and a brief description of the evaluation criteria and methods used by the project proponent to identify and develop those corridors and routes;

(5) A brief description of the proposed project, including end points, voltage, ownership, intermediate substations if applicable, and, to the extent known, any information about constraints or flexibility with respect to the proposed project;

(6) Identification of any environmental and engineering firms and sub-contractors under contract to develop the proposed project;

(7) The project proponent's proposed schedule for filing necessary Federal and State applications, construction start date, and planned in-service date, assuming receipt of all necessary authorizations; and

(8) A list of anticipated relevant Federal entities and relevant non-Federal entities, including contact information for each Federal agency, State agency, Indian Tribe, or multi-State entity that is responsible for or has a role in issuing an authorization or environmental review for the proposed project.

(c) *Maps, geospatial information, and studies.* The initiation request must include maps, geospatial information, and studies in support of the information provided in the summary of the proposed project under paragraph (b) of this section. Maps must be of sufficient detail to identify the study corridors and potential routes. Project proponents must provide the maps, information, and studies as electronic data files that may be readily accessed by relevant Federal entities and relevant non-Federal entities. The maps, information, and studies described in this paragraph (c) must include:

(1) Location maps and plot plans to scale showing all major components, including a description of zoning and site availability for any permanent facilities; cultural resource location information in these materials should be submitted in accordance with § 900.4(h);

(2) A map of the project area showing potential study corridors and potential routes;

(3) Existing data or studies relevant to the summary of the proposed project; and

(4) Citations identifying sources, data, and analyses used to develop the summary of the proposed project.

(d) *Project participation plan.* The project participation plan, which may not exceed 10, single-spaced pages, summarizes the outreach that the project proponent conducted prior to submission of the initiation request, and describes the project proponent's planned outreach to communities of interest going forward. A supplemental appendix may be submitted to provide sufficient detail in addition to the narrative elements. The project participation plan must include:

(1) A summary of prior outreach to communities of interest and stakeholders including:

(i) A description of what work already has been done, including stakeholder and community outreach and public engagement, as well as any entities and organizations interested in the proposed electric transmission project;

(ii) A list of environmental, engineering, public affairs, other contractors or consultants employed by the proponent to facilitate public outreach;

(iii) A description of any materials provided to the public, such as environmental surveys or studies;

(iv) A description of the communities of interest identified and the process by which they were identified;

(v) A general description of the real property interests that would be impacted by the proposed project and the rights that the owners of those property interests would have under State law; and

(vi) A summary of comments received during these previous engagement activities, issues identified by stakeholders, communities of interest (including various resource issues, differing project alternative study corridors or routes, and revisions to routes), and responses provided to commenters, if applicable; and

(2) A public engagement plan, which must:

(i) Describe the project proponent's outreach plan and status of those activities, including planned future activities corresponding to each of the items or issues identified in paragraphs (d)(1)(i) through (vi) of this section, specifying the planned dates or frequency;

(ii) Describe the manner in which the project proponent will reach out to communities of interest about potential mitigation of concerns;

(iii) Describe planned outreach activities during the permitting process, including efforts to identify, and engage, individuals with limited English proficiency and linguistically isolated communities, and provide accommodations for individuals with accessibility needs; and

(iv) Discuss the specific tools and actions used by the project proponent to facilitate public communications and public information, including whether the project proponent will have a readily accessible, easily identifiable, single point of contact.

(e) *FAST–41 statement.* The FAST–41 statement required under paragraph (a) of this section must specify the status of the proposed electric transmission project pursuant to FAST–41 at the time of submission of the initiation request. The statement must either:

(1) State that the project proponent has sought FAST–41 coverage pursuant to 42 U.S.C. 4370m–2(a)(1); and state whether the Executive Director of the FPISC has created an entry on the Permitting Dashboard for the project as a covered project pursuant to 42 U.S.C. 4370m–2(b)(2)(A); or

(2) State that the project proponent elected not to apply to be a FAST–41 covered project at this time.

(f) *Initiation request determination.* Not later than 20 calendar days after the date that DOE receives an initiation request, DOE shall:

(1) Determine whether the initiation request meets the requirements of this section and, if not previously determined under § 900.3, whether the proposed electric transmission facility is a qualifying project;

(2) Identify the relevant Federal entities and relevant non-Federal entities and provide each with an electronic copy of the initiation request; and

(3) Give notice to the project proponent and relevant Federal and non-Federal entities of DOE's determinations under paragraph (f)(1) of this section.

(g) *Deficiencies.* If DOE determines under paragraph (f)(1) of this section that the initiation request does not meet the requirements of this section, DOE must provide the reasons for that finding and a description of how the project proponent may, if applicable, address any deficiencies in the initiation request so that DOE may reconsider its determination. If DOE determines under paragraph (f)(1) of this section that the proposed electric transmission facility is not a qualifying project, DOE must provide a justification for the determination and the project proponent may file a request for coordination with the Director as provided in § 900.3. A project to site a proposed electric transmission facility that is not a qualifying project is not eligible for participation in the IIP Process.

(h) *Initial meeting.* If a project proponent submits a valid initiation request, DOE, in consultation with the identified relevant Federal entities, shall convene the IIP Process initial meeting with the project proponent and all relevant Federal entities notified by DOE under paragraph (f) of this section as soon as practicable and no later than 15 calendar days after the date that DOE provides notice under paragraph (f) that the initiation request meets the requirements of this section. DOE shall also invite relevant non-Federal entities to participate in the initial meeting. During the initial meeting:

(1) DOE and the relevant Federal entities shall discuss with the project proponent the IIP Process, Federal authorization process, related environmental reviews, any arrangements for the project proponent to contribute funds to DOE to cover costs incurred by DOE and the relevant Federal entities in the IIP Process (in accordance with 42 U.S.C. 7278), any requirements for entering into cost recovery agreements, and paying for third-party contractors under DOE's supervision, where applicable;

(2) DOE will identify any Federal applications that must be submitted during the IIP Process, to enable relevant Federal entities to begin work on the review process, and those applications that will be submitted after the IIP Process. All application submittal timelines will be accounted for in the project-specific schedule described in § 900.7;

(3) DOE will establish all analysis areas necessary for the completion of resource reports required under § 900.6;

(4) The project proponent shall describe the proposed electric transmission project and the contents of the initiation request;

(5) DOE and the relevant Federal entities, along with any relevant non-Federal entities who choose to participate, will review the information provided by the project proponent and publicly available information, discuss the study corridors and potential routes identified by the project proponent, discuss the evaluation criteria and methods used to identify those corridors and routes and, to the extent possible and based on agency expertise and experience, identify any additional criteria for adding or modifying potential routes and study corridors;

(6) DOE and the relevant Federal entities will discuss, based on available information provided by the project proponent, any surveys and studies that may be required for potential routes and completion of the resource reports, including biological (including

threatened and endangered species or avian, aquatic, and terrestrial species and aquatic habitats of concern), visual, cultural, economic, social, health, and historic surveys and studies.

(i) *Feedback to project proponent.* Feedback provided to the project proponent under paragraph (h) of this section does not constitute a commitment by any relevant Federal entity to approve or deny a Federal authorization request, nor does the IIP Process limit agency discretion regarding NEPA review.

(j) *Draft initial meeting summary.* Not later than 10 calendar days after the initial meeting, DOE shall:

(1) Prepare a draft initial meeting summary that includes a summary of the meeting discussion, a description of key issues and information gaps identified during the meeting, and any requests for more information from relevant Federal entities and relevant non-Federal entities; and

(2) Convey the draft summary to the project proponent, relevant Federal entities, and any relevant non-Federal entities that participated in the meeting.

(k) *Corrections.* The project proponent and entities that received the draft initial meeting summary under paragraph (j) of this section will have 10 calendar days following receipt of the draft initial meeting summary to review the draft and provide corrections to DOE.

(l) *Final summary.* Not later than 10 calendar days following the close of the 10-day review period under paragraph (k) of this section, DOE shall:

(1) Prepare a final initial meeting summary by incorporating received corrections, as appropriate;

(2) Add the final summary to the consolidated administrative docket described by § 900.10; and

(3) Provide an electronic copy of the summary to all relevant Federal entities, relevant non-Federal entities, and the project proponent.

§ 900.6 Project proponent resource reports.

(a) *Preparation and submission.* The project proponent shall prepare and submit to DOE the 13 project proponent resource reports described in this section. The project proponent may submit the resource reports at any time before requesting a review meeting under § 900.8 and shall, at the direction of DOE, revise resource reports in response to comments received from relevant Federal entities and relevant non-Federal entities during the Integrated Interagency Pre-Application (IIP) Process.

(b) *Content.* Each resource report must include concise descriptions, based on the best available scientific and commercial information, of the known existing environment and major site conditions. The detail of each resource report must be commensurate with the complexity of the proposal and its potential for environmental impacts. Each topic in each resource report must be addressed or its omission justified. If any resource report topic is not addressed at the time the applicable resource report is filed or its omission is not addressed, the report must explain why the topic is missing. If material required for one resource report is provided in another resource report or in another exhibit, it may be incorporated by reference. If outside material is reasonably available for review and comment, a resource report may incorporate that material by reference by including a citation to the material and a brief summary of the material. Consistent with §§ 900.1(h) and 900.4(g), the Director may modify the requirements of this section to reflect differences in onshore and offshore environments and uses.

(c) *Requirements for IIP Process progression.* Failure of the project proponent to provide at least the required initial or revised content will prevent progress through the IIP Process to the IIP Process review or close-out meetings, unless the Director determines that the project proponent has provided an acceptable reason for the item's absence and an acceptable timeline for filing it. Failure to file within the accepted timeline will prevent further progress in the IIP Process.

(d) *General requirements.* As appropriate, each resource report shall:

(1) Address conditions or resources that might be directly or indirectly affected by the proposed electric transmission project;

(2) Identify environmental effects expected to occur as a result of the proposed project;

(3) Identify the potential effects of construction, operation (including maintenance and malfunctions), and termination of the proposed project, as well as potential cumulative effects resulting from existing or reasonably foreseeable projects;

(4) Identify measures proposed to enhance the environment or to avoid, minimize, or compensate for potential adverse effects of the proposed project; and

(5) Provide a list of publications, reports, and other literature or communications, including agency communications, that were cited or relied upon to prepare each report.

(e) *Federal responsibility.* The resource reports prepared by the project proponent under this section do not supplant the requirements under existing environmental laws related to the information required for Federal authorization or consultation processes. The relevant Federal entities shall independently evaluate the information submitted and shall be responsible for the accuracy, scope, and contents of all Federal authorization decision documents and related environmental reviews.

(f) *Resource Report 1—General project description.* This report should describe all expected facilities associated with the project, special construction and operation procedures, construction timetables, future plans for related construction, and permits, authorizations, and consultations that are expected to be required for proposed project. Resource Report 1 must:

(1) Describe and provide location maps of all facilities to be constructed, modified, abandoned, replaced, or removed, including facilities related to construction and operational support activities and areas such as maintenance bases, staging areas, communications towers, power lines, and new access roads (roads to be built or modified), as well as any existing infrastructure proposed to be used for the project (*e.g.,* connections to existing substations and transmission, and existing access roads);

(2) Describe specific generation resources that are known or reasonably foreseen to be developed or interconnected as a result of the proposed electric transmission project, if any;

(3) Identify facilities constructed by other entities that are related to the proposed project (*e.g.,* fiber optic cables) and where those facilities would be located;

(4) Provide the following information for each facility described under paragraphs (f)(1) through (3) of this section:

(i) A brief description of the facility, including, as appropriate, ownership, land requirements, megawatt size, construction status, and an update of the latest status of Federal, State, and local permits and approvals; and

(ii) Current topographic maps showing the location of the facility;

(5) Provide any communications with the appropriate State Historic Preservation Offices (SHPOs) and Tribal Historic Preservation Offices (THPOs) regarding cultural and historic resources in the project area;

(6) To the extent known, identify the permits, authorizations, and consultations that are expected to be required for proposed project, including consultation under section 106 of the NHPA, consultation under section 7 of the Endangered Species Act of 1973 (Pub. L. 93–205, as amended, 16 U.S.C. 1531 *et seq.*), consistency determinations under the Coastal Zone Management Act (CZMA), and permits under the Clean Water Act (33 U.S.C. 1251 *et seq.*) (CWA);

(7) Describe any developments in obtaining authorizations and permits or completing required consultations for the proposed project and identify environmental mitigation requirements specified in any permit or proposed in any permit application to the extent not specified elsewhere in this resource report or another resource report;

(8) If the project includes abandonment of certain facilities, rights-of-way, or easements, identify and describe the following:

(i) facilities, rights-of-way, or easements that the project proponent plans to abandon;

(ii) how the facilities, rights-of-way, or easements would be abandoned;

(iii) how the abandoned facilities, rights-of-way, and easements would be restored;

(iv) the owner of the facilities, rights-of-way, or easement after abandonment;

(v) the party responsible for the abandoned facilities, rights-of-way, or easement;

(vi) whether landowners were or are expected to be given the opportunity to request that the abandoned facilities on their property, including foundations and below ground components, be removed; and

(vii) landowners whose preferences regarding abandoned facility removal the project proponent does not intend to honor and reasons why the project proponent does not intend to honor those preferences;

(9) Provide construction timetables and describe, by milepost, proposed construction and restoration methods to be used in areas of rugged topography, residential areas, active croplands, sites where the proposed project would be located parallel to and under roads, and sites where explosives may be used;

(10) Describe estimated workforce requirements for the proposed project, including the number of construction spreads, average workforce requirements for each construction spread, estimated duration of construction from initial clearing to final restoration, and number of personnel to be hired to operate the proposed project;

(11) Describe reasonably foreseeable plans for future expansion of facilities related to the project, including additional land requirements and the compatibility of those plans with the current proposal;

(12) Provide the names and mailing addresses of all potentially affected landowners identified by the project proponent, identify which potentially affected landowners have been notified by the project proponent, and describe the methodology used to identify potentially affected landowners;

(13) Summarize the proposed mitigation approach anticipated by the project proponent to reduce the potential impacts of the proposed project to resources warranting or requiring mitigation; and

(14) Describe how the proposed project will reduce capacity constraints and congestion on the transmission system, meet unmet demand, or connect generation resources (including the expected type of generation, if known) to load, as appropriate.

(g) *Resource Report 2—Water use and quality.* This report should describe water resources that may be impacted by the proposed project, describe the potential impacts on these resources, and describe the measures taken to avoid and minimize adverse effects to such water resources, where appropriate. Resource Report 2 must:

(1) Identify surface water resources, including perennial waterbodies, intermittent streams, ephemeral waterbodies, municipal water supply or watershed areas, specially designated surface water protection areas and sensitive waterbodies, floodplains, and wetlands, that would be crossed by a potential route;

(2) For each surface water resource that would be crossed by a potential route, identify the approximate width of the crossing, State water quality classifications, any known potential pollutants present in the water or sediments, and any downstream potable water intake sources within the applicable analysis area;

(3) Describe typical staging area requirements at surface water resource crossings and identify and describe each potential surface water crossing where staging areas are likely to be more extensive and could require a mitigation approach to address potential impacts to the water resource;

(4) Provide two copies of floodplain and National Wetland Inventory (NWI) maps or, if not available, appropriate State wetland maps clearly showing the study corridors or potential routes and mileposts;

(5) For each wetland crossing, identify the milepost of the crossing, the wetland classification specified by the USFWS, and the length of the crossing, and describe, by milepost, wetland crossings as determined by field delineations using the current Federal methodology;

(6) For each floodplain crossing, identify the mileposts, acres of floodplains affected, flood elevation, and basis for determining that elevation;

(7) Describe and provide data supporting the expected impact of the proposed project on surface and groundwater resources;

(8) Describe and provide data supporting proposed avoidance and minimization measures as well as protection or enhancement measures that would reduce the potential for adverse impacts to surface and groundwater resources, and discuss any potential compensation expected to be provided for remaining unavoidable impacts to water resources due to the proposed project;

(9) Identify the location of known public and private groundwater supply wells or springs within the applicable analysis area;

(10) Identify locations of EPA or State-designated principal-source aquifers and wellhead protection areas crossed by a potential route;

(11) Discuss the results of any coordination with relevant Federal entities or non-Federal entities related to CWA permitting and include any written correspondence that resulted from the coordination; and

(12) Indicate whether the project proponent expects that a water quality certification (under section 401 of the CWA) will be required for any potential routes.

(h) *Resource Report 3—Fish, wildlife, and vegetation.* This report should identify and describe potential impacts to aquatic and terrestrial habitats, wildlife, and plants from the proposed project and discuss potential avoidance, minimization, or compensation measures, and enhancement or protection measures to reduce adverse impacts to these resources. Resource Report 3 must:

(1) Describe aquatic habitats that occur in the applicable analysis area, including commercial and recreational warmwater, coldwater, and saltwater fisheries and associated significant habitats such as spawning or rearing areas, estuaries, and other essential fish habitats;

(2) Describe terrestrial habitats that occur in the project area, including wetlands, typical wildlife habitats, and rare, unique, or otherwise significant habitats;

(3) Identify fish, wildlife, and plants that may be affected by the proposed project, including species that have commercial, recreational, or aesthetic value and that may be affected by the proposed project;

(4) Describe and provide the acreage of vegetation cover types that would be affected by the proposed project, including unique ecosystems or communities such as remnant prairie or old-growth forest, or significant individual plants, such as old-growth specimen trees;

(5) Describe the impact of the proposed project on aquatic and terrestrial habitats, including potential loss and fragmentation;

(6) Describe the potential impact of the proposed project on Federally listed, candidate, or proposed endangered or threatened species, State, Tribal, and local species of concern, and those species' habitats, including the possibility of a major alteration to ecosystems or biodiversity;

(7) Describe the potential impact of maintenance, clearing, and treatment of the applicable analysis area on fish, wildlife, and plant life;

(8) Identify all Federally listed, candidate, or proposed endangered or threatened species that may be affected by the proposed project and proposed or designated critical habitats that potentially occur in the applicable analysis area;

(9) Identify all State, Tribal, and local species of concern that may be affected by the proposed project;

(10) Identify all known and potential bald and golden eagle nesting and roosting sites, migratory bird flyways, and any sites important to migratory bird breeding, feeding, and sheltering within the applicable analysis areas. These identifications should coincide with the USFWS's most current range and location maps at the time this resource report is submitted;

(11) Discuss the results of any discussions conducted by the proponent to date with relevant Federal entities or relevant non-Federal entities related to fish, wildlife, and vegetation resources, and include any written correspondence that resulted from the discussions;

(12) Include the results of any appropriate surveys that have already been conducted, as well as plans and protocols for future surveys. If potentially suitable habitat is present, species-specific surveys may be required;

(13) If present, identify all Federally designated essential fish habitat (EFH) that occurs in the applicable analysis area and provide:

(i) Information on all EFH, as identified by the pertinent Federal fishery management plans, which may be adversely affected by potential routes;

(ii) The results of discussions with National Marine Fisheries Service; and

(iii) Any resulting EFH assessments that were evaluated, and EFH Conservation Recommendations that were provided by the National Marine Fisheries Service;

(14) Describe potential avoidance, minimization, or compensation measures, and enhancement or protection measures to address adverse effects described in paragraphs (h)(5), (6), and (7) of this section;

(15) Describe anticipated site-specific mitigation approaches for fisheries, wildlife (including migration corridors and seasonal areas of use), grazing, and plant life;

(16) Describe proposed measures to avoid and minimize incidental take of Federally listed and candidate species and species of concern, including eagles and migratory birds; and

(17) Include copies of any correspondence not otherwise provided pursuant to this paragraph (h) containing recommendations from appropriate Federal, State, and local fish and wildlife agencies to avoid or limit impact on wildlife, fish, fisheries, habitats, and plants, and the project proponent's response to those recommendations.

(i) *Resource Report 4—Cultural resources.* This report should describe the location of known cultural and historic resources, previous surveys and listings of cultural and historic resources, the potential effects that construction, operation, and maintenance of the proposed project will have on those resources, and initial recommendations for avoidance and minimization measures to address potential effects to those resources. The information provided in Resource Report 4 will contribute to the satisfaction of DOE's and relevant Federal entities' obligations under section 106 of the NHPA.

(1) Resource Report 4 must contain:

(i) A summary of known cultural and historic resources in the applicable analysis area including but not limited to those listed or eligible for listing on the National Register of Historic Places, such as properties of religious and cultural significance to Indian Tribes, and any material remains of past human life or activities that are of an archeological interest;

(ii) A description of potential effects that construction, operation, and maintenance of the proposed project will have on resources identified in paragraph (i)(1)(i) of this section;

(iii) Documentation of the project proponent's initial communications and engagement, including preliminary outreach and coordination, with Indian Tribes, indigenous peoples, THPOs, SHPOs, communities of interest, and other entities having knowledge of, interest regarding, or an understanding about the resources identified in paragraph (i)(1)(i) of this section and any written comments from SHPOs, THPOs, other Tribal historic preservation offices or governments, or others, as appropriate and available;

(iv) Recommended avoidance and minimization measures to address potential effects of the proposed project;

(v) Any relevant existing surveys or listings of cultural and historic resources in the affected environment; and

(vi) Recommendations for any additional surveys needed; and

(vii) A description, by milepost, of any area that has not been surveyed due to a denial of access by landowners.

(2) The project proponent must update this report with the results of any additional surveys that the project proponent chooses to undertake, as identified in in paragraph (i)(1)(vi) of this section, after the initial submission of this report.

(3) The project proponent must request confidential treatment for all material filed with DOE containing non-public location, character, and ownership information about cultural resources in accordance with § 900.4(h).

(j) *Resource Report 5—Socioeconomics.* This report should identify and quantify the impacts of constructing and operating the proposed project on the demographics and economics of communities in the applicable analysis area, including minority and underrepresented communities. Resource Report 5 must:

(1) Describe the socioeconomic resources that may be affected in the applicable analysis area;

(2) Describe the positive and adverse socioeconomic impacts of the proposed project;

(3) Evaluate the impact of any substantial migration of people into the applicable analysis area on governmental facilities and services and describe plans to reduce the impact on the local infrastructure;

(4) Describe on-site labor requirements during construction and operation, including projections of the number of construction personnel who currently reside within the applicable analysis area, who would commute daily to the site from outside the

analysis area, or who would relocate temporarily within the analysis area;

(5) Determine whether existing affordable housing within the applicable analysis area is sufficient to meet the needs of the additional population; and

(6) Describe the number and types of residences and businesses that would be displaced by the proposed project, procedures to be used to acquire these properties, and types and amounts of relocation assistance payments.

(k) *Resource Report 6—Tribal interests.* This report must identify the Indian Tribes and indigenous communities that may be affected by the construction, operation, and maintenance of the project facilities, including those Indian Tribes and indigenous communities that may attach religious and cultural significance to cultural resources within the project area. In developing this report, the project proponent should consider both Indian Tribes with contemporary presence in the project area and Indian Tribes with historic connections to the area. To the extent Indian Tribes and indigenous communities are willing to communicate and share resource information, this report must discuss the potential impacts of project construction, operation, and maintenance on Indian Tribes and Tribal interests. This discussion must include impacts to sacred sites and Treaty rights, impacts related to enumerated resources and areas identified in the resource reports listed in this section (for instance, water rights, access to property, wildlife and ecological resources, etc.), and set forth available information on any additional, relevant traditional cultural and religious resources that could be affected by the proposed electric transmission project that are not already addressed. This resource report should acknowledge existing relationships between adjacent and underlying Federal land management agencies and the Indian Tribes. In developing this report, the project proponent should engage the Federal land manager early to leverage existing relationships. Specific site or property locations, the disclosure of which may create a risk of harm, theft, or destruction of archaeological or Native American cultural resources and information which would violate any Federal law, including section 9 of the Archaeological Resources Protection Act of 1979 (Pub. L. 96–95, as amended) (16 U.S.C. 470hh) and section 304 of the NHPA (54 U.S.C. 307103), should be submitted consistent with § 900.4(h). The project proponent must request confidential treatment for all material filed with DOE containing non-public location, character, and ownership information about Tribal resources in accordance with § 900.4(h).

(l) *Resource Report 7—Communities of Interest.* This report must summarize best available information about the presence of communities of interest. The resource report must identify and describe the potential impacts of constructing, operating, and maintaining the proposed electric transmission project on communities of interest; and describe any proposed mitigation approaches for such impacts or community concerns. The report must include a discussion of any disproportionate and/or adverse human health or environmental impacts to communities of interest.

(m) *Resource Report 8—Geological resources and hazards.* This report should describe geological resources that might be directly or indirectly affected by the proposed electric transmission project and methods to reduce those effects. The report should also describe geological hazards that could place project facilities at risk and methods proposed to mitigate those risks. Resource Report 8 must:

(1) Describe geological resources in the applicable analysis area that are currently or potentially exploitable, if relevant;

(2) Identify, by milepost, existing and potential geological hazards and areas of nonroutine geotechnical concern in the applicable analysis area, such as high seismicity areas, active faults, and areas susceptible to soil liquefaction; planned, active, and abandoned mines; karst terrain (including significant caves protected under the Federal Cave Resources Protection Act (Pub. L. 100–691, as amended) (16 U.S.C. 4301 *et seq.*)); and areas of potential ground failure, such as subsidence, slumping, and land sliding;

(3) Discuss the risks posed to the proposed project from each hazard or area of nonroutine geotechnical concern identified in paragraph (m)(2) of this section;

(4) Describe how the proposed project would be located or designed to avoid or minimize adverse effects to geological resources and reduce risk to project facilities, including geotechnical investigations and monitoring that would be conducted before, during, and after construction;

(5) Discuss the potential for blasting to affect structures and the measures to be taken to remedy such effects; and

(6) Specify methods to be used to prevent project-induced contamination from mines or from mine tailings along the right-of-way and discuss whether the proposed project would hinder mine reclamation or expansion efforts.

(n) *Resource Report 9—Soil resources.* This report should describe the soils that could be crossed by the proposed electric transmission project, the potential effect on those soils, and the proposed mitigation approach for those effects. Resource Report 9 must:

(1) List, by milepost, the soil associations that would be crossed by each potential route and describe the erosion potential, fertility, and drainage characteristics of each association;

(2) For the applicable analysis area:

(i) List the soil series within the area and the percentage of the area comprised of each series;

(ii) List the percentage of each series which would be permanently disturbed;

(iii) Describe the characteristics of each soil series; and

(iv) Indicate which soil units are classified as prime or unique farmland by the USDA, Natural Resources Conservation Service;

(3) Identify potential impacts from: soil erosion due to water, wind, or loss of vegetation; soil compaction and damage to soil structure resulting from movement of construction vehicles; wet soils and soils with poor drainage that are especially prone to structural damage; damage to drainage tile systems due to movement of construction vehicles and trenching activities; and interference with the operation of agricultural equipment due to the probability of large stones or blasted rock occurring on or near the surface as a result of construction;

(4) Identify, by milepost, cropland and residential areas where loss of soil fertility due to trenching and backfilling could occur; and

(5) Describe the proposed mitigation approach to reduce the potential for adverse impact to soils or agricultural productivity.

(o) *Resource Report 10—Land use, recreation, and aesthetics.* This report should describe the existing uses of land that may be impacted by the proposed project, and changes to those land uses and impacts to inhabitants and users that would occur if the proposed electric transmission project is approved. Resource Report 10 must:

(1) Describe the width and acreage requirements of all construction and permanent rights-of-way required for project construction, operation, and maintenance;

(2) List existing rights-of-way that would be co-located with or adjacent to the proposed rights-of-way (including temporary construction lines), and any required utility coordination, permits,

and fees that would be associated as a result;

(3) Identify, preferably by diagrams, existing rights-of-way that are expected to be used for any portion of the construction or operational right-of-way, the overlap, and how much additional width is expected to be required;

(4) Identify the total amount of land to be purchased or leased for each project facility, the amount of land that would be disturbed for construction, operation, and maintenance of the facility, and the use of the remaining land not required for project operation and maintenance, if any;

(5) Identify the size of typical staging areas and expanded work areas, such as those at railroad, road, and waterbody crossings, and the size and location of all construction materials storage yards and access roads;

(6) Identify, by milepost, the existing use of:

(i) Lands crossed by or adjacent to each project facility; and

(ii) Lands on which a project facility is expected to be located;

(7) Describe:

(i) Planned development within the applicable analysis area that is either included in a master plan or on file with the local planning board or the county;

(ii) The time frame (if available) for such development; and

(iii) Proposed coordination to minimize impacts on land use due to such development;

(8) Identify areas within applicable analysis areas that:

(i) Are owned or controlled by Federal, State or local agencies, or private preservation groups;

(ii) Are directly affected by the proposed project or any project facilities or operational sites; and

(iii) Have special designations not otherwise mentioned in other resource reports.

(iv) Examples of such specially designated areas under this provision may include but are not limited to sugar maple stands, orchards and nurseries, landfills, hazardous waste sites, nature preserves, conservation or agricultural lands subject to conservation or agricultural easements or restrictions, game management areas, remnant prairie, old-growth forest, national or State forests, parks, designated natural, recreational or scenic areas, registered natural landmarks, and areas managed by Federal entities under existing land use plans as Visual Resource Management Class I or Class II areas;

(9) Identify Indian Tribes and indigenous communities that may be affected by the proposed project;

(10) Describe Tribal and indigenous community resources lands, interests, and established treaty rights that may be affected by the proposed project;

(11) Identify properties within the project area which may hold cultural or religious significance for Indian Tribes and indigenous communities, regardless of whether the property is on or off of any Federally recognized Indian reservation;

(12) Identify resources within the applicable analysis area that are included in, or are designated for study for inclusion in, if available: the National Wild and Scenic Rivers System (16 U.S.C. 1271), the National Wildlife Refuge System (16 U.S.C. 668dd), the National Wilderness Preservation System (16 U.S.C. 1131), the National Trails System (16 U.S.C. 1241–1251), the National Park System (54 U.S.C. 100101–120104), National Historic Landmarks (NHLs), National Natural Landmarks (NNLs), Land and Water Conservation Fund (LWCF) acquired Federal lands, LWCF State Assistance Program sites and the Federal Lands to Parks (FLP) program lands, or a wilderness area designated under the Wilderness Act (16 U.S.C. 1131–1136); or the National Marine Sanctuary System, including national marine sanctuaries (16 U.S.C. 1431–1445c–1.) and Marine National Monuments as designated under authority by the Antiquities Act (54 U.S.C. 320301–320303) or by Congress; National Forests and Grasslands (16 U.S.C. 1609 *et seq*); and lands in easement programs managed by the Natural Resource Conservation Service or the U.S. Forest Service (16 U.S.C. 3865, *et seq.*);

(13) Indicate whether the project proponent will need to submit a CZMA Federal consistency certification to State coastal management program(s) for the project, as required by NOAA's Federal consistency regulations at 15 CFR part 930, subpart D;

(14) Describe the impacts the proposed project will have on:

(i) Present uses of land in the applicable analysis area, including commercial uses, mineral resource uses, and recreational uses,

(ii) Public health and safety;

(iii) Federal, State, and Tribal scientific survey, research, and observation activities;

(iv) Sensitive resources and critical habitats;

(v) The aesthetic value of the land and its features; and

(vi) Federal, State or Tribal access limitations.

(15) Describe any temporary or permanent restrictions on land use that would result from the proposed project.

(16) Describe the proposed mitigation approach intended to address impacts described in paragraphs (o)(12) and (13) of this section, as well as protection and enhancement of existing land use;

(17) Provide a proposed operations and maintenance plan for vegetation management, including management of noxious and invasive species;

(18) Describe the visual characteristics of the lands and waters affected by the proposed project. Components of this description include a description of how permanent project facilities will impact the visual character of proposed project right-of-way and surrounding vicinity, and measures proposed to lessen these impacts. Project proponents are encouraged to supplement the text description with visual aids;

(19) Identify, by milepost, all residences and buildings near the proposed electric transmission facility construction right-of-way, and identify the distance of the residence or building from the edge of the right-of-way and provide survey drawings or alignment sheets to illustrate the location of the proposed facility in relation to the buildings;

(20) List all dwellings and related structures, commercial structures, industrial structures, places of worship, hospitals, nursing homes, schools, or other structures normally inhabited by humans or intended to be inhabited by humans on a regular basis within the applicable analysis area and provide a general description of each habitable structure and its distance from the centerline of the proposed project. In cities, towns, or rural subdivisions, houses can be identified in groups, and the report must provide the number of habitable structures in each group and list the distance from the centerline to the closest habitable structure in the group;

(21) List all known commercial AM radio transmitters located within the applicable analysis area and all known FM radio transmitters, microwave relay stations, or other similar electronic installations located within the analysis area; provide a general description of each installation and its distance from the centerline of the proposed project; and locate all installations on a routing map; and

(22) List all known private airstrips within the applicable analysis area and all airports registered with the Federal Aviation Administration (FAA) with at least one runway more than 3,200 feet in length that are located within the analysis area. Indicate whether any transmission structures will exceed a 100:1 horizontal slope (one foot in height for each 100 feet in distance) from the closest point of the closest runway. List all airports registered with

the FAA having no runway more than 3,200 feet in length that are located within the analysis area. Indicate whether any transmission structures will exceed a 50:1 horizontal slope from the closest point of the closest runway. List all heliports located within the analysis area. Indicate whether any transmission structures will exceed a 25:1 horizontal slope from the closest point of the closest landing and takeoff area of the heliport. Provide a general description of each private airstrip, registered airport, and registered heliport, and state the distance of each from the centerline of the proposed transmission line. Locate all airstrips, airports, and heliports on a routing map.

(23) Information made available under paragraphs (o)(9), (10), and (11) must be submitted consistent with § 900.4(h), including information regarding specific site or property locations, the disclosure of which will create a risk of harm, theft, or destruction of archaeological or Native American cultural resources and information which would violate any Federal law, including section 9 of the Archaeological Resources Protection Act of 1979 (Pub. L. 96–95, as amended) (16 U.S.C. 470hh) and section 304 of the NHPA (54 U.S.C. 307103).

(p) *Resource Report 11—Air quality and noise effects.* This report should identify the effects of the proposed electric transmission project on the existing air quality and noise environment and describe proposed measures to mitigate the effects. Resource Report 11 must:

(1) Describe the existing air quality in the applicable analysis area, indicate if any project facilities are located within a designated nonattainment or maintenance area under the Clean Air Act (42 U.S.C. 7401 *et seq.*), and provide the distance from the project facilities to any Class I area in the project area;

(2) Estimate emissions from the proposed project and the corresponding impacts on air quality and the environment;

(i) Estimate the reasonably foreseeable emissions, including greenhouse gas emissions, from construction, operation, and maintenance of the project facilities (such as emissions from tailpipes, equipment, fugitive dust, open burning, and substations) expressed in tons per year; include supporting calculations, emissions factors, fuel consumption rates, and annual hours of operation;

(ii) Estimate the reasonably foreseeable change in greenhouse gas emissions from the existing, proposed, and reasonably foreseeable generation resources identified in Resource Report 1 (see paragraph (f) of this section) that may connect to the proposed project or interconnect as a result of the proposed project, if any, as well as any other modeled air emissions impacts;

(iii) For each designated nonattainment or maintenance area, provide a comparison of the emissions from construction, operation, and maintenance of the proposed project with the applicable General Conformity thresholds (40 CFR part 93);

(iv) Identify the corresponding impacts on communities and the environment in the applicable analysis area from the estimated emissions;

(v) Describe any proposed mitigation measures to control emissions identified under this section; and

(vi) Estimate the reasonably foreseeable effect of the proposed project on indirect emissions;

(3) Describe existing noise levels at noise-sensitive areas in the applicable analysis area, such as schools, hospitals, residences, and any areas covered by relevant State or local noise ordinances;

(i) Report existing noise levels as the a-weighted decibel (dBA) Leq (day), Leq (night), and Ldn (day-night sound level) and include the basis for the data or estimates;

(ii) Include a plot plan that identifies the locations and duration of noise measurements, the time of day, weather conditions, wind speed and direction, engine load, and other noise sources present during each measurement; and

(iii) Identify any noise regulations that may be applicable to the proposed project;

(4) Estimate the impact of the proposed project on the noise environment;

(i) Provide a quantitative estimate of the impact of transmission line operation on noise levels at the edge of the proposed right-of-way, including corona, insulator, and Aeolian noise; and provide a quantitative estimate of the impact of operation of proposed substations and appurtenant project facilities on noise levels at nearby noise-sensitive areas, including discrete tones;

(A) Include step-by-step supporting calculations or identify the computer program used to model the noise levels, the input and raw output data and all assumptions made when running the model, far-field sound level data for maximum facility operation (either from the manufacturer or from far-field sound level data measured from similar project facilities in service elsewhere) and the source of the data;

(B) Include sound pressure levels for project facilities, dynamic insertion loss for structures, and sound attenuation from the project facilities to the edge of the right-of-way or to nearby noise-sensitive areas (as applicable);

(ii) Describe the impact of proposed construction activities, including any nighttime construction, on the noise environment; estimate the impact of any horizontal directional drilling, pile driving, or blasting on noise levels at nearby noise-sensitive areas and include supporting assumptions and calculations;

(5) Based on noise estimates, indicate whether the proposed project will comply with applicable noise regulations and whether noise attributable to any proposed substation or appurtenant facility will exceed permissible levels at any pre-existing noise-sensitive area;

(6) Based on noise estimates, determine whether any wildlife-specific noise thresholds may have an impact on the proposed project, such as those thresholds specific to avian species that may be relevant in significant wildlife areas, if appropriate; and

(7) Describe measures, and manufacturer's specifications for equipment, proposed to mitigate noise effects and impacts to air quality, including emission control systems, installation of filters, mufflers, or insulation of piping and buildings, and orientation of equipment away from noise-sensitive areas.

(q) *Resource Report 12—Alternatives.* This report should describe the range of study corridors that were considered as alternatives during the planning, identification, and design of the proposed electric transmission project and compare the environmental impacts of such corridors and the routes contained in those corridors. This analysis may inform the relevant Federal entities' subsequent analysis of their alternatives during the NEPA process. Resource Report 12 must:

(1) Identify all study corridors and routes contained within those corridors. The report must identify the location of the corridors on maps of sufficient scale to depict their location and relationship to the proposed project, and the relationship of the proposed electric transmission facility to existing rights-of-way;

(2) Discuss the ''no action'' alternative and the potential for accomplishing the proponent's proposed objectives using alternative means;

(3) Discuss design and construction methods considered by the project proponent;

(4) Identify all the alternative study corridors and routes the project proponent considered in the initial screening for the proposed project but did not recommend for further study and the reasons why the proponent chose not to examine such alternatives.

(5) For alternative study corridors and routes recommended for more in-depth consideration, the report must:

(i) Describe the potential impacts to cultural and historic resources for each alternative;

(ii) Describe the environmental characteristics of each alternative, provide comparative tables showing the differences in environmental characteristics for the alternatives, and include an analysis of the potential relative environmental impacts for each alternative;

(iii) Provide an explanation of the costs to construct, operate, and maintain each alternative, the potential for each alternative to meet project deadlines, and technological and procedural constraints in developing the alternatives; and

(iv) Demonstrate whether and how environmental benefits and costs were weighed against economic benefits and costs to the public.

(r) *Resource Report 13—Reliability, resilience, and safety.* This report should describe the impacts that would result from a failure of the proposed electric transmission facility, the measures, procedures, and features that would reduce the risk of failure, and measures in place to reduce impacts and protect the public if a failure did occur. Resource Report 13 must:

(1) Discuss events that could result in a failure of the proposed facility, including accidents, intentional destructive acts, and natural catastrophes (accounting for the likelihood of relevant natural catastrophes resulting from climate change);

(2) Describe the reasonably foreseeable impacts that would result from a failure of the proposed electric transmission facility, including hazards to the public, environmental impacts, and service interruptions;

(3) Describe the operational measures, procedures, and design features of the proposed project that would reduce the risk of facility failure;

(4) Describe measures proposed to protect the public from failure of the proposed facility (including coordination with local agencies);

(5) Discuss contingency plans for maintaining service or reducing downtime;

(6) Describe measures used to exclude the public from hazardous areas, measures used to minimize problems arising from malfunctions and accidents (with estimates of probability of occurrence), and identify standard procedures for protecting services and public safety during maintenance and breakdowns; and

(7) Describe improvements to reliability likely to result from the proposed project.

§ 900.7 Standard and project-specific schedules.

(a) DOE shall publish, and update from time to time, a standard schedule that identifies the steps generally needed to complete decisions on all Federal environmental reviews and authorizations for a proposed electric transmission project. The standard schedule will include recommended timing for each step so as to allow final decisions on all Federal authorizations within two years of the publication of a notice of intent to prepare an environmental review document under § 900.9 or as soon as practicable thereafter, considering the requirements of relevant Federal laws, and the need for robust analysis of proposed project impacts, early and meaningful consultation with potentially affected Indian Tribes and engagement with stakeholders and communities of interest.

(b) During the Integrated Interagency Pre-Application (IIP) Process, DOE, in coordination with any NEPA joint lead agency and relevant Federal entities, shall prepare a project-specific schedule that is informed by the standard schedule prepared under paragraph (a) of this section and that establishes prompt and binding intermediate milestones and ultimate deadlines for the review of, and Federal authorization decisions relating to, a proposed electric transmission project, accounting for relevant statutory requirements, the potential route, reasonable alternative potential routes, if any, the need to assess and address any impacts to military testing, training, and operations, and other factors particular to the specific proposed project, including the need for early and meaningful consultation with potentially affected Indian Tribes and engagement with stakeholders and communities of interest. DOE may revise the project-specific schedule as needed to satisfy applicable statutory requirements, allow for engagement with stakeholders and communities of interest, and account for delays caused by the actions or inactions of the project proponent.

§ 900.8 IIP Process review meeting.

(a) An Integrated Interagency Pre-Application (IIP) Process review meeting is required for each proposed electric transmission project utilizing the IIP Process and may only be held after the project proponent submits a review meeting request to DOE. The project proponent may submit the request at any time following submission of the initial resource reports required under § 900.6. The review meeting request must include:

(1) A summary table of changes made to the proposed project since the IIP Process initial meeting, including potential environmental and community benefits from improved siting or design;

(2) Maps of potential routes and study corridors, including the proposed line, substations, and other infrastructure, as applicable, with at least as much detail as required for the initiation request described by § 900.5 and as modified in response to early stakeholder input and outreach and feedback from relevant Federal entities and relevant non-Federal entities;

(3) If known, a schedule for completing any upcoming field resource surveys, as appropriate;

(4) A conceptual plan for implementation and monitoring of proposed mitigation measures to avoid, minimize, or compensate for effects of the proposed project, consistent with 40 CFR 1508.1(s) or any successor regulation. This may include compensatory mitigation measures (offsite and onsite);

(5) An updated public engagement plan described in § 900.5(d)(2), reflecting actions undertaken since the project proponent submitted the initiation request and input received from relevant Federal entities and relevant non-Federal entities;

(6) A listing of:

(i) The dates on which the project proponent filed applications or requests for Federal authorizations and the dates on which the project proponent filed revisions to previously filed applications or requests; and

(ii) Estimated dates for filing remaining applications or requests for Federal authorization;

(7) Estimated dates that the project proponent will file requests for authorizations and consultations with relevant non-Federal entities; and

(8) A proposed duration for each Federal land use authorization expected to be required for the proposed project, commensurate with the anticipated use of the proposed electric transmission facility.

(b) Not later than 10 calendar days after the date that DOE receives the review meeting request, DOE shall provide relevant Federal entities and relevant non-Federal entities with materials included in the request and the initial resource reports submitted under § 900.6 via electronic means.

(c) Not later than 60 calendar days after the date that DOE receives the review meeting request, DOE shall:

(1) Determine whether the meeting request meets the requirements of paragraph (a) of this section and whether the initial resource reports are sufficiently detailed; and

(2) Give notice to the project proponent and relevant Federal and non-Federal entities of DOE's determinations under paragraph (c)(1) of this section.

(d) If DOE determines under paragraph (c)(1) of this section that the meeting request does not meet the requirements of paragraph (a) of this section or that the initial resource reports are not sufficiently detailed, DOE must provide the reasons for that finding and a description of how the project proponent may address any deficiencies in the meeting request or resource reports so that DOE may reconsider its determination.

(e) Not later than 15 calendar days after the date that DOE provides notice to the project proponent under paragraph (c) of this section that the review meeting request and initial resource reports have been accepted, DOE shall convene the review meeting with the project proponent and the relevant Federal entities. All relevant non-Federal entities participating in the IIP Process shall also be invited.

(f) During the IIP Process review meeting:

(1) The relevant Federal entities shall discuss, and modify if needed, the analysis areas used in the initial resource reports;

(2) Relevant Federal entities shall identify any remaining issues of concern, known information gaps or data needs, and potential issues or conflicts that could impact the time it will take the relevant Federal entities to process applications for Federal authorizations for the proposed electric transmission project;

(3) Relevant non-Federal entities may identify remaining issues of concern, information needs, and potential issues or conflicts for the project;

(4) The participants shall discuss the project proponent's updates to the siting process to date, including stakeholder outreach activities, resultant stakeholder input, and project proponent response to stakeholder input;

(5) Led by DOE, all relevant Federal entities shall discuss statutory and regulatory standards that must be met to make decisions for Federal authorizations required for the proposed project;

(6) Led by DOE, all relevant Federal entities shall describe the process for, and estimated time to complete, required Federal authorizations and, where possible, the anticipated cost (*e.g.,* processing and monitoring fees and land use fees);

(7) Led by DOE, all relevant Federal entities shall describe their expectations for complete applications for Federal authorizations for the proposed project;

(8) Led by DOE, all relevant Federal entities shall identify necessary updates to the initial resource reports that must be made before conclusion of the IIP Process, or, as necessary, following conclusion of the IIP Process; and

(9) DOE shall present the proposed project-specific schedule developed under § 900.7.

(g) Not later than 10 calendar days after the review meeting, DOE shall:

(1) Prepare a draft review meeting summary that includes a summary of the meeting discussion, a description of key issues and information gaps identified during the meeting, and any requests for more information from relevant Federal entities and relevant non-Federal entities; and

(2) Convey the draft summary to the project proponent, relevant Federal entities, and any non-Federal entities that participated in the meeting.

(h) The project proponent and entities that received the draft review meeting summary under paragraph (g) of this section will have 10 calendar days following receipt of the draft to review the draft and provide corrections to DOE.

(i) Not later than 10 calendar days following the close of the 10-day review period under paragraph (h) of this section, DOE shall:

(1) Prepare a final review meeting summary incorporating received corrections, as appropriate;

(2) Add the final summary to the consolidated administrative docket described by § 900.10; and

(3) Provide an electronic copy of the summary to the relevant Federal entities, relevant non-Federal entities, and the project proponent.

(j) Not later than 10 calendar days following the close of the 10-day review period under paragraph (h) of this section, DOE shall:

(1) determine whether the project proponent has developed the scope of its proposed project and alternatives sufficiently for DOE to determine that there exists an undertaking for purposes of section 106 of the NHPA; and

(2) if the scope is sufficiently developed, initiate consultation with SHPOs, THPOs, and others consistent with 36 CFR 800.2(c)(4), which may include authorizing a project proponent, as a CITAP applicant, to initiate section 106 consultation and providing appropriate notifications.

(k) After the review meeting and before the IIP Process close-out meeting described by § 900.9 the project proponent shall revise resource reports submitted under § 900.6 based on feedback from relevant Federal entities and relevant non-Federal entities received during the review meeting and based on any updated surveys conducted since the initial meeting.

§ 900.9 IIP Process close-out meeting.

(a) An Integrated Interagency Pre-Application (IIP) Process close-out meeting concludes the IIP Process for a proposed electric transmission project and may only be held after the project proponent submits a close-out meeting request to DOE. The project proponent may submit the request at any time following the submission of the updated resource reports as required under § 900.8. The close-out meeting request shall include:

(1) A summary table of changes made to the proposed project during the IIP Process, including potential environmental and community benefits from improved siting or design;

(2) A description of all changes made to the proposed project since the review meeting, including a summary of changes made to the updated resource reports in response to the concerns raised during the review meeting;

(3) A final public engagement plan, as described in § 900.5(d)(2);

(4) Requests for Federal authorizations for the proposed project; and

(5) An updated estimated timeline of filing requests for all other authorizations and consultations with non-Federal entities.

(b) Not later than 10 calendar days after the date that DOE receives the close-out meeting request, DOE shall provide relevant Federal entities and relevant non-Federal entities with materials included in the request and any updated resource reports submitted under § 900.6 via electronic means.

(c) Not later than 60 calendar days after the date that DOE receives the close-out meeting request, DOE shall:

(1) Determine whether the meeting request meets the requirements of paragraph (a) of this section and whether the updated resource reports are sufficiently detailed; and

(2) Give notice to the project proponent and relevant Federal and non-Federal entities of DOE's determinations under paragraph (c)(1) of this section.

(d) If DOE determines that the meeting request does not meet the

requirements of paragraph (a) of this section or that the updated resource reports are not sufficiently detailed, DOE must provide the reasons for that finding and a description of how the project proponent may address any deficiencies in the meeting request or resource reports so that DOE may reconsider its determination.

(e) Not later than 15 calendar days after the date that DOE provides notice to the project proponent under paragraph (c) of this section that the close-out meeting request and updated resource reports have been accepted, DOE shall convene the close-out meeting with the project proponent and all relevant Federal entities. All relevant non-Federal entities participating in the IIP Process shall also be invited.

(f) The IIP Process close-out meeting concludes the IIP Process. During the close-out meeting:

(1) The participants shall discuss the project proponent's updates to the siting process to date, including stakeholder outreach activities, resultant stakeholder input, and project proponent response to stakeholder input; and

(2) DOE shall present the final project-specific schedule.

(g) Not later than 10 calendar days after the close-out meeting, DOE shall:

(1) Prepare a draft close-out meeting summary; and

(2) Convey the draft summary to the project proponent, relevant Federal entities, and any non-Federal entities that participated in the meeting.

(h) The project proponent and entities that received the draft close-out meeting summary under paragraph (g) of this section will have 10 calendar days following receipt of the draft to review the draft and provide corrections to DOE.

(i) Not later than 10 calendar days following the close of the 10-day review period under paragraph (h) of this section, DOE shall:

(1) Prepare a final close-out meeting summary by incorporating received corrections, as appropriate;

(2) Add the final summary to the consolidated administrative docket described by § 900.10;

(3) Provide an electronic copy of the summary to all relevant Federal entities, relevant non-Federal entities, and the project proponent; and

(4) In the event that the proposed project is not identified as a covered project pursuant to § 900.5(e), notify the FPISC Executive Director that the proposed project ought to be included on the FPISC Dashboard as a transparency project.

(j) DOE and any NEPA joint lead agency shall issue a Notice of Intent to prepare an environmental review document for the proposed project within 90 days of the later of the IIP Process close-out meeting or the receipt of a complete application for a Federal authorization for which NEPA review will be required, as consistent with the final project-specific schedule.

(k) DOE shall issue, for each Federal land use authorization for a proposed electric transmission facility, a preliminary duration determination commensurate with the anticipated use of the proposed facility.

§ 900.10 Consolidated administrative docket.

(a) DOE shall maintain a consolidated docket of:

(1) All information that DOE distributes to or receives from the project proponent, relevant Federal entities, and relevant non-Federal entities related to the Integrated Interagency Pre-Application (IIP) Process, including:

(i) The IIP initiation request, review meeting request, and close-out meeting request required by §§ 900.5, 900.8, and 900.9;

(ii) The IIP Process final meeting summaries required by §§ 900.5, 900.8 and 900.9;

(iii) The IIP Process final resource reports developed under § 900.6;

(iv) The final project-specific schedule developed under §§ 900.7 and 900.8;

(v) Other documents submitted by the project proponent as part of the IIP Process or provided to the project proponent as part of the IIP Process, including but not limited to maps, publicly available data, and other supporting documentation; and

(vi) Communications between any relevant Federal or non-Federal entity and the project proponent regarding the IIP Process; and

(2) All information assembled and used by relevant Federal entities as the basis for Federal authorizations and related reviews following completion of the IIP Process.

(b) Federal entities should include DOE in all communications with the project proponent related to the IIP Process for the proposed electric transmission project.

(c) DOE shall make the consolidated docket available, as appropriate, to the NEPA joint lead agency selected under § 900.11; any relevant Federal or non-Federal entity responsible for issuing an authorization for the proposed project; and any consulting parties per section 106 of the NHPA, consistent with 36 CFR part 800. DOE shall exclude or redact privileged documents, as appropriate.

(d) Where necessary and appropriate, DOE may require a project proponent to contract with a qualified record-management consultant to compile a contemporaneous docket on behalf of all participating agencies. Any such contractor shall operate at the direction of DOE, and DOE shall retain responsibility and authority over the content of the docket.

(e) Upon request, any member of the public will be provided materials included in the docket, excluding any materials protected as CEII or otherwise required or allowed to be withheld under the Freedom of Information Act.

§ 900.11 NEPA lead agency and selection of NEPA joint lead agency.

(a) For a proposed electric transmission project that is accepted for the Integrated Interagency Pre-Application (IIP) Process under § 900.5, DOE shall serve as the NEPA lead agency to prepare an environmental review document to serve the needs of all relevant Federal entities. A NEPA joint lead agency to prepare the environmental review document may also be designated pursuant to this section, no later than by the IIP Process review meeting.

(b) The NEPA joint lead agency, if any, shall be the Federal entity with the most significant interest in the management of Federal lands or waters that would be traversed or affected by the proposed project. DOE shall make this determination in consultation with all Federal entities that manage Federal lands or waters traversed or affected by the proposed project. For a proposed project that would traverse lands managed by both the USDA and the DOI, DOE will request that USDA and DOI determine the appropriate NEPA joint lead agency, if any.

§ 900.12 Environmental review.

(a) After the Integrated Interagency Pre-Application (IIP) Process close-out meeting, and after receipt of a relevant application for a Federal authorization or permit in accordance with the final project-specific schedule, DOE and any NEPA joint lead agency selected under § 900.11 shall prepare an environmental review document for the proposed electric transmission project designed to serve the needs of all relevant Federal entities.

(b) When preparing the environmental review document, DOE and any NEPA joint lead agency shall:

(1) Consider the materials developed throughout the IIP Process; and

(2) Consult with relevant Federal entities and relevant non-Federal entities.

(c) DOE, in consultation with any NEPA joint lead agency, is expected to be responsible for:

(1) Identifying, contracting with, directing, supervising, and arranging for the payment of contractors, as appropriate, to draft the environmental review document; and

(2) Publishing the environmental review document and any related documents.

(d) Each Federal entity or non-Federal entity that is responsible for issuing a separate Federal authorization for the proposed project shall:

(1) Identify all information and analysis needed to make the authorization decision; and

(2) Identify all alternatives that need to be included, including a preferred alternative, with respect to the authorization.

(e) DOE and any NEPA joint lead agency, in consultation with relevant Federal entities, shall identify the full scope of alternatives for analysis, including the no action alternative.

(f) To the maximum extent permitted under law, relevant Federal entities shall use the environmental review document as the basis for all Federal authorization decisions on the proposed project. DOE and the relevant Federal entities shall issue, except where inappropriate or inefficient, a joint decision document, which will include the determination by the Secretary of a duration for each land use authorization issued on the proposed project.

(g) For all proposed projects, DOE shall serve as lead agency for consultation under the Endangered Species Act (50 CFR 402.07) and section 106 of the NHPA (36 CFR 800.2(a)(2)) unless the relevant Federal entities designate otherwise. DOE shall coordinate these consultation processes with the Federal agency with the most significant interest in the management of Federal lands or waters that would be traversed or affected by the proposed project or the designated lead agency.

§ 900.13 Severability.

The provisions of this part are separate and severable from one another. Should a court hold any provision(s) to be stayed or invalid, such action shall not affect any other provision of this part and the remaining provisions shall remain in effect.

Department of Energy

10 CFR Parts 433 and 435
Clean Energy for New Federal Buildings and Major Renovations of Federal Buildings; Final Rule

DEPARTMENT OF ENERGY

10 CFR Parts 433 and 435

[EERE–2010–BT–STD–0031]

RIN 1904–AB96

Clean Energy for New Federal Buildings and Major Renovations of Federal Buildings

AGENCY: Federal Energy Management Program, Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (''DOE'') is publishing a rule that establishes energy performance standards for the new construction and major renovation of Federal buildings, including commercial buildings, multi-family high-rise residential buildings, and low-rise residential buildings per the Energy Conservation and Production Act (''ECPA''), as amended by the Energy Independence and Security Act of 2007 (''EISA''). Consistent with the requirements of ECPA and EISA, DOE is establishing Federal building energy performance standards that require Federal agencies to reduce their use of on-site use of fossil fuels (which include coal, petroleum, natural gas, oil shales, bitumens, tar sands, and heavy oils) consistent with the targets of ECPA and EISA. This final rule also provides processes by which Federal agencies may petition DOE for a modification to the final standards.

DATES: The effective date of this rule is July 15, 2024. Compliance with revised performance standards established in this rule is required for the construction of new and major renovation of Federal buildings, including commercial buildings, multi-family high-rise residential buildings, and low-rise residential buildings, for which design for construction begins on or after May 1, 2025.

ADDRESSES: The docket for this rulemaking, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index.

The docket web page can be found at *www.regulations.gov/docket/EERE-2010-BT-STD-0031.* The docket web page contains instructions on how to access all documents, including public comments, in the docket.

Ms. Laura Zuber, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 306–7651. Email: *laura.zuber@hq.doe.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The following section briefly discusses the statutory authority underlying this final rule, as well as some of the relevant historical background related to the establishment of a fossil fuel-generated energy consumption reduction rule for certain Federal buildings.

A. Authority

Section 305 of ECPA established energy conservation requirements for Federal buildings. 42 U.S.C. 6834. Section 433(a) of EISA amended section 305 of ECPA and directed DOE to establish regulations that require certain new Federal buildings and Federal buildings undergoing major renovations to reduce their fossil fuel-generated energy consumption. 42 U.S.C. 6834(a)(3)(D)(i). The fossil fuel-generated energy consumption reductions only apply to Federal buildings that: (1) are ''public buildings'' (as defined in 40 U.S.C. 3301) [1] with respect to which the

[1] Under 40 U.S.C. 3301(a)(5), ''public building'' is a building, whether for single or multitenant occupancy, and its grounds, approaches, and appurtenances, which is generally suitable for use as office or storage space or both by one or more Federal agencies or mixed-ownership Government corporations. ''Public building'' includes Federal office buildings, post offices, customhouses, courthouses, appraisers stores, border inspection facilities, warehouses, record centers, relocation facilities, telecommuting centers, similar Federal facilities, and any other buildings or construction projects the inclusion of which the President considers to be justified in the public interest. The definition does not include a building or construction project that is on the public domain (including that reserved for national forests and other purposes); that is on property of the Government in foreign countries; that is on Native American and Native Alaskan property held in trust by the Government; that is on land used in connection with federal programs for agricultural, recreational, and conservation purposes, including research in connection with the programs; that is on or used in connection with river, harbor, flood control, reclamation or power projects, for chemical manufacturing or development projects, or for nuclear production, research, or development projects; that is on or used in connection with housing and residential projects; that is on military installations (including any fort, camp, post, naval training station, airfield, proving ground, military

Administrator of General Services is required to transmit a prospectus to Congress under 40 U.S.C. 3307; [2] or (2) those that cost at least $2,500,000 in costs adjusted annually for inflation. 42 U.S.C. 6834(a)(3)(D)(i).

For these buildings, section 305 of ECPA, as amended by EISA, mandates that the buildings be designed so that a building's fossil fuel-generated energy consumption is reduced as compared with such energy consumption by a similar building in fiscal year (''FY'') 2003 (as measured by Commercial Buildings Energy Consumption Survey (''CBECS'') or Residential Energy Consumption Survey (''RECS'') data from the DOE's Energy Information Administration (''EIA'') by 55 percent beginning in FY 2010, 65 percent beginning in FY 2015, 80 percent beginning in FY 2020, 90 percent beginning in FY 2025, and 100 percent beginning in FY 2030, also shown in Table I.1. 42 U.S.C. 6834(a)(3)(D)(i)(I).

TABLE I–1—BUILDING PERCENTAGE REDUCTION REQUIREMENTS BY FISCAL YEAR

Fiscal year	Percentage reduction
2010	55
2015	65
2020	80
2025	90
2030	100

In addition, ECPA, as amended by EISA, permits DOE to adjust the applicable numeric reduction requirement downward with respect to a specific building, if the head of the Federal agency requesting the downward adjustment certifies in writing that meeting such requirement would be technically impracticable in light of the agency's specified functional needs for that building and DOE concurs with the agency's conclusion. 42 U.S.C. 6834(a)(3)(D)(i)(II). Such an adjustment does not apply to the General Services Administration (''GSA''). *Id.*

B. Background

In this final rule, DOE establishes regulations that require certain new Federal buildings and Federal buildings undergoing major renovations to be designed to reduce their fossil fuel-generated energy consumption and provides a process for Federal agencies to petition for a downward adjustment from these requirements if applicable. This rule amends the regulations governing energy efficiency in Federal buildings found in 10 CFR parts 433 and 435.

DOE previously published a notice of proposed rulemaking (''NOPR'') in the **Federal Register** on October 15, 2010, which proposed a rule to implement section 433 of EISA. 75 FR 63404. A public meeting on the NOPR was held on November 12, 2010, and public comments were accepted through December 14, 2010. DOE received several comments expressing concern and encouraging DOE to re-examine the proposed regulations.[3] In response to these comments, DOE identified additional areas for clarification and consideration that would benefit from further public comment. DOE issued a supplemental notice of proposed rulemaking (''2014 SNOPR'') on October 14, 2014. 79 FR 61694. Comments were accepted through December 15, 2014. *Id.* DOE received comments requesting reconsideration of key issues.

DOE revisited its proposed rule and issued a second SNOPR on December 21, 2022 (''2022 SNOPR''). 87 FR 78382. The rule proposed in the 2022 SNOPR differed from the rule proposed in the 2014 SNOPR. Specifically, the rule proposed in the 2022 SNOPR:

Limited its application to on-site fossil fuel usage or Scope 1 GHG emissions in CO_2e (''Carbon Dioxide Equivalent Gases'').

Introduced a shift multiplier for Federal commercial buildings that operate on extended schedules compared to the private sector buildings sampled in CBECS.

Revised the calculation of fossil fuel usage to be consistent with how DOE measures fossil fuel usage and greenhouse gas emissions in reporting related to Section 432 of EISA.

Clarified that the rule applies to EISA-subject major renovations for (1) all on-site fossil fuel-using systems, (2) on-site fossil fuel-using system level renovations, and (3) on-site fossil fuel-using component level renovations.

Clarified when the rule applies to leased Federal facilities.

Refined an approach to determine required fossil fuel-generated energy consumption levels for EISA-subject major renovations that are limited to system or component level retrofits.

Provided an alternative compliance method for buildings with process loads that are not included in CBECS and RECS.

Clarified that process loads of building types not included in CBECS are not subject to the fossil fuel reduction requirements.

Stated that certain renewable fuels are exempt from the calculation of fossil fuel usage.

Identified information Federal agencies must provide when petitioning for a downward adjustment.

A public meeting on the 2022 SNOPR was held on January 5, 2023, and public comments were accepted through March 23, 2023. 87 FR 78382; 88 FR 12267. The comment period was extended to accommodate requests from stakeholders to provide additional time to analyze the information presented in the 2022 SNOPR and accompanying technical support document.

C. Final Rule Overview

The final rule adopts energy performance standards for new construction and major renovation of Federal buildings. The final rule adds standards for the maximum emissions resulting from on-site fossil fuel usage, language related to the purpose of these new standards, definitions associated with these standards, and a detailed process for Federal agencies petitioning for a downward adjustment from these standards to 10 CFR parts 433 (Federal commercial and multi-family high-rise residential buildings) and 435 (Federal low-rise residential buildings). The final rule adds the following provisions to 10 CFR parts 433 and 435:

Adds a paragraph to the purpose and scope provisions which states that the regulation also establishes the maximum allowable fossil fuel-generated energy consumption standard for EISA-subject Federal buildings.

Adds and revises definitions applicable to 10 CFR parts 433 and 435.

Adds subpart B that outlines the fossil fuel-generated energy consumption requirement, the process for determining a Federal building's fossil fuel-generated energy consumption, and the process for petitioning for a downward adjustment.

Adds Appendix A to Subpart B that identifies the targets for specific building types and climate zones for FY 2020–2024 and FY 2025–2029.

After considering the comments submitted in response to the 2022 SNOPR, DOE makes the following substantive revisions to the rule proposed in the 2022 SNOPR:

Revises the definitions of ''construction cost'' and ''major

supply depot, military school, or any similar facility of the Department of Defense); that is on installations of the Department of Veterans Affairs used for hospital or domiciliary purposes; or the exclusion of which the President considers to be justified in the public interest.

[2] 40 U.S.C. 3307 describes the minimum construction, alteration, and lease costs that would trigger a prospectus to Congress.

[3] Complete contents of the docket folder may be found at *www.regulations.gov/#!docketDetail;D=EERE-2010-BT-STD-0031.*

renovation cost'' so that the definitions list similar costs associated with the construction or major renovation of EISA-subject buildings.

Shortens the review period for the FEMP Director to review petitions for downward adjustment related to construction of new Federal buildings or major renovations from 45 days to 30 days.

Adds regulatory language that clarifies when Federal agencies may bundle petitions for downward adjustments.

Additionally, DOE updated the datasets used for the underlying modeling impact analysis. The final rule is discussed in greater detail in section VII of this document.

II. Public Comments on the 2022 SNOPR

DOE received comments in response to the 2022 SNOPR from the individuals and interested parties listed in Table II–1.[4] These comments are available in the public docket for this rulemaking. The specific issues relating to the final rule raised by the commenters are addressed in section III of this document. Additional concerns raised by the commenters relating to DOE's authority to promulgate these standards or potential procedural issues are addressed in Section IV of this document. A parenthetical reference at the end of a comment quotation or paraphrase provides the location of the item in the public record.[5] DOE also held a public meeting webinar on January 5, 2023, where it sought input from stakeholders regarding its proposed rule. DOE focuses on written comments in this final rule, as only one stakeholder (Sierra Club) opted to speak during the public meeting webinar, and its verbal comments were consistent with its written comments later submitted.

[4] DOE received comments from an individual on April 11, 2023, after the re-opened comment period closed. Doc. No. 127. Despite the fact that these comments were filed late, DOE considered the issues raised in these comments when reviewing the rule.

[5] The parenthetical reference provides a reference for information located in the docket for this rulemaking. (Docket No. EERE–2010–BT–STD–0031, which is maintained at *www.regulations.gov*). The references are arranged as follows: (commenter name, comment docket ID number, page of that document).

III. Discussion of the Final Rule

The following section discusses the final rule. The final rule introduces energy performance standards for new construction and major renovation of Federal buildings. The final rule adds standards for the maximum emissions resulting from on-site fossil fuel usage, language related to the purpose of these new standards, definitions associated with these standards, and a detailed process for Federal agencies petitioning for a downward adjustment from these standards to 10 CFR parts 433 (Federal commercial and multi-family high-rise residential buildings) and 435 (Federal low-rise residential buildings). The revisions to 10 CFR parts 433 and 435, as summarized in this section, are presented at the end of this document.

A. Scope

1. Federal Buildings

This final rule applies to a defined subset of new Federal buildings and major renovations to Federal buildings, as specified in section 433 of EISA. *See* 42 U.S.C. 6834(a)(3)(D)(i). The term ''Federal building'' means ''any building to be constructed by, or for the use of, any Federal agency [including] buildings built for the purpose of being leased by a federal agency, and privatized military housing.'' 42 U.S.C. 6832(6). However, the rule would not apply in cases of Federal agencies leasing space in buildings where the Federal Government does not lease the entire building. Accordingly, if the building at issue is not entirely leased to the Federal Government at the time of renovation, the final energy performance standards do not apply.

The subset of Federal buildings to which this rule applies fall under two categories and will be referred collectively to as ''EISA-subject buildings.'' The first qualifying category of EISA-subject buildings includes any new Federal buildings or major renovations to Federal buildings that are public buildings, as defined in 40 U.S.C. 3301, for which transmittal of a prospectus to Congress is required under 40 U.S.C. 3307. Under 40 U.S.C. 3307(a)(1), a transmittal of a prospectus to Congress is required if a total expenditure in excess of $1,500,000 is required to construct, alter, or acquire the public building.[6] Under 40 U.S.C. 3307(h), the GSA Administrator may adjust this value annually to account for construction cost increases. GSA's annual prospectus threshold for FY 2024 is $3,613,000.[7] GSA also provides a separate dollar threshold for alterations in leased public buildings for which a prospectus is required; in FY 2024, this threshold is $1,806,500.

The second qualifying category of EISA-subject buildings includes any new Federal buildings or major renovations to Federal buildings that are not public buildings and for which the construction cost or major renovation cost is at least $2,500,000 (in 2007 dollars, adjusted for inflation).[8] For the purposes of calculating this threshold, agencies should use the inflated value of the $2,500,000 as of October of the FY during which the design for construction of the project begins. DOE is adopting a methodology that allows for a constant inflator to be applied during the entirety of the year. By this methodology, an agency should set the Bureau of Labor and Statistics CPI Inflation calculator to $2,500,000 in October 2006 for the value of the original cost threshold. As of the most recent update, October 2023, $2.5 million in 2007 dollars, when adjusted for inflation, is $3,811,583. DOE revises regulatory text in §§ 433.200(a) and 435.200(a) to clarify how the cost thresholds for new public and non-public buildings should be adjusted for inflation.

As noted previously, GSA also provides a separate dollar threshold for alterations in leased public buildings ($1,806,500 in FY 2024). DOE will use both thresholds (*i.e.,* the $2,500,000 in 2007 dollars threshold (adjusted for inflation) for Federal buildings that are not public buildings, and the $1,806,500 in FY 2024 dollars threshold for leased public buildings) for this second category of EISA-subject buildings (*i.e.,* buildings for which a prospectus is not required). Using the lower GSA prospectus threshold for leased public buildings is consistent with: (1) current agency practice for such buildings, and (2) the scheme Congress established in EISA section 433 where the prospectus dollar thresholds (*e.g.,* $2,500,000 in 2007 dollars) are also applied to buildings and renovations for which a prospectus is not required.

TABLE III–1—COST THRESHOLDS FOR FY2024 (MILLION DOLLARS)

	Public buildings	Non-Public buildings
Construction or Major Renovation to Federally Owned Buildings	* $3.613	** $3.812
Major Renovation of Federally Leased Buildings	† 1.806	†† 1.806

* Cost threshold for buildings that are owned public buildings, as defined in 40 U.S.C. 3301, is determined by the GSA annual prospectus thresholds published for each FY at *www.gsa.gov/real-estate/design-and-construction/annual-prospectus-thresholds.*

** Cost threshold for any new construction or major renovation that is in an owned, non-public building is determined by adjusting the $2,500,000 in 2007$ for inflation to the current FY. DOE sets the inflated value for the entire FY based on the value reported in October of that FY in the Bureau of Labor and Statistics CPI Inflation calculator *www.bls.gov/data/inflation_calculator.htm.*

† Cost threshold for major renovations within leased buildings is determined by the GSA annual prospectus thresholds published for each FY at *www.gsa.gov/real-estate/design-and-construction/annual-prospectus-thresholds.*

†† Cost threshold for major renovations within leased buildings is determined by the GSA annual prospectus thresholds published for each FY at *www.gsa.gov/real-estate/design-and-construction/annual-prospectus-thresholds.*

For example, a building in the first category would include a federal office building for which design for construction began in FY 2024 and with construction or renovation costs that are more than $3,613,000. A building in the second category would include a residential building (which is excluded from the definition of ''public building'' under 40 U.S.C. 3301) with construction or renovation costs of at least $3,811,583 in FY 2024 ($2,500,000 in 2007 dollars, adjusted for inflation). DOE expects that most low-rise residential buildings that meet the cost threshold will be low-rise

[6] 40 U.S.C. 3307(a) also contains a second prospectus threshold in 40 U.S.C. 3307(a)(3), which applies to alterations of buildings that are leased by the Federal Government for use for a public purpose if the cost of the alteration will exceed $750,000. This threshold is one-half of the threshold for all other new construction or alterations of existing buildings.

[7] *See* GSA Annual Prospectus Thresholds, available at *www.gsa.gov/real-estate/design-and-construction/annual-prospectus-thresholds.*

[8] To find the adjusted cost threshold, go to *data.bls.gov/cgi-bin/cpicalc.pl.*

multi-family buildings or low-rise dormitories as Federal low-rise single-family homes are not likely to meet the cost threshold.

The International Code Council (ICC) stated that this final rule should apply to all new Federal buildings and major renovation projects. ICC, Doc. No. 98, pg. 2. ICC asserted that doing so would maximize the long term ecological and economic benefits of the rule. *Id.* However, DOE notes that section 433 of EISA clearly identifies the buildings to which the energy performance standards are to apply. Thus, although DOE encourages Federal agencies consider these energy performance standards holistically in developing their construction and renovation plans, the final rule only applies to EISA-subject buildings.

2. Calculating Costs

The final rule also outlines which costs Federal agencies must include when calculating construction or major renovation costs to an EISA-subject building.

a. Construction and Major Renovations Costs

In the final rule, DOE revises the definitions of ''construction cost'' and ''major renovation cost'' proposed in the 2022 SNOPR. The 2022 SNOPR proposed to define ''construction cost'' as ''all costs associated with design and construction of a federal building. It includes the cost of design, permitting, construction (materials and labor), and building commissioning.'' 87 FR 78382, 78420. However, the 2022 SNOPR explicitly stated that ''construction cost'' does not include legal or administrative fees, or the cost of acquiring the land. *Id.*

The 2022 SNOPR proposed to define ''major renovation cost'' as costs associated with the ''[r]epairing, remodeling, improving, or extending, or other changes in, a public building as per 40 U.S.C. 3301(a)(1).'' These costs included costs associated with the ''[p]reliminary planning, engineering, architectural, legal, fiscal[] and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the alteration of a public building[.]'' *Id.*

One individual commented on the definition of ''construction cost'' proposed on the 2022 SNOPR. Doc. No. 127, pg. 2. They stated that ''construction cost'' should include administrative and legal fees because it would increase the number of buildings to which these energy performance standards apply as more construction projects would meet the threshold. *Id.* In addition, they claimed that including administrative and legal fees when calculating construction costs would promote fiscal responsibility with public funds. *Id.* This commenter also argued that land acquisition costs should be included in the definition of ''construction cost'' because doing so would ''incentivize project managers to prioritize the use of existing Federal lands and renovations of existing buildings, rather than buying new spaces'' *Id.*

After reviewing the definitions proposed in the 2022 SNOPR and stakeholder comments, DOE amends the definitions of ''construction cost'' to include a similar list of costs that DOE included in the definition of ''major renovation cost.'' This includes, but is not limited to, the costs of preliminary planning, engineering, architectural, permitting, fiscal and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the construction of a new Federal building. Additionally, DOE amends the definition of ''construction cost'' to remove the language specifically excluding legal or administrative fees from the calculation of ''construction cost.'' If legal or administrative fees are associated with the construction of a new Federal building, such as permitting fees, then these costs must be included in the calculation of construction costs. However, DOE notes that most administrative or legal costs are generally part of overhead costs and are not associated with the construction of a new Federal building.

DOE declines to adopt the commenter's suggestion that the cost of acquiring the land should be included in the definition of ''construction cost.'' DOE previously stated that many new Federal buildings are built on land already owned by the Federal Government. 79 FR 61694, 61698. Thus, including the land costs in the definition of ''construction cost'' is unnecessary and would have little practical effect. Moreover, not including land costs for new Federal buildings in the threshold calculation would be consistent with the threshold calculation for major renovations, for which land costs are not included.

In addition, DOE also amends the definition of ''major renovation cost'' so that it aligns with the revised definition of ''construction cost.'' First, the revised definition of ''major renovation cost'' provides a general description of major renovation costs—*i.e.,* cost associated with the repairing, remodeling, improving, extending, or other changes in a federal building. Second, the revised definition then lists specific associated costs included in the definition of ''major renovation costs.'' Third, the revised definition replaces references to ''public buildings,'' as defined in 40 U.S.C. 3301(a)(1), to ''Federal buildings,'' as defined in the final rule so that the definition applies to both categories of EISA-subject buildings.

b. Individual Buildings

The final rule applies the cost thresholds to individual buildings rather than multiple buildings in a single project. A commenter urged DOE to reconsider the proposed definition of ''buildings'' to apply to multiple buildings that are located within the grounds of another public building, meaning that the standard would apply to multiple buildings and ''projects'' would be the unit of analysis. Doc. No. 127, pg. 1. However, the statute authorizes DOE to establish Federal building energy efficiency performance standards that reduce fossil fuel-generated energy consumption for ''new Federal buildings and Federal buildings undergoing major renovations'' not ''projects'' that could include multiple buildings or major renovations. 42 U.S.C. 6834(a)(3)(D)(i). The cost threshold and public building determination stipulated in the statutory language is also specific to individual buildings. Furthermore, the date that design for construction begins (to determine the appropriate reduction target) is also building specific. Thus, when calculating the costs to determine whether the final rule applies, Federal agencies should calculate the costs for individual buildings.

c. Major Renovations

In establishing these standards, DOE is sensitive to the notion that Federal agencies might break up their major renovations into smaller pieces to prevent associated costs from exceeding the applicable threshold. DOE discourages the practice of ''breaking up renovation projects to get around the cost threshold'' and intends to further address this topic as part of the Department's implementation guidance. Even in cases of replacing individual systems or equipment, for which this rule applies, DOE believes agencies should prioritize pairing energy efficiency measures with reducing fossil fuel use. DOE notes that Section 433 of EISA states that ''[i]n establishing criteria for identifying major renovations that are subject to the requirements of this subparagraph,

[DOE] shall take into account the scope, degree, and types of renovations that are likely to provide significant opportunities for substantial improvements in energy efficiency.'' 42 U.S.C. 6834(a)(3)(D)(ii). Multiple sequential renovations to the same building are likely to provide significant opportunities for substantial improvements and their cumulative effect over time should be evaluated and utilized to determine the cost of the project for the application of this rule. In this final rule, DOE broadly applies the term ''major renovations'' to include projects for which Federal agencies can practicably implement the energy efficiency and fossil fuel reduction goals of ECPA and EISA.

DOE is clarifying that the energy performance standards being adopted in this final rule apply both to whole building retrofits as well as multiple minor renovations that occur in phases on the same Federal building as long as the building meets the cost thresholds as explained above. More specifically, this final rule applies to renovations that are so extensive that they replace all on-site fossil fuel-using systems in the building, such as comprehensive replacement or restoration of most or all major systems, interior work (*e.g.,* ceilings, partitions, doors, floor finishes, etc.), or building elements and features. DOE refers to such major renovations as ''whole building'' renovations throughout this preamble. However, the final rule also requires Federal agencies to consider major renovations that are less than whole building renovations (*i.e.,* component and system level renovations, including multiple sequential renovations) that provide significant opportunities for substantial improvements in energy efficiency and reduce on-site fossil fuel usage across the Federal building portfolio.

d. Energy Conservation Measures

When designing new or renovated buildings, DOE encourages agencies to consider any energy conservation measures (''ECMs'') that have been identified in that building and reported to DOE, as per 42 U.S.C. 8253(f)(3)(A). If identified ECMs include projects that impact on-site fossil fuel usage, DOE urges the agency to evaluate and consider the total of those project costs bundled together when implementing those ECMs to determine whether the total cost meets the thresholds in section 433 of EISA. ECMs that impact on-site fossil fuel usage include, but are not limited to, adding new fossil fuel-using heating, hot water, or cooking systems to an existing building; direct replacement of existing fossil fuel-using heating, hot water, or cooking systems in an existing building; and modification or replacement of any building systems (including systems such as lighting or building envelope systems that do not use fossil fuel directly) that lead to an increase or decrease in the use of fossil fuel. Considering ECM projects in a more comprehensive approach, rather than a piecemeal approach, better aligns with the goals of section 433 of EISA.

3. Fossil Fuel-Generated Energy Consumption

a. Limitation to On-Site Use of Fossil Fuels

Section 433 of EISA directs DOE to establish regulations that require certain new Federal buildings and Federal buildings undergoing major renovations be designed to reduce their fossil fuel-generated energy consumption. 42 U.S.C. 6834(a)(3)(D)(i). The scope of the building energy covered by the final rule is limited by the term ''fossil fuel-generated energy consumption.'' In the 2022 SNOPR, DOE noted that this term is not defined in section 433 of EISA and proposed to define ''fossil fuel-generated energy consumption'' as on-site stationary combustion of fossil fuels that contribute to Scope 1 emissions for generation of electricity, heat, cooling, or steam as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016). This includes, but not limited to, combustion of fuels in stationary sources (*e.g.,* boilers, furnaces, turbines, and emergency generators). This term does not include mobile sources, fugitive emissions, or process emissions as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016).

87 FR 78382, 78421. Pursuant to this proposed definition, the standard would apply to energy consumption from fossil fuels used by equipment and systems designed to support building operations; that is, fossil fuels consumed on site. The proposed definition would not apply to the consumption of fossil fuels used to produce electricity off-site.

DOE received several public comments in response to 2022 SNOPR's proposed definition of ''fossil fuel-generated energy consumption.'' Several commenters supported the proposed definition. For example, the Green Building Initiative (GBI) expressed support for focusing on on-site generated energy because ''it presents the best opportunity to clearly track improvements and more clearly measure improvements of Federal buildings.'' GBI, Doc. No. 120, pg. 3. GBI also acknowledged that many factors within off-site generated energy are outside the control of the Federal government and that focusing on on-site generated energy will assist the Federal government in improving the factors that it can control. *Id.* Furthermore, one commenter urged DOE to retain its focus on on-site fossil fuel reduction as it focused the standard on outcomes. Doc. No. 79, pg. 4–5.

DOE also received comments that opposed the definition for ''fossil fuel-generated energy consumption'' proposed in the 2022 SNOPR. For example, several commenters questioned DOE's authority to define ''fossil fuel-generated energy consumption.'' *See e.g.,* APGA, Doc. No. 102, pg. 3; NPGA, Doc. No. 90, pg. 3; AGA, Doc. No.100, pg. 11. NPGA and AGA both alleged that DOE does not have authority to define ''fossil fuel-generated energy consumption'' because the meaning of the term is clear. NPGA, Doc. No. 90, pg. 3; AGA, Doc. No.100, pg. 11. They argued that the plain text of the statute unambiguously refers to the total energy consumption of the buildings, rather than only the on-site energy consumption. AGA, Doc. No.100, pg. 11.

Section 433 of EISA does not define the term ''fossil fuel-generated energy consumption of the buildings.'' But when the text of section 433 is considered as a whole, it is best read to apply standards only to the on-site consumption of fossil fuels on the site of the Federal building.

In section 433 of EISA, Congress sought to address how certain Federal buildings are designed when they are constructed or undergo major renovations. The operative sentence directing the imposition of standards states that certain new Federal buildings or Federal buildings undergoing major renovations ''shall *be designed* so that the fossil fuel-generated energy consumption of the buildings is reduced[.]'' 42 U.S.C. 6834(a)(3)(D)(i)(I) (emphasis added). Section 433 then prescribes standards that progressively reduce and then entirely eliminate ''fossil fuel-generated energy consumption of the buildings'' by FY 2030. 42 U.S.C. 6834(a)(3)(D)(i)(II).

With this text, Congress clearly indicated that section 433 covers fossil fuel-generated energy consumption that can be reduced, and ultimately eliminated, through building design measures. On-site consumption of fossil fuel-generated energy can be reduced, and entirely eliminated, through the use of building design measures. Such

measures may include the installation of electric equipment for space and water heating, along with any insulation, ductwork, and electrical work necessary to ensure the building's needs are met.

By contrast, off-site consumption of fossil fuels, such as the combustion of natural gas and coal by distant power plants, cannot practically be eliminated through building design measures. Building design measures can reduce the amount of fossil-fuel derived electricity that a federal building draws from the grid through various efficiency measures and on-site generation. But such building design measures could not eliminate entirely the consumption of fossil-fuel derived electricity, as section 433 requires beginning in FY 2030, unless section 433 were read to require every Federal building to use on-site non-fossil generation to generate *all* of the electricity that would be used by the building. While self-generation could be achievable for some Federal facilities, for others it is not. Particularly for buildings with high energy demands and limited generation and storage space, such as high energy demand buildings with small site footprints and/or located in areas with poor solar resources, full on-site generation at all times of day could impose extreme additional expense or even be technically impracticable. DOE therefore finds it highly implausible that Congress intended that outcome in adopting the requirement to reduce and eliminate fossil fuel-generated energy consumption through the design of Federal buildings. No commenter has offered any basis to conclude that it would be reasonable to read section 433 as requiring that every new Federal building or major renovation subject to EISA be designed to generate all of its own electricity by FY 2030.

Consumers of electricity, including the Federal government, sometimes seek to reduce the use of fossil fuels in electricity generation through procurement practices, which can include directly contracting for non-fossil generation or the purchase of energy attribute certificates (EACs). These sorts of electricity procurement practices could eliminate the off-site fossil fuel consumption attributed to a building's consumption of electricity. Even so, the availability of these procurement options does not persuade DOE to conclude that section 433 should be read to cover off-site consumption of fossil fuels for two reasons. First, again, section 433 states clearly that the standards it prescribes are to be achieved through design measures in new or renovated buildings. 42 U.S.C. 6834(a)(3)(D)(i)(I) (''buildings shall *be designed* so that the fossil fuel-generated energy consumption of the buildings is reduced[.]'') (emphasis added). A requirement to procure electricity from particular sources or to purchase EACs is not a building design requirement. Indeed, whether a federal building manager elects to purchase electricity from one source or another has nothing to do with how the building is designed.[9]

Second, a reading that section 433 of EISA, a provision aimed at Federal building design, was also intended to encompass the procurement of electricity is hard to square with Congress' direct treatment of that subject in section 203 of the Energy Policy Act of 2005. That provision, enacted just two years earlier, required the Federal government to procure renewable energy at levels no less than three percent in fiscal years 2007 through 2009, 5 percent in fiscal years 2010 through 2012, and 7.5 percent in fiscal years 2013 and each fiscal year thereafter. 42 U.S.C. 15852. That Congress had addressed renewable energy procurement by the Federal Government in explicit terms so recently, and had set standards that differ so markedly from those in section 433, is yet another reason to disfavor a reading of section 433 that would necessitate the purchase of non-fossil fuel derived electricity as a necessary means of compliance.

Several commenters noted that the definition for ''fossil fuel-generated energy consumption'' proposed in the 2022 SNOPR, and the scope of the rule, differed from what was proposed in the 2010 NOPR and 2014 SNOPR. In the 2022 SNOPR, in proposing to limit the scope of the rule to only on-site energy consumption from on-site fossil fuel used by equipment and systems designed to support the building, DOE acknowledged that the proposed definition was a shift from the proposed scope of the 2014 SNOPR. 87 FR 78382, 78385. In discussing this shift, DOE observed that it received a comment in response to the 2014 SNOPR that argued that the term should only apply to the on-site energy consumption. 87 FR 78382, 78390, (*see* American Public Power Association (APPA), Doc. No. 71, pg. 2). After considering the comment and reviewing the relevant statutory language, DOE agreed with APPA's analysis and proposed limiting the scope of the rule accordingly.[10] Upon further review, and as proposed in the 2022 SNOPR, this final rule adopts the definition of ''fossil fuel-generated energy consumption'' that limits the scope of the rule to on-site energy consumption.

Commenters also stated that the 2022 SNOPR proposed definition of ''fossil fuel-generated energy consumption'' would have less impact and potential savings (particularly in terms of emissions) than the potential savings under the definition proposed in the 2010 NOPR and 2014 SNOPR. ASHRAE Doc. No. 96, pg. 3; BCSE Doc. No. 115, pg. 2; Gas Associations, Doc. No. 99, pg. 2; Doc. No 122, pg. 1; Doc. No 80, pg. 3. These commenters suggested that DOE include all or some off-site generated energy (particularly purchased electricity generated by fossil fuels) in the definition of ''fossil fuel-generated energy consumption.''

Regarding comments on the effects of focusing the rule on on-site energy use, DOE has further analyzed the impacts of the rule. DOE projects site energy and full fuel cycle emissions savings even when the rule is limited to on-site fossil fuel-generated energy consumption. The expected savings are shown in section V.A–C and the accompanying technical support document (''TSD''). DOE notes that the estimated benefits of the rule are derived from purchasing and installing less expensive electric equipment, along with the health and climate benefits from the associated emissions reductions, while the estimated costs come from the operation of such equipment. DOE also expects the net benefits of this rulemaking to increase over time as electricity rates decrease relative to those of natural gas and as the grid continues to shift to a cleaner mix of generation.

DOE also notes that there are other tools available to Federal agencies to reduce the use of off-site fossil fuel-generated energy, such as on-site solar and procurement of renewable EACs. Although Federal building managers can procure fossil fuel-free electricity, primarily through EACs, such procurement measures are not building design measures that reduce on-site fossil fuel-generated energy consumption.[11] Accordingly, requiring

[9] Further, depending on the geographic location, building managers have limited discretion to elect the source from which they procure electricity. Federal agencies (with limited exceptions) must procure utility services from their serving utility, which may not sell non-fossil fuel derived electricity. *See* 40 U.S.C. 501 & 591; FAR Part 41.

[10] A key attribute to the notice and comment rulemaking process is that agencies invite the public to comment on their proposed rules and agencies can benefit from this feedback. Accordingly, agencies may revise their proposed rules based the feedback they received.

[11] Additionally, at the design stage, the agency controlling the design process would not necessarily be able to guarantee that the building occupant would, in fact, procure the EACs that

such actions are outside the scope of DOE's authority under section 433 of EISA. Further, Congress did not give clear authority for fossil fuel-free electricity procurement under section 433 of EISA, as it did under the Energy Policy Act of 2005, which set forth the total electricity from renewable sources that must be procured by the Federal government (*see* 42 U.S.C. 15852). Therefore, although there are means to reduce emissions from the electricity use in buildings, which DOE encourages agencies to pursue, this final rule only requires building design measures to reduce the use of on-site fossil fuel-generated energy.

Commenters also argued that the rule's proposed focus on the use of on-site fossil fuel-generated energy is a departure from DOE's general position of fuel neutrality. AGA, Doc. No. 100, pg. 9; Gas Associations, Doc. No. 99, pg. 2 n.8. These commenters cite rulemakings related to the energy conservation program for certain consumer and commercial appliances under the Energy Policy and Conservation Act (EPCA). Pursuant to EPCA, any new or amended energy conservation standard must be designed to achieve the ''maximum improvement in energy efficiency'' that DOE determines is technologically feasible and economically justified. 42 U.S.C. 6295(o)(2)(A). In applying that standard, DOE considers the improvement in energy efficiency feasible and justified for electric products separately from gas- or oil-fueled products, consistent with 42 U.S.C. 6295(q)(1)(A), which required establishment of a separate standard for any covered products that ''consume a different kind of energy from that consumed by other covered products within'' the regulated type of products.

In contrast, the language of section 433 is clearly not ''fuel neutral,'' as the text singles out and disfavors fossil fuels relative to other sources of energy. Further, as discussed above, the language and structure of the statutory text strongly support limiting the scope of the requirement to just the use of on-site fossil fuel-generated energy. Accordingly, the specific applicable statutory text here requires a departure from the fuel neutral approach that DOE uses when setting energy conservation standards for certain consumer and commercial appliances under EPCA.

After further considering the proposed approach in light of the comments received, DOE determines that focusing on direct emissions best aligns with section 433's directive to reduce and ultimately eliminate fossil fuel-generated energy consumption through building design measures of Federal buildings.

The final rule adopts the definition of ''fossil fuel-generated energy consumption'' as proposed in the 2022 SNOPR, with three revisions. First, the final rule revises the term to be defined from ''Scope 1 fossil fuel-generated energy consumption'' to ''fossil fuel-generated energy consumption.'' This clarifies that the scope of this rule aligns with the directive in section 433 of EISA. Second, the final rule revises the definition so that it applies to ''on-site stationary consumption'' of fossil fuels. This revision uses language that is consistent with section 433 and clarifies that the definition includes the on-site consumption of natural gas. Third, the final rule deletes, ''for the purposes of this final rule'' from the definition because this language is not necessary.

b. Exemptions and Exceptions

As proposed in the 2022 SNOPR, not all Scope 1 emissions are included under this final rule. DOE identifies several on-site uses are that exempted or excepted from this final rule. First, the standards only apply to on-site fossil fuel use or Scope 1 emissions from stationary combustion sources. Again, section 433 of EISA requires that certain new Federal buildings and Federal buildings undergoing major renovations be designed to reduce fossil fuel-generated energy consumption. As such, this rule does not apply to emissions associated with natural gas for alternatively fueled vehicles (''AFVs'') (or any other ''alternative fuel,'' defined at 42 U.S.C. 13211) because building design measures do not include use of AFVs. In addition, DOE notes that because the CBECS and RECS data that provide the energy use targets for this rule do not contain manufacturing or industrial process loads, DOE excludes these loads from the scope of the energy performance standards at this time. For buildings with such process loads, the process loads will need to be accounted for in the analysis of the building's fossil fuel consumption and GHG emissions, but such loads would not be subject to the percentage reductions in fossil fuel-generated energy consumption (Scope 1 GHG emissions) required for the building related loads as related to this rule.

Second, this final rule does not apply to the on-site consumption of fossil fuel (or the subsequent emissions) from energy generation associated with the supply of emergency backup electricity. Again, section 433 of EISA requires building design measures for certain Federal buildings to reduce fossil fuel-generated energy consumption. Thus, this rule is focused on the use of on-site energy as *designed* for standard building operations. Emergency backup generation is generally used infrequently and for short periods, for emergency services only when Federal buildings are not operating as designed. In addition, given their limited use, the impact from emergency backup generators, in terms of both direct fossil fuel consumption and emissions, is usually quite small relative to the impact from ongoing building operations. However, *non-emergency* generation from backup generators (such as those for peak shaving or peak shifting) is within in the scope of this rule. DOE also notes that if Federal agencies use their backup generators for both purposes, they will be required to calculate the fraction of their backup generator emissions that is associated with emergency use and the fraction associated with non-emergency use.

Third, the final rule does not apply to on-site energy generation or Scope 1 emissions associated with biomass fuels because biomass fuels are not fossil fuels. Because EISA directed DOE to establish regulations that require fossil fuel-generated energy consumption reductions, and biomass is not a fossil fuel, DOE has intentionally left biomass fuels out of the CBECS and RECS targets developed for this rule. DOE acknowledges that guidance from the Council on Environmental Quality [12] takes a somewhat different approach on biomass fuels, but DOE believes CEQ's guidance is complementary to this final rulemaking. CEQ's guidance states that the CO_2 emissions from biomass and biofuel combustion are considered biogenic and are reported separately from fossil fuel-generated GHGs and biomass and biofuel-generated CH_4 and N_2O. This CEQ guidance ensures that any GHG emissions associated with biomass or biofuel use at a covered Federal building are still taken into account in reporting emissions (though reported separately). This rule does not cover such fuels, however, as they are not fossil fuel derived and therefore fall outside the statutory authority.

DOE received numerous comments on the exemptions and exceptions included in the final rule. These comments ranged from supporting limiting the application of the standards to stationary combustion sources and the exemptions for emergency backup

would be necessary to meet the applicable fossil fuel energy standards.

[12] Federal Greenhouse Gas Accounting and Reporting Guidance,'' Council on Environmental Quality (CEQ), January 17, 2016 (CEQs guidance).

generators [13] and the exception of biomass fuels, to urging DOE to adopt additional exemptions or opposing some of the exemptions.

Two commenters opposed exempting backup generators from the final rule. CHP Alliance and MRC both noted that emergency backup generators run on fossil fuel. CHP Alliance, Doc. No. 104, pg. 4; MRC, Doc. No. 105, pg. 8. MRC also stated that that emergency backup generators must run on a regular basis to keep them in good operating condition.[14] CHP Alliance argued that reducing GHG emissions from this type of fossil fuel-generated energy consumption is the purpose of section 433 of EISA. CHP Alliance, Doc. No. 104, pg. 4. Thus, these commenters argued, exempting backup generators is counter to the entire purpose of the final rule.

DOE notes that although this rule exempts emergency backup systems, this exemption is limited to when these generators are used solely for emergencies. Therefore, any use of these backup generators for peak shaving, peak shifting, or other demand management activities must be included in the building energy consumption.

An individual commenter urged DOE to reconsider the exception for emissions resulting from biomass fuel. Doc. No. 79, pg. 3. Although this commenter acknowledged that biomass fuel is not fossil fuel-based, the commenter argued that the rule should apply to biomass fuels because they still emit GHG. *Id.* However, as previously noted, biomass fuels are not fossil fuels. Because EISA directed DOE to establish regulations that require Federal agencies to reduce their fossil fuel-generated energy consumption, and biomass fuels are not fossil fuel-based, Congress intentionally excluded biomass fuels from the targets developed for this rule.

DOE received several comments urging DOE to exclude renewable fuels such as biomethane (renewable natural gas), biopropane (renewable propane), and clean hydrogen from the final rule. AGA and NPGA stated that it is appropriate for DOE to exclude biomass fuels from this rule, but argued that DOE should also consider excluding other renewable fuels. AGA; Doc. No. 100, pg. 32–34; NPGA, Doc. No. 90, pg. 8; *see* WGL, Doc. No. 101; pg. 6. Specifically, AGA and NPGA noted that there have been developments in the production of synthetic hydrocarbon. AGA; Doc. No. 100, pg. 32–34; NPGA, Doc. No. 90, pg. 8. Similarly, CHP Alliance observed that combined heat and power (CHP) systems are extremely efficient and some approach 90-percent efficiency. CHP Alliance, Doc. 104, pg. 5.

DOE acknowledges that purely renewable fuels would not fall within the scope of this rulemaking as long as they are not fossil fuel-based or made from blends that contain fossil fuels. A Federal building may use renewable fuels if the Federal agency is able to verify the use of such fuels on-site do not also include fossil fuels in their mixture. Additional specification about fuel content of biofuels will be provided in a companion implementation guidance.

DOE also received several comments on the NOPR and the 2014 SNOPR about differentiating between fossil fuels used to generate purchased electricity (*i.e.,* natural gas versus crude oil). DOE notes that because the rule is now focused on on-site fossil fuel use only, these comments no longer apply. DOE acknowledges that the source emission factors related to electricity are used in DOE's analysis of the impacts of the rule and notes that DOE will use the latest available source emission factors from DOE and EPA.

DOE also received several comments on the treatment of distributed energy resources (DERs) in the 2022 SNOPR suggesting that DOE treat DERs as a ''Scope 2'' impact and, thus, exempt DERs from these standards. These commenters argued that because emissions from DERs are considered Scope 2 emission for reporting purposes, these emissions should also be considered as Scope 2 emissions for the purposes of this rule.

DOE does not agree with this interpretation because the energy generated by DERs is generated on-site and is consumed directly by one building. Accordingly, the energy consumed by building processes supplied by DERs and generated from fossil fuels falls within the definition of ''fossil fuel-generated energy consumption.'' When an EISA subject building is connected to an existing DER resource that is located off the building site and is servicing more than one building it may then be treated as energy generated off-site and the energy stream would not be subject to this rule. New DER resources, when qualified as an EISA-subject building, would be subject to this final rule. Additionally, DOE notes that the terms ''Scope 1'' and ''Scope 2'' are more commonly utilized when performing GHG emissions calculations and reporting. Here, DOE uses these terms to help describe the scope of building energy use covered by this rule (as discussed in Section III.A). The statutory authority for this rulemaking is based upon the fossil fuel consumption of the energy source and systems that service an applicable building, and the building must be subject to the reduction targets, regardless of how subsequent emissions may be accounted.

B. Performance Standards for Fossil Fuel-Generated Energy Consumption

To provide flexibility, the final rule establishes standards for a fossil fuel-generated energy consumption metric expressed in thousand British thermal units (''kBtu'') per square foot (''ft^2'') of building gross area and provides an equivalent conversion of the energy metric measured in greenhouse gas (''GHG'') metrics. DOE opted to include the GHG metric, which will measure Scope 1 emissions, because agencies are already required to track and report their GHG emissions annually utilizing CEQ's guidance. The final rule aligns the quantifications and terminologies with those established in the Federal Greenhouse Gas Accounting and Reporting Guidance. Although CEQ's guidance categorizes Scope 1 emissions as ''Generation of electricity, heat, cooling, or steam'', ''Mobile sources'', ''Fugitive emissions'', or ''Process emissions,'' this final rule focuses only on the on-site fossil fuel use associated with the ''Generation of electricity, heat, cooling, or steam''.

This final rule provides agencies with two separate but equivalent sets of fossil fuel generated energy consumption targets—(1) fossil fuel-generated energy consumption based on a summation of on-site fossil fuel usage expressed in kBtu per ft^2 of building gross area, and (2) a new carbon dioxide equivalent (''CO_2e'') per ft^2 metric based on the emissions associated with the on-site fossil fuel-generated energy consumption. Agencies may use either metric for their design targets. The CO_2e metric is based upon the stationary combustion of natural gas and is most appropriate when that is the only fossil fuel being utilized. When a building is burning fuels other than standard natural gas, it would be most appropriate to use the on-site fossil fuel energy metric in units of kBtu per ft^2 of building gross area.

To develop these fossil fuel generated energy consumption targets, DOE utilized CBECS and RECS data to determine the on-site fossil fuel usage by fossil fuel type for each building type in CBECS or RECS. The CBECS and RECS data was parsed into the format commonly utilized by DOE to evaluate building energy codes and standards,

[13] WGL, Doc. No. 101, pg. 5.

[14] MRC, Doc. No. 105, pg. 8. MRC asserted that this results in approximately 0.79 metric tons of GHG per MWh of backup supply.

such as organizing by climate zone, which aligns with the technical analysis methodology used to evaluate the Federal baseline standards for commercial and multi-family high-rise residential buildings, which rely on Standard 90.1–2019, as well as the Federal baseline standards for low-rise residential buildings, which rely on the 2021 IECC.

DOE determined the kBtu per square foot targets by dividing fossil fuel consumption data by the building area, applying the weighting factors associated with the building, and assigning each building to one of the building type/climate zone categories. DOE determined the CO_2e (in metric tons of CO_2e) per square foot targets by multiplying the fossil fuel usage for each fuel type by the applicable GHG coefficient (from the CEQ guidance for each fuel type), dividing by the building area, applying the weighting factors associated with the building, and assigning each building to one of the building type/climate zone categories. The resulting targets are shown in Table A–1a and Table A–1b of appendix A to subpart B of parts 433 and 435.

For the purposes of establishing the targets, the final rule identifies and defines 16 categories of commercial buildings and five categories of residential dwelling units that cover all relevant buildings in the Federal building portfolio, including low-rise (single-family and multi-family), mid-rise apartment buildings, and high-rise apartment buildings, to be utilized when referencing the target defining tables in the regulatory text.

The 16 categories of commercial buildings defined are education, food sales, food service, health care (inpatient), health care (outpatient), laboratory, lodging, mercantile (enclosed and strip shopping malls), office, public assembly, public order and safety, religious worship (not applicable), retail (other than mall), service, and warehouse and storage. Many of these commercial building categories are further divided into building types, providing a total of 48 commercial building types. These building categories and building types represent the high-level Principle Building Activity (''PBA'') and low-level Principle Building Activity Plus categories in the 2003 CBECS.

The five categories of residential buildings are: mobile home, multi-family in 2–4-unit buildings, multi-family in 5 or more-unit buildings, single-family attached, and single-family detached. These building types represent the housing unit types in the 2005 RECS (DOE chose to use 2005 RECS data because the RECS was conducted in 2001 and 2005 but not 2003). Residential buildings that fall under 10 CFR part 435 and multi-family mid-rise and high-rise buildings that fall under 10 CFR part 433 will use these same categories. In analyzing the rule, DOE assumes that most multi-family high-rise residential buildings will fall into the ''multi-family in 5 or more-unit buildings'' category based on the most typical buildings representative of the Federal buildings.

Federal agencies must select from these 53 building categories (including commercial building subcategories) to identify the fossil fuel-generated energy consumption target (expressed in both kBtu per ft^2 and Scope 1 GHG emissions in CO_2e per ft^2) for a specific building. DOE notes that the building types available from CBECS and RECS do not correspond directly to the building types used in the Federal Real Property Profile (''FRPP'') and that agencies should exercise their best judgement to select the building category that best matches the building's intended use. Additionally, some buildings may be mixed use, so agencies may need to area-weight the floor space of these CBECS and RECS targets for Federal buildings that do not correspond directly to the CBECS or RECS building types. For example, a Department of Defense (''DOD'') Post Exchange building might have aspects of Food Sales, Food Service, and Mercantile, necessitating the development of an area-weighted target. Similarly, a DOD barracks building might include aspects of Lodging or Residential, Education, and Warehouse, again necessitating the use of an area-weighted mapping.

1. New Construction and Major Renovations of a Whole Building

DOE developed quantitative requirements to determine compliance with the fossil fuel reduction targets within the revised energy performance standards for new construction and major renovations (*i.e.,* major renovation of on-site fossil fuel-using systems or components in a building) of EISA-subject buildings. The adopted quantitative requirements require agencies to calculate the on-site fossil fuel-generated energy consumption in kBtu of fossil fuels or the Scope 1 GHG emissions in CO_2e of their proposed building design and compare that estimate to the allowable fiscal year percentage reduction target found in the target tables in appendix A of subpart B to 10 CFR parts 433 and 435. This is done by identifying the allowable target (in either kBtu of on-site fossil fuels or Scope 1 GHG emissions attributed to the generation of electricity, heat, cooling, or steam) for stationary combustion sources as per the ''Federal Greenhouse Gas Accounting and Reporting Guidance.'' The agencies then divide the kBtu values or the metric tons of CO_2e Scope 1 emissions by the floor area of the building to calculate the per square foot (metric tons of CO_2e per square foot) value to compare with the target values in appendix A. For buildings that combine two or more building types, area-weighted averaging by square footage for each building type will be used to calculate the maximum allowable fossil fuel-generated energy consumption of the combined building.

2. Major Renovations Within a Building

DOE developed streamlined prescriptive requirements to determine compliance with the energy performance standards for major renovations of systems or components within EISA-subject buildings. Such prescriptive requirements include requiring the systems within the building undergoing major renovation to be brought up to the performance requirements of the individual sections of Standard 90.1–2019 (chapters 5–10). Under the rule, agencies will begin implementing the energy performance standards upon the effective date of the rule. For major renovations in EISA-subject buildings that meet the project cost threshold and coverage requirements and are less than whole building renovations (*i.e.,* projects within the existing building comprising retrofits to a single system or component, such as a HVAC system or a chiller), agencies are required to adhere to the following requirements.

For component level renovations, meaning an individual product or piece of equipment, the final rule requires agencies to utilize electric or non-fossil fuel-using Federal Energy Management Program (''FEMP'') designated or ENERGY STAR equipment, which follow existing Federal requirements for equipment efficiency (found in 10 CFR part 436, subpart C, ''Agency Procurement of Energy Efficient Products'').

For system level renovations, meaning a group of equipment pieces that function together to satisfy a building load, agencies must utilize electric or non-fossil fuel-using FEMP designated or ENERGY STAR equipment, in alignment with 10 CFR part 436, subpart C and must also meet the system level requirements for the systems being renovated, as specified in the model energy codes used to establish baseline energy efficiency standards for Federal buildings (*i.e.,* the current Standard 90.1

for Federal commercial and high-rise multi-family buildings covered under 10 CFR part 433 or the current IECC for Federal low-rise buildings covered under 10 CFR part 435).

DOE received three comments in response to the 2022 SNOPR from BCSE, Polyisocyanurate Insulation Manufacturers Association (PIMA), and Aeoroseal stating that DOE should require agencies to implement energy efficiency upgrades before undertaking larger scale electrification renovations. BCSE, Doc. No. 115, pg. 2; PIMA, No. 83, pg. 2; Aeroseal, No. 97, pg. 3. DOE agrees with the commenters that energy efficiency is a key component of decarbonization. Not only does energy efficiency provide more traditional payback periods from operational cost savings, but it can often result in additional capital savings, such as when equipment can be downsized due to the associated energy load reductions. Additional details on the order of application will be provided in separate implementation guidance, but DOE encourages agencies and individual project teams to meet the energy efficiency requirements of 10 CFR parts 433 and 435 prior to applying additional design changes to meet the emissions reduction targets defined in this final rule.

Although this final rule only covers systems and components that utilize on-site fossil fuels, agencies should ensure that projects that could have secondary impacts on fossil fuel-using equipment, such as lighting, appliance or window replacement projects, are considered. DOE encourages agencies to consider whole building optimization for any type of major renovation project to ensure no adverse impacts to on-site fossil fuel use. DOE also encourages on-site renewables such as solar and energy storage systems as good practice. DOE is not including on-site solar as a means to offset on-site fossil fuel consumption because it will not reduce the overall on-site contribution of fossil fuels directly consumed, even though on-site solar is a means to reduce emissions from the electricity use in buildings.

In response to the 2022 SNOPR, DOE received multiple comments discussing the base reference code for Federal building efficiency, noting that newer and different codes or above-code programs (*e.g.,* Standard 90.1–2022 or Passive House) may be able to demonstrate additional energy savings. NECA, Doc. No. 123, pg. 2; Build SMART, Doc. No. 111, pg. 1. In response, DOE acknowledges that ECPA establishes energy performance requirements for Federally owned residential and commercial buildings, based on the IECC and Standard 90.1, respectively. The statutory authority for this rule is an amendment to the existing requirements for Federal buildings, as established by Section 305 of the ECPA, and it does not change the reference code in question. In fact, under ECPA, minimum standards, including the reference code (IECC or Standard 90.1), must be satisfied, and then *in addition* the fossil fuel reduction targets must be applied and adhered to by the building design. DOE does, however, generally encourage the use of updated and advanced building energy codes, innovative codes, and standards, which achieve increased levels of energy efficiency, thereby decreasing fossil fuel use in accordance with the objectives of EISA and this rule.

3. Shift Adjustment Multiplier

In the 2022 SNOPR, because many types of Federal buildings are operated for longer hours than typical for private sector buildings covered in CBECS and RECS, DOE introduced a shift adjustment multiplier. 87 FR 78382, 78391. In addition, DOE notes that hours of operation are already considered in tools such as ENERGY STAR Portfolio Manager, which agencies must use as part of their building benchmarking activities. 42 U.S.C. 8253(f)(8). A building's hours of operation are also implicit in any whole building simulation done on a building design, with longer hours of operation typically leading to higher energy usage.

The shift multiplier [15] in this final rule is based on analysis by Oak Ridge National Laboratory and was originally developed for ASHRAE Standard 100–2018. It is expressed in ''number of operating shifts,'' as opposed to actual hours of operation. Shift multipliers vary by building type. For example, for government offices, operating the building for two shifts does not increase the energy usage, but operating the building for three shifts increases the energy use by a multiplier of 1.4. Because residential buildings by their very nature are already considered to be 24-hour operation, the final rule only applies the shift multiplier to Federal commercial buildings regulated under 10 CFR part 433.

4. Compliance Date

The final rule provides individual fossil fuel generated energy consumption phase down targets (mandated by EISA) that apply to EISA-subject buildings depending on whether the design for construction or major renovations began in FY 2024, FY 2025 to FY 2029, or during or after FY 2030. The date after which all EISA-subject buildings that have not yet begun design for construction must comply with this final rule is one year after is published in the **Federal Register**.

For buildings for which design for construction or whole building renovation began in FY 2024 or during the FY 2025 to FY 2029 range, phase down target tables of the maximum allowable on-site fossil fuel-generated energy consumption (expressed in both kBtu per ft^2 and Scope 1 GHG emissions in CO_2e per ft^2) by building type and climate zone are provided in Appendix A of 10 CFR parts 433 and 435, subpart B. The values in the tables come from DOE's EIA CBECS (for commercial buildings) and RECS (for multi-family high-rise and low-rise residential buildings), both of which are converted from site energy consumption to kBtu and Scope 1 GHG emissions in CO_2e. For EISA-subject buildings for which design for construction or whole building renovation begins in FY 2030 or later, the fossil fuel-generated energy consumption of the building must be zero for all building types and climate zones, based on the calculation established in the regulations.

DOE received comments regarding the compliance dates proposed in the 2022 SNOPR. Washington Gas Light Company (WGL) noted that the rule is overdue and that the directive in Section 433 of EISA assumed that DOE would promulgate energy efficiency performance standards to meet the emission reduction targets in December 2008. WGL, Doc. No. 101, pg. 6. WGL expressed concern that the standards proposed in the 2022 SNOPR ''sets up an unrealistic expectation that [F]ederal agencies can achieve a sharp reduction in onsite fossil fuel energy consumption in less than 7 years.'' *Id.*

In response WGL's comment, DOE is issuing this final rule to meet its statutory obligations under EISA and cannot change the clearly delineated dates for fossil fuel consumption reductions. The performance standards in this final rule will enable Federal agencies to meet the reduction targets established in EISA. Furthermore, DOE notes that the final rule does not require all Federal buildings to meet the performance standards. These requirements only apply to certain new Federal buildings or Federal buildings undergoing major renovations. Thus, if an existing Federal building is not being renovated, then the performance standards do not apply. Also, as discussed below, DOE is confident that

[15] Sharp, Terry, ORNL/TM–2014/215, Derivation of Building Energy Use Intensity Targets for ASHRAE Standard 100, August 31, 2011; *https://info.ornl.gov/sites/publications/files/Pub49965.pdf.*

as a practical matter, agencies can meet the requirements of the final rule.

In addition, if Federal agencies (other than GSA) are unable to meet the energy performance standards adopted by this final rule, they may petition DOE to adjust the applicable standard. 42 U.S.C. 6834(a)(3)(D)(i)(II). DOE may adjust the applicable standard if it believes that it is technically impracticable for the agency to meet the energy performance standards.

The Alliance to Save Energy (ASE) stated that DOE should finalize this rule only when DOE feels that agencies can meet the requirements in the rule, especially for the requirements in year 2030 and beyond. ASE, Doc. No. 76, pg. 1. Others, such as ACEEE *et al.* stated that the final rule is overdue, and that DOE should require compliance as soon as possible.

In response to these comments, DOE believes that agencies can meet the requirements of this revised final rule, especially considering the focus on on-site fossil fuel usage, and the widespread availability of electrified appliances (such as heat pumps and electrified cooking equipment) that can completely substitute for fossil fuel-generated energy consumption on-site. The ENERGY STAR program provides extensive details and lists of commercially available electric appliances and equipment, including air source heat pumps that can be found at *https://www.energystar.gov/products/air_source_heat_pumps,* commercial heat pump and VRF equipment that can be found at *https://www.energystar.gov/products/heating_cooling/light_commercial_heating_cooling/light_commercial_hvac_key_product_criteria,* and electric cooking products that can be found at *https://www.energystar.gov/products/electric_cooking_products.* These technologies have now become far more well known and commercially available than they were at the time Congress adopted the requirements in EISA. It is also worth noting that the rule's requirements apply at the design for construction stage, when an agency has the maximum flexibility to develop a design for a new building that will meet the standards, or has the flexibility to select an approach to a major renovation that will meet the more limited requirements that apply to major renovations. Not only are the standards in the final rule required by the statute, they are also reasonable and achievable, given the point in the design and construction process when the standards become applicable and the real world options now available for agency compliance.

C. Petitions for Downward Adjustment

Under section 433 of EISA, agencies other than GSA may petition DOE for an adjustment to the fossil fuel-generated energy performance standard with respect to a specific building if meeting the requirement is technically impracticable in light of the agency's functional needs for the building. 42 U.S.C. 6834(a)(3)(D)(i)(II). As proposed in the 2022 SNOPR, the final rule allows GSA tenant agencies that have significant control over building design to petition DOE. This rule specifies the information petitioning agencies must provide when requesting a downward adjustment. Specifically, as proposed in the 2022 SNOPR, the final rule requires petitioning agencies to describe the building and associated components and equipment; explain why compliance with the requirements is technically impracticable considering the functional needs of the building; demonstrate that all cost-effective energy efficiency and on-site renewable energy measures were included in the building design; provide the largest feasible reduction in fossil fuel-generated energy consumption that can reasonably be achieved; and discuss measures that were evaluated but rejected.

When filing petitions for downward adjustment related to new construction, Federal agencies must include the maximum applicable allowable fossil fuel-generated energy consumption for the proposed building, the requested alternative allowable fossil fuel-generated energy consumption for the building, the estimated fossil fuel-generated energy consumption of the proposed building, the total estimated project cost, and a description of the building and the building energy systems. A description of the building includes, but is not limited to, location, use type, floor area, stories, expected number of occupants and occupant schedule, functional needs of the building, and any other information the agency deems pertinent. Federal agencies must describe the HVAC systems and service water heating system, as well as the loads in the building, including any specialized process, specialized research loads, electric vehicle charging stations, alternatively fueled vehicle fueling stations, emergency backup generators and other energy consuming systems or components. This information will provide DOE the necessary information to review petitions, and help agencies address key questions and options during the design process.

This final rule adopts the standard and requires information for downward adjustment related to major renovations. For major renovations that are whole building renovations, a downward adjustment would be provided at a level equal to the energy efficiency level that would be achieved were the proposed building designed to meet the baseline energy efficiency standard applicable to new construction in 10 CFR parts 433 or 435. For whole building renovations, Federal agencies must provide the same information that is required for new construction. DOE believes the cost of processing the petitions will be de minimis, as DOE already works extensively with Federal agencies on energy-efficiency and decarbonization efforts.

For major renovations that are limited to system or component level retrofits, DOE will provide downward adjustments at a level equal to the energy efficiency level that would be achieved through the use of commercially available systems and/or components by using ENERGY STAR or FEMP designated products. Unlike the required standard, however, the ENERGY STAR or FEMP designated products are not required to be electric or non-fossil fuel based. A major renovation that is limited to a single system or multiple systems could receive a downward adjustment equal to the energy efficiency level that would be achieved through the use of the same ENERGY STAR or FEMP designated products as required for component renovations and through use of the system level requirements for renovations found in the baseline energy efficiency standards in 10 CFR part 433 (Standard 90.1–2019) or 10 CFR part 435 (2021 IECC).

DOE received a comment that supported the changes made to the petition requirements proposed in the 2022 SNOPR from the American Council for an Energy-Efficient Economy (ACEEE), Earthjustice, Rewiring America, RMI, and Sierra Club. They stated that requiring Federal agencies to submit the information proposed in the 2022 SNOPR ''will help ensure the petition process meets EISA requirements.'' ACEEE *et al.,* Doc. No. 126, pg. 3.

However, other commenters expressed concern with the required information Federal agencies must file with their petitions. CHP Alliance stated that the rule proposed in the 2022 SNOPR is flawed because the new building baseline energy efficiency standard for major renovation is based on replacing all equipment included in the renovation with ENERGY STAR or

FEMP designated products. CHP Alliance, Doc. No. 104, pg. 6. CHP Alliance noted that this requirement excludes CHP systems from being both an onsite power and heating/cooling source option for major renovations because neither ENERGY STAR nor FEMP have products designated for CHP systems. *Id.* CHP Alliance urged DOE to eliminate this requirement or immediately designate CHP systems that use renewable fuels or non-fossil fuels as products which Federal agencies can use. *Id.*

DOE requires the use of FEMP and ENERGY STAR designated products when such designations are available as specified in 10 CFR part 436 subpart C because when setting efficiency requirements, both FEMP and ENERGY STAR have integrated life-cycle cost effectiveness into their guiding principles that demonstrate compliance with 10 CFR part 436 subpart A. As such, Federal buyers can have confidence that required products have both good energy performance and a total cost of ownership that is equal to or less than products below set efficiencies.

Although there are no such FEMP or ENERGY STAR designated products for CHP systems, this does not preclude an agency from utilizing such systems. If an agency determines that it would like to utilize a CHP system in an EISA-subject building, it may do so but must ensure that the fossil fuel utilization of the system complies with the energy performance standard. This can be done by utilizing renewable, non-fossil fuel based fuels and is discussed in more detail in section III.A.3.b. Defining Technical Impracticability.

In the 2022 SNOPR, DOE proposed that a ''technical impracticability'' exists when achieving the fossil fuel-generated energy consumption targets would:

(1) not be feasible from an engineering design or execution standpoint due to existing physical or site constraints that prohibit modification or addition of elements or spaces; (2) significantly obstruct building operations and the functional needs of a building, specifically for industrial process loads, critical national security functions, mission critical information systems as defined in NIST SP 800–60 Vol. 2 Rev. 1, and research operations; or (3) significantly degrade energy resiliency and energy security of building operations as defined in 10 U.S.C. 101(e)(6) and 10 U.S.C. 101(e)(7) respectively.

87 FR 78382, 78421 and 78430. Upon determination that complying with these standards is technically impracticable, the building is still required to reduce fossil fuel consumption to the maximum extent practicable. Technical impracticability may include technology availability and cost considerations but may not be based solely on cost considerations.

In response to the 2022 SNOPR, DOE received one comment on this topic that claimed that the definition of ''technical impracticability'' is too ambiguous and could lead to agencies taking advantage of loopholes. Doc. No. 79, pg. 4. DOE notes that Congress directed DOE to base its petition adjudication decisions on agency determinations of technical impracticability. Due to the range of issues and challenges related to technical impracticability that could be faced by agencies, DOE will review each petition on a case-by-case basis and make the ultimate determination as to whether meeting the applicable standard is technically impracticable for that building and project. DOE may also provide further guidance on this topic via an implementation guidance.

1. DOE Review of Petitions

In the 2022 SNOPR, DOE proposed that the Director of FEMP will review the petitions for downward adjustment and make a best effort to return the complete petition within 45 calendar days of submittal. 87 FR 78382, 78397. DOE stated that it would review petitions in a timely manner and if the petitioning agency has demonstrated the need for a downward adjustment per the previous discussion, DOE will concur with the agency's conclusion and notify the agency in writing. *Id.* If DOE does not concur, it would forward its reasons to the petitioning agency.

In this final rule, DOE is modifying the proposed timing. DOE will make a best effort to notify an agency within 30 calendar days of submittal whether a petition is approved or rejected. However, the timeframe does not apply to incomplete petitions, which may result in delays. Complete petitions are described in the regulatory text at the end of this final rulemaking notice, specifically sections § 433.202 and § 435.202. DOE recognizes that agencies want assurance that DOE will respond to petitions in a timely manner in order to avoid project delays. If DOE rejects the petition, it will include its reasons for doing so in its response to the agency.

Additionally, in the 2022 SNOPR, for new construction or major renovations of the whole building, DOE proposed that DOE could establish an adjusted value of on-site fossil fuel-generated energy consumption standard, other than the adjusted value requested in a petition. 87 FR 78382, 78424. DOE is finalizing this provision. If DOE finds that the petition does not support the requested adjusted value but that the statutorily required level was nonetheless technically impracticable, DOE can establish a new adjusted value. 87 FR 78382, 78424. DOE intends this provision to provide flexibility in the petition process and reduce the need for agencies to resubmit petitions in the instance of a rejection. In addition, this provision will likely reduce the likelihood of an agency disagreeing with the result of its petition request, as it will be an active participant in an exchange of information with DOE.

2. Making Petitions for Downward Adjustment Public

Throughout this rulemaking proceeding, DOE received comments urging DOE to make petitions for downward adjustment publicly available. In the 2022 SNOPR, DOE stated that it will publish any petitions that are filed, deemed complete, and screened for national security reasons for downward adjustment that are received (subject to potential filtering for national security reasons) to the DOE website. 87 FR 78382, 78396. ACEEE *et al.* supports making petitions for downward adjustments and DOE responses subject to public scrutiny. ACEEE *et al.,* Doc. No. 126, pg. 3–4. However, ACEEE noted that the 2022 SNOPR did not propose regulatory text requiring such public scrutiny and urged DOE to include such language in the final rule.

DOE opts not to include regulatory language requiring it to make petitions public. DOE notes there is nothing in the statutory text that requires the information be made publicly available. In addition, there are instances where information included with the petitions for downward adjustment cannot be made public (*e.g.,* information with national security implications). However, DOE acknowledges the importance of transparency and will make its best effort to publish any petitions for downward adjustment that are filed, deemed complete, and screened for national security concerns.

3. Bundling Petitions

DOE will allow agencies to bundle petitions for new buildings or whole renovations to buildings that are the same design, have the same set of reduction targets, and would require similar measures to reduce fossil fuel-generated energy consumption. The bundled petitions must clearly state any differences between the buildings and explain why the differences do not warrant the submission of separate

evaluations. For component-level major renovations, DOE will allow bundling petitions that are of the same component and building type. DOE will provide more specific details on the bundling process and criteria in the accompanying implementation guidance.

4. GSA Tenant Agencies

ECPA, as amended, precludes GSA from petitioning DOE for a downward adjustment of the applicable percentage reduction requirement. 42 U.S.C. 6834(a)(3)(D)(i)(II). In the 2022 SNOPR, DOE noted although ECPA prohibits GSA from petitioning DOE for a downward adjustment, it makes no reference to GSA tenant agencies. 87 FR 78382, 78396. DOE stated that allowing GSA tenant agencies to submit a petition for downward adjustment will provide an option for some buildings for which the required fossil fuel-generated energy consumptions reductions may be technically impracticable in light of the building's functional needs, but for which GSA may not submit a petition. *Id.* In the 2022 SNOPR, DOE proposed that for construction of a new Federal building or major renovations of a federal building, if a GSA tenant agency is providing substantive and significant design criteria in the design process, the tenant agency may petition DOE for a downward adjustment of the applicable percentage reduction requirements. *Id.*

DOE received one comment on this topic in response to the 2022 SNOPR. ACEEE *et al.* commented that DOE may not allow GSA tenant agencies to petition for downward adjustments because ECPA specifically excludes GSA from the downward adjustment petition process. ACEEE *et al.,* Doc. No. 126, pg. 4. They stated that allowing GSA tenant agencies to petition DOE for downward adjustment would expand the number of buildings eligible for such adjustments in a manner that directly contravenes the ECPA. *Id.*

DOE reiterates that although the statute prohibits GSA from petitioning DOE for a downward adjustment, it makes no reference to GSA tenant agencies. The statute allows for an ''agency'' to petition for a downward adjustment. The term ''Federal agency'' means any department, agency, corporation, or other entity or instrumentality of the executive branch of the Federal Government, including the United States Postal Service, the Federal National Mortgage Association, and the Federal Home Loan Mortgage Corporation. 42 U.S.C. 6832(5). As the ACEEE notes, the statute only prohibits GSA from submitting a petition. Thus, in cases in which the GSA tenant agency exercises significant control of design choices in the building, and GSA does not, it makes little sense to prohibit the GSA tenant agency from petitioning for a downward adjustment if such a prohibition is not required by statute. Moreover, these petitions are still subject to the same criteria and review process as other petitions, including that meeting the requirement would be technically impracticable, which is defined as achieving the fossil fuel-based energy consumption targets would (1) not be feasible from an engineering design or execution standpoint due to existing physical or site constraints that prohibit modification or addition of elements or spaces; (2) significantly obstruct building operations and the functional needs of a building, specifically for industrial process loads, critical national security functions, mission critical information systems as defined in NIST SP 800–60 Vol. 2 Rev. 1, and research operations; or (3) significantly degrade energy resiliency and energy security of building operations as defined in 10 U.S.C. 101(e)(6) and 10 U.S.C. 101(e)(7) respectively. DOE does not expect that GSA tenant agencies would commonly be able to make such showings for the more generic types of buildings typical of GSA's holdings. Rather, DOE expects this petition process to be applied in the rare situations where building design needs specific to a GSA tenant agency's unique situation make application of the percentage reduction requirements technically impracticable.

5. Petitions Submitted by the Department of Defense

DOE also considered whether it should have a separate petition process for Department of Defense or other agency projects that serve critical national security functions whereby classified or sensitive information can be withheld, and such petitions will not be subject to public disclosure.

Two commenters stated that DOE should not have a separate petition process for buildings serving national security functions. An individual commenter argued that instead of exempting buildings with national security risks, the Federal government must navigate and balance these national security challenges with policies to reduce fossil fuel-generated energy consumption. Doc. No. 81, pg. 2. Similarly, ACEEE *et al.* commented that buildings serving national security functions must be subject to the same petition review process and policies as other Federal buildings. ACEEE *et al.,* Doc. No. 126, pg. 5.

DOE agrees that there will be no blanket exemptions for national security sites. Section 433(a) of EISA does not provide an exemption from the standard for national security. For some buildings, it may be technically impracticable to achieve the consumption targets so the petition process may be appropriate.[16] Each agency must provide a petition if they believe their facility cannot meet the statutory requirements due to technical impracticability. DOE intends to review all petitions using the same process. DOE believes the petition process will sufficiently vet buildings and agencies' proposed reasoning as to why achieving the reductions will be technically impracticable.

In addition, DOE is sensitive to classification issues and will work with agencies to ensure that sensitive information is treated appropriately. DOE also recognizes that agencies may need flexibility in defining what buildings or projects serve critical national security functions, and that a pending petition may delay projects that serve critical national security functions. DOE intends to work closely with agencies pertaining to petitions for projects with critical national security functions as part of its implementation guidance following publication of the rule.

D. Definitions

The final rule adds definitions for ''construction cost,'' ''design for renovation,'' ''EISA-subject building or project,'' ''Federal building,'' ''Fiscal year (FY),'' ''Fossil fuel-generated energy consumption,'' ''Major renovation,'' ''Major renovation cost,'' ''Major renovation of all Scope 1 fossil fuel-using systems,'' ''Major renovation of a Scope 1 fossil fuel-using building system or component,'' ''Multi-family high-rise residential building,'' ''Shift adjustment multiplier,'' and ''Technical impracticability,'' and it revises the definition for ''proposed building'' to 10 CFR 433.2 and 10 CFR 435.2. Any comments relating to specific definitions have been previously discussed in Section III. In addition to

[16] The definition of ''technical impracticability'' in this rule is defined as achieving the fossil fuel-based energy consumption targets would (1) not be feasible from an engineering design or execution standpoint due to existing physical or site constraints that prohibit modification or addition of elements or spaces; (2) significantly obstruct building operations and the functional needs of a building, specifically for industrial process loads, critical national security functions, mission critical information systems as defined in NIST SP 800–60 Vol. 2 Rev. 1, and research operations; or (3) significantly degrade energy resiliency and energy security of building operations.

the substantive edits to the definitions of ''construction cost,'' ''fossil fuel-generated energy consumption,'' and ''major renovation cost,'' discussed previously, DOE also makes minor revisions to the definitions of ''EISA-subject building or project,'' ''Federal building,'' ''fiscal year (FY),'' ''major renovation,'' and ''technical impracticability'' to remove unnecessary language or to provide clarification. These minor revisions do not change the nature of the definitions proposed in the 2022 SNOPR.

IV. Additional Issues Raised by Commenters

A. Authority

AGA argued in its comments that DOE's authority to promulgate performance standards to reduce emissions from fossil fuel-generated energy consumption expired in December 2008.[17] AGA noted that section 433 of EISA directs DOE to establish by rule revised Federal building energy efficiency performance standards for both new Federal buildings and for Federal buildings undergoing major renovations, ''[n]ot later than 1 year after December 19, 2008.'' AGA, Doc. No. 100, pg. 4. Because ''agencies may act only when and how Congress lets them [,]'' AGA asserted that DOE's authority to establish these standards has lapsed. *Id.,* pg. 5 (*citing Cent. United Life Ins. Co.* v. *Burwell,* 827 F.3d 70, 73 (D.C. Cir. 2016)). However, the Supreme Court of the United States has routinely held that unless a statute specifies a consequence for noncompliance with a statutory deadline, an agency's obligation does not disappear when a statutory deadline passes. *United States* v. *James Daniel Good Real Prop.,* 510 U.S. 43, 63 (1993); *see Barnhart* v. *Peabody Coal Co.,* 537 U.S. 149, 159 (2003)*; Regions Hosp.* v. *Shalala,* 522 U.S. 448, 459 n.3 (1998). The EISA does not specify any consequence for noncompliance with its deadlines.

B. APA Concerns

Two commenters raised procedural concerns related to the 2022 SNOPR. First, APGA expressed concern that stakeholders were deprived from meaningfully commenting on the 2022 SNOPR. APGA, Doc. No. 102, pg. 9. APGA argued that interested parties needed additional time to review the 2022 SNOPR because the rule proposed marked a significant departure from the previous proposed rules. *Id.* In addition, APGA stated that DOE failed to provide a timely copy of the transcript of the January 5, 2023, public meeting, and, as a result, stakeholders that were not able to attend the meeting were unable to review the relevant docket materials. *Id.*

DOE notes that it granted the requests from stakeholders for a 30-day extension of the public comment period. 88 FR 12267. As a result, interested parties had 90 days to review the 2022 SNOPR. Multiple parties used this period as an opportunity to file revised comments. *See e.g.,* ASHRAE, Doc. Nos. 96 and 113, Business Council for Sustainable Energy, Doc. Nos. 87 and 115, and joint comments from local officials, Doc. Nos. 94 and 125.

In addition, a copy of the transcript of the January 5, 2023, public meeting is on the docket web page for this rulemaking. Although the transcript was posted after the initial 60-day comment period closed, it was available when DOE re-opened the comment period for an additional 30 days, providing sufficient time for parties to review and comment on that material in the docket.

V. Methodology, Analytical Results, and Conclusion

This final rule implements fossil fuel reduction targets established under EISA, which will begin to reduce GHG emissions in the near term and prepare Federal buildings for a clean energy future. By ensuring that Federal buildings are designed—either from the ground up, or when being renovated—to reduce fossil fuel use, the rule ensures that long-term, as the electric grid integrates more carbon free energies, emissions will be reduced. DOE recognizes that exchanging on-site fossil fuel generated energy for increased reliance on the electric grid, which may still be generating energy with fossil fuels, will not in every application lead to an immediate reduction in emissions of GHGs and SO_2 and in some cases could result in some increase in energy costs. This is explored in more detail in Chapter 1, Section 1.8 of the technical support document by examining the overall sensitivity of the rule to future grid cleaning scenarios. However, agencies must make decisions for the long-term, making capital investments today which will have lasting impacts well into the future, resulting in net benefits over the time and the life of the asset. Net benefits will increase significantly as the grid incorporates cleaner sources of electricity, as illustrated by the supporting technical analysis. In addition, DOE expects emerging and improving technological advancements in electric equipment, such as heat pumps, will lead to additional and dramatic site energy savings, further improving the emissions and cost savings cases for this rule.

A. Cost-Effectiveness

DOE conducted an Environmental Assessment (EA) for this final rulemaking.[18] In addition, DOE referenced a previous technical analysis conducted by the DOE Building Energy Codes Program that evaluated the energy and cost savings impacts, as well as cost effectiveness, of Standard 90.1–2019.[19] As described in the EA, DOE identified a rate of new Federal commercial construction of 13.3 million square feet per year, with a distribution of building types as shown in Table V–1. Starting in 2030, section 205(c)(ii) of Executive Order 14057, ''Catalyzing Clean Energy Industries and Jobs Through Federal Sustainability'' (December 8, 2021), requires agencies to ''design new construction and modernization projects greater than 25,000 gross square feet to be net-zero emissions by 2030.'' This effectively reduces the impact of this rule to apply to new construction and major renovation projects that fall above the cost threshold but are also below 25,000 gross square feet. For the year 2030 and beyond, DOE estimated new Federal commercial and multi-family high-rise residential building construction volume will be 2.2 million square feet per year, with a distribution of building types as shown in Table V–2. The distribution of building types is based on an extraction of the latest 10 years of new construction data entered into the Federal Real Property Portfolio Management System (''FRPP MS'') that meets the required cost threshold of the final rule for cases both before and after the 25,000 Sf minimum triggering E.O. 14057 compliance.[20]

Additionally, DOE identified an estimated rate of Federal major renovation projects that would be influenced by this rule. To do so, DOE utilized data from the Federal

[17] AGA, Doc. No. 100, pg. 4. NPGA supported AGA comments with respect to ''the questionable foundation on which this rulemaking was proposed.'' NPGA, Doc. No. 90, pg. 7.

[18] The Environmental Assessment (EA) (DOE/EA–2165) is entitled, ''Environmental Assessment for Final Rule, 10 CFR part 433, 'Energy Efficiency Standards for New Federal Commercial and Multi-Family High-Rise Residential Buildings' Baseline Standards Update.'' The EA may be found in the docket for this rulemaking and at *www.energy.gov/node/472482.*

[19] *See* DOE's analysis of the cost savings of the 2016 and 2019 ASHRAE 90.1 Standards at *www.energycodes.gov/sites/default/files/2020-07/90.1-2016_National_Cost-Effectiveness.pdf* and *www.energycodes.gov/sites/default/files/2021-07/90.1-2019_National_Cost-Effectiveness.pdf,* respectively.

Compliance Tracking System (''CTS'') where agencies report data on building efficiency improvement projects. The data from CTS was queried to include only those projects that would meet the cost threshold and have impacts on site fossil fuel energy consumption. As not all agencies are compliant in reporting data into CTS, results were scaled up to account for agencies out of compliance. As CTS does not supply data on the types of buildings for the reported projects, the distribution of eligible Federal buildings for a renovation that would meet the cost threshold was applied to the estimated total project square footage. DOE identified an estimated rate of new Federal major renovation construction of 1.36 million square feet per year with a distribution of building types as shown in Table V–1. As noted above, Executive Order 14057 effectively reduces the impact of this rule to apply only to new construction and major renovation projects that fall above the cost threshold but are also below 25,000 gross square feet. Taking this into account for the year 2030 and beyond, the estimated new Federal commercial and multi-family high-rise residential building major renovation construction volume per year will be 0.4 million square feet per year, with a distribution of building types as shown in Table V–1 and Table V–2 of this document.

These tables also show the prototype buildings incorporated into simulations that are used to estimate energy use in each building type. DOE derived these prototype buildings from 16 building types in 17 climate zones [21] using its Commercial Prototype Building models.[22] Of the 16 prototype buildings, DOE developed costs for 6 prototype buildings that represent the majority of the building types used by Federal agencies to determine the cost effectiveness of Standard 90.1–2016 and Standard 90.1–2019.[23] DOE then extracted the cost-effectiveness information for those prototype buildings and weighted those values as appropriate to obtain an average cost effectiveness value for building types found in the Federal commercial sector.

TABLE V–1—NEW FEDERAL COMMERCIAL AND HIGH-RISE MULTI-FAMILY CONSTRUCTION VOLUME BY BUILDING TYPE FOR BUILDINGS CONSTRUCTED IN YEARS 2025–2029

Building type	Fraction of Federal construction volume (by floor area) (%)	Assumed BECP prototypes for energy savings	Assumed BECP prototypes for cost effectiveness
Office	17.77	Small Office, Medium Office, Large Office	Small Office, Large Office.
Dormitories and Barracks	14.57	Small Hotel, Mid-rise Apartment, High-rise Apartment.	Small Hotel, Mid-rise Apartment.
School	15.65	Secondary School	Primary School.
Service	15.16	Stand-alone Retail, Non-refrigerated Warehouse	Stand-alone Retail.
Other Institutional Uses	5.76	None *	None.
Hospital	7.80	Hospital	Small Office, Large Office.
Warehouses	2.95	Non-Refrigerated Warehouse	None.
Laboratories	4.24	Medium Office, Hospital	Small Office, Large Office.
All Other	2.74	None	None.

* Note that energy savings and cost-effectiveness mapping are not available for a number of Federal building types, with other institutional uses, warehouses, and all other being the largest Federal building types with no reliable mapping. As described in this section, DOE considered energy savings and costs for these unmapped Federal building types to be equivalent to the weighted energy savings and cost for the mapped Federal building types.

DOE has determined estimated incremental construction first cost information for the building types and climate zones analyzed for buildings compliant with this final rule (compliant buildings) versus Standard 90.1–2019 (see Table V–3).[24]

TABLE V–3—INCREMENTAL CONSTRUCTION FIRST COST (2022$) FOR COMPLIANT BUILDING DESIGN UNDER THE FINAL RULE VS. STANDARD 90.1–2019

Prototype	Value	ASHRAE Climate Zone *				
		2A	3A	3B	4A	5A
Small Office	First Cost	$673	$584	$515	$1,666	$641
	/ft²	0.12	0.11	0.09	0.30	0.12
Large Office	First Cost	261,781	268,194	196,408	354,808	223,553
	/ft²	0.52	0.54	0.39	0.71	0.45
Stand-alone Retail	First Cost	19,608	20,240	19,740	21,563	19,363
	/ft²	0.79	0.82	0.80	0.87	0.78
Primary School	First Cost	(126,946)	(121,994)	(116,139)	(94,722)	(122,894)
	/ft²	(1.72)	(1.65)	(1.57)	(1.28)	(1.66)
Small Hotel	First Cost	(104,866)	(104,624)	(104,396)	(101,194)	(103,044)
	/ft²	(2.43)	(2.42)	(2.42)	(2.34)	(2.38)
Mid-rise Apartment	First Cost	(18,343)	(17,490)	(18,113)	(12,445)	(25,126)
	/ft²	(0.54)	(0.52)	(0.54)	(0.37)	(0.74)

* Negative costs (shown in parentheses) indicate a reduction in cost due to changes in the code, usually due to reduced HVAC capital cost and reduction of venting required for on-site combustion.

[24] Note that the values in Table V–3 have been adjusted to reflect 2022$ from the table that appears in DOE's determination of energy savings for Standard 90.1–2019, which were in 2020$. This adjustment was made using the GDP deflator value to correct for inflation between 2020 and 2022. Organization for Economic Co-operation and Development, GDP Implicit Price Deflator in United States, retrieved from FRED, Federal Reserve Bank of St. Louis; *fred.stlouisfed.org/series/USAGDPDEFAISMEI.* These values have also been adjusted to reflect the same underlying economic assumptions as the 2019 version, and sales tax has also been removed.

DOE used data from Table V–3 to calculate preliminary values for overall estimated incremental first cost of construction for Federal commercial and high-rise, multi-family residential buildings. DOE calculated the incremental first cost of the Federal building types based on the DOE cost prototypes shown in the far-right column of Table V–1 of this document. DOE then calculated the weighted average incremental cost for mapped Federal building types based on their corresponding prototypes, which represent an estimated 79.3 percent of new Federal construction. This weighted incremental cost was assigned to un-mapped Federal building types, and a total weighted incremental cost was calculated by multiplying the incremental cost for each Federal building type by the fraction of Federal construction shown in Table V–1.

The estimated national incremental first cost for building types was developed by multiplying the average (across climate zones) incremental first cost of the prototypes Standard 90.1 cost-effectiveness analysis by the fraction of the Federal sector construction volume shown in Table V–1, and then multiplying that by the total estimate of Federal new construction floorspace.[25] DOE estimates that total first cost outlays for new Federal buildings will be less under compliant designs than under Standard 90.1–2019, primarily due to lower HVAC equipment costs for some building types (*see* Table V–3). The decrease in capital cost is primarily driven by lower equipment cost as well as the avoidance of gas infrastructure costs, which can include gas lines and venting. See Chapter 1, section 3 of DOE's technical support document for more information. The resulting total incremental first cost estimate is a savings of $8.44 million per year. The average first cost decrease is $1.82 per square foot. These first cost decreases are a result of the lower capital costs of the assumed electric equipment types as dictated in the ASHRAE and IECC energy codes (as mandated in 10 CFR part 433 and 10 CFR part 435 and are the baseline for this modified building efficiency standard). Minimally compliant electric equipment was assumed in the proposed case as hitting the ''30% better'' (than baseline) performance goal as generally required by regulation, but include a cost effectiveness caveat that can reduce the goal down to minimal compliance. As can be seen in Table V–4,[26] most building types are projected to switch their space heating systems from a fossil fuel burning system over to an electric resistance-based system.

TABLE V–4—BREAKDOWN OF PROPOSED HEATING SYSTEM BY BUILDING PROTOTYPE

Building prototype	Yearly constructed SF—Post 2030 (%)	Yearly constructed SF—Pre 2030 (%)	Baseline gas unit efficiency	Proposed electric unit efficiency	Space heat notes
Small Office	12.8	14.8	0.81	99% Electric Boilers	Convert using AFUE for gas furnace and AFUE Estimate for Electric Furnace.
Medium Office	2.6	5.5	0.79	99% Electric Furnaces	Convert using pre 1/1/2023 Et estimated Et for Furnaces assuming 0.75 casing loss.

High-Rise Apartment	2.7	8.2	0.82	99% Electric Boilers	Convert using Et Estimate for boilers.

An estimated 17.7 percent of the projects would utilize heat pumps in their proposed ''all electric'' case (those that map to Stand Alone Retail and Mid-Rise Apartment prototype models) with assumed efficiency performance metrics as noted. Service hot water systems (when not already specified as an electric system per the 10 CFR parts 433 and 435 requirements) are similarly assumed to be minimally compliant electric resistance systems with 99-percent efficiencies. Cooking systems, where present, are assumed to switch from 40-percent efficient gas systems to 70-percent standard efficiency electric systems.

It should be noted that in all cases higher efficiency electric equipment is available on the market, but the statutory authority of this rule is limited to total building reduction targets and does not specify specific equipment types or efficiency levels. An agency is free to design a project per their own site, cost, and usage specific needs, while complying with applicable efficiency targets. As such, the analysis presented in this final rule intends to capture the base-level compliance cases only. DOE encourages agencies to carefully consider and select higher efficiency equipment (such as even higher efficiency heat pumps and/or more widespread adoption) to the greatest extent possible, given project-specific needs and constraints. Higher efficiency equipment can often provide projects with a lifecycle cost effective solution that saves even more energy and emissions (potentially with higher up-front capital costs) than agencies would achieve through just base compliance with this rule.

DOE also analyzed the relative impact of the final rule on the first cost of newly constructed Federal buildings as

[25] For the Federal office building, the small and large office prototype first costs were averaged. For the Federal education building, the primary school prototype first cost was used. For the Federal dormitories/barracks building type, the small hotel and mid-rise apartment prototype first costs were averaged.

[26] See Chapter 1 of DOE's technical support document supporting this rulemaking for more information.

a percentage of the overall annual cost of newly constructed Federal commercial and high-rise buildings. In order to estimate the total cost of construction for new Federal buildings, DOE obtained estimated construction costs for new Federal commercial and high-rise multifamily buildings from RS Means (2020) [27] for the six building types analyzed in DOE's cost-effectiveness report. These new construction costs were weighted by the percent of Federal floorspace to develop an estimated average cost of a new Federal building of $198 per square foot, as shown in Table V–5. This average construction cost may be multiplied by the overall total of 19.54 million square feet of new Federal construction per year used in this rulemaking to estimate the annual total cost of all new Federal commercial and high-rise multi-family construction, which is $3.86 billion. As previously noted, first cost savings associated with this rulemaking are estimated at $8.62 million per year, indicating a potential cost reduction in new Federal construction costs of 0.223 percent ($8.62 million divided by $3.86 billion).

TABLE V–5—FIRST COST OF TYPICAL NEW FEDERAL BUILDING IN $/FT^2

* All building first cost data from RS Means 2020.

DOE determined that the total incremental first cost estimate for Federal buildings (as mapped to the prototype buildings in Table V–1) is a savings of $149.2 million (at a 3-percent discount rate) and a savings of $91.5 million (based on a 7-percent discount rate), with an average first cost decrease of $1.07 per square foot (at a 3-percent discount rate) and $0.66 per square foot (at a 3-percent discount rate).

For annualized energy cost savings, DOE used a similar approach to that used for incremental first cost. That is, DOE developed the national annualized energy cost savings [28] for building types by multiplying the average (across climate zones) energy cost savings (determined from the same Standard 90.1 cost-effectiveness analysis) by the fraction of the Federal sector construction volume shown in Table V–1, and then multiplying that by the total estimate of Federal new construction floorspace.[29] DOE notes that it used the best publicly-available data in its analysis, but data about the location of future new construction or major renovations in the Federal sector are limited. Table V–6 shows the estimated annual energy cost savings by prototype buildings for a compliant building compared to buildings meeting only Standard 90.1–2019. This comparison shows projected increases in energy costs across the board because despite the increases in equipment efficiency and overall site energy savings, the projected difference between the cost of fossil fuels (primarily natural gas) and purchased electricity, when evaluated at a national level, are too high for the improvements to overcome. EIA's Annual Energy Outlook for 2023 (AEO 2023) [30] outlook rate projections indicate that for the same amount of site energy consumed, electricity is about 3.68 times more expensive than natural gas. This number is projected to gradually fall over time to 3.34 times more expensive by the year 2050.

As it did for the incremental cost analysis, DOE adjusted the 2019 energy cost savings analysis to use the same underlying economic assumptions for its analysis of compliant building designs, including fuel prices, fuel price escalations, labor and material costs, and the removal of sales tax. The resulting total annualized energy cost impacts for the affected buildings' 14.7 million square feet of annual construction for years 2025–2029 and 2.6 million square feet of annual construction for years 2030–2054 was estimated to be an additional cost of $11.05 million per year (at a 3-percent discount rate) and $8.43 million per year (at a 7-percent discount rate). The annualized energy cost impacts were estimated to be an additional $2.38 per square foot (at a 3-percent discount rate) and an additional $1.82 per square foot (at a 7-percent discount rate). The annual energy cost impacts are estimated for one year of Federal commercial and high-rise multi-family

[27] RS Means. 2020. RS Means Building Construction Cost Data, 78th Ed. Construction Publishers & Consultants. Norwell, MA.

[28] The energy costs used were the national average energy costs used by ASHRAE in the development of Standard 90.1–2019. To quote the cost-effectiveness analysis report ''Energy rates used to calculate the energy costs from the modeled energy usage were $0.98/therm for fossil fuel and $0.1063/kWh for electricity. These rates were used for the Standard 90.1–2019 energy analysis and derived from the EIA data. These were the values approved by the SSPC 90.1 for cost-effectiveness for the evaluation of individual addenda during the development of Standard 90.1–2019.''

[29] For the Federal office building, the small and large office prototype LCCs were weighted by estimated fraction of small and large offices observed in the FRPP MS database over the past 10 years of construction. For the Federal education building, the primary school prototype LCC was used. For the Federal dorm/barracks building type, the small office, small hotel, and mid-rise apartment prototype LCCs were averaged.

Total	100.00	(11.05)	(8.43)	(2.38)	(1.82)

Note: Negative numbers (shown in parentheses) represent an increased cost.

For LCC net savings, DOE used a similar approach to that used for incremental first cost and first year energy cost savings. That is, DOE developed the national annual LCC net savings [31] for the entire rule by multiplying the average (across climate zones) LCC net savings (determined from the same Standard 90.1 cost-effectiveness analysis) by the fraction of the Federal sector construction volume shown in Table V–1, and then multiplying that result by the total estimate of Federal new construction floorspace.[32] DOE only used the climate zones per table V–3 to help further estimate first cost of equipment given variances in equipment type requirements per building type per climate zone. Table V–7 shows annual LCC net savings by prototype buildings for the compliant buildings compared to buildings meeting only Standard 90.1–2019. As DOE did for the incremental cost analysis, DOE adjusted the 2019 LCC analysis to use the same underlying economic assumptions as the compliant buildings, including fuel prices, fuel price escalations, labor and material costs, and the removal of sales tax. The resulting total LCC net savings for 14.7 million square feet of annual construction for years 2025–2029 and 2.6 million square feet of annual construction for years 2030–2054 was estimated to be a cost of $54.87 million (at a 3-percent discount rate) and a savings of $0.089 million (based on a 7 percent discount rate). The average LCC net impacts in year 1 was estimated to be a cost o- $2.97 million (at a 3 percent discount rate) and a savings of $0.01 million (based on a 7-percent discount rate. The annual LCC savings are for one year of Federal commercial and high-rise multi-family residential construction, and those savings would accumulate over the LCC evaluation period. For the purpose of this analysis, DOE relied on a 30-year period.[33]

TABLE V–7—ANNUAL NET LIFE-CYCLE COST (LCC) (2022$) FOR COMPLIANT BUILDING DESIGN VS. STANDARD 90.1–2019

Building prototype	Total prototype usage	Cumulative LCC cost savings, (M$2022)		Annualized LCC cost savings, annualized (M$2022)

Note: Negative numbers (shown in parentheses) represent an increased cost or disbenefit.

DOE calculated the net present value (''NPV'') of the change in equipment cost and reduced operating cost associated with the difference between the compliant case and Standard 90.1–2019. The NPV is the value in the present of a time-series of costs and savings, equal to the present value of savings in operating cost minus the present value of the increased total equipment cost.

DOE determined the total increased equipment cost for each year of the analysis period (2024–2053) using the incremental construction cost described previously. DOE determined the present value of operating cost savings for each year from the beginning of the analysis period to the year when all Federal buildings constructed by 2054 have been retired, assuming a 30-year lifetime of the building.

The average annual operating cost includes the costs for energy, repair, or replacement of building components (*e.g.,* heating and cooling equipment, lighting, and envelope measures), and maintenance of the building. DOE determined the per-unit annual increase in operating cost based on the differences in energy costs plus replacement and maintenance cost savings, which were calculated in the underlying cost-effectiveness analysis by DOE's Building Energy Codes Program. While DOE used the methodology and prices described above to calculate first year energy cost savings and LCC net savings, for the NPV calculations, DOE determined the per-unit annual savings in operating cost by multiplying the per square foot annual electricity and natural gas savings in energy consumption by the appropriate energy price from AEO 2023. DOE forecasted energy prices based on projected average annual price changes in AEO 2023 to develop the operating cost savings through the analysis period.

DOE uses national discount rates to calculate national NPV. DOE estimated NPV using both a 3-percent and a 7-percent real discount rate, in accordance with the Office of Management and Budget's guidance to Federal agencies on the development of regulatory analysis, particularly section E therein: *Identifying and Measuring Benefits and Costs.*[34] The NPV is the sum over time of the discounted net savings.

The present value of increased equipment costs is the annual total cost increase in each year (the difference between the final rule and Standard 90.1–2019), discounted to the present, and summed throughout the analysis period (2024 through 2053) plus 30-year lifetime. Because new construction is held constant through the analysis period, the installed cost is constant.

The present value of savings in operating cost is the annual savings in operating cost (the difference between final rule and Standard 90.1–2019), discounted to the present and summed through the analysis period (2024 through 2053) plus 30-year lifetime. Savings are decreases in operating cost associated with the higher energy efficiency associated with buildings designed to the final rule compared to Standard 90.1–2019. Total annual savings in operating cost are the savings per square foot multiplied by the number of square feet that survive in a particular year through the lifetime of the buildings constructed in the last year of the analysis period.

B. Emissions Analysis

The emissions analysis consists of two components. The first component estimates the effect of potential Federal building energy standards on power sector and site (where applicable) combustion emissions of CO_2, NO_X, SO_2, and Hg. The second component estimates the impacts of potential Federal building energy standards on emissions of two additional greenhouse gases, CH_4 and N_2O, as well as the changes to emissions of other gases due to ''upstream'' activities in the fuel production chain. These upstream activities comprise extraction, processing, and transporting fuels to the site of combustion.

The analysis of electric power sector emissions of CO_2, NO_X, SO_2, and Hg uses emissions factors intended to represent the marginal impacts of the change in electricity consumption associated with Federal building energy standards. The methodology is based on results published for the AEO 2023, including a set of side cases that implement a variety of efficiency-related policies. The analysis presented in this notice uses projections from *AEO 202*3. Power sector emissions of CH_4 and N_2O

from fuel combustion are estimated using Emission Factors for Greenhouse Gas Inventories published by the Environmental Protection Agency (''EPA'').[35]

To demonstrate this final rule's effects under the Biden-Administration clean-electricity goals, DOE analyzed an additional case where the future grid emission factors were assumed to follow a ''100% reduction by 2035'' (100 by 2035) profile as utilized in the National Renewable Energy Lab's 100% Clean Electricity by 2035 Study and as defined in NREL's ''Cambium 2022 Scenario Descriptions and Documentation'' report [36] detailed in the accompanying TSD for this final rule. This case represents a change in national electricity generation that assumes national power sector CO_2 emissions reach 100-percent below 2005 levels by 2035. This more aggressive case results in the final rule producing immediate decreases in CO_2e gas emissions on a yearly basis (starting in the first analysis year of 2025). Details of this analysis can be found in Chapter 1 of the TSD for this final rule.

Until 2030, the on-site operation of construction subject to this final rule allows combustion of fossil fuels and results in emissions of CO_2, NO_X, SO_2, CH_4, and N_2O where these products are used. Site emissions of these gases were estimated using Emission Factors for Greenhouse Gas Inventories and, for NO_X and SO_2 emissions intensity factors from an EPA publication.[37]

Full fuel cycle upstream emissions, which include emissions from fuel combustion during extraction, processing, and transportation of fuels, and ''fugitive'' emissions (direct leakage to the atmosphere) of CH_4 and CO_2, are estimated based on the methodology described in Chapter 1 of the TSD.

The emissions intensity factors are expressed in terms of physical units per MWh or MMBtu of site energy savings. For power sector emissions, specific emissions intensity factors are calculated by sector and end use. Total emissions changes are estimated using the energy savings calculated in the national impact analysis with energy savings derived from a load shifting modeling analysis of the Standard 90.1–2019 prototype models.

1. Air Quality Regulations Incorporated in DOE's Analysis

DOE's analysis for the electric power sector reflects the AEO, which incorporates the projected impacts of existing air quality regulations on emissions. AEO 2023 reflects, to the extent possible, laws and regulations adopted through mid-November 2022, including the emissions control programs discussed in the following paragraphs and the Inflation Reduction Act.[38]

SO_2 emissions from affected electric generating units (''EGUs'') are subject to nationwide and regional emissions cap-and-trade programs. Title IV of the Clean Air Act sets an annual emissions cap on SO_2 for affected EGUs in the 48 contiguous States and the District of Columbia (''D.C.''). 42 U.S.C. 7651 *et seq.* SO_2 emissions from numerous States in the eastern half of the United States are also limited under the Cross-State Air Pollution Rule (''CSAPR''). 76 FR 48208 (Aug. 8, 2011). CSAPR requires these States to reduce certain emissions, including annual SO_2 emissions, and went into effect as of January 1, 2015. The AEO 2023 incorporates implementation of CSAPR, including the update to the CSAPR ozone season program emission budgets and target dates issued in 2016. 81 FR 74504 (Oct. 26, 2016). Compliance with CSAPR is flexible among EGUs and is enforced through the use of tradable emissions allowances. Under existing EPA regulations, for states subject to SO_2 emissions limits under CSAPR, any excess SO_2 emissions allowances resulting from the lower electricity demand caused by the adoption of an efficiency standard could be used to permit offsetting increases in SO_2 emissions by another regulated EGU.

However, beginning in 2016, SO_2 emissions began to fall as a result of the Mercury and Air Toxics Standards (''MATS'') for power plants. 77 FR 9304 (Feb. 16, 2012). The final MATS rule establishes power plant emission standards for mercury, acid gases, and non-mercury metallic toxic pollutants. Because of the emissions reductions under the MATS, it is unlikely that excess SO_2 emissions allowances resulting from the lower electricity demand would be needed or used to permit offsetting increases in SO_2 emissions by another regulated EGU. DOE estimated SO_2 emissions impacts using emissions factors based on AEO 2023.

CSAPR also established limits on NO_X emissions for numerous States in the eastern half of the United States. Federal building energy standards would have little effect on NO_X emissions in those States covered by CSAPR emissions limits if excess NO_X emissions allowances resulting from the lower electricity demand could be used to permit offsetting increases in NO_X emissions from other EGUs. In such case, NO_X emissions would remain near the limit even if electricity generation goes down. Depending on the configuration of the power sector in the different regions and the need for allowances, however, NO_X emissions might not remain at the limit in the case of lower electricity demand. That would mean that Federal building energy standards might reduce NO_X emissions in covered States. Despite this possibility, DOE has chosen to be conservative in its analysis and has maintained the assumption that Federal building energy standards will not reduce NO_X emissions in States covered by CSAPR. Federal building energy standards would be expected to reduce NO_X emissions in the States not covered by CSAPR. DOE used AEO 2023 data to derive NO_X emissions factors for the group of States not covered by CSAPR.

The MATS limit mercury emissions from power plants, but they do not include emissions caps and, as such, DOE's Federal building energy standards would be expected to slightly reduce Hg emissions. DOE estimated mercury emissions reduction using emissions factors based on AEO 2023, which incorporates the MATS.

C. Monetizing Emissions Impacts

As part of the development of this final rule, for the purpose of complying with the requirements of Executive Order 12866, DOE considered the estimated monetary benefits from the reduced emissions of CO_2, CH_4, N_2O, NO_X, and SO_2 that are expected to result from the energy performance standards considered. This section summarizes the basis for the values used for monetizing the emissions benefits and presents the values considered in this final rule.

To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates under Executive Order 13990, published in February 2021 by the Interagency Working Group on the Social Cost of

Greenhouse Gases (''IWG'') (''February 2021 SC–GHG TSD'').

1. Monetization of Greenhouse Gas Emissions

DOE estimates the monetized benefits of the reductions in emissions of CO_2, CH_4, and N_2O by using a measure of the social cost (''SC'') of each pollutant (*e.g.,* SC–CO_2). These estimates represent the monetary value of the net harm to society associated with a marginal increase in emissions of these pollutants in a given year, or the benefit of avoiding that increase. These estimates are intended to include (but are not limited to) climate-change-related changes in net agricultural productivity, human health, property damages from increased flood risk, disruption of energy systems, risk of conflict, environmental migration, and the value of ecosystem services.

DOE exercises its own judgment in presenting monetized climate benefits as directed by applicable Executive orders, and DOE would reach the same conclusion presented in this rule in the absence of the social cost of greenhouse gases. That is, the social costs of greenhouse gases, whether measured using the February 2021 interim estimates presented by the Interagency Working Group on the Social Cost of Greenhouse Gases or by another means, did not affect the rule ultimately finalized by DOE because section 433 of EISA specifically directs DOE to establish regulations that require certain new Federal buildings and Federal buildings undergoing major renovations to reduce their on-site fossil fuel-generated energy consumption by specific amounts and by specific dates; that is, the achievable emissions reductions, and their monetized benefits, would not have changed the energy-consumption reductions required by this rule.

DOE estimated the global social benefits of CO_2, CH_4, and N_2O reductions using SC–GHG values that were based on the interim values presented in the February 2021 SC–GHG TSD. The SC–GHG is the monetary value of the net harm to society associated with a marginal increase in emissions in a given year, or the benefit of avoiding that increase. In principle, the SC–GHG includes the value of all climate change impacts, including (but not limited to) changes in net agricultural productivity, human health effects, property damage from increased flood risk and natural disasters, disruption of energy systems, risk of conflict, environmental migration, and the value of ecosystem services. The SC–GHG therefore, reflects the societal value of reducing emissions of the gas in question by one metric ton. The SC–GHG is the theoretically appropriate value to use in conducting benefit-cost analyses of policies that affect CO_2, N_2O and CH_4 emissions. As a member of the IWG involved in the development of the February 2021 SC–GHG TSD, DOE agreed that the interim SC–GHG estimates represent the most appropriate estimate of the SC–GHG until revised estimates were developed reflecting the latest, peer-reviewed science. *See* 87 FR 78382, 78406–78408 for discussion of the development and details of the IWG SC–GHG estimates.

There are a number of limitations and uncertainties associated with the SC–GHG estimates. First, the current scientific and economic understanding of discounting approaches suggests discount rates appropriate for intergenerational analysis in the context of climate change are likely to be less than 3-percent, near 2-percent or lower. Second, the IAMs used to produce these interim estimates do not include all of the important physical, ecological, and economic impacts of climate change recognized in the climate change literature and the science underlying their ''damage functions''—*i.e.,* the core parts of the IAMs that map global mean temperature changes and other physical impacts of climate change into economic (both market and nonmarket) damages—lags behind the most recent research. For example, limitations include the incomplete treatment of catastrophic and non-catastrophic impacts in the integrated assessment models, their incomplete treatment of adaptation and technological change, the incomplete way in which inter-regional and intersectoral linkages are modeled, uncertainty in the extrapolation of damages to high temperatures, and inadequate representation of the relationship between the discount rate and uncertainty in economic growth over long time horizons. Likewise, the socioeconomic and emissions scenarios used as inputs to the models do not reflect new information from the last decade of scenario generation or the full range of projections. The modeling limitations do not all work in the same direction in terms of their influence on the SC–CO_2 estimates. However, as discussed in the February 2021 TSD, the IWG has recommended that, taken together, the limitations suggest that the interim SC–GHG estimates used in this rule likely underestimate the damages from GHG emissions. DOE concurs with this assessment.

DOE's derivations of the SC–GHGs (*i.e.,* SC–CO_2, SC–N_2O, and SC–CH_4) values used for this rule are discussed in the following sections, and the results of DOE's analyses estimating the benefits and disbenefits of the changes in emissions of these pollutants are presented in section VI.A. of this document.

a. Social Cost of Carbon

The SC–CO_2 values used for this rule were based on the values developed for the February 2021 SC–GHG TSD, which are shown in Table V–8 in five-year increments from 2020 to 2050. The set of annual values that DOE used, which was adapted from estimates published by EPA,[39] is presented in the final rule TSD. These estimates are based on methods, assumptions, and parameters identical to the estimates published by the IWG, which were based on EPA modeling, and include values for 2051 to 2070. DOE expects additional climate benefits to accrue for products still operating after 2070, but a lack of available SC–CO_2 estimates for emissions years beyond 2070 prevents DOE from monetizing these potential benefits in this analysis.

TABLE V–8—ANNUAL SC–CO_2 VALUES FROM 2021 INTERAGENCY UPDATE, 2020–2050 (2020$ PER METRIC TON CO_2)

Year	Discount rate			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
2020	14	51	76	152
2025	17	56	83	169

[39] *See* EPA, Revised 2023 and Later Model Year Light-Duty Vehicle GHG Emissions Standards: Regulatory Impact Analysis, Washington, DC, December 2021. Available at *nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P1013ORN.pdf* (last accessed February 21, 2023).

TABLE V–8—ANNUAL SC–CO_2 VALUES FROM 2021 INTERAGENCY UPDATE, 2020–2050 (2020$ PER METRIC TON CO_2)—Continued

Year	Discount rate			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
2030	19	62	89	187
2035	22	67	96	206
2040	25	73	103	225
2045	28	79	110	242
2050	32	85	116	260

DOE multiplied the CO_2 emissions reduction estimated for each year by the SC–CO_2 value for that year in each of the four cases. DOE adjusted the values to 2022$ using the implicit price deflator for gross domestic product (''GDP'') from the Bureau of Economic Analysis. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the four cases using the specific discount rate that had been used to obtain the SC–CO_2 values in each case.

b. Social Cost of Methane and Nitrous Oxide

The SC–CH_4 and SC–N_2O values used for this rule were based on the values developed for the February 2021 SC–GHG TSD. Table V–9 shows the updated sets of SC–CH_4 and SC–N_2O estimates from the latest interagency update in 5-year increments from 2020 to 2050. The full set of annual values used is presented in the final rule TSD. To capture the uncertainties involved in regulatory impact analysis, DOE has determined it is appropriate to include all four sets of SC–CH_4 and SC–N_2O values, as recommended by the IWG. DOE derived values after 2050 using the approach described above for the SC–CO_2.

TABLE V–9—ANNUAL SC–CH_4 AND SC–N_2O VALUES FROM 2021 INTERAGENCY UPDATE, 2020–2050 (2020$ PER METRIC TON)

Year	SC–CH_4 Discount rate and statistic				SC–N_2O Discount rate and statistic			
	5%	3%	2.5%	3%	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile	Average	Average	Average	95th percentile
2020	670	1500	2000	3900	5800	18000	27000	48000
2025	800	1700	2200	4500	6800	21000	30000	54000
2030	940	2000	2500	5200	7800	23000	33000	60000
2035	1100	2200	2800	6000	9000	25000	36000	67000
2040	1300	2500	3100	6700	10000	28000	39000	74000
2045	1500	2800	3500	7500	12000	30000	42000	81000
2050	1700	3100	3800	8200	13000	33000	45000	88000

DOE multiplied the CH_4 and N_2O emissions change estimated for each year by the SC–CH_4 and SC–N_2O estimates for that year in each of the cases. DOE adjusted the values to 2022$ using the implicit price deflator for GDP from the Bureau of Economic Analysis. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the cases using the specific discount rate that had been used to obtain the SC–CH_4 and SC–N_2O estimates in each case.

c. Sensitivity Analysis Using Updated 2023 SC–GHG Estimates

In December 2023, EPA issued a new set of SC–GHG estimates (2023 SC–GHG) in connection with a final rulemaking under the Clean Air Act.[40] These estimates incorporate recent research and address recommendations of the National Academies (2017) and comments from a 2023 external peer review of the accompanying technical report. For this rulemaking, DOE used these updated 2023 SC–GHG values to conduct a sensitivity analysis of the value of GHG emissions reductions associated with alternative standards for energy standards for Federal buildings. This sensitivity analysis provides an expanded range of potential climate benefits associated with energy standards for Federal buildings. The final year of EPA's new 2023 SCGHG estimates is 2080; therefore, DOE did not monetize the climate benefits of GHG emissions reductions occurring after 2080. The overall climate benefits are greater when using the higher, updated 2023 SC–GHG estimates, compared to the climate benefits using the older IWG SC–GHG estimates. The results of the sensitivity analysis are presented in appendix 2A of the final rule TSD.

2. Monetization of Other Emissions Impacts

For the final rule, DOE estimated the monetized value of NO_X and SO_2 emissions changes from electricity generation using benefit-per-ton estimates for that sector from the EPA's Benefits Mapping and Analysis Program.[41] DOE used EPA's values for $PM_{2.5}$-related benefits associated with NO_X and SO_2 and for ozone-related benefits associated with NO_X for 2025, 2030, and 2040, calculated with 3-percent and 7-percent discount rates.

[40] *See www.epa.gov/environmental-economics/scghg.*

[41] U.S. Environmental Protection Agency. Estimating the Benefit per Ton of Reducing Directly-Emitted $PM_{2.5}$, $PM_{2.5}$ Precursors and Ozone Precursors from 21 Sectors. Available at *www.epa.gov/benmap/estimating-benefit-ton-reducing-directly-emitted-pm25-pm25-precursors-andand-ozone-precursors.*

DOE used linear interpolation to define values for the years not given in the 2025 to 2040 period; for years beyond 2050 the values are held constant (rather than extrapolated) to be conservative. DOE combined the EPA regional benefit-per-ton estimates with regional information on electricity consumption and emissions from AEO 2023 to define weighted-average national values for NO_X and SO_2.

DOE also estimated the monetized value of NO_X and SO_2 emissions changes from site use of natural gas in buildings impacted by this rule using benefit-per-ton estimates from the EPA's Benefits Mapping and Analysis Program. Although none of the sectors covered by EPA refers specifically to residential and commercial buildings, the sector called ''area sources'' would be a reasonable proxy for Federal buildings.[42] The EPA document provides high and low estimates for 2025 and 2030 at 3- and 7-percent discount rates.[43] DOE used the same linear interpolation and extrapolation as it did with the values for electricity generation.

DOE multiplied the emissions changes (in tons) in each year by the associated $/ton values, and then discounted each series using discount rates of 3 percent and 7 percent as appropriate.

D. Public Comment

DOE received several comments in response to the 2014 and 2022 SNOPRs relating to methodology. These comments covered potential exclusions for thermal and electrical energy storage systems, basing this rule on an agency portfolio (as opposed to on a building-by-building basis), potential credits for nuclear and hydropower electricity, and suggesting a need to rewrite the main equation in the rule.

In response to the comments about the role of energy storage systems in limiting fossil fuel generated energy consumption from purchased electricity, DOE's decision in the final rule to focus only on on-site combustion of fossil fuels makes discussion of electrical energy storage irrelevant. For example, if an agency chooses to burn fossil fuels to store heat in a thermal energy storage system, that fossil fuel use would be counted as part of the consumption of the building. DOE also notes that this rule applies to individual buildings based on statutory requirements, so DOE cannot change this rule to a portfolio approach.

DOE also notes that credits for nuclear and hydropower electricity are no longer relevant to this final rule and that the governing equation in this final rule has been extensively rewritten and simplified in accordance with the change of scope to focus on only on-site fossil fuel use.

E. Conclusion

Table V–10 provides DOE's estimate of cumulative emissions changes expected to result from this rulemaking. DOE recognizes exchanging on-site fossil fuel generated energy for reliance on the electric grid, which may still be generating energy with fossil fuels, does not necessarily lead to an immediate reduction in emissions of GHGs and SO_2 in all cases. In some areas, there will likely be an immediate reduction in GHG emissions, while in other areas, emissions will fall over time as the amount of clean energy on the grid increases. By ensuring that Federal buildings are designed—either from the ground up, or when being renovated—to reduce fossil fuel use, the rule ensures that long-term, as the grid integrates more renewable energies, emissions will be reduced.

TABLE V–10—CUMULATIVE PHYSICAL EMISSIONS CHANGES IN 2025–2084

Pollutant	Total
Primary (plant) Emissions Changes	
CO_2 (million metric tons)	0.7
Hg (tons)	−0.0028
NO_X (thousand tons)	1.1
SO_2 (thousand tons)	−0.4
CH_4 (thousand tons)	−0.1
N_2O (thousand tons)	−0.01
Upstream Emissions Changes	
CO_2 (million metric tons)	0.1
Hg (tons)	−0.00001
NO_X (thousand tons)	2.3
SO_2 (thousand tons)	−0.01
CH_4 (thousand tons)	15.8
N_2O (thousand tons)	−0.0001
Total Emissions Changes	
CO_2 (million metric tons)	0.9
Hg (tons)	−0.003
NO_X (thousand tons)	3.3
SO_2 (thousand tons)	−0.4
CH_4 (thousand tons)	15.8
N_2O (thousand tons)	−0.009

Negative values refer to an increase in emissions.
Numbers may not sum due to rounding.

[42] ''Area sources'' represents all emission sources for which states do not have exact (point) locations in their emissions inventories. Because exact locations would tend to be associated with larger sources, ''area sources'' would be fairly representative of small dispersed sources like homes, businesses and office buildings.

[43] ''Area sources'' are a category in the 2018 document from EPA, but are not used in the 2021 document cited previously. See: *www.epa.gov/sites/default/files/2018-02/documents/sourceapportionmentbpttsd_2018.pdf.*

Table V–11 presents the present value of monetized climate disbenefits associated with the CO_2 emissions changes using the full set of SC–CO_2 estimates described previously.

TABLE V–11—PRESENT VALUE OF MONETIZED CLIMATE BENEFITS FROM CHANGES IN CO_2 EMISSIONS FOR CONSTRUCTION IMPACTS 2025–2054 WITH A 30-YEAR LIFETIME

	SC–CO_2 Case			
	Discount rate and statistics			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
Million 2022$				
Total	7.0	31.6	50.1	95.7

Note: Climate benefits and disbenefits associated with CO_2 emissions changes occur over 2025–2070. DOE expects additional climate impacts to accrue from CO_2 emissions changes post 2070, but a lack of available SC–CO_2 estimates for years beyond 2070 prevents DOE from monetizing these additional impacts in this analysis.

Table V–12 presents the monetized climate benefits associated with the estimated CH_4 emissions reduction, and Table V–13 presents the monetized climate disbenefits associated with the estimated changes in N_2O emissions.

TABLE V–12—PRESENT VALUE OF MONETIZED CLIMATE BENEFITS FROM CHANGES IN METHANE EMISSIONS FOR CONSTRUCTION IMPACTS 2025–2054 WITH A 30-YEAR LIFETIME

	SC–CH_4 Case			
	Discount rate and statistics			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
Million 2022$				
Total	6.5	19.8	27.8	52.5

Note: Climate benefits and disbenefits associated with CH_4 emissions changes occur over 2025–2070. DOE expects additional climate impacts to accrue from CH_4 emissions changes post 2070, but a lack of available SC–CH_4 estimates for years beyond 2070 prevents DOE from monetizing these additional impacts in this analysis.

TABLE V–13—PRESENT VALUE OF MONETIZED CLIMATE DISBENEFITS FROM CHANGES IN NITROUS OXIDE EMISSIONS FOR CONSTRUCTION IMPACTS 2025–2054 WITH A 30-YEAR LIFETIME

	SC–N_2O Case			
	Discount rate and statistics			
	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile
Million 2022$				
Total	0.0	−0.1	−0.2	−0.3

Note: Negative numbers represent an increase cost or disbenefit. Climate benefits and disbenefits associated with N_2O emissions changes occur over 2025–2070. DOE expects additional climate impacts to accrue from N_2O emissions changes post 2070, but a lack of available SC–N_2O estimates for years beyond 2070 prevents DOE from monetizing these additional impacts in this analysis.

DOE is aware that scientific and economic knowledge about the contribution of CO_2 and other GHG emissions to changes in the future global climate and the potential resulting damages to the global and U.S. economy continues to evolve rapidly. DOE, together with other Federal agencies, will continue to review methodologies for estimating the monetary value of changes in CO_2 and other GHG emissions. This ongoing review will consider the comments on this subject that are part of the public record for this and other rulemakings, as well as other methodological assumptions and issues.

DOE also estimated the monetary value of the health benefits and disbenefits associated with changes in NO_X and SO_2 emissions anticipated to result from this rule. The dollar-per-ton values that DOE used are discussed in

section V.C of this document. Table V–14 presents the present value for NO_X emissions reduction calculated using 7-percent and 3-percent discount rates, and Table V–15 presents similar results for SO_2 emissions increases. The results in these tables reflect application of EPA's low dollar-per-ton values, which DOE used to be conservative.

TABLE V–14—PRESENT VALUE OF NO_X EMISSIONS REDUCTION

	3% Discount rate	7% Discount rate
Million 2022$		
Total	81.2	28.8

TABLE V–15—PRESENT VALUE OF SO_2 EMISSIONS INCREASE

	3% Discount rate	7% Discount rate
Million 2022$		
Total	−25.3	−10.4

Note: Negative numbers represent an increase cost or disbenefit.

Not all the public health and environmental benefits from the reduction of greenhouse gases, NO_X, and SO_2 are captured in the values above, and additional unquantified benefits from the reductions of those pollutants as well as from the reduction of direct PM and other co-pollutants may be significant. DOE has not included monetary benefits of the reduction of Hg emissions because the amount of reduction is very small.

DOE's analysis estimates the energy impacts, emissions savings, and cost savings over a 30-year period. The Federal building energy standards in this final rule are projected to result in an estimated national increased energy use of 0.029 quads. The increase is for the full fuel cycle which is essentially accounting for source energy impacts. The actual breakdown is .00221 quads of upstream energy savings and an increase of 0.031 quads of primary energy use (energy use impacts at the power plants) for a grand total of an increase in .029 quads of full fuel cycle energy. However, the Federal building energy standards are projected to result in estimated savings of 0.9 million metric tons (''MMT'') of CO_2 emissions according to DOE's base analysis, which uses AEO 2023. When combining CO_2 savings with methane (CH_4) savings and slight increases N_2O emissions into a CO_2 equivalent metric, there results in an overall net savings of CO_2e emissions of approximately 1.29 MMT CO_2e.

Notably, the recent enactment of the Inflation Reduction Act of 2022 (Pub. L. 117–169) and the Infrastructure Investment and Jobs Act (Pub. L. 117–58) will drive power sector emissions reductions in both the near-term and the short-term. With these laws in place, DOE has projected that U.S. economy-wide greenhouse gas emissions will decline to 35 to 41% below 2005 levels in 2030,[44] with the power sector representing the largest source of these reductions. In contrast to the base case presented in this rulemaking, there are alternative scenarios for projecting the future emissions associated with grid electricity that better align with these new policy drivers. These scenarios, discussed in section V.B of this document, have a large effect on the net emissions impacts of the rulemakings and present larger environmental and overall net benefits. With these policy drivers now in place, power sector reductions beyond those projected would only further increase the emissions benefits of this rulemaking in the future. These scenarios do not present comprehensive profiles for all additional climate factors beyond CO_2 emissions (such as NO_X, Hg, N_2O, CH_4, and SO_2), and have been presented only in the corresponding TSD for reference.

The cumulative NPV of the final rule for compliant buildings ranges from $70 million (at a 7-percent discount rate) to $52 million (at a 3-percent discount rate). This NPV expresses the estimated total value of future operating-costs and the estimated increased capital costs for a compliant building constructed in 2025–2054, although in reality, those costs will be realized throughout the 30-year project time period analyzed.

In addition, compliant buildings are projected to impact emissions of multiple greenhouse gases and other pollutants. DOE estimates that the rule would result in cumulative emissions (over the same period as for energy savings) impacts of a decrease of 0.9 MMT of carbon dioxide (''CO_2''), an increase of 0.4 thousand tons of sulfur dioxide (''SO_2''), a decrease of 3.3 thousand tons of nitrogen oxides (''NO_X''), a decrease of 15.8 thousand tons of methane (''CH_4''), an increase of 0.009 thousand tons of nitrous oxide (''N_2O''), and an increase of 0.003 tons of mercury (''Hg'').[45]

DOE estimates the value of climate benefits and disbenefits from a change in emissions of greenhouse gases using four different estimates of the social cost of CO_2 (''SC–CO_2''), the social cost of methane (''SC–CH_4''), and the social cost of nitrous oxide (''SC–N_2O''). Together these represent the social cost of greenhouse gases (''SC–GHG''). DOE used interim SC–GHG values developed by the ''IWG''.[46] The derivation of these values is discussed in section V.C of this document. For presentational purposes, the climate benefits (including both the climate benefits and disbenefits) associated with the average SC–GHG at a 3-percent discount rate is $51.3 million, primarily driven by savings in CH_4. DOE does not have a single central SC–GHG point estimate and DOE emphasizes the value of considering the benefits calculated using all four SC–GHG estimates.

DOE also estimates health benefits and disbenefits from changes of SO_2 and NO_X emissions.[47] DOE estimates the present value of the health benefits would be $18.4 million using a 7-percent discount rate, and $55.9 million using a 3-percent discount rate.[48] DOE is currently only monetizing $PM_{2.5}$ precursor health effects and (for NO_X) ozone precursor health benefits, but will continue to assess the ability to monetize other effects such as health effects from reductions in direct $PM_{2.5}$ emissions.[49]

Table VI–1 summarizes the economic benefits and costs expected to result from this final rule. There are other important unquantified effects, including certain unquantified climate benefits, unquantified public health benefits from the reduction of toxic air pollutants and other emissions, unquantified energy security benefits, and distributional effects, among others.

[44] U.S. Department of Energy's Office of Policy. Investing in American Energy, DOE OP Economy Wide Report_0.pdf (*energy.gov*), August 2023.

[45] DOE calculated emissions changes relative to the no-new-standards case, which reflects key assumptions in the AEO2023. AEO 2023 represents current federal and state legislation and final implementation of regulations as of the time of its preparation. *See* section VI.K of this document for further discussion of AEO 2023 assumptions that effect air pollutant emissions.

[46] See Interagency Working Group on Social Cost of Greenhouse Gases, *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide. Interim Estimates Under Executive Order 13990,* Washington, DC, February 2021, *available at www.whitehouse.gov/wp-content/uploads/2021/02/TechnicalSupportDocument_SocialCostofCarbonMethaneNitrousOxide.pdf?source=email.*

[47] DOE estimated the monetized value of NO_X and SO_2 emissions changes associated with this final rule using benefit per ton estimates from the scientific literature. See section IV.L.2 of this document for further discussion.

[48] DOE estimates the economic value of these emissions changes resulting from the considered TSLs for the purpose of complying with the requirements of Executive Order 12866.

TABLE VI–1—SUMMARY OF MONETIZED ECONOMIC BENEFITS AND COSTS (2025–2054 PLUS 30-YEAR LIFETIME)

[Million 2022$]

	Million 2022$	
	3% discount rate	7% discount rate
Capital Cost Savings of Equipment *	149.2	91.5
Climate Benefits **	51.3	51.3
Health Benefits ***	55.9	18.4
Total Benefits †	256.4	161.1
Operating Costs ††	−204.1	−91.4
Net Benefits	52.3	69.7

Note: This table presents the costs and benefits associated with compliant buildings built and operated in 2025–2084. These results include consumer, climate, and health benefits and disbenefits that accrue after 2054 from the buildings constructed or renovated in 2025–2054.

* Capital costs are a savings to consumers due to the base level efficiency electric equipment being less expensive than equivalent gas equipment as well as infrastructure savings from avoided gas line installation and exhaust venting.

** Climate benefits are calculated using four different estimates of the social cost of carbon ($SC–CO_2$), methane ($SC–CH_4$), and nitrous oxide ($SC–N_2O$) (model average at 2.5-percent, 3-percent, and 5-percent discount rates; 95th percentile at 3-percent discount rate). Together these represent the social cost of greenhouse gases (SC–GHG). For presentational purposes of this table, the climate benefits associated with the average SC–GHG at a 3-percent discount rate are shown; however, DOE emphasizes the importance and value of considering the benefits calculated using all four sets of SC–GHG estimates. To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the February 2021 SC–GHG TSD.

*** Health benefits are calculated using benefit-per-ton values for NO_X and SO_2. DOE is currently only monetizing (for SO_2 and NO_X) $PM_{2.5}$ precursor health benefits and (for NO_X) ozone precursor health benefits but will continue to assess the ability to monetize other effects such as health benefits from reductions in direct $PM_{2.5}$ emissions. See section V.C of this document for more details.

† Total and net benefits include those consumer, climate, and health benefits that can be quantified and monetized. For presentation purposes, total and net benefits for both the 3-percent and 7-percent cases are presented using the average SC–GHG with 3-percent discount rate.

†† Negative number indicates an increased cost to building owners, driven primarily by higher relative cost of electricity compared to natural gas.

A more detailed discussion of the basis for these tentative conclusions is contained in the remainder of this document and the accompanying TSD.

F. Reference Resources

DOE has prepared a list of resources to help Federal agencies address the reduction of fossil fuel-generated energy consumption. These resources come in many forms such as design guidance, case studies and in a variety of media such as printed documents or websites. The resources for energy efficiency improvement will also provide guidance for fossil fuel-generated energy consumption reductions.

U.S. Department of Energy, Federal Energy Management Program. (*https://www.energy.gov/femp/federal-energy-management-program*). FEMP provides access to numerous resources and tools that can help Federal agencies improve the energy efficiency of new and existing buildings. Specific resources to support this Final Rule will include, but are not limited to:

Implementation Guidance
Petition Template

U.S. Department of Energy, Building Technologies Office. Database of high-performance buildings. (*https://buildingdata.energy.gov/*).

U.S. Department of Energy, Better Buildings Program. Decarbonization Resource Hub. (*https://betterbuildingssolutioncenter.energy.gov/carbon-hub*).

New York State Energy Research and Development Authority (NYSERDA). Building Decarbonization Insights. (*https://www.nyserda.ny.gov/All-Programs/Empire-Building-Challenge/Building-Decarbonization-Insights*).

New Buildings Institute. Zero Energy Buildings Database. (*https://newbuildings.org/resource/getting-to-zero-database/*).

VI. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' as supplemented and reaffirmed by E.O. 13563, ''Improving 'Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and amended by E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (''OIRA'') in the Office of Management and Budget has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in the preamble, this regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 also requires agencies to submit ''significant regulatory actions'' to the Office of Information and Regulatory Affairs (''OIRA'') for review. OIRA has

determined that this regulatory action constitutes a ''significant regulatory action'' under section 3(f)(1) of E.O. 12866. Accordingly, pursuant to section 6(a)(3)(C) of E.O. 12866, DOE has provided to OIRA an assessment, including the underlying analysis, of benefits and costs anticipated from the regulatory action, together with, to the extent feasible, a quantification of those costs; and an assessment, including the underlying analysis, of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation, and an explanation why the planned regulatory action is preferable to the identified potential alternatives. These assessments are summarized in the tables that follows. Further detail can be found in the TSD accompanying this final rule.

DOE's analyses indicate that the final rule saves a significant amount of site energy. Switching from gas loads burned on-site to electric loads produced off-site, at national average level emission rates, would result in a decrease in CO_2, NO_X and CH_4 emissions and an increase of N_2O, Hg, and SO_2 emissions. Electrifying the end-use equipment results in emissions that become dependent upon the electricity generation mix delivered to the building. Relative to the case without the amended standards, compliant buildings constructed in the 30-year period that begins in the anticipated year of compliance with the amended standards (2025–2034) are projected to result in an increased full fuel cycle lifetime energy use of 0.029 quadrillion Btus.

The benefits and costs of this final rule presented in Section V.A can also be expressed in terms of annualized values. The monetary values for the total annualized net benefits are (1) the decrease in capital cost, (2) the increase in operating costs, plus (3) the monetized value of changes in GHG, and NO_X, and SO_2 emissions, all annualized.[50] The benefits and disbenefits associated with estimated changes in emissions as a result of the rule are also calculated based on the lifetime of a compliant building constructed in 2025–2054.

Estimates of annualized benefits and costs of this final rule are shown in Table VI–1 and Table VI–2. The results shown as the primary estimate utilize a 7-percent discount rate for operating benefits, costs, and health benefits and disbenefits (from changes to NO_X and SO_2 emissions), and a 3-percent discount rate case for climate benefits (from GHG emissions) as follows:

Capital cost of impacts of the standards in this case are estimated to be $8.44 million per year in decreased equipment costs.

Annual operating disbenefits are estimated to be $8.43 million per year in increased equipment operating costs, primarily driven by the higher relative cost of electricity compared to natural gas.

Net climate benefits total $2.77 million per year, primarily driven by savings from CH_4.

Net health benefits total $1.69 million per year, primarily driven by NO_X emissions savings overshadowing increased SO_2 emissions.

Overall net monetized benefits would amount to a savings of $4.48 million per year.

Using a 3-percent discount rate for all benefits, disbenefits and costs, the annualized results are as follows:

Capital cost impacts of the standards in this case are estimated to be $8.08 million per year in decreased equipment costs.

Annual operating disbenefits are estimated to be $11.05 million per year in increased equipment operating costs, driven by the higher relative cost of electricity compared to natural gas.

Net climate benefits total $2.77 million per year, primarily driven by savings from CH_4.

Net health benefits total $3.03 million per year, primarily driven by NO_X emissions savings overshadowing increased SO_2 emissions.

Overall net monetized benefits would amount to a savings of $2.83 million per year.

TABLE VI–2—ANNUALIZED MONETIZED BENEFITS AND COSTS OF FINAL REGULATION BASE SCENARIO USING AEO 2023

[Million 2022$]

Category	Million 2022$/year	
	3% discount rate	7% discount rate
Capital Costs of Equipment Savings *	8.08	8.44
Climate Benefits **	2.77	2.77
Health Benefits ***	3.03	1.69
Total Benefits †	13.88	12.91
Operating Costs ††	−11.05	−8.43
Net Benefits	2.83	4.48

Note: This table presents the costs and benefits associated with this final rule impacted buildings in 2025–2084. These results include consumer, climate, and health benefits and disbenefits which accrue after 2054 from the buildings constructed in 2025–2054.

* Capital costs of equipment are a savings to consumers due to the base level efficiency electric equipment being less expensive than equivalent gas equipment as well as infrastructure savings from avoided gas line installation and exhaust venting.

** Climate benefits are calculated using four different estimates of the SC–GHG (see section V.C of this document). For presentational purposes of this table, the climate benefits associated with the average SC–GHG at a 3-percent discount rate are shown; however, DOE emphasizes the importance and value of considering the benefits calculated using all four sets of SC–GHG estimates. To monetize the benefits of reducing GHG emissions, this analysis uses the interim estimates presented in the February 2021 SC–GHG TSD.

*** Health benefits are calculated using benefit-per-ton values for NO_X and SO_2. DOE is currently only monetizing (for SO_2 and NO_X) $PM_{2.5}$ precursor health benefits and (for NO_X) ozone precursor health benefits, but will continue to assess the ability to monetize other effects such as health benefits from reductions in direct $PM_{2.5}$ emissions.

† Total benefits for both the 3-percent and 7-percent cases are presented using the average SC–GHG with 3-percent discount rate.

[50] To convert the time-series of costs and benefits into annualized values, DOE calculated a present value in $2022, the year used for discounting the NPV of total costs and savings. For the benefits, DOE calculated a present value associated with each year's construction or renovations in the year in which the construction or renovation occur (*e.g.,* 2030), and then discounted the present value from each year to 2022. Using the present value, DOE then calculated the fixed annual payment over a 30-year period, starting in the compliance year, that yields the same present value.

†† Negative number indicates an increased cost to building owners, driven primarily by higher relative cost of electricity compared to natural gas.

DOE's analysis of the national impacts of the final standards is described in sections V.B, and V.C of this document.

DOE's analysis is sensitive to how emission factors per unit of grid electricity purchased change over time. The base case presented in this rulemaking utilizes emission factors obtained through AEO 2023. AEO 2023 reflects, to the extent possible, laws and regulations adopted through mid-November 2022, including the Inflation Reduction Act (IRA). This is consistent with the methodology used in other rulemakings (including the efficiency portions for the analysis behind 10 CFR parts 433 and 435) and representative of an expected or ''business as usual'' case. However, AEO 2023 does not fully account for President Biden's goal to achieve 100-percent carbon pollution-free electricity by 2035. Such accelerated clean grid scenarios significantly impact the overall emissions profile of the rule allowing for more climate benefits sooner in the lifecycle of the expected projects.

Results and details for a 100-percent reduction by 2035 case are presented in the TSD. As noted previously, alternative cases are presented to show the emissions and climate impacts of this rule in accelerated clean grid scenarios that may flow from recent legislation and Administration priorities, but that are not represented in the base case utilizing AEO 2023 (the ''business as usual'' case).

DOE's analysis of the impacts of the final regulation on Federal agencies is described in section V.A, Cost Effectiveness, of this document.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (''IRFA'') for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by E.O. 13272, ''Proper Consideration of Small Entities in Agency Rulemaking,'' 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website (*www.energy.gov/gc/office-general-counsel*).

In the 2022 SNOPR, DOE stated that the proposed rule only applies to the fossil fuel-generated energy consumption of new Federal buildings and Federal buildings undergoing major renovations. 87 FR 78382, 78417. Thus, the only entities directly regulated by this rulemaking would be Federal agencies. *Id.* Accordingly, DOE determined that an IRFA was not required. *Id.*

APGA claimed that DOE erred in its determination that the rule would not have a significant economic impact on a substantial number of small businesses. APGA, Doc. No. 102, pg. 5. APGA asserted most of its members are small businesses. *Id.* APGA stated that ''[r]educing fossil fuels to zero will certainly impact the load and revenue of many public gas systems across the country.'' *Id.* Thus, APGA argued that the rule would have a significant economic impact on a substantial number of small businesses and DOE must prepare an IRFA or withdraw the 2022 SNOPR. *Id.*

This final rule applies only to the fossil fuel-generated energy consumption of new Federal buildings and Federal buildings undergoing major renovation. As such, the only entities directly regulated by this rulemaking would be Federal agencies. Under the Regulatory Flexibility Act, an ''agency may properly certify that no regulatory flexibility analysis is necessary when it determines that the rule will not have a significant economic impact on a substantial number of small entities *that are subject to the requirements of the rule.*'' *Mid-Tex Elec. Co-op., Inc.* v. *FERC,* 773 F.3d 327, 342 (D.C. Cir. 1985) (emphasis added); *see Cement Kiln Recycling Coalition* v. *EPA,* 255 F.3d 855, 870 (holding that the Regulatory Flexibility Act does not apply to small businesses indirectly affected by regulation of other entities).

On the basis of the foregoing, DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities. Accordingly, DOE has not prepared a regulatory flexibility analysis for this rulemaking. DOE's certification and supporting statement of factual basis was provided to the Chief Counsel for Advocacy of the Small Business Administration pursuant to 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act

This final rule will impose no new information or record keeping requirements. Accordingly, OMB clearance is not required under the Paperwork Reduction Act. 44 U.S.C. 3501 *et seq.*

D. Review Under the National Environmental Policy Act of 1969

DOE prepared a draft Environmental Assessment (EA) (DOE/EA–1778) entitled, ''Environmental Assessment for Supplemental Notice of Proposed Rulemaking, 10 CFR parts 433 and 435, 'Clean Energy for New Federal Buildings and Major Renovations of Federal Buildings,' '' pursuant to the Council on Environmental Quality's (CEQ) Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act (NEPA) (40 CFR parts 1500–1508), NEPA, as amended (42 U.S.C. 4321 *et seq.*), and DOE's NEPA Implementing Procedures (10 CFR part 1021).

This draft EA addressed the possible environmental effects attributable to the implementation of this final rule. The draft EA stated that the rule, by its fundamental intent, would have a positive impact on the environment and the anticipated impacts of this rulemaking would be an overall decrease in CO_2 equivalent gases (despite modest increases in base CO_2 and N_2O emissions, CH_4 emission reductions result in net savings) with an additional decrease in NO_X emission and an increase in SO_2 emissions resulting from reduced fossil fuel-generated energy consumption in new Federal buildings and major renovations of Federal buildings but increased electric purchases from the grid. In the draft EA, DOE concluded that the new Federal buildings designed and constructed and major renovations of Federal buildings designed and completed to be compliant with the proposed rule would not have a significant environmental impact.

DOE posted this draft EA on its Office of NEPA Policy and Compliance website on December 7, 2022.[51] The draft EA requested interested parties to submit comments by December 22, 2022. No comments were received.

DOE recently updated its analysis to included data made available since it prepared the draft EA. DOE again

[51] Available at *www.energy.gov/nepa/articles/doeea-2183-draft-environmental-assessment.*

concludes that the new Federal buildings designed and constructed and major renovations of Federal buildings designed and completed to be compliant with this rule will not have a significant environmental impact in a Finding of No Significant Impact (FONSI).[52]

In its comments on the rule, APGA stated that it is unclear how the draft EA addresses the possible environmental affects attributable to the implementation of the 2022 SNOPR. APGA, Doc. No. 102, pg. 4. APGA asserted that because the rule proposed in the 2022 SNOPR is significantly different than the rule proposed in the 2010 NOPR, DOE cannot rely on the draft EA that was developed over a decade ago in support of the 2010 NOPR. *Id.* However, as explained in the 2022 SNOPR, DOE prepared a new draft EA that considered the possible environmental effects attributable to the implementation of the rule proposed in the 2022 SNOPR. 87 FR 78382, 78417. Thus, DOE did not rely on the draft EA prepared in 2010, but rather prepared a new draft EA prior to publishing the 2022 SNOPR.

E. Review Under Executive Order 13132

E.O. 13132, ''Federalism,'' 64 FR 43255 (Aug. 10, 1999), imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. The Executive order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this final rule and has tentatively determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, no further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of E.O. 12988, ''Civil Justice Reform,'' imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of E.O. 12988 specifically requires that executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any, (2) clearly specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of E.O. 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (''UMRA'') requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, section 201 (codified at 2 U.S.C. 1531). For a proposed regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. 2 U.S.C. 1532(a), (b). The UMRA also requires a federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a proposed ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. DOE's policy statement is also available at *www.energy.gov/sites/prod/files/gcprod/documents/umra_97.pdf.*

This final rulemaking contains neither an intergovernmental mandate nor a mandate that may result in the expenditure of $100 million or more in any year by State, local and Tribal governments, in the aggregate, or by the private sector so these requirements under the UMRA do not apply.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This final rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to E.O. 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights,'' 53 FR 8859 (Mar. 15, 1988), DOE has determined that this final rule would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). Pursuant to OMB Memorandum M–19–15, Improving Implementation of the Information Quality Act (April 24, 2019), DOE published updated guidelines which are available at

[52] Available at *www.energy.gov/nepa/listings/findings-no-significant-impact-fonsis.*

www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf. DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

E.O. 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any proposed significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that (1) is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any proposed significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

One commenter raised procedural concerns related to the preparation of a Statement of Energy Effects in response to the 2022 SNOPR. APGA, Doc. No. 102, pg. 4. Specifically, APGA stated that DOE's conclusion that the proposed rule would not have a significant energy impact does not mean that it would not, especially when the Federal government is the largest energy consumer in the nation, *Id.,* pg. 5.

Although it may be true that the government as whole is the largest energy consumer in the nation, this rule affects a subset of qualified new Federal buildings and major renovation projects and does not directly affect the supply, distribution, or consumption of energy for all Federal buildings. Rather, the impact of this rule is estimated to be less than an additional 0.029 quads of full fuel cycle energy. When compared with the total estimated use of 22 quads of energy per year in the U.S. buildings sector, the impact of this rule only represents 0.004 percent of the total energy consumption of the sector over the 30-year analysis period. Furthermore, the rule is not anticipated to have any direct effect on energy supplies.

This final rule would not have a significant adverse effect on the supply, distribution, or use of energy. Moreover, as the rulemaking would result in increased building level energy efficiency, it would not have a significant adverse effect on energy. For these reasons, the rulemaking is not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

L. Information Quality

On December 16, 2004, OMB, in consultation with the Office of Science and Technology Policy (''OSTP''), issued its Final Information Quality Bulletin for Peer Review (''the Bulletin''). 70 FR 2664 (Jan. 14, 2005). The Bulletin establishes that certain scientific information shall be peer reviewed by qualified specialists before it is disseminated by the Federal Government, including influential scientific information related to agency regulatory actions. The purpose of the bulletin is to enhance the quality and credibility of the Government's scientific information. Under the Bulletin, EIA's CBECS and RECS are ''influential scientific information,'' which the Bulletin defines as ''scientific information that the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions.'' 70 FR 2664, 2667 (Jan. 14, 2005). The Academy recommendations have been peer reviewed pursuant to section II.2 of the Bulletin. Both surveys are peer reviewed internally within EIA and other DOE offices before they are published. In addition, both surveys are subject to public comment that EIA addresses before finalizing CBECS and RECS.

VII. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 433

Buildings and facilities, Energy conservation, Engineers, Federal buildings and facilities, Fossil fuel reductions, Housing, Multi-family residential buildings.

10 CFR Part 435

Buildings and facilities, Energy conservation, Engineers, Federal buildings and facilities, Fossil fuel reductions, Housing.

Signing Authority

This document of the Department of Energy was signed on April 12, 2024, by Mary Sotos, the Director of the Federal Energy Management Program, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 12, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons set forth in the preamble, DOE amends parts 433 and 435 of chapter II of title 10 of the Code of Federal Regulations as set forth below:

PART 433—ENERGY EFFICIENCY STANDARDS FOR THE DESIGN AND CONSTRUCTION OF NEW FEDERAL COMMERCIAL AND MULTI–FAMILY HIGH–RISE RESIDENTIAL BUILDINGS

■ 1. The authority citation for part 433 continues to read as follows:

Authority: 42 U.S.C. 6831–6832, 6834–6835; 42 U.S.C. 7101 *et seq.*

■ 2. Amend § 433.1 by adding paragraph (b) to read as follows:

§ 433.1 Purpose and scope.

* * * * *

(b) This part also establishes a maximum allowable fossil fuel-generated energy consumption standard for new Federal buildings that are commercial or multi-family high-rise residential buildings and major renovations to Federal buildings that are commercial or multi-family high-rise residential buildings, for which design for construction began on or after May 1, 2025.

* * * * *

■ 3. Amend § 433.2 by:

■ a. Adding in alphabetical order the definitions of ''Construction cost,'' ''Design for renovation,'' ''EISA-subject building or project'', ''Federal building,'' ''Fiscal year (FY),'' ''Fossil fuel-generated energy consumption,'' ''Major renovation,'' ''Major renovation cost,'' ''Major renovation of all Scope 1 fossil fuel-using systems in a building,'' ''Major renovation of a Scope 1 fossil fuel-using building system or Scope 1 fossil-fuel-using component,'' and ''Multi-family high-rise residential building'';

■ b. Revising the definition of ''Proposed building''; and
■ c. Adding in alphabetical order the definitions of ''Shift adjustment multiplier,'' and ''Technical impracticability''.

The additions and revision read as follows:

§ 433.2 Definitions.

* * * * *

Construction cost means all costs associated with the construction of a new Federal building. It includes, but is not limited to, the cost of preliminary planning, engineering, architectural, permitting, fiscal and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the construction of a new Federal building. It does not include the cost of acquiring the land.

* * * * *

Design for renovation means the stage when the energy efficiency and sustainability details (such as insulation levels, HVAC systems, water-using systems, etc.) are either explicitly determined or implicitly included in a renovation project cost specification.

EISA-subject building or project means, for purposes of this rule, any new Federal building or renovation project that is subject to the cost thresholds and reporting requirements in Section 433 of Energy Independence and Security Act of 2007 (EISA) ((Pub. L. 110–140, codified at 42 U.S.C. 6834(a)(3)(D)(i))).

* * * * *

Federal building means any building to be constructed by, or for the use of, any Federal agency. Such term shall include buildings built for the purpose of being leased by a Federal agency and privatized military housing.

Fiscal year (FY) means the 12-month period beginning on October 1 of the year prior to the specified calendar year and ending on September 30 of the specified calendar year.

Fossil fuel-generated energy consumption means the on-site stationary consumption of fossil fuels that contribute to Scope 1 emissions for generation of electricity, heat, cooling, or steam as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016). This includes, but is not limited to, combustion of fuels in stationary sources (*e.g.,* boilers, furnaces, turbines, and emergency generators). This term does not include mobile sources, fugitive emissions, or process emissions as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016).

* * * * *

Major renovation means either major renovation of all Scope 1 fossil fuel-using systems in a Federal building or major renovation of one or more Scope 1 fossil fuel-using building systems or components, as defined in this section.

Major renovation cost means all costs associated with the repairing, remodeling, improving, extending, or other changes in a federal building. It includes, but is not limited to, the cost of preliminary planning, engineering, architectural, permitting, fiscal and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the alteration of a Federal building.

Major renovation of all Scope 1 fossil fuel-using systems in a building means construction on an existing Federal building that is so extensive that it replaces all Scope 1 fossil fuel-using systems in the building. This term includes, but is not limited to, comprehensive replacement or restoration of most or all major systems, interior work (such as ceilings, partitions, doors, floor finishes, etc.), or building elements and features.

Major renovation of a Scope 1 fossil fuel-using building system or Scope 1 fossil fuel-using component means changes to a federal building that provide significant opportunities for energy efficiency or reduction in fossil fuel-related energy consumption. This includes, but is not limited to, replacement of the HVAC system, hot water system, or cooking system, or other fossil fuel-using systems or components of the building that have a major impact on fossil fuel usage.

Multi-family high-rise residential building means a residential Federal building that contains 3 or more dwelling units and that is designed to be 4 or more stories above grade.

* * * * *

Proposed building means the design for construction of a new Federal commercial or multi-family high-rise residential building, proposed for construction, or a major renovation to a Federal commercial or multi-family high-rise residential building.

* * * * *

Shift adjustment multiplier means a multiplication factor that agencies may apply to their Maximum Allowable Fossil Fuel-Generated Energy Consumption by Building Category target based upon the weekly hours of active operation of the building. The weekly hours of operation used as a basis for the shift adjustment multiplier lookup include the time in which in the building is actively occupied and operating per its intended use type and unoccupied hours or other times of limited use (such as night-time setback hours).

Technical impracticability means achieving the fossil fuel-based energy consumption targets would:

(1) Not be feasible from an engineering design or execution standpoint due to existing physical or site constraints that prohibit modification or addition of elements or spaces;

(2) Significantly obstruct building operations and the functional needs of a building, specifically for industrial process loads, critical national security functions, mission critical information systems as defined in NIST SP 800–60 Vol. 2 Rev. 1, and research operations; or

(3) Significantly degrade energy resiliency and energy security of building operations as defined in 10 U.S.C. 101(e)(6) and 10 U.S.C. 101(e)(7) respectively.

■ 4. Subpart B is added to part 433 to read as follows:

Subpart B—Reduction in Scope 1 Fossil Fuel-Generated Energy Consumption

Sec.

§ 433.200 Scope 1 Fossil fuel-generated energy consumption requirement.

(a) *New EISA-Subject buildings.* (1) New Federal buildings that are commercial or multi-family high-rise residential buildings, for which design for construction began on or after May 1, 2025 must be designed to meet the requirements of paragraph (c) of this section if:

(i) For Federally owned public buildings or leased Federal buildings, the construction cost of the new building exceeds GSA's Annual Prospectus Thresholds that are found at *https://www.gsa.gov/real-estate/design-construction/gsa-annual-prospectus-thresholds;* or

(ii) For Federally owned non-public buildings, the cost of the building is at least $2,500,000 (in 2007 dollars, adjusted for inflation). For the purposes of calculating this threshold, projects should set the Bureau of Labor and

Statistics CPI Inflation calculator to $2,500,000 in October of 2006 (to represent the value of the original cost threshold) and then set for October of the FY during which the design for construction of the project began or is set to begin.

(2) [Reserved]

(b) *Major renovations of EISA-Subject buildings.* (1) Major renovations to Federal buildings that are commercial or multi-family high-rise residential buildings, for which design for construction began on or after May 1, 2025, must be designed to meet the requirements of paragraphs (c) or (d) of this section, as applicable, if:

(i) The renovation is a major renovation to a public building as defined in 40 U.S.C. 3301 and for which transmittal of a prospectus to Congress is required under 40 U.S.C. 3307; or

(ii) The cost of the major renovation of a Federally owned building is at least $2,500,000 (in 2007 dollars, adjusted for inflation). For the purposes of calculating this threshold, projects should set the Bureau of Labor and Statistics CPI Inflation calculator to $2,500,000 in October of 2006 (to represent the value of the original cost threshold) and then set for October of the FY during which the design for construction of the project began or is set to begin. The cost of a major renovation for a Federally leased building is at least the amount listed for alterations in leased buildings that would need to transmit a prospectus to Congress under section 3307 of title 40. *See* GSA Annual Prospectus Thresholds at *https://www.gsa.gov/real-estate/design-construction/gsa-annual-prospectus-thresholds.*

(2) This subpart only applies to major renovations that meet the definition of ''major renovation of all Scope 1 fossil fuel-using systems in a federal building'' or ''major renovation of a Scope 1 fossil fuel-using building system or Scope 1 fossil fuel-using component.''

(3) For leased buildings, this subpart applies to major renovations only if the building was originally built for the use of any Federal agency, including being leased by a Federal agency.

(4) This subpart applies only to the portions of the proposed building or proposed building systems that are being renovated and to the extent that the scope of the renovations permits compliance with the applicable requirements of this subpart. Unaltered portions of the proposed building or proposed building systems are not required to comply with this subpart.

(c) *Federal buildings that are of the type included in appendix A of this subpart.*

(1) *New Construction and Major Renovations of all Scope 1 Fossil Fuel-Using Systems in EISA-Subject Buildings.*

(i) *Design for construction began during FY 2024 through FY 2029.* For new construction or major renovations of all Scope 1 fossil fuel-using systems in a Federal building for which design for construction or renovation, as applicable, began during FY 2024 through 2029, the Scope 1 fossil fuel-generated energy consumption of the proposed building, based on the building design and calculated according to § 433.201(a), must not exceed the value identified in Tables A–1a to A–2a (if targets based on emissions are used) or Tables A–1b to A–2b (if targets based on kBtu of fossil fuel usage are used) of appendix A of this subpart for the associated building type, climate zone, and fiscal year in which design for construction begins.

(A) Federal agencies may apply a shift adjustment multiplier to the values in Tables A–1a to A–2a or Tables A–1b to A–2b based on the following baseline hours of operation assumed in Tables A–1a to A–2a or Tables A–1b to A–2b. To calculate the shift adjustment multiplier, agencies shall estimate the number of shifts for their new building and multiply by the appropriate factor shown below in Table 1 of this section for their building type.

(B) The Scope 1 fossil fuel-generated energy consumption target for the building is the applicable value in either Tables A–1a to A–2a or Tables A–1b to A–2b multiplied by the shift adjustment multiplier calculated for that building.

TABLE 1—SHIFT ADJUSTMENT MULTIPLIER BY HOURS OF OPERATION AND BUILDING TYPE

Building activity type	Weekly hours of operation		
	50 or less	51 to 167	168
Admin/professional office	1	1	1.4

Courthouse/Probation Office	1	1	1.4

(ii) *Design for construction began during or after FY 2030.* For new construction or major renovations of all fossil fuel-using systems in an EISA-subject building for which design for construction or renovation, as applicable, began during or after FY 2030, the Scope 1 fossil fuel-generated energy consumption of the proposed building, based on building design and calculated according to § 433.201(a), must be zero.

(C) *Major Renovations of a Federal Building System or Component within an EISA-Subject Building.* System level renovations shall follow the renovation requirements in section 4.2.1.3 of the applicable building baseline energy efficiency standards listed in § 433.100 substituting the ''design for construction'' with ''design for renovation'' for the relevant date and shall replace all equipment that is included in the renovation with all electric or non-fossil fuel-using ENERGY STAR or Federal Energy Management Program (FEMP) designated products as defined in § 436.42 of this chapter. For component level renovations, Agencies shall replace all equipment that is part of the renovation with all electric or non-fossil fuel-using ENERGY STAR or FEMP designated products as defined in § 436.42 of this chapter.

(D) *Mixed-use buildings.*

(*1*) For Federal buildings subject to the requirements of paragraph (c)(1)(A) of this section that combine two or more building types identified in Tables 1a to 2a or Tables 1b to 2b of appendix A of this subpart, the maximum allowable fossil fuel-generated energy consumption of the proposed building is equal to the averaged applicable building type values in Tables A–1a to A–2a or Tables A–1b to A–2b weighted by floor area of the two or more building types. The equation which follows shall be used for mixed use buildings.

Equation 1: Scope 1 Fossil fuel-generated energy consumption for a mixed-use building = the sum across all building uses of (the fraction of total floor building floor area for building use i times the allowable fossil fuel-generated energy consumption for building use i)

Equation 1 may be rewritten as:

$$\textit{Scope 1 Fossil Fuel} - \textit{Generated Energy Consumption for a Mixed Use Building} = \sum_{i=1}^{n} (\textit{Fraction of Total Building Floor Area for Building Use i times Allowable Scope 1 Fossil Fuel} - \textit{Generated Energy Consumption for Building Use i})$$

(*2*) For example, if a proposed building for which design for construction began in FY 2026 that is to be built in climate zone 4a has a total of 200 square feet—100 square feet of which qualifies as College/University and 100 square feet of which qualifies as Laboratory—the maximum allowable Scope 1 fossil fuel-generated energy consumption is equal to:

[(100 sqft. × 3 kBtu/yr.-sqft.) + (100 sqft × 10 kBtu/yr.-sqft.)]/200 sqft. = 6.5 kBtu/yr.-sqft.

(d) *Federal buildings that are of the type not included in Appendix A of this subpart—*

(1) *Process load buildings.* For building types that are not included in any of the building types listed in Tables A–1a to A–2a or A–1b to A–2b of appendix A of this subpart, or for building types in these tables that contain significant process loads that are not likely to be found in the Commercial Buildings Energy Consumption Survey (CBECS) and qualify for exemption per § 433.202, Federal agencies must select the applicable building type, climate zone, and fiscal year in which design for construction began from Tables 1a to 2a or 1b to 2b of appendix A of this subpart

that most closely corresponds to the proposed building without the process load. The estimated Scope 1 fossil fuel-generated energy consumption of the process load must be added to the maximum allowable Scope 1 fossil fuel-generated energy consumption of the applicable building type for the appropriate fiscal year and climate zone to calculate the maximum allowable Scope 1 fossil fuel-generated energy consumption for the building. The same estimated Scope 1 fossil fuel-generated energy consumption of the process load that is added to the maximum allowable Scope 1 fossil fuel-generated energy consumption of the applicable building must also be used in determining the Scope 1 fossil fuel-generated energy consumption of the proposed building.

(2) *Mixed-use buildings.* For buildings that combine two or more building types with process loads or, alternatively, that combine one or more building types with process loads with one or more building types in Tables A–1a to A–2a or A–1b to A–2b of appendix A of this subpart, the maximum allowable Scope 1 fossil fuel-generated energy consumption of the proposed building is equal to the averaged process load building values determined under paragraph (d)(1) of this section and the applicable building type values in Tables A–1a to A–2a or A–1b to A–2b of appendix A of this subpart, weighted by floor area.

§ 433.201 Scope 1 Fossil fuel-generated energy consumption determination.

(a) The fossil fuel-generated energy consumption of a proposed building is calculated as follows:

Equation 2: Fossil fuel-generated energy consumption = Direct Scope 1 Fossil Fuel-Generated Consumption of Proposed Building/Floor Area

Where:

Direct Scope 1 Fossil Fuel-Generated Energy Consumption of Proposed Building equals the total Scope 1 fossil fuel-generated energy consumption of the proposed building calculated in accordance with the method required in § 433.101(a)(5) and measured in thousands of British thermal units per year (kBtu/yr), except that this term does not include fossil fuel consumption for emergency electricity generation. Agencies must include all on-site fossil fuel use or Scope 1 emissions associated with non-emergency generation from backup generators (such as those for peak shaving or peak shifting). Any energy generation or Scope 1 emissions associated with biomass fuels are excluded. Any emissions associated with natural gas for alternatively fueled vehicles (''AFVs'') (or any other alternative fuel defined at 42 U.S.C. 13211 that is provided at a Federal building) is excluded. For buildings with manufacturing or industrial process loads, the process loads should be accounted for in the analysis for the building's fossil fuel consumption and GHG emissions, but are not subject to the phase down targets.

Floor Area is the area enclosed by the exterior walls of a building, both finished and unfinished, including indoor parking facilities, basements, hallways, lobbies, stairways, and elevator shafts.

§ 433.202 Petition for downward adjustment.

(a) *New Federal buildings, major renovations of all Scope 1 fossil fuel-using systems, and major renovations of a Scope 1 fossil fuel-using building system or component in an EISA-subject building.* (1) Upon petition by a Federal agency, the Director of FEMP may adjust the applicable maximum allowable Scope 1 fossil fuel-generated energy consumption standard with respect to a specific building, upon written certification from the head of the agency designing the building or major renovation, that the requested adjustment is the largest feasible reduction in Scope 1 fossil fuel energy consumption that can practicably be achieved in light of the specified functional needs for that building, as demonstrated by the following (which is not an exhaustive list and whose components may be further modified by guidance):

(i) A statement from the Head of the Agency or their designee requesting the petition for downward adjustment for the building or renovation, that the building or renovation reduces consumption of Scope 1 fossil fuel energy consumption in accordance with the applicable energy performance standard to the maximum extent practicable and that each fossil fuel using product included in the proposed building that is of a product category covered by the ENERGY STAR program or FEMP for designated products is an ENERGY STAR product or a product meeting the FEMP designation criteria, as applicable;

(ii) A description of the systems, technologies, and practices that were evaluated and unable to meet the required fossil fuel reduction, including a justification of why achieving the Scope 1 fossil fuel-based energy consumption targets would be technically impracticable;

(iii) Any other information the agency determines would help explain its request;

(iv) A general description of the building or major renovation, including but not limited to location, use type, floor area, stories, expected number of occupants and occupant schedule, project type, project cost, and functional needs, mission critical activity, research, and national security operations as applicable;

(v) The maximum allowable Scope 1 fossil fuel energy consumption for the building from § 433.200(c) or (d);

(vi) The estimated Scope 1 fossil fuel energy consumption of the proposed building; and

(vii) A description of the proposed building's energy-related features, such as:

(A) HVAC system or component type and configuration;

(B) HVAC equipment sizes and efficiencies;

(C) Ventilation systems or components (including outdoor air volume, controls technique, heat recovery systems, and economizers, if applicable);

(D) Service water heating system or component configuration and equipment (including solar hot water, wastewater heat recovery, and controls for circulating hot water systems, if applicable);

(E) Estimated industrial process loads; and

(F) Any other on-site fossil fuel using equipment.

(2)(i) Agencies may file one petition for a project with multiple buildings if the buildings are

(A) Of the same building, building system, or component type and of similar size, location, and functional purpose;

(B) Are being designed and constructed to the same set of targets for fossil fuel-generated energy consumption reduction; and

(C) would require similar measures to reduce fossil fuel-generated energy consumption and similar adjustment to the numeric reduction requirement.

(ii) The bundled petition must include the information in paragraph (a) of this section that pertains to all buildings, building systems, or components included in the petition and an additional description of the differences between each building, building system, or component. The agency is only required to show work for adjustment once.

(3) Petitions for downward adjustment should be submitted to *cer-petition@hq.doe.gov,* or to: U.S. Department of Energy, FEMP, Director, Clean Energy Reduction Petitions, EE–5F, 1000 Independence Ave. SW, Washington, DC 20585–0121.

(4) The Director of FEMP will make a best effort to notify the requesting

agency in writing whether the petition for downward adjustment to the numeric reduction requirement is approved or rejected, in 30 calendar days of submittal, provided that the petition is complete. If the Director rejects the petition or establishes a value other than that presented in the petition, the Director will forward its reasons for rejection to the petitioning agency.

(b) *Exclusions.* The General Services Administration (GSA) may not submit petitions under paragraph (a) of this section. Agencies that are tenants of GSA buildings for which the agency, not GSA, has significant design control may submit petitions in accordance with this section.

Appendix A to Subpart B of Part 433—Maximum Allowable Scope 1 Fossil Fuel-Generated Energy Consumption

(a) For purposes of the tables in this appendix, the climate zones are the same as those listed in the performance standards required by § 433.100(a)(5)(i).

(b) For purpose of appendix A, the following definitions apply:

(1) *Education* means a category of buildings used for academic or technical classroom instruction, such as elementary, middle, or high schools, and classroom buildings on college or university campuses. Buildings on education campuses for which the main use is not as a classroom are included in the category relating to their use. For example, administration buildings are part of ''Office,'' dormitories are ''Lodging,'' and libraries are ''Public Assembly.''

(2) *Food sales* means a category of buildings used for retail or wholesale of food. For example, grocery stores are ''Food Sales.''

(3) *Food service* means a category of buildings used for preparation and sale of food and beverages for consumption. For example, restaurants are ''Food Service.''

(4) *Health care (Inpatient)* means a category of buildings used as diagnostic and treatment facilities for inpatient care.

(5) *Health care (Outpatient)* means a category of buildings used as diagnostic and treatment facilities for outpatient care. Medical offices are included here if they use any type of diagnostic medical equipment (if they do not, they are categorized as an office building).

(6) *Laboratory* means a category of buildings equipped for scientific experimentation or research as well as other technical, analytical and administrative activities.

(7) *Lodging* means a category of buildings used to offer multiple accommodations for short-term or long-term residents, including skilled nursing and other residential care buildings.

(8) *Mercantile (Enclosed and Strip Malls)* means a category of shopping malls comprised of multiple connected establishments.

(9) *Multi-Family High-Rise Residential Buildings* means a category of residential buildings that contain 3 or more dwelling units and that is designed to be 4 or more stories above grade.

(10) *Office* means a category of buildings used for general office space, professional office, or administrative offices. Medical offices are included here if they do not use any type of diagnostic medical equipment (if they do, they are categorized as an outpatient health care building).

(11) *Public assembly* means a category of public or private buildings, or spaces therein, in which people gather for social or recreational activities.

(12) *Public order and safety* means a category of buildings used for the preservation of law and order or public safety.

(13) *Religious worship* means a category of buildings in which people gather for religious activities, (such as chapels, churches, mosques, synagogues, and temples).

(14) *Retail (Other Than Mall)* means a category of buildings used for the sale and display of goods other than food.

(15) *Service* means a category of buildings in which some type of service is provided, other than food service or retail sales of goods.

(16) *Warehouse and storage* means a category of buildings used to store goods, manufactured products, merchandise, raw materials, or personal belongings (such as self-storage).

PART 435—ENERGY EFFICIENCY STANDARDS FOR THE DESIGN AND CONSTRUCTION OF NEW FEDERAL LOW–RISE RESIDENTIAL BUILDINGS

■ 5. The authority citation for part 435 continues to read as follows:

Authority: 42 U.S.C. 6831–6832; 6834–6836; 42 U.S.C. 8253–54; 42 U.S.C. 7101 *et seq.*

■ 6. Amend § 435.1, by adding paragraph (b) to read as follows:

§ 435.1 Purpose and scope.

* * * * *

(b) This part also establishes a maximum allowable fossil fuel-generated energy consumption standard for new Federal buildings that are low-rise residential buildings and major renovations to Federal buildings that are low-rise residential buildings, for which design for construction began on or after May 1, 2025

* * * * *

■ 7. Amend § 435.2 by:
■ a. Adding in alphabetical order, the definitions of ''Construction cost,'' ''Design for renovation'', ''EISA-subject building or project'', ''Federal building,'' ''Fiscal year (FY),'' ''Fossil fuel-generated energy consumption,'' ''Major renovation,'' ''Major renovation cost,'' ''Major renovation of all Scope fossil fuel-using systems in a building,'' and ''Major renovation of a Scope 1 fossil fuel-using building system or Scope 1 fossil fuel-using component'';
■ b. Revising the definition of ''Proposed building''; and
■ c. Adding in alphabetical order, the definitions of ''Shift adjustment multiplier'' and ''Technical impracticability''.

The additions and revision read as follows:

§ 435.2 Definitions.

* * * * *

Construction cost means all costs associated with the construction of a new Federal building. It includes, but not limited to, the cost of preliminary planning, engineering, architectural, permitting, fiscal, and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the construction of a new Federal building. It does not include the cost of acquiring the land.

* * * * *

Design for renovation means the stage when the energy efficiency and sustainability details (such as insulation levels, HVAC systems, water-using systems, etc.) are either explicitly determined or implicitly included in a renovation project cost specification.

* * * * *

EISA-subject building or project means, for purposes of this rule, any new building or renovation project that is subject to the cost thresholds and reporting requirements in Section 433 of EISA ((42 U.S.C. 6834(a)(3)(D)(i))). The cost threshold referenced in Section 433 of EISA is $2.5 million in 2007 dollars. GSA provides a table of annual updates to this cost threshold at *https://www.gsa.gov/real-estate/design-and-construction/annual-prospectus-thresholds.* GSA also provides a second cost threshold for renovations of leased buildings that is ½ of the cost threshold for renovation of Federally owned buildings.

* * * * *

Federal building means any building to be constructed by, or for the use of, any Federal agency. Such term shall include buildings built for the purpose of being leased by a Federal agency and privatized military housing.

Fiscal Year (FY) means the 12-month period beginning on October 1 of the year prior to the specified calendar year and ending on September 30 of the specified calendar year.

Fossil fuel-generated energy consumption means the on-site stationary consumption of fossil fuels that contribute to Scope 1 emissions for generation of electricity, heat, cooling, or steam as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016). This includes, but is not limited to, emissions that result from combustion of fuels in stationary sources (*e.g.,* boilers, furnaces, turbines, and emergency generators). This term does not include mobile sources, fugitive emissions, or process emissions as defined by ''Federal Greenhouse Gas Accounting and Reporting Guidance'' (Council on Environmental Quality, January 17, 2016).

* * * * *

Major renovation means either major renovation of all Scope 1 fossil fuel-using systems in a building or major renovation of one or more Scope 1 fossil fuel-using building systems or components, as defined in this section.

Major renovation cost means all costs associated with the repairing, remodeling, improving, extending, or other changes in a Federal building. It includes, but is not limited to, the cost of preliminary planning, engineering, architectural, permitting, fiscal, and economic investigations and studies, surveys, designs, plans, working drawings, specifications, procedures, and other similar actions necessary for the alteration of a Federal building.

Major renovation of all Scope 1 fossil fuel-using systems in a building means construction on an existing building that is so extensive that it replaces all Scope 1 fossil fuel-using systems in the building. This term includes, but is not limited to, comprehensive replacement or restoration of most or all major systems, interior work (such as ceilings, partitions, doors, floor finishes, etc.), or building elements and features.

Major renovation of a Scope 1 fossil fuel-using building system or Scope 1 fossil fuel-using component means changes to a building that provide significant opportunities for energy efficiency or reduction in fossil fuel-related energy consumption. This includes, but is not limited to, replacement of the HVAC system, hot water system, or cooking system, or other fossil fuel-using systems or components of the building that have a major impact on fossil fuel usage.

* * * * *

Proposed building means the design for construction of a new Federal low-rise residential building, or major renovation to a Federal low-rise residential building, proposed for construction.

Shift adjustment multiplier means that agencies can apply a multiplication factor to their Maximum Allowable Fossil Fuel-Generated Energy Consumption by Building Category target based upon the weekly hours of active operation of the building. The weekly hours of operation to use as a basis for the shift adjustment multiplier lookup should be based upon the time in which in the building is actively occupied and operating per its intended use type and should include unoccupied hours or other times of limited use (such as night-time setback hours).

Technical impracticability means achieving the Scope 1 fossil fuel-based energy consumption targets would:

(1) Not be feasible from an engineering design or execution standpoint due to existing physical or site constraints that prohibit modification or addition of elements or spaces;

(2) Significantly obstruct building operations and the functional needs of a building, specifically for industrial process loads, critical national security functions, mission critical information systems as defined in NIST SP 800–60 Vol. 2 Rev. 1, and research operations, or

(3) Significantly degrade energy resiliency and energy security of

building operations as defined in 10 U.S.C. 101(e)(6) and 10 U.S.C. 101(e)(7) respectively.

■ 8. Subpart B is added to part 435 to read as follows:

Subpart B—Reduction in Scope 1 Fossil Fuel-Generated Energy Consumption

Sec.

Appendix A to Subpart B of Part 435—Maximum Allowable Scope 1 Fossil Fuel-Generated Energy Consumption

§ 435.200 Scope 1 Fossil fuel-generated energy consumption requirement.

(a) *New EISA-Subject buildings.* (1) New Federal buildings that are low-rise residential buildings, for which design for construction began on or after May 1, 2025, must be designed to meet the requirements of paragraph (c) of this section if:

(i) For all leased buildings, the construction cost of the new building exceeds GSA's Annual Prospectus Thresholds that are found at *www.gsa.gov/real-estate/design-construction/gsa-annual-prospectus-thresholds.*

(ii) For all Federally owned non-public buildings, the cost of the building is at least $2,500,000 (in 2007 dollars, adjusted for inflation). For the purposes of calculating this threshold, agencies must set the Bureau of Labor and Statistics CPI Inflation calculator to $2,500,000 in October of 2006 (to represent the value of the original cost threshold) and then set for October of the FY during which the design for construction of the project began or is set to begin.

(b) *Major renovations of EISA-Subject buildings.* (1) Major renovations to Federal buildings that are low-rise residential buildings, for which design for construction began on or after May 1, 2025, must be designed to meet the requirements of paragraph (c) of this section if the cost of the major renovation is at least $2,500,000 (in 2007 dollars, adjusted for inflation). For the purposes of calculating this threshold, projects should set the Bureau of Labor and Statistics CPI Inflation calculator to $2,500,000 in October of 2006 (to represent the value of the original cost threshold) and then set for October of the FY during which the design for construction of the project began or is set to begin.

(2) This subpart applies only to the portions of the proposed building or proposed building systems that are being renovated and to the extent that the scope of the renovation permits compliance with the applicable requirements in this subpart. Unaltered portions of the proposed building or proposed building systems are not required to comply with this subpart.

(3) For leased buildings, this subpart applies to major renovations only if the proposed building was originally built for the use of any Federal agency, including for the purpose of being leased by a Federal agency.

(c) *Federal buildings that are of the type included in Appendix A of this subpart*—(1) *New Construction and Major Renovations of all Scope 1 Fossil Fuel-Using Systems in an EISA-Subject Building.*

(i) Design for construction began during FY 2024 through FY 2029. For new construction or major renovations of all fossil fuel-using systems in an EISA-subject building, for which design for construction or renovation, as applicable, began during FY 2024 through 2029, the Scope 1 fossil fuel-generated energy consumption of the proposed building, based on the building design and calculated according to § 435.201(a), must not exceed the value identified in Tables A–1a to A–2a (if targets based on Scope 1 emissions are used) or Tables A–1b to A–2b (if targets based on kBtu of fossil fuel usage are used) of Appendix A of this subpart for the associated building type, climate zone, and fiscal year in which design for construction began.

(A) Federal agencies may apply a shift adjustment multiplier to the values in Tables A–1a to A–2a or Tables A–1b to A–2b based on the following baseline hours of operation assumed in Tables A–1a to A–2a or Tables A–1b to A–2b.

(B) To calculate the shift adjustment multiplier, agencies shall estimate the number of shifts for their new building and multiply by the appropriate factor shown below in Table 1 for their building type. The Scope 1 fossil fuel-generated energy consumption target for the building would be the value in either Tables A–1a to A–2a or Tables A–1b to A–2b multiplied by the multiplier calculated in the previous sentence.

TABLE 1—SHIFT ADJUSTMENT MULTIPLIER BY HOURS OF OPERATION AND BUILDING TYPE

Building activity/type	Weekly hours of operation		
	50 or less	51 to 167	168
Admin/professional office	1	1	1.4

(ii) Design for construction began during or after FY 2030. For new construction and major renovations of all Scope 1 fossil fuel-using systems in an EISA-subject building, the Scope 1 fossil fuel-generated energy consumption of the proposed building, based on building design and calculated according to § 435.201(a), must be zero.

(2) Major Renovations of a Scope 1 Fossil Fuel-Using Building System or Component within an EISA-Subject Building shall follow the renovation requirements in section 4.2.1.3 of the applicable building baseline energy efficiency standards listed in § 435.4 substituting the term ''design for construction'' with ''design for renovation'' for the relevant date, and shall replace all equipment that is included in the renovation with all electric or non-fossil fuel-using ENERGY STAR or FEMP designated products as defined in § 436.42. For component level renovations, Agencies shall replace all equipment that is part of the renovation with all electric or non-fossil fuel-using ENERGY STAR or FEMP designated products as defined in § 436.42.

(d) *EISA-Subject buildings that are of the type not included in Appendix A of this subpart*—(1) *Process load buildings.* For building types that are not included in any of the building types listed in Tables A–1a to A–2a or A–1b to A–2b of appendix A of this subpart, or for building types in these tables that contain significant process loads, Federal agencies must select the applicable building type, climate zone, and fiscal year in which design for construction began from Tables A–1a to A–2a or A–1b to A–2b of appendix A of this subpart that most closely corresponds to the proposed building without the process load. The estimated Scope 1 fossil fuel-generated energy consumption of the process load must be added to the maximum allowable Scope 1 fossil fuel-generated energy consumption of the applicable building type for the appropriate fiscal year and climate zone to calculate the maximum allowable Scope 1 fossil fuel-generated energy consumption for the building. The same estimated Scope 1 fossil fuel-generated energy consumption of the process load that is added to the maximum allowable Scope 1 fossil fuel-generated energy consumption of the applicable building must also be used in determining the Scope 1 fossil fuel-generated energy consumption of the proposed building.

(2) *Mixed-use buildings.* For buildings that combine two or more building types with process loads or, alternatively, that combine one or more building types with process loads with one or more building types in Tables A–1a toA–2a or A–1b to A–2b of appendix A of this subpart, the maximum allowable Scope 1 fossil fuel-generated energy consumption of the proposed building is equal to the averaged process load building values determined under paragraph (d)(1) of this section and the applicable building type values in Tables A–1a toA–2a or A–1b to A–2b of appendix A of this subpart, weighted by floor area. Equation 1 shall be used for mixed use buildings.

Equation 1: Scope 1 Fossil fuel generated energy consumption for a mixed-use building = the sum across all building uses of (the fraction of total floor building floor area for building use i times the allowable fossil fuel-generated energy consumption for building use i)

Equation 1 may be rewritten as:

$$Scope\ 1\ Fossil\ Fuel - Generated\ Energy\ Consumption\ for\ a\ Mixed\ Use\ Building = \sum_{i=1}^{n} (Fraction\ of\ Total\ Building\ Floor\ Area\ for\ Building\ Use\ i\ times\ Allowable\ Scope\ 1\ Fossil\ Fuel - Generated\ Energy\ Consumption\ for\ Building\ Use\ i)$$

§ 435.201 Scope 1 Fossil fuel-generated energy consumption determination.

(a) The Scope 1 fossil fuel-generated energy consumption of a proposed design is calculated as follows:

Equation: Scope 1 Fossil Fuel-Generated Energy Consumption = Direct Fossil Fuel Consumption of Proposed Building/Floor Area

Where:

Direct Scope 1 Fossil Fuel-Generated Energy Consumption of Proposed Building equals the total site Scope 1 fossil fuel-generated energy consumption of the proposed building calculated in accordance with the method required in § 435.5(d), and measured in thousands of British thermal units per year (kBtu/yr), except that this term does not include fossil fuel consumption for emergency electricity generation. Agencies must include all on-site fossil fuel use or Scope 1 emissions associated with non-emergency generation from backup generators (such as those for peak shaving or peak shifting). Any energy generation or Scope 1 emissions associated with biomass fuels are excluded. Any emissions associated with natural gas for alternatively fueled vehicles (''AFVs'') (or any other alternative fuel defined at 42 U.S.C. 13211 that is provided at a Federal building) is excluded. For buildings with manufacturing or industrial process loads, such process loads shall be accounted for in the analysis for the building's fossil fuel consumption and GHG emissions, but the process loads are not subject to the phase down targets.

Floor Area is the floor area of the structure that is enclosed by exterior walls, including finished or unfinished basements, finished or heated space in attics, and garages if they have an uninsulated wall in common with the house. Not included are crawl spaces, and sheds and other buildings that are not attached to the house.

§ 435.202 Petition for downward adjustment.

(a) *New Federal buildings major renovations of all Scope 1 fossil fuel-using systems, and major renovations of a Scope 1 fossil fuel-using building system or component in an EISA-subject building.* (1) Upon petition by a Federal agency, the Director of FEMP may adjust the applicable maximum allowable Scope 1 fossil fuel energy consumption standard with respect to a specific building, upon written certification from the head of the agency designing the building, that the requested adjustment is the largest feasible reduction in Scope 1 fossil fuel energy consumption that can practicably be achieved in light of the specified functional needs for that building, as demonstrated by:

(i) A statement from the Head of the Agency or their designee requesting the petition for downward adjustment for the building or renovation, that the building or renovation reduces consumption of Scope 1 fossil fuel energy consumption in accordance with the applicable energy performance standard to the maximum extent practicable and that each fossil fuel using product included in the proposed building that is of a product category covered by the ENERGY STAR program or FEMP for designated products is an ENERGY STAR product or a product meeting the FEMP designation criteria, as applicable;

(ii) A description of the systems, technologies, and practices that were evaluated and unable to meet the required fossil fuel reduction including a justification of why achieving the Scope 1 fossil fuel-based energy consumption targets would be technically impracticable; and

(iii) Any other information the agency determines would help explain its request.

(2) The head of the agency designing the building, or their designee, must also include the following information in the petition:

(i) A general description of the building or major renovation, including but not limited to location, use type, floor area, stories, expected number of occupants and occupant schedule, project type, project cost, and functional needs, mission critical activity, research, and national security operations as applicable;

(ii) The maximum allowable Scope 1 fossil fuel energy consumption for the building from paragraphs (c) or (d) of this section;

(iii) The estimated Scope 1 fossil fuel energy consumption of the proposed building; and

(iv) A description of the proposed building's energy-related features, such as:

(A) HVAC system or component type and configuration;

(B) HVAC equipment sizes and efficiencies;

(C) Ventilation systems or components (including outdoor air volume, controls technique, heat recovery systems, and economizers, if applicable);

(D) Service water heating system or component configuration and equipment (including solar hot water, wastewater heat recovery, and controls for circulating hot water systems, if applicable);

(E) Estimated industrial process loads; and

(F) Any other on-site fossil fuel using equipment.

(3) (i) Agencies may file one petition for a project with multiple buildings if the buildings are

(A) Of the same building, building system, or component type and of similar size and location;

(B) Are being designed and constructed to the same set of targets for fossil fuel-generated energy consumption reduction; and

(C) Would require similar measures to reduce fossil fuel-generated energy consumption and similar adjustment to the numeric reduction requirement.

(ii) The bundled petition must include the information in section (a) that pertains to all buildings, building systems or components included in the petition and an additional description of the differences between each of the buildings, building systems or components. The agency is only required to show work for adjustment once.

(4) Petitions for downward adjustment should be submitted to *cer-petition@hq.doe.gov,* or to:

U.S. Department of Energy, FEMP, Director, Clean Energy Reduction Petitions, EE–5F, 1000 Independence Ave. SW, Washington, DC 20585–0121.

(5) The Director will make a best effort to notify the requesting agency in writing whether the petition for downward adjustment to the numeric reduction requirement is approved or rejected, in 30 calendar days of submittal of a complete petition. If the Director rejects the petition or establishes a value other than that presented in the petition, the Director will forward the reasons for rejection to the petitioning agency.

(b) *Exclusions.* The General Services Administration (GSA) may not submit petitions under paragraphs (a) of this section. Agencies that are tenants of GSA buildings for which the agency, not GSA, has significant design control may

submit petitions in accordance with this section.

Appendix A to Subpart B of Part 435 Maximum Allowable Fossil Fuel Generated Energy Consumption

(a) For purposes of the tables in this appendix, the climate zones are listed in the performance standards required by § 435.4(a)(4)(i).

(b) For purpose of appendix A, the following definitions apply:

(1) *Mobile Home* means a dwelling unit built to the Federal Manufactured Home Construction and Safety Standards in 24 CFR part 3280, that is built on a permanent chassis and moved to a site. It may be placed on a permanent or temporary foundation and may contain one or more rooms.

(2) *Multi-Family in 2–4 Unit Buildings* means a category of structures that is divided into living quarters for two, three, or four families or households in which one household lives above or beside another. This category also includes houses originally intended for occupancy by one family (or for some other use) that have since been converted to separate dwellings for two to four families.

(3) *Multi-Family in 5 or More Unit Buildings* means a category of structures that contain living quarters for five or more households or families and in which one household lives above or beside another.

(4) *Single-Family Attached* means a building with two or more connected dwelling units, generally with a shared wall, each providing living space for one household or family. Attached houses are considered single-family houses as long as they are not divided into more than one dwelling unit and they have independent outside entrances. A single-family house is contained within walls extending from the basement (or the ground floor, if there is no basement) to the roof. Townhouses, row houses, and duplexes are considered single-family attached dwelling units, as long as there is no dwelling unit above or below another.

(5) *Single-Family Detached* means a separate, unconnected dwelling unit, not sharing a wall with any other building or dwelling unit, which provides living space for one household or family. A single-family house is contained within walls extending from the basement (or the ground floor, if there is no basement) to the roof. This includes modular homes but does not include mobile homes.

RIN 0331–AA07

National Environmental Policy Act Implementing Regulations Revisions Phase 2

AGENCY: Council on Environmental Quality.

ACTION: Final rule.

SUMMARY: The Council on Environmental Quality (CEQ) is finalizing its ''Bipartisan Permitting Reform Implementation Rule'' to revise its regulations for implementing the procedural provisions of the National Environmental Policy Act (NEPA), including the recent amendments to NEPA in the Fiscal Responsibility Act. CEQ is making these revisions to provide for an effective environmental review process; ensure full and fair public engagement; enhance efficiency and regulatory certainty; and promote sound Federal agency decision making that is grounded in science, including consideration of relevant environmental, climate change, and environmental justice effects. These changes are grounded in NEPA's statutory text and purpose, including making decisions informed by science; CEQ's extensive experience implementing NEPA; CEQ's perspective on how NEPA can best inform agency decision making; longstanding Federal agency experience and practice; and case law interpreting NEPA's requirements.

DATES: The effective date is July 1, 2024.

ADDRESSES: CEQ established a docket for this action under docket number CEQ–2023–0003. All documents in the docket are listed on *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Amy B. Coyle, Deputy General Counsel, 202–395–5750, *Amy.B.Coyle@ceq.eop.gov;* Megan Healy, Deputy Director for NEPA, 202–395–5750, *Megan.E.Healy@ceq.eop.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

This final rule completes a multiphase rulemaking process that CEQ initiated in 2021 to revise its regulations to improve implementation of the National Environmental Policy Act (NEPA). Throughout the process, CEQ engaged with agency experts who implement NEPA on a daily basis to develop revisions to the regulations to enhance the clarity of the regulatory text, improve the efficiency and effectiveness of the NEPA process, enhance regulatory certainty and address potential sources of litigation risk, and promote consistency across the Federal Government while recognizing the importance of providing agencies with flexibility to tailor their NEPA processes to the specific statutes and factual contexts in which they administer their programs and decisions. CEQ also engaged with individuals affected by agency implementation of NEPA, including representatives of Tribal Nations, environmental justice experts, and representatives of various industries, to gather input on how to improve the NEPA process. CEQ proposed and is now finalizing this rule to reflect the input CEQ has received, the decades of CEQ and agency experience implementing NEPA, and the recent statutory amendments to NEPA. This final rule will help agencies more successfully implement NEPA and facilitate a more efficient and effective environmental review process.

A. NEPA Statute

To declare an ambitious and visionary national policy to promote environmental protection for present and future generations, Congress enacted NEPA in 1969 by a unanimous vote in the Senate and a nearly unanimous vote in the House,[1] and President Nixon signed it into law on January 1, 1970. NEPA seeks to ''encourage productive and enjoyable harmony'' between humans and the environment, recognizing the ''profound impact'' of human activity and the ''critical importance of restoring and maintaining environmental quality'' to the overall welfare of humankind. 42 U.S.C. 4321, 4331. Furthermore, NEPA seeks to promote efforts that will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of people, making it the continuing policy of the Federal Government to use all practicable means and measures to create and maintain conditions under which humans and nature can exist in productive harmony and fulfill the social, economic, and other requirements of present and future generations of Americans. 42 U.S.C. 4331(a). It also recognizes that each person should have the opportunity to enjoy a healthy environment and has a responsibility to contribute to the preservation and enhancement of the environment. 42 U.S.C. 4331(c).

NEPA requires Federal agencies to interpret and administer Federal policies, regulations, and laws in accordance with NEPA's policies and to consider environmental values in their decision making. 42 U.S.C. 4332. To that end, section 102(2)(C) of NEPA requires Federal agencies to prepare ''detailed statement[s],'' referred to as environmental impact statements (EISs), for ''every recommendation or report on proposals for legislation and other major Federal actions significantly affecting the quality of the human environment'' and, in doing so, provide opportunities for public participation to help inform agency decision making. 42 U.S.C. 4332(2)(C). The EIS process embodies the understanding that informed decisions are better decisions and lead to better environmental outcomes when decision makers understand, consider, and publicly disclose environmental effects of their decisions. The EIS process also enriches understanding of the ecological systems and natural resources important to the Nation and helps guide sound decision making based on high-quality information, such as decisions on infrastructure and energy development.[2] *See, e.g., Winter* v. *NRDC,* 555 U.S. 7, 23 (2008) (''Part of the harm NEPA attempts to prevent in requiring an EIS is that, without one, there may be little if any information about prospective environmental harms and potential mitigating measures.'').

In many respects, NEPA was a statute ahead of its time and remains vital today. It codifies the common-sense idea of ''look before you leap'' to guide agency decision making, particularly in complex and consequential areas, because conducting sound environmental analysis before agencies take actions reduces conflict and waste in the long run by avoiding unnecessary harm and uninformed decisions. *See, e.g.,* 42 U.S.C. 4332; *Laclede Gas Co.* v. *FERC,* 873 F.2d 1494, 1499 (D.C. Cir. 1989) (''When so much depends upon the agency having a sure footing, it is not too much for us to demand that it look first, and then leap if it likes.''). It establishes a framework for agencies to ground decisions in science, by

[1] *See* Linda Luther, Cong. Rsch. Serv., RL33152, The National Environmental Policy Act: Background and Implementation, 4 (2011), *https://crsreports.congress.gov/product/details?prodcode=RL33152.*

[2] *See* CEQ, *The National Environmental Policy Act: A Study of Its Effectiveness after Twenty-five Years* 17 (Jan. 1997) (noting that study participants, which included academics, nonprofit organizations, and businesses, ''applauded NEPA for opening the federal process to public input and were convinced that this open process has improved project design and implementation.'').

requiring professional and scientific integrity, and recognizes that the public may have important ideas and information on how Federal actions can occur in a manner that reduces potential harms and enhances ecological, social, and economic well-being. *See, e.g.,* 42 U.S.C. 4332.

On June 3, 2023, President Biden signed into law the Fiscal Responsibility Act of 2023, which included amendments to NEPA. Specifically, it amended section 102(2)(C) and added sections 102(2)(D) through (F) and sections 106 through 111. 42 U.S.C. 4332(2)(C)–(D), 4336–4336e. The amendments codify longstanding principles drawn from CEQ's NEPA regulations, decades of agency practice, and case law interpreting the NEPA regulations, and provide additional direction to improve the efficiency and effectiveness of the NEPA process consistent with NEPA's purposes. Section 102(2)(C) provides that EISs should include discussion of reasonably foreseeable environmental effects of the proposed action, reasonably foreseeable adverse environmental effects that cannot be avoided, and a reasonable range of alternatives to the proposed action; section 102(2)(D) requires Federal agencies to ensure the professional integrity of the discussion and analysis in an environmental document; section 102(2)(E) requires use of reliable data and resources when carrying out NEPA; and section 102(2)(F) requires agencies to study, develop, and describe technically and economically feasible alternatives. 42 U.S.C. 4332(2)(C)–(F).

Section 106 adds provisions for determining the appropriate level of NEPA review. It clarifies that an agency is required to prepare an environmental document when proposing to take an action that would constitute a final agency action, and codifies existing regulations and case law that an agency is not required to prepare an environmental document when doing so would clearly and fundamentally conflict with the requirements of another law or a proposed action is non-discretionary. *See Flint Ridge Development Co.* v. *Scenic Rivers Ass'n of Oklahoma,* 426 U.S. 776, 791 (1976) (holding that a 30–day statutory deadline for a certain agency action created a ''clear and fundamental conflict of statutory duty'' that excused the agency from NEPA compliance with regard to that action); *Dep't of Transp.* v. *Pub. Citizen,* 541 U.S. 752, 756 (2004) (concluding that NEPA did not require an agency to evaluate the environmental effects of certain actions because the agency lacked discretion over those actions). Section 106 also largely codifies the current CEQ regulations and longstanding practice with respect to the use of categorical exclusions (CEs), environmental assessments (EAs), and EISs, as modified by the new provision expressly permitting agencies to adopt CEs from other agencies established in section 109 of NEPA. 42 U.S.C. 4336, 4336c.

Section 107 addresses timely and unified Federal reviews, largely codifying existing practice with a few adjustments, including provisions clarifying lead, joint-lead, and cooperating agency designations, generally requiring development of a single environmental document, directing agencies to develop procedures for project sponsors to prepare EAs and EISs, and prescribing page limits and deadlines. 42 U.S.C. 4336a. Section 108 codifies time lengths and circumstances for when agencies can rely on programmatic environmental documents without additional review, and section 109 allows a Federal agency to adopt and use another agency's CE. 42 U.S.C. 4336b, 4336c. Section 111 adds statutory definitions. 42 U.S.C. 4336e. This final rule updates the regulations to address how agencies should implement NEPA consistent with these recent amendments.

Section 110 directs CEQ to conduct a study and submit a report to Congress on the potential to use online and digital technologies to improve NEPA processes. The development of this report is outside the scope of this rulemaking and the final rule does not incorporate provisions related to implementation of section 110.

B. The Council on Environmental Quality

NEPA codified the existence of the Council on Environmental Quality (CEQ), which had been established 6 months earlier through E.O. 11472, *Establishing the Environmental Quality Council and the Citizen's Advisory Committee on Environmental Quality,* as a component of the Executive Office of the President. 42 U.S.C. 4342. For more than 50 years, CEQ has advised presidents on national environmental policy, assisted Federal agencies in their implementation of NEPA and engaged with them on myriad of environmental policies, and overseen implementation of a variety of other environmental policy initiatives from the expeditious and thorough environmental review of infrastructure projects [3] to the sustainability of Federal operations.[4]

NEPA charges CEQ with overseeing and guiding NEPA implementation across the Federal Government. In addition to issuing the regulations for implementing NEPA, 40 CFR parts 1500 through 1508 (referred to throughout as ''the CEQ regulations''), CEQ has issued guidance on numerous topics related to NEPA review. In 1981, CEQ issued the ''Forty Most Asked Questions Concerning CEQ's National Environmental Policy Act Regulations,'' [5] which CEQ has routinely identified as an invaluable tool for Federal, Tribal, State, and local governments and officials, and members of the public, who have questions about NEPA implementation.

CEQ also has issued guidance on a variety of other topics, from scoping to cooperating agencies to consideration of

For Presidential directives pertaining to other environmental initiatives, see E.O. 13432, *Cooperation Among Agencies in Protecting the Environment With Respect to Greenhouse Gas Emissions From Motor Vehicles, Nonroad Vehicles, and Nonroad Engines,* 72 FR 27717 (May 16, 2007) (requiring CEQ and OMB to implement the E.O. and facilitate Federal agency cooperation to reduce greenhouse gas emissions); E.O. 13141, *Environmental Review of Trade Agreements,* 64 FR 63169 (Nov. 18, 1999) (requiring CEQ and the U.S. Trade Representative to implement the E.O., which has the purpose of promoting Trade agreements that contribute to sustainable development); E.O. 13061, *Federal Support of Community Efforts Along American Heritage Rivers,* 62 FR 48445 (Sept. 15, 1997) (charging CEQ with implementing the American Heritage Rivers initiative); E.O. 13547, *Stewardship of the Ocean, Our Coasts, and the Great Lakes,* 75 FR 43023 (July 22, 2010) (directing CEQ to lead the National Ocean Council); E.O. 13112, *Invasive Species,* 64 FR 6183 (Feb. 8, 1999) (requiring the Invasive Species Council to consult with CEQ to develop guidance to Federal agencies under NEPA on prevention and control of invasive species).

[5] CEQ, Forty Most Asked Questions Concerning CEQ's National Environmental Policy Act Regulations, 46 FR 18026 (Mar. 23, 1981) (Forty Questions), *https://www.energy.gov/nepa/downloads/forty-most-asked-questions-concerning-ceqs-national-environmental-policy-act.*

effects.[6] For example, in 1997, CEQ issued guidance documents on the consideration of environmental justice in the NEPA context [7] under E.O. 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,*[8] and on analysis of cumulative effects in NEPA reviews.[9] From 2010 to the present, CEQ developed additional guidance on CEs, mitigation, programmatic reviews, and consideration of greenhouse gas (GHG) emissions in NEPA.[10] To ensure coordinated environmental reviews, CEQ has issued guidance to integrate NEPA reviews with other environmental review requirements such as the National Historic Preservation Act, E.O. 11988, *Floodplain Management,* and E.O. 11990, *Protection of Wetlands.*[11] Additionally, CEQ has provided guidance to ensure efficient and effective environmental reviews, particularly for infrastructure projects.[12] Finally, CEQ has published resources for members of the public to assist them in understanding the NEPA process and how they can effectively engage in agency NEPA reviews to make sure their voices are heard.[13]

In addition to guidance, CEQ engages frequently with Federal agencies on their implementation of NEPA. CEQ is responsible for consulting with all agencies on the development of their NEPA implementing procedures and determining that those procedures conform with NEPA and the CEQ regulations. Through this process, CEQ engages with agencies to understand their specific authorities and programs to ensure agencies integrate consideration of environmental effects into their decision-making processes. CEQ also provides feedback and advice on how agencies may effectively implement NEPA through their procedures. Additionally, CEQ provides recommendations on how agencies can coordinate on or align their respective procedures to ensure consistent implementation of NEPA across agencies. This role is particularly important in situations where multiple agencies and applicants are regularly involved, such as the review of infrastructure projects.

Second, CEQ consults with agencies on the efficacy and effectiveness of NEPA implementation. Where necessary or appropriate, CEQ engages with agencies on NEPA reviews for specific projects or project types to provide advice and identify any emerging or cross-cutting issues that would benefit from CEQ issuing formal guidance or assisting with interagency coordination. This includes establishing alternative arrangements for compliance with NEPA when agencies encounter emergency situations where they need to act swiftly while also ensuring they meet their NEPA obligations. CEQ also advises on NEPA compliance when agencies are establishing new programs or implementing new statutory authorities. Finally, CEQ helps advance the environmental review process for projects or initiatives deemed important to an administration such as nationally and regionally significant projects, major infrastructure projects, and consideration of certain types of effects, such as climate change-related effects and effects on communities with environmental justice concerns.[14]

Third, CEQ meets regularly with external stakeholders to understand their perspectives on the NEPA process. These meetings can help inform CEQ's development of guidance or other initiatives and engagement with Federal agencies. Finally, CEQ coordinates with other Federal agencies and components of the White House on a wide array of environmental issues and reviews that intersect with the NEPA process, such as Endangered Species Act consultation or effects to Federal lands and waters from federally authorized activities.

In addition to its NEPA responsibilities, CEQ is currently charged with implementing several of the administration's key environmental priorities, including efficient and effective environmental review and permitting. On January 27, 2021, the President signed E.O. 14008, *Tackling the Climate Crisis at Home and Abroad,* to establish a government-wide approach to the climate crisis by

reducing GHG emissions across the economy; increasing resilience to climate change-related effects; conserving land, water, and biodiversity; transitioning to a clean-energy economy; and advancing environmental justice, including delivering the benefits of Federal investments to disadvantaged communities.[15] CEQ is leading the President's efforts to secure environmental justice consistent with sections 219 through 223 of the E.O. For example, CEQ has developed the Climate and Economic Justice Screening Tool,[16] and collaborates with the Office of Management and Budget (OMB) and the National Climate Advisor on implementing the Justice40 initiative, which sets a goal that 40 percent of the overall benefits of certain Federal investments flow to disadvantaged communities.[17]

Section 205 of the E.O. also charged CEQ with developing the Federal Sustainability Plan to achieve a carbon pollution-free electricity sector and clean and zero-emission vehicle fleets. Thereafter, CEQ issued the Federal Sustainability Plan,[18] which accompanied E.O. 14057, *Catalyzing Clean Energy Industries and Jobs Through Federal Sustainability*.[19] CEQ is leading the efforts with its agency partners to implement E.O. 14057's ambitious goals, which include reducing Federal agency GHG emissions by 65 percent and improving the climate resilience of Federal infrastructure and operations. CEQ also is collaborating with the Departments of the Interior, Agriculture, and Commerce on the implementation of the America the Beautiful Initiative, which was issued to achieve the goal of conserving at least 30 percent of our lands and waters by 2030 as set forth in E.O. 14008.[20] Additionally, E.O. 14008 requires the Chair of CEQ and the Director of OMB to ensure that Federal permitting decisions consider the effects of GHG emissions and climate change.[21]

CEQ is also instrumental to the President's efforts to institute a government-wide approach to advancing environmental justice. On April 21, 2023, the President signed E.O. 14096, *Revitalizing Our Nation's Commitment to Environmental Justice for All,* to further embed environmental justice into the work of Federal agencies and ensure that all people can benefit from the vital safeguards enshrined in the Nation's foundational environmental and civil rights laws.[22] The E.O. charges each agency to make achieving environmental justice part of its mission consistent with the agency's statutory authority,[23] and requires each agency to submit to the Chair of CEQ and make publicly available an Environmental Justice Strategic Plan setting forth the agency's goals and plans for advancing environmental justice.[24] Further, section 8 of the E.O. establishes a White House Office of Environmental Justice within CEQ.

Additionally, CEQ plays a significant role in improving interagency coordination and providing for efficient environmental reviews and permitting under the Biden-Harris Permitting Action Plan.[25] The Action Plan outlines the Administration's strategy for ensuring that Federal environmental reviews and permitting processes are effective, efficient, and transparent, guided by the best available science to promote positive environmental and community outcomes, and shaped by early and meaningful public engagement. The Action Plan contains five key elements that build on strengthened Federal approaches to environmental reviews and permitting: (1) accelerating permitting through early cross-agency coordination to appropriately scope reviews, reduce bottlenecks, and use the expertise of sector-specific teams; (2) establishing clear timeline goals and tracking key project information to improve transparency and accountability, providing increased certainty for project sponsors and the public; (3) engaging in early and meaningful outreach and communication with Tribal Nations, States, Territories, and local communities; (4) improving agency responsiveness, technical assistance, and support to navigate the environmental review and permitting process effectively and efficiently; and (5) adequately resourcing agencies and using the environmental review process to improve environmental and community outcomes.

Finally, CEQ is staffed with experts with decades of NEPA experience as well as other environmental law and policy experience. As part of CEQ's broader environmental policy role, CEQ advises the President on environmental issues facing the nation, and on the design and implementation of the President's environmental initiatives. In that role, CEQ collaborates with agencies and provides feedback on their implementation of the numerous environmental statutes and directives. CEQ's diverse array of responsibilities and expertise has long influenced the implementation of NEPA, and CEQ relied extensively on this experience in developing this rulemaking.

C. NEPA Implementation 1970–2019

Following shortly after the enactment of NEPA, President Nixon issued E.O. 11514, *Protection and Enhancement of Environmental Quality,* directing CEQ to issue guidelines for implementation of section 102(2)(C) of NEPA.[26] In response, CEQ in April 1970 issued interim guidelines, which addressed the provisions of section 102(2)(C) of the Act regarding EIS requirements.[27] CEQ revised the guidelines in 1971 and 1973 to address public involvement and introduce the concepts of EAs and draft and final EISs.[28]

In 1977, President Carter issued E.O. 11991, *Relating to Protection and Enhancement of Environmental Quality,* amending E.O. 11514 and directing CEQ to issue regulations for implementation

[27] *See* CEQ, Statements on Proposed Federal Actions Affecting the Environment, 35 FR 7390 (May 12, 1970) (interim guidelines).

[28] CEQ, Statements on Proposed Federal Actions Affecting the Environment, 36 FR 7724 (Apr. 23, 1971) (final guidelines); CEQ, Preparation of Environmental Impact Statements, 38 FR 10856 (May 2, 1973) (proposed revisions to the guidelines); CEQ, Preparation of Environmental Impact Statements: Guidelines, 38 FR 20550 (Aug. 1, 1973) (revised guidelines).

of section 102(2)(C) of NEPA and requiring that Federal agencies comply with those regulations.[29] CEQ promulgated its NEPA regulations in 1978.[30] Issued 8 years after NEPA's enactment, the NEPA regulations reflected CEQ's interpretation of the statutory text and Congressional intent, expertise developed through issuing and revising the CEQ guidelines and advising Federal agencies on their implementation of NEPA, initial interpretations of the courts, and Federal agency experience implementing NEPA. The 1978 regulations reflected the fundamental principles of informed and science-based decision making, transparency, and public engagement that Congress established in NEPA. The regulations further required agency-level implementation, directing Federal agencies to issue and periodically update agency-specific implementing procedures to supplement CEQ's procedures and integrate the NEPA process into the agencies' specific programs and processes. Consistent with 42 U.S.C. 4332(2)(B), the regulations also required agencies to consult with CEQ in the development or update of these agency-specific procedures to ensure consistency with CEQ's regulations.

CEQ made typographical amendments to the 1978 implementing regulations in 1979[31] and amended one provision in 1986 (CEQ refers to these regulations, as amended, as the ''1978 regulations'' in this preamble).[32] Otherwise, CEQ left the regulations unchanged for over 40 years. As a result, CEQ and Federal agencies developed extensive experience implementing the 1978 regulations, and a large body of agency practice and case law developed based on them. *See, e.g., Robertson* v. *Methow Valley Citizens Council,* 490 U.S. 332, 355 (1989) (''CEQ regulations are entitled to substantial deference.''); *Wild Va.* v. *Council on Env't Quality,* 56 F.4th 281, 288 (4th Cir. 2022) (noting that prior to the 2020 rule, CEQ's NEPA regulations ''had remained virtually unchanged since 1978.'')

D. 2020 Amendments to the CEQ Regulations

On August 15, 2017, President Trump issued E.O. 13807, *Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure Projects,*[33] which directed CEQ to establish and lead an interagency working group to identify and propose changes to the NEPA regulations.[34] In response, CEQ issued an advance notice of proposed rulemaking (ANPRM) on June 20, 2018,[35] and a notice of proposed rulemaking (NPRM) on January 10, 2020, proposing broad revisions to the 1978 regulations.[36] A wide range of stakeholders submitted more than 12,500 comments on the ANPRM[37] and 1.1 million comments on the proposed rule,[38] including from State and local governments, Tribes, environmental advocacy organizations, professional and industry associations, other advocacy or non-profit organizations, businesses, and private citizens. Many commenters provided detailed feedback on the legality, policy wisdom, and potential consequences of the proposed amendments. In keeping with the proposed rule, the final rule, promulgated on July 16, 2020 (2020 regulations or 2020 rule), made wholesale revisions to the regulations; it took effect on September 14, 2020.[39]

In the months that followed the issuance of the 2020 rule, five lawsuits were filed challenging the 2020 rule.[40] These cases challenge the 2020 rule on a variety of grounds, including under the Administrative Procedure Act (APA), NEPA, and the Endangered Species Act, and contend that the rule exceeded CEQ's authority and that the related rulemaking process was procedurally and substantively defective. The district courts issued temporary stays in each of these cases, except for *Wild Virginia* v. *Council on Environmental Quality,* which the district court dismissed without prejudice on June 21, 2021.[41] The Fourth Circuit affirmed that dismissal on December 22, 2022.[42]

E. CEQ's Review of the 2020 Regulations

On January 20, 2021, President Biden issued E.O. 13990, *Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis,*[43] to establish an administration policy to listen to the science; improve public health and protect our environment; ensure access to clean air and water; limit exposure to dangerous chemicals and pesticides; hold polluters accountable, including those who disproportionately harm communities of color and low-income communities; reduce GHG emissions; bolster resilience to the impacts of climate change; restore and expand the Nation's treasures and monuments; and prioritize both environmental justice and the creation of well-paying union jobs necessary to achieve these goals.[44] The Executive Order calls for Federal agencies to review existing regulations issued between January 20, 2017, and January 20, 2021, for consistency with the policy it articulates and to take appropriate action.[45] The Executive Order also revokes E.O. 13807 and directs agencies to take steps to rescind any rules or regulations implementing it.[46] An accompanying White House fact sheet, published on January 20, 2021, specifically identified the 2020 regulations for CEQ's review for consistency with E.O. 13990's policy.[47]

[47] The White House, Fact Sheet: List of Agency Actions for Review (Jan. 20, 2021), *https://www.whitehouse.gov/briefing-room/statements-releases/2021/01/20/fact-sheet-list-of-agency-actions-for-review/.*

Consistent with E.O. 13990 and E.O. 14008, CEQ has reviewed the 2020 regulations and engaged in a multi-phase rulemaking process to ensure that the NEPA implementing regulations provide for sound and efficient environmental review of Federal actions, including those actions integral to tackling the climate crisis, in a manner that enables meaningful public participation, provides for an expeditious process, discloses climate change-related effects, advances environmental justice, respects Tribal sovereignty, protects our Nation's resources, and promotes better and more equitable environmental and community outcomes.

On June 29, 2021, CEQ issued an interim final rule to amend the requirement in 40 CFR 1507.3(b) (2020) [48] that agencies propose changes to existing agency-specific NEPA procedures to make those procedures consistent with the 2020 regulations by September 14, 2021.[49] CEQ extended the date by 2 years to avoid agencies proposing changes to agency-specific implementing procedures on a tight deadline to conform to regulations that were undergoing extensive review and would likely change in the near future.

Next, on October 7, 2021, CEQ issued a ''Phase 1'' proposed rule to focus on a discrete set of provisions designed to restore three elements of the 1978 regulations, which CEQ finalized on April 20, 2022.[50] First, the Phase 1 rule revised 40 CFR 1502.13 (2020), with a conforming edit to 40 CFR 1508.1(z) (2020), to clarify that agencies have discretion to consider a variety of factors when assessing an application for authorization by removing a requirement that an agency base the purpose and need on the goals of an applicant and the agency's statutory authority. Second, CEQ removed language in 40 CFR 1507.3 (2020) that could be construed to limit agencies' flexibility to develop or revise procedures to implement NEPA specific to their programs and functions that may go beyond CEQ's regulatory requirements. Finally, CEQ revised the definition of ''effects'' in 40 CFR 1508.1(g) (2020) to restore the substance of the definitions of ''effects'' and ''cumulative impacts'' contained in the 1978 regulations.

On July 31, 2023, CEQ published the Phase 2 notice of proposed rulemaking (proposed rule or NPRM), initiating a broader rulemaking to revise, update, and modernize the NEPA implementing regulations.[51] Informed by CEQ's extensive experience implementing NEPA, public and agency input, and Congress's amendments to NEPA, CEQ proposed further revisions to improve the efficiency and effectiveness of environmental reviews; ensure that environmental reviews are guided by science and are consistent with the statute's text and purpose; enhance clarity and certainty for Federal agencies, project proponents, and the public; enable full and fair public participation and a process that informs the public about the potential environmental effects of agency actions; and ultimately promote better informed Federal decisions that protect and enhance the quality of the human environment, including by ensuring climate change, environmental justice, and other environmental issues are fully accounted for in agencies' decision-making processes.

Publication of the proposed rule initiated a 60–day public comment period that concluded on September 29, 2023. CEQ held four virtual public meetings on the proposed rule on August 26, 2023; August 30, 2023; September 11, 2023; and September 21, 2023, as well as two Tribal consultations on September 6, 2023, and September 12, 2023. CEQ received approximately 147,963 written comments and 86 oral comments in response to the proposed rule and considered these 148,049 comments in the development of this final rule. A majority of the comments (approximately 147,082) were campaign form letters sent in response to an organized initiative and are identical or very similar in form and content. CEQ received approximately 920 unique public comments, of which 540 were substantive comments on a variety of aspects of the rulemaking approach and contents of the proposed rule.

The majority of the unique comments expressed overall or conditional support for the proposed rule. CEQ provides a summary of the comments received on the proposed rule and responses to those comment summaries in the document, ''National Environmental Policy Act Implementing Regulations Revision Phase 2 Response to Comments'' (Phase 2 Response to Comments). Additionally, CEQ provides brief comment summaries and responses for many of the substantive comments it received as part of the summary and rationale for the final rule in section II.

As discussed in section I.B, CEQ relies on its extensive experience overseeing and implementing NEPA in the development of this rule. CEQ has over 50 years of experience advising Federal agencies on the implementation of NEPA and is staffed by NEPA practitioners who have decades of experience implementing NEPA at agencies across the Federal Government as well as from outside the government, including State governments and applicants whose activities require Federal action. CEQ collaborates daily with Federal agencies on specific NEPA reviews, provides government-wide guidance on NEPA implementation, including the recent NEPA amendments, consults with agencies on the development of agency-specific NEPA implementing procedures and determines whether the procedures conform with NEPA and the CEQ regulations, and advises the President on a vast array of environmental issues. This experience also enables CEQ to contextualize the patchwork of fact-specific judicial decisions that have evolved under NEPA. This rulemaking seeks to bring clarity and predictability to Federal agencies and outside parties whose activities require Federal action and therefore trigger NEPA review, while also facilitating better environmental and social outcomes due to informed decision making.

II. Summary of and Rationale for the Final Rule

This section summarizes the changes CEQ proposed to its NEPA implementing regulations in the notice of proposed rulemaking (NPRM or proposed rule), the public comments CEQ received on those proposed changes, a description of the revisions made through this final rule, and the rationale for those changes. CEQ's revisions fall into five general categories. First, CEQ makes revisions to the regulations to implement the amendments to NEPA made by the Fiscal Responsibility Act. Second, CEQ amends the regulations to enhance consistency and clarity. Third, CEQ revises the regulations based on decades of CEQ and agency experience implementing and complying with NEPA to improve the efficiency and

[48] In the preamble, CEQ uses the section symbol (§) to refer to the proposed or final regulations; 40 CFR 150X.X (2020) or (2022) to refer to the current CEQ regulations as set forth in 40 CFR parts 1500–1508, which this Final Rule amends; and 40 CFR 150X.X (2019) to refer to the CEQ regulations as they existed prior to the 2020 rule.

[50] CEQ, National Environmental Policy Act Implementing Regulations Revisions, 86 FR 55757 (Oct. 7, 2021) (Phase 1 proposed rule); CEQ, National Environmental Policy Act Implementing Regulations Revisions, 87 FR 23453 (Apr. 20, 2022) (Phase 1 Final Rule).

[51] CEQ, National Environmental Policy Act Implementing Regulations Revision Phase 2, 88 FR 49924 (July 31, 2023) (Phase 2 proposed rule).

effectiveness of the environmental review process, foster science-based decision making, better effectuate NEPA's statutory purposes, and reflect developments in case law. Fourth, CEQ reverts to and revises for clarity certain language from the 1978 regulations, which were in effect for more than 40 years before the 2020 rule revised them, where CEQ determined the 1978 language provides clearer and more effective and predictable direction or guidance to implement NEPA. Fifth, CEQ removes certain provisions added by the 2020 rule that CEQ considers imprudent or legally unsettled, or that create uncertainty or ambiguity that could reduce efficiency or increase the risk of litigation. Outside of those revisions, CEQ retains many of the changes made in the 2020 rulemaking, including changes that codified longstanding practice or guidance or enhanced the efficiency and effectiveness of the NEPA process. For example, CEQ identified for retention the inclusion of Tribal interests throughout the regulations, the integration of mechanisms to facilitate better interagency cooperation, and the reorganization and modernization of provisions addressing certain elements of the process to make the regulations easier to understand and follow. CEQ considers it important that the regulations meet current goals and objectives, including to promote the development of NEPA documents that are concise but also include the information needed to inform decision makers and reflect public input.

In response to the Phase 1 proposed rule, CEQ received many comments on provisions not addressed in Phase 1. CEQ indicated in the Phase 1 Final Rule that it would consider such comments during the development of this Phase 2 rulemaking. CEQ has done so, and where applicable, this final rule provides a high-level summary of the important issues raised in those public comments. Where CEQ has retained provisions as finalized in the Phase 1 rulemaking, CEQ incorporates by reference the discussion of those provisions in the Phase 1 proposed and final rule, as well as the Phase 1 Response to Comments.[52] CEQ is revising and republishing the entirety of the NEPA regulations, Subpart A of Chapter V, Title 40 of the Code of Federal Regulations.[53]

A. Changes Throughout Parts 1500–1508

In the NPRM, CEQ proposed several revisions throughout parts 1500 through 1508 to provide consistency, improve clarity, and correct grammatical errors. CEQ proposed clarifying edits because unclear language can create confusion and undermine consistent implementation, thereby improving the efficiency of the NEPA process and reducing the risk of litigation.

For these reasons, CEQ proposed to change the word ''impact'' to ''effect'' throughout the regulations where this term is used as a noun because these two words are synonymous, with three exceptions. The regulations would continue to refer to a finding of no significant impact (FONSI) because that term has been widely used and recognized and making the substitution of effect for impact in that instance could create confusion rather than add clarity, and environmental impact statement because this term is used in the NEPA statute. Third, CEQ proposed to use ''cumulative impact'' in the definition of ''environmental justice'' as discussed further in section II.J.9. CEQ makes these change in the final rule as proposed.

Also, to enhance clarity, CEQ proposed to use the word ''significant'' only to modify the term ''effects'' throughout the regulations. Accordingly, where ''significant'' modifies a word other than ''effects,'' CEQ proposed to replace ''significant'' with another synonymous adjective, typically ''important'' or ''substantial,'' which have also been used in varying provisions throughout the CEQ regulations since 1978. CEQ proposed this change to avoid confusion about what ''significant'' means in these other contexts without substantively changing any of the provisions so revised.

CEQ proposed this change based on public comments and agency feedback on the Phase 1 rulemaking that use of the word ''significant'' in phrases such as ''significant issues'' or ''significant actions'' creates confusion on what the word ''significant'' means.[54] CEQ also proposed the change to align with the definition of ''significant effects'' in § 1508.1(mm), as discussed in section II.J.24.

One commenter supported the use of ''important'' in place of ''significant,'' asserting that the change will reduce unnecessary confusion and delays because use of consistent terminology will eliminate ambiguity and increase consistency and will speed up future reviews because all parties will understand what is meant by a term. A few other commenters supported the changes in terms generally, saying that the changes help make the NEPA regulations easier to understand.

A separate commenter supported the use of the term ''important'' arguing that it would broaden the scope of what agencies should consider under NEPA. The commenter described significance, in the context of NEPA, as a high bar, and agreed with CEQ that important issues should also be subject to thorough consideration in environmental reviews.

Multiple commenters disagreed with the proposed use of ''important'' in place of ''significant'' or ''unimportant'' in place of ''insignificant.'' These commenters expressed concern about the interpretation of ''important'' without a definition or additional guidance, and that the use of these adjectives could cause confusion and increase litigation risk. A few commenters requested that the final rule replace ''issues'' with ''effects'' and change ''important issues'' to ''significant effects'' asserting that the phrase ''important issues'' is subjective. One commenter stated that while CEQ described the changes as minor, these terms are well understood by courts and agencies and as such changing them will result in numerous updates of related procedures, regulations, and guidance documents that use these terms just for editorial purposes.

Another commenter expressed concern that replacing the word ''significant'' with another adjective is unnecessary, and points to CEQ's own description in the NPRM that it does not intend to ''substantively change the meaning of the provisions'' and suggesting the replacement words will be synonymous. The commenter further asserted that it will be difficult to ensure consistency of implementation if CEQ continually changes language that has no substantive effect on the regulations.

A separate commenter asserted that while they appreciated the return of the definition of ''significance,'' the use of the new term ''important'' is confusing. The commenter further stated that with the heightened focus on environmental justice, human health, and social or societal effects, it is unclear what is

[52] CEQ, Phase 1 proposed rule, *supra* note 50; CEQ, Phase 1 Final Rule, *supra* note 50; CEQ, National Environmental Policy Act Implementing Regulations Revision Phase 1 Response to Comments (Apr. 2022) (Phase 1 Response to Comments), *https://www.regulations.gov/document/CEQ-2021-0002-39427*.

[53] Consistent with guidance from the Office of **Federal Register**, republishing the provisions that are unchanged in this rulemaking provides context for the revisions. *See* Office of the Federal Register, Amendatory Instruction: Revise and Republish, *https://www.archives.gov/federal-register/write/ddh/revise-republish*.

[54] CEQ, Phase 1 Response to Comments, *supra* note 52, at 120–21.

considered important and who determines whether something is important.

CEQ implements this change from ''significant'' to one of its synonyms when it is not modifying ''effect'' in the final rule. The NEPA regulations have long required agencies to focus on the ''important'' issues, *see* 40 CFR 1500.1 (2019), and agencies have decades of experience doing just that—CEQ disagrees that use of this term in other provisions as a substitute for ''significant issues'' alters the scope of the issues to which those provisions refer. CEQ declines to add a definition for this term because its plain meaning is sufficient and notes that the phrase ''significant issues'' was not defined in the 1978 regulations.[55] CEQ's intent is that agencies focus their NEPA documents on the issues that are key for the public to comment on and the agency to take into account in the decision-making process, and only briefly explain why other, unimportant issues are not discussed. As CEQ indicated in the proposed rule, it does not intend the substitution of ''important'' and ''substantial'' for ''significant'' to substantively change the meaning of the provisions, but rather to bring greater consistency and clarity to agencies in implementing these provisions by eliminating a potential ambiguity that these phrases incorporate the definition of ''significant effects''; for example, ensuring that the phrase ''significant actions'' is not mistakenly understood to mean actions that have significant effects, which was not the meaning of the phrase in the regulations. CEQ discusses comments on specific uses of the terms in specific sections of the rule and in the Phase 2 Response to Comments.

For clarity, CEQ proposed to change ''statement'' to ''environmental impact statement'' and ''assessment'' to ''environmental assessment'' where the regulations only use the short form in the paragraph. *See, e.g.,* §§ 1502.3 and 1506.3(e)(1) through (e)(3). CEQ did not receive comments on this proposal and makes these changes throughout the rule as proposed.

CEQ also proposed to make non-substantive grammatical corrections or consistency edits throughout the regulations where CEQ considered the changes to improve readability. Finally, CEQ proposed to update the authorities for each part, update the references to NEPA as amended by the Fiscal Responsibility Act, and fix internal cross references to other sections of the regulations throughout to follow the correct **Federal Register** format. CEQ makes these changes in the final rule.

B. Revisions To Update Part 1500, Purpose and Policy

CEQ proposed substantive revisions to all sections in part 1500. These revisions include reinstating § 1500.2, ''Policy,'' as its own section separate from § 1500.1, ''Purpose'' consistent with the approach taken in the 1978 regulations. Some commenters recommended that CEQ title § 1500.1 ''Purpose and Policy'' and title § 1500.2 ''Additional Policy'' because, in their view, § 1500.2 reflects CEQ's policy judgments rather than the commands of the NEPA statute.

CEQ declines to make this change. The purpose of §§ 1500.1 and 1500.2 is to place the regulations into their broader context by restating the policies of the Act within the regulations, which will improve readability by avoiding the need for cross references to material outside the text of the regulations. Section 1500.2 reflects CEQ's interpretation of the policies of the Act, rather than CEQ's own policy priorities.

1. Purpose (§ 1500.1)

In § 1500.1, CEQ proposed to restore much of the language from the 1978 regulations with revisions to further incorporate the policies Congress established in the NEPA statute. CEQ proposed these changes to restore text regarding NEPA's purpose and goals, placing the regulations into their broader context and to restate the policies of the Act within the regulations. Some commenters expressed general support for proposed § 1500.1 stating that the revisions appropriately frame NEPA's purposes. CEQ revises § 1500.1 as discussed in this section to recognize that the procedural provisions of NEPA are intended to further the purpose and goals of the Act. One of those goals is to make informed and sound government decisions.

First, CEQ proposed to revise paragraph (a) of 40 CFR 1500.1 (2020) by subdividing it into paragraphs (a), (a)(1), and (a)(2). In paragraph (a), CEQ proposed to revise the first sentence to restore language from the 1978 regulations stating that NEPA is ''the basic national charter for protection of the environment'' and add a new sentence stating that NEPA ''establishes policy, sets goals'' and ''provides direction'' for carrying out the principles and policies Congress established in sections 101 and 102 of NEPA. 42 U.S.C. 4331, 4332. CEQ proposed to remove language from the first sentence of paragraph (a) describing NEPA as a purely procedural statute because CEQ considers that language to be an inappropriately narrow view of NEPA's purpose and ignores the fact that Congress established the NEPA process for the purpose of promoting informed decision making and improved environmental outcomes.

Some commenters objected to the proposed use of the phrase ''basic national charter for protection of the environment'' in paragraph (a), asserting it misrepresents NEPA's purpose as a procedural statute. Other commenters opposed the proposed changes to remove the language clarifying that NEPA is a procedural statute, asserting the proposed changes could give the impression that CEQ seeks to expand NEPA beyond its original mandate.

Another commenter objected to the restoration of the language in paragraph (a) asserting that describing NEPA as the ''basic national charter for the protection of the environment'' displaces the U.S. Constitution from the role of ''America's basic national charter for protection.'' CEQ declines to remove this language, which accurately describes NEPA's purpose, was included in the 1978 regulations, and remained in place until the 2020 rule. CEQ disagrees that describing NEPA as the basic national charter for the protection of the environment denigrates the role of the U.S. Constitution. Congress enacted NEPA exercising its Constitutional authority to declare a national environmental policy and describing NEPA as ''America's basic national charter for the protection of the environment'' does not imply that NEPA overshadows the U.S. Constitution. CEQ also notes that several courts have quoted this language approvingly. *See, e.g., Ctr. for Biological Diversity* v. *Bernhardt,* 982 F.3d 723, 734 (9th Cir. 2020); *Habitat Educ. Ctr., Inc.* v. *United States Forest Serv.,* 673 F.3d 518, 533 (7th Cir. 2012).

In the final rule, CEQ revises paragraph (a) as proposed, but removes the parenthetical references to sections 101 and 102 as unnecessary and incomplete because other sections of NEPA also provide direction for carrying out NEPA's policy, which are addressed throughout the regulations. While CEQ agrees that the NEPA analysis required by section 102(2)(C) and these regulations does not dictate a particular outcome, Congress did not establish NEPA to create procedure for procedure's sake, but rather, to provide for better informed Federal decision making and improved environmental

[55] *See, e.g., Significant,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/significant* (defining ''significant'' as ''having or likely to have influence or effect: IMPORTANT'').

outcomes. These goals are not fulfilled if the NEPA analysis is treated merely as a check-the-box exercise. 42 U.S.C. 4332(2)(C). CEQ does not consider it necessary to repeatedly emphasize in the regulations the procedural nature of the statutory mechanism Congress chose to advance the purposes of NEPA as described in section 2 and the policy directions established in section 101 of NEPA. 42 U.S.C. 4321, 4331. Doing so may suggest that NEPA mandates a rote paperwork exercise and de-emphasizes the Act's larger goals and purposes. Instead, CEQ remains cognizant of the goals Congress intended to achieve through the NEPA process in developing CEQ's implementing regulations, and agencies should carry out NEPA's procedural requirements in a manner faithful to the purposes of the statute.

Second, in § 1500.1(a)(1), CEQ proposed to retain the second sentence of 40 CFR 1500.1(a) (2020) summarizing section 101(a) of NEPA, change ''man'' to ''people'' to remove gendered language, and delete ''of Americans'' after ''present and future generations.'' 42 U.S.C. 4331(a). CEQ proposed to add a second sentence summarizing section 101(b) to clarify that agencies should advance the purposes in section 101(b) through their NEPA reviews. 42 U.S.C. 4331(b). CEQ proposed to include this language in § 1500.1(a)(1) to help agencies understand what the regulations refer to when the regulations direct or encourage agencies to act in a manner consistent with the purposes or policies of the Act. *See, e.g.,* §§ 1500.2(a), 1500.6, 1501.1(a), 1502.1(a), and 1507.3(b).

Some commenters objected to the proposal to remove ''of Americans'' from paragraph (a)(1) contending that the removal would be inconsistent with the statute. After considering these comments, CEQ has determined not to make this change and leave the phrase ''of Americans'' at the end of the first sentence of paragraph (a)(1), because this sentence is specifically describing section 101(a) of NEPA, which includes the phrase. However, CEQ notes that this text in section 101(a) and paragraph (a)(1) does not limit NEPA's concerns solely to Americans or the United States. For example, other language in section 101 reflects NEPA's broader purpose to ''create and maintain conditions under which [humans] and nature can exist in productive harmony'' without qualification. 42 U.S.C. 4331(a). As discussed further in section II.J.13, CEQ removes ''of Americans'' from the definition of ''human environment'' in § 1508.1(r) for consistency with the statute's overall broader purpose.

A commenter recommended CEQ add a dash after ''national policy'' in the second sentence for consistency with the statute to ensure that all six of the goals are modified by the phrase ''consistent with considerations of national policy.'' CEQ agrees that the beginning of the sentence, including the phrase ''consistent with other essential considerations of national policy'' modifies all of the listed items that follow and, in the final rule, revises the sentence to subdivide it into paragraphs (a)(1)(i) through (vi) to make this clarification. Lastly in paragraph (a)(1), in the final rule, CEQ changes ''man'' to ''humans'' rather than the proposed ''people'' to remove the gendered language while also providing consistency with the term ''human'' and ''human environment'' used in the NEPA statute and throughout the regulations.

Third, CEQ proposed to begin § 1500.1(a)(2) with the third sentence of 40 CFR 1500.1(a) (2020), modify it, and add two new sentences to generally restore the language of the 1978 regulations stating that the purpose of the regulations is to convey what agencies should and must do to comply with NEPA to achieve its purpose. Specifically, CEQ proposed to revise the first sentence to state that section 102(2) of NEPA establishes the procedural requirements to carry out the policies ''and responsibilities established'' in section 101, and contains '' 'action-forcing' procedural provisions to ensure Federal agencies implement the letter and spirit of the Act.'' 42 U.S.C. 4332(2), 42 U.S.C. 4331. CEQ proposed to add a new second sentence stating the purpose of the regulations is to set forth what agencies must and should do to comply with the procedures and achieve the goals of the Act. In the third new sentence, CEQ proposed to restore the language from the 1978 regulations that the President, Federal agencies, and the courts share responsibility for enforcing the Act to achieve the policy goals of section 101. 42 U.S.C. 4331.

Fourth, CEQ proposed to strike the fourth and fifth sentences of 40 CFR 1500.1(a) (2020), added by the 2020 rule, which state that NEPA requires Federal agencies to provide a detailed statement for major Federal actions, that the purpose and function of NEPA is satisfied if agencies have considered environmental information and informed the public, and that NEPA does not mandate particular results. While the NEPA process does not mandate that agencies reach specific decisions, CEQ proposed to remove this language because CEQ considered this language to unduly minimize Congress's understanding that procedures ensuring that agencies analyze, consider, and disclose environmental effects will lead to better substantive outcomes. CEQ also considered this language inconsistent with Congress's statements of policy in the NEPA statute.

Some commenters objected specifically to the proposed addition of the phrase ''action-forcing,'' and others contended that the proposed rule would revise the regulation not merely to force action, but to require specific outcomes. Another commenter asserted that proposed paragraph (a)(2) goes too far in separating policy goals from the procedures passed by Congress to achieve them.

CEQ finalizes paragraph (a)(2) as proposed and removes the language that describes NEPA as a purely procedural statute because CEQ considers the language to reflect an inappropriately narrow view of NEPA's purpose that minimizes Congress's broader goals in enacting the statute, as specified in sections 2 and 101 of NEPA. 42 U.S.C. 4321, 4331. While NEPA does not mandate particular results in specific decision-making processes, Congress intended the procedures required under the Act to result in more informed decisions, with the goal that information about the environmental effects of those decision would facilitate better environmental outcomes. *See, e.g., Andrus* v. *Sierra Club,* 442 U.S. 347, 350–51 (1979) (''If environmental concerns are not interwoven into the fabric of agency planning, the action-forcing characteristics of [NEPA] would be lost.'').

Fifth, CEQ proposed to strike the first two sentences of 40 CFR 1500.1(b) (2020), which the 2020 rule added, because they provide an unnecessarily narrow view of the purposes of NEPA and its implementing regulations. CEQ proposed to revise the third sentence and add two new sentences to restore in paragraph (b) language from the 1978 regulations emphasizing the importance of the early identification of high-quality information that is relevant to a decision. Early identification and consideration of issues using high-quality information have long been fundamental to the NEPA process, particularly because such identification and consideration facilitates comprehensive analysis of alternatives and timely and efficient decision making, and CEQ considers it important to emphasize these considerations in this section. CEQ also proposed the changes to emphasize that the environmental information that agencies

use in the NEPA process should be high-quality, science-based, and accessible.

Multiple commenters supported the proposed provisions of § 1500.1(b). One commenter supported the provision for agencies to ''concentrate on the issues that are truly relevant to the action in question, rather than amassing needless detail,'' and to use ''high quality, science-based, and accessible'' information. One commenter recommended that CEQ revise ''Most important'' to ''Most importantly'' in § 1500.1(b). CEQ agrees that this change would improve the readability of the sentence and makes this clarifying edit in the final rule.

Other commenters opposed the change to proposed paragraph (b), asserting it would delete important regulatory text. The commenters asserted that by striking the language, CEQ has turned the section from one that says follow the rules into one that adds to the rules. Upon further consideration, CEQ has determined not to finalize the proposed revisions to the beginning of paragraph (b) because the text from the 1978 regulations could be construed as a direction to agencies rather than a statement about the purpose of the CEQ regulations. Specifically, the final rule retains ''[t]he regulations in this subchapter implement'' from the current regulations and then replaces ''section 102(2) of NEPA'' with ''the requirements of NEPA,'' because the requirements of NEPA extend to additional sections following the 2023 NEPA amendments. Additionally, CEQ includes the proposed new second sentence, with revisions. In the final rule, this provision requires rather than recommends that information be high quality for consistency with § 1506.6. CEQ does not include the proposed references to ''science-based'' and ''accessible'' to avoid potential confusion that this provision was establishing a separate obligation from § 1506.6, which addresses methodology and scientific accuracy.

Finally, CEQ proposed a new paragraph (c) to restore text from the 1978 regulations, most of which the 2020 rule deleted, emphasizing the importance of NEPA reviews for informed decision making. Some commenters recommended CEQ further amend proposed paragraph (c) to state that agencies only have to ''protect'' or ''restore and protect,'' rather than ''enhance'' the environment for consistency with sections 101 and 102 of NEPA. 42 U.S.C. 4331, 4332.

CEQ disagrees with the commenters' view of NEPA's purposes and scope. To the extent that a substantive difference exists between the terms in this context, CEQ notes that section 101(c) of NEPA recognizes ''that each person has a responsibility to contribute to the preservation *and enhancement* of the environment.'' 42 U.S.C. 4331(c) (emphasis added); *see also, e.g., Douglas Ctny.* v. *Babbitt,* 48 F.3d 1495, 1505 (9th Cir. 1995) (''The purpose of NEPA is to 'provide a mechanism to *enhance* or improve the environment and prevent further irreparable damage.' '' (emphasis added) (quoting *Pac. Legal Found.* v. *Andrus,* 657 F.2d 829, 837 (6th Cir. 1981)). Another commenter recommended that CEQ qualify the second sentence of proposed paragraph (c) by appending, ''within the agency's Congressional authorizations.'' CEQ declines to make this change. In implementing any statute, agencies must act within the scope of their legal authority; adding a specific qualification to that effect here is therefore unnecessary and could be confusing. CEQ finalizes paragraph (c) as proposed.

2. Policy (§ 1500.2)

The 2020 rule struck 40 CFR 1500.2 (2019), stating that it was duplicative of other sections, and integrated policy language into 40 CFR 1500.1 (2020).[56] CEQ proposed to restore § 1500.2 because a robust articulation of NEPA's policy principles is fundamental to the NEPA process. CEQ also proposed to restore the policy section because it is helpful to agency practitioners and the public to have a consolidated listing of policy objectives regardless of whether other sections of the regulations address those objectives. CEQ proposed to restore with some updates the language of the 1978 regulations to § 1500.2.

First, CEQ proposed to restore an introductory paragraph to require agencies ''to the fullest extent possible'' to comply with the policy set forth in paragraphs (a) through (f). One commenter asserted that the final rule should delete ''to the fullest extent possible'' because it improperly expands the regulation's authority. CEQ disagrees with the commenter's interpretation of the phrase, which does not expand, but rather qualifies, the scope of § 1500.2 and conforms with the text in section 102 of NEPA, which directs agencies to comply with that section's requirements, including the requirement to prepare an EIS, ''to the fullest extent possible.'' *See* 42 U.S.C. 4332.

Second, CEQ proposed to restore in paragraph (a) the 1978 language directing agencies to interpret and administer policies, regulations, and U.S. laws consistent with the policies of NEPA and the CEQ regulations. Some commenters recommended the final rule revise paragraph (a) to replace ''the policies set forth in the Act and in these regulations,'' with ''with other applicable laws and regulations, in addition to NEPA.'' CEQ finalizes paragraph (a) as proposed and declines to make this change because it aligns with the language of section 102(1) of NEPA. *See* 42 U.S.C. 4332(1). The purpose of § 1500.2(a) is to place the CEQ regulations into their broader context by restating NEPA's policies. Doing so improves readability by avoiding the need for cross references to material outside the text of the regulations.

Third, in paragraph (b), CEQ proposed to restore with clarifying edits the 1978 language directing agencies to implement procedures that facilitate a meaningful NEPA process, including one that is useful to decision makers and the public with environmental documents that are concise and clear, emphasize the important issues and alternatives, and are supported by evidence. CEQ did not receive comments specific to this proposed paragraph and finalizes paragraph (b) as proposed.

Fourth, in paragraph (c), CEQ proposed to direct agencies to integrate NEPA with other planning and environmental review requirements to promote efficient, concurrent processes. One commenter requested the final rule revise proposed paragraph (c) to add qualifying language to require the integration be done at the earliest reasonable time, consistent with § 1501.2(a), except where inconsistent with other statutory requirements or where inefficient. The commenter generally supported integrating the NEPA process with other processes when it is efficient, but asserted that sometimes it may be more efficient to have other processes run consecutively instead of concurrently. CEQ agrees that processes should run consecutively where it is more efficient to do so, and that agencies should not integrate processes when doing so would be inefficient. Therefore, in the final rule, CEQ adds proposed paragraph (c) but does not include ''all'' before ''such procedures,'' and adds ''where doing so promotes efficiency'' at the end of the paragraph.

Fifth, in paragraph (d) CEQ proposed to modernize language from the 1978 regulations in 40 CFR 1500.2(d) (2019) to emphasize public engagement, including ''meaningful public

[56] CEQ, 2020 Final Rule, *supra* note 39, at 43316–17.

engagement with communities with environmental justice concerns, which often include communities of color, low-income communities, indigenous communities, and Tribal communities.''

One commenter requested that CEQ clarify whether the phrase ''affect the quality of the human environment'' in paragraph (d) refers to beneficial or adverse effects and whether it covers temporary effects in addition to permanent ones. CEQ declines to amend the language in question, which CEQ is restoring from the 1978 regulations. Because NEPA directs agencies to consider all of the reasonably foreseeable effects of a proposed action—including positive, negative, temporary, and permanent effects—this phrase is appropriately broad. While the final rule defines ''significant effects'' as limited to only adverse effects, *see* § 1508.1(mm), paragraph (d) is broader because the NEPA regulations encourage and facilitate public engagement for actions that may not have significant effects, including actions that agencies analyze through an EA.

Multiple commenters supported proposed § 1500.2(d) and the emphasis on public engagement. Some commenters recommended the final rule expand the paragraph to clarify how agencies should facilitate public engagement and education. CEQ declines to expand this paragraph because the intent of § 1500.2 is to place the regulations into their broader policy context. Instead, § 1501.9 describes agencies' public engagement responsibilities in detail.

Some commenters opposed proposed paragraph (d) and the emphasis on public engagement. One commenter expressed concern that the proposed rule does not include a similar increased emphasis on State-specific involvement, requested the final rule delineate between State involvement and public involvement, and explicitly emphasize the importance of State-specific engagement, much the same way CEQ has outlined for Tribal engagement.

In the final rule, CEQ adds proposed paragraph (d) but omits the last clause of the proposal and declines to specifically address State-specific involvement in this paragraph because this paragraph is about involving the public, rather than coordinating with other government entities such as States and Tribes. While public involvement and inter-governmental coordination are both critically important components of the NEPA process, they implicate different considerations and are addressed by different portions of the NEPA regulations. CEQ does not include the proposed language describing what communities are often included as communities with environmental justice concerns because ''environmental justice'' and ''communities with environmental justice concerns'' are defined terms in § 1508.1(f) and (m) and the explanatory language is unnecessary in § 1500.2. CEQ also revises the clause in the final rule to clarify the example by adding ''such as those'' after communities so that the example refers to communities in general and communities with environmental justice concerns more specifically, because the regulations encourage meaningful engagement with all communities that are potentially affected by an action. The reference to engagement with communities with environmental justice concerns is an example and not exhaustive. Further, CEQ views an emphasis on engagement with such communities to be important because agencies have not always meaningfully engaged with them, and such communities have been disproportionately and adversely affected by certain Federal activities, and such communities often face challenges in engaging with the Federal Government. In making this change to emphasize public engagement, CEQ notes that consultation with Tribal Nations on a nation-to-nation basis is distinct from the public engagement requirements of NEPA.[57]

Sixth, in paragraph (e), CEQ proposed to restore language from the 1978 regulations regarding use of the NEPA process to identify and assess the reasonable alternatives to proposed actions that avoid or minimize adverse effects. CEQ also proposed to add examples of such alternatives, including those that will reduce climate change-related effects or address health and environmental effects that disproportionately affect communities with environmental justice concerns.

One commenter requested that the final rule further clarify paragraph (e) by adding examples of reasonable alternatives. CEQ declines to add examples to paragraph (e) because reasonable alternatives are not amenable to easy generalization or simple description as they depend on project-specific factors, such as purpose and need, and technical and economic feasibility. Therefore, examples of reasonable alternatives are ill-suited to regulatory text. Some commenters opposed the references to climate change and environmental justice in § 1500.2(e), contending that the references indicate that CEQ's regulations direct or favor particular substantive outcomes, such as the disapproval of oil and gas projects, and will therefore prejudice agencies' analysis of environmental effects; that the NEPA statute does not explicitly address these subjects; or that it will be difficult or burdensome for agencies to account for climate change when conducting environmental reviews.

CEQ adds paragraph (e) as proposed in the final rule. CEQ agrees that NEPA does not dictate a particular outcome, and disagrees that the references to climate change and environmental justice in § 1500.2(e) are contrary to this principle. Rather, Congress enacted and amended NEPA based on the understanding that agency decision makers will make better decisions if they are fully informed about each decision's reasonably foreseeable environmental effects. Paragraph (e) prompts agencies to give appropriate regard to environmental effects related to climate change and environmental justice.

Further, the references to climate change and environmental justice in paragraph (e) reflect and advance NEPA's statutory objectives, text, and policy statements, which include analyzing a reasonable range of alternatives; avoiding environmental degradation; preserving historic, cultural, and natural resources; and ''attain[ing] the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences.'' 42 U.S.C. 4331(b), 4332(2)(C)(iii). The references emphasize that decision makers should integrate those subjects into the analysis of the environmental effects of a proposed action and any reasonable alternatives, as appropriate. Additionally, these changes are consistent with the goal of providing ''safe, healthful, productive, and esthetically and culturally pleasing surroundings'' across the Nation, and the goal that all people can ''enjoy a healthful environment,'' 42 U.S.C. 4331(b), (c), and highlight the importance of considering such effects in environmental documents, consistent with NEPA's requirements and agency practice.[58] The changes are also

[57] *See* E.O. 13175, *Consultation and Coordination with Indian Tribal Governments,* 65 FR 67249 (Nov. 9, 2000); Presidential Memorandum, Tribal Consultation and Strengthening Nation-to-Nation Relationships, 86 FR 7491 (Jan. 29, 2021).

[58] Consistent with section 102(2)(C) of NEPA, consideration of environmental justice and climate change-related effects has long been part of NEPA analysis. *See, e.g., Ctr. for Biological Diversity* v. *Nat'l Highway Traffic Safety Admin.,* 538 F.3d 1172

consistent with E.O. 12898 and E.O. 14096.

Finally, in paragraph (f), CEQ proposed to restore the direction from the 1978 regulations to use all practicable means, consistent with the policies of NEPA, to restore and enhance the environment and avoid or minimize any possible adverse effects of agency actions. These revisions to § 1500.2(d), (e), and (f) reflect longstanding practice among Federal agencies and align with NEPA's statutory policies, including to avoid environmental degradation, preserve historic, cultural, and natural resources, and ''attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences.'' 42 U.S.C. 4331(b).

Multiple commenters expressed support for the proposed changes to paragraphs (d), (e), and (f), asserting the changes appropriately emphasize agency obligations to facilitate public participation in the decision-making process, instead of merely keeping the public informed, and to act on information they obtain in that process. These commenters asserted the proposed changes properly describe the objectives of environmental reviews under NEPA as informed decision making, robust public engagement, and protection of the environment.

One commenter requested the final rule revise paragraph (f) to add other laws and agency authorities after ''the requirements of the Act.'' CEQ finalizes paragraph (f) as proposed and declines to make this change because this paragraph aligns with section 101(b) of NEPA. 42 U.S.C. 4331(b). The purpose of §§ 1500.1 and 1500.2 is to place the regulations into their broader context by restating NEPA's policies within the regulations. Doing so improves readability by avoiding the need for cross references to material outside the text of the regulations. CEQ agrees that agencies should comply with other laws and with agency authorities, which are examples of ''other essential considerations of national policy.'' CEQ also notes that this text was in the 1978 regulation, in effect until 2020, and did not create confusion that the NEPA regulations prevented agencies from complying with other legal requirements.

Commenters recommended that CEQ add various qualifiers to § 1500.2 asserting that agencies have limited authorities and resources and must comply with other applicable laws in addition to NEPA. CEQ declines to make these changes. The introductory paragraph of § 1500.2 provides that agencies must carry out the policies set forth in the section ''to the fullest extent possible,'' which renders the suggested amendments redundant. Moreover, § 1501.3 directs agencies to consider, for a particular action, whether compliance with NEPA would clearly and fundamentally conflict with the requirements of another provision of Federal law when determining NEPA applicability to that action, which is consistent with the manner in which Congress addressed this issue in section 106 of NEPA. 42 U.S.C. 4336.

Likewise, commenters suggested that CEQ clarify particular points of NEPA practice, such as defining ''all practicable means;'' explaining how agencies should facilitate public engagement and education; adding examples of reasonable alternatives; requiring environmental documents to describe the steps that the agency has taken to avoid or minimize adverse effects; providing standards against which to quantitatively assess agencies' implementation of the NEPA regulations; requiring only that agencies minimize the ''significant'' adverse effects of a proposed action; or directing agencies to make their planning efforts consistent with State and local plans to the maximum extent possible.

CEQ declines to revise the regulations in response to these comments. The purpose of §§ 1500.1 and 1500.2 is to place the regulations into their broader context by restating the purposes and policies of the Act and addressing a variety of aspects of NEPA practice would distract from that purpose. Other provisions in the regulations implement the provisions of NEPA that effectuate these purposes and policies, and set forth specific procedures that agencies must and should follow. Accordingly, it is not necessary or appropriate for § 1500.2 to address these subjects in greater detail.

Lastly, one commenter recommended that CEQ add a new paragraph to § 1500.2 to require agencies to realize the Federal Government's trust responsibility to Tribal Nations by acting on and not merely considering Indigenous Knowledge. Another commenter made a related recommendation that § 1500.1 explicitly recognize the Federal Government's trust responsibilities to Tribes.

CEQ agrees that agencies should consider and include Indigenous Knowledge in Federal research, policies, and decision making, including as part of the environmental review process under NEPA. CEQ also recognizes that the Federal trust responsibility to Tribal Nations may shape both the procedures that agencies follow and the substantive outcomes of agencies' decision-making processes. CEQ does not, however, view it as properly within the scope of CEQ's authority to direct agencies to act on Indigenous Knowledge through the NEPA regulations, because the NEPA statute includes procedural, rather than substantive requirements, and the obligation to honor the trust responsibility, including the obligation to engage in Tribal consultation, does not arise from the NEPA statute.

3. NEPA Compliance (§ 1500.3)

CEQ proposed to revise § 1500.3 to restore some language from the 1978 regulations and remove some provisions added by the 2020 rule regarding exhaustion and remedies, which aimed to limit legal challenges and judicial remedies.[59] The process established by the 2020 rule provided that first, an agency must request in its notice of intent (NOI) comments on all relevant information, studies, and analyses on potential alternatives and effects. 40 CFR 1500.3(b)(1) (2020). Second, the agency must summarize all the information it receives in the draft EIS and specifically seek comment on it. 40 CFR 1500.3(b)(2), 1502.17, 1503.1(a)(3) (2020). Third, decision makers must certify in the record of decision (ROD) that they considered all the alternatives, information, and analyses submitted by public commenters. 40 CFR 1500.3(b)(4), 1505.2(b) (2020). And fourth, any comments not submitted within the comment period were considered forfeited as unexhausted. 40 CFR 1500.3(b)(3), 1505.2(b) (2020).

First, CEQ proposed to revise paragraph (a) to remove the phrase ''except where compliance would be inconsistent with other statutory requirements'' from the end of the first sentence because § 1500.6 addresses this issue. CEQ also proposed to remove the references to E.O. 13807, which E.O. 13990 revoked, as well as the reference to section 309 of the Clean Air Act because this provision is implemented by EPA.[60]

CEQ removes the clause ''except where compliance would be inconsistent with other statutory requirements'' in the final rule because the relationship between NEPA and agency statutory authority is addressed in § 1500.6 and the circumstances in

(9th Cir. 2008) and CEQ, Environmental Justice Guidance, *supra* note 7.

[59] CEQ, 2020 Final Rule, *supra* note 39, at 43317–18.

[60] *See* E.O. 13807, *supra* note 14; E.O. 13990, *supra* note 43.

which an agency does not need to prepare an environmental document due to a conflict with other statutes is addressed in § 1501.3. Moreover, to the extent that this phrase could be read as identifying when an agency does not need to conduct an environmental review, the NEPA amendments address that in section 106(a)(3) using different language, specifically, that an agency does not need to prepare an environmental document where ''the preparation of such document would clearly and fundamentally conflict with the requirements of another provision of law.'' 42 U.S.C. 4336(a)(3). CEQ also removes the references to E.O. 13807 and section 309 of the Clean Air Act consistent with the proposal.

Second, CEQ proposed to delete paragraphs (b) and (b)(1) through (b)(4) of 40 CFR 1500.3 (2020) addressing exhaustion. CEQ proposed to remove these provisions because they establish an inappropriately stringent exhaustion requirement for public commenters and agencies. CEQ also proposed to delete this paragraph because it is unsettled whether CEQ has the authority under NEPA to set out an exhaustion requirement that bars parties from bringing claims on the grounds that an agency's compliance with NEPA violated the APA, pursuant to 5 U.S.C. 702. As explained in the proposed rule, while the 2020 rule correctly identifies instances in which courts have ruled that parties may not raise legal claims based on issues that they themselves did not raise during the comment period,[61] other courts have sometimes ruled that a plaintiff can bring claims where another party raised an issue in comments or where the agency should have identified an issue on its own. *Pac. Coast Fed'n of Fishermen's Ass'ns* v. *U.S. Dep't of Interior,* 929 F. Supp. 2d 1039, 1045–46 (E.D. Cal. 2013); *Wyo. Lodging and Rest. Ass'n* v. *U.S. Dep't of Interior,* 398 F. Supp. 2d 1197, 1210 (D. Wyo. 2005); *see Pub. Citizen,* 541 U.S. at 765 (noting that ''[T]he agency bears the primary responsibility to ensure that it complies with NEPA . . . and an EA's or an EIS' flaws might be so obvious that there is no need for a commentator to point them out specifically in order to preserve its ability to challenge a proposed action'').

[61] CEQ, 2020 Final Rule, *supra* note 39, at 43317–18 (citing *Dep't of Transp.* v. *Pub. Citizen,* 541 U.S. 752, 764–65 (2004); *Karst Env't. Educ. & Prot., Inc.* v. *Fed. Highway Admin.,* 559 F. App'x 421, 426–27 (6th Cir. 2014); *Friends of the Norbeck* v. *U.S. Forest Serv.,* 661 F.3d 969, 974 (8th Cir. 2011); *Exxon Mobil Corp.* v. *U.S. EPA,* 217 F.3d 1246, 1249 (9th Cir. 2000); and *Nat'l Ass'n of Mfrs.* v. *U.S. Dep't of the Interior,* 134 F.3d 1095, 1111 (D.C. Cir. 1998)).

Because the fundamental question raised by these cases is the availability of a cause of action under the APA and not a question of interpreting NEPA, CEQ proposed to delete the exhaustion provision because CEQ considers interpreting and applying the APA more appropriate for the courts.

CEQ also proposed to remove the exhaustion requirement because it is at odds with longstanding agency practice. While courts have ruled that agencies are not required to consider comments that are not received until after comment periods end, *see, e.g., Pub. Citizen,* 541 U.S. at 764–65 (finding that where a party does not raise an objection in their comments on an EA, the party forfeits any objection to the EA on that ground), agencies have discretion to do so and have sometimes chosen to exercise this discretion, particularly where a comment provides helpful information to inform the agency's decision. As explained in the proposed rule, the exhaustion requirement could encourage agencies to disregard important information presented to the agency shortly after a comment period closes, and such a formalistic approach would not advance NEPA's goal of informed decision making.

Many commenters supported CEQ's proposal to remove the exhaustion provisions asserting that the provisions were unlawful, created additional compliance burdens, did not improve the efficiency of the NEPA process, and did not reduce litigation risk; and that removal is consistent with the NEPA statute, which does not provide for an exhaustion requirement. One commenter that supported removal, asserted that because NEPA does not impose a statutory exhaustion requirement, the determination of whether a particular plaintiff may go forward with a particular claim is a matter for the judiciary. CEQ agrees with this commenter's view. Where appropriate in light of the statutes they administer, individual agencies may address exhaustion through their agency-specific rules of procedure, and courts will continue to consider exhaustion as a normal part of judicial review.

Commenters that opposed removing the exhaustion requirements argued they are necessary to curb ''frivolous litigation claims;'' assist agencies and the public by providing helpful information on filing timely comments and incentivizing them to raise concerns during the NEPA process; and communicate the need for prompt and active participation in the NEPA review process. While CEQ agrees with these commenters' assertions that the regulations should promote early engagement and public participation and the timely identification of concerns during the NEPA process, CEQ disagrees that the exhaustion provisions are the mechanism to achieve these goals. CEQ considers other provisions in the regulations, including §§ 1501.9 and 1502.4, and part 1503, to be the better means of achieving these goals without incurring the risk of including provisions in the regulations that are legally uncertain.

For these reasons, CEQ removes the exhaustion provisions from the regulations and strikes paragraphs (b) and (b)(1) through (b)(4) of 40 CFR 1500.3 (2020) consistent with the proposal. Removal of these exhaustion provisions does not relieve parties interested in participating in, commenting on, or ultimately challenging a NEPA analysis of the obligation to ''structure their participation so that it is meaningful.'' *Vt. Yankee Nuclear Power Corp.* v. *Nat. Res. Def. Council, Inc.,* 435 U.S. 519, 553 (1978). As CEQ's regulations have made clear since 1978, parties must provide comments that are as specific as possible to enable agencies to consider and address information during the decision-making processes. *See* 40 CFR 1503.3(a) (2019).

Further, nothing in this revision limits the positions the Federal Government may take regarding whether, based on the facts of a particular case, a particular issue has been forfeited by a party's failure to raise it before the agency, and removing this provision does not suggest that a party should not be held to have forfeited an issue by failing to raise it. By deleting the exhaustion requirements, CEQ does not take the position that plaintiffs may raise new and previously unraised issues in litigation. Rather, CEQ considers this to be a question of general administrative law best addressed by the courts based on the facts of a particular case.

Third, CEQ proposed to redesignate paragraph (c), ''Review of NEPA compliance,'' of 40 CFR 1500.3 (2020) as paragraph (b) and add a clause, ''except with respect to claims brought by project sponsors related to deadlines under section 107(g)(3) of NEPA'' to the end of the first sentence stating that judicial review of NEPA compliance does not occur before an agency issues a ROD or takes a final agency action. CEQ did not receive specific comments on this proposal and adds to redesignated paragraph (b) the exception clause to acknowledge the ability of project sponsors to petition a

court when an agency allegedly fails to meet a deadline consistent with section 107(g)(3) of NEPA. 42 U.S.C. 4336(a)(g)(3).

Fourth, CEQ proposed to move the last sentence of paragraph (d) of 40 CFR 1500.3 (2020) regarding harmless error for minor, non-substantive errors, a concept that has been in place since the 1978 regulations, to redesignated paragraph (b). CEQ also proposed to delete the second sentence of paragraph (c) of 40 CFR 1500.3 (2020) stating that noncompliance with NEPA and the CEQ regulations should be resolved as expeditiously as possible. While CEQ agrees with expeditious resolution of issues, CEQ proposed to delete this sentence reasoning that CEQ cannot compel members of the public or courts to resolve NEPA disputes expeditiously.

One commenter opposed the proposed deletion of the second sentence of paragraph (c) of 40 CFR 1500.3 (2020) and disagreed with CEQ's rationale, asserting that it is proper for CEQ to express its interest in agencies resolving NEPA compliance issues as soon as practicable. The commenter further argued that doing so is in the interest of Federal agencies, project proponents, and the public, and that unresolved NEPA disputes can lead to costly litigation that prolongs the NEPA process, wastes taxpayer and project proponent resources, and deprives communities of infrastructure improvements.

CEQ agrees that efficiency is an important goal, and that resolving claims of NEPA noncompliance can result in costly and time-consuming litigation. Upon further consideration, CEQ retains the second sentence of paragraph (c) of 40 CFR 1500.3(2020) in the final rule as the third sentence of § 1500.3(b), but revises the text from ''as expeditiously as possible'' to ''as expeditiously as appropriate.'' While it is true that CEQ cannot compel members of the public or courts to resolve disputes expeditiously, as noted in CEQ's justification for proposing to delete this provision, CEQ considers this sentence to appropriately express CEQ's intention, rather than purporting to inappropriately bind those parties to litigation or dictate what timeline is appropriate for any particular case. Further, CEQ notes that the regulations promote public engagement, appropriate analysis, and informed decision making to facilitate NEPA compliance and avoid such disputes from the outset. CEQ moves the last sentence of 40 CFR 1500.3(d) (2020) to § 1500.3(b) as proposed.

Fifth, CEQ proposed to strike the last sentence of paragraph (c) of 40 CFR 1500.3 (2020) allowing agencies to include bonding and other security requirements in their procedures consistent with their organic statutes and as part of implementing the exhaustion requirements because this relates to litigation over an agency action and not the NEPA process. CEQ explained in the proposed rule that it is unsettled whether NEPA provides agencies with authority to promulgate procedures that require plaintiffs to post bonds in litigation brought under the APA, and that CEQ does not consider it appropriate to address this issue in the NEPA implementing procedures.

Multiple commenters urged CEQ not to remove this sentence or encouraged CEQ to revise the regulations to require parties to post such a bond when petitioning a court to enjoin a NEPA decision during the pendency of litigation. Conversely, many commenters supported the proposed elimination of the bonding provision, which the commenters said discourages public engagement, appropriate analysis, and informed decision making and inequitably burdens disadvantaged communities.

CEQ removes the bonding provision in the final rule by striking the last sentence of 40 CFR 1500.3(c) (2020). NEPA does not authorize CEQ to require posting of bonds or other financial securities prior to a party challenging an agency decision. Agencies may have various authorities independent of NEPA to require bonds or other securities as a condition of filing an administrative appeal or obtaining injunctive relief; this rule does not modify those authorities. CEQ continues to consider it unsettled whether NEPA provides agencies with authority to promulgate procedures that require plaintiffs to post bonds in litigation brought under the APA, commenters did not identify any specific statutory authorities, and even if such authority exists, CEQ does not view such a requirement as appropriate for inclusion in the NEPA regulations. Agency authority to require bonds or other securities as a condition of an administrative appeal or injunctive relief may exist independent of NEPA, and to the extent that such authority does exist, it likely varies by agency. The rule does not modify any existing authority.

CEQ proposed to strike paragraph (d) of 40 CFR 1500.3 (2020) regarding remedies, with the exception of the last sentence, which CEQ proposed to move to proposed paragraph (c) as discussed earlier in this section. CEQ proposed to remove this provision because it is questionable whether CEQ has the authority to direct courts about what remedies are available in litigation brought under the APA, and in any case, CEQ considers the 2020 rule's addition of this paragraph to be inappropriate.

CEQ strikes 40 CFR 1500.3(d) (2020) in the final rule. CEQ considers courts to be in the best position to determine the appropriate remedies when a plaintiff successfully challenges an agency's NEPA compliance. *See, e.g., N. Cheyenne Tribe* v. *Norton,* 503 F.3d 836, 842 (9th Cir. 2007) (rejecting successful NEPA plaintiffs' contention that CEQ regulations mandated a particular remedy and holding that ''a NEPA violation is subject to traditional standards in equity for injunctive relief'').

Finally, CEQ proposed to redesignate paragraph (e) of 40 CFR 1500.3 (2020) on Severability, as proposed paragraph (c), without change. CEQ makes this change in the final rule because CEQ intends these regulations to be severable. This final rule amends existing regulations, and the NEPA regulations can be functionally implemented if each revision in this final rule occurred on its own or in combination with any other subset of revisions. As a result, if a court were to invalidate any particular provision of this final rule, allowing the remainder of the rule to remain in effect would still result in a functional NEPA review process. This approach to severability is the same as the approach that CEQ took when it promulgated the 2020 regulations, because those amendments similarly could be layered onto the 1978 regulations individually without disrupting the overarching NEPA review process.

4. Concise and Informative Environmental Documents (§ 1500.4)

CEQ proposed to revise § 1500.4, which briefly describes and cross references certain other provisions of the CEQ regulations, to emphasize the important values served by concise and informative NEPA documents beyond merely reducing paperwork, such as promoting informed and efficient decision making and facilitating meaningful public participation and transparency. CEQ proposed these changes to encourage the preparation of documents that can be easily read and understood by decision makers and the public, which in turn promotes informed and efficient decision making and public participation.

First, CEQ proposed to retitle § 1500.4 from ''Reducing paperwork'' to ''Concise and informative environmental documents'' and revise the introductory text to clarify that the

listed paragraphs provide examples of the regulatory mechanisms that agencies can use to prepare concise and informative environmental documents. Multiple commenters supported the proposed changes in § 1500.4, opining the changes properly direct agencies to streamline the process of preparing environmental documents and make those documents analytical, concise, and informative. One commenter recommended that CEQ add ''for example'' and ''as appropriate'' to the introductory paragraph.

CEQ revises the title and introductory text of § 1500.4 in the final rule as proposed. Concise and informational documents make the NEPA process more accessible and transparent to the public, allowing the public an opportunity to contribute to the NEPA process. The changes in § 1500.4 align the regulations with the intent of NEPA to allow the public to provide input and enhance transparency, while providing agencies flexibility on how to achieve concise and informative documents. CEQ declines to add ''for example'' and ''as appropriate'' to the introductory paragraph. Those qualifiers are unnecessary because CEQ proposed and is adding ''*e.g.,*'' throughout § 1500.4, where appropriate, to clarify that the cross-references are non-exclusive examples of strategies that agencies must use in preparing analytical, concise, and informative environmental documents.

CEQ proposed to strike paragraphs (a) and (b) of 40 CFR 1500.4 (2020) because they are redundant with § 1500.5(a) and (b) and are more appropriately addressed in that section, which addresses an efficient process. CEQ also proposed to strike paragraph (d) of 40 CFR 1500.4 (2020) because this provision would be addressed in the revised introductory text.

A few commenters objected to the deletion of 40 CFR 1500.4(a) and (b) (2020), which pertain to using CEs and FONSIs, respectively. The commenters asserted that the use of CEs and FONSIs is critical to ensuring ''analytical, concise, and informative'' environmental documents, and that the inclusion of such language encourages concision in the evaluation process. While recognizing the paragraphs are redundant with § 1500.5(a) and (b), they asserted that § 1500.5(a) and (b) address improving efficiency in the process, while § 1500.4 addresses concise environmental documents. The commenters further asserted that the two sections are separate in substance and in form, and each should therefore include independent language addressing any inefficiencies.

CEQ strikes paragraphs (a), (b), and (d) of 40 CFR 1500.4 (2020) consistent with the proposal. While CEQ agrees that, where appropriate, applying CEs and preparing EAs and FONSIs typically result in shorter evaluation timelines, this section addresses the preparation of documents, including CE determinations, EAs, and FONSIs, rather than addressing the use of different types of environmental documents.

CEQ proposed to redesignate paragraphs (c) and (e) through (q) of 40 CFR 1500.4 (2020) as § 1500.4 (a) and (b) through (n), respectively. CEQ proposed to add ''*e.g.,*'' to the cross references listed in proposed paragraphs (b), (c), and (e) to clarify that they are non-exclusive examples of how agencies can briefly discuss unimportant issues, write in plain language, and reduce emphasis on background material. CEQ also proposed to update the regulatory section cross references for consistency with the proposed changes in the rule. CEQ makes these changes in the final rule as proposed.

In proposed paragraphs (c) and (e), CEQ proposed to expand the reference from EISs to all environmental documents, as the concepts discussed are more broadly applicable. Additionally, in paragraph (e), CEQ proposed to insert ''most'' before ''useful'' to clarify that the environmental documents should not contain portions that are useless.

In proposed paragraph (f), CEQ proposed to replace ''significant'' with ''important'' and insert ''unimportant'' to modify ''issues'' consistent with the proposal to only use ''significant'' to modify ''effects.'' CEQ also proposed to clarify in paragraph (f) that scoping may apply to EAs. Additionally, CEQ proposed to expand paragraph (h), regarding programmatic review and tiering, to include EAs to align with the proposed changes to § 1501.11. CEQ makes these changes to paragraphs (c), (e), (f), and (h) in the final rule as proposed.

While CEQ did not propose any changes to paragraph (*l*) regarding use of errata sheets, in the final rule, CEQ moves the clause ''when changes are minor'' from the end to the beginning of the paragraph to make the language clearer that agencies use errata sheets only when changes between the draft EIS and final EIS are minor. Finally, in paragraph (m), CEQ proposed to insert ''Federal'' before ''agency'' consistent with § 1506.3, which allows adoption of NEPA documents prepared by other Federal agencies.

One commenter objected to paragraph (m), contending that directing agencies to eliminate duplication by preparing environmental documents jointly with relevant State, Tribal, and local agencies would threaten the autonomy of Tribes by obligating them to coordinate with Federal agencies in preparing environmental documents. CEQ disagrees with this commenter's interpretation of paragraph (m). Paragraph (m) refers agencies to § 1506.2, which makes clear that agencies should only prepare joint environmental documents by mutual consent. CEQ makes the changes as proposed in the final rule.

Commenters recommended including additional strategies in § 1500.4, including minimizing unnecessary repetition in describing and assessing alternatives, limiting discussion of effects to those that are reasonably foreseeable, and resolving disagreements in the review process expeditiously. CEQ declines to add additional paragraphs. Section 1500.4 lists regulatory provisions that agencies must use in preparing concise and informative environmental documents; these provisions already direct agencies to minimize unnecessary repetition, evaluate the reasonably foreseeable effects of proposed actions, and resolve disagreements expeditiously.

5. Efficient Process (§ 1500.5)

CEQ proposed minor changes to § 1500.5 to provide clarity and flexibility regarding mechanisms by which agencies can apply the CEQ regulations to improve efficiency in the environmental review process. CEQ proposed these changes to acknowledge that unanticipated events and circumstances beyond agency control may delay the environmental review process, and to recognize that, while these approaches may improve efficiency for many NEPA reviews, they could be inefficient for others. To that end, CEQ proposed to retitle § 1500.5 from ''Reducing delay'' to ''Efficient process'' and revise the introductory text to replace ''reduce delay'' with ''improve efficiency of the NEPA processes'' consistent with the new title.

Some commenters recommended against these changes asserting that they give the impression that it is unimportant for agencies to reduce delays in the permitting process. CEQ revises the title and introductory text as proposed. The purpose of the changes is not to discount the importance of reducing delays in the environmental review process, but to emphasize that agencies should make their review processes broadly efficient and not merely fast—recognizing that efficiency also requires effectiveness and quality of

work. CEQ agrees that reducing delays is important but considers the text to give the wrong impression that there are always delays in the NEPA process.

CEQ proposed to add EAs to paragraph (a) to make the provision consistent with the definition of ''categorical exclusion;'' phrase paragraph (d) in active voice; change ''real issues'' to ''important issues that required detailed analysis'' in paragraph (f) for consistency with § 1502.4; change ''time limits'' to ''deadlines'' in paragraph (g) for consistency with § 1501.10; and expand the scope of paragraph (h) from EISs to environmental documents to make clear that, regardless of the level of NEPA review, agencies should prepare environmental documents early in the process. CEQ proposed these revisions to recognize the importance of timely information for decision making and encourage agencies to implement the 12 listed mechanisms to achieve timely and efficient NEPA processes. CEQ did not receive any comments specific to these proposed changes and makes them in the final rule. Additionally, CEQ revises § 1500.5(a) to change ''using'' to ''establishing'' and adds a cross reference to § 1507.3(c)(8) because the language in this provision is addressing the development of CEs, not their application to proposed actions.

One commenter recommended the final rule revise paragraph (d)—requiring interagency cooperation during preparation of an EA or EIS rather than waiting to submit comments on a completed document—to require the lead agency to involve other relevant agencies in the determination of whether to review a proposed action by applying a CE, preparing an EA, or preparing an EIS.

CEQ revises paragraph (d) to incorporate some of the text proposed by the commenter. Specifically, CEQ adds ''including with affected Federal, State, Tribal, and local agencies'' to highlight the efficiency benefits of interagency cooperation with those non-Federal entities, and also adds the words ''request or'' before the ''submit comments'' to highlight the importance of both the lead agency and other agencies to interagency cooperation.

6. Agency Authority (§ 1500.6)

CEQ proposed revisions to § 1500.6 to clarify that agencies have an independent responsibility to ensure compliance with NEPA and a duty to harmonize NEPA with their other statutory requirements and authorities to the maximum extent possible. CEQ proposed to revise the second and third sentences in § 1500.6 and strike the fourth sentence.

While CEQ did not propose changes to the first sentence, which requires an agency to view its policies and missions in the light of NEPA's environmental objectives to the extent consistent with its existing authority, one commenter recommended that CEQ revise the sentence to restore phrasing from the 1978 regulations. In particular, the commenter recommended the final rule delete the last clause, ''to the extent consistent with its existing authority'' because it is ''internally inconsistent and contrary to the plain language of NEPA Section 105.'' 42 U.S.C. 4335. Another commenter recommended the final rule delete the first sentence and disagreed with the description in the proposed rule that ''an irreconcilable conflict exists only if the agency's authorizing statute grants it no discretion to comply with NEPA while also satisfying the statutory mandate,'' asserting that if a statute delegates authority, it does so expressly and there is no presumption that an agency's authorizing statute delegates the agency authority to comply with NEPA.

CEQ declines to revise the first sentence. This provision generally directs agencies to interpret the provisions of NEPA, including section 2's statement of purpose, section 101's statement of policy, and sections 102 through 111's procedural provisions as a supplement to their existing authorities, and agencies can only do so to the extent consistent with those authorities. *See* 42 U.S.C. 4321 *et seq.* This provision does not address the more specific issue of when an agency is excused from completing an environmental document because of contrary statutory authority. That issue is addressed in § 1501.3(a)(2), which incorporates section 106(a) of NEPA's directive that agencies are not required to prepare an environmental document where ''the preparation of such document would clearly and fundamentally conflict with the requirements of another provision of law.'' 42 U.S.C. 4336(a)(3). NEPA applies to all Federal agencies and includes a specific statutory directive that ''the policies, regulations, and public laws of the United States shall be interpreted and administered in accordance with the policies set forth in [NEPA].'' 42 U.S.C. 4332(1). While there may be situations in which compliance with another Federal law precludes an agency from complying with NEPA, agencies have an obligation to harmonize NEPA with their other statutes where possible to do so.

CEQ proposed to revise the second sentence of § 1500.6 to remove the qualification added in the 2020 rule that agencies must ensure full compliance with the Act ''as interpreted by'' the CEQ regulations so the provision would instead state that agencies must review and revise their procedures to ensure compliance with NEPA and the CEQ regulations. CEQ proposed this change because the phrase ''as interpreted by'' could be read to indicate that agencies have no freestanding requirement to comply with NEPA itself, which would be untrue. CEQ also considered the change necessary for consistency with § 1507.3(b), which CEQ revised in its Phase 1 rulemaking to make clear that, while agency procedures must be consistent with the CEQ regulations, agencies have discretion and flexibility to develop procedures beyond the CEQ regulatory requirements, enabling agencies to address their specific programs, statutory mandates, and the contexts in which they operate. CEQ proposed to make conforming edits in §§ 1502.2(d) and 1502.9(b) to remove this phrase.

Several commenters expressed support for CEQ's proposal to restore language emphasizing each Federal agency's independent obligation and ability to implement NEPA. The commenters asserted that removing this language would make it clear that agencies have an obligation to comply with NEPA by following CEQ's regulations and also reviewing and revising, as necessary, their own agency policies, procedures, and activities. The commenter further asserted this independent obligation to comply with NEPA, combined with revisions to § 1507.3 in the Phase 1 rule, provides Federal agencies with flexibility to craft regulations tailored to their agency's work, even if they go beyond the requirements of the CEQ NEPA regulations.

Another commenter expressed support for this proposed change and agreed with CEQ's statement that the current text could be read to mistakenly indicate that agencies have no freestanding requirement to comply with NEPA. The commenter suggested that the final rule add to the beginning of the second sentence, to state that ''[a]gencies shall comply with the purposes and provisions of the Act and with the requirements under this Part, to the fullest extent possible.'' The commenter asserted that regardless of what an agency's policies, procedures, and regulations say, it is critical that the agency comply with both NEPA and the CEQ regulations, unless an agency activity, decision, or action is exempted

by law or compliance with NEPA is impossible.

In the final rule, CEQ revises the second sentence of § 1500.6 as proposed to replace ''as interpreted by'' with ''and'' and makes conforming changes to §§ 1502.2(d) and 1502.9(b). CEQ declines to add the clause suggested by the commenter because compliance with NEPA and the regulations is already addressed in the last sentence of this section as well as §§ 1507.1 and 1507.2.

In the third sentence, CEQ proposed to remove the cross-reference to § 1501.1 for consistency with the proposed revisions to § 1501.1 and add the text, consistent with language from the 1978 regulations, explaining that the phrase ''to the fullest extent possible'' means that each agency must comply with section 102 of NEPA unless an agency activity, decision, or action is exempted by law or compliance with NEPA is impossible. 42 U.S.C. 4332.

A couple of commenters suggested revisions to the last sentence of § 1500.6. They asserted that the proposed revisions would create confusion by creating a distinction between complying with section 102 of NEPA and complying with all of NEPA, and that this was incorrect given the recent NEPA amendments and the proposed implementation of those amendments in these regulations. 42 U.S.C. 4321 *et seq.* The commenters recommended the final rule replace ''that section unless'' with ''the Act and the regulations of this subchapter.''

CEQ agrees with the commenter that the statement in section 102 is not limited to that section and replaces the phrase ''that section'' with ''the Act'' for consistency with the statute. Section 102(2) authorizes and directs that, to the fullest extent possible the policies, regulations, and public laws of the United States shall be interpreted and administered in accordance with the policies set forth in NEPA. 42 U.S.C. 4332(2). CEQ does not include a reference to the regulations as these are not specifically identified in section 102, and § 1507.1 addresses the requirement to comply with the NEPA regulations.

The commenters also recommended the final rule replace ''compliance with NEPA is impossible'' with ''compliance is impracticable.'' The commenters recommended this change because section 101 refers to the Federal Government taking all ''practicable means'' to advance NEPA's goals, implicitly sparing the need to pursue ''impracticable'' steps. 42 U.S.C. 4331.

CEQ declines to make this change and revises the last sentence as proposed to strike ''consistent with § 1501.1 of this chapter'' and replace it with ''unless an agency activity, decision, or action is exempted from NEPA by law or compliance with NEPA is impossible.'' Compliance with NEPA is only impossible within the meaning of this subsection when the conflict between another statute and the requirements of NEPA are clear, unavoidable, and irreconcilable. Absent exemption by Congress or a court, an irreconcilable conflict exists if the agency's authorizing statute does not provide the agency any discretion to comply with NEPA while also satisfying its statutory mandate. While NEPA requires agencies ''to use all practicable means'' to achieve the Act's environmental goals, *see* 42 U.S.C. 4331, the Act does not limit its procedural requirements in the same fashion. Instead, it directs agencies to fulfill the obligations in section 102 of NEPA, which establishes NEPA's procedural obligations, ''to the fullest extent possible,'' 42 U.S.C. 4332, which the Supreme Court has interpreted to require compliance except for ''where a clear and unavoidable conflict in statutory authority exists.'' *See Flint Ridge Dev. Co,* 426 U.S. at 788. Therefore, revising proposed paragraph (a)(3) to replace ''impossible'' with ''impracticable'' would be inconsistent with the statute and deviate from the established legal standard implementing it.

Finally, CEQ proposed to strike the last sentence of 40 CFR 1500.6 (2020) stating that the CEQ regulations do not limit an agency's other authorities or legal responsibilities. In the 2020 rule, CEQ stated that it added this sentence to acknowledge the possibility of different statutory authorities with different requirements and for consistency with E.O. 11514, as amended by section 2(g) of E.O. 11991.[62] CEQ reconsidered its position and proposed to delete the sentence as superfluous and unnecessarily vague. CEQ proposed that the revised last sentence of § 1500.6—agencies must comply with NEPA in carrying out an activity, decision, or action unless exempted by law (including where courts have held that a statute is functionally equivalent) or compliance with NEPA is impossible—accurately reflects the directive that Federal agencies comply with the CEQ regulations ''except where such compliance would be inconsistent with statutory requirements.'' [63] CEQ removes this sentence from 40 CFR 1500.6 (2020) in the final rule.

C. Revisions To Update Part 1501, NEPA and Agency Planning

CEQ proposed substantive revisions to all sections in part 1501 except § 1501.2, ''Apply NEPA early in the process,'' to which CEQ proposed minor edits for readability that are non-substantive. CEQ received a few comments on § 1501.2 requesting additional revisions but declines to make additional changes in response to the comments, which are discussed in the Phase 2 Response to Comments.

1. Purpose (§ 1501.1)

CEQ proposed to revise § 1501.1 to address the purpose and goals of part 1501, consistent with the approach in the 1978 regulations, and move the text in paragraph (a) of 40 CFR 1501.1 (2020) regarding NEPA thresholds to § 1501.3(a). CEQ discusses the revisions to that paragraph in section II.C.2 of this rule. Multiple commenters expressed general support for the overall changes to § 1501.1.

First, consistent with the approach in the 1978 regulations, CEQ proposed to retitle § 1501.1 to ''Purpose,'' and add an introductory paragraph to indicate that this section would address the purposes of part 1501. CEQ did not receive any specific comments on these proposed changes and makes them in the final rule consistent with the proposal.

Second, in paragraph (a), CEQ proposed to highlight the importance of integrating NEPA early in agency planning processes by restoring some of the language from the 1978 regulations, while also including language that emphasizes that early integration of NEPA promotes an efficient process and can reduce delay. CEQ proposed these revisions for consistency with section 102(2)(C) of NEPA and the objective to build into agency decision making, beginning at the earliest point, an appropriate consideration of the environmental aspects of a proposed action. 42 U.S.C. 4332(2)(C). CEQ did not receive any specific comments on proposed paragraph (a) and includes it in the final rule as proposed.

Third, CEQ proposed in paragraph (b) to emphasize early engagement in the environmental review process to elevate the importance of early coordination and engagement throughout the NEPA process to identify and address potential issues early in the decision-making process, thereby helping to reduce the overall time required to approve a project and improving outcomes. Multiple commenters expressed support

[62] E.O. 11514, *supra* note 26; E.O 11991, *supra* note 29.

[63] CEQ, 2020 Final Rule, *supra* note 39, at 43319.

for proposed paragraph (b) and the emphasis on early engagement in the environmental review process. One commenter suggested additional language to clarify that engagement should occur both prior to and during preparation of environmental documents. CEQ agrees that public engagement should continue throughout the NEPA process. However, this section outlines the purposes of part 1501, and while § 1501.1(b) emphasizes that engagement should start early in the NEPA process, the full breadth of appropriate engagement in the NEPA process is more appropriately discussed in § 1501.9. Therefore, CEQ includes paragraph (b), which is consistent with other changes throughout the regulations emphasizing the importance of engagement, as proposed, in the final rule.

Fourth, CEQ proposed to add a new paragraph (c) to restore text from the 1978 regulations regarding expeditious resolution of interagency disputes. One commenter suggested appending ''and in the best interest of the public'' to the end of paragraph (c) and expressed concern that the proposed language, particularly the reference to ''fair,'' implies agencies have an interest of their own. The commenter recommended the regulations clarify that interagency disputes should be resolved in a manner that advances the public interest and not just the interests of the agencies.

CEQ adds paragraph (c), as proposed, to the final rule. While CEQ considers expeditious resolution of interagency disputes to be in the best interest of the public, the purpose of part 1501 is to facilitate the resolution of such disputes in an efficient fashion that accommodates the perspectives, expertise, and relevant statutory authority of the agencies involved in the dispute.

Fifth, CEQ proposed to add paragraph (d) to restore the direction to identify the scope of the proposed action and important environmental issues consistent with § 1501.3, which can enhance efficiency. One commenter requested clarity on what ''important environmental issues'' means, while another commenter asserted that all issues that acutely and negatively impact the environment deserve full study. One commenter also requested the final rule add language to clarify that agencies should remove unimportant issues from study or analysis, not just deemphasize them.

CEQ adds paragraph (d), as proposed, to the final rule. CEQ declines to make the commenter's recommended changes in paragraph (d). Agencies must consider all issues during the environmental review process, but the level of analysis should be commensurate with the importance of the effect, with some issues requiring less analysis. This approach is consistent with the approach of the 1978 regulations that agencies have decades of experience implementing, which indicated that agencies should ''concentrate on the issues that are truly significant to the action in question, rather than amassing needless detail.'' 40 CFR 1500.1(b) (2019).

Sixth, CEQ proposed to add paragraph (e) to highlight the importance of schedules consistent with § 1501.10, which includes provisions requiring agencies to develop a schedule for all environmental reviews and authorizations, as well as §§ 1501.7 and 1501.8, which promote interagency coordination including with respect to schedules. CEQ did not receive any specific comments on proposed paragraph (e) and includes it in the final rule as proposed.

Seventh, as discussed further in section II.C.2, CEQ proposed to combine the threshold considerations provision with the process to determine the appropriate level of NEPA review in § 1501.3 by moving paragraphs (a)(1), (a)(2), (a)(4), and (a)(5) of 40 CFR 1501.1 (2020) to § 1501.3(a)(1), (2), (4), and (4)(ii), respectively, and striking paragraphs (a)(3) and (a)(6).

CEQ proposed to delete the factor listed in 40 CFR 1501.1(a)(3) (2020), inconsistency with Congressional intent expressed in another statute, because upon further consideration, CEQ considers this factor to have inadequately accounted for agencies' responsibility to harmonize NEPA with other statutes, as discussed further in section II.C.2. As discussed in section II.B.5, the regulations provide that an agency should determine if a statute or court decision exempts an action from NEPA or if compliance with NEPA and another statute would be impossible; if not, the agency must comply with NEPA. To the extent the factor suggested that agencies should seek to go beyond these two questions to determine Congress's intent regarding NEPA compliance in enacting another statute, the factor is incorrect.

One commenter objected to CEQ's removal of the factor at 40 CFR 1501.1(a)(3) (2020) directing agencies to consider ''[w]hether compliance with NEPA would be inconsistent with Congressional intent expressed in another statute.'' The commenter asserted the proposed rule does not provide sufficient guidance to Federal agencies to determine whether an action is consistent with Congressional intent. In the final rule, CEQ strikes 40 CFR 1501.1(a)(3) (2020) as proposed because CEQ considers this factor to have inadequately accounted for agencies' responsibility to harmonize NEPA with other statutes. Section 1501.3(a)(2) of the final rule requires agencies to consider ''[w]hether compliance with NEPA would clearly and fundamentally conflict with the requirements of another provision of Federal law.'' As discussed further in section II.C.2, § 1501.3(a)(2) incorporates the language of section 106(a)(3) of NEPA, 42 U.S.C. 4336(a)(3), and aligns with the statutory mandate in section 102 of NEPA, 42 U.S.C. 4332, that agencies comply with NEPA ''to the fullest extent possible.'' Therefore, CEQ is removing this factor because it provides an inadequately rigorous standard for exempting agency actions from NEPA and is redundant with § 1501.3(a)(2).

CEQ proposed to strike the factor in 40 CFR 1501.1(a)(6) (2020) regarding functional equivalence to restore the status quo as it existed in the longstanding 1978 regulations. The NPRM explained that certain Environmental Protection Agency (EPA) actions are explicitly exempted from NEPA's environmental review requirements, *see, e.g.,* 15 U.S.C. 793(c)(1) (exempting EPA actions under the Clean Air Act); 33 U.S.C. 1371(c)(1) (exempting most EPA actions under the Clean Water Act), and courts have found EPA's procedures under certain other environmental statutes it administers and certain procedures under the Endangered Species Act (ESA) to be functionally equivalent to or otherwise exempt from NEPA. *See, e.g., Env't Def. Fund, Inc.* v. *EPA,* 489 F.2d 1247, 1256–57 (D.C. Cir. 1973) (exempting agency actions under the Federal Insecticide, Fungicide, and Rodenticide Act); *W. Neb. Res. Council* v. *U.S. Env't Prot. Agency,* 943 F.2d 867, 871–72 (8th Cir. 1991) (noting exemptions under the Safe Drinking Water Act); *Douglas County* v. *Babbitt,* 48 F.3d 1495, 1503 (9th Cir. 1995) (holding that Endangered Species Act procedures for designating a critical habitat replace the NEPA requirements). Nevertheless, CEQ considered this language added to the 2020 rule to go beyond the scope of the NEPA statute and case law because the language could be construed to expand functional equivalence beyond the narrow contexts in which it has been recognized.

Some commenters opposed the proposed removal of the factor on functional equivalence from 40 CFR 1501.1(a)(6) (2020) as well as in other provisions of the regulations, including the removal of 40 CFR 1500.1(a), 1506.9,

1507.3(c)(5), and 1507.3(d)(6) (2020). One commenter asserted that removing it would extend duplicative activity among agencies. Other opponents underscored that courts have held on several occasions that statutes that include their own environmental review processes can make compliance with NEPA redundant. These commenters asserted that CEQ's removal of regulatory language recognizing those decisions will encourage duplication and inefficiency. One commenter asserted that language in the rulemaking that encourages agencies ''to establish mechanisms in their agency NEPA procedures to align processes and requirements from other environmental laws with the NEPA process'' would turn the functional equivalence doctrine on its head, by requiring a specific statute to give way to a general statute rather than *vice versa.*

By contrast, supporters of these changes asserted that the language in question had no justification in law, and that Congress had considered incorporating language related to functional equivalence into NEPA as part of the development of the Fiscal Responsibility Act but had ultimately chosen not to do so.

CEQ strikes the factor in 40 CFR 1501.1(a)(6) (2020) from the final rule. As several commenters acknowledged, courts decided some of the cases addressing functional equivalence before CEQ issued the 1978 regulations, which encouraged agencies to combine environmental documents with ''any other agency document[s] to reduce duplication and paperwork,'' 40 CFR 1506.4 (2019),[64] and to ''adapt[] [their] implementing procedures authorized by § 1507.3 to the requirements of other applicable laws.'' 40 CFR 1507.1 (2019). CEQ acknowledges the continuing validity of the judicial decisions finding EPA's procedures under certain environmental statutes it administers and certain procedures under the ESA are functionally equivalent to NEPA. CEQ considers these circumstances to fall within the scope of the activities and decisions addressed in § 1501.3(a)(1) as ''exempted from NEPA by law.'' CEQ considers it unhelpful to separately discuss functional equivalence in the regulations to avoid suggesting that other agencies and activities or decisions are also exempted from NEPA. CEQ disagrees with commenters who contended that the functional equivalence decisions give agencies license to create new NEPA exemptions.[65] Rather, the appropriate approach is for agencies to align their NEPA procedures with their statutory requirements—an approach that does not require a more specific statute to give way to a more general one, as asserted by a commenter, but rather allows agencies to comply with both statutes at once.

Eighth, CEQ proposed to remove the language in paragraph (b) of 40 CFR 1501.1 (2020) allowing agencies to make threshold determinations individually or in their NEPA procedures because CEQ proposed to move the consideration of thresholds into § 1501.3 to consolidate the steps agencies should take to determine whether NEPA applies and, if so, what level of NEPA review is appropriate. CEQ also proposed to strike this language because it is redundant to language in § 1507.3(d)(1), which provides that agency NEPA procedures may identify activities or decisions that are not subject to NEPA.

Ninth, CEQ proposed to remove as unnecessary paragraph (b)(1) of 40 CFR 1501.1 (2020) because agencies have discretion to consult with CEQ and have done so for decades on a wide variety of matters, including on determining NEPA applicability, without such specific language in the CEQ regulations.

Finally, CEQ proposed to eliminate paragraph (b)(2) of 40 CFR 1501.1 (2020) directing agencies to consult with another agency when they jointly administer a statute if they are making a threshold applicability determination. CEQ proposed to delete this paragraph because while CEQ agrees that consultation is a good practice in such circumstances, it does not consider such a requirement necessary for these regulations because consultation is best determined by the agencies involved.

One commenter expressed appreciation for the consolidation of threshold considerations from paragraph (b) but asserted that the final rule should retain an acknowledgement that the threshold considerations are a non-exhaustive list and that agencies should identify considerations on a case-by-case basis. CEQ considers the language in §§ 1501.3(a) and 1507.3(d)(1) to address the commenter's concern and removes paragraphs (b), (b)(1), and (b)(2) of 40 CFR 1501.1 (2020) in the final rule.

2. Determine the Appropriate Level of NEPA Review (§ 1501.3)

CEQ proposed substantive revisions to § 1501.3 to provide a more robust and consolidated description of the process agencies should use to determine the appropriate level of NEPA review, including addressing the threshold question of whether NEPA applies. CEQ also proposed clarifying edits, including adding paragraph headings to paragraphs (a) through (d). CEQ proposed these revisions to clarify the steps for assessing the appropriate level of NEPA review to facilitate a more efficient and predictable review process.

First, as noted in section II.C.1, CEQ proposed to move paragraph (a) of 40 CFR 1501.1 (2020) to a new § 1501.3(a), title it ''Applicability,'' and add a sentence requiring agencies to determine whether NEPA applies to a proposed activity or decision as a threshold matter. CEQ proposed this move because the inquiry into whether NEPA applies is a component of determining the level of NEPA review. CEQ proposed to consolidate the steps in this process into one regulatory section to improve the clarity of the regulations. CEQ also noted that this consolidated provision is consistent with the approach in section 106 of NEPA, which addresses threshold determinations on whether to prepare an EA/FONSI or EIS. 42 U.S.C. 4336. In moving the text, CEQ proposed to strike ''or is otherwise fulfilled'' after ''[i]n assessing whether NEPA applies'' because, as discussed in section II.C.1, CEQ proposed to remove the functional equivalence factor from the regulation.

Second, CEQ proposed to move the threshold determination factors agencies should consider when determining whether NEPA applies from paragraphs (a)(1) and (a)(2) of 40 CFR 1501.1 (2020), to proposed paragraphs (a)(1) and (2), respectively. CEQ proposed to align the text in paragraph (a)(1) with the language proposed in § 1500.6 by deleting ''expressly'' and replacing ''exempt from NEPA under another statute'' with ''exempted from NEPA by law.'' CEQ proposed to align the text in paragraph (a)(2) with the language in section 106(a)(3) of NEPA, changing ''another statute'' to ''another provision of law'' for consistency with the statutory text. 42 U.S.C. 4336(a)(3).

One commenter requested that the final rule revise paragraph (a)(2) to clarify that in the event of a clear and fundamental conflict with another law, an agency should consider ''whether NEPA or that provision prevails under legal rules for resolving such conflicts between Federal laws.'' In requesting

[64] *See* CEQ, Phase 2 proposed rule, *supra* note 51, at 49956.

[65] *See also* CEQ, Phase 2 proposed rule, *supra* note 51, at 49959 (''CEQ has concerns about . . . language added by the 2020 rule [in 40 CFR 1507.3(c)(5)] to substitute other reviews as functionally equivalent for NEPA compliance, and therefore proposes to remove it.'').

this revision, the commenter described that if a situation arises in which NEPA clearly and fundamentally conflicts with a provision of State, Tribal, or local law, the agency has no further assessment to make before determining that NEPA prevails. However, if a situation arises in which NEPA clearly and fundamentally conflicts with another provision of a Federal law or a U.S. treaty with a foreign power, the commenter asserted the agency must make further assessments before it can determine whether NEPA or the other provision prevails.

In the final rule, CEQ moves paragraph (a) of 40 CFR 1501.1 (2020) to a new § 1501.3(a), ''Applicability,'' and makes the changes to paragraph (a) as proposed. CEQ also moves paragraphs (a)(1) and (a)(2) of 40 CFR 1501.1 (2020), to § 1501.3(a)(1) and (2), respectively, except that CEQ adds the word ''Federal'' to the phrase ''another provision of law.'' CEQ interprets section 106(a)(3), 42 U.S.C. 4336(a)(3), in light of the bedrock legal principle established by the Supremacy Clause of the Constitution that State, Tribal, or local laws do not override Federal law, the corollary that the Federal Government is not subject to State regulation in the absence of clear and unambiguous Congressional authorization, *see EPA* v. *California ex rel. State Water Resources Control Bd.,* 426 U.S. 200, 211 (1976), and decades of case law that predated the NEPA amendments and informed CEQ's 2020 rule considering whether NEPA conflicts with another Federal law. *See, e.g., Flint Ridge Development Co.* v. *Scenic Rivers Ass'n of Oklahoma,* 426 U.S. 776, 788 (1976). To improve the clarity of the NEPA regulations, CEQ adds the word ''Federal'' to the sentence to avoid any potential confusion that non-Federal legal requirements can override NEPA. CEQ disagrees that an agency must apply principles of statutory interpretation to determine whether NEPA applies where its application would present a clear and fundamental conflict with the requirements of another provision of Federal law, because section 106(a) of NEPA provides that in such circumstances ''an agency is not required to prepare an environmental document with respect to a proposed agency action.'' 42 U.S.C. 4336(a).

Third, CEQ proposed a new factor in paragraph (a)(3) to address circumstances where statutory provisions applicable to a proposed activity or decision make compliance with NEPA impossible. CEQ explained in the proposed rule that this factor is consistent with case law, principles of statutory construction, and the statutory requirement of section 102 of NEPA that agencies interpret and administer ''the policies, regulations, and public laws of the United States'' in accordance with NEPA's policies. 42 U.S.C. 4332(1).

One commenter recommended the final rule change ''impossible'' to ''impracticable'' while another commenter suggested that the final rule remove paragraph (a)(3) because it is duplicative of paragraph (a)(2). CEQ has considered the comments and agrees that proposed paragraph (a)(3) is duplicative of proposed paragraph (a)(2) and could therefore cause confusion. Therefore, CEQ does not include proposed paragraph (a)(3) in the final rule.

Fourth, consistent with section 106(a)(1) and (4) of NEPA, 42 U.S.C. 4336(a)(1) and (4), CEQ proposed to move the threshold determination factor regarding whether the activity or decision is a major Federal action from paragraph (a)(4) of 40 CFR 1501.1 (2020) and the factor regarding whether the activity or decision is non-discretionary from paragraph (a)(5) of 40 CFR 1501.1 (2020), to proposed § 1501.3(a)(4) and (a)(4)(ii), respectively. CEQ proposed to add a new paragraph (a)(4)(i) to add the factor regarding whether the proposed activity or decision is a final agency action under the APA. CEQ proposed to include whether an activity or decision is a final agency action or non-discretionary as subfactors of whether an activity or decision is a major Federal action in § 1501.3(a)(4) because CEQ also proposed these as exclusions from the definition of ''major Federal action.'' The proposed rule explained that when agencies assess whether an activity or decision is a major Federal action, agencies determine whether they have discretion to consider environmental effects consistent with the definition of ''major Federal action'' in § 1508.1.

One commenter recommended the final rule exclude proposed paragraph (a)(4) because the question of whether NEPA applies precedes the determination of whether the proposed action is a major Federal action, and there is no need to consider whether an action is a major Federal action if NEPA does not apply to the action. Other commenters recommended proposed paragraphs (a)(4), (a)(4)(i), and (a)(4)(ii) be separated from paragraph (a) in order to clearly distinguish the factors for threshold applicability determination from the definition of ''major Federal action.''

In the final rule, CEQ moves paragraph (a)(4) of 40 CFR 1501.1(2020) regarding major Federal action to § 1501.3(a)(3) and adds a cross reference to the definition § 1508.1(w). CEQ makes this revision to enhance the clarity of the regulation and for consistency with section 106(a) of NEPA. 42 U.S.C. 4336(a). CEQ disagrees with the commenter that determining whether an action constitutes a major Federal action is not a component of determining NEPA applicability or that treating this determination separately will improve efficiency. Agencies have the flexibility to consider the factors in paragraph (a) in any order and, therefore, the regulation does not require an agency to evaluate whether an action is a major Federal action if NEPA does not apply to it for other reasons.

In the final rule CEQ adds proposed paragraph (a)(4)(i) regarding final agency action to § 1501.3(a)(4) to make this a stand-alone factor, rather than a component of determining whether an action is a major Federal action, for consistency with section 106(a) of NEPA and improved clarity. 42 U.S.C. 4336(a). The final rule also adds the word ''not'' to paragraph (a)(4), so that it reads ''[w]hether the proposed activity or decision is not a final agency action'' for consistency with section 106(a)(1) of NEPA and parallelism with the other factors, which identify circumstances in which NEPA does not apply. 42 U.S.C. 4336(a)(1). CEQ notes that this factor requires the agency to evaluate whether the proposed action would be a final agency action if ultimately taken by the agency. CEQ does not include a cross reference to the definition of ''major Federal action'' as proposed because the final rule does not include this as an exclusion from the definition.

Lastly within paragraph (a), CEQ moves paragraph (a)(5) of 40 CFR 1501.1 (2020) on non-discretionary actions to § 1501.3(a)(5) to make this a stand-alone factor, rather than a sub-factor of major Federal action, for consistency with section 106(a)(4) of NEPA. 42 U.S.C. 4336(a)(4). While non-discretionary actions are excluded from the definition of ''major Federal action'' in section 111(10) of NEPA and § 1508.1(w), Congress determined that it was important to highlight this category as a component of determining NEPA applicability, and CEQ considers it appropriate for the regulations to do so as well. 42 U.S.C. 4336e(10). CEQ does not include a cross reference to the definition of ''major Federal action'' as proposed because the language in the statutory exclusion from the definition of ''major Federal action'' is different from this exclusion.

CEQ notes that where some components of an action are non-discretionary, but others are

discretionary, an agency can exclude considerations of the non-discretionary components from its NEPA analysis. That circumstance more logically presents an issue of the appropriate scope of the analysis, rather than of NEPA applicability, so, as discussed below, CEQ has included a reference to it in paragraph (b). For example, if a statute mandated an agency to make an affirmative decision once a set of criteria are met, but the agency has flexibility in how to meet those criteria, the agency exercises discretion on aspects of its decision and an analysis of alternatives and effects would inform the agency's exercise of discretion. Similarly, if a statute directs an agency to take an action, but the agency has discretion in how it takes that action, the agency can still comply with NEPA while carrying out its statutory mandate.

Fifth, CEQ proposed to move, with clarifying edits and additions, paragraph (e) and its subparagraphs of 40 CFR 1501.9 (2020), ''Determination of scope,'' to a new § 1501.3(b), ''Scope of action and analysis,'' to provide the next step in determining the appropriate level of NEPA review—the scope of the proposed action and its potential effects. In addition, CEQ proposed moving into § 1501.3(b) one sentence from paragraph (a) of 40 CFR 1502.4 (2020) directing agencies to evaluate in a single NEPA review proposals sufficiently closely related to be considered a single action, and the text from paragraph (e)(1) of 40 CFR 1501.9 (2020) regarding connected actions, which are closely related Federal activities or decisions that agencies should consider in a single NEPA document. CEQ proposed to move paragraphs (e)(1)(i) through (e)(1)(iii) of 40 CFR 1501.9 (2020) providing the types of connected actions into § 1501.3(b)(1) through (b)(3), respectively.

CEQ proposed these changes because this longstanding principle from the 1978 regulations—that agencies should not improperly segment their actions—is relevant not only when agencies are preparing EISs, but also when agencies determine whether to prepare an EA or apply a CE. *See, e.g., Fath* v. *Texas DOT,* 924 F.3d 132, 137 (5th Cir. 2018) (''Agencies generally should not segment, or divide artificially a major Federal action into smaller components to escape the application of NEPA to some of its segments.'') (quotations omitted). CEQ proposed to consolidate this text into § 1501.3(b) because the determination of the scope of the action, including any connected actions, necessarily informs the appropriate level of NEPA review. Because including this provision in § 1501.3 would make it applicable to environmental reviews other than EISs, CEQ proposed to strike the sentence that accompanied the text in 40 CFR 1502.4(a) (2020) directing the lead agency to determine the scope and significant issues for analysis in the EIS as part of the scoping process. CEQ proposed in § 1501.3(b)(1) to make a conforming change of ''environmental impact statements'' to ''NEPA review.''

Multiple commenters provided feedback on the first sentence of proposed § 1501.3(b) suggesting the final rule include additional language to limit it to an action that is under Federal agency control, and that NEPA reviews should not be used as a ''Federal handle'' to subject an entire project to Federal review where the Federal action comprises only one portion of the project. CEQ declines these edits because the sentence in question appropriately directs agencies to consider the scope of the proposed action and its potential effects consistent with longstanding agency practice.

In the final rule, CEQ moves paragraphs (e) and (e)(1) of 40 CFR 1501.9 (2020), to § 1501.3(b), and moves paragraph (e)(1)(i) through (e)(1)(iii) of 40 CFR 1501.9 (2020) to § 1501.3(b)(1) through (b)(3), respectively. CEQ adds the first sentence of proposed § 1501.3(b) as proposed with an additional phrase ''whether aspects of the action are non-discretionary'' at the end of the first sentence for consistency with agency practice and case law recognizing that where some aspects of an agency's action are non-discretionary, the agency can properly exclude them from the scope of its analysis. Adding this reference to this sentence clarifies that while NEPA does not apply to an action that is wholly non-discretionary, agencies should approach circumstances in which aspects of an action are non-discretionary, but others are discretionary, as a component of determining scope.

Another commenter suggested use of ''potential effects'' be replaced with ''reasonably foreseeable effects'' to emphasize that agencies are not required to consider effects that are not reasonably foreseeable. CEQ agrees that an agency only needs to consider reasonably foreseeable effects in determining the scope of analysis but declines to make this change as the word ''effects'' is a defined term in the regulations meaning reasonably foreseeable effects. Upon further consideration, CEQ deletes the word ''potential'' before the word ''effects'' to avoid any confusion that agencies must consider effects other than reasonably foreseeable effects.

Some commenters requested additional clarity on the meaning of scope and how determination of scope under paragraph (b) relates to public engagement and the scoping process under § 1502.4. CEQ adds a new second sentence to paragraph (b) to require agencies to use, as appropriate, the public engagement and scoping mechanisms in §§ 1501.9 and 1502.4 to inform consideration of the scope of the proposed action and determination of the level of NEPA review. CEQ adds this language, consistent with other changes made in §§ 1501.9 and 1502.4 to better explain the connection between scope, scoping, and public engagement.

One commenter requested clarity on the relationship between the second and third sentences of proposed § 1501.3(b), specifically suggesting deletion of the second sentence and revisions to the third sentence to provide a clearer standard for connected actions. Another commenter requested the final rule exclude ''Federal'' in the proposed sentence. CEQ declines the suggested edits. These sentences are based on longstanding provisions from 40 CFR 1502.4 and 1501.9(e)(1) (2020) and 40 CFR 1508.25(a)(1) (2019), and agencies have decades of experience applying them, including experience identifying those components of a project that have independent utility and therefore can be analyzed separately without running afoul of the prohibition on segmentation. The two regulatory requirements of the proposed second and third sentences—prohibiting agencies from breaking up a single ''action'' into separate reviews and requiring them to review together closely related ''connected actions''—are related but distinct requirements, which is why CEQ included them in a single paragraph but in different sentences. CEQ also disagrees that connected actions should be broadened to include non-Federal actions. Non-Federal actions have long been excluded from connected actions because the purpose of the doctrine is to prevent the Federal Government from segmenting Federal actions into separate projects and thereby failing to consider the scope and impact of the Federal activity. *See Sierra Club* v. *U.S. Army Corps of Engineers*, 803 F.3d 31 (D.C. Cir. 2015). Including non-Federal actions as connected actions would be inconsistent with the purpose of the concept and unsettle an aspect of the NEPA implementation that has been stable for decades.

One commenter suggested that CEQ add language to § 1501.3(b) stating that

to avoid segmentation, projects that are separate and distinct must have a logical end point; substantial independent utility; do not foreclose the opportunity to consider alternatives; and do not irretrievably commit Federal funds for closely related projects during the same time period, place, and type. CEQ declines to adopt the language suggested by the commenter. CEQ recognizes that some courts and agencies have included similar language in decisions and agency NEPA procedures (*see, e.g., Del. Riverkeeper Network* v. *FERC,* 753 F.3d 1304, 1315 (D.C. Cir. 2014) (quoting *Taxpayers Watchdog, Inc.* v. *Stanley,* 819 F.2d 294, 298 (D.C. Cir. 1987))); 23 CFR 771.111(f)) (2018), but considers providing additional details on segmentation more appropriately addressed in agency procedures that can be tailored to specific agency programs and actions.

In moving the text from 40 CFR 1501.9(e) (2020) to § 1501.3(b), CEQ proposed to strike paragraphs (e)(2) and (e)(3) of 40 CFR 1501.9 (2020) relating to alternatives and impacts, respectively. CEQ proposed to delete these paragraphs because both the 2020 regulations and the proposed rule separately address the analyses of alternatives and effects regarding EISs (§§ 1502.14, 1502.15) and EAs (§ 1501.5(c)(2)(ii) and (c)(2)(iii)). CEQ considers it to be premature in the process, unnecessary, and unhelpful to address alternatives as part of determining the level of NEPA review.

One commenter requested the final rule provide a better explanation regarding the deletion of 40 CFR 1501.9(e)(2) and (e)(3) (2020) and requested that CEQ provide more direction and guidance on consideration of alternatives and impacts. The commenter stated that this text has been in the regulations since 1978 and requested clearer justification for the changes. CEQ agrees that the effects of a proposed action are relevant to determining the scope of the action and analysis, which is why the first sentence of § 1501.3(b) references effects. However, CEQ does not consider alternatives to be relevant to identifying the scope of action and analysis under paragraph (b), which is intended to inform an agency's determination under paragraph (c) of the appropriate level of review.

In the final rule, CEQ adds the second sentence from proposed paragraph (d)(2)(vi), in which CEQ proposed to include an intensity factor from the 1978 regulations related to the relationship of actions, to be the fourth sentence of § 1501.3(b). CEQ revises the language for clarity to specify that agencies ''shall not term an action temporary that is not temporary in fact or segment an action into smaller component parts to avoid significant effects.'' CEQ has made this change in the final rule because the text in proposed paragraph (d)(2)(vi) directs agencies not to segment actions, which is more appropriately addressed in the paragraph on scope than in the paragraph on intensity.

Sixth, CEQ proposed to redesignate paragraph (a) of 40 CFR 1501.3 (2020) as paragraph (c), title it ''Levels of NEPA review,'' incorporate the language of section 106(b)(3) of NEPA, 42 U.S.C. 4336(b)(3), addressing the sources of information agencies may rely on when determining the appropriate level of NEPA review, and redesignate paragraphs (a)(1) through (a)(3) describing three levels of review—CEs, EAs, and EISs—as paragraphs (c)(1) through (c)(3), respectively without change.

CEQ received multiple comments on the incorporation of section 106(b)(3) of NEPA into proposed paragraph (c). 42 U.S.C. 4336(b)(3). Some commenters supported this incorporation, while others urged CEQ to limit the standard established in section 106(b)(3) to the determination of whether to prepare an EA or an EIS. CEQ disagrees with these commenters and adds the proposed language in the final rule because CEQ considers it appropriate to direct agencies to make use of any reliable data source in considering whether to apply a CE to an action and notes that a decision based on unreliable data would likely be inconsistent with the principles of reasoned decision making. CEQ also considers the approach to reliable data and producing new research in section 106(b)(3) to be consistent with longstanding practice and case law and appropriate to apply broadly to an agency's determination of the appropriate level of NEPA review, including a determination that no such review is required. 42 U.S.C. 4336(b)(3). Moreover, because section 106(b)(3)(B) provides that an agency ''is not required to undertake new scientific or technical research'' outside of the identified circumstances, making this language inapplicable to CE determinations would mean that agencies have a broader (but undefined) obligation to undertake new scientific or technical research for those determinations. 42 U.S.C. 4336(b)(3). Such a result would undermine the efficiency of CEs and create confusion for agencies.

Multiple commenters requested additional guidance from CEQ on how to apply the standard, what is considered a reliable data source, what costs or delays make obtaining new information unreasonable, and how long information will continue to be considered reliable. CEQ considers those questions to raise detailed or fact-specific issues that may be better suited to address in guidance or by agencies in considering specific NEPA reviews. CEQ notes that agencies have extensive experience in assessing the reliability of information in the NEPA process, and the regulations provide additional direction in §§ 1502.21 and 1506.6. CEQ will consider whether additional guidance is necessary to assist agencies in applying the standard.

CEQ makes these revisions as proposed in the final rule with one clarifying change to paragraph (c)(1) to replace ''[n]ormally does not have significant effects and is'' with ''[i]s appropriately.'' As phrased, this provision could be read to conflict with the process provided for in § 1501.4(b) for an agency to determine that a proposed action can be categorically excluded notwithstanding the existence of extraordinary circumstances. This change also provides for a parallel structure with paragraphs (c)(2) and (c)(3).

Seventh, CEQ proposed to redesignate paragraph (b) of 40 CFR 1501.3 (2020) as § 1501.3(d), title it ''Significance determination—context and intensity,'' and address factors agencies must consider in determining significance by restoring with some modifications the consideration of ''context'' and ''intensity'' from the 1978 regulations, which appeared in the definition of ''significantly.'' *See* 40 CFR 1508.27 (2019). The proposed rule explained that because this text provides direction on how agencies determine the significance of an effect, rather than a definition, addressing significance determinations in § 1501.3 is more appropriate than § 1508.1.

Eighth, CEQ proposed to modify the introductory language in paragraph (d) by replacing the requirement that agencies ''analyze the potentially affected environment and degree of the effects'' with a requirement for agencies to consider the context of an action and the intensity of the effects when considering whether the proposed action's effects are significant. CEQ proposed to strike the second sentence of 40 CFR 1501.3(b) (2020) requiring agencies to consider connected actions because this concept would be included in proposed paragraph (c).

Multiple commenters expressed support for the overall restoration of the context and intensity factors, as well as the proposed expansion of the factors, asserting that doing so aligns with

longstanding case law and adds certainty to the process. A few commenters generally opposed the reintroduction and expansion of the factors, asserting they would expand the scope of NEPA review rather than encourage streamlining and that the expansion of the factors is inconsistent with the statutory amendments to NEPA. A few commenters requested that proposed paragraph (d) clarify that agencies may consider mitigation in making a significance determination.

In the final rule, consistent with the proposal, CEQ redesignates paragraph (b) of 40 CFR 1501.3 (2020) as § 1501.3(d), titles it ''Significance determination—context and intensity,'' revises the first sentence of paragraph (d) with additional modifications to the proposal, and strikes the second sentence of 40 CFR 1501.3(b) (2020). CEQ adds and revises the factors as discussed further in this section. CEQ disagrees that the factors will expand the scope of NEPA review. Rather, these factors, including the additional factors, will assist agencies in determining the appropriate level of NEPA review for their proposed actions by focusing their review on the critical factors in determining significance.

As discussed further in this section, CEQ moves language regarding beneficial and adverse effects as well as the language regarding segmentation to the end of paragraph (d) in response to commenters' recommendations because this language is more generally applicable and not specific to context or intensity. Finally, CEQ declines to address the role of mitigation in this paragraph. CEQ has clarified in § 1501.6 that if an agency determines that a proposed action would not have a significant effect because of the implementation of mitigation, then the agency must document its finding in a mitigated FONSI. Therefore, addressing mitigation and its relation to significance is unnecessary in this paragraph.

Ninth, CEQ proposed to strike 40 CFR 1501.3(b)(1) (2020), replace it with proposed paragraph (d)(1), and restore the requirement for agencies to analyze the significance of an action in several contexts consistent with the 1978 regulations. CEQ also proposed to add examples of contexts that may be relevant. In the first sentence, CEQ proposed to encourage agencies to consider the characteristics of the relevant geographic area, such as proximity to unique or sensitive resources or vulnerable communities. The proposed rule indicated that such resources may include historic or cultural resources, Tribal sacred sites, and various types of ecologically sensitive areas. CEQ explained that this revision relates to the intensity factor in proposed paragraph (d)(2)(iii), which CEQ proposed to restore from the 1978 regulations. CEQ proposed to include it as a context factor as well since it relates to the setting of the proposed action and to encourage agencies to consider proximity to communities with environmental justice concerns.

CEQ also proposed to add a third sentence to paragraph (d)(1) encouraging agencies to consider the potential global, national, regional, and local contexts, which may be relevant depending on the scope of the action, consistent with the 2020 and 1978 regulations. Additionally, CEQ proposed to move and revise text providing that the consideration of short- and long-term effects is relevant to the context of a proposed action from 40 CFR 1501.3(b)(2)(i) (2020) to the end of the third proposed sentence in paragraph (d)(1) to encourage agencies to consider the duration of the potential effects whether they are anticipated to be short- or long-term.

Multiple commenters expressed support for the proposed restoration of the consideration of context in determining significance, asserting that doing so is consistent with case law and would promote compliance with NEPA's mandate to consider all significant effects. A few commenters requested the regulations define or add clarity on the terms ''unique or sensitive resources,'' ''vulnerable communities,'' and ''relevant geographic area.'' Some commenters supported the use of these terms while others expressed concern that without clear definitions there could be project delays or increased litigation risk.

In the final rule CEQ strikes 40 CFR 1501.3(b)(1) (2020) and replaces it in § 1501.3(d)(1) with the text in proposed paragraph (d)(1) with a few modifications. CEQ notes that paragraph (d)(1) requires agencies to analyze the significance of an action in several contexts, as evidenced by use of the term ''shall'' in the first sentence, while the second and third sentences use ''should'' to clarify that the determination the appropriate contextual factors will depend on the particular proposed action. In the final rule, CEQ uses the term ''communities with environmental justice concerns'' instead of ''vulnerable communities'' because CEQ has added this as a defined term in § 1508.1, and it is consistent with use of this term elsewhere in the rule. CEQ excludes the word ''relevant'' before ''geographic area'' in the final rule text as an unnecessary modifier since the encouragement is to consider the geographic area of the proposed action, which will necessarily depend on the context and scope of the proposed action. Moreover, agencies have decades of experience implementing a similar provision in the 1978 regulations, which did not include the word ''relevant'' before ''geographic area,'' and the addition of ''relevant'' could have the unintended consequence of indicating to agencies that this provision requires a substantially different analysis. CEQ declines to define ''geographic area'' and ''unique or sensitive resources'' as these phrases have been used in the regulations since 1978, and agencies have extensive experience interpreting them in the context of particular proposed actions. Further, CEQ is unaware of any misunderstanding about the meaning of these phrases and is concerned that adding a new regulatory definition could be disruptive for agencies.

Some commenters expressed support for the language encouraging agencies to consider the potential global, national, regional, and local contexts. Other commenters opposed the inclusion of all four contexts, and in particular the inclusion of ''global,'' stating that requiring agencies to consider all four would expand the complexity and scope of NEPA reviews and lead to inappropriate determinations that certain projects require an EIS, strain agency resources, cause delays and increase litigation risk, and allow subjectivity to be introduced to the decision. Other commenters requested more clarity on the types of actions that require consideration of potential global, national, regional, and local contexts, with another commenter requesting that the language be modified to provide flexibility to consider appropriate geographic contexts based on the site-specific action rather than always require evaluation of all four contexts.

In the final rule, CEQ includes the language on global, national, regional, and local contexts as proposed in § 1501.3(d)(1). The 2020 rule described ''context'' as related to the potentially affected environment in determining significance, stating that this reframing relates more closely to physical, ecological, and socio-economic aspects of the environment.[66] CEQ has reconsidered this approach and now finds it to be unhelpful and potentially limiting. While CEQ agrees that the contexts relevant to an agency's assessment of significance will be those that are potentially affected, identifying

[66] CEQ, 2020 Final Rule, *supra* note 39, at 43322.

the global, national, regional, and local contexts reminds agencies that they should consider whether proposed actions have reasonably foreseeable effects across these various contexts. Describing context in this manner is also consistent with the decades of experience agencies had implementing the 1978 regulations and is consistent with the concepts of indirect and cumulative effects. CEQ has also reconsidered the statement in the 2020 rule that the affected environment, is ''usually'' only the local area, 40 CFR 1501.3(b)(1) (2020) (''For instance, in the case of a site-specific action, significance would *usually* depend only upon the effects in the local area.'') (emphasis added), because many Federal actions have reasonably foreseeable effects that extend regionally, nationally, or globally.

CEQ notes that § 1501.3(d)(1) does not require agencies to evaluate all four contexts—global, national, regional, and local—for every proposed action. Rather, agencies should determine the appropriate contexts to consider based on the scope of the action and its anticipated reasonably foreseeable effects.

CEQ disagrees with commenters' assertion that this language will lead agencies to expand the evaluation of effects beyond those that are reasonably foreseeable. This provision provides guidance to agencies on how to determine whether an effect is significant, and the word ''effect'' is a defined term in the regulations that is always limited to reasonably foreseeable effects. This text recognizes that the global, national, regional, or local context may bear on assessing the significance of reasonably foreseeable effects. For example, in determining the significance of an effect on highly migratory marine species that travels thousands of miles each year from waters around Antarctica to the Arctic Ocean, the agency may need to consider the global context in which the species migrates, including other stressors that occur at other points of the migration route. Conversely, dam operations in a transboundary watershed may have consequences on aquatic ecosystems that are appropriately considered at the regional or watershed level and that may need to consider management and stressors extending across national boundaries. The regional nature of the resource effects, however, may not necessitate an analysis of global context. A decision to fund a project to construct a building to provide additional office space for a Federal agency on previously developed land may have consequences limited to the local area around the new building, and may not necessitate an analysis of global, State, or regional context.

Tenth, CEQ proposed to strike 40 CFR 1501.3(b)(2) (2020), replace it with proposed paragraph (d)(2), and reinstate ''intensity'' as a consideration in determining significance, which CEQ reframed in the 2020 rule as the ''degree'' of the action's effects. Specifically, CEQ proposed to strike the sentence in 40 CFR 1501.3(b)(2) (2020) encouraging agencies to consider the list of factors in assessing the degree of effects and replace it with a requirement to analyze the intensity of effects in light of the list of factors as applicable to the proposed action and in relation to one another. CEQ proposed to reinstate consideration of intensity because the concept of intensity and the intensity factors have long provided agencies with guidance in how the intensity of an action's effects may inform the significance determination. Further, CEQ noted it had reconsidered its position in the 2020 rule that removal of intensity as a consideration was based in part on the proposition that effects are not required to be intense or severe to be considered significant.[67] CEQ does not consider ''intense'' to be a synonym for ''significant;'' rather, it points to factors to inform the determination of significance that are part of longstanding agency practice.

Multiple commenters expressed general support for the restoration of the intensity factors in the proposed rule or identified support for specific factors, whereas others expressed general opposition or opposition to particular factors. One commenter suggested that the final rule replace the phrases ''potential'' and ''degree to which the proposed action may adversely affect'' in proposed paragraphs (d)(2)(ii), (iii), (v), (viii), and (x) with ''the degree of any reasonably foreseeable adverse effect of the proposed action on.'' The commenter also suggested the final rule revise paragraph (d)(2)(ix) to ''the degree of any reasonably foreseeable and disproportionate adverse effects from the proposed action on communities with environmental justice concerns.'' The commenter asserted these changes would focus the consideration on reasonably foreseeable effects, consistent with the statute, while ''may adversely affect'' could be read to mean agencies should consider speculative scenarios and effects that are not reasonably foreseeable. Other commenters made similar suggestions, requesting the regulations consistently refer to ''reasonably foreseeable effects.'' Relatedly, a commenter recommended the regulations consistently refer to ''the proposed action,'' rather than ''the action'' in the factors. Some commenters opposed the inclusion of ''adverse'' in front of multiple factors.

CEQ declines to make these changes in the final rule. The intensity factors inform an agency's determination of whether an effect is significant, and the word ''effect'' is a defined term that means reasonably foreseeable effects. Therefore, paragraph (d)(2) applies only to reasonably foreseeable effects and repeating the phrase ''reasonably foreseeable'' throughout this paragraph is unnecessary. CEQ retains ''adverse'' in the final rule consistent with the definition of ''significant effects'' and the language in § 1501.3(d), which clarify that only adverse effects can be significant.

Eleventh, CEQ proposed to clarify in proposed paragraph (d)(2)(i) that agencies should focus on adverse effects in determinations of significance, consistent with NEPA's policies and goals as set forth in section 101 of the statute. 42 U.S.C. 4331. CEQ proposed to redesignate paragraph (b)(2)(ii) of 40 CFR 1501.3 (2020) as paragraph (d)(2)(i) regarding beneficial and adverse effects and revise it to state that ''[e]ffects may be beneficial or adverse'' but ''only actions with significant adverse effects require an [EIS].''

CEQ proposed to add a third sentence to this paragraph to indicate that a significant adverse effect may exist even if the agency considers that on balance the effects of the action will be beneficial. The proposed rule explained that this provision is intended to be distinct from weighing beneficial effects against adverse effects to determine that an action's effects on the whole are not significant. Rather, an action with only beneficial effects and no significant adverse effects does not require an EIS, consistent with CEQ's proposed revisions to § 1501.3(d)(2), regarding the meaning of intensity.

CEQ proposed to strike paragraph (b)(2)(i) of 40 CFR 1501.3 (2020) but incorporate the text into a fourth sentence in paragraph (d)(2)(i) to clarify that agencies should consider the duration of effects and include an example of such consideration—an action with short-term adverse effects but long-term beneficial effects. The proposed rule explained that while significant adverse effects may exist even if the agency considers that on balance the effects of the action will be beneficial, the agency should consider any related short- and long-term effects in the same effect category together in evaluating intensity.

[67] CEQ, 2020 Final Rule, *supra* note 39, at 43322.

Multiple commenters supported proposed paragraph (d)(2)(i), expressing support for the qualification that only actions with significant adverse effects require an EIS because it will reduce expenditure of agency resources on unnecessary EISs, streamline the NEPA process, and promote a holistic review of projects. One commenter cited *Friends of Fiery Gizzard* v. *Farmers Home Admin.,* 61 F.3d 501 (6th Cir. 1995) to support CEQ's proposed approach.

Multiple commenters also opposed the proposal to only require an EIS for actions with significant adverse effects. Some commenters asserted that proposed (d)(2)(i) and the reference to adverse effects in other proposed intensity factors would illegally limit the scope of NEPA because the statutory requirement to prepare an EIS does not distinguish between adverse and beneficial effects. A few commenters cited case law that they argued contravenes the proposed change. *Hiram Clarke Civil Club* v. *Lynn,* 476 F.2d 421 (5th Cir. 1973); *Environmental Defense Fund* v. *Marsh,* 651 F.2d 983 (5th Cir. 1981). One commenter also asserted the proposal poses a risk that agencies will not assess significant adverse effects or evaluate less damaging alternatives, and that the proposed provision could be interpreted to give agencies discretion to opt out of preparing an EIS based on unsupported claims that the project will be beneficial or based on the project's stated intent. One commenter further asserted that almost no environmentally significant project completely avoids all potentially significant adverse effects and also expressed concern about the lack of an EIS limiting the opportunity for the public to provide comment where they might raise other potentially adverse effects. A few commenters expressed concern that the proposed language favors a certain type of project over another without statutory or factual support for doing so.

Some commenters interpreted the language in the last two sentences of proposed paragraph (d)(2)(i) to read that CEQ supported a ''netting'' approach to EISs, whereby if an action has significant adverse effects but had net beneficial effects then the agency would not have to prepare an EIS. Some commenters supported this interpretation while others opposed it. A few commenters requested CEQ clarify that the significance determination through the application of context and intensity factors across timescales or duration applies to each individual ''effect category'' that is implicated by the proposed action. The commenters state that without this clarification, decision makers could conflate categories of effects by considering an action's effects as a whole thereby dismissing significant adverse effects within an individual category on a given timescale if the decision maker determines the action is beneficial overall. Another commenter requested the regulations clarify that an EIS is not required where the beneficial effects of a proposed action outweigh its adverse effects.

In the final rule, CEQ addresses the concept that only adverse effects are significant by moving the last sentence of proposed paragraph (d)(2)(i) to paragraph (d) and revising it because this concept is a more general consideration and not specific to intensity. CEQ also includes a definition of ''significant effect'' in § 1508.1 to provide further clarity.

Specifically, CEQ strikes 40 CFR 1501.3(b)(2)(i) and (ii) (2020) because § 1501.3(d) addresses consideration of the duration of effects and whether a particular category of effect is adverse or beneficial coupled with the definition of ''significant effects'' in § 1508.1(mm). CEQ includes the first clause of the last sentence of proposed paragraph (d)(2)(i), encouraging agencies to consider the duration of effects, as the second sentence of § 1501.3(d) and adds an introductory clause to the sentence: ''[i]n assessing context and intensity.'' CEQ also makes ''effects'' singular to emphasize that this analysis is done on an effect-by-effect basis and does not allow agencies to weigh a beneficial effect of one kind against an adverse effect of another kind or evaluate whether an action is beneficial or adverse in net to determine significance. For example, an agency cannot compare and determine significance by weighing adverse water effects against beneficial air effects, or adverse effects to one species against beneficial effects to another species. Then, CEQ includes and modifies the second clause of the last sentence of proposed paragraph (d)(2)(i), providing that an action may have short-term adverse effects but long-term beneficial effects, as the third sentence in § 1501.3(d) to explain that agencies may consider the extent to which an effect is adverse at some points in time and beneficial at others. CEQ also includes an illustrative example of a proposed action for habitat restoration where an agency may consider both any short-term harm to a species during implementation of the action and any benefit to the same species once the action is complete. As another example, an action that will enhance recharge of a groundwater aquifer once completed could have an adverse effect on groundwater recharge in the short term. In evaluating the significance of the action's effect on groundwater recharge, the agency should consider both the short-term harm and long-term benefit. In some circumstances, an effect may be significant due to the harm during one period of time regardless of the benefit at another. For example, if implementation of a habitat restoration action may extirpate a species from the area, then an agency could not reasonably rely on long-term habitat improvements resulting from the action to determine that the overall effect to the species is not significant. The approach to considering duration contemplated by this language is similar to the familiar analysis agencies engage in with respect to compensatory mitigation, in which they may conclude that benefits from the implementation of mitigation measures reduce the anticipated adverse effects of a proposed action below the level of significance.

In place of the third sentence of proposed paragraph (d)(2)(i), CEQ adds a new third sentence at the end of paragraph (d) that prohibits agencies from offsetting an action's adverse effects with other beneficial effects to determine significance. This sentence also includes a parenthetical example that agencies may not offset an action's adverse effect on one species with a beneficial effect on another species. The CEQ regulations have never allowed agencies to use a net benefit analysis across environmental effects to inform the level of NEPA review. Because the final rule clarifies that only adverse effects may be significant, CEQ considers it especially important to emphasize this prohibition in the regulatory text to ensure agencies identify the appropriate level of review for their proposed actions. Finally, CEQ does not include the second sentence of proposed paragraph (d)(2)(i) stating that only actions with significant adverse effects require an EIS because this is made clear through the limitation in the definition of ''significant effects'' in § 1508.1(mm) to adverse effects.

The Fifth and Sixth Circuit cases cited by the commenters illustrate the split among courts on whether actions with only significant beneficial effects and no significant adverse effects trigger an EIS. *See also Humane Soc'y of U.S.* v. *Locke,* 626 F.3d 1040, 1056 n.9 (9th Cir. 2010) and *Drakes Bay Oyster Co.* v. *Jewell,* 747 F.3d 1073, 1090 n.11 (2014) discussing the split in courts in dicta. CEQ considers the Congressional declaration of purpose in section 2 of NEPA and the Congressional declaration of national

environmental policy in section 101 of NEPA to indicate that Congress intended for ''significant effects'' to be those that are damaging, which is what CEQ interprets the phrase ''adverse effects'' to mean. 42 U.S.C. 4321, 4331. The recent amendments to NEPA bolster this interpretation because section 102(2)(C)(iii) directs analysis of ''negative environmental impacts of the no action alternative'' and section 108(1) refers to the significance of adverse effects related to programmatic environmental documents. 42 U.S.C. 4332(2)(C)(iii), 4336b(l). CEQ notes too that the definition of ''significant effects'' and § 1501.3(d) do not eliminate the requirement for agencies to identify and discuss all reasonably foreseeable environmental effects whether adverse or beneficial when preparing an EIS.

Twelfth, CEQ proposed to redesignate paragraph (b)(2)(iii) of 40 CFR 1501.3 (2020) as paragraph (d)(2)(ii) and make a clarifying edit to the factor relating to effects on health and safety by adding language indicating that the relevant consideration is ''the degree to which'' the proposed action may ''adversely'' affect public health and safety. Commenters suggested that the final rule add ''welfare'' and ''public well-being'' to this factor. CEQ declines these additions because public health and safety have a more precise meaning than ''welfare'' and ''well-being'' and therefore, will be more readily applied by agencies. Further, this factor has remained unchanged since 1978, so agencies have a long history of examining these in the consideration of significant effects on the human environment. In the final rule, CEQ redesignates paragraph (b)(2)(iii) of 40 CFR 1501.3 (2020) as § 1501.3(d)(2)(i) and revises it as proposed but omits ''proposed'' before ''action'' for consistency with the language of the factors.

Thirteenth, CEQ proposed to add a new paragraph (d)(2)(iii) to add a new intensity factor to consider the degree to which the proposed action may adversely affect unique characteristics of the geographic area such as historic or cultural resources, park lands, Tribal sacred sites, prime farmlands, wetlands, wild and scenic rivers, or ecologically critical areas. CEQ proposed this factor to reinstate a factor from the 1978 regulations, with clarifying edits, which agencies have considered for decades. As noted earlier in this section, CEQ proposed to use the wording from the 1978 factor on unique characteristics in paragraph (d)(1) on context because they relate to the setting of an action. The proposed rule indicated that consideration of this factor is consistent with both the definition of ''effects'' and the policies and goals of NEPA. 42 U.S.C. 4331.

Some commenters expressed support for the restoration of the factor in proposed paragraph (d)(2)(iii) and the proposed modifications to the 1978 regulatory text. One commenter recommended removing ''historic or cultural resources'' because it is redundant and imprecise. Two commenters asked that the final rule define ''park lands,'' ''prime farmlands,'' and ''ecologically critical areas'' for clarity. A few commenters requested that the final rule broaden the reference to Tribal sacred sites to include culturally significant sites, including sites of Native Hawaiians, Alaskan Natives, and indigenous peoples in the United States and its Territories. Other commenters requested use of ''and other indigenous communities'' to include non-federally recognized Tribes.

CEQ adds proposed new paragraph (d)(2)(iii) at § 1501.3(d)(2)(ii) in the final rule, revising ''park lands'' to ''parks'' to modernize the language that was included in the 1978 regulations and omitting ''proposed'' before ''action'' for consistency with the language of the factors. CEQ declines to remove the word ''prime'' before ''farmlands,'' which would substantially expand this factor beyond historical practice and including all farmland within this factor would be inconsistent with directing agencies to consider the ''unique characteristics of the geographic area.'' CEQ declines to make the other changes suggested by the commenters. However, CEQ notes that in addition to ''Tribal sacred sites,'' the list of intensity factors includes several other factors that may be relevant to Tribal and Indigenous cultural sites, including ''historic or cultural resources'' and ''resources listed or eligible for listing in the National Register of Historic Places.'' The list also directs agencies to consider ''[w]hether the action may violate relevant Federal, State, Tribal, or local laws,'' as well as ''[t]he degree to which the action may have disproportionate and adverse effects on communities with environmental justice concerns'' and ''[t]he degree to which the action may adversely affect rights of Tribal Nations that have been reserved through treaties, statutes, or Executive orders.'' Finally, CEQ notes that the list is not intended to be an exhaustive list of all potential factors, and agencies can consider other factors in their determination of significance as appropriate for the proposed action.

Fourteenth, CEQ proposed to redesignate paragraph (b)(2)(iv) of 40 CFR 1501.3 (2020) as paragraph (d)(2)(iv) and revise ''effects that would'' to ''actions that may'' violate ''relevant'' Federal, State, Tribal, or local laws. CEQ proposed to add ''other requirements'' after law as well as ''inconsistencies'' with ''policies designed for protection of the environment'' because agencies should not necessarily limit their inquiry to statutory requirements. CEQ explained that it may be appropriate for agencies to give relatively more weight to whether the action threatens to violate a law imposed for environmental protection as opposed to a policy, but formally adopted policies designed for the protection of clean air, clean water, or species conservation, for example, may nonetheless be relevant in evaluating intensity.

Some commenters recommended the final rule strengthen this factor to identify examples of relevant environmental protection laws and policies to ensure Federal agencies do not overlook actions taken by States to address climate change or environmental justice. Another commenter suggested CEQ provide guidance encouraging agencies to coordinate with coastal programs to achieve consistency with all relevant State and Territory plans, policies, and initiatives to protect coastal uses and resources.

In the final rule, CEQ redesignates paragraph (b)(2)(iv) of 40 CFR 1501.3 (2020) as § 1501.3(d)(2)(iii) and revises it as proposed. CEQ declines to make the commenters' suggested edits as they are unnecessarily specific for this rule and encompassed in the proposed text. However, this does not preclude an agency from identifying more specific examples in its agency NEPA procedures if the agency determines it would be helpful for assessing significance for its proposed actions.

Fifteenth, CEQ proposed to add a new paragraph (d)(2)(v) to consider the degree to which effects are highly uncertain. The 1978 regulations included factors for ''controversial'' effects and those that are ''highly uncertain or involve unique or unknown risks.'' CEQ proposed to restore a modified version of this concept that makes clear that the uncertainty of an effect is the appropriate consideration, and not whether an action is controversial. The proposed rule explained that while a legitimate disagreement on technical grounds may relate to uncertainty, this approach would make clear that public controversy over an activity or effect is not a factor for determining significance.

A few commenters expressed support for proposed paragraph (d)(2)(v). A couple of commenters suggested the

final rule include the phrase ''high degree of uncertainty'' to better conform with NEPA practice under the 1978 regulations. Another commenter requested clarity on what is meant by ''highly uncertain.'' A few commenters recommended the regulations restore ''highly controversial'' from the 1978 regulations because it was well-developed in case law and doing so would provide clarity to agencies on how to assess the degree to which effects were ''highly controversial.''

CEQ adds proposed new paragraph (d)(2)(v) at § 1501.3(d)(2)(iv) in the final rule. CEQ declines to use the term ''highly controversial.'' While some may be familiar with the terminology, it could mistakenly give the impression that it refers to public controversy. CEQ also declines to use ''high degree of uncertainty,'' which means the same thing as ''highly uncertain,'' because the phrase ''highly uncertain'' has been included in the NEPA regulations since 1978 and making this substitution would require restructuring the sentence in a manner that would reduce parallelism and readability without otherwise improving the clarity or improving meaning. *See* 40 CFR 1508.27(b)(5) (2019).

Sixteenth, CEQ proposed to add a new paragraph (d)(2)(vi) to consider the degree to which the action may relate to other actions with adverse effects. CEQ proposed this paragraph to reinstate a factor from the 1978 regulations and for consistency with the longstanding NEPA principle that agencies cannot segment actions to avoid significance. *See, e.g., Sierra Club* v. *Marsh,* 769 F.2d 868 (1st Cir. 1985); *Kern* v. *U.S. Bureau of Land Mgmt.,* 284 F.3d 1062 (9th Cir. 2002).

Some commenters supported the restoration of this factor, but suggested removal of the term ''adverse.'' Other commenters indicated that CEQ did not explain why it proposed to use ''in the aggregate'' instead of the 1978 regulations' phrasing ''cumulatively significant impact on the environment'' and asserted that this would be a confusing change. One commenter expressed support for the second sentence in the factor specifying that an agency cannot segment or term an action temporary that is not in fact temporary.

Another commenter opposed the restoration of this intensity factor, asserted it would confuse the NEPA process and imply that an EIS can be required solely based on the effects of other actions when the action under consideration does not have significant adverse effects itself. Another commenter also expressed concern about the factor and stated that if CEQ's goal is to ensure that the potential for repetition or recurrence of an impact is considered, the regulations should state this more clearly.

Upon further consideration, CEQ is not restoring this text from the 1978 regulations to the final rule. The inclusion of cumulative effects as a component of effects already addresses the interrelationship between the effects of an action under consideration. Moreover, rather than identifying a factor for an agency to consider in assessing significance, this language more directly relates to the prohibition on an agency segmenting an action, which the final rule addresses in § 1501.3(b) related to the scope of an action and effects.

Seventeenth, CEQ proposed to add a new paragraph (d)(2)(vii) to add a factor relating to actions that would affect historic resources listed or eligible for listing in the National Register of Historic Places. CEQ proposed this factor to generally reinstate a factor from the 1978 regulations, which agencies have decades of experience considering. The proposed rule explained that consideration of this factor furthers the policies and goals of NEPA, including to ''preserve important historic, cultural, and natural aspects of our national heritage.'' 42 U.S.C. 4331.

A couple of commenters expressed support for proposed paragraph (d)(2)(vii), while another commenter requested the final rule broaden the factor by inserting ''or State or Tribal equivalents to registers of historic places'' to the end of the factor. CEQ adds proposed new paragraph (d)(2)(vii) at § 1501.3(d)(2)(v) in the final rule. CEQ declines the commenter's recommended addition because the revised provision is consistent with decades of agency practice. CEQ notes that the list of intensity factors is not exhaustive.

Eighteenth, CEQ proposed to add a new paragraph (d)(2)(viii) to add the degree to which the action may adversely affect an endangered or threatened species or its habitat, including critical habitat under the Endangered Species Act. 16 U.S.C. 1532(5). CEQ proposed to reinstate and expand an intensity factor from the 1978 regulations, which only addressed critical habitat. CEQ proposed this addition to clarify that agencies should consider effects to the habitat of endangered or threatened species even if it has not been designated as critical habitat.

Some commenters expressed support for the expansion of the factor to include impacts to habitat regardless of whether they have been designated as critical. A few commenters disagreed with the proposed expansion of this intensity factor and suggested that the final rule restore the 1978 language that ''limited'' this factor to review of critical habitat. Multiple commenters requested the final rule exclude this factor, asserting that CEQ failed to justify the proposed expansion to require agencies to consider the effect of an action on habitat that have not been designated as critical habitats under the Endangered Species Act. Commenters stated that it was unclear why this would be an intensity factor when agencies already must engage in ESA section 7 consultation. One commenter expressed concern the proposed expansion would expand the scope of the significance determination, resulting in project delays and siting issues. Other commenters specifically recommended removing ''habitat, including'' because the language expands habitat considerations beyond what is protected by Federal law.

CEQ adds proposed new paragraph (d)(2)(viii) in § 1501.3(d)(2)(vi) of the final rule, as proposed, because critical habitat is a regulatory category under the Endangered Species Act designation process and does not necessarily align with the geographic range of the species or the habitat a species is using. Major Federal actions can have significant effects on endangered or threatened species habitat regardless of whether critical habitat has been designated. Moreover, the section 7 consultation process considers effects to listed species generally, including where habitat that has not been designated as critical habitat is used by a species and therefore, damage to that habitat may affect the species. As a result, revising the factor in this manner helps to align environmental review under NEPA and the section 7 consultation process.

Nineteenth, CEQ proposed to add a new paragraph (d)(2)(ix) to include consideration of the degree to which the action may have disproportionate and adverse effects on communities with environmental justice concerns. CEQ proposed this factor because evidence continues to accumulate that communities with environmental justice concerns often experience disproportionate environmental burdens such as pollution or urban heat stress, and often experience disproportionate health and other socio-economic burdens that make them more susceptible to adverse effects.

Multiple commenters expressed support for the proposed addition of environmental justice as an intensity factor. One commenter requested clarity on what is meant by ''the degree to

which an action may have a disproportionate effect.'' Another commenter recommended the final rule revise the factor to read ''the degree of any reasonably foreseeable and adverse effects from the proposed action on communities with environmental justice concerns'' to focus on reasonably foreseeable effects.

CEQ adds the factor in proposed paragraph (d)(2)(ix) related to communities with environmental justice concerns in § 1501.3(d)(2)(vii) in the final rule with modifications. Specifically, the final rule revises the factor to revise the phrase ''have disproportionate and adverse effects'' to ''adversely affect'' to enhance the consistency of this factor with the other intensity factors. CEQ notes that the intensity factors inform an agency's determination of whether an effect is significant, and the word ''effect'' is defined to mean reasonably foreseeable effect.

Finally, CEQ proposed to add a new proposed paragraph (d)(2)(x) to include effects upon rights of Tribal Nations that have been reserved through treaties, statutes, or Executive orders. CEQ proposed this factor because Tribes' ability to exercise these rights often depends on the conditions of the resources that support the rights, and agencies should consider these reserved rights when determining whether effects to such resources are significant. CEQ specifically sought comments from Tribes on this proposed addition.

Multiple commenters, including Tribal government agencies and Tribal leaders, supported the addition of proposed paragraph (d)(2)(x), but also urged CEQ to specifically address effects on Tribal sovereignty, reservations, religious and cultural practices and cultural heritage, current cultural practices, and habitat on which resources crucial to the exercise of Tribal Nations' reserved rights depend. A few commenters recommended the factor include broader references when discussing ''rights'' to ensure inclusion of the rights of indigenous peoples not denominated as Tribes. A few commenters opposed the proposed addition, asserting that it prejudges which effects would be significant.

CEQ adds proposed new paragraph (d)(2)(x) in § 1501.3(d)(2)(viii) of the final rule, as proposed. The provision identifies an important factor that agencies should consider in determining whether an effect is significant and will help agencies consider rights that have been reserved through treaties, statutes, or Executive orders during the NEPA process, without prejudging which categories of environmental effects will be most important in any given analysis. Regarding the additional considerations that commenters suggest that CEQ incorporate into these provisions, CEQ notes that paragraphs (d)(2)(ii), (iii), (v), and (vii) capture many of them in whole or in part. Because the list of considerations in paragraph (d)(2) is not exhaustive, CEQ declines to specify these additional terms. Regarding the recommendation to add a reference to rights of indigenous peoples in this factor, CEQ does not make this revision because this factor addresses the unique and distinctive rights of Tribal Nations that have a nation-to-nation relationship with the United States.

3. Categorical Exclusions (§ 1501.4)

CEQ proposed revisions to § 1501.4 regarding CEs to clarify this provision, and provide agencies new flexibility to establish CEs using additional mechanisms outside of their NEPA procedures to promote more efficient and transparent development of CEs that may be tailored to specific environmental contexts or project types.

Many commenters expressed general support for the proposed changes to § 1501.4. Some of these commenters suggested that the final rule go further to encourage the use of CEs. Other commenters advocated for additional provisions in the section, such as requiring agencies to notify the public of the proposed use of a CE and make all documentation on the use of a CE for a specific action available to the public. CEQ addresses the specific comments throughout this section and in the Phase 2 Response to Comments.

CEQ intends the changes in the final rule to promote agency use of CEs whenever appropriate for a proposed action. The mechanisms in § 1501.4 as well as § 1507.3 will provide agencies with additional flexibility in establishing CEs while ensuring that CEs are appropriately substantiated and bounded to ensure they apply to actions that normally do not have significant effects. CEQ declines to require agencies to provide public notice in advance of using a CE. While agencies may choose to do this where they deem appropriate, an across-the-board requirement would burden agency resources and undermine the efficiency of the CE process. Similarly, requiring agencies to publish documentation of every CE determination would be overly burdensome. Consistent with § 1507.3(c)(8)(i), agencies must identify in their NEPA procedures which of their CEs require documentation. Agencies also can identify processes or specific CEs in their agency procedures for which they will make determinations publicly available where they determine this is appropriate. CEQ encourages agencies to notify the public and make documentation publicly available for CEs when they expect public interest in the determination.

CEQ proposed changes throughout § 1501.4. First, CEQ proposed to revise the first sentence in paragraph (a) to strike the clause requiring agencies to identify CEs in their agency NEPA procedures and replace it with a clause requiring agencies to establish CEs consistent with § 1507.3(c)(8), which requires agencies to establish CEs in their NEPA procedures. CEQ proposed this revision because it would more fully and accurately reflect the purposes of and requirements for CEs. Because paragraph (c) provides mechanisms for agencies to establish CEs outside of their NEPA procedures, CEQ makes this change to § 1501.4(a) in the final rule but adds ''or paragraph (c)'' so that the first sentence refers to the various mechanisms for establishing CEs. As is reflected in the regulations, CEQ views CEs to be important tools to promote efficiency in the NEPA process where agencies have long exercised their expertise to identify and substantiate categories of actions that normally do not have a significant effect on the human environment.

Second, in the description of CEs in the first sentence of paragraph (a), CEQ proposed to add the clause ''individually or in the aggregate'' to modify the clause ''categories of actions that normally do not have a significant effect on the human environment.'' CEQ proposed to add this language to clarify that when establishing a CE, an agency must determine that the application of the CE to a single action and the repeated collective application to multiple actions would not have significant effects on the human environment. CEQ proposed this clarification to recognize that agencies often use CEs multiple times over many years and for consistency with the reference to a ''category of actions'' in the definition of ''categorical exclusion'' provided by section 111(1) of NEPA, which highlights the manner in which CEs consider an aggregation of individual actions. 42 U.S.C. 4336e(1).

CEQ intended the proposed change to have a meaning similar to the 1978 regulations' definition ''categorical exclusion'' as categories of actions that do not ''individually or cumulatively'' have significant effects, which the 2020 rule removed stating that the removal was consistent with its removal of the term ''cumulative impacts'' from the regulations. The Phase 1 rulemaking reinstated cumulative effects to the

definition of ''effects,'' [68] so the 2020 rule's justification for removing the phrase no longer has a basis. However, CEQ proposed to use the phrase ''in the aggregate'' rather than ''cumulatively'' to avoid potential confusion. Cumulative effects refer to the incremental effects of an agency action added to the effects of other past, present, and reasonably foreseeable actions. In the context of establishing CEs, agencies consider both the effects of a single action as well as the aggregation of effects from anticipated multiple actions covered by the CE such that the aggregate sum of actions covered by the CE does not normally have a significant effect on the human environment. As part of this analysis, agencies consider the effects—direct, indirect, and cumulative—of the individual and aggregated actions.

Because the definition of ''effects'' includes cumulative effects, CEQ proposed the phrase ''in the aggregate'' to more clearly define what agencies must consider in establishing a CE—the full scope of direct, indirect, and cumulative effects of the category of action covered by the CE. Agencies have flexibility on how to evaluate whether the aggregate actions covered by a CE will not ordinarily have significant effects and may consider the manner in which the agency's extraordinary circumstances may apply to avoid multiple actions taken in reliance on the CE having reasonably foreseeable significant effects in the aggregate.

Commenters both supported and opposed the addition of the phrase ''individually or in the aggregate'' in proposed § 1501.4(a) and § 1507.3(c)(8)(ii). Commenters who supported the inclusion of the text asserted that it restores an important clarification regarding the proper scope of CEs from the 1978 regulations and that it gives meaning to the statutory definition of ''categorical exclusion'' in section 111(1) of NEPA. 42 U.S.C. 4336e(1). Commenters opposed to this phrase asserted it is undefined, lacks foundation in the statute, is burdensome on agencies, and will require agencies to consider effects beyond those that are reasonably foreseeable.

CEQ disagrees that the phrase ''individually or in the aggregate'' lacks foundation in the statute because use of the phrase ''does not significantly affect'' in section 111(1) of NEPA indicates it is the ''*category* of actions'' that the agency has determined normally would not result in significant effects to the environment, not an individual action to which the CE would apply. *See* 42 U.S.C. 4336e(1) (emphasis added). CEQ also disagrees that this phrase will add burden to agencies because CEQ considers this a clarifying edit consistent with the longstanding definition of ''categorical exclusion'' and agency practice. Finally, CEQ notes that all effects analyses are bounded by reasonable foreseeability, including in the establishment of CEs.

Some commenters also requested the regulations clarify the relationship between the phrase ''individually or in the aggregate'' and the definition of cumulative effects. CEQ views these terms as related. The term ''effects'' as used in the definition of ''categorical exclusion'' and throughout the regulations includes cumulative effects, which, in turn, refers to the effects of the action being analyzed in an environmental document when added to the effects of other past, present, and reasonably foreseeable actions. The use of ''in the aggregate'' in this paragraph refers to the fact that in substantiating a CE to determine that a category of actions normally does not have significant effects, the agency must consider both the effects—including cumulative effects as well as direct and indirect—of an individual action within that category and of the aggregate of the actions that the agency can reasonably foresee will be taken and covered by the CE. Because the regulations use the phrase ''in the aggregate'' consistent with the ordinary meaning of the phrase, CEQ does not consider it necessary to add additional explanatory text.

A few commenters requested the regulations clarify that an agency should ensure that actions covered by a CE will not have a significant effect ''individually or in the aggregate'' at the time the agency establishes and substantiates the CE. Conversely, another commenter asserted considering the aggregate effects of a CE is inappropriate when an agency establishes a CE, asserting that an agency should consider any aggregate effects when applying the CE to a proposed action. CEQ declines to address substantiation of CEs in § 1501.4 as this issue is addressed in § 1507.3(c)(8)(ii). Further, CEQ disagrees that agencies would need to analyze aggregate effects each time the agency applies a CE, except to the extent the agency's extraordinary circumstances review requires such an analysis. Requiring such an analysis each time an agency applies a CE, independent of any analysis required as part of the agency's extraordinary circumstances review, would undermine the efficiency of CEs. Instead, agencies must consider whether a category of actions normally does not have a significant effect individually or in the aggregate at the time that the agency establishes a CE.

Some commenters opposed the use of the term ''normally'' in the description of a CE in paragraph (a), which CEQ discusses in section II.J.2. CEQ retains this term for the reasons discussed in the 2020 rule, section II.J.2, and the Phase 2 Response to Comments.

Third, CEQ proposed to revise the end of the first sentence of paragraph (a) to add the qualifier, ''unless extraordinary circumstances exist that make application of the categorical exclusion inappropriate'' with a cross reference to paragraph (b). As discussed in section II.J.11, CEQ proposed to add a definition of ''extraordinary circumstances.'' CEQ stated in the proposed rule, that these provisions are consistent with longstanding practice and recognize that, as the definition provided by section 111(1) of NEPA indicates, CEs are a mechanism to identify categories of actions that normally do not have significant environmental effects. *See* 42 U.S.C. 4336e(1). Extraordinary circumstances serve to identify individual actions whose effects exceed those normally associated with that category of action and therefore, may not be within the scope of the CE. CEQ did not receive comments on this specific proposed change and makes this addition to paragraph (a) in the final rule.

Fourth, CEQ proposed to add a new sentence at the end of paragraph (a) to clarify that agencies may establish CEs individually or jointly with other agencies. The proposed rule noted that where agencies establish CEs jointly, they may use a shared substantiation document and list the CE in both agencies' NEPA procedures or identify them through another joint document as provided for by § 1501.4(c). CEQ proposed this addition to clarify that agencies may use this mechanism to establish CEs transparently and with appropriate public process. The proposed rule noted that agencies may save administrative time and resources by establishing a CE jointly for activities that they routinely work on together and where having a CE would create efficiency in project implementation.

Multiple commenters supported the inclusion of this clarification in paragraph (a), stating that joint establishment of CEs by agencies can help improve efficiency, reduce redundancy, and improve cohesion between agencies. On the other hand, one commenter opposed the proposed addition asserting that joint CEs will not

[68] CEQ, Phase 1 Final Rule, *supra* note 50, at 23469.

help communities participate fully in the NEPA process. CEQ adds the proposed language in § 1501.4(a) in the final rule. The NEPA regulations have never prohibited agencies from establishing CEs jointly, and the proposed change in paragraph (a) provides clarity to agencies and the public that this is an acceptable practice. The requirement to substantiate CEs as described in § 1507.3(c)(8), including public review and comment, apply to establishment of joint CEs in the same manner as CEs established by an individual agency.

Fifth, CEQ proposed edits to paragraph (b)(1) addressing what agencies do when there are extraordinary circumstances for a particular action. CEQ proposed to change ''present'' to ''exist'' and clarify the standard for when an agency may apply a CE to a proposed action notwithstanding the extraordinary circumstances. CEQ proposed to make explicit that an agency must conduct an analysis to satisfy the requirements of the paragraph. Next, CEQ proposed to change the description of the determination that agencies must make from ''there are circumstances that lessen the impacts'' to ''the proposed action does not in fact have the potential to result in significant effects notwithstanding the extraordinary circumstance.'' Then CEQ proposed to change ''or other conditions sufficient to avoid significant effects'' to ''or the agency modifies the action to address the extraordinary circumstance.'' CEQ proposed this standard for consistency with agency practice and case law. Additionally, CEQ proposed this change because the language in paragraph (b)(1) of 40 CFR 1501.4 (2020) could be construed to mean that agencies may mitigate on a case-by-case basis extraordinary circumstances that would otherwise have the potential for significant effects and thereby apply a CE with no opportunity for public review or engagement on such actions. While the 2020 Response to Comments sought to distinguish ''circumstances that lessen the impacts'' from required mitigation to address significant effects,[69] based on CEQ's discussions with agency representatives and stakeholders, the potential for confusion remained. CEQ proposed the revised text to make clear that if an extraordinary circumstance exists, an agency must make an affirmative determination that there is no potential for significant effects in order to apply a CE. If the agency cannot make this determination, the agency must either modify its proposed action in a way that will address the extraordinary circumstance, or prepare an EA or EIS.

Sixth, CEQ proposed to add a sentence to paragraph (b)(1) to require agencies to document their determinations in those instances where an agency applies a CE notwithstanding extraordinary circumstances. While not required, CEQ proposed to encourage agencies to publish such documentation to provide transparency to the public of an agency determination that there is no potential for significant effects. CEQ proposed this sentence in response to feedback from the public requesting such transparency.

Multiple commenters generally supported proposed § 1501.4(b), which sets out the process for applying a CE to a proposed action, and its subparagraphs addressing consideration of extraordinary circumstances. Several commenters opposed the proposed requirement in paragraph (b)(1) to prepare a separate analysis as part of the extraordinary circumstances review, asserting it will decrease efficiency, disincentivize use of CEs, and strain already limited agency resources.

Multiple commenters opposed allowing an agency to apply a CE when extraordinary circumstances exist and expressed concerns that this provision would allow the use of mitigated CEs. Some of these commenters recommended the final rule remove paragraph (b)(1); further specify what extraordinary circumstances agencies must consider, such as the presence of endangered, threatened, or rare or sensitive species; or include ''other protective measures.'' Some commenters urged the final rule to require, rather than encourage, publication of the CE determinations in paragraph (b)(1). Other commenters urged CEQ not to make publication a requirement because it would be burdensome on agencies. One commenter who supported proposed paragraph (b)(1) also suggested the regulations clarify that the standard to apply a CE to a proposed action also includes mitigation commitments to address extraordinary circumstances.

CEQ revises paragraph (b)(1) as proposed with two additional clarifying edits. In applying CEs, the evaluation of extraordinary circumstances is critical to ensure that a proposed action to which a CE may apply would not cause significant effects. However, mere presence of an extraordinary circumstance does not mean that the proposed action has the potential to result in significant effects. To ensure both the efficient and the appropriate use of CEs, CEQ revises paragraph (b)(1) to enable agencies to analyze and document that analysis to ensure application of the CE is valid. CEQ disagrees that requiring agencies to document this analysis is inefficient because this provision does not require an agency to prepare documentation of every extraordinary circumstance review. Rather, the provision requires documentation only when the agency identifies the presence of extraordinary circumstances but nevertheless determines that application of the CE is appropriate. Documentation in such instances is appropriate so that the agency can demonstrate that it adequately assessed the extraordinary circumstances and determined that the action will nonetheless not have the potential to result in significant effects. CEQ declines to require agencies to publish this documentation because it could burden agency resources and undermine the efficiency of the CE process.

CEQ has considered the comments on this paragraph related to mitigated CEs and modifies the text in the final rule to clarify what it means for an agency to modify its action. Specifically, CEQ replaces the phrase ''address the extraordinary circumstance'' with the phrase ''avoid the potential to result in significant effects.'' This change clarifies that while an agency may rely on measures that avoid potential significant effects, it may not rely on measures to compensate for potential significant effects as the basis for relying on a CE when extraordinary circumstances are present, and the agency has determined that the proposed action has the potential to result in significant effects. While CEQ has determined that reliance on compensatory mitigation in this provision is inappropriate, it notes that other provisions of the regulations, such as the allowance for mitigated FONSIs in § 1501.6, promote the use of compensatory mitigation to promote efficient environmental reviews and quality decision making. CEQ also revises the introductory clause of the last sentence from ''In such cases'' to ''in these cases'' to make it clear that the documentation requirement applies to both situations—(1) when the agency conducts an analysis and determines that the proposed action does not in fact have the potential to result in significant effects notwithstanding the extraordinary circumstance or (2) the agency modifies the action to avoid the potential to result in significant effects.

[69] CEQ, Update to the Regulations Implementing the Procedural Provisions of the National Environmental Policy Act Final Rule Response to Comments 130 (June 30, 2020) (2020 Response to Comments), *https://www.regulations.gov/document/CEQ-2019-0003-720629.*

Seventh, CEQ proposed to add a new paragraph (c) to provide agencies more flexibility to establish CEs outside of their NEPA procedures. CEQ proposed this provision to allow agencies to establish CEs through a land use plan, a decision document supported by a programmatic EIS or EA, or other equivalent planning or programmatic decisions. Once established, the proposal would allow agencies to apply CEs to future actions addressed in the program or plan, including site-specific or project-level actions. CEQ proposed this provision because it anticipated that expanding the mechanisms through which agencies may establish CEs will encourage agencies to conduct programmatic and planning reviews, increase the speed with which agencies can establish CEs while ensuring public participation and adequate substantiation, promote the development of CEs that are tailored to specific contexts, geographies, or project-types, and allow decision makers to consider the cumulative effects of related actions on a geographic area over a longer time frame than agencies generally consider in a review of a single action.

Proposed paragraph (c) would not require agencies to establish CEs through this new mechanism, but rather would provide new options for agencies to consider. CEQ also noted in the proposed rule that this mechanism does not preclude agencies from conducting and relying on programmatic analyses in making project-level decisions consistent with § 1501.11 in the absence of establishing a CE. Additionally, the proposed rule noted that it does not require agencies to conduct a NEPA analysis to establish CEs generally, consistent with § 1507.3(c)(8).

Numerous commenters expressed support for proposed paragraph (c), asserting it will improve flexibility and efficiency. Some commenters opposed the proposed provision, expressing concern about public engagement. One commenter requested CEQ exclude ''other equivalent planning or programmatic decision'' from paragraph (c) asserting that CEQ should limit the provision to documents prepared pursuant to NEPA to ensure public transparency and early public involvement. Another commenter recommended the final rule include an example in paragraph (c) to illustrate the appropriateness of creating a CE for restoration actions in a planning document, referencing § 1500.3(d)(2)(i) for proposed Federal actions with short-term, non-significant, adverse effects and long-term beneficial effects, such as restoration projects.

CEQ adds paragraph (c) with additional text to clarify that the phrase ''other equivalent planning or programmatic decision'' requires that such decision be supported by an environmental document prepared under NEPA. CEQ anticipates that this alternative approach will provide agencies with more flexibility on how to identify categories of actions that normally will not have significant effects and establish a CE for those categories. An environmental document such as a programmatic EIS prepared for land use plans or other planning and programmatic decisions can provide the analysis necessary to substantiate a new CE established by the associated decision document that makes sense in the context of the overall program decision or land use plan. For example, a land management agency could consider establishing a CE for zero or minimal impact resilience-related activities through a land use plan and the associated EIS. Enabling an agency to establish a CE through this mechanism will reduce duplication of effort by obviating the need for the agency to revise its NEPA procedures consistent with § 1507.3 after completing a programmatic EIS. Agencies also may find it efficient to establish a CE through a land use planning process rather than undertaking a separate process to establish the CE via agency procedures after completion of the land use planning process.

Eighth, CEQ proposed to add paragraphs (c)(1) through (c)(6) to set forth the requirements for the establishment of CEs through the mechanism proposed in paragraph (c). In paragraphs (c)(1) and (c)(2), CEQ proposed to require agencies to provide CEQ an opportunity to review and comment and provide opportunities for public comment. The proposed rule noted that agencies may satisfy the requirement for notification and comment under paragraph (c)(2) by incorporating the proposed CEs into any interagency and public review process that involves notice and comment opportunities applicable to the relevant programmatic or planning document.

One commenter requested that paragraph (c)(1) include a requirement for CEQ to provide review and comment to agencies within 30 days of the receipt of the draft plan, programmatic environmental document, or equivalent decision document, consistent with the timeframe included in § 1507.3(b)(2). Another commenter asserted that requiring agencies to coordinate with CEQ defeats the purpose of having an alternative mechanism for establishing CEs outside of an agency's NEPA procedures.

Some commenters asserted that bundling new CEs with other large actions could make it hard for the public to track and result in a lack of public participation and potential for abuse. CEQ disagrees that the alternative process for establishing CEs will curtail meaningful public engagement on proposed CEs and notes that paragraph (c)(2) would require notification and an opportunity for public comment. Further, programmatic environmental documents are subject to the public and governmental engagement requirements in § 1501.9.

The final rule adds paragraphs (c)(1) and (c)(2) as proposed. CEQ declines to include a timeline in the final rule but notes that it will strive to provide comments as quickly and efficiently as possible. CEQ disagrees that requiring agencies to consult with CEQ defeats the purpose of this alternative mechanism. Consultation with CEQ facilitates consistency and coordination across the government, which can lead to greater efficiency. CEQ also can help ensure that agencies are adequately substantiating CEs through this new mechanism.

In paragraphs (c)(3) and (c)(4), CEQ proposed to include the same requirements for agencies to substantiate CEs and provide for extraordinary circumstances when they establish CEs under this section as when they establish CEs through their agency NEPA procedures pursuant to § 1507.3. Specifically, paragraph (c)(3) would require agencies to substantiate their determinations that the category of actions covered by a CE normally will not result in significant effects, individually or in the aggregate. Paragraph (c)(4) would require agencies to identify extraordinary circumstances.

CEQ did not receive comments specific to paragraphs (c)(3) and (c)(4) and adds them to the final rule as proposed. CEQ notes that agencies have flexibility in how they identify the list of new extraordinary circumstances. For example, agencies could rely on their list set forth in their NEPA procedures. Or, the agency could identify a list specific to the CEs established under paragraph (c). Agencies also could do a combination of both. CEQ also notes that while agencies would need to satisfy the requirements in paragraphs (c)(3) and (c)(4) in a manner consistent with the establishment of CEs under § 1507.3, agencies could document their compliance with these requirements in the relevant programmatic or planning documents.

In paragraph (c)(5), CEQ proposed to direct agencies to establish a process for determining that a CE applies to a specific action in the absence of extraordinary circumstances or determine the CE still applies notwithstanding the presence of extraordinary circumstances. Finally, in paragraph (c)(6), CEQ proposed to direct agencies to maintain a list of all such CEs on their websites, similar to the requirement for agencies to publish CEs established in their agency NEPA procedures consistent with §§ 1507.3(b)(2) and 1507.4(a).

One commenter asserted that requiring agencies to publish a list of all CEs established pursuant paragraph (c) on an agency's website defeats the purpose of having an alternative mechanism for establishing CEs outside of an agency's NEPA procedures. CEQ adds paragraphs (c)(6) as proposed. CEQ disagrees that providing transparency on a website is burdensome or will affect the efficiency of the alternative process for establishing CEs. Agency websites should clearly link the CEs established pursuant to § 1504.1(c) to their underlying programmatic or planning documents. Additionally, where they determine it is efficient and helpful to do so, agencies may incorporate CEs established through these mechanisms into their agency NEPA procedures during a subsequent revision. Irrespective of whether agencies do this, CEQ encourages agencies to list all agency CEs in one location, regardless of how the agency established the CE, so that the public can easily access the full list of an agency's CEs.

Ninth, CEQ proposed new paragraphs (d) and (d)(1) through (d)(4) to identify a list of examples of features agencies may want to consider including when establishing CEs, regardless of what mechanism they use to do so. In paragraph (d)(1), CEQ proposed to specifically allow for CEs that cover specific geographic areas or areas that share common characteristics, such as a specific habitat type for a given species. CEQ did not receive any comments specific to this proposal and adds paragraphs (d) and (d)(1) to the final rule.

To promote experimentation and evaluation, CEQ proposed in paragraph (d)(2) to indicate that agencies may establish CEs for limited durations. CEQ did not receive any comments specific to this proposal and adds paragraph (d)(2) to the final rule. Agencies may establish CEs for limited durations when doing so will enable them to narrow the scope of analysis necessary to substantiate that a class of activities normally will not have a significant environmental effect where uncertainty exists about changes to the environment that may occur later in time that could affect the analysis or where an agency anticipates that the frequency of actions covered by a CE may increase in the future. As with all CEs, agencies should review their continued validity periodically, consistent with the CE review timeframe in § 1507.3(c)(9). Once the limited duration threshold is met, agencies may either consider the CE expired, conduct additional analysis to create a permanent CE, or reissue the CE for a new period if they can adequately substantiate the reissued CE.

CEQ proposed in paragraph (d)(3) to provide that a CE may include mitigation measures to address potential significant effects. The proposed rule explained that a CE that includes mitigation is different than an agency modifying an action to avoid an extraordinary circumstance that would otherwise require preparation of an EA or EIS.

Numerous commenters interpreted proposed paragraph (d)(3) to allow ''mitigated CEs,'' and commenters expressed both support and opposition for the proposed provision. Supportive commenters asserted that mitigated CEs can provide efficiencies to agencies. Commenters opposed to the provision expressed concern that this would allow agencies to provide compensatory mitigation for impacts of CEs and asserted the provision violates a bedrock principle of NEPA that an agency may not weigh beneficial effects against adverse effects to determine that an action's effects on a whole are not significant. Some commenters objected to the proposal that mitigation included as part of a CE must be legally binding, enforceable, and subject to monitoring.

CEQ includes paragraph (d)(3) as proposed. This provision provides for a CE that includes mitigation measures integrated into the category of action itself, which agencies would adopt through a public comment process, and does not enable mitigation that is identified after the fact or on a case-by-case basis. Where an agency establishes a CE for a category of activities that include mitigation measures, agencies would implement the activities covered by the CE as well as the mitigation incorporated into those activities as described in the text of CE. This provision would enable agencies to incorporate mitigation as part of the category of action covered by a CE. The potential to integrate compensatory mitigation into a CE does not authorize weighing beneficial and adverse effects, just as agencies may not weigh beneficial effects against adverse effects to determine significance of a proposed action. Rather, a CE may incorporate compensatory mitigation requirements as part of the action to ensure that an environmental effect is not significant. For example, in appropriate circumstances an agency might conclude that a category of activity that results in degradation of five acres of habitat will not ordinarily have significant effects where five acres of equivalent habitat are effectively restored or conserved elsewhere within that same geographic location. As another example, a CE might cover a category of activities that result in releasing a certain volume of sediment into a waterway if measures were taken to reduce sediment into the waterway from other sources. In establishing a CE that incorporates a mitigation measure, the agency would need to determine that implementation of the mitigation measure will mean that the category of activities will not normally have a significant effect. Where an agency establishes a CE with a mitigation requirement, the agency would need to include such mitigation in their proposed actions in order for the CE to apply.

In paragraph (d)(4), CEQ proposed to provide that agencies can include criteria for when a CE might expire such that, if such criteria occur, the agency could no longer apply that CE. For example, an agency could establish a CE for certain activities up to a threshold, such as a specified number of acres or occurrences. Once the applications of the CE met the threshold, the agency could no longer use the CE. Similarly, an agency might set an expiration date or threshold where the agency can substantiate that a category of activities will not have a significant effect up to a certain number of applications of the CE, but beyond that point there is uncertainty or analytic difficulty determining whether application of the CE would have significant effects. Adopting CEs of this type may significantly reduce the difficulty substantiating a CE and therefore, may promote more efficient and appropriate establishment of CEs in certain circumstances.

Some commenters requested that the criteria to cause a CE to expire be mandatory while another commenter asserted the expiration criteria would undermine the use of the CEs. CEQ includes paragraph (d)(4) as proposed in the final rule and notes that this provision is merely an example of a type of feature that can be incorporated into a CE. In establishing the CE, agencies

would determine whether the criteria were mandatory.

Finally, CEQ proposed to add paragraph (e) to implement the process for adoption and use of another agency's CE consistent with section 109 of NEPA. 42 U.S.C. 4336c. As discussed in section II.I.3, CEQ proposed to strike the provision that would allow an agency to establish a process in its agency NEPA procedures to apply a CE listed in another agency's NEPA procedures in 40 CFR 1507.3(f)(5) (2020) and replace it with this provision.

Numerous commenters generally opposed the concept of adopting and using another agency's CE. A few commenters asserted that such an allowance could be ''disastrous'' because it allows agencies to skip full assessment of the potential environmental and socioeconomic impacts of the proposed action required by NEPA, and it limits public engagement.

CEQ includes paragraph (e) in the final rule because it implements the provisions of section 109 of NEPA, which allows agencies to adopt and apply the CEs of other agencies. 42 U.S.C. 4336c. CEQ notes that the statutory provision only allows for agency adoption and use of CEs established administratively by the agency, including those that Congress directs agencies to establish administratively, but does not permit adoption of CEs directly created by statute, for which an agency has not evaluated whether the category of activities that fall within the CE will not normally have significant effects. While CEQ encourages agencies to include legislative CEs established by statute in their NEPA procedures to provide transparency, they are not ''established'' by the agency, but rather by Congress. Therefore, this provision does not apply to legislative CEs.

In paragraph (e)(1), CEQ proposed to require the adopting agency to identify the proposed action or category of proposed actions that falls within the CE. CEQ did not receive comments on this proposed paragraph and adds it to the final rule as proposed.

In paragraph (e)(2), CEQ proposed to require the adopting agency to consult with the agency that established the CE, consistent with the requirement of section 109(2) of NEPA that an agency consult with ''the agency that established the categorical exclusion.'' 42 U.S.C. 4336c(2). While some commenters opposed the consultation requirements included in paragraph (e)(2), it is consistent with section 109(2) of NEPA. Therefore, CEQ adds paragraph (e)(2) in the final rule with revisions to clarify that ''the application'' refers to ''the proposed action or category of proposed actions to which the agency intends to apply'' the adopted CE. Consultation with the agency that established the CE ensures that the CE is appropriate for the proposed action or categories of action that the adopting agency is contemplating as well as to ensure the adopting agency follows any process contemplated in the establishing agency's procedures. Agencies structure their CEs in a variety of manners, and it is essential that the adopting agency comport with the establishing agency's process necessary for appropriate application of the CE. For example, some agencies structure their CEs to have a list of conditions or factors to consider in order to apply the CE. Other agencies require documentation for certain CEs. These conditions would apply to the adopting agency as well. In contrast, procedures internal to the establishing agency and unrelated to proper application of the CE, such as protocols for seeking legal review or briefing agency leadership, would not.

CEQ proposed in paragraph (e)(3) to require the adopting agency to evaluate the proposed action for extraordinary circumstances and to incorporate the process for documenting use of the CE when extraordinary circumstances are present but application of the CE is still appropriate consistent with § 1504.1(b)(1). One commenter requested additional clarity on which agency's extraordinary circumstances the adopting agency needs to consider while another commenter asserted both agencies' extraordinary circumstances should apply. Another commenter asserted that section 109 of NEPA does not require the extraordinary circumstances review included in paragraph (e)(3), and suggested the final rule include this in paragraph (e)(1). The commenter further asserted that the cross-reference to § 1501.4(b) in paragraph (e)(3) presents problems of action-specific application.

In the final rule, CEQ swaps proposed paragraphs (e)(3) and (e)(4) to better reflect the order in which these activities occur. CEQ includes proposed paragraph (e)(3) at § 1501.4(e)(4), adds an introductory clause, ''[i]n applying the adopted categorical exclusion to a proposed action,'' and removes reference to a ''category of proposed actions'' since consideration of extraordinary circumstances would come at the stage of application and evaluation of a particular action, not at the adoption stage, because the purpose of assessing for extraordinary circumstances is to determine whether a particular action normally covered by a CE requires preparation of an EA or EIS.

CEQ declines to specify which agency's extraordinary circumstances apply in this paragraph and instead adds language to § 1501.4(e)(3) (proposed paragraph (e)(4)) to require agencies to explain the process the agency will use to evaluate for extraordinary circumstances. When the agencies consult regarding the appropriateness of the CE consistent with paragraph (e)(2), the agencies should discuss how the adopting agency will review for extraordinary circumstances (*e.g.,* whether the adopting agency will apply the establishing agency's extraordinary circumstances exclusively or both agencies' provisions), taking into account how each agency's NEPA procedures define and require consideration of extraordinary circumstances. The adopting agency should then explain how it will address extraordinary circumstances in its notification under § 1501.4(e)(4). CEQ expects that agencies will follow the extraordinary circumstances process set forth in the NEPA procedures containing the CE, but may determine it is appropriate to also consider the extraordinary circumstances process in their own procedures because, for example, their extraordinary circumstances address agency-specific considerations.

In proposed paragraph (e)(4), CEQ proposed to require the adopting agency to provide public notice of the CE it plans to use for its proposed action or category of proposed actions. Some commenters asserted the procedural requirements under paragraph (e)(4) are unnecessary and could make the process more difficult. One commenter requested the regulations clarify that public notice is not intended for each individual project using the other agency's CE, but rather when one agency decides to use another agency's CE. Some commenters requested the final rule require agencies to accept public comment on the notice. Conversely, a few commenters expressed concern that the requirement to provide notice contemplates the potential for pre-adoption public comment and necessitates formal comment. These latter commenters requested CEQ clarify that formal public comment and agency response are not required for the notice.

In the final rule, CEQ adds proposed paragraph (e)(4) at § 1501.4(e)(3) because section 109(3) of NEPA requires public notice of CE adoption. 42 U.S.C. 4336c(3). In the final rule text, CEQ uses ''public notification'' instead of ''public

notice'' for consistency with use of ''notification'' throughout the rule. CEQ changes ''use'' to ''is adopting'' to clarify that this notice is about adoption of the CE for a proposed action or category of actions, not the application of the adopted CE to a particular proposed action. CEQ replaces ''for'' with ''including a brief description of'' before ''the proposed action or category of proposed actions'' and adds the clause ''to which the agency intends to apply the adopted categorical exclusion'' to further clarify the purpose of the notice. Then, as discussed earlier in this section, the final rule requires that the notice specify the process for consideration of extraordinary circumstances. CEQ notes that several agencies have already successfully adopted other agencies' CEs and provided such notice since the NEPA amendments were enacted.[70] CEQ declines to add a requirement to this paragraph to require agencies to seek comment on the adoption. While CEQ encourages agencies to do so in appropriate cases, such as when there is community interest in the action, the statute does not require agencies to seek public comment on the adoption and use of another agency's CE. Finally, CEQ adds a requirement to include a brief description of the consultation process required by § 1501.4(c)(2) to demonstrate that this process occurred.

Lastly, in paragraph (e)(5), CEQ proposed to require the adopting agency to publish the documentation of the application of the CE. Some commenters opposed this proposed requirement, asserting it is not required by NEPA and differs from the section 109(4) requirement to document adoption of the CE, and that the requirement will only delay projects that clearly qualify for use of a CE. 42 U.S.C. 4336c(4). Other commenters supported the documentation requirement and requested that paragraph (e)(5) require agencies to publish decision documents.

CEQ adds § 1501.4(e)(5) in the final rule with the addition of ''adopted'' to modify ''categorical exclusion'' for clarity and consistency with § 1501.4(c)(3) and (c)(4). Paragraph (e)(5) implements sections 109(3) and 109(4) of NEPA and reflects CEQ's understanding that section 109(4) of NEPA describes a step that is distinct from and occurs later than the step described in section 109(3). *See* 42 U.S.C. 4336c(3), (4). Section 109(3) requires agencies to ''identify to the public the categorical exclusion that the agency plans to use for its proposed actions,'' while section 109(4) requires an agency to ''document adoption of the categorical exclusion.'' CEQ reads these provisions together to be consistent with requiring both notice of the adopting agency's adoption, which would describe the agency's intended use, as well as actual application of the adopted CE to proposed actions. It also furthers the purposes of NEPA to inform the public. Additionally, providing transparency about how agencies are using the adopted CEs will help allay commenters' concerns about this provision because they will be made aware of what CEs agencies are adopting and how they are using them. Therefore, agencies must prepare such documentation each time they apply the CE to a proposed action. Paragraph (e)(5) requires agencies to publish this determination that the application of the CE is appropriate for the proposed action, and that there are no extraordinary circumstances requiring preparation of an EA or EIS, including the analysis required by § 1501.4(b)(1) if the agency determines that there is no potential for significant effects notwithstanding those extraordinary circumstances. CEQ notes that use of the defined term ''publish'' in § 1501.4(e)(5) provides agencies with discretion to determine the appropriate manner in which to publish the documentation and that § 1501.4(e)(5) does not require agencies to publish any pre-decisional or deliberative materials the agencies may use to support a determination of the applicability of the adopted CE.

When an agency is adopting one or more CEs that it plans to use for one or more categories of actions, it may publish a single notice of the adoption under § 1501.4(e)(3), consistent with section 109(3) of NEPA. *See* 42 U.S.C. 4336c(3). However, when the agency then applies the adopted CE to a specific action, it must document that particular use of the CE to satisfy section 109(4) of NEPA, as reflected in § 1501.4(e)(4) and (5). *See* 42 U.S.C. 4336c(4). Finally, agencies must publish the documentation to provide transparency to the public consistent with section 109(3) and (4) of NEPA.

If an adopting agency anticipates long-term use of an adopted CE, CEQ encourages agencies to establish the CE either in their own procedures or through the process set forth in § 1501.4(c). Section 1501.4(e) can serve as an important bridge when agencies are implementing new programs where they have not yet established relevant CEs or when existing programs begin to undertake new categories of actions but where other agencies have experience with similar actions and have established a CE for those actions. In these circumstances, the agency can immediately begin to implement the new programs or activities after adoption of another agency's CE for similar actions without the need to first develop its own CE to cover them.

CEQ notes that section 109 of NEPA does not provide that an agency can modify the CE it is adopting. 42 U.S.C. 4336c. Therefore, agencies must adopt a CE as established and cannot modify the text of the adopted CE. However, in the public notification required by § 1501.4(e)(3), agencies must describe the action or category of actions to which they intend to apply the adopted CE and the action or category of actions for which the CE is adopted may be narrower in scope than the CE might otherwise encompass. If an agency later seeks to apply the adopted CE to a different category of actions than those identified in the prior adoption notice, the agency must further consult with the establishing agency and provide new public notification consistent with § 1501.4(e). If the agency publishes a consolidated list of CEs on its website, as CEQ recommends, the adopting agency should include identification of the action or category of actions for which it has adopted the CE with the list. If an adopting agency would prefer to narrow or otherwise modify the text of the adopted CE, it should instead substantiate and establish a new CE in its agency NEPA procedures.

4. Environmental Assessments (§ 1501.5)

CEQ proposed to revise § 1501.5 to make it consistent with section 106(b)(2) of NEPA, which addresses when an agency must prepare an EA, and section 107(e)(2) of NEPA, which address EA page limits. 42 U.S.C. 4336(b)(2), 4336a(e)(2). CEQ also proposed to revise § 1501.5 to provide greater clarity to agencies on the requirements that apply to the preparation of EAs and codify agency practice. CEQ proposed edits to address what agencies must discuss in an EA, how agencies should consider public comments they receive on draft EAs, what page limits apply to EAs, and what other requirements in the CEQ regulations agencies should apply to EAs.

First, regarding the contents of an EA, CEQ proposed to split paragraph (c)(2) of 40 CFR 1501.5 (2020), requiring an EA to briefly discuss the purpose and need for the proposed action, alternatives, and effects, into paragraphs

[70] *See, e.g.,* U.S. Dep't of Com., Adoption of Energy Categorical Exclusions under the National Environmental Policy Act, 88 FR 64884 (Sept. 20, 2023); U.S. Dep't of Transp., Notice of Adoption of Electric Vehicle Charging Stations Categorical Exclusion under the National Environmental Policy Act, 88 FR 64972 (Sept. 20, 2023).

(c)(2)(i) through (iii) to improve readability and provide a clearly defined list of requirements for EAs. CEQ proposed this formatting change to make it easier for the public and agencies to ascertain whether an EA includes the necessary contents. For example, when an agency develops an EA for a proposal involving unresolved conflicts concerning alternative uses of available resources, section 102(2)(H) of NEPA requires an analysis of alternatives, which will generally require analysis of one or more reasonable alternatives, in addition to a proposed action and no action alternative. *See* 42 U.S.C. 4332(2)(H). CEQ did not receive specific comments on these proposed changes and makes them in the final rule.

Second, CEQ proposed to move the requirement for EAs to list the agencies and persons consulted in the development of the EA from paragraph (c)(2) of 40 CFR 1501.5 (2020) into its own paragraph at § 1501.5(c)(3). CEQ also proposed to clarify the term ''agencies'' in this paragraph by specifying that the EA should list the Federal agencies and State, Tribal, and local governments and agencies consulted. CEQ did not receive specific comments on these proposed changes and makes them in the final rule to improve readability and improve clarity.

Third, CEQ proposed to add a new paragraph at § 1501.5(c)(4) to require each EA to include a unique identification number that can be used for tracking purposes, which the agency would then carry forward to all other documents related to the environmental review of the action, including the FONSI. As discussed in section II.D.4, CEQ proposed a comparable provision for EISs in § 1502.4(e)(10). CEQ included this proposal because identification numbers can help the public and agencies track the progress of an EA for a specific action as it moves through the NEPA process and may allow for more efficient and effective use of technology such as databases.

Many commenters expressed support for the addition of these requirements. Commenters agreed with CEQ's proposal that having a consistent reference point to facilitate public and agency engagement would increase transparency and accessibility and improve the public's ability to track agency reviews and decision making. Other supportive commenters indicated that the use of unique identification numbers would or should promote the use of technology, such as databases by Federal agencies, for tracking purposes and some commenters encouraged CEQ to require agencies to use technology and databases. Commenters also suggested that the final rule provide additional information such as standardizing the number format or specifying which documents require the numbering. Commenters that raised concern about the requirement suggested that without a requirement for electronic tracking systems, the requirement is premature and burdensome.

In this final rule, CEQ is retaining the proposed text and, in response to comments, adding a clause to also require use of the identification numbers in any agency databases or tracking systems. Identification numbers can help both the public and the agencies track the progress of an action as it moves through the NEPA process from initiation to final decision. The use of identification numbers will increase transparency and accountability to the public when a proposed action is tiered from an existing analysis or when an agency adopts another agency's NEPA analysis to support its own decision making. In addition to the Permitting Dashboard, many agencies already have internal or external databases and tracking systems for their environmental review documents.[71] While the proposed requirement would likely result in agencies using these tracking numbers in their systems, CEQ considers it important to add text to the final rule to emphasize their use as agencies continue to develop new ways to provide transparency and improve efficiency in their processes.

CEQ agrees with commenters that additional information will be needed for agencies to implement this provision. For example, there is the question whether to have a government-wide system assign the unique identification number, to use a standardized numbering format, or whether agencies will develop their own format. However, CEQ considers these questions best answered through instructions to agencies, which CEQ can revise or reissue as needed, especially given the speed at which technology advances and changes. CEQ intends to develop such instructions following issuance of this final rule.

Fourth, to reflect current agency practice and provide the public with a clearer understanding about potential public participation opportunities with respect to EAs, CEQ proposed to add a new paragraph (e) that would provide that if an agency chooses to publish a draft EA, it must invite public comment on the draft and consider those comments when preparing a final EA.

Numerous commenters expressed support for this proposed change. Some commenters recommend the final rule go further to require public comment on all EAs, with at least one commenter suggesting a 30-day minimum comment period. Another commenter requested the regulations require agencies to respond to comments on an EA and publish the comments on a website, similar to the requirements for EISs.

Some commenters opposed the proposed change, asserting that it creates the perception that publication of a draft EA for public comment should be the default practice when in fact, agencies have discretion not to do this. They also requested CEQ explicitly state in the rule and preamble that there is no obligation for agencies to publish a draft EA for comment. Other commenters emphasized discretion, stating that because agencies already have discretion to prepare a draft EA, they should have discretion on whether to invite public comment on it. The commenters also expressed concern that proposed § 1501.5(e) removes agency discretion on how to manage EAs and could prolong the development of EAs. Some commenters asserted the language on draft EAs contradicts case law, hinders the efficiency of the EA process, and could disincentivize agencies from publishing draft EAs.

CEQ considered these comments and includes paragraph (e) as proposed. CEQ considers this approach to strike the right balance between agency discretion and ensuring that agencies consider public comments when they choose to prepare both a draft and final EA. As the proposed rule articulated, this provision reflects the fact that one of the primary purposes for which agencies choose to prepare draft EAs is to facilitate public participation. Codifying this practice enhances the public's understanding of the NEPA process and meaningful public engagement and does not restrict agency discretion over whether to choose to prepare a draft EA for public comment.

CEQ declines to mandate that all EAs be made available for comment because agencies appropriately have flexibility to determine what level of engagement is appropriate for an EA given the specific circumstances of a proposed action, consistent with § 1501.5(f). However, in developing EAs, agencies must involve the public, State, Tribal, and local governments, relevant agencies, and any applicants, to the extent practicable, in accordance with § 1501.5(f). CEQ also declines to require agencies to respond to comments and

[71] *See, e.g.,* U.S. Forest Serv. Schedule of Proposed Actions, *https://www.fs.usda.gov/sopa/index.php.*

publish public comments on a website. Doing so would unduly limit the discretion of agencies to tailor the public engagement process for EAs to the specific circumstances of a proposed action, which could include responding to comments or publishing them on a website though the regulations do not require it. Adding such requirements instead of leaving it to agency discretion could disincentivize agencies from publishing draft EAs due to concerns about the burden of responding to voluminous comments.

Fifth, CEQ proposed to redesignate paragraphs (e) and (f) of 40 CFR 1501.5 (2020) as § 1501.5(f) and (g) respectively. CEQ makes these changes in the final rule.

Sixth, CEQ proposed to revise paragraph (g) addressing page limits to dispense with the requirement for senior agency official approval to exceed 75 pages, not including any citations or appendices, for consistency with section 107(e)(2) of NEPA. 42 U.S.C. 4336a(e)(2). CEQ did not receive any comments on this proposed change and makes this change in the final rule.

Seventh, CEQ proposed to add paragraph (h) to clarify that agencies may reevaluate or supplement an EA if a major Federal action remains to occur and the agency considers it appropriate to do so. Proposed paragraph (h) also provided that agencies may reevaluate an EA or otherwise document a finding that changes to the proposed action or new circumstances or information relevant to environmental concerns are not substantial, or the underlying assumptions of the analysis remain valid. CEQ proposed to add this language to clarify that an agency may apply the provisions at § 1502.9 regarding supplemental EISs to a supplemental EA to improve efficiency and effectiveness.

A few commenters expressed that supplemental EAs should consider whether the effects analysis still supports a FONSI rather than merely addressing underlying assumptions. Some commenters interpreted the supplementation and reevaluation language to allow an agency to change its finding after it issued the FONSI.

In the final rule, CEQ includes § 1501.5(h) to address supplementation and reevaluation, but revises it from the proposal to address concerns raised by the commenters about potential confusion. The final rule divides supplementation and revaluation into subparagraphs and incorporates the same supplementation standard as § 1502.9. Paragraph (h)(1) provides that agencies ''should'' supplement EAs rather than ''may'' as proposed. CEQ uses ''should'' in the final rule because there may be instances where an agency determines that supplementation is appropriate because the changes to the proposed action or new information indicate the potential for significant effects, and in such instances, agencies should supplement their analysis if an action remains to occur and is therefore incomplete or ongoing. As discussed in section II.D.8, CEQ replaces ''remains to occur'' with ''incomplete or ongoing'' to more clearly describe the standard for supplementation, and CEQ uses this same phrasing in § 1501.5(h)(1).

In § 1501.5(h)(1)(i) and (ii), the final rule includes the same criteria for supplementation as in § 1502.9(d)(i) and (ii) with an additional clause at the end of (h)(ii) to clarify the meaning in the case of EAs. CEQ includes ''to determine whether to prepare a finding of no significant impact or an environmental impact statement'' at the end of paragraph (h)(ii) to clarify what ''that bear on the analysis'' means in the context of an EA. After considering the comments, CEQ determined that it should not create a different supplementation standard for EAs from EISs since the purpose of supplementation is to address circumstances where the analysis upon which the agency based its decision has changed and there is potential for new significant effects. Aligning the standards for EISs and EAs will also reduce the complexity of the NEPA regulations and the environmental review process.

To further align this provision with § 1502.9, CEQ adds in § 1501.5(h)(2) the same text in § 1502.9 to state that agencies may prepare supplements when the agency determines the purposes of NEPA will be furthered in doing so. CEQ includes this paragraph for consistency with EISs and to make clear that agencies have such discretion.

Two commenters requested CEQ revise paragraph (h) to clarify that new circumstances or information in the absence of remaining discretionary approval involving a major Federal action do not trigger a requirement to reevaluate or supplement an EA. The commenters stated the proposed text could be interpreted to suggest that agencies are obligated to reevaluate an EA whenever new circumstances or information arise. While the proposed qualifier that ''an action remains to occur,'' would address the commenters' concerns, as noted in this section, the final rule clarifies that ''remains to occur'' means when an action is incomplete or ongoing, which is consistent with § 1502.9 as well as longstanding case law that makes clear that there must be an incomplete or ongoing action in order for reevaluation or supplementation to be necessary.

Some commenters expressed that paragraph (h) would result in the public and project sponsor not having certainty on the whole of the administrative record. These commenters requested the regulations require an agency to rescind the FONSI until a new one is reached; another commenter similarly requested CEQ add a paragraph on rescission of FONSIs. CEQ declines to require agencies to rescind a FONSI while a reevaluation or supplemental EA is ongoing because these processes are intended to inform whether a FONSI remains valid. If an agency prepares a supplemental EA, it will determine whether it is necessary to revise or issue a new FONSI or whether the existing FONSI remains valid based on the outcome of the supplemental analysis.

In the final rule, CEQ addresses reevaluation in its own paragraph, consistent with § 1502.9, by adding § 1501.5(i) to provide that an agency may use a reevaluation to document its consideration of changes to the proposed action or new information and its determination that supplementation is not required. For example, a reevaluation can be a short memo describing a change in project design that briefly explains why that change does not change the analysis conducted in the EA in a manner that warrants supplementation.

Finally, CEQ proposed to clarify which provisions applicable to EISs agencies should or may apply to EAs. CEQ proposed to replace paragraph (g) of 40 CFR 1501.5 (2020), listing the provisions for incomplete or unavailable information, methodology and scientific accuracy, and environmental review and consultation requirements, with proposed new paragraphs (i) and (j). CEQ proposed in paragraph (i) to clarify that agencies generally should apply the provisions of § 1502.21 regarding incomplete or unavailable information and § 1502.23 regarding scientific accuracy. CEQ proposed to revise these from ''may apply'' to ''should apply'' because CEQ considers it important to disclose where information is incomplete or unavailable and ensure scientific accuracy for all levels of NEPA review, not just EISs.

CEQ proposed in paragraph (j) that agencies may apply the other provisions of parts 1502 and 1503 as appropriate to improve efficiency and effectiveness of EAs. The proposed list included example provisions where this might be the case—scoping (§ 1502.4), cost-benefit analysis (§ 1502.22), environmental review and consultation

requirements (§ 1502.24), and response to comments (§ 1503.4).

Various commenters asked for clarity regarding proposed §§ 1501.5(i) and (j), expressing confusion on the difference between ''generally should apply'' and ''may apply.'' Some commenters requested the final rule require application of §§ 1502.4, 1502.21, 1502.22, 1502.23, 1502.24, and 1503.4 to EAs.

In the final rule, CEQ adds proposed paragraph (i) at § 1501.5(j) but only references § 1502.21 regarding incomplete and unavailable information because CEQ has moved 40 CFR 1502.23 (2020), which is applicable to environmental documents, including EAs, to § 1506.6 as discussed in sections II.D.18 and II.H.4. CEQ retains ''generally should'' in the final rule. While CEQ encourages agencies to follow § 1502.21, CEQ retains the ''generally'' qualifier to acknowledge that there may be some circumstances where the section does not or should not apply. Additionally, because EAs can include significant effects that an agency mitigates to reach a FONSI, it is important that agencies apply § 1502.21 in such cases. CEQ also adds proposed paragraph (j) at § 1501.5(k), consistent with the proposal, to encourage agencies to apply the provisions of parts 1502 and 1503 where it will improve the efficiency and effectiveness of an EA.

Some commenters provided general comments on EAs. Some commenters requested the final rule add more requirements to align with EISs, including requiring agencies to consider the same scope of effects as those considered in an EIS; to provide decision makers with a summary and comparison of effects; and to consider alternatives to address adverse environmental effects. Other commenters argued generally that the proposed changes to § 1501.5 would result in EAs looking more like EISs, which is contrary to goal of an efficient process.

CEQ declines to make additional changes to § 1501.5. As discussed in this section, CEQ concluded that § 1501.5 strikes the right balance to ensure agencies preparing an EA conduct an appropriate and efficient review without imposing unnecessary requirements that would mirror an EIS or result in a less efficient process.

5. Findings of No Significant Impact (§ 1501.6)

CEQ proposed two revisions to § 1501.6 on findings of no significant impact (FONSIs) to clarify the 2020 rule's codification of the longstanding agency practice of relying on mitigated FONSIs in circumstances where the agency incorporates mitigation into the action to reduce its effects below significance. Mitigated FONSIs are an important efficiency tool for NEPA compliance because they expand the circumstances in which an agency may prepare an EA and reach a FONSI, rather than preparing an EIS, consistent with the requirements of NEPA.

CEQ proposed to revise paragraph (a), which provides that an agency must prepare a FONSI if it determines, based on an EA, not to prepare an EIS because the action will not have significant effects. At the end of paragraph (a), CEQ proposed to clarify that agencies can prepare a mitigated FONSI if the action will include mitigation to avoid the significant effects that would otherwise occur or minimize or compensate for them to the point that the effects are not significant. The proposed rule noted that so long as the agency can conclude that effects will be insignificant in light of mitigation, the agency can issue a mitigated FONSI. The proposed rule noted this change improved consistency with the language in § 1501.6(c) and aligns with CEQ's guidance on appropriate use of mitigation, monitoring, and mitigated FONSIs.[72]

Numerous commenters supported proposed § 1501.6(a), viewing the proposed changes as consistent with agency practice and longstanding CEQ guidance as well as promoting efficiency in the NEPA process. In contrast, multiple commenters opposed the proposed changes and raised concerns that use of mitigated FONSIs would reduce opportunities for public participation and allow agencies to trade off different kinds of environmental effects to rely on a net benefit outcome to arrive at a FONSI.

In the final rule, CEQ revises paragraph (a) with additional, non-substantive edits for clarity, including subdividing paragraph (a) into subparagraphs. In paragraph (a), CEQ adds an introductory clause to make clear that an agency prepares a FONSI after completing an EA. In paragraph (a)(1), CEQ revises the text to clarify that an agency prepares a FONSI when it determines that NEPA does not require preparation of an EIS because the proposed action will not have significant effects. In paragraph (a)(2), CEQ also repeats the clause ''if the agency determines, based on the environmental assessment, that NEPA does not require preparation of an environmental impact statement'' after mitigated FONSI to make clear that a mitigated FONSI is also based on the EA. Finally, CEQ adds a new paragraph (a)(3) to clarify that an agency must prepare an EIS following an EA if the agency determines that the action will have significant effects.

CEQ has long recognized in guidance that agencies may use mitigation to reduce the anticipated adverse effects of a proposed action below the level of significance, resulting in a FONSI. CEQ agrees that mitigated FONSIs promote efficiency, and the final rule includes safeguards to ensure that agencies will only use mitigated FONSIs when they can reasonably conclude that the mitigation measures will occur. Regarding opportunities for public engagement, the final rule supports public engagement in the EA process, consistent with § 1501.9.

CEQ disagrees that the use of a mitigated FONSI allows agencies to trade off different kinds of environmental effects and rely on a net benefit outcome to arrive at a FONSI. The CEQ regulations have never allowed agencies to use a net benefit analysis across environmental effects to inform the level of review. Instead, agencies must consider each type of effect or affected resources separately when determining whether a proposed action would have a significant effect. Therefore, an agency could not rely upon mitigation focused on one type of effect to arrive at a FONSI if the proposed action would nonetheless have a significant adverse effect of a different kind or on a different resource. A mitigated FONSI only enables an agency, consistent with existing practice, to determine that an effect is not significant in light of mitigation.

To accommodate the changes to paragraph (a), in the final rule, CEQ redesignates paragraphs (a)(1), (a)(2), and (b) of 40 CFR 1501.6 (2020) as § 1501.6(b)(1), (b)(2), and (c), respectively. CEQ also makes a non-substantive, clarifying change to § 1501.6(b)(2) to simplify the language from ''makes its final determination'' to ''determines.''

Next, CEQ proposed to revise proposed § 1501.6(c) addressing what an agency must include in a FONSI regarding mitigation. The second sentence provides that when an agency relies on mitigation to reach a FONSI, the mitigated FONSI must state the enforceable mitigation requirements or commitments that will be undertaken to avoid significant effects. CEQ proposed to strike the last clause, ''to avoid significant impacts'' at the end of the second sentence and replace that phrase with a requirement for the FONSI to state the authorities for the enforceable mitigation requirements or

[72] CEQ, Mitigation Guidance, *supra* note 10.

commitments, since they must be enforceable for agencies to reach a mitigated FONSI. CEQ proposed this change because, where a proposed action evaluated in an EA may have significant effects, and an agency is not preparing an EIS, the FONSI must include mitigation of the significant effects. CEQ also proposed to add examples of enforcement authorities including ''permit conditions, agreements, or other measures.''

Commenters were generally supportive of proposed § 1501.6(c). A few commenters opposed the proposed changes or questioned CEQ's authority to include them in the regulations. As discussed in sections II.I.1 and II.I.2 on §§ 1505.2(c) and 1505.3(c), the rule reinforces the integrity of environmental reviews by ensuring that if an agency assumes as part of its analysis that mitigation will occur and will be effective, the agency takes steps to ensure that the assumption is correct. In the final rule, which redesignates proposed paragraph (c) as § 1501.6(d), CEQ strikes the phrase ''to avoid significant impacts,'' as proposed, from the end of the second sentence and replaces it with the clause ''and the authority to enforce them'' such that the sentence requires agencies to both state the enforceable mitigation requirements or commitments and the authority to enforce those commitments when the agency finds no significant effects based on mitigation. Next, the sentence includes a list of examples of such commitments and authorities. The final rule includes more specificity than the proposed rule, to include ''terms and conditions or other measures in a relevant permit, incidental take statement, or other agreement.''

Finally, as discussed further in section II.G.2, CEQ proposed to add a new sentence at the end of paragraph (c) to require agencies to prepare a monitoring and compliance plan when the EA relies on mitigation as a component of the proposed action, consistent with § 1505.3(c). CEQ proposed these changes to help effectuate NEPA's purpose as articulated in section 101, including to ''attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences'' and to ''preserve important historic, cultural, and natural aspects of our national heritage.'' 42 U.S.C. 4331(b).

For the reasons discussed in section II.G.2, CEQ adds this requirement in the final rule in § 1501.6(d). Specifically, the final rule requires agencies to prepare a mitigation and compliance plan for the enforceable mitigation and any other mitigation required by § 1505.3(c) to ensure that if an agency assumes as part of its analysis that mitigation will occur and will be effective, the agency takes steps to ensure that the assumption is correct.

6. Lead Agency (§ 1501.7)

CEQ proposed several changes to § 1501.7, which addresses the responsibilities of lead agencies. First, CEQ proposed to retitle § 1501.7 from ''Lead agencies'' to ''Lead agency'' to align with section 107(a) of NEPA. 42 U.S.C. 4336a(a). CEQ did not receive comments specific to the section title and makes this change in the final rule.

Second, in paragraph (a) of § 1501.7, CEQ proposed to eliminate the reference to ''complex'' EAs so that the regulations would require a lead agency to supervise the preparation of any EIS or EA for an action or group of actions involving more than one Federal agency. The 2020 rule added the concept of complex EAs to this section without defining the term. CEQ invited comment on whether it should retain the concept of a complex EA in the regulations, and if so, how the regulations should define a complex EA.

Three commenters supported removal of complex EAs arguing it was confusing and unnecessary. A commenter suggested that if CEQ retains the concept, the rule define it as an EA that requires reviews from multiple Federal agencies. CEQ removes the reference to complex EAs as unnecessary given that the provision already states that a lead agency must supervise preparation of an EA when more than one Federal agency is involved and the term is not used elsewhere in the rule.

Some commenters suggested that the text of proposed § 1501.7(a) was inconsistent with sections 107(a)(2) and 111(9) of NEPA, which address the role of and define ''lead agency.'' CEQ disagrees that the language in paragraph (a) is inconsistent. CEQ considers the longstanding language in paragraphs (a)(1) and (a)(2) to describe the situations where there are more than one Federal agency participating in the environmental review process for purposes of identifying the lead agency and therefore retains this text in the final rule.

Third, CEQ proposed to revise paragraph (b) regarding joint lead agencies for consistency with section 107(a)(1)(B) of NEPA. 42 U.S.C. 4336a(a)(1)(B). CEQ proposed to clarify that Federal, State, Tribal, or local agencies may serve as a joint lead agency upon invitation from the Federal lead agency and acceptance by the invited agency, consistent with paragraph (c). CEQ proposed to retain Federal agencies in the list of potential joint lead agencies because, consistent with current practice, there are circumstances in which having another Federal agency serving as a joint lead agency will enhance efficiency. CEQ noted in the proposed rule that it does not read the text in section 107(a)(1)(B) of NEPA, 42 U.S.C. 4336a(a)(1)(B), as precluding this approach; rather, Congress specified that State, Tribal, and local agencies may serve as joint lead agencies because they are ineligible to serve as the lead agency. CEQ also proposed to add a sentence at the end of paragraph (b) to require joint lead agencies to fulfill the role of a lead agency, consistent with the last sentence of section 107(a)(1)(B) of NEPA. 42 U.S.C. 4336a(a)(1)(B).

One commenter asserted CEQ's proposal was inconsistent with section 107(a)(1)(B) of NEPA. 42 U.S.C. 4336a(a)(1)(B). Other commenters expressed concerns or asked questions about how this might work in practice and how agencies might manage and share responsibilities. One commenter asserted that the proposal for lead agencies to jointly fulfill the role of a lead agency may be complicated and difficult to implement and requested CEQ maintain the existing regulatory approach for providing for joint lead agencies generally.

In the final rule, CEQ revises paragraph (b) as proposed, but makes agency singular in the first sentence for consistency with the rest of the paragraph. In general, CEQ anticipates that there will only be one joint lead agency but does not intend the regulations to be so restrictive. While section 107(a)(1)(B) does not specifically refer to Federal agencies, it makes clear that there is one lead agency when there is more than one Federal agency, but it is silent as to what role the other Federal agency or agencies will fulfill. 42 U.S.C. 4336a(a)(1)(B). Therefore, CEQ is clarifying in the final rule that other Federal agencies may serve as joint lead agencies or cooperating agencies. With respect to the questions about how agencies manage and share responsibilities, CEQ notes that the provision for joint lead agencies has been in the regulations since 1978, and agencies have a great deal of experience in implementing these provisions. Sometimes agencies will engage in an MOU or otherwise outline their respective roles and responsibilities. CEQ encourages this as a best practice to facilitate an efficient process, and agencies should consider using the letter or memorandum required by

§ 1501.7(c) to set out their roles and responsibilities.

Fourth, CEQ proposed to revise paragraph (c) for consistency with section 107(a)(1) of NEPA to clarify that the participating Federal agencies must determine which agency will be the lead agency and any joint lead agencies, and that the lead agency determines any cooperating agencies. 42 U.S.C. 4336a(a)(1). CEQ also proposed this change for consistency with the text in § 1506.2(c) on joint EISs.

One commenter interpreted paragraph (c) to mean that the factors listed in paragraphs (c)(1) through (c)(5) apply only if there is disagreement among participating agencies on which agency should be the lead agency and asserted this interpretation is inconsistent with section 107(a)(1)(A) of NEPA. 42 U.S.C. 4336a(a)(1)(A). CEQ did not intend this interpretation. Therefore, in the final rule, for clarity and greater consistency with the statute, CEQ adds the clause ''considering the factors in paragraphs (c)(1) through (c)(5)'' to the first sentence in paragraph (c) to clarify that participating Federal agencies should consider these factors in determining which agency should serve as the lead agency.

One commenter suggested that proposed paragraphs (b) and (c) might create confusion between agencies and a project proponent regarding which agency is ultimately the lead agency for the NEPA review, is responsible for meeting timeframes and deadlines, and serves as the contact for the project proponent.

In the final rule, CEQ revises the first sentence of paragraph (c) for additional clarity by moving the reference to joint lead agencies to the end. Consistent with this provision, participating Federal agencies will first determine which agency will serve as the lead agency. Then, the lead agency will determine which agencies will serve as joint lead or cooperating agencies. While agencies are in the best position to communicate with applicants about responsibilities and appropriate points of contact, the language in paragraphs (b) and (c) make clear that the lead agency is ultimately responsible, though it may share responsibilities with a joint lead agency if the participating agencies designate one. Further, § 1501.10(a) sets forth the provisions on setting deadlines and schedules and § 1500.5(g) indicates that all agencies are responsible for meeting deadlines.

Fifth, in paragraph (d), CEQ proposed to revise the text for consistency with section 107(a)(4) of NEPA, which allows any Federal, State, Tribal, or local agency or a person that is substantially affected by a lack of lead agency designation to submit a request for designation to a participating Federal agency. 42 U.S.C. 4336a(a)(4). CEQ also proposed to add a requirement for the receiving agency to provide a copy of such a request to CEQ consistent with the statute. Finally, CEQ proposed to make a non-substantive change to replace the phrase ''private person'' with the word ''individual'' for consistency with this term's use in other sections of the regulations.

Sixth, in paragraph (e), which addresses what happens if Federal agencies are unable to agree which agency will serve as the lead agency, CEQ proposed to revise the text for consistency with section 107(a)(5) of NEPA, clarify that the 45 days is calculated from the date of the written request to the senior agency officials as set forth in § 1501.7(d), and replace ''persons'' with ''individuals'' for consistency with the rest of regulations. 42 U.S.C. 4336a(a)(5).

A commenter stated that the change of ''person'' to ''individual'' is inconsistent with sections 107(a)(4) and (a)(5)(A) of NEPA. 42 U.S.C. 4336a(a)(4), 4336a(a)(5)(A). While CEQ does not view this as a substantive change, in the final rule, CEQ revises references to ''individual'' or ''private person'' to ''person'' throughout the regulations for consistency with the recent amendments to NEPA, including in § 1501.7(d) and (e), and to avoid using the word ''person'' and the word ''individual'' in different sections of the regulations where the same meaning is intended. Otherwise, CEQ makes the changes to paragraph (d) and (e) as proposed.

Seventh, in paragraph (f), CEQ proposed to revise the text for consistency with section 107(a)(5)(C) and (a)(5)(D) of NEPA, to change ''within 20 days'' to ''no later than 20 days'' in the first sentence, and ''20 days'' to ''40 days'' and ''determine'' to ''designate'' in the second sentence. 42 U.S.C. 4336a(a)(5)(C)–(D). CEQ did not receive any comments to this specific proposal and revises paragraph (f) as proposed in the final rule except that the final rule strikes ''and all responses to it'' to clarify that the 40-day deadline for CEQ to designate a lead agency runs from the date of request. This change is consistent with section 107(a)(5)(D) which requires that CEQ designate the lead agency ''[n]ot later than 40 days after the date of the submission of a request.'' 42 U.S.C. 4336a(a)(5)(D).

Eighth, CEQ proposed minor edits to paragraph (g), which addresses joint environmental documents, including EISs, RODs, EAs, and FONSIs. While section 107(b) of NEPA addresses joint EISs, EAs, and FONSIs, which are defined collectively as an ''environmental document'' in section 111(5) of NEPA, the statute does not explicitly address joint RODs. 42 U.S.C. 4336a(b); 4336e(5). Because joint RODs can in some circumstances be inefficient, CEQ proposed to revise § 1501.7(g) to add a caveat that agencies must issue joint RODs except where it is ''inappropriate or inefficient'' to do so, such as when an agency has a separate statutory directive, or it would take significantly longer to issue a joint ROD than separate ones. Additionally, for consistency with § 1501.5, CEQ proposed to add that agencies can jointly determine to prepare an EIS if a FONSI is inappropriate.

Commenters generally supported CEQ's proposal. Some commenters recommended CEQ expand the inappropriate or inefficient exception to EISs, EAs, and FONSIs. Another comment suggested the regulations require agencies to document their rationale for not preparing a joint document.

CEQ finalizes § 1501.7(g) as proposed with minor, non-substantive clarifying edits. CEQ is not applying the inappropriate or inefficient exception to EISs, EAs, and FONSIs because section 107(b) of NEPA directs agencies to prepare joint EISs, EAs, and FONSIs ''to the extent practicable.'' 42 U.S.C. 4336a(b). With respect to RODs, CEQ includes the inappropriate or inefficient exception in the final rule text in recognition that, in some cases, requiring a joint ROD could inadvertently slow the NEPA process down, and the exclusion of RODs from section 107(b) of NEPA makes it appropriate to apply a tailored standard to joint RODs. *See* 42 U.S.C. 4336a(b). For example, agencies may have different procedures for issuing authorizations under their applicable legal authorities or may need to consider different factors. However, in other cases, a joint ROD could improve efficiency by avoiding duplication of effort or analysis. Agencies collaborating on a NEPA document for a specific action are in the best position to identify when a joint ROD is not appropriate for that particular action.

Lastly, in paragraph (h)(2), CEQ proposed to add a clause to the beginning of the paragraph, consistent with section 107(a)(2)(C) of NEPA, to require the lead agency to give consideration to a cooperating agency's analyses and proposals. 42 U.S.C. 4336a(a)(2)(C). CEQ proposed to move the qualifier clause—to the extent practicable—to precede the existing

requirement to use the environmental analysis and information provided by cooperating agencies. CEQ proposed this move to clarify that this qualifier only modifies the second clause. CEQ also proposed to change ''proposals'' to ''information'' to make the text consistent with § 1501.8(b)(3) and because the use of ''proposal'' here was inconsistent with the definition of ''proposal'' provided in § 1508.1(ff). Finally, because the reference to jurisdiction by law or special expertise was unnecessarily redundant given that the definition of ''cooperating agency'' in § 1508.1(g) incorporates those phrases, CEQ proposed to remove them from the sentence.

One commenter asserted that proposed § 1501.7(h)(2) unnecessarily conflicts with section 107(a)(2)(C) of NEPA, 42 U.S.C. 4336a(a)(2)(C), and is inconsistent with proposed §§ 1501.8(b)(3), 1508.1(e), and 1508.1(dd). Another commenter opposed the changes to paragraph (h)(2) and requested CEQ retain the existing language. The commenter asserted that the existing text provides a clear statement that agencies should use information and analyses provided by cooperating agencies to the maximum extent practicable and that the proposed changes remove this clarity. As a result, the commenter opined that for cooperating agencies, it will be unclear on what qualifies as an analysis or proposal for consideration and what qualifies as information.

In the final rule, CEQ makes the changes as proposed but retains ''proposal'' in the second clause because, upon further consideration, CEQ has determined removing ''proposal'' could introduce unnecessary confusion and potential delay, particularly because both the 1978 regulations and the 2020 regulations treated proposals in the same manner as environmental analysis for purposes of this provision, and agencies have not raised concerns that the inclusion of proposals creates challenges for lead agencies. CEQ retains the qualifier ''to the maximum extent practicable,'' which CEQ views as striking the right balance between ensuring that the lead agency uses the environmental analysis, proposal, and information provided by cooperating agencies and providing the lead agency with flexibility in determining the content of a document. CEQ disagrees that this provision is in conflict with § 1501.8(b)(3), which merely states the requirement for cooperating agencies to assist with developing information and analyses for NEPA documents; it does not address the lead agency's role in considering or using that content. CEQ similarly does not see a conflict with the definitions of ''cooperating agency'' and ''proposal'' and the commenter who asserted that a conflict exists did not explain the conflict. Finally, CEQ disagrees that this provision conflicts with section 107(a)(2)(C) of NEPA; the provision incorporates the text of the statute and goes beyond it to require lead agencies to use the information in their documents to the maximum extent practicable. 42 U.S.C. 4336a(a)(2)(C).

Other commenters requested CEQ add a requirement for lead agencies to document how and to what extent they have considered the studies, analyses, and other information provided by cooperating agencies. CEQ declines to add this requirement as unnecessary and burdensome. In most cases, lead and cooperating agencies can address these issues informally and disclosure of this informal process is unnecessary for the decision maker to make an informed decision and documenting them would consume agency resources and could lead to a more formalized and less collaborative process between the agencies.

CEQ did not propose edits to paragraph (h)(4) requiring the lead agency to determine the purpose and need, and alternatives in consultation with any cooperating agency. One commenter recommended the final rule add ''with ultimate authority to finalize the purpose and need and alternatives resting with the lead agency'' to the end of this paragraph. CEQ declines to make this change. While the lead agency has ultimate responsibility, in order for documents to address the decisions of all agencies with jurisdiction by law and therefore result in an efficient review and decision-making process, the cooperating agency must have a consultative role. CEQ encourages agencies to collaborate early on purpose and need and alternatives to resolve any disputes early in the process and ensure the document will meet the needs of all agencies relying on the documents for their actions.

As discussed further in section II.C.8, CEQ proposed to move the requirements for schedules and milestones in paragraphs (i) and (j) of 40 CFR 1501.7 (2020) to § 1501.10(c) in order to consolidate provisions related to deadlines, schedules, and milestones in one section. CEQ makes this change in the final rule as discussed further in section II.C.9.

7. Cooperating Agencies (§ 1501.8)

CEQ proposed an addition to paragraph (a) of § 1501.8 to clarify the meaning of the phrase ''special expertise,'' which is one of the criteria that qualifies an agency to serve as a cooperating agency. Among other things, paragraph (a) provides that, at the request of a lead agency, an agency with special expertise may elect to serve as a cooperating agency. CEQ proposed to clarify in paragraph (a) that special expertise may include Indigenous Knowledge.

While a few commenters opposed the inclusion of Indigenous Knowledge as a form of special expertise, many commenters expressed support. Having considered the comments, CEQ continues to view the inclusion of Indigenous Knowledge as a form of special expertise as appropriate and, therefore, finalizes the change to § 1501.8(a) as proposed except that CEQ removes the cross reference to § 1507.3(e) because this provision does not address the appeals procedures for cooperating agencies. This addition of Indigenous Knowledge as a form of special expertise helps ensure that Federal agencies respect and benefit from the unique knowledge that Tribal governments bring to the environmental review process.

CEQ invited comment on whether it should include a definition of ''Indigenous Knowledge'' in the regulations. CEQ received a range of comments on this question. Some commenters opposed a definition, and several commenters suggested a range of diverse definitions. Other commenters recommended CEQ engage in Tribal consultation on the definition, CEQ held two Tribal consultations on the rule but a consensus view on a definition did not emerge from those consultations. CEQ has determined not to define ''Indigenous Knowledge'' in this rulemaking. The comments CEQ received did not provide an adequate basis for CEQ to determine that providing a definition in the regulations would be workable across contexts and Tribal Nations. CEQ, therefore, considers it appropriate for agencies to have flexibility to approach Indigenous Knowledge in a fashion that makes sense for their programs and the Tribal Nations with which they work. Agencies' implementation of this provision may be informed by the existing approaches that some agencies have developed to Indigenous Knowledge [73] and the Guidance for

[73] *See, e.g.,* U.S. Dep't of the Interior, 301 Departmental Manual 7, Departmental Responsibilities for Consideration and Inclusion of Indigenous Knowledge in Departmental Actions and Scientific Research (Dec. 5, 2023), *https://www.doi.gov/document-library/departmental-*

Continued

Federal Departments and Agencies on Indigenous Knowledge that CEQ and the Office of Science and Technology Policy issued on November 30, 2022.[74] CEQ will consider whether additional guidance specific to the environmental review context or a regulatory definition is needed in the future.

A couple of commenters requested CEQ clarify what is meant by ''jurisdiction by law'' in § 1501.8(a). CEQ declines to add additional language to explain this phrase, which has been in the regulations since 1978 and generally has been construed to mean when an agency has a role in an action that is conferred by law. CEQ has not heard concern from agencies that the phrase is unclear or that a lack of definition is creating practical problems. Therefore, establishing a definition is unnecessary and could unsettle existing agency practice that has successfully implemented this provision.

Another commenter requested CEQ revise paragraph (a) to require the lead agency to grant cooperating agency status if a State or local agency has jurisdiction by law or special expertise over a project that could impact the local agency's interest. Other commenters requested that CEQ compel lead agencies to invite certain parties as a cooperating agency, such as substantially affected Tribal agencies. CEQ declines to make it a requirement for the lead agency to invite or grant cooperating agency status to a State, Tribal, or local agency. Section 107(a)(3) of NEPA permits but does not require lead agencies to designate Federal, State, Tribal, or local agencies that have jurisdiction by law or special expertise as cooperating agencies. *See* 42 U.S.C. 4336a(a)(3). Because agency authorities and obligations can vary dramatically, CEQ considers it important to maintain flexibility for the lead agency to determine on a case-by-case basis whether a State, Tribal, or local agency should serve as a cooperating agency.

One commenter requested that CEQ extend to potential non-Federal cooperating agencies the right to appeal to CEQ when a lead Federal agency denies them cooperating agency status. CEQ declines to make this change in the final rule because lead agencies are in the best position to make a case-by-case determination of whether to invite non-Federal agencies to be cooperating agencies. Such an appeal process could also unduly burden CEQ and its limited resources and delay the environmental review process.

In paragraph (b)(6) regarding consultation with the lead agency on developing schedules, CEQ adds ''and updating'' after ''developing'' for consistency with § 1501.10(a) that provides for both the development and updates to schedules. In paragraph (b)(7), CEQ proposed to require cooperating agencies to meet the lead agency's schedule for providing comments, but strike the second clause requiring cooperating agencies to limit their comments to those for which they have jurisdiction by law or special expertise with respect to any environmental issue. CEQ proposed this deletion to align this paragraph with section 107(a)(3) of NEPA, which provides that a cooperating agency may submit comments to the lead agency no later than a date specified in the lead agency's schedule. *See* 42 U.S.C. 4336a(a)(3).

Some commenters recommended CEQ retain this clause to avoid unnecessary delays and avoid disagreements amongst lead and cooperating agencies. CEQ disagrees that this clause will necessarily avoid disagreements amongst lead and cooperating agencies because agencies may disagree on whether an agency's comments fall within its jurisdiction or special expertise. Imposing this limitation on the participation of cooperating agencies may also undermine the kind of collaborative engagement between lead agencies and cooperating agencies that enhances the efficiency and quality of environmental reviews. CEQ is also concerned that retaining the clause could have unintended consequences that could delay decision making by cooperating agencies with jurisdiction by law. For example, if a cooperating agency considers a document to be legally insufficient with respect to a particular issue, this could lead the cooperating agency to develop its own, separate NEPA document, resulting in a delay in the cooperating agency's action and potential legal risk to the lead agency with a different analysis. CEQ encourages cooperating agencies to identify and seek to resolve issues as early in the process as possible.

8. Public and Governmental Engagement (§ 1501.9)

CEQ proposed to address public and governmental engagement in a revised § 1501.9 by moving the provisions of 40 CFR 1506.6 (2020), ''Public involvement,'' into proposed § 1501.9 and updating them as described in this section, and moving the provisions of 40 CFR 1501.9 (2020) specific to the EIS scoping process to § 1502.4. CEQ proposed these updates to better promote agency flexibility to tailor engagement to their specific programs and actions, maintaining the requirements to engage the public and affected parties in the NEPA process, and thereby fostering improved public and governmental engagement. CEQ proposed the revisions to § 1501.9 to emphasize the importance of creating an accessible and transparent NEPA process. CEQ also proposed many of these changes in response to feedback on the Phase 1 proposed rule, the 2020 proposed rule, and input received from stakeholders and agencies during development of this proposed rule. Much of that feedback requested increased opportunities for public engagement and increased transparency about agency decision making, along with general requests that CEQ elevate the importance of public engagement in the NEPA process. Finally, CEQ proposed to move general requirements related to public engagement to part 1501 to emphasize that public engagement is important to multiple components of the NEPA process and agency planning, while moving other provisions related to scoping for EISs to § 1502.4.

First, CEQ proposed to move the provisions of 40 CFR 1501.9 (2020) on scoping for EISs—paragraphs (a), (b), (c), (d), (d)(1) through (8), (f), and (f)(1) through (5)—to proposed § 1502.4, ''Scoping.'' As discussed in sections II.C.2 and II.C.10 CEQ proposed to move the provisions in 40 CFR 1502.4 (2020) on ''Major Federal actions requiring the preparation of environmental impact statements'' to §§ 1501.3 and 1501.11. Also, as discussed in section II.C.2, CEQ proposed to move the remaining text of 40 CFR 1501.9(e) and (e)(1) through (3) (2020) on the determination of scope to § 1501.3 because determining the scope of actions applies to all levels of NEPA review.

Many commenters were supportive of CEQ's proposed approach. Commenters expressed support for the restoration of provisions related to early review and coordination and the proposed revisions to §§ 1501.9 and 1502.4 to reinforce the importance of early public engagement designed to meet the needs of the community. Supportive commenters characterized CEQ's proposed changes as being more in line with the statute as well as best practice by emphasizing the importance of initiating public outreach and planning as early as possible. Commenters also pointed to early engagement and opportunities for comment as trademarks of an effective

manual/301-dm-7-departmental-responsibilities-consideration-and.

[74] *See* Office of Science and Technology Policy and CEQ, Guidance for Federal Departments and Agencies on Indigenous Knowledge (Nov. 30, 2022), *https://www.whitehouse.gov/wp-content/uploads/2022/12/OSTP-CEQ-IK-Guidance.pdf.*

NEPA process that can help prevent unexpected problems and delays by helping agencies identify potential roadblocks early, design effective solutions when proposals and alternatives are still being developed, and build trust with communities. Some commenters opposed the outreach and engagement requirements in proposed § 1501.9, asserting that they were too open ended and would add burden and time to the process.

In this final rule, CEQ is reorganizing these sections as proposed. Public engagement is a foundational element of the NEPA process and is appropriately addressed in part 1501. Agencies have decades of experience designing effective outreach strategies that are tailored to the specifics of their programs and actions. Technology, when used appropriately, can further improve these strategies, and this final rule will provide agencies with the flexibility and encouragement to more effectively engage with interested or affected governments, communities, and people.

Second, CEQ proposed to retitle § 1501.9 to ''Public and governmental engagement'' and accordingly update references to ''public involvement'' within this section and throughout the CEQ regulations to ''public engagement.'' CEQ proposed this change to better reflect how Federal agencies should interact with the public and interested or affected parties, stating that the word ''engagement'' reflects a process that is more interactive and collaborative compared to simply including or notifying the public of an action. Engagement is also a common term for Federal agencies with experience developing public engagement strategies or that work with public engagement specialists. CEQ proposed to add ''governmental'' to the title to better reflect the description of the provisions included in the section, which relate to both public and governmental entities.

Commenters were generally supportive of this proposed change because it implies a process that is more interactive and collaborative instead of just notifying the public of an action. CEQ is revising the title of § 1501.9 as proposed.

Third, CEQ proposed to add proposed paragraphs (a) and (b) to articulate the purposes of public and governmental engagement and to identify the responsibility of agencies to determine the appropriate methods of public and governmental engagement and conduct scoping consistent with § 1502.4 for EISs. CEQ proposed to use the phrase ''meaningful'' engagement in this particular paragraph to better describe the purpose of this process because public and governmental engagement should not be a mere check-the-box exercise, and agencies should conduct engagement with appropriate planning and active dialogue or other interaction with stakeholders in which all parties can contribute.

Many commenters expressed support for CEQ's use of ''meaningful engagement.'' Commenters who disliked the descriptor ''meaningful'' stated that the word is too subjective, open to differing interpretations, and likely to cause unnecessary controversy and delay. Other commenters suggested the description of ''meaningful'' was not strong or specific enough, as proposed, to result in the desired outcome and recommended CEQ define meaningful engagement.

In the final rule, CEQ combines purpose and responsibility, which it had proposed to address in separate paragraphs, in § 1501.9(a) because these concepts are linked, and upon further consideration, CEQ considers addressing them together to reduce redundancy in proposed paragraphs (a) and (b), and enhance the clarity of the final rule. Additionally, the second sentence of proposed paragraph (b) addresses the role of engagement in determining the scope of a NEPA review; as discussed further in this section, CEQ revises § 1501.9(b) to address this topic. The first two sentences in § 1501.9(a) describe the purposes of public engagement and governmental engagement. CEQ is retaining ''meaningful engagement'' as proposed to better describe the overall purpose of public engagement. Public engagement should not be a simple check-the-box exercise, and agencies should conduct engagement with appropriate planning and active dialogue or other interaction with interested parties in which all can contribute. Federal agencies have flexibility to determine what methods are appropriate to achieve a collaborative and inclusive process that meaningfully and effectively engages communities affected by their proposed actions. As part of meaningful engagement, CEQ encourages agencies to engage with all potentially affected communities including communities with environmental justice concerns, consistent with § 1500.2(d).

In the final rule, CEQ adds a new third sentence to paragraph (a) to clarify that the purpose of § 1501.9 is to set forth agencies' responsibilities and best practices for such engagement. Finally, CEQ moves the first sentence of proposed paragraph (b) to be the last sentence of paragraph (a) requiring agencies to determine the appropriate methods of engagement for their proposed actions. Agencies are best situated to carry out this responsibility, because agencies understand their programs and authorities, and the communities that are interested in and affected by them.

CEQ revises § 1501.9(b) in the final rule, different from the proposal, to clarify the role of public and governmental engagement in determining the scope of a NEPA analysis. As discussed in section II.C.2, agencies must identify the scope of their proposed action, consistent with the definition of ''major Federal action,'' which in turn informs the level of NEPA review, and what alternatives and effects an agency must consider; public input has long informed this process. Therefore, CEQ has added a sentence to § 1501.9(b) to require agencies to use public and governmental engagement to inform the level of review for and scope of analysis of a proposed action consistent with § 1501.3. CEQ qualifies this provision ''as appropriate'' to account for the variety of ways that agencies should engage with the public and because not all actions will necessitate public engagement. For example, agencies must engage with the public when developing new CEs, but generally do not do so when applying CEs to their proposed actions.

CEQ adds the second sentence of proposed paragraph (b) in the final rule, which cross references to scoping for EISs as set forth in § 1502.4. Finally, CEQ adds a new sentence to § 1501.9(b) encouraging agencies to apply that scoping provision to EAs as appropriate. This addition is consistent with § 1501.5(j), which encourages agencies to apply § 1502.4 to EAs as appropriate to improve efficiency and effectiveness and is also responsive to public comments requesting more clarity on what is required for an EIS versus an EA as well as comments requesting increased opportunities for involvement on EAs. Agencies have experience successfully using the scoping process for EAs, and the regulatory text clarifies that agencies may continue to use the scoping process to inform the level of review, or find it helpful when they intend to rely on mitigation in an EA to reduce effects below significance and reach a FONSI rather than preparing an EIS.

Fourth, in the proposed rule, § 1501.9 had separate paragraphs addressing outreach (paragraph (c)) and notification (paragraph (d)) with the former recommended procedures and the latter required. Specifically, proposed

paragraph (c)(1) recommended that agencies invite likely affected agencies and governments, and proposed paragraph (c)(2) recommended that agencies conduct early engagement with likely affected or interested members of the public. CEQ modeled these provisions on the prior approaches in 40 CFR 1501.7(a)(1) (2019) and 40 CFR 1501.9(b) (2020) requiring the lead agency to invite early participation of likely affected parties. Proposed paragraph (c)(3) would provide flexibility to agencies to tailor engagement strategies, considering the scope, scale, and complexity of the proposed action and alternatives, the degree of public interest, and other relevant factors. CEQ proposed to move from 40 CFR 1506.6(c) (2020) to § 1501.9(c)(3) the requirement that agencies consider the ability of affected parties to access electronic media when selecting the appropriate methods of notification. CEQ also proposed to add a clause to the end of paragraph (c)(3) to require agencies to consider the primary language of affected persons when determining the appropriate notification methods to use.

At least one commenter noted that the use of ''should'' in proposed paragraph (c)(1) was inconsistent with proposed § 1501.7(h)(1) requiring lead agencies to invite the participation of cooperating agencies. Other commenters asked that the language on outreach be stronger, recommending that CEQ change ''should'' to ''shall'' in proposed paragraph (c) and ''consider'' to ''ensure'' in proposed paragraph (c)(3).

In the final rule, CEQ combines proposed paragraphs (c) and (d) in § 1501.9(c) to address outreach and notification. CEQ revised the introductory text from ''lead agency'' to ''agencies'' for consistency with the use of ''agencies'' in the rest of § 1501.9. This change does not mean that each agency involved in an EIS or EA needs to conduct these responsibilities independently or that the lead agency is not ultimately responsible given its role in supervising the preparation of an EIS or EA consistent with § 1501.7(a), but rather that there is flexibility in which agency conducts these responsibilities under the lead agency's supervision.

CEQ also revises the introductory text from agencies ''should'' to ''shall'' for consistency with the both the 2020 and 1978 regulations and to resolve the inconsistency between § 1501.7(h)(1), which requires the lead agency to invite cooperating agencies at the earliest practicable time and proposed § 1501.9(c)(1) encouraging the lead agency to invite the participation of likely affected agencies and governments, including cooperating agencies, as early as practicable. CEQ also is changing ''should'' to ''shall'' because using ''should'' would be confusing and inaccurate to the extent that it could be read to suggest that some requirements are optional. CEQ adds ''as appropriate'' to qualify the requirement in paragraph (c)(2) to conduct early engagement to make clear that when the regulations require or encourage agencies to conduct engagement, they should do so early in the process. These changes from the proposal do not establish new obligations for agencies, but rather, clarify which provisions are obligatory in light of the requirements of the NEPA statute and other provisions in the regulations.

CEQ also adds ''any'' in paragraph (c)(1) to acknowledge that for some actions, there will not be any likely affected agencies or governments. CEQ finalizes paragraph (c)(3) as proposed with two changes, which requires agencies to consider the appropriate methods of outreach and notification, including the ability of affected persons and agencies to access electronic media and the primary language of affected persons. In the final rule, CEQ includes ''and persons'' after entities consistent with the phrasing in paragraph (c)(5)(i) and makes language plural for consistency with ''persons.'' Additionally, CEQ notes that agencies will also need to consider other statutory requirements, such as those under the Rehabilitation Act, when selecting appropriate methods of outreach and notification.

Fifth, CEQ proposed to move the introductory clause of 40 CFR 1506.6 (2020), ''Agencies shall'' to proposed paragraph (d) and add the paragraph heading ''Notification.'' As discussed earlier in this section, CEQ is combining proposed paragraph (c) and (d) in the final rule. CEQ proposed in § 1501.9 and throughout the proposed regulations to replace the word ''notice'' with ''notification,'' except where ''notice'' is used in reference to a **Federal Register** notice. CEQ is making this change in the final rule to clearly differentiate between those requirements to publish a notice in the **Federal Register** and other requirements to provide notification of an activity, which may include a notice in the **Federal Register** or use of other mechanisms.

Sixth, in the proposed rule, CEQ proposed a new paragraph (d)(1) to require agencies to publish notification of proposed actions they are analyzing through an EIS. CEQ proposed this requirement in response to feedback from multiple stakeholders and members of the public requesting more transparency about agency proposed actions. CEQ finalizes the proposed provision in § 1501.9(c)(4) with an additional clause at the end of its proposed language to reference that this requirement can be met through a NOI consistent with § 1502.4. CEQ adds this language in response to at least one comment expressing confusion on this point.

Agencies may publish notification through websites, email notifications, or other mechanisms such as the Permitting Dashboard,[75] so long as the notification method or methods are designed to adequately inform the persons and agencies who may be interested or affected, consistent with the definition of ''publish'' in § 1508.1(gg). An NOI in the **Federal Register,** consistent with § 1502.4(e), can fulfill the notification requirement, but agencies also may elect to use additional notification methods.

Seventh, CEQ proposed to move 40 CFR 1506.6(b) (2020), including its subparagraphs, (b)(1) through (b)(3) and (b)(3)(i) through (b)(3)(x), to proposed § 1501.9(d)(2) (including (d)(2)(i) through (d)(2)(iii) and (d)(2)(iii)(A) through (d)(2)(iii)(I)), and proposed to make minor revisions to improve readability and consistency with the rest of § 1501.9. CEQ is finalizing these changes with some additional edits as described in the following paragraphs.

In the final rule, proposed paragraph (d)(2) becomes § 1501.9(c)(5) requiring agencies to provide public notification of NEPA-related hearings, public meetings, or other opportunities for public engagement, as well as the availability of environmental documents. At least one commenter noted that CEQ's proposed addition of the qualifier ''as appropriate'' before the requirement to provide public notification of the availability of documents could be read to give agencies discretion to provide such notice. This was not CEQ's intent as the regulations have always required agencies to provide such notice so CEQ does not include this qualifier in the final rule.

In the proposed rule, paragraphs (d)(2)(i) through (d)(2)(iii) expanded on these general public notification requirements in paragraph (d)(2). Specifically, CEQ proposed to move 40 CFR 1506.6(b)(1) and (b)(2) (2020) to proposed paragraphs (d)(2)(i) and (d)(2)(ii), respectively, and change

[75] *See* Fed. Permitting Improvement Steering Council, Permitting Dashboard for Federal Infrastructure Projects, *https://www.permits.performance.gov/*.

''organizations'' to ''entities and persons'' in paragraph (d)(2)(ii). In the final rule, CEQ strikes the introductory clause, ''In all cases,'' as superfluous, and consolidates into § 1501.9(c)(5)(i) the requirement to notify both those entities and persons who have requested notification on an individual action as well as those who have requested regular notification, such as actions in a geographic region or a category of actions an agency typically takes. Paragraph (c)(5)(ii), which was proposed paragraph (d)(2)(ii), only addresses when notification is required in the **Federal Register**—when an action has effects of national concerns. CEQ also changes ''notice'' to ''notification'' in § 1501.9(c)(5)(ii) for consistency with the rest of § 1501.9 and adds the word ''also'' to make clear that this notification is in addition to the notification required by paragraph (c)(5)(i).

Eighth, CEQ proposed to move 40 CFR 1506.6(b)(3) (2020) to proposed paragraph (d)(2)(iii), which addressed notification for actions for which the effects are primarily of local concern. CEQ proposed to change ''notice may include'' to ''notification may include distribution to or through'' followed by a list of mechanisms for notification. CEQ makes this change as proposed in § 1501.9(c)(5)(iii) the final rule.

Ninth, CEQ proposed to move 40 CFR 1506.6(b)(3)(i) and (b)(3)(iii) through (b)(3)(x) (2020) to proposed § 1501.9(d)(2)(iii)(A) through (d)(2)(iii)(I), respectively. CEQ proposed to combine the provisions from 40 CFR 1506.6(b)(3)(i) and (ii) (2020) on notice to State, Tribal, and local governments and agencies in proposed § 1501.9(d)(2)(iii)(A) to consolidate similar provisions. CEQ also proposed to remove the parenthetical in proposed paragraph (d)(2)(iii)(C) and instead refer to local newspapers ''having general circulation.'' Lastly, CEQ proposed to add a sentence in proposed paragraph (d)(2)(iii)(I) that recommended agencies establish email notification lists or similar methods for the public to easily request electronic notifications for proposed actions. CEQ includes all of these changes as proposed in the final rule at § 1501.9(c)(5)(iii)(A) through (I).

Tenth, CEQ proposed to move the requirements to make EISs available under FOIA from 40 CFR 1506.6(f) (2020) to § 1501.9(d)(3). CEQ received comments on this provision requesting that CEQ restore the language from the 1978 regulations because some members of the public do not have easy access to electronic information, it is important for the public to have access to agency comments, and that restoring the language would help restore consistency in agency implementation of FOIA to ensure transparency. CEQ considered the comments and the changes between the 1978 and 2020 rules and determined the existing language addresses access to underlying documents and comments. However, CEQ determined it is appropriate to restore language related to fees as the 2020 rule removed language that agencies should make documents related to the development of NEPA documents free of charge or no more than the cost of duplication. Therefore, in the final rule, CEQ adds a clause to § 1501.9(c)(6) to require agencies to make EISs and any underlying documents available consistent with FOIA and without charge to the extent practicable.

Eleventh, CEQ proposed to move 40 CFR 1506.6(c) (2020) requiring agencies to hold or sponsor public meetings or hearings to § 1501.9(e), with modification, including adding the paragraph heading ''Public meetings and hearings.'' Additionally, CEQ proposed to make this provision discretionary, and add that agencies could do so in accordance with ''regulatory'' requirements as well as statutory requirements or in accordance with ''applicable agency NEPA procedures.'' In the proposal, CEQ revised the sentence requiring agencies to consider the ability of affected entities to access electronic media and to instead encourage agencies to ''consider the needs of affected communities'' when determining what format to use for a public hearing or public meeting because the best option for the communities involved may vary. Lastly, CEQ proposed to add a sentence to clarify that when an agency accepts comments for electronic or virtual meetings, agencies must allow the public to submit them electronically, via regular mail, or another appropriate method.

Commenters raised concerns about the proposed change from ''shall'' to ''may'' suggesting that this would make discretionary whether to hold public hearings, meetings and other opportunities for public engagement. CEQ notes that this provision gives agencies the discretion to determine the appropriate methods of public engagement except where required by other statutory or regulatory requirements, including agency NEPA procedures. However, CEQ did not intend to make a substantive change to this provision, and therefore, in § 1501.9(d) of the final rule, retains the use of ''shall'' consistent with 40 CFR 1506.6(c) (2020). In the third sentence addressing format for hearings or meetings, CEQ adds examples of formats agencies might consider—whether an in-person or virtual meeting or a formal hearing or listening session is most appropriate—and requires rather than encourages agencies to consider the needs of affected communities.

Commenters also requested that CEQ restore the recommendation from the 1978 regulations that agencies make draft EISs available at least 15 days in advance when they are the subject of a public meeting or hearing. CEQ agrees that this recommendation is helpful to facilitate a more effective public engagement, and therefore includes a new sentence at the end of § 1501.9(d) consistent with the longstanding recommendation from the 1978 regulations but broadening it to apply to draft environmental documents.

Twelfth, CEQ proposed to move 40 CFR 1506.6(a) (2020) requiring agencies to involve the public in preparing and implementing their agency NEPA procedures to proposed § 1501.9(f), adding a paragraph heading ''Agency procedures'' and changing the word ''involve'' to ''engage'' consistent with CEQ's proposed change of ''involvement'' to ''engagement'' through the regulations. CEQ finalizes this provision in § 1501.9(e) as proposed.

Finally, CEQ notes two provisions in 40 CFR 1506.6 (2020) that it did not incorporate into § 1501.9. First, as discussed in section II.I.3, CEQ proposed to move the requirement for agencies to explain in their NEPA procedures where interested persons can get information on EISs and the NEPA process from 40 CFR 1506.6(e) (2020) to § 1507.3(c)(11) since this is a requirement for NEPA procedures, not public engagement. And second, CEQ proposed to delete 40 CFR 1506.6(d) (2020) on soliciting information from the public because that concept is present in the purpose and language of revised § 1501.9. In the final rule, CEQ strikes these paragraphs from 40 CFR 1506.6 (2020).

9. Deadlines and Schedule for the NEPA Process (§ 1501.10)

CEQ proposed to retitle § 1501.10 to ''Deadlines and schedule for the NEPA process'' from ''Time limits'' and revise the section to direct agencies to set deadlines and schedules for NEPA reviews to achieve efficient and informed NEPA analyses consistent with section 107 of NEPA, 42 U.S.C. 4336a. CEQ proposed these changes to improve transparency and predictability for stakeholders and the public regarding NEPA reviews.

Commenters were generally supportive of CEQ's proposed changes to this provision in order to promote a timely NEPA process. Some commenters expressed support while suggesting additional changes as described further in this section and in the Phase 2 Response to Comments. Other commenters opposed the inclusion of the deadlines, expressing concerns that the deadlines would result in rushed analyses, strain agency and applicant resources, and have negative impacts on public engagement. CEQ addresses these concerns in the context of specific provisions discussed in this section.

CEQ revises the title of § 1501.10 and reorganizes and revises the provision as discussed further in this section. As discussed in section II.J.1, CEQ removes the references to ''project sponsor'' in favor of the defined term ''applicant,'' which includes project sponsors, throughout § 1501.10 and the rest of the regulations.

In addition to those revisions, CEQ proposed revisions to specific provisions of § 1501.10. First, in paragraph (a), CEQ proposed an edit to the first sentence to emphasize that while NEPA reviews should be efficient and expeditious, they also must include ''sound'' analysis. CEQ also proposed to direct agencies to set ''deadlines and schedules'' appropriate to individual or types of proposed actions to facilitate meeting the deadlines proposed in § 1501.10(b). Consistent with section 107(a)(2)(D) of NEPA, CEQ also proposed in this paragraph to require, where applicable, the lead agency to consult with and seek concurrence of joint lead, cooperating, and participating agencies and consult with project sponsors and applicants when establishing and updating schedules. 42 U.S.C. 4336a(a)(2)(D).

Some commenters supported the proposed requirement for consultation on schedules in paragraph (a), as well as in paragraph (c). Multiple commenters opposed the proposed requirements to seek concurrence asserting that it would result in delay and exceed the statutory requirements of section 107(a)(2)(D) of NEPA. 42 U.S.C. 4336a(a)(2)(D). Multiple commenters requested additional clarity on how agencies would carry out consultation with the applicant pursuant to paragraphs (a) and (c). One commenter suggested making reference to ''use of reliable and currently accurate data'' as an example of sound analysis in paragraph (a).

CEQ makes the revisions to paragraph (a) as proposed with three additional edits. First, CEQ excludes the reference to project sponsors in favor of the defined term ''applicant'' in § 1508.1(c). Second, CEQ adds ''for the proposed action'' after ''schedule'' to clarify that lead agencies establish schedules for each action. Third, CEQ includes the requirement to seek the concurrence of any joint lead, cooperating, and participating agencies, and in consultation with any applicants, adding the word ''any'' to clarify that not all actions will necessarily have a joint lead, cooperating, and participating agencies or applicants.

CEQ adds the requirement to ''seek the concurrence'' as proposed to encourage up-front agreement on schedules to facilitate achieving the statutory deadlines. This provision requires the lead agency to seek concurrence, not obtain concurrence. While lead agencies should strive to reach agreement on schedules because agreement on a schedule up front will facilitate the agencies' meeting a deadline, lead agencies do not need to obtain concurrence to proceed if the agencies cannot reach an agreement on the schedule. CEQ considers this approach to strike the right balance because requiring the lead agency to obtain, rather than seek, concurrence could unreasonably delay the process if an agency will not concur and not requiring any agreement would undermine the efficacy of the schedule if other agencies cannot meet the schedule or have unaddressed concerns with it. CEQ declines to add a reference to the ''use of reliable and currently accurate data'' as an example of sound analysis because § 1506.6 addresses the requirement to use reliable data, and CEQ does not consider it necessary or appropriate to address data in this section on deadlines and schedules.

Second, CEQ proposed to update paragraph (b) and its subparagraphs for consistency with section 107(g) of NEPA. *See* 42 U.S.C. 4336a(g). In the proposed revisions, paragraphs (b)(1) and (b)(2) would require agencies to complete an EA within one year and an EIS in two years, respectively, unless the lead agency, in consultation with any applicant or project sponsor, extends the deadline in writing and establishes a new deadline providing only as much time as necessary to complete the EA or EIS. CEQ proposed to include ''any'' to account for circumstances where there is no applicant or project sponsor, in which case the consultation requirement would be inapplicable to extension of deadlines.

Some commenters opposed the deadlines asserting that agencies will shortcut public participation or Tribal consultation in the NEPA process, and that the deadlines create conflicts with implementation of section 106 of the National Historic Preservation Act. 54 U.S.C. 306101. Other commenters expressed concern that the deadlines will impede the ability of ''minority and Indigenous communities'' to organize and advise their communities of impending harm. Other commenters expressed concerns that other proposed changes, including consideration of reasonably foreseeable climate change related effects and disproportionate and adverse effects on communities with environmental justice concerns, will make it challenging for agencies to meet the prescribed deadlines. One commenter asserted that the proposed deadlines are arbitrary and at odds with the need for rigorous scientific study to support NEPA findings.

CEQ makes the changes to paragraphs (b), (b)(1), and (b)(2) as proposed with two additions to implement the statutory deadlines established in section 107(g) of NEPA. 42 U.S.C. 4336a(g). First, CEQ excludes the reference to project sponsors in favor of the defined term ''applicant'' in § 1508.1(c). Second, CEQ includes ''as applicable'' before ''in consultation with any applicant'' in § 1501.10(b)(1) and (b)(2) to emphasize that not all actions have applicants. In such cases, an agency may extend the deadline and set a new deadline in writing. CEQ appreciates the concerns expressed by commenters that timelines could lead to rushed analysis but recognizes that establishing deadlines can improve the efficiency and timeliness of the environmental review process and notes that section 107(g) of NEPA and this provision provide agencies with the ability to extend the deadline where necessary to ensure they meet their public engagement and consultation obligations and conduct the requisite analysis. 42 U.S.C. 4336a(g). Further, agencies have demonstrated that they can complete robust and high-quality environmental reviews within these timelines. CEQ encourages agencies to conduct early public engagement, consistent with § 1501.9, because early engagement can improve the efficiency and quality of the environmental review process and can help ensure agencies conduct meaningful engagement while also meeting the statutory timeframes.

CEQ also notes that nothing in the regulations modifies compliance with section 106 of NHPA. CEQ disagrees that the updated provisions of these regulations, including §§ 1502.15(b); 1502.16(a)(6), (a)(9), and (a)(13); and 1508.1(g)(4)—which reflect current practice and requirements such as those requiring consideration of certain effects

like climate-related effects—impose new requirements that will increase review timeframes such that agencies will not be able to meet timelines. Rather, as discussed in section II.D.14, II.D.15, and II.J.5, CEQ is updating these provisions to reflect current practice and categories of reasonably foreseeable effects long considered under NEPA consistent with the statute and case law. CEQ disagrees that these changes will prevent agencies from complying with the deadlines or that the deadlines will prevent agencies from conducting rigorous analysis. Many agencies already have considerable experience analyzing these types of effects.

Third, consistent with section 107(g) of NEPA, CEQ proposed a new paragraph (b)(3) to identify the starting points from which agencies measure the deadline for EAs and EISs and to require agencies to measure from the soonest of three dates, as applicable. 42 U.S.C. 4336a(g). Consistent with section 107(g)(1) of NEPA, the proposed dates were: (i) the date the agency determines an EA or EIS is required; (ii) the date the agency notifies an applicant that its application to establish a right-of-way is complete; and (iii) the date the agency issues an NOI. 42 U.S.C. 4336a(g)(1).

Multiple commenters expressed support for the starting points proposed in paragraph (b)(3), with some commenters suggesting changes for further clarification. Many of these commenters requested the regulations require agencies to include in their agency NEPA procedures criteria for automatically starting the one-year or two-year periods. Suggestions included criteria for when an application for a permit, authorization, or right-of-way is considered complete.

CEQ makes the changes as proposed in paragraph (b)(3) and (b)(3)(i) through (b)(3)(iii) because they incorporate the statutory provisions of section 107(g)(1) of NEPA. *See* 42 U.S.C. 4336a(g)(1). CEQ declines to require agencies to include criteria in their agency NEPA procedures, though agencies may do so at their discretion so long as they are consistent with this provision.

Fourth, after considering the comments on this section and more generally emphasizing the importance of consistency and clarity, in the final rule, CEQ adds paragraph (b)(4) to address the end dates for measuring the deadlines. This revision is consistent with CEQ's approach in the proposed rule to implementing section 107(g)(1) in a manner that is transparent and practical and will ensure consistency across Federal agencies in measuring deadlines, avoiding inconsistencies that could create confusion among agencies and applicants. 42 U.S.C. 4336a(g)(1). Paragraphs (b)(4)(i) and (b)(4)(i)(A) through (b)(4)(i)(C) specify that for EAs, the end date is the date on which the agency publishes an EA; makes the EA available pursuant to an agency's pre-decisional administrative review process, where applicable; or issues an NOI to prepare an EIS. CEQ notes that in situations where an agency publishes both a draft EA and a final EA, the final EA is the EA used to determine the end date. Paragraph (b)(4)(ii) specifies for EISs that the end date is the date on which EPA publishes a notice of availability of the final EIS or, where applicable, the date the agency makes the final EIS available pursuant to its pre-decisional administrative review process, consistent with § 1506.10(c)(1).

Fifth, CEQ proposed in paragraph (b)(4) to require agencies to submit the report to Congress on any missed deadlines as required by section 107(h) of NEPA. 42 U.S.C. 4336a(h). Some commenters requested the regulations include additional detail on the annual report to Congress, including detail on the content and deadlines for submitting the report. One commenter also requested that the regulations allow for a pause in the time periods for specific scenarios, such as when the agency is waiting for information from an applicant or to award contracts to support analyses. Similarly, other commenters suggested generally that the final rule include provisions to provide more flexibility in measuring the deadlines to avoid rushed environmental analyses.

CEQ finalizes proposed § 1501.10(b)(4) in paragraph (b)(5) as proposed but changes ''The'' to ''Each'' to clarify that each lead agency separately has a responsibility to report to Congress if it misses a deadline. CEQ declines to provide more specifics about the report to Congress at this time, but will consider whether guidance is necessary to assist agencies in their reporting obligations. CEQ also declines to provide a mechanism for pausing the deadline clock. The regulations, consistent with the statute, provide that a lead agency may extend the deadline in order to provide any additional time necessary to complete an EIS or EA. Where an agency has extended a deadline for an EA or EIS in conformity with this section and section 107(g) of NEPA, the agency has not missed a deadline for purposes of 107(h) and would not need to submit a report to Congress. 42 U.S.C. 4336a(g)–(h). For example, if an agency is experiencing a delay outside its control such that it does not have the requisite information to complete its EA or EIS, the lead agency may extend the one- or two-year deadlines. Because the statute and regulations provide agencies with the flexibility to extend deadlines when necessary to complete an EA or EIS, CEQ does not consider it necessary or appropriate to establish a mechanism for agencies to pause the deadline clock.

Sixth, to enhance predictability, CEQ proposed to move the text from paragraph (i) of 40 CFR 1501.7 (2020) to the beginning of a new paragraph (c) and modify the language for consistency with sections 107(a)(2)(D) and 107(a)(2)(E) of NEPA, which require the lead agency to develop schedules for EISs and EAs. 42 U.S.C. 4336a(a)(2)(D), 4336a(a)(2)(E). CEQ proposed to divide the first sentence moved from 40 CFR 1501.7(i) (2020) into two sentences and add an introductory clause, ''[t]o facilitate predictability,'' to reinforce the purpose of schedules. CEQ proposed to add ''for completion of environmental impact statements and environmental assessments as well as any authorizations required to carry out the action'' after ''the lead agency shall develop a schedule'' for consistency with section 107(a)(2)(D) of NEPA. 42 U.S.C. 4336a(a)(2)(D). CEQ proposed in the second sentence to retain the requirement for the lead agency to set milestones for environmental reviews and authorizations, and add ''permits'' for consistency with section 107(a)(2)(D) of NEPA. 42 U.S.C. 4336a(a)(2)(D). CEQ also proposed in the second sentence to require agencies to develop the schedules in consultation with the applicant or project sponsor, and in consultation with and seek the concurrence of any joint lead, cooperating, and participating agencies.

CEQ proposed to add a new third and fourth sentence to paragraph (c) to note that schedules may vary depending on the type of action; agencies should develop schedules based on their experience reviewing similar types of actions; and highlight factors listed in paragraph (d) that may help agencies set specific schedules to meet the deadlines.

Finally, CEQ proposed to move the text from paragraph (j) of 40 CFR 1501.7 (2020) regarding missed schedule milestones to the end of paragraph (c) and modify it to make it consistent with section 107(a)(2)(E) of NEPA and provide clarification to enhance interagency communication and issue resolution. 42 U.S.C. 4336a(a)(2)(E). CEQ proposed to require that, when the lead or any participating agency anticipates a missed milestone, that agency notify the responsible agency (and the lead agency if identified by another agency) and request that they

take action to comply with the schedule. To emphasize the importance of informed and efficient decision making, CEQ proposed to require agencies to elevate any unresolved disputes contributing to the missed milestone to the appropriate officials for resolution within the deadlines for the individual action.

One commenter requested that the final rule include a deadline for the development of a schedule. CEQ declines to include this proposal in the final rule. While CEQ encourages agencies to work efficiently in developing a schedule, CEQ recognizes that the complexity of the schedule will vary considerably from case to case, and defers to agencies to oversee the efficient and effective preparation of a schedule. Also, as discussed earlier in this section, commenters both supported and opposed the requirement for lead agencies to consult with applicants and consult and seek concurrence of joint lead, cooperating, and participating agencies when establishing schedule milestones. Another commenter stated that, with respect to the fifth sentence of paragraph (c), the final rule should require, not just recommend, agencies to consider all previous relevant actions and incorporate that information into their schedules.

In the final rule, CEQ revises the existing text of paragraph (c) as proposed excluding the reference to project sponsors in favor of the defined term ''applicant'' in § 1508.1(c)) for consistency with section 107(a)(2)(D) of NEPA and to ensure that agencies are identifying at the beginning of the process the steps they need to take and the timeframe in which they need to take them in order to meet the statutory timeframes. 42 U.S.C. 4336a(a)(2)(D). For the reasons articulated earlier in this section, CEQ includes the requirements for consultation and seeking concurrence on schedules. Next, CEQ adds a new sentence in the final rule to direct all agencies with milestones to take appropriate measures to meet the schedule. Finally, CEQ moves paragraph (j) of 40 CFR 1501.10 (2020) regarding missed milestones to the end of paragraph (c) as proposed, but further revises it for clarity in the final rule. CEQ simplifies the text to clarify that any participating agency can identify a potentially missed milestone to the lead agency and the agency responsible for the milestone. CEQ also adds ''potentially'' before ''missed milestone'' in the last sentence for consistency of use in the sentence.

Seventh, CEQ proposed to redesignate paragraph (c) of 40 CFR 1501.10 (2020), addressing factors in setting deadlines, as paragraph (d), and make changes to the text for consistency with proposed paragraph (b). Specifically, CEQ proposed to change ''senior agency official'' to ''lead agency'' and ''time limits'' to reference ''the schedule and deadlines.''

Eighth, CEQ proposed to add a new factor that the lead agency may consider in determining the schedule and deadlines to paragraph (d)(7): the degree to which a substantial dispute exists regarding the size, location, nature, or consequences of the proposed action and its effects. CEQ proposed this factor to restore and clarify a factor included in the 1978 regulations at 40 CFR 1501.8(a)(vii) (2019) regarding the degree to which the action is controversial. While the 2020 regulations removed this factor because it overlapped with other factors, CEQ reconsidered its position and determined that this is an important factor that could have implications for establishing schedules and milestones. CEQ noted in the proposed rule that, in such instances, agencies should seek ways to resolve disputes early in the process, including using conflict resolution and other tools, to achieve efficient outcomes and avoid costly and time-consuming litigation later in the process. To accommodate this new factor, CEQ proposed to redesignate paragraph (c)(7) of 40 CFR 1501.10 (2020) to be paragraph (d)(8).

One commenter suggested CEQ append ''or benefit'' to ''[p]otential for environmental harm'' in paragraph (d)(1). CEQ declines this change because ''environmental benefits'' is already covered by the factor in paragraph (d)(4) regarding public need. Other commenters suggested CEQ modify paragraph (d)(4) in the final rule to include consideration of the impact on the environment in addition to public need or modify it to reflect that the consequences of delay include cost considerations of short- and long-term delays. CEQ declines to make these changes because paragraph (d)(1) already covers potential for environmental harm, and CEQ interprets ''consequences of delay'' to include any cost-related consequences to the public of short- or long-term delays.

Regarding paragraph (d)(7), one commenter opposed the replacement of ''controversial'' from the 1978 regulations with ''substantial dispute'' asserting that ''controversial'' is well defined in case law as scientific rather than public controversy. The commenter further asserted that shifting this language could become a new source of dispute. CEQ disagrees and considers this change consistent with case law interpreting the term ''controversial,'' as used in the 1978 regulations as distinct from general public controversy or opposition. *See, e.g., Bark* v. *United States Forest Serv.,* 958 F.3d 865, 870 (9th Cir. 2020) (''A project is 'highly controversial' [under the 1978 regulations] if there is a 'substantial dispute about the size, nature, or effect of the major Federal action rather than the existence of opposition to a use.' '' (quoting *Native Ecosystems Council* v. *United States Forest Serv.,* 428 F.3d 1233, 1240 (9th Cir. 2005) (alteration omitted)); *see also Standing Rock Sioux Tribe* v. *U.S. Army Corps of Eng'rs,* 985 F.3d 1032, 1042 (D.C. Cir. 2021).

One commenter recommended the final rule add a factor to accommodate government-to-government consultation with Tribal Nations, while other commenters requested inclusion of consideration of Tribal consultation in developing schedules overall. In the final rule, CEQ adds paragraph (d)(9) for consideration of the time necessary to conduct government-to-government Tribal consultation. While agencies are already able to take this into account when building schedules, CEQ adds this factor to encourage agencies to ensure they are building sufficient time in the schedule to conduct meaningful consultation. Finally, CEQ adds ''court ordered deadlines'' to paragraph (d)(8), which lists time limits imposed on the agency, since agencies are sometimes conducting NEPA for actions subject to a court order.

Ninth, CEQ proposed to redesignate paragraph (d) of 40 CFR 1501.10 (2020) as paragraph (e), strike the text allowing a senior agency official to set time limits because this is superseded by the enactment of section 107(g) of NEPA, 42 U.S.C. 4336a(g), setting statutory deadlines, and replace it with a requirement for EIS schedules to include a list of specific milestones. CEQ proposed to strike the text in paragraphs (d)(1) through (d)(7) of 40 CFR 1501.10 (2020) listing potential time limits a senior agency official could set and replace them with proposed new paragraphs (e)(1) through (e)(5) to list the minimum milestones that an EIS schedule must include: publication of the NOI, issuance of the draft EIS, the public comment period, issuance of the final EIS, and issuance of the ROD.

Relatedly, CEQ proposed to add new paragraphs (f) and (f)(1) through (f)(4) to identify the milestones that agencies must include in schedules for EAs: the decision to prepare an EA; issuance of

a draft EA, where applicable; the public comment period, where applicable; and issuance of the final EA and a decision whether to issue a FONSI or NOI to prepare an EIS.

Multiple commenters expressed support for proposed § 1501.10(e) and (f), asserting the changes would improve the transparency, timeliness, and certainty of environmental reviews. Some commenters suggested additional milestones to further these goals, such as the starting points in proposed paragraph (b)(3), specific stages of the review process (*i.e.,* decision to prepare a document and issuance of a draft or final document), and 60-or 90-day deadlines for cooperating and participating agency review stages.

CEQ declines to add additional milestones at this time. CEQ notes that this is a non-exhaustive list, and CEQ may issue guidance with recommendations for additional milestones in the future or agencies may elect to include additional milestones on an action-by-action basis or in their agency NEPA procedures.

Tenth, CEQ proposed to redesignate paragraph (e) of 40 CFR 1501.10 (2020) as paragraph (g) allowing an agency to designate a person to expedite the NEPA process, with no proposed changes to the language. One commenter asserted that paragraph (g) provides agencies too much discretion as to whether they should designate someone to expedite the NEPA process. The commenter suggested that, at a minimum, the paragraph be expanded to discuss when that role would be beneficial and set requirements on who can fill the role. CEQ declines additional edits to paragraph (g), which has been in the regulations since 1978. CEQ considers it appropriate to preserve agency flexibility to assign staff to expedite the NEPA process.

Eleventh, CEQ proposed to strike paragraph (f) of 40 CFR 1501.10 (2020), allowing State, Tribal, or local agencies, or members of the public to request a Federal agency set time limits. One commenter opposed the proposed removal of this paragraph, expressing concern that the proposal would diminish the involvement and use of information from States. CEQ makes this change in the final rule because the NEPA statute sets deadlines for EAs and EISs rendering this paragraph unnecessary and inconsistent with the statute. However, CEQ notes that State, Tribal, and local agencies have a role in the development of schedules to the extent they are serving as joint lead, cooperating, or participating agencies.

Finally, to increase predictability and enhance agency accountability, CEQ proposed to add a new paragraph (h) to require agencies to make schedules for EISs publicly available and to publish revisions to the schedule. The proposal also would require agencies to publish revisions to the schedule and include an explanation for substantial revisions to increase transparency and public understanding of decision making and to encourage agencies to avoid unnecessary delays.

One commenter expressed concern that paragraph (h) would increase the potential for litigation related to timelines. Another commenter opposed the requirement for agencies to publicly post schedules for an EIS, asserting that the requirement would distract from analyzing and disclosing significant environmental effects.

CEQ adds paragraph (h) as proposed in the final rule. CEQ disagrees that making schedules publicly available will have any meaningful effect on the agency's analysis. CEQ also does not see litigation risk attached to the posting of schedules, which would not constitute a final agency action for purposes of judicial review, and the commenter did not provide an explanation as to how this might be the case.

Multiple commenters requested clarity on what qualifies as ''substantial'' changes to an EIS schedule. CEQ declines to include additional language in the rule and defers to agencies to determine what schedule changes are ''substantial'' and require an explanation. CEQ anticipates this may vary from case-to-case depending on the agency and the complexity of the proposed action. CEQ will continue to consider whether additional guidance would be helpful.

A few commenters requested that the final rule expand paragraph (h) to require agencies to make EA schedules publicly available. CEQ declines to require agencies to publish schedules for EAs, though CEQ encourages agencies to do so, especially when doing so would facilitate public engagement. CEQ is concerned that requiring agencies to make schedules for all EAs publicly available could significantly increase the administrative burden on agencies especially since not all EAs will involve complex schedules, *i.e.,* they may only include the dates for the decision to prepare an EA and the issuance of an EA.

Some commenters expressed general support for § 1501.10 but suggested additional changes arguing that there are ''loopholes'' for agencies to exploit or manipulate the deadlines. Commenters requested the regulations provide for oversight of agencies to ensure they are adhering to the deadlines. Another commenter suggested CEQ add incentives to the final rule for agencies to adhere to the timelines.

CEQ declines to make additional revisions to address the commenters' suggestions. The final rule implements the statutory deadlines, and Congress has provided a reporting mechanism to address situations where agencies miss deadlines. Further, section 107(g)(3) of NEPA provides a mechanism for project sponsors to petition the courts for relief if an agency fails to meet the deadlines. 42 U.S.C. 4336a(g)(3). The statute does not establish a mechanism for CEQ to enforce deadlines, and CEQ declines to revise the regulations in a manner that would substantially change the role that CEQ has played with respect to environmental reviews for decades.

A commenter requested clarification on supplementation and whether or not supplemental environmental documents would affect the timeline of the original document. CEQ declines to add additional language to § 1501.10 in response to this comment. In cases where an agency determines a supplemental draft EA or a supplemental draft EIS is necessary, the end point remains the final EA or final EIS. However, as provided in § 1501.10(b), the lead agency may extend the deadline to provide additional time necessary to complete the final EA or final EIS. When an agency prepares a supplemental EA or EIS following the completion of a final EA or EIS, the lead agency should adhere to the deadlines and develop schedules for the supplemental NEPA review consistent with paragraph (b) and section 107(g) of NEPA. 42 U.S.C. 4336a(g).

10. Programmatic Environmental Documents and Tiering (§ 1501.11)

CEQ has encouraged agencies to engage in environmental reviews for broad Federal actions through the NEPA process since CEQ's initial guidelines issued in 1970. This continues to be a best practice for addressing broad actions, such as programs, policies, rulemakings, series of projects, and larger or multi-phase projects. CEQ developed guidance in 2014 on Effective Use of Programmatic NEPA Reviews,[76] compiling best practices across the Federal Government on the development of programmatic environmental reviews. CEQ proposed to codify some of these principles in the CEQ regulations.

First, CEQ proposed to revise and retitle § 1501.11, ''Programmatic

[76] CEQ, Programmatic Guidance, *supra* note 12.

environmental documents and tiering,'' for consistency with section 108 of NEPA, to consolidate relevant provisions, and to add new language to codify best practices for developing programmatic NEPA reviews and tiering, which are important tools to facilitate more efficient environmental reviews and project approvals. 42 U.S.C. 4336b. As discussed further in this section, CEQ proposed to move portions of 40 CFR 1502.4 (2020) on EISs for broad Federal actions to § 1501.11 because agencies can review actions at a programmatic level in both EAs and EISs.

Several commenters expressed support for the overall proposed changes in § 1501.11 and for use of programmatic reviews and tiering. These commenters asserted that programmatic reviews and tiering are important tools for efficiency and supported the clarity provided in the proposed rule on both tools. In the final rule, CEQ revises the title of § 1501.11 and moves the text of 40 CFR 1502.4 (2020) to § 1501.11 as further described in this section.

CEQ proposed to reorganize the paragraphs in § 1506.11 to address programmatic environmental documents and then tiering. Accordingly, second, CEQ proposed to add a new paragraph (a) to address programmatic environmental documents. CEQ proposed to move paragraph (b) of 40 CFR 1502.4 (2020) to § 1501.11(a) and revise the first sentence to clarify that agencies may prepare programmatic EAs or EISs to evaluate the environmental effects of policies, programs, plans, or groups of related activities. CEQ proposed to revise the second sentence to provide that programmatic environmental documents should be relevant to the agency's decisions and timed to coincide with meaningful points in agency planning and decision making; change ''statements'' to ''documents'' to include EAs; and change ''program'' to ''agency'' to broaden the language for consistency with the revised first sentence of paragraph (a). Finally, CEQ proposed a third sentence in paragraph (a) to clarify that agencies can use programmatic environmental documents in a variety of ways, highlighting some examples for agencies to consider to facilitate better and more efficient environmental reviews.

One commenter requested that CEQ change paragraph (a) to require agencies to prepare programmatic environmental documents. CEQ declines to require preparation of programmatic environmental documents as agencies need flexibility to determine when a programmatic environmental document is appropriate.

Another commenter suggested CEQ add language stating if an agency is preparing to make a programmatic decision on a policy, program, plan, or group of related activities that meets other applicable thresholds for NEPA analysis, an agency must prepare a programmatic analysis commensurate with the scope of that decision. The commenter asserted that while it may be permissible to prepare a programmatic analysis when an agency is not presently making a decision, it is mandatory to prepare one when making a programmatic decision.

A few commenters requested CEQ restore regulatory language from 40 CFR 1502.4(b) (2019) stating that programmatic EISs are sometimes required for proposed decisions regarding new agency programs or regulations. The commenter stated that the 2020 rule removed this direction to focus the provision on the discretionary use of programmatic EISs in support of clearly defined decision-making purposes. The commenter asserted CEQ would better serve agencies and the public by acknowledging that programmatic EISs are sometimes required.

CEQ declines to make these change in the final rule. Agencies have the discretion to determine whether to prepare a programmatic or non-programmatic NEPA document to evaluate their actions, and CEQ is concerned that the commenter's proposals are unnecessarily prescriptive and declines to introduce a new concept of ''programmatic decision.''

Third, CEQ proposed to move the list of ways agencies may find it useful to evaluate a proposal when preparing programmatic documents from paragraphs (b)(1) and (b)(1)(i) through (b)(1)(iii) of 40 CFR 1502.4 (2020) to § 1501.11(a)(1) and (a)(1)(i) through (a)(1)(iii), respectively. CEQ proposed to expand the list to encompass EAs as well as EISs. CEQ proposed to modify the beginning of paragraph (a)(1)(ii) to clarify ''[g]enerically'' to mean ''[t]hematically or by sector,'' and add technology as an example action type. CEQ proposed in paragraph (a)(1)(iii) to modify ''available'' to ''completed'' for clarity. CEQ moves these provisions and makes these revisions as proposed in the final rule.

One commenter opined that the language in proposed paragraph (a)(i)(iii) regarding stage of technological development makes it seem as though environmental review must happen more quickly than accrual of significant investment. The commenter asserted that the accrual of significant investment would prejudice the review and, therefore, should be barred until the review takes place and suggested regulatory language to that effect.

CEQ declines to modify paragraph (a)(1)(iii) to incorporate the commenter's proposed language. The concept the commenter proposes to add—to not prejudice the outcome of dependent decisions—is addressed in § 1506.1, and it is unnecessary and potentially confusing to address that issue here. However, CEQ changes ''restrict later alternatives'' to ''limit the choice of reasonable alternatives'' to align the text with § 1506.1(a).

Fourth, CEQ proposed to add a new paragraph (a)(2) to provide examples of the types of agency actions that may be appropriate for programmatic environmental documents, including programs, policies, or plans; regulations; national or regional actions; or actions with multiple stages and are part of an overall plan or program. CEQ did not receive any comments specific to this paragraph and adds it in the final rule.

Fifth, CEQ proposed to move paragraph (b)(2) of 40 CFR 1502.4 (2020) to § 1501.11(a)(3) and revise it to recommend, rather than require, that agencies employ scoping, tiering, and other tools to describe the relationship between programmatic environmental documents and related actions to reduce duplication. CEQ proposed to strike the last sentence of 40 CFR 1502.4(b)(2) (2020) stating that agencies may tier their analyses because tiering and programmatic environmental documents would now be addressed together in this section, rendering the language unnecessary.

A commenter requested CEQ replace ''should'' with ''shall'' in paragraph (a)(3) because the discretionary language relaxes the standard for agencies to seek efficiencies. CEQ declines to make this change. While scoping is required for EISs, including programmatic EISs, it is not required for EAs. It also would unnecessarily constrain agency processes to require tiering for all programmatic environmental documents, particularly because at the time that an agency prepares a programmatic environmental document, it may not yet know whether or what agency actions it may consider in the future related to the programmatic environmental document. Rather, CEQ intends this provision to encourage agencies to use scoping, tiering, and other methods to make programmatic environmental documents more effective, efficient, and transparent.

A commenter requested that CEQ add text to proposed paragraph (a)(3)

providing that programmatic documents should explain which issues the programmatic document analyzes and which issues the agency is deferring. This commenter pointed to CEQ's 2014 memorandum on use of programmatic NEPA reviews, which explains that the programmatic analysis and the decision document should explain which decisions are supported by the programmatic NEPA document and which decisions are deferred to a later time. Two commenters further requested CEQ clarify that tiering is required to analyze the deferred analysis of issues, effects, or alternatives before making a final project-level or site-specific decision; stating that the current text is permissive in that it allows but does not require tiering.

CEQ considered the comments and in the final rule revises § 1501.11(a)(3) to clarify that a programmatic document must identify any decisions or categories of decisions that the agency anticipates making in reliance on it. This direction includes any action or category of action that the agency anticipates making in reliance on a programmatic environmental document without additional analysis and any action or category of action the agency anticipates making after developing a subsequent, tiered environmental document. This provision only requires agencies to identify actions the agency anticipates making when it prepares a programmatic environmental document; it does not require agencies to identify every conceivable circumstance in which the agency could develop a tiered environmental review in the future. Including this information in a programmatic environmental document ensures that agencies are transparent about the relationship between their programmatic documents and any subsequent documents and decisions. Failure to anticipate and list a particular circumstance where a programmatic environmental document could inform a future decision does not preclude tiering to the programmatic environmental document in an environmental document related to that future circumstance.

Sixth, CEQ proposed to redesignate paragraphs (a), (b), and (c) of 40 CFR 1501.11 (2020), which address tiering, as paragraphs (b), (b)(1), and (b)(2), respectively, with some modifications as discussed further in this section. CEQ also proposed to redesignate paragraphs (c), (c)(1), and (c)(2) as paragraphs (b)(2), (b)(2)(i), and (b)(2)(ii), respectively, with no proposed modifications. CEQ proposed to title paragraph (b) ''Tiering.'' CEQ makes these changes in the final rule.

Seventh, CEQ proposed to add two new sentences at the beginning of paragraph (b) to describe when agencies may employ tiering. The first proposed sentence would allow agencies to employ tiering with an EIS, EA, or programmatic environmental document relevant to a later proposed action. The sentence emphasizes the benefits of tiering to avoid duplication and focus on issues, effects, or alternatives, not fully addressed in the earlier document. In the existing text, CEQ proposed to strike as redundant the reference to issues not yet ripe for decision as well as the last sentence on applying tiering to different stages of actions. CEQ did not receive comments specific to the changes proposed in this paragraph and finalizes them as proposed except that CEQ reorders the list of documents—EISs, EAs, and programmatic environmental documents—in § 1501.11(b)(1) for consistency with paragraph (b).

Eighth, in § 1501.11(b)(1) CEQ proposed to add ''programmatic environmental review'' to the list of documents from which agencies may tier. CEQ also proposed to clarify that the tiered document must discuss the relationship between the tiered analysis and the previous review; analyze site-, phase-, or stage-specific conditions and effects; and allow for public engagement opportunities consistent with the type of environmental document prepared and that are appropriate for the location, phase, or stage. Finally, CEQ proposed to clarify that the tiered document must state where the earlier document is ''publicly'' available.

One commenter requested CEQ clarify that tiering to a previous programmatic analysis is only appropriate if those analyses took the requisite ''hard look'' at site-specific environmental impacts. CEQ declines to make this change. While agencies must ensure a hard look at site-specific effects before finalizing a site-specific agency action, agencies have discretion to consider such effects in a programmatic environmental document or subsequent tiered documents. Multiple commenters requested CEQ clarify that tiered reviews must include the requisite site-specific analysis for the action, with some commenters raising concerns that agencies do not provide the necessary opportunity for the public to review alternatives and provide comments by using programmatic environmental reviews without subsequent site-specific reviews. CEQ agrees that tiering does not authorize an agency to avoid the public engagement, including any opportunity for comment, that it would need to do if it analyzed an action through a single environmental document, rather than through a tiered approach and notes that the text CEQ proposed in § 1501.11(b)(1) addresses this issue. Regardless of whether an agency employs tiering, agencies must comply with the requirements for consideration of alternatives and public comments consistent with the requirements for EAs or EISs, as applicable.

A few commenters expressed concern that the use of tiering would lead to delays in incorporating new scientific evidence into environmental reviews and allow agencies to circumvent the requirement to consider alternatives. Another commenter expressed similar concern that the expanded use of programmatic documents with CEs would limit consideration of alternatives. CEQ disagrees with the commenters' concerns because agencies cannot use programmatic documents or tiering to circumvent the requirements of NEPA, including section 102(2)(C)(iii) requirement to consider a reasonable range of alternatives for actions requiring an EIS. 42 U.S.C. 4332(2)(C)(iii).

Other commenters requested CEQ clarify certain aspects of tiering, including establishing bounds for use of programmatic CEs. As described in § 1501.11(a), programmatic environmental documents may be an EA or EIS. As such, § 1501.11 does not address programmatic CEs. Section 1501.4 addresses circumstances in which agencies may conduct programmatic reviews to establish new CEs.

One commenter stated that the rule needs to clearly distinguish between tiering and supplementation and suggested CEQ could clarify the different approaches in § 1501.11(b)(2)(ii). CEQ agrees that the reference to supplementation in § 1501.11(b)(2)(ii) is confusing because supplementation is a different concept. Section 1502.9(d) sets forth the standard for supplementation of EISs, and agencies may supplement EAs at their discretion. Therefore, CEQ strikes ''a supplement (which is preferred)'' from the first sentence of this paragraph.

CEQ makes the changes to § 1501.11(b) and (b)(1) as proposed, though CEQ revises programmatic environmental ''review'' to ''document'' in paragraph (b)(1) for consistency with the rest of the section. CEQ notes that programmatic documents can most effectively address later activities when they provide a description of planned activities that would implement the program and consider the effects of the program as specifically and

comprehensively as possible. A sufficiently detailed programmatic analysis with such project descriptions can allow agencies to rely upon programmatic environmental documents for further actions with no or little additional environmental review necessary. When conducting programmatic analyses, agencies should engage the public throughout the NEPA process and consider when it is appropriate to re-engage the public prior to implementation of the action.

Ninth, in paragraph (c), CEQ proposed to include the provisions of section 108 of NEPA, which address when an agency may rely on a programmatic document in subsequent environmental documents. 42 U.S.C. 4336b. CEQ notes that it interprets the reference to ''judicial review'' in paragraph (c)(1) to mean an opportunity for a party to challenge the programmatic document, including through an administrative proceeding or challenge brought under the Administrative Procedure Act. CEQ proposed in paragraph (c)(2) to require agencies to briefly document their reevaluations when relying on programmatic environmental documents older than 5 years. Two commenters opined that there is no incentive for an agency to prepare a programmatic environmental document if the statute and regulations require them to complete it within one or two years and then review it every five years. The commenters asserted that programmatic documents generally take longer to prepare, but the long-term benefits are worth the investment. The commenters are concerned that the time limits for EAs and EISs will result in agencies preparing fewer programmatic environmental documents. A separate commenter indicated that many agencies review programmatic documents at longer intervals than five years.

CEQ appreciates the commenters' concerns but notes that the timeframes are statutory. CEQ encourages agencies to use programmatic environmental documents and tiering whenever it will result in more efficiency overall. CEQ also notes that a reevaluation of a programmatic document need not be a lengthy process especially where agencies can quickly and easily verify the ongoing accuracy of the evaluation.

One commenter asserted that the process for reevaluation is unclear in the statute and in the proposed rule and asked CEQ to clarify the steps. The commenter requested that the regulations state that the tiered environmental review is what triggers the need for reevaluation and that it also serves as the documentation of the reevaluation.

CEQ declines to articulate additional steps for reevaluation. The regulations already provide a process for reevaluation in §§ 1501.5 and 1502.9(e). CEQ agrees that agencies may make use of tiered documents to support their reevaluation. However, because of the nature of tiering, such documents may not assess all of the underlying assumptions of the programmatic document.

Another commenter recommended that the regulations allow agencies to tier from programmatic documents while reevaluation is ongoing and requested CEQ clarify that those projects are not at risk of noncompliance for reliance on previous versions should the agency issue a new version of the document.

CEQ declines to make these specifications in the final rule. CEQ agrees that a tiered document may also serve as a reevaluation of the programmatic document. CEQ considers the language in section 108(1) of NEPA to be clear that agencies may tier from a programmatic review in a subsequent environmental document for up to five years without additional analysis, and therefore any tiered documents relying on the programmatic document during those five years is entitled to the statutory presumption that no additional review is required even where the agency subsequently revises the programmatic document. 42 U.S.C. 4336b(1).

A few commenters requested that the regulations require the five-year reevaluation for EISs and EAs be subject to public comment; that agencies provide public notice of the reevaluation; and that reevaluation of programmatic analyses be made publicly available.

CEQ declines to make these changes to retain flexibility depending on the context of the reevaluation. Some reevaluations may be simple and not require public comment. Other reevaluations may warrant and benefit from public engagement, including public comment. If the agency finds that any assumptions are no longer valid or that the criteria for supplementation in § 1502.9(d) are met, then the regulations require the agency to conduct a supplemental analysis to continue to rely on the programmatic review in subsequent environmental documents.

11. Incorporation by Reference Into Environmental Documents (§ 1501.12)

CEQ proposed minor modifications to § 1501.12 to emphasize the importance of transparency and accessibility of material that agencies incorporate by reference. First, CEQ proposed to revise the title to add ''into environmental documents'' at the end to clarify into what agencies incorporate by reference. CEQ makes this change in the final rule.

Second, CEQ proposed to add to the second sentence a specific requirement for agencies to briefly explain the relevance of any material incorporated by reference into the environmental document to clarify that agencies must not only summarize the content incorporated but also explain its relevance to the environmental review document. CEQ proposed this addition because explaining the relevance of incorporated material in addition to summarizing it will better inform the decision maker and the public.

A few commenters opposed the proposed requirement for agencies to briefly explain the relevance of the incorporated material to the environmental document, asserting that the relevance of the material is often obvious and that requiring this explanation would add burdensome paperwork without additional benefit. A commenter also asserted that the requirement defeats the purpose of incorporating material by reference.

CEQ disagrees with the commenters' assertions and makes the proposed addition in the final rule. CEQ adds the language to emphasize the importance of transparency regarding material that agencies incorporate by reference and rely upon as part of their analysis. Briefly explaining the relevance of incorporated material should not require substantial agency resources or lengthy text. Section 1501.11 already requires an agency to briefly summarize material that it incorporates by reference; briefly explaining the relevance of the material does not require additional analysis, but rather, only requires that the agency briefly document how the material is related to the agency action it is reviewing in an environmental document. While in some cases the relevance of material incorporated by reference may be obvious, in such cases, briefly explaining relevance will be a trivial task that may require no more than a sentence. Where the relevance of the material is not immediately obvious, a brief explanation will help better inform both the public and decision makers. CEQ disagrees that the requirement is burdensome or duplicative, and encourages agencies to integrate the description of relevance into the summary of the material.

Third, CEQ proposed to change ''may not'' to ''shall not'' in the third sentence to eliminate a potential ambiguity over

whether agencies must make material they incorporate by reference reasonably available for public inspection. One commenter supported the preclusion of incorporation by reference if the material is not reasonably available for public inspection. Another commenter requested that CEQ define ''reasonably available for inspection'' to clarify what information should be made available prior to public comment. In considering this comment, CEQ determined that it was more appropriate to revise the text in the final rule to improve clarity rather than define this phrasing from the 1978 regulations, and therefore changes ''inspection'' to ''review.'' CEQ does not intend this change in wording to be substantive, but rather to modernize the regulatory language and, thereby, improve clarity of the requirement. CEQ anticipates that agencies will generally make this material available electronically or online, though it may be appropriate for agencies to provide physical copies in certain circumstances such as for localized actions where internet access or bandwidth is limited.

Another commenter expressed support for incorporation by reference, but questioned whether the standard should allow agencies to incorporate by reference proprietary data. CEQ declines to change the ''reasonably available for review'' standard. Incorporation by reference is a tool that agencies can use to improve the efficiency of their environmental review process. However, it cannot be used to circumvent the public engagement, public comment, public access, and transparency requirements of NEPA and these regulations, including section 107(c)'s requirement that for an EIS, an agency must request public comment on ''alternatives or impacts and on relevant information, studies, or analyses with respect to the proposed agency action.'' 42 U.S.C. 4336a(c). CEQ therefore retains the requirement that has been in the NEPA regulations since 1978 that prohibits agencies from incorporating by reference material that is not reasonably available for review, including proprietary data that is not available for review and comment.

Another commenter recommended CEQ revise existing regulatory text in the third sentence. The commenter suggested CEQ replace ''within the time'' with ''at the beginning of and throughout the time'' asserting that the current language allows an agency to post documents near the end of the comment period. The commenter stated that documents should be available for the full comment period to allow for meaningful public review and comment. CEQ agrees that materials that are incorporated by reference should be reasonably available throughout the public comment period. CEQ is unaware of agencies incorporating by reference material that is not available throughout the comment period. However, CEQ agrees that the reasonable availability of material incorporated by reference is critical to the public comment process for EISs under the regulations and under section 107(c) of NEPA, which requires agencies preparing EISs to request public comment on ''relevant information, studies, or analyses with respect to the proposed agency action.'' 42 U.S.C. 4336a(c). Therefore, the final rule replaces the word ''inspection'' with ''review'' and the word ''within'' with the word ''throughout'' to remove any ambiguity over when the materials an agency incorporates by reference must be reasonably available to the public. The final rule also adds ''or public review'' after ''comment'' to make it clear that the material must be available while an environmental document is available for public review in those cases where the regulations do not require an agency to seek public comment. CEQ makes these changes in the final rule to ensure that material incorporated by reference, including research publications and data, is openly available and accessible to the public.

Fourth, CEQ proposed in the third sentence to add a reference to ''publicly accessible website'' as an example of a mechanism through which material incorporated by reference may be reasonably available to the public. CEQ did not receive any comments specific to this proposed example. CEQ makes this change in the final rule.

Finally, CEQ proposed to add a new fourth sentence encouraging agencies to provide digital references, such as hyperlinks, to incorporated material or otherwise indicate how the public can access the material for review. One commenter expressed support for the proposed inclusion of digital references. CEQ adds this sentence in the final rule.

A few commenters expressed general support for proposed § 1501.12. Another supportive commenter appreciated the emphasis on transparency and accessibility of material incorporated by reference, but suggested CEQ establish standards for the digital format of environmental documents and their underlying analysis to facilitate interagency information sharing and collaboration. CEQ appreciates the comment and notes that it is currently engaged in an eNEPA study, consistent with section 110 of NEPA, to assesses such issues. *See* 42 U.S.C. 4336d. Following the completion of that study, CEQ may issue guidance or consider additional rulemaking in the future to address these issues.

Another commenter requested that the regulations require agencies to disclose if the cited material is outdated, disputed, or not fully proven. CEQ declines to make this change. Agencies generally have an obligation under § 1506.6 and § 1502.21 for EISs to disclose any relevant assumptions or limitations of the information on which they rely, including information incorporated by reference. Imposing a distinct requirement for material that is incorporated by reference is unnecessary and could create confusion.

One commenter expressed agreement that incorporation by reference can cut down on bulk but indicated that CEQ should expand § 1501.12 to address other reasons to incorporate materials by reference, such as to reduce duplicative work and ensure efficient use of agency resources. The commenter also requested CEQ rephrase the section to ensure that agencies can use pre-existing documents to further the efficiency requirements of NEPA. While CEQ agrees that incorporation by reference also reduces duplicative work and facilitates efficient use of agency resources, CEQ does not consider it necessary to add additional text to the regulations to make these points as the regulations already emphasize efficiency and use of other documents. *See, e.g.,* §§ 1506.2, 1506.3.

Finally, a commenter asserted the proposed rule did not sufficiently address avoidance of duplication between the NEPA process and States' environmental review and permitting processes. The commenter requested that CEQ clarify in § 1501.12 that there is a presumption that agencies can incorporate by reference environmental studies prepared in accordance with State procedural requirements akin to NEPA. CEQ declines to make this change. Establishing a presumption that agencies can incorporate by reference States' materials would be confusing and is unnecessary because the language in § 1501.12 allows agencies to incorporate material generated by States, and § 1506.2 has long promoted elimination of duplication with State requirements.

D. Revisions To Update Part 1502, Environmental Impact Statements

CEQ proposed to revise several sections of part 1502, as discussed in section II.D of the NPRM. CEQ is not implementing any substantive changes to § 1502.3, but is revising the section title to read ''Statutory requirements for environmental impact statements.'' CEQ

is not making substantive changes to § 1502.6, Interdisciplinary preparation; § 1502.18, List of preparers; § 1502.19, Appendix; § 1502.20, Publication of the environmental impact statement; § 1502.22, Cost-benefit analysis; or § 1502.24, Environmental review and consultation requirements. CEQ received some comments on these sections but declines to make additional changes, as further explained in the Phase 2 Response to Comments.

1. Codification of 2023 GHG Guidance

CEQ invited comment on whether it should codify any or all of its 2023 National Environmental Policy Act Guidance on Consideration of Greenhouse Gas Emissions and Climate Change (2023 GHG guidance).[77] CEQ also invited comment on which provisions of part 1502 or other provisions of the CEQ regulations CEQ should amend if a commenter recommended codification of part of the guidance.

CEQ received numerous comments responding to this request for comments on codification of the 2023 GHG guidance. Comments expressed both support and opposition, with many commenters including general recommendations or considerations that did not specify what amendments to the rule CEQ should consider. Others identified specific text or concepts they recommended CEQ include. Some commenters resubmitted the same comments they submitted on the interim guidance, whereas others reiterated points they made as part of their comments on the interim guidance.

Some commenters requested that CEQ incorporate quantification and contextualization of climate effects from the guidance into the final rule, with specific suggestions for adding text to §§ 1502.16(a)(1), 1501.3(d), and 1508.1(g). Another commenter requested that CEQ modify § 1502.16(a)(7) to align the provision with the guidance for emphasizing quantification of emissions in determining reasonably foreseeable climate change-related effects. This commenter also recommended CEQ add provisions to § 1501.3 recognizing that while there is no particular threshold for GHG emissions that triggers an EIS, Federal agencies should quantify, where relevant, the reasonably foreseeable direct and indirect GHG emissions of their proposed actions and reasonable alternatives and the effects associated with those projected emissions in the determination of significance.

Another commenter asked that CEQ expand § 1502.6(a)(7) or § 1508.1(g)(4) to include key principles from the guidance. The commenter provided as an example that CEQ could clarify that climate change related effects should include analysis of reasonably foreseeable direct, indirect, and cumulative GHG emissions over the expected lifetime of the action.

Multiple commenters requested that CEQ add, in full, sections IV(B), (E), and (F); V; VI(A) through (C) and (E); and VII of the guidance. One commenter requested that CEQ strengthen proposed § 1502.15(b) and proposed § 1502.23(c) to require consideration of projections based on varying emissions scenarios and related variations in climate change effects on the proposed action and alternatives. The commenter referenced information included in the 2023 GHG guidance that provides important information on quantifying and analyzing uncertainty in the long-range projects of climate change. The commenter requested CEQ strengthen the final rule by codifying the need to manage this uncertainty and analyze it; otherwise, the commenter asserted, agencies may unlawfully seek to minimize or avoid analysis of long-range projects of climate change altogether.

One commenter requested that CEQ add consideration for proportionality and causality in the NEPA analysis of GHG-related impacts to more appropriately assign mitigation efforts to the true source of greenhouse gases. Another commenter suggested that CEQ integrate the warning against perfect substitution analysis from the guidance directly into the regulatory text. They also requested the rule include a provision on the appropriate use of the social cost of GHGs in climate change analyses.

Some commenters opposed codifying any part of the 2023 GHG guidance for multiple reasons. Two commenters expressed that inclusion of the guidance in the regulations would trigger concerns on overreach of the authority of the administrative branch. Other commenters expressed the view that CEQ should not codify any parts of the guidance until CEQ resolves policy issues and addresses the comments submitted on the guidance. A few other commenters were concerned that incorporation of climate change would unlawfully expand the scope of NEPA analyses past ''foreseeable effects'' and result in agencies prioritizing climate change above other environmental issues. One commenter expressed that because climate change science continues to evolve, it would be premature to codify the guidance and that retaining it as guidance would provide flexibility to continue to update the manner in which agencies address climate change in NEPA reviews as science evolves. Another commenter stated that codification of guidance would be arbitrary and capricious, and that NEPA was not intended to be a climate policy framework.

Two commenters stated that if CEQ does decide to codify all or part of the 2023 GHG guidance, CEQ should issue another NPRM to provide an opportunity for the public to comment prior to issuing a final rule, consistent with the APA. Similarly, a few other commenters stated that CEQ did not provide enough information about how CEQ may incorporate the guidance, including what parts of the guidance CEQ would include, and that any attempt to codify the interim guidance through the final rule would be contrary to CEQ's obligations under the APA.

A few commenters asserted that the guidance wrongfully elevates climate change and its effects, no matter how small the effect may be, and that this emphasis is inconsistent with the purpose of NEPA and recent NEPA amendments.

After considering the comments, CEQ has determined not to revise the text of the proposed rule in the final rule to codify the 2023 GHG guidance, with the exception of one revision on quantification that was requested by commenters and that is included in the final rule in § 1502.16. CEQ responds to the comments summarized here in the Phase 2 Response to Comments, and CEQ will consider these and the comments received on the 2023 GHG guidance during development of any final GHG guidance. If CEQ deems it appropriate, CEQ may consider codification of the 2023 GHG guidance in a future rulemaking.

2. Purpose of an Environmental Impact Statement (§ 1502.1)

CEQ proposed to divide § 1502.1 into paragraphs (a), (b), and (c) to enhance readability and amend the text in the section to restore the approach taken in the 1978 regulations regarding the purpose of EISs as they relate to NEPA.

In proposed paragraph (a), CEQ proposed to restore language from the 1978 regulations clarifying that one purpose of an EIS is to ''serve as an action-forcing device'' for implementing the policies set out in section 101 of NEPA by ensuring agencies consider the environmental effects of their action in decision making. 42 U.S.C. 4331. CEQ proposed these changes because Congress did not enact NEPA to create

[77] *See* CEQ, 2023 GHG Guidance, *supra* note 10.

procedure for procedure's sake; rather, NEPA's procedures serve the substantive policies and goals Congress established and restoring the action-forcing language would clarify how EISs serve this broader function. CEQ proposed this change for consistency with the proposed edits in § 1500.1. *See* section II.B.1.

One commenter expressed support for the proposed changes in paragraph (a), specifying that the action-forcing language captures the intent of NEPA and serves the substantive policies and goals established by Congress. Multiple commenters opposed the proposed changes in paragraph (a), asserting that the language is contrary to the procedural approach of NEPA, and that it elevates the goals of the Act above the statutory requirements of other legislation. One commenter requested CEQ replace the proposed clause at the end of the sentence with language stating that the goals of NEPA cannot and do not supersede the requirements of other Federal statutes. Specific to the restoration of the action-forcing language, one commenter opposed the language because they do not agree that an EIS could be an action-forcing device on its own. The commenter described that an environmental study could reveal information that could be action forcing but that an EIS itself should not be and that an EIS is a device used to disclose and study the environmental consequences of actions. Other comments expressed that the phrasing inappropriately inserts a substantive element into NEPA's procedural requirements.

CEQ disagrees with the assertions of the commenters opposing this change and restores the language from the 1978 regulations as proposed in § 1502.1(a). As CEQ articulated in the proposed rule, CEQ considers it appropriate to restore this text from the 1978 regulations to ensure that agencies use the information gathered and analyzed in an EIS in their decision-making processes. CEQ disagrees that this language, which was part of the 1978 regulations implemented by agencies and interpreted by courts for decades, imposes a substantive requirement inconsistent with the statute. This provision does not require agency decision makers to make any particular decision based on the information in an EIS; it only requires that the information in an EIS inform the agency's decision, which is consistent with NEPA, agency practice, and case law.

In proposed paragraph (b), CEQ proposed minor edits for clarity and consistency with other changes proposed throughout the regulations. CEQ proposed to change ''It'' to ''Environmental impact statements'' to improve readability in light of the proposal to break this section into lettered paragraphs. CEQ also proposed to change ''significant'' to ''important'' before ''environmental issues'' and insert ''reasonable'' before ''alternatives'' for consistency with similar phrasing throughout the regulations.

Two commenters requested that CEQ further revise paragraph (b). One requested that CEQ replace ''enhance'' with ''restore and maintain'' because the underlying statute does not put the burden on Federal decision makers or project sponsors to ''enhance'' the quality of the human environment. This commenter pointed to 42 U.S.C. 4331(a) and the language ''restoring and maintaining environmental quality.'' A second commenter requested CEQ replace ''avoid and minimize'' with ''reduce to the extent practical'' to conform to the plain language of the NEPA statute.

CEQ finalizes § 1502.1(b) as proposed. CEQ does not consider it necessary to further revise this paragraph as the commenters suggested because this language has been in the regulations since 1978, and CEQ is unaware of any confusion or practical or legal problems created by this language. In the absence of such confusion or problem, CEQ views the potential cost to agencies and applicants of assessing what, if any, change in practice is needed to accommodate revised text as likely to outweigh any potential benefit of the language proposed by the commenters.

In proposed paragraph (c), CEQ proposed to restore the 1978 language clarifying that an EIS is more than a disclosure document, and that agencies must use EISs concurrently with other relevant information to make informed decisions. CEQ considers this language to provide important direction to agencies to ensure that EISs inform planning and decision making and do not serve as a perfunctory check-the-box exercise.

One commenter expressed support for the changes in proposed paragraph (c) stating that it reinforces that EISs must state how alternatives and decisions will or will not achieve the requirements of NEPA, the CEQ regulations, and other environmental laws and policies. Another commenter expressed that the language regarding an EIS being more than a disclosure document suggests that something more than a disclosure of environmental impacts is required to comply with the regulations. The commenter asserted this is contrary to NEPA's original intent.

One commenter requested that CEQ delete the last sentence of the paragraph requiring agencies to use EISs in conjunction with other relevant material to plan actions and make decisions. The commenter asserted that the sentence is not tethered to the EIS review process but addresses agency efforts to plan actions and make decisions, and therefore, the commenter asserted, CEQ is inserting itself into ongoing activities beyond environmental review pursuant to NEPA.

CEQ makes the changes as proposed in § 1502.1(c) and adds ''involve the public'' to the last sentence directing agencies to use other material to plan actions and make decisions. As CEQ noted elsewhere in this final rule, CEQ disagrees that NEPA is merely a check-the-box exercise, and considers it appropriate to reinforce this point in the regulations. CEQ also declines to exclude the proposed last sentence of paragraph (c). This provision does not go beyond NEPA, but rather emphasizes that an EIS is one of the documents agencies must use in their decision-making processes along with other relevant documents.

3. Implementation (§ 1502.2)

CEQ proposed minor modifications to § 1502.2. First, CEQ proposed to restore from the 1978 regulations the introductory paragraph directing agencies to prepare EISs consistent with paragraphs (a) through (g) to achieve the purpose established in § 1502.1. While the 2020 rule removed this paragraph as unnecessary, upon reconsideration CEQ proposed to restore the language to provide clarity on the purpose of this section and improve readability.

One commenter expressed support for all of the proposed revisions in § 1502.2 to ensure that lead agencies explain in an EIS how alternatives and agency decisions will or will not achieve the requirements of NEPA, CEQ regulations, and other environmental policies. Further, the commenter characterized the proposed changes as necessary to facilitate NEPA's goals of transparency and public participation. CEQ appreciates the commenters' supportive statements and in the final rule adds the introductory paragraph to § 1502.2 as proposed.

Next, in paragraph (b), CEQ proposed to replace the word ''significant'' with ''important'' and add a reference to an EA for clarity and consistency. In paragraph (c), CEQ proposed to change ''analytic'' to ''analytical,'' and ''project size'' to ''the scope and complexity of the action'' since this provision is

applicable to more than projects, and the length of an EIS should be proportional to the scope and complexity of the action analyzed in the document.

One commenter expressed support for EISs being brief, concise, and no longer than necessary, but expressed concern over the language encouraging that the length of an EIS should be proportional to the effects and scope because this language conflicts with the page limits identified in § 1502.7. The commenter requested CEQ delete the sentence discussing proportionality to resolve any confusion.

CEQ disagrees with the commenter. The page limits provide the maximum length for EISs. Agencies should not automatically use every page allowable under the page limits and should not write documents longer than necessary. This statement acknowledges that some EISs may be less than the page limits.

CEQ proposed to delete ''as interpreted in'' before ''the regulations in this subchapter'' in paragraph (d), for consistency with the changes in §§ 1500.6 and 1502.9 as discussed in section II.B.6. The proposed rule explained that this phrase could inappropriately constrain agencies whose agency NEPA procedures go beyond the CEQ regulations. One commenter opposed the deletion of this language, expressing support for the inclusion of it to meet the spirit and flexibility of the 2020 rule.

CEQ removes ''as interpreted in'' from paragraph (d) in the final rule because CEQ considers this language inappropriately constricting and potentially causing confusion in light of changes CEQ is making to other provisions of the regulations allowing agencies to tailor their procedures to their programs and include more specific requirements and suggestions. Under the revisions, EISs must state how alternatives and decisions will or will not achieve the requirements of NEPA, the CEQ regulations, and other environmental laws and policies.

Finally, CEQ proposed to delete the word ''final'' in paragraph (f) because the regulations do not distinguish between a decision and final decision and, therefore, using the phrase ''final decision'' is inconsistent with use of ''decision'' elsewhere in the regulations. CEQ makes this change as proposed in the final rule.

4. Scoping (§ 1502.4)

As discussed in section II.C.8 on § 1501.9, ''Public and governmental engagement,'' section II.C.2 on § 1501.3, ''Determine the appropriate level of NEPA review,'' and section II.C.10 on § 1501.11, ''Programmatic environmental document and tiering,'' CEQ proposed to revise § 1502.4 by retitling it ''Scoping'' and moving provisions from 40 CFR 1501.9 (2020) to this section and moving the existing provisions of 40 CFR 1502.4 (2020), ''Major Federal actions requiring the preparation of environmental impact statements'' to §§ 1501.3 and 1501.11. CEQ proposed to move the requirements of scoping for EISs to part 1502, which addresses the requirements specific to EISs, while moving requirements for determining scope applicable to all environmental reviews to § 1501.3(b). CEQ also proposed to revise the provisions moved from 40 CFR 1501.9 (2020) to proposed § 1502.4 to align scoping with related changes made on public engagement in § 1501.9 and to add requirements focused on increasing efficiency in the EIS scoping process.

As discussed further in sections II.C.8 and section II.C.10, commenters were generally supportive of this approach. Commenters did provide a few targeted comments as discussed further in this section and the Phase 2 Response to Comments.

CEQ proposed these changes because it has heard from multiple Federal agencies that there is uncertainty over the differences between the scoping process required for EISs and other public involvement or engagement requirements for NEPA reviews more generally. By revising § 1501.9 on public and governmental engagement and moving the scoping provisions to § 1502.4, CEQ is emphasizing the importance of public engagement in the NEPA process generally, clarifying what requirements are specific to the scoping process for EISs, and clarifying what requirements and best practices agencies should consider regardless of the level of NEPA review.

First, CEQ proposed to move 40 CFR 1501.9(a) (2020), outlining the general purpose of scoping, to § 1502.4(a) and proposed to change the words ''significant'' and ''non-significant'' to ''important'' and ''unimportant,'' respectively, to align with CEQ's proposed change to only use the word ''significant'' when describing effects, which CEQ indicated was a clarifying, non-substantive change. CEQ finalizes this paragraph as proposed with three additional changes to replace the paragraph heading ''Generally'' with ''Purpose,'' to more accurately describe the paragraph; to add use of the word ''scoping'' in the first sentence to make clear that this sentence is describing the purpose of scoping; and to change ''may'' to ''should'' in the second sentence to address comments requesting clarification that scoping can and should begin prior to issuance of the NOI. This last change also emphasizes the importance for agencies to begin scoping work early to facilitate meeting the statutory two-year deadline for completing EISs. CEQ made clear in the 2020 regulations that scoping should begin as soon as practicable, so the agency can gather the requisite information to allow the public to provide meaningful input on the NOI, including on the topics specifically identified for inclusion in the notice in § 1502.4(e)(1) through (e)(10). Agencies cannot be reasonably expected to have this information available to them without beginning scoping prior to issuance of the NOI.

Second, CEQ proposed to move paragraph (c) of 40 CFR 1501.9 (2020) on scoping outreach to § 1502.4(b) and add an introductory sentence requiring agencies to facilitate notification to persons and agencies that may be interested or affected by an agency's proposed action, consistent with the public and governmental engagement requirements in proposed § 1501.9. CEQ finalizes this paragraph as proposed.

Third, CEQ proposed to move paragraph (b) of 40 CFR 1501.9 (2020) on cooperating and participating agencies to § 1502.4(c) and retitle it ''Inviting participation'' to better reflect that the paragraph covers cooperating and participating agencies as well as proponents of the action and other likely affected or interested persons. CEQ also proposed to strike the last sentence providing an example of when an agency might hold a scoping meeting.

Some commenters expressed concern for the removal of the language requiring cooperating and participating agencies be invited and consulted, and noted their specific reference in the NEPA statute. CEQ did not intend a substantive change by modifying the paragraph heading and notes that §§ 1501.7 and 1501.8 have long provided for the invitation of such agencies to serve as cooperating or participating agencies. In the final rule, CEQ adds a clause to the regulatory text to make clear that the invitation to Federal, State, Tribal, and local agencies and governments is to participate as cooperating or participating agencies. CEQ also notes that agencies invited to serve as cooperating or participating agencies should respond in a timely manner to facilitate the inclusion in the NOI of any information that these agencies may need as part of the scoping process.

A commenter also expressed confusion about the reference to ''the

proponent of the action'' since that is the lead agency. This phrase, which has been in the regulations since 1978, refers to an outside party such as a project sponsor or applicant. Therefore, in this final rule, CEQ revises this phrase to ''any applicant'' for consistency with the final rule's definition of ''applicant'' and includes ''any'' since not all actions will involve such parties.

Fourth, CEQ proposed to move paragraphs (f) and (f)(1) through (f)(5) of 40 CFR 1501.9 (2020), which addresses additional scoping responsibilities, to § 1502.4(d) and (d)(1) through (d)(5), respectively. Within this list, CEQ proposed modifications to paragraph (d)(1) to change ''significant'' to ''important'' to align with changes in paragraph (a) and the use of ''significant'' throughout the regulations, which CEQ intended to be a clarifying, non-substantive change. CEQ finalizes these changes consistent with its proposal. Additionally, in paragraph (d)(3) of the final rule, CEQ changes ''public'' EAs and other EISs to ''publicly available'' to clarify the meaning of this provision.

Fifth, CEQ proposed to move the requirements for an NOI from paragraphs (d) and (d)(1) through (d)(8) of 40 CFR 1501.9 (2020) to § 1502.4(e) and (e)(1) through (e)(8), respectively. CEQ proposed to delete the reference to 40 CFR 1507.3(f)(3) (2020) because CEQ proposed to remove that provision from the regulations, as discussed in section II.I.3 of the proposed rule. CEQ proposed to revise the language in paragraph (e)(7) for consistency with section 107(c) of NEPA requiring the NOI to include a request for public comment on alternatives or impacts and on relevant information, studies, or analyses, and proposed to delete the cross reference to § 1502.17 because CEQ proposed to broaden the language in § 1502.17. 42 U.S.C. 4336a(c). CEQ also proposed to delete the cross reference because it would no longer be necessary since CEQ proposed to remove the exhaustion process in 40 CFR 1500.3 (2020), which relied, in part, on this provision as the first step in that process. Lastly, CEQ proposed these edits because the purpose of scoping is to receive input from the public on the proposed action and alternatives as well as other information relevant to consideration of the proposed action, and CEQ considered the language in this paragraph to be redundant to the other required information in proposed paragraph (e). CEQ is finalizing these changes as proposed for the reasons set forth in the NPRM and this final rule. Also, CEQ revises paragraph (e)(1) to add the word ''agency'' between ''proposed action'' to align the text with changes to § 1502.13 and for consistency with section 107(d) of NEPA. *See* 42 U.S.C. 4336a(d).

Sixth, to this list of NOI requirements, CEQ proposed to add paragraph (e)(9) to require the lead agency to list any cooperating and participating agencies that have been identified at the time of the NOI, as well as any information those agencies require to facilitate their decisions or authorizations related to the EIS. CEQ proposed to add this requirement to ensure that lead and cooperating agencies communicate about any unique statutory or regulatory requirements of each agency so that the necessary information is included in the initial NOI and does not require re-issuance of a second NOI by the cooperating or participating agency. For example, the U.S. Forest Service's regulations regarding administrative review require the responsible official to disclose during the NEPA scoping process that a proposed project or activity or proposed plan, plan amendment, or plan revision is subject to one of its administrative review regulations. 36 CFR 218.7(a), 219.52(a). When the Forest Service acts as a cooperating agency and the lead agency does not include the necessary information in the NOI, the Forest Service then must issue its own NOI, which can add additional time to the NEPA process. CEQ is finalizing this proposal consistent with the NPRM.

Seventh, CEQ proposed to add paragraph (e)(10) to require that the NOI include a unique identification number for tracking purposes that would be carried forward in all other documents related to the action such as the draft and final EISs and ROD (comparable to the provision in § 1501.5(c)(4) requiring tracking numbers for EAs). As discussed in greater detail in section II.C.4, CEQ proposed this provision because identification numbers can help both the public and agencies track the progress of an EIS for a specific action as it moves through the NEPA process. In the final rule, CEQ has retained the proposal and, in response to comments, added a clause to also require use of the unique identification numbers in any agency databases or tracking systems.

Eighth, CEQ proposed to move and edit the second sentence regarding supplemental notices in 40 CFR 1507.3(f)(3) (2022) to paragraph (f), ''Notices of withdrawal or cancellation,'' to require that an agency publish in the **Federal Register** a notice of withdrawal of the NOI or a supplemental notice to inform the public that it is no longer considering a proposed action and, therefore, discontinuing preparation of an EIS. CEQ proposed this requirement to codify common agency practice and to increase transparency to the public. CEQ is finalizing this change as proposed because agencies should publish such notices if they withdraw, cancel, or otherwise cease the consideration of a proposed action before completing a final EIS in order to provide notice to the public that a proposed action is no longer under consideration. Such a notice does not need to be lengthy, but should clearly reference the original NOI, name of the project in the original notice, unique identification number, and who to contact for additional information.[78]

Finally, CEQ proposed to move paragraph (g) of 40 CFR 1501.9 (2020) on NOI revisions to § 1502.4(g), updating the cross references and changing ''significant'' to ''important'' and ''impacts'' to ''effects,'' which CEQ indicated was a clarifying, non-substantive edit. CEQ makes this change in the final rule, consistent with the NPRM to align the text with the changes to § 1502.9(d)(1)(ii).

5. Timing (§ 1502.5)

CEQ proposed to make three clarifying amendments to § 1502.5. First, in paragraph (a), CEQ proposed to add ''*e.g.,*'' in the parenthetical ''(go/no-go).'' CEQ proposed this amendment in response to agency feedback during the development of the proposed rule to clarify that the feasibility analysis and the ''go/no-go'' stage may not occur at the same point in time and may differ depending on what is included in the feasibility analysis and how the agency has structured that analysis. CEQ proposed this change for consistency with the longstanding practice that agencies have discretion to decide the appropriate time to begin the NEPA analysis, but also that agencies should integrate the NEPA process and other planning or authorization processes early. *See* § 1501.2(a).

Two commenters recommended CEQ delete the introductory paragraph of § 1502.5 encouraging agencies to commence preparation of an EIS as close as practicable to the time the agency is developing or receives a proposal, as well as the feasibility analysis and go/no-go language in

[78] *See, e.g.,* U.S. Forest Serv., Powell Ranger District; Utah; Powell Travel Management Project; Withdrawal of Notice of Intent to Prepare an Environmental Impact Statement, 87 FR 1109 (Jan. 10, 2022); U.S. Army Corps of Eng'rs, Withdrawal of the Notice of Intent to Prepare an Environmental Impact Statement for the Carpinteria Shoreline, a Feasibility Study in the City of Carpinteria, Santa Barbara County, CA, 86 FR 41028 (July 30, 2021).

paragraph (a). The commenters asserted that the feasibility analysis stage is generally considered an early stage of project management and suggested this stage was pre-proposal and therefore pre-NEPA. The commenters explained that this stage can and should take considerable time, and therefore should not be covered by the time limits, or agencies will likely miss the statutory deadlines. The commenters asserted that the NEPA process should not commence until this stage is completed. One of these commenters further pointed to the statutory definition of ''proposal'' added in 2023 and asserted this should be the starting point for the timing requirements for EISs and EAs. The commenter further asserted that CEQ should encourage pre-NEPA ''environmental considerations'' early in agency planning and decision making prior to issuing a NOI to file an EIS.

In the final rule CEQ revises § 1502.5(a) to revise ''at the feasibility analysis (go/no-go) stage'' to instead refer to the feasibility analysis or equivalent stage evaluating whether to proceed with the project. This revised text improves the clarity of the sentence and recognizes that feasibility analyses are not a component of project authorizations for every agency. The regulations have long encouraged agencies to integrate NEPA into their planning and decision-making processes. As CEQ advised in the 2020 regulatory revisions, agencies often begin ''pre-NEPA'' work before they make the formal determination to prepare an EIS by issuing a NOI. As discussed in section II.D.4, agencies must commence this work before issuing an NOI in order to meet the content requirements for an NOI. CEQ does not consider it necessary to delineate these phases in the regulations, as the commenter suggests, because agencies have decades of experience in developing EISs consistent with this provision, and CEQ is unaware of any agency concerns with or practical problems created by this provision.

Second, CEQ proposed to add ''complete'' in the first sentence of paragraph (b) to clarify that agencies must begin preparing an EIS after receiving a complete application, though agencies can elect to begin the process earlier if they choose to do so. CEQ also proposed to add ''together and'' in the second sentence of paragraph (b) to clarify further that agencies should work ''together and with'' potential applicants and other entities before receiving the application. CEQ proposed these changes based on its experience that early conversations and coordination among Federal agencies, the applicant, and other interested entities can improve efficiencies in the NEPA process and ultimately lead to better environmental outcomes. Additionally, CEQ noted that similar to the proposed change to paragraph (a), the proposed changes to paragraph (b) are consistent with other directions in the regulations to integrate the NEPA process and other processes early. *See* §§ 1500.5(h)–(i), 1501.2(a).

One commenter requested CEQ revise paragraph (b) in order to ensure there are no unnecessary delays in proceeding. The commenter suggested language be added to require agencies to commence review of the application and decide on its completeness within 30 days and issue a NOI within 6 months. The commenter also requested CEQ add language requiring agencies to establish objective measures in their regulations for determining when an application is complete.

CEQ declines to add this level of specificity in its regulations because the regulations apply to a broad range of agencies and contexts, and these specific requirements may not work for all of them. Instead, it is best left to agency-specific NEPA procedures or agency program regulations to articulate these sorts of deadlines. In the final rule, CEQ adds ''complete'' in paragraph (b) consistent with its proposal.

6. Page Limits (§ 1502.7)

CEQ proposed to amend § 1502.7, to align the text with section 107(e) of NEPA, which sets page limits for EISs at 150 pages or 300 pages for proposals of extraordinary complexity, not including citations or appendices. 42 U.S.C. 4336a(e). CEQ proposed to remove the requirement for the senior agency official of the lead agency to approve longer documents for consistency with the statute, which does not provide a mechanism to approve longer documents.

CEQ received a number of comments on page limits. Some commenters expressed concerns that the page limits would prevent agencies from conducting the requisite analysis under NEPA. Some of those commenters requested that CEQ retain the provision allowing the senior agency official to authorize an exceedance of the page limits. Other commenters expressed support for the page limits and requested that CEQ impose additional requirements to ensure agencies do not circumvent the page limits. Commenters also requested CEQ define ''extraordinary complexity.''

CEQ makes the changes as proposed in the final rule. The NEPA statute sets clear page limits for EAs and EISs and does not establish a mechanism for exceeding those page limits. Allowing senior agency officials to approve an exceedance of the page limits would undermine the direction in the statute and CEQ's longstanding goals of developing concise, readable NEPA documents that will inform the decision maker and the public. CEQ is confident that agencies can both meet page limits and fully consider the elements required by the statute and these regulations.

CEQ has long encouraged and continues to strongly encourage agencies to prepare EISs that are both comprehensive and informative, as well as understandable, to the decision maker and the public. Agencies should consider establishing within their procedures mechanisms to do so that will be most effective for their programs and activities. These mechanisms could include placing technical analyses in appendices and summarizing them in plain language in the EIS; making use of visual aids, which are excluded from the definition of ''page'' provided by § 1508.1(bb), including sample images, maps, drawings, charts, graphs, and tables; and using interactive documents, insets, colors, and highlights to create visually interesting ways to draw attention to key information and conclusions. Agencies should consider making EISs and technical appendices machine readable, where possible and feasible, to facilitate data sharing and reuse in future analyses.

7. Writing (§ 1502.8)

CEQ proposed minor edits to § 1502.8 to change ''may'' to ''should'' and change ''graphics'' to ''visual aids or charts'' for consistency with modifications proposed in § 1502.12 regarding visual aids or charts. One commenter expressed support for the proposed changes to require agencies to use plain language and encourage use of visual aids and charts. However, this commenter stated that use of visual aids and charts must be designed to be understandable to non-technical audiences, pointing to documents they have reviewed that included tables that are difficult to understand.

CEQ makes the edits as proposed in § 1502.8 in the final rule. The CEQ regulations have long required agencies to write environmental documents in plain language as a means to preparing readable, concise, and informative documents. *See, e.g.,* §§ 1500.4 and 1502.8. Agencies commonly use visual aids, such as graphics, maps, and pictures, throughout their environmental documents. CEQ agrees with the commenters that the visual

aids and charts must be understandable but does not consider it necessary to make additional changes to the regulatory text since the text indicates that the purpose of visual aids and charts is to enable decision makers and the public to readily understand the EIS. EISs must be written in plain language, and this requirement would also apply to visual aids and charts.

8. Draft, Final, and Supplemental Statements (§ 1502.9)

CEQ did not propose any substantive changes to paragraph (a) of § 1502.9 and did not receive any comments on it. Therefore, CEQ finalizes paragraph § 1502.9(a) as proposed.

CEQ proposed to revise paragraph (b) addressing draft EISs by deleting ''as interpreted'' from the requirement that draft EISs meet the requirements for final EISs in section 102(2)(C) of NEPA ''as interpreted in the regulations in this subchapter.'' 42 U.S.C. 4332(2)(c). CEQ proposed to delete this clause as inappropriately restrictive and for consistency with the same proposed change in §§ 1500.6 and 1502.2. CEQ makes this change in the final rule for the reasons discussed in section II.B.6 with respect to deleting the same phrase in § 1500.6.

CEQ also proposed to add the phrase ''the agency determines that'' to the introductory clause of the third sentence of § 1502.9(b) so that the beginning of the sentence would read, ''If the agency determines that a draft statement is so inadequate as to preclude meaningful analysis.'' CEQ proposed this addition to clarify that it is the agency preparing a draft EIS that determines a draft statement requires supplementation to inform its decision-making process.

A commenter suggested additional language for the second sentence of paragraph (b) to clarify that a lead agency must work with a cooperating agency to develop the proposed action and subsequent range of all alternatives. Another commenter recommended CEQ add the phrase ''may identify a preferred alternative'' to the end of § 1502.9(b) to clarify that agencies have the authority to identify a preferred alternative in a draft EIS.

In the final rule, CEQ revises paragraph (b) consistent with its proposed clarifying changes. CEQ declines to make the edits suggested by the commenters as §§ 1501.7 and 1501.8 address the roles of lead and cooperating agencies, and § 1502.14(d) already requires agencies to identify a preferred alternative or alternatives in the draft EIS, if one or more exists.

In § 1502.9(c), CEQ proposed to clarify that a final EIS should ''consider and respond'' to comments rather than just ''address'' them, thereby restoring language from the 1978 regulations and aligning the language with text in § 1503.4(a) regarding consideration of comments. The proposed rule explained that the 2020 rule did not explain the change from ''consider and respond'' to ''address,'' [79] and CEQ is concerned that it could be read as weakening the standard for responding to comments within § 1502.9 and in § 1503.4. CEQ makes this change in the final rule for consistency with § 1503.4(a).

One commenter suggested that CEQ replace ''responsible opposing view'' in paragraph (c) with ''relevant and non-frivolous opposing view'' to promote transparency and remove subjectivity regarding the definition of ''responsible.'' In the final rule, CEQ revised paragraph (c) consistent with its proposed clarifying changes. CEQ declines to change ''responsible,'' which has been in the regulations since 1978, and CEQ has not heard that there is confusion regarding the meaning of this term or that it is creating practical problems for agencies implementing NEPA or the public seeking to participate in NEPA reviews. CEQ interprets this phrasing to mean that there is a reasoned basis for the opposing view, not one that is arbitrary.

Paragraph (d) of § 1502.9 and its subparagraphs address the standards for supplemental EISs. While CEQ did not propose changes to paragraph (d)(1), a commenter suggested that the phrase ''if a major Federal action remains to occur'' is vague. In the final rule, CEQ revises the text in paragraph (d)(1) addressing when an agency has to consider a supplemental EIS. In the 2020 rule, CEQ added a clause to specify that agencies prepare supplements if an action ''remains to occur.'' Upon further consideration, CEQ revises this phrase in the final rule to ''is incomplete or ongoing'' to provide more clarity and specifically identify the circumstances when an agency needs to consider supplementation. CEQ intends the phrase ''incomplete and ongoing'' to have the same substantive meaning as ''remains to occur,'' and notes that courts have used both phrases. *See, e.g., Marsh* v. *Or. Nat. Res. Council,* 490 U.S. 360, 373 (1989) (holding that supplementation may be required ''[i]f there remains major Federal action to occur''; *Norton* v. *S. Utah Wilderness All.,* 542 U.S. 55, 73 (2004) (citing *Marsh* and holding that an agency is not required to supplement when the action in question is ''completed,'' and is no longer ''ongoing'').

In paragraph (d)(1)(ii), CEQ proposed to replace the word ''significant'' with ''important'' and ''impacts'' with ''effects'' (except where ''impact'' is used as part of the term FONSI) for consistency, as discussed in section II.A. CEQ also proposed to add ''substantial or'' before ''important new circumstances or information,'' for consistency with language in section 108(1) of NEPA, which confirms that an agency may rely on the analysis in an existing programmatic environmental document for five years without having to supplement or reevaluate the analysis, provided no substantial new circumstances or information exists. 42 U.S.C. 4336b(1).

Two commenters indicated that the proposed rule does not align with the statutory language in section 108 of NEPA regarding supplementation and reevaluation, because that section does not include the words ''or important'' before ''new circumstances.'' *See* 42 U.S.C. 4336b. Two commenters opposed the replacement of ''significant'' with ''substantial,'' expressing concern that it will increase uncertainty. A few commenters also requested that CEQ add definitions for ''substantial changes,'' ''substantial or important new circumstances,'' and ''environmental concerns are not substantial.''

In the final rule, CEQ revises paragraph (d)(1)(ii) by replacing ''significant'' with ''substantial'' to track the language of section 108(1) of NEPA requiring agencies to supplement if there are substantial new circumstances or information about the significance of adverse effects that bear on the analysis. 42 U.S.C. 4336b(1). CEQ interprets this language as consistent with the longstanding standard for supplementation and considers it a non-substantive change that clarifies one of the standards for supplementation of an EIS. Directly incorporating the language from section 108(1) of NEPA also avoids creating an implication that there are different supplementation standards for programmatic environmental documents and other environmental documents. As noted, the language in section 108(1) is consistent with longstanding practice, so there are not different standards for supplementation for programmatic environmental documents. 42 U.S.C. 4336b(1). This approach also obviates the need for the definitions requested by commenters because agencies have extensive experience applying the supplementation standard.

One commenter suggested that CEQ revise § 1502.9(d)(1)(ii) to clarify that

[79] *See* CEQ, 2020 Final Rule, *supra* note 39, at 43364–65.

supplementation is not limited to new environmental effects and that it also would apply to situations where the purpose and need or the alternatives are changed. CEQ declines to edit this paragraph to clarify this point because this scenario would be covered by the other criterion for supplementation in paragraph (d)(1)(i). Consistent with existing agency practice, agencies should continue to focus on whether a change to the proposed action could have environmental effects that have not been analyzed in determining whether changes to the proposed action require supplementation.

Another commenter noted that the cross-reference to the Emergencies section, § 1506.11, was incorrect in proposed paragraph (d)(3). In the final rule, CEQ fixes the cross reference and revises ''alternative procedures'' to ''alternative arrangements'' for consistency with the phrasing of § 1506.11.

CEQ proposed to redesignate paragraph (d)(4) of 40 CFR 1502.9 (2020) as paragraph (e) of § 1502.9 and title it ''Reevaluation'' to clarify that reevaluation is a separate tool to document new information when supplementation is not required. CEQ proposed to add in paragraph (e) that agencies may ''reevaluate'' an EIS in part to determine that changes to the proposed action or new circumstances or information relevant to environmental concerns are not ''substantial'' or ''that the underlying assumptions of the analysis remains valid,'' and therefore, the agency does not need to prepare a supplemental EIS. CEQ proposed this language in part for consistency with section 108(2) of NEPA's rule that an agency may rely on programmatic documents that are more than five years old if it reevaluates the underlying analysis. 42 U.S.C. 4336b(2). However, while section 108(2) requires reevaluation for programmatic documents more than five years old, CEQ proposed to leave agencies discretion over whether and when to reevaluate non-programmatic documents. 42 U.S.C. 4336b(1).

One commenter requested that CEQ revise paragraph (e) to clarify that when agencies reevaluate their NEPA documents, supplementation is required if the changes are substantial or the underlying assumptions of the analysis do not remain valid. A couple of commenters requested specific wording changes, including adding ''or important'' after ''substantial'' in the first sentence of paragraph (e) and changing ''the agency should'' to ''the agency must document the finding.'' Another commenter asked CEQ to revise paragraph (e) to clarify that new circumstances or information in the absence of a major Federal action do not trigger a requirement to reevaluate an EIS. Another commenter recommended language to clarify that reevaluation should only be permitted in circumstances for which the proposed action has not changed physical location.

In the final rule, CEQ revises paragraph (e) to simplify the paragraph on reevaluation and provide that agencies may reevaluate EISs to determine that supplementation is not required. This text is substantively the same as the proposed rule, but avoids unnecessary repetition of the standard for supplementation and avoids any potential confusion that there is an independent standard for reevaluation. Agencies may use reevaluation to document why a change to an action or new information does not require supplementation. Additionally, agencies may use reevaluation to conduct additional analysis to determine whether the change to the action or the new information meets either of the criteria for supplementation; in such cases, the agency would then prepare a supplemental EIS. Some agency procedures already provide such processes and § 1507.3(c)(10) provides that agencies must include such processes in their NEPA procedures, as appropriate. CEQ revises the last sentence of paragraph (e) to clarify that agencies also may prepare a supplemental EA and FONSI to reevaluate an EIS. Some agencies already do this in practice, and CEQ is revising this language in the final rule to codify the practice.

One commenter provided general feedback on § 1502.9 recommending CEQ include language requiring that final EISs and reevaluated EISs adhere to the regulatory requirements in place at the time the agency develops the supplement. CEQ declines to make these changes as agencies are in the best position to determine which regulatory requirements apply on a case-by-case basis, consistent with § 1506.12, which addresses the effective date of the final rule.

9. Recommended Format (§ 1502.10)

In § 1502.10, CEQ proposed to revise the recommended format of an EIS. CEQ proposed to add cross references to the relevant regulatory sections at the end of paragraphs (a)(1), (a)(2), and (a)(4) through (a)(6). In paragraph (a)(7), CEQ proposed to strike the reference to ''submitted alternatives, information, and analyses'' given the proposed revisions to § 1502.17. CEQ proposed to move appendices to paragraph (a)(7), include the summary of scoping information required by § 1502.17 and the list of preparers required by § 1502.18 in appendices, rather than the main body of the EIS, and add cross references to the relevant regulatory sections. Therefore, CEQ proposed to strike paragraphs (a)(8) and (a)(9) of 40 CFR 1502.10 (2020) referencing the list of preparers and appendices since these lists would be addressed in paragraph (a)(7). Finally, CEQ proposed to revise paragraph (b) to require agencies to include all of the sections referenced in paragraph (a) if they choose to use a different format.

CEQ received minimal comments on the proposed changes to § 1502.10, and the few comments submitted expressed support for the proposed changes. One commenter also requested that CEQ require the EIS format for EAs. CEQ makes the changes to § 1502.10 as proposed. CEQ declines to apply this section to EAs as well because § 1501.5 already addresses the required sections of an EA.

10. Cover (§ 1502.11)

CEQ proposed to revise § 1502.11(a) to clarify that the list of ''responsible agencies'' on an EIS cover are the ''lead, joint lead, and any cooperating agencies.'' CEQ did not receive comments specific to this proposal but has added the phrase ''to the extent feasible'' before ''any cooperating agencies'' to address the rare circumstance in which there may be such a large number of cooperating agencies that listing all of them on the cover would make the cover unreadable. In such circumstances, an agency may include a note on the cover that identifies where in the EIS a list of the cooperating agencies is found.

Consistent with the proposed change in § 1502.4(e)(10) to require a unique identification number for tracking purposes, CEQ proposed to amend paragraph (g) to require the cover to include the identification number identified in the NOI. As discussed further in sections II.C.4 and II.D.4, CEQ is including the requirement for unique identification numbers in the final rule, and therefore adds this requirement to § 1502.11(g) as proposed. The inclusion of the identification number on the cover clarifies the relationships of documents to one another, helps the public and decision makers easily track the progress of the EIS as it moves through the NEPA process, and facilitates digitization and analysis.

CEQ proposed to strike the requirement in paragraph (g) of 40 CFR 1502.11 (2020) to include on the cover

of the final EIS the estimated preparation cost. Multiple agencies requested this change during development of the proposed rule. The 2020 rule added this requirement stating that including estimated total costs would be helpful for tracking such costs, and that agencies could develop their own methodologies for tracking EIS preparation costs in their agency NEPA procedures.[80] However, Federal agency commenters stated that agencies typically do not estimate total costs, that they are difficult to monitor especially when applicants and contractors are bearing some of the cost, that the methodology for estimating costs is inconsistent across agencies, and that providing these estimates would be burdensome. At least one agency commenter noted that agencies inconsistently implemented a similar requirement in E.O. 13807,[81] which undermined the utility of the estimates, that tracking costs added a significant new burden on staff, and that it was not clear whether tracking such costs provided useful information for agencies or the public.

Commenters both supported and opposed the proposal to remove the requirement to include the estimated preparation costs on the cover of the final EIS. Commenters who supported removing the requirement stated that the requirement added in 2020 imposed a substantial administrative burden on agencies and increased the length of the EIS preparation process because accurately tracking the total cost of preparation is difficult and labor-intensive. A few commenters expressed support for removing the requirement but suggested that, in order to facilitate transparency, CEQ could encourage agencies to include estimated cost information in the EIS, indicating this information could easily be included in an appendix.

Commenters who opposed the removal expressed that the requirement improves transparency and accountability and also suggested that tracking costs can improve the efficiency of the NEPA process. One commenter also asserted that CEQ failed to explain why it is no longer necessary to fulfill the data gap that was outlined in the 2020 rulemaking as a basis for adding the requirement.

As stated in the proposed rule, CEQ does not consider EIS costs to be germane to the purpose of an EIS. Requiring that they be included on the cover could incorrectly lead the public and decision makers to believe that those costs provide information about the proposed action addressed in the EIS. In general, the purpose of the cover is to indicate the subject matter of the document and provide the public with an agency point of contact, provide a short abstract of the EIS, and indicate the date by which the public must submit comments. Further, CEQ was concerned that requiring agencies to calculate costs may unnecessarily add time and expense to the EIS preparation process, particularly where aspects of an environmental review serve multiple purposes, and allocating costs to NEPA compliance and other obligations may be complicated.

CEQ recognizes the value in gathering information on overall costs, trends in costs, and approaches that can reduce costs, as this can provide a full picture of how and whether agencies are effectively using their resources, including to conduct environmental reviews. Each agency should track and monitor these costs through their own procedures and mechanisms and consult with CEQ about any lessons learned to inform CEQ's ongoing evaluation of the efficiency and effectiveness of the NEPA process. However, CEQ does not consider requiring in the NEPA regulations that agencies publish costs on the cover of EISs to be the appropriate mechanism to develop that information.

CEQ considered the comments it received and is removing the requirement to include costs from paragraph (g). Removing this requirement does not preclude agencies from developing cost information or including it in an EIS if they deem it appropriate, but CEQ is concerned that the increased administrative burden of tracking costs, including the potential additional time needed to gather information, will unnecessarily delay NEPA processes. Further, the lack of consistent methodology across agencies coupled with the significant burden to develop consistent methodology, for which CEQ lacks the specialized expertise to do so, limits the utility of requiring agencies to present this information.

11. Summary (§ 1502.12)

CEQ proposed modifications to § 1502.12 to clarify the purpose of the summary and update what elements agencies should include in the summary, with a goal of creating summaries that are more useful to the public and agency decision makers. CEQ proposed these changes so that the summary would provide the public and agency decision makers with a clear, high-level overview of the proposed action and alternatives, the significant effects, and other critical information in the EIS.

In the second sentence of § 1502.12, CEQ proposed to replace the word ''stress'' with ''include'' in describing the contents of the summary to clarify that an adequate and accurate summary may include more than what is listed in § 1502.12. Next, CEQ proposed to clarify that the summary should ''summarize any disputed issues,'' ''any issues to be resolved,'' and ''key differences among alternatives.''

CEQ proposed these changes to provide the public and decision makers with a more complete picture of the disputed issues, rather than focusing on ''areas of'' disputed issues, and to facilitate informed decision making and transparency. CEQ also proposed these edits for consistency with § 1502.14(b), which requires agencies to discuss alternatives in detail. CEQ explained in the proposed rule that summarizing the key differences between alternatives would enhance the public's and decision makers' understandings of the relative trade-offs between the alternatives that the agency considered in detail.

One commenter expressed concern with CEQ's proposal stating that summarizing ''any'' issue trivializes the analytical process and makes the summary more like a catalog of issues raised, regardless of how ill-informed or baseless the issues may be.

CEQ finalizes the changes as proposed. CEQ disagrees with the commenter's interpretation of the use of the term ''any.'' CEQ's intent in using the qualifier ''any'' is to acknowledge that some EISs will not have any disputed issues or issues for resolution. It is not CEQ's intent for agencies to include a laundry list of every minor issue. Rather, CEQ intends the summary to explain the big-picture and important issues that the EIS addresses.

CEQ also proposed to add language to the second sentence to require that the summary identify the environmentally preferable alternative or alternatives. CEQ proposed this addition to enhance the public's and decision makers' understandings of the alternative or alternatives that will best promote the national environmental policy, as expressed in section 101 of NEPA, by providing a summary of that alternative early on in the document. As discussed further in section II.D.13, CEQ is finalizing its proposal to require agencies to identify the environmentally preferable alternative in the EIS, and therefore finalizes this addition to § 1502.12 as proposed.

[80] *Id.* at 43329.

[81] E.O. 13807, *supra* note 14.

CEQ proposed to add a third sentence to § 1502.12 to require agencies to write the summary in plain language and encourage use of visual aids and charts. CEQ proposed this addition to make EIS summaries easier to read and understand.

One commenter expressed support for the proposed changes to require agencies to write the summary in plain language and to encourage use of visual aids and charts. However, this commenter stated that agencies must design their use of visual aids and charts to be understandable to non-technical audiences, pointing to documents they have reviewed that included tables that are difficult to understand.

CEQ adds the proposed sentence to § 1502.12 in the final rule. The CEQ regulations have long required agencies to write environmental documents in plain language as a means to preparing readable, concise, and informative documents. *See, e.g.,* 40 CFR 1500.4 and 1502.8 (2019). Agencies commonly use visual aids, such as graphics, maps, and pictures, throughout their environmental documents. CEQ agrees with the commenters that visual aids and charts should be understandable but does not consider it necessary to make additional changes to the regulatory text. Section 1502.8 explains that agencies should use visual aids or charts in EISs so that decision makers and the public can readily understand them, which includes in the summary.

Finally, similar to other changes regarding page limits, CEQ proposed to allow agencies flexibility in the length of a summary. CEQ proposed to remove the 15-page limitation on summaries and instead to encourage that summaries not exceed 15 pages. Although summaries should be brief, CEQ acknowledged with this proposed change that some proposed actions are more complex and may require additional pages.

One commenter suggested that CEQ require the summary to include a consistency analysis that compares the proposed action and alternatives with applicable State and county resource management plans and State statutes. To accommodate their suggestion, the commenters indicated that the page limit might need to be adjusted to more than 15 pages.

CEQ makes the change to the length of summaries as proposed to provide agencies with flexibility to vary the length of documents based on the complexity of the action. Because summaries count toward the page limits set in § 1502.7, agencies have an incentive to keep summaries as short as possible while providing necessary information to the public and decision makers. While CEQ declines to require the summary to include a consistency analysis per the commenter's suggestion because it is inappropriately specific for government-wide regulations, the additional flexibility for length would accommodate such an approach, should an agency choose to do so.

12. Purpose and Need (§ 1502.13)

CEQ proposed to revise § 1502.13 to align the language with the text of section 107(d) of NEPA, which requires an EIS to include a statement that briefly summarizes the underlying purpose and need for the proposed agency action. *See* 42 U.S.C. 4336a(d).

CEQ received multiple comments requesting that CEQ revise § 1502.13 to revert to the 2020 rule's language providing that when an agency's statutory duty is to review an application for authorization, the agency must base the purpose and need on the applicant's goals and the agency's authority. CEQ revised this language in the Phase 1 rulemaking and declines to restore the 2020 language for the reasons discussed in the Phase 1 rulemaking, the Phase 1 Response to Comments, and the Phase 2 Response to Comments. Additionally, CEQ declines to include this language in the final rule because it is inconsistent with section 107(d) of NEPA. 42 U.S.C. 4336a(d). CEQ revises § 1502.13 as proposed.

One commenter requested CEQ clarify that the purpose and need of a proposed action should define or limit the reasonableness of the range of alternatives, which is identified in the statutory amendments. CEQ addresses alternatives in § 1502.14 and declines to edit this section to address alternatives. Another commenter requested CEQ add a direction for agencies to use narrow purpose and need statements that limit the potential reasonable alternatives. CEQ declines to make this change because it would be inconsistent with section 107(d) of NEPA and would undermine the discretion and judgment that agencies appropriately exercise in defining the purpose and need for their actions. *See* 42 U.S.C. 4336a(d).

13. Alternatives Including the Proposed Action (§ 1502.14)

CEQ proposed revisions to § 1502.14 to promote the rigorous analysis and consideration of alternatives. To that end, CEQ proposed to reintroduce to § 1502.14 much of the 1978 text that the 2020 rule removed and to modernize it to ensure agency decision makers are well-informed. Many commenters on the Phase 1 rule requested CEQ revise this provision to revert to the 1978 language or otherwise revise it to ensure agencies fully explore the reasonable alternatives to their proposed actions.[82]

First, CEQ proposed to revise the introductory paragraph of § 1502.14 to reinstate the language from the 1978 regulations that provided that the alternatives analysis ''is the heart of the environmental impact statement.'' As CEQ explained in the NPRM, while the 2020 rule described this clause as ''colloquial language'' to justify its removal,[83] CEQ has reconsidered its position and now considers the language to be an integral policy statement that emphasizes the importance of the alternatives analysis to allow decision makers to assess a reasonable range of possible approaches to the matters before them, and notes that numerous court decisions quoted this language from the 1978 regulations in stressing the importance of the alternatives analysis. *See, e.g., Wyoming* v. *U.S. Dep't of Agric.,* 661 F.3d 1209, 1243 (10th Cir. 2011). The proposed rule also noted that numerous commenters on the 2020 rule and the 2022 Phase 1 rule supported the inclusion of this language.[84]

Multiple commenters supported restoring the language that describes the alternatives section as the heart of the EIS, citing pre-1978 case law and asserting that without evaluation of reasonable alternatives, the NEPA process loses its potential to truly inform better decision making. Another commenter asserted that robust analysis of the relative environmental effects of a range of reasonable alternatives is necessary to ensure the EIS serves the regulatory purpose of providing for meaningful public input and informed agency decision making. In the final rule, CEQ reinstates the language from the 1978 regulations to the introductory paragraph of § 1502.14, as proposed.

Second, CEQ proposed a clarifying edit in the second sentence of the introductory paragraph to replace ''present the environmental impacts'' with ''identify the reasonably foreseeable environmental effects'' for consistency with § 1500.2(e) and section 102(2)(C)(i) of NEPA. 42 U.S.C. 4332(2)(C)(i). CEQ did not receive comments specific to this proposal and makes this change in the final rule.

Third, in the introductory paragraph, CEQ proposed to add a third sentence

[82] *See* CEQ, Phase 1 Response to Comments, *supra* note 52, at 162.

[83] *See* CEQ, 2020 Final Rule, *supra* note 39, at 43330.

[84] *See, e.g.,* CEQ, 2020 Response to Comments, *supra* note 69, at 274; CEQ, Phase 1 Response to Comments, *supra* note 52, at 55.

stating that the alternatives analysis should sharply define issues for the decision maker and the public and provide a clear basis for choice among the alternatives. CEQ proposed reintroducing this language from the 1978 regulations because it provides an important policy statement, concisely explaining the goals of the alternatives analysis. CEQ received generally supportive comments on this proposal, and CEQ makes this edit to the third sentence of the introductory paragraph in the final rule.

Fourth, CEQ proposed in paragraph (a) to restore from the 1978 regulations the clause that agencies must ''rigorously explore and objectively evaluate'' reasonable alternatives at the beginning of the first sentence. CEQ proposed to reinsert this language because it provides a standard that agencies have decades of experience applying in the analysis of alternatives.

Some commenters expressed general support for restoring the requirement to rigorously explore and objectively evaluate reasonable alternatives in paragraph (a). Other commenters opposed the restoration of this language, asserting that it is arbitrary and subjective and has the potential to increase litigation over whether an agency met the subjective test of rigorous and objective evaluation. CEQ makes this change in the final rule because restoring this language will help ensure agencies conduct a robust analysis of alternatives and their effects, rather than a cursory, box-checking analysis.

One commenter asserted that the first sentence of paragraph (a) should refer to the definition of ''reasonable alternatives'' to make it clear that alternatives proposed in scoping that do not meet the purpose and need and that are not technically and economically feasible should be eliminated from further consideration. CEQ declines to add a cross reference to the definition of ''reasonable alternatives'' as unnecessary because the phrase ''reasonable alternatives'' is a defined term in the regulations, and the definition applies whenever the regulations use the term.

Fifth, CEQ proposed to add two additional sentences to paragraph (a). CEQ proposed the first sentence to clarify that agencies need not consider every conceivable alternative to a proposed action, but rather must consider a reasonable range of alternatives that fosters informed decision making. CEQ proposed to add this sentence to replace the first sentence in paragraph (f) of 40 CFR 1502.14 (2020), which required agencies to limit their consideration to a reasonable number of alternatives. CEQ proposed this language for consistency with longstanding CEQ guidance [85] and to reinforce that the alternatives analysis is not boundless; the key is to provide the decision maker with reasonable options to ensure informed decision making. CEQ did not receive specific comments on this proposed change and adds the proposed new sentence to § 1502.14(a).

CEQ also proposed a second new sentence in paragraph (a) to clarify that agencies have the discretion to consider reasonable alternatives not within their jurisdiction, but NEPA and the CEQ regulations generally do not require them to do so. CEQ explained that such alternatives may be relevant, for instance, when agencies are considering program-level decisions [86] or anticipate funding for a project not yet authorized by Congress.[87]

Several commenters opposed this proposal, asserting that if an agency has no authority to implement an alternative, it is unreasonable, and the agency should not consider it. One commenter stated that NEPA is a procedural statute that does not confer substantive authority; as such, NEPA cannot authorize an agency to pursue an action that is otherwise not authorized. Some commenters characterized consideration of alternatives outside the agency's jurisdiction as inefficient and a waste of agency resources. Others expressed that allowing consideration of such alternatives would be contrary to law, and the alternatives would not be consistent with the purpose and need of the proposal. Multiple commenters stated that *Public Citizen* supports the proposition that an agency's NEPA analysis is properly limited by the scope of the agency's authority and that, as such, CEQ's proposed language is in tension with this ruling as well as other case law. However, other commenters stated the opposite—that case law has well established that agencies may and in some cases must consider alternatives beyond the agency's jurisdiction.

CEQ adds this second new sentence to the end of § 1502.14(a) in the final rule to acknowledge that in limited situations, it may be appropriate for an agency to consider an alternative outside its jurisdiction. As noted in the proposed rule, CEQ anticipates that such consideration will occur relatively infrequently and notes that such alternatives would still need to be technically and economically feasible and meet the purpose and need for the proposed action, consistent with the definition of ''reasonable alternatives.'' CEQ's revision is intended to strike a balance; the final rule does not require agencies to consider alternatives outside their jurisdiction or preclude agencies from doing so. Further, the final rule retains the qualification that the agency need only consider reasonable alternatives.

Some commenters requested CEQ revise § 1502.14(a) to expressly comply with the statutory direction that alternatives must be technically and economically feasible and must meet the purpose and need of the proposal. 42 U.S.C. 4332(2)(C)(iii). The commenters stated the alternatives that do not meet those criteria are not consistent with the statute. CEQ declines to add additional language in § 1502.14(a) because the definition of ''reasonable alternatives'' already includes the requirement that an alternative be technically and economically feasible and meet the purpose and need. CEQ addresses additional comments on the definition of ''reasonable alternatives'' in section II.J.22.

Sixth, as noted earlier in this section, CEQ proposed to strike the requirement to limit consideration to a reasonable number of alternatives from paragraph (f) and to add a sentence to paragraph (a) directing agencies to consider a reasonable range of alternatives that fosters informed decision making. CEQ proposed to repurpose paragraph (f) to establish a requirement to identify the environmentally preferable alternative. In addition to proposing a new definition of ''environmentally preferable alternative'' in § 1508.1(*l*), CEQ proposed in this provision to describe elements that the environmentally preferable alternative may generally include. CEQ proposed to use ''or'' in the list to make clear that the environmentally preferable alternative need not include each delineated element and recognize that identifying the environmentally preferable alternative may entail making trade-offs in some cases. CEQ explained that it proposed this approach to provide agencies flexibility to rely on

[85] *See* CEQ, Forty Questions, *supra* note 5.

[86] *See, e.g.,* Fed. R.R. Admin., Final Program Environmental Impact Report/Environmental Impact Statement (EIR/EIS) for the proposed California High-Speed Train System (2005), *https://hsr.ca.gov/programs/environmental-planning/program-eir-eis-documents-for-the-statewide-high-speed-rail-system-tier-1/final-program-environmental-impact-report-environmental-impact-statement-eir-eis-for-the-proposed-california-high-speed-train-system-2005/.*

[87] *See, e.g.,* U.S. Army Corps of Eng'rs, *Final Environmental Impact Statement for Savannah Harbor Expansion Project* (rev. July 2012), *https://www.sas.usace.army.mil/Missions/Civil-Works/Savannah-Harbor-Expansion/Final-Environmental-Impact-Statement/.*

their discretion and expertise to strike an appropriate balance in identifying the environmentally preferable alternative. Finally, CEQ proposed to clarify in paragraph (f) that the environmentally preferable alternative may be the proposed action, the no action alternative, or a reasonable alternative and that agencies may identify more than one environmentally preferable alternative as they deem appropriate.

Two commenters opposed the removal of ''limit their consideration to a reasonable number of alternatives'' in paragraph (f), asserting the statement is consistent with long-standing CEQ guidance and case law. The commenter further opined that the proposed paragraph (f) unnecessarily and inexplicably creates an open question regarding the number of alternatives an agency must consider and is likely to result in delays and increase litigation risk. One commenter stated that while they recognize that proposed paragraph (a) states that an agency does not need to consider every conceivable alternative, they asserted that it is helpful and consistent with judicial precedent to describe what constitutes a ''reasonable number.'' Another commenter asserted that removal of this language could lead agencies to develop more alternatives than are reasonable or necessary under NEPA.

CEQ declines to retain the statement that agencies must limit their consideration to a reasonable number of alternatives because CEQ considers the new sentence in paragraph (a) to provide clearer direction to agencies that they should consider a reasonable range of alternatives that foster informed decision making. Agencies have long had discretion to identify that range, and CEQ encourages agencies to identify and consider an appropriate range and explain why it considered and dismissed other alternatives so that agency decision makers and the public have a clear understanding as to how the agency arrived at the alternatives it considered in the document. While CEQ considers the new sentence in paragraph (a) to be clearer than the sentence previously included in paragraph (f), it does not interpret the new sentence to require agencies to consider a greater number of alternatives and does not intend for agencies to do so.

Multiple commenters supported proposed § 1502.14(f), while other commenters opposed it. Those who supported identification of the environmentally preferable alternative in the EIS expressed that earlier identification will provide more transparency to the public and allow the public an opportunity to comment on it. Some commenters also specifically supported the inclusion of addressing climate-change related effects and disproportionate and adverse effects on communities with environmental justice concerns in the examples of an environmentally preferable alternative.

Commenters who opposed the proposed language expressed concern that the concept of an environmentally preferable alternative would create new complexity and risk for litigation. They expressed that the identification of such an alternative is inherently subjective and would result in unnecessarily broad and time-consuming environmental reviews not supported by the statute. One commenter contended that the proposed new requirement inappropriately introduces political doctrine into the rule. One commenter suggested that if CEQ retains the requirement to identify the environmental preferable alternative in the EIS, that the final rule should be less prescriptive about the attributes of the environmentally preferable alternative.

CEQ adds the requirement to identify the environmentally preferable alternative or alternatives in the EIS in § 1502.14(f), and adds a clause to clarify that the agency must identify the environmentally preferable alternative from amongst the alternatives considered in the EIS. CEQ adds this clarification to address a misunderstanding by some of the commenters that the environmentally preferable alternative or alternatives that § 1502.14(f) requires agencies to identify is an additional alternative to the proposed action, no action, and reasonable alternatives that the agency would otherwise consider in an EIS. Rather, this provision requires agencies to identify which alternative amongst the proposed action, no action, and reasonable alternatives is the environmentally preferable alternative.

CEQ disagrees that requiring agencies to identify the environmentally preferable alternative in the EIS requires an inherently subjective determination, would result in unnecessarily broad and time-consuming environmental reviews, or introduces political doctrine. As CEQ noted in the proposed rule, the regulations have always required agencies to identify the environmentally preferable alternative in a ROD. 40 CFR 1505.2 (2019) and 40 CFR 1505.2 (2020). Agencies, therefore, have decades of experience with identifying the environmentally preferable alternative.

Moreover, CEQ views this information as helpful for decision makers and the public. Requiring agencies to identify the environmentally preferrable alternative in the draft EIS will enable public comment on this determination, which can include comment on whether the agency has adequately explained its conclusion or whether the determination is overly subjective. This new provision provides additional guidance on what this alternative entails, improving consistency and furthering NEPA's goal of ensuring that agencies make informed decisions regarding actions that impact the environment. Additionally, requiring the draft and final EIS to identify the environmentally preferable alternative will increase the transparency of the agency's decision-making process at an earlier stage, as well as provide an opportunity for the public to comment on the environmentally preferable alternative before the agency makes its decision.

CEQ disagrees that merely requiring agencies to identify which alternative or alternatives are environmentally preferable in the EIS, rather than only in the ROD, will increase litigation. The requirement in the final rule shifts the timing of identifying the environmentally preferred alternative or alternatives, but commenters have not explained why requiring agencies to make this identification earlier in the decision-making process would increase litigation risk, and CEQ does not view this shift as materially affecting litigation risk, since claims alleging a violation of NEPA must be brought after an agency issues a ROD. *See, e.g., Oregon Nat. Res. Council* v. *Harrell,* 52 F.3d 1499, 1504 (9th Cir. 1995). CEQ also notes the regulations do not require agencies to select the environmentally preferable alternative, just as the long-standing requirement for agencies to identify the environmentally preferable alternative in a ROD did not. Rather, identifying the environmentally preferable alternative will increase transparency and allow the public to comment on it.

Some commenters expressed that, overall, the proposed changes to § 1502.14 expand the alternatives analysis and could interfere with agencies' ability to meet the page and time limits. CEQ disagrees with the commenters' assertions because the revised regulations clarify, rather than expand, the requirements for alternatives analysis.

While CEQ did not propose edits to § 1502.14(b), one commenter requested that CEQ restore the 1978 language to ensure agencies devote substantial treatment to each alternative they considered in detail. The 2020 rule removed the substantial treatment

language and replaced it with the requirement to discuss each alternative. The commenter asserted that CEQ should restore this language because restoring direction to rigorously explore and objectively evaluate reasonable alternatives would ensure agencies take a hard look at their proposed action. CEQ declines to add this language. The language that CEQ adds to paragraph (a), requiring agencies to rigorously explore and objectively evaluate alternatives to foster informed decision making, addresses this concern and provides agencies sufficient direction to take a hard look at their proposed actions and alternatives.

14. Affected Environment (§ 1502.15)

CEQ proposed revisions to § 1502.15 to emphasize the use of high-quality information; clarify considerations of reasonably foreseeable environmental trends; and emphasize efficiency and concise documents. CEQ also proposed to divide § 1502.15 into separate lettered paragraphs.

First, CEQ proposed to move the first sentence of 40 CFR 1502.15 (2020) into paragraph (a) of § 1502.15 but did not propose any changes to the text. One commenter suggested changes to proposed paragraph (a) to more clearly describe that the affected environment must be a clear, unambiguous base case against which the agency can compare all effects equally and noted a particular example in which, the commenter asserted, confusion about this point had resulted in distorted analyses for a category of actions that did not provide the agency decision maker and the public an appropriate comparison of the proposed actions, no action alternatives, and reasonable alternatives. In the final rule, CEQ deletes ''or created'' in the first sentence because areas created by the proposed action or alternatives would constitute reasonably foreseeable effects, and are not part of the affected environment. CEQ notes, however, that the affected environment cannot be frozen in time and therefore must examine reasonably foreseeable environmental trends in the affected areas.

Second, CEQ proposed to add new paragraph (b) to encourages agencies to use high-quality information, including best available science and data—in recognition that high-quality information should inform all agency decisions—to describe reasonably foreseeable environmental trends. CEQ also proposed to note explicitly that such trends include anticipated climate-related changes to the environment and that agencies should provide relevant information, consistent with § 1502.21, when such information is lacking. CEQ proposed this paragraph to articulate clearly NEPA's statutory mandate that science inform agencies' decisions as part of a systematic, interdisciplinary approach. *See* 42 U.S.C. 4332(2)(A).

In the second sentence of paragraph (b), CEQ proposed to encourage agencies to use the description of baseline environmental conditions and reasonably foreseeable trends to inform its analysis of environmental consequences and mitigation measures by connecting the description of the affected environment with the agency's analysis of effects and mitigation. CEQ proposed this language to clarify that agencies should consider reasonably foreseeable future changes to the environment, including changes of climate conditions on affected areas, rather than merely describing environmental trends or climate change trends at the global or national level. When describing the proposed changes to paragraph (b) in the proposed rule, CEQ noted that, in line with scientific projections, accurate baseline assessment of the affected environment over an action's lifetime should incorporate forward-looking climate projections rather than relying on historical data alone.

A few commenters opposed proposed § 1502.15(b), with some commenters particularly taking issue with the singling out of climate change. A few commenters requested that the final rule require agencies to use high-quality information, with some further requesting that the regulations define high-quality information. One commenter expressed that it will be nearly impossible to use best available science, and another requested that Indigenous Knowledge be included as a source of high-quality information.

CEQ adds proposed § 1502.15(b) in the final rule with a few modifications. In the first sentence, CEQ changes ''should'' to ''shall'' before ''use high-quality information'' for consistency with § 1506.6 (proposed as § 1502.23) and modifies the clause providing examples of high-quality information for consistency with the changes to the examples CEQ makes in § 1506.6, as discussed in section II.H.4. The final rule includes ''reliable data and resources, models, and Indigenous Knowledge'' as examples of high-quality information in lieu of the proposed phrase ''including the best available science and data.'' As noted in section II.H.4, this change incorporates the language of section 102(2)(E) of NEPA and is consistent with section 102(2)(D) of NEPA. 42 U.S.C. 4332(2)(D)–(E). Peer-reviewed studies and models are examples of reliable data and resources.[88] The final rule also replaces ''lacking'' with ''incomplete or unavailable'' for consistency with the language of § 1502.21, which the sentence cross-references. CEQ declines to remove the example of climate change from this sentence. Because climate change has implications for numerous categories of effects—from species to water to air quality—it is a particularly important environmental trend for agencies to consider in addressing the affected environment.[89] *See* 42 U.S.C. 4321, 4331, 4332(2)(C)(iv). Lastly, CEQ includes the third proposed sentence in the final rule but uses ''affected environment'' instead of ''baseline'' and describes existing ''environmental conditions, reasonably foreseeable trends, and planned actions in the area'' as examples of the affected environmental that should inform the agency's analysis of environmental consequences and mitigation measures.

Third, CEQ proposed to move the second through fourth sentences of 40 CFR 1502.15 (2020) to new paragraph (c) and revise the second sentence to divide it into two sentences to enhance readability. In the first sentence of paragraph (c), CEQ proposed minor revisions to clarify that agencies may combine the affected environment and environmental consequences sections in an EIS. In the second sentence, CEQ proposed to clarify that the description ''should,'' rather than ''shall'', be no longer than necessary to understand the ''relevant affected environment'' and the effects of the alternatives.

One commenter disagreed with allowing agencies to combine the affected environment and environmental consequences sections of the EIS. The commenter asserted that agencies should discuss the two issues separately so that it is clear in the EIS how much attention is paid to each section and in order to ''force the agency to present actual'' effects in the EIS. The commenter asserted that agencies will provide more material on the affected environment instead of describing effects.

CEQ makes the change as proposed in § 1502.15(c) of the final rule. The final rule allows but does not require

[88] *See, e.g.,* OMB, Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies, 67 FR 8452 (Feb. 22, 2002); OMB, Final Information Quality Bulletin for Peer Review, 70 FR 2664 (Jan. 14, 2005); and OMB, M–19–15, Improving Implementation of the Information Quality Act (2019), *https://www.whitehouse.gov/wp-content/uploads/2019/04/M-19-15.pdf.*

[89] *See, e.g.,* U.S. Glob. Change Rsch. Program, Fifth National Climate Assessment (2023), *https://nca2023.globalchange.gov.*

agencies to combine the description of the affected environment with the analysis of environmental consequences. CEQ added this provision in the 2020 regulations to promote more efficient documents, and CEQ encourages agencies to reduce redundancy in their documents and provide clear and concise but thorough descriptions in the EIS. CEQ disagrees that allowing agencies to combine these discussions also allows them to give more weight to one section or the other. Agencies must thoroughly discuss both the affected environment and the environmental consequences of their proposed actions and alternatives to meet the requirements of both §§ 1502.15 and 1502.16.

15. Environmental Consequences (§ 1502.16)

CEQ proposed several changes to § 1502.16 to clarify the role of this section and methods of analysis and make updates to ensure that agencies integrate climate change and environmental justice considerations into the analysis of environmental effects. First, CEQ proposed to add ''reasonably foreseeable'' in proposed paragraph (a)(1) before ''environmental effects'' for consistency with section 102(2)(C)(i) of NEPA and in proposed paragraph (a)(2) before ''adverse environmental effects'' for consistency with section 102(2)(C)(ii) of NEPA. 42 U.S.C. 4332(2)(C)(i)–(ii). In the final rule, CEQ reorganizes § 1502.16 to integrate proposed paragraph (a)(1) into § 1502.16(a), as discussed further in this section, and adds the reference to ''reasonably foreseeable'' effects in paragraph (a) to make clear that agencies must discuss the environmental consequences described in paragraphs (a)(1) through (a)(13) when they are reasonably foreseeable effects of the proposed action or alternatives. Therefore, CEQ omits further references to ''reasonably foreseeable'' in paragraphs (a)(1) through (a)(13) to avoid duplication. The recent amendments to NEPA codified the longstanding principle from the 1978 regulations and recognized by the courts that effects must be reasonably foreseeable. CEQ also notes that the definition of ''effects'' in § 1508.1(i) incorporates ''reasonably foreseeable'' into the definition such that the term ''effects'' incorporates the reasonably foreseeable standard each time it is used in this section and throughout the regulations.

Second, in proposed paragraph (a)(1), CEQ proposed to modify the second sentence, requiring agencies to base the comparison of the proposed action and reasonable alternatives on the discussion of effects, to add a clause at the end: ''focusing on the significant or important effects.'' CEQ proposed this change to emphasize that agencies' analyses of effects should be proportional to the significance or importance of the effects. CEQ did not receive specific comments on this proposal, and CEQ makes this change in the final rule in paragraph (a), into which CEQ integrates proposed paragraph (a)(1) as discussed further in this section. CEQ includes the word ''important'' in addition to ''significant'' because even if an agency does not identify which effects rise to the level of significance, it should still focus on the effects that are important for the agency decision maker to be aware of and consider. Consistent with this provision, agencies should generally identify the effects they deem significant to inform the public and decision makers.

While CEQ did not propose any substantive changes to paragraph (a), a few commenters suggested changes. One commenter expressed that even though paragraph (a) specifies that the environmental consequences discussion should not duplicate discussions from § 1502.14, it is confusing and unnecessary for the regulations to essentially require the same information in both sections. Another commenter requested that CEQ add qualifying language, ''as relevant or appropriate'' to the last sentence of paragraph (a) stating that ''[t]he discussion shall include.'' The commenter asserted this language would help improve efficiency by providing lead agencies flexibility to tailor the EIS to the specifics of the action.

CEQ agrees with the commenter that the language in paragraph (a) could be confusing. To enhance clarity, the final rule integrates proposed paragraph (a)(1) into § 1502.16(a) and combines the first two sentences of proposed paragraph (a)(1), to require that the comparison of the proposed action and alternatives ''be based on their reasonably foreseeable effects and the significance of those effects'' and that this discussion focus on the significant and important effects. The final rule also consolidates the last two sentences of proposed paragraph (a) to state that the environmental consequences section should not duplicate discussions ''required by'' § 1502.14, which CEQ revises to address the commenter's confusion about this text, and must include ''an analysis of'' the issues discussed in the subparagraphs to paragraph (a).

CEQ declines to add the qualifier ''as relevant or appropriate'' to the last sentence, because some of the items in the list are always required. For paragraphs (a)(5) through (a)(10) and (a)(13), which are only required when they are reasonably foreseeable, the final rule adds the qualifier ''where applicable''—in some cases replacing the word ''any,'' as used in the proposed rule—to make clear that an EIS need only include the specific topics where those effects are reasonably foreseeable. Where the effects that relate to a particular topic in the list exist but are not significant or important, the EIS can briefly describe the effect and explain why the agency has reached the conclusion that it is not significant or important.

Third, CEQ proposed to add a new sentence to the end of proposed paragraph (a)(1) clarifying the proper role of the no action alternative to ensure that agencies do not distort the comparative analysis by selecting a different alternative (for example, the preferred alternative) as the baseline against which the agency assesses all other alternatives. CEQ also invited comment on whether it should include additional direction or guidance regarding the no action alternative in the final rule.

One commenter requested that the regulations clarify the proper role of the no action alternative and disagreed with the direction included in the proposed rule. The commenter asserted that establishing a no action alternative as the baseline against which alternatives are compared, rather than establishing the proposed action as the baseline, favors the no action alternative over the proposed action and is contrary to NEPA's goals of informing rather than driving decisions. CEQ disagrees with the commenter's position as agencies have long used the no action alternative as the baseline from which to assess the proposed action and alternatives,[90] and this approach is consistent with the requirement of section 102(2)(C)(i)–(ii) of NEPA that an EIS include the reasonably foreseeable environmental effects of the proposed agency action. 42 U.S.C. 4332(2)(C)(i)–(ii). The no action alternative is a particularly useful comparison for the effects of the proposed action, and the CEQ

[90] *See* CEQ, Forty Questions, *supra* note 5, Question 3, ''No Action Alternative'' (stating that the no action alternative ''provides a benchmark, enabling decisionmakers to compare the magnitude of environmental effects of the action alternatives.''); *see also Ctr. for Biological Diversity* v. *United States DOI*, 72 F.4th 1166, 1185 (10th Cir. 2023) (''In general, NEPA analysis uses a no-action alternative as a baseline for measuring the effects of the proposed action.''' (quoting *Biodiversity Conservation All.* v. *U.S. Forest Serv.*, 765 F.3d 1264, 1269 (10th Cir. 2014)).

regulations require agencies to compare effects across alternatives.

Multiple commenters requested guidance on how to evaluate the no action alternative in circumstances in which the Federal action does not dictate whether the underlying project will occur. CEQ declines to add additional specifications to the regulations but will consider whether additional guidance on this topic will help agencies carry out their NEPA responsibilities. CEQ notes that agencies have decades of experience with this issue even prior to the addition of this provision into NEPA and the CEQ regulations.

One commenter requested CEQ revise the language to make it clear that the no action alternative is focused on the environmental consequences of not issuing the approval rather than on the proposed facility not being built or the proposed physical action not occurring. CEQ declines to add this specific additional language to the regulations as the consideration of the no action alternative is specific to the agency's authority and the scope of the NEPA review.

One commenter stated CEQ should provide additional guidance to ensure that Federal agencies fully disclose the environmental implications of the no action alternative. Another commenter requested CEQ provide additional guidance encouraging agencies to select the no action alternative, when appropriate. Relatedly, another commenter stated that the no action alternative should be more than a baseline for comparison; it should also be an alternative that the agency can select even if it does not meet the applicant's or project's purpose and need. CEQ agrees that in many cases, the no action alternative is among the alternatives that the agency may select, and that doing so is consistent with the regulations and long-standing agency practice, but this is a fact-specific inquiry based on the agency's authority. CEQ will consider this and the other recommended topics when developing guidance.

One commenter requested the regulations include a new section on the no action alternative instead of including it in § 1502.16. Another commenter requested the regulations include a definition of ''no action alternative'' and requested clarification that agencies should analyze more than one action alternative and therefore must include more than just the no action alternative and one action alternative. CEQ declines to add a separate section on or define the phrase ''no action alternative.'' CEQ includes the proposed language in the final rule, as the fourth sentence of paragraph (a), to provide additional context for the longstanding requirement in § 1502.14 to assess the no action alternative and for consistency with section 102(2)(C)(iii) of NEPA and longstanding agency practice. 42 U.S.C. 4332(2)(C)(iii).

Fourth, CEQ proposed to add a new paragraph (a)(3), requiring an analysis of the effects of the no action alternative, including any adverse environmental effects. CEQ proposed this change for consistency with section 102(2)(C)(iii) of NEPA, which requires ''an analysis of any negative environmental impacts of not implementing the proposed action in the case of a no action alternative.'' 42 U.S.C. 4332(2)(C)(iii).

One commenter suggested that the phrase ''including any adverse effects'' does not conform with section 102(2)(C)(iii) of NEPA. CEQ disagrees with the commenter's characterization. The difference in phrasing between proposed paragraph (a)(3) and section 102(2)(C)(iii) is because paragraph (a)(3) addresses what needs to be contained in the discussion of environmental consequences, while section 102(2)(C)(iii) of NEPA addresses the range of alternatives. 42 U.S.C. 4332(2)(C)(iii). Multiple commenters were generally supportive of the requirement to analyze the adverse effects of the no action alternative.

CEQ adds proposed paragraph (a)(3) in the final rule at § 1502.16(a)(2). As CEQ noted in the proposed rule, CEQ interprets ''negative'' to have the same meaning as the term ''adverse.'' For example, an environmental restoration project that helps mitigate the effects of climate change and restores habitat could have adverse effects if it were not implemented or the construction of a commuter transit line could have adverse effects from persistent traffic congestion, air pollution, and related effects to local communities if it were not implemented.

Fifth, to accommodate proposed new paragraph (a)(3), CEQ proposed to redesignate paragraphs (a)(3) through (a)(5) of 40 CFR 1502.16 (2020) as paragraphs (a)(4) through (a)(6), respectively. CEQ did not receive any comments on this proposed reorganization. However, because the final rule integrates proposed paragraph (a)(1) into paragraph (a), the final rule does not redesignate these paragraphs.

Sixth, in proposed paragraph (a)(5), CEQ proposed to insert ''Federal'' before ''resources'' for consistency with section 102(2)(C)(v) of NEPA. 42 U.S.C. 4332(2)(C)(v). One commenter asserted that the proposed insertion of ''Federal'' ignores analysis and reporting of potentially significant resources committed by other entities. CEQ adds the word ''Federal'' to the final rule in § 1502.16(a)(4) because Congress added it to the corresponding phrase in the statute. Another commenter suggested CEQ revise this paragraph to encompass resources held in trust. CEQ declines to make this addition, as CEQ interprets the phrase ''Federal resources'' to plainly mean resources owned by the Federal Government or held in trust for Tribal Nations.

Seventh, CEQ proposed to add references to two specific elements that agencies must include in the analysis of environmental consequences and revise the reference to another element, all related to climate change. CEQ proposed to revise proposed paragraph (a)(6), addressing possible conflicts between the proposed action and the objectives of Federal, regional, State, Tribal and local land use plans, policies, and controls for the area concerned. CEQ proposed to broaden ''land use plans'' to ''plans'' generally and to add an example that clarifies that these plans, policies, and controls include those addressing climate change.

Eighth, CEQ proposed to add a new paragraph (a)(6) to clarify that the discussion of environmental consequences in an EIS must include any reasonably foreseeable climate change-related effects, including effects of climate change on the proposed action and alternatives (which may in turn alter the effects of the proposed action and alternatives).

Ninth, CEQ proposed to add a new paragraph (a)(9) to require agencies to address any risk reduction, resiliency, or adaptation measures included in the proposed action and alternatives. CEQ proposed this addition to ensure that agencies consider resiliency to the risks associated with a changing climate, including wildfires, extreme heat and other extreme weather events, drought, flood risk, loss of historic and cultural resources, and food scarcity. CEQ noted in the proposed rule that these analyses further NEPA's mandate that agencies use ''the environmental design arts'' in decision making and consider the relationship between the ''uses'' of the environment ''and the maintenance and enhancement of long-term productivity.'' 42 U.S.C. 4332(2)(A), 4332(2)(C)(iv). CEQ also noted that the proposed change helps achieve NEPA's goals of protecting the environment across generations, preserving important cultural and other resources, and attaining ''the widest range of beneficial uses of the environment without degradation, risk to health or safety, or

other undesirable and unintended consequences.'' 42 U.S.C. 4331(b)(3).

Multiple commenters expressed support generally for both proposed paragraphs (a)(6) and (a)(7), asserting that it is necessary to emphasize climate change. On the other hand, one commenter opposed proposed paragraphs (a)(6) and (a)(7) and asserted that they are based on political doctrine rather than scientific and technical analyses. CEQ disagrees with the commenter's assertion and notes that the inclusion of climate change in proposed paragraphs (a)(6) and (a)(7) is consistent with section 102(2)(C)(i) of NEPA, 42 U.S.C. 4332(2)(C)(i), which requires agencies to address ''reasonably foreseeable environmental effects of the proposed agency action;'' with section 102(2)(I) of NEPA, 42 U.S.C. 4332(I), which requires Federal agencies to ''recognize the worldwide and long-range character of environmental problems;'' and with a large volume of case law invalidating NEPA analyses that failed to adequately consider reasonably foreseeable effects related to climate change. *See e.g., Vecinos para el Bienestar de la Comunidad Costera* v. *FERC,* 6 F.4th 1321 (D.C. Cir. 2021) (holding NEPA analysis for pipeline and liquified natural gas port deficient due to inadequate climate change analysis); *WildEarth Guardians* v. *Zinke,* 368 F.3d 41 (D.C. Cir. 2019) (invalidating oil and gas leases for failure to consider downstream greenhouse gas emissions during the NEPA process); and *WildEarth Guardians* v. *BLM,* 870 F.3d 1222 (10th Cir. 2017) (holding that EIS and ROD for four coal leases were arbitrary and capricious because they failed to adequately consider climate change).

With respect to proposed paragraph (a)(6), a couple of commenters asserted the regulations should not direct agencies to discuss a proposed action's relationship with governmental plans related to climate change. The commenters urged CEQ to exclude the language ''those addressing climate change'' from the final rule or recommended the regulations clarify that NEPA does not require agencies to attempt to resolve these conflicts. Another commenter opined that the proposal to remove ''land use plans'' and instead include plans addressing climate change threatens to lead to speculative analyses. Further, the commenter asserted that the regulations do not explain how agencies should analyze multi-State projects or determine how a particular project conflicts with a State- or region-wide plan or emissions target.

In the final rule, CEQ removes ''land use'' and adds the example of plans that address climate change in the final rule at § 1502.16(a)(5). CEQ notes that the reference to climate change plans is only an example, but also that the example is consistent with the 2023 GHG guidance, which identifies climate change plans as having the potential to assist agencies in their analysis of reasonably foreseeable GHG emissions. CEQ also notes that nothing in this provision or any other provision of the NEPA regulations has ever required agencies to resolve conflicts; it merely requires agencies to discuss any possible conflicts. With respect to multi-State projects, CEQ does not consider it appropriate to modify this provision to address a specific type of project. However, CEQ is unaware of agency confusion regarding how to address multi-State projects. CEQ will consider whether additional guidance is needed in the future. CEQ retains the term ''policies'' to promote inclusive consideration of positions taken by regional, State, Tribal and local government entities, noting that policies are formally adopted by those entities while preferences or positions generally are not formally adopted.

Multiple commenters specifically opposed proposed paragraph (a)(7) and the singling out of reasonably foreseeable climate change-related effects in the regulations. One commenter stated that the integration of one specific category of potential environmental effects is a notable break from NEPA precedent and historic practice, which emphasizes that NEPA is neutral towards the type of resource concern and the type of potential environmental effect. CEQ disagrees with the assertion that identifying a category of effects is unprecedented and notes that this provision has always referenced certain types of effects, including effects related to energy, natural and depletable resources, and historic and cultural resources.

A commenter asserted that the references to climate change-related effects in proposed paragraph (a)(7) and other provisions of the regulations inconsistently refer to NEPA's reasonable foreseeability limitation and otherwise ignore the fundamental principle of causation. A few other commenters also raised the issue of causation, arguing that NEPA only requires an agency to consider effects that have a sufficiently close causal connection to the proposed action and stating that the proposed rule, and specifically proposed paragraph (a)(7), diverges from this principle by requiring analysis of any reasonably foreseeable climate-change related effects of the proposed action. One commenter asserted CEQ is rewriting the standard that requires an agency to consider effects that have a sufficiently close causal relationship to the proposed action. They also asserted proposed paragraph (a)(7) could require an agency to discuss effects that are remote and speculative because it does not require the ability to demonstrate a direct causal chain between a project and climate change or how a specific project's greenhouse gas emissions would lead to actual environmental effects in that specific location.

Another commenter asserted that proposed paragraph (a)(7) places unnecessary emphasis on climate change when there are many other effects on the environment that may occur due to a proposed action. A separate commenter asserted the proposed paragraph conflicts with the flexibility provided in CEQ's Interim Greenhouse Gas Guidance, which explains that agencies have the flexibility to discuss climate change and any other environmental issues to the extent the information will or will not be useful to the decision-making process and the public consistent with the ''rule of reason.'' Another commenter stated proposed paragraph (a)(7) is inconsistent with NEPA and would be impractical, resulting in lengthy reviews for projects without climate consequences.

CEQ disagrees with these commenters' assertions and includes proposed paragraph (a)(7) at § 1502.16(a)(6) in the final rule. CEQ adds the phrase ''where feasible, quantification of greenhouse gas emissions from the proposed action and alternatives and'' before ''the effects of climate change on the proposed action and alternatives.'' This provision incorporates into the final rule one of the recommendations of CEQ's 2023 GHG guidance.[91] CEQ includes this provision in response to comments that CEQ received in response to CEQ's request for comment on potentially codifying elements of the Guidance in the rule. *See* section II.D.1.[92] CEQ agrees with the comments discussed in section II.D.1 that contend that requiring agencies to quantify greenhouse gas emissions, where feasible, will increase the clarity of the regulations and is consistent with case law. *See, e.g., Food & Water Watch* v. *FERC,* 28 F.4th 277, 289 (D.C. Cir. 2022) (remanding to the agency to prepare a supplemental EA

[91] *See* CEQ, 2023 GHG Guidance, *supra* note 10.

[92] *See* CEQ, Phase 2 proposed rule, *supra* note 51, at 49945.

''in which it must either quantify and consider the project's downstream carbon emissions or explain in more detail why it cannot do so''); *Sierra Club* v. *FERC,* 867 F.3d 1357, 1375 (D.C. Cir. 2017) (holding that the agency ''must either quantify and consider the project's downstream carbon emissions or explain in more detail why it cannot do so''); *WildEarth Guardians* v. *Zinke,* 368 F.Supp.3d 41, 68 (D.D.C. 2019) (BLM's failure to quantify greenhouse gas emissions that were reasonably foreseeable effects of oil and gas development during the leasing and development process was arbitrary and capricious). As such, CEQ disagrees with the commenters' assertions that the rule requires agencies to go beyond what case law generally already requires them to consider under NEPA. Moreover, as CEQ indicates earlier in this section and makes clearer with its edits to paragraph (a) in the final rule, this paragraph indicates that agencies must analyze climate-related effects that meet the definition of ''effects''—that is, are reasonably foreseeable—and includes the qualifier ''where applicable'' to acknowledge that not all actions will have climate-related effects that require analysis in the EIS.

A few commenters opposed the addition of proposed paragraphs (a)(7) and (a)(10), stating that taken together, the proposed changes expand the scope of NEPA effects and alternatives analyses relative to discrete projects and authorizations and will result in agencies relying on unsubstantiated projections on a project's potential to impact climate change locally or globally.

Other commenters opposed proposed paragraph (a)(10) for various reasons. One commenter asserted risk reduction, resiliency, or adaptation measures are best addressed through planning and programming, asset management, and emergency response that occurs programmatically prior to NEPA review and in final design that occurs after the NEPA review, instead of as part of the project-specific review. Similarly, another commenter stated requiring an EIS to incorporate these measures into the proposed action or alternatives will be costly if completed during the NEPA process and should be done earlier, such as during long-range planning processes that occur prior to NEPA. CEQ notes that if an agency engages in long-range planning processes, the agency may incorporate by reference any analyses that are completed programmatically prior to the NEPA review for a specific action. With respect to final design, agencies may discuss such measures generally in the EIS. Further, agencies have decades of experience analyzing proposed actions before final design, and agencies can do so similarly for risk reduction, resiliency, or adaptation measures.

Another commenter asserted that the term ''relevant'' is subjective and suggested that CEQ define it to include peer-reviewed science and data made available by independent sources. CEQ declines to add this specificity in the final rule and leaves it to agency judgment to identify what is relevant for a particular proposed action.

One commenter supported proposed paragraph (a)(10) but requested the regulations clarify that the language does not require an agency to gather new data, consistent with NEPA. Another commenter also supported the proposal, but suggested that CEQ remove the mandate to use accurate and up-to-date information from proposed § 1502.21. CEQ considers it important to specifically reference science and data on the affected environment and expected future conditions in this paragraph because they are essential to determine what resiliency and adaptation measures are relevant. CEQ declines to specify that agencies do not need to gather new data as this is addressed in § 1502.21, regarding incomplete or unavailable information as well, as § 1506.6, regarding methodology and scientific accuracy. Therefore, CEQ adds proposed paragraph (a)(10) at § 1502.16(a)(9) in the final rule.

In the final rule, CEQ revises § 1502.16(a)(5) and adds § 1502.16(a)(6) and (a)(9) to clarify that agencies must address both the effects of the proposed action and alternatives on climate change, and the resiliency of the proposed action and alternatives in light of climate change.[93] These revisions are consistent with what NEPA has long required: using science to make decisions informed by an understanding of the effects of the proposed action and of its alternatives. In particular, understanding how climate change will affect the proposed action and the various alternatives to that action is necessary to understanding what constitutes ''a reasonable range of alternatives'' and which alternatives are ''technically and economically feasible'' and ''appropriate,'' *see* 42 U.S.C. 4332(2)(C)(iii), (F), (H). Moreover, the effects that climate change will have on the proposed action and its alternatives may in turn alter the effects that the action has on the environment. For example, an increase in extreme weather events may affect the amount of stream sedimentation that results from a new road or the risk that an industrial facility will experience a catastrophic release. Therefore, considering the effects of climate change on the action and its alternatives is necessary to understand the ''reasonably foreseeable environmental effects'' of the proposed action and its alternatives, 42 U.S.C. 4332(2)(C)(i). These revisions also align with the definition of ''effects'' to encompass reasonably foreseeable indirect and cumulative effects, which are integral to NEPA analyses.

Tenth, to accommodate the newly proposed paragraphs (a)(7) and (a)(10), CEQ proposed to redesignate paragraphs (a)(6) and (a)(7) of 40 CFR 1502.16 (2020) as paragraphs (a)(8) and (a)(9), respectively. In the final rule, CEQ redesignates these paragraphs as § 1502.16(a)(7) and (a)(8). CEQ also proposed to redesignate paragraphs (a)(8) through (a)(10) of 40 CFR 1502.16 (2020) as paragraphs (a)(11) through (a)(13), respectively. In the final rule, CEQ redesignates these paragraphs as § 1502.16(a)(10) through (a)(12).

Eleventh, CEQ proposed to add a new paragraph (a)(14) to require agencies to discuss any potential for disproportionate and adverse health and environmental effects on communities with environmental justice concerns, consistent with sections 101, 102(2)(A), 102(2)(C)(i), and 102(2)(I) of NEPA. *See* 42 U.S.C. 4331, 4332(2)(A), 4332(2)(C)(i), 4332(2)(I). CEQ proposed this paragraph to clarify that EISs generally must include an environmental justice analysis to ensure that decision makers consider disproportionate and adverse effects on these communities.

A few commenters expressed general support for proposed paragraph (a)(14), with some stating that the inclusion of disproportionate effects on communities with environmental justice concerns is long overdue. Some of these supportive commenters requested CEQ provide additional clarity in the regulations or through guidance on what constitutes a robust environmental justice analysis. One commenter suggested the final rule include additional text to emphasize welfare effects and to state that the evaluation should not offset positive effects on one community with environmental justice concerns against

[93] Such analysis is not new, and CEQ has issued guidance consistent with these proposed provisions for nearly a decade. *See generally* CEQ, Final Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act Reviews, 81 FR 51866 (Aug. 8, 2016), *https://ceq.doe.gov/docs/ceq-regulations-and-guidance/nepa_final_ghg_guidance.pdf,* and CEQ, 2023 GHG Guidance, *supra* note 10.

negative effects on another community with environmental justice concerns.

Multiple commenters opposed proposed paragraph (a)(14) for reasons similar to the opposition to including climate change-related effects, asserting that it is inappropriate to single out these types of effects. One commenter suggested the proposed paragraph will allow consideration of remote and speculative environmental justice concerns and is in conflict with case law. Another commenter stated the proposed paragraph requires agencies to consider effects that are not ''reasonably foreseeable.'' Further, another commenter requested that the regulations clarify that not all environmental effects will be ''disproportionate and adverse.''

In the final rule, CEQ adds proposed paragraph (a)(14) at § 1502.16(a)(13) and modifies the text from the proposal to replace ''[t]he potential for'' with ''[w]here applicable'' before ''disproportionate and adverse human health and environmental effects on communities with environmental justice concerns.'' As discussed earlier in this section, CEQ adds the ''where applicable'' qualifier to make clear that not all proposed actions will have such effects. The final rule also omits ''potential,'' given the changes to paragraph (a) to clarify that all effects in the list must be reasonably foreseeable.

Multiple commenters grouped their general concerns on proposed § 1502.16(a)(7), (a)(10), and (a)(14) together, expressing overall concern regarding the inclusion of climate change and environmental justice-related provisions in § 1502.16. These commenters asserted that these proposed additions are contrary to the purpose of NEPA and inappropriately elevate climate change and environmental justice over other issues, such as water quality, waste management, and air quality. Other commenters expressed concern over the addition of policy priorities to the regulations. As CEQ has discussed in this section and elsewhere in this preamble and the Phase 2 Response to Comments, CEQ considers these additions consistent with the text of NEPA, longstanding practice, and case law and finds it appropriate to recognize the importance of climate change and environmental justice effects to inform agency decision making and the public about a proposed action. CEQ notes that the list of effects in § 1502.16(a) is not exhaustive, and that agencies must determine on a case-by-case basis which effects are relevant to address in an EIS.

Finally, in paragraph (b), which addresses economic or social effects, CEQ proposed to strike ''and give appropriate consideration to'' from paragraph (b). CEQ proposed this revision to remove unnecessary language that could be read to require the decision maker to make consideration of such effects a higher priority than other effects listed in this section.

One commenter expressed support for the proposed change in paragraph (b) but requested that the final rule include language requiring specific analyses of housing affordability, availability, and quality. CEQ declines to add this language because, while these considerations may be appropriate for some projects, this level of specificity is unnecessary in the regulations, as housing-related effects are a subset of social and economic effects. Another commenter requested that the final rule include cultural effects in the second sentence. CEQ declines to add cultural effects to paragraph (b) because historic and cultural resources are included in § 1502.16(a)(10), and agencies also may address effects to cultural resources consistent with § 1502.16(a)(5).

CEQ did not receive comments specific to its proposed edits to paragraph (b). In the final rule, CEQ strikes the phrase ''and give appropriate consideration to,'' as proposed, from § 1502.16(b).

16. Summary of Scoping Information (§ 1502.17)

CEQ proposed to revise § 1502.17 and retitle it ''Summary of scoping information'' to more accurately reflect the proposed revisions to this section and align it with the common practice of what many agencies produce in scoping reports. CEQ proposed other changes in this section to simplify and remove unnecessary or redundant text and clarify requirements. Commenters were generally supportive of CEQ's proposal and provided a few suggested edits to the regulatory text, as discussed in this section. A few commenters expressed concern about the additional burden of preparing a summary of scoping information.

CEQ finalizes this section as proposed with a few additional edits. Agencies have long collected the information addressed in this section as part of the scoping process and provided it in various formats, such as in scoping reports or by integrating it into the EIS itself. Transparency about this information is valuable to the NEPA process because it demonstrates what agencies have considered in preparing an EIS. Further, CEQ disagrees that preparing a summary of such information is a significant burden on agencies because the regulations do not require a lengthy, detailed summary and provide agencies sufficient flexibility to exercise their discretion in what to prepare.

CEQ proposed to revise paragraph (a) to require agencies to include a summary of the information they receive from commenters during the scoping process in draft EISs, consistent with the revisions to §§ 1500.4, 1501.9, and 1502.4. CEQ proposed to replace ''State, Tribal, and local governments and other public commenters'' with ''commenters'' because this phrase is all encompassing. CEQ also proposed to clarify that a draft EIS should include a summary of information, including alternative and analyses, that commenters submitted during scoping.

At least one commenter inquired whether an agency could meet the requirements of paragraph (a) by including a summary in an appendix to the draft EIS. CEQ did not intend its proposal to limit where agencies provide the summary of scoping information. To make clear that agencies have the flexibility on where to place this section in their EISs, CEQ has added ''or appendix'' after ''draft environmental impact statement.'' Another commenter asked whether inserting the word ''draft'' before the second instance of ''environmental impact statement'' in paragraph (a) precluded agencies from considering such information in the final EIS. This was not CEQ's intent, so the final rule text does not include the word ''draft'' as CEQ proposed. CEQ otherwise revises paragraph (a) as proposed. This change provides agencies flexibility to develop a broader summary of information received during scoping. While agencies should still summarize alternatives and analyses, this provision does not require them to provide a specific summary of every individual alternative, piece of information, or analysis commenters submit during scoping.

CEQ proposed to redesignate paragraph (a)(1) as paragraph (b) and modify it to clarify that agencies can either append comments received during scoping to the draft EIS or otherwise make them publicly available. CEQ proposed this modification to clarify that the requirements of this paragraph can be met through means other than an appendix, such as a scoping report, which is common practice for some Federal agencies. CEQ proposed a conforming edit in paragraph (d) of § 1502.19, ''Appendix,'' for consistency with this language.

CEQ received a comment questioning why CEQ would change ''publish'' to ''otherwise make publicly available all

comments,'' which could suggest an agency could make comments publicly available by providing them in response to a FOIA request rather than by affirmatively providing them. This was not the intent of CEQ's proposed change. Therefore, CEQ is not making this change in the final rule. With these modifications, CEQ amends this provision as proposed.

Finally, CEQ proposed to delete 40 CFR 1502.17(a)(2) and (b) (2020) because the requirements of these paragraphs are redundant to the requirements in part 1503 for Federal agencies to invite comment on draft EISs in their entirety and review and respond to public comments. CEQ makes this change in the final rule.

17. Incomplete or Unavailable Information (§ 1502.21)

CEQ proposed one revision to paragraph (b) of § 1502.21, which addresses when an agency needs to obtain and include incomplete information in an EIS. CEQ proposed to strike ''but available'' from the sentence, which the 2020 rule added, to clarify that agencies must obtain information relevant to reasonably foreseeable significant adverse effects when that information is essential to a reasoned choice between alternatives, where the overall costs of doing so are not unreasonable, and the means of obtaining that information are known. CEQ proposed to remove the phrase ''but available'' because it could be read to significantly narrow agencies' obligations to obtain additional information even when it is easily attainable and the costs are reasonable. During the development of the proposed rule, agency NEPA experts indicated that this qualifier could be read to say that agencies do not need to collect additional information that could and should otherwise inform the public and decision makers.

Some commenters supported the proposed deletion of ''but available'' in paragraph (b), reasoning that this edit will ensure agencies obtain necessary information regarding reasonably foreseeable significant adverse effects that is essential to a reasoned choice among alternatives rather than dismissing the information as unavailable. Another commenter supported the change because it better ensures agencies obtain high quality information to inform their analyses. Other commenters opposed the change, asserting it unduly expands agencies' obligations to obtain additional information. One commenter stated the change removes a bright-line requirement to rely on existing information and another commenter agreed, stating the inclusion of ''but available'' helped to focus the scope of the inquiry on available information. Without this limitation, the commenter asserted agencies could face litigation over the subjective reasonableness of failing to obtain new information. Some commenters expressed concern that the proposed change broadens the circumstances when agencies must obtain new information and increases the risk of reliance on poor quality information developed quickly to meet the statutory timeframes.

One commenter provided that if CEQ finalizes the proposed change, it should clarify that agencies should not delay the NEPA process by obtaining non-essential information. This commenter also requested that CEQ clarify that agencies only need to produce new information where the agencies would not be able to make an informed decision about the reasonably foreseeable effects of a project otherwise. Similarly, another commenter stated that if finalized, CEQ should clarify that new agency research is required only in limited circumstances and is the exception, not the rule.

CEQ makes the change to remove ''but available'' from § 1502.21(b) in the final rule. CEQ has reconsidered its position in the 2020 rule and now considers it vital to the NEPA process for agencies to undertake studies and analyses where the information from those studies and analyses is essential to a reasoned choice among alternatives and the overall costs are not unreasonable, rather than relying solely on available information. In particular, CEQ notes its longstanding interpretation of ''incomplete information'' as articulated in the 1986 amendments to this provision. CEQ defined ''incomplete information'' as information that an agency cannot obtain because the overall costs of doing so are exorbitant and ''unavailable information'' as information that an agency cannot obtain it because ''the means to obtain it are not known.'' [94] In response to comments in 1986, CEQ further explained that the phrase '' 'the means to obtain it are not known' is meant to include circumstances in which the unavailable information cannot be obtained because adequate scientific knowledge, expertise, techniques or equipment do not exist.'' [95] The 2020 rule disregarded this longstanding interpretation and instead suggested that new scientific or technical research is ''unavailable information.'' Upon further consideration, CEQ disagrees with the interpretation in the 2020 rule and re-adopts its longstanding interpretation that the phrase ''incomplete information'' applies only to information from new scientific or technical research, the cost of which are unreasonable.

Removing the phrase ''but available'' also is consistent with section 106(b)(3) of NEPA, which was added by the recent NEPA amendments and states that in determining the level of NEPA review, agencies are only required to undertake new scientific or technical research where essential to a reasoned choice among alternatives and the overall costs and time frame of obtaining it are not unreasonable. 42 U.S.C. 4336(b)(3). While section 106(3) only directly applies to determining the level of NEPA review, the provision's limitation on when agencies need to undertake new scientific or technical research in that context refutes an interpretation of NEPA as limiting agencies to considering available information. 42 U.S.C. 4336(b)(3). Establishing a consistent standard to address incomplete information in the NEPA review process that is consistent with the text of section 106(3) will lead to a more orderly and predictable environmental review process. 42 U.S.C. 4336(b)(3). Similarly, CEQ considers it appropriate to require agencies to ensure professional integrity, including scientific integrity, and use reliable data and resources, as well as other provisions in the regulations emphasizing the importance of relying on high-quality and accurate information throughout implementation of NEPA. *See, e.g.,* §§ 1500.1(b), 1506.6.

CEQ disagrees that this change will unduly expand agencies' obligations to obtain additional information. CEQ is reverting to the longstanding approach in the regulations that will ensure agencies appropriately gather information when it is necessary to inform the decision maker and the public. CEQ considers the bounding language of reasonable costs and necessity to make a reasoned choice to be the appropriate cabining so that agencies are reasonably gathering any additional information needed for a sufficient NEPA analysis without creating undue burden or facilitating a boundless collection of information. With respect to litigation risk, as with many other aspects of a NEPA review, agencies should explain in their documents their rationale when they determine it is unreasonable or

[94] CEQ, National Environmental Policy Act Regulations; Incomplete or Unavailable Information, *supra* note 32, at 15621.

[95] *Id.* at 15622.

unnecessary to obtain new information. Finally, CEQ acknowledges the potential tension between the time it takes to gather new information and statutory deadlines. CEQ encourages agencies to identify incomplete information as early as possible in the process to ensure they have time to gather the information necessary to satisfy their NEPA obligations during the statutory timeframes. CEQ also notes that where an agency cannot obtain incomplete information within the statutory timeframes, but the costs are reasonable, the agency could conclude that it is necessary to set a new deadline that allows only as much time as necessary to obtain the information so long as the costs of obtaining the information, including any cost from extending the deadline and delaying the action, are reasonable.

Finally, CEQ removes the modifier ''adverse'' from ''significant adverse effects'' throughout this section because the final rule defines ''significant effects'' to be adverse effects. CEQ makes this change for clarity and consistency with the definition.

18. Methodology and Scientific Accuracy (Proposed § 1502.23)

In the proposed rule, CEQ proposed updates to § 1502.23, ''Methodology and Scientific Accuracy,'' which requires agencies to ensure the professional integrity, including scientific integrity, of the discussions and analyses in environmental documents. CEQ proposed revisions to promote use of high-quality information; require agencies to explain assumptions; and, where appropriate, incorporate projections, including climate change-related projections, in the evaluation of reasonably foreseeable effects.

CEQ received a number of comments expressing confusion regarding the applicability of this provision. In particular, since 1978, the provision has used the term ''environmental documents,'' making it broadly applicable. However, it is included in part 1502, which addresses requirements for EISs. Additionally, the amendments to NEPA make clear that agencies must ensure the professional integrity, including scientific integrity, of the discussion and analysis in their NEPA documents, not just in EISs, and make use of reliable data and resources in carrying out NEPA. To address the confusion amongst commenters and for consistency with the NEPA statute, CEQ moves this provision to part 1506, specifically § 1506.6, which addresses other requirements of NEPA.

For the discussion of the specific proposed changes and comments on those changes as well as a description of the final rule, refer to section II.H.4.

E. Revisions To Update Part 1503, Commenting on Environmental Impact Statements

CEQ is making substantive revisions to all sections of part 1503, except § 1503.2, ''Duty to comment.'' While CEQ invited comment on whether it should make any substantive changes to this section, CEQ did not receive any specific comments recommending such changes to § 1503.2. Therefore, CEQ finalizes § 1503.2 with the non-substantive edits proposed in the NPRM (spelling out EIS and fixing citations).

1. Inviting Comments and Requesting Information and Analyses (§ 1503.1)

CEQ did not propose substantive changes to § 1503.1 except to delete paragraph (a)(3) of 40 CFR 1503.1 (2020), requiring agencies to invite comment specifically on the submitted alternatives, information, and analyses and the summary thereof, for consistency with the proposed changes to the exhaustion provision in § 1500.3 and the corresponding revisions to § 1502.17. CEQ discusses the comments on removal of the exhaustion provisions generally in section II.B.3, and CEQ did not receive any comments specific to the proposed deletion of 40 CFR 1503.1(a)(3) (2020). CEQ deletes this paragraph in the final rule because CEQ is revising § 1500.3 to remove the exhaustion provision in this final rule as discussed in section II.B.3. Therefore, this requirement to invite comment is unnecessary and redundant as Federal agencies invite comment on all sections of draft EISs, including any appendices, and thus need not invite comment on one specific section of an EIS.

2. Specificity of Comments and Information (§ 1503.3)

CEQ proposed edits to § 1503.3 to clarify the expected level of detail in comments submitted by the public and other agencies to facilitate consideration of such comments by agencies in their decision-making processes. CEQ proposed these edits to remove or otherwise modify provisions that could inappropriately restrict public comments and place unnecessary burden on public commenters.

Multiple commenters expressed support for the proposed rule's edits to § 1503.3 to remove language in the 2020 rule and argued that the language impeded public participation and unlawfully sought to limit access to the courts. Commenters asserted that the 2020 language impeded participation in the NEPA process by members of the public with valuable information and perspective on the proposed action. Specifically, the commenters supported the removal of the requirement for the public to provide as much detail as necessary in paragraph (a), along with the proposed clarification that commenters do not need to describe their data, sources, or methodologies. Commenters further stated that the requirement to provide as much detail as necessary was ambiguous and could have been interpreted to establish an unjustified barrier to public comment to those who do not have access to technical experts or consultants. As discussed further in this section, CEQ is finalizing all but one of its proposed changes.

CEQ proposed to remove language from § 1503.3(a), which the 2020 rule added, that requires comments to be as detailed ''as necessary to meaningfully participate and fully inform the agency of the commenter's position'' because this requirement could lead commenters to provide unnecessarily long comments that will impede efficiency. Commenters generally supported this proposal. In support of the proposed removal, one commenter asserted that the ambiguity of the requirement to provide as much detail as necessary would prompt unnecessary litigation over whether particular comments were sufficient to ''fully inform'' the agency.

CEQ strikes this language in the final rule. Paragraph (a) of § 1503.3 has always required comments to be ''as specific as possible,'' *see* 40 CFR 1503.3(a) (2019); 40 CFR 1503.3(a) (2020), and the language CEQ is removing could be read to require commenters to provide detailed information that either is not pertinent to the NEPA analysis or is about the commenter's position on the proposed action, the project proponent, the Federal agency, or other issues. For example, the text could be read to require a commenter to provide a detailed explanation of a moral objection to a proposed action or a personal interest in it if those inform the commenter's position on the project. The text also could imply that commenters must either be an expert on the subject matter or hire an expert to provide the necessary level of detail. Further, the text could be read to imply that commenters are under an obligation to collect or produce information necessary for agencies to fully evaluate issues raised in comments even if the commenters do not possess that information or the skills necessary to produce it.

As CEQ explained in the proposed rule, some commenters on the 2020 rule

raised this issue, expressing concerns that this language could be read to require the general public to demonstrate a level of sophistication and technical expertise not required historically under the CEQ regulations or consistent with the NEPA statute.[96] Commenters also expressed concern that the requirement would discourage or preclude laypersons or communities with environmental justice concerns from commenting.[97] Other commenters on the 2020 rule expressed concern that the changes would shift the responsibility of analysis from the agencies to the general public.[98] Finally, CEQ is removing this language because the requirements that comments provide as much detail as necessary to ''meaningfully'' participate and ''fully inform'' the agency are vague and put the burden on the commenter to anticipate the appropriate level of detail to meet those standards.

CEQ also proposed to delete from the second sentence in paragraph (a) language describing certain types of impacts that a comment should cover, including the reference to economic and employment impacts as well as the phrase ''and other impacts affecting the quality of the human environment'' because it is unnecessary and duplicative of ''consideration of potential effects and alternatives,'' which appears earlier in the sentence. CEQ proposed to delete the reference to economic and employment impacts because this language imposes an inappropriate burden on commenters by indicating that comments need to explain why an issue matters for economic and employment purposes. NEPA requires agencies to analyze the potential effects on the human environment and does not require that these effects be specified in economic terms or related specifically to employment considerations. Therefore, it is inappropriate to single out these considerations for special consideration by commenters and unduly burdensome to expect every commenter to address economic and employment impacts.

A few commenters opposed the deletion, expressing concerns that removal of this language would discourage agencies from considering economic or employment impacts, or indicate that agencies are not interested in considering such information. CEQ disagrees with the commenters' assertions. This provision addresses the role of commenters, who are in the best position to assess the appropriate scope of their comments. CEQ broadens the language in the final rule, consistent with the proposal, to invite and welcome comments on effects of all kinds. The revision in the final rule will not have the effect of limiting commenters from addressing economic or employment impacts in their comments but would avoid the implication that members of the public are welcome to comment only if they address those issues. Further, the removal of this language in the provisions on public comments for an EIS does not affect potential consideration of these effects during the environmental review process. Specifically, § 1501.2(b)(2) requires agencies to identify environmental effects and values in adequate detail so the decision maker can appropriately consider such effects and values alongside economic and technical analyses. For these reasons, CEQ makes the edits as proposed to the second sentence of § 1503.3(a) in the final rule.

Finally, in paragraph (a), CEQ proposed changes to the last sentence to clarify that, only where possible, the public should include citations or proposed changes to the EIS or describe the data, sources, or methodologies that support the proposed changes in their comments. While such information is helpful to the agency whenever it is readily available, CEQ had concerns that this could be construed to place an unreasonable burden on commenters. CEQ did not receive any comments specific to this change and makes these edits as proposed in the final rule.

CEQ proposed to strike paragraph (b) of 40 CFR 1503.3 (2020) and redesignate paragraphs (c) and (d) as § 1503.3(b) and (c), respectively. CEQ proposed to delete paragraph (b) for consistency with the proposed removal of the exhaustion requirement from 40 CFR 1500.3 (2020) and corresponding changes to § 1502.17. CEQ also proposed to remove this paragraph because it is unrelated to the subject addressed in § 1503.3, which addresses the specificity of comments, rather than when commenters should file their comments. Finally, CEQ proposed to remove this paragraph because agencies have long had the discretion to consider special or unique circumstances that may warrant consideration of comments outside those time periods.

While most commenters were supportive of the deletion of the provisions related to exhaustion, a few commenters specifically requested CEQ retain paragraph (b) of 40 CFR 1503.3 (2020) in the final rule. These commenters expressed concern about increased litigation and commenters raising issues at the last minute or in litigation for the first time.

CEQ removes paragraph (b) of 40 CFR 1503.3 (2020) in the final rule. The CEQ regulations have long encouraged the identification of issues early in the NEPA process by providing multiple opportunities for the public to engage—first through the scoping process and then through the public comment period on the draft EIS. As CEQ explains in section II.B.3, CEQ has determined it is appropriate to remove the exhaustion provisions in 40 CFR 1500.3 (2020), which CEQ considers related to general principles of administrative law applied by courts rather than to principles specific to NEPA. Therefore, CEQ removes this paragraph for the reasons set forth in the NPRM, the Phase 2 Response to Comments, and the preamble of this final rule.

Next, CEQ proposed to strike ''site-specific'' from 40 CFR 1503.3(d) (2020) in proposed paragraph (c) to clarify that cooperating agencies must identify additional information needed to address significant effects generally. CEQ proposed this change to enhance efficiency because it ensures that cooperating agencies have the information they need to fully comment on EISs, averting potential delay in the environmental review process. CEQ did not receive any comments specific to this proposed change. CEQ makes this change for clarity in the final rule.

Finally, CEQ proposed to strike the requirement for cooperating agencies to cite their statutory authority for recommending mitigation from 40 CFR 1503.3(e) (2020). The NPRM explained that this requirement is unnecessary since, at this stage in development of an EIS, those agencies with jurisdiction by law have already established their legal authority to participate as cooperating agencies. Two commenters opposed this change, suggesting that requiring cooperating agencies to provide this additional detail to the lead agency will help the lead agency and applicants assess the reasonableness of such recommendations. Upon further consideration, CEQ has decided not to remove this requirement in the final rule. CEQ revises the beginning of the sentence from ''When a cooperating agency with jurisdiction by law specifies'' to ''A cooperating agency with jurisdiction by law shall specify'' to clarify the requirement to identify mitigation measures. Then, in the last clause, CEQ replaces ''the cooperating agency shall'' with ''and'' to retain the requirement for a cooperating agency to cite to its applicable statutory authority.

[96] CEQ, 2020 Response to Comments, *supra* note 69, at 326–27.

[97] *Id.*at 327.

[98] *Id.* at 328.

CEQ agrees that identifying the statutory authorities for mitigation is useful information. CEQ encourages cooperating agencies to identify such information as early as practicable in development of the EIS, but no later than at the time of their review of a draft EIS. CEQ also proposed in paragraph (d) to replace the reference to ''permit, license, or related requirements'' with ''authorizations'' because the definition of ''authorization'' in § 1508.1(d) is inclusive of those terms. CEQ makes this change as proposed for clarity and consistency in the final rule.

3. Response to Comments (§ 1503.4)

CEQ proposed to revise paragraph (a) of § 1503.4 to clarify that agencies must respond to comments but may do so either individually, in groups, or in some combination thereof. CEQ proposed to change ''may'' to ''shall,'' which would revert a change made in the 2020 rule, because the change created ambiguity that could be read to mean that agencies have discretion in whether to respond to comments at all, not just in the manner in which they respond, *i.e.,* individually or in groups. CEQ did not indicate that it intended to make responding to comments voluntary when it made this change in the 2020 rule, and CEQ has determined that amending the regulations to avoid this ambiguity improves the clarity of the regulations.

CEQ received a few comments on paragraph (a). A commenter suggested that the rule provide greater latitude to agencies to summarize and respond to comments of a similar nature or decline to respond to comments that the agency determines provide no substantive information applicable to the EIS. CEQ agrees that Federal agencies should have flexibility to summarize and respond to similar comments or decline to respond to non-substantive comments where appropriate. The proposed language provides this flexibility, and CEQ makes this change in the final rule. Restoring ''shall'' in place of ''may'' removes any ambiguity created by revisions to the paragraph in the 2020 regulations and is consistent with the longstanding requirement and expectation for agencies to respond to comments received on an EIS, while also clarifying that agencies have discretion on how to respond to comments to promote the efficiency of the NEPA process.

A couple of commenters requested that CEQ define ''substantive comments;'' modify the last sentence of paragraph (a) to make the list of means by which an agency may respond in the final EIS to be a required list by changing ''may respond'' to ''will respond;'' and modify paragraph (a)(2) to clarify that the only alternatives an agency should develop and evaluate following public comments are those that are consistent with the purpose and need and are technically and economically feasible. CEQ declines to make these changes in the final rule. Agencies have extensive experience assessing whether a comment is substantive and should have the flexibility to do so—CEQ is concerned that a definition would be unnecessarily restrictive. Similarly, CEQ declines to make the list of means by which an agency responds to comments mandatory, as unnecessarily prescriptive; paragraph (a) lists the key ways agencies may address comments, but as long as agencies respond to individual comments or groups of comments, as required by the second sentence of paragraph (a), they should have flexibility to determine the appropriate means of response. Lastly, CEQ does not consider the proposed change to paragraph (a)(2) necessary because alternatives already must be consistent with the purpose and need consistent with § 1502.14.

In paragraph (c), CEQ proposed changes to clarify that when an agency uses an errata sheet, the agency must publish the entire final EIS, which would include the errata sheet, a copy of the draft EIS, and the comments with their responses. CEQ proposed these edits to reflect typical agency practice and to reflect the current requirement for electronic submission of EISs rather than the old practice of printing EISs for distribution. One commenter suggested that proposed edits would eliminate the errata sheet. The intent of CEQ's edits is to ensure that the public can access the complete analysis in one place. CEQ disagrees with the commenter's interpretation of the proposed text, but to remove any ambiguity, CEQ has revised the provision in the final rule to make clear that the final EIS includes the errata sheet and ''a copy of the draft statement.''

F. Revisions To Update Part 1504, Dispute Resolution and Pre-Decisional Referrals

In the NPRM, CEQ proposed to revise part 1504 to add a new section on early dispute resolution and reorganize the existing sections. As discussed further in this section, CEQ makes the changes in the final rule with some additional edits that are responsive to commenters. One commenter noted that CEQ did not propose to revise the title of part 1504 to reflect this approach. Therefore, in this final rule, CEQ revises and simplifies the title of part 1504 to ''Dispute resolution and pre-decisional referrals'' for consistency with the revisions to this part. CEQ notes that the criteria and procedures for agencies to make a referral apply to agencies that make a referral under the NEPA regulations and do not apply to EPA when exercising its referral authority under section 309 of the Clean Air Act, 42 U.S.C. 7609.

1. Purpose (§ 1504.1)

CEQ proposed in § 1504.1(a) to add language encouraging agencies to engage early with each other to resolve interagency disagreements concerning proposed major Federal actions before such disputes are referred to CEQ. CEQ also proposed to add language clarifying that part 1504 establishes procedures for agencies to submit requests to CEQ for informal dispute resolution, expanding the purpose to reflect the changes proposed in § 1504.2 and described in section II.F.2. While CEQ did not receive any comments on the language of this specific provision, CEQ revises the proposed language to make clear that agencies need not engage in dispute resolution before a referral. At least one commenter interpreted the optional early dispute resolution provision in § 1504.2 as a required precursor to a referral. Therefore, in the final rule, CEQ revises the first sentence as proposed to encourage agencies to engage with one another to resolve interagency disputes and adds the proposed new sentence indicating that part 1504 establishes the procedures for early dispute resolution, but does not include the clause referencing the referral process. As discussed further in section II.F.2, these revisions are consistent with CEQ's ongoing role in promoting the use of environmental collaboration and conflict resolution,[99] and serving as a convener and informal mediator for interagency disputes. CEQ strongly encourages agencies to resolve disputes informally and as early as possible so that referrals under part 1504 are used only as a last resort. Early resolution of disputes is essential to ensuring an efficient and effective environmental review process.

In paragraph (b), which notes EPA's role pursuant to section 309 of the Clean Air Act, 42 U.S.C. 7609, CEQ proposed to strike the parenthetical providing the

[99] *See* OMB & CEQ, Memorandum on Environmental Collaboration and Conflict Resolution (Sept. 7, 2012), *https://ceq.doe.gov/docs/ceq-regulations-and-guidance/OMB_CEQ_Env_Collab_Conflict_Resolution_20120907.pdf;* OMB & CEQ, Memorandum on Environmental Conflict Resolution (Nov. 28, 2005), *https://ceq.doe.gov/docs/ceq-regulations-and-guidance/regs/OMB_CEQ_Joint_Statement.pdf.*

term ''environmental referrals,'' as this term is not used elsewhere in part 1504. CEQ notes that EPA's section 309 authority is distinct from the ability of an agency to make a referral pursuant to § 1504.3, and therefore part 1504 does not apply to EPA when it is exerting its section 309 authority. Finally, CEQ proposed to revise the second sentence in paragraph (c) to eliminate the passive voice to improve clarity. CEQ did not receive any specific comments on its proposed changes to paragraphs (b) and (c). Consistent with the NPRM, this final rule removes the parenthetical in paragraph (b) and revises paragraph (c) to add the second sentence as proposed. Additionally, the final rule strikes ''similar'' from the first sentence of paragraph (c) because the bases for referral under NEPA and section 309 are distinct.

2. Early Dispute Resolution (§ 1504.2)

As discussed further in section II.F.3, CEQ proposed to move the provisions in 40 CFR 1504.2 (2020) to § 1504.3(a) and to repurpose § 1504.2 for a new section on early dispute resolution. CEQ proposed to add this section to codify agencies' current and longstanding practice of engaging with one another and enlisting CEQ to help resolve interagency disputes. While CEQ did not receive many comments on this provision, the vast majority of those it did receive supported the new provision, and some recommended CEQ make the language in the provision stronger and more directive. On the other hand, one commenter suggested dispute resolution would slow the environmental review process. CEQ is finalizing the provision as proposed because CEQ considers a flexible, informal, and non-binding approach rather than a mandatory and prescriptive process to strike the right balance to advance early resolution of interagency disputes. CEQ does not consider this provision to abrogate CEQ's authorities, as one commenter suggested, but rather to encourage agencies to resolve disputes early amongst themselves and elevate issues to CEQ when doing so will help advance resolution. Making the language in the regulations discretionary rather than mandatory does not affect CEQ's authorities.

CEQ revises § 1504.2 as proposed. Specifically, new paragraph (a) encourages agencies to engage in interagency coordination and collaboration within planning and decision-making processes and to identify and resolve interagency disputes. Further, paragraph (a) encourages agencies to elevate issues to appropriate agency officials or to CEQ in a timely manner that is consistent with the schedules for the proposed action established under § 1501.10.

Paragraph (b) allows a Federal agency to request that CEQ engage in informal dispute resolution. When making such a request to CEQ, the agency must provide CEQ with a summary of the proposed action, information on the disputed issues, and agency points of contact. This provision codifies the longstanding practice of CEQ helping to mediate and resolve interagency disputes outside of and well before the formal referral process (§ 1504.3) and to provide additional direction to agencies on what information CEQ needs to mediate effectively.

Paragraph (c) provides CEQ with several options to respond to a request for informal dispute resolution, including requesting additional information, convening discussions, and making recommendations, as well as the option to decline the request.

3. Criteria and Procedure for Referrals and Response (§ 1504.3)

As noted in section II.F.2, CEQ proposed to move the criteria for referral set forth in 40 CFR 1504.2 (2020) to a new paragraph (a) in § 1504.3 and redesignate paragraphs (a) through (h) of 40 CFR 1504.3 (2020) as § 1504.3(b) through (i), respectively. Because of this consolidation, CEQ proposed to revise the title of § 1504.3 to ''Criteria and procedure for referrals and response.''

At least one commenter supported the move of 40 CFR 1504.2 (2020) to proposed § 1504.3(a) to facilitate the addition of the informal dispute resolution process. A few commenters requested that CEQ make additional changes to § 1504.3 to restore language from the 1978 regulations allowing public comment during CEQ's deliberations on whether to accept a particular referral and, if CEQ accepts a referral, during CEQ's consideration of recommendations to resolve the dispute.

In the final rule, CEQ adds an additional factor, ''other appropriate considerations,'' at § 1504.3(a)(8) to clarify that the list of considerations for referral is not an exclusive list. Additionally, CEQ revises paragraph (f) to allow ''other interested persons'' to provide views on the referrals because CEQ agrees with the commenters that the opportunity to provide views should not be limited to applicants. Relatedly, CEQ clarifies in paragraph (g)(3) that CEQ may obtain additional views and information ''including through public meetings or hearings.'' While the language in 40 CFR 1504.3(f)(3) (2020) and the proposed rule would not preclude CEQ from holding public meetings or hearings, CEQ considers it important to provide this clarification in the regulations to respond to comments. CEQ otherwise finalizes this provision as proposed.

G. Revisions to NEPA and Agency Decision Making (Part 1505)

1. Record of Decision in Cases Requiring Environmental Impact Statements (§ 1505.2)

The proposed rule included proposed modifications in § 1505.2 to align this section with other proposed changes to the regulations relating to exhaustion and to clarify which alternatives agencies must identify in RODs. CEQ also proposed to modify the provision on mitigation. As discussed further in this section, CEQ proposed to strike paragraph (b) of 40 CFR 1505.2 (2020), make paragraph (a) of 40 CFR 1505.2 (2020) the undesignated introductory paragraph in § 1505.2, and redesignate paragraphs (a)(1) through (a)(3) of 40 CFR 1505.2 (2020) as § 1505.2(a) through (c), respectively. CEQ makes these reorganizational changes in the final rule.

In proposed paragraph (b), CEQ proposed to restructure the first sentence—by splitting it into two sentences and reframing it in active voice—to improve readability and clarify that an agency must identify the alternatives it considered in reaching its decision and also specify one or more environmentally preferable alternatives in the ROD, consistent with proposed changes to § 1502.14(f) requiring an agency to identify one or more environmentally preferable alternatives in the EIS. CEQ makes these changes as proposed in the final rule.

CEQ received a number of comments on the ''environmentally preferable alternative'' generally, which are discussed in detail in sections II.D.13 and II.J.10. CEQ notes that it did not intend a substantive change to the longstanding requirement to identify which alternative (or alternatives) considered in the EIS is the environmentally preferable alternative(s). Some commenters suggested that the ''environmentally preferable alternative'' could be an alternative other than the proposed action, no action, or reasonable alternatives (which must be technically and economically feasible and meet the definition of purpose and need). However, this is incorrect because the environmentally preferable alternative is one of the alternatives included in the analysis, which consist of the proposed action, no action, or reasonable

alternatives. CEQ is revising § 1502.14(f) in the final rule, to which § 1505.2(b) cross references, to make this clear. CEQ revises § 1505.2 as proposed in the final rule.

Another commenter suggested CEQ require an agency to specify if it selected the environmentally preferable alternative and if not, why not. CEQ declines to make this change in the final rule because it is overly prescriptive. The regulations have long required agencies to discuss myriad factors and considerations that agencies balance in making their decisions without specifically requiring an agency to explain why it did not select the environmentally preferable alternative, and CEQ does not consider a change from this longstanding practice to be warranted.

In the third sentence of proposed § 1505.2(b), CEQ added environmental considerations to the list of example relevant factors upon which an agency may base discussion of preferences among alternatives. CEQ did not receive any specific comments on this proposed change to § 1505.2(b) and makes the changes in the final rule consistent with its proposal.

In proposed § 1505.2(c), CEQ proposed to change ''avoid or minimize'' to ''mitigate'' in the first sentence for consistency with the remainder of the paragraph. One commenter opposed this change, arguing that it would impose a burdensome requirement on agencies to consider mitigation for each of the effects of the proposed action and explain in a ROD why each impacted resource will not be replaced with a substitute. CEQ disagrees with the commenter's interpretation of the proposed revision. This provision has never required agencies to discuss avoidance or minimization at this level of detail, *i.e.,* for each resource category. Rather, it requires an agency to discuss generally whether it has ''adopted all practicable means'' and if not, the reasons for not doing so. CEQ makes this change in the final rule to clarify that agencies should discuss generally whether they have adopted practicable mitigation to address environmental harms from the selected alternative. Agencies need not do so on an impact category-by-impact category basis.

Additionally, CEQ proposed to clarify in proposed § 1505.2(c) that any mitigation must be enforceable, such as through permit conditions or grant agreements, if an agency includes the mitigation as a component of the selected action in the ROD, and the analysis of reasonably foreseeable effects in the EISs relies on effective implementation of that mitigation. CEQ also proposed to require agencies to identify the authority for enforceable mitigation. Lastly, CEQ proposed to replace the requirement to adopt and summarize a monitoring and enforcement program for any enforceable mitigation requirements or commitments, with a requirement to adopt a monitoring and compliance plan consistent with proposed § 1505.3(c).

CEQ received a large number of comments both supporting and opposing the proposed requirement to ensure that mitigation is enforceable in certain cases and to identify the authority for the enforceable mitigation. Supporters of the proposed change generally expressed concerns that mitigation incorporated in RODs or FONSIs is often not carried out, undermining the evaluation of effects required by NEPA. By contrast, opponents of the proposed change expressed concern that the provision would require enforceable mitigation in every case, and that the requirement for enforceability would discourage project proponents from proposing voluntary mitigation. These commenters also stated that NEPA does not require mitigation of adverse effects or give agencies the authority to require or enforce mitigation measures. They expressed concern that to the extent that the authority to require or enforce mitigation comes from other statutes, the requirement in proposed § 1505.2(c) would be duplicative. Finally, commenters noted that ''enforcement'' may be the responsibility of an agency other than the lead agency and may consist of suspension or revocation of an authorization under terms and conditions included in the authorization rather than direct civil or administrative enforcement actions.

In the final rule, CEQ retains the requirement to make mitigation enforceable in those circumstances in which agencies rely upon that mitigation as part of its analysis. CEQ has revised the sentence in § 1505.2(c) to enhance readability and to address some of the confusion raised by commenters by specifying that mitigation must be enforceable by a lead, joint lead, or cooperating agency when the ROD incorporates mitigation and the analysis of the reasonably foreseeable effects of the proposed action is based on implementation of that mitigation. The final rule further revises the second sentence of proposed § 1505.2(c) by breaking it into two sentences. The first identifies when mitigation must be enforceable. The second requires agencies to identify the authority for enforceable mitigation, provides examples of enforceable mitigation—specifically, permit conditions, agreements, or other measures—and requires agencies to prepare a monitoring and compliance plan. CEQ received a number of comments on the monitoring and compliance plan proposal, which are discussed in detail in section II.G.2. For the reasons discussed in that section, as well as the Phase 2 Response to Comments and NPRM, CEQ revises the last sentence of § 1505.2(c) to require agencies to prepare a monitoring and compliance plan consistent with § 1505.3.

Section 1505.2(c) does not require agencies to include enforceable mitigation measures in every decision subject to NEPA or require them to adopt mitigation in any circumstance; rather, the provision reinforces the integrity of environmental reviews by ensuring that if an agency assumes as part of its analysis that mitigation will occur and will be effective, the agency takes steps to ensure that this assumption is correct, including by making the mitigation measures enforceable.

This provision does not prohibit agencies from approving proposals with unmitigated adverse environmental effects or from approving proposals that include unenforceable mitigation measures so long as the agency does not rely on the effective implementation of those measures to determine the potential reasonably foreseeable effects of the action. Rather, the provision only prohibits an agency from basing its environmental analysis on mitigation that the agency cannot be reasonably sure will occur. If an agency treats the proposal's unmitigated effects as ''reasonably foreseeable,'' and analyzes them in its environmental review, then the rule does not require the agency to make the mitigation measures discussed in the environmental document enforceable or to identify the authority for those measures.

The text in the final rule is consistent with CEQ's longstanding position that agencies should not base their NEPA analyses on mitigation measures that they lack the authority to carry out or to require others to carry out. CEQ agrees with the commenters that enforcing mitigation measures will generally rely on authorities conferred on the agency (or other participating agencies) by statutes other than NEPA. Rather than duplicating work done under those other statutes, however, the requirement to identify those authorities will help integrate NEPA with other

statutory processes and promote efficiency and transparency.

Finally, CEQ proposed to strike paragraph (b) of 40 CFR 1505.2 (2020), requiring a decision maker to certify in the ROD that the agency considered all of the submitted alternatives, information, and analyses in the final EIS, consistent with paragraph (b) of 40 CFR 1502.17 (2020), and stating that such certification is entitled to a presumption that the agency considered such information in the EIS. CEQ proposed to strike this paragraph because such certification is redundant—the discussion in the ROD and the decision maker's signature on such document have long served to verify the agency has considered the entirety of the EIS's analysis of the proposed action, alternatives, and effects, as well as the public comments received. As a result, the certification that this paragraph required could have the unintended consequence of suggesting that the agency has not considered other aspects of the EIS, such as the comments and response to comments, in making the decision. CEQ also proposed this change because agencies are entitled to a presumption of regularity under the tenets of generally applicable administrative law, rather than this presumption arising from NEPA; therefore, CEQ considers it inappropriate to address in the NEPA regulations.

CEQ also proposed to strike paragraph (b) for consistency with its proposal to remove the exhaustion provision in 40 CFR 1500.3 (2020), as discussed in section II.B.3. As CEQ discussed in that section, CEQ now considers it more appropriately the purview of the courts to make determinations regarding exhaustion. Therefore, to the extent that the certification requirement was intended to facilitate the exhaustion provision in 40 CFR 1500.3 (2020), it is no longer necessary.

As discussed in section II.B.3, CEQ considered the comments regarding the exhaustion-related provisions and is removing them in this final rule. While most commenters discussed the provisions collectively, at least one commenter recommended removing this certification provision because it created an additional compliance burden on agencies without improving efficiency or reducing litigation risk. CEQ agrees that the certification provision does not increase efficiency or reduce litigation risk, and that this is an additional reason to remove this provision. For the reasons discussed here and in section II.B.3, CEQ removes this paragraph in the final rule. As noted in this section, CEQ considers such certification to be redundant to the decision maker's signature on a ROD, which indicates that the decision maker has considered all of the information, including the public comments.

2. Implementing the Decision (§ 1505.3)

CEQ proposed to add provisions to § 1505.3 for mitigation and related monitoring and compliance plans. To accommodate the changes, CEQ proposed to designate the undesignated introductory paragraph of 40 CFR 1505.3 (2020) as paragraph (a) and redesignate 40 CFR 1505.3(a) and (b) (2020) as § 1505.3(a)(1) and (a)(2), respectively. CEQ makes these reorganizational changes in the final rule with two clarifying edits to § 1505.3(a). First, CEQ adds an introductory clause in § 1505.3, ''[i]n addition to the requirements of paragraph (c) of this section,'' to distinguish the discussion of monitoring in paragraph (a) from the new monitoring and compliance plans provided for in paragraph (c). Second, CEQ deletes ''lead'' before agency in the last sentence for consistency with the prior sentence, stating that the lead or other appropriate consenting agency shall implement mitigation committed to as part of the decision.

CEQ proposed to add new § 1505.3(b) to encourage lead and cooperating agencies to incorporate, where appropriate, mitigation measures addressing a proposed action's significant adverse human health and environmental effects that disproportionately and adversely affect communities with environmental justice concerns. CEQ proposed this addition to highlight the importance of considering environmental justice and addressing disproportionate effects through the NEPA process and the associated decision. CEQ proposed this addition based on public and agency feedback received during development of this proposed rule requesting that this rule address mitigation of disproportionate effects. Additionally, CEQ proposed this change to encourage agencies to incorporate mitigation measures to address disproportionate burdens on communities with environmental justice concerns.

Numerous commenters opposed CEQ's proposed addition of § 1505.3(b), pointing to the Supreme Court's decision in *Robertson* v. *Methow Valley Citizens Council,* 490 U.S. 332 (1989). These commenters stated that as a procedural statute, NEPA does not empower CEQ to require agencies to adopt mitigation measures. In contrast, other commenters supported CEQ's inclusion of the proposed new language in § 1505.3(b), and in some cases, encouraged CEQ to go further to require agencies to mitigate adverse effects to communities with environmental justice concerns.

CEQ finalizes § 1505.3(b) as proposed with two edits. The final rule includes ''into its decision'' after ''incorporate'' to clarify where agencies incorporate mitigation measures and does not include ''adverse'' after ''significant'' since ''significant effects'' is defined to only be adverse effects. CEQ has long encouraged agencies, as a policy matter, to adopt mitigation measures that will reduce the adverse environmental effects of their actions.[100] The addition of the language in § 1505.3(b) is consistent with this approach without imposing new legal requirements on Federal agencies.

CEQ recognizes the Supreme Court's holding in *Methow Valley* that NEPA does not require ''that a complete mitigation plan be actually . . . adopted,'' 490 U.S. at 352, and has not changed its longstanding position that ''NEPA in itself does not compel the selection of a mitigated approach.'' [101] Accordingly, this provision does not impose any binding requirements on agencies, but rather codifies a portion of CEQ's longstanding position that agencies should, as a policy matter, mitigate significant adverse effects where relevant and appropriate, in particular for ''actions that disproportionately and adversely affect communities with environmental justice concerns.'' The encouragement to agencies to mitigate disproportionate and adverse human health and environmental effects on communities with environmental justice concerns is grounded in NEPA, which, while not imposing a requirement to mitigate adverse effects, nonetheless does ''set forth significant substantive goals for the Nation.'' See *Vt. Yankee,* 435 U.S. at 558. Specifically, NEPA declares that the purposes of the statute are ''to promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of [people]''; establishes ''the continuing policy of the Federal Government'' to ''assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings'' and to ''preserve important historic, cultural, and natural aspects of our national heritage''; and ''recognizes that each person should

[100] *See, e.g.,* CEQ, Mitigation Guidance, *supra* note 10, at 3847 (''CEQ encourages agencies to commit to mitigation to achieve environmentally preferred outcomes, particularly when addressing unavoidable adverse environmental impacts'').

[101] *See id.* at 3844.

enjoy a healthful environment.'' 42 U.S.C. 4321, 4331(a), (b)(2), (b)(4), (c).

CEQ's policy guidance has long ''encourage[d] agencies to commit to mitigation to achieve environmentally preferred outcomes, particularly when addressing unavoidable adverse environmental impacts.'' [102] CEQ's choice to encourage agencies in § 1505.3(b) to mitigate, ''where relevant and appropriate,'' the significant effects of ''actions that disproportionately and adversely affect communities with environmental justice concerns,'' reflects the particular importance of addressing environmental justice. CEQ does not intend the codification of its encouragement to mitigate this category of effects to imply that CEQ does not also continue to encourage agencies to commit to mitigation more broadly as set forth in CEQ's guidance. Rather, CEQ has determined to focus the regulation on mitigation where actions disproportionately and adversely affect communities with environmental justice concerns, due to its heightened policy concern when actions further burden communities that already experience disproportionate burdens.

Next, CEQ proposed to revise the text in paragraph (c) regarding mitigation and strike 40 CFR 1505.3(d) (2020) regarding publication of monitoring results, and replace them with new language in § 1505.3(c) regarding the contents of a monitoring and compliance plan. As proposed, this provision would require agencies to prepare a monitoring and compliance plan in certain circumstances when the agency commits to mitigation in a ROD, FONSI, or separate document. CEQ proposed to require agencies to prepare a plan for any mitigation committed to and adopted as the basis for analyzing the reasonably foreseeable effects of a proposed action, not just mitigation to address significant effects. In the NPRM, CEQ explained that it views such plans as necessary in order for an agency to conclude that it is reasonably foreseeable that a mitigation measure will be implemented, and, therefore, that the agency does not have to analyze and disclose the effects of the action without mitigation because they are not reasonably foreseeable. The proposal would not require a monitoring and compliance plan where an agency analyzes and discloses the effects of the action without the mitigation measure because, in that circumstance, the agency would not base its identification of reasonably foreseeable effects on the mitigation measure.

[102] *See id.* at 3847.

CEQ received many comments both supporting and opposing the requirement for mitigation monitoring and compliance plans under prescribed circumstances. Supporters of the proposed changes generally expressed concerns that without monitoring and compliance plans, agencies' assumptions regarding the ability of mitigation to reduce the adverse effects of the proposed action may be speculative. Opponents of the changes, meanwhile, raised similar concerns to those raised in connection with the language in § 1505.2(c) regarding the enforceability of mitigation, as discussed in section II.G.1. Specifically, commenters expressed concern that enforceable mitigation would be required in every case, and that the requirement for enforceability would discourage project proponents from proposing voluntary mitigation. These commenters also noted that NEPA does not require or authorize CEQ to require detailed mitigation plans and expressed concern that preparing monitoring and compliance plans would be duplicative and burdensome. Commenters also suggested that CEQ require monitoring plans in a broader range of cases; require plans to include more detailed information regarding effectiveness and uncertainty; require agencies to engage the public in connection with mitigation plans; and provide guidance on topics including interagency coordination and mitigation funding.

In the final rule, CEQ strikes paragraph (d) of 40 CFR 1505.3 (2020) and revises § 1505.3(c) to require the lead or cooperating agency to prepare and publish a monitoring and compliance plan for mitigation in certain circumstances identified in § 1505.3(c)(1) and (c)(2)—the final rule subdivides the text from proposed paragraph (c) to improve readability. The final rule clarifies that an agency must publish the plan. While publication is implied in the proposed rule, since such plans would be completed in or with the ROD or FONSI, and these documents must be published, commenters requested CEQ address this explicitly in the final rule, and CEQ has done so to avoid any confusion over whether agencies must publish these plans.

CEQ revises the language from the proposed rule to make clear that agencies must prepare such plans when the following conditions are met. First, the analysis of the reasonably foreseeable effects of a proposed action in an EA or EIS is based on implementation of mitigation. Second, the agency incorporates the mitigation into its ROD, FONSI, or separate decision document.

As with the requirements related to mitigation enforceability in § 1505.2(c), this provision does not require agencies to include mitigation monitoring and compliance plans for every action subject to NEPA or even for every decision that includes mitigation. Rather, the final rule requires the agency to prepare and publish a mitigation monitoring and compliance plan when an agency bases its identification of the reasonably foreseeable effects of the action, as required by section 102(2)(C) of NEPA, on implementation of mitigation. Specifically, the statutory text requires an agency to identify the ''reasonably foreseeable environmental effects'' of the proposed action; to the extent that identification assumes the implementation of mitigation measures to avoid adverse effects, it follows, in turn, that implementation of mitigation must also be reasonably foreseeable. The preparation of a monitoring and compliance plan therefore provides the agency with reasonable certainty that the mitigation measures upon which it has based its effects analysis will be implemented, and therefore, that the effects of the action in the absence of mitigation do not need to be analyzed and disclosed to satisfy the requirements of the NEPA statute. For example, if an agency concluded that issuing a permit allowing fill of five acres of wetlands would not have a significant effect based on the applicant's agreement to restore five acres of comparable wetlands in the same watershed, then the agency has based its conclusion that the action to grant the permit does not have significant effects on implementation of the mitigation measure and would need to prepare a monitoring and compliance plan. The same would be true if the agency's analysis in its EA or EIS found that authorizing the filling of five acres of wetlands would not have a reasonably foreseeable effect on the availability of wetlands habitat in the watershed based on the implementation of the wetlands restoration measure.

The language in § 1505.3 builds on CEQ's longstanding positions regarding the information that agencies must include in NEPA documents when agencies choose to base their effects analysis on the implementation of mitigation measures. To the extent that other authorities may require monitoring and compliance plans, agencies should leverage those existing plans to comply with the requirements of the rule, rather than duplicating efforts.

CEQ proposed paragraphs (c)(1) and (c)(1)(i) through (c)(1)(vi) of § 1505.3 to describe the contents of a monitoring and compliance plan and provide agencies flexibility to tailor plans to the complexity of the mitigation that the agency has incorporated into a ROD, FONSI, or other document. Contents should include a description of the mitigation measures; the parties responsible for monitoring and implementation; how the information will be made publicly available, as appropriate; the anticipated timeframe for implementing and completing the mitigation; the standards for compliance with the mitigation; and how the mitigation will be funded.

A commenter suggested that CEQ require in § 1505.3(c)(1)(v) that the standards address effectiveness of the mitigation. CEQ declines to make this change in the final rule. The goal of this provision is to ensure that agencies have reasonable certainty that mitigation measures that serve as the basis for the effects analysis will be implemented, and therefore, that the effects of the action in the absence of implementation of mitigation are not reasonably foreseeable and can be excluded from the analysis. Agencies appropriately evaluate the effectiveness of mitigation measures as part of the NEPA process and rely on various techniques, such as adaptive management plans, to address circumstances where there is substantial uncertainty over effectiveness, for example where a mitigation measure is new or novel.

CEQ finalizes these paragraphs in § 1505.3(d) and (d)(1) through (d) as proposed, with an addition to § 1505.3(d) to reference the monitoring and compliance plan required by paragraph (c). Agencies may tailor monitoring and compliance plans to the particular action, but they should contain sufficient detail to inform the participating and cooperating agencies and the public about relevant considerations, such as the magnitude of the environmental effects that would be subject to mitigation, the degree to which the mitigation represents an innovative approach, any technical or other challenges with implementation, the time frame for implementation and monitoring, and other relevant facts that support a determination that the mitigation will be implemented. Where a proposed action involves more than one agency, the lead and cooperating agencies should collaboratively develop a monitoring and compliance plan that clearly defines agency roles and avoids duplication of effort.

Requiring agencies to prepare a monitoring and compliance plan for mitigation in the circumstances identified in paragraph § 1505.3(c) is intended to address concerns that mitigation measures included in agency decisions are not always carried out. If it is reasonably foreseeable that a mitigation measure will not be implemented, then the agency cannot appropriately base its analysis of the effects of the action on the implementation of the mitigation measure. A monitoring and compliance plan will address this concern and support an agency relying on mitigation for purposes of analyzing and disclosing the reasonably foreseeable environmental effects of a proposed action, as required by section 102(2)(C) of NEPA, and, in some circumstances, concluding that a FONSI is appropriate.

Finally, CEQ proposed to add a new paragraph (c)(2) to provide that any new information developed through the monitoring and compliance plan would not require an agency to supplement its environmental documents solely because of this new information. CEQ proposed this provision to clarify that the existence of a monitoring and compliance plan by itself would not mean that the action to which it relates is an ongoing action if it would otherwise be considered completed.

CEQ received comments supporting, opposing, and asking CEQ to clarify proposed § 1505.3(c)(2). In the final rule, CEQ includes proposed paragraph (c)(2) at § 1505.3(e) with some revisions to the proposal. CEQ revises the beginning of the first sentence to clarify that where an action is incomplete or ongoing, the information developed through the monitoring and compliance plan itself cannot induce the requirement to supplement or revise environmental documents. CEQ includes this provision to avoid perverse incentives that could lead agencies to adopt less effective monitoring and compliance plans, or forgo commitments to mitigation entirely, to avoid revision and supplementation. This clarification is also consistent with the purpose of the monitoring and compliance plan, which is to ensure that the agency has a reasonable basis for assessing environmental effects at the time that it makes its decision, rather than creating a new obligation for ongoing NEPA analysis after a decision is made. Second, CEQ adds an additional sentence at the end of the paragraph to clarify that the ongoing implementation of a monitoring and compliance plan by itself is not an incomplete or ongoing Federal action that induces supplementation under §§ 1501.5(h) or 1502.9(d).

The changes to § 1505.3 are consistent with the final rule's revisions to § 1505.2(c), which direct agencies to adopt and summarize a monitoring and enforcement program for any enforceable mitigation requirements or commitments for a ROD, and to § 1501.6(a) to clarify the use of mitigated FONSIs. The changes also provide more consistency in the content of monitoring and compliance plans, increase transparency in the disclosure of mitigation measures, and provide the public and decision makers with relevant information about mitigation measures and the process to comply with them.

H. Revisions to Other Requirements of NEPA (Part 1506)

CEQ proposed multiple revisions to part 1506, as described in this section. As noted in section II.C.8, CEQ proposed to move 40 CFR 1506.6 (2020), ''Public involvement,'' to § 1501.9, ''Public and governmental engagement.'' CEQ did not propose changes to § 1506.2, ''Elimination of duplication with State, Tribal, and local procedures;'' § 1506.4, ''Combining documents;'' or § 1506.8, ''Proposals for legislation,'' but invited comments on whether it should make changes to these provisions in the final rule.

CEQ received several general comments of support on § 1506.2 regarding elimination of duplication with State, Tribal, and local procedures, and one commenter suggested the final rule change § 1506.2(d) to require rather than recommend that EISs describe how the agency will reconcile an inconsistency between the proposed action and an approved State, Tribal, or local plan or law. CEQ declines to make this change to this longstanding language from the 1978 regulations. As also noted in this provision, NEPA does not require such reconciliation.

CEQ did not receive any recommendations to amend § 1506.4 regarding combining documents, though one commenter requested additional guidance on use of this and other provisions to facilitate sound and efficient decision making and avoid duplication. Finally, CEQ received one comment on § 1506.8 regarding legislative EISs, requesting CEQ include public notification and participation requirements for legislative EAs/EISs in § 1506.8(b). CEQ notes that consistent with § 1506.8(c), agencies must provide for public notice and seek comment like any other draft EIS. After considering these comments, CEQ has determined to finalize the rule without making changes to §§ 1506.2, 1506.4, or 1506.8.

1. Limitations on Actions During NEPA Process (§ 1506.1)

CEQ proposed to edit § 1506.1(b) to provide further clarity on the limitations on actions during the NEPA process to ensure that agencies and applicants do not take actions that will adversely affect the environment or limit the choice of reasonable alternatives until an agency concludes the NEPA process.

CEQ proposed to amend the last sentence in paragraph (b), which provides that agencies may authorize certain activities by applicants for Federal funding while the NEPA process is ongoing. To better align this provision with NEPA's requirements, CEQ proposed to add a clause to the sentence clarifying that such activities cannot limit the choice of reasonable alternatives, and the Federal agency must notify the applicant that the agency retains discretion to select any reasonable alternative or the no action alternative regardless of any potential prior activity taken by the applicant prior to the conclusion of the NEPA process. CEQ also proposed this revision to provide additional clarity consistent with § 1506.1(a) and the 2020 Response to Comments, which state that this provision allows certain activities to proceed, prior to a ROD or FONSI, so long as they do not have an adverse environmental impact or limit the choice of reasonable alternatives.[103] The NPRM also noted that the proposed change is responsive to comments received on the 2020 rule expressing concern that the existing language could allow pre-decisional activities to proceed that would inappropriately narrow the range of alternatives considered by an agency.

A few commenters expressed support for the proposed changes to § 1506.1(b), including commenters who also requested additions to the list of examples of potentially permissible activities. Several other commenters opposed the proposed language, pointing to sector-specific reasons; citing cases where courts issued preliminary injunctions predicated on a ruling that limiting reasonable alternatives before the NEPA analysis is complete is irreparable harm; citing cases where courts ruled that undertaking project actions before NEPA is completed undermines the law; and asserting that allowing any economic investment in an action before completing the NEPA process undermines confidence in agency decisions.

Some commenters opposed the examples of activities an agency could authorize, asserting that land rights acquisition and long lead time equipment purchases are apt to bias agency decision making and recommended CEQ revise the list to prohibit acquisition of interests in land, purchase of long lead-time equipment, and purchase options made by applicants before NEPA review.

One commenter asserted that the proposed revisions to paragraph (b) undermine the value of an agency authorization and recommended the provision state that project applicants may proceed at their own risk without agency authorization. Another commenter requested that CEQ add language to paragraph (b) to provide Tribes with more flexibility to undertake interim actions.

CEQ considered the comments and finalizes § 1506.1(b) as proposed with two additional revisions. Specifically, CEQ changes the phrase ''non-Federal entity'' to ''applicant'' in the first sentence of paragraph (b) for consistency with the definition of ''applicant'' added to § 1508.1(c) and does not include the phrase ''potential prior'' before the word ''activity,'' so that the provision requires notification that the agency retains discretion regardless of any activity taken by the applicant prior to the conclusion of the NEPA process. CEQ has deleted this phrase because, upon further consideration, it considers it to be confusing because the sentence refers to activity taken prior to the conclusion of the NEPA process, and, therefore, the earlier use of ''prior'' is redundant and the use of ''potential'' is unnecessary because such activity would be actual and not potential at the conclusion of the NEPA process. CEQ considers the provision as revised to strike the right balance between preserving the integrity of the NEPA process, including preserving an agency's right to select no action or a reasonable alternative, and providing applicants sufficient flexibility to make business decisions. This approach is consistent with the fact that NEPA applies to Federal agencies and does not directly regulate applicants (unless the applicants are themselves Federal agencies). This approach is also consistent with longstanding practice under § 1506.1. Further, applicants are in the best position to assess and determine their tolerance for risk, and agencies should never be unduly influenced by these decisions in their NEPA processes.

CEQ also proposed to strike ''required'' in paragraph (c). This edit is consistent with § 1501.11, which encourages, but does not require, the use of programmatic environmental reviews.

A few commenters opposed the proposed change to paragraph (c), asserting that it is contrary to NEPA and multiple other laws by restricting actions during discretionary or non-required programmatic environmental reviews. One commenter stated that the proposal would authorize agencies to suspend programs like Federal coal leasing while environmental studies are ongoing, and that NEPA does not provide agencies with authority for such action. The commenter asserted that expanding proposed § 1506.1 beyond required programmatic environmental reviews is arbitrary and capricious because CEQ has failed to describe a valid purpose for the deletion.

CEQ has reviewed this provision in response to comments and retains ''required'' in the final rule. CEQ also revises ''programmatic environmental review'' to ''environmental review for a program'' to revert to the approach in the 1978 regulations. The 2020 rule changed ''program'' EIS to ''programmatic environmental review'' stating that ''programmatic'' is the term commonly used by NEPA practitioners.[104] However, paragraphs (c) and (c)(1) continue to refer to ''program,'' and the definition of ''programmatic environmental document'' in § 1508.1(ee) is not limited to reviews of programs, but extends other reviews such as reviews of groups of related actions. To resolve any ambiguity, the final rule is using ''program'' throughout these paragraphs and changes ''existing programmatic review'' to ''environmental document.'' CEQ also notes that the longstanding principles set forth in paragraph (c)—that agencies must comply with NEPA for specific Federal actions before taking the action and that agencies cannot engage in activities that prejudice the outcome of the NEPA process—apply to programmatic environmental reviews irrespective of whether a programmatic review is required.

2. Adoption (§ 1506.3)

CEQ proposed changes to § 1506.3 in the NPRM to facilitate an agency's adoption of the EISs, EAs, and CE determinations of another agency in an appropriate and transparent manner. As CEQ noted in the proposed rule, the 2020 regulations expanded § 1506.3 to codify longstanding agency practice of adopting EAs and explicitly allowed for adoption of other agencies' CE determinations. CEQ proposed

[103] CEQ, 2020 Response to Comments, *supra* note 69, at 356.

[104] CEQ, 2020 Final Rule, *supra* note 39, at 43327.

modifications to § 1506.3 to improve clarity, reduce redundancy, and ensure that when an agency adopts an EIS, EA, or CE determination, the agency conducts an independent review to determine that the EIS, EA, or CE determination meets certain basic standards. CEQ also proposed to add new requirements regarding the adoption of another agency's CE determination to increase public transparency.

Comments on the proposed changes to § 1506.3 expressed both opposition and support for adoption in general, the approach to enabling adoption taken in the proposed rule, and its application to EISs, EAs, and CE determinations. Commenters who supported the adoption provisions as proposed point to the efficiencies gained in reducing time. Commenters who opposed CEQ's proposed changes asserted that the proposed rule went beyond the intended goal of NEPA and that adoption limits public engagement. Additionally, one commenter requested that throughout this section, CEQ replace ''substantially the same'' with ''the same'' to strengthen the requirements for adoption.

CEQ finalizes the proposed changes to § 1506.3 as discussed in this section. CEQ disagrees that adoption goes beyond NEPA's intended goals. Because actions must be substantially the same, the public will have had the opportunity to engage during the preparation of the original document to the extent engagement is required or appropriate for that particular action; and, where the actions are not substantially the same, additional public engagement may be required consistent with the requirements for the document type. Additionally, the CEQ regulations have provided for adoption since 1978 and included the ''substantially the same'' standard. Such language is critical to facilitating adoption because agency actions are often not the same, but relate to the same overall project. For example, one agency's funding decision is not the same action as another agency's decision to issue a permit. However, if the underlying activity analyzed in the NEPA document is the same project, then adoption is appropriate.

In paragraph (a), which provides that an agency may adopt EISs, EAs or CE determinations, CEQ proposed to strike the language requiring an EIS, EA, or CE determination to meet relevant standards and instead articulate the standards in paragraphs (b) through (d), which address adoption of EISs, EAs, and CE determinations, respectively. CEQ proposed to replace this clause with language that requires adoption to be done ''consistent with this section.'' CEQ proposed to remove ''Federal'' before the types of documents an agency may adopt as unnecessary and to make clear that agencies can adopt NEPA documents prepared by non-Federal entities that are doing so pursuant to delegated authority from a Federal agency. *See, e.g.,* 23 U.S.C. 327. CEQ makes these changes in the final rule as proposed.

In paragraph (b), CEQ proposed to add text after the heading ''Environmental impact statements'' to provide that an agency may adopt a draft or final EIS, or a portion of a draft or final EIS, if the adopting agency independently reviews the statement and concludes it meets the standards for an adequate statement pursuant to the CEQ regulations and the adopting agency's NEPA procedures.

A commenter opposed the proposed requirement for agencies to confirm that an adopted EIS, as well as an EA under paragraph (c), meets the standards of the adopting agency's NEPA procedures. The commenter asserted that this requirement is burdensome and can cause delays. One commenter also asserted that paragraph (b) requires standards for EIS adoption in agency NEPA procedures and that because agencies have a year to adopt new procedures, this will set adoption back by a year.

CEQ finalizes the changes to paragraph (b) as proposed but replaces ''a draft or final'' EIS with ''another agency's draft or final'' EIS to respond to commenters' requests for additional clarity and for consistency with the existing phrasing in paragraph (d). CEQ disagrees that requiring adopting agencies to assess consistency with their procedures will add substantial additional burden. Ensuring consistency with the adopting agency's procedures is a codification of longstanding agency practice and is necessary so that an agency can ensure that the adopted document satisfies the requirements applicable to the adopting agency. CEQ also disagrees that agencies must update their procedures to address adoption before they can make use of this tool. While agencies may consider including the adoption process in their procedures, § 1507.3 does not require agencies to do so and does not preclude an agency from using adoption before its procedures are updated. Therefore, CEQ disagrees with the commenter's assertion that agencies cannot adopt EISs until their agency NEPA procedures are updated.

In paragraph (b)(1), which addresses adoption of an EIS for actions that are substantially the same, CEQ proposed to insert ''and file'' after ''republish'' to improve consistency with § 1506.9 and because agencies must both publish the EIS and file it with EPA. Further in paragraph (b)(1), CEQ proposed to add text to clarify that agencies should supplement or reevaluate an EIS if the agency determines that the EIS requires additional analysis.

One commenter questioned if the phrase ''or reevaluate it as necessary'' means an agency could adopt an EIS through an EA and FONSI. Another commenter requested that CEQ more clearly require agencies to supplement an EIS, interpreting the proposed rule text to encourage, rather than require, supplementation when there is new or updated data. Similarly, the commenter also requested that CEQ define when it is necessary to supplement or reevaluate an EA in paragraph (c). CEQ finalizes this provision with an additional revision to change ''the statement requires supplementation'' to ''the statement may require supplementation consistent with § 1502.9 of this subchapter,'' which adds a cross-reference to the section of the regulations addressing supplementation and reevaluation. CEQ includes these revisions to clarify that agencies can conduct additional analysis to determine whether the supplementation criteria of § 1502.9(d) are met or document why supplementation is not required. This revised provision codifies agency practice and provides agencies more flexibility to use the efficiency mechanism of adoption while also ensuring that the analysis included in an adopted document is valid and complete. For example, if an agency is adopting an EIS that was prepared several years prior, and there is more recent data or updated information available on one of the categories of effects, the agency may need to do additional analysis if the supplementation standard in § 1502.9(d) is met, or document in a reevaluation, consistent with § 1502.9(e), why the supplementation standard is not met. Similarly, if an action is not substantially the same, and the adopting agency determines that the EIS requires supplemental analysis, the agency would treat the EIS as a draft, prepare the additional analysis, and publish the new draft EIS for notice and comment. Where a proposed action is not substantially the same, an agency must, at minimum, supplement the adopted EIS to ensure it adequately covers its proposed action.

In paragraph (b)(2), which addresses adoption of an EIS by a cooperating agency, CEQ proposed to clarify that this provision is triggered when a

cooperating agency does not issue a joint or concurrent ROD consistent with § 1505.2. In the proposed rule, CEQ explained that this provision covers instances when a cooperating agency adopts an EIS for an action the cooperating agency did not anticipate at the time the EIS was issued, such as a funding action for a project that was not contemplated at the time of the EIS. In such instances, the cooperating agency may issue a ROD adopting the EIS of the lead agency without republication of the EIS. CEQ proposed to strike the text at the end of paragraph (b)(2) regarding independent review because CEQ proposed to capture that standard in paragraph (b).

CEQ did not receive comments on its proposed changes to paragraph (b)(2). Therefore, CEQ finalizes this provision consistent with its proposal.

In paragraph (c), CEQ proposed to add language to clarify the standard for adopting an EA, which mirrors the standard for adoption of an EIS. CEQ similarly proposed edits to align the process with the processes for EISs by clarifying that the adopting agency may adopt the EA, and supplement or reevaluate it as necessary, in its FONSI.

A few commenters opposed the adoption of EAs, in particular expressing opposition to the adoption of draft EAs or EAs that are the subject of formal dispute resolution or litigation, and suggested these should instead be incorporated by reference pursuant to § 1501.12. One commenter requested that CEQ revise paragraph (c) to align it with paragraph (d) to require agencies to document the reasons for its adoption and make its reasoning publicly available.

In the final rule, CEQ finalizes the text as proposed in paragraph (c) with an additional revision to replace ''an environmental assessment'' with ''another agency's environmental assessment'' to respond to commenters' requests for additional clarity and for consistency with the same change to paragraph (b) and the existing language in paragraph (d). For the reasons articulated with respect to EISs, CEQ revises the language that if an agency determines an EA ''may require supplementation consistent with § 1501.5(h) of this subchapter,'' it may adopt and supplement or reevaluate the EA as necessary and issue its FONSI. CEQ agrees that an agency may only adopt a final EA, and that use of a draft EA through incorporation by reference is appropriate. However, CEQ interprets the proposed text as precluding adoption of a draft EA and, therefore, does not consider additional revisions necessary to address this comment. The reference to EAs in this section necessarily means final EAs, since the regulations do not require a draft and final EA; therefore, the reference to EA without specification means a final EA.

For additional clarity, CEQ proposed to add ''determinations'' to the title of paragraph (d). CEQ also proposed to revise this paragraph to improve readability and clarify that the adopting agency is adopting another agency's determination that a CE applies to a particular proposed action where the adopting agency's proposed action is substantially the same. As CEQ noted in the proposed rule, this provision does not allow an agency to unilaterally use another agency's CE for an independent proposed action; rather, the process for such reliance on another agency's CE is addressed in § 1501.4(e).

To ensure that there is public transparency for adoption of CE determinations, like adoption of EAs and EISs, CEQ proposed new paragraphs (d)(1) and (d)(2) to require agencies to document and publish their adoptions of CE determinations, such as on their website. CEQ proposed in paragraph (d)(1) to specify that agencies must document a determination that the proposed action is substantially the same as the action covered by the original CE determination, and there are no extraordinary circumstances present requiring preparation of an EA or EIS. Because agencies typically already make such determinations in the course of adopting CE determinations for actions that are substantially the same, CEQ has concluded that this documentation requirement will not be onerous or time consuming. In paragraph (d)(2), CEQ proposed to require agencies to publicly disclose when they are adopting a CE determination. CEQ stated in the proposed rule that this proposed change was intended to increase transparency on use of CEs to respond to feedback from stakeholders that they often do not know when an agency is proceeding with a CE. This adds a standard to adoption of CE determinations that is similar to the practice for adoption of EAs and EISs. Agencies, however, have flexibility to determine how to make this information publicly available, including through posting on an agency's website.

One commenter requested that CEQ require an agency to both publish a determination on its website and make it publicly available in other ways, as opposed to one or the other. CEQ declines to require agencies to publish CE adoption determinations in multiple places as unnecessarily burdensome on agencies. However, CEQ notes that the language in paragraph (d)(2) does not preclude agencies from both publishing an adoption of a CE determination on its website and making it publicly available in other ways when they determine doing so is appropriate. CEQ finalizes these paragraphs as proposed with one clarifying change to add introductory language at the end of paragraph (d)—''In such circumstances the adopting agency shall''—to make clear that paragraphs (d)(1) and (d)(2) apply when adopting another agency's CE determination to distinguish this process from the adoption process under § 1501.4(e).

3. Agency Responsibility for Environmental Documents (§ 1506.5)

CEQ proposed modifications and additions to § 1506.5 to clarify the roles and responsibilities for agencies, applicants, and agency-directed contractors in preparing environmental documents and to make the provision consistent with section 107(f) of NEPA, which requires agencies to prescribe procedures to allow project sponsors to prepare EAs and EISs under the agencies' supervision and to independently evaluate and take responsibility for such documents. 42 U.S.C. 4336a(f). The 2020 rule amended § 1506.5 to allow an applicant to prepare EISs on behalf of the agency; however, the 2023 amendments to NEPA make clear that agencies themselves must establish procedures for project sponsors to prepare EAs and EISs, not the CEQ regulations. As noted in the NPRM, CEQ understands the 2023 amendments to NEPA to use the terms ''applicant'' and ''project sponsor'' interchangeably and, therefore, CEQ proposed to use the term ''applicant'' and, in the final rule, CEQ uses and defines the term ''applicant.'' See section II.J.1. However, as discussed further in this section, CEQ notes that the 2023 NEPA amendments' requirement that agencies establish procedures for project sponsors to prepare EAs and EIS does not affect the ability of applicants and project sponsors to provide information to agencies to assist agencies or their agency-directed contractors in the preparation of environmental documents consistent with § 1506.5(c).

CEQ received multiple comments that generally supported the proposed changes to allow applicants to prepare EAs and EISs, as well as multiple commenters who generally opposed the provision and opposed section 107(f) of NEPA, 42 U.S.C. 4336a(f). CEQ discusses these comments and responses in section II.I.3 of this final rule, which addresses the statutory

requirement for agencies to prescribe applicant procedures.

In paragraph (a), CEQ proposed to clarify that regardless of who prepares an environmental document—the agency itself, a contractor under the direction of the agency, or the applicant pursuant to agency procedures—the agency must ensure the document is prepared with professional and scientific integrity using reliable data and resources, consistent with sections 102(2)(D) and (2)(E) of NEPA, 42 U.S.C. 4332(2)(D)–(E), and exercise its independent judgment to review, take responsibility for, and briefly document its determination that the document meets all necessary requirements and standards related to NEPA, the CEQ regulations, and the agency's NEPA procedures.

A few commenters provided suggestions for CEQ to consider regarding the changes in paragraph (a). These commenters asked CEQ to define what ''under the supervision of the agency'' means; require agencies to fully rather than briefly document its determination that an environmental document meets the standards of NEPA, the CEQ regulations, and the agency's NEPA procedures; and adopt a clearer standard for guaranteeing professional and scientific integrity to ensure all EISs and EAs receive the same level of scrutiny regardless of who prepares them.

Multiple commenters also provided feedback on the language in paragraph (a) referring to agency procedures adopted pursuant to § 1507.3(c)(12), which are discussed in section II.I.3 of this final rule.

In the final rule, CEQ makes a few clarifying updates to the proposed text in paragraph (a). Specifically, CEQ revises the paragraph heading to ''agency responsibility'' to clarify that this paragraph addresses agency responsibility for environmental documents generally. CEQ adds ''and direction'' after ''supervision'' to better distinguish contractors under the supervision of the agency from applicant-directed contractors. This provision addresses contractors hired directly by the agency and third-party contractors where the applicant pays for the contractor but otherwise has no role in directing that contractor during the preparation of the document; rather, the agency supervises and provides the direction. Contractors hired by the applicant and supervised by the applicant directly are covered by the language in the regulation addressing applicant-prepared EAs and EISs pursuant to § 1507.3(c)(12).

CEQ declines to specifically define ''supervision'' as this is a commonly understood term, and CEQ considers the addition of the word ''direction'' in this paragraph to capture the appropriate role of agencies, which have decades of experience with supervising the work of contractors preparing NEPA documents. CEQ also declines to require agencies to do more than briefly document their determination that an environmental document meets the standards under NEPA, the regulations in this subchapter, and the agency's NEPA procedures. In general, NEPA documents themselves demonstrate that they meet these standards; the determination required by this paragraph merely requires that an agency documents that it has also made this determination.

Lastly with respect to paragraph (a), CEQ declines to include standards for scientific and professional integrity. These concepts have been in the regulations since 1978, and the final rule further clarifies these concepts by moving 40 CFR 1502.23 (2020) to § 1506.6 as discussed further in section II.H.4.

In the NPRM, CEQ proposed in the second sentence of paragraph (b) to remove text providing that agencies may direct an applicant to prepare an environmental document and also replace the phrase ''environmental document'' with specific reference to EAs or EISs. CEQ also proposed to add a clause to allow agencies to authorize a contractor to draft a FONSI or ROD, while also providing that the agency is nevertheless responsible for the accuracy, scope, and contents of contractor-drafted FONSIs and RODs. CEQ proposed to add this clause because a FONSI or ROD represents an agency's conclusions regarding potential environmental effects and other aspects of a proposed action. CEQ also proposed these changes to exclude applicants from directly preparing EAs and EISs under this section, given the direction in section 107(f) of NEPA that a lead agency must prescribe procedures to allow a project sponsor to prepare an EA or EIS, 42 U.S.C. 4336a(f), and CEQ proposed to require agencies to include these procedures as part of their agency NEPA procedures in § 1507.3(c)(12). CEQ also proposed these edits to clarify the role of contractors because finalizing and verifying the contents of FONSIs and RODs is appropriately the responsibility of the Federal agency and is consistent with longstanding agency practice.

CEQ received comments expressing confusion regarding this paragraph given the reference to applicants in the first sentence. CEQ also received multiple comments interpreting this provision to allow applicants to prepare draft FONSIs or RODs. Some of these commenters objected to this perceived allowance asserting that applicants should not be allowed to draft decision documents because they are biased and have a conflict of interest. Conversely, three commenters supported the ability of applicants, contractors, or project sponsors to prepare FONSIs and RODs, pointing to time and cost savings, with one commenter specifically interpreting section 107(f) of NEPA, 42 U.S.C. 4336a(f), to allow applicants to prepare all environmental documents. One commenter suggested CEQ edit the beginning of the second sentence of proposed paragraph (b) to address conflict of interest by adding a qualifier that would limit the applicability of the paragraph to circumstances in which an agency has established the absence of any conflict of interest.

In the final rule, CEQ addresses the confusion around this provision by separating the provisions related to applicants from provisions related to agency-directed contractors. First, CEQ revises the paragraph heading for paragraph (b) to read ''applicant information'' and retains the first sentence allowing agencies to require applicants to submit environmental information for agency use in preparing an environmental document. The CEQ regulations have long allowed agencies to collect information from applicants to help them prepare NEPA documents, and CEQ considers this allowance essential to an efficient environmental review process because in many cases, the applicant will already have obtained or be in the best position to obtain information that an agency needs.

Second, in paragraphs (b)(1) through (b)(3) of the final rule, CEQ includes the provisions that provide directions related to applicant-provided information. Paragraph (b)(1) retains the first sentence from paragraph (b)(1) of the proposed rule, which provides that agencies should outline the information that the agency needs from the applicant to prepare an environmental document.

Paragraph (b)(2) retains the requirement in the current regulations and proposed paragraph (b)(2) that the agency independently evaluate the environmental information provided by an applicant and be responsible for the accuracy, scope, and contents of any applicant-provided environmental information included in the environmental document. CEQ does not require agencies to specifically document their evaluation of this information since the agencies are

responsible for preparing the NEPA document, and therefore any applicant-provided environmental information included in the NEPA document becomes the agency's responsibility. While paragraph (a) requires agencies to briefly document its determination that a contractor-prepared environmental document meets the standards under NEPA, the CEQ regulations, and the agency's NEPA procedures, requiring an agency to specifically address each piece of information or analysis provided by an applicant that the agency has incorporated into an environmental document would be burdensome. Under this provision, agencies have discretion to integrate applicant-provided information in environmental documents as the agency sees fit, and the agency is responsible for the accuracy of that information, just as it is responsible for the accuracy of information from other sources that the agency relies upon. And, as with all NEPA documents, the agencies are responsible for ensuring their documents are appropriately scoped and satisfy all legal requirements including compliance with these regulations and their agency NEPA procedures. Lastly, CEQ includes a new paragraph (b)(3) to note that an agency may allow applicants to prepare EAs or EISs consistent with agency procedures issued pursuant to section 107(f) of NEPA, 42 U.S.C. 4336a(f), and § 1507.3(c)(12).

Third, the second sentence of proposed § 1506.5(b) becomes paragraph (c) in the final rule, and CEQ adds a paragraph heading, ''Agency-directed contractor,'' to clarify that this provision addresses contractors where the agency supervises and directs their work. CEQ adds ''and direction'' after ''supervision'' for consistency with its edit in paragraph (a) and to clarify that this provision does not apply to contractors hired and overseen by applicants. In the final rule, CEQ does not revise ''environmental document'' to be ''environmental assessment or environmental impact statement'' or include the language allowing an action to authorize a contractor to draft a FONSI or ROD. Since this provision is specific to agency-directed contractors, and an agency may direct a contractor in helping to draft any environmental document, these limitations are unnecessary.

Fourth, paragraph (c)(1) of the final rule contains the second sentence of proposed § 1506.5(b)(1) and requires agencies to provide their contractors guidance, and participate in and supervise the environmental document's preparation. Fifth, paragraph (c)(2) of the final rule addresses proposed § 1506.5(b)(2) and requires agencies to independently evaluate contractor-prepared environmental documents, be responsible for their accuracy, scope, and contents, and document the evaluations in the environmental documents themselves. As discussed earlier in this section, CEQ addresses applicant-submitted information in paragraph (b)(2).

One commenter requested that CEQ add in proposed paragraph (b)(2), which is § 1506.5(c)(2) in the final rule, a requirement for agencies to explain how it independently evaluated the information prepared by the contractor and upon what basis the agency is able to vouch for the accuracy, scope, and contents of the information or documents submitted. This comment aligns with other commenters who requested that CEQ strengthen agency responsibility for the accuracy, scope, and contents of environmental documents.

CEQ declines to add greater specificity about how agencies must evaluate and document their evaluations. Such evaluations may vary greatly depending on what the agency is evaluating and setting a regulatory standard would be inappropriate and inefficient. Further, the level of evaluation needed may vary depending on the guidance and direction agencies provide to the contractors in the first place.

Fifth, paragraph (c)(3) of the final rule requires agencies to include the names and qualifications of the persons preparing and independently evaluating the contractor-prepared environmental documents, such as in the list of preparers for EISs, consistent with § 1502.18. This provision is identical to proposed § 1506.5(b)(3), in which CEQ proposed to remove the reference to applicants as discussed earlier in this section.

Next, CEQ proposed to revise paragraph (b)(4) of 40 CFR 1506.5 (2020) to clarify that the Federal agency is responsible for preparing a disclosure statement for the contractor to execute, specifying that the contractor does not have any financial or other interest in the outcome of the proposed action.

CEQ received multiple comments regarding the proposed changes to paragraph (b)(4). One commenter expressed that the paragraph provides for less disclosure than the 1978 regulations did. One commenter expressed direct support for the paragraph and encouraged CEQ to retain the disclosure requirement. Another commenter requested that CEQ delete ''where appropriate'' interpreting the clause to modify ''shall prepare'' instead of ''cooperating agency'' and arguing deletion of this clause will minimize conflicts of interest. One commenter opposed paragraph (b)(4), asserting that it is not workable for a contractor to have no financial or other interest in the outcome of an action because it is common for a firm that assists with preparing the NEPA documents to perform subsequent engineering and design work if a project moves forward.

CEQ finalizes this provision in § 1506.5(c)(4) as proposed, but adds ''where appropriate'' to precede rather than follow (as proposed) ''a cooperating agency'' to make it clear that the clause modifies ''cooperating agency.'' CEQ makes this change in the final rule to address commenters' concerns that the provision, as drafted in the proposed rule, would have given agencies the discretion whether to prepare a disclosure statement. The revised language is generally consistent with the approach in the 1978 regulations, and CEQ disagrees that it provides for less disclosure than the 1978 regulations. CEQ does not consider the potential for a contractor to perform future engineering and design work to present a conflict of interest in the outcome of an action. Instead, a conflict of interest would exist if a contractor possessed a direct financial interest in the project, for example if it entered into a contingency fee arrangement that provided for an additional payment if an agency authorized an action. However, CEQ encourages agencies to disclose this information to the public in their contractor disclosure statements.

Finally, CEQ proposed to change ''any agency'' to ''an agency'' in paragraph (b)(5). In the final rule, CEQ redesignates paragraph (b)(5) of 40 CFR 1506.5 (2020) to be paragraph (d) as this paragraph is a general statement about the operations of § 1506.5 and is not specific to agency-directed contractors. CEQ adds a paragraph heading, ''Information generally'' for consistency with the paragraph headings added throughout.

4. Methodology and Scientific Accuracy (§ 1506.6)

As discussed in section II.D.18, in the final rule, CEQ moves the provision on methodology and scientific accuracy, from proposed § 1502.23 to § 1506.6, because this provision is generally applicable to NEPA reviews. As discussed further in this section, CEQ finalizes the text from proposed § 1502.23 with additional clarifying edits.

CEQ proposed to separate 40 CFR 1502.23 (2020) into paragraphs (a) and (b), with some modification, and add a new paragraph (c). In the final rule, CEQ further subdivides these paragraphs for additional clarity.

First, the first sentence of proposed § 1502.23(a), which is the opening sentence of 40 CFR 1502.23 (2020), requires agencies to ensure the professional integrity, including scientific integrity, of the discussions and analyses in environmental documents. This sentence has been in the regulations unchanged since 1978, is consistent with section 102(2)(D) of NEPA, 42 U.S.C. 4332(2)(D), and CEQ did not propose any revisions to this sentence in the proposed rule. CEQ finalizes this sentence in a standalone paragraph, § 1506.6(a), in the final rule.

Second, CEQ proposed to use the term high-quality information, which the 1978 regulations required agencies to use, *see* 40 CFR 1500.1 (2019), in the second sentence of proposed § 1502.23(a). CEQ proposed to clarify that such information includes best available science and reliable data, models, and resources.

Some commenters requested that CEQ add definitions for ''high-quality information'' and ''best available science.'' One commenter expressed that ''high-quality information'' is ambiguous and recommended CEQ remove it. Other commenters interpreted the example best available science to set a standard and asserted that this conflicts with the direction in section 102 of NEPA to establish information quality standards. Some commenters opposed the use of best available science and stated that the high-quality information standard is sufficient to ensure scientific integrity.

A few commenters pointed to case law to support their opinion that NEPA does not require agencies to use the best scientific methodology available. These commenters expressed concerns that a best available science standard could result in increased costs and delays that may not be justified and instead supported the high-quality information standard. Another commenter asserted that a best available science standard could be inconsistent with the rule of reason, which is supported by case law, and result in agencies unreasonably gathering information to meet a best available science standard. Conversely, another commenter stated that the reference to best available science and data is consistent with the rule of reason and relevant case law.

In § 1506.6(b) of the final rule, CEQ makes the change in the second sentence of proposed § 1502.23(a) to require agencies to use high-quality information. For clarity, CEQ replaces the last clause of the sentence, ''to analyze effects resulting from a proposed action and alternatives,'' with a more general clause at the beginning of the first sentence of § 1506.6(b) to avoid an ambiguity in the proposed text that could be read to imply that agencies do not need to rely on high-quality information for aspects of their environmental documents other than analyzing the effects of a proposed action and alternatives. CEQ did not intend to suggest that agencies can rely on anything other than high-quality information in their decision making, and the revision in the final rule makes clear that agencies must use high-quality information ''[i]n preparing environmental documents.'' Given the more general language in the NEPA statute and the general applicability of this provision, CEQ considers this phrasing to more accurately reflect the standard. CEQ includes, with minor reorganization, three of the proposed examples of high-quality information in the final rule: ''reliable data,'' ''models,'' and ''resources.'' The final rule uses the combined phrase ''reliable data and resources'' as one example to directly track the provision in section 102(2)(E) of NEPA, 42 U.S.C. 4332(2)(E), with ''models'' being another example. CEQ also notes that the Information Quality Act (Pub. L. 106–554, 44 U.S.C. 3516 note) and other authorities establish requirements for the quality, utility, objectivity, and integrity of the information that agencies disseminate, including, in some cases, requirements for peer review, and agencies should ensure compliance with those authorities as applicable.[105]

In the final rule, CEQ does not include ''best available science'' as an example of high-quality information. While CEQ considers ''best available science'' to be one example of high-quality information, CEQ agrees with commenters that NEPA does not require use of ''best available science'' in order to meet the statute's requirement for professional integrity, including scientific integrity. While CEQ did not intend for the inclusion of ''best available science'' as one example of ''high quality information'' in the proposed rule to require agencies to use the best available science, based on the comments, CEQ is concerned that this text could be misconstrued by agencies and potential litigants to require use of best available science in all cases. Therefore, CEQ does not include this example in the final rule to avoid any confusion.

Third, in the preamble to the proposed rule, CEQ provided Indigenous Knowledge as an example of high-quality information. Several commenters recommended CEQ include this as an example in the regulatory text to make clear that Indigenous Knowledge can constitute high-quality information upon which agencies could rely consistent with the regulations. One commenter expressed concern about the addition of Indigenous Knowledge in the preamble because the commenter worried that agencies may weigh Indigenous Knowledge more heavily than other sources of scientific expertise. Another commenter requested that CEQ define ''Indigenous Knowledge'' and explain how agencies can best use it as high-quality information. Some commenters provided a suggested definition, while others opposed CEQ defining ''Indigenous Knowledge'' in the rule.

In the final rule, CEQ includes Indigenous Knowledge as an example of high-quality information in the regulatory text. CEQ disagrees with the concern that identifying Indigenous Knowledge as an example of high-quality information—whether in the preamble or regulatory text—requires agencies to weigh this knowledge more heavily than other sources of scientific expertise. The regulations require agencies to rely on high-quality information and provide several examples, one of which is Indigenous Knowledge, and do not create a preference for one kind of high-quality information over others. CEQ declines to define Indigenous Knowledge in the regulations as it did not receive sufficient input from commenters or through its Tribal consultation for it to develop an appropriate definition that could apply to all of the contexts in which Federal agencies operate governed by the CEQ regulations. Additionally, while some Tribes provided feedback on a definition, others expressed concerns about a regulatory definition. While CEQ is not including a definition in the final rule, CEQ notes that agencies may look to the CEQ/OSTP guidance as a resource, and CEQ will consider whether additional guidance is needed to help agencies incorporate Indigenous Knowledge into its NEPA reviews.

[105] *See* OMB, Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies, 67 FR 8452 (Feb. 22, 2002); OMB, Final Information Quality Bulletin for Peer Review, 70 FR 2664 (Jan. 14, 2005); and OMB, M–19–15, Improving Implementation of the Information Quality Act (2019), *https://www.whitehouse.gov/wp-content/uploads/2019/04/M-19-15.pdf.*

Fourth, CEQ proposed to include a clause in the second sentence of proposed § 1502.23(a) to reference that high-quality information includes existing sources and materials. This proposed change moved the word ''existing'' in the second sentence of 40 CFR 1502.23 (2020) to the end of the sentence. CEQ proposed these changes to clarify that while agencies must use reliable data and resources, which can include existing data and resources, they are not limited to using existing sources and materials. CEQ proposed these changes in response to public commenters on the 2020 rule and Federal agency experts who raised concerns that the 2020 language could limit agencies to ''existing'' resources and preclude agencies from undertaking site surveys and performing other forms of data collection, which have long been standard practice when analyzing an action's potential environmental effects and may be necessary for agencies to adequately understand particular effects.

Some commenters stated the removal of the word ''existing'' in proposed paragraph (a) is in conflict with section 106(b)(3) of NEPA, 42 U.S.C. 4336(b)(3), because it suggests agencies have the discretion to undertake new, non-essential scientific or technical research without regard for whether the information to be obtained is essential to a reasoned choice among alternatives or for the cost or time considerations under NEPA. Another commenter requested that CEQ amend this statement to specify that where project-specific data is available, agencies should rely on that information rather than theoretical models. One commenter suggested that CEQ clarify that while new research may not be required, agencies must consider new information in their analyses.

In the final rule, CEQ replaces the proposed clause in the second sentence of proposed § 1502.23(a), ''including existing sources and materials,'' with a new sentence, ''Agencies may rely on existing information as well as information obtained to inform the analysis,'' to make clear that agencies can and should rely on existing information, but may also undertake new or additional information gathering as needed to adequately analyze their proposed actions. For example, in the context of analyzing historical, cultural, or biological effects, agencies may need to conduct survey work or reassess existing survey work periodically. Requiring an agency to rely on outdated data would not comport with sections 102(2)(D) through (F) of NEPA, 42 U.S.C. 4332(2)(D)–(F). While there are numerous reliable data sources for a variety of resources analyzed in NEPA documents, and the CEQ regulations encourage the use of existing information wherever possible, *see* § 1501.12, agencies should be permitted to exercise their judgment in determining when additional data and analyses are necessary for their analyses and decision making.

Fifth, CEQ moves the third sentence of 40 CFR 1502.23 (2020), which allows agencies to use any reliable data sources, such as remotely gathered information or statistical models to be the third sentence of § 1506.6(b) in the final rule and makes the clarifying edits consistent with the proposal.

Sixth, CEQ proposed to add a new sentence at the end of proposed § 1502.23(a) to encourage agencies to explain their assumptions and any limitations of their models and methods. CEQ proposed this addition to support this section's overall purpose of ensuring the integrity of the discussions and analyses in environmental documents. Additionally, CEQ proposed this addition to codify typical agency practice to explain relevant assumptions or limitations of the information in environmental documents.

A commenter recommended CEQ change the proposed new sentence from a recommendation to a requirement, stating that it is necessary for agencies to explain relevant assumptions or limitations of any models or methodologies on which they rely for their analyses to adequately inform the public and the agency decision makers. CEQ agrees that disclosing this information is necessary in order for the decision maker and the public to assess the reliability of the information. Therefore, CEQ includes the proposed sentence at the end of § 1506.6(b), but changes ''should'' to ''shall'' in the final rule.

Seventh, in proposed § 1502.23(b), CEQ proposed to strike the statement that agencies are not required to undertake new research to inform their analyses, consistent with the proposed change to proposed § 1502.23(a) regarding existing information. Some commenters opposed the proposed deletion of this language in proposed § 1502.23(b) and disagreed with CEQ's rationale for the deletion, stating that the existing language could not be reasonably read to prohibit agencies from undertaking additional analyses. One commenter opposed the proposed deletion, expressing concern that without the language, agencies may feel compelled to complete new research, which could interfere with agencies' ability to provide services, not just analysis, in contravention of NEPA's broad purposes in sections 101(a) and (b) of NEPA, 42 U.S.C. 4331(a)–(b) to balance other national priorities, including conserving agency resources. Another commenter suggested that CEQ clarify that while new research may not be required, agencies must consider new information in their analyses. Other commenters opposed to the proposed deletion stated that the proposed change conflicts with other provisions of the proposed rule, such as the intent of proposed § 1506.5(b)(3) for acceptable work to not be redone and proposed § 1506.4 to reduce duplication and paperwork. Multiple commenters expressed concern that deleting this language could result in additional litigation risk and delays by encouraging agencies to conduct additional analyses. One commenter also suggested that the deletion is unnecessary because agencies already know that they are not limited to existing materials.

CEQ strikes this sentence in the final rule. In order for agencies to meet the requirements of the NEPA statute to analyze the effects of their proposed actions and, where appropriate, study alternatives, while ensuring professional integrity, including scientific integrity, CEQ considers it necessary to remove this statement because in some instances, in order to meet the statutory requirements, agencies will need to undertake research. CEQ disagrees that agencies will read this deletion to mean they need to do so in all cases, even where unnecessary or unreasonable. As one commenter noted, the CEQ regulations have long encouraged agencies to rely on existing information and analyses, and incorporate them by reference, *see, e.g.,* §§ 1501.12, 1506.2, and 1506.3.

A few commenters stated that the deletion of this text conflicts with section 106(b)(3) of NEPA, 42 U.S.C. 4336(b)(3), by implying agencies have discretion to undertake new, non-essential scientific or technical research without regard to whether the information to be obtained is essential to a reasoned choice among alternatives. CEQ disagrees with this assertion because section 106(b)(3) expressly applies only to an agency's determination of the level of NEPA review it needs to perform for an action, and does not apply to the analysis in an environmental document. Further, these comments suggest conflict with the statute because deleting this sentence disregards direction to make use of reliable data and resources. CEQ disagrees that section 102(2)(E) of NEPA, 42 U.S.C. 4332(2)(E), refers only to existing reliable data and resources,

because such a reading of 102(2)(E) would be inconsistent with the provision of section 106(b)(3) indicating that agencies are only required to undertake new scientific or technical research in determining the level of NEPA review in certain circumstances. Rather, section 102(2)(E) does not address whether agencies can conduct new research or gather new data, but only provides that any data or resources an agency relies upon, whether existing or new, must be reliable. As noted in this section, it is common practice for agencies, when necessary or appropriate, to engage in additional research and create new data based on an action's particular circumstances (such as the affected environment) when analyzing proposed actions under NEPA. By striking the sentence added in 2020, CEQ is not imposing a new requirement for agencies to undertake new research in all cases, but rather is allowing agencies to continue to exercise their judgment and expertise in determining whether and when to undertake new research.

Eighth, CEQ strikes the last sentence in 40 CFR 1502.23 (2020), which the NPRM proposed to retain as the second sentence in proposed § 1502.23(b) regarding continued compliance with other statutory requirements related to scientific and technical research. In the 2020 rule, CEQ added this sentence to clarify the preceding sentence that agencies are not required to undertake new scientific and technical research to inform their analyses. Because the final rule strikes that sentence, it is unnecessary to retain the sentence that follows. Therefore, the final rule removes the last sentence of 40 CFR 1502.23 (2020) because it is unnecessary.

Some commenters suggested additional items be added to proposed § 1502.23(b). One commenter requested that CEQ incorporate the language from section 106(b)(3) of NEPA, 42 U.S.C. 4336(b)(3), to establish a clear standard for when new scientific research is needed. As CEQ noted earlier in this section, section 106(b)(3) applies only to determining the level of NEPA review. Another commenter requested CEQ add language to address information quality standards and transparency requirements for modeling. CEQ does not consider this level of detail appropriate for the regulations but will consider whether additional guidance on this topic could assist agencies in carrying out their NEPA responsibilities.

Ninth, CEQ moves to § 1506.6(c) the first and second sentences in proposed § 1502.23(b), which are the fourth and fifth sentences in 40 CFR 1502.23 (2020), requiring agencies to identify any methodologies used and make explicit reference to the scientific and other sources relied upon for conclusions in the environmental document, which agencies may place in an appendix. This change improves the organizational clarity of the section and is non-substantive.

Finally, CEQ proposed to add a new paragraph (c) to proposed § 1502.23 to require agencies to use projections when evaluating reasonably foreseeable effects, including climate change-related effects, where appropriate. CEQ also proposed to clarify that such projections may employ mathematical or other models that project a range of possible future outcomes, so long as agencies disclose the relevant assumptions or limitations. CEQ proposed this addition for consistency with the other proposed amendments to this section.

Some commenters expressed support for proposed § 1502.23(c) but recommended that CEQ provide guidance on how to support agencies in evaluating climate modeling projects or add additional language to address localized impacts of climate change on a project along with global impacts of the project on climate change. Another commenter requested that CEQ recommend, rather than require, use of projections, while another commenter expressed that the rule strikes an appropriate balance between allowing modeling necessary to project future effects and providing transparency for public viewing of the modeling on which agencies rely.

One commenter opposed the changes in paragraph (c) to require the use of projections because they interpret the language to be referring to the social cost of greenhouse gases and argued that this is inappropriate for project-specific NEPA reviews. They also offered the opinion that social cost of greenhouse gas models is not best available science. Another commenter requested CEQ remove the reference to climate-change related effects in paragraph (c) because it elevates climate change effects over other potential effects. Another commenter also expressed concern about the requirement to use projections because they asserted it may encourage agencies to attempt to model relationships between incremental greenhouse gas emissions from a particular project with actual environmental impacts, which is impossible, or use metrics like social cost of greenhouse gas emissions, which are not suited to environmental reviews. Another commenter also expressed concern that the project effects of climate change are too difficult to model and that the proposed language could create delays and increase litigation risk.

CEQ includes proposed § 1502.23(c) in the final rule at § 1506.6(d). CEQ notes that projections are required only where an agency considers them appropriate. CEQ disagrees that including the example of climate-change related effects elevates these above other effects; it is an example, and agencies may determine projections are appropriate in analyzing a variety of other effects such as water or air quality, or effects on endangered species or historic properties. CEQ also disagrees that this language is intended to require agencies to use the social cost of greenhouse gases. As discussed in CEQ's 2023 GHG guidance, agencies may use this as a proxy to compare alternatives, but the regulations and the guidance do not require agencies to use this tool.

As CEQ noted in the proposed rule, based on existing agency practice and academic literature, agencies can and do use reliable projections to analyze reasonably foreseeable effects, including climate change-related effects. Where available and appropriate, agencies also can use or rely on projections that are scaled to a more targeted and localized geographic scope, such as land use projections, air emissions, and modeling, or to evaluate effects, including climate effects, experienced locally in relation to the proposed action. When doing so, agencies should explain the basis for relying on those projections and their underlying assumptions. In particular, climate projections can vary based on different factors and assumptions such as geography, location, and existing and future GHG emissions, and agencies should disclose the assumptions and limitations underlying any projection upon which the agency relies. Agencies can use models that analyze a range of possible future outcomes, but again agencies must disclose the underlying relevant assumptions or limitations of those models.

CEQ expects that modeling techniques will continue to improve in the future, resulting in more precise projections. To be consistent with § 1506.6, as modeling techniques advance, agencies should continue to rely on high-quality information when evaluating reasonably foreseeable effects.

5. Further Guidance (§ 1506.7)

CEQ proposed to simplify § 1506.7(a) by deleting references to Executive orders that have been revoked. CEQ will continue to provide guidance

concerning NEPA and its implementation on an as-needed basis. Any such guidance will be consistent with NEPA, the CEQ regulations, and any other applicable requirements. Future guidance could include updates to existing CEQ guidance [106] or new guidance. CEQ also proposed to update paragraph (b) to reflect the date upon which the final rule is effective. If there is a conflict between existing guidance and an issued final rule, the final rule will prevail after the date upon which it becomes effective. CEQ did not receive any comments on these proposed changes and finalizes this section as proposed.

6. Proposals for Regulations (40 CFR 1506.9)

CEQ proposed to strike 40 CFR 1506.9 (2020), ''Proposals for regulations.'' The 2020 rule added this provision to allow agencies to substitute processes and documentation as part of the rulemaking process for corresponding requirements in these regulations.[107] Since 1978, the CEQ regulations have encouraged agencies to combine environmental documents with any other agency document to reduce duplication and paperwork (40 CFR 1506.4 (2019)), and agencies also may combine procedural steps, for example, to satisfy the public comment requirements of a rulemaking process and NEPA. *See* § 1507.3(c)(5). As such, CEQ concluded that the provision at 40 CFR 1506.9 (2020) was unnecessary to achieve the desired effect of improved efficiency.

CEQ received one comment on this proposed change expressing support for the removal of the section. CEQ removes this section as proposed. Removing this section avoids confusion and controversy over whether the procedures of a separate process meet the requirements of CEQ's regulations. Further, courts have questioned whether separate regulatory processes can be a substitute for NEPA in some cases. *See e.g., Sierra Club v Fed. Energy Regul. Comm'n,* 867 F.3d 1357, 1375 (D.C. Cir. 2017) (''[T]he existence of permit requirements overseen by another [F]ederal agency or [S]tate permitting authority cannot substitute for a proper NEPA analysis.''). Additionally, CEQ does not consider it appropriate to single out one particular type of action—rulemaking—for combining procedural steps. Indeed, one of the key objectives of agency NEPA procedures is to integrate the NEPA process into other agency processes. Therefore, the more prudent approach is for agencies to combine NEPA reviews with other reviews for rulemaking, similar to longstanding agency practice to combine NEPA documents with other review processes, such as compliance with section 106 of the National Historic Preservation Act or section 7 of the Endangered Species Act, or set out processes in their NEPA procedures to comply concurrently with multiple legal requirements.

7. Filing Requirements (§ 1506.9)

CEQ proposed to redesignate 40 CFR 1506.10 (2020) as § 1506.9, which would restore the same numbering for this and subsequent sections used in the 1978 regulations. CEQ proposed to replace the acronym for EPA with the full name ''Environmental Protection Agency'' here and in § 1506.10, consistent with the format in the rest of the CEQ regulations. CEQ also proposed to add a new paragraph (c) to clarify that agencies must notify EPA when they adopt an EIS consistent with § 1506.3(b). CEQ proposed this change to codify common practice and guidance from EPA.[108] EPA notification ensures initiation of the appropriate comment or review period. Such notification, even where a cooperating agency is adopting an EIS without public comment consistent with § 1506.3(b)(1), improves transparency to the public regarding the status of the EIS and also helps track the status of EISs across the Federal Government.

One commenter provided feedback on this proposed change, asking CEQ to insert the word ''timely'' or more clearly specify a period within which agencies must notify EPA when they adopt EISs. CEQ declines the commenter's suggested edit because the language specifies that the agency must notify EPA when they adopt the EIS; therefore, notification must occur at the same time as adoption. CEQ adds paragraph (c) in the final rule to require agencies to file an adoption of an EIS with EPA consistent with current practice and agency guidance. CEQ modifies the text from the proposal to cross reference to § 1506.3(b)(1) rather than require the notice be consistent with § 1506.3(b). It is only an adoption made pursuant to § 1506.3(b)(1) that requires agencies to file their adoption notices with EPA.

8. Timing of Agency Action (§ 1506.10)

To accommodate the change in numbering described in section II.H.6, CEQ proposed to renumber 40 CFR 1506.11 (2020), ''Timing of agency action,'' to § 1506.10. CEQ proposed in paragraph (b) to change ''may not'' to ''shall not'' to eliminate a potential ambiguity and make clear that the minimum periods between a draft EIS and ROD as set forth in paragraph (b)(1) and between a final EIS and ROD as set forth in paragraph (b)(2) are mandatory. CEQ did not receive any comments specific to this proposal and revises the final rule consistent with the proposal.

Two commenters requested that CEQ remove the minimum time periods prescribed in paragraphs (b)(1) and (2) as well as the minimum 45-day public comment period for draft EISs prescribed in paragraph (d), asserting that these timing requirements conflict with the statutory timeframes. The commenters suggested that CEQ instead allow agencies more flexibility for public engagement and comment within the statutory timeframes. Another commenter requested that CEQ expand the minimum comment period for a draft EIS to 90 days because commenters are often not notified of an open comment period until midway through.

CEQ considered the commenters' suggested changes but declines to revise the final rule to adopt them. Agencies and the public have worked within these timeframes since issuance of the 1978 regulations. CEQ intends these provisions to facilitate a transparent and open process that ensures agencies are taking the time to carefully consider public input and analyze alternatives prior to making a decision. CEQ is concerned that shortening these periods will significantly impede the public's ability to engage in the NEPA process. Further, CEQ notes that the minimum timeframe between a final EIS and ROD does not implicate the statutory deadlines because the statutory timeframe ends upon completion of the EIS, not issuance of the EIS.

Finally, with respect to the concern raised about the delay in notification to the public regarding open comment periods, CEQ intends the revisions to § 1501.9 regarding public engagement to better facilitate notification to interested parties, and considers improving notification to be the more appropriate mechanism to address the concern that interested parties sometimes do not receive notice until partway through a comment period, rather than extending

[106] *See* CEQ, *CEQ Guidance Documents, https://www.energy.gov/nepa/ceq-guidance-documents.*

[107] CEQ, 2020 Final Rule, *supra* note 39, at 43338–39.

[108] EPA must be notified when a Federal agency adopts an EIS to commence the appropriate comment or review period. If a Federal agency chooses to adopt an EIS written by another agency, and it was not a cooperating agency in the preparation of the original EIS, the EIS must be republished and filed with EPA. *See* EPA, *Environmental Impact Statement Filing Guidance, https://www.epa.gov/nepa/environmental-impact-statement-filing-guidance.*

the comment period. Agencies must notify the public of opportunities for public comment, and CEQ encourages agencies to consider effective and efficient ways to do so, such as providing opportunities for the public to sign up for distribution lists to be notified of an ongoing review and opportunities for engagement.

CEQ proposed changes to paragraph (c)(1), addressing appeals processes, to update this provision to reflect current practices within Federal agencies. Specifically, CEQ proposed to change references to ''appeal processes'' to ''administrative review processes'' and add examples, which can include processes such as appeals, objections, and protests. CEQ further proposed updates to the text to provide flexibility in timing to agencies that use these administrative review processes and clarify that such a process may be initiated either prior to or after the filing and publication of a final EIS with EPA, depending on the specifics of the agency's authorities. Depending on the agency involved and its associated authorities, administrative review processes generally allow other agencies or the public to raise issues about a decision and make their views known. CEQ proposed to clarify that the period for administrative review of the decision and the 30-day review period prescribed in paragraph (b)(2) for when a ROD can be issued may run concurrently. CEQ proposed these changes to reflect changes in Federal agency regulations and procedures since this text was promulgated in 1978 and to allow for greater efficiency.

CEQ did not receive comments on these proposed changes and makes the changes as proposed in the final rule to better accommodate existing agency practices. For example, the U.S. Department of Agriculture's Forest Service has an objections process outlined at 36 CFR part 218 whereby the public can object to a draft decision; these regulations replaced the prior appeal process formerly used by the agency. To initiate the objections process, Forest Service regulations require that the final EIS and a draft ROD be made available to the public, but the Forest Service does not have to publish the final EIS with EPA until the conclusion of the objections process. *See* 36 CFR 218.7(b). The objections process can take 120 to 160 days, during which the agency makes the final EIS available to the public. Allowing the agency to file the final EIS with EPA and issue a ROD at the same time as the conclusion of the objections process rather than waiting an additional 30 days following the official filing will avoid inefficiency. These changes also will accommodate similar administrative review procedures maintained by other agencies. *See e.g.,* 43 CFR 1610.5–2 (outlining the Bureau of Land Management (BLM) protest procedures).

CEQ also proposed minor edits in paragraphs (d) and (e) for clarity and readability. CEQ did not receive comments on the proposed changes. CEQ has made an additional revision to paragraphs (c)(2) and (e) to correct the reference to § 1506.9 to § 1506.10.

Finally, one commenter requested that CEQ remove the language in paragraph (e), arguing that the failure to file timely comments is not a sufficient reason for extending a timeframe because the public often does not find out about the draft EIS until late in the 45-day comment period. The commenter stated that CEQ should recognize that agencies do not notify the public about when an EA or EIS is released and therefore commenters may be late in providing comments because they did not receive adequate, proper, timely notification. CEQ declines to make this change. As discussed in II.C.8 and II.E.I, § 1501.9 identifies requirements for how and when agencies must notify the public of an action and § 1503.1 requires agencies to request comments from the public on an EIS. Further, agencies have long had the discretion to consider special or unique circumstances that may warrant consideration of comments outside the public comment period.

9. Emergencies (§ 1506.11)

Consistent with changes in the preceding sections, CEQ proposed to renumber 40 CFR 1506.12 (2020), ''Emergencies,'' to § 1506.11. CEQ proposed to strike the last sentence, stating other actions remain subject to NEPA review because it erroneously implies that actions covered by § 1506.11 are not subject to NEPA review. Instead, CEQ proposed to replace the sentence with language clarifying that alternative arrangements are not a waiver of NEPA; rather, they establish an alternative means for NEPA compliance.

Commenters recommended CEQ make it a requirement rather than a recommendation for agencies to consult with CEQ about alternative arrangements. Additionally, commenters disagreed with CEQ's deletion of the statement that other actions remain subject to NEPA, expressing concern that the revised provision would rely on negative implication as a substitute for this clear statement.

In the final rule, CEQ has revised this provision to change ''should'' to ''shall'' to make clear that agencies must consult with CEQ on alternative arrangements for an action with significant effects. CEQ agrees with commenters' suggestion, which is consistent with longstanding agency practice. Such consultation ensures that the agency is limiting the scope of such arrangements to those actions that are necessary to address the emergency and that the public is appropriately notified and involved in the process. CEQ is also revising ''will'' to ''shall'' in the second sentence to clarify that this is a regulatory requirement rather than a statement of fact. Upon further consideration, CEQ retains the clause ''other actions remain subject to NEPA review'' and adds the clause ''consistent with this subchapter'' to make clear that agencies and CEQ are required to limit such arrangements, and that any remaining actions not covered by the alternative arrangements must comply with the regulations.

Finally, CEQ adds the last sentence as proposed to address confusion [109] as to whether, during emergencies, agency actions are exempted from NEPA. This addition clarifies that the regulations do not create a NEPA exemption; rather, they provide a pathway for compliance with NEPA where the exigencies of emergency situations do not provide sufficient time for an agency to complete an EIS in conformity with the CEQ regulations for an action with significant environmental effects.

CEQ does not have the authority to exempt agency actions from NEPA, regardless of whether an emergency exists. The changes to § 1506.11 clarify that CEQ does not offer ''alternative arrangements'' to circumvent appropriate NEPA analysis but rather to enable Federal agencies to establish alternative means for NEPA compliance to ensure that agencies can act swiftly to address emergencies while also meeting their statutory obligations under NEPA. CEQ's revisions clarify that when emergencies arise, § 1506.11 allows agencies to adjust the means by which they achieve NEPA compliance. This approach is also consistent with CEQ's guidance on NEPA and emergencies, updated in 2020.[110]

Finally, CEQ notes that, consistent with longstanding practice, agencies have discretion to determine how to proceed with actions to respond to

[109] *See* CEQ, 2020 Response to Comments, *supra* note 69, at 417–19.

[110] *See* CEQ, Emergencies and the National Environmental Policy Act Guidance (Sept. 14, 2020), *https://ceq.doe.gov/docs/nepa-practice/emergencies-and-nepa-guidance-2020.pdf.*

emergencies that do not have significant environmental effects, which agencies would ordinarily analyze through an EA. Agencies may continue to consult with CEQ where they are unsure whether alternative arrangements or an EA is the appropriate course of action. And, as discussed in section II.I.3, some agencies include procedures for addressing such situations in their agency NEPA procedures, and CEQ encourages agencies to do so where appropriate for their programs and activities.

10. Innovative Approaches to NEPA Reviews (Proposed § 1506.12)

CEQ proposed to add a new section to the regulations in § 1506.12 to allow CEQ to grant a request for modification to authorize Federal agencies to pursue innovative approaches to comply with NEPA and the regulations in order to address extreme environmental challenges. CEQ proposed this new concept to be distinct from the emergency provisions in § 1506.11 with different considerations and criteria.

Commenters generally opposed this proposed provision. Some commenters thought it was unnecessary, and CEQ did not receive concrete examples of situations where commenters thought agencies could successfully use such approaches. Other commenters were concerned the proposal did not contain enough guideposts for agencies. Commenters also raised concerns that the lack of notice and comment for rulemaking could lead to uncertainty about durability of the provisions and potential litigation and delay.

Upon further consideration, including the public comments received on the proposed provision, CEQ is not including this provision in the final rule. The mechanisms provided in this final rule, including updated provisions on programmatic environmental reviews and agency NEPA procedures that should be tailored to agencies' unique programs and actions, as well as new methods of establishing or adopting CEs, provide agencies sufficient flexibility to innovate and address extreme environmental challenges.

11. Effective Date (§ 1506.12)

CEQ proposed to remove the 2020 effective date in § 1506.13 and replace it with the date upon which a final rule is effective. CEQ received a variety of comments on this provision, including one commenter requesting that it require agencies to apply the final rule to ongoing actions. Conversely, a group of commenters requested that the final rule explicitly state that agencies should follow the NEPA regulations that were effective at the time at which the agency initiated the environmental review, asserting that allowing agencies flexibility to apply the final rule to ongoing actions will cause delays, create uncertainty, and increase costs for project proponents.

Some commenters requested that CEQ revise this section to not allow the regulations to apply to a Federal agency's actions until the agency adopts new agency procedures under § 1507.3 to avoid confusion and inconsistency, and that CEQ provide additional clarity on which version of CEQ's regulations and an agency's procedures apply to each Federal action moving forward.

CEQ finalizes this section as proposed in § 1506.12. Section 1506.12 requires agencies to comply with the regulations for proposed actions begun after the effective date of the final rule. Agencies are in the best position to determine on a case-by-case basis whether applying provisions of the revised regulations to ongoing reviews will facilitate a more effective and efficient process, and CEQ declines to limit agency flexibility in this regard. Regarding potential conflict with existing agency procedures, an agency's existing NEPA procedures remain in effect until the agency revises its procedures consistent with § 1507.3; however, agencies should read their existing procedures in concert with the final rule to ensure they are meeting the requisite requirements of both wherever possible. Additionally, CEQ notes that the Fiscal Responsibility Act's amendments to NEPA were effective upon enactment, so to the extent the regulations implement provisions of the NEPA amendments, these are applicable to ongoing reviews.

For the last several years, agencies have had experience reconciling differences between their procedures and the current regulations, and CEQ is unaware of significant issues that have arisen. While certain provisions included in this final rule may be missing from agency procedures, these provisions are requirements that agencies would need to add to their procedures and are therefore less likely to pose a direct conflict or create inconsistencies. Additionally, where CEQ is restoring the regulatory text or approach from the 1978 regulations, CEQ notes that most agency procedures are consistent with the 1978 regulations, and therefore there is less likely to be conflict with those provisions. To the extent that there is conflict between an agency's procedures and CEQ's regulations, the CEQ regulations generally will apply, and CEQ is available to assist in addressing any such conflicts. Lastly, CEQ notes that Federal agencies would not need to redo or supplement a completed NEPA review (*e.g.,* where a CE determination, FONSI, or ROD has been issued) as a result of the issuance of this rulemaking.

I. Revisions to Agency Compliance (Part 1507)

1. Compliance (§ 1507.1)

CEQ proposed to add a second sentence to § 1507.1 to restore language from the 1978 regulations to state that agencies have flexibility to adapt their implementing procedures to the requirements of other applicable laws. CEQ made this proposal because restoring this language is consistent with the changes CEQ made to 40 CFR 1507.3 (2022) in its Phase 1 rulemaking to restore agency discretion to tailor their NEPA procedures to their unique missions and contexts, creating opportunity for agencies to innovate and improve efficiency.

One commenter requested that CEQ delete the first sentence of § 1507.1, which requires all agencies to comply with the CEQ regulations, and add a clause at the end of the proposed second sentence making requirements with other applicable laws dependent upon compliance with the regulations. The commenter asserted this change would allow an agency to tailor its NEPA procedures as appropriate, but make clear that the agency still must comply with these regulations.

Another commenter expressed concerns that the flexibility proposed in § 1507.1 will result in inconsistency, especially where a State agency serves as a co-lead agency or as a participating agency for a project over which multiple Federal agencies have jurisdiction. The commenter asserted that the flexibility in the proposed text in § 1507.1 undermines predictability and consistency and will result in delays in the environmental review process.

CEQ considered the commenters' suggestions and finalizes the language as proposed. With respect to the first comment, CEQ considers the language in the final rule to be consistent with the commenter's objective and longstanding practice: agencies may tailor their procedures to their unique programs, but they must also comply with NEPA and the CEQ regulations. This point is reinforced in § 1500.6, which requires agencies to fully comply with the purposes and provisions of the NEPA statute and CEQ's NEPA regulations unless an agency activity, decision, or action is exempted from NEPA by law or compliance with NEPA is impossible.

CEQ disagrees with the other commenter's assertions that this provision undermines predictability. To ensure NEPA reviews inform decision making, Federal agencies need to integrate the NEPA process into the decision-making process, and having a ''one size fits all'' approach to agency procedures would not achieve that objective. The CEQ regulations encourage agencies to engage in early coordination to prevent delays in individual NEPA reviews. Further, the regulations have long encouraged agencies to consult with other agencies with which they have similar programs or frequently take actions on the same projects, and CEQ encourages agencies to strive to reconcile their processes as they update their procedures for consistency with this rule. *See* § 1507.3(b)(1).

2. Agency Capability To Comply (§ 1507.2)

CEQ proposed edits to § 1507.2 to emphasize agencies' responsibilities under NEPA, including to incorporate the requirements added to section 102(2) of NEPA, 42 U.S.C. 4332, and to require agencies to designate a Chief Public Engagement Officer. First, CEQ proposed to move the first sentence of paragraph (a) of 40 CFR 1507.2 (2020), which requires agencies to fulfil the requirements of section 102(2)(A) of NEPA, 42 U.S.C. 4332(2)(A), to use a systematic, interdisciplinary approach, to a new § 1507.2(b). Second, CEQ proposed to require in § 1507.2(a) that in addition to designating a senior agency official responsible for overall agency NEPA compliance, agencies identify a Chief Public Engagement Officer who would be responsible for facilitating community engagement across the agency and, where appropriate, the provision of technical assistance to communities.

CEQ received multiple comments on the requirement for Federal agencies to identify a Chief Public Engagement Officer. Numerous supportive commenters expressed that this position would benefit all stakeholders, quicken public engagement processes by making the environmental review processes more accessible and transparent, facilitate consistent engagement practices, and promote a level of accountability that enhances engagement. Some supportive commenters asked CEQ to clarify expectations for the position, such as identifying a minimum level of seniority within the agency and to clarify that ''community engagement'' includes ''industry engagement.'' A couple of commenters were supportive of the general idea, but expressed concern about how agencies would define the role and whether agencies would have resources to support the Officer. A few commenters suggested that the person who serves in the position within an agency must be a neutral party and trusted expert with necessary experience to be effective in the position. Multiple commenters also provided suggestions for additional guidance regarding the duties of the Chief Public Engagement Officer.

Several commenters opposed the proposed requirement for agencies to designate a Chief Public Engagement Officer asserting that the NEPA amendments do not require it; there is lack of clarity on whether this position would help mediate resolutions to allow more efficient completion of the environmental review process; and it would create a burden on agencies because they will need to hire a Chief Public Engagement Officer.

Another commenter raised the concern that by requiring agencies to identify a Chief Public Engagement Officer, CEQ is creating a new and potentially overlapping position with the Chief Environmental Review and Permitting Officer (CERPO) that already exists to manage environmental review and authorization processes.

CEQ considered the comments and includes the requirement in § 1507.2(a) to identify a Chief Public Engagement Officer with clarifying edits. To address commenters' concerns about agency burden and the scope of the position, CEQ adds language to clarify that the regulations make the Chief Public Engagement Officer responsible for facilitating community engagement in environmental reviews and does not direct agencies to make the officer responsible for all engagement activities within an agency, though agencies have the discretion to define the role more broadly should they determine doing so is appropriate.

CEQ also adds a sentence to the end of paragraph (a) to clarify that when an agency is a department, it may be efficient for major subunits to identify senior agency officials or Chief Public Engagement Officers within those subunits. This language is consistent with the approach for agency NEPA procedures in § 1507.3(b), and the regulations provide that the department-level official or Officer would have oversight over the subunit officials or officers. CEQ adds this language to provide large departments the flexibility to effectively manage their programs while ensuring that there is also centralized, consistent coordination across the whole department. CEQ notes that a senior agency official must be ''an official of assistant secretary rank or higher (or equivalent),'' in accordance with § 1508.1(*ll*); in the case of a senior agency official designated by a major subunit, that individual must have a degree of authority and responsibility within the subunit that is equivalent to the authority and responsibility that an assistant secretary would have within a department.

CEQ notes that Federal agencies may designate current employees to serve as the senior agency official and Chief Public Engagement Officer, and need not hire new employees. Regarding the variety of comments recommending specific responsibilities for the Chief Public Engagement Officer, CEQ will consider providing guidance to agencies that addresses the role and expectations of the Officer, but CEQ considers this level of detail unnecessary for the regulations. Lastly, CEQ revises paragraph (a) to strike ''Agencies shall'' from the beginning of the paragraph because it is duplicative to the end of the introductory paragraph of § 1507.2.

Third, CEQ proposed to redesignate paragraphs (b) and (c), and (d) through (f) of 40 CFR 1507.2 (2020) as § 1507.2(c) and (d), and (h) through (j) respectively. CEQ makes these changes in the final rule.

Fourth, CEQ proposed to add a new paragraph (e) to require agencies to prepare environmental documents with professional integrity consistent with section 102(2)(D) of NEPA, 42 U.S.C. 4332(2)(D). In a new paragraph (f), CEQ proposed to require agencies to make use of reliable data and resources, consistent with section 102(2)(E) of NEPA, 42 U.S.C. 4332(2)(E). And, in a new paragraph (g), CEQ proposed to require agencies to study, develop, and describe technically and economically feasible alternatives, consistent with section 102(2)(F) of NEPA, 42 U.S.C. 4332(2)(F). Finally, in redesignated paragraph (j), CEQ proposed to delete the reference to E.O. 13807 because E.O. 13990 revoked E.O. 13807.[111]

CEQ did not receive any substantive comments on these proposed changes. CEQ finalizes these provisions as proposed.

3. Agency NEPA Procedures (§ 1507.3)

CEQ proposed several updates to § 1507.3 to reorganize paragraphs to improve readability, consolidate related provisions, restore text from the 1978 regulations, and codify CEQ guidance on CEs. First, in paragraphs (a) and (b), CEQ proposed to update the effective date to reflect the effective date of a

[111] E.O. 13990, *supra* note 43.

final rule. CEQ received several comments expressing concern about paragraph (a), which provides that CEQ determined that the CEs contained in agency NEPA procedures as of the final rule effective date are consistent with the CEQ regulations. Commenters raised concerns about the lack of evidence that all CEs are consistent with CEQ's proposal and, in some instances, identified particular CEs that the commenters stated were inconsistent. Commenters also asked about how this provision would interact with § 1507.3(c)(8) and (9) regarding the process for establishing and periodically reviewing existing CEs.

CEQ considered the comments and revises this paragraph in the final rule for clarity. CEQ's intent with this provision is to clarify that the changes made in the final rule, including revisions to the definition of ''categorical exclusion'' and § 1501.4 do not implicate the validity of existing CEs. CEQ revises the paragraph to clarify that it has determined that the revisions to its regulations made in this final rule do not affect the validity of agency CEs that are in place as of the effective date of this rule. Further, as discussed more in this section, CEQ is encouraging agencies to prioritize their older CEs for review.

Second, in § 1507.3(b), CEQ proposed to give agencies 12 months after the effective date to develop proposed procedures and initiate consultation with CEQ to implement the CEQ regulations. CEQ also proposed moving, with some modification, language from paragraph (c) of 40 CFR 1507.3 (2022) to § 1507.3(b) for clarity and to improve organization since the language is generally applicable to all agency NEPA procedures. The NPRM explained that proposed procedures should facilitate efficient decision making and ensure that agencies make decisions in accordance with the policies and requirements of NEPA.

One commenter requested that CEQ explicitly state that in the case of conflicts, an agency's NEPA procedures supersede the CEQ regulations, and that such a statement would increase certainty and reduce litigation risks. CEQ declines to add this language. Agencies and courts have extensive experience applying both CEQ's regulations and agency-specific procedures, and in CEQ's experience, this relationship has not led to uncertainty or litigation risk that would outweigh the uncertainty that could be created from a new regulatory provision on this subject.

Two commenters asserted that 12 months is not enough time for agencies to propose procedures, take public comment, and produce final procedures. CEQ declines to revise the timing provided in § 1507.3(b). While CEQ will work with agencies to update their procedures as quickly as possible, agencies only need to provide CEQ with proposed revisions within 12 months. Therefore, CEQ considers 12 months sufficient for agencies to propose procedures and finalizes § 1507.3(b) as proposed, except a grammatical change from ''agencies make'' to ''the agency makes'' for consistency with the rest of the sentence.

Third, in paragraph (b)(2), CEQ proposed to change ''adopting'' to ''issuing'' to avoid confusion with adoption under § 1506.3. CEQ also proposed to restore text from the 1978 regulations requiring agencies to continue to review their policies and procedures and revise them as necessary to be in full compliance with NEPA. The 2020 rule deleted this language as redundant to language added to paragraph (b) of 40 CFR 1507.3 (2020) requiring agencies to update their procedures to implement the final rule.[112]

One commenter opposed CEQ's proposed restoration of this language in § 1507.3(b)(2), asserting that the requirement for agencies to continually review their NEPA policies and procedures could reduce stability because agencies will be in a constant cycle of revision. CEQ disagrees with the commenter's assertions because this provision was in the 1978 regulations and has not resulted in agencies continually updating their procedures. CEQ also considers it important for agencies to review their procedures to ensure that they are meeting the intent of NEPA and are updated to address any changes to agencies' authorities or programs so that the NEPA process is effectively integrated in agencies' decision-making processes.

CEQ makes the changes to paragraph (b)(2) as proposed with one additional change in the fourth sentence to change ''to'' to ''and'' for clarity. CEQ is restoring this language because the requirement for an agency to continue to review their policies and procedures is different than the requirement in paragraph (b) to initially update procedures consistent with the final rule. Further, restoring this requirement is consistent with the requirement in § 1507.3(c)(9) for agencies to review CEs at least every 10 years.

Fourth, CEQ proposed to add a new paragraph (b)(3) to clarify that, consistent with longstanding practice, the issuance of new agency procedures or an update to existing agency procedures is not itself subject to NEPA review. CEQ did not receive comments on this paragraph and adds it with the language as proposed in the final rule.

Fifth, paragraphs (c) and (c)(1) through (c)(10) of 40 CFR 1507.3 (2022) list the items that all agency NEPA procedures must include, and CEQ proposed minor revisions to paragraphs (c)(1) through (c)(4) to improve clarity and conciseness. Specifically, CEQ proposed to modify paragraph (c)(1) to clarify that agencies should designate the major decision points for their programs and actions subject to NEPA and ensure that the NEPA process begins at the earliest reasonable time. In paragraph (c)(2), CEQ proposed to remove the reference to ''formal'' as unnecessarily limiting since agencies generally engage in informal rulemaking, and change ''or'' to ''and'' to clarify that agencies should make relevant environmental documents, comments, and responses part of the record in both rulemakings and adjudicatory proceedings. CEQ proposed to modify paragraph (c)(3) to clarify that procedures should integrate environmental review into agency decision-making processes so that decision makers use the information in making decisions. CEQ did not receive comments on these specific changes and makes the edits as proposed in the final rule.

Sixth, CEQ proposed to modify paragraph (c)(5) to emphasize that combining environmental documents should be done to facilitate sound and efficient decision making and avoid duplication. CEQ proposed to strike the language from this paragraph allowing agencies to designate and rely on other procedures or documents to satisfy NEPA compliance. As discussed further in sections II.C.1 and II.C.2 of the NPRM, CEQ had concerns about this language added by the 2020 rule to substitute other reviews as functionally equivalent for NEPA compliance, and therefore proposed to remove it.

One commenter stated that paragraph (c)(5) should implement section 107(b) of NEPA, 42 U.S.C. 4336a(b). Section 107(b) of NEPA addresses preparation of a single environmental document for lead and cooperating agencies. CEQ addresses this in § 1501.7(g) and therefore declines to make this change. The intent of paragraph (c)(5) is to ensure that agency procedures require the combination of environmental documents with other agency documents in order to facilitate sound and efficient decision making and avoid duplication where consistent with

[112] CEQ, 2020 Final Rule, *supra* note 39, at 43340.

applicable statutory requirements. CEQ makes the changes to § 1507.3(c)(5) as proposed.

Seventh, to consolidate into one paragraph—paragraph (c)—the required aspects of agency NEPA procedures, CEQ proposed to move paragraphs (e)(1), (e)(2), (e)(2)(i), and (e)(2)(iii) of 40 CFR 1507.3 (2022) to paragraphs (c)(6), (c)(7), (c)(7)(i) and (c)(7)(ii), respectively, with minor wording modification for readability. Proposed paragraph (c)(6) addressed procedures required by § 1501.2(b)(4) regarding assistance to applicants. Proposed paragraphs (c)(7), (c)(7)(i), and (c)(7)(ii) addressed criteria to identify of typical classes of action that normally require EISs and EAs.

One commenter questioned if paragraphs (c)(7)(i) and (ii) are intended to make EIS and EA thresholds more definitive. These provisions—which have been in the CEQ regulations since 1978 and to which CEQ only proposed minor, non-substantive edits for readability—require agencies to identify their common activities or decisions that typically require an EIS or EA. While not determinative for any particular action, these lists put the public on notice of the decisions agencies regularly make that require these levels of NEPA review. CEQ has not substantively changed these provisions and, therefore, does not intend for them to affect EIS and EA thresholds or otherwise change current practice. CEQ makes the changes to § 1507.3(6) and (7) as proposed.

Eighth, CEQ proposed to move with modification paragraph (e)(2)(ii) of 40 CFR 1507.3(2022), requiring agencies to establish CEs and identify extraordinary circumstances, to paragraph (c)(8). CEQ proposed in paragraphs (c)(8)(i) through (c)(8)(iii) to include more specificity about the process for establishing new or revising existing CEs, consistent with CEQ's 2010 CE guidance and agency practice. CEQ proposed to move the existing requirement that agencies identify when documentation is required for a determination that a CE applies to a proposed action from paragraph (e)(2)(i) of 40 CFR 1507.3 (2022) to proposed paragraph (c)(8)(i). CEQ proposed a new paragraph (c)(8)(ii) to require agencies to substantiate new or revised CEs with sufficient information to conclude that the category of actions does not have a significant effect, individually or in the aggregate, and make the documentation publicly available for comment. Lastly, CEQ proposed to add paragraph (c)(8)(iii) to require agencies to describe how they will consider extraordinary circumstances, a concept that was moved from paragraph (e)(2)(ii) of 40 CFR 1507.3 (2022). CEQ proposed these provisions for consistency with its 2010 guidance and CEQ's longstanding practice requiring agencies to demonstrate that agency activities are eligible for CEs.[113]

One commenter requested that CEQ revise proposed paragraph (c)(8)(i) to require agencies to provide the public with documentation of a determination that a CE applies to a proposed action. CEQ declines to require agencies to document and publish all determinations that a CE applies to an action, as many CEs are used for routine actions with no potential for environmental effects and documentation of all determinations would result in burdensome and unnecessary paperwork. CEQ considers the better approach to be for agencies to identify which CEs require documentation and whether to make that documentation publicly available.

One commenter requested that CEQ expand paragraph (c)(8)(ii) to preclude agencies from establishing CEs if similar categories of actions have historically been controversial, are known to have substantial environmental justice considerations, or have previously resulted in preparation of an EIS. Another commenter suggested that CEQ replace the use of ''or in the aggregate'' with ''cumulative,'' to use the term from the 1978 regulations.

Some commenters opposed proposed paragraph (c)(8)(iii), stating that agencies should not have to delineate the extraordinary circumstances under which an action normally excluded from further NEPA review nonetheless requires additional review. The commenters asserted that the proposed section substantially limits the breadth of extraordinary circumstances under which an action normally excluded requires further review. CEQ disagrees with the commenters' assertions. The provision clarifies that an explanation of how the agency will consider extraordinary circumstances when applying a proposed CE is a necessary component of substantiating the CE. The provision should be read in context with the definition of ''extraordinary circumstances'' in § 1508.1(o).

CEQ considers these comments but finalizes the provisions in § 1507.3(c)(8) and (c)(8)(i) through (iii) as proposed, with one change: instead of restating the process for consideration of extraordinary circumstances in paragraph (c)(8)(iii), the final rule cross-references to § 1501.4(b), which sets for the process for consideration of extraordinary circumstances, including documenting when an agency determines that a CE applies notwithstanding extraordinary circumstances. CEQ declines to make the commenters' recommended changes. When establishing CEs, agencies must provide sufficient information to CEQ and to the public to substantiate the determination that the category of actions normally does not result in significant effects. Agencies must also address how they will consider extraordinary circumstances in applying CEs. CEQ does not consider it appropriate to specify these limitations within its regulations; rather, agencies and CEQ must consider these concerns on a case-by-case basis when substantiating and reviewing proposed new CEs.

As discussed further in section II.C.3, CEQ also declines to replace ''or in the aggregate'' in the paragraph because it is consistent with § 1501.4 on establishment of CEs. CEQ considers ''individually or in the aggregate'' to have the same meaning as the 1978 regulation's definition of ''categorical exclusion'' as a category of actions that do not ''individually or cumulatively'' have significant effects. CEQ uses ''in the aggregate'' instead of ''cumulatively'' within the regulations to avoid potential confusion with the definition of ''effects,'' which includes cumulative effects.

Ninth, CEQ proposed to add a new paragraph (c)(9) to require agencies to include in their NEPA procedures a process for reviewing their CEs every 10 years to codify recommendations in CEQ's guidance on establishing CEs,[114] which encourages agencies to review CEs periodically. While the guidance recommends every 7 years,[115] CEQ proposed requiring that review occur at least every 10 years because it can take about a year to complete the steps involved to conduct such a review and revise CEs. These steps typically include conducting the analysis, developing a proposal to update procedures to reflect the review, consulting with CEQ on any proposed update to procedures, soliciting public comment, developing final procedures, and receiving a CEQ conformity determination. CEQ noted in the proposed rule that Federal agencies should review their CEs for multiple reasons, including to determine if CEs remain useful, whether they should modify them, and to determine if circumstances have changed resulting in

[113] *See* CEQ, CE Guidance, *supra* note 10.

[114] *Id.* at 15–18.

[115] *Id.* at 16.

an existing category rising the potential for significant effects.

Multiple commenters supported this requirement, with some suggesting that this review be subject to notice and public comment and others requesting the 10-year timeframe start at the time the agency issues the CE. One commenter requested that the regulations instruct agencies to take a holistic and comprehensive look at their current CEs to determine if any changes are needed, while another suggested that the periodic reviews need to account for the latest science and design practices.

CEQ declines to require agencies to provide notice and comment for their periodic review of CEs, but notes that where an agency decides to revise a CE based on the review, such revisions would require notice and comment under § 1507.3(b), for CEs established through agency procedures, or § 1501.4(c), for CEs developed through the mechanisms identified in that paragraph. CEQ declines to require agencies to comprehensively review their CEs, because allowing agencies to review their CEs on a rolling basis will provide for a more orderly and efficient review process and allow agencies to complete their review of their oldest CEs more quickly than would occur if the agency were to review all of its CEs at one time. CEQ declines to include additional requirements for the periodic review but agrees that the standard set forth in § 1501.4(d)(4) may help inform agencies as to when an agency should revise or remove a CE.

Some commenters opposed the proposed requirement to review existing CEs, asserting that it places an administrative burden on agencies that is unjustified to the extent it goes beyond how agencies currently administer CEs. While CEQ recognizes that this review process may be new for some agencies, CEQ has encouraged agencies to review CEs since the 2010 guidance. CEQ's experience with agencies that have undertaken this review is that it is a valuable process for agencies because it results in revised and new CEs that better align with the agencies' programs and experience. Such reviews are animated by the same principle as the longstanding practices to reexamine an analysis when an agency has an ongoing action, such as reevaluation and supplementation. A periodic analysis of existing CEs serves the same purpose—to ensure the underlying analysis and conclusions remain valid.

One commenter requested that the final rule add ''which does not impact projects approved under a categorical exclusion that existed at the time'' to paragraph (c)(9) to clarify that review of and changes to CEs are forward-looking and do not affect previously approved actions. CEQ agrees that any review of CEs does not have implications for prior CE determinations and does not consider the text in the final rule to raise any question that a review would require an agency to reopen the approval process for such actions. As a result, CEQ views this addition to be unnecessary.

In the final rule, CEQ adds this provision with an additional clause to clarify that agencies do not need to review all of their CEs at once and may do so on a rolling basis, but should focus on the oldest CEs first. CEQ adds this provision to clarify that agencies need not undertake a comprehensive review of all CEs but could instead break them up such that they review them in tranches on some periodic schedule but where the review of each CE occurs once every 10 years. Additionally, in response to comments on the interaction between § 1507.3(a) regarding the validity of existing CEs and this provision, CEQ clarifies that agencies should prioritize its oldest CEs first.

Tenth, CEQ proposed to move 40 CFR 1507.3(e)(3) (2020) to paragraph (c)(10) without substantive change. This provision addresses the requirement that agencies include a process for introducing a supplemental EA or EIS into its formal administrative record. CEQ did not receive comments on this provision. In the final rule, CEQ moves 40 CFR 1507.3(e)(3) (2020) to § 1507.3(c)(10) and revises the text to require agencies to include processes for reevaluating and supplementing EAs and EISs, as appropriate. CEQ has revised the text in this provision to enhance clarity by referring to ''processes for'' rather than ''a process for introducing'' and removing the reference to including supplemental materials in a formal administrative record to enable agencies flexibility to develop procedures that work with their programs consistent with longstanding agency practice. Additionally, 40 CFR 1502.9(d)(4) (2020) implicitly requires agency procedures to address reevaluation by encouraging agencies to document their findings consistent with their agency NEPA procedures. CEQ adds an explicit requirement in § 1507.3(c)(10) in the final rule for consistency with § 1502.9(e) and to make clear that agencies must include such a process in their agency procedures.

Eleventh, CEQ proposed to move the requirement for agencies to explain in their NEPA procedures where interested persons can get information on EISs and the NEPA process from paragraph (e) of 40 CFR 1506.6 (2020) to § 1507.3(c)(11) and add a reference to EAs as well. CEQ did not receive comments on this provision and makes this change as proposed in the final rule.

Twelfth, CEQ proposed to codify section 107(f) of NEPA, 42 U.S.C. 4336a(f), in a new paragraph (c)(12) requiring agencies to include procedures, where applicable, to allow a project sponsor to prepare EAs and EISs consistent with § 1506.5. Since not all agency actions involve project sponsors, CEQ proposed to include ''where applicable'' to qualify this requirement so that it applies only where agencies have actions where there is a project sponsor. The proposal included ''consistent with § 1506.5'' so that such procedures would ensure environmental documents prepared by project sponsors (or a contractor on the project sponsor's behalf) are prepared with professional and scientific integrity, and ensure that the agency independently evaluates and takes responsibility for the contents of such documents. The proposed rule also explained that this would ensure that agencies require project sponsors to execute a disclosure statement to address financial or other interests. In addition to procedures, agencies may provide project sponsors with guidance and assist in the preparation of the documents consistent with § 1506.5(b)(1).

CEQ received multiple comments that generally supported the proposed changes to allow applicants to prepare EAs and EISs, as well as multiple commenters who generally opposed the provision and opposed section 107(f) of NEPA. Some commenters who oppose the proposed changes recognized that it is not within CEQ's authority to modify section 107(f) of NEPA but stated that CEQ could provide more oversight and guardrails for how agencies carry this out and that CEQ should provide more guidance on avoiding conflicts of interest. Another group of commenters asked CEQ to provide more specificity for what agency procedures should specify regarding applicant or project sponsor-prepared EAs and EISs.

Commenters who supported the proposal pointed to time and cost savings and asserted that allowing project proponents, applicants, and contractors more opportunities to prepare EAs and EISs will help reduce inaccuracies and delays. Some supportive commenters also requested that CEQ go further, such as by allowing

a project sponsor a first right of refusal to prepare an EA or EIS.

One commenter opposed the addition of paragraph (c)(12) and the general allowance of project sponsors to prepare EAs and EISs. However, they noted that their concerns could be mitigated if there is a definition of ''project sponsor.'' Another commenter requested that CEQ add to paragraph (c)(12) a requirement for agencies to include specific public engagement requirements in their procedures when a project sponsor prepares an EA or EIS. Additionally, as discussed further in section II.H.3, commenters were confused about the applicability of this provision and § 1506.5.

In the final rule, CEQ includes § 1507.3(c)(12) to address preparation of EAs and EISs by applicants, including project sponsors. As discussed in section II.J.1, CEQ is adding a definition of ''applicant,'' which is inclusive of ''project sponsors'' to address confusion regarding the meaning of this term here and elsewhere in the regulations. CEQ also revises the ''where applicable'' language to ''where an agency has applicants that seek its action'' to address concerns that the provision could be read as discretionary. As CEQ noted in the preamble to the proposed rule, not all agencies have applicants or project sponsors; therefore, such agencies need not include procedures for non-existent applicants. This phrasing is consistent with the definition of ''applicant'' in the final rule. Additionally, CEQ adds a sentence in the final rule to clarify that such procedures will not apply to applicants when they serve as joint lead agencies. Section 107 of NEPA allows the Federal lead agency to appoint a State, Tribal, or local agency as a joint lead agency and jointly fulfill the role of the lead agency. In such cases, the joint lead agency and lead agency would work together to prepare the document, including development of the purpose and need, identification of alternatives, and preparing the FONSI or ROD.

In § 1507.3(c)(12), CEQ also revises the cross reference to § 1506.5(a) and (c). As discussed in section II.H.3, CEQ is modifying § 1506.5 for clarity, and therefore the provisions in § 1506.5 regarding applicant-provided information for a NEPA document prepared by the agency or an agency-directed contractor are inapplicable in this instance where the applicant or its contractor is preparing the EA or EIS.

In the final rule, CEQ adds paragraphs (c)(12)(i), (ii) and (iii), to set out minimum requirements for such procedures. CEQ includes these provisions to respond to comments requesting CEQ include more specificity about the agency's role with respect to applicant prepared EAs and EIS. Paragraph (c)(12)(i) requires that agency procedures provide for agency review and approval of the purpose and need and alternatives. Agency involvement in development of these key features of the environmental document is critical to ensure that applicant prepared EISs and EAs will be appropriately scoped and include the reasonable alternatives as determined by the agency. Paragraph (c)(12)(ii) requires agencies to include process for the agency to independently evaluate the applicant-prepared EA or EIS; take responsibility for its accuracy, scope, and contents; and document the agency's evaluation in the document consistent with the requirements in § 1506.5(a). CEQ adds paragraph (c)(12)(iii) to address comments requesting that CEQ clarify that applicants cannot prepare FONSIs or RODs. CEQ agrees that this is consistent with section 107(f) of NEPA and agrees that it is an important clarification to ensure that the agency's determinations and decisions are its own.

CEQ declines to add additional requirements regarding public engagement in paragraph (c)(12) because the regulations require agencies to engage the public in the preparation of an EA and EIS, which is required regardless of the preparer.

Numerous commenters expressed the view that CEQ is not fully implementing section 107(f) of NEPA because it is not specifically requiring agencies to allow project sponsors or applicants the opportunity to prepare documents in the absence of prescribed procedures. Some commenters referred to the fact that agencies have 12 months to propose procedures to CEQ following the effective date of the final rule, which means it will be more than a year before agencies have final procedures in place and be able to implement section 107(f) of NEPA. One commenter also pointed to some agencies already accepting sponsor-prepared documents for years and having a process in place to facilitate doing so and asserting that those agencies should not be prevented from continuing to accept these documents.

CEQ agrees that agencies have long allowed applicants to prepare EAs and that many agencies already have procedures in place for applicant-prepared documents. CEQ disagrees that this provision in the regulations precludes agencies from implementing applicant-prepared documents if they already have procedures that enable them to do so. Agencies are currently implementing section 107(f) of NEPA and this provision does not prevent them from continuing to do so. Rather, this provision ensures that going forward, agencies include their procedures for applicant prepared EAs and EISs in their NEPA procedures. Doing so will ensure that the procedures include the criteria set forth in this final rule and that the public has an opportunity to review and comment on the agency procedures without disrupting existing practice implementing 107(f) of NEPA.

Thirteenth, CEQ proposed to move, with revisions, paragraph (d) of 40 CFR 1507.3 (2022) to § 1507.3(d)(1) and strike the provisions in paragraphs (d)(1) through (d)(6) of 40 CFR 1507.3 (2022), which recommended agency procedures identify different classes of activities or decisions that may not be subject to NEPA. CEQ proposed to remove these provisions for consistency with its revisions to § 1501.1. *See* section II.C.1.

Instead, CEQ proposed § 1507.3(d) and its subparagraphs to provide a list of items that agencies may include in their procedures, as appropriate, which would include, at paragraph (d)(1), identifying activities or decisions that are not subject to NEPA. CEQ proposed in paragraph (d)(2) to allow agencies to include processes for emergency actions that would not result in significant environmental effects. Finally, CEQ proposed to move, without modification, paragraphs (f)(1) and (f)(2) of 40 CFR 1507.3 (2022) to paragraphs (d)(3) and (d)(4), respectively.

One commenter expressed support for the proposed § 1507.3(d), and specifically identified additional support for paragraphs (d)(1) and (d)(2) through (6). Another commenter requested that CEQ make the list of items in § 1507.3(d) required rather than optional for inclusion in agency procedures. This commenter also opposed the allowance in paragraph (d)(3) regarding classified proposals, asserting that this language invites abuse by agencies that will classify proposals that should not be classified to avoid public input and requested that there be public comment periods for classified proposals.

CEQ finalizes the list of items agencies may include in their procedures in § 1507.3(d) as proposed. It is appropriate for this list of items to be optional because the items included in the list will not always be applicable to every agency.

CEQ notes that the provision in (d)(2) regarding emergency actions is similar to CEQ's emergency process for EISs provided in § 1506.11, but relates to activities that would not require

preparation of an EIS. Some agencies have programs that focus on these types of emergency actions and may need to consider special arrangements for their EAs in these circumstances. These special arrangements could focus on the format of the documents, special distribution and public involvement procedures, and timing considerations. Some agencies have already established such processes in their procedures to ensure efficient NEPA compliance in an emergency. *See, e.g.,* 36 CFR 220.4(b); U.S. Dep't of Homeland Sec., Instruction Manual #023–01–001–01, Section VI.[116]

Regarding classified proposals, CEQ declines to further modify paragraph (d)(3), which has been in place since the 1978 regulations and is important for agencies who handle classified information. CEQ notes that the provision encourages agencies to withhold only what is necessary for the protection of classified information and structure the document such that it can easily make unclassified portions available for public comment.

Fourteenth, CEQ proposed to strike paragraph (e) of 40 CFR 1507.3 (2020) because it was unnecessary and potentially confusing. CEQ makes this change in the final rule because this provision is redundant with the regulations' longstanding requirement that agencies develop agency NEPA procedures that CEQ has determined conform to the NEPA regulations. Further, its requirement that agency procedures ''comply'' with the CEQ regulations could be read to suggest that agencies must complete a NEPA review when establishing their procedures, which is inconsistent with paragraph (b)(3).

Fifteenth, CEQ proposed to remove, as superfluous, the first sentence of paragraph (f)(3) of 40 CFR 1507.3 (2020) regarding lengthy periods between an agency's decision to prepare an EIS and actual preparation, as the regulations prescribe specific timelines for preparation of environmental documents. As discussed in section II.D.3, CEQ proposed to move the second sentence of 40 CFR 1507.3(f)(3) regarding supplemental notices when an agency withdraws, cancels, or otherwise ceases the consideration of a proposed action before completing an EIS to § 1502.4(f) with modifications. CEQ makes these changes in the final rule.

Sixteenth, CEQ proposed to remove as unnecessary paragraph (f)(4) of 40 CFR 1507.3 (2022) regarding combining the agency's EA process with its scoping process. Section 1501.5(k) clarifies that agencies can employ scoping at their discretion when it will improve the efficiency and effectiveness of EAs, including combining scoping with a comment period on a draft EA.

One commenter opposed this deletion because integrating scoping with the EA process can be an inclusive method of soliciting input and save time and money during the NEPA process. CEQ agrees that integrating scoping with an EA process can provide efficiency benefits, which §§ 1501.5(k) and 1501.9(b) address. CEQ finalizes the proposal to remove paragraph (f)(4) because it is redundant with those provisions.

Finally, as discussed in section II.C.3, CEQ proposed to strike paragraph (f)(5) of 40 CFR 1507.3 (2022) and replace it with a provision in § 1501.4(e) that is consistent with the process established by section 109 of NEPA, 42 U.S.C. 4336c, for adoption or use of another agency's CE. CEQ makes this change in the final rule.

4. Agency NEPA Program Information (§ 1507.4)

CEQ proposed revisions to § 1507.4, which describes the use of agency websites and other information technology tools to promote transparency and efficiency in the NEPA process. In paragraph (a), CEQ proposed to change ''other means'' to ''other information technology tools'' and to remove ''environmental'' before ''documents'' because ''environmental documents'' is a defined term, and the intent of the sentence is to refer to NEPA-related information and documents more broadly and not only to those documents that are included in the definition of ''environmental document.'' CEQ proposed the same edit, removing ''environmental'' before ''documents,'' in paragraph (a)(1). CEQ also proposed in paragraph (a) to require agencies to provide on their websites or through other information technology tools (to account for new technologies) their agency NEPA procedures and a list of EAs and EISs that are in development and complete. Lastly, in paragraph (a), CEQ proposed to encourage rather than allow agencies to include the information listed in paragraphs (a)(1) through (a)(4) on agency websites or other information technology tools.

CEQ proposed to revise paragraph (a)(2) to encourage agencies to post their environmental documents to their websites or other information technology tools. Finally, CEQ proposed edits to paragraph (b), which promotes interagency coordination of environmental program websites and shared databases, to provide agencies with additional flexibility and clarify that the section is not limited to the listed technology.

One commenter opposed CEQ's proposed requirement for agencies to provide a list of EAs and EISs that are in development and complete because the regulations already require publication of the NOI, draft EIS, final EIS, and ROD; require completed EISs to be publicly accessible via EPA's EIS database; encourage publication of draft EAs; and require publication of FONSIs. Combined with CEQ's proposed requirements for notification in § 1501.9(d)(2), the commenter asserted the requirement to post a list of EAs and EISs is redundant and adds another administrative burden on agencies.

CEQ makes the changes as proposed, including the requirement for agencies to provide a list of EAs and EISs that are in development and complete. During the rulemaking process, CEQ heard from multiple members of the public that it can be challenging to identify what NEPA reviews are active within an agency. CEQ considers the requirement to maintain a website or other electronic listing of EAs and EISs to be an important method of transparency that provides easily accessible information to the public. CEQ notes that the provision does not require agencies to publish the documents themselves, rather, it only requires a list of documents that are in development or completed. Agencies already routinely consolidate this type of information and can cross-reference to other repositories, such as the **Federal Register** or EPA's EIS database, on the agency website in order to reduce or avoid duplication. Agencies have discretion to determine when a NEPA review is sufficiently in development to list it on its website, and this provision does not require agencies to post publicly pre-decisional or deliberative information, including non-public information that an agency is working on an environmental document.

Regarding the proposal to encourage, rather than allow, agencies to include the information listed in paragraphs (a)(1) through (a)(4), one commenter asked CEQ to go further and make the listed items a requirement. CEQ declines to require agencies to include this information, but strongly encourages them to do so.

J. Revisions to Definitions (Part 1508)

In § 1508.1, CEQ proposed revisions to the definitions of ''categorical exclusion,'' ''cooperating agency,''

[116] DHS, 023–01–001–01, Implementation of the National Environmental Policy Act (Nov. 6, 2014), *https://www.dhs.gov/sites/default/files/publications/DHS_Instruction%20Manual%20023-01-001-01%20Rev%2001_508%20Admin%20Rev.pdf.*

''effects'' or ''impacts,'' ''environmental assessment,'' ''environmental document,'' ''environmental impact statement,'' ''finding of no significant impact,'' ''human environment,'' ''lead agency,'' ''major Federal action,'' ''mitigation,'' ''notice of intent,'' ''page,'' ''scope,'' and ''tiering.'' CEQ proposed to add definitions for ''environmental justice,'' ''environmentally preferable alternative,'' ''extraordinary circumstances,'' ''joint lead agency,'' ''participating Federal agency,'' ''programmatic environmental document,'' and ''significant effects.''

CEQ did not propose substantive edits to any other definitions, but proposed to redesignate most of the paragraphs to keep the list of terms in alphabetical order. CEQ invited comment on whether it should modify the remaining definitions or define additional terms.

Multiple commenters requested that CEQ add other definitions or edit existing definitions where no changes were proposed. Commenters requested that CEQ define a number of additional terms including ''unresolve conflicts,'' ''Tribal consultation,'' ''final action,'' ''monitoring,'' ''environmental design arts,'' ''reasonably available for inspection,'' ''substantive comments,'' ''earliest reasonable time,'' and ''issues.'' One commenter requested additional modification to the definition of ''publish'' and ''publication'' to encourage agencies to inform as broad an audience as possible. CEQ declines to make these changes in the final rule and discusses the rationale for not making these changes in the Phase 2 Response to Comments as well as in other sections of the preamble. CEQ is adding definitions for several additional terms and modifying definitions contained in the proposed rule as explained below.

1. Applicant (§ 1508.1(c))

CEQ adds a definition of ''applicant'' to § 1508.1(c). CEQ defines this term as a non-Federal entity that seeks an action by a Federal agency and clarifies that this term is inclusive of project sponsors. The CEQ regulations have long used the term ''applicant'' as well as ''non-Federal entity'' and ''project sponsor.'' The recent NEPA amendments also use both terms interchangeably. Because applicants can include project sponsors, as well as non-Federal entities that are seeking agency action for other activities that are not ordinarily referred to as projects, CEQ is electing to use the term ''applicants'' throughout these regulations. Therefore, for consistency and clarity, CEQ revises the regulations to use this term consistently throughout, replacing references to ''non-Federal entity'' and ''project sponsor'' with ''applicant.''

2. Categorical Exclusion (§ 1508.1(e))

CEQ proposed to modify the definition of ''categorical exclusion'' in proposed paragraph (d) to add a cross reference to proposed § 1501.4(c), in which CEQ proposed to establish a new way for agencies to establish CEs. CEQ also proposed minor grammatical edits to change ''the agency'' to ''an agency'' and ''normally do not'' to ''normally does not.''

A number of commenters expressed opposition to the existing term ''normally'' in the definition of ''categorical exclusion,'' which CEQ did not propose to change, and asked that the final rule clarify the meaning of the term. Commenters opposed to the term ''normally'' asserted it makes the standard for establishing a CE insufficiently rigorous. Other commenters specifically asked that the final rule specify that ''normally'' means ''in the absence of extraordinary circumstances,'' and that an agency cannot establish a CE if some actions will have significant adverse effects but will nonetheless be approved under the CE.

CEQ revises the definition of ''categorical exclusion'' as proposed in the final rule at § 1508.1(e) because it is consistent with section 111(1) of NEPA, which defines a CE in part as ''a category of actions that a Federal agency has determined *normally* does not significantly affect the quality of the human environment.'' 42 U.S.C. 4336e(1) (emphasis added). CEQ has long used the term ''normally'' to mean in the absence of extraordinary circumstances,[117] and CEQ added ''normally'' in the definition of ''categorical exclusion'' in the 2020 rule for this reason.[118] Agency-established CEs are not exemptions from the requirement of section 102(2)(C) of NEPA that an agency prepare an EIS before taking a major Federal action significantly affecting the environment. 42 U.S.C. 4332(2)(C). Instead, CEs are a mechanism for complying with this requirement for actions of a kind the agency has determined will not normally have significant effects with the extraordinary circumstances applicable to a CE serving to identify actions of the kind covered by the CE that could nonetheless have significant effects and therefore require additional analysis pursuant to the documentation requirement of § 1501.4(b)(1) or through an EA or EIS. Therefore, when developing a CE to identify categories of actions that will not normally have significant effects, an agency must also provide for the consideration of extraordinary circumstances to identify when a specific action that falls within the category is not of the normal variety that the agency has already determined will not have significant effects and, therefore, requires further analysis.

3. Communities With Environmental Justice Concerns (§ 1508.1(f))

CEQ did not propose a specific definition of ''communities with environmental justice concerns'' but invited comment on whether the final rule should define the term, and if so, how. CEQ explained in the proposed rule that it intended the phrase to mean communities that do not experience environmental justice as defined in proposed § 1508.1(k) (88 FR 49960).

Multiple commenters recommended the final rule define ''communities with environmental justice concerns.'' Some commenters recommended CEQ define it as ''communities that do not experience environmental justice as described in § 1508.1(k).'' Another commenter suggested the definition of ''environmental justice'' was ''politicized'' and therefore referring to § 1508.1(k) would do little to add clarity. One commenter asserted that CEQ's intended meaning would burden communities with raising concerns rather than a definition with ''objective measures of adverse health and environmental effects and disproportionate impacts that warrant alternatives analysis.''

Numerous commenters requested the final rule include a specific definition because it would provide consistency and clarity to Federal agencies on how they should assess environmental justice impacts and how they should define communities with environmental justice concerns. Commenters also asserted that including a definition is important because the phrase is used frequently in the proposed rule. Many commenters also requested that CEQ provide additional guidance on how to identify communities with environmental justice concerns, and some specifically asserted that a definition will only be beneficial if there is additional guidance that includes

[117] *See, e.g.,* CEQ, CE Guidance, *supra* note 10, at 2 (''Extraordinary circumstances are factors or circumstances in which a normally excluded action may have a significant environmental effect that then requires further analysis in an environmental assessment (EA) or an environmental impact statement (EIS).'').

[118] *See* CEQ, 2020 Final Rule, *supra* note 39, at 43342 (''CEQ proposed to revise the definition of 'categorical exclusion' in paragraph (d) by inserting 'normally' to clarify that there may be situations where an action may have significant effects on account of extraordinary circumstances.'').

robust public engagement with environmental justice stakeholders. Some commenters provided specific language for consideration, which CEQ describes in the Phase 2 Response to Comments.

Some commenters asserted that the final rule does not need a definition, and one commenter suggested that the regulations already account for such groups.

After considering the comments, CEQ agrees that a definition would help provide consistency and clarity for Federal agencies and adds one at § 1508.1(f). CEQ defines ''communities with environmental justice concerns'' to mean communities ''that may not experience environmental justice as defined . . . in § 1508.1(m).'' The definition also indicates that agencies may use available screening tools, as appropriate to their activities and programs, to assist them in identifying these communities and includes two examples of existing tools that agencies could use: the Climate and Economic Justice Screening Tool and the EJScreen Tool.[119] The definition also clarifies that agencies have flexibility to develop procedures for the identification of such communities in their agency NEPA procedures. CEQ considers the definition provided in paragraph (f) that connects the definition of ''communities with environmental justice concerns'' with the definition of ''environmental justice,'' alongside an indication that agencies may use available screening tools to assist them, to strike the right balance between providing additional guidance to agencies and recognizing that agencies should have flexibility to identify communities with environmental justice concerns in light of the unique circumstances associated with each action.

CEQ encourages agencies to make use of all available tools and resources in identifying communities with environmental justice concerns. CEQ notes that this definition is not intended to make such communities self-identify; it is incumbent on the agencies to proactively identify such communities. While many agencies have experience in doing so, CEQ anticipates that agencies will develop more expertise over time, which is why CEQ encourages agencies to consider further defining their methodology for identifying communities with environmental justice concerns in their agency NEPA procedures. CEQ also may provide guidance to agencies in the future as tools and methodologies for identification of communities with environmental justice concerns develop.

4. Cooperating Agency (§ 1508.1(g))

In proposed paragraph (d) of § 1508.1, CEQ proposed to revise the definition of ''cooperating agency'' for clarity and consistency with the definition of ''cooperating agency'' in sections 111(2) of and 107(a)(3) of NEPA, which provides that a lead agency may designate as a cooperating agency ''any Federal, State, Tribal, or local agency that has jurisdiction by law or special expertise with respect to any environmental impact involved in a proposal.'' *See* 42 U.S.C. 4336a(a)(3), 4336e(2).

One commenter requested CEQ modify the definition to be more inclusive of State and local governments and Tribal entities by allowing them to serve as cooperating agencies when there are potential impacts in their communities or jurisdictions, and they are ''involved in a proposal.'' Another commenter requested CEQ add a specific exclusion of non-governmental organizations or quasi-governmental organizations from the definition.

CEQ declines to expand the definition of ''cooperating agency'' to include agencies ''involved in a proposal'' as this is overly broad. Instead, CEQ finalizes the definition in § 1508.1(g) consistent with the proposal, which incorporates the language in section 107(a)(3) of NEPA. *See* 42 U.S.C. 4336(a)(3). However, CEQ encourages agencies to invite local governments and Tribes to participate as cooperating agencies where they have special expertise about a proposed action and its environmental effects. CEQ also declines to add the recommended explicit exclusion of non-governmental organizations or quasi-governmental organizations from the definition of ''cooperating agency'' because the definition of ''cooperating agency'' sets forth the entities that are eligible to serve as cooperating agencies, and this does not include non-governmental organizations or quasi-governmental organizations.

5. Effects or Impacts (§ 1508.1(i))

In proposed paragraph (g), CEQ proposed to make clarifying edits to the definition of ''effects'' and to add and modernize examples. Paragraph (g)(4) of 40 CFR 1508.1 (2022) listed common types of effects that may arise during NEPA review. CEQ proposed to update the list to add ''disproportionate and adverse effects on communities with environmental justice concerns, whether direct, indirect, or cumulative'' and ''climate change-related effects.'' For climate change-related effects, CEQ proposed to clarify that these effects can include both contributions to climate change from a proposed action and its alternatives as well as the potential effects of climate change on the proposed action and its alternatives. CEQ proposed these changes to update the definition to include effects that have been an important part of NEPA analysis for more than a decade and will continue to be relevant, consistent with best available science and NEPA's requirements. Also, CEQ proposed these changes in response to comments received during the Phase 1 rulemaking that the definition of ''effects'' or ''impacts'' should explicitly address environmental justice and climate change.[120]

CEQ received a variety of comments on the proposed definition of ''effects'' or ''impacts.'' Some commenters supported the proposed definition generally, and specifically supported the retention of the changes made in the Phase 1 rulemaking to include direct, indirect, and cumulative effects in the definition.

Some commenters requested CEQ add additional examples of effects, including vandalism, destruction of cultural resources, and adverse effects to resources crucial to the exercise of Tribal Nations' reserved rights or the habitat such resources depend on for any part of their lifecycle.

Some commenters characterized the proposed definition of ''effects'' as an attempt to inappropriately broaden the definition, contravene NEPA, and invite litigation, delays, and complexity. These commenters primarily focused on the additions of environmental justice and climate change into proposed paragraph (g)(4), taking issue with CEQ codifying concepts that have previously only been included in guidance documents and Executive orders. One commenter generally described the proposed changes to the definition of ''effects'' as broadening the non-statutory definition of effects and asserted that it is at odds with NEPA, going beyond what the statute authorizes or requires. They also asserted the proposed changes have nothing to do with the mission of most agencies.

CEQ adds the proposed examples in § 1501.8(i)(4) of the final rule, and also adds ''effects on Tribal resources'' in response to commenters' suggestions. CEQ also revises the last sentence of the paragraph to substitute ''adverse'' for its

[119] CEQ, *Explore the Map,* Climate and Economic Justice Screening Tool, *https://screeningtool.geoplatform.gov/;* EPA, EJScreen: *Environmental Justice Screening and Mapping Tool, https://www.epa.gov/ejscreen.*

[120] CEQ, Phase 1 Response to Comments, *supra* note 52, at 87, 99.

synonym ''detrimental'' before ''effects,'' for consistency with the usage of the phrase ''adverse effects'' in other provisions in the regulations. CEQ declines to add the other proposed examples as they are overly specific. CEQ notes that this paragraph is a non-exhaustive list of examples, and that effects vary widely depending on the nature and scope of an agency action. CEQ considers it irrelevant to this rulemaking whether environmental effects, including climate-related and environmental justice effects, relate to an agency's mission. The purpose of NEPA is for agency decision makers to consider environmental effects in their decision making regardless of the agency's mission or purpose.

CEQ acknowledges that the term ''effects'' is not statutorily defined. A definition of ''effects,'' however, has been a part of CEQ's regulations since 1978, which included direct, indirect, and cumulative effects, *see* 40 CFR 1508.8 (2019), and which CEQ restored to the regulations in its Phase 1 rulemaking. Including explicit references to ''climate change-related effects'' and ''disproportionate and adverse effects on communities with environmental justice concerns'' as examples of effects is consistent with that definition of ''effects,'' and the approach the CEQ regulations have taken since 1978 of identifying examples of categories of effects that fall within the regulation's definition of ''effects.'' See 40 CFR 1508.1(g)(1) (2020); 40 CFR 1508.8 (2019). The addition of these new examples to the regulatory text provides further specificity consistent with the statutory text and do not expand the scope of the definition of ''effects.'' For example, section 2 of NEPA, 42 U.S.C. 4321, notes that in enacting NEPA Congress declared a national policy, among other things, ''to promote efforts which will prevent or eliminate damage to the environment and *biosphere*'' (emphasis added). Section 102 of NEPA, for example, directs the ''Federal Government to use all practical means'' to ensure ''for *all* Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings,'' and that ''Congress recognizes that *each person* should enjoy a healthful environment.'' 42 U.S.C. 4331(b) and (c) (emphasis added). And as section 102(2)(C)(i) of NEPA also notes, an agency's NEPA analysis must address the ''reasonably foreseeable adverse environmental effects'' of the proposed action,which has long been interpreted in CEQ's regulations (and affirmed by courts) to include direct, indirect, and cumulative effects. 42 U.S.C. 4332(2)(C)(ii). As a result, expressly identifying climate change, effects to communities with environmental justice concerns, and similar considerations simply draws attention to various categories of effects that already merit consideration.

A commenter recommended CEQ clarify that agencies focus cumulative effects analyses on ''significant'' cumulative effects to improve efficiency. The commenter also asked CEQ to recognize that a qualitative analysis is sufficient when describing potential cumulative effects. CEQ has determined not to include these suggestions in the regulatory definition because they are overly specific and prescriptive and notes that CEQ has issued guidance on cumulative effects that address these issues.

One commenter asserted that ''effects of the proposed agency action'' in section 102(2)(C) of NEPA cannot be read to include effects that are totally unrelated to the proposed agency action and therefore inclusion of cumulative effects in the definition of ''effects'' is precatory and irrelevant to the legal sufficiency of an EIS.

Some commenters asserted that the amendments to NEPA prohibit consideration of cumulative effects because they do not demonstrate a reasonably close causal relationship, and stated that Congress intentionally codified ''reasonably foreseeable'' effects rather than ''cumulative'' or ''aggregate'' effects and urged CEQ to adopt language consistent with the statutory amendments.

CEQ disagrees with the commenters' assertions. The first sentence of the definition of ''effects'' is clear—effects must be reasonably foreseeable. Direct, indirect, and cumulative effects are categories of reasonably foreseeable effects. Therefore, CEQ declines to make changes to the definition to remove ''cumulative'' from the types of effects.

Some commenters requested that CEQ restore the definition of ''effects'' from the 2020 rule, in particular emphasizing the restoration of ''reasonably close causal relationship to the proposed action,'' which CEQ removed in the Phase 1 rulemaking. CEQ declines to restore the 2020 definition for the reasons discussed in the Phase 1 rulemaking, the Phase 1 Response to Comments, and the Phase 2 Response to Comments. CEQ also notes that Congress did not include this language in the 2023 NEPA amendments, but instead used the phrase ''reasonably foreseeable effects.''

CEQ also proposed minor, non-substantive edits to paragraph (g)(3) regarding cumulative effects. Consistent with CEQ's proposal to ensure ''significant'' only modify ''effects,'' CEQ proposed to revise the phrase to read ''actions with individually minor but collectively significant effects.'' A commenter on the Phase 1 rulemaking had also noted that the word ''actions'' should be ''effects.'' CEQ did not receive any comments specific to this proposed change and makes it in the final rule in § 1508.1(i)(3).

6. Environmental Assessment (§ 1508.1(j))

CEQ proposed to update the definition of ''environmental assessment'' in proposed paragraph (h) for consistency with sections 106(b)(2) and 111(4) of NEPA, proposed § 1501.5, and longstanding agency practice. *See* 42 U.S.C. 4336(b)(2), 4336e(4). CEQ proposed to strike ''prepared by a Federal agency'' and change it to ''for which a Federal agency is responsible'' for consistency with section 107(f) of NEPA and § 1506.5, which allow a project sponsor (following agency issuance of procedures) or agency-directed contractor, respectively, to prepare an EA but requires that the agency take responsibility for the accuracy of its contents irrespective of who prepares it. *See* 42 U.S.C. 4336a(f).

To improve readability, CEQ proposed to strike ''to aid an agency's compliance with the Act'' and replace it with text from § 1501.5 clarifying that an agency prepares an EA when a proposed action is not likely to have a significant effect or the significance of the effects is unknown. CEQ also proposed to insert additional language to clarify that an EA is ''used to support an agency's'' determination of whether to prepare an EIS, add a parenthetical cross reference to part 1502, and make the cross reference to the provision on FONSIs a parenthetical to match. CEQ noted in the proposed rule that the proposed changes would not alter the intention that an EA is used to support an agency's determination whether to prepare an EIS (part 1502) or issue a FONSI (§ 1501.6).

One commenter requested that the definition of ''environmental assessment'' reference the requirements of an EA with a mitigated FONSI and clarify that an agency may incorporate mitigation to reach a FONSI determination. CEQ revises the definition of ''environmental assessment'' as proposed in § 1508.1(j). CEQ declines to make additional edits to address mitigated FONSIs because the definition already cross-references to § 1501.6, which addresses mitigated FONSIs.

7. Environmental Document (§ 1508.1(k))

CEQ proposed to add ''record of decision'' to the definition of ''environmental document'' in proposed paragraph (i) for clarity. CEQ also proposed to add a ''documented categorical exclusion determination'' to the definition to reflect the longstanding agency practice of documenting some CE determinations.

A few commenters opposed the proposed addition of a documented CE determination to the definition. One commenter opposed the definition stating that it is inconsistent with the definition of ''environmental document'' in section 111 of NEPA. Another commenter opposed the change asserting some of the regulatory requirements for environmental documents should only apply to EAs and EISs, and that the proposed definition further obscures the distinction between a CE compared to an EA or EIS. A third commenter requested confirmation that undocumented CEs are excluded from the definition and also generally opposed the inclusion of CEs in the definition of ''environmental document.''

CEQ makes the changes as proposed to the definition of ''environmental document'' in § 1508.1(k). This change is consistent with the changes to §§ 1501.4 and 1507.3 that reference CE determinations. Therefore, for clarity and efficiency, CEQ is incorporating documented CE determinations into the definition of ''environmental document.'' As CEQ acknowledged in its proposed rule, CEQ intentionally proposed a broader definition of ''environmental document'' than the definition in the NEPA statute because the CEQ regulations have long defined this term more broadly for the regulation's purposes, and narrowing the definition in the regulations would require substantial further conforming revisions that could create additional uncertainty and would disrupt existing practices. In developing the proposed and final rule, CEQ reviewed each use of the term to ensure its definition is appropriate as well as consistent with the NEPA statute. CEQ is unclear how this definition ''obscures the distinction'' between CEs and EAs or EISs, and therefore declines to make any changes in response to this comment. Lastly, CEQ agrees with the commenter that this would exclude undocumented CE determinations but declines to remove documented CE determinations as discussed earlier in this section.

8. Environmental Impact Statement (§ 1508.1(*l*))

CEQ proposed to change ''as required'' to ''that is required'' in the definition of ''environmental impact statement'' in proposed paragraph (j) for consistency with the definition of ''environmental impact statement'' in section 111(6) of NEPA. *See* 42 U.S.C. 4336e(6). CEQ did not receive comments on this proposed change. CEQ makes this change in the final rule in § 1508.1(*l*).

9. Environmental Justice (§ 1508.1(m))

CEQ proposed to add a new definition of ''environmental justice'' at proposed paragraph (k) to define ''environmental justice'' as the just treatment and meaningful involvement of all people so that they are fully protected from disproportionate and adverse human health and environmental effects and hazards, and have equitable access to a healthy, sustainable, and resilient environment. In defining ''environmental justice,'' CEQ proposed to use the phrase ''cumulative impacts,'' rather than the phrase ''cumulative effects,'' as used elsewhere in the proposed regulations because the phrase ''cumulative impacts'' has a meaning in the context of environmental justice relating to the aggregate effect of multiple stressors and exposures on a person, community, or population. *See, e.g.,* Environmental Protection Agency, Cumulative Impacts Research: Recommendations for EPA's Office of Research and Development (2022). CEQ explained in the proposed rule that it views the evolving science on cumulative impacts as sufficiently distinct from the general meaning of cumulative effects under the NEPA regulations such that using a different term could be helpful to agencies and the public. CEQ invited comment on this approach.

Multiple commenters expressed support for the proposed definition, with many saying the language is clear and comprehensive and others welcoming the inclusion of a definition, saying it is long overdue. Some commenters expressed support for specific components of the definition, such as the inclusion of Tribal affiliation. Numerous commenters suggested specific revisions to the definition or asked that the final rule include additional elements, which CEQ discusses in the Phase 2 Response to Comments.

Some commenters supported use of the phrase ''cumulative impacts'' in the definition and CEQ's rationale for doing so. One commenter asserted that ''cumulative impacts'' is a newly introduced concept and urged CEQ to clarify its meaning, expressing concern that it is open-ended and could result in agencies inaccurately interpreting the term to call for an unnecessarily expansive historical baseline in the analysis that could slow or discourage development or require projects to mitigate historical environmental burdens that go beyond the impacts of a proposed project. One commenter requested that CEQ add a separate definition for ''cumulative impacts'' as it is used in the definition of ''environmental justice'' to distinguish it from ''cumulative effects.''

Multiple commenters opposed the proposed definition of ''environmental justice'' for a variety of reasons. Commenters asserted that it was subjective, vague, difficult to implement, an impossibly high standard, politically motivated, inconsistent with § 1502.16(b), unlawful and not supported by statute, vulnerable to legal challenges, could open the door to endless project delays, and changes NEPA procedural requirements to achieve substantive goals.

In the final rule, CEQ adds a definition of ''environmental justice'' in § 1508.1(m) consistent with the proposal. Consideration of environmental justice is within the scope of NEPA's purpose to provide for the social, economic, and other requirements of present and future generations and allowing for all Americans to participate in a wide sharing of life's amenities. *See* 42 U.S.C. 4331. NEPA also recognizes that each person should have the opportunity to enjoy a healthy environment. 42 U.S.C. 4331. Consideration of environmental justice also informs an agency's analysis of reasonably foreseeable effects. Agencies have decades of experience integrating consideration of environmental justice in their NEPA reviews and incorporating a definition of ''environmental justice'' into the regulations will provide additional clarity and consistency as agencies continue to analyze environmental justice in environmental documents, as they have for many years. The definition added to the regulations is consistent with longstanding agency practice evaluating potential effects to communities that experience disproportionate and adverse human health and environmental effects and ensuring meaningful engagement with communities affected by proposed actions. The definition is also consistent with the definition of ''environmental

justice'' in section 2(b) of E.O. 14096.[121] CEQ declines to define the phrase ''cumulative impacts.'' As noted in the proposed rule, ''cumulative impacts'' has a meaning in the context of environmental justice relating to the aggregate effect of multiple stressors and exposures on a person, community, or population. The science of ''cumulative impacts'' is an evolving field, and CEQ has determined that it is premature and inappropriately limiting to establish a regulatory definition of the phrase at this time. CEQ will consider whether guidance on cumulative impacts would assist agencies conducting environmental reviews.

Some commenters asked CEQ to provide clearer direction and guidance on how to apply the definition and consideration of environmental justice to improve consistency and clarity amongst Federal agencies. CEQ will consider what additional guidance may be necessary.

10. Environmentally Preferable Alternative (§ 1508.1(n))

CEQ proposed to add a new definition of ''environmentally preferable alternative'' at § 1508.1(*l*), a concept that has been in the regulations since 1978, and define it as the alternative or alternatives that will best promote the national environmental policy in section 101 of NEPA. CEQ based its proposed definition on CEQ's Forty Questions guidance that was issued in 1981 and has remained an important resource for agencies since that time.[122]

Some commenters expressed general support for the proposed definition. Others expressed support and suggested changes, such as incorporating the phrases ''reasonable alternative'' and ''economically and technically feasible.'' Other commenters opposed the proposed definition. Multiple commenters asserted the definition conflicts with the mandates of section 101 of NEPA and asserted that because section 101 is about striking a balance, the environmentally preferable alternative should be defined as the alternative that best strikes a balance. Another commenter asserted the proposed definition is at odds with the statutory language of NEPA arguing that agencies must only consider alternatives that are technically and economically feasible and asserting that the environmentally preferable alternative may not always be technically and economically feasible.

CEQ adds the definition of ''environmentally preferable alternative'' in § 1508.1(n) as proposed. As CEQ has clarified in § 1502.14(f) and in the discussion in section II.D.9, agencies identify the environmentally preferable alternative amongst the alternatives considered in the EIS, which are the proposed action, no action, and reasonable alternatives. Therefore, the definition of ''environmentally preferable alternative'' does not require agencies to consider alternatives beyond those already identified for consideration. CEQ disagrees that it is necessary to include text indicating that the environmentally preferable alternative must be a reasonable alternative, because agencies select the environmentally preferable alternative from the alternatives analyzed in the EIS, which include the proposed action, no action, and reasonable alternatives, which is defined as a range of alternatives that are technically and economically feasible, and meet the purpose and need for the proposed action. CEQ also disagrees that the environmentally preferable alternative should be defined as the alternative that best balances competing considerations. While balance is an important part of NEPA, identifying the environmentally preferable alternative provides information to decision makers and the public, and is a longstanding part of the NEPA process. Agencies are not required to adopt the environmentally preferred alternative as its final decision. Additionally, CEQ disagrees that the definition is at odds with section 101 of NEPA because that section is incorporated into the definition.

11. Extraordinary Circumstances (§ 1508.1(o))

CEQ proposed to add a definition of ''extraordinary circumstances'' in proposed paragraph (m). While the 1978 regulations explained the meaning of extraordinary circumstances as part of the definition of ''categorical exclusion'' at 40 CFR 1508.4 (2019), which the 2020 rule moved to 40 CFR 1501.4(b) (describing how to apply extraordinary circumstances when considering use of a CE) and 40 CFR 1507.3(e)(2)(ii) (requiring agencies to establish extraordinary circumstances for CEs in their procedures),[123] CEQ proposed to create a standalone definition to improve clarity when this term is used throughout the rule.

CEQ also proposed to add several examples of extraordinary circumstances to help agencies and the public understand common situations that agencies may consider in determining whether an action normally covered by a CE falls outside the category of actions the agency has determined will not have significant effects and, therefore, additional analysis is required either under § 1501.4(b), if the agency can determine that it can rely on the CE notwithstanding the presence of the extraordinary circumstance, or through an EA or EIS. The proposed examples included effects on sensitive environmental resources, disproportionate and adverse effects on communities with environmental justice concerns, effects associated with climate change, and effects on historic properties or cultural resources. This list of examples is not exclusive, and agencies continue to have the discretion to identify extraordinary circumstances in their NEPA implementing procedures, consistent with § 1507.3, as well as through the new mechanism to establish CEs in § 1501.4(c), that are specific and appropriate to their particular actions and CEs.

Multiple commenters expressed general support for the proposed definition of ''extraordinary circumstances.'' A few commenters specifically supported the inclusion of the examples of extraordinary circumstances, including the references to climate change effects, effects on sensitive environmental resources, effects on communities with environmental justice concerns, and effects on historic properties and cultural resources.

Other commenters criticized the proposed definition, asserting it is too broad, vague, and subjective. Some commenters suggested the proposed definition is contrary to the NEPA amendments allowing expanded use of CEs. Other commenters specifically objected to the examples, specifically effects on climate change and communities with environmental justice concerns. One commenter stated the definition could result in confusion because it does not provide clarity on what agencies must evaluate. Similarly, another commenter stated this lack of clarity provides too much freedom to agencies that may not properly assess the effects of projects for the sake of efficiency.

CEQ adds a definition of ''extraordinary circumstances'' in § 1508.1(o) as proposed with minor changes. In the final rule, CEQ uses ''means'' instead of ''are'' for consistency with other definitions in § 1508.1. The final rule removes ''environmental'' from ''significant

[121] *See* E.O. 14096, *supra* note 22, at 25253.

[122] CEQ, Forty Questions, *supra* note 5, at 6.

[123] CEQ, 2020 Final Rule, *supra* note 39, at 43342–43.

environmental effects'' because ''significant effects'' is a defined term. CEQ also revises the examples of extraordinary circumstances to use the same introductory text, ''substantial'' effects as discussed further in this section. The operative language included in this definition has been in the regulations since 1978, and agencies have decades of experience analyzing proposed actions for extraordinary circumstances. CEQ disagrees that the definition is inconsistent with the recent amendments to NEPA because NEPA requires agencies to conduct an EIS for actions that will have significant effects, and extraordinary circumstances are the mechanism by which an agency assesses whether a particular proposed action may have significant effects and, therefore, that reliance on a CE is inappropriate. CEQ disagrees that the definition is overbroad and considers it to provide agencies the necessary flexibility to tailor their extraordinary circumstances consistent with their programs and authorities. CEQ also disagrees that the proposed definition impedes the ability of agencies to use CEs or apply the provisions of NEPA regarding CEs. The regulations have always required agencies to consider extraordinary circumstances when applying a CE and providing a definition within the regulations helps provide clarity to agencies, applicants, and the public.

Multiple commenters asserted that the undefined phrase ''substantial effects'' used in the examples of extraordinary circumstances may result in confusion, delays, and increased litigation risk. Another commenter questioned why ''potential substantial effects'' is used in the examples instead of ''reasonably foreseeable'' and ''significant effects.'' CEQ used this different phrasing because the purpose of extraordinary circumstances is to screen an individual action, which would normally be covered by a CE, for further analysis to assess whether the action has reasonably foreseeable significant effects requiring the preparation of an EIS. While an agency could adopt extraordinary circumstances that directly implement the reasonably foreseeable significant effects standard, doing so could degrade the efficiency of applying CEs by requiring a more complex analysis in applying its extraordinary circumstances that would consider the context and intensity factors that govern an assessment of significance. CEQ notes that many agencies have long used this phrase in their lists of existing extraordinary circumstances and that this approach has resulted in an efficient process for applying CEs.

Some commenters also questioned why the example for effects on communities with environmental justice concerns or effects on historic properties or cultural resources did not use the phrase ''substantial effects.'' CEQ revises the examples to use ''substantial'' effects for consistency with the other examples in § 1508.1(o), although CEQ notes that agencies have flexibility to design extraordinary circumstances in a manner that makes sense for their programs.

12. Finding of No Significant Impact (§ 1508.1(q))

In the definition of ''finding of no significant impact'' proposed in paragraph (o), CEQ proposed to insert ''agency's determination that and'' after ''presenting the'' for consistency with the definition of ''finding of no significant impact'' in section 111(7) of NEPA, which defines the term to mean ''a determination by a Federal agency that a proposed agency action does not require the issuance of an environmental impact statement.'' 42 U.S.C. 4336e(7).

One commenter suggested CEQ revise the definition to clarify that the proposed action will not have a significant adverse effect on any aspect of the human environment. CEQ revises the definition of ''finding of no significant impact'' in § 1508.1(q) as proposed, and CEQ declines to make additional changes to the definition. CEQ agrees that the purpose of a FONSI is to document the determination that the proposed action will not have a significant effect, which is specified in § 1501.3(d)(2)(i), and does not consider repeating that proposition here necessary. Another commenter suggested the final rule include a definition for mitigated FONSI, which CEQ declines to add because the meaning of a mitigated FONSI is conveyed in § 1501.6(a).

13. Human Environment or Environment (§ 1508.1(r))

CEQ proposed to clarify in proposed paragraph (p) that ''human environment'' and ''environment'' are synonymous in the regulations given that ''environment'' is the more commonly used term across the regulations.

A few commenters expressed support for the use of ''human environment'' and ''environment'' synonymously. A couple of commenters asked for CEQ to define ''human environment'' and ''environment'' as separate terms but did not include a rationale for doing so. One commenter was supportive but requested that CEQ expand the definition to explicitly include cultural and socio-economic conditions.

CEQ makes this change as proposed in the final rule at § 1508.1(r). CEQ declines to explicitly reference cultural and socio-economic conditions in the definition, because the definition cross-references the definition of ''effects,'' which notes that effects include ecological, aesthetic, historic, cultural, economic, social, or health.

CEQ proposed a minor edit to ''human environment'' in § 1508.1(p) to remove ''of Americans'' after ''present and future generations.'' This minor edit improves consistency with section 101(a) of NEPA, which speaks generally about the impact of people's ''activity on the interrelations of all components of the natural environment'' and the need ''to create and maintain conditions under which [humans] and nature can exist in productive harmony.'' 42 U.S.C. 4331(a).

One commenter opposed the removal of the phrase ''of Americans'' and disagreed with CEQ's characterization of the change as minor. CEQ disagrees with the commenter's assertion and makes this change in the final rule. In the 2020 rule, CEQ changed ''people'' to ''of Americans,'' explaining that this change was made to be consistent with section 101(a) of NEPA.[124] However, CEQ has reconsidered that explanation, which overlooks the context in which the phrase ''present and future generations of Americans'' is used in section 101(a). That paragraph of the Act refers to Americans at the end of the last sentence after using the broader term ''man'' three times. ''Human environment'' refers broadly to the interrelationship between people and the environment. The phrase ''present and future generations of Americans'' is used in a narrower context to ''fulfill the social, economic, and other requirements of present and future generations of Americans.'' 42 U.S.C. 4331(a). CEQ notes that it considers the removal of the phrase ''of Americans'' in the definition of ''human environment'' to be consistent with CEQ's determination to retain the phrase in the first sentence of § 1501.1(a). That sentence specifically describes section 101(a) of NEPA and does not define the undefined term ''human environment,'' which appears in NEPA section 102(2)(C). CEQ considers it appropriate to define ''human environment'' in consideration of the totality of section 101, rather than solely based on the last phrase in section 101(a). A definition of

[124] *Id.* at 43344–45.

''human environment'' that is not limited by the phrase ''of Americans'' is also consistent with the statutory exclusion in section 111(10)(b)(vi) of NEPA of activities or decisions with effects located entirely outside of the jurisdiction of the United States from the definition of ''major Federal action.'' This exclusion—consistent with decades of agency practice—requires agencies to evaluate effects that occur outside of U.S. jurisdiction as a component of the human environment because it does not limit the definition of ''effects,'' but rather excludes a narrow category of activities from the definition of ''major Federal action.'' 42 U.S.C. 4336e(10)(b)(vi).

14. Joint Lead Agency (§ 1508.1(s))

CEQ proposed to add a definition for ''joint lead agency'' to mean ''a Federal, State, Tribal, or local agency designated pursuant to § 1501.7(c) that shares the responsibilities of the lead agency'' for preparing an EA or EIS. CEQ proposed the definition for consistency with the usage of that term in section 107(a)(1)(B) of NEPA and § 1501.7(b) and (c). *See* 42 U.S.C. 4336a(a)(1)(B).

One commenter expressed that NEPA establishes two categories of joint lead agencies: Federal joint lead agencies and non-Federal joint lead agencies. The commenter requested CEQ clarify this distinction in the definition. CEQ declines to make the commenter's recommended change. CEQ reviewed the use of the term in the regulations and identified no circumstance where the term was used in a fashion that required distinguishing between Federal joint lead agencies and non-Federal joint lead agencies. Therefore, CEQ finalizes the definition of ''joint lead agency'' as proposed in § 1508.1(s).

15. Lead Agency (§ 1508.1(u))

CEQ proposed in paragraph (s) to revise the definition of ''lead agency'' as ''the Federal agency that proposes the agency action or is designated pursuant to § 1501.7(c) for preparing or having primary responsibility.'' CEQ proposed this revision for consistency with the definition of ''lead agency'' in section 111(9) of NEPA and to expand the definition ''to also include EAs, consistent with longstanding practice. CEQ did not receive any comments on its proposed revisions to the definition of ''lead agency'' and finalizes the definition of ''lead agency'' as proposed in § 1508.1(u). *See* 42 U.S.C. 4336e(9).

16. Major Federal Action (§ 1508.1(w))

CEQ proposed to revise the definition of ''major Federal action'' in proposed paragraph (u) to clarify the list of example activities or decisions that meet the definition, and revise the list of exclusions from the definition consistent with section 111(10) of NEPA. *See* 42 U.S.C. 4336e(10). First, CEQ proposed to revise the introductory paragraph to change ''activity or decision'' to ''action that the agency carrying out such action determines is'' and insert ''substantial'' before ''Federal control and responsibility'' and delete ''subject to the following'' to align the text with the language in section 111(10) of NEPA.

Some commenters requested the final rule provide further clarity and specificity regarding ''substantial Federal control and responsibility'' contending that this phrase is ambiguous and confusing. Another commenter argued that Congress made a significant change to the definition of ''major Federal action'' in section 111(10) of NEPA in using the phrase ''substantial Federal control and responsibility'' over the action the agency is carrying out, instead of adopting the definition of ''major Federal action'' from the 1978 regulations, ''actions with effects which are potentially subject to Federal control and responsibility'' or the 2020 regulations ''Federal control and responsibility.'' This commenter argued the use of ''substantial'' by Congress further limits the definition of ''major Federal action'' and therefore NEPA's applicability generally. Several other commenters agreed with this premise and suggested the intention of the NEPA amendments was to narrow the application of NEPA. Other commenters asked CEQ to define the term ''substantial'' in the context of the definition.

CEQ disagrees that ''substantial Federal control and responsibility'' applies in a more limited manner than ''Federal control and responsibility.'' Substantial modifies Federal control and responsibility and indicates that a large amount, but not complete, control and responsibility is required for an action to be a major Federal action. This interpretation is consistent with Supreme Court precedent interpreting the meaning of substantial in various statutes. *See, e.g., Ayestas* v. *Davis,* 584 U.S., 28, 45 (2018); *Life Technologies Corp.* v. *Promega Corp.,* 580 U.S. 140, 145–46 (2017); *Virginia* v. *Hicks,* 539 U.S. 113, 119–20, 122–24 (2003). CEQ interprets substantial Federal control and responsibility to mean the agency has a large amount of control and responsibility over the action the agency is carrying out but not complete control over the action or its effects. The phrase ''substantial Federal control and responsibility'' could, therefore, be interpreted to capture a broader set of actions than the phrase in the absence of the word ''substantial,'' because ''Federal control and responsibility'' unqualified could be read to require complete control and responsibility. Contrary to the commenters' assertion, the phrase ''substantial Federal control and responsibility'' does not require a narrower scope for the term major Federal action than the phrase ''Federal control and responsibility.''

CEQ notes that the phrase ''substantial Federal control and responsibility'' in section 111(10) applies to the actions an agency is carrying out. 42 U.S.C. 4336e(10)(A). In most cases, agencies exercise control and responsibility over the actions they carry out, unless those actions are non-discretionary. CEQ declines to define ''substantial'' in the final rule but will consider whether to issue guidance in the future and will assist agencies in evaluating circumstances in which the agency carries out an action but lacks complete control and responsibility for it.

CEQ revises the introductory paragraph of the definition of ''major Federal action'' in § 1508.1(w) as proposed because the text aligns with the definition of ''major Federal action'' in section 111(10) of NEPA. 42 U.S.C. 4336e(10). The determination of whether an activity or decision is a major Federal action is a fact-specific analysis that agencies have long engaged in, and they should continue to exercise judgment as they evaluate the contexts in which they operate. The regulations provide a list of example activities and decisions in § 1508.1(w)(1) to assist agencies in making these determinations.

Second, CEQ proposed to reorder and revise the definition to first list the examples of activities or decisions that may be included in the definition of ''major Federal action'' before the exclusions. To that end, CEQ proposed to move paragraph (q)(3) of 40 CFR 1508.1 (2020) to proposed paragraph (u)(1), and revise ''tend to fall within one of the following categories'' to read ''generally include.''

Several commenters opposed the proposed list of example activities or decisions that meet the definition of ''major Federal action'' and recommended the final rule retain only the exclusions set forth in section 111(10) of NEPA. The commenters argued that these examples go beyond the text of NEPA, subvert Congressional intent, and limit an agency's ability to make case-by-case determinations.

Other commenters expressed support for the list of examples.

CEQ considered the range of comments on the definition of ''major Federal action'' and determined that providing both examples of activities or decisions that typically meet the definition of ''major Federal action'' as well as exclusions from the definition strikes the right balance to help agencies as they make case-by-case factual determinations of whether an action qualifies as a major Federal action and for consistency with section 111(10). *See* 42 U.S.C. 4336e(10). To provide additionally clarity that this is a fact-specific, case-by-case determination, CEQ moves paragraph (q)(3) of 40 CFR 1508.1 (2020) to § 1508.1(w)(1) in the final rule, revises it consistent with the proposal, and adds an introductory clause, ''[e]xamples of'' before ''major Federal actions generally include'' to the beginning of the paragraph to make clear that this is a list of example activities and decisions that may meet the definition of ''major Federal action.''

Third, CEQ proposed to strike paragraph (q)(2) of 40 CFR 1508.1 (2020) and replace it with proposed paragraph (u)(1)(i) to include the granting of authorizations such as permits, licenses, and rights-of way. CEQ proposed to strike the examples in paragraph (q)(2) 40 CFR 1508.1 (2020) because the proposed example addresses regulated activities, and the other examples are redundant to those listed in proposed paragraphs (u)(1)(ii) through (u)(1)(vi). CEQ did not receive any comments specific to this proposal. CEQ strikes paragraph (q)(2) of 40 CFR 1508.1 (2020) in the final rule and replaces it in § 1508.1(w)(1)(i) with the language as proposed.

Fourth, CEQ proposed to redesignate paragraphs (q)(3)(i) through (q)(3)(iv) of 40 CFR 1508.1 (2020) as proposed paragraphs (u)(1)(ii) through (u)(1)(v). CEQ did not receive any comments specific to this proposal. In the final rule, CEQ redesignates paragraphs (q)(3)(i) through (q)(3)(iv) of 40 CFR 1508.1 (2020) as § 1508.1(w)(3)(i) through (w)(3)(iv), respectively.

Fifth, in paragraph (u)(1)(iv), CEQ proposed to change the phrase ''connected agency decisions'' to ''related agency decisions'' to clarify that the concept in this paragraph is not meant to refer to ''connected actions'' as discussed in § 1501.3. CEQ proposed this as a non-substantive, clarifying change to avoid any confusion with connected actions. CEQ did not receive specific comments on this proposed change and revises this provision as proposed in § 1508.1(w)(1)(iv).

Sixth, CEQ proposed to revise paragraph (u)(1)(v) to change ''approval of'' to ''carrying out'' specific projects to address projects carried out directly by a Federal agency. CEQ proposed to strike ''located in a defined geographic area'' from the example of management activities; while this is merely an example, CEQ is concerned it could be read as limiting. CEQ also proposed to strike the sentence regarding permits and address them in the example in proposed paragraph (u)(1)(i).

One commenter requested removal of the term ''carrying out,'' asserting that CEQ has not shown that carrying out construction activities constitutes major Federal action. In the final rule, CEQ retains the example in § 1501.8(w)(1)(v) and adds ''or carrying out'' after ''[a]pproval of'' rather than replacing it because the phrase ''carrying out'' is consistent with section 111(10) of NEPA, which includes the phrase ''the agency carrying out such action.'' 42 U.S.C. 4336e(10)(A). CEQ also adds ''agency'' before ''projects'' to distinguish this example from non-Federal projects. Because this is a list of examples and both approving or carrying out construction projects can be major Federal actions, CEQ includes both in the final rule. For example, an agency may approve construction of a Federal facility and then contract out with another entity to actually carry out that construction.

Seventh, CEQ proposed to add a new example in proposed paragraph (u)(1)(vi) to improve clarity and ensure appropriate application of NEPA by explaining when Federal financial assistance is a major Federal action. Generally, actions to provide Federal financial assistance, other than actions that provide only minimal Federal funding, are major Federal actions so long as the Federal agency has authority and discretion over the financial assistance in a manner that could address environmental effects from the activities receiving the financial assistance. In such circumstances, the agency has sufficient control and responsibility over the use of the funds or the effects of the action for the action providing financial assistance to constitute a major Federal action consistent with the definition in section 111(10) of NEPA. 42 U.S.C. 4336e(10)(A). This includes circumstances where the agency could deny the financial assistance, in whole or in part, due to environmental effects from the activity receiving the financial assistance, or could impose conditions on the financial assistance that could address the effects of such activity.

Several commenters contended that CEQ's proposal to include financial assistance as an example of a major Federal action in proposed paragraph (u)(1)(vi) is inconsistent with the statutory definition of ''major Federal action'' in section 111(10)(B) of NEPA. The commenters stated that the proposed language is overly broad and could cover too many Federal loan or grant programs. One commenter asserted that this language ''could cover virtually any Federal grant or loan program, including ones that are not currently subject to NEPA.'' Another commenter asserted that financial assistance should never be considered a major Federal action.

CEQ disagrees that the examples of how an agency may exercise ''sufficient control and responsibility'' with regard to financial assistance to meet the statutory definition of ''major Federal action'' are inconsistent with the statute. The language in paragraph (u)(1)(vi) provides examples of where financial assistance meets the definition of ''major Federal action'' and is not covered by the exclusion of ''financial assistance where a Federal agency does not exercise sufficient control and responsibility over the subsequent use of such financial assistance or the effect of the action.'' 42 U.S.C. 4336e(10)(B)(iii).

CEQ adds the proposed examples in the final rule at § 1508.1(w)(1)(vi) with an additional clause to incorporate the phrase ''more than a minimal amount'' into the example to avoid any confusion about the relationship of the example to the exclusion in paragraph (w)(2)(i)(A) and NEPA section 111(10)(B)(ii). CEQ also makes two editorial corrections to add the missing word ''to'' after ''due'' and repeat the subject ''authority to'' before ''impose conditions.'' Except in circumstances in which an agency provides minimal Federal funding, where an agency has substantial control and responsibility over a recipient's environmental effects or sufficient discretion to consider the environmental effects when making decisions, the agency must comply with NEPA. While an agency can appropriately tailor the scope of its NEPA analysis to the environmental effects that it can take into account in making its decision, the agency cannot exclude such actions from NEPA review altogether.

CEQ disagrees with the assertion that the example broadens the applicability of NEPA to financial assistance that is excluded by section 111(10)(B)(ii) and § 1508.1(w)(2)(iii). Rather, the example describes circumstances in which an agency exercises sufficient control or

responsibility over the use of financial assistance or the effect of the action to fall outside the exception. In evaluating whether a particular action qualifies as a major Federal action consistent with this example and the exclusion in § 1508.1(w)(2)(iii), agencies should consider the specific circumstances and legal authorities involved. As with any NEPA review, where an agency determines that an action providing financial assistance constitutes a major Federal action, the agency should scope the NEPA review in light of the statutory and factual context presented.

Other commenters specifically questioned the inclusion of financial assistance where the agency ''otherwise has sufficient control and responsibility over the subsequent use of the financial assistance or the effects of the activity for which the agency is providing the financial assistance'' in the example. A commenter asserted that this phrase's breadth and ambiguity could lead to litigation and recommended narrowing this flexibility clause to apply only where the agency ''otherwise has authority to impose conditions on the receipt of the financial assistance to address environmental effects.''

CEQ declines to make the commenters' proposed changes. The text the commenter addresses reflects the exclusion in section 111(10)(B)(iii) of NEPA. *See* 42 U.S.C. 4336e(10)(B)(iii). CEQ agrees that authority to impose conditions to address environmental effects, along with authority to deny in whole or in part assistance due to environmental effects, would satisfy the statutory test, and those situations are identified in the sentence immediately preceding the text that is the focus of the comment. Describing these situations, along with the remainder of § 1508.1(w)(1)(vi), can assist agencies in evaluating actions providing financial assistance, in light of the relevant statutory authorities and factual context, to determine if such action falls within the exclusion in section 111(10)(B)(iii) of NEPA and § 1508.1(w)(2)(iii). In addition to reflecting the statutory exclusion, this clause recognizes the varying degrees of control and responsibility agencies have over a wide variety of financial assistance programs, as well as the agencies' responsibility to determine the proper scope of its NEPA review with regard to such programs.

Eighth, CEQ proposed to replace the exclusions in paragraphs (q)(1)(i) through (vi) of 40 CFR 1508.1 (2020) with the exclusions from the definition of ''major Federal action'' codified in the definition in section 111(10)(B) of NEPA. *See* 42 U.S.C. 4336e(10)(B). CEQ proposed to include in proposed paragraph (u)(2)(i), (u)(2)(i)(A), and (u)(2)(i)(B) the exclusion of non-Federal actions with no or minimal funding; or with no or minimal Federal involvement where the agency cannot control the outcome of the project consistent with section 111(10)(B)(i) of NEPA. CEQ proposed these exclusions to replace the exclusion in 40 CFR 1508.1(q)(1)(vi) (2020), which CEQ proposed to strike. CEQ also invited comment on whether it should add additional provisions to the regulations to implement the ''minimal Federal funding'' exclusion in proposed paragraph (u)(2)(i)(A), noting that agencies currently evaluate the provision of minimal Federal funding based on specific factual contexts. CEQ asked whether additional procedures, including thresholds related to the amount or proportion of Federal funding, could increase predictability while ensuring that Federal agencies do not disregard effects to vital components of the human environment, including the health of children and vulnerable populations, drinking water, communities with environmental justice concerns, and similar considerations.

CEQ received some comments on the exclusion for non-Federal actions with no or minimal Federal involvement where the Federal agency cannot control the outcome of the project, which mirrors the exclusion in section 111(10)(B)(i)(II) of NEPA, and in response to the request for comment. One commenter recommended against setting a threshold, given the fact-specific nature of the inquiry. The commenter expressed concern that setting a threshold for the amount or proportion of Federal funding necessary for agency action to trigger NEPA would undermine the statute's emphasis that it apply to the ''fullest extent possible.'' The commenter further asserted that the 2023 NEPA amendments, as clarified by CEQ's proposed regulations, are sufficient to provide clarity on the scope of NEPA's application, and a threshold amount is not necessary or useful.

Two commenters recommended that the regulations establish thresholds for minimal Federal funding or direct agencies to establish thresholds in their NEPA procedures, asserting that clear thresholds will improve efficiency and reduce litigation risk. Two other commenters supported establishing a threshold for minimum funding and included suggestions for what that threshold should be. A couple of commenters requested CEQ define ''minimum'' in the context of minimum funding.

CEQ strikes 40 CFR 1508.1(q)(1)(vi) (2020) and adds this exclusion in the final rule as proposed at § 1508.1(w)(2)(i), (w)(2)(i)(A), and (w)(2)(i)(B). CEQ has considered the broad range of suggestions to thresholds it received but has not identified a threshold that would be appropriate across the broad range of Federal programs or that would address CEQ's concern about the health of children and vulnerable populations, drinking water, communities with environmental justice concerns, and similar circumstances. CEQ also notes that there is limited case law as to what constitutes ''minimal Federal funding'' and that the case law that exists does not define a clear threshold that could be incorporated into the regulations. Therefore, agencies should continue to evaluate whether funding is ''minimal'' based on the specific factual context of the proposed action.

CEQ also adds the exclusion for non-Federal actions ''with no or minimal Federal involvement where a Federal agency cannot control the outcome of the project'' in § 1508.1(w)(2)(i)(B) as proposed. This provision reinforces the general rule that major Federal actions are actions carried out by an agency, and not non-Federal actions, and that a non-Federal action does not become a Federal action due to only minimal Federal involvement. Note, this exclusion does not bear on whether an action undertaken by a Federal agency, such as issuing a regulatory authorization or deciding to provide funding assistance, is a major Federal action, because in such circumstances the agency is undertaking an action itself. There are, however, circumstances where Federal involvement in a non-Federal action does not constitute an action, for example, where an agency informally provides a non-Federal party information that the non-Federal party considers in developing the non-Federal action. The provision of the information may not qualify as an agency action and the minimal Federal involvement would not result in the non-Federal action being considered a Federal action.

Ninth, CEQ proposed to include the exclusion of funding assistance solely in the form of general revenue sharing funds consistent with section 111(10)(B)(ii) of NEPA in proposed paragraph (u)(2)(ii). *See* 42 U.S.C. 4336e(10)(B)(ii). CEQ proposed this exclusion to replace the similar exclusion in 40 CFR 1508.1(q)(1)(v) (2020), which CEQ proposed to strike. CEQ did not receive substantive comments on this proposed revision. CEQ strikes 40 CFR 1508.1(q)(1)(v)

(2020) and adds this exclusion in the final rule as proposed at § 1508.1(w)(2)(ii).

Tenth, CEQ proposed to include the exclusion of loans, loan guarantees, or other forms of financial assistance where a Federal agency does not exercise sufficient control and responsibility over the subsequent use of such financial assistance or the effects of the action, consistent with section 111(10)(B)(iii) of NEPA, in proposed paragraph (u)(2)(iii). *See* 42 U.S.C. 4336e(10)(B)(iii). CEQ did not receive substantive comments on this proposed revision, although as discussed above, CEQ did receive related comments on the example about financial assistance added to paragraph (w)(1)(vi). CEQ adds this exclusion in the final rule as proposed at § 1508.1(w)(2)(iii).

Eleventh, CEQ proposed to include the exclusion of certain business loan guarantees provided by the Small Business Administration, consistent with section 111(10)(B)(iv) of NEPA, in proposed paragraph (u)(2)(iv). *See* 42 U.S.C. 4336e(10)(B)(iv). CEQ proposed this exclusion to replace the similar exclusion in 40 CFR 1508.1(q)(1)(vii) (2020), which CEQ proposed to strike. In particular, CEQ proposed to strike the example in 40 CFR 1508.1(q)(1)(vii) of farm ownership and operating loan guarantees by the Farm Service Agency (FSA) pursuant to 7 U.S.C. 1925 and 1941 through 1949 because CEQ considered it best left to agencies to identify exclusions from the definition of ''major Federal action'' absent specific statutory authority like those for the Small Business Administration loan guarantees.

Several commenters requested that CEQ retain the explicit exclusion of FSA loans and loan guarantees from the definition of ''major Federal action.'' These commenters contended that the loan amounts are low, that activities funded do not require an agency permit, and that the agency does not have sufficient control or authority over the use of the funds. These commenters disagreed with CEQ's explanation that it is best left to agencies to identify exclusions from the definition of ''major Federal action'' absent specific statutory authority like those for the Small Business Administration (SBA) loan guarantees, arguing that the FSA loans are clearly outside the statutory definition, and that CEQ did not provide sufficient justification for not retaining the explicit exclusion.

CEQ strikes 40 CFR 1508.1(q)(1)(vii) (2020) and adds this exclusion in the final rule as proposed at § 1508.1(w)(2)(iv). When Congress amended NEPA to provide a definition of ''major Federal action'' in section 111(10), it included an exclusion for one of the two loan guarantee programs identified in 40 CFR 1508.1(q)(1)(vii) (2020), excluding business loan guarantees provided by the Small Business Administration, but not farm ownership and operating loan guarantees by the FSA. 42 U.S.C. 4336e(10)(B)(iv). In light of Congress's action, CEQ does not consider it appropriate to retain the exclusion for FSA loan guarantees in the NEPA regulations. FSA, like other agencies that administer loan and loan guarantee programs, should evaluate specific actions providing loans and loan guarantees to determine if the action falls within the exclusion in section 111(10) of NEPA and § 1508.1(w)(2)(iii) and, if appropriate, could address the applicability of this exclusion to this program in its NEPA procedures.

CEQ disagrees with the assertion that providing financial assistance for a non-Federal action cannot constitute a major Federal action. As discussed earlier, section 111(10)(B)(iii) of NEPA excludes financial assistance ''where a Federal agency does not exercise sufficient control and responsibility over the subsequent use of such financial assistance or the effect of the action.'' 42 U.S.C. 4336e(10)(B)(iii). This limited exclusion is inconsistent with treating actions providing financial assistance for non-Federal activities as categorically excluded from the definition of ''major Federal action.''

One commenter suggested that if CEQ does not retain the explicit exclusion for FSA loans and loan guarantees, CEQ should clearly explain in the final rule that it understands that FSA loans and loan guarantees are the types of loans and guarantees covered by proposed paragraph (u)(1)(iv), and that no additional procedures are necessary to apply proposed paragraph 1508.1(u)(1)(iv) to the FSA loans and loan guarantees. CEQ declines to make these statements. FSA is in the best position to determine whether its loans and loan guarantees meet the requirements for the exclusion established in § 1508.1 (w)(2)(iii). FSA, like other agencies administering financial assistance programs, may determine whether specific actions providing financial assistance are major Federal actions or may address such programs in their NEPA implementing procedures.

One commenter requested that CEQ explicitly indicate that farm operations funded through FSA loans or subject to loan guarantees are not excluded from the definition. Other commenters expressed support for CEQ's proposed removal of the exclusion but requested further guidance on when loans and loan guarantees are actions subject to substantial Federal control and responsibility, citing FSA and Department of Energy programs specifically.

CEQ disagrees with the commenter that farm operations by non-Federal actors are major Federal actions if they are funded by FSA loans or loan guarantees. Rather, the question that FSA, like other agencies, will need to consider is whether FSA's action to provide a loan or loan guarantee is a major Federal action in consideration of the exclusion. FSA is in the best position to determine whether an action or category of actions by the agency to provide loan or loan guarantees involve a circumstance where the agency does not exercise sufficient control and responsibility over the subsequent use of the financial assistance or the effects and, therefore are excluded.

Finally, one commenter requested additional guidance regarding the exclusion of SBA loans. While CEQ incorporates the statutory exclusion of certain business loan guarantees provided by the Small Business Administration (SBA) into § 1508.1(w)(2)(iv), CEQ considers it best left to SBA, which has expertise with the statutes it administers, to determine the applicability of the exclusion to the specific programs it administers.

Twelfth, CEQ proposed to move, without change, the exclusions in paragraphs (q)(1)(iv), (q)(1)(i), and (q)(1)(ii) of 40 CFR 1508.1 (2020) to proposed paragraphs (u)(2)(v) through (u)(2)(vii), respectively because section 111(10)(B)(v) through (vii) of NEPA codified these exclusions verbatim. *See* 42 U.S.C. 4336e(10)(B)(v)–(vii). Specifically, proposed paragraph (u)(2)(v) would exclude bringing judicial or administrative civil or criminal enforcement actions. Proposed paragraph (u)(2)(vi) would exclude extraterritorial activities or decisions. Proposed paragraph (u)(2)(vii) would exclude activities or decisions that are non-discretionary.

One commenter requested that CEQ expand the exclusion in proposed in paragraph (u)(2)(v) to exclude from NEPA applicability all judicial proceedings when an agency joins a lawsuit. CEQ declines to make this revision in the final rule, which incorporates the statutory text and is consistent with long-standing agency practice, but agrees with the commenter that the exclusion encompasses an agency's decision to join a lawsuit. In the final rule, CEQ moves, without

change, the exclusion for bringing judicial or administrative civil or criminal enforcement actions in paragraph (q)(1)(iv) of 40 CFR 1508.1 (2020) to § 1508.1(w)(2)(v).

A few commenters requested the final rule remove proposed paragraph (u)(2)(vi), arguing that it impermissibly expands the scope of NEPA and is inconsistent with the statute. CEQ declines to make this change as the language in proposed paragraph (u)(2)(vi) aligns with the text of section 111(10)(B)(vi) of NEPA, 42 U.S.C. 4336e(10)(B)(vi). In the final rule, CEQ moves, without change, the exclusion for extraterritorial activities or decisions, which refers to activities or decisions with effects located entirely outside the jurisdiction of the United States,[125] from paragraph (q)(1)(i) of 40 CFR 1508.1 (2020) to § 1508.1(w)(2)(vi).[126]

A few commenters supported the inclusion of proposed (u)(2)(ii) asserting that CEQ rightfully excluded non-discretionary actions from NEPA, as NEPA is designed to help agencies make better decisions. In the final rule, CEQ moves, without change, the exclusion for non-discretionary activities or decisions in paragraph (q)(1)(ii) of 40 CFR 1508.1 (2020) to § 1508.1(w)(2)(vii). As discussed in section II.C.2 addressing § 1501.3, some activities or decisions may be partially, but not entirely, non-discretionary, and while such actions may constitute major Federal actions under this definition, the agency may appropriately exclude the non-discretionary aspects of its decision from the scope of its NEPA analysis.

Thirteenth, CEQ proposed to move the exclusion regarding non-final agency actions from 40 CFR 1508.1(q)(1)(iii) to § 1508.1(u)(2)(viii) and make changes for consistency with section 106(a)(1) of NEPA, 42 U.S.C. 4336(a)(1). CEQ proposed this revision for consistency with longstanding case law excluding non-final agency actions from the definition of ''major Federal action.'' Therefore, CEQ proposed to include the finality of an action as a threshold consideration as well as an exclusion from the definition of ''major Federal action.'' Upon further consideration, CEQ considers finality to be adequately addressed as a threshold consideration in § 1501.3 and concludes that both the existing regulatory text and the proposed revision are confusing. Therefore, CEQ strikes 40 CFR 1508.1(q)(1)(iii) (2020) in the final rule and does not add proposed paragraph (u)(2)(viii). CEQ does not intend this deletion to have any substantive effect because § 1501.3 provides that NEPA does not apply where a proposed activity or decision is not a final agency action.

Finally, CEQ proposed a new exclusion in paragraph (u)(2)(ix) for activities or decisions for projects approved by a Tribal Nation that occur on or involve land held in trust or restricted status when the activities involve no Federal funding or other Federal involvement. CEQ proposed this exclusion in recognition of the unique circumstances facing Tribal Nations due to the United States' holding land in trust for them or the Tribal Nation holding land in restricted status. CEQ proposed to clarify that activities or decisions for projects approved by a Tribal Nation on trust lands are not major Federal actions where such activities do not involve Federal funding or other Federal involvement. CEQ proposed this exclusion because Tribal leaders raised this issue during consultations that CEQ held on its NEPA regulations and voiced concerns that the NEPA process placed Tribal Nations in a disadvantageous position relative to State and local governments because of the United States' ownership interest in Tribal lands.

A few commenters argued that the final rule should not include this exclusion because it was not included in the recent amendments to NEPA. Numerous other commenters supported the exclusion, and a large portion of those commenters asked that the final rule expand the exclusion to include additional actions, activities, or lands. One commenter asked CEQ to expand the provision to exclude all Tribal development from the definition of ''major Federal action.'' Another commenter recommended that the terminology in proposed paragraph (u)(ix) ''when no such activities or decisions involve no Federal funding'' be revised to match the language in paragraph (2)(i)(A) which states ''[w]ith no or minimal Federal funding.''

CEQ adds the exclusion in the final rule at § 1508.1(w)(2)(viii), but adds ''or minimal'' before ''involvement'' for consistency with section 111 of NEPA, 42 U.S.C. 4336e(10)(B). CEQ declines to make the exclusion broader than this because it considers the exclusion to strike the right balance in recognizing the unique circumstances facing Tribal Nations and carrying out the purposes of NEPA. CEQ notes that categories of activities on trust lands that typically will not constitute major Federal actions include the transfer of existing operation and maintenance activities of Federal facilities to Tribal groups, water user organizations, or other entities; human resources programs such as social services, education services, employment assistance, Tribal operations, law enforcement, and credit and financing activities not related to development; self-governance compacts for Bureau of Indian Affairs programs; service line agreements for an individual residence, building, or well from an existing facility where installation will involve no clearance of vegetation from the right-of-way other than for placement of poles, signs (including highway signs), or buried power/cable lines; and approvals of Tribal regulations or other documents promulgated in exercise of Tribal sovereignty, such as Tribal Energy Resource Agreements, certification of a Tribal Energy Development Organization, Helping Expedite and Advance Responsible Tribal Homeownership Act Tribal regulations, Indian Trust Asset Reform Act Tribal regulations and trust asset management plans, and Tribal liquor control ordinances.

One commenter asked CEQ to clarify if the proposed exclusion would extend to activities or projects that are approved by Tribal Nations and focused entirely on managing, accessing, or protecting resources or sites on Federal land that is not held in trust but to which the Tribe has reserved rights. CEQ declines to make this change. Because of the diversity of statutory, treaty, and factual considerations that can be involved, determining whether such circumstances involve a major Federal action is appropriately left to the administering agency.

One commenter requested the proposed provision be expanded to include any grant funding awarded to a Tribe. CEQ declines to make this change as section 111(10) of NEPA sets the standard for when actions to provide financial assistance, including grants, constitute a major Federal action. *See* 42 U.S.C. 4336e(10).

[125] CEQ notes that the jurisdiction of the United States is not limited to the United States' land territory. ''For purposes of the presumption against extraterritoriality, the territorial jurisdiction of the United States includes its land, internal waters, territorial sea, the adjacent airspace, and other places over which the United States has sovereignty or some measure of legislative control.'' Restatement (Fourth) of Foreign Relations Law § 404 cmt. d (Am. Law Inst. 2019).

[126] NEPA statutorily excludes from the definition of ''major Federal action'' ''extraterritorial activities or decisions, which means agency activities or decisions with effects located entirely outside of the jurisdiction of the United States.'' 42 U.S.C. 4336e(10)(B)(vi). However, this exclusion does not change the scope of environmental effects that agencies must assess or expand the set of actions that are subject to NEPA review to extraterritorial matters that do not have effects within the jurisdiction of the United States.

Other commenters requested the proposed exclusion be expanded to include certain contracts, cooperative agreements, and similar funding vehicles authorizing the transfer of Federal funding to a Tribe for carrying out Federal programs. CEQ declines to make this change due to the complexity and numerosity of these arrangements but notes that the agencies that administer these programs could consider whether to include provisions addressing these programs in their NEPA procedures.

One commenter argued the proposed exclusion is impermissibly narrow, and the final rule should exclude entire categories of actions in the rule text. CEQ declines to make this change as agencies are in a better position to consider the legal and factual circumstances for their actions either on a case-by-case basis or through their agency NEPA procedures.

Several commenters asked for clarification of the term ''other Federal involvement.'' One commenter suggested defining it as any proposed Federal permits or other Federal approvals. Other commenters suggested ''other Federal involvement'' be defined as any proposed Federal permits or other Federal approvals on Tribal lands or ceded lands. CEQ declines to further define the term as agencies administering programs are best situated to consider the factual and legal contexts in which they operate to determine whether there is other Federal involvement that would make application of this exclusion inappropriate.

17. Mitigation (§ 1508.1(y))

CEQ proposed three edits to the definition of ''mitigation'' in proposed paragraph (w). First, CEQ proposed to change ''nexus'' to the more commonly used word ''connection'' to describe the relationship between a proposed action or alternatives and any associated environmental effects. CEQ did not receive comments specific to this proposed change and makes this revision in the final rule at § 1508.1(y).

Second, CEQ proposed to delete the sentence that NEPA ''does not mandate the form or adoption of any mitigation'' because this sentence was unnecessary and could mislead readers because it does not acknowledge that agencies may use other authorities to require mitigation or may incorporate mitigation in mitigated FONSIs (§ 1501.6) and RODs (§ 1505.2).

CEQ received comments that both supported and opposed the removal of this language from the definition of ''mitigation.'' Supportive commenters agreed with the approach CEQ proposed in the definition because it is consistent with established mitigation practices and because they were generally supportive regarding the prioritization listed. Opponents generally questioned the effect of this removal, suggesting it contradicts the Supreme Court's holding in *Robertson* v. *Methow Valley Citizens Council* that NEPA does not require agencies to mitigate adverse effects. CEQ disagrees with the commenters' assertions regarding *Methow Valley,* as discussed further in section II.G.2 and the Phase 2 Response to Comments. CEQ removes this language from the final rule consistent with the proposal.

Third, CEQ proposed to add the clause ''in general order of priority'' to the sentence, ''Mitigation includes'' which introduces the list of mitigation types. CEQ proposed this change to clarify that the types of mitigation provided in proposed paragraphs (u)(1) though (u)(5) are listed in general order of priority, consistent with the familiar ''mitigation hierarchy.'' [127] This list was prioritized in the 1978 regulations with avoidance coming before other types of mitigation and the proposed addition highlights that intent, which is consistent with longstanding agency practice.[128]

Some commenters supported the added language clarifying the general order of priority for mitigation. Supportive commenters stated this language is consistent with established mitigation practices and asserted that it will encourage agencies to avoid adverse effects rather than try to rectify or compensate for them after they have occurred. Other commenters opposed the added language, stating that agencies may not in all cases have authority to avoid adverse effects, and that providing a rigid prioritization fails to guide agencies to consider the full range of mitigation opportunities.

CEQ adds the clause ''in general order of priority'' to the definition in the final rule. CEQ uses the qualifier ''in general'' to provide flexibility and acknowledge that such prioritization will not apply to every situation. Further, the language does not prohibit agencies from applying the elements of the mitigation hierarchy out of order when they determine it is appropriate to do so, and CEQ encourages agencies to consider the full range of mitigation opportunities before deciding on an appropriate mitigation approach.

Some commenters asserted that CEQ has ''concealed'' its prioritization by placing it in the definitions section of the regulations. CEQ disagrees that placing this language in the definitions conceals it and CEQ notes that the definitions are essential elements of the NEPA regulations. Further, the definition of ''mitigation,'' including discussion of the categories of mitigation, has been in the regulations since 1978. Therefore, this is a logical place in the regulations for agencies or the public to look for text addressing the categories of mitigation.

Some commenters provided specific feedback on compensatory mitigation, including some that expressed concern that it can be ineffective. One commenter asserted that some agencies are prohibited from requiring compensatory mitigation. Another commenter requested CEQ clarify that agencies may rely on third-party mitigation or restoration providers to carry out compensatory mitigation.

CEQ declines to make additional edits to the definition of ''mitigation.'' Agencies must identify the authority for any mitigation that they rely on in their analysis, and agencies should not rely on mitigation absent the authority to ensure that the mitigation is performed. Because NEPA requires agencies to

---

[127] *See e.g.,* U.S. Dep't of the Interior, A Strategy for Improving the Mitigation Policies and Practices of the Department of the Interior (Apr. 2014), *https://www.doi.gov/sites/doi.gov/files/migrated/news/upload/Mitigation-Report-to-the-Secretary_FINAL_04_08_14.pdf* at 2–3 (discussing the development of a ''mitigation hierarchy''—which starts with avoidance—in the implementation of NEPA and the Clean Water Act); Bureau of Land Mgmt., H–1794–1, Mitigation Handbook (P) (Sept. 22, 2021), *https://www.blm.gov/sites/default/files/docs/2021-10/IM2021-046_att2.pdf* at 2–1 (citing CEQ regulations and noting that the ''five aspects of mitigation (avoid, minimize, rectify, reduce/eliminate, compensate) are referred to as the mitigation hierarchy because they are generally applied in a hierarchical manner''); U.S. Env't Prot. Agency & U.S. Dep't of Def., Memorandums of Agreement (MOA); Clean Water Act Section 404(b)(1) Guidelines; Correction, 55 FR 9210, 9211 (Mar. 12, 1990) (noting that under section 404 of the Clean Water Act, the Army Corps of Engineers evaluates potential mitigation efforts sequentially, starting with avoidance, minimization, and then compensation).

[128] *See, e.g.,* 10 CFR 900.3 (defining a regional mitigation approach under NEPA as ''an approach that applies the mitigation hierarchy (first seeking to avoid, then minimize impacts, then, when necessary, compensate for residual impacts)''); Presidential Memorandum, Mitigating Impacts on Natural Resources From Development and Encouraging Related Private Investment, 80 FR 68743, 68745 (Nov. 6, 2015) (addressing five agencies and noting that, ''[a]s a practical matter, [mitigation is] captured in the terms avoidance, minimization, and compensation. These three actions are generally applied sequentially . . . .''); Fed. Highway Admin., *NEPA and Transportation Decisionmaking: Questions and Answers Regarding the Consideration of Indirect and Cumulative Impacts in the NEPA Process, https://www.environment.fhwa.dot.gov/nepa/QAimpact.aspx* (describing the importance of ''sequencing,'' which refers to the process of prioritizing avoidance and minimization of effects over replacement or compensation for NEPA mitigation efforts).

consider mitigation, not implement it, CEQ defers to agencies regarding the appropriate use of compensatory mitigation, third-party mitigation, or restoration providers.

One commenter requested that CEQ establish a preference for mitigation that is practicable, effective, and as minimally disruptive to a proposed project as possible. CEQ agrees that mitigation measures should be practicable and effective, but considers these requirements to be clear from the regulations as a whole and do not need to be reiterated in the definition.

Finally, CEQ makes two additional clarifying edits. First, CEQ adds ''adverse'' to modify ''effects'' in each instance it is used in the definition of ''mitigation'' to clarify that mitigation addresses adverse effects, not beneficial effects, and for consistency with the definition of ''significant effects,'' which is defined as adverse effects. Second, CEQ changes ''effects'' to ''the adverse effect'' in paragraph (y)(2) for consistency with paragraphs (y)(1) and (y)(3) through (y)(5), which all use the singular of effect.

18. Notice of Intent (§ 1508.1(aa))

CEQ proposed to modify the definition of ''notice of intent'' to include EAs, as applicable. CEQ proposed this change for consistency with § 1501.5(j), which provides that agencies may issue an NOI for an EA where it is appropriate to improve efficiency and effectiveness, and § 1501.10(b)(3)(iii), which sets forth one of the three potential starting points from which deadlines are measured for EAs consistent with section 107(g)(1)(B)(iii) of NEPA, 42 U.S.C. 4336a(g)(1)(B)(iii).

One commenter recommended the final rule clarify whether the addition of EA to the proposed definition requires an NOI for EAs, and if so, noted that this would be a new requirement. Another commenter similarly stated that including an EA in the definition will cause confusion over whether an NOI is required for an EA, and asserted that it clearly is not.

CEQ adds ''environmental assessment'' to the definition of ''notice of intent'' for consistency with §§ 1501.5(j) and 1501.10(b)(3), but moves the qualifier ''as applicable'' to precede ''environmental assessment'' to make clear that the regulations do not require agencies to issue an NOI for an EA, but provide them the discretion to do so.

19. Page (§ 1508.1(bb))

CEQ proposed to modify the definition of ''page'' for consistency with section 107(e) of NEPA, 42 U.S.C. 4336a(e), to exclude citations from the definition of ''page'' and therefore the page limits for EISs and EAs. To facilitate better NEPA documents, CEQ proposed to retain the exclusions for maps, diagrams, graphs, tables, and other means of graphically displaying quantitative or geospatial information from the definition of ''page.'' While agencies could move these visual representations of information to appendices, which could come at the end of an EIS or the end of EIS chapters, CEQ expressed concern that this will make the documents less understandable and useful to decision makers and the public. Further, such graphical displays themselves could be considered appendices consistent with the ordinary definition of appendix as ''supplementary material usually attached at the end of a piece of writing.'' [129]

Multiple commenters supported the proposed definition of ''page,'' specifically asserting that the listed exclusions will help agencies integrate those types of information into the body of an EA or EIS without affecting the document's page limit and asserting that inclusion of these elements in the body of an EA or EIS provide a more readable and accessible document. Conversely, several commenters opposed the exclusion of certain elements from the definition of ''page,'' except for citations and appendices as provided for in section 107(e) of NEPA. These commenters assert that the proposed exclusion of other items—maps, diagrams, graphs, and tables—circumvents Congress' intent to mandate strict page limits, and that these items should be included in the definition of ''page'' and be subject to the page limit. They also asserted that the exclusion of these elements from the page count results in environmental documents that are longer, more complex, and more difficult for the public and decision makers to understand.

NEPA does not define the term ''page,'' but rather provides, in section 107(e), that each type of environmental document ''shall not exceed [the specified number of] pages, not including any citations or appendices.'' 42 U.S.C. 4336a(e). When Congress enacted this language in 2023, it had before it the CEQ regulations, which define ''page'' as excluding ''explanatory maps, diagrams, graphs, tables, and other means of graphically displaying quantitative or geospatial information.'' Had Congress intended to eliminate these regulatory exclusions from the definition of ''page,'' it could have done so by providing a contrary definition of ''page'' in section 111 of NEPA, 42 U.S.C. 4336e. Instead, Congress chose to leave the term ''page'' undefined, therefore leaving CEQ's definition undisturbed, while separately specifying that the page limits of section 107(e) would exclude two additional elements that were *not* specifically set forth in the 2020 regulatory definition—citations and appendices. *See* 42 U.S.C. 4336a(e). Therefore, CEQ's continued use of a regulatory definition based on the one promulgated in 2020 does not circumvent, but rather complements, the statutory exclusion for citations and appendices.

CEQ disagrees that the proposed definition of ''page'' contradicts section 107(e) of NEPA or will make more documents more complex and difficult to understand. Rather, CEQ considers the flexibility to include additional visual elements in environmental documents will reduce the complexity of environmental documents by making the content easier to understand for the public and decision makers and facilitate the delivery of clearer and more useful documents. Agencies should limit the visual elements in the body of the document to those that enhance comprehensibility and place additional information in appendices, in keeping with the general principles CEQ has set forth regarding clear and concise writing in NEPA documents.

20. Participating Federal Agency (§ 1508.1(dd))

CEQ proposed to add a definition of ''participating Federal agency'' to proposed paragraph (bb) and define it to mean ''a Federal agency participating in an environmental review or authorization of an action'' consistent with the definition of the same term in section 111(8) of NEPA. 42 U.S.C. 4336e(8). CEQ did not receive any substantive comments on the definition of ''participating Federal agency'' and finalizes it in § 1508.1(dd) as proposed.

21. Programmatic Environmental Document (§ 1508.1(ee))

CEQ proposed to add a definition of ''programmatic environmental document'' to proposed paragraph (cc) and define it consistent with the definition of the same term in section 111(11) of NEPA, 42 U.S.C. 4336e(11). One commenter asserted that ''programmatic'' is not well defined in the proposed rule, stating that neither § 1501.11 or the proposed definition of ''programmatic environmental

[129] See *Appendix,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/appendix.*

document'' provide a clear way to distinguish between programmatic and non-programmatic analyses. The commenter described that the essential characteristic of a programmatic document includes some aspect of the decision that is deferred.

CEQ adds a definition of ''programmatic environmental document'' at § 1508.1(ee) consistent with the proposal and declines to modify it as the commenter suggests because the uses of programmatic environmental documents are addressed in § 1501.11, as discussed in section II.C.10 and in the Phase 2 Response to Comments.

22. Reasonable Alternatives (§ 1508.1(hh))

CEQ did not propose revisions to the definition of ''reasonable alternatives'' but received comments on the existing definition. Commenters requested guidance on the meaning of ''technically and economically feasible,'' and one commenter requested the regulations direct agencies to consult with project sponsors to determine economic and technical feasibility. Some commenters requested that CEQ use the Forty Questions guidance as a starting point for additional clarity on technical and economic feasibility, specifically referencing the description that technical and economic feasibility must be based on common sense rather than a project proponent's preferences.

One commenter requested guidance on how to identify and evaluate reasonable alternatives and include clear criteria and examples for defining and selecting reasonable alternatives, such as feasibility, cost, effectiveness, and public acceptability. One commenter asserted that the regulations should not define ''reasonable alternatives'' as a ''reasonable range of alternatives'' because the language ''reasonable range'' suggests that agencies do not have to consider all reasonable alternatives. The commenter asserted that Federal courts have long held that NEPA requires agencies to consider all reasonable alternatives, and that an agency's failure to consider a reasonable alternative is fatal to an agency's NEPA analysis. The commenter further expressed that ''reasonable range of alternatives'' is ambiguous.

CEQ does not make revisions to the definition of ''reasonable alternatives'' in § 1508.1(hh). CEQ will consider whether to issue additional guidance but notes that agencies have long used the Forty Questions to assist them in identifying alternatives. With respect to the phrase ''reasonable range,'' CEQ disagrees that agencies must consider ''all'' reasonable alternatives or that the case law requires this. In some circumstances, there could be a limitless number of reasonable alternatives to a proposed action, with each alternative including slight changes to the action. NEPA does not require agencies to evaluate all such alternatives, but rather, a reasonable range of alternatives to inform decision makers and the public. Agencies must consider a reasonable range of alternatives that facilitates the comparison of effects and helps inform the decision maker and the public. Further, the regulations have long provided that agencies should discuss alternatives that they dismiss from detailed analysis and explain their rationale.

22. Reasonably Foreseeable (§ 1508.1(ii))

CEQ did not propose to revise the definition of ''reasonably foreseeable'' but received comments on the existing definition. A few commenters described the definition as vague, subject to manipulation, and inconsistent with case law and Congressional intent. Some commenters suggested edits to the definition, such as adding that an effect is ''reasonably foreseeable'' when an agency can conclude with a high degree of confidence that the effect is more likely than not to occur. Some commenters asked for more clarity on how certain industries might meet the reasonably foreseeable standard, or suggested that what constitutes reasonably foreseeable, or a person of ordinary prudence, is subjective. Relatedly, another commenter stated that agency decision makers have access to knowledge, skills, resources, and statutory duties not applicable to a person of ordinary prudence. The commenter recommended CEQ replace ''person of ordinary prudence'' with ''prudent agency decision maker.''

CEQ declines to make change to the definition of ''reasonably foreseeable'' and finalizes it in § 1508.1(ii) as proposed. Regarding additional qualifiers or concerns that the definition is subjective, CEQ declines additional changes because the application of reasonably foreseeable is influenced by the context of the proposed action. Inherent in the application of reasonably foreseeable is the concept that Federal agencies are not required to ''foresee the unforeseeable'' or engage in speculative analysis. Agencies must forecast to the extent they can do so either quantitatively or qualitatively within a reasonable range. Further, the term ''reasonably foreseeable'' is consistent with the ordinary person standard—that is, what a person of ordinary prudence would consider in reaching a decision. CEQ is unaware of any practical challenges or confusion that has arisen from connecting this definition to the ordinary person, or circumstances where an agency has excluded analysis of an effect that the agency views as reasonably foreseeable because an ordinary person would not. Changing the regulatory text could create uncertainty as agencies and courts consider what, if any, implications the change would have, and CEQ considers creating that uncertainty unnecessary.

23. Scope (§ 1508.1(kk))

CEQ proposed to expand the definition of ''scope'' to include EAs and revise the definition to include both the range and breadth of the actions, alternatives, and effects to be considered in an EIS or EA, consistent with CEQ's proposal to relocate the discussion of scope in § 1501.3(b). CEQ also proposed to strike the last sentence regarding tiering because it was not definitional language and was unnecessary because this concept is more addressed in § 1501.11.

One commenter expressed support for the proposed definition of ''scope,'' asserting it strengthens EAs and EISs. CEQ revises the definition of ''scope'' in § 1501.8(kk) as proposed. As discussed further in section II.C.2, agencies have long examined the scope of their actions to determine what alternatives and effects they must analyze. This is a fact-specific analysis that agencies undertake informed by their statutory authority and control and responsibility over the activity. Other comments regarding scope are further discussed in section II.C.2 and the Phase 2 Response to Comments.

24. Significant Effects (§ 1508.1(mm))

CEQ proposed to add a definition for ''significant effects'' to define those effects that are central to determining the appropriate level of review in the NEPA process. CEQ proposed the definition to align with the restoration of the context and intensity factors for determining significance in § 1501.3(d). CEQ proposed to define ''significant effects'' as adverse effects identified by an agency as significant, based on the criteria set forth in § 1501.3(d), to clarify that beneficial effects are not significant effects as the phrase is used in NEPA and, therefore, do not require an agency to prepare an EIS. CEQ proposed this as an alternative approach to that taken by the proposal in § 1501.3(d)(2)(i) where an action ''does not'' require an EIS when it would result only in significant

beneficial effects and invited comment on which approach is preferred.

One commenter supported a standalone definition of ''significant effects'' but expressed concern that only including adverse effects could create confusion over how agencies assess which effects are truly beneficial and from whose perspective. Other commenters asserted that the limitation of significant effects to adverse effects, in conjunction with proposed § 1501.3(d)(2)(i) to only require an EIS for significant adverse effects, is unlawful and contrary to NEPA's policy. These commenters asserted that NEPA requires an environmental review if an action's effects are significant, regardless of whether those effects are exclusively beneficial, and requested that the final rule remove ''adverse'' from the definition. A few commenters supported the proposed definition for varying reasons, including because it is straightforward and because it will help encourage streamlined processes by reducing the need for EISs.

Regarding CEQ's request for comment on the preferred approach—proposed § 1501.3(d)(2)(i) or proposed § 1508.1(kk)—one commenter recommended the final rule include both provisions because the definition serves to strengthen the concept that NEPA analyses should focus on actions with adverse effects. Another commenter preferred proposed § 1501.3(d)(2)(i), asserting it provides stronger guidance for agencies.

CEQ adds the definition of ''significant effects'' as proposed in § 1508.1(mm), and CEQ revises § 1501.3(d) for greater clarity on this approach as discussed in section II.C.2. This approach means that an agency does not need to prepare an EIS if a proposed action's effects are exclusively beneficial. However, irrespective of the level of NEPA review, agencies still need to analyze both adverse and beneficial effects in NEPA documents if they are reasonably foreseeable.

25. Tiering (§ 1508.1(oo))

CEQ proposed to revise the definition of ''tiering'' to cross reference the process as set forth in § 1501.11. CEQ proposed this revision to avoid any potential inconsistencies between the definition and the provisions of § 1501.11. CEQ did not receive any comments on the proposed definition of ''tiering'' and revises it as proposed in § 1508.1(oo). Other comments regarding the application of tiering are discussed in section II.C.10 and the Phase 2 Response to Comments.

III. Rulemaking Analyses and Notices

A. Executive Order 12866, Regulatory Planning and Review

E.O. 12866, as supplemented and affirmed by E.O. 13563 and amended by E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules.[130] This final rule is a significant regulatory action under section 3(f)(1) of E.O. 12866, as amended by E.O. 14094, that CEQ submitted to OIRA for review. The changes in the final rule will improve the CEQ regulations to benefit agencies and the public. Furthermore, an effective NEPA process can save time and reduce overall project costs by providing a clear process for evaluating alternatives and effects, coordinating agencies and relevant stakeholders including the public, and identifying and avoiding problems—including potential significant effects—that may occur in later stages of project development.[131] Additionally, if agencies choose to consider additional alternatives and conduct clearer or more robust analyses, such analyses will improve societal outcomes by facilitating improved agency decision making on the whole, even if the NEPA statute and regulations do not dictate the outcome of any specific decision. Because individual cases will vary, the magnitude of potential costs and benefits resulting from these changes are difficult to anticipate, but CEQ has prepared a qualitative analysis in the accompanying regulatory impact analysis (RIA).

CEQ received two comments on the draft RIA. One commenter stated that CEQ should include more detailed explanation of the flaws associated with the 2020 Rule's RIA and how the revised rule rectifies those flaws to produce net benefits, including by discussing evidence that suggests the NEPA process contributes to greater environmental benefits that the 2020 RIA did not consider; aligning the explanation of the alternative of retaining the 2020 Rule, as amended by the Phase I rulemaking, with guidance regarding baselines as a scenario with zero incremental benefits or costs; and removing any distinction between direct and indirect benefits or costs to avoid inadvertently downplaying the proposed rule's benefits and costs. The second commenter stated that CEQ should account for economic impacts of NEPA-related delays in project implementation in the RIA, and provided information on how labor, procurement, and material costs increase as a project is delayed.

In response to the first comment, CEQ has revised the RIA. In response to the second comment, CEQ acknowledges that project delays often result in labor, procurement, and material costs increases. The revisions to the NEPA regulations in this final rule will improve the efficiency and effectiveness of the NEPA process, and thereby save time and reduce overall project costs by providing a clear process for evaluating alternatives and effects; coordinating agencies and relevant stakeholders, including the public, more efficiently; identifying and avoiding problems that may occur in later stages of project development; and reducing litigation. CEQ provides its detailed analysis in the accompanying Regulatory Impact Analysis, which CEQ incorporates by reference into this final rule.

B. Regulatory Flexibility Act and Executive Order 13272, Proper Consideration of Small Entities in Agency Rulemaking

The Regulatory Flexibility Act (RFA), as amended, 5 U.S.C. 601 *et seq.,* and E.O. 13272, *Proper Consideration of Small Entities in Agency Rulemaking,*[132] require agencies to assess the impacts of proposed and final rules on small entities. Under the RFA, small entities include small businesses, small organizations, and small governmental jurisdictions. An agency must prepare an Initial Regulatory Flexibility Analysis unless it determines and certifies that the rule will not have a significant economic impact on a substantial number of small entities. *See* 5 U.S.C. 605(b). This final rule does not directly regulate small entities. Rather, the rule applies to Federal agencies and sets forth the process for their compliance with NEPA. Accordingly, CEQ hereby certifies that the rule will not have a significant economic impact on a substantial number of small entities.

One commenter asserted that CEQ should develop an economic sustainability plan for the proposed rule. Another commenter asserted that CEQ's statement in the proposed rule that the rulemaking would not impact small businesses was insufficient and that CEQ must prepare a regulatory

[130] *See* E.O. 12866, *Regulatory Planning and Review,* 58 FR 51735, 51737 (Oct. 4, 1993); E.O. 14094, *Modernizing Regulatory Review,* 88 FR 21879, 21879–80 (Apr. 11, 2023); E.O. 13563, *Improving Regulation and Regulatory Review,* 76 FR 3821, 3822 (Jan. 21, 2011).

[131] *See generally* Cong. Rsch. Serv. R42479, *The Role of the Environmental Review Process in Federally Funded Highway Projects: Background and Issues for Congress* (2012), *https://crsreports.congress.gov/product/pdf/R/R42479.*

[132] 67 FR 53461 (Aug. 16, 2002).

flexibility plan that describes the impact of the proposed rule on small entities to comply with the Small Business Regulatory Enforcement Fairness Act. The commenter asserted that the proposed rulemaking will impact small businesses, particularly in the mining industry. For the reasons set forth in this preamble, CEQ declines to prepare the requested plan because the final rule applies to Federal agencies and does not directly regulate small businesses or other small entities.

C. National Environmental Policy Act

Under the CEQ regulations, major Federal actions may include regulations. When CEQ issued regulations in 1978, it prepared a ''special environmental assessment'' for illustrative purposes pursuant to E.O. 11991.[133] The NPRM for the 1978 rule stated ''the impacts of procedural regulations of this kind are not susceptible to detailed analysis beyond that set out in the assessment.'' [134] Similarly, in 1986, while CEQ stated in the final rule that there were ''substantial legal questions as to whether entities within the Executive Office of the President are required to prepare environmental assessments,'' it also prepared a special EA.[135] The special EA issued in 1986 supported a FONSI, and there was no finding made for the assessment of the 1978 final rule. CEQ also prepared a special EA and reached a FONSI for the Phase 1 rulemaking.

The final rule makes it explicit that a NEPA analysis is not required for establishing or updating NEPA procedures, *see* § 1507.3(b)(3), and CEQ continues to consider NEPA not to require a NEPA analysis for CEQ's NEPA regulations. *See Heartwood* v. *U.S. Forest Serv.,* 230 F.3d 947, 954–55 (7th Cir. 2000) (finding that neither NEPA or the CEQ regulations required the Forest Service to conduct an EA or an EIS prior to the promulgation of its procedures creating a CE). Nevertheless, based on past practice, CEQ developed a draft special EA, has posted it in the docket, and invited comments in the proposed rule.

CEQ received two comments on its compliance with NEPA. The commenters generally asserted that the Special EA conducted for this rulemaking was inadequate and not justified by precedent. One commenter argued that this rulemaking requires an EIS because the proposed changes can reasonably be expected to have a significant effect on the environment. The commenter asserted that provisions allowing the adoption and use of another agency's CEs, allowing agencies to modify their NEPA procedures without going through the rulemaking process; and exempting large-scale power plants from having to prepare an EIS supported their position. The commenter also argued that comments on the rulemaking were not visible to the public, and therefore did not fulfill public comment requirements.

CEQ declines to prepare an EIS for the reasons discussed earlier in this section. CEQ notes that the first proposed change noted by the commenter, related to adopting CEs, implements section 109 of NEPA, which allows such adoption and use by statute. *See* 42 U.S.C. 4336c. With respect to the second proposed change noted by the commenter, the CEQ regulations have never required agencies to conduct rulemaking for the development or revision of their implementing procedures, but have always required agencies to provide public notice and comment. Further, this final rule does not specifically address NEPA reviews for large-scale power plants. Rather the regulations set the standards for when agencies must prepare EISs and leaves the decision of whether an EIS is required to a case-by-case determination by the agencies, as has always been the case. Finally, CEQ notes that, in the interest of transparency, comments received on the proposed rule were posted to the public docket.[136]

D. Executive Order 13132, Federalism

E.O. 13132 requires agencies to develop an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.[137] Policies that have federalism implications include regulations that have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.[138] CEQ received one comment asserting that this rulemaking would impact States, and requested that CEQ revisit its conclusion that the rulemaking does not pose federalism implications. CEQ disagrees with the commenter. This rule does not have federalism implications because it applies to Federal agencies, not States. CEQ notes that States may elect to assume NEPA responsibilities under Federal statutes,[139] but States are further governed by the regulations and agreements under those programs.

E. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

E.O. 13175 requires agencies to have a process to ensure meaningful and timely input by Tribal officials in the development of policies that have Tribal implications.[140] Such policies include regulations that have substantial direct effects on one or more Tribal Nations, on the relationship between the Federal Government and Tribal Nations, or on the distribution of power and responsibilities between the Federal Government and Tribal Nations.[141] CEQ has assessed the impact of this final rule on Indian Tribal governments and has determined that the rule does significantly or uniquely affect Tribal Nations. CEQ engaged in government-to-government consultation with Tribal Nations on the Phase 2 rulemaking. As required by E.O. 13175, CEQ held a Tribal consultation on the NEPA regulations generally on September 30, 2021, on this rulemaking on November 12, 2021, prior to the publication of the NPRM, and on September 6, 2023, and September 12, 2023, following publication of the NPRM.[142] In addition to the feedback provided during these consultation sessions, CEQ received a number of written comments from Tribal Nations during the public comment period, and considered these written comments in the development of the final rule.

Several Tribal Nations agreed with CEQ's preliminary determination that the proposed rule significantly or uniquely affects Tribal Nations. One Tribal Nation requested that CEQ acknowledge its written comments as part of the Tribal consultation process, and not only as public comments. Several Tribes also requested additional consultation with CEQ in the future.

CEQ acknowledges that the written comments it received from Tribal Nations constitute part of the Tribal consultation process in addition to the

public comment process and considered those comments accordingly. CEQ appreciates the considerable time and effort that Tribal Nations invested in their oral and written comments, which helped illuminate many aspects of how NEPA affects Tribal Nations, their lands and legal rights, and their citizens. These comments helped CEQ to develop a better final rule. CEQ plans to continue to engage in government-to-government consultation with federally recognized Tribes and in consultation with Alaska Native Corporations on the implementation of its NEPA regulations.

F. Executive Order 12898, Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096, Revitalizing Our Nation's Commitment to Environmental Justice for All

E.O. 12898 and E.O. 14096 charge agencies to make achieving environmental justice part of their missions, as appropriate and consistent with applicable law, by identifying, analyzing, and addressing disproportionate and adverse human health and environmental effects (including risks) and hazards of Federal activities, including those related to climate change and cumulative impacts of environmental and other burdens, on communities with environmental justice concerns.[143]

CEQ has analyzed this final rule and determined that it will not cause disproportionate and adverse human health or environmental effects on communities with environmental justice concerns. This rule sets forth implementing regulations for NEPA; it is in the agency implementation of NEPA when conducting reviews of proposed agency actions where consideration of environmental justice effects typically occurs.

CEQ received one comment requesting that CEQ conduct research into the effect of immigration on environmental quality, including on communities with environmental justice concerns, and include study of immigration impacts during NEPA analysis. CEQ declines to conduct this research because this rule does not specifically address issues related to immigration or make any changes to the U.S. immigration laws or their implementing regulations. Any environmental effects resulting from specific agency actions related to immigration would be addressed by agencies with relevant authorities and requirements to do so and are not within the scope of the analysis of this rulemaking.

G. Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

Agencies must prepare a Statement of Energy Effects for significant energy actions under E.O. 13211.[144] CEQ has determined that this rulemaking is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

CEQ received one comment related to its compliance with E.O. 13211. The commenter disagreed with CEQ's determination that the proposed rule is not a ''significant energy action'' as described in E.O. 13211, and further stated that the proposed rulemaking is incongruous with E.O. 14008, which directs agencies to deploy their full capabilities in combating climate change. The commenter asserted that the proposed rule will have an effect on the energy supply that exceeds $100 million and would hamper efforts to achieve a clean energy transition.

For the reasons set forth in this preamble, CEQ disagrees that the rule will hamper efforts to achieve a clean energy transition or have a significant effect on the energy supply. To the contrary, the proposed rule will facilitate the responsible development of energy resources, including carbon pollution-free energy, by promoting efficient and effective environmental reviews.

H. Executive Order 12988, Civil Justice Reform

Under section 3(a) of E.O. 12988, agencies must review their proposed regulations to eliminate drafting errors and ambiguities, draft them to minimize litigation, and provide a clear legal standard for affected conduct.[145] Section 3(b) provides a list of specific issues for review to conduct the reviews required by section 3(a).[146] CEQ did not receive any comments specific to E.O. 12988. CEQ has conducted the review under E.O. 12988 and determined that this final rule complies with its requirements.

I. Unfunded Mandates Reform Act

Section 201 of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531, requires Federal agencies to assess the effects of their regulatory actions on Tribal, State, and local governments, and the private sector to the extent that such regulations incorporate requirements specifically set forth in law. Before promulgating a rule that may result in the expenditure by a Tribal, State, or local government, in the aggregate, or by the private sector of $100 million, adjusted annually for inflation, in any 1 year, an agency must prepare a written statement that assesses the effects on Tribal, State, and local governments and the private sector. 2 U.S.C. 1532. CEQ did not receive any comments related to the Unfunded Mandates Reform Act.

This final rule applies to Federal agencies and will not result in expenditures of $100 million or more for Tribal, State, and local governments, in the aggregate, or the private sector in any 1 year. This action also will not impose any enforceable duty, contain any unfunded mandate, or otherwise have any effect on small governments subject to the requirements of 2 U.S.C. 1531 *et seq.*

J. Paperwork Reduction Act

This final rule will not impose any new information collection burden that would require additional review or approval by OMB under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*

CEQ received one comment related to the PRA. The commenter disagreed with CEQ's preliminary determination that the proposed rule would not impose additional burden under the PRA, stating that the review of proposed changes to NEPA and future changes to agency NEPA procedures and guidelines will impose significant burdens on State agencies. The commenter also expressed concern that the proposed changes to include technical analyses in appendices does not change or limit the amount of material that must be reviewed.

CEQ disagrees with the commenter's assertions. General solicitations of public comments of the sort associated with the development of agency NEPA procedures and guidelines or the publication of a draft environmental document are not subject to the PRA. *See* 5 CFR 1320.3(h)(4), (8) (exempting from the PRA ''[f]acts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that

[143] E.O. 12898, *supra* note 8; E.O. 14096, *supra* note 22.

[144] E.O. 13211, *Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,* 66 FR 28355 (May 22, 2001).

[145] E.O. 12988, *Civil Justice Reform,* 61 FR 4729, 4731 (Feb. 7, 1996).

[146] *Id.*

necessary for self-identification, as a condition of the agency's full consideration of the comment,'' and ''[f]acts or opinions obtained or solicited at or in connection with public hearings or meetings''). Furthermore, while the rule clarifies which material agencies should include in the body of an environmental document and which they should include in an appendix, it does not increase the overall amount of materials available to States or members of the public to review, or require States or members of the public to review those materials.

List of Subjects in 40 CFR Parts 1500, 1501, 1502, 1503, 1504, 1505, 1506, 1507, and 1508

Administrative practice and procedure; Environmental impact statements; Environmental protection; Natural resources.

Brenda Mallory,

Chair.

■ For the reasons discussed in the preamble, the Council on Environmental Quality amends 40 CFR chapter V by revising and republishing subchapter A to read as follows:

Chapter V—Council on Environmental Quality

Subchapter A—National Environmental Policy Act Implementing Regulations

PART 1500—PURPOSE AND POLICY

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1500.1 Purpose.

(a) The National Environmental Policy Act (NEPA) is the basic national charter for protection of the environment. It establishes policy, sets goals, and provides direction for carrying out the policy.

(1) Section 101(a) of NEPA establishes the national environmental policy of the Federal Government to use all practicable means and measures to foster and promote the general welfare, create and maintain conditions under which humans and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans. Section 101(b) of NEPA establishes the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to:

(i) Help each generation serve as a trustee of the environment for succeeding generations;

(ii) Assure for all people safe, healthful, productive, and aesthetically and culturally pleasing surroundings;

(iii) Attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

(iv) Preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity and variety of individual choice;

(v) Achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

(vi) Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

(2) Section 102(2) of NEPA establishes procedural requirements to carry out the policy and responsibilities established in section 101 of NEPA and contains ''action-forcing'' procedural provisions to ensure Federal agencies implement the letter and spirit of the Act. The purpose of the regulations in this subchapter is to set forth what Federal agencies must and should do to comply with the procedures and achieve the goals of the Act. The President, the Federal agencies, and the courts share responsibility for enforcing the Act so as to achieve the policy goals of section 101.

(b) The regulations in this subchapter implement the requirements of NEPA and ensure that agencies identify, consider, and disclose to the public relevant environmental information early in the process before decisions are made and before actions are taken. The information shall be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA. Most importantly, environmental documents must concentrate on the issues that are truly relevant to the action in question, rather than amassing needless detail. The regulations in this subchapter also are intended to ensure that Federal agencies conduct environmental reviews in a coordinated, consistent, predictable, and timely manner, and to reduce unnecessary burdens and delays. Finally, the regulations in this subchapter promote concurrent environmental reviews to ensure timely and efficient decision making.

(c) Ultimately, of course, it is not better documents but better decisions that count. NEPA's purpose is not to generate paperwork—even excellent paperwork—but to foster excellent action. The NEPA process is intended to help public officials make decisions that are based on an understanding of environmental consequences and take actions that protect, restore, and enhance the environment. The regulations in this subchapter provide the direction to achieve this purpose.

§ 1500.2 Policy.

Federal agencies shall to the fullest extent possible:

(a) Interpret and administer the policies, regulations, and public laws of the United States in accordance with the policies set forth in the Act and in these regulations.

(b) Implement procedures to make the NEPA process more useful to decision makers and the public; to reduce paperwork and the accumulation of extraneous background data; and to emphasize important environmental issues and alternatives. Environmental documents shall be concise, clear, and supported by evidence that agencies have conducted the necessary environmental analyses.

(c) Integrate the requirements of NEPA with other planning and environmental review procedures required by law or by agency practice so that such procedures run concurrently rather than consecutively where doing so promotes efficiency.

(d) Encourage and facilitate public engagement in decisions that affect the quality of the human environment, including meaningful engagement with communities such as those with environmental justice concerns.

(e) Use the NEPA process to identify and assess the reasonable alternatives to proposed actions that will avoid or minimize adverse effects of these actions upon the quality of the human environment, such as alternatives that will reduce climate change-related effects or address adverse health and environmental effects that

disproportionately affect communities with environmental justice concerns.

(f) Use all practicable means, consistent with the requirements of the Act and other essential considerations of national policy, to restore and enhance the quality of the human environment and avoid or minimize any possible adverse effects of their actions upon the quality of the human environment.

§ 1500.3 NEPA compliance.

(a) *Mandate.* This subchapter is applicable to and binding on all Federal agencies for implementing the procedural provisions of the National Environmental Policy Act of 1969, as amended (Pub. L. 91–190, 42 U.S.C. 4321 *et seq.*) (NEPA or the Act). The regulations in this subchapter are issued pursuant to NEPA; the Environmental Quality Improvement Act of 1970, as amended (Pub. L. 91–224, 42 U.S.C. 4371 *et seq.*); and Executive Order 11514, Protection and Enhancement of Environmental Quality (March 5, 1970), as amended by Executive Order 11991, Relating to the Protection and Enhancement of Environmental Quality (May 24, 1977). The regulations in this subchapter apply to the whole of section 102(2) of NEPA. The provisions of the Act and the regulations in this subchapter must be read together as a whole to comply with the Act.

(b) *Review of NEPA compliance.* It is the Council's intention that judicial review of agency compliance with the regulations in this subchapter not occur before an agency has issued the record of decision or taken other final agency action, except with respect to claims brought by project sponsors related to deadlines under section 107(g)(3) of NEPA. It is also the Council's intention that minor, non-substantive errors that have no effect on agency decision making shall be considered harmless and shall not invalidate an agency action. It is the Council's intention that any allegation of noncompliance with NEPA and the regulations in this subchapter should be resolved as expeditiously as appropriate.

(c) *Severability.* The sections of this subchapter are separate and severable from one another. If any section or portion therein is stayed or determined to be invalid, or the applicability of any section to any person or entity is held invalid, it is the Council's intention that the validity of the remainder of those parts shall not be affected, with the remaining sections to continue in effect.

§ 1500.4 Concise and informative environmental documents.

Agencies shall prepare analytical, concise, and informative environmental documents by:

(a) Meeting appropriate page limits (§§ 1501.5(g) and 1502.7 of this subchapter).

(b) Discussing only briefly issues other than important ones (*e.g.,* § 1502.2(b) of this subchapter).

(c) Writing environmental documents in plain language (*e.g.,* § 1502.8 of this subchapter).

(d) Following a clear format for environmental impact statements (§ 1502.10 of this subchapter).

(e) Emphasizing the portions of the environmental document that are most useful to decision makers and the public (*e.g.,* §§ 1502.14, 1502.15, and 1502.16 of this subchapter) and reducing emphasis on background material (*e.g.,* § 1502.1 of this subchapter).

(f) Using the scoping process to identify important environmental issues deserving of study and to deemphasize unimportant issues, narrowing the scope of the environmental impact statement process (or, where an agency elects to do so, the environmental assessment process) accordingly (§§ 1501.9 and 1502.4 of this subchapter).

(g) Summarizing the environmental impact statement (§ 1502.12 of this subchapter).

(h) Using programmatic environmental documents and tiering from documents of broad scope to those of narrower scope, to eliminate repetitive discussions of the same issues (§ 1501.11 of this subchapter).

(i) Incorporating by reference (§ 1501.12 of this subchapter).

(j) Integrating NEPA requirements with other environmental review and consultation requirements (§ 1502.24 of this subchapter).

(k) Requiring that comments be as specific as possible (§ 1503.3 of this subchapter).

(l) When changes are minor, attaching and publishing only changes to the draft environmental impact statement rather than rewriting and publishing the entire statement (§ 1503.4(c) of this subchapter).

(m) Eliminating duplication with State, Tribal, and local procedures, by providing for joint preparation of environmental documents where practicable (§ 1506.2 of this subchapter), and with other Federal procedures, by providing that an agency may adopt appropriate environmental documents prepared by another Federal agency (§ 1506.3 of this subchapter).

(n) Combining environmental documents with other documents (§ 1506.4 of this subchapter).

§ 1500.5 Efficient process.

Agencies shall improve efficiency of their NEPA processes by:

(a) Establishing categorical exclusions to define categories of actions that normally do not have a significant effect on the human environment (§§ 1501.4 and 1507.3(c)(8) of this subchapter) and therefore do not require preparation of an environmental assessment or environmental impact statement.

(b) Using a finding of no significant impact when an action not otherwise excluded will not have a significant effect on the human environment (§ 1501.6 of this subchapter) and therefore does not require preparation of an environmental impact statement.

(c) Integrating the NEPA process into early planning (§ 1501.2 of this subchapter).

(d) Engaging in interagency cooperation, including with affected Federal, State, Tribal, and local agencies, before or during the preparation of an environmental assessment or environmental impact statement, rather than waiting to request or submit comments on a completed document (§§ 1501.7 and 1501.8 of this subchapter).

(e) Ensuring the swift and fair resolution of lead agency disputes (§ 1501.7 of this subchapter).

(f) Using the scoping process for early identification of the important issues that require detailed analysis (§ 1502.4 of this subchapter).

(g) Meeting appropriate deadlines for the environmental assessment and environmental impact statement processes (§ 1501.10 of this subchapter).

(h) Preparing environmental documents early in the process (§§ 1502.5 and 1501.5(d) of this subchapter).

(i) Integrating NEPA requirements with other environmental review and consultation requirements (§ 1502.24 of this subchapter).

(j) Eliminating duplication with State, Tribal, and local procedures by providing for joint preparation of environmental documents where practicable (§ 1506.2 of this subchapter) and with other Federal procedures by providing that agencies may jointly prepare or adopt appropriate environmental documents prepared by another agency (§ 1506.3 of this subchapter).

(k) Combining environmental documents with other documents (§ 1506.4 of this subchapter).

(l) Using accelerated procedures for proposals for legislation (§ 1506.8 of this subchapter).

§ 1500.6 Agency authority.

Each agency shall interpret the provisions of the Act as a supplement to its existing authority and as a mandate to view policies and missions in the light of the Act's national environmental objectives, to the extent consistent with its existing authority. Agencies shall review their policies, procedures, and regulations accordingly and revise them as necessary to ensure full compliance with the purposes and provisions of the Act and the regulations in this subchapter. The phrase ''to the fullest extent possible'' in section 102 of NEPA means that each agency of the Federal Government shall comply with the Act unless an agency activity, decision, or action is exempted from NEPA by law or compliance with NEPA is impossible.

PART 1501—NEPA AND AGENCY PLANNING

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1501.1 Purpose.

The purposes of this part include:

(a) Integrating the NEPA process into agency planning at an early stage to facilitate appropriate consideration of NEPA's policies, promote an efficient process, and reduce delay;

(b) Providing for early engagement in the environmental review process with other agencies, State, Tribal, and local governments, and affected or interested persons, entities, and communities before a decision is made;

(c) Providing for the swift and fair resolution of interagency disputes;

(d) Identifying at an early stage the important environmental issues deserving of study, and deemphasizing unimportant issues, narrowing the scope of the environmental review and enhancing efficiency accordingly; and

(e) Promoting accountability by establishing appropriate deadlines and requiring schedules.

§ 1501.2 Apply NEPA early in the process.

(a) Agencies should integrate the NEPA process with other planning and authorization processes at the earliest reasonable time to ensure that agencies consider environmental effects in their planning and decisions, to avoid delays later in the process, and to head off potential conflicts.

(b) Each agency shall:

(1) Comply with the mandate of section 102(2)(A) of NEPA to utilize a systematic, interdisciplinary approach, which will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decision making that may have an impact on the human environment, as specified by § 1507.2(a) of this subchapter.

(2) Identify environmental effects and values in adequate detail so the decision maker can appropriately consider such effects and values alongside economic and technical analyses. Whenever practicable, agencies shall review and publish environmental documents and appropriate analyses at the same time as other planning documents.

(3) Study, develop, and describe appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources, as provided by section 102(2)(H) of NEPA.

(4) Provide for actions subject to NEPA that are planned by applicants before Federal involvement so that:

(i) Policies or designated staff are available to advise potential applicants of studies or other information foreseeably required for later Federal action.

(ii) The Federal agency consults early with appropriate State, Tribal, and local governments and with interested persons and organizations when their involvement is reasonably foreseeable.

(iii) The Federal agency commences its NEPA process at the earliest reasonable time (§§ 1501.5(d) and 1502.5(b) of this subchapter).

§ 1501.3 Determine the appropriate level of NEPA review.

(a) *Applicability.* As a threshold determination, an agency shall assess whether NEPA applies to the proposed activity or decision. In assessing whether NEPA applies, Federal agencies should determine:

(1) Whether the proposed activity or decision is exempted from NEPA by law;

(2) Whether compliance with NEPA would clearly and fundamentally conflict with the requirements of another provision of Federal law;

(3) Whether the proposed activity or decision is not a major Federal action (§ 1508.1(w) of this subchapter);

(4) Whether the proposed activity or decision is not a final agency action within the meaning of such term in chapter 5 of title 5, United States Code; or

(5) Whether the proposed activity or decision is a non-discretionary action with respect to which such agency does not have authority to take environmental factors into consideration in determining whether to take the proposed action.

(b) *Scope of action and analysis.* If the agency determines that NEPA applies, the agency shall consider the scope of the proposed action and its effects to inform the agency's determination of the appropriate level of NEPA review and whether aspects of the action are non-discretionary. The agency shall use, as appropriate, the public engagement and scoping mechanisms in §§ 1501.9 and 1502.4 of this subchapter to inform consideration of the scope of the proposed action and determination of the level of NEPA review. The agency shall evaluate, in a single review, proposals or parts of proposals that are related closely enough to be, in effect, a single course of action. The agency shall not avoid a determination of significance under paragraph (c) of this section by terming an action temporary that is not temporary in fact or segmenting an action into smaller component parts. The agency also shall consider whether there are connected actions, which are closely related Federal activities or decisions that should be considered in the same NEPA review that:

(1) Automatically trigger other actions that may require NEPA review;

(2) Cannot or will not proceed unless other actions are taken previously or simultaneously; or

(3) Are interdependent parts of a larger action and depend on the larger action for their justification.

(c) *Levels of NEPA review.* In assessing the appropriate level of NEPA review, agencies may make use of any reliable data source and are not required to undertake new scientific or technical research unless it is essential to a reasoned choice among alternatives, and the overall costs and timeframe of obtaining it are not unreasonable.

Agencies should determine whether the proposed action:

(1) Is appropriately categorically excluded (§ 1501.4);

(2) Is not likely to have significant effects or the significance of the effects is unknown and is therefore appropriate for an environmental assessment (§ 1501.5); or

(3) Is likely to have significant effects and is therefore appropriate for an environmental impact statement (part 1502 of this subchapter).

(d) *Significance determination—context and intensity.* In considering whether an adverse effect of the proposed action is significant, agencies shall examine both the context of the action and the intensity of the effect. In assessing context and intensity, agencies should consider the duration of the effect. Agencies may also consider the extent to which an effect is adverse at some points in time and beneficial in others (for example, in assessing the significance of a habitat restoration action's effect on a species, an agency may consider both any short-term harm to the species during implementation of the action and any benefit to the same species once the action is complete). However, agencies shall not offset an action's adverse effects with other beneficial effects to determine significance (for example, an agency may not offset an action's adverse effect on one species with its beneficial effect on another species).

(1) Agencies shall analyze the significance of an action in several contexts. Agencies should consider the characteristics of the geographic area, such as proximity to unique or sensitive resources or communities with environmental justice concerns. Depending on the scope of the action, agencies should consider the potential global, national, regional, and local contexts as well as the duration, including short-and long-term effects.

(2) Agencies shall analyze the intensity of effects considering the following factors, as applicable to the proposed action and in relationship to one another:

(i) The degree to which the action may adversely affect public health and safety.

(ii) The degree to which the action may adversely affect unique characteristics of the geographic area such as historic or cultural resources, parks, Tribal sacred sites, prime farmlands, wetlands, wild and scenic rivers, or ecologically critical areas.

(iii) Whether the action may violate relevant Federal, State, Tribal, or local laws or other requirements or be inconsistent with Federal, State, Tribal, or local policies designed for the protection of the environment.

(iv) The degree to which the potential effects on the human environment are highly uncertain.

(v) The degree to which the action may adversely affect resources listed or eligible for listing in the National Register of Historic Places.

(vi) The degree to which the action may adversely affect an endangered or threatened species or its habitat, including habitat that has been determined to be critical under the Endangered Species Act of 1973.

(vii) The degree to which the action may adversely affect communities with environmental justice concerns.

(viii) The degree to which the action may adversely affect rights of Tribal Nations that have been reserved through treaties, statutes, or Executive Orders.

§ 1501.4 Categorical exclusions.

(a) For efficiency and consistent with § 1507.3(c)(8)(ii) of this subchapter or paragraph (c), agencies shall establish categorical exclusions for categories of actions that normally do not have a significant effect on the human environment, individually or in the aggregate, and therefore do not require preparation of an environmental assessment or environmental impact statement unless extraordinary circumstances exist that make application of the categorical exclusion inappropriate, consistent with paragraph (b) of this section. Agencies may establish categorical exclusions individually or jointly with other agencies.

(b) If an agency determines that a categorical exclusion identified in its agency NEPA procedures covers a proposed action, the agency shall evaluate the action for extraordinary circumstances in which a normally excluded action may have a significant effect.

(1) If an extraordinary circumstance exists, the agency nevertheless may apply the categorical exclusion if the agency conducts an analysis and determines that the proposed action does not in fact have the potential to result in significant effects notwithstanding the extraordinary circumstance, or the agency modifies the action to avoid the potential to result in significant effects. In these cases, the agency shall document such determination and should publish it on the agency's website or otherwise make it publicly available.

(2) If the agency cannot categorically exclude the proposed action, the agency shall prepare an environmental assessment or environmental impact statement, as appropriate.

(c) In addition to the process for establishing categorical exclusions under § 1507.3(c)(8) of this subchapter, agencies may establish categorical exclusions through a land use plan, a decision document supported by a programmatic environmental impact statement or programmatic environmental assessment, or other equivalent planning or programmatic decision for which an environmental document has been prepared, so long as the agency:

(1) Provides the Council an opportunity to review and comment prior to public comment;

(2) Provides notification and an opportunity for public comment;

(3) Substantiates its determination that the category of actions normally does not have significant effects, individually or in the aggregate;

(4) Identifies extraordinary circumstances;

(5) Establishes a process for determining that a categorical exclusion applies to a specific action or actions in the absence of extraordinary circumstances, or, where extraordinary circumstances are present, for determining the agency may apply the categorical exclusion consistent with (b)(1) of this section; and

(6) Publishes a list of all categorical exclusions established through these mechanisms on its website.

(d) Categorical exclusions established consistent with paragraph (c) of this section or § 1507.3(c)(8) of this subchapter may:

(1) Cover specific geographic areas or areas that share common characteristics, *e.g.,* habitat type;

(2) Have a limited duration;

(3) Include mitigation measures that, in the absence of extraordinary circumstances, will ensure that any environmental effects are not significant, so long as a process is established for monitoring and enforcing any required mitigation measures, including through the suspension or revocation of the relevant agency action; or

(4) Provide criteria that would cause the categorical exclusion to expire because the agency's determination that the category of action does not have significant effects, individually or in the aggregate, is no longer applicable, including, as appropriate, because:

(i) The number of individual actions covered by the categorical exclusion exceeds a specific threshold;

(ii) Individual actions covered by the categorical exclusion are too close to one another in proximity or time; or

(iii) Environmental conditions or information upon which the agency's determination was based have changed.

(e) An agency may adopt and apply a categorical exclusion listed in another agency's NEPA procedures to a proposed action or a category of proposed actions consistent with this paragraph. The agency shall:

(1) Identify the categorical exclusion listed in another agency's NEPA procedures that covers its proposed action or a category of proposed actions;

(2) Consult with the agency that established the categorical exclusion to ensure that the proposed action or category of proposed actions to which the agency intends to apply the categorical exclusion is appropriate;

(3) Provide public notification of the categorical exclusion that the agency is adopting, including a brief description of the proposed action or category of proposed actions to which the agency intends to apply the adopted categorical exclusion, the process the agency will use to evaluate for extraordinary circumstances consistent with paragraph (b) of this section, and a brief description of the agencies' consultation;

(4) In applying the adopted categorical exclusion to a proposed action, evaluate the proposed action for extraordinary circumstances, consistent with paragraph (b) of this section; and

(5) Publish the documentation of the application of the adopted categorical exclusion.

§ 1501.5 Environmental assessments.

(a) An agency shall prepare an environmental assessment for a proposed action that is not likely to have significant effects or when the significance of the effects is unknown unless the agency finds that a categorical exclusion (§ 1501.4) is applicable or has decided to prepare an environmental impact statement.

(b) An agency may prepare an environmental assessment on any action to assist agency planning and decision making.

(c) An environmental assessment shall:

(1) Briefly provide sufficient evidence and analysis for determining whether to prepare an environmental impact statement or a finding of no significant impact;

(2) Briefly discuss the:

(i) Purpose and need for the proposed agency action;

(ii) Alternatives as required by section 102(2)(H) of NEPA; and

(iii) Environmental effects of the proposed action and alternatives;

(3) List the Federal agencies; State, Tribal, and local governments and agencies; or persons consulted; and

(4) Provide a unique identification number for tracking purposes, which the agency shall reference on all associated environmental review documents prepared for the proposed action and in any database or tracking system for such documents.

(d) For applications to the agency requiring an environmental assessment, the agency shall commence the environmental assessment as soon as practicable after receiving the application.

(e) If an agency publishes a draft environmental assessment, the agency shall invite public comment and consider those comments in preparing the final environmental assessment.

(f) Agencies shall involve the public, State, Tribal, and local governments, relevant agencies, and any applicants, to the extent practicable in preparing environmental assessments (*see* § 1501.9).

(g) The text of an environmental assessment shall not exceed 75 pages, not including any citations or appendices.

(h) Agencies:

(1) Should supplement environmental assessments if a major Federal action is incomplete or ongoing, and:

(i) The agency makes substantial changes to the proposed action that are relevant to environmental concerns; or

(ii) There are substantial new circumstances or information about the significance of the adverse effects that bear on the analysis to determine whether to prepare a finding of no significant impact or an environmental impact statement.

(2) May also prepare supplements when the agency determines that the purposes of the Act will be furthered by doing so.

(i) Agencies may reevaluate an environmental assessment to determine that the agency does not need to prepare a supplemental environmental assessment and a new finding of no significant impact or an environmental impact statement.

(j) Agencies generally should apply § 1502.21 of this subchapter to environmental assessments.

(k) As appropriate to improve efficiency and effectiveness of environmental assessments, agencies may apply the other provisions of part 1502 and 1503 of this subchapter, including §§ 1502.4, 1502.22, 1502.24, and 1503.4, to environmental assessments.

§ 1501.6 Findings of no significant impact.

(a) After completing an environmental assessment, an agency shall prepare:

(1) A finding of no significant impact if the agency determines, based on the environmental assessment, that NEPA does not require preparation of an environmental impact statement because the proposed action will not have significant effects;

(2) A mitigated finding of no significant impact if the agency determines, based on the environmental assessment, that NEPA does not require preparation of an environmental impact statement because the proposed action will not have significant effects due to mitigation; or

(3) An environmental impact statement if the agency determines, based on the environmental assessment, that the action will have significant effects.

(b)(1) The agency shall make the finding of no significant impact available to the affected public as specified in § 1501.9(c)(5).

(2) In the following circumstances, the agency shall make the finding of no significant impact available for public review for 30 days before the agency determines whether to prepare an environmental impact statement and before the action may begin:

(i) The proposed action is or is closely similar to one that normally requires the preparation of an environmental impact statement under the procedures adopted by the agency pursuant to § 1507.3 of this subchapter; or

(ii) The nature of the proposed action is one without precedent.

(c) The finding of no significant impact shall include the environmental assessment or incorporate it by reference and shall note any other environmental documents related to it (§ 1502.4(d)(3) of this subchapter). If the environmental assessment is included, the finding need not repeat any of the discussion in the assessment but may incorporate it by reference.

(d) The finding of no significant impact shall state the authority for any mitigation that the agency has adopted and any applicable monitoring or enforcement provisions. If the agency finds no significant effects based on mitigation, the mitigated finding of no significant impact shall state the enforceable mitigation requirements or commitments that will be undertaken and the authority to enforce them, such as terms and conditions or other measures in a relevant permit, incidental take statement, or other agreement, and the agency shall prepare a monitoring and compliance plan for that mitigation consistent with

§ 1505.3(c) of this subchapter. In addition, the agency shall prepare a monitoring and compliance plan for other mitigation as required by § 1505.3(c) of this subchapter.

§ 1501.7 Lead agency.

(a) A lead agency shall supervise the preparation of an environmental impact statement or environmental assessment if more than one Federal agency either:

(1) Proposes or is involved in the same action; or

(2) Is involved in a group of actions directly related to each other because of their functional interdependence or geographical proximity.

(b) A Federal, State, Tribal, or local agency may serve as a joint lead agency to prepare an environmental impact statement or environmental assessment (§ 1506.2 of this subchapter). A joint lead agency shall jointly fulfill the role of a lead agency.

(c) If an action falls within the provisions of paragraph (a) of this section, the participating Federal agencies shall determine, by letter or memorandum, which agency will be the lead agency, considering the factors in paragraphs (c)(1) through (c)(5) of this section, and the lead agency shall determine which agencies will be joint lead or cooperating agencies. The agencies shall resolve the lead agency question so as not to cause delay. If there is disagreement among the agencies, the following factors (which are listed in order of descending importance) shall determine lead agency designation:

(1) Magnitude of agency's involvement;

(2) Project approval or disapproval authority;

(3) Expertise concerning the action's environmental effects;

(4) Duration of agency's involvement; and

(5) Sequence of agency's involvement.

(d) Any Federal, State, Tribal, or local agency or person substantially affected by the absence of a lead agency designation, may make a written request to the senior agency officials of the potential lead agencies that a lead agency be designated. An agency that receives a request under this paragraph shall transmit such request to each participating Federal agency and to the Council.

(e) If Federal agencies are unable to agree on which agency will be the lead agency or if the procedure described in paragraph (c) of this section has not resulted in a lead agency designation within 45 days of the written request to the senior agency officials, any of the agencies or persons concerned may file a request with the Council asking it to determine which Federal agency shall be the lead agency. The Council shall transmit a copy of the request to each potential lead agency. The request shall consist of:

(1) A precise description of the nature and extent of the proposed action; and

(2) A detailed statement of why each potential lead agency should or should not be the lead agency under the criteria specified in paragraph (c) of this section.

(f) Any potential lead agency may file a response no later than 20 days after a request is filed with the Council. As soon as possible, but not later than 40 days after receiving the request, the Council shall designate which Federal agency will be the lead agency and which other Federal agencies will be cooperating agencies.

(g) To the extent practicable, if a proposal will require action by more than one Federal agency and the lead agency determines that the proposal requires preparation of an environmental impact statement, the lead and cooperating agencies shall evaluate it in a single environmental impact statement; the lead and cooperating agencies shall issue, except where inappropriate or inefficient, a joint record of decision. To the extent practicable, if a proposal will require action by more than one Federal agency and the lead agency determines that it requires preparation of an environmental assessment, the lead and cooperating agencies shall evaluate the proposal in a single environmental assessment and issue a joint finding of no significant impact or jointly determine to prepare an environmental impact statement.

(h) With respect to cooperating agencies, the lead agency shall:

(1) Request the participation of each cooperating agency in the NEPA process at the earliest practicable time;

(2) Consider any analysis or proposal created by a cooperating agency and, to the maximum extent practicable, use the environmental analysis, proposal, and information provided by cooperating agencies;

(3) Meet with a cooperating agency at the latter's request; and

(4) Determine the purpose and need, and alternatives in consultation with any cooperating agency.

§ 1501.8 Cooperating agencies.

(a) The purpose of this section is to emphasize agency cooperation early in the NEPA process. Upon request of the lead agency, any Federal agency with jurisdiction by law shall be a cooperating agency. In addition, upon request of the lead agency, any other Federal agency with special expertise with respect to any environmental issue may be a cooperating agency. A State, Tribal, or local agency of similar qualifications may become a cooperating agency by agreement with the lead agency. Relevant special expertise may include Indigenous Knowledge. An agency may request that the lead agency designate it a cooperating agency, and a Federal agency may appeal a denial of its request to the Council.

(b) Each cooperating agency shall:

(1) Participate in the NEPA process at the earliest practicable time.

(2) Participate in the scoping process (described in § 1502.4).

(3) On request of the lead agency, assume responsibility for developing information and preparing environmental analyses, including portions of the environmental impact statement or environmental assessment concerning which the cooperating agency has special expertise.

(4) On request of the lead agency, make available staff support to enhance the lead agency's interdisciplinary capability.

(5) Normally use its own funds. To the extent available funds permit, the lead agency shall fund those major activities or analyses it requests from cooperating agencies. Potential lead agencies shall include such funding requirements in their budget requests.

(6) Consult with the lead agency in developing and updating the schedule (§ 1501.10), meet the schedule, and elevate, as soon as practicable, to the senior agency official of the lead agency any issues relating to purpose and need, alternatives, or other issues that may affect any agencies' ability to meet the schedule.

(7) Meet the lead agency's schedule for providing comments.

(8) To the maximum extent practicable, jointly issue environmental documents with the lead agency.

(c) In response to a lead agency's request for assistance in preparing the environmental documents (described in paragraph (b)(3), (4), or (5) of this section), a cooperating agency may reply that other program commitments preclude any involvement or the degree of involvement requested in the action that is the subject of the environmental impact statement or environmental assessment. The cooperating agency shall submit a copy of this reply to the Council and the senior agency official of the lead agency.

§ 1501.9 Public and governmental engagement.

(a) *Purpose and responsibility.* The purpose of public engagement is to inform the public of an agency's proposed action, allow for meaningful engagement during the NEPA process, and ensure decision makers are informed by the views of the public. The purpose of governmental engagement is to identify the potentially affected Federal, State, Tribal, and local governments, invite them to serve as cooperating agencies, as appropriate, and ensure that participating agencies have opportunities to engage in the environmental review process, as appropriate. This section sets forth agencies' responsibilities and best practices to conduct public and governmental engagement. Agencies shall determine the appropriate methods of public and governmental engagement for their proposed actions.

(b) *Determination of scope.* Agencies shall use public and governmental engagement, as appropriate, to inform the level of review for and scope of analysis of a proposed action, consistent with § 1501.3 of this subchapter. For environmental impact statements, in addition to the requirements of this section, agencies also shall comply with the requirements for scoping set forth in § 1502.4 of this subchapter. For environmental assessments, in addition to the requirements of this section, agencies should consider applying the requirements for scoping set forth in § 1502.4 of this subchapter, as appropriate.

(c) *Outreach and notification.* Agencies shall:

(1) Invite the participation of any likely affected Federal, State, Tribal, and local agencies and governments, as early as practicable, including, as appropriate, as cooperating agencies under § 1501.8 of this subchapter;

(2) Conduct, as appropriate, early engagement with likely affected or interested members of the public (including those who might not be in accord with the action), unless there is a limited exception under § 1507.3(d)(3) of this subchapter; and

(3) Consider what methods of outreach and notification are necessary and appropriate based on the likely affected entities and persons; the scope, scale, and complexity of the proposed action and alternatives; the degree of public interest; and other relevant factors. When selecting appropriate methods for providing public notification, agencies shall consider the ability of affected persons and agencies to access electronic media and the primary languages of affected persons.

(4) Publish notification of proposed actions they are analyzing through an environmental impact statement, including through a notice of intent consistent with § 1502.4 of this subchapter.

(5) Provide public notification of NEPA-related hearings, public meetings, and other opportunities for public engagement, and the availability of environmental documents to inform those persons and agencies who may be interested or affected by their proposed actions.

(i) The agency shall notify those entities and persons who have requested notification on a particular action and those who have requested regular notification from the agency on its actions.

(ii) In the case of an action with effects of national concern, notification shall also include publication of a notice in the **Federal Register**.

(iii) In the case of an action with effects primarily of local concern, the notification may include distribution to or through:

(A) State, Tribal, and local governments and agencies that may be interested or affected by the proposed action.

(B) Following the affected State or Tribe's public notification procedures for comparable actions.

(C) Publication in local newspapers having general circulation.

(D) Other local media.

(E) Potentially interested community organizations, including small business associations.

(F) Publication in newsletters that may be expected to reach potentially interested persons.

(G) Direct mailing to owners and occupants of nearby or affected property.

(H) Posting of notification on- and off-site in the area where the action is to be located.

(I) Electronic media (*e.g.,* a project or agency website, dashboard, email list, or social media). Agencies should establish email notification lists or similar methods for the public to easily request electronic notifications for a proposed action.

(6) Make environmental impact statements, the comments received, and any underlying documents available to the public pursuant to the provisions of the Freedom of Information Act, as amended (5 U.S.C. 552), and without charge to the extent practicable.

(d) *Public meetings and hearings.* Agencies shall hold or sponsor public hearings, public meetings, or other opportunities for public engagement whenever appropriate or in accordance with statutory or regulatory requirements or applicable agency NEPA procedures. Agencies may conduct public hearings and public meetings by means of electronic communication except where another format is required by law. When determining the format for a public hearing or public meeting, such as whether an in-person or virtual meeting, or formal hearing or listening session is most appropriate, agencies shall consider the needs of affected communities. When accepting comments for electronic or virtual public hearings or meetings, agencies shall allow the public to submit comments electronically, by regular mail, or by other appropriate methods. Agencies should make a draft environmental document available to the public at least 15 days in advance when it is the subject of a public hearing or meeting unless the purpose of such hearing or meeting is to provide information for the development of the document.

(e) *Agency procedures.* Agencies shall make diligent efforts to engage the public in preparing and implementing their NEPA procedures (§ 1507.3 of this subchapter).

§ 1501.10 Deadlines and schedule for the NEPA process.

(a) To ensure that agencies conduct sound NEPA reviews as efficiently and expeditiously as practicable, Federal agencies shall set deadlines and schedules appropriate to individual actions or types of actions consistent with this section and the time intervals required by § 1506.10 of this subchapter. Where applicable, the lead agency shall establish the schedule for a proposed action and make any necessary updates to the schedule in consultation with and seek the concurrence of any joint lead, cooperating, and participating agencies, and in consultation with any applicants.

(b) To ensure timely decision making, agencies shall complete:

(1) Environmental assessments within 1 year, unless the lead agency extends the deadline in writing and, as applicable, in consultation with any applicant, and establishes a new deadline that provides only so much additional time as is necessary to complete the environmental assessment.

(2) Environmental impact statements within 2 years, unless the lead agency extends the deadline in writing and, as applicable, in consultation with any applicant and establishes a new deadline that provides only so much additional time as is necessary to complete the environmental impact statement.

(3) The deadlines in paragraphs (b)(1) and (2) of this section are measured from the sooner of, as applicable:

(i) the date on which the agency determines that NEPA requires an environmental impact statement or environmental assessment for the proposed action;

(ii) the date on which the agency notifies an applicant that the application to establish a right-of-way for the proposed action is complete; or

(iii) the date on which the agency issues a notice of intent for the proposed action.

(4) The deadlines in paragraphs (b)(1) and (2) of this section are measured to, as applicable:

(i) For environmental assessments, the date on which the agency:

(A) Publishes an environmental assessment;

(B) Where applicable, makes the environmental assessment available pursuant to an agency's pre-decisional administrative review process; or

(C) Issues a notice of intent to prepare an environmental impact statement; and

(ii) For environmental impact statements, the date on which the Environmental Protection Agency publishes a notice of availability of the final environmental impact statement or, where applicable, the date on which the agency makes the final environmental impact statement available pursuant to an agency's pre-decisional administrative review process, consistent with § 1506.10(c)(1) of this subchapter.

(5) Each lead agency shall annually submit the report to Congress on any missed deadlines for environmental assessments and environmental impact statements required by section 107(h) of NEPA.

(c) To facilitate predictability, the lead agency shall develop a schedule for completion of environmental impact statements and environmental assessments as well as any authorizations required to carry out the action. The lead agency shall set milestones for all environmental reviews, permits, and authorizations required for implementation of the action, in consultation with any applicant and in consultation with and seek the concurrence of all joint lead, cooperating, and participating agencies, as soon as practicable. Schedules may vary depending on the type of action and in consideration of other factors in paragraph (d) of this section. The lead agency should develop a schedule that is based on its expertise reviewing similar types of actions under NEPA. All agencies with milestones, including those for a review, permit, or authorization, in the schedule shall take appropriate measures to meet the schedule. If a participating agency anticipates that a milestone will be missed, the agency shall notify, as applicable, the agency responsible for the milestone and the lead agency, and request that they take appropriate measures to comply with the schedule. As soon as practicable, the lead and any other agency affected by a potentially missed milestone shall elevate any unresolved disputes contributing to the potentially missed milestone to the appropriate officials of the agencies responsible for the potentially missed milestone, to ensure timely resolution within the deadlines for the individual action.

(d) The lead agency may consider the following factors in determining the schedule and deadlines:

(1) Potential for environmental harm.

(2) Size of the proposed action.

(3) State of the art of analytic techniques.

(4) Degree of public need for the proposed action, including the consequences of delay.

(5) Number of persons and agencies affected.

(6) Availability of relevant information.

(7) Degree to which a substantial dispute exists as to the size, location, nature, or consequences of the proposed action and its effects.

(8) Time limits imposed on the agency by law, regulation, Executive order, or court ordered deadlines.

(9) Time necessary to conduct government-to-government Tribal consultation.

(e) The schedule for environmental impact statements shall include the following milestones:

(1) The publication of the notice of intent;

(2) The issuance of the draft environmental impact statement;

(3) The public comment period on the draft environmental impact statement, consistent with § 1506.10 of this subchapter;

(4) The issuance of the final environmental impact statement; and

(5) The issuance of the record of decision.

(f) The schedule for environmental assessments shall include the following milestones:

(1) Decision to prepare an environmental assessment;

(2) Issuance of the draft environmental assessment, where applicable;

(3) The public comment period on the draft environmental assessment, consistent with § 1501.5 of this subchapter, where applicable; and

(4) Issuance of the final environmental assessment and decision on whether to issue a finding of no significant impact or issue a notice of intent to prepare an environmental impact statement.

(g) An agency may designate a person (such as the project manager or a person in the agency's office with NEPA responsibilities) to expedite the NEPA process.

(h) For environmental impact statements, agencies shall make schedules for completing the NEPA process publicly available, such as on their website or another publicly accessible platform. If agencies make subsequent changes to the schedule, agencies shall publish revisions to the schedule and explain the basis for substantial changes.

§ 1501.11 Programmatic environmental documents and tiering.

(a) *Programmatic environmental documents.* Agencies may prepare programmatic environmental documents, which may be either environmental impact statements or environmental assessments, to evaluate the environmental effects of policies, programs, plans, or groups of related activities. When agencies prepare such documents, they should be relevant to the agency decisions and timed to coincide with meaningful points in agency planning and decision making. Agencies may use programmatic environmental documents to conduct a broad or holistic evaluation of effects or policy alternatives; evaluate widely applicable measures; or avoid duplicative analysis for individual actions by first considering relevant issues at a broad or programmatic level.

(1) When preparing programmatic environmental documents (including proposals by more than one agency), agencies may find it useful to evaluate the proposal(s) in one of the following ways:

(i) Geographically, including actions occurring in the same general location, such as body of water, region, or metropolitan area.

(ii) Thematically or by sector, including actions that have relevant similarities, such as common timing, effects, alternatives, methods of implementation, technology, media, or subject matter.

(iii) By stage of technological development, including Federal or federally assisted research, development, or demonstration programs for new technologies that, if applied, could significantly affect the quality of the human environment. Documents on such programs should be

completed before the program has reached a stage of investment or commitment to implementation likely to determine subsequent development or limit the choice of reasonable alternatives.

(2) Agency actions that may be appropriate for programmatic environmental documents include:

(i) Programs, policies, or plans, including land use or resource management plans;

(ii) Regulations;

(iii) National or regional actions;

(iv) Actions that have multiple stages or phases, and are part of an overall plan or program; or

(v) A group of projects or related types of projects.

(3) Agencies should, as appropriate, employ scoping (§ 1502.4 of this subchapter), tiering (paragraph (b) of this section), and other methods listed in §§ 1500.4 and 1500.5 of this subchapter, to describe the relationship between the programmatic environmental document and related individual actions and to avoid duplication and delay. The programmatic environmental document shall identify any decisions or categories of decisions that the agency anticipates making in reliance on it.

(b) *Tiering.* Where an existing environmental impact statement, environmental assessment, or programmatic environmental document is relevant to a later proposed action, agencies may employ tiering. Tiering allows subsequent tiered environmental analysis to avoid duplication and focus on issues, effects, or alternatives not fully addressed in a programmatic environmental document, environmental impact statement, or environmental assessment prepared at an earlier phase or stage. Agencies generally should tier their environmental impact statements and environmental assessments when it would eliminate repetitive discussions of the same issues, focus on the actual issues ripe for decision, and exclude from consideration issues already decided.

(1) When an agency has prepared an environmental impact statement, environmental assessment or programmatic environmental document for a program or policy and then prepares a subsequent statement or assessment on an action included within the program or policy (such as a project- or site-specific action), the tiered document shall discuss the relationship between the tiered document and the previous review, and summarize and incorporate by reference the issues discussed in the broader document. The tiered document shall concentrate on the issues specific to the subsequent action, analyzing site-, phase-, or stage-specific conditions and reasonably foreseeable effects. The agency shall provide for public engagement opportunities consistent with the type of environmental document prepared and appropriate for the location, phase, or stage. The tiered document shall state where the earlier document is publicly available.

(2) Tiering is appropriate when the sequence from an environmental impact statement or environmental assessment is:

(i) From a programmatic, plan, or policy environmental impact statement or environmental assessment to a program, plan, or policy statement or assessment of lesser or narrower scope or to a site-specific statement or assessment.

(ii) From an environmental impact statement or environmental assessment on a specific action at an early stage (such as need and site selection) to a subsequent statement or assessment at a later stage (such as environmental mitigation). Tiering in such cases is appropriate when it helps the agency to focus on the issues that are ripe for decision and exclude from consideration issues already decided or not yet ripe.

(c) *Reevaluation.* When an agency prepares a programmatic environmental document for which judicial review was available, the agency may rely on the analysis included in the programmatic environmental document in a subsequent environmental document for related actions as follows:

(1) Within 5 years and without additional review of the analysis in the programmatic environmental document, unless there are substantial new circumstances or information about the significance of adverse effects that bear on the analysis; or

(2) After 5 years, so long as the agency reevaluates the analysis in the programmatic environmental document and any underlying assumption to ensure reliance on the analysis remains valid. The agency shall briefly document its reevaluation and explain why the analysis remains valid considering any new and substantial information or circumstances.

§ 1501.12 Incorporation by reference into environmental documents.

Agencies shall incorporate material, such as planning studies, analyses, or other relevant information, into environmental documents by reference when the effect will be to cut down on bulk without impeding agency and public review of the action. Agencies shall cite the incorporated material in the document, briefly describe its content, and briefly explain the relevance of the incorporated material to the environmental document. Agencies shall not incorporate material by reference unless it is reasonably available for review, such as on a publicly accessible website, by potentially interested persons throughout the time allowed for comment or public review. Agencies should provide digital references, such as hyperlinks, to the incorporated material or otherwise indicate how the public can access the material for review. Agencies shall not incorporate by reference material based on proprietary data that is not available for review and comment.

PART 1502—ENVIRONMENTAL IMPACT STATEMENT

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1502.1 Purpose of environmental impact statement.

(a) The primary purpose of an environmental impact statement prepared pursuant to section 102(2)(C) of NEPA is to serve as an action-forcing device by ensuring agencies consider the environmental effects of their action in decision making, so that the policies and goals defined in the Act are infused

into the ongoing programs and actions of the Federal Government.

(b) Environmental impact statements shall provide full and fair discussion of significant effects and shall inform decision makers and the public of reasonable alternatives that would avoid or minimize adverse effects or enhance the quality of the human environment. Agencies shall focus on important environmental issues and reasonable alternatives and shall reduce paperwork and the accumulation of extraneous background data.

(c) Environmental impact statements shall be concise, clear, and to the point, and shall be supported by evidence that the agency has made the necessary environmental analyses. An environmental impact statement is more than a disclosure document. Federal agencies shall use environmental impact statements in conjunction with other relevant material to plan actions, involve the public, and make decisions.

§ 1502.2 Implementation.

To achieve the purposes set forth in § 1502.1, agencies shall prepare environmental impact statements in the following manner:

(a) Environmental impact statements shall not be encyclopedic.

(b) Environmental impact statements shall discuss effects in proportion to their significance. There shall be only brief discussion of other than important issues. As in an environmental assessment and finding of no significant impact, there should be only enough discussion to show why more study is not warranted.

(c) Environmental impact statements shall be analytical, concise, and no longer than necessary to comply with NEPA and with the regulations in this subchapter. Length should be proportional to potential environmental effects and the scope and complexity of the action.

(d) Environmental impact statements shall state how alternatives considered in them and decisions based on them will or will not achieve the requirements of sections 101 and 102(1) of NEPA, the regulations in this subchapter, and other environmental laws and policies.

(e) The range of alternatives discussed in environmental impact statements shall encompass those to be considered by the decision maker.

(f) Agencies shall not commit resources prejudicing the selection of alternatives before making a decision (*see also* § 1506.1 of this subchapter).

(g) Environmental impact statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made.

§ 1502.3 Statutory requirements for environmental impact statements.

As required by section 102(2)(C) of NEPA, environmental impact statements are to be included in every Federal agency recommendation or report on proposals for legislation and other major Federal actions significantly affecting the quality of the human environment.

§ 1502.4 Scoping.

(a) *Purpose.* Agencies shall use scoping, an early and open process consistent with § 1501.9 of this subchapter, to determine the scope of issues for analysis in an environmental impact statement, including identifying the important issues and eliminating from further study unimportant issues. Scoping should begin as soon as practicable after the proposal for action is sufficiently developed for agency consideration. Scoping may include appropriate pre-application procedures or work conducted prior to publication of the notice of intent (see §§ 1501.3 and 1501.9 of this subchapter).

(b) *Scoping outreach.* When preparing an environmental impact statement, agencies shall facilitate notification to persons and agencies who may be interested or affected by an agency's proposed action, consistent with § 1501.9 of this subchapter. As part of the scoping process, the lead agency may hold a scoping meeting or meetings, publish scoping information, or use other means to communicate with those persons or agencies who may be interested or affected, which the agency may integrate with any other early planning meeting.

(c) *Inviting participation.* As part of the scoping process, and consistent with § 1501.9 of this subchapter, the lead agency shall invite the participation of likely affected Federal, State, Tribal, and local agencies and governments as cooperating or participating agencies, as appropriate; any applicant; and other likely affected or interested persons (including those who might not be in accord with the action), unless there is a limited exception under § 1507.3(d)(3) of this subchapter.

(d) *Additional scoping responsibilities.* As part of the scoping process, the lead agency shall:

(1) Identify and eliminate from detailed study the issues that are not important or have been covered by prior environmental review(s) (§§ 1501.12 and 1506.3 of this subchapter), narrowing the discussion of these issues in the environmental impact statement to a brief presentation of why they will not be important or providing a reference to their coverage elsewhere.

(2) Allocate assignments for preparation of the environmental impact statement among the lead and cooperating agencies, with the lead agency retaining responsibility for the statement.

(3) Indicate any publicly available environmental assessments and other environmental impact statements that are being or will be prepared and are related to but are not part of the scope of the environmental impact statement under consideration.

(4) Identify other environmental review, authorization, and consultation requirements so the lead and cooperating agencies may prepare other required analyses and studies concurrently and integrated with the environmental impact statement, as provided in § 1502.24.

(5) Indicate the relationship between the timing of the preparation of environmental analyses and the agencies' tentative planning and decision-making schedule.

(e) *Notice of intent.* As soon as practicable after determining that a proposal is sufficiently developed to allow for meaningful public comment and requires an environmental impact statement, the lead agency shall publish a notice of intent to prepare an environmental impact statement in the **Federal Register**. In addition to the **Federal Register** notice, an agency also may publish notification in accordance with § 1501.9 of this subchapter. The notice shall include, as appropriate:

(1) The purpose and need for the proposed agency action;

(2) A preliminary description of the proposed action and alternatives the environmental impact statement will consider;

(3) A brief summary of expected effects;

(4) Anticipated permits and other authorizations;

(5) A schedule for the decision-making process;

(6) A description of the public scoping process, including any scoping meeting(s);

(7) A request for comment on alternatives and effects, as well as on relevant information, studies, or analyses with respect to the proposed action;

(8) Contact information for a person within the agency who can answer questions about the proposed action and the environmental impact statement;

(9) Identification of any cooperating and participating agencies, and any information that such agencies require in the notice to facilitate their decisions

or authorizations that will rely upon the resulting environmental impact statement; and

(10) A unique identification number for tracking purposes, which the agency shall reference on all environmental documents prepared for the proposed action and in any database or tracking system for such documents.

(f) *Notices of withdrawal or cancellation.* If an agency withdraws, cancels, or otherwise ceases the consideration of a proposed action before completing a final environmental impact statement, the agency shall publish a notice in the **Federal Register**.

(g) *Revisions.* An agency shall revise the determinations made under paragraphs (b), (c), and (d) of this section if substantial changes are made later in the proposed action, or if important new circumstances or information arise that bear on the proposal or its effects.

§ 1502.5 Timing.

An agency should commence preparation of an environmental impact statement as close as practicable to the time the agency is developing or receives a proposal so that preparation can be completed in time for the final statement to be included in any recommendation or report on the proposal. The statement shall be prepared early enough so that it can serve as an important practical contribution to the decision-making process and will not be used to rationalize or justify decisions already made (§§ 1501.2 of this subchapter and 1502.2). For instance:

(a) For projects directly undertaken by Federal agencies, the agency shall prepare the environmental impact statement at the feasibility analysis or equivalent stage evaluating whether to proceed with the project and may supplement it at a later stage, if necessary.

(b) For applications to the agency requiring an environmental impact statement, the agency shall commence the statement as soon as practicable after receiving the complete application. Federal agencies should work together and with potential applicants and applicable State, Tribal, and local agencies and governments prior to receipt of the application.

(c) For adjudication, the final environmental impact statement shall normally precede the final staff recommendation and that portion of the public hearing related to the impact study. In appropriate circumstances, the statement may follow preliminary hearings designed to gather information for use in the statement.

(d) For informal rulemaking, the draft environmental impact statement shall normally accompany the proposed rule.

§ 1502.6 Interdisciplinary preparation.

Agencies shall prepare environmental impact statements using an interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts (section 102(2)(A) of NEPA). The disciplines of the preparers shall be appropriate to the scope and issues identified in the scoping process (§ 1502.4 of this subchapter).

§ 1502.7 Page limits.

The text of final environmental impact statements, not including citations or appendices, shall not exceed 150 pages except for proposals of extraordinary complexity, which shall not exceed 300 pages.

§ 1502.8 Writing.

Agencies shall write environmental impact statements in plain language and should use, as relevant, appropriate visual aids or charts so that decision makers and the public can readily understand such statements. Agencies should employ writers of clear prose or editors to write, review, or edit statements, which shall be based upon the analysis and supporting data from the natural and social sciences and the environmental design arts.

§ 1502.9 Draft, final, and supplemental statements.

(a) *Generally.* Except for proposals for legislation as provided in § 1506.8 of this subchapter, agencies shall prepare environmental impact statements in two stages and, where necessary, supplement them as provided in paragraph (d)(1) of this section.

(b) *Draft environmental impact statements.* Agencies shall prepare draft environmental impact statements in accordance with the scope decided upon in the scoping process (§ 1502.4 of this subchapter). The lead agency shall work with the cooperating agencies and shall obtain comments as required in part 1503 of this subchapter. To the fullest extent practicable, the draft statement must meet the requirements established for final statements in section 102(2)(C) of NEPA and in the regulations in this subchapter. If the agency determines that a draft statement is so inadequate as to preclude meaningful analysis, the agency shall prepare and publish a supplemental draft of the appropriate portion. At appropriate points in the draft statement, the agency shall discuss all major points of view on the environmental effects of the alternatives, including the proposed action.

(c) *Final environmental impact statements.* Final environmental impact statements shall consider and respond to comments as required in part 1503 of this subchapter. At appropriate points in the final statement, the agency shall discuss any responsible opposing view that was not adequately discussed in the draft statement and shall indicate the agency's response to the issues raised.

(d) *Supplemental environmental impact statements.* Agencies:

(1) Shall prepare supplements to either draft or final environmental impact statements if a major Federal action is incomplete or ongoing, and:

(i) The agency makes substantial changes to the proposed action that are relevant to environmental concerns; or

(ii) There are substantial new circumstances or information about the significance of adverse effects that bear on the analysis.

(2) May also prepare supplements when the agency determines that the purposes of the Act will be furthered by doing so.

(3) Shall prepare, publish, and file a supplement to an environmental impact statement (exclusive of scoping (§ 1502.4 of this subchapter)) as a draft and final environmental impact statement, as is appropriate to the stage of the environmental impact statement involved, unless the Council approves alternative arrangements (§ 1506.11 of this subchapter).

(e) *Reevaluation.* An agency may reevaluate an environmental impact statement to determine that the agency does need to prepare a supplement under paragraph (d) of this section. The agency should document its finding consistent with its agency NEPA procedures (§ 1507.3 of this subchapter), or, if necessary, prepare a supplemental environmental assessment and finding of no significant impact.

§ 1502.10 Recommended format.

(a) Agencies shall use a format for environmental impact statements that will encourage good analysis and clear presentation of the alternatives, including the proposed action. Agencies should use the following standard format for environmental impact statements unless the agency determines that there is a more effective format for communication:

(1) Cover (§ 1502.11);

(2) Summary (§ 1502.12);

(3) Table of contents;

(4) Purpose of and need for action (§ 1502.13);

(5) Alternatives including the proposed action (sections 102(2)(C)(iii) and 102(2)(H) of NEPA) (§ 1502.14);

(6) Affected environment and environmental consequences (especially sections 102(2)(C)(i), (ii), (iv), and (v) of NEPA) (§§ 1502.15 and 1502.16); and

(7) Appendices (§ 1502.19), including the summary of scoping information (§ 1502.17) and the list of preparers (§ 1502.18).

(b) If an agency uses a different format, it shall include paragraph (a) of this section, as further described in §§ 1502.11 through 1502.19, in any appropriate format.

§ 1502.11 Cover.

The environmental impact statement cover shall not exceed one page and shall include:

(a) A list of the lead, joint lead, and, to the extent feasible, any cooperating agencies;

(b) The title of the proposed action that is the subject of the statement (and, if appropriate, the titles of related cooperating agency actions), together with the State(s) and county(ies) (or other jurisdiction(s), if applicable) where the action is located;

(c) The name, address, and telephone number of the person at the agency who can supply further information;

(d) A designation of the statement as a draft, final, or draft or final supplement;

(e) A one-paragraph abstract of the statement;

(f) The date by which the agency must receive comments (computed in cooperation with the Environmental Protection Agency under § 1506.10 of this subchapter); and

(g) The identification number included in the notice of intent (§ 1502.4(e)(10)).

§ 1502.12 Summary.

Each environmental impact statement shall contain a summary that adequately and accurately summarizes the statement. The summary shall include the major conclusions and summarize any disputed issues raised by agencies and the public, any issues to be resolved, and key differences among alternatives, and identify the environmentally preferable alternative or alternatives. Agencies shall write the summary in plain language and should use, as relevant, appropriate visual aids and charts. The summary normally should not exceed 15 pages.

§ 1502.13 Purpose and need.

The environmental impact statement shall include a statement that briefly summarizes the underlying purpose and need for the proposed agency action.

§ 1502.14 Alternatives including the proposed action.

The alternatives section is the heart of the environmental impact statement. The alternatives section should identify the reasonably foreseeable environmental effects of the proposed action and the alternatives in comparative form based on the information and analysis presented in the sections on the affected environment (§ 1502.15) and the environmental consequences (§ 1502.16). In doing so, the analysis should sharply define the issues for the decision maker and the public and provide a clear basis for choice among options. In this section, agencies shall:

(a) Rigorously explore and objectively evaluate reasonable alternatives to the proposed action, and, for alternatives that the agency eliminated from detailed study, briefly discuss the reasons for their elimination. The agency need not consider every conceivable alternative to a proposed action; rather, it shall consider a reasonable range of alternatives that will foster informed decision making. Agencies also may include reasonable alternatives not within the jurisdiction of the lead agency.

(b) Discuss each alternative considered in detail, including the proposed action, so that reviewers may evaluate their comparative merits.

(c) Include the no action alternative.

(d) Identify the agency's preferred alternative or alternatives, if one or more exists, in the draft statement and identify such alternative in the final statement unless another law prohibits the expression of such a preference.

(e) Include appropriate mitigation measures not already included in the proposed action or alternatives.

(f) Identify the environmentally preferable alternative or alternatives amongst the alternatives considered in the environmental impact statement. The environmentally preferable alternative will best promote the national environmental policy expressed in section 101 of NEPA by maximizing environmental benefits, such as addressing climate change-related effects or disproportionate and adverse effects on communities with environmental justice concerns; protecting, preserving, or enhancing historic, cultural, Tribal, and natural resources, including rights of Tribal Nations that have been reserved through treaties, statutes, or Executive Orders; or causing the least damage to the biological and physical environment. The environmentally preferable alternative may be the proposed action, the no action alternative, or a reasonable alternative.

§ 1502.15 Affected environment.

(a) The environmental impact statement shall succinctly describe the environment of the area(s) to be affected by the alternatives under consideration, including the reasonably foreseeable environmental trends and planned actions in the area(s).

(b) Agencies shall use high-quality information, including reliable data and resources, models, and Indigenous Knowledge, to describe reasonably foreseeable environmental trends, including anticipated climate-related changes to the environment, and when such information is incomplete or unavailable, provide relevant information consistent with § 1502.21. This description of the affected environment, including existing environmental conditions, reasonably foreseeable trends, and planned actions in the area, should inform the agency's analysis of environmental consequences and mitigation measures (§ 1502.16).

(c) The environmental impact statement may combine the description of the affected environment with evaluation of the environmental consequences (§ 1502.16). The description should be no longer than necessary to understand the relevant affected environment and the effects of the alternatives. Data and analyses in a statement shall be commensurate with the importance of the effect, with less important material summarized, consolidated, or simply referenced. Agencies shall avoid useless bulk in statements and shall concentrate effort and attention on important issues. Verbose descriptions of the affected environment are themselves no measure of the adequacy of an environmental impact statement.

§ 1502.16 Environmental consequences.

(a) The environmental consequences section forms the scientific and analytic basis for the comparisons under § 1502.14. It shall consolidate the discussions of those elements required by sections 102(2)(C)(i), (ii), (iv), and (v) of NEPA that are within the scope of the environmental impact statement and as much of section 102(2)(C)(iii) of NEPA as is necessary to support the comparisons. The comparison of the proposed action and reasonable alternatives shall be based on the discussion of their reasonably foreseeable effects and the significance of those effects (§ 1501.3 of this subchapter), focusing on the significant or important effects. The no action alternative should serve as the baseline

against which the proposed action and other alternatives are compared. This section should not duplicate discussions required by § 1502.14 and shall include an analysis of:

(1) Any adverse environmental effects that cannot be avoided should the proposal be implemented.

(2) The effects of the no action alternative, including any adverse environmental effects;

(3) The relationship between short-term uses of the human environment and the maintenance and enhancement of long-term productivity;

(4) Any irreversible or irretrievable commitments of Federal resources that would be involved in the proposal should it be implemented;

(5) Where applicable, possible conflicts between the proposed action and the objectives of Federal, regional, State, Tribal, and local plans, policies, and controls for the area concerned, including those addressing climate change (§ 1506.2(d) of this subchapter);

(6) Where applicable, climate change-related effects, including, where feasible, quantification of greenhouse gas emissions, from the proposed action and alternatives and the effects of climate change on the proposed action and alternatives;

(7) Where applicable, energy requirements and conservation potential of various alternatives and mitigation measures;

(8) Where applicable, natural or depletable resource requirements and conservation potential of various alternatives and mitigation measures;

(9) Where applicable, relevant risk reduction, resiliency, or adaptation measures incorporated into the proposed action or alternatives, informed by relevant science and data on the affected environment and expected future conditions;

(10) Where applicable, urban quality, historic and cultural resources, and the design of the built environment, including the reuse and conservation potential of various alternatives and mitigation measures;

(11) Means to mitigate adverse environmental effects (if not fully covered under § 1502.14(e));

(12) Where applicable, economic and technical considerations, including the economic benefits of the proposed action; and

(13) Where applicable, disproportionate and adverse human health and environmental effects on communities with environmental justice concerns.

(b) Economic or social effects by themselves do not require preparation of an environmental impact statement. However, when the agency determines that economic or social and natural or physical environmental effects are interrelated, the environmental impact statement shall discuss these effects on the human environment.

§ 1502.17 Summary of scoping information.

(a) The draft environmental impact statement or appendix shall include a summary of information, including alternatives and analyses, submitted by commenters during the scoping process for consideration by the lead and cooperating agencies in their development of the environmental impact statement.

(b) The agency shall append to the draft environmental impact statement or publish all comments (or summaries thereof where the response has been exceptionally voluminous) received during the scoping process.

§ 1502.18 List of preparers.

The environmental impact statement shall list the names, together with their qualifications (expertise, experience, professional disciplines), of the persons who were primarily responsible for preparing the environmental impact statement or important background papers, including basic components of the statement. Where possible, the environmental impact statement shall identify the persons who are responsible for a particular analysis, including analyses in background papers. Normally the list will not exceed two pages.

§ 1502.19 Appendix.

If an agency prepares an appendix, the agency shall publish it with the environmental impact statement, and it shall consist of, as appropriate:

(a) Material prepared in connection with an environmental impact statement (as distinct from material that is not so prepared and is incorporated by reference (§ 1501.12 of this subchapter)).

(b) Material substantiating any analysis fundamental to the impact statement.

(c) Material relevant to the decision to be made.

(d) For draft environmental impact statements, all comments (or summaries thereof where the response has been exceptionally voluminous) received during the scoping process that identified information for the agency's consideration.

(e) For final environmental impact statements, the comment summaries and responses consistent with § 1503.4 of this chapter.

§ 1502.20 Publication of the environmental impact statement.

Agencies shall publish the entire draft and final environmental impact statements and unchanged statements as provided in § 1503.4(c) of this subchapter. The agency shall transmit the entire statement electronically (or in paper copy, if requested due to economic or other hardship) to:

(a) Any Federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved and any appropriate Federal, State, Tribal, or local agency authorized to develop and enforce environmental standards.

(b) The applicant, if any.

(c) Any person, organization, or agency requesting the entire environmental impact statement.

(d) In the case of a final environmental impact statement, any person, organization, or agency that submitted substantive comments on the draft.

§ 1502.21 Incomplete or unavailable information.

(a) When an agency is evaluating reasonably foreseeable significant effects on the human environment in an environmental impact statement, and there is incomplete or unavailable information, the agency shall make clear that such information is lacking.

(b) If the incomplete information relevant to reasonably foreseeable significant effects is essential to a reasoned choice among alternatives, and the overall costs of obtaining it are not unreasonable, the agency shall include the information in the environmental impact statement.

(c) If the information relevant to reasonably foreseeable significant effects cannot be obtained because the overall costs of obtaining it are unreasonable or the means to obtain it are not known, the agency shall include within the environmental impact statement:

(1) A statement that such information is incomplete or unavailable;

(2) A statement of the relevance of the incomplete or unavailable information to evaluating reasonably foreseeable significant effects on the human environment;

(3) A summary of existing credible scientific evidence that is relevant to evaluating the reasonably foreseeable significant effects on the human environment; and

(4) The agency's evaluation of such effects based upon theoretical approaches or research methods generally accepted in the scientific community.

(d) For the purposes of this section, ''reasonably foreseeable'' includes

effects that have catastrophic consequences, even if their probability of occurrence is low, provided that the analysis of the effects is supported by credible scientific evidence, is not based on pure conjecture, and is within the rule of reason.

§ 1502.22 Cost-benefit analysis.

If an agency is considering a cost-benefit analysis for the proposed action relevant to the choice among alternatives with different environmental effects, the agency shall incorporate the cost-benefit analysis by reference or append it to the statement as an aid in evaluating the environmental consequences. In such cases, to assess the adequacy of compliance with section 102(2)(B) of NEPA (ensuring appropriate consideration of unquantified environmental amenities and values in decision making, along with economical and technical considerations), the statement shall discuss the relationship between that analysis and any analyses of unquantified environmental impacts, values, and amenities. For purposes of complying with the Act, agencies need not display the weighing of the merits and drawbacks of the various alternatives in a monetary cost-benefit analysis and should not do so when there are important qualitative considerations. However, an environmental impact statement should at least indicate those considerations, including factors not related to environmental quality, that are likely to be relevant and important to a decision.

§ 1502.23 [Reserved]

§ 1502.24 Environmental review and consultation requirements.

(a) To the fullest extent possible, agencies shall prepare draft environmental impact statements concurrent and integrated with environmental impact analyses and related surveys and studies required by all other Federal environmental review laws and Executive orders applicable to the proposed action, including the Fish and Wildlife Coordination Act (16 U.S.C. 661 *et seq.*), the National Historic Preservation Act of 1966 (54 U.S.C. 300101 *et seq.*), and the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*).

(b) The draft environmental impact statement shall list all Federal permits, licenses, and other authorizations that must be obtained in implementing the proposal. If it is uncertain whether a Federal permit, license, or other authorization is necessary, the draft environmental impact statement shall so indicate.

PART 1503—COMMENTING ON ENVIRONMENTAL IMPACT STATEMENTS

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1503.1 Inviting comments and requesting information and analyses.

(a) After preparing a draft environmental impact statement and before preparing a final environmental impact statement the agency shall:

(1) Obtain the comments of any Federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved or is authorized to develop and enforce environmental standards; and

(2) Request the comments of:

(i) Appropriate State, Tribal, and local agencies that are authorized to develop and enforce environmental standards;

(ii) State, Tribal, or local governments that may be affected by the proposed action;

(iii) Any agency that has requested it receive statements on actions of the kind proposed;

(iv) The applicant, if any; and

(v) The public, affirmatively soliciting comments in a manner designed to inform those persons or organizations who may be interested in or affected by the proposed action.

(b) An agency may request comments on a final environmental impact statement before the final decision and set a deadline for providing such comments. Other agencies or persons may make comments consistent with the time periods under § 1506.10 of this subchapter.

(c) An agency shall provide for electronic submission of public comments, with reasonable measures to ensure the comment process is accessible to affected persons.

§ 1503.2 Duty to comment.

Cooperating agencies and agencies that are authorized to develop and enforce environmental standards shall comment on environmental impact statements within their jurisdiction, expertise, or authority within the time period specified for comment in § 1506.10 of this subchapter. A Federal agency may reply that it has no comment. If a cooperating agency is satisfied that the environmental impact statement adequately reflects its views, it should reply that it has no comment.

§ 1503.3 Specificity of comments and information.

(a) To promote informed decision making, comments on an environmental impact statement or on a proposed action shall be as specific as possible, and may address either the adequacy of the statement or the merits of the alternatives discussed or both. Comments should explain why the issues raised are important to the consideration of potential environmental effects and alternatives to the proposed action. Where possible, comments should reference the corresponding section or page number of the draft environmental impact statement, propose specific changes to those parts of the statement, and describe any data, sources, or methodologies that support the proposed changes.

(b) When a participating agency criticizes a lead agency's predictive methodology, the participating agency should describe the alternative methodology that it prefers and why.

(c) A cooperating agency shall specify in its comments whether it needs additional information to fulfill other applicable environmental review or consultation requirements and what information it needs. In particular, it shall specify any additional information it needs to comment adequately on the draft statement's analysis of significant effects associated with the granting or approving by that cooperating agency of necessary Federal permits, licenses, or authorizations.

(d) A cooperating agency with jurisdiction by law shall specify mitigation measures it considers necessary to allow the agency to grant or approve applicable authorizations or concurrences and cite to its applicable statutory authority.

§ 1503.4 Response to comments.

(a) An agency preparing a final environmental impact statement shall consider substantive comments timely submitted during the public comment period. The agency shall respond to individual comments or groups of comments. In the final environmental impact statement, the agency may respond by:

(1) Modifying alternatives including the proposed action;

(2) Developing and evaluating alternatives not previously given serious consideration by the agency;

(3) Supplementing, improving, or modifying its analyses;

(4) Making factual corrections; or

(5) Explaining why the comments do not warrant further agency response, recognizing that agencies are not required to respond to each comment.

(b) An agency shall append or otherwise publish all substantive comments received on the draft statement (or summaries thereof where the response has been exceptionally voluminous).

(c) If changes in response to comments are minor and are confined to the responses described in paragraphs (a)(4) and (5) of this section, an agency may write any changes on errata sheets and attach the responses to the statement instead of rewriting the draft statement. In such cases, the agency shall publish the final statement (§ 1502.20 of this subchapter), which includes the errata sheet, a copy of the draft statement, the comments, and the responses to those comments. The agency shall file the final statement with the Environmental Protection Agency (§ 1506.10 of this subchapter).

PART 1504—DISPUTE RESOLUTION AND PRE-DECISIONAL REFERRALS

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1504.1 Purpose.

(a) This part establishes procedures for referring to the Council Federal interagency disagreements concerning proposed major Federal actions that might cause unsatisfactory environmental effects. It provides means for early resolution of such disagreements, and encourages Federal agencies to engage with each other as early as practicable to resolve interagency disagreements concerning proposed major Federal actions before referring disputes to the Council. This part also establishes procedures for Federal agencies to submit a request to the Council to provide informal dispute resolution on NEPA issues.

(b) Section 309 of the Clean Air Act (42 U.S.C. 7609) directs the Administrator of the Environmental Protection Agency to review and comment publicly on the environmental impacts of Federal activities, including actions for which agencies prepare environmental impact statements. If, after this review, the Administrator determines that the matter is ''unsatisfactory from the standpoint of public health or welfare or environmental quality,'' section 309 directs that the matter be referred to the Council.

(c) Under section 102(2)(C) of NEPA (42 U.S.C. 4332(2)(C)), other Federal agencies may prepare reviews of environmental impact statements, including judgments on the acceptability of anticipated environmental impacts. These agencies must make these reviews available to the President, the Council, and the public.

§ 1504.2 Early dispute resolution.

(a) Federal agencies should engage in interagency coordination and collaboration in their planning and decision-making processes and should identify and resolve disputes concerning proposed major Federal actions early in the NEPA process. To the extent practicable, agencies should elevate issues to appropriate agency officials or the Council in a timely manner that will accommodate schedules consistent with § 1501.10 of this subchapter.

(b) A Federal agency may request that the Council engage in informal dispute resolution to provide recommendations on how to resolve an interagency dispute concerning an environmental review. In making the request, the agency shall provide the Council with a summary of the proposed action, information on the disputed issues, and agency points of contact.

(c) In response to a request for informal dispute resolution, the Council may request additional information, provide non-binding recommendations, convene meetings of those agency decision makers necessary to resolve disputes, or determine that informal dispute resolution is unhelpful or inappropriate.

§ 1504.3 Criteria and procedure for referrals and response.

(a) Federal agencies should make environmental referrals to the Council only after concerted, timely (as early as practicable in the process), but unsuccessful attempts to resolve differences with the lead agency. In determining what environmental objections to the matter are appropriate to refer to the Council, an agency should weigh potential adverse environmental effects, considering:

(1) Possible violation of national environmental standards or policies;

(2) Severity;

(3) Geographical scope;

(4) Duration;

(5) Importance as precedents;

(6) Availability of environmentally preferable alternatives;

(7) Economic and technical considerations, including the economic costs of delaying or impeding the decision making of the agencies involved in the action; and

(8) Other appropriate considerations.

(b) A Federal agency making the referral to the Council shall:

(1) Notify the lead agency at the earliest possible time that it intends to refer a matter to the Council unless a satisfactory agreement is reached;

(2) Include such a notification whenever practicable in the referring agency's comments on the environmental assessment or draft environmental impact statement;

(3) Identify any essential information that is lacking and request that the lead agency make it available at the earliest possible time; and

(4) Send copies of the referring agency's views to the Council.

(c) The referring agency shall deliver its referral to the Council no later than 25 days after the lead agency has made the final environmental impact statement available to the Environmental Protection Agency, participating agencies, and the public, and in the case of an environmental assessment, no later than 25 days after the lead agency makes it available. Except when the lead agency grants an extension of this period, the Council will not accept a referral after that date.

(d) The referral shall consist of:

(1) A copy of the letter signed by the head of the referring agency and delivered to the lead agency informing the lead agency of the referral and the reasons for it; and

(2) A statement supported by factual evidence leading to the conclusion that the matter is unsatisfactory from the standpoint of public health or welfare or environmental quality. The statement shall:

(i) Identify any disputed material facts and incorporate (by reference if appropriate) agreed upon facts;

(ii) Identify any existing environmental requirements or policies that would be violated by the matter;

(iii) Present the reasons for the referral;

(iv) Contain a finding by the agency whether the issue raised is of national importance because of the threat to national environmental resources or policies or for some other reason;

(v) Review the steps taken by the referring agency to bring its concerns to the attention of the lead agency at the earliest possible time; and

(vi) Give the referring agency's recommendations as to what mitigation

alternative, further study, or other course of action (including abandonment of the matter) are necessary to remedy the situation.

(e) No later than 25 days after the referral to the Council, the lead agency may deliver a response to the Council and the referring agency. If the lead agency requests more time and gives assurance that the matter will not go forward in the interim, the Council may grant an extension. The response shall:

(1) Address fully the issues raised in the referral;

(2) Be supported by evidence and explanations, as appropriate; and

(3) Give the lead agency's response to the referring agency's recommendations.

(f) Applicants or other interested persons may provide views in writing to the Council no later than the response.

(g) No later than 25 days after receipt of both the referral and any response or upon being informed that there will be no response (unless the lead agency agrees to a longer time), the Council may take one or more of the following actions:

(1) Conclude that the process of referral and response has successfully resolved the problem.

(2) Initiate discussions with the agencies with the objective of mediation with referring and lead agencies.

(3) Obtain additional views and information, including through public meetings or hearings.

(4) Determine that the issue is not one of national importance and request the referring and lead agencies to pursue their decision process.

(5) Determine that the referring and lead agencies should further negotiate the issue, and the issue is not appropriate for Council consideration until one or more heads of agencies report to the Council that the agencies' disagreements are irreconcilable.

(6) Publish its findings and recommendations (including, where appropriate, a finding that the submitted evidence does not support the position of an agency).

(7) When appropriate, submit the referral and the response together with the Council's recommendation to the President for action.

(h) The Council shall take no longer than 60 days to complete the actions specified in paragraph (g)(2), (3), or (5) of this section.

(i) The referral process is not intended to create any private rights of action or to be judicially reviewable because any voluntary resolutions by the agency parties do not represent final agency action and instead are only provisional and dependent on later consistent action by the action agencies.

PART 1505—NEPA AND AGENCY DECISION MAKING

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1505.1 [Reserved]

§ 1505.2 Record of decision in cases requiring environmental impact statements.

At the time of its decision (§ 1506.10 of this subchapter) or, if appropriate, its recommendation to Congress, each agency shall prepare and timely publish a concise public record of decision or joint record of decision. The record, which each agency may integrate into any other record it prepares, shall:

(a) State the decision.

(b) Identify alternatives considered by the agency in reaching its decision. The agency also shall specify the environmentally preferable alternative or alternatives (§ 1502.14(f) of this subchapter). The agency may discuss preferences among alternatives based on relevant factors, including environmental, economic, and technical considerations and agency statutory missions. The agency shall identify and discuss all such factors, including any essential considerations of national policy, that the agency balanced in making its decision and state how those considerations entered into its decision.

(c) State whether the agency has adopted all practicable means to mitigate environmental harm from the alternative selected, and if not, why the agency did not. Mitigation shall be enforceable when the record of decision incorporates mitigation and the analysis of the reasonably foreseeable effects of the proposed action is based on implementation of that mitigation. The agency shall identify the authority for enforceable mitigation, such as through permit conditions, agreements, or other measures, and prepare a monitoring and compliance plan consistent with § 1505.3(c).

§ 1505.3 Implementing the decision.

(a) In addition to the requirements of paragraph (c) of this section, agencies may provide for monitoring to assure that their decisions are carried out and should do so in important cases. Mitigation (§ 1505.2(c)) and other conditions established in the environmental impact statement or during its review and committed as part of the decision shall be implemented by the lead agency or other appropriate consenting agency. The agency shall:

(1) Include appropriate conditions in grants, permits, or other approvals; and

(2) Condition funding of actions on mitigation.

(b) The lead or cooperating agency should, where relevant and appropriate, incorporate into its decision mitigation measures that address or ameliorate significant human health and environmental effects of proposed Federal actions that disproportionately and adversely affect communities with environmental justice concerns.

(c) The lead or cooperating agency shall prepare and publish a monitoring and compliance plan for mitigation when:

(1) The analysis of the reasonably foreseeable effects of a proposed action in an environmental assessment or environmental impact statement is based on implementation of mitigation; and

(2) The agency incorporates the mitigation into a record of decision, finding of no significant impact, or separate decision document.

(d) The agency should tailor the contents of a monitoring and compliance plan required by paragraph (c) of this section to the complexity of the mitigation committed to and include:

(1) A basic description of the mitigation measure or measures;

(2) The parties responsible for monitoring and implementing the mitigation;

(3) If appropriate, how monitoring information will be made publicly available;

(4) The anticipated timeframe for implementing and completing mitigation;

(5) The standards for determining compliance with the mitigation and the consequences of non-compliance; and

(6) How the mitigation will be funded.

(e) If an action is incomplete or ongoing, an agency does not need to supplement its environmental impact statement (§ 1502.9(d) of this subchapter) or environmental assessment (§ 1501.5 of this subchapter) or revise its record of decision or finding of no significant impact or separate decision document based solely on new information developed through a monitoring and compliance plan required by paragraph (c) of this section. The ongoing implementation of a monitoring and compliance plan shall not be considered an incomplete or ongoing Federal action.

PART 1506—OTHER REQUIREMENTS OF NEPA

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1506.1 Limitations on actions during NEPA process.

(a) Except as provided in paragraphs (b) and (c) of this section, until an agency issues a finding of no significant impact, as provided in § 1501.6 of this subchapter, or record of decision, as provided in § 1505.2 of this subchapter, no action concerning the proposal may be taken that would:

(1) Have an adverse environmental effect; or

(2) Limit the choice of reasonable alternatives.

(b) If an agency is considering an application from an applicant and is aware that the applicant is about to take an action within the agency's jurisdiction that would meet either of the criteria in paragraph (a) of this section, then the agency shall promptly notify the applicant that the agency will take appropriate action to ensure that the objectives and procedures of NEPA are achieved. This section does not preclude development by applicants of plans or designs or performance of other activities necessary to support an application for Federal, State, Tribal, or local permits or assistance. An agency considering a proposed action for Federal funding may authorize such activities, including, but not limited to, acquisition of interests in land (*e.g.,* fee simple, rights-of-way, and conservation easements), purchase of long lead-time equipment, and purchase options made by applicants, if the agency determines that such activities would not limit the choice of reasonable alternatives and notifies the applicant that the agency retains discretion to select any reasonable alternative or the no action alternative regardless of any activity taken by the applicant prior to the conclusion of the NEPA process.

(c) While work on a required environmental review for a program is in progress and an action is not covered by an existing environmental document, agencies shall not undertake in the interim any major Federal action covered by the program that may significantly affect the quality of the human environment unless such action:

(1) Is justified independently of the program;

(2) Is itself accompanied by an adequate environmental review; and

(3) Will not prejudice the ultimate decision on the program. Interim action prejudices the ultimate decision on the program when it tends to determine subsequent development or limit alternatives.

§ 1506.2 Elimination of duplication with State, Tribal, and local procedures.

(a) Federal agencies are authorized to cooperate with State, Tribal, and local agencies that are responsible for preparing environmental documents, including those prepared pursuant to section 102(2)(G) of NEPA.

(b) To the fullest extent practicable unless specifically prohibited by law, agencies shall cooperate with State, Tribal, and local agencies to reduce duplication between NEPA and State, Tribal, and local requirements, including through use of studies, analyses, and decisions developed by State, Tribal, or local agencies. Except for cases covered by paragraph (a) of this section, such cooperation shall include, to the fullest extent practicable:

(1) Joint planning processes.

(2) Joint environmental research and studies.

(3) Joint public hearings (except where otherwise provided by statute).

(4) Joint environmental assessments.

(c) To the fullest extent practicable unless specifically prohibited by law, agencies shall cooperate with State, Tribal, and local agencies to reduce duplication between NEPA and comparable State, Tribal, and local requirements. Such cooperation shall include, to the fullest extent practicable, joint environmental impact statements. In such cases, one or more Federal agencies and one or more State, Tribal, or local agencies shall be joint lead agencies. Where State or Tribal laws or local ordinances have environmental impact statement or similar requirements in addition to but not in conflict with those in NEPA, Federal agencies may cooperate in fulfilling these requirements, as well as those of Federal laws, so that one document will comply with all applicable laws.

(d) To better integrate environmental impact statements into State, Tribal, or local planning processes, environmental impact statements shall discuss any inconsistency of a proposed action with any approved State, Tribal, or local plan or law (whether or not federally sanctioned). Where an inconsistency exists, the statement should describe the extent to which the agency would reconcile its proposed action with the plan or law. While the statement should discuss any inconsistencies, NEPA does not require reconciliation.

§ 1506.3 Adoption.

(a) *Generally.* An agency may adopt a draft or final environmental impact statement, environmental assessment, or portion thereof, or categorical exclusion determination, consistent with this section.

(b) *Environmental impact statements.* An agency may adopt another agency's draft or final environmental impact statement, or portion thereof, provided that the adopting agency conducts an independent review of the statement and concludes that it meets the standards for an adequate statement, pursuant to the regulations in this subchapter and the adopting agency's NEPA procedures.

(1) If the actions covered by the original environmental impact statement and the proposed action are substantially the same, the adopting agency shall republish and file it as a final statement consistent with § 1506.9. If the actions are not substantially the same or the adopting agency determines that the statement may require supplementation consistent with § 1502.9 of this subchapter, the adopting agency shall treat the statement as a draft, supplement or reevaluate it as necessary, and republish and file it, consistent with § 1506.9.

(2) Notwithstanding paragraph (b)(1) of this section, if a cooperating agency does not issue a record of decision jointly or concurrently consistent with § 1505.2 of this subchapter, a cooperating agency may issue a record of decision adopting the environmental impact statement of a lead agency without republication.

(c) *Environmental assessments.* An agency may adopt another agency's environmental assessment, or portion thereof, if the actions covered by the original environmental assessment and the proposed action are substantially the same, and the assessment meets the standards for an adequate environmental assessment under the regulations in this subchapter and the adopting agency's NEPA procedures. If the actions are not substantially the

same or the adopting agency determines that the environmental assessment may require supplementation consistent with § 1501.5(h) of this subchapter, the adopting agency may adopt and supplement or reevaluate the environmental assessment as necessary, issue its finding of no significant impact, and provide notice consistent with § 1501.6 of this subchapter.

(d) *Categorical exclusion determinations.* An agency may adopt another agency's determination that a categorical exclusion applies to a particular proposed action if the action covered by that determination and the adopting agency's proposed action are substantially the same. In such circumstances, the adopting agency shall:

(1) Document its adoption, including the determination that its proposed action is substantially the same as the action covered by the original categorical exclusion determination and that there are no extraordinary circumstances present that require the preparation of an environmental assessment or environmental impact statement; and

(2) Publish its adoption determination on an agency website or otherwise make it publicly available.

(e) *Identification of certain circumstances.* The adopting agency shall specify if one of the following circumstances is present:

(1) The agency is adopting an environmental assessment or environmental impact statement that is not final within the agency that prepared it.

(2) The action assessed in the environmental assessment or environmental impact statement is the subject of a referral under part 1504 of this subchapter.

(3) The environmental assessment or environmental impact statement's adequacy is the subject of a judicial action that is not final.

§ 1506.4 Combining documents.

Agencies should combine, to the fullest extent practicable, any environmental document with any other agency document to reduce duplication and paperwork.

§ 1506.5 Agency responsibility for environmental documents.

(a) *Agency responsibility.* The agency is responsible for the accuracy, scope (§ 1501.3(b) of this subchapter), and content of environmental documents and shall ensure they are prepared with professional and scientific integrity, using reliable data and resources, regardless of whether they are prepared by the agency or a contractor under the supervision and direction of the agency or by the applicant under procedures the agency adopts pursuant to section 107(f) of NEPA and § 1507.3(c)(12) of this subchapter. The agency shall exercise its independent judgment and briefly document its determination that an environmental document meets the standards under NEPA, the regulations in this subchapter, and the agency's NEPA procedures.

(b) *Applicant-provided information.* An agency may require an applicant to submit environmental information for possible use by the agency in preparing an environmental document.

(1) The agency should assist the applicant by outlining the types of information required for the preparation of environmental documents.

(2) The agency shall independently evaluate the information submitted by the applicant and, to the extent it is integrated into the environmental document, shall be responsible for its accuracy, scope, and contents.

(3) An agency may allow an applicant to prepare environmental assessments and environmental impact statements pursuant to its agency procedures, consistent with section 107(f) of NEPA and § 1507.3(c)(12) of this subchapter.

(c) *Agency-directed contractor.* An agency may authorize a contractor to prepare an environmental document under the supervision and direction of the agency.

(1) The agency shall provide guidance to the contractor and participate in and supervise the environmental document's preparation.

(2) The agency shall independently evaluate the environmental document prepared by the agency-directed contractor, shall be responsible for its accuracy, scope, and contents, and document the agency's evaluation in the environmental document.

(3) The agency shall include in the environmental document the names and qualifications of the persons preparing environmental documents, and conducting the independent evaluation of any information submitted or environmental documents prepared by a contractor, such as in the list of preparers for environmental impact statements (§ 1502.18 of this subchapter). It is the intent of this paragraph (c)(3) that acceptable work not be redone, but that it be verified by the agency.

(4) The lead agency or, where appropriate, a cooperating agency shall prepare a disclosure statement for the contractor's execution specifying that the contractor has no financial or other interest in the outcome of the action. Such statement need not include privileged or confidential trade secrets or other confidential business information.

(d) *Information generally.* Nothing in this section is intended to prohibit an agency from requesting any person, including the applicant, to submit information to it or to prohibit any person from submitting information to an agency for use in preparing environmental documents.

§ 1506.6 Methodology and scientific accuracy.

(a) Agencies shall ensure the professional integrity, including scientific integrity, of the discussions and analyses in environmental documents.

(b) In preparing environmental documents, agencies shall use high-quality information, including reliable data and resources, models, and Indigenous Knowledge. Agencies may rely on existing information as well as information obtained to inform the analysis. Agencies may use any reliable data sources, such as remotely gathered information or statistical models. Agencies shall explain any relevant assumptions or limitations of the information or the particular model or methodology selected for use.

(c) Agencies shall identify any methodologies used and shall make explicit reference to the scientific and other sources relied upon for conclusions in the environmental document. Agencies may place discussion of methodology in an appendix.

(d) Where appropriate, agencies shall use projections when evaluating the reasonably foreseeable effects, including climate change-related effects. Such projections may employ mathematical or other models that project a range of possible future outcomes, so long as agencies disclose the relevant assumptions or limitations.

§ 1506.7 Further guidance.

(a) The Council may provide further guidance concerning NEPA and its procedures.

(b) To the extent that Council guidance issued prior to July 1, 2024 is in conflict with this subchapter, the provisions of this subchapter apply.

§ 1506.8 Proposals for legislation.

(a) When developing legislation, agencies shall integrate the NEPA process for proposals for legislation significantly affecting the quality of the human environment with the legislative process of the Congress. Technical drafting assistance does not by itself

constitute a legislative proposal. Only the agency that has primary responsibility for the subject matter involved will prepare a legislative environmental impact statement.

(b) A legislative environmental impact statement is the detailed statement required by law to be included in an agency's recommendation or report on a legislative proposal to Congress. A legislative environmental impact statement shall be considered part of the formal transmittal of a legislative proposal to Congress; however, it may be transmitted to Congress up to 30 days later to allow time for completion of an accurate statement that can serve as the basis for public and Congressional debate. The statement must be available in time for Congressional hearings and deliberations.

(c) Preparation of a legislative environmental impact statement shall conform to the requirements of the regulations in this subchapter, except as follows:

(1) There need not be a scoping process.

(2) Agencies shall prepare the legislative statement in the same manner as a draft environmental impact statement and need not prepare a final statement unless any of the following conditions exist. In such cases, the agency shall prepare and publish the statements consistent with §§ 1503.1 of this subchapter and 1506.10:

(i) A Congressional committee with jurisdiction over the proposal has a rule requiring both draft and final environmental impact statements.

(ii) The proposal results from a study process required by statute (such as those required by the Wild and Scenic Rivers Act (16 U.S.C. 1271 *et seq.*)).

(iii) Legislative approval is sought for Federal or federally assisted construction or other projects that the agency recommends be located at specific geographic locations. For proposals requiring an environmental impact statement for the acquisition of space by the General Services Administration, a draft statement shall accompany the Prospectus or the 11(b) Report of Building Project Surveys to the Congress, and a final statement shall be completed before site acquisition.

(iv) The agency decides to prepare draft and final statements.

(d) Comments on the legislative statement shall be given to the lead agency, which shall forward them along with its own responses to the Congressional committees with jurisdiction.

§ 1506.9 Filing requirements.

(a) Agencies shall file environmental impact statements together with comments and responses with the Environmental Protection Agency, Office of Federal Activities, consistent with the Environmental Protection Agency's procedures.

(b) Agencies shall file statements with the Environmental Protection Agency no earlier than they are also transmitted to participating agencies and made available to the public. The Environmental Protection Agency may issue guidelines to agencies to implement its responsibilities under this section and § 1506.10.

(c) Agencies shall file an adoption of an environmental impact statement with the Environmental Protection Agency (see § 1506.3(b)(1)).

§ 1506.10 Timing of agency action.

(a) The Environmental Protection Agency shall publish a notice in the **Federal Register** each week of the environmental impact statements filed since its prior notice. The minimum time periods set forth in this section are calculated from the date of publication of this notice.

(b) Unless otherwise provided by law, including statutory provisions for combining a final environmental impact statement and record of decision, Federal agencies shall not make or issue a record of decision under § 1505.2 of this subchapter for the proposed action until the later of the following dates:

(1) 90 days after publication of the notice described in paragraph (a) of this section for a draft environmental impact statement.

(2) 30 days after publication of the notice described in paragraph (a) of this section for a final environmental impact statement.

(c) An agency may make an exception to the rule on timing set forth in paragraph (b) of this section for a proposed action in the following circumstances:

(1) Some agencies have formally established administrative review processes (*e.g.,* appeals, objections, protests), which may be initiated prior to or after filing and publication of the final environmental impact statement with the Environmental Protection Agency, that allow other agencies or the public to raise issues about a decision and make their views known. In such cases where a real opportunity exists to alter the decision, the agency may make and record the decision at the same time it publishes the environmental impact statement. This means that the period for administrative review of the decision and the 30-day period set forth in paragraph (b)(2) of this section may run concurrently. In such cases, the environmental impact statement shall explain the timing and the public's right of administrative review and provide notification consistent with § 1506.9; or

(2) An agency engaged in rulemaking under the Administrative Procedure Act or other statute for the purpose of protecting the public health or safety may waive the time period in paragraph (b)(2) of this section, publish a decision on the final rule simultaneously with publication of the notice of the availability of the final environmental impact statement, and provide notification consistent with § 1506.9, as described in paragraph (a) of this section.

(d) If an agency files the final environmental impact statement within 90 days of the filing of the draft environmental impact statement with the Environmental Protection Agency, the minimum 30-day and 90-day periods may run concurrently. However, subject to paragraph (e) of this section, agencies shall allow at least 45 days for comments on draft statements.

(e) The lead agency may extend the minimum periods in paragraph (b) of this section and provide notification consistent with § 1506.9. Upon a showing by the lead agency of compelling reasons of national policy, the Environmental Protection Agency may reduce the minimum periods and, upon a showing by any other Federal agency of compelling reasons of national policy, also may extend the minimum periods, but only after consultation with the lead agency. The lead agency may modify the minimum periods when necessary to comply with other specific statutory requirements (§ 1507.3(d)(4) of this subchapter). Failure to file timely comments shall not be a sufficient reason for extending a period. If the lead agency does not concur with the extension of time, the Environmental Protection Agency may not extend it for more than 30 days. When the Environmental Protection Agency reduces or extends any period it shall notify the Council.

§ 1506.11 Emergencies.

Where emergency circumstances make it necessary to take an action with significant effects without observing the provisions of the regulations in this subchapter, the Federal agency taking the action shall consult with the Council about alternative arrangements for compliance with section 102(2)(C) of NEPA. Agencies and the Council shall limit such arrangements to actions necessary to control the immediate impacts of the emergency; other actions

remain subject to NEPA review consistent with this subchapter. Alternative arrangements do not waive the requirement to comply with the statute, but establish an alternative means for NEPA compliance.

§ 1506.12 Effective date.

The regulations in this subchapter apply to any NEPA process begun after July 1, 2024. An agency may apply the regulations in this subchapter to ongoing activities and environmental documents begun before July 1, 2024.

PART 1507—AGENCY COMPLIANCE

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1507.1 Compliance.

All agencies of the Federal Government shall comply with the regulations in this subchapter. It is the intent of these regulations to allow each agency flexibility in adapting its implementing procedures authorized by § 1507.3 to the requirements of other applicable laws.

§ 1507.2 Agency capability to comply.

Each agency shall be capable (in terms of personnel and other resources) of complying with the requirements of NEPA and the regulations in this subchapter. Such compliance may include use of the resources of other agencies, applicants, and other participants in the NEPA process, but the agency using the resources shall itself have sufficient capability to evaluate what others do for it and account for the contributions of others. Agencies shall:

(a) Designate a senior agency official to be responsible for overall review of agency NEPA compliance, including resolving implementation issues, and a Chief Public Engagement Officer to be responsible for facilitating community engagement in environmental reviews across the agency and, where appropriate, the provision of technical assistance to communities. When the agency is a department, it may be efficient for major subunits (with the consent of the department) to identify senior agency officials or Chief Public Engagement Officers within those subunits, whom the department-level official or Officer oversees.

(b) Fulfill the requirements of section 102(2)(A) of NEPA to utilize a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in planning and in decision making that may have an impact on the human environment.

(c) Identify methods and procedures required by section 102(2)(B) of NEPA to ensure that presently unquantified environmental amenities and values may be given appropriate consideration.

(d) Prepare adequate environmental impact statements pursuant to section 102(2)(C) of NEPA and cooperate on the development of environmental impact statements in the areas where the agency has jurisdiction by law or special expertise or is authorized to develop and enforce environmental standards.

(e) Ensure environmental documents are prepared with professional integrity, including scientific integrity, consistent with section 102(2)(D) of NEPA.

(f) Make use of reliable data and resources in carrying out their responsibilities under NEPA, consistent with section 102(2)(E) of NEPA.

(g) Study, develop, and describe technically and economically feasible alternatives, consistent with section 102(2)(F) of NEPA.

(h) Study, develop, and describe alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources, consistent with section 102(2)(H) of NEPA.

(i) Comply with the requirement of section 102(2)(K) of NEPA that the agency initiate and utilize ecological information in the planning and development of resource-oriented projects.

(j) Fulfill the requirements of sections 102(2)(I), 102(2)(J), and 102(2)(L), of NEPA, and Executive Order 11514, Protection and Enhancement of Environmental Quality, section 2, as amended by Executive Order 11991, Relating to Protection and Enhancement of Environmental Quality.

§ 1507.3 Agency NEPA procedures.

(a) The Council has determined that the revisions to this subchapter as of July 1, 2024 do not affect the validity of categorical exclusions contained in agency NEPA procedures as of this date.

(b) No more than 12 months after July 1, 2024, or 9 months after the establishment of an agency, whichever comes later, each agency shall develop or revise, as necessary, proposed procedures to implement the regulations in this subchapter, facilitate efficient decision making, and ensure that the agency makes decisions in accordance with the policies and requirements of the Act. When the agency is a department, it may be efficient for major subunits (with the consent of the department) to adopt their own procedures.

(1) Each agency shall consult with the Council while developing or revising its proposed procedures and before publishing them in the **Federal Register** for comment. Agencies with similar programs should consult with each other and the Council to coordinate their procedures, especially for programs requesting similar information from applicants.

(2) Agencies shall provide an opportunity for public review and review by the Council for conformity with the Act and the regulations in this subchapter before issuing their final procedures. The Council shall complete its review within 30 days of the receipt of the proposed final procedures. Once in effect, agencies shall publish their NEPA procedures and ensure that they are readily available to the public. Agencies shall continue to review their policies and procedures, in consultation with the Council, and revise them as necessary to ensure full compliance with the purposes and provisions of the Act.

(3) The issuance or update of agency procedures is not subject to NEPA review under this subchapter.

(c) Agency procedures shall:

(1) Designate the major decision points for the agency's programs and actions subject to NEPA, ensuring that the NEPA process begins at the earliest reasonable time, consistent with § 1501.2 of this subchapter, and aligns with the corresponding decision points;

(2) Require that relevant environmental documents, comments, and responses be part of the record in rulemaking and adjudicatory proceedings;

(3) Integrate the environmental review into the decision-making process by requiring that relevant environmental documents, comments, and responses accompany the proposal through existing agency review processes so that decision makers use them in making decisions;

(4) Require that the alternatives considered by the decision maker are encompassed by the range of alternatives discussed in the relevant environmental documents and that the decision maker consider the alternatives described in the environmental documents. If another decision document accompanies the relevant environmental documents to the decision maker, agencies are encouraged

to make available to the public before the decision is made any part of that document that relates to the comparison of alternatives;

(5) Require the combination of environmental documents with other agency documents to facilitate sound and efficient decision making and avoid duplication, where consistent with applicable statutory requirements;

(6) Include the procedures required by § 1501.2(b)(4) of this subchapter (assistance to applicants);

(7) Include specific criteria for and identification of those typical classes of action that normally:

(i) Require environmental impact statements; and

(ii) Require environmental assessments but not necessarily environmental impact statements;

(8) Establish categorical exclusions and identify extraordinary circumstances. When establishing new or revising existing categorical exclusions, agencies shall:

(i) Identify when documentation of a determination that a categorical exclusion applies to a proposed action is required;

(ii) Substantiate the proposed new or revised categorical exclusion with sufficient information to conclude that the category of actions does not have a significant effect, individually or in the aggregate, on the human environment and provide this substantiation in a written record that is made publicly available as part of the notice and comment process (§ 1507.3(b)(1) and (2)); and

(iii) Describe how the agency will consider extraordinary circumstances consistent with § 1501.4(b) of this subchapter;

(9) Include a process for reviewing the agency's categorical exclusions at least every 10 years, which the agency may conduct on a rolling basis, starting with its oldest categorical exclusions;

(10) Include processes for reevaluating and supplementing environmental assessments and environmental impact statements, as appropriate;

(11) Explain where interested persons can get information or status reports on environmental impact statements, environmental assessments, and other elements of the NEPA process; and

(12) Where an agency has applicants that seek its action, include procedures to allow an applicant (including an applicant-directed contractor) to prepare environmental assessments and environmental impact statements under the agency's supervision. Such procedures shall not apply to applicants when they serve as joint lead agencies. Such procedures shall be consistent with § 1506.5(a) and (c) of this subchapter, and at a minimum shall include the following:

(i) Requirements that the agency review and approve the purpose and need (§§ 1501.5(c)(2)(i) or 1502.13 of this subchapter) and reasonable alternatives (§§ 1501.5(c)(2)(ii) or 1502.14 of this subchapter);

(ii) A process for the agency to independently evaluate the applicant-prepared environmental assessment or environmental impact statement; take responsibility for its accuracy, scope, and contents; and document the agency's evaluation in the document; and

(iii) A prohibition on the preparation of a finding of no significant impact or record of decision by applicants.

(d) Agency procedures also may:

(1) Identify activities or decisions that are not subject to NEPA;

(2) Include processes for consideration of emergency actions that would not result in significant effects;

(3) Include specific criteria for providing limited exceptions to the provisions of the regulations in this subchapter for classified proposals. These are proposed actions that are specifically authorized under criteria established by an Executive order or statute to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such Executive order or statute. Agencies may safeguard and restrict from public dissemination environmental assessments and environmental impact statements that address classified proposals in accordance with agencies' own regulations applicable to classified information. Agencies should organize these documents so that classified portions are included as annexes, so that the agencies can make the unclassified portions available to the public; and

(4) Provide for periods of time other than those presented in § 1506.10 of this subchapter when necessary to comply with other specific statutory requirements, including requirements of lead or cooperating agencies.

§ 1507.4 Agency NEPA program information.

(a) To allow agencies and the public to efficiently and effectively access information about NEPA reviews, agencies shall provide for agency websites or other information technology tools to make available documents, relevant notices, and other relevant information for use by agencies, applicants, and interested persons. The website or other such means of publication shall include the agency's NEPA procedures, including those of subunits, and a list of environmental assessments and environmental impact statements that are in development and complete. As appropriate, agencies also should include:

(1) Agency planning and other documents that guide agency management and provide for public involvement in agency planning processes;

(2) Environmental documents;

(3) Agency policy documents, orders, terminology, and explanatory materials regarding agency decision-making processes;

(4) Agency planning program information, plans, and planning tools; and

(5) A database searchable by geographic information, document status, document type, and project type.

(b) Agencies shall provide for efficient and effective interagency coordination of their environmental program websites and other information technology tools, such as use of shared databases or application programming interfaces, in their implementation of NEPA and related authorities.

PART 1508—DEFINITIONS

Sec.

Authority: 42 U.S.C. 4321–4347; 42 U.S.C. 4371–4375; 42 U.S.C. 7609; and E.O. 11514, 35 FR 4247, 3 CFR, 1966–1970, Comp., p. 902, as amended by E.O. 11991, 42 FR 26967, 3 CFR, 1977 Comp., p. 123.

§ 1508.1 Definitions.

The following definitions apply to the regulations in this subchapter. Federal agencies shall use these terms uniformly throughout the Federal Government.

(a) *Act* or *NEPA* means the National Environmental Policy Act, as amended (42 U.S.C. 4321, *et seq.*).

(b) *Affecting* means will or may have an effect on.

(c) *Applicant* means a non-Federal entity, including a project sponsor, that seeks an action by a Federal agency such as granting a permit, license, or financial assistance.

(d) *Authorization* means any license, permit, approval, finding, determination, or other administrative decision issued by an agency that is required or authorized under Federal law in order to implement a proposed action.

(e) *Categorical exclusion* means a category of actions that an agency has determined, in its agency NEPA

procedures (§ 1507.3 of this subchapter) or pursuant to § 1501.4(c) of this subchapter, normally does not have a significant effect on the human environment.

(f) *Communities with environmental justice concerns* means those communities that may not experience environmental justice as defined in paragraph (m) of this section. To assist in identifying communities with environmental justice concerns, agencies may use available screening tools, such as the Climate and Economic Justice Screening Tool and the EJScreen Tool, as appropriate to their activities and programs. Agencies also may develop procedures for the identification of such communities in their agency NEPA procedures.

(g) *Cooperating agency* means any Federal, State, Tribal, or local agency with jurisdiction by law or special expertise with respect to any environmental impact involved in a proposal that has been designated by the lead agency.

(h) *Council* means the Council on Environmental Quality established by title II of the Act.

(i) *Effects* or *impacts* means changes to the human environment from the proposed action or alternatives that are reasonably foreseeable and include the following:

(1) Direct effects, which are caused by the action and occur at the same time and place.

(2) Indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable. Indirect effects may include growth-inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems.

(3) Cumulative effects, which are effects on the environment that result from the incremental effects of the action when added to the effects of other past, present, and reasonably foreseeable actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative effects can result from actions with individually minor but collectively significant effects taking place over a period of time.

(4) Effects include ecological (such as the effects on natural resources and on the components, structures, and functioning of affected ecosystems), aesthetic, historic, cultural, economic, social, or health, such as disproportionate and adverse effects on communities with environmental justice concerns, whether direct, indirect, or cumulative. Effects also include effects on Tribal resources and climate change-related effects, including the contribution of a proposed action and its alternatives to climate change, and the reasonably foreseeable effects of climate change on the proposed action and its alternatives. Effects may also include those resulting from actions which may have both beneficial and adverse effects, even if on balance the agency believes that the effects will be beneficial.

(j) *Environmental assessment* means a concise public document, for which a Federal agency is responsible, for an action that is not likely to have a significant effect or for which the significance of the effects is unknown (§ 1501.5 of this subchapter), that is used to support an agency's determination of whether to prepare an environmental impact statement (part 1502 of this subchapter) or a finding of no significant impact (§ 1501.6 of this subchapter).

(k) *Environmental document* means an environmental assessment, environmental impact statement, documented categorical exclusion determination, finding of no significant impact, record of decision, or notice of intent.

(*l*) *Environmental impact statement* means a detailed written statement that is required by section 102(2)(C) of NEPA.

(m) *Environmental justice* means the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability, in agency decision making and other Federal activities that affect human health and the environment so that people:

(1) Are fully protected from disproportionate and adverse human health and environmental effects (including risks) and hazards, including those related to climate change, the cumulative impacts of environmental and other burdens, and the legacy of racism or other structural or systemic barriers; and

(2) Have equitable access to a healthy, sustainable, and resilient environment in which to live, play, work, learn, grow, worship, and engage in cultural and subsistence practices.

(n) *Environmentally preferable alternative* means the alternative or alternatives that will best promote the national environmental policy as expressed in section 101 of NEPA.

(o) *Extraordinary circumstances* means factors or circumstances that indicate a normally categorically excluded action may have a significant effect. Examples of extraordinary circumstances include potential substantial effects on sensitive environmental resources; potential substantial disproportionate and adverse effects on communities with environmental justice concerns; potential substantial effects associated with climate change; and potential substantial effects on historic properties or cultural resources.

(p) *Federal agency* means all agencies of the Federal Government. It does not mean the Congress, the Judiciary, or the President, including the performance of staff functions for the President in his Executive Office. For the purposes of the regulations in this subchapter, Federal agency also includes States, units of general local government, and Tribal governments assuming NEPA responsibilities from a Federal agency pursuant to statute.

(q) *Finding of no significant impact* means a document by a Federal agency briefly presenting the agency's determination that and reasons why an action, not otherwise categorically excluded (§ 1501.4 of this subchapter), will not have a significant effect on the human environment and for which an environmental impact statement therefore will not be prepared.

(r) *Human environment* or *environment* means comprehensively the natural and physical environment and the relationship of present and future generations with that environment. (*See also* the definition of ''effects'' in paragraph (i) of this section.)

(s) *Joint lead agency* means a Federal, State, Tribal, or local agency designated pursuant to § 1501.7(c) that shares the responsibilities of the lead agency for preparing the environmental impact statement or environmental assessment.

(t) *Jurisdiction by law* means agency authority to approve, veto, or finance all or part of the proposal.

(u) *Lead agency* means the Federal agency that proposes the agency action or is designated pursuant to § 1501.7(c) for preparing or having primary responsibility for preparing the environmental impact statement or environmental assessment.

(v) *Legislation* means a bill or legislative proposal to Congress developed by a Federal agency, but does not include requests for appropriations or legislation recommended by the President.

(w) *Major Federal action* or *action* means an action that the agency carrying out such action determines is subject to substantial Federal control and responsibility.

(1) Examples of major Federal actions generally include:

(i) Granting authorizations, including permits, licenses, rights-of-way, or other authorizations.

(ii) Adoption of official policy, such as rules, regulations, and interpretations adopted under the Administrative Procedure Act, 5 U.S.C. 551 *et seq.,* or other statutes; implementation of treaties and international conventions or agreements, including those implemented pursuant to statute or regulation; formal documents establishing an agency's policies that will result in or substantially alter agency programs.

(iii) Adoption of formal plans, such as official documents prepared or approved by Federal agencies, which prescribe alternative uses of Federal resources, upon which future agency actions will be based.

(iv) Adoption of programs, such as a group of concerted actions to implement a specific policy or plan; systematic and related agency decisions allocating agency resources to implement a specific statutory program or executive directive.

(v) Approval of or carrying out specific agency projects, such as construction or management activities.

(vi) Providing more than a minimal amount of financial assistance, including through grants, cooperative agreements, loans, loan guarantees, or other forms of financial assistance, where the agency has the authority to deny in whole or in part the assistance due to environmental effects, has authority to impose conditions on the receipt of the financial assistance to address environmental effects, or otherwise has sufficient control and responsibility over the subsequent use of the financial assistance or the effects of the activity for which the agency is providing the financial assistance.

(2) Major Federal actions do not include the following:

(i) Non-Federal actions:

(A) With no or minimal Federal funding; or

(B) With no or minimal Federal involvement where the Federal agency cannot control the outcome of the project;

(ii) Funding assistance solely in the form of general revenue sharing funds that do not provide Federal agency compliance or enforcement responsibility over the subsequent use of such funds;

(iii) Loans, loan guarantees, or other forms of financial assistance where a Federal agency does not exercise sufficient control and responsibility over the subsequent use of such financial assistance or the effects of the action;

(iv) Business loan guarantees provided by the Small Business Administration pursuant to section 7(a) or (b) and of the Small Business Act (15 U.S.C. 636(a) and (b)), or title V of the Small Business Investment Act of 1958 (15 U.S.C. 695 through 697g);

(v) Judicial or administrative civil or criminal enforcement actions;

(vi) Extraterritorial activities or decisions, which means agency activities or decisions with effects located entirely outside of the jurisdiction of the United States;

(vii) Activities or decisions that are non-discretionary and made in accordance with the agency's statutory authority; and

(viii) Activities or decisions for projects approved by a Tribal Nation that occur on or involve land held in trust or restricted status by the United States for the benefit of that Tribal Nation or by the Tribal Nation when such activities or decisions involve no or minimal Federal funding or other Federal involvement.

(x) *Matter* means for purposes of part 1504 of this subchapter:

(1) With respect to the Environmental Protection Agency, any proposed legislation, project, action, or regulation as those terms are used in section 309(a) of the Clean Air Act (42 U.S.C. 7609).

(2) With respect to all other agencies, any proposed major Federal action to which section 102(2)(C) of NEPA applies.

(y) *Mitigation* means measures that avoid, minimize, or compensate for adverse effects caused by a proposed action or alternatives as described in an environmental document or record of decision and that have a connection to those adverse effects. Mitigation includes, in general order of priority:

(1) Avoiding the adverse effect altogether by not taking a certain action or parts of an action.

(2) Minimizing the adverse effect by limiting the degree or magnitude of the action and its implementation.

(3) Rectifying the adverse effect by repairing, rehabilitating, or restoring the affected environment.

(4) Reducing or eliminating the adverse effect over time by preservation and maintenance operations during the life of the action.

(5) Compensating for the adverse effect by replacing or providing substitute resources or environments.

(z) *NEPA process* means all measures necessary for compliance with the requirements of section 2 and title I of NEPA.

(aa) *Notice of intent* means a public notice that an agency will prepare and consider an environmental impact statement or, as applicable, an environmental assessment.

(bb) *Page* means 500 words and does not include citations, explanatory maps, diagrams, graphs, tables, and other means of graphically displaying quantitative or geospatial information.

(cc) *Participating agency* means a Federal, State, Tribal, or local agency participating in an environmental review or authorization of an action.

(dd) *Participating Federal agency* means a Federal agency participating in an environmental review or authorization of an action.

(ee) *Programmatic environmental document* means an environmental impact statement or environmental assessment analyzing all or some of the environmental effects of a policy, program, plan, or group of related actions.

(ff) *Proposal* means a proposed action at a stage when an agency has a goal, is actively preparing to make a decision on one or more alternative means of accomplishing that goal, and can meaningfully evaluate its effects. A proposal may exist in fact as well as by agency declaration that one exists.

(gg) *Publish* and *publication* mean methods found by the agency to efficiently and effectively make environmental documents and information available for review by interested persons, including electronic publication, and adopted by agency NEPA procedures pursuant to § 1507.3 of this subchapter.

(hh) *Reasonable alternatives* means a reasonable range of alternatives that are technically and economically feasible, and meet the purpose and need for the proposed action.

(ii) *Reasonably foreseeable* means sufficiently likely to occur such that a person of ordinary prudence would take it into account in reaching a decision.

(jj) *Referring agency* means the Federal agency that has referred any matter to the Council after a determination that the matter is unsatisfactory from the standpoint of public health or welfare or environmental quality.

(kk) *Scope* consists of the range and breadth of actions, alternatives, and effects to be considered in an environmental impact statement or environmental assessment.

(*ll*) *Senior agency official* means an official of assistant secretary rank or higher (or equivalent) that is designated for overall agency NEPA compliance, including resolving implementation issues.

(mm) *Significant effects* means adverse effects that an agency has

identified as significant based on the criteria in § 1501.3(d) of this subchapter.

(nn) *Special expertise* means statutory responsibility, agency mission, or related program experience.

(oo) *Tiering* refers to the process described in § 1501.11 of this subchapter by which an environmental document may rely on an existing and broader or more general environmental document.

[Docket No. TSA–2004–19147; Amendment No. 1552–1]

RIN 1652–AA35

Flight Training Security Program

AGENCY: Transportation Security Administration, DHS.

ACTION: Final rule.

SUMMARY: The Transportation Security Administration (TSA) is finalizing the 2004 interim final rule (IFR) that established the Flight Training Security Program (FTSP) (formerly known as the Alien Flight Student Program). The FTSP implements a statutory requirement under the Aviation and Transportation Security Act, as amended by the Vision 100–Century of Aviation Reauthorization Act, to prevent flight schools from providing flight training to any individuals who are not U.S. citizens or nationals, and who have not been vetted by the Federal Government to determine whether the flight training candidate is a security threat. The rule also requires security awareness training for certain flight training provider employees. In finalizing this rule, TSA addresses the comments on the IFR, recommendations from the Aviation Security Advisory Committee, and additional comments received during a reopened comment period. TSA also is eliminating years of programmatic guidance and clarifications by codifying current and relevant information into the regulatory text. Where possible, TSA is modifying the program to make it more effective and less burdensome. Finally, TSA is making other technical modifications to its regulations to consolidate in one location the agency's inspection authority.

DATES:

Effective Date: This rule is effective July 30, 2024.

Compliance Date: Flight training providers and individuals subject to the requirements of this rule must comply with these sections by July 30, 2024. Until this date, all regulated entities must continue to comply with the requirements in the IFR.

FOR FURTHER INFORMATION CONTACT:

Technical questions: D. Julean Thorpe, Enrollment Services and Vetting Programs, Vetting Programs Division, TSA; telephone: (571) 227–1932; email: *FTSP.help@tsa.dhs.gov.*

Legal questions: David M.G. Ross, Office of Chief Counsel, TSA; telephone: (571) 227–2465; email: *TSA-OCC-R&SS@tsa.dhs.gov.*

SUPPLEMENTARY INFORMATION:

Availability of Rulemaking Document

You can find an electronic copy of this rulemaking using the internet by accessing the Government Publishing Office's web page at *https://www.govinfo.gov/app/collection/FR/* to view the daily published **Federal Register** edition or accessing the Office of the Federal Register's web page at *https://www.federalregister.gov.* Copies are also available by contacting the individual identified for ''General Questions'' in the **FOR FURTHER INFORMATION CONTACT** section. Make sure to identify the docket number of this rulemaking.

Small Entity Inquiries

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires TSA to comply with small entity requests for information and advice about compliance with statutes and regulations within TSA's jurisdiction. Any small entity that has a question regarding this document may contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. Persons can obtain further information regarding SBREFA on the Small Business Administration's web page at *https://advocacy.sba.gov/resources/reference-library/sbrefa/.*

I. Overview

A. Purpose of This Rulemaking

This rulemaking finalizes an IFR issued in 2004.[1] The purpose of this rulemaking is to prevent non-U.S. citizens[2] who are potential threats to aviation or national security from receiving flight training. Since issuance of the 2004 IFR, TSA's vetting of flight training candidates has identified a number of individuals as potential security threats,[3] including some certificated[4] pilots.

This final rule addresses all public comments received on the IFR, both through the initial comment period in 2004 and a reopened comment period in 2018.[5] TSA is also addressing recommendations TSA received from regulated persons, other Federal organizations, and advisory committees. Finally, TSA is eliminating more than a decade of previously issued clarifications and interpretations, either by addressing them in the preamble or through changes to the regulatory text. All previously issued clarifications and interpretations are superseded by this rulemaking.

In addition, Executive Order (E.O.) 13563 of January 18, 2011 (Improving Regulation and Regulatory Review), requires agencies to periodically review existing regulations to identify requirements that ''may be outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline, expand, or repeal them, in accordance with what has been learned.''[6] Consistent with these requirements, this final rule provides an overall reduction in the burden of compliance through several modifications that will reduce the regulatory burden without negatively affecting security. For an

[1] *See* 69 FR 56324 (Sep. 20, 2004), *codified at* 49 CFR part 1552.

[2] The enabling statute for this rule applies to aliens as the term is defined in 8 U.S.C. 1101(a)(3). *See* 49 U.S.C. 44939. Section 1101(a)(3) defines an ''alien'' as ''any person who is not a citizen or national of the United States.'' Section 1101(a)(22) defines a ''national of the United States'' as ''(A) a citizen of the United States, or (B) a person who, though not a citizen of the United States, owes permanent allegiance to the United States.'' Similarly, 8 U.S.C. 1401 *et seq.* sets the criteria for ''nationals and citizens of the United States.'' TSA historically adopted the terminology from the status, using the term ''alien'' in program documents, and originally titling the program as the Alien Flight Student Program. In 2021, the President directed DHS to cease using the term ''alien,'' recommending the term ''non-citizen'' in its place. Some candidates in the FTSP program have taken offense at being referred to as ''non-citizens.'' With this rulemaking, TSA is modifying 49 CFR part 1552 to use the term ''non-U.S. citizen'' for any individual who is an ''alien'' as defined in 8 U.S.C. 1101(a)(3), is not a ''national'' of the United States as defined in 8 U.S.C. 1101(a)(22), or who does not meet the requirements to be a national or citizen of the United States under 8 U.S.C. 1401 *et seq.* Throughout this preamble and through revisions to the rule, the term ''non-U.S. citizen'' means a person who is not a U.S. citizen or U.S. national.

[3] TSA uses the term ''threat'' in all of its vetting programs, which is an essential element of the risk that an individual may pose to aviation, transportation security, or national security. The statute requiring the FTSP program uses the term ''risk,'' *see id.,* which is a broader term that incorporates ''threat'' as used by TSA. DHS generally sees risk as a function of threat, vulnerability and consequences.

[4] ''Certificated'' is a term used by the FAA for an individual who has been granted an FAA certificate.

[5] *See* 83 FR 23238 (May 18, 2018).

[6] *See* Sec. 6 of E.O. 13563.

overview of these modifications, see section I.D.

B. Statutory and Rulemaking History

1. Introduction

Several of the terrorists who hijacked planes used to commit the terrorist attacks on September 11, 2001, received flight training in the United States.[7] To address this security vulnerability, Congress passed the Aviation and Transportation Security Act (ATSA), which required those who are not U.S. citizens or nationals (hereafter, referred to collectively as ''non-U.S. citizens'') to undergo vetting in order to receive flight training in the United States.[8] Specifically, section 113 of ATSA included two prerequisites for providing flight training to non-U.S. citizens: (1) the flight training provider must first notify the Attorney General that the individual requested such training and must submit information about the individual to the Attorney General; and (2) the Attorney General must determine that the individual does not present a risk to aviation or national security.[9] ATSA also required the training provider to give the Attorney General information regarding the individual's identity in the form required by the Attorney General.[10] This provision gave the Attorney General the discretion to request a wide variety of information from these individuals in order to determine whether they presented a risk[11] to aviation or national security.

On February 13, 2003, the Department of Justice (DOJ) issued a final rule implementing the ATSA requirement.[12] The DOJ rule applied to individual flight training providers, training centers, certificated carriers, and flight schools (collectively referred to as ''providers''), including those located in countries other than the United States, if they provided training leading to a U.S. license, certification, or rating.[13]

The DOJ rule also required a provider to submit certain identifying information for each non-U.S. citizen (referred to as ''candidates'') and other individuals designated by the Administrator of TSA[14] before providing training to the candidate. Using the information provided, which included fingerprints and financial information, DOJ performed a risk assessment. Consistent with the requirements in section 113 of ATSA, if DOJ did not complete a candidate's risk assessment within the time period designated in the statute, the provider could initiate the candidate's training. If the training provider received subsequent notification that the candidate presented a risk to aviation or national security, the provider was required to immediately cease the candidate's training.

Beginning in December 2003, the following series of legislative actions substantially modified the requirements in ATSA.

- The Vision 100-Century of Aviation Reauthorization Act (the Vision 100 Act)[15] transferred the function of vetting candidates from the Attorney General to the Secretary of the Department of Homeland Security (DHS)[16] and required DHS to issue an IFR to implement additional requirements added to 49 U.S.C. 44939.[17] These amendments included authority for DHS to charge for the costs of conducting the required vetting.[18]
- Section 520 of the Department of Homeland Security Appropriations Act, 2004 required the collection of fees authorized by the Vision 100 Act.[19]
- Section 543 of the Department of Homeland Security Appropriations Act, 2009, further amended 6 U.S.C. 469 to ensure the scope of the program includes both initial and recurrent training.[20] This law required DHS to establish a process to properly identify individuals who are non-U.S. citizens who receive recurrent flight training, and to ensure that those individuals do not pose a risk to aviation or national security. These amendments also authorize DHS to impose reasonable fees to recoup the cost of vetting candidates seeking recurrent training.[21]

ATSA created TSA as a component of the Department of Transportation. Section 403(2) of the Homeland Security Act of 2002 (HSA)[22] transferred all functions related to transportation security, including those of the Secretary of Transportation and the Under Secretary of Transportation for Security, to the Secretary of Homeland Security. Pursuant to DHS Delegation Number 7060.2, the Secretary delegated to the Administrator of TSA, subject to the Secretary's guidance and control, the authority vested in the Secretary with respect to the TSA, including the authority in section 403(2) of the HSA.

TSA established the FTSP by issuing an IFR with request for comments on September 20, 2004.[23] The IFR implemented many of the same requirements as the program previously administered by DOJ pursuant to the statutory requirements in 49 U.S.C. 44939. Consistent with section 520 of the Department of Homeland Security Appropriations Act of 2004, the IFR also set fees to cover costs incurred by the program.[24] As required by section 543 of the Department of Homeland Security Appropriations Act of 2009, TSA subsequently published a notice in the **Federal Register** announcing an additional fee to cover processing of a security threat assessment (STA)[25] for each candidate engaged in recurrent training.[26]

2. Imposing Fees for the FTSP

As noted above, TSA is authorized to collect fees under 49 U.S.C. 44939 and is required to collect fees to cover the costs of vetting under 6 U.S.C. 469. To comply with 6 U.S.C. 469, which requires TSA to fund vetting and credentialing programs through user fees, TSA charges fees for candidates who receive an STA under the FTSP.

TSA determined the fees for the FTSP program in accordance with Office of Management and Budget (OMB)

Circular No. A–25. The fees are set to recover a share of the service costs from all individuals that use a particular service, and a description of the processes that went into estimating the proposed fees is available in the Fee Report in the rulemaking docket. TSA may increase or decrease the fees described in this regulation to achieve efficiencies or to accommodate inflation, changes in contractual services, changes in populations, or other factors following publication of the final rule. TSA will publish a notice in the **Federal Register** notifying the public of any fee changes and will update fee information on the website dedicated to this program.

TSA incurs costs associated with performing STAs, assessing comparable STAs, conducting expedited processing, requesting Federal Bureau of Investigation (FBI) reviews, issuing Determinations of Eligibility, maintaining the FTSP Portal, and processing provider notifications of flight training events. TSA expends resources to establish, operate, and maintain the technology to facilitate the STA process for candidates and provider compliance with this program entirely through the FTSP Portal. In addition, TSA assumes in its analysis that some online interactions will result in customer service expenses.

A candidate pays a single fee that consolidates all fees assessed by TSA, as presented in section II.C.2. The FTSP fee structure is designed to cover TSA's anticipated costs of conducting and administering STA services over the 5-year duration of each STA. TSA calculated the proposed fees based on estimates for the cost of each respective service, pertinent to the expected number of candidates that will benefit from the services. The following summarizes the costs consolidated into the fee:

- Once candidate information is captured and records are established, TSA incurs costs to run the information through the various databases accessed for the STA. TSA incurs costs to construct, maintain, and operate the information technology platform that enables comparisons of applicant information to multiple intelligence, immigration and law enforcement databases, and other information sources.
- TSA incurs additional expenses to evaluate the information received from these sources, make decisions as to whether a candidate may pose a security threat, correct records with the candidate when necessary, and communicate with other entities, such as the candidate's employer, flight training provider, or governmental agencies.
- Additional costs include staffing for this service to (1) adjudicate the results of Criminal History Records Checks (CHRCs); (2) conduct immigration checks; (3) provide candidates an opportunity to correct their records; and (4) process the recordkeeping and training event notifications required by the program.
- Finally, the fee includes the FBI's fee to process CHRCs. TSA collects this fee and forwards it to the FBI.

To properly recover the cost of this vetting service, TSA set the FTSP standard fee at $140, and the FTSP reduced fee at $125. As discussed more fully in section II.C.2.b., candidates may be eligible for a reduced fee if they already completed a comparable STA recognized by TSA.[27]

3. Evolution of Flight Training Security

In late 2004 and early 2005, after the IFR took effect, TSA held six meetings with industry representatives subject to the regulatory requirements. In response to questions and concerns raised during these meetings and through public comments submitted on the IFR, TSA issued clarifications, interpretations, exemptions, and other guidance documents.[28] This final rule reflects TSA's review of these previously issued documents and statements, for both internal and external audiences, and determinations of whether to make them permanent. As a result of this review, any previously issued interpretations of the provisions of 49 CFR part 1552 published on or before the effective date of this final rule are withdrawn and superseded by this rulemaking.

In July 2012, the Government Accountability Office (GAO) reviewed the program and provided the following recommendations to TSA: (1) identify instances where non-U.S. citizens receive Federal Aviation Administration (FAA) airman certificates without first undergoing an STA and the reasons for these occurrences; (2) strengthen controls to prevent future occurrences; and (3) establish a pilot program to check the program's data against DHS data on candidates' admissibility status to help detect immigration violations by non-U.S. citizen flight students (see discussion in section II.D.).[29] DHS concurred with these recommendations. TSA adopted the following corrective actions that continue to operate under this final rule: TSA and the FAA exchange data under a memorandum of understanding, and TSA sends a candidate's information to the U.S. Customs and Border Protection (CBP) Arrival and Departure Information System (ADIS) to assist CBP in determining a candidate's purpose for entering the United States when they arrive at the U.S. border. *See* discussion in section II.D.

As discussed more fully in section II.D.1, TSA also works directly with U.S. Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (USCIS), and CBP to share information and address unique circumstances regarding candidates. TSA refers candidates who appear to be engaged in unauthorized employment, criminal violations, and/or visa overstays to the ICE Counterterrorism and Criminal Exploitation Unit (CTCEU). CTCEU reviews the candidate's primary purpose for being in the United States and provides that information to TSA to assist TSA in making a Determination of Eligibility for the candidate. TSA uses the USCIS Systematic Alien Verification for Entitlements (SAVE) program and the DHS Automated Targeting System (ATS), administered by CBP to resolve immigration concerns.[30] GAO closed its recommendations as a result of these actions.[31]

4. Aviation Security Advisory Committee's Recommendations

Since issuance of the IFR, TSA has also engaged regularly with the Aviation Security Advisory Committee (ASAC).[32]

[27] *See* fee study and Regulatory Impact Analysis posted on the public docket at *https://www.regulations.gov/docket?D=TSA-2004-19147.*

[28] A list of these documents may be found under Supporting & Related Material in the public docket for the FTSP program, at *https://www.regulations.gov/docket/TSA-2004-19147/document?documentTypes=Supporting%20%26%20Related%20Material.*

[30] FTSP uses CBP's ATS—Unified Passenger module to compare candidate information against law enforcement, intelligence, and other data. TSA shares information with CBP through ADIS to support admissibility determinations of approved flight training candidates.

[31] The use of information related to the FTSP is covered by the Transportation Security Threat Assessment System of Records Notice (SORN), most recently updated at 79 FR 46862 (Aug. 11, 2014). TSA also shares information within DHS in compliance with section (b)(1) of the Privacy Act of 1974 (5 U.S.C. 552a (Privacy Act).

[32] The ASAC is an official advisory body established under 49 U.S.C. 44946. The ASAC is composed of representatives from air carriers, all-cargo air transportation, indirect air carriers, labor organizations representing air carrier employees, labor organizations representing transportation security officers, aircraft manufacturers, airport operators, airport construction and maintenance contractors, labor organizations representing employees of airport construction and maintenance contractors, general aviation, privacy organizations,

Continued

The Aviation Security Stakeholder Participation Act of 2014 established the ASAC as an advisory committee with whom the Administrator of TSA consults, as appropriate.[33] In 2016, the ASAC submitted five recommendations to the Administrator regarding the FTSP, including: (1) moving from an event-based STA to a time-based STA; (2) addressing recordkeeping requirements between parties to wet and dry aircraft and simulator leases; (3) requiring the use of the FTSP program for Department of Defense (DoD) endorsees; (4) clarifying which events require an STA; and (5) clarifying the impact of visa applicability on flight training.[34] This final rule addresses each of these recommendations.

5. Reopening of Comment Period

In 2018, TSA reopened the comment period on the IFR to ensure TSA adequately considered the current operational environment when finalizing the IFR, to solicit updated comments following the original comment period in 2004, and to solicit comments on the substance of the 2016 ASAC recommendations related to the FTSP that were under consideration.[35] In particular, TSA requested comments on six issues: (1) costs and benefits of requiring flight training providers to undergo an STA; (2) impact of moving from an event-based to time-based STA requirement; (3) appropriate compliance requirements for parties involved in leases of aircraft, aircraft simulators, and other flight training equipment; (4) impact of allowing regulated parties to use electronic recordkeeping, in whole or in part, to establish compliance; (5) implications of refining the scope of STAs for candidates who train with FAA-certified flight instructors operating outside of the United States; and (6) sources of data on the number or percentage of flight schools that only train U.S. citizens. TSA also requested the submission of any other data or information available that it should consider during the review of the IFR. TSA requested new comments in these areas to expand upon issues raised by one or more commenters in response to the IFR in 2004. See section IV for additional details on the comments received.

Although 5 years have passed since TSA last solicited comments, TSA does not believe the policymaking landscape for this rule has shifted substantively since 2018. The policy changes in this rule are supported by comments received on the IFR, or by comments received following the 2018 reopened comment period. TSA tailored the scope and content of the final rule to reflect only those changes that are supported by the public record.

C. Organization of Final Rule

The IFR divided the requirements into two subparts: flight training and security awareness training. To provide greater clarity, this final rule consists of three subparts. Subpart A outlines the scope of the regulation, defines terms, and prescribes general requirements applicable to all flight training providers. Subpart B prescribes requirements applicable to all candidates regarding STAs and associated fees. Subpart C prescribes requirements applicable to all flight training providers concerning notification and management of flight training events. Table 1 provides a distribution table for changes to current 49 CFR part 1552.

TABLE 1—DISTRIBUTION TABLE

IFR	Final rule
1552.1(a);1552.21(a) (scope)	1552.1
1552.1(b); 1552.21(b) (definitions)	1552.3
1552.3(a)–(d) and (k) (notification of flight training events)	1552.7 and 1552.51
1552.3(a)–(d) and (k) (submission of information)	1552.31
1552.3(a)–(d), 1552.5 (fee)	1552.39
1552.3(e) (interruption of flight training)	1552.31
1552.3(f) (fingerprints)	1552.31
1552.3(g)(1) (false statements)	1552.19
1552.3(g)(2) (preliminary approval)	1552.35
1552.3(h) (U.S. citizens and DoD endorsees)	1552.7
1552.3(i)(1) and 1552.25(a) (recordkeeping)	1552.15
1552.3(i)(2) and 1552.25(c) (inspection)	1503.207
1552.3(j) (grandfathered candidates)	(removed)
1552.23 (security awareness training)	1552.13

D. Regulatory Relief

With publication of this final rule, TSA is modifying the FTSP regulations to reduce the regulatory burden of compliance. Consistent with E.O. 13563 of January 18, 2011,[36] and TSA's statutory mandate under 49 U.S.C. 114(l)(3), TSA has considered the impact of the costs and the security benefits and determined that burden reduction modifications can be made to the program without negatively affecting the appropriate security posture or failing to execute the statutory mandates. Three changes to the regulatory requirements will result in notable cost savings to the industry: (1) modifying the refresher security awareness training[37] from an annual to a biennial requirement; (2) providing for electronic recordkeeping and a dedicated website (the FTSP Portal);

the travel industry, airport-based businesses (including minority-owned small businesses), businesses that conduct security screening operations at airports, aeronautical repair stations, passenger advocacy groups, the aviation security technology industry (including screening technology and biometrics), victims of terrorist acts against aviation, and law enforcement and security experts. The Administrator of TSA consults with the ASAC, as appropriate, in developing, refining, and implementing policies, programs, rulemaking, and security directives.

[33] Public Law 113–238 (128 Stat. 2842; Dec. 18, 2014), *as codified at* 49 U.S.C. 44946.

Note that neither the minutes nor this rulemaking contain or address recommendations that include Sensitive Security Information under 49 CFR part 1520.

[35] *See* 83 FR 23238 (May 18, 2018).

[36] *See supra* note 6.

[37] In the IFR, the term ''recurrent training'' applied both to flight training for candidates and security awareness training for employees. Through this final rule, TSA is modifying the security awareness training terminology to require ''refresher training'' rather than ''recurrent training'' to distinguish the two requirements.

and (3) moving from an event-based STA to a time-based STA.

1. Reducing Frequency of Security Awareness Training

The Vision 100 Act includes a requirement for the FTSP to mandate security awareness training for flight training provider employees to ''increase their awareness of suspicious circumstances and activities of individuals enrolling in or attending flight school.'' [38] The IFR required this training to be provided on an annual basis. In response to industry feedback as discussed further in section IV.C.5.b., the final rule has reduced the required frequency of security awareness training to provide economic and logistical relief to flight training providers, and to provide more flexibility in how they schedule refresher training. Specifically, the final rule replaces the IFR's annual security awareness training requirement with a requirement for all covered flight training provider employees to receive initial training within 60 days of hiring, and a biennial refresher training requirement thereafter. TSA discusses these changes further in section II.B.6. A provider may conduct refresher training on or before the 2-year anniversary of the previous initial training or the last refresher training.

2. Electronic Recordkeeping and FTSP Portal

At the industry's request, TSA provided an online portal that flight training providers use to meet the requirement to notify TSA of a candidate's proposed and actual flight training events. This capability was first provided in 2004 and updated in 2007. Today, all flight training providers use TSA's online portal; no candidates or flight training providers submit applications via traditional paper-based methods. The final rule codifies this capability as mandatory for this purpose.

This modification is consistent with multiple recommendations from industry to establish an electronic storage capability for provider accounts, to ease their storage costs and time burdens. In addition to informal comments on this issue since the rule was first issued, the recommendation was formally submitted to TSA in the comments during the reopened comment period in 2018, requesting that TSA ''allow regulated parties to use electronic recordkeeping, in whole or in part, to establish compliance.'' [39]

In response to these comments, and generally recognizing advancements in electronic recordkeeping since the IFR was published, TSA has enhanced its web-based capabilities to facilitate submission of information and recordkeeping compliance. Through this rule, TSA is expanding the availability of this option for both required and optional use. Providing this option recognizes that flight training providers may realize cost and time savings and reduce or eliminate duplicative and costly physical and electronic recordkeeping by storing and maintaining their records on the FTSP Portal. Section V describes TSA's analysis of estimated cost savings for providers as a result of these changes.

TSA may also benefit from the enhanced capabilities of the FTSP Portal to increase efficiency and effectiveness in monitoring compliance. Ready availability of stored records also provides TSA with more immediate access to information about a candidate who has been identified as a potential threat.

3. Time-Based STAs

Currently, an STA is required for each training event. Consistent with recommendations and new vetting capabilities, under § 1552.31(d) of this final rule, an STA is valid for up to 5 years. See IV.C.5.B. for a more detailed discussion. This change from an event-based STA to a time-based STA is possible due to significant improvements in TSA's ability to conduct recurrent vetting of candidates, which enables TSA to review a candidate's record on an on-going basis. As discussed more fully in section II.D., TSA conducts recurrent vetting of candidates through several intelligence databases that include terrorist watchlists and can conduct continuous CHRCs of candidates for disqualifying offenses through the FBI's Rap Back service. This change aligns the FTSP with other TSA programs, such as TSA PreCheck®, Transportation Worker Identification Credential (TWIC®), and Hazardous Materials Endorsement (HME).[40]

Recurrent vetting has several benefits that reduce costs and enhance security. First, recurrent vetting enables TSA to ensure security while allowing for a time-based STA that can be valid for a 5-year period. Second, as discussed more fully in section II.D.4., recurrent vetting allows TSA to continually vet a candidate and revoke the approval if and when disqualifying information emerges. Third, recurrent vetting enables TSA to reduce the costs of the rule by reducing delays in processing training requests and supporting the portability or sharing of a candidate's Determination of Eligibility among flight training providers.

This modification will reduce costs and save time for individuals who have multiple training events over a 5-year period. Rather than paying a fee for each vetting event, candidates will pay a single fee for a 5-year STA. As many candidates will have multiple training events within a 5-year period, the time-based STA is likely to reduce the total amount of fees most candidates must pay over time.[41] Section 1552.51(f) also allows expedited processing for candidates that hold type ratings [42] and candidates who are lawful permanent residents of the United States. As discussed in more detail in sections IV.C.5.b.–d., TSA received many comments indicating that this change would likely foster industry growth.

E. Summary of Other Modifications

This final rule includes additional modifications that will provide benefits to the flight training industry and enhance security. First, the final rule incorporates previously issued clarifications concerning what type of training is covered by the regulation while eliminating the four weight-based categories of training identified by the IFR. TSA's response to comments in section IV.C.4.a. provides more information on these revisions. Second, the rule clarifies who is responsible for maintaining records of lease arrangements. Section II.A.2. and TSA's response to comments in section IV.C.2.c. provides more information on these revisions. Third, the final rule aligns this program with TSA's other transportation security programs by requiring flight training providers to designate a Security Coordinator to serve as a security liaison with TSA. Section II.B.5. provides more information on these revisions.

TSA also is consolidating provisions found throughout TSA's regulations relating to inspections, as well as

[38] *See* 49 U.S.C. 44939(i).

[39] Four major industry organizations and one major flight training provider posted comments using this same explanation of the request. All comments are available in the docket to this rulemaking (TSA–2004–19147) at *www.regulations.gov*.

[40] As discussed more fully in section II.C.2.b. (and the fee study and Regulatory Impact Analysis (RIA) in the docket for this rulemaking), TSA provides a reduced fee for individuals who have completed a comparable STA, as determined by TSA. *See also* § 1552.37.

[41] *Id.*

[42] ''Type rating'' means an endorsement on a pilot certificate indicating the make and type of aircraft that the individual has the skill or authorization to operate, and that the holder of the certificate has completed the appropriate training and testing required by a civil or military aviation authority.

harmonizing and consolidating terminology. TSA is mandated to: (1) enforce its regulations and requirements; (2) oversee the implementation and ensure the adequacy of security measures; and (3) inspect, maintain, and test security facilities, equipment, and systems for all modes of transportation.[43] Through this regulation, TSA is making a technical amendment to consolidate inspection requirements in one location, a new § 1503.207 in 49 CFR part 1503, which is that part of TSA's regulations that specifically focuses on investigative and enforcement procedures applicable to all of TSA's regulatory requirements. TSA also is removing the definition of ''Public transportation agency'' from § 1503.103. TSA added the definition of a public transportation agency to § 1500.3 through a separate rulemaking, making the definition in § 1503.103 unnecessary.[44]

TSA also is making technical amendments to consolidate into a single location several definitions applicable to the FTSP that are also used in other parts of TSA's regulations. These amendments standardize and harmonize the meaning of the following terms, without substantively changing their meaning: ''Citizen of the United States,'' ''Day,'' ''Lawful Permanent Resident,'' ''National of the United States,'' and ''Non-U.S. Citizen.'' [45]

In each case, the harmonized definition added to § 1500.3 reflects TSA's long-standing interpretation of the term, and the clearest expression of its meaning. This final rule also removes these terms from the definition sections of other parts of 49 CFR chapter XII, as appropriate.

TSA also revised and added definitions to § 1552.3 that further clarify regulatory requirements and minimize ambiguity. Revised definitions include ''Aircraft Simulator,'' ''Candidate,'' ''Demonstration flight for marketing purposes,'' ''Flight Training,'' and ''Recurrent training.'' New definitions include ''Determination of Eligibility,'' Determination of Ineligibility,'' ''DoD,'' ''DoD Endorsee,'' ''Flight Training Provider,'' ''Flight Training Provider Employee,'' ''Flight Training Security Program (FTSP),'' ''FTSP Portal,'' ''FTSP Portal account,'' ''Non-U.S. Citizen,'' ''Security Threat,'' ''Security Threat Assessment,'' ''Simulated flight for entertainment purposes,'' and ''Type rating.''

II. Summary of Regulatory Requirements

A. Who is required to comply?

As noted above, the purpose of this rule is to prevent the provision of flight training to non-U.S. citizens who may pose a security risk. In general, the requirements apply to those who provide flight training (flight training providers), those who provide equipment for flight training (lessors of flight training equipment), and those who receive flight training (candidates). This rule prohibits providing flight training to a candidate, as defined in § 1552.3, unless the flight training provider and candidate submit certain information to TSA, the candidate remits the specified fee to TSA, and TSA determines that the candidate is not known or suspected to be a threat to aviation or national security.

1. Flight Training Providers

Under the final rule, a flight training provider is defined in § 1552.3 to include the following persons:

- Any person that provides instruction under 49 U.S.C. subtitle VI, part A, in the operation of any aircraft or aircraft simulator in the United States or outside the United States, including any pilot school, flight training center, air carrier flight training facility, or individual flight instructor certificated under 14 CFR part 61 (providers who are either individual FAA Certified Flight Instructors (CFIs) or a group of associated-CFIs that provide training services); part 141 (providers who are FAA certificated); part 142 (providers who are training centers certificated by FAA); and parts 121 and 135 (providers who are U.S. air carriers and U.S. aircraft operators and conduct in-house training for their businesses). As required to comply with applicable Federal Equal Employment Opportunity laws, U.S. operators providing in-house training for its employees must conduct training and report threat assessments in a manner that is consistent with these laws and free from discrimination.
- Similar persons certificated by foreign aviation authorities recognized by the FAA, who provide flight training services in the United States.
- Any lessor of aircraft or aircraft simulators for flight training, if the entity or company leasing their equipment is not covered by the previous two categories.

Through this final rule, TSA is revising the definition of flight training providers to provide greater clarity and to ensure the regulatory program aligns with the scope of the statute. The scope of 49 U.S.C. 44939 includes persons ''operating as a flight instructor, pilot school, or aviation training center,'' which the IFR captured under the general term ''flight school.'' Adopting the term ''flight training provider'' clarifies the rule's broad applicability to the flight training industry, consistent with 49 U.S.C. 44939.

2. Lessors of Flight Training Equipment

In response to comments received on the IFR in 2004 and in 2018, and in response to a request from the ASAC, TSA is providing clarity regarding which party to an aircraft or simulator lease agreement is responsible for compliance with this part. In most lease situations, the lessee of the simulator or other equipment is a certificated flight training provider. In situations where the lessee of the equipment is not registered with TSA as a flight training provider, however, the lessor is considered the flight training provider for purposes of assuming reporting and recordkeeping responsibilities. For example, a foreign government may bring its own instructors and candidates to the United States for flight training on leased equipment, but TSA cannot require a foreign government to register as a flight training provider. Through the definitions and the applicability stated in §§ 1552.3 and 1552.5, TSA is clarifying that in similar cases, the company owning the aircraft simulator must register as a flight training provider and comply with the requirements in this rule.

3. Candidates

The requirements of this rule directly affect candidates for flight training. As defined in § 1552.3, a candidate is anyone applying for flight training who is neither a U.S. citizen nor a foreign military pilot endorsed by the DoD (DoD endorsee). Candidates must establish an account on the FTSP Portal to apply for an STA, submit biographic and biometric information, and pay their fee using *Pay.gov*. After the candidate has completed the STA process and received a Determination of Eligibility, they may share their Determination of Eligibility with one or more flight training providers through the FTSP Portal. Figure 1 in section II.F summarizes candidate requirements.

B. What must flight training providers do in order to comply?

Flight training providers must not provide flight training or access to any flight training equipment to any

[43] *See* 49 U.S.C. 114(f).

[44] *See* 85 FR 16456 (March 23, 2020).

[45] TSA's definitions relating to a person's citizenship status are consistent with the definitions set out in the Immigration and Nationality Act and those used by the U.S. immigration agencies. Should the definitions change, TSA will make corresponding revisions in title 49 of the CFR as necessary.

individual (a U.S. or non-U.S. Citizen) before first establishing whether the individual is a candidate for flight training (a non-U.S. Citizen required to complete an STA). Flight training providers must notify TSA of all training events for candidates and must validate that the candidate has a current Determination of Eligibility before providing training. All flight training providers also must designate a Security Coordinator, provide security awareness training to their employees, and maintain records to demonstrate compliance with this part. Figure 2 in section II.F summarizes the requirements. Subsections 1 through 7 below describe these requirements in greater detail.

1. Determine Whether an Individual Is a Candidate for Flight Training

The FTSP, consistent with 49 U.S.C. 44939, imposes vetting requirements on individuals who are non-U.S. citizens or who have not been endorsed by the DoD. The first step towards compliance is determining whether an individual seeking training is a candidate required to comply with this part, *i.e.,* not a U.S. citizen, not a U.S. national, and not a DoD endorsee, and not otherwise exempt.

a. Verify Whether an Individual Is a U.S. Citizen or U.S. National (§ 1552.7(a)(1))

U.S. citizens and U.S. nationals are exempt from the requirement to undergo an STA, but the flight training provider must verify an individual's U.S. citizenship or U.S. nationality by checking official documents presented by the individual. While the final rule retains the IFR's verification requirements, TSA is removing the IFR's list of specific documents that are acceptable to establish U.S. citizenship, U.S. nationality, foreign nationality, or presence in the United States.

TSA will maintain a list of common official documents suitable to identify U.S. citizens and U.S. nationals on the FTSP Portal, and will update the list as any relevant laws or national policies change. As of the publication date for this final rule, any of the identity documents listed in the first column of table 2 can be used to establish U.S. citizenship and nationality.[46] If a U.S. citizen or U.S. national does not have one of these documents, the individual must provide two qualifying documents: one document from List A and one document from List B.

TABLE 2—TWO OPTIONS FOR DOCUMENTS VALIDATING U.S. CITIZENSHIP AND NATIONALITY

Option 1: provide one of the following documents establishing identity and U.S. citizenship	Option 2: provide 1 document from List A AND 1 document from List B	
	List A—valid proof of U.S. citizenship	List B—Valid photo identification
• Unexpired U.S. Passport (book or card). • Unexpired Enhanced Tribal Card. • Unexpired Free and Secure Trade Card (designates U.S. citizenship if indicated on the document). • Unexpired NEXUS Card (designates U.S. citizenship if indicated on the document). • Unexpired Secure Electronic Network for Travelers Rapid Inspection (SENTRI) Card (designates U.S. citizenship if indicated on the document). • Unexpired Global Entry Card (designates U.S. citizenship if indicated on the document). • Unexpired U.S. Enhanced Driver's License or Unexpired Enhanced Identification Card (designates U.S. citizenship if indicated on the document).	• U.S. Birth Certificate. • U.S. Territory Birth Certificate. • U.S. Certificate of Citizenship (N–560 or N–561). • U.S. Certificate of Naturalization (N–550 or N–570). • U.S. Citizen Identification Card (I–179 or I–197). • Consular Report of Birth Abroad (FS–240) • Certification of Report of Birth Abroad (DS–1350 or FS–545). • Expired U.S. passport (book or card) within 12 months of expiration if one or more of the documents in List B is also presented.	• Unexpired driver's license issued by a State or outlying possession of the United States. • Unexpired temporary driver's license plus expired driver's license (constitutes one document). • Unexpired photo ID card issued by the Federal Government or by a State or outlying possession of the United States that includes a Federal or State agency seal or logo (such as a State university ID) (permits, such as a gun permit, are not considered valid identity documents). • Unexpired U.S. military ID card. • Unexpired U.S. retired military ID card. • Unexpired U.S. military dependent's card. • Native American tribal document with photo. • Unexpired DHS/TSA TWIC Credential. • Unexpired Merchant Mariner Credential. • Expired U.S. passport within 12 months of expiration if one or more of the documents in List A is also presented.

b. Verify Status of Foreign Military Pilots Endorsed by the DoD (§ 1552.7(a)(2))

Foreign military pilots endorsed by the DoD are exempt from the requirement to undergo an STA, as provided in 49 U.S.C. 44939(f), but the flight training provider must verify the status of each pilot to ensure that the endorsee is exempt from TSA's STA requirements. The final rule requires use of the FTSP portal to confirm an endorsee's status, codifying a previous policy decision from 2012 that eliminated a paper-based DoD endorsement verification process. Providers must use the FTSP Portal by matching the endorsee's identification to an official endorsement provided to TSA electronically by the DoD attaché.[47] ASAC also recommended in 2016 that TSA update the regulation to confirm the mandatory use of the FTSP portal to verify endorsee status.

The FTSP portal also serves as the records repository for DoD endorsee letters provided by the attaché. To further ensure compliance, providers must retain proof that they verified identification documents against the documents in the DoD endorsement. Providers may maintain either separate electronic or paper records to

[46] The documents listed in table 2 are consistent with TSA's requirements for validating U.S. citizenship or nationality for all vetting programs. *See https://www.tsa.gov/sites/default/files/twic-and-hazmat-endorsement-threat-assessment-program.pdf.* TSA's list is aligned with similar lists maintained by U.S. immigration authorities, and will be revised as their lists change. *See also* discussion in section II.D.1. Please note that each TSA program may have unique requirements.

[47] Foreign military pilots endorsed by the DoD are registered under the U.S. International Military Education and Training program. The DoD attaché coordination office uses the FTSP Portal to nominate DoD endorsees and to manage DoD attaché account holders' access to the portal. *See* Defense Security Cooperation Agency IMET website at *https://www.dsca.mil/programs/international-military-education-training-imet.*

demonstrate compliance, or may use the portal to store records when this capability becomes available. Section II.B.7 and II.E describe recordkeeping and the FTSP Portal.

c. Determine Whether an Individual Providing ''Side Seat'' Support Is a Candidate (§ 1552.3)

In most cases, non-U.S. citizens who are not endorsed by the DoD are considered candidates who must comply with this regulation. TSA has made a limited exception for certificated individuals who provide ''side-seat support'' to other candidates. ''Side-seat support'' is an aviation industry term that refers to a second pilot that is required for some training events. When a second pilot is required, the candidate or their sponsor (generally their employer) hires an individual with appropriate skill and experience to provide side-seat support for the candidate or student being trained.

Under a limited exception to the definition of ''candidate'' in § 1552.3, the flight training provider does not need to notify TSA of any training events involving a non-U.S. citizen providing side-seat support if the individual providing the support holds a type rating for the aircraft in which the training occurs, or otherwise holds the piloting certificate necessary to operate the aircraft in which the instruction occurs. TSA is providing this limited exception because these individuals already possess the piloting skills being taught, and because these individuals are already vetted by TSA as candidates under this program when they seek recurrent training to retain their FAA rating or certificate under 6 U.S.C. 469(b).

As with other individuals seeking flight training, the flight training provider must determine the individual's U.S. citizenship status. If the individual providing side-seat support is a non-U.S. citizen, the flight training provider must either determine that the individual providing side-seat support holds a type rating for the specific aircraft, or must ensure the individual undergoes an STA and receives a Determination of Eligibility.

2. Determine Whether the Candidate Is Required To Be Vetted Before Receiving Flight Training

Having established that the individual is a candidate (*i.e.,* the individual is a non-U.S. citizen, is not a DoD endorsee, and is not providing side-seat support under the limited exemption provided above), the flight training provider must determine whether the regulation applies to the training the candidate seeks.

a. Activities Considered Flight Training Events (§ 1552.3)

The following flight training events are subject to the rule's requirements:

- Initial pilot certification (whether private, recreational, or a sport pilot certificate), which provides a pilot with basic piloting skills.
- Instrument rating, which enhances a pilot's abilities to pilot an aircraft in bad weather or at night, and enables a pilot to better understand the instruments and physiological experiences of flying without reference to visual cues outside the aircraft.
- Multi-engine rating, which provides a pilot with the skill to operate more complex, faster aircraft.
- Type rating, which is a specific certification a pilot obtains to operate a certain type of aircraft, because this training is required beyond the initial, multi-engine, and instrument certification.
- Recurrent training for type ratings, which is required to maintain or renew a type rating already held by a pilot.

The flight training events subject to the rule's requirements align with the clarification provided in 2004, when TSA exempted training to operate ultralight aircraft, gliders, sail planes, and lighter-than-air aircraft from the requirements of the IFR. These types of aircraft present a minimal threat, and the skills needed to operate them do not translate easily to the skills needed to operate rotary or fixed-wing piloted aircraft. TSA also has determined that training related to operation of unmanned aerial systems does not fall within the requirements of the final rule for the same reasons. This determination is consistent with the statutory requirements, which limit training events to those that occur in an aircraft or simulator, and do not apply to ground training events.[48]

b. Activities Considered Recurrent Training (§ 1552.3)

As part of this rulemaking, TSA is modifying the definition of ''recurrent training'' to apply to those flight training events that pilots need to maintain or renew their type ratings. The requirement specifically applies to pilots certificated (a) under 14 CFR part 61; subpart K of part 91; or parts 121, 125, or 135; or (b) by a foreign entity recognized by a Federal agency of the United States. A candidate may only register for recurrent training if their FTSP account record includes an airman certificate showing they are currently certificated for that aircraft. The modified definition also excludes facets of training that impart new knowledge or demonstrate the pilot's ability to gain or maintain a rating.

This modification to the definition of recurrent training ensures the regulation aligns with clarifications provided by TSA after publication of the IFR. For example, in October 2004, TSA clarified that recurrent training ''[does] not include any flight review, proficiency check, or other check whose purpose is to review rules, maneuvers, or procedures, or to demonstrate a pilot's existing skills,'' and that flight checks ''do not constitute either flight training or recurrent training . . . because, in practice, these checks are mainly used for pilots to demonstrate their skills to an instructor, rather than to gain new skills.'' [49] TSA also released an interpretation listing activities that are not described as recurrent training by the FAA and are generally considered to be checks or tests that ''do not affect the validity of the certificate(s) and/or the qualifications of a type rating.'' [50] As stated above, and discussed more fully in section III, all previously issued clarifications and interpretations are replaced by this final rule.

c. Activities That Do Not Require Notification

Consistent with a recommendation from ASAC, table 3 provides a current list of flight training activities that do not require notification. This list replaces all information previously issued by TSA regarding training activities that do not require notification. If a flight training provider inadvertently notifies TSA of a non-

[48] *See* 49 U.S.C. 44939(e), which defines the term ''training'' as ''training received from an instructor in an aircraft or aircraft simulator and does not include recurrent training, ground training, or demonstration flights for marketing purposes.'' Given this definition, TSA has concluded that the statute does not apply to ground-based courses focused on remote-piloted aircraft incapable of carrying people.

[49] *See* Interpretation of Certain Definitions and Exemptions from Certain Requirements Contained in 49 CFR part 1552, Oct. 19, 2004, Docket No. TSA–2004–19147–0226 *available at https://www.regulations.gov/document?D=TSA-2004-19147-0226.*

Activity	References and guidance
Upset Recover Training	• FAA AC 120–111, Upset Prevention and Recovery Training—with Change.
High Altitude Training	• 14 CFR 61.31(g), Type rating requirements, additional training, and authorization requirements.

Flight training providers must notify TSA about any recurrent flight training events planned for a candidate that do not fall under the exempted events listed in table 3. TSA will publish any updates to this list of training events that do not require notification under § 1552.51 on the FTSP Portal.

3. Notify TSA of Flight Training Events for Candidates (§ 1552.51)

Consistent with the requirements in 49 U.S.C. 44939, flight training providers are required to notify TSA of all proposed and actual flight training events for candidates. Subpart C lays out flight training event notification requirements for flight training providers. The final rule clarifies and consolidates requirements for flight training providers regarding training event management and confirms TSA's present practice of requiring all notifications to occur through the FTSP portal. There are no other changes to the requirements in this subpart.

The final rule permits a flight training provider to schedule a flight training event or events up to the expiration of a candidate's Determination of Eligibility, but the final rule also continues the IFR's requirement for flight training providers to verify a candidate's Determination of Eligibility for *each* flight training event. While a new STA may only be required once every 5 years, this notification is necessary because TSA may revoke a candidate's Determination of Eligibility at any time within the 5-year window that an STA may otherwise be valid. TSA does not inform flight training providers of a change in a candidate's Determination of Eligibility except in response to a notification that the candidate is currently applying for or involved in a flight training event. A provider is not permitted to initiate a new flight training event notification for a candidate whose Determination of Eligibility has expired.

a. Information To Be Included in Notification of a Flight Training Event (§ 1552.51(a))

In keeping with similar requirements under § 1552(a)(2) of the IFR, the flight training provider must submit the following information and supporting documentation to TSA through the FTSP Portal for each notification of a candidate flight training event:

- The candidate's name.
- The rating that the candidate could receive, maintain, or revitalize if the candidate completes the training.
- The location or locations, domestic or international, where training is to occur.
- The estimated start and end dates of training.

To ensure Determinations of Eligibility can be made before the scheduled training, TSA recommends that flight training providers notify TSA no less than 30 days before the estimated start of the flight training event, even for a candidate who may be eligible for expedited processing. Upon completion of the training event, the provider must update the FTSP Portal with the training event's actual start and end dates, and indicate whether the candidate concluded, cancelled, failed to complete, or abandoned the training.

TSA requires this specific information and documentation to properly ensure compliance with the requirements of 49 U.S.C. 44939, and to properly determine whether any candidate may be a risk to aviation or national security. Knowledge of the candidate, the training location, the training dates, and the type of training to be received is essential to assessing risk. The statute does not refer to type ratings, but the flight training industry tends to market and deliver training by piloting skill and by aircraft type, not by aircraft weight. Generally, crew members of aircraft weighing 12,500 pounds or less are not required to have type ratings.

Flight training providers operating with multiple instructors as an air carrier, charter operator, pilot school, training center, or other corporate entity certificated under 14 CFR parts 61, 121, 135, 141, or 142 respectively, do not need to submit multiple flight training event notifications when multiple instructors within its operation participate in the training of one candidate during that candidate's flight training event. However, multiple individual flight instructors with certificates provided under 14 CFR part 61 who operate as a flying group or club that is not separately certificated by the FAA must list all the CFIs operating at its establishment as part of its registration for an FTSP Portal account.

b. Candidate Photograph (§ 1552.51(d))

The flight training provider must take a photograph of the candidate upon the candidate's arrival for each training event. The provider need only take one photo per day. In the case of a multi-day training event, the provider need only submit one photo for the event, not one per day. The provider may take the photograph either at the beginning of ground training or, if the candidate is not involved in any ground training at the provider's training location, when the candidate begins training on the aircraft or aircraft simulator. The provider must upload the photograph to the FTSP Portal no later than 5 business days after the day the candidate arrived for training. A provider may not re-use a previous candidate photograph for a later training event.

When this program was established by DOJ, flight training providers were encouraged, but not required, to maintain photographs of all candidates. The 2004 IFR made the photographs mandatory because submission of a candidate photograph, along with other identification documents (including a valid passport), offers assurance that the candidate is the person described in the identification and immigration documents submitted to TSA. Flight training providers play a critical role in determining whether the person before them is the same person featured in the identity and immigration documents upon which TSA relies for its STAs, and the required photograph ensures that providers make a reasonable effort to confirm a candidate's identity.

c. Notification of an Update or Cancellation (§ 1552.51(g))

The flight training provider must update the following information for each candidate flight training event:

- Actual start and end dates;
- Actual training location(s); and
- Notification whether training was completed or not completed, and the reason(s) why it was not completed.

When a training event is not completed, the provider must submit a brief description of why the training

was not completed, *e.g.,* cancellation by the provider or the candidate, failure of the candidate to meet the required standard, or abandonment of training by the candidate.

d. Expedited Processing (§ 1552.51(f))

A candidate may be eligible for expedited processing of flight training event notification(s), under 49 U.S.C. 44939(d), if more than 5 business days have elapsed since TSA acknowledged receipt of the event notification and the candidate meets one or more of the following criteria:

- Holds an FAA airman certificate and has provided proof of their FAA certification and at least one type rating;
- Holds an airman certification from a foreign entity that is recognized by an agency of the United States and has provided proof of their airman certificate and at least one type rating;
- Is employed by an aircraft operator regulated under 49 CFR part 1544 or foreign air carrier regulated under 49 CFR part 1546 that has a TSA-approved or accepted security program and has provided proof of employment;
- Is an individual who has unescorted access to a secured area of an airport regulated by TSA under 49 CFR part 1542 with a TSA-approved security program under this chapter and has provided proof of this unexpired credential; or
- Is a lawful permanent resident, and has provided proof of that status (see section II.B.5.g for more discussion on this issue).

Section 1552.51(f) of the final rule requires candidates to provide proof of eligibility when they apply for expedited processing. Upon receipt of a complete candidate application that includes appropriate documentation of eligibility for expedited processing, TSA will send an email notification to the candidate's flight training provider that the candidate is eligible for expedited processing. The 5-day waiting period for candidates eligible for expedited processing applies to the initial application for an STA, and to subsequent notifications of flight training events.

4. Deny Flight Training to Candidates Determined To Be a Security Threat and Notify TSA if They Become Aware of a Threat (§§ 1552.3, 1552.7(b), (c), and (d), and 1552.31(e))

If TSA determines that a candidate presents a threat to aviation or national security, TSA notifies both the candidate and the flight training provider that the candidate has been issued a Determination of Ineligibility and may not participate in flight training. If TSA notifies the provider that the candidate's preliminary Determination of Eligibility has been revoked or suspended, the flight training provider must immediately terminate or cancel the candidate's flight training event. The provider must acknowledge through the FTSP Portal the receipt of all TSA communications regarding a candidate's ineligibility, disqualification, or denial of flight training.

Flight training providers conduct security awareness training pursuant to the IFR, which includes training in the general requirements for eligibility under the FTSP program, and a general awareness of threats to aviation and national security deriving from flight training. If a flight training provider believes that a candidate is no longer eligible to receive flight training, TSA encourages the provider to notify TSA and their local FBI office, as such reporting is consistent with the training requirements of 49 U.S.C. 44939(i) and the requirements of § 1552.9 and as described in section II.B.5. The provider is encouraged to notify TSA of any new alleged disqualifying criminal offenses, as identified under this chapter, or of any changes to an individual's permission to remain in the United States that may affect a candidate's Determination of Eligibility.

5. Designate a Security Coordinator (§ 1552.9)

TSA is committed to enhancing information sharing with all of our industry stakeholders and partners. The final rule aligns the FTSP with other TSA regulations by requiring that all flight training providers designate a Security Coordinator.[51] In keeping with the requirements of the statutes authorizing the FTSP program, a Security Coordinator is necessary to ensure all flight training providers ''conduct a security awareness program for flight school employees to increase their awareness of suspicious circumstances and activities of individuals enrolling in or attending flight school.'' [52] Security Coordinators are a vital part of transportation security, providing TSA and other government agencies with an identified point of contact with access to company leadership and knowledge of the flight training provider's operations, in the event it is necessary to convey extremely time-sensitive information about threats or security procedures to a provider, particularly in situations requiring frequent information updates. The Security Coordinator provides TSA with a designated contact in a position to understand security problems; immediately raise issues with, or transmit information to, corporate or system leadership; and recognize when emergency response action is appropriate.

This final rule requires the Security Coordinator to be accessible to TSA 24 hours per day, 7 days per week, enabling TSA to contact any flight training provider quickly if TSA or another Federal agency should identify a security threat. TSA may contact Security Coordinators by email or telephone, or in person if electronic communications were not promptly acknowledged. TSA recommends that the flight training provider designate at least one alternate for the Security Coordinator, if staffing permits, to ensure the required accessibility is maintained. If the flight training provider designates any alternates, the provider must submit to TSA the same information for the alternates as for the primary Security Coordinator.

This requirement applies to all flight training providers, including those who do not provide flight training to non-U.S. citizens. This applicability reflects that any flight training provider is in a position to identify critical threat information that needs to be provided to the FBI and TSA related to aviation or other national security concerns. Equally important, TSA may need to provide flight training providers with information about an emerging or imminent threat.

As required by § 1552.9, the Security Coordinator acts as a single point of contact and facilitates interactions between TSA and the flight training provider. The final rule does not require the Security Coordinator or alternate(s) to be a dedicated position staffed by an individual who has no other primary or additional duties, *i.e.,* the Security Coordinator may be an existing employee and may perform other duties. For example, if a CFI is a one-person flight training operation, the CFI can be the Security Coordinator. A larger flight training provider operation may designate a Security Coordinator and alternate Security Coordinators, as necessary, to maintain the required level of availability. The final rule does not require the Security Coordinator to be certificated by the FAA. For example, a business owner or office manager may act as the Security Coordinator. A Security Coordinator may also be the administrator of the provider's FTSP Portal account.

[51] *See* 49 CFR 1542.3 (airports); 1544.233 (aircraft operators); 1548.13 (indirect air carriers); 1549.107 (certified cargo screening facilities); and 1570.201 (surface transportation).

[52] 44 U.S.C. 44939(i).

The Security Coordinator's responsibilities include coordinating with law enforcement and emergency response authorities as needed. Although the rule encourages flight training providers to notify TSA of security incidents, if there is an immediate threat, the first priority is to notify and work directly with first responders, such as the FBI or other appropriate authority, as soon as a provider becomes aware of suspected criminal or terroristic concerns, or other suspicious behavior. After notifying the FBI or other Federal, State, Tribal, or local law enforcement agencies, as appropriate, TSA encourages the provider's Security Coordinator to notify TSA.

Threats to aviation security continuously evolve, and incidents may occur. For this reason, the flight training provider's Security Coordinator should actively review TSA updates and security advisories and ensure the provider incorporates relevant new information into their security awareness training.

Flight training providers must designate a Security Coordinator no later than 6 months after the publication date of this final rule. The provider must submit the following information for the Security Coordinator and any designated alternate(s): name(s), title(s), telephone number(s), and email address(es). Flight training providers must keep this contact information on Security Coordinators current, ensuring that TSA is notified when a Security Coordinator leaves the flight training provider's employment and a new coordinator is designated. Flight training providers must provide any change in this information to TSA within 7 days of the change taking effect. The information collection burden associated with providing this information to TSA is the primary cost of this additional requirement.

The burdens imposed on flight training providers to designate a Security Coordinator are minimal, as most providers (including all individual instructors) are likely to designate the same person who already appears as the designated point of contact on the provider's FTSP profile with TSA. All burdens associated with the designation of a Security Coordinator are consistent with the requirements to undergo an STA. When TSA reopened the comment period for the IFR in 2018, the agency sought comment on whether flight training providers and their employees should be required to undergo an STA. 83 FR 23239. Many commenters were in favor of imposing such a requirement. In order to maximize the regulatory relief of the final rule, however, TSA elected to not impose a new requirement for STAs, as the less-burdensome requirement to designate a Security Coordinator also provides a meaningful security improvement.

6. Provide Security Awareness Training to Employees (§ 1552.13)

All ''flight training provider employees,'' as defined in § 1552.3, are also positioned to identify potential threats to security, including information they may become aware of while providing flight training, administering tests, or processing verification documents. TSA is required by 49 U.S.C. 44939(i) to ensure that all flight training providers conduct security awareness training programs that provide employees the awareness and tools necessary to identify individuals who may have malicious intent.

The rule requires flight training providers to provide initial and refresher security awareness training to their employees. As with the Security Coordinator requirements in § 1552.9, these requirements apply to all flight training providers, not just those who train candidates. Flight training providers registered with TSA and their covered employees must complete their initial security awareness training within 60 days of being hired. Thereafter, providers and their employees must complete refresher training at least every 2 years.[53] The final rule uses the term ''refresher training'' rather than the IFR's term ''recurrent security awareness training'' to avoid confusion with the recurrent training required to maintain an aircraft type rating.

The security awareness training program must instruct flight training provider employees on how to recognize suspicious circumstances and suspicious activities that may be exhibited by individuals enrolling in flight training, attending flight training, or employed by flight training providers. The training must address each of the elements identified in § 1552.13 as applied to the unique circumstances associated with their operations. Flight training providers should supplement and update security awareness training as TSA or other law enforcement or intelligence resources transmit new threat information or any changes to requirements applicable to the flight training provider, including changes to security measures for airports, aircraft operators, or foreign air carriers applicable to the flight training provider's operations.

The scope of the training requirements includes a new factor, in § 1552.13(b)(3)(iii), which recognizes the unique position of flight training providers and their employees to identify a potential threat to aviation security: non-U.S. citizens who are or have received flight training from someone not participating in the FTSP, but providing the type of training covered by this rule. This type of information is a security concern that flight training providers are encouraged to report to TSA under § 1552.9. Flight instructors were always in a position to detect such events, and the security awareness training required by the statute and imposed under the IFR was intended to encourage the reporting of such events. In the 19 years of the FTSP program operating under TSA, many providers have come forward to allege that another provider may be training a non-U.S. citizen who has not been vetted by TSA, or that a U.S. citizen was not required to provide documentation exempting the individual from an STA. Incorporating this new factor only makes the training more explicit, and codifies existing practice. In 2006, TSA granted an exemption from security awareness training requirements for aircraft operators who conduct flight training solely for their own employees, because TSA already required aircraft operators to conduct similar training under 49 CFR parts 1544 or 1546. This final rule incorporates this exemption by allowing an aircraft operator operating under a security program approved by TSA under 49 CFR parts 1544 or 1546 to comply with the security awareness training requirements through its programs under those parts, if all of the following conditions and limitations are met:

- The aircraft operator must not offer or conduct flight training to the public or to employees of other aircraft operators.
- The aircraft operator must maintain or continue to maintain training records in accordance with the aircraft operator's approved security program and must make those records available to TSA and FAA inspectors upon request.
- An aircraft operator who implements this exemption must not use the FTSP Portal to record security awareness training.

[53] In practice, TSA allows a grace period of 30 days to allow for scheduling flexibility. For example, an employee who completed initial security awareness training on April 1, 2019, must complete a refresher course no later than May 1, 2021. This provision in the final rule allows flight training providers latitude to consolidate security awareness training for their employees.

Although the requirements under § 1552.13 also apply to those persons who engage in lease agreements for flight training, the security training requirements do not apply to their employees who never come into contact with any candidates or records related to compliance with the FTSP. In general, individuals who provide side-seat support are not considered flight training provider employees and do not need to complete security awareness training unless the flight training provider employs them. For example, individuals who are supplied by the candidate or student's sponsor in order to provide side-seat support are not considered flight school employees.

The final rule also allows a provider to adopt and tailor industry-developed online security awareness training programs to the provider's needs as long as they cover the topics identified in the rule. In addition, TSA publishes guidelines for a security awareness training program in the document ''Security Guidelines for General Aviation Airport Operators and Users.'' [54]

7. Maintain Records (§ 1552.15)

In accordance with § 1552.15(a), flight training providers required to comply with this rule must retain the following records for at least 5 years from the date the record is created:

- Employee records regarding security awareness training. Flight training providers must retain records for former employees for at least 1 year after the employee has left their employment. As provided in § 1552.15 (b)(3), flight training provider employees or former employees may request their security awareness training records from their current or previous employer as evidence of previous or current security awareness training. Providers must make those records available to the employee or former employee upon request and should provide the record(s) in a timely manner. Records may be provided in hard copy or electronically.
- Candidate records demonstrating flight training eligibility, as required in § 1552.15(c).
- Records documenting the flight training provider's verification of a student's U.S. citizenship, as required in § 1552.15(c). Providers also may meet this requirement by placing a statement in provider and student logbooks in accordance with § 1552.15(c)(2).
- DoD endorsement records demonstrating that the flight training provider has verified the endorsee's identity, as required in § 1552.7(a)(2).
- Provider and contractor records concerning leasing agreements. Section 1552.15(d) clarifies requirements for flight training providers and contractors to maintain records of their flight training lease agreements. The flight training provider is responsible for documenting leasing agreements used in flight training, unless that provider cannot register with TSA, in which case, the lessor of the simulator must register with TSA as a provider. Flight training providers must demonstrate compliance with this requirement no later than 6 months after the publication of this final rule.

To ensure compliance with this regulation, TSA may review a provider's records, whether these records are stored on the FTSP Portal or maintained physically or electronically by the provider (such as documentation that a student is a U.S. citizen or otherwise not subject to the vetting requirements before receiving flight training). Flight training providers not in compliance with recordkeeping requirements are subject to civil penalties. TSA publishes its Enforcement Sanction Guidance Policy on its website at *www.tsa.gov.*

Providers are not required to maintain physical records if they have their own electronic system for this purpose. TSA is, however, also developing a recordkeeping capability associated with the FTSP Portal to allow flight training providers the option to upload and store their compliance records through their FTSP account. Providers will be notified when this option becomes available. Section E provides more information on the FTSP Portal.

C. What must a candidate do in order to comply with the rule and receive flight training?

The final rule continues to require an STA and Determination of Eligibility for all non-U.S. citizens, except DoD endorsees, who seek either flight training in the United States or an FAA certification abroad, as provided in § 1552.31. Candidates must use the FTSP Portal to apply for the STA and pay the appropriate fee. In performing the STA, TSA assesses the candidate's biographic information, identity documentation, and biometric information (fingerprints) against terrorism risk, criminal history, and immigration datasets. Candidates are responsible for keeping their FTSP Portal account information current. Subsections 1 and 2 below describe the requirements in greater detail.

1. Submit Information Sufficient for TSA To Conduct a Security Threat Assessment (§ 1552.31)

Candidates must submit information to TSA sufficient for TSA to conduct an STA. To reduce the burden to candidates, the final rule has limited the information TSA collects to biographic elements identified in table 4, which often aligns with the type of information the candidate provides to obtain a U.S. visa.[55] A candidate who does not have a passport, such as an asylee or a refugee, must produce other government-issued documentation, whether from their home country or from the United States, to positively identify who they are. Documentation must include an issue date and an expiration date (if appropriate), such as on a U.S. driver's license or U.S. employment authorization document. TSA collects gender information in coordination and compliance with the U.S. DOJ. TSA no longer collects candidate height, weight, eye color, or hair color. A candidate need not obtain an immigrant or nonimmigrant document from the United States in order to participate in training outside the United States, but a candidate must present any immigrant or nonimmigrant documents previously issued to the candidate by the United States, even if the candidate now seeks training at a location outside the United States. Many candidates have been to the United States before, and some applicants have previously been denied a U.S. visa. TSA considers a candidate's prior interactions with U.S. immigration agencies to be relevant information when determining whether a candidate presents a risk to aviation or national security. The information and documents listed in table 4 are for illustrative purposes only, and may be subject to change. A complete list of acceptable documents will be maintained at *www.tsa.gov.*

[54] A copy of these guidelines is available at *https://www.tsa.gov/for-industry/general-aviation* under ''GA Security Guidelines'' or by contacting *FTSP.Help@tsa.dhs.gov.*

[55] *See* DOS Online Nonimmigrant Visa Application (DS–160) at *https://ceac.state.gov/genniv/.*

TABLE 4—INFORMATION SUBMITTED BY CANDIDATES TO TSA

Identification Information	
Name	The candidate's official name as it appears on their passport or other acceptable documentation. Any other name variations from the candidate's passport (or other acceptable document) name that appear on other documents provided by the candidate. Any other aliases used that are different from the documentation or may not be obvious from documents provided, such as: • Birth name: the name as it appears on the candidate's birth certificate. • Maiden or premarital name: the name used prior to marrying. • Americanized name: name that an individual may have adopted as an Anglicization to facilitate the spelling or pronunciation by English speakers. • Legal name changes: legally changed name or names used by the individual one or more times in their life. • Previous legal names even if no longer used. • Nickname: a familiar name used in lieu of the person's official name, such as: Rick for Richard, Betty for Elizabeth, Fred for Fahad, Jenni for Jennifer, *etc.*
Gender	Female/woman. Male/man. another or unspecified gender identity.
Date(s) of birth	The date of birth listed on the candidate's passport. If another date is listed on any document supplied, the candidate may be required to provide an explanation.
Foreign Citizenship	Citizenship information to include: • Birth Country • Foreign Naturalization status, from the date of naturalization to present. • Whether dual or multi citizenship (include any and all citizenships held currently or in the past). • Historical data (any citizenship(s) that has been modified from a previous nation state to a new nation state; for example, a citizen from the former Socialist Federal Republic of Yugoslavia is now from either Bosnia-Herzegovina, Croatia, Macedonia, Montenegro, Serbia, or Slovenia). • Renunciation of citizenship.
Social Security Number (if issued by the U.S. Government).	Social Security Number (if issued by the U.S. Government). Most candidates will not have a social security number and it is not required. Providing a social security number is voluntary and may in certain circumstances facilitate the completion of the STA.
Document images and information	
Passport information (if applicable)	Passport number(s); Date issued/expiration date; and Extension date and image, if applicable.
Documents sufficient to demonstrate permission to remain in the United States during all proposed flight training events.	One or more documents that may include a Form I–94, U.S. lawful permanent resident card, U.S. employment authorization document, refugee documentation, asylum seeker documentation, parolee documentation, or authorization documents under Deferred Action for Childhood Arrivals. Documentation provided must include: • Document number(s); • Date issued and/or expiration date (if any); and • Extension date and image, if applicable. *Note:* The following documents do not demonstrate an extension of permission to remain in the United States: • Appointment confirmation for biometric submission. • Appointment confirmation for interview. • Electronic System for Travel Authorization documentation.
Airman certificate information	All airman certificate information and images, current or expired (if available), that may demonstrate their eligibility for training or their eligibility for expedited processing. Certificate information must include all document number(s), issuance date(s) and rating(s).
Physical address information	All residential addresses for the past 5 years and indication whether each address provided is current or historical. Any gap in residence of 30 days or more must be explained. The application also must include any physical or postal addresses that appear on the document images provided. Address information provided must include the following: • Start and end date(s) for each address. • Street address and apartment or room number, if applicable. • City, state, province, jurisdiction, and country. • Zip code/postal code. • Phone number(s). A post office box is not acceptable as a residential address and cannot be used to cover a 30-day gap.
Email address information (TSA requires every candidate to provide an email address; this email address will be the primary means of communication between TSA and the candidate).	Email information must be unique to the individual and match the email associated with the candidate's account on the FTSP Portal. If a candidate's email information changes, it is the candidate's responsibility to update that information on the FTSP Portal to ensure the candidate receives TSA notifications.
Employment information	The candidate must provide information regarding their current employment status. If currently unemployed, candidates may select "unemployed" and need not fill out employer information. TSA requires the following information in order to contact a candidate's current employer to verify that candidate's eligibility for expedited processing: • Occupation. • Employer or company name.

TABLE 4—INFORMATION SUBMITTED BY CANDIDATES TO TSA—Continued

	• Contact name (provide a person's contact information who can confirm occupation/employer, usually a supervisor). • Employer phone number (if any). • Employer email (if any). • Employer website (if any).

TSA will initiate the STA after the agency receives all of the information required under this section, as well as the candidate's fingerprints and the fee. The Candidate Guide on the FTSP Portal provides additional information on completing the STA application.

Sometimes an individual will convert an airman certificate from another civil aviation authority to an FAA-certification. In general, this conversion of an airman certificate is not subject to the requirements under § 1552.51. If, however, the individual converting the FAA-certification wishes to pursue additional training or recurrent training on that certificate, that individual may be a candidate under this rule who must enroll with TSA and apply for an STA.[56]

Consistent with current practice under the IFR, § 1552.31(e) provides procedures for candidates TSA identified as ineligible to present additional information to correct their records if they believe such information would materially affect TSA's decision. The IFR did not provide redress procedures for candidates who are declared ineligible by TSA, but TSA has always allowed candidates an opportunity to correct their records. The procedures to correct the record are described in § 1552.31(e).

2. Pay Fee for the Security Threat Assessment

a. Fees (§ 1552.39)

The final rule requires a candidate to submit a fee the first time that candidate requests an STA and with each STA renewal, as provided in § 1552.39. The fee is a consolidated fee that allows a candidate to train as often as they wish over the 5-year period of their valid Determination of Eligibility, without additional cost.

The candidate generally will pay one fee to cover the STA for all training events up to 5 years. Table 7 provides the fees and amounts required as of the publication date for this final rule.

Candidates who have completed an STA that TSA deems is comparable to the STA required for FTSP candidates may be eligible for a reduced fee, collected to cover the cost of confirming their comparable STA. *See* § 1552.37.

As noted above, this change from an event-based STA to a time-based STA provides significant cost-savings and addresses an ASAC recommendation to reduce the frequency that a candidate must undergo an STA. This change will result in time and cost savings for candidates. Over the initial 18 years of the program, very few candidates paid for only one or two STAs. Most candidates paid for 3 to 12 combined STAs and training event notifications over a 5-year period, costing them a combined total of $350 to $840.[57]

Payments are submitted to TSA via *Pay.gov,* the U.S. Government's electronic fee payment portal. The FTSP Portal provides all necessary instructions and a link to *Pay.gov* for payment. Automated processing of the STA is initiated as soon as the candidate pays the fee. TSA is not authorized to refund fees once the STA is initiated because TSA incurs the costs of vetting upon receiving verification from *Pay.gov* that a fee was paid. Under § 1552.5 of the IFR, TSA had allowed a refund only when an individual submitted a fee in error, for example, submitting a fee when one was not required.[58] This provision was intended to account for U.S. Citizens (who are not required to undergo an STA) who submitted an application by mistake, or if a candidate submitted multiple applications for the same training event. TSA believes that the online enrollment process would identify and preclude these types of mistakes before an individual paid any fee. Though mistakes are unlikely, TSA will retain the limited refund provision from the IFR.

The FTSP fee structure reflects current and estimated costs for processing the candidate's application.[59] The consolidated fee includes the fee the FBI charges to process fingerprints, which TSA collects and forwards to the FBI. If the FBI fee changes, TSA will collect and transmit the revised fee to the FBI. TSA reviews fees for this program every 2 years and will publish any changes with a notice published in the **Federal Register**.

b. Reduced Fee for Comparable STAs (§ 1552.37)

TSA may determine that another TSA-conducted STA or an STA conducted by another governmental agency is comparable to the Level 3 STA required under this rule, as discussed further in section II.D. In these cases, the candidate would not be required to undergo, and TSA would not have to conduct, a duplicate STA in its entirety. The candidate would pay only for the services TSA performs to verify the STA and determine eligibility, resulting in a reduced fee. Note that some STAs governed by other regulations may have unique restrictions, requirements, or privileges. A candidate who receives a comparable STA determination under this regulation is not entitled to additional privileges beyond the original STA. TSA will review the comparable STA of any candidate if new information indicates the candidate may pose or poses a threat to aviation or aviation security.

If TSA confirms completion of a comparable STA under § 1552.37, TSA assesses a reduced STA fee.[60] A candidate with a comparable STA must still provide the biographic and biometric information required under § 1552.31. The following is the current list of comparable STAs:

- TSA's PreCheck® program;[61]
- TSA's TWIC® program;[62]
- TSA's HME program;[63]

[56] The FAA creates advisory circulars memorializing agreements with other civil aviation authorities, generally concerning the conversion process for pilot certificates. Conversion agreements with other civil aviation authorities are managed by FAA's General Aviation and Commercial Division, AFS 800. *See https://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afx/afs/afs800/.*

[57] This statement is based on an August 2019 TSA-analysis of the latest 5-year window for 216 candidates who paid for an STA on August 15, 2014. Based on this analysis, TSA determined that 20 of the candidates paid less than $220 and 15 paid $840 or more.

[58] *See* 69 FR at 56334.

[59] *See* fee study and RIA in the docket for this rulemaking for more information on how the fees are developed.

• DHS Trusted Traveler programs including Global Entry, SENTRI, and NEXUS.[64]

TSA considers each of the threat assessment programs listed above to be a ''Level 3'' STA, which is discussed in detail below. For the purposes of the FTSP, TSA will only consider a Level 3 STA to be a comparable STA. TSA will publish any changes to the list of comparable STAs on the FTSP Portal.

D. How does TSA determine whether a candidate is eligible for flight training?

TSA determines a candidate's eligibility by conducting an STA, which is designed to determine whether a candidate poses a threat to transportation or national security. Individuals who are issued a Determination of Eligibility following an STA may be granted access to transportation infrastructure or assets, or may be granted other privileges and credentials, including access to flight training. Both the IFR and the final rule require an STA that consists of one or more checks against immigration records, terrorist watchlists (known as an ''intelligence'' check), and criminal history records, as well as other data sources. An STA with these checks is referred to as a ''Level 3 STA.''

1. Immigration Check (§ 1552.35)

The final rule specifies that all flight training students who are not U.S. citizens, U.S. nationals, or foreign pilots endorsed by the DoD must undergo an immigration check as part of the STA process. The immigration check for a Level 3 STA verifies that the individual is lawfully admitted for permanent residence; a refugee admitted under 8 U.S.C. 1157; granted asylum under 8 U.S.C. 1158; in lawful nonimmigrant status; paroled into the United States under 8 U.S.C. 1182(d)(5); or otherwise authorized to be in or be employed in the United States. A candidate who is not authorized to be in the United States under one of these categories is not eligible for flight training in the United States. TSA also considers a candidate's history with U.S. immigration services, such as violations of U.S. immigration laws or regulations, to be a factor in determining a candidate's risk to aviation or national security, regardless of where a candidate may seek flight training.

TSA conducts an immigration check using CBP's ATS, which allows TSA to query many different databases and systems that may include SAVE, the Advanced Passenger Information System, ADIS, Consular Consolidated Database, the Treasury Enforcement Communications System, used by CBP officers at the border to assist with screening and determinations regarding admissibility of arriving persons, and the Student and Exchange Visitor Information System (SEVIS). Candidates who appear to be ineligible following an immigration check for a Level 3 STA are referred to an immigration authority or liaison to assist in determining whether the candidate is eligible to participate in flight training. TSA also compares the information a candidate presents with their STA application to the information in the above databases. The documents provided by the candidate help TSA adjudicators narrow mixed results, de-conflict contradictory info, and save time during the adjudication process. For instance, an applicant may have a document that is more detailed than what is in the database.

TSA may suspend a Determination of Eligibility if immigration authorities inform TSA that the candidate does not have permission to remain in the United States. In this instance, TSA will advise the provider to cease training the candidate, because a candidate that no longer passes the immigration check for a Level 3 STA is considered by TSA to be unlawfully present, and to be a risk to national security.

Unless otherwise directed by the U.S. Department of State (DOS), a candidate's Determination of Eligibility will expire when their passport or other document(s) establishing eligibility for flight training expires, is revoked, or suspended, even if the Determination of Eligibility was originally issued for a longer period of time. The candidate may submit additional documents to correct or update their record and possibly extend or restore their Determination of Eligibility. Table 4 provides a list of relevant documents, and § 1552.31(e) describes redress provisions.

TSA relies upon valid U.S. Government identity document(s) with issue and expiration dates when conducting immigration checks. TSA is not an immigration authority and relies on data and guidance from immigration authorities, such as DOS, USCIS, ICE, and CBP, during TSA's review of information, and when resolving any immigration-related questions or concerns that arise.

2. Intelligence Check (§ 1552.31(c))

The intelligence check for a Level 3 STA reviews biographic information, documents, and databases to confirm an individual's identity, and searches government and non-government databases, including terrorist watchlists, criminal wants and warrants, Interpol, and other domestic and international sources, to determine whether an individual may pose or poses a threat to transportation or national security. TSA conducts the intelligence check ''recurrently'' so that each time a watchlist changes, TSA again runs the vetted individuals against the revised list. Thus, if a candidate is initially issued a Determination of Eligibility, but is later placed on a watchlist, TSA can quickly take appropriate action to minimize the threat. If TSA determines that the candidate presents a threat to aviation or national security, that individual is not eligible for flight training. Under § 1552.31(e), flight training candidates may request that TSA reconsider an ineligibility determination only if the determination was made on the basis of incorrect records. TSA provides each candidate with a summary of the records upon which TSA based its decision, to the extent feasible in light of national security and law enforcement interests.

3. Criminal History Records Check (§ 1552.31(c))

The CHRC conducted under this rule is similar to the CHRC TSA conducts for other Level 3 STAs such as the TSA PreCheck® program (a DHS trusted traveler program), and the TWIC® and HME programs under 49 CFR part 1572. TSA submits the biometrics (fingerprints) collected for STAs that include a CHRC to the Automated Biometrics Identification System (IDENT), which is operated by the DHS Office of Biometric Identity Management. IDENT is the departmental repository for biometrics collected by DHS agencies and provides additional information for TSA to use as part of the vetting process.

4. Rap Back

The FTSP will use the FBI's Noncriminal Justice Rap Back service[65] for individuals required to undergo a CHRC. Rap Back allows TSA to move from an event-based STA requirement to a time-based STA. TSA has implemented Rap Back for other vetting programs. The Rap Back service provides a continuous criminal vetting capability that enhances security significantly by providing TSA with timely criminal history information rather than finding it when the next STA is conducted.

[64] *See https://www.dhs.gov/trusted-traveler-programs.*

[65] For more information, *see* the FBI's Next Generation website at *https://www.fbi.gov/services/cjis/fingerprints-and-other-biometrics/ngi.*

Rap Back enables TSA to receive new criminal history that occurs after the initial submission of fingerprints. Without Rap Back, TSA must submit new fingerprints and fees each time it seeks to obtain a new CHRC on an individual. With Rap Back, TSA can determine that an individual who initially passed the CHRC and received a Determination of Eligibility has become ineligible due to a recent disqualifying criminal offense. Implementation of Rap Back does not affect the type or amount of information TSA must collect from each individual at enrollment.

E. How do flight training providers and candidates provide the required information to TSA?

1. Use the FTSP Portal To Submit Documents (§ 1552.17)

For nearly 2 decades, flight training providers and candidates have used the FTSP Portal to manage STA applications and notify TSA of flight training events. The final rule makes the use of the FTSP Portal mandatory for candidates to submit STA applications, for flight training providers to submit their flight training event notifications to TSA, and for U.S. DoD attachés to submit DoD endorsements. The final rule also removes previously permitted procedures for faxing documents. *See* § 1552.17. Under the final rule, flight training providers must use the FTSP Portal to submit all flight training event notifications to TSA on behalf of candidates. TSA accepts no other method to be notified of flight training events.

2. Use the FTSP Portal for Recordkeeping (§ 1552.15)

As previously described in section II.B.7, TSA will allow flight training providers to store records required by § 1552.15 on the FTSP Portal, including records containing personally identifiable information, to facilitate compliance with the regulation.

When this capability is made available, all flight training providers will be able to use the FTSP Portal for recordkeeping purposes. For example, a provider that does not train candidates may use the FTSP Portal to maintain records of compliance with citizenship verification requirements, security awareness training, etc. These providers may, of course, continue to use their own recordkeeping systems. TSA will encourage providers to take advantage of this capability, as the maintenance of all required records in one place facilitates audits and inspections for all parties. For example, many recordkeeping violations of the requirements in this part resulted from the dispersal of records across the enterprise, or from inconsistent recordkeeping practices. Consolidating records on the FTSP Portal will address these issues.

In addition, both Student and Exchange Visitor Program (SEVP)-certified and non-SEVP-certified providers will be able to upload their lease agreements to the FTSP Portal. Table 5 compares the required to permissive use of the FTSP Portal for flight training providers.

TABLE 5—COMPARISON OF REQUIRED AND OPTIONAL USE OF THE FTSP PORTAL

Use of FTSP Portal *required* for the following purposes	Use of FTSP Portal *encouraged* for the following purposes
• Designate a Security Coordinator. • Verify that a student, candidate, or DoD endorsee is eligible to participate in flight training. • Ensure each candidate holds a Determination of Eligibility. • Notify TSA of all non-U.S. citizen flight training events. • Notify TSA when a candidate appears to no longer be lawfully present or otherwise no longer permitted to remain in the United States, or has a disqualifying criminal offense. • Document each student and candidate presents valid ID at each flight training event. • Upload photos of candidates and DoD endorsees within 5 days from when they arrive for training. • Update FTSP Portal records concerning candidate completion or non-completion of training. • Acknowledge receipt of TSA notifications.	• Record compliance-related activities in lieu of maintaining physical or electronic records onsite. • Record employee initial and biennial security awareness training events. • Document aircraft simulator lease agreements. • Record verification of student, candidate, or DoD endorsee eligibility. • Support TSA, FAA, DoD, and SEVP inspections and audits of compliance records.

The FTSP Portal also is available to other U.S. Government agencies who may request access for the following purposes:

• FAA Airmen Certification Office and Flight Standards personnel who confirm airman and flight training provider certifications, facilitate the notification of disqualifying actions or offenses, and support FAA inspections and audits of flight training providers.

• DoD attachés who initiate and distribute endorsement notifications to specific flight training providers.

• DHS employees authorized to support inspections and audits of flight training providers' facilities and records, facilitate the sharing of candidate training activities, and determine a candidate's status with Federal immigration authorities.

3. Use the FTSP Portal To Create and Access Accounts (§ 1552.17)

In order to comply with the regulation, candidates and flight training providers must create their own accounts on the FTSP Portal [66] and submit all required information and documentation through their FTSP Portal accounts. Each candidate uses the FTSP Portal to create an account; enter biographic and biometric information; upload digital copies of identity documents, visas, and other documents that establish eligibility for FTSP; apply for an STA; access the link to pay the fee through an account on *Pay.gov;* and associate their account with their flight training provider or providers.

Flight training providers covered by the final rule must establish an account on the FTSP Portal and identify only one person as the administrator for their FTSP Portal account. This person may be the Security Coordinator or another employee. Each provider must identify at least one FAA instruction certification to establish an online provider account with TSA. Flight training provider accounts are verified with FAA through certificate(s) granted under 14 CFR parts 61, 121, 135, 141, or 142. A provider may identify additional non-administrator agents on their account if desired.

[66] Currently accessible at *https://www.fts.tsa.dhs.gov.*

TSA may suspend any user's access to the FTSP Portal at any time. The decision to suspend a user's FTSP Portal account or a user's access to the FTSP Portal is within TSA's sole discretion, but TSA would not do so without just cause. Examples of such causes include suspicion of fraud, persistent noncompliance with one or more requirements of this part, or reasonable suspicion that the account holder poses a threat to aviation or national security. TSA assumes responsibility for the security of any data uploaded to the FTSP Portal and will partner with flight training providers in the retention and removal of records according to National Archives and Records Administration (NARA) and Privacy Act standards.[67]

4. Use the FTSP Portal To Access FTSP Guidance (§ 1552.17)

The FTSP Portal is the primary source for obtaining information about FTSP requirements. The portal offers detailed guidance on FTSP processes and requirements, including candidate, provider, and other user guides, and Frequently Asked Questions.

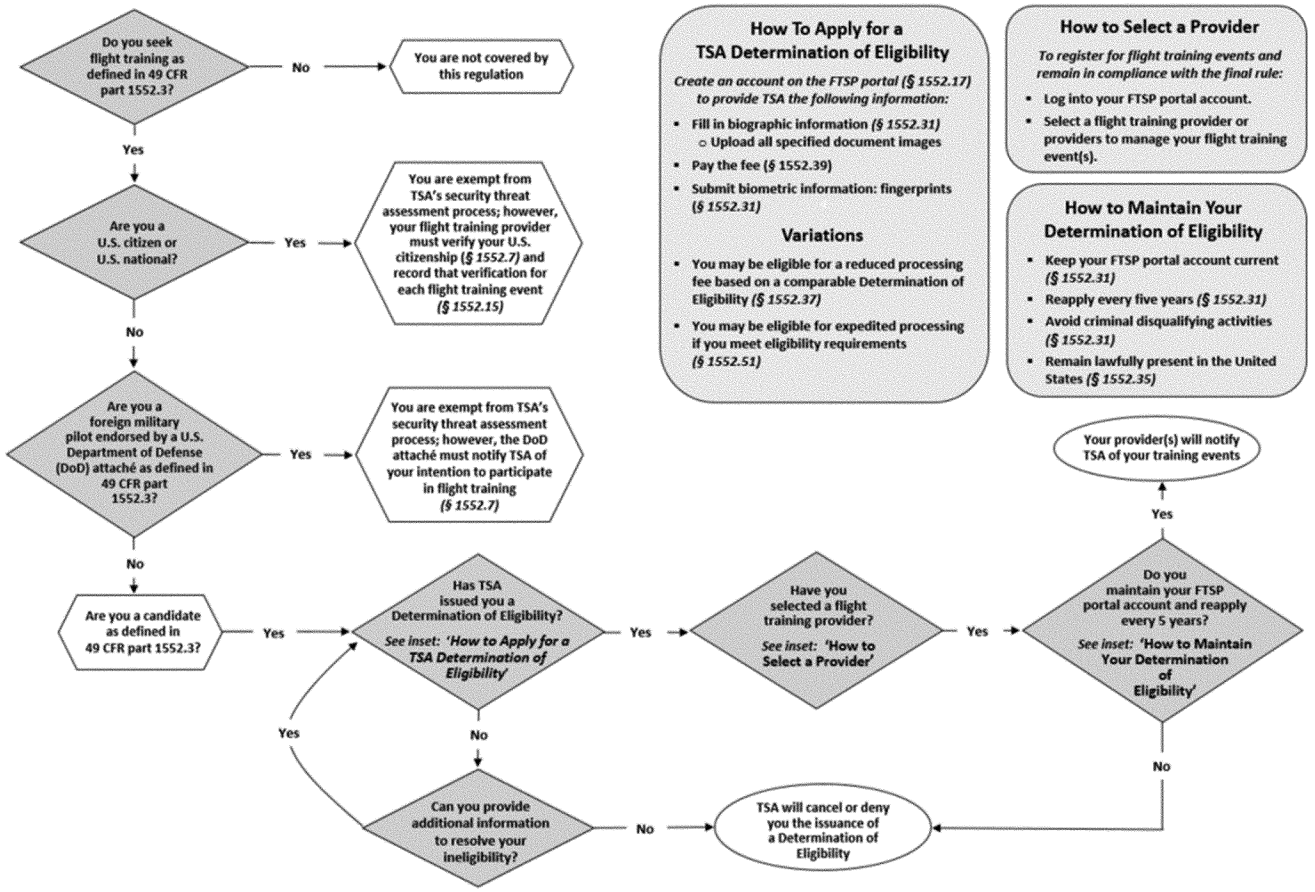
Through the FTSP Portal, TSA is reducing its carbon footprint by providing for all documentation and correspondence between TSA and the regulated party to occur through the portal and email; no hard-copy correspondence is required or generated. Email to *FTSP.Help@tsa.dhs.gov* is the most effective way to communicate with or query the FTSP. TSA generally responds to emails within 5 to 7 business days.

F. Compliance Guidelines

The flow charts in Figures 1 and 2 summarize compliance requirements for candidates (Figure 1) and flight training providers (Figure 2).

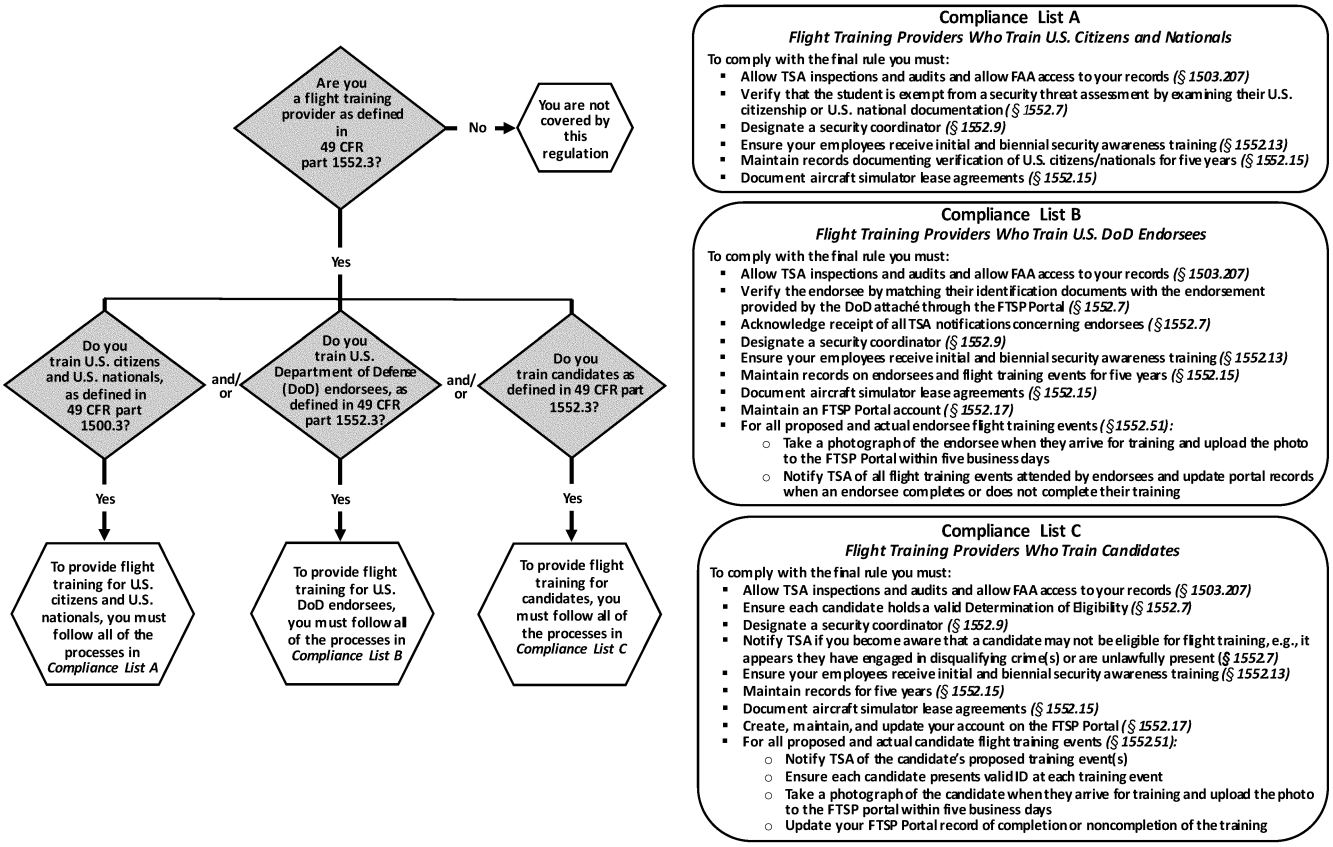
BILLING CODE 9110–05–P

FIGURE 1. FLIGHT TRAINING CANDIDATE COMPLIANCE GUIDELINES



[67] Please *see supra* note 32.

FIGURE 2. FLIGHT TRAINING PROVIDER COMPLIANCE GUIDELINES



BILLING CODE 9110–05–C

G. What happens if a flight training provider or candidate fails to comply?

1. False Statements (§ 1552.19)

Under § 1552.19, neither the flight training provider nor the candidate may make a willful false statement or misrepresentation or omit a material fact when submitting the information required under this part. TSA considers online confirmation and attestation by the flight training provider or the candidate to be sufficient certification that the information provided is neither fraudulent nor false. The final rule clarifies that this prohibition against false statements under the IFR applies to both candidates and flight training providers.

Individuals subject to this rule may be subject to enforcement actions under 49 CFR 1540.103 for fraud and intentional falsification of records, or under § 1540.105, which applies to individuals who tamper with, interfere with, compromise, modify or attempt to circumvent any security system, measure, or other TSA procedure. Individuals subject to this rule who make knowing and willful false statements, or who omit a material fact when submitting required information for TSA also may be subject to fines and/or imprisonment under 18 U.S.C. 1001, denied approval for a Determination of Eligibility, and subject to other enforcement actions.

2. Compliance, Inspection, and Enforcement (§ 1503.207)

While the IFR included a paragraph related to TSA's inspection authority, it did not provide the same detail found in other TSA regulatory provisions, nor did it align with the full scope of TSA's statutory authority. ATSA authorizes TSA, during reasonable business hours and without advance notice, to enter a facility or access online records and conduct any audits, assessments, tests, or inspection of operations, and view, inspect, and copy any records necessary to carry out TSA's security-related statutory and regulatory authorities.[68] TSA may inspect the original or the recorded copy of any documents provided by a student, candidate, or provider.

This access is necessary to ensure TSA meets its statutory mandate to: (a) enforce its regulations and requirements; (b) oversee the implementation and ensure the adequacy of security measures; and, (c) inspect, maintain, and test security facilities, equipment, and systems for all modes of transportation.[69] This mandate applies even in the absence of rulemaking, but TSA has chosen to include a restatement of its authority in its rules. Over the years, TSA added language through multiple final rules regarding inspections. As a result, TSA's inspection authority had been restated in 49 CFR parts 1542, 1544, 1546, 1548, 1549, 1550, 1552, 1554, 1557, and 1570.

This final rule does not alter the scope of TSA's inspection authority. Through this rulemaking, TSA is consolidating all statements on the agency's enforcement authority into § 1503.207, which covers all of TSA's investigative and enforcement procedures. The new § 1503.207 applies to all of TSA's regulatory requirements. This consolidation is purely technical, as TSA's authority to conduct inspections under each part is not changed. While the various statements of inspection authority included in 49 CFR parts 1500 *et seq.* were not identically worded, TSA has consistently interpreted each of the previous statements to have the same scope and meaning as provided by

[68] *See* ATSA as codified at 49 U.S.C. 114.

[69] *See* 49 U.S.C. 114(f)(7), (11), and (9).

49 U.S.C. 114. This final rule codifies this consistent interpretation in § 1503.207.

H. Severability

TSA is adding § 1540.7 to reflect TSA's intent that the various regulatory provisions be considered severable from each other to the greatest extent possible. For instance, if a court of competent jurisdiction were to hold that the rule or a portion thereof may not be applied to a particular owner or operator or in a particular circumstance, TSA intends for the court to leave the remainder of the rule in place with respect to all other covered persons and circumstances. The inclusion of a severability clause is not intended to imply a position on severability in other TSA regulations.

III. Summary of Changes Between IFR and Final Rule

Table 6 summarizes changes between the IFR and final rule.

TABLE 6—SUMMARY OF CHANGES BETWEEN THE IFR AND THE FINAL RULE

Final rule	Change from IFR	Reason for the change
Subpart A		
§ 1552.1. Scope	Describes the scope and general requirements of the rule.	Technical.
§ 1552.3. Terms used in this part	Consolidates definitions by removing them from other parts of the CFR and publishing them in one part.	Technical change. Provides clarity to requirements by defining terms previously not defined and expanding some existing definitions. Moves some terms used throughout TSA's regulations to § 1500.3. (*See* I.E.)
§ 1552.5. Applicability	Describes the individuals and entities subject to regulation under this rule, with revised text.	Provides clarity regarding applicability of the rules' requirements. Clarifies requirements for persons, entities, and companies providing leased aircraft simulators for flight training. (*See* II.B.).
§ 1552.7. Verification of eligibility	Describes the process for verifying a flight student's eligibility for training in a separate section, with revised text.	Expands and incorporates clarifications published after the IFR was issued, by recognizing that many flight training providers may become aware that a candidate might have become ineligible prior to TSA being informed through formal channels. (*See* II.B. and III.C.).
§ 1552.9. Security Coordinator	Requires all flight training providers to designate a person to serve as a Security Coordinator and outlines the role of the Security Coordinator, including what training the Coordinator must participate in.	Provides a primary contact for administrative purposes and compliance, consistent with TSA's other regulations. (*See* II.B.5.).
§ 1552.13. Security awareness training	Replaces ''recurrent'' security awareness training with ''refresher security awareness training''.	Avoids confusion between recurrent flight training (required by the FAA) and recurrent security awareness training (required by TSA) and reduces the frequency of refresher security awareness training. (*See* II.B.6.).
§ 1552.15. Recordkeeping	Consolidates documentation and recordkeeping requirements and introduces the capability to store and manage records on the FTSP Portal.	Provides clarity and eliminates redundancies. Provides cost-saving options. (*See* II.B.7.).
§ 1552.17. FTSP Portal	Consolidates FTSP Portal account provisions	Provides clarity and eliminates redundancies. (*See* II.E.).
§ 1552.19. Fraud, falsification, misrepresentation, or omission.	Updates language concerning the confirmation and attestation of truth and accuracy.	Provides clarity on impact of making false statements. (See II.G.1, III.C.).
Subpart B		
§ 1552.31. Security threat assessments required for flight training candidates.	Consolidates and standardizes requirements for candidates, and extends the duration of an STA for up to 5 years.	The Determination of Eligibility may be used with one or more flight training providers (portable), instead of requiring a new determination for each flight training event. (See I.D.3., II.C., II.D., IV.C.5.).
§ 1552.33. [Reserved]		
§ 1552.35. Presence in the United States	Describes how TSA determines immigration check eligibility in relation to an STA.	Clarifies TSA's role in conducting an immigration check. (*See* II.D.).
§ 1552.37. Comparable security threat assessments.	Allows applicants to submit proof of a completed, comparable STA.	Allows for a reduced fee for candidates that hold a comparable STA issued by another DHS or TSA program. (See II.C.2., IV.C.).
§ 1552.39. Fees	Consolidates all fee requirements	Combines fees paid over a 5-year timeframe into one fee and incorporates an industry-stated preference to pay a single fee for an STA covering multiple training events. (*See* II.C., IV.B., IV.C., V.).

TABLE 6—SUMMARY OF CHANGES BETWEEN THE IFR AND THE FINAL RULE—Continued

Final rule	Change from IFR	Reason for the change
Subpart C		
§ 1552.51. Notification and processing of flight training events.	Consolidates flight training event notification requirements.	Standardizes phrasing concerning processing capabilities, and collects pertinent information for one to many training events based on a 5-year Determination of Eligibility. (See II.B.3., IV.C.4).

TSA made these changes in response to comments received during the comment periods following publication of the IFR in 2004, and following the reopened comment period in 2018. All changes in the final rule are supported by comments received on the IFR, or following the 2018 reopened comment period, many of which also formed the basis of formal recommendations from ASAC. TSA tailored the scope and content of the final rule to reflect only those changes that are supported by the public record. TSA did not solicit a new round of comments after the 2018 comment period because the issues raised have not changed.

All exemptions, interpretations, and guidance documents related to the IFR are incorporated into the final rule. TSA has authority under 49 U.S.C. 114(q) to issue an exemption to any TSA regulation, if such an exemption is in the public interest. The basis for TSA's decision in each exemption, interpretation, and guidance document was stated in the original documents TSA provided when issuing each decision, all of which may be found in the public docket for this rulemaking. TSA's reasons for incorporating its previous decisions into the final rule are described more fully in the sections of this document referenced in column three of table 6. Most of TSA's interpretations of this rule have been in place for nearly 2 decades, and all interpretations are now standard practice across the flight training community. TSA does not believe any industry members have relied to their detriment upon the original text of the IFR, or any exemptions, interpretations, or guidance documents issued thereafter. The final rule is intended primarily as a cost-saving and burden-reducing measure, and as such, TSA does not expect any members of the flight training community to be significantly burdened by it.

IV. Discussion of Public Comments and TSA Responses

A. Solicitation of Comments on the IFR

TSA has twice invited public comment on the regulatory requirements to inform a final rule. First, the IFR, published on September 20, 2004,[70] requested comments from the public to be submitted by October 20, 2004. Although the original comment period closed in late 2004, one additional comment came after the closing period (in 2011). TSA also accepted this comment as part of the official record. Second, on May 18, 2018, TSA reopened the IFR comment period for 30 days[71] and solicited additional comments on the scope of STAs, including who should receive them and how frequently; options for reducing the burden of recordkeeping requirements, including use of electronic records; and sources of data on costs and other programmatic impacts of the rule. In addition to these formal opportunities for comment, TSA has been interacting with, and receiving feedback directly from, the regulated community on this program since its inception.

In total, TSA received 386 comments on the IFR since it was issued. TSA considered every comment received during the open comment periods as well as other stakeholder feedback on the FTSP since the IFR was published. The following summarizes all comments and provides TSA's responses. Issuance of this final rule concludes the comment solicitation process TSA began with the IFR. TSA believes it has addressed all issues and concerns emanating from public comments, and has incorporated all viable recommendations from the public and industry.

B. General Rulemaking Issues

1. Justification for the FTSP

Comments: In early comments, some commenters and members of an industry association expressed general support for the IFR. Association members noted that the IFR's requirements were reasonable to prevent another terrorist attack similar to the attacks of September 11, 2001.

Some commenters felt the 2004 IFR did not go far enough, and many commenters, including flight training providers, expressed general disapproval of the IFR. Commenters opposing the IFR cited perceived burdens across the regulated industry and predicted the rule would be ineffective against a terrorist threat, stating that terrorists can obtain training elsewhere, flight simulation software is readily available, or that other forms of transportation, such as trucks, pose more of a threat. Some 2004 commenters predicted that the IFR would have a negative effect on aviation safety, and a few commenters in 2018 asserted that any regulation that discourages candidates from training in the United States compromises aviation safety globally and could harm U.S. citizens traveling abroad.

Some commenters suggested that the IFR could be circumvented easily by terrorists or flight training providers, and that non-U.S. citizens who become flight instructors could accumulate flight time in the United States without being vetted by TSA. Several commenters stated that the rule does not prevent a terrorist from learning to fly, stating as examples that terrorists can train in other countries, receive ''informal'' training that is not covered by this rule, or learn using publicly available web-based flight simulation software.

Commenters also expressed concern that the IFR's underlying message was that all foreign candidates are considered potential terrorists or criminals. These commenters suggested this perception and the increased burdens associated with the IFR would discourage non-U.S. citizens from pursuing flight training in the United States.

One industry association suggested that the IFR was not necessary because flight training providers had already implemented other measures that have ''dramatically increased'' flight school security. Some did not accept that a threat exists.

One commenter recommended that TSA ensure that candidates speak and understand English.

[70] *See supra* note 1.

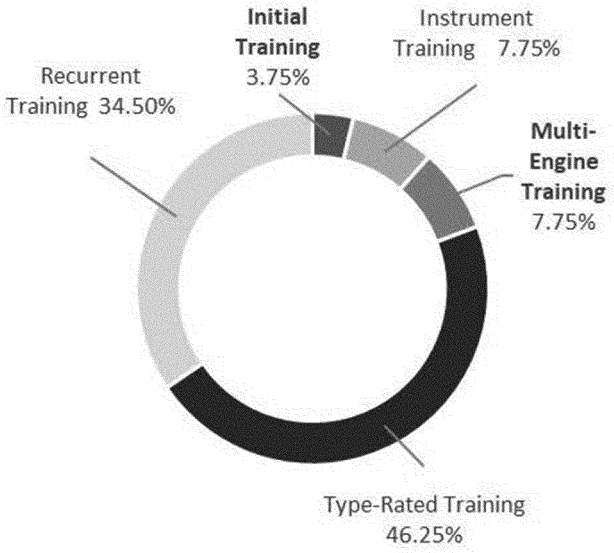
[71] *See supra* note 5.

TSA response: TSA was created in response to the attacks of September 11th, and numerous laws have been enacted since that date to strengthen security. One of these provisions, 49 U.S.C. 44939, requires a nationwide program to identify individuals applying for flight training who present ''a risk to aviation or national security.'' The requirements in section 44939 focus on non-U.S. citizens who obtain in-person flight training, and on security awareness training for flight training providers in general. This rule is aligned with the requirements of that statute.

The primary purpose of the FTSP is to prevent a non-U.S. citizen from receiving flight training unless TSA has determined they are not a security threat. Several of the terrorists who committed the attacks on September 11, 2001, trained at flight schools in Florida, Arizona, and Minnesota.[72] As demonstrated by the horrific events of that day, even a single act of terrorism can cause grave economic and social harm.

Since publication of the IFR in 2004, TSA has identified individuals who posed or may have posed a threat to aviation and national security and prevented them from receiving flight training that they could use to carry out a terrorist act. During the 10-year period shown in Figure 3, below, individuals representing all stages of a pilot's career were identified as posing potential threats to aviation and national security. For this reason, as discussed further below, the final rule focuses on potential skills achieved by an individual, as opposed to the IFR's focus on the weight of an aircraft. Specifically, the final rule covers flight training leading to an initial pilot license, an instrument rating, a multi-engine rating, a type rating, and training required to maintain ratings for specific types of aircraft. The definition of ''flight training'' codifies these changes in § 1552.3.

Figure 3. Training Events Where Non-U.S. Citizens Were Identified as a Threat to Aviation or National Security Over a 10-Year Period



Source: TSA, Enrollment Services and Vetting Programs (FY2009-FY2018)

TSA agrees that the United States benefits from foreign pilots training in the United States under U.S. aviation safety standards. Many of these aviators return to their home countries as professional pilots and provide safer air transportation to U.S. citizens traveling abroad.

Regarding the 2004 comments that the IFR unduly burdened the industry, the final rule implements changes that TSA believes mitigates burdens to candidates and providers. *See* discussion above in section I.D.

Finally, in regard to requiring candidates to demonstrate English proficiency, TSA's mission and authorities do not extend to this concern. The FAA requires English proficiency under 14 CFR part 61.

2. TSA's Authority To Impose Requirements

Comments: Several commenters felt that the IFR exceeded the statutory authority granted to TSA. An industry representative and another commenter stated that the provisions of 49 U.S.C. 44939 pertaining to flight training only require flight instructors to provide identification information to DHS and do not require individuals to submit information to TSA beyond what the statute specifically requires, or to submit to a background check.

TSA response: Under 49 U.S.C. 44939, the Secretary of Homeland Security has broad discretion to

[72] *See supra* note 7.

determine whether a candidate poses a ''risk to aviation or national security.'' The same provision also states that these requirements may be applied to ''other individuals designated by the Secretary.'' As previously noted, the HSA transferred all functions related to transportation security, including those of the Secretary of Transportation and the Under Secretary of Transportation for Security, to the Secretary of Homeland Security.[73] The Secretary of Homeland Security delegated this discretion and authority to the TSA Administrator in DHS Delegation No. 7060.2. In addition to the authorities granted by 49 U.S.C. 44939, TSA has broad authority to ensure the security of air transportation under 49 U.S.C. 114.

TSA has broad statutory authority to assess a security risk for any mode of transportation, develop security measures for dealing with that risk, and enforce compliance with those measures.[74] TSA also has broad regulatory authority to issue, rescind, and revise regulations as necessary to carry out its transportation security functions.[75]

In addition to these authorities, 6 U.S.C. 469(b) requires the Secretary of Homeland Security to establish a process to properly identify individuals who are not U.S. citizens or U.S. nationals who receive recurrent flight training, and to ensure that these individuals do not pose a risk to aviation or national security. The Secretary of Homeland Security has also delegated this discretion and authority to the TSA Administrator in DHS Delegation No. 7060.2. As discussed below, the same statute authorizes the Secretary to impose reasonable fees to recoup the cost of vetting candidates seeking flight training.[76]

3. TSA's Authority To Impose Fee for STAs

Comments: A few commenters, including two industry associations, questioned TSA's authority to impose fees.

TSA response: TSA incurs costs from conducting STAs, processing notifications of training events, enabling expedited processing for eligible candidates, processing comparable STAs, arranging for FBI CHRCs, and online records management. In addition to the authority under 6 U.S.C. 469(a), which requires TSA to fund vetting and credentialing programs in the field of transportation through user fees, TSA is required by 6 U.S.C. 469(a) and authorized by 49 U.S.C. 44939(g) to collect fees for conducting STAs and managing flight training event notifications. Accordingly, TSA charges fees for candidates who receive an STA under the FTSP. A more robust discussion on TSA's authority to collect fees for STAs is provided above in section I.B.6. For more information concerning TSA costs, see the accompanying fee study posted to the public docket and discussion in section II.C.2.

4. TSA's Decision To Issue an IFR

Comments: Several commenters, including professional associations, flight training providers, and others, disagreed with TSA issuing a binding rule without providing the opportunity for prior notice and public comment. They were concerned that stakeholder input would not be solicited or considered.

TSA response: The Vision 100 Act transferred responsibility for the FTSP from DOJ to DHS and required the Secretary of Homeland Security to publish the IFR accomplishing this transfer, and other required changes, within 60 days.[77] For this reason, TSA dispensed with certain notice procedures when it published the IFR. TSA has, however, twice invited public comment on the regulatory requirements to inform a final rule. TSA included an opportunity for public comment on the IFR, specifically asking the public ''to participate in this rulemaking by submitting written comments, data, or views,'' noting that ''to the maximum extent possible, operating administrations within DHS will provide an opportunity for public comment on regulations issued without prior notice.'' [78] In May 2018, TSA reopened the 2004 comment period to solicit further comments on the program and identified six issues for additional consideration.[79] Through this final rule, TSA has considered and responded to all of the comments received. In addition to soliciting public comment through the **Federal Register**, TSA received recommendations from the ASAC, whose meetings are a public record. The details of the ASAC recommendations are discussed in more detail in section I.B.

5. Economic Impacts of the FTSP on the Industry

Comments: Many commenters raised issues regarding the economic impacts of the FTSP. A commenter wrote that the IFR could ''. . . potentially [have] disastrous unintended consequences,'' and that ''TSA has not set a very good example for following rules,'' giving as an example that TSA did not prepare a statement under the Unfunded Mandates Reform Act (UMRA) of 1985. Several commenters predicted that the IFR would ruin the U.S. flight industry, especially recreational flight. For additional information on the ASAC and reopened comment period, see section I.B.4 and 5.

While at least one commenter concurred with TSA that it is appropriate for candidates who undergo an STA for the first time to be held to a 30-day review process to ensure that they do not pose a threat to aviation or national security, many commenters argued that flight training providers should not bear the burden of verifying candidates' citizenship, identification, or other documents. They felt that the IFR created undue time and cost burdens for non-U.S. citizens, lawful permanent residents, and others who had already successfully undergone a U.S.-Government-sponsored threat assessment.

Several 2004 commenters suggested that limiting the number of non-U.S. citizens who receive flight training in the United States would damage the U.S. economy by harming flight schools, flight instructors, and other businesses patronized by foreign customers. Some aircraft operators predicted that the IFR would reduce the U.S. share of the multi-billion-dollar global flight training industry because aircraft operators would train in other countries. An industry association commented that burdens from the IFR threatened the viability of the general aviation industry, private flight instructors, and small flight schools. One commenter wrote that small businesses and independent instructors conduct much of their flight training in the United States and that many of these individuals do not have offices or equipment necessary to comply with the IFR. One commenter wrote ''TSA seems to be putting the burden of safeguarding the airline industry on the flight schools instead of shouldering the responsibility themselves.''

A Canadian aircraft operator disagreed with TSA's determination in the IFR that the rule's economic impact would be neutral, contending that IFR requirements presented a significant

[73] *See supra* note 22.

[77] *See supra* note 15.

[78] 69 FR at 56324.

[79] 83 FR at 23239.

obstacle to taking flight training in the United States for non-U.S. residents. A pilot stated that, although TSA assumed the IFR would not have a significant impact on the demand for U.S. flight school training despite the increase in costs to candidates, no data was provided to support this assumption. A flight training provider stated that approximately 60 percent of his students were not U.S. citizens, and that the IFR's burden would result in some of these students forgoing training.

Another pilot asserted that TSA's economic analysis in the IFR was based on a flawed model of foreign pilots coming to the United States to complete a single course of training, rather than a series of training events over a long period of time. A flight instructor argued the economic analysis does not account for either non-U.S. citizen pilots training in the United States for a license to be issued by an authority of a foreign country or for non-U.S. citizen pilots receiving proficiency training in the United States.

A major flight training provider submitted that the IFR did not include an estimate of the time lost by flight schools to process candidates for flight training, *e.g.,* identifying all candidates, making copies of information, photographing candidates, and submitting photos to TSA. Commenters in both 2004 and 2018 indicated that TSA had underestimated the paperwork burden. One provider asserted that the number of times candidates would need to apply to upgrade their ratings and keep current on different types of aircraft was more than twice what TSA had assumed in the IFR. Several commenters expressed concern that the costs to industry caused by compliance with the IFR far outweigh the benefits, particularly for light aircraft, and recommended that TSA more thoroughly evaluate the costs and benefits.

Some 2018 commenters noted that domestic and foreign airlines use U.S.-trained pilots to transport passengers and cargo to and from the United States and between other countries, and that the U.S. economy benefits from pilots trained in the United States to FAA standards.

TSA response: TSA is required by 49 U.S.C. 44939 to implement a nationwide program to identify all non-U.S. citizens applying for flight training who ''present[] a risk to aviation or national security.'' In 2004, when assuming responsibility from DOJ and publishing the IFR, TSA conducted all required regulatory analyses to the degree possible. TSA consulted extensively with DOJ and stakeholders on the costs of implementing the DOJ rule and conducted the economic and other analyses published in the IFR. Since the IFR was published, TSA has continually assessed impacts and adjusted the program and requirements.

UMRA [80] does not apply to a regulatory action in which no notice of proposed rulemaking is published, as was the case for the IFR. *See* UMRA analysis for this rulemaking in section V. Accordingly, and as stated in the IFR, TSA did not prepare a statement under the UMRA.

TSA acknowledges regulatory and cost burdens resulting from the IFR, but notes that they mostly resulted from requirements TSA had to impose to comply with statutory requirements. As noted above, TSA has worked continually to improve STA processing and address as many industry concerns as possible. Early predictions that the IFR would be ineffective or ''has the potential for destroying an entire industry'' have proven incorrect. As noted above, since publication of the IFR, TSA has identified individuals who pose a threat to aviation and national security and has prohibited them from participating in flight training. The industry remains a robust economic activity in the United States.

The final rule is intended to minimize cost and time burdens on both candidates and providers while maintaining the appropriate level of security and complying with all statutory mandates. TSA considered all economic impacts identified in the comments and conducted an extensive economic analysis of the impacts of the IFR and the projected impacts of the final rule; this analysis is included in section V. As noted in section I.B.2, a 2008 amendment to 6 U.S.C. 469 required TSA to recoup the costs of STAs for recurrent training.[81] The statutory amendments authorized TSA to establish the fees through notice. Consistent with the changes to the law, TSA published a notice imposing these fees in 2009.[82]

This final rule reduces candidate and provider burdens by moving to a 5-year STA; incorporating all enhancements and clarifications previously issued by the TSA; adding definitions and other clarifications; and allowing for electronic recordkeeping. In addition, TSA has separated the notification of training events by providers from the STA process for the candidate. TSA has also implemented a reduced fee for candidates who have a comparable STA.

TSA believes that these enhancements to the final rule may improve opportunities for non-U.S. citizens to participate in flight training in the United States and with FAA-certificated flight training providers abroad. Finally, the regulatory and cost analyses TSA conducted prior to issuing this final rule, as described in section V, comply with current requirements for issuance of final rules.

C. Specific Regulatory Requirements

1. Terms (General)

Comments: TSA received comments concerning the following terms: ''aircraft simulator,'' ''alien,'' ''candidate,'' ''day,'' ''demonstration flight for marketing purposes,'' ''flight school,'' ''flight training,'' ''ground training,'' ''national of the United States,'' and ''recurrent training.'' Many commenters raised questions relating to the IFR's definitions, particularly questioning how the specific meaning of a term in the IFR would affect the commenter's obligation to comply with the regulation. Definition comments generally fell into the following areas of concern:

- Inconsistencies between how some terms and definitions were used in the IFR's preamble and the regulatory text, especially the terms ''training,'' ''flight training,'' and ''candidate.''
- Inconsistency between the IFR's definition of ''aircraft simulator'' and the FAA's definition.
- Lack of clarity regarding whether lawful permanent residents of the United States are subject to requirements applicable to non-U.S. citizens.
- Lack of clarity on requirements for documentation of leasing agreements associated with training on aircraft simulators.
- Inadequacy of the definition of recurrent training, which caused some confusion and generated many recommendations from commenters.

TSA response: In coordination with industry and other U.S. Government agencies, TSA expanded, consolidated, and clarified definitions in the final rule in the following manner:

- Added the following terms and their definitions to § 1500.3, applicable to all TSA regulatory requirements: ''citizen of the United States,'' ''day,'' ''lawful permanent resident,'' ''national of the United States or U.S. national,'' and ''non-U.S. citizen.''
- Added the following definitions to part 1552, applicable specifically to the FTSP: ''aircraft simulator,'' ''candidate,''

[80] Public Law 104–4 (109 Stat. 66; Mar. 22, 1995), *codified at* 2 U.S.C. 1511 *et seq.*

[81] *See supra* note 20 and accompanying text.

[82] 74 FR 16880 (April 13, 2009).

''demonstration flight for marketing purposes,'' ''DoD,'' ''DoD endorsee,'' ''Determination of Eligibility,'' ''Determination of Ineligibility,'' ''flight training,'' ''flight training provider,'' ''flight training provider employee,'' ''Flight Training Security Program (FTSP),'' ''FTSP Portal,'' ''FTSP portal account,'' ''recurrent training,'' ''security threat,'' ''security threat assessment,'' ''simulated flight for entertainment purposes,'' and ''type rating.''

- Amended the following definitions in part 1552 for clarity: ''aircraft simulator,'' ''candidate,'' ''demonstration flight for marketing purposes,'' ''flight training,'' and ''recurrent training.''
- Replaced the term ''flight school'' with ''flight training provider,'' with some amendments, as appropriate, for clarity.
- Eliminated the terms ''alien'' and ''ground training.''

TSA discusses how these changes to the definitions affect regulatory requirements in section II.A and in the next subsection, which clarifies the scope and applicability of the regulation.

2. Applicability

a. General

Comments: Some 2004 commenters felt that applicability of the FTSP is either too broad or unclear. Several aircraft operators and an association requested that TSA exempt candidates who hold an FAA pilot's license and who have worked for a U.S.-certificated airline for 3 or more years. Most of these commenters argued that their employees meet the statutory definition of a ''national of the United States,'' and therefore fall outside the IFR's scope. Others asked that TSA allow their companies to satisfy the IFR's requirements by sending TSA a list of current airline pilots they employ.

An association noted that all air crews operating into the United States must be on the aircraft operator's Master Crew List and therefore were already cleared to operate into the United States.

Some commenters asked TSA to accept persons cleared by US–VISIT [83] as exempt, because DHS already collected their biometric information (fingerprints) for that process.

TSA response: Both the IFR and the final rule implement the statutory requirements of 49 U.S.C. 44939. Persons who must comply with requirements of the final rule are flight training providers and their employees, all individuals who are ''candidates'' as defined in the rule, and U.S. citizens or U.S. nationals who seek flight training. Section II.B.1 clarifies the need for the requirements as applied to U.S. citizens and U.S. nationals. Section 1552.37 of the final rule allows for those candidates who have successfully completed a comparable STA to submit evidence of that STA in order to qualify for a reduced fee. TSA may accept Determinations of Eligibility held by individuals who participate in TSA's TWIC®, HME, TSA PreCheck®, and CBP's Global Entry, SENTRI, and NEXUS programs, and any other program that TSA publishes on the FTSP Portal as acceptable. TSA does not consider the US–VISIT program to be a comparable STA because the vetting requirements of that program do not include all elements of a Level 3 STA conducted by TSA.

TSA recognizes that the final rule is broad in its applicability to flight training in all locations and in some cases to types of aircraft that may not seem inherently dangerous. Consistent with its transportation security mission, however, TSA recognizes the fact that skills used to operate one aircraft can be transferred to the operation of another aircraft.

b. Scope of Who Is Considered a Flight Training Provider

Comments: Early commenters noted that the IFR did not define ''flight school employee'' adequately, and that the definition of ''flight schools'' also included independent CFIs. These definitions, they noted, resulted in TSA considering an independent instructor to be both a flight school and an employee, despite the fact that the instructor may not be a flight school or an employee as those terms are commonly understood.

In 2004, an industry representative noted that the IFR expanded the scope of the former DOJ program and stated that approximately 3,400 flight training providers provide flight training under 14 CFR part 61 without the necessity for a flight school certification, and approximately 88,000 flight instructors are certificated under 14 CFR part 61, many of whom provide flight training unaffiliated with any flight school.

TSA response: TSA resolved these concerns shortly after the IFR was issued by clarifying that the program is not limited to traditional ''schools'' regulated under 14 CFR part 141.[84] The definition of ''flight training provider'' in the final rule further clarifies which entities must comply with FTSP requirements, making clear that flight training for the purposes of the FTSP program may be delivered by a person operating under one or more of the relevant FAA regulations, *i.e.,* 14 CFR parts 61, 121, 135, 141 and 142. Flight training delivered to non-U.S. citizens under any of these regulations results in their obtaining skills as a pilot; the manner in which the FAA regulates the training is not relevant from a national security perspective.

Consistent with this policy, TSA does not limit the FTSP to only flight training providers certificated under 14 CFR parts 141 and 142 because most flight training in the United States occurs under 14 CFR part 61, by individual flight instructors. Since the inception of the program, approximately 9,000 of the 13,000 flight training providers registered with TSA operate under 14 CFR part 61, and 500 providers operate under 14 CFR parts 121 and 135. Approximately 3,500 flight training providers registered with FTSP and operating under 14 CFR parts 141 and 142 are SEVP-certified. These providers offer FAA-approved courses and ratings; are associated with fixed facilities; and are recognized as an effective way to expose citizens of other countries to the American people and culture.[85]

c. Responsibility for Compliance Under Leasing Agreements for Aircraft and Aircraft Simulators

Comments: Both the ASAC and many 2018 commenters encouraged TSA to define terminology and provide guidance on recordkeeping of lease agreements. A flight training provider noted that the IFR was not specific enough regarding leasing, causing confusion and noncompliance among the parties. An industry representative recommended that TSA limit any regulatory language about leases to only those instances where an aircraft or aircraft simulator would be used for flight training. Individuals and companies who own and operate aircraft and simulators requested that TSA provide clarity on who is responsible for compliance with this regulation.

Most commenters requested that TSA hold only the flight training provider who is actually conducting the training with leased aircraft or aircraft simulators responsible for

[83] Now called the Office of Biometric Identity Management. *See https://www.dhs.gov/obim.*

[84] *See* Letter to John S. Yodice, Aircraft Owners and Pilots Association, Oct. 19, 2004, fn.1, Docket No. TSA–2004–19147–0227 *available at https://www.regulations.gov/document?D=TSA-2004-19147-0227.*

[85] *See* SEVP Policy Guidance for Adjudicators 1207–04: Flight Training Providers, Dec. 11, 2012, at *https://www.ice.gov/doclib/sevis/pdf/sevp-policy-guidance-flight-training-providers.pdf.*

recordkeeping and compliance. Many acknowledged that persons, entities, or companies who own flight training equipment or aircraft may not know what activities that equipment is being used for, including training of non-U.S. citizens. A commenter noted: ''the flight training provider (as opposed to the lessor of the equipment) is best suited to communicate with the candidate and with TSA.'' A provider recalled situations where both the provider and the entity providing the equipment were registered with TSA and were confused about which party should be responsible for recordkeeping compliance.

A company noted that it may lease its simulator to foreign government personnel to conduct training for non-U.S. citizens and that the foreign personnel are generally not flight training providers recognized by the FAA. Other commenters questioned whether TSA would hold foreign governments responsible for complying with this regulation. An industry representative commented in 2018 that it appeared TSA audits and inspections were providing ''informal'' or inconsistent guidance to flight training providers regarding documentation of their lease agreements.

TSA response: The scope of 49 U.S.C. 44939 includes ''training received from an instructor in an aircraft or aircraft simulator.'' The final rule defines the term ''aircraft simulator'' in § 1552.3 and specifically addresses applicability of regulatory requirements to aircraft simulators leased for flight training in § 1552.5.

Regarding comments that a simulator owner leasing the equipment for flight training may lack knowledge of the parties being trained with their equipment, TSA notes that the U.S. Government also cannot know who is using the aircraft simulator unless that information is provided to TSA. The final rule stipulates that the flight training provider must make their leasing agreements available to TSA upon request. Commenters are correct that TSA cannot require a foreign government to register as a flight training provider; in this scenario, the simulator owner is required by § 1552.5(d)(2) to register as the flight training provider.

The clarification under the final rule is limited to aircraft simulator leases, because a person, entity, or company who leases an aircraft for flight training purposes in the United States must be certified by the FAA to operate that aircraft, and must register under this program as a flight training provider if they train non-U.S. citizens. Both flight training providers and the persons, entities, or companies leasing flight training simulators may use the FTSP Portal to document their lease agreements.

3. Determining Whether Vetting Is Required

a. Citizenship Verification Requirements

Comments: TSA received many comments concerning the U.S. citizenship verification requirement, falling into the following broad themes:

- Some commenters questioned TSA's authority to require U.S. citizens seeking flight training to prove their U.S. citizenship, and others asserted these checks were excessive and would not enhance aviation security.
- Several commenters, including an aircraft operator, recommended that TSA accept other means of verifying citizenship, *e.g.,* the aircraft operator's verification of citizenship in the hiring process.
- An industry association asked TSA to clarify that every flight school (including every freelance flight instructor) must determine the citizenship or nationality of every flight student who seeks flight training, including interpreting and determining the authenticity of the student's legal documents.
- A commenter noted that it is redundant to verify citizenship every time a student participates in flight training.
- An industry representative and a flight training provider asked TSA to provide clear guidance on how to verify citizenship, including an updated list of documents flight training providers may accept to establish U.S. citizenship.
- Some commenters, including a major industry association, contended the IFR placed the responsibility of establishing a person's citizenship on individual flight schools and instructors who are not equipped to perform that task.

TSA response: TSA is required by 49 U.S.C. 44939 to ensure that non-U.S. citizens who apply for flight training do not pose a risk to aviation or national security. Flight training providers are best positioned to confirm the identity of those persons who wish to take flight training, and the best way to ensure that non-U.S. citizens who apply for flight training do not pose a risk to aviation or national security is to require flight training providers to verify citizenship status for all individuals seeking flight training. The final rule continues the requirement for flight training providers to review citizenship documents of all U.S. citizens and U.S. nationals who apply for flight training. TSA notes that a designated pilot examiner, an FAA-certificated pilot who is not the same individual as a candidate's flight training provider, submits citizenship verification to the FAA through the Integrated Airman Certification and Rating Application (IACRA), but a pilot examiner generally is not involved in a candidate's training experience until relatively late in the typical training pipeline, well after a candidate has developed many piloting skills. Detailed information regarding verification of citizenship is provided in section II.B.1.

U.S. citizens and U.S. nationals are not required to undergo an STA, but they must provide proof of U.S. citizenship or U.S. nationality to the flight training provider in order for the requirements under 44 U.S.C. 44939 to be implemented. Flight training providers must have this information to identify which flight students are required by law to obtain a Determination of Eligibility from TSA before the individual is permitted to receive covered flight training.

To facilitate provider compliance with rule requirements to verify citizenship, TSA provides the list of applicable identity documents for U.S. citizens/nationals in table 2.

b. DoD-Endorsee Verification Requirements

Comments: A commenter wanted TSA to clarify the process and requirements for flight training providers to accept and facilitate DoD-endorsed candidates.

TSA response: Section 44939(f) of title 49 U.S.C. provides a program exemption for foreign military pilots endorsed by the DoD, but TSA must be able to determine which applicants qualify for that exemption. As a result, if they wish to qualify for the exemption provided under this section, TSA must require DoD endorsees and their governments to provide information that enables TSA to verify their status. TSA is adding a definition of ''Department of Defense endorsee'' to the final rule and providing additional clarity on the necessary procedures and requirements through amendments to § 1552.7. TSA describes these changes further in section II.B.1, and recordkeeping requirements for DoD-endorsed flight training in section II.B.7.

c. Side-Seat Support

Comments: A flight training provider requested that TSA exempt individuals who occupy a side seat during training from the STA required for a candidate.

TSA response: As discussed in section II.B.1(c), the definition of ''candidate'' in § 1552.3 clarifies

requirements as to who is required to undergo an STA before providing side-seat support during flight training. U.S. citizens and other individuals who hold a type rating for the aircraft or who otherwise possess the certificates needed to pilot the aircraft do not need to register with FTSP and undergo an STA in this context. Non-U.S. citizens providing side-seat support who do not hold an appropriate aircraft type rating or other appropriate certificate must hold a Determination of Eligibility from TSA.

4. Flight Training Events

a. Identification and Notification

Comments: Many flight training providers requested that TSA define flight training events by activity rather than the weight of the aircraft. Specifically, they requested that TSA incorporate the terms ''initial,'' ''instrument,'' ''multi-engine,'' ''type-rated,'' and ''recurrent for type-rated'' training in place of the IFR's four categories based on aircraft weight. An industry association and an individual commenter noted that 49 U.S.C. 44939 excludes recurrent training from the definition of training. One aircraft operator requested that TSA clarify which training activities do not have to be reported as recurrent training.

TSA received many comments and requests for clarification concerning the category types, especially the IFR's Category 4 (recurrent training). Commenters observed that either all or certain types of recurrent training do not impart new knowledge to the pilot. Other commenters observed that recurrent training is not included in the enabling legislation.

Some commenters faulted TSA for not excluding from the rule flight training on certain types of aircraft with a maximum certificated takeoff weight of 12,500 pounds or less. These commenters noted that the requirements of 49 U.S.C. 44939 do not apply to aircraft in this weight range and asked TSA to exempt from the rule any flight training in the operation of aircraft weighing less than 12,500 pounds, including helicopters, gliders, rotorcraft, balloons, ultralight aircraft, and all unpowered aircraft.

TSA response: Both 49 U.S.C. 44939 and 6 U.S.C. 469, as amended, require flight training providers to notify TSA of flight training events. Section 44939 also requires flight training providers to wait up to 30 days for TSA to approve flight training events involving aircraft weighing more than 12,500 pounds. Consistent with the statutes, the IFR identified four training categories based on the weight of the aircraft. In addition to these authorities, 6 U.S.C. 469 requires the Secretary of Homeland Security to establish a process to properly identify individuals who are not U.S. citizens or U.S. nationals who receive recurrent flight training and ensure those individuals do not pose a threat to aviation or national security. As noted in section I.B, this requirement was added to section 469 after publication of the IFR.

TSA recognizes that the weight-based structure of both 49 U.S.C. 44939 and the IFR, which tied the requirements of the rule to the aircraft weight being used for the training, created unintended ambiguities. The IFR imposed different requirements and TSA processing times for similar flight training events based on whether the aircraft weighed slightly more or less than 12,500 pounds. This weight-based structure was consistent with 49 U.S.C. 44939(a), (c), and (d), but did not align conceptually with the typical flight training curriculum. In practice, flight training events in the United States are seldom organized or marketed by aircraft weight. Instead, these events are organized around piloting skills, *e.g.,* single-engine, multi-engine, or instrument ratings. TSA also realized that some aircraft models, such as the Cessna Citation or the Beechcraft King Air, may weigh slightly more or less than 12,500 pounds depending on how they were equipped by the manufacturer. The disconnect between the structure of the IFR and the industry's practices resulted in unnecessary confusion.

In January 2005, TSA issued an interpretation of the IFR clarifying that the reporting requirements under the IFR applied to all training events leading to a new FAA certificate or type rating. This clarification resolved the ambiguity of whether the rule applied to training events in aircraft weighing 12,500 lbs. or less, as well as all training in aircraft over 12,500 lbs.[86] This clarification is codified in the final rule, as described in section II.B.2. Even though the final rule organizes flight training by piloting skill, the final rule still meets the policy intent of 49 U.S.C. 44939 because the events that would require reporting by aircraft weight under that statute also require reporting under the final rule.

Potential impacts from the IFR noted by many 2004 commenters concerning aircraft weighing less than 12,500 pounds were mitigated by TSA-issued exemptions and interpretations regarding gliders, balloons, ultralight aircraft, and all unpowered aircraft. All exemptions, interpretations, and guidance documents related to the IFR are either incorporated into the final rule or supplanted by new final rule provisions.[87] Notably, the final rule eliminates the four flight training categories specified in the IFR and replaces them with a requirement to report flight training events as described in § 1552.51. TSA provides more information on this change in section II.B.3.

In addition to eliminating the IFR's numbered, weight-based training categories, the final rule more clearly defines which flight training events require notification and recordkeeping. Although the final rule does not identify or categorize flight training events by aircraft weight, the new reporting and notification requirements based on piloting skills achieve the same results. The final rule focuses on the notification of flight training events that ''substantially enhance a pilot's skills,'' as discussed in section II.B.3. Table 3 lists type-rated training variations that do not require notification under § 1552.51. The final rule's requirement to notify TSA of flight training events aligns with TSA's long-standing interpretation of these requirements under the IFR and the statute, which requires notification for flights in aircraft weighing over 12,500 pounds, *see* 44939(a), and notification for training in aircraft weighing less than 12,500 pounds. *See* 49 U.S.C. 44939(c).

Finally, under the final rule, the flight training notification requirement in § 1552.51 is separated from the STA requirement in § 1552.31. All candidates are still required to have a current, valid STA prior to participating in any flight training event covered by the regulation, including recurrent training. Developments in information technology, however, now allow continuous vetting of each candidate for terrorism and criminal disqualifications. These developments allow TSA to require only one STA that may be valid for up to 5 years. As discussed in section V, TSA believes these changes significantly reduce the regulatory burden.

[86] *See* Interpretation of ''Flight Training'' for Aircraft with an MTOW of 12,500 Pounds or Less and Exemption from Certain Recurrent Training Information Submission Requirements Contained in 49 CFR part 1552 (Jan. 5, 2005) available as Docket No. TSA–2004–19147–0337 at *https://www.regulations.gov.*

[87] Interpretations and other clarification documents are posted on the public docket at *https://www.regulations.gov/docket?D=TSA-2004-19147.*

b. Recurrent Training

Comments: Commenters did not find value in conducting STAs on individuals engaged in recurrent training for type ratings they already hold.

TSA response: TSA is required under 6 U.S.C. 469(b),[88] to establish a process to ensure that non-U.S. citizens applying for recurrent training in the operation of any aircraft are properly identified and have not become a risk to aviation or national security since the time that a prior STA was conducted.[89] Figure 3, above, shows that more than a third of the security threats identified by FTSP over a 10-year period were candidates participating in recurrent training.

5. STA Requirements

a. General

Comments: Many flight training providers and industry associations expressed concern that the IFR's requirement to obtain an STA for each training event posed logistical and financial burdens for candidates and providers alike. Flight training providers, industry associations, their members, and others requested that TSA accept the threat assessment conducted by FAA when issuing airman certifications. Some commenters and a trade organization recommended that TSA work with the FAA to augment the IACRA process with additional security measures that would satisfy TSA's STA requirements. Many commenters recommended that TSA accept vetting conducted by other government agencies that review or approve applications for student pilots to obtain a U.S. entry visa, such as student pilots processed and approved by FAA-approved flight schools and U.S. embassies for M–1, F–1, or J–1 visas,[90] or immigrant candidates vetted by USCIS. Others thought that TSA should accept driver's licenses and/or passports in lieu of an STA.

Two commenters also expressed concern that individuals could be subjected to racial profiling and discrimination as a result of IFR requirements.

TSA response: Section 44939 requires non-U.S. citizens seeking flight training to submit specific information to TSA (under delegation from DHS) to determine whether or not the individual poses a threat to aviation or national security. Thus, the final rule continues to require all non-U.S. citizens to undergo an STA before they may begin flight training to determine whether they may pose a threat to aviation or national security. In most cases, however, the final rule's move from an event-based to a time-based STA means that most candidates will apply for an STA prior to their first training event and then once every 5 years thereafter. The next section provides more discussion on this topic.

Non-U.S. citizens may undergo multiple vetting processes by other agencies before and after arrival in the United States. However, these checks generally are not equivalent to a Level 3 STA. For example, as part of the FAA certification process, all flight students undergo a terrorism-only check, but this check does not include either a fingerprint-based background check for disqualifying criminal offenses or an immigration check. The FAA threat assessment focuses only on terrorism, based on the information provided by the candidate through either FAA's IACRA or Form 8710 (variations) used to apply for an airman certificate or rating.[91] Application information is not verified by the FAA until after the student receives training and begins their practical test with a check airman, which does not meet the 49 U.S.C. 44939 requirement that a provider may conduct flight training for a non-U.S. citizen ''only if that person has notified the Secretary that the individual has requested such training and furnished the Secretary with that individual's identification in such form as the Secretary may require'' and only after the Secretary, through TSA in accord with this regulation, has determined that the individual does not ''present a risk to aviation or national security.'' Section II.C.2 describes some of the background checks that are equivalent to a Level 3 STA.

TSA does not profile individuals on the basis of race or ethnicity and has never condoned racial profiling. TSA screens all candidates based on factors that do not focus or discriminate on the basis of race or ethnicity.

b. Frequency of Security Threat Assessment

Comments: The ASAC and several commenters expressed concern that the IFR required an STA for each flight training event. Some noted that the burden of resubmitting documentation and fees for multiple STAs made it difficult for flight students to change flight training providers or seek additional training from independent instructors.

A flight training provider requested that TSA allow providers to register a candidate for multiple training events on a single STA. Another provider noted that certain candidates are part of a team of pilots and may want to register as a team for flight training events, usually for type-rated or recurrent type-rated training. A provider commented that the options to register multiple training events for a candidate and multiple candidates for a single training event would improve efficiency and reduce clerical errors.

Other commenters requested that TSA limit the number of STAs and associated fees to reduce the financial burden on candidates and flight training providers and, thereby, reduce obstacles to flight training in the United States. Some commenters objected to TSA's calculations described in the IFR; others objected to collecting fees on the behalf of the Government. A flight training provider relayed that its candidates would be willing to pay a higher fee to avoid submitting multiple fees over a 5-year period.

TSA response: The IFR complied with 49 U.S.C. 44939, which required TSA to ensure that an individual is eligible for each flight training event. TSA's vetting capabilities when the IFR was issued were more limited than they are today, making it necessary to conduct an STA with each training event.

Newer capabilities to conduct recurrent criminal and terrorist vetting allow TSA to implement a time-based approach in place of the IFR's event-based approach. Implementing a 5-year STA under the final rule aligns this program with other TSA programs, including TSA PreCheck®, TWIC®, and HME. TSA chose the 5-year term when creating these vetting programs several years ago to align with government security clearance programs and to balance the legitimate need for accurate contact and biographic information against the costs associated with requiring multiple enrollments for individuals.

Flight training providers are required to notify TSA before every flight training event to confirm that a candidate remains eligible for flight training. The final rule allows candidates to pursue flight instruction from one or more providers and continue their flight training curriculum without having to undergo multiple STAs. This use of the 5-year STA is possible because the flight training provider notifies TSA of each training

[88] *See supra* note 20.

[89] *See id.* and related discussion. *See also* discussion in section IV.B.5.

[90] *See https://travel.state.gov/content/travel/en/us-visas/visa-information-resources/all-visa-categories.html* for more information on visa categories.

[91] For more information on IACRA, *see https://iacra.faa.gov/IACRA/Default.aspx.*

event and receives confirmation that the candidate has a current Determination of Eligibility. If flight training providers were not required to notify TSA of each training event, TSA could not provide this more fluid use of the STA.

Candidates must register with TSA individually through the FTSP portal. Team or group registrations are not permitted, because TSA requires individual biographic and biometric information to complete any required STA, and to confirm that each individual remains eligible for flight training.

Requirements specified in subpart B of the final rule reduce the overall fee burden for candidates by reducing the number of required STAs. The consolidated fee paid by the candidate and discussed in section II.C.2 covers any covered training events that may occur during the duration of the candidate's STA. Under § 1552.51(a) and (b), the flight training provider (not the candidate) is responsible for notifying TSA of all candidate flight training events. Table 7 shows fees collected under the IFR compared to estimated fees that will be collected for the final rule's 5-year STA and one or more training event notifications. This comparison demonstrates anticipated cost savings for a candidate resulting from the final rule's change from an event-based approach to a time-based approach for the candidate STA.

TABLE 7—COMPARISON OF IFR FEES AND FINAL RULE FEES

One to many event-based STA fees paid by candidates over a 5-year period fell into these broad ranges			One consolidated 5-year time-based STA fee paid by the candidate under the final rule for the type of STA processing shown
Number of candidates (percent of total candidates)	Number of STAs	Fees paid under the IFR	5-year fee paid under the final rule
12	1	$130	Reduced fee eligible—$125
6	2	140–260	
41	3–5	210–650	
28	6–10	420–1240	Regular fee—140
13	11+	770+	

X

In contrast to repetitive fees for multiple STAs under the IFR, under the final rule, candidates in each of these examples pay only one consolidated fee, which covers their STA and all notifications of flight training event(s) for up to 5 years. Fee requirements for conducting a new STA, requesting an FBI CHRC, and validating a prior or comparable STA are discussed further in sections II.C.2.

c. Portability of a Determination of Eligibility

Comments: Industry representatives, flight training providers, and candidates reported cost and time burdens due to the inability under the IFR to transfer a Determination of Eligibility between flight training providers. Providers requested that TSA limit or discontinue charging a separate fee for moving a candidate's STA from one flight training provider to another.

Many candidates noted that the time-based approach would allow them to transfer to other flight training providers more easily, and many providers noted that a single STA for a specified time period would ease managing multiple events for one candidate.

A provider observed that a Determination of Eligibility to provide flight training ''should be valid at any school'' registered with TSA. Another provider encouraged TSA to establish the portability of candidate Determinations of Eligibility, stating that this could generate more business for the U.S. flight training industry. An industry representative stated that most professional pilots cannot always train with the same flight training provider because of their schedules.

A flight training provider requested clarification of the 180-day waiting period specified in the IFR. Another commenter characterized the IFR's requirement for a candidate STA for each training event as rigid and not allowing for time it may take to obtain a visa. Pilots may need to change from one provider to another because of visa delays or changes in immigration status.

TSA response: The final rule allows portability of a candidate's Determination of Eligibility, which means that a candidate may engage in flight training from multiple providers after successfully completing one STA, resulting in cost and time savings for candidates, providers, and the government. The IFR's limitation that a candidate must start training within 180 days no longer applies. Generally, a candidate's Determination of Eligibility remains valid for 5 years, unless TSA determines through continuous vetting that the candidate is no longer eligible. For instance, if a candidate were convicted of a disqualifying criminal offense in year 3 of the STA, TSA would disqualify the candidate because they no longer meet the standard. This same determination could take place due to terrorism concerns or lack of permission to enter or remain in the United States.

d. Security Threat Assessment Comparability

Comments: A number of commenters requested that TSA accept STAs conducted by other U.S. government agencies. A non-U.S. citizen pilot working for a foreign aircraft operator under 49 CFR part 1546 recommended TSA accept a Determination of Eligibility acquired under that program. Another aircraft operator requested that TSA eliminate redundant requirements for an STA that the candidate obtained when working for a U.S. air carrier or that the candidate was previously issued for another flight training event.

TSA response: The statute requires an STA for all flight training candidates. However, TSA recognizes that many aircraft operators already conduct comparable STAs of candidates to comply with other TSA regulations or other U.S. Government requirements. The final rule specifies that TSA may verify and accept STAs that include comparable, unexpired terrorism, criminal, and immigration checks. For example, TSA may accept Determinations of Eligibility held by individuals who participate in TSA's TWIC®, HME, TSA PreCheck®, and CBP's Global Entry, SENTRI, and NEXUS programs, and any other program that TSA publishes on the FTSP Portal as acceptable.

The final rule includes three deregulatory adjustments that mitigate the burdens imposed by the IFR's STA requirements. First, under § 1552.31, the rule eliminates the need to undergo an

STA with each training request and instead adopts an STA valid for up to 5 years. Second, TSA now allows for the transfer or portability of a Determination of Eligibility by the candidate from one flight training provider to another without submitting duplicate paperwork. Third, under § 1552.37, TSA may accept comparable STAs for a reduced fee.

e. Security Threat Assessment Application Process

Comments: TSA received many comments that the IFR's application process was burdensome, and that small business entities are limited in their ability to gather, maintain, and transmit records. Many commenters requested that TSA limit data collected on candidates to the six data elements listed in 49 U.S.C. 44939, which are: full name, including aliases and variations of spelling; passport and visa information; country or countries of citizenship; date of birth; estimated dates of training; and biometrics, specifically fingerprints. Lawful permanent residents requested that TSA accept their lawful permanent resident documentation in lieu of a valid passport.

Many 2004 commenters objected to the IFR's requirement that flight training providers capture and submit a photograph of the candidate on their arrival for training, citing such reasons as: the statute does not require a photograph upload; immigration authorities already have taken photographs of lawful permanent residents; training should not be delayed for up to 5 days; and some businesses cannot afford to comply. A 2018 commenter suggested that TSA reduce the ''amount of paperwork required'' such as uploading images and providing other documentation.

Several commenters suggested that TSA accept fingerprints obtained when a candidate applied for a visa or lawful permanent resident status. Early commenters noted a scarcity of fingerprinting locations abroad, which they predicted would harm their operations. Aircraft operators commented that they may have to send their pilots to the United States to be fingerprinted, and that it could take more than 30 days to receive criminal history records returned to TSA for adjudication. An aircraft operator suggested that TSA provide locations abroad for pilots to be fingerprinted. Many flight training providers requested that TSA accept fingerprints they collect themselves rather than through TSA-authorized fingerprint collection services. One provider noted that many pilots participate in FAA-certified flight training exclusively outside the United States and that it is difficult for many of them to fly to the United States just to be fingerprinted.

TSA response: Verification of citizenship for each flight training event is required by 49 U.S.C. 44939. To conduct the required STA, TSA collects the six basic biographic and biometric data elements listed in that statute. As is standard practice across all TSA vetting programs, TSA requires additional information to conduct the scope of STA necessary to determine whether a candidate presents a risk to aviation or national security, which is what TSA must do to comply with the requirements of 49 U.S.C. 44939. TSA only collects the candidate information necessary to determine whether the candidate presents a risk to aviation or national security. The additional information also helps to verify identity, confirm that the applicant is presenting information that is true, and aids in Federal response if TSA determines the individual poses a threat. TSA collects this information in all vetting programs.

TSA provides all vetting applicants with Privacy Act notices that explain what their data is being used for and with whom it is shared. TSA added explanatory text to the preamble in response to similar comments. In many cases, candidates also use TSA's preliminary Determination of Eligibility as a reference document to obtain a visa from the U.S. Department of State. The final rule adopts a broader list of acceptable documentation to identify and document a candidate's presence in the United States, as provided in table 4.

TSA collects information in accordance with the Paperwork Reduction Act (PRA) [92] and the Privacy Act.[93] Wherever possible, the final rule adjusts the FTSP's operational, administrative, and recordkeeping requirements to minimize burdens while maintaining the appropriate level of security.

The final rule addresses burdens posed by multiple STAs required under the IFR by implementing a time-based approach to the STA requirement. Under the procedures in the final rule, TSA may issue a Determination of Eligibility that remains valid for up to 5 years to candidates that successfully complete an STA. When TSA published the IFR, recurrent terrorism and CHRCs were not available, which led to TSA's use of an event-based approach to STAs. Having implemented continuous review of terrorism databases for other programs and the use of continuous criminal vetting, TSA is confident in the efficiencies and security effectiveness of this capability as it is expanded to the FTSP.

In accordance with 49 U.S.C. 44939, TSA does not accept fingerprints directly from any individual, to minimize the risks of fraud and collection of unreadable prints. TSA works with vendors to provide fingerprinting services domestically and abroad. The FBI currently returns criminal history records to TSA within 2 business days of receipt. Under current policy, the FBI restricts the sharing of fingerprints collected for one purpose with the intent of those fingerprints being reused for a different purpose. Accordingly, TSA will not accept fingerprint information from another agency. Under the final rule, candidates pay for an STA and submit fingerprints once every 5 years, unless otherwise directed by TSA. TSA believes the final rule's reduction in costs achieved in part by reducing how often candidates must be fingerprinted will provide relief for candidates and flight training providers. The requirement that the flight training provider upload a current photo of each candidate when the candidate arrives for flight training is an important security measure. TSA may compare that photo with photos obtained by other agencies as part of its candidate vetting process.

f. Immigration Checks

Comments: Many commenters recognized that non-U.S. citizens must undergo an immigration check during the STA process, and offered opinions on what documents should be required to participate in flight training in the United States. Some felt that flight training should not be allowed on a tourist visa, while others felt TSA should accept tourist visas, particularly for professional pilots, rather than requiring a visa specific to education or professional training. One commenter recommended that TSA accept a flight training candidate's USCIS Form I–9, Employment Eligibility Verification. Some commenters recommended limiting the STA to the expiration of the candidate's passport or immigrant or nonimmigrant documents.

A flight training provider encouraged TSA to work closely with DOS to provide clarity as to which immigration categories may permit a candidate to participate in flight training. The provider noted that embassies and consulates vary widely in how they adjudicate visas. The ASAC and various

[92] *See* 44 U.S.C. 3501, *et seq.*

[93] *See supra* note 32.

commenters encouraged DHS to include TSA in any discussions between agencies regarding immigration categories and eligibility for flight training. One commenter noted that the IFR did not address immigration violations and another commenter suggested that immigration authorities should consider creating a visa specific for candidates.

Commenters felt that professional pilots should not be required to undergo the DHS Form I–20 (Certificate of Eligibility for Nonimmigrant Student Status) process and obtain an M–1 visa [94] for short-duration training in the United States.

A commenter noted that many flight instructors who provide training in the United States are not U.S. citizens. Many are lawful permanent residents or individuals employed by airlines and sent to the United States to obtain or provide training on company owned simulators. These instructors, who are not lawful permanent residents, often use the B1/B2 visa [95] for doing business in the United States, and most of them are subject to an STA under 49 CFR parts 1544 or 1546.

Finally, an industry representative noted that lawful permanent residents do not present the same security risk as other non-U.S. citizen candidates and recommended TSA give lawful permanent residents special consideration when processing their STAs.

TSA response: TSA is required by 49 U.S.C. 44939 to ensure that all non-U.S. citizens, including lawful permanent residents, undergo an STA for flight training.[96] Completion of a favorable STA that includes an immigration check is sufficient to pursue flight training under TSA regulations. TSA does not limit eligibility for flight training to specific types of visas; any non-U.S. citizen that is authorized to be in the United States is potentially eligible for flight training.[97] Any restrictions, however, on a candidate's permission to remain in the United States will affect the duration of an STA issued under this part. Candidates deemed ineligible following an immigration check may submit new documentation to correct the record regarding their immigration status, parolee status, visa expiration date, or other permission to remain in the United States.

TSA does not set immigration policy and implements policy guidance established by U.S. Government immigration authorities. Some U.S. embassies require a Form I–20 and a completed STA from TSA prior to issuing a visa specific for vocational or formal flight training. Other U.S. embassies do not require the TSA STA prior to issuing a visa. TSA relies on the DOS and DHS's agencies with immigration responsibilities for direction on immigration policies and, to the fullest extent possible, applies their policies to a candidate's immigration check. TSA will deny flight training to candidates who may have violated any applicable Federal immigration policies.

TSA does not accept a Form I–9 because the I–9 is not an identification document or proof of permission to remain in the United States. Although the I–9 collects information that an employer has reviewed, that information has not been reviewed or confirmed by a U.S. Government official.

Section 1552.35 requires the STA expiration date to coincide with the expiration of a candidate's documentation that establishes their permission to remain in the United States, or 5 years, whichever comes first, as discussed further in section II.D. If a candidate's initial documentation limits the STA to less than 5 years (such as a visa that expires before 5 years), the candidate may subsequently provide additional documentation on their FTSP Portal account, which may allow TSA to extend their STA up to the 5-year maximum.

Finally, TSA recognizes that non-U.S. citizens granted lawful permanent residence status in the United States may be a lower-risk population relative to other candidates. Under § 1552.51(f), lawful permanent residents are now eligible for expedited processing. These individuals will still be required to successfully complete the STA, but the availability of data related to their status as a lawful permanent residence permits TSA to provide the expedited process.

g. Correction of Record

Comments: Two commenters recommended TSA add a provision to the rule that gives a candidate a right of appeal if TSA denies their application for training, noting that other TSA rules permit applicants to appeal a decision made by TSA.

TSA response: Following publication of the IFR, TSA allowed candidates to provide additional information to correct the record, if the candidate's application for an STA was denied. The final rule codifies this process without change. *See* § 1552.31(e). Candidates who receive a Determination of Ineligibility or have their Determination of Eligibility revoked may submit new information to TSA to correct inaccurate identification or immigration information. TSA cannot correct any information it receives from a CHRC. This information typically comes from a U.S. state or U.S. Federal criminal history records information system. To challenge the accuracy or completeness of any information on a criminal record, the candidate must contact the State or Federal agency that originated the record, or the candidate may contact the FBI directly.

6. Security Awareness Training Requirements

a. Flight Training Provider Employees

Comments: TSA received many comments about the IFR's security awareness training requirements. An industry association asserted that these requirements exceeded the scope authorized under 49 U.S.C. 44939 by applying the security awareness training requirements to flight instructors who are not employed by flight schools. One commenter recommended that the final rule clarify security awareness training requirements for independent instructors.

Flight training provider commenters in 2018 also requested that TSA define ''flight training provider employee.'' Specifically, providers sought direction as to whether the following individuals were covered by the rule: management; administrative staff; CFIs; ground instructors; a director of training; and/or any other person employed by a flight school, including an independent contractor. An aircraft operator recommended that TSA require security awareness training only for those employees who have direct contact with a flight school student. An aircraft operator commented that the definition of flight school employee did not appear to include employees of training schools operating under 14 CFR part 121 or 14 CFR part 135.

TSA response: 49 U.S.C. 44939 requires security awareness training and refresher security awareness training for flight training provider employees. The final rule defines ''flight training provider employee'' as an individual, whether paid or unpaid, who has direct contact with flight training students and

[94] M–1 visa is a type of student visa reserved for vocational and technical schools.

[95] B1/B2 visa allows an individual to enter the United States temporarily for business or pleasure.

[96] Under 8 U.S.C. 1101(a)(20), the term ''lawfully admitted for permanent residence'' means the status of having been lawfully accorded the privilege of residing permanently in the United States as an immigrant in accordance with U.S. immigration laws.

[97] *See* ICE SEVP Guidance, Non-Immigrants: Who can Study? (2018), available at *https://www.ice.gov/doclib/sevis/pdf/Nonimmigrant%20Class%20Who%20Can%20Study.pdf.*

candidates. Through the definition of ''flight training provider'' in § 1552.3, this final rule also clarifies that all flight training providers, including CFIs, must comply with the security awareness training requirement.

As noted in section II.B.6, the employees of a flight training provider may be the first or only line of defense against a determined terrorist or insider threat. Initial security awareness training when flight training provider employees are hired and biennial training thereafter bolsters an employee's ability to assess and identify potential threats. Flight training provider employees, after training, should be able to identify anomalies or aberrant behavior by their customers or by other persons in or around their flight training operations and report such observations to Federal, State, Tribal, or local law enforcement and to TSA.

Section 1552.13(a) and (b) of the final rule excludes from the security awareness training requirement those flight training provider employees who do not have direct contact with candidates and students, *e.g.,* baggage handlers, custodians, or grounds maintenance staff who are unlikely to have direct contact with candidates and students. Section II.B.6 provides additional discussion of covered and excluded employees.

b. Frequency of Training

Comments: Some commenters recommended that TSA provide more flexibility in scheduling requirements for security awareness training. Others requested clarification on security awareness training recordkeeping requirements. An industry representative requested TSA mitigate the redundancy of the IFR's requirement to conduct security awareness training for those companies who already conduct security awareness training under a TSA-approved security program such as those conducted under 49 CFR parts 1542, 1544, and 1546. An aircraft operator asked TSA to allow aircraft operators and their affiliated aviation training centers certified by the FAA under 14 CFR part 142 to satisfy the refresher security awareness training requirement through training they conduct under a TSA-approved security program.

Many flight training providers asked TSA to allow a longer interval between refresher security awareness training events. Another provider requested TSA eliminate the requirement for refresher security awareness training and allow email updates instead.

TSA response: The final rule reduces the required frequency of security awareness training to provide economic and logistical relief to flight training providers and more flexibility in how they schedule refresher training. As discussed in section II.B.6, the final rule replaces the IFR's annual security awareness training requirement with an initial training requirement that must be completed by all covered flight training provider employees within 60 days of hiring and a biennial refresher training requirement thereafter. A provider may conduct refresher training on or before the 2-year anniversary of the previous initial or refresher training. The final rule allows aircraft operators to meet initial and refresher training requirements by documenting their compliance with other TSA security programs, such as security awareness training provided under 49 CFR parts 1544 and 1546.

Flight training providers may either leverage security awareness training modules created by industry organizations or create their own. Providers should include any nuanced security concerns pertinent to their site-specific operations.

TSA believes an email message is not adequate for security awareness training because an email cannot replace a full course. Emails cannot fully refresh previously taught security awareness principles or memorably introduce new security concerns raised since the previous training.

7. Recordkeeping Requirements and the FTSP Portal

a. Electronic Submission of Information and Recordkeeping

Comments: TSA received many comments in both 2004 and 2018 asserting that the IFR's recordkeeping requirements were duplicative, costly, and burdensome. In 2018, commenters overwhelmingly responded to TSA's query as to the projected ''impact of allowing regulated parties to use electronic recordkeeping, in whole or in part, to establish compliance'' [98] by recommending that TSA accept and facilitate electronic recordkeeping to demonstrate compliance with this regulation.

Some commenters suggested that TSA allow them to retain or use their own electronic recordkeeping systems. An aircraft operator requested that TSA make a determination that its FAA-approved recordkeeping system satisfies TSA's training documentation and recordkeeping requirements. Another commenter estimated that electronic recordkeeping through TSA would reduce their costs by two-thirds.

TSA response: The final rule establishes that TSA will implement and maintain an electronic recordkeeping capability via the FTSP Portal to provide regulatory and cost relief for flight training providers. This capability will give providers the option to demonstrate compliance electronically in lieu of maintaining physical or manual records. TSA recognizes that many flight training providers already have robust facilities and systems to document all records required under this part. The final rule allows providers to use their own recordkeeping systems, but permits use of the FTSP Portal to provide a consolidated resource.

b. Registration Requirements for Flight Training Providers

Comments: Flight training industry representatives and flight training providers questioned whether providers who do not instruct non-U.S. citizens must register with TSA. A few providers recommended that they be allowed to register with TSA first and that TSA verify their certificated status with FAA. One provider recommended that TSA provide an alternative for registration at an FAA flight standards district office. Other commenters requested clarification as to whether flight training providers operating under 14 CFR part 61 should register as independent CFIs or part 61 flight training providers.

A commenter requested that TSA identify non-U.S. citizen flight students obtaining an FAA certificate along with the instructor or school signing off on the certificate.

Some providers expressed concern about the IFR's requirement that the point of contact or administrator of a flight training provider must hold an FAA certificate.

TSA response: Flight training providers who do not train non-U.S. citizens are not required to register with TSA; however, they may want to do so in order to take advantage of the FTSP Portal to store other records required to demonstrate compliance with the final rule. Flight training providers who provide instruction to non-U.S. citizens must register online with TSA. TSA concurs with the recommendations that providers be allowed to register through the FTSP Portal and that TSA confirm that registration with the FAA. FAA confirms the CFI's certificate under 14 CFR part 61 or the flight training provider's certificate(s) under 14 CFR parts 141, 142, 121, or 135. As discussed in section II.B.5, § 1552.9 of the final

[98] *See* 83 FR at 23238.

rule allows a non-certificated individual to register as the flight training provider's Security Coordinator.

c. Providing Information to TSA

Comments: A few flight training providers and an aircraft operator asked TSA to clarify how candidates and providers should submit information to TSA. A provider expressed concern that some candidates and providers may not have access to the internet. An aircraft operator requested TSA avoid electronic signatures as a way of verifying accuracy.

TSA response: TSA adopted the information collection procedures previously established by the Department of Justice when TSA assumed responsibility for the FTSP program almost 2 decades ago. At the time, candidates and providers were encouraged to apply online, but also were allowed to provide information by fax transmission. Use of fax machines to transmit paper records often introduced human error, excessive cost and effort for TSA, and frustration for candidates and providers. TSA has not processed a fax-and-paper application since 2007. Validation of the information provided by candidates and providers through the FTSP Portal reduces human error and allows candidates and providers to check for accuracy, reuse information provided to TSA previously, and upload information in a timely manner.

Internet access has improved significantly since the IFR was issued, to a degree that all flight training providers likely have multiple means of internet access at all times. Similarly, the use of digital signatures on electronic documents is now common. In recognition of these developments, the final rule requires digital signatures and use of the FTSP Portal where appropriate.

d. FTSP Customer Support

Comments: A flight training provider relayed dissatisfaction with responses to emails and phone calls to TSA. Another provider requested TSA provide guidance to candidates on how to apply for an STA, and that the guidance be made available to flight training providers so they may assist candidates.

TSA response: Flight training candidates apply for STAs from countries in all time zones around the world. TSA has found that flight training candidates, whose English proficiency may be limited, communicate best with the program via email, as it is more efficient to understand the candidate's concern and address the problem in a written format.

TSA maintains detailed candidate and provider user guides and frequently asked questions on the FTSP Portal. A candidate still experiencing difficulties with the application process may contact FTSP via email to *FTSP.Help@tsa.dhs.gov.* TSA generally responds to emails within 5 to 7 business days.

e. Security of Information in FTSP Portal

Comments: Some commenters in 2004 were concerned about the FTSP Portal's security. Some expressed concern about maintaining personally identifiable information at their place of business or in their homes and desired a more secure location or system provided by TSA. Some commenters stated this would enable TSA to apply its cybersecurity standards to those records, thereby increasing security. A commenter in 2018 suggested that, with more than 5,000 flight training providers registered with TSA, maintaining their records on a Federal system would result in economies of scale and enhanced cybersecurity.

TSA response: TSA shares users' concerns about the security of their data and the protection of personally identifiable information. All TSA systems and networks, including the FTSP Portal, meet DHS enterprise cybersecurity protocols and best practices, in accordance with statutory authorities such as the Federal Information Security Modernization Act[99] and the Privacy Act.[100] TSA enhanced the portal's information technology infrastructure in 2007 and 2012, and through ongoing efforts from 2018 to the present. In implementing the final rule, TSA will continue to use DHS-required cybersecurity technologies and standards to protect the security of all data and records stored by TSA, including flight training provider records uploaded to the FTSP Portal.

f. Privacy Concerns

Comments: Several commenters in 2004 raised concerns about democratic processes and civil liberties. A few were concerned about privacy issues raised by the IFR's recordkeeping requirements. Some commenters expressed that TSA does not have the statutory authority to require third parties to establish pilot citizenship files or the legal protections for those files.

An industry association noted that the documentation flight training providers maintain in a pilot's employment file is already subject to privacy protection requirements. Other commenters stated they did not have the ability to properly store and maintain sensitive documents.

TSA response: TSA is required by 49 U.S.C. 44939 to collect the information required by this rule. TSA follows all pertinent laws and DHS policies governing the collection of this information, including the publication of a Privacy Impact Assessment (PIA) and System of Records Notice (SORN) maintained and posted online through DHS.[101] TSA's compliance with the privacy and information collection requirements is discussed in section V.

In response to the concern that CFIs and other providers are required to retain student and candidate personal information, TSA notes that providers must as a business practice maintain files that are certain to contain protected privacy information about persons they employ. For example, employers must complete paperwork, such as the Form I–9, to verify an individual's eligibility for employment in the United States, that contains an employee's name, address, and other personally identifiable information. Enhancements to the FTSP Portal provide an electronic, secure alternative for all flight training providers to ensure the privacy and security of all flight student, candidate, and flight training provider information.

D. Compliance

1. Enforceability of the Rule

Comments: In 2004, a few commenters felt that the rule would be ''unenforceable.''

TSA response: TSA has successfully enforced this rule and administered the FTSP for more than 18 years. In accordance with TSA's statutory and regulatory authorities stated in § 1503.207 and discussed in section I.E, TSA's domestic and international compliance offices will continue to conduct audits and inspections. FTSP coordinates closely with these other TSA offices to identify and thwart attempts to circumvent this regulation. In addition, the FAA sends TSA an electronic record of all airmen, updated each month, who have been issued new pilot certificates. TSA reconciles this FAA data with TSA's own record of non-U.S. citizens who have applied for flight training through the FTSP

[99] Public Law 113–283 (128 Stat. 3073; Dec. 18, 2014).

[100] Public Law 93–579 (88 Stat. 1896; Dec. 31, 1974), *as codified at* 5 U.S.C. 552a.

[101] For the FTSP PIA and SORN, *see* DHS–TSA Privacy Impact Assessment, DHS–TSA–PIA–026, Alien Flight Student Program, at *https://www.dhs.gov/publication/dhs-tsa-pia-026-alien-flight-student-program. See also supra* note 32 for information on the SORN.

program. Any discrepancies between the TSA and FAA records are promptly resolved and, if necessary, addressed through a combination of civil or criminal penalties.

2. Compliance, Audits, and Inspections

Comments: A major industry flight training provider asked TSA to publish its inspection rhythm or schedule and provide clear guidance to enable flight training providers to anticipate when inspections and audits will occur and what will be required. Other providers asked TSA to give them the same guidelines TSA inspectors use to conduct audits.

TSA response: Figure 2 itemizes what providers must do to comply with this regulation. The provider guide posted on the FTSP Portal has more detailed guidance on recordkeeping. In addition, TSA's published Enforcement Sanction Guidance Policy [102] describes the range of civil and criminal penalties that can be assessed against a candidate or a provider for noncompliance with this regulation. TSA does not publish a schedule for audits or inspections to enable candid reviews of flight training provider operations by the inspector. TSA believes that expanding the capability for providers to maintain their records electronically may mitigate the impact of audits and inspections.

3. Documenting Compliance

Comments: Many commenters felt it redundant to require a flight training provider to maintain a record already provided to TSA through the FTSP Portal and unfair to penalize a provider during an audit who did not have a hard copy of a record electronically available to both TSA and the provider online. Many 2018 commenters recommended that TSA accept information provided through the FTSP Portal as demonstration of their compliance with this regulation. They stated this would allow TSA to review records electronically and shift the burden of maintaining physical files and facilities or information technology systems from flight training providers to TSA. Some commenters recommended TSA expand its electronic storage capability to facilitate TSA and FAA compliance audits and reduce their employees' time and effort complying with a TSA audit.

Another commenter requested that TSA provide access to FAA authorities to verify citizenship as part of FAA's audits and inspections. Flight training providers and industry representatives stated that electronic recordkeeping would bring TSA into conformity with other regulatory agencies such as FAA and USCIS. A provider suggested TSA provide specific guidance providers can follow to demonstrate compliance. One commenter expressed frustration with the requirement to document whether or not a candidate has completed training.

TSA response: TSA auditors will accept either electronic records or physical records. TSA issues a unique electronic confirmation whenever a flight training provider uploads or enters new information through the FTSP Portal. Providers may present this electronic confirmation to demonstrate compliance with this regulation. Section 1552.15 of the final rule eliminates the requirement for hard-copy records if the records are retained electronically, whether through a provider's system or the FTSP Portal.

TSA provides access to the FTSP Portal to FAA, USCIS, DoD, and SEVP to facilitate their audits and inspections. Providers recording completion of training events facilitates audits and inspections by other government agencies.

TSA anticipates that flight training providers' use of the FTSP Portal for electronic recordkeeping will facilitate audits and inspections. Providers who do not use the FTSP Portal for recordkeeping must retain records for 5 years, in a form and manner acceptable to TSA, to demonstrate compliance. Compliance guidance is provided in the provider guide posted on the FTSP Portal. Section II.B.7 provides more details concerning this requirement.

E. Additional Comments Received in Response to 2018 Reopening

1. General Rulemaking Comments

Comments: In the 2018 comment period, many commenters expressed general support for the regulation and focused on TSA's specific requests for information and recommending improvements to the rule. Industry commenters suggested that TSA revise the final rule to (1) use simpler language; (2) reduce economic burdens and enhance security; and (3) consolidate and formalize notices and interpretations of the regulation issued since the IFR was published. Two commenters criticized the current program as a ''waste of time and money'' that harms the aviation industry and law enforcement.

One commenter recognized the importance of the FTSP in preventing terrorists from using aircraft to attack the United States and suggested that TSA use a ''risk-based approach'' to ''improve'' the IFR.

Another commenter felt that FTSP requirements, such as the STA process and recordkeeping, have resulted in a loss of business and that modifying these requirements could stimulate a return of non-U.S. citizen customers to U.S.-based flight training instruction.

An industry representative requested that TSA enable the capture of metrics from the information they supply to TSA, to help providers promote their business and boost their competitiveness in the world market. One commenter requested that TSA periodically publish the number of FTSP candidates.

TSA response: In response to these comments, TSA has made changes to the rule that are intended to strengthen elements of the program while mitigating many industry concerns. The final rule provides clarity on many of the requirements, codifies or otherwise consolidates all previously issued instructions and interpretations, and modifies requirements to significantly reduce the burden while meeting the security purpose of the rule. Through both the rule text and this preamble, as well as the use of the FTSP Portal, TSA has attempted to provide a more user-friendly regulatory program for industry, candidates, the general public, and government partners.

TSA is considering how to adapt the FTSP Portal to generate metrics, population data, and other operational data collected for flight training providers.

2. Recommending Against Requiring Flight Training Providers To Undergo an STA

Comments: In the 2018 request for comments, TSA requested feedback on whether the FTSP should require flight training providers to undergo an STA. As a result, TSA received many comments concerning the costs and benefits of extending the STA requirements to providers. Many commenters expressed reservations about the prospect, and others believed that requiring an STA should be implemented only for non-U.S. citizens employed by flight training providers.

A flight training provider asserted that enough security requirements should be in place to ensure that a provider employee does not pose a threat to aviation or national security. This individual doubted their employees would be involved in disqualifying offenses or would not be permitted to enter or remain in the United States. An industry representative opposed STAs for flight training providers because of

[102] *See https://www.tsa.gov/travel/frequently-asked-questions/how-was-penalty-amount-determined.*

the likelihood providers have undergone threat assessments under other U.S. Government programs.

A few commenters recognized that some providers could pose a threat. A commenter noted that each ''foreign instructor'' has access to simulators or aircraft without having undergone an STA. Another commenter noted that the majority of U.S. terrorist acts since 9/11 ''have been performed by people born in the USA.'' An industry representative proposed that every flight training provider employee be required to undergo an STA to ensure ''the general aviation flight training industry remains safe.''

A major flight training provider reminded TSA that a large part of its operations occurs overseas. Several foreign aircraft operators noted that they recognize efficiencies by allowing their pilots to train to FAA certification standards closer to where they operate. An industry representative requested that TSA ensure that flight training providers maintain the ability to conduct training toward FAA certificates and ratings at locations outside the United States.

A few commenters felt that non-U.S. citizens should not be allowed to participate in training from individual instructors certificated under 14 CFR part 61, and that the only non-U.S. citizens who should undergo an STA are those training with pilot schools or other institutions or businesses certificated under 14 CFR parts 121, 135, 141, or 142. An industry representative requested that TSA ensure that providers operating under either 14 CFR part 61 or part 141, or both, are permitted to provide flight training to non-U.S. citizens under TSA's regulations. To show their support for this regulation, industry representatives emphasized that all flight training providers, including independent CFIs, should comply with TSA regulations and ICE/SEVP regulations, as applicable.

Some commenters indicated that an STA for flight training providers could be warranted if TSA could provide examples of threats posed and actual occurrences supporting the imposition of this requirement on providers. One commenter suggested TSA require a TSA-approved Flight Training Provider Security Program for each flight training provider.

TSA response: As with the IFR, the final rule requires STAs only for candidates. The statute focuses on individuals who request training. Consistent with the statute, this rule is narrowly tailored to impose only those burdens on industry that are mandated by Congress, while maintaining or improving the current level of security.

Many flight training provider employees may also be subject to an STA under other TSA-regulated public trust programs such as 49 CFR part 1542 for airports and 49 CFR part 1544 for aircraft operators. Nonetheless, TSA considered imposing a new requirement that flight training provider employees undergo an STA under the provision in 49 U.S.C. 44939 as an ''other individual specified by the Secretary of Homeland Security.'' TSA decided that the net economic impact of the final rule should reduce burdens on industry, and that imposing an STA requirement on flight training providers would add more costs than other provisions of the final rule would reduce.

TSA is not pursuing the institution of flight training provider-specific security programs, either domestically or for flight training providers operating in international locations, because of the uniqueness of each flight training provider operation and because the costs required for TSA to develop and oversee more than 5,000 such programs appears to be prohibitive.

V. Rulemaking Analyses and Notices

A. Economic Impact Analyses

1. Regulatory Impact Analysis Summary

Changes to Federal regulations must undergo several economic analyses. First, E.O. 12866 of October 4, 1993 (Regulatory Planning and Review),[103] as supplemented by E.O. 13563 of January 21, 2011 (Improving Regulation and Regulatory Review) [104] and E.O. 14094 of April 6, 2023 (Modernizing Regulatory Review) [105] directs each Federal agency to propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (RFA) [106] requires agencies to consider the economic impact of regulatory changes on small entities. Third, the Trade Agreement Act of 1979 [107] prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. Fourth, the UMRA [108] () requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more annually (adjusted for inflation).[109]

2. Executive Orders 12866, 13563, and 14094 Assessment

Under the requirements of E.O. 12866, agencies must assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). These requirements were supplemented by E.O. 13563 and E.O. 14094, which emphasize the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

TSA summarizes the findings:

1. This final rule is a significant regulatory action under E.O. 12866. However, this final rule is not an economically significant rulemaking under the definition in section 3(f)(1) of E.O. 12866, as amended by E.O. 14094, because its annual effect on the economy does not exceed $200 million in any year of the analysis;

2. Under the Regulatory Flexibility Act of 1980, TSA is not required to perform a Regulatory Flexibility Analysis because it did not publish a proposed rule;

3. This final rule does not constitute a barrier to international trade as defined by the Trade Agreement Act of 1979; and

4. This final rule is not likely to result in the expenditure by state, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more annually (adjusted for inflation). Therefore, no actions were deemed necessary under the provisions of the UMRA.

As part of completing the final rule, TSA has prepared an analysis of the estimated costs and cost savings for both the IFR baseline and overall cost of the rule (using the pre-IFR baseline). The costs and cost savings are summarized in the following paragraphs and in the OMB Circular A–4 Accounting Statement.

The IFR baseline provides an accounting of the final rule changing three IFR requirements: (1) moving from an *event-based* to a *time-based* STA; (2) implementing a TSA-sponsored

[103] 58 FR 51735 (Oct. 4, 1993).

[104] 76 FR 3821 (Jan. 21, 2011).

[105] 88 FR 21879 (Apr. 11, 2023).

[106] Public Law 96–354 (94 Stat. 1164; Sept. 19, 1980), codified at 5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA).

[107] Public Law 96–39 (93 Stat. 144; July 26, 1979), codified at 19 U.S.C. 2531–2533.

[108] Public Law 104–4 (109 Stat. 66; Mar. 22, 1995), codified at 2 U.S.C. 1531–1538.

[109] *Id.*

electronic recordkeeping system; and (3) reducing the frequency of security awareness training. The IFR baseline also provides an accounting of two new costs introduced under the final rule: (a) designation of a Security Coordinator; and (b) familiarization with the final rule. TSA's key reasons for implementing cost changes and the rationale for each change are:

- *Implementation of a time-based STA.* As with the IFR, the final rule requires candidates to apply to TSA for an STA, and the flight training provider must notify TSA of each training event. The final rule, however, allows a candidate to receive a single STA that could be valid up to 5 years. Under the IFR, an STA was required each time a candidate requested flight training. For the final rule, the $140 *time-based* fee replaces the IFR's multiple, *event-based* STA fees. In addition, this change to a *time-based* STA reduces candidates' time burden for training event requests. In the final rule, TSA also includes a $125 reduced fee for candidates who may already have a comparable STA. Lastly, the final rule continues to offer and expand expedited processing, at no additional fee, for eligible candidates that request completion of their STA within 5 business days.
- *Implementation of a TSA-sponsored electronic recordkeeping system.* To facilitate compliance with final rule requirements, the final rule allows flight training providers to use the FTSP portal if they wish to do so for electronic recordkeeping of candidate STA and flight training event requests, whereas the IFR required paper records. TSA calculated three estimates related to this new resource—first, cost savings for providers from reduced physical storage costs; second, less time burden for providers preparing physical records for compliance inspections; and, third, cost savings for TSA from reduced time and other associated costs required for physical records inspections.
- *Reduced frequency of security awareness training.* The final rule allows providers to administer security awareness training for their employees at least every 2 years, whereas the IFR required this training to occur annually. TSA estimates the time-burden savings for providers resulting from the reduced frequency of security awareness training.
- *Implementation of a Security Coordinator requirement.* The final rule introduces a new requirement for providers to designate a Security Coordinator and provide their contact information to TSA. TSA estimates the time-burden cost for this new requirement to be between approximately $16 to $24 per coordinator.

In addition to the IFR baseline, the change between the final rule and the IFR, TSA also presents the overall cost of the rule using the pre-IFR baseline. In completing this final rule, TSA updated the costs, data points, and assumptions of the original IFR published in 2004 and estimated costs of IFR requirements that were previously unaccounted for in the accompanying analysis. The final rule retains these requirements from the IFR, including: (1) flight training candidates are required to submit fingerprints to TSA; (2) flight training candidates and providers are required to create and maintain FTSP portal accounts; (3) flight training providers are required to submit a candidate's photograph to TSA; (4) flight training providers are required to update and maintain refresher security awareness training for employees; and (5) TSA must conduct regulatory compliance inspections of all flight training providers.

Table 8 below presents the annualized costs and cost savings associated with implementing all final rule requirements relative to the pre-IFR baseline over the 10-year period of analysis (2024–2033).

The 10-year annualized difference of $14.37 million, presented in table 8, under the pre-IFR baseline differs from the $14.60 million annualized net cost savings presented in table 9. The later compares the net impact of the final rule to the IFR baseline. As part of this final rule, TSA analyzed two baselines, to estimate the costs relative to the respective baselines. For two of the requirements, the start year 2005 (year 1 of the IFR) versus 2024 (year 1 of the final rule) affected the recurrent generations of inspections and number of new providers, which accounts for the small difference.

TABLE 8—ANNUALIZED 10-YEAR COST OF THE IFR WITH UPDATED COSTS VS. FINAL RULE BY REQUIREMENT

[2022 Dollars]

Final rule (FR requirements	49 CFR	IFR with updated costs and FR comparison (discounted at 7 percent; $ millions)			Description
		Updated IFR costs	FR costs	10-Year difference	
Compliance Inspections Time.	§ 1503.207	$8.65	$1.49	($7.15)	Under the IFR and FR, each flight training provider must allow TSA to enter and conduct any audits, assessments, tests, or inspections of operations, and to view, inspect, and copy records. Cost savings result from a reduction in the number of hours spent on TSA on-site inspections.
Security Awareness Training.	§ 1552.13	8.09	5.03	(3.06)	Under the IFR and FR, providers must update and maintain refresher training to include but not limited to new security measures and procedures implemented by provider, security incidents, and any new TSA guidelines or recommendations. Providers must ensure that all employees complete security awareness training. The final rule changes the requirement from annual to biennial.
Recordkeeping	§ 1552.15 and § 1552.17	2.08	0.05	(2.03)	Cost savings derived from electronic recordkeeping.

TABLE 8—ANNUALIZED 10-YEAR COST OF THE IFR WITH UPDATED COSTS VS. FINAL RULE BY REQUIREMENT—Continued

[2022 Dollars]

Final rule (FR requirements	49 CFR	IFR with updated costs and FR comparison (discounted at 7 percent; $ millions)			Description
		Updated IFR costs	FR costs	10-Year difference	
FTSP Portal Accounts.	§ 1552.17	0.16	0.16		Under the IFR and FR, flight training provider and candidates must create and maintain portal accounts to use the FTSP portal. Providers can also use the portal for electronic record-keeping.
Fingerprinting	§ 1552.31	2.59	2.59		Under the IFR and FR, candidates are required to submit fingerprints to TSA in order for TSA to initiate the STA. Fingerprints must be collected at a TSA-approved location.
Candidate Security Threat Assessment Fees.	§ 1552.39	5.12	2.45	(2.67)	All candidates must apply for an STA. Under the IFR, the candidate had to get an STA each time the candidate requested flight training. Costs under the IFR were based on Category 1, 2, and 3 training events paying a fee of $130 per event and Category 4 paying a fee of $70 per event. Under the final rule, the candidate applies for one STA that could be valid for up to 5 years, for a fee of $140. Under the final rule, a candidate with a comparable STA may pay a reduced fee of $125.
Notification and Processing of Flight Training Events.	§ 1552.51	1.44	1.12	(0.32)	The flight training provider must notify TSA through the FTSP portal about all proposed and actual flight training events, whether or not that training is intended to result in certification.
Candidate Photograph Submission.	§ 1552.51	0.04	0.04		Under the IFR and FR, providers must take a photograph of the candidate upon the candidate's arrival for each training event. Photographs must be uploaded to the FTSP portal.
Designation of Security Coordinator.	§ 1552.9		0.13	0.13	The FR implements the new requirement for the provider to assign a Security Coordinator to serve as a security liaison with TSA. Costs include initial and updated submissions from Security Coordinator turnover.
Familiarization with Final Rule.	§ 1552		0.73	0.73	TSA assumes a time burden cost for familiarization with the final rule.
Total		28.17	13.80	(14.37)	

Note: Totals may not add due to rounding.

When estimating the cost of a rulemaking, agencies typically estimate future expected costs imposed by a regulation over a period of analysis. For this final rule, TSA uses a 10-year period of analysis to estimate the costs and cost savings, compared to the IFR baseline, to flight training providers, candidates, and TSA. TSA provides an analysis of costs and cost savings under the final rule, compared to the IFR baseline, as well as an overall cost of the rule using a pre-IFR baseline savings in the Regulatory Impact Assessment (RIA) placed in the docket.

Using the IFR baseline, TSA estimates the net impacts of the changes in this final rule in comparison to the costs of the IFR. TSA estimates the 10-year total net impact of the final rule, compared to the IFR baseline, to be a net cost savings of $102.56 million discounted at seven percent. The annualized net impact of the final rule, compared to the IFR baseline, is $14.60 million discounted at seven percent.

TSA estimates the final rule cost savings, compared to the IFR baseline, to be $108.57 million over 10 years, discounted at seven percent. The estimated new costs of the final rule, compared to the IFR baseline is $6.01 million over 10 years, discounted at seven percent. Combining the cost savings and new costs of the final rule, the resulting net cost savings, compared to the IFR baseline, is $102.56 million, over 10 years, discounted at 7 percent. TSA's analysis summarizes the net impacts of the new costs and costs

savings of the final rule to be borne by three parties: flight training providers, flight training candidates, and TSA. As displayed in table 9 below, TSA estimates the 10-year total net impact of this final rule, compared to the IFR baseline, to be a cost savings of $149.72 million undiscounted, $126.36 million discounted at three percent, and $102.56 million discounted at seven percent.

TABLE 9—FINAL RULE'S NEW COST AND COST SAVINGS BY ENTITY TYPE AS COMPARED TO THE IFR BASELINE

[2024–2033; $ millions]

Year	Costs to flight training providers	Cost savings to flight training providers	Cost savings to candidates	TSA cost savings	Total final rule net impact		
					Undiscounted	Discounted at 3%	Discounted at 7%
	a	b	c	d	e = a − Σb,c,d		
1	$4.51	$11.54	$0.90	$0.73	($8.65)	($8.40)	($8.09)
2	0.27	9.83	3.34	0.17	(13.07)	(12.32)	(11.42)
3	0.28	12.91	3.38	0.73	(16.75)	(15.33)	(13.67)
4	0.28	10.15	3.43	0.22	(13.52)	(12.01)	(10.31)
5	0.29	13.69	3.49	0.73	(17.62)	(15.20)	(12.57)
6	0.30	10.57	1.50	0.26	(12.03)	(10.08)	(8.02)
7	0.30	14.45	3.55	0.74	(18.43)	(14.99)	(11.48)
8	0.31	11.07	3.65	0.30	(14.70)	(11.61)	(8.56)
9	0.32	15.20	3.76	0.75	(19.39)	(14.86)	(10.55)
10	0.33	11.64	3.89	0.34	(15.54)	(11.56)	(7.90)
Total	7.19	121.05	30.90	4.96	(149.72)	(126.36)	(102.56)
Annualized						(14.81)	(14.60)

Note: Totals may not add due to rounding.

TSA breaks out the ten-year total cost *savings,* presented in table 9, by *savings* to flight training candidates, flight training providers, and TSA. TSA estimates the flight training candidates ten-year cost *savings* to be $30.90 million undiscounted, $25.98 million discounted at three percent, $20.99 million discounted at seven percent. These candidate costs savings represent the ultimate effect of fewer STAs conducted by TSA. While TSA no longer has to pay for additional STA's ($18.74 million over 10 years, discounted at seven percent) these savings are transferred to candidates in the form of reduced fees. Candidate cost savings could have an important distributional effect if the set of candidates are disproportionately represented by certain groups of people. TSA sums the $18.74 million fee transfer, discounted at seven percent, with the $2.25 million, discounted at seven percent, for time savings to estimate a total cost *savings* to candidates of $20.99 million, discounted at seven percent. Next, TSA estimates then ten-year cost *savings* to flight training providers to be $121.05 million undiscounted, $102.76 million discounted at three percent, and $84.08 million discounted at seven percent. Lastly, TSA estimates the ten-year cost *savings* to TSA to be $4.96 million undiscounted, $4.24 million discounted at three percent, and $3.50 million discounted at seven percent.

Table 10 displays the two new cost categories introduced and cost savings under the final rule, compared to the IFR baseline, by rule component.

TABLE 10—NEW COSTS AND COST SAVINGS BY FINAL RULE COMPONENT AS COMPARED TO THE IFR BASELINE

[2024–2033; $ millions]

Year	Cost savings					Costs		Net impact		
	STA structure change fee	STA structure change time burden	Record-keeping	Security awareness training	Inspections time	Familiarity	Security coordinators	Undiscounted	Discounted at 3%	Discounted at 7%
	a	b	c	d	e	f	g	h = Σf,g − Σa,b,c,d,e		
1	$0.59	$0.31	$1.32		$10.95	$4.01	$0.50	($8.65)	($8.40)	($8.09)
2	3.03	0.31	1.92	$5.59	2.50	0.20	0.06	(13.07)	(12.32)	(11.42)
3	3.07	0.31	1.95	0.74	10.95	0.21	0.07	(16.75)	(15.33)	(13.67)
4	3.12	0.32	1.98	5.22	3.16	0.21	0.07	(13.52)	(12.01)	(10.31)

8	3.32	0.33	2.14	4.82	4.40	0.24	0.07	(14.70)	(11.61)	(8.56)
9	3.43	0.33	2.19	2.39	11.37	0.24	0.08	(19.39)	(14.86)	(10.55)
10	3.55	0.34	2.24	4.75	4.99	0.25	0.08	(15.54)	(11.56)	(7.90)
Total	27.68	3.22	19.92	31.78	74.31	6.05	1.14	(149.72)	(126.36)	(102.56)
Annualized									(14.81)	(14.60)

Note: Totals may not add due to rounding.

The primary benefit of the final rule, compared to the IFR baseline, is the replacement of the IFR's *event-based* STA approach with a *time-based* STA approach. The change will reduce STA-related time burdens for flight training candidates and flight training providers and reduce fee expenses for the vast majority of candidates. TSA expects this change to reduce delays and fees, assist in tracking of candidate training events, and support the portability of a candidate's STA between providers.

In completing this final rule, TSA updated the accounting of requirements of the 2004 IFR to estimate the overall cost of the rule using the pre-IFR baseline. Table 11 presents the total cost of the rule from 2005 through 2033, covering 29 years of analysis. This covers the cost of the IFR with updated costs from 2005 through 2023 and the cost of the IFR, less the net cost savings of the final rule, compared to the no action baseline, from 2024 through 2033. The total cost to flight training candidates, flight training providers, and TSA would be $579.43 million undiscounted, $699.05 discounted at three percent, and $957.79 million discounted at seven percent.

TABLE 11—TOTAL COST OF THE RULE INCORPORATING IFR WITH UPDATED COSTS (2005–2023) AND FINAL RULE'S NET COST SAVINGS (2024–2033)

[$ Millions, 2022 dollars]

Year	Cost to candidates	Cost to providers	Cost to TSA	d = Σa,b,c		
	a	b	c	Total undiscounted	Discounted at 3%	Discounted at 7%
2005 18	$8.52	$18.94	$1.80	$29.25	$49.80	$98.88
2006 17	8.26	8.97	0.45	17.68	29.23	55.86
2007 16	8.19	13.89	1.80	23.88	38.32	70.50
2008 15	8.13	9.57	0.56	18.26	28.45	50.38
2009 14	9.63	12.96	1.82	24.40	36.91	62.92
2010 13	9.55	8.98	0.66	19.19	28.17	46.23
2011 12	9.47	13.32	1.84	24.63	35.11	55.46
2012 11	9.40	9.62	0.76	19.77	27.37	41.62
2013 10	9.33	13.74	1.87	24.94	33.51	49.05
2014 9	9.27	10.27	0.85	20.39	26.61	37.49
2015 8	9.22	14.21	1.91	25.33	32.09	43.52
2016 7	9.17	10.94	0.95	21.05	25.89	33.81
2017 6	9.13	14.72	1.96	25.81	30.82	38.73

2019 4	9.07	15.29	2.01	26.37	29.68	34.57
2020 3	9.06	12.34	1.13	22.53	24.62	27.60
2021 2	9.05	15.90	2.08	27.03	28.67	30.94
2022 1	9.05	13.09	1.23	23.37	24.07	25.00
2023 0	9.06	16.57	2.14	27.77	27.77	27.77
2024 1	8.12	11.91	2.18	22.21	21.56	20.76
2025 2	5.71	2.27	0.52	8.50	8.01	7.43
2026 3	5.72	7.32	2.18	15.22	13.93	12.42
2027 4	5.72	3.05	0.65	9.42	8.37	7.19
2028 5	5.78	7.12	2.20	15.10	13.02	10.76
2029 6	7.80	3.74	0.77	12.31	10.31	8.20
2030 7	5.85	7.03	2.22	15.10	12.28	9.40
2031 8	5.87	4.35	0.89	11.11	8.77	6.47
2032 9	5.88	7.02	2.26	15.17	11.63	8.25
2033 10	5.94	4.92	1.01	11.87	8.83	6.03
Total	234.03	303.66	41.74	579.43	699.05	957.79

Next, TSA presents the total cost of the rule if TSA did not implement this final rule. While all requirements from the IFR would be retained, the costs in the table below would not capture the cost *savings* derived, compared to the IFR baseline. This includes the STA fee and time reduction, electronic recordkeeping, less frequent security awareness training, and reduction in inspection burdens. Furthermore, absent implementation of this final rule, TSA would not introduce a requirement to designate Security Coordinators and for providers to familiarize themselves with the changes between the final rule and IFR. Table 12 covers both the IFR period (2005—2023) and 10-years into the future (2024—2033) similar to the final rule period of analysis. The total cost to flight training candidates, flight training providers, and TSA would be $728.86 million undiscounted, $824.40 discounted at three percent, and $1,058.71 million discounted at seven percent.

TABLE 12—TOTAL COST OF THE IFR RULE (IFR; (2005–2033), ABSENT IMPLEMENTATION OF THE FINAL RULE

[$ Millions, 2022 dollars]

Year	Cost to candidates	Cost to providers	Cost to TSA	Total undiscounted	Discounted at 3%	Discounted at 7%
2005 18	$8.52	$18.94	$1.80	$29.25	$49.80	$98.88
2006 17	8.26	8.97	0.45	17.68	29.23	55.86

TABLE 12—TOTAL COST OF THE IFR RULE (IFR; (2005–2033), ABSENT IMPLEMENTATION OF THE FINAL RULE—Continued

[$ Millions, 2022 dollars]

Year	Cost to candidates	Cost to providers	Cost to TSA	Total undiscounted	Discounted at 3%	Discounted at 7%
2007 16	8.19	13.89	1.80	23.88	38.32	70.50
2008 15	8.13	9.57	0.56	18.26	28.45	50.38

2029 6	9.31	18.86	2.39	30.56	25.60	20.37
2030 7	9.40	16.43	1.64	27.47	22.34	17.11
2031 8	9.51	19.74	2.49	31.74	25.06	18.47
2032 9	9.64	17.38	1.75	28.77	22.05	15.65
2033 10	9.83	20.67	2.59	33.09	24.62	16.82
Total	264.92	417.42	46.51	728.86	824.40	1,058.71

TSA then compares the 10-year cost, from 2024 to 2033, of the IFR with updated costs and final rule in table 13. As part of completing this final rule, TSA updated the IFR costs to include all requirements outlined in the 2004 IFR. The first column estimates what the future expected costs of the IFR would be over the next 10 years (without any changes from this final rule). The second column estimates the future expected costs under the final rule over the same 10-year period. The final rule cost column represents the total cost of the IFR less the net savings from the final rule.

TABLE 13—10-YEAR COMPARISON OF THE IFR WITH UPDATED COSTS AND FINAL RULE

[$ Millions, discounted at 7 percent, 2022 dollars]

Year	IFR with updated costs	Final rule cost	Difference
1	$22.63	$20.76	($1.87)
2	24.94	7.43	(17.52)
3	20.57	12.42	(8.15)
4	22.51	7.19	(15.32)
5	18.78	10.76	(8.01)
6	20.37	8.20	(12.16)
7	17.11	9.40	(7.70)
8	18.47	6.47	(12.01)
9	15.65	8.25	(7.40)
10	16.82	6.03	(10.79)
Total	197.84	96.92	(100.92)

3. OMB A–4 Statement

The OMB A–4 Accounting Statement shown in table 14 below presents the annualized costs and qualitative benefits of the final rule under the IFR baseline. TSA also presents a second OMB A–4 Accounting Statement (table 15), which covers the annualized costs and qualitative benefits of the entire FTSP program beginning from the IFR (2005) through the end of the final rule period (2033).[110] All monetary values are presented in 2022 dollars.

[110] TSA, as part of this rule, analyzes two baselines. Table 14 presents the net impact of the final rule to the IFR baseline over the 10-year period of 2024 to 2033. Table 15 reflects 29 year annualized with a start year of 2005 (year 1 of the

TABLE 14—OMB A–4 ACCOUNTING STATEMENT FOR THE IFR BASELINE (2024–2033)
[In millions, 2022 dollars]

Category	Estimates			Units			Notes and source citation (final rule RIA, preamble, etc.)
	Primary estimate	Low estimate	High estimate	Year dollar	Discount rate (%)	Period covered (years)	
Benefits:							
Annualized	N/A	N/A	N/A	N/A	7	N/A	*See* FR RIA.*
	N/A	N/A	N/A	N/A	3	N/A	
Qualitative	In addition to regulatory relief, the final rule results in additional benefits which are derived from improved standardization of the vetting process, including security enhancements through the implementation of Rap Back for the CHRC portion of the STA. Furthermore, TSA extends the duration of STAs for up to 5 years, improving comparability amongst STA programs.						
Costs:							
Annualized	($14.60)	N/A	N/A	2022	7	10	*See* FR RIA*.
	(14.81)	N/A	N/A	2022	3	10	
Qualitative	N/A						
Transfers:							
Federal Annualized Monetized ($ millions/year)	N/A	N/A	N/A	N/A	7	N/A	
	N/A	N/A	N/A	N/A	3	N/A

*The RIA is posted on the public docket at *https://www.regulations.gov/docket?D=TSA-2004-19147*.

TABLE 15—OMB A–4 ACCOUNTING STATEMENT FOR OVERALL COST OF THE RULE (2005–2033)
[In millions, 2022 dollars]

Category	Estimates			Units			Notes and source citation (final rule RIA, preamble, etc.)
	Primary estimate	Low estimate	High estimate	Year dollar	Discount rate (%)	Period covered (years)	
Benefits:							
Annualized	N/A	N/A	N/A	N/A	7	N/A	
	N/A	N/A	N/A	N/A	3	N/A	
Qualitative	The primary benefit of FTSP is the increased protection of U.S. citizens and property from acts of terrorism. The requirements under the IFR and final rule are proposed to ensure that non-U.S. citizen flight training candidates do not pose a risk to the U.S. This addresses the security vulnerability which was exploited in the 9/11 attacks with the non-U.S. citizen hijackers receiving flight training from U.S. flight training providers and then using the knowledge and experienced gained to hijack aircraft and use them to commit acts of terrorism.						
Costs:							
Annualized	$78.01	N/A	N/A	2022	7	29	*See* FR RIA.*
	36.43	N/A	N/A	2022	3	29

IFR), versus 2024 (year 1 of the final rule), whose different timeline affects recurrent inspection and new providers calculations that results in a small difference between the two tables. When comparing annualized cost of both baselines, discounted at 7 percent, over the same 10-year period (2024–2033), the annualized cost of the no-action baseline (presented in table 14) remains unchanged at $14.60 million while the annualized cost the pre-IFR baseline (presented in table 15) would be $14.37 million.

TABLE 15—OMB A–4 ACCOUNTING STATEMENT FOR OVERALL COST OF THE RULE (2005–2033)—Continued
[In millions, 2022 dollars]

4. Alternatives Considered

In addition to the final rule, TSA also considered three regulatory alternatives compared to the IFR baseline. The first alternative (Alternative 1) includes cost-savings resulting from *time-based* candidate STAs, biennial employee security awareness training, and electronic recordkeeping. Alternative 1 removes the new requirement to designate Security Coordinators. TSA did not choose Alternative 1 over the final rule provisions because the opportunity costs to designate a Security Coordinator per provider would be approximately $16 to $24. TSA believes the benefits of having a Security Coordinator as a primary contact with TSA and who can address security related issues outweigh this low-cost burden. Furthermore, the designation of a Security Coordinator will support TSA in scheduling and managing audits and inspections, and bring FTSP in synchronization with other aviation programs, including the Airport Operator Standard Security Program, which have similar Security Coordinator requirements.

The second alternative (Alternative 2) would maintain the IFR or baseline STA requirements for a candidate to pay for an STA each time that candidate requests flight training. Alternative 2 would allow for electronic recordkeeping and security awareness training every 2 years, and would not require the designation of the Security Coordinator. This alternative does not include the regulatory relief resulting from the switch to *time-based* candidate STAs of approximately $20.99 million annually discounted at seven percent. TSA does not endorse Alternative 2 because it is contrary to the top recommendation from the ASAC to move from an *event-based* STA to a *time-based* STA. Maintaining an *event-based* STA commands a 10-year cost of $46.06 million, discounted at 7 percent, over the final rule. While the move from *event-based* STAs would reduce the number of STAs for returning flight training candidates, the level of security remains unchanged as a result of TSA's adoption of continuous vetting methods, including the use of the Rap Back program.

The third alternative (Alternative 3) would mirror all the changes under the final rule with the exception of the employees' refresher security awareness training. Under this alternative, the training would be required triennially. Alternative 3 would still result in cost savings through the adoption of a *time-based* STA and adoption of electronic recordkeeping. TSA does not endorse Alternative 3, despite greater cost savings, as it does not align with industry's recommendation to bring employees' security awareness training in line with other flight industry required training, including the FAA's biennial flight reviews. Table 16 below compares costs of the alternatives using a 'no action' baseline.

TABLE 16—COMPARISON OF NET IMPACTS BETWEEN FINAL RULE AND ALTERNATIVES
[IFR baseline; 2024–2033]

Alternative	Requirements	10-Year cost ($ millions); discounted at 7 percent			
		Candidates/ providers	TSA	Total cost	Difference from FR
Final Rule	Migration to time-based STAs; allows electronic recordkeeping and security awareness training every 2 years; adds new designation of Security Coordinators.	($99.06)	($3.50)	($102.56)	N/A
Alternative 1	Provisions of final rule but removes new requirement of designation of Security Coordinators.	(99.95)	(3.50)	(103.45)	(0.90)
Alternative 2	Maintaining training event based STAs, while allowing electronic recordkeeping; and removes designation of Security Coordinators.	(78.97)	(3.50)	(82.47)	20.09

TABLE 16—COMPARISON OF NET IMPACTS BETWEEN FINAL RULE AND ALTERNATIVES—Continued
[IFR baseline; 2024–2033]

Alternative	Requirements	10-Year cost ($ millions); discounted at 7 percent			
		Candidates/ providers	TSA	Total cost	Difference from FR
Alternative 3	Provisions of final rule but changes the frequency of employee security awareness training to a triennial cycle.	(105.44)	(3.50)	(108.94)	(6.38)

Note: Totals may not add due to rounding.

5. Regulatory Flexibility Act Assessment

The RFA was enacted by Congress to ensure that small entities (small businesses, small not-for-profit organizations, and small governmental jurisdictions) are not unnecessarily or disproportionately burdened by Federal regulations. The RFA requires agencies to review rules to determine whether they have ''a significant economic impact on a substantial number of small entities.'' Section 603(a) of the RFA requires that agencies prepare and make available for public comment an initial RFA whenever the agency is required by law to publish a general notice of proposed rulemaking. However, 49 U.S.C. 44939 required TSA to promulgate an IFR implementing its requirements. TSA is not required to perform a final regulatory flexibility analysis, because it was not ''required by [5 U.S.C. 553] or any other law to publish a general notice of proposed rulemaking.'' TSA did, however, estimate additional costs resulting from this final rule's new requirement for designation of Security Coordinators and for providers to familiarize themselves with the requirements of the final rule in its regulatory evaluation. *See* section I.B.1. for a discussion of statutory authorities pertinent to the IFR and the final rule.

6. International Trade Impact Assessment

The Trade Agreement Act of 1979 prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and, where appropriate, that the standards constitute the basis for U.S. standards. TSA has assessed the potential effects of this rule and determined that the rule imposes the same costs on domestic and international entities and thus has a neutral trade impact.

7. Unfunded Mandates Reform Act Assessment

The UMRA does not apply to a regulatory action in which no notice of proposed rulemaking is published, as is the case in this rulemaking action. Accordingly, TSA has not prepared a statement under the UMRA.

B. Paperwork Reduction Act

The PRA requires Federal agencies to consider the impact of paperwork and other information collection burdens imposed on the public and, under the provisions of 44 U.S.C. 3507(d), obtain approval from the OMB for each collection of information it conducts, sponsors, or requires through regulations.[111]

OMB approved the information collection request for the IFR, Flight Training for Aliens and Other Designated Individuals, under OMB Control No. 1652–0021. This final rule contains a new information collection activity for Security Coordinators to provide their contact information to TSA. Accordingly, TSA has submitted the following information requirements to OMB for its review. The Supporting Statement for this information collection request is available in the docket for this rulemaking.

Title: Flight Training Security Program

Summary: This final rule requires the following information collections:

First, prior to taking flight training, the non-U.S. citizen flight training candidate is required to submit their biographic and biometric information to TSA to conduct an STA. The candidate also must keep their biographical information current in their FTSP account in order to maintain their Determination of Eligibility. The final rule will change the frequency in which candidates apply for STAs from each time there is a request for flight training required by the IFR to one STA that will last up to 5 years. These changes will save candidates from paying STAs fees each time they request flight training and will save them an increment of time formerly required for each training event notification because candidates no longer provide these notifications to TSA. These changes also will result in a reduction in the final rule's information collection hour burden and a reduction in costs from multiple STA fees.

Second, the final rule maintains recordkeeping requirements necessary for TSA to verify that flight training providers ensured their candidates had appropriate STAs, confirmed the citizenship or nationality status of each flight student, and conducted employee security awareness training. The final rule will allow for records that were previously only allowed to be stored in hard copy to be stored electronically, creating further cost savings from reduced physical storage costs.

Third, the final rule adds a new collection of information for each provider to submit information for their Security Coordinator. This new requirement for a Security Coordinator supports communications with TSA concerning intelligence information, security related activities, and incident or threat response with appropriate law enforcement and emergency response agencies. TSA has added a burden estimate to the collection for this activity.

Fourth, the final rule may allow TSA inspectors to reduce time spent inspecting paper records, because records may be electronically stored on the FTSP portal. TSA's estimate includes the updated TSA inspection time burden.

Respondents (including number of): There are two categories of respondents: candidates and flight training providers. TSA estimates there would be 58,069 flight training candidates over a 3-year period, beginning on the effective date of the final rule. TSA estimates there are approximately 4,206 flight training providers who actively provide flight training to candidates, U.S. citizens, and U.S. nationals, and 19,738 flight training

[111] Public Law 96–511 (94 Stat. 2812; Dec. 11, 1980), as codified at 44 U.S.C. 3501 *et seq.*

providers who exclusively train U.S. citizens and U.S. nationals.

Frequency: Under the IFR, a candidate applied for an STA prior to each flight training event. Thus, the frequency varied by candidate. Under the final rule, the STA frequency is reduced from every time a candidate trains (*event-based*) to once every 5 years (*time-based*). The provider is still required to notify TSA of each training event. Providers must also maintain an employees' security awareness training record; however, this training is now required to be conducted every 2 years for each covered employee, as opposed to the IFR's requirement that this training be conducted annually. The final rule allows for electronic recordkeeping of these records using the FTSP portal.

Annual Burden Estimate: The final rule's average yearly burden for candidate flight training event notifications, Security Coordinator designations, recordkeeping of candidates' flight training requests, and recordkeeping of employee security awareness training, is estimated to be 93,915 responses and 33,594 hours. TSA estimates the annual hourly cost burden to be $1.47 million. TSA estimates annual fees of $2.71 million for this collection to cover the Federal burden for administering the STAs. Table 17 below displays the annual number of responses and hours per information collection activity.

TABLE 17—PRA INFORMATION COLLECTION RESPONSES AND BURDEN HOURS

Collection activity	Responses			Total responses	Average annual responses	Time burden per response (hours)	Total hours	Average annual hours
	Year 1	Year 2	Year 3					
Security Coordinator Submission	32,097	4,120	4,225	40,442	13,481	0.0250	10,110	3,370
Candidate Training Requests (with new or renewing STA)	30,847	13,611	13,611	58,069	19,356	0.7500	43,552	14,517
Candidate Training Requests (with existing STA)	14,329	31,643	31,794	77,766	25,922	0.5833	45,363	15,121
Employee Security Awareness Training Recordkeeping	51,002	6,768	47,699	105,469	35,156	0.0167	1,758	586
Total	.....	.....	.....	281,745	93,915	.....	100,783	33,594

Note: Totals may not add due to rounding.

C. Privacy Act

The FTSP Portal stores and protects information in accordance with the Privacy Act and NARA regulations and schedules. Personally identifiable information may only be shared in accordance with DHS/TSA's PIA. The PIA is updated whenever there is a change to how PII is handled or what PII is being collected and/or retained. The current PIA was published July 28, 2014.[112]

The FTSP system covers the following categories of designated individuals:

- Other individuals who are connected to the transportation industry for whom DHS/TSA conducts STAs to ensure transportation security.
- Non-U.S. citizens/nationals or other individuals designated by DHS/TSA who apply for flight training or recurrent training.
- Individuals who are owners, operators, or directors of any transportation mode facilities, services, or assets.

D. Executive Order 13132 (Federalism)

E.O. 13132 of August 4, 1999 (Federalism), requires TSA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' The phrase ''policies that have federalism implications'' is defined in this E.O. to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.''

TSA has analyzed this rule under the principles and criteria of E.O. 13132 and has determined that this action does not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, does not have federalism implications.

E. Environmental Analysis

TSA has reviewed this rule for purposes of the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4347) and has determined that this action would not have a significant effect on the human environment.

F. Energy Impact Analysis

TSA has assessed the energy impact of this rule in accordance with the Energy Policy and Conservation Act (EPCA),[113] and has determined that this rulemaking is not a major regulatory action under the provisions of EPCA.

For the reasons set forth in the preamble, the Transportation Security Administration amends chapter XII, of title 49, Code of Federal Regulations, to read as follows:

PART 1500—APPLICABILITY, TERMS, AND ABBREVIATIONS

■ 1. The authority citation for part 1500 is revised to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44907, 44913–44914, 44916–44918, 44935–44936, 44939, 44942, 46105; Pub. L. 110–53 (121 Stat. 266, Aug. 3, 2007) secs. 1408 (6 U.S.C. 1137), 1501 (6 U.S.C. 1151), 1517 (6 U.S.C. 1167), and 1534 (6 U.S.C. 1184).

■ 2. Amend § 1500.3 by adding the definitions of ''Citizen of the United States or U.S. Citizen'', ''Day'', ''Lawful permanent resident'', ''National of the United States or U.S. national'', and ''Non-U.S. citizen'' in alphabetical order to read as follows:

§ 1500.3 Terms and abbreviations used in this chapter.

* * * * *

Citizen of the United States or *U.S. Citizen* means any person who is a United States citizen by law, birth, or naturalization as described in 8 U.S.C. 1401 *et seq.*

Day means calendar day, unless called ''business day,'' which refers to Monday through Friday, excluding days when the U.S. Government is closed.

* * * * *

Lawful permanent resident means a person ''lawfully admitted for permanent residence'' as defined in 8 U.S.C. 1101(a)(20).

* * * * *

National of the United States or *U.S. national* means:

(1) A citizen of the United States; or

(2) A person who, though not a citizen of the United States, owes permanent allegiance to the United States, as defined in 8 U.S.C. 1101(a)(22).

Non-U.S. citizen means an individual who is not a citizen or national of the United States. This term is synonymous with the term ''alien'' as defined in 8 U.S.C. 1101(a)(3).

* * * * *

PART 1503—INVESTIGATIVE AND ENFORCEMENT PROCEDURES

■ 3. The authority citation for part 1503 is revised to read as follows:

Authority : 6 U.S.C. 1142; 18 U.S.C. 6002; 28 U.S.C. 2461 (note); 49 U.S.C. 114, 20109, 31105, 40113–40114, 40119, 44901–44907, 44939, 46101–46107, 46109–46110, 46301, 46305, 46311, 46313–46314; Pub. L. 110–53 (121 Stat. 266, Aug. 3, 2007) secs. 1408 (6 U.S.C. 1137), 1501 (6 U.S.C. 1151), 1517 (6 U.S.C. 1167), and 1534 (6 U.S.C. 1184).

Subpart B—Scope of Investigative and Enforcement Procedures

§ 1503.103 [Amended]

■ 4. Amend § 1503.103 by removing the definition of ''Public transportation agency''.

Subpart C—Investigative Procedures

■ 5. Add § 1503.207 to read as follows:

§ 1503.207 Inspection authority.

(a) Each person subject to any of the requirements in this chapter or other applicable authority must allow TSA and other authorized DHS officials, at any time and in a reasonable manner, without advance notice, to enter, assess, inspect, and test property, facilities, equipment, and operations; and to view, inspect, and copy records, as necessary to carry out TSA's security-related statutory or regulatory authorities and without a subpoena, including its authority to—

(1) Assess threats to transportation.

(2) Enforce security-related laws, regulations, directives, and requirements.

(3) Inspect, maintain, and test the security of facilities, equipment, and systems.

(4) Ensure the adequacy of security measures for the transportation of passengers and cargo.

(5) Oversee the implementation, and ensure the adequacy, of security measures for conveyances and vehicles, at transportation facilities and infrastructure and other assets related to transportation.

(6) Review security plans and/or programs.

(7) Determine compliance with any requirements in this chapter.

(8) Carry out such other duties, and exercise such other powers, relating to transportation security, as the Administrator for TSA considers appropriate, to the extent authorized by law.

(b) At the request of TSA, each person subject to the requirements of this chapter must provide evidence of compliance with this chapter, including copies of records.

(c) TSA and other authorized DHS officials, may enter, without advance notice, and be present within any area or within any vehicle or conveyance, terminal, or other facility covered by this chapter without access media or identification media issued or approved by a person subject to requirements in this chapter or other applicable authority in order to inspect or test compliance, or perform other such duties as TSA may direct.

(d) TSA inspectors and other authorized DHS officials working with TSA will, on request, present their credentials for examination, but the credentials may not be photocopied or otherwise reproduced.

PART 1515—APPEAL AND WAIVER PROCEDURES FOR SECURITY THREAT ASSESSMENTS FOR INDIVIDUALS

■ 6. The authority citation for part 1515 continues to read as follows:

Authority: 46 U.S.C. 70105; 49 U.S.C. 114, 5103a, 40113, and 46105; 18 U.S.C. 842, 845; 6 U.S.C. 469.

§ 1515.3 [Amended]

■ 7. Amend § 1515.3 by removing the definition of ''Day''.

PART 1540—CIVIL AVIATION SECURTIY: GENERAL RULES

■ 8. The authority citation for part 1540 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44907, 44913–44914, 44916–44918, 44925, 44935–44936, 44942, 46105.

■ 9. Add § 1540.7 to read as follows:

§ 1540.7 Severability.

Any provision of this subchapter held to be invalid or unenforceable as applied to any person or circumstance shall be construed so as to continue to give the maximum effect to the provision permitted by law, including as applied to persons not similarly situated or to dissimilar circumstances, unless such holding is that the provision of this subpart is invalid and unenforceable in all circumstances, in which event the provision shall be severable from the remainder of this subchapter and shall not affect the remainder thereof.

PART 1542—AIRPORT SECURITY

■ 10. The authority citation for part 1542 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44905, 44907, 44913–44914, 44916–44917, 44935–44936, 44942, 46105.

Subpart A—General

§ 1542.5 [Removed and Reserved]

■ 11. Remove and reserve § 1542.5.

PART 1544—AIRCRAFT OPERATOR SECURITY: AIR CARRIERS AND COMMERCIAL OPERATORS

■ 12. The authority citation for part 1544 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44905, 44907, 44913–44914, 44916–44918, 44932, 44935–44936, 44942, 46105.

Subpart A—General

§ 1544.3 [Removed and Reserved]

■ 13. Remove and reserve § 1544.3.

PART 1546—FOREIGN AIR CARRIER SECURITY

■ 14. The authority citation for part 1546 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44905, 44907, 44914, 44916–44917, 44935–44936, 44942, 46105.

Subpart A—General

§ 1546.3 [Removed and Reserved]

■ 15. Remove and reserve § 1546.3.

PART 1548—INDIRECT AIR CARRIER SECURITY

■ 16. The authority citation for part 1548 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44905, 44913–44914, 44916–44917, 44932, 44935–44936, 46105.

§ 1548.3 [Removed and Reserved]

■ 17. Remove and reserve § 1548.3.

PART 1549—CERTIFIED CARGO SCREENING PROGRAM

■ 18. The authority citation for part 1549 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44905, 44913–44914, 44916–44917, 44932, 44935–44936, 46105.

Subpart A—General

§ 1549.3 [Removed and Reserved]

■ 19. Remove and reserve § 1549.3.

PART 1550—AIRCRAFT SECURITY UNDER GENERAL OPERATING AND FLIGHT RULES

■ 20. The authority citation for part 1550 continues to read as follows:

Authority: 49 U.S.C. 114, 5103, 40113, 44901–44907, 44913–44914, 44916–44918, 44935–44936, 44942, 46105.

§ 1550.3 [Removed and Reserved]

■ 21. Remove and reserve § 1550.3.

■ 23. Revise part 1552 to read as follows:

PART 1552—FLIGHT TRAINING SECURITY PROGRAM

Subpart A—Definitions and General Requirements

Sec.
1552.1 Scope.
1552.3 Terms used in this part.
1552.5 Applicability.
1552.7 Verification of eligibility.
1552.9 Security Coordinator.
1552.11 [Reserved]
1552.13 Security awareness training.
1552.15 Recordkeeping.
1552.17 FTSP Portal.
1552.19 Fraud, falsification, misrepresentation, or omission.

Subpart B—Security Threat Assessments

1552.31 Security threat assessment required for flight training candidates.
1552.33 [Reserved]
1552.35 Presence in the United States.
1552.37 Comparable security threat assessments.
1552.39 Fees.

Subpart C—Flight Training Event Management

1552.51 Notification and processing of flight training events.

Authority: 49 U.S.C. 114, 44939, and 6 U.S.C. 469.

Subpart A—Definitions and General Requirements

§ 1552.1 Scope.

This part includes requirements for the following persons:

(a) Persons who provide flight training or flight training equipment governed by 49 U.S.C. subtitle VII, part A, to any individual.

(b) Persons who lease flight training equipment.

(c) Non-U.S. citizens who apply for or participate in flight training.

(d) U.S. citizens and U.S. nationals who participate in flight training.

§ 1552.3 Terms used in this part.

In addition to the terms in §§ 1500.3 and 1540.5 of this chapter, the following terms apply to this part:

Aircraft simulator means a flight simulator or flight training device, as those terms are defined under 14 CFR part 61. Simulated flights for entertainment purposes or personal computer, video game, or mobile device software programs involving aircraft flight are not aircraft simulators for purposes of the requirements in this part.

Candidate means a non-U.S. citizen who applies for flight training or recurrent training from a flight training provider. The term does not include foreign military personnel who are endorsed for flight training by the U.S. Department of Defense (DoD), as described in § 1552.7(a)(2); and does not include a non-U.S. citizen providing in-aircraft or in-simulator services or support to another candidate's training event (commonly referred to as ''side-seat support'') if the individual providing this support holds a type rating or other set of pilot certificates required to operate the aircraft or simulator in which the supported individual is receiving instruction.

Demonstration flight for marketing purposes means a flight for the purpose of demonstrating aircraft capabilities or characteristics to a potential purchaser; an orientation, familiarization, discovery flight for the purpose of demonstrating a flight training provider's training program to a potential candidate; or an acceptance flight after an aircraft manufacturer delivers an aircraft to a purchaser.

DoD means the Department of Defense.

DoD endorsee means a non-U.S. citizen who is or will be employed as a pilot by a foreign military, endorsed by the DoD or one of its component services, and validated by a DoD attaché for flight training as required by § 1552.7(a)(2).

Determination of Eligibility means a finding by TSA, upon completion of a security threat assessment, that an individual meets the standards of a security threat assessment, and is eligible for a program, benefit, or credential administered by TSA.

Determination of Ineligibility means a finding by TSA, upon completion of a security threat assessment, that an individual does not meet the standards of a security threat assessment, and is not eligible for a program, benefit, or credential administered by TSA.

Flight training means instruction in a fixed-wing or rotary-wing aircraft or aircraft simulator that is consistent with the requirements to obtain a new skill, certificate, or type rating, or to maintain a pilot certificate or rating. For the purposes of this rule, flight training does not include instruction in a balloon, glider, ultralight, or unmanned aircraft; ground training; demonstration flights for marketing purposes; simulated flights for entertainment purposes; or any flight training provided by the DoD, the U.S. Coast Guard, or any entity providing flight training under a contract with the DoD or the Coast Guard.

Flight training provider means—

(1) Any person that provides instruction under 49 U.S.C. subtitle VII, part A, in the operation of any aircraft or aircraft simulator in the United States or outside the United States, including any pilot school, flight training center, air carrier flight training facility, or individual flight instructor certificated under 14 CFR parts 61, 121, 135, 141, or 142;

(2) Similar persons certificated by foreign aviation authorities recognized by the Federal Aviation Administration (FAA), who provide flight training services in the United States; and

(3) Any lessor of an aircraft or aircraft simulator for flight training, if the person leasing their equipment is not covered by paragraph (1) or (2) of this definition.

Flight training provider employee means an individual who provides services to a flight training provider in return for financial or other compensation, or a volunteer, and who has direct contact with flight training students and candidates. A flight training provider employee may be an instructor, other authorized representative, or independent contractor.

Flight Training Security Program (FTSP) means the TSA program that provides regulatory oversight of the requirements in this part and provides related resources for individuals within the scope of this part.

FTSP Portal means a website that must be used to submit and receive certain information and notices as required by this part.

FTSP Portal account means an account created to access the FTSP Portal.

Recurrent training means

(1) Periodic flight training—

(i) Required for certificated pilots under 14 CFR parts 61, 121, 125, 135, or subpart K of part 91 to maintain a certificate or type rating; or

(ii) Similar training required by a civil aviation authority recognized by the FAA and conducted within the United States and its territories.

(2) Recurrent training does not include—

(i) Training that may be credited toward a new certificate or a new type rating; or

(ii) Checks or tests that do not affect the validity of the certificate(s) or the qualifications of a type rating.

Security threat means an individual determined by TSA to pose or to be suspected of posing a threat to national security, to transportation security, or of terrorism.

Security threat assessment means both a product and process of evaluating information regarding an individual seeking or holding approval for a program administered by TSA, including criminal, immigration, intelligence, law enforcement, and other security-related records, to verify the individual's identity and to determine whether the individual meets the eligibility criteria for the program. An individual who TSA determines is a security threat, or who does not otherwise meet the eligibility criteria for the program, is ineligible for that program.

Simulated flight for entertainment purposes means a ground-based aviation experience offered exclusively for the purpose of entertainment by a person that is not a flight training provider. Any simulated aviation experience that could be applied or credited toward an airman certification is not a simulated flight for entertainment purposes.

Type rating means an endorsement on a pilot certificate that the holder of the certificate has completed the appropriate training and testing required by a civil or military aviation authority to operate a certain make and type of aircraft.

§ 1552.5 Applicability.

Each of the following persons must comply with the requirements in this part:

(a) Any individual applying for flight training or recurrent flight training from a flight training provider;

(b) Flight training providers;

(c) Flight training provider employees; and

(d) Persons using a leased aircraft simulator to provide flight training as follows:

(1) If one or more persons using the leased aircraft simulator to provide flight training is certificated by the FAA as a flight instructor, then at least one of those certificated persons must register with TSA as a flight training provider and comply with the requirements of this part; or

(2) If one or more persons using a leased aircraft simulator to provide flight training are neither registered with TSA as a flight training provider nor certificated by the FAA as an instructor, then the lessor of the aircraft simulator must register with TSA as a flight training provider and comply with the requirements of this part.

§ 1552.7 Verification of eligibility.

(a) No flight training provider may provide flight training or access to flight training equipment to any individual before establishing that the individual is a U.S. citizen, U.S. national, DoD endorsee, or candidate with a valid Determination of Eligibility resulting from a TSA-accepted security threat assessment completed in accordance with subpart B of this part.

(1) To establish that an individual is a U.S. citizen or a U.S. national, each flight training provider must examine the individual's government-issued documentation as proof of U.S. citizenship or U.S. nationality. A student who claims to be a U.S. citizen or a U.S. national and who fails to provide valid, acceptable identification documents must be denied flight training. A list of acceptable identification documents may be found on the FTSP Portal.

(2) To establish that an individual has been endorsed by the DoD to receive U.S. Government-sponsored flight training in the United States, each flight training provider must use the FTSP Portal to confirm that the endorsee's government-issued photo identification matches the information provided in the U.S. DoD endorsement available on the FTSP Portal. A DoD endorsee is exempt from the requirement to undergo the

security threat assessment required by this part if the DoD attaché with jurisdiction for the foreign military pilot's country of citizenship has notified TSA through the FTSP Portal that the pilot may participate in U.S. Government-sponsored flight training.

(3) To establish that a candidate has undergone a TSA-accepted security threat assessment, each flight training provider must use the FTSP Portal to confirm that TSA has issued a Determination of Eligibility to that candidate and that the determination is valid.

(b) Each flight training provider must immediately terminate a candidate's participation in all ongoing or planned flight training events when TSA either sends a Determination of Ineligibility for that candidate or notifies the flight training provider that the candidate presents a security threat.

(c) Each flight training provider must acknowledge through the FTSP Portal receipt of any of the following TSA notifications: Determination of Ineligibility; Candidate Security Threat; and Deny Candidate Flight Training.

(d) Each flight training provider must notify TSA if the provider becomes aware that a candidate is involved in any alleged criminal disqualifying offenses, as described under § 1544.229(d) of this subchapter; is no longer permitted to remain in the United States, as described in § 1552.35; or has reason to believe the individual otherwise poses a security threat.

§ 1552.9 Security Coordinator.

(a) *Designation of a Security Coordinator.* Each flight training provider must designate and use a primary Security Coordinator. The Security Coordinator must be designated at the corporate level.

(b) *Notification to TSA.* Each flight training provider must provide to TSA the names, title(s), phone number(s), and email address(es) of the Security Coordinator and the alternate Security Coordinator(s), as applicable, no later than November 1, 2024. Once a flight training provider has notified TSA of the contact information for the designated Security Coordinator and the alternate Security Coordinator(s), as applicable, the provider must notify TSA within 5 days of any changes in any of the information required by this section. This information must be provided through the FTSP Portal.

(c) *Role of Security Coordinator.* Each flight training provider must ensure that at least one Security Coordinator—

(1) Serves as the primary contact for intelligence information and security-related activities and communications with TSA. Any individual designated as a Security Coordinator may perform other duties in addition to those described in this section.

(2) Is accessible to TSA on a 24-hours a day, 7 days a week basis.

(3) Coordinates security practices and procedures internally, and with appropriate law enforcement and emergency response agencies.

(d) *Training for Security Coordinator.* Security Coordinator must satisfactorily complete the security awareness training required by § 1552.13, and have the resources and knowledge necessary to quickly contact the following, as applicable:

(1) Their local TSA office;

(2) The local Federal Bureau of Investigation (FBI) office; and

(3) Local law enforcement, if a situation or an individual's behavior could pose an immediate threat.

§ 1552.11 [Reserved]

§ 1552.13 Security awareness training.

(a) Each flight training provider must ensure that each flight training provider employee who has direct contact with flight students completes a security awareness training program that meets the requirements of this section.

(b) Each flight training provider must ensure that each flight training provider employee who has direct contact with flight students receives initial security awareness training within 60 days of hiring. At a minimum, initial security awareness training must—

(1) Require direct participation by the flight training provider employee receiving the training, either in person or through an online training module;

(2) Provide situational scenarios requiring the flight training provider employee receiving the training to assess specific situations and determine appropriate courses of action; and

(3) Contain information that enables a flight training provider employee to identify the following:

(i) Any restricted areas of the flight training provider or airport where the flight training provider operates and individuals authorized to be in these areas or in or on equipment, including designations such as uniforms or badges unique to the flight training provider and required to be worn by employees or other authorized persons.

(ii) Behavior that may be considered suspicious, including, but not limited to—

(A) Excessive or unusual interest in restricted airspace or restricted ground structures by unauthorized individuals;

(B) Unusual questions or interest regarding aircraft capabilities;

(C) Aeronautical knowledge inconsistent with the individual's existing airman credentialing; and

(D) Sudden termination of instruction by a candidate or other student.

(iii) Indications that candidates are being trained without a Determination of Eligibility or validation of exempt status.

(iv) Behavior by other persons on site that may be considered suspicious, including, but not limited to—

(A) Loitering on or around the operations of a flight training provider for extended periods of time; and

(B) Entering ''authorized access only'' areas without permission.

(v) Circumstances regarding aircraft that may be considered suspicious, including, but not limited to—

(A) Unusual modifications to aircraft, such as the strengthening of landing gear, changes to the tail number, or stripping of the aircraft of seating or equipment;

(B) Damage to propeller locks or other parts of an aircraft that is inconsistent with the pilot training or aircraft flight log; and

(C) Dangerous or hazardous cargo loaded into an aircraft.

(vi) Appropriate flight training provider employee responses to specific situations and scenarios, including—

(A) Identifying suspicious behavior requiring action, such as identifying anomalies within the operational environment considering the totality of the circumstances, and appropriate actions to take;

(B) When and how to safely question an individual if the individual's behavior is suspicious; and

(C) Informing a supervisor and the flight training provider's Security Coordinator, if a situation or an individual's behavior warrants further investigation.

(vii) Any other information relevant to security measures or procedures unique to the flight training provider's business, such as threats, past security incidents, or a site-specific TSA requirement.

(c) All flight training providers must ensure that each employee receives refresher security awareness training at least every 2 years. At a minimum, a refresher security awareness training program must—

(1) Include all the elements from the initial security awareness training;

(2) Provide instruction on any new security measures or procedures implemented by the flight training provider since the last security awareness training program;

(3) Relay information about recent security incidents at the flight training provider's business, if any, and any

lessons learned as a result of such incidents;

(4) Cover any new threats posed by, or incidents involving, general or commercial aviation aircraft; and

(5) Provide instruction on any new TSA requirements concerning the security of general or commercial aviation aircraft, airports, or flight training operations.

(d) Flight training providers who must conduct security awareness training under part 1544 or 1546 of this subchapter may deliver that training in lieu of compliance with paragraphs (a) through (c) of this section.

§ 1552.15 Recordkeeping.

(a) *Retention.* Except as provided in paragraph (e) of this section, each flight training provider subject to the requirements in this part must, at a minimum, retain the records described in this section to demonstrate compliance with TSA's requirements and make these records available to TSA upon request for inspection and copying.

(b) *Employee records.* Each flight training provider required to provide security awareness training under § 1552.13 must—

(1) Retain security awareness training records for each employee required to receive training that includes, at a minimum—

(i) The employee's name;

(ii) The dates the employee received security awareness training;

(iii) The name of the instructor or manager for training; and

(iv) The curricula or syllabus used for the most recently provided training that establishes the training meets the criteria specified in § 1552.13.

(2) Retain records of security training for no less than 1 year after the individual is no longer an employee.

(3) Provide records to current and former employees upon request and at no charge as necessary to provide proof of training. At a minimum, the information provided must include—

(i) The information in paragraph (b)(1) of this section, except that, in lieu of providing the curriculum or syllabus, the flight training provider may provide a statement certifying that the training program used by the flight training provider met the criteria specified in § 1552.13; and

(ii) The signature or e-signature of an authorized official of the provider.

(4) A flight training provider that conducts security awareness training under parts 1544 or 1546 of this subchapter may retain that documentation in lieu of compliance with this section.

(c) *Records demonstrating eligibility for flight training for U.S. citizens and U.S. nationals.* (1) Each flight training provider must maintain records that document the provider's verification of U.S. citizenship or U.S. nationality as described in § 1552.7(a)(1).

(2) Each flight training provider may certify that verification of U.S. citizenship or U.S. nationality occurred by making the following endorsement in both the instructor's and the student's logbooks: ''I certify that [insert student's full name] has presented to me a [insert type of document presented, such as U.S. birth certificate or U.S. passport, and the relevant control or sequential number on the document, if any] establishing that [the student] is a U.S. citizen or U.S. national in accordance with 49 CFR 1552.7(a). [Insert date and the instructor's signature and certificate number.]''

(3) In lieu of paragraph (c)(1) or (2) of this section, the flight training provider may make and retain copies of the documentation establishing an individual as a U.S. citizen or U.S. national.

(d) *Leasing agreements.* Each flight training provider must retain all lease agreement records for aircraft simulators leased from another person, as identified under this section, as necessary to demonstrate compliance with the requirements of this part.

(e) *Records maintenance.* (1) With the exception of the retention schedule for training records required under paragraph (b)(2) of this section, all records required by this part must be maintained electronically using methods approved by TSA or as paper records for at least 5 years after expiration or discontinuance of use.

(2) A flight training provider that uses its FTSP Portal account to confirm or manage the following records is not required to maintain separate electronic or paper copies of the following records:

(i) Security awareness training records;

(ii) Security Coordinator training records;

(iii) Verification of U.S. citizenship or U.S. nationality;

(iv) Verification of DoD Endorsee identity; or

(v) Aircraft or aircraft simulator lease agreements.

§ 1552.17 FTSP Portal.

(a) Candidates must obtain an FTSP Portal account and use the FTSP Portal to submit the information and fees necessary to initiate a security threat assessment under subpart B of this part.

(b) Flight training providers who provide flight training to candidates must obtain an FTSP Portal account and use the FTSP Portal to notify TSA of all candidate flight training events and confirm that a candidate is eligible for flight training. The flight training provider also may use the FTSP Portal for other recordkeeping purposes related to the requirements in § 1552.15.

(c) The FTSP Portal account administrator for flight training providers who operate under 14 CFR part 61, either as an individual certified flight instructor, or for a group of certified flight instructors, must be an FAA certificate holder. The FTSP Portal account administrator for flight training providers who operate under 14 CFR parts 121, 135, 141, and 142 is not required to be an FAA certificate holder.

(d) TSA may suspend a flight training provider's access to the FTSP Portal at any time, without advance notice.

§ 1552.19 Fraud, falsification, misrepresentation, or omission.

If an individual covered by this part commits fraud, makes a false statement or misrepresentation, or omits a material fact when submitting any information required under this part, the individual may be—

(a) Subject to fine or imprisonment or both under Federal law, including, but not limited to, 18 U.S.C. 1001 and 49 U.S.C. 46301;

(b) Denied a security threat assessment under this chapter; and/or

(c) Subject to other enforcement or administrative action, as appropriate, including, but not limited to, proceedings under § 1540.103 of this subchapter.

Subpart B—Security Threat Assessments

§ 1552.31 Security threat assessment required for flight training candidates.

(a) *Scope of security threat assessment.* Each candidate must complete a security threat assessment and receive a Determination of Eligibility from TSA prior to initiating flight training.

(b) *Information required.* To apply for a security threat assessment, each candidate must submit the following, in a form and manner acceptable to TSA—

(1) Biographic and biometric information determined by TSA to be necessary for conducting a security threat assessment;

(2) Identity verification documents; and

(3) The applicable security threat assessment fee identified in § 1552.39.

(c) *TSA Determination of Eligibility.* TSA may issue a Determination of Eligibility to the flight training provider

after conducting a security threat assessment of the candidate that includes, at a minimum—

(1) Confirmation of the candidate's identity;

(2) A check of relevant databases and other information to determine whether the candidate may pose or poses a security threat and to confirm the individual's identity;

(3) An immigration check; and

(4) An FBI fingerprint-based criminal history records check to determine whether the individual has a disqualifying criminal offense in accordance with the requirements of § 1544.229 of this subchapter.

(d) *Term of TSA Determination of Eligibility.* (1) The TSA Determination of Eligibility expires 5 years after the date it was issued, unless—

(i) The candidate commits a disqualifying criminal offense described in § 1544.229(d) of this subchapter and, in such case, the Determination of Eligibility expires on the date the candidate was convicted or found not guilty by reason of insanity;

(ii) TSA determines that the candidate poses a security threat; or

(iii) The candidate's authorization to remain in the United States expires earlier than 5 years and, in such case, the Determination of Eligibility expires on the date that the candidate's authorization to remain in the United States expires. Candidates may extend the term of their Determination of Eligibility up to a total of 5 years by submitting updated documentation of authorization to remain in the United States.

(2) No candidate may engage in flight training after the expiration of the candidate's Determination of Eligibility.

(e) *Processing time.* TSA will process complete security threat assessment applications within 30 days.

(f) *Correction of the record.* A Determination of Ineligibility made by TSA on the basis of a candidate's complete and accurate record is final. If the Determination of Ineligibility was based on a record that the candidate believes is erroneous, the candidate may correct the record by submitting all missing or corrected documents, plus all additional documents or information that TSA may request, within 180 days of TSA's initial determination.

§ 1552.33 [Reserved]

§ 1552.35 Presence in the United States.

(a) A candidate may be eligible to participate in flight training if the candidate—

(1) Is lawfully admitted to the United States, or entered the United States and has been granted permission to stay by the U.S. Government, or is otherwise authorized to be employed in the United States; and

(2) Is within their period of authorized stay in the United States.

(b) A candidate who has yet to obtain a valid document issued by the United States evidencing eligibility to take flight training may be issued a preliminary Determination of Eligibility pending the individual's ability to provide proof of eligibility.

(c) A candidate who engages in a flight training event that takes place entirely outside the United States is not required to provide eligibility for flight training in the United States, but must provide any United States visas held by the candidate.

(d) Any history of denial of a United States visa may be a factor in determining whether a candidate is eligible to participate in flight training, regardless of training location.

§ 1552.37 Comparable security threat assessments.

(a) TSA may accept the results of a comparable, valid, and unexpired security threat assessment, background check, or investigation conducted by TSA or by another U.S. Government agency, which TSA generally describes as a Determination of Eligibility. A candidate seeking to rely on a comparable security threat assessment must submit documents confirming their Determination of Eligibility through the FTSP Portal, including the biographic and biometric information required under § 1552.31. TSA will post a list of acceptable comparable security threat assessments on the FTSP Portal.

(b) TSA will charge a fee to cover the costs of confirming a comparable security threat assessment, but this fee may be a reduced fee.

(c) An FTSP reduced-fee security threat assessment based on a comparable security threat assessment will be valid in accordance with § 1552.31.

§ 1552.39 Fees.

(a) *Imposition of fees.* (1) A candidate must remit the fees required by this part, as determined by TSA, which will be published through notice in the **Federal Register** and posted on the FTSP Portal.

(2) Changes to the fee amounts will be published through notice in the **Federal Register** and posted on the FTSP Portal.

(3) TSA will publish the details of the fee methodology in the rulemaking docket.

(b) *Refunding fees.* TSA will not issue fee refunds unless the fee is paid in error.

Subpart C—Flight Training Event Management

§ 1552.51 Notification and processing of flight training events.

(a) *Notification of flight training events.* Each flight training provider must notify TSA through the FTSP Portal of all proposed and actual flight training events scheduled by a candidate, without regard to whether that training is intended to result in certification.

(b) *Training event details.* Each flight training provider must include the following information with each flight training event notification:

(1) Candidate name;

(2) The rating(s) that the candidate could receive upon completion of the flight training, if any;

(3) For recurrent flight training, the type rating for which the recurrent training is required;

(4) Estimated start and end dates of the flight training; and

(5) Location(s) where the flight training is anticipated to occur.

(c) *Acknowledgement.* TSA will acknowledge receipt of the information required by paragraphs (a) and (b) of this section.

(d) *Candidate photograph.* When the candidate arrives for training, each flight training provider must take a photograph of the candidate and must upload it to the FTSP Portal within 5 business days of the date that the candidate arrived for flight training.

(e) *Waiting period.* Each flight training provider may initiate flight training if more than 30 days have elapsed since TSA acknowledged receipt of the information required by paragraphs (a) and (b) of this section.

(f) *Waiting period for expedited processing.* A flight training provider may initiate flight training if:

(1) More than 5 business days have elapsed since TSA acknowledged receipt of the information required by paragraphs (a) and (b) of this section; and

(2) TSA has provided confirmation in its acknowledgement to the flight training provider that the candidate is eligible for expedited processing. A candidate is eligible for expedited processing if the candidate has provided proof to TSA that the candidate—

(i) Holds an FAA airman certificate with a type rating;

(ii) Holds an airman certificate, with a type rating, from a foreign country that is recognized by an agency of the United States, including a military agency;

(iii) Is employed by a domestic or foreign air carrier that has an approved security program under parts 1544 or 1546 of this subchapter, respectively;

(iv) Is an individual that has unescorted access to a secured area of an airport as determined under part 1542 of this subchapter; or

(v) Is a lawful permanent resident.

(g) *Update training event details.* Each flight training provider must update on the FTSP Portal the following information for each reported flight training event:

(1) Actual start and end dates.

(2) Actual training location(s).

(3) Notification if training was not completed, to include a brief description of why the training was not completed, *e.g.,* cancellation by the provider or the candidate, failure of the candidate to meet the required standard, or abandonment of training by the candidate.

PART 1554—AIRCRAFT REPAIR STATION SECURITY

■ 24. The authority citation for part 1554 continues to read as follows:

Authority: 49 U.S.C. 114, 40113, 44903, 44924.

§ 1554.3 [Removed and Reserved]

■ 25. Remove and reserve § 1554.3.

Subchapter D—Maritime and Surface Transportation Security

PART 1570—GENERAL RULES

■ 26. The authority citation for part 1570 continues to read as follows:

Authority: 18 U.S.C. 842, 845; 46 U.S.C. 70105; 49 U.S.C. 114, 5103a, 40113, and 46105; Pub. L. 108–90 (117 Stat. 1156, Oct. 1, 2003), sec. 520 (6 U.S.C. 469), as amended by Pub. L. 110–329 (122 Stat. 3689, Sept. 30, 2008) sec. 543 (6 U.S.C. 469); Pub. L. 110–53 (121 Stat. 266, Aug. 3, 2007) secs. 1402 (6 U.S.C. 1131), 1405 (6 U.S.C. 1134), 1408 (6 U.S.C. 1137), 1413 (6 U.S.C. 1142), 1414 (6 U.S.C. 1143), 1501 (6 U.S.C. 1151), 1512 (6 U.S.C. 1162), 1517 (6 U.S.C. 1167), 1522 (6 U.S.C. 1170), 1531 (6 U.S.C. 1181), and 1534 (6 U.S.C. 1184).

Subpart A—General

§ 1570.3 [Amended]

■ 27. Amend § 1570.3 by removing the definitions of ''Alien'', ''Lawful permanent resident'', ''National of the United States'', and ''Security threat''.

§ 1570.9 [Removed and Reserved]

■ 28. Remove and reserve § 1570.9.

PART 1572—CREDENTIALING AND SECURITY THREAT ASSESSMENTS

■ 29. The authority citation for part 1572 continues to read as follows:

Authority: 46 U.S.C. 70105; 49 U.S.C. 114, 5103a, 40113, and 46105; 18 U.S.C. 842, 845; 6 U.S.C. 469.

§ 1572.400 [Amended]

■ 30. Amend § 1572.400 by removing the definition of ''Day.''

Dated: April 19, 2024.

No. 85 May 1, 2024

Part VI

Department of the Interior

Bureau of Land Management

43 CFR Part 2800

Rights-of-Way, Leasing, and Operations for Renewable Energy; Final Rule

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Part 2800

[BLM_HQ_FRN_MO# 4500177145]

RIN 1004–AE78

Rights-of-Way, Leasing, and Operations for Renewable Energy

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This final rule updates procedures governing the BLM's renewable energy and right-of-way programs, focusing on two main topics. The first topic is solar and wind energy generation rents and fees, implementing new authority from the Energy Act of 2020 to ''reduce acreage rental rates and capacity fees, or both, for existing and new wind and solar authorizations'' and making certain findings required by the statute. The second topic is expanding agency discretion to process applications for solar and wind energy generation rights-of-way inside designated leasing areas (DLAs). In addition to these two main topics, this final rule makes technical changes, corrections, and clarifications to the regulations. This final rule will update the BLM's procedures governing the BLM's administration of rights-of-way issued under Title V of the Federal Land Policy and Management Act (FLPMA), including for solar and wind energy applications and development authorizations.

DATES: This rule is effective July 1, 2024.

FOR FURTHER INFORMATION CONTACT: Jayme Lopez, Interagency Coordination Liaison, by phone at (520) 235–4581, or by email at *energy@blm.gov* for information relating to the BLM Renewable Energy programs and information about the final rule. Please use ''RIN 1004–AE78'' in the subject line. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

In 2021, the Bureau of Land Management (BLM) initiated preliminary activities related to rulemaking through listening sessions seeking public comment on the BLM's potential use of the Energy Act of 2020 (43 U.S.C. 3003) authority to ''reduce acreage rental rates and capacity fees'' to ''promote the greatest use of wind and solar energy resources.'' In May 2022, the BLM published BLM Manual section 2806.60 as interim guidance to implement that authority from the Energy Act of 2020 pending completion of this final rule. On June 16, 2023, the BLM published a proposed rule (88 FR 39726 [1]) in the **Federal Register**, that, among other things, proposed updates to the BLM's methodology for determining acreage rents and capacity fees for solar and wind energy development projects, including providing opportunities for reductions to rents and fees under the authority of the Energy Act of 2020. The BLM also proposed more flexibility in how the BLM processes applications for solar and wind energy development inside DLAs, and updates to how to prioritize solar and wind energy applications. The proposed rule also suggested technical changes, corrections, and clarifications to the existing right-of-way regulations. After considering comments on the proposed rule and other factors, the BLM prepared this final rule.

II. Background

The BLM's governing regulations for rights-of-way, including for solar and wind energy generation, are found at Title 43 CFR part 2800. These regulations were last comprehensively updated by a final rule published in the **Federal Register** on December 19, 2016, ''Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development and Technical Changes and Corrections'' (81 FR 92122). That final rule built upon existing rights-of-way regulations and policies to expand BLM's ability to responsibly facilitate solar and wind energy development.

Most recently, the BLM amended components of 43 CFR part 2800 under its final rule, ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way,'' (89 FR 25922) on April 12, 2024. That final rule updated BLM regulations to enhance the communications uses program, update its cost recovery fee schedules, and add provisions governing the development and approval of operations, maintenance, and fire prevention plans and agreements for rights-of-way for electric transmission and distribution facilities (*i.e.,* powerlines). That final rule also included technical changes to certain sections that this renewable energy rule proposed to make changes to, as will be discussed further in the section-by-section discussion of this final rule.

Solar and Wind Energy Rents and Fees

Title V of FLPMA (43 U.S.C. 1761–1772) generally requires grant holders, leaseholders, or both (holders) to ''pay in advance the fair market value'' for use of the public lands, subject to certain exceptions. The Energy Act of 2020, 43 U.S.C. 3003, introduced a new exception to FLPMA's fair market value requirement, authorizing the Secretary to ''reduce acreage rental rates and capacity fees, or both, for existing and new wind and solar authorizations'' if the agency makes certain findings. These findings can include that the existing rates ''exceed fair market value,'' ''impose economic hardships'' or ''limit commercial interest in a competitive lease sale or right-of-way grant,'' or ''that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources.'' 43 U.S.C. 3003(b)(1)(A)–(C) and 3003(b)(2).

As reflected in this final rule, the BLM determined that the changes to the acreage rents and capacity fees for solar and wind energy right-of-way authorizations are needed to ''promote the greatest use of wind and solar energy resources'' and maximize ''commercial interest'' in lease sales and right-of-way grants. Reducing the acreage rent and capacity fee in this final rule will encourage solar and wind energy development with a goal of increasing the share of clean energy that is part of the United States' domestic power infrastructure as authorized by the Energy Act of 2020 and directed by Executive Orders 14008 and 14057. This will be done by decreasing the costs for developers to construct and operate solar and wind energy development, allowing them to increase investments in new facilities and thus promote additional development. These changes will result in the most additional deployment of solar and wind energy development (see Regulatory Impact Analysis 3.1.D). The BLM's determination is supported by a regulatory impact analysis of economic impacts, public comments received on

[1] *https://www.federalregister.gov/documents/2023/06/16/2023-12178/rights-of-way-leasing-and-operations-for-renewable-energy.*

the proposed rule, and the BLM's experience with solar and wind energy development on public lands.

Reductions in costs will also benefit smaller-scale projects or projects that are on the margins of being economically profitable. Additionally, the BLM expects that the rule will not only increase interest among renewable energy developers to use BLM-administered public lands, but it will decrease the cost for developers such that they may be able to invest in additional wind and solar projects on Tribal, State, or private lands. Further, the decrease in cost to developers is expected to translate, over time, to a reduction in the average cost per MW of solar and wind energy, which will make solar- and wind-generated energy more competitive with other energy sources and will stabilize or even reduce the cost of energy to consumers, even as the cost of other energy sources may experience increased volatility.

The BLM also determined that the authority provided under the Energy Act of 2020, 43 U.S.C. 3003, supports two other reductions to the capacity fees under two potentially qualifying circumstances: (1) a Domestic Content reduction when a grant holder or lease holder demonstrates the use of American-made iron, steel, construction materials, or manufactured products in the construction of the project consistent with the requirements set forth in this final rule; and (2) a reduction for Project Labor Agreements (PLAs), *i.e.,* when the holder uses PLAs to hire labor for the development and construction of a solar or wind development. The additional, voluntary reductions offered in this final rule advance the Energy Act of 2020 goal of promoting the greatest use of solar and wind energy resources. First, a Domestic Content reduction will provide an incentive to use components made or manufactured in the United States in the construction of the solar or wind energy development project by offsetting those costs, which, if broadly adopted, could increase demand for domestically produced renewable energy parts and materials and, over the long term, lead to decreased costs for parts and materials, decreased reliance on potentially volatile foreign-sourced parts and materials, and ultimately increased economic certainty for and promotion of wind and solar energy resources on public lands. Second, the PLA reduction will incentivize good labor practices and in turn lead to responsible and productive construction, minimize the potential duration, and improve construction standards, thereby promoting the greatest use of wind and solar resources. These reductions will also incentivize project proponents to advance other Congressional and Administration goals that strengthen the use of American products and manufacturing and the associated labor markets.

Therefore, reductions in the final rule that rely upon authority from the Energy Act of 2020 include an 80 percent reduction to the MWh rate when setting the capacity fee and the two additional reductions to the capacity fee for which right-of-way holders may qualify: a 20 percent Domestic Content reduction and a 20 percent PLA reduction. The MWh rate reduction applies to projects when they are permitted (or grants or rights-of-way are re-issued under 2806.51(c)) and continues for the life of the grant. The MWh rate reduction will be 80 percent through 2035, 60 percent for new authorizations in 2036, 40 percent for new authorizations in 2037, and 20 percent for new authorizations in 2038 and beyond. Additional information on the MWh rate is found under the discussions of §§ 2801.5 and 2806.52(b) of this preamble, as well as more broadly under part 2806 of this preamble.

This final rule also codifies a new rate-setting methodology for solar and wind energy development projects. Under this rule, the BLM will collect from right-of-way holders the greater of either an acreage rent or a capacity fee. The BLM will assess acreage rent by applying the rate schedule, based on a survey of values for pastureland from the National Agricultural Statistics Service (NASS) Cash Rents Survey, to the number of acres that the right-of-way authorizes for use. Capacity fees reflect the value of generating electricity from solar and wind energy resources, which are quantified by the number of megawatt hours (MWh) of electricity produced from public lands. In this rule, the BLM has changed the definition of capacity to move away from the maximum capacity that a solar facility could produce and towards ensuring that the capacity fee reflects the actual capacity for solar or wind energy generation of a site covered by a given right-of-way grant or lease, taking into consideration environmental or other factors that may impact generation capacity of the site, including weather, servicing, and Acts of God. As provided in the final rule, the BLM will determine the capacity fee by considering the wholesale prices for major trading hubs serving 11 western States, and documentation concerning the price received by the right-of-way holder under a Power Purchase Agreement.

The final rule provides that, when issuing a grant or lease for solar or wind energy development, or a renewal of such grant or lease, the BLM will set the per-acre rate and the MWh rate (including applicable reductions). The acreage rent and capacity fee will be adjusted annually, however, using an annual adjustment factor set at the beginning of the grant or lease term. Upon renewal of a right-of-way, the per-acre rate and the MWh rate and reductions would be updated based on the then-current rates, as well as any applicable reductions for which the right-of-way holder qualifies at that time.

Existing right-of-way holders may elect to continue using their current rate setting methodology, which may be updated periodically for changes in the market, or change to the new rate setting methodology in this final rule. Otherwise, the new rate setting methodology would only apply to new or renewed rights-of-way. If an existing right-of-way holder elects to change to the new rate setting methodology, that methodology will apply until the end of the right-of-way term.

This final rule bases the capacity fee for solar and wind energy generation facilities on actual energy generation at each facility rather than on nameplate capacity. The BLM believes this change more accurately reflects the actual capacity for energy production of an individual project based on a developer's selection of technology, project design, and the solar or wind resource available at a particular site. This change to the capacity fee indexes the required payment to the projects' energy generation, being greater when the project generates more energy and less when it generates less.

This rule improves payment predictability for grant and leaseholders by revising the key data used for determining the acreage rent and the capacity fee—the state-wide pastureland rent values and the wholesale price of electricity—at the time the right-of-way is issued. In doing so, the per-acre and MWh rates are set for the term of the right-of-way and only adjusted by the annual adjustment factor and, in the case of the capacity fee, by the holder's actual annual energy production. See preamble §§ 2806.50 and 2805.52 for a more detailed discussion of the BLM's proposed methodology for determining the acreage rent and capacity fee.

Solar and Wind Energy Applications Inside Designated Leasing Areas

In this final rule, the BLM clarifies that it will review and process applications, including on a non-

competitive basis, for proposed solar and energy generation rights-of-way inside DLAs, which are defined at 43 CFR 2801.5(b). The BLM retains discretion to conduct competitive processes, either inside or outside of DLAs, where the authorized officer decides to do so. In the proposed rule, the BLM used the terms ''competitive offer'' and ''competitive process'' interchangeably. To provide clarity and minimize confusion, the final rule uses only the term ''competitive process'' to describe the method by with the BLM will offer parcels in a competitive bidding process. To learn more about BLM's DLAs, see the 2012 Western Solar Plan (*https://blmsolar.anl.gov/documents/solar-peis/*), which identified approximately 285,000 acres of agency preferred development locations (*i.e.,* DLAs) with high potential for solar energy production and low conflicts with other resources and uses. Subsequently, the BLM designated approximately 388,000 acres of preferred development locations for solar energy in California through the 2016 Desert Renewable Energy Conservation Plan (*https://blmsolar.anl.gov/documents/drecp/*) and over 192,000 acres of preferred development locations for solar, wind, and geothermal energy in Arizona through the 2017 Restoration Design Energy Project. Currently, the BLM is in the process of updating its 2012 Western Solar Plan to, among other things, make programmatic planning decisions for solar development on BLM-administered lands in 11 western states, including Arizona, California (exclusive of the area covered by the Desert Renewable Energy Conservation Plan), Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Oregon, Washington, and Wyoming (See *https://eplanning.blm.gov/eplanning-ui/project/2022371/510*).

Under this final rule, if no competitive interest exists for a particular parcel, the BLM may issue leases without a competitive process. This change to the rule provides the BLM with increased flexibility and discretion to issue grants and leases through either competitive or non-competitive processes across all public lands inside and outside of DLAs, which is expected to maximize interest in renewable energy leasing and accelerate the deployment of solar and wind energy on the public lands. See subpart 2809 for a discussion of the competitive process for solar and wind energy.

Need for the Rule

FLPMA provides the BLM with comprehensive authority for the administration and protection of the public lands and their resources and directs that the public lands be managed ''on the basis of multiple use and sustained yield'' unless otherwise provided by law (43 U.S.C. 1732(a)). Further, FLPMA authorizes the BLM to issue rights-of-way on the public lands for electric generation systems, including solar and wind energy generation systems, and mandates that the United States receive fair market value for the use of the public lands and their resources unless otherwise provided for by statute (43 U.S.C. 1764(g)).

On December 27, 2020, the Energy Act of 2020 was enacted, establishing a minimum goal of ''authoriz[ing] production of not less than 25 gigawatts of electricity from wind, solar, and geothermal energy projects by not later than 2025'' on Federal lands. 43 U.S.C. 3004. Current information regarding the BLM's approved energy development projects and number of gigawatts is available on its website.[2] The Energy Act of 2020 also provides the BLM with new authority to reduce rates below fair market value based on specific findings, including ''that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources'' 43 U.S.C. 3003(b)(2). The BLM has determined that reduced rates and fees are necessary to promote the greatest use of wind and solar energy resources, and this rule seeks to implement such reductions consistent with the direction in the Energy Act of 2020.

On January 27, 2021, President Biden issued Executive Order (E.O.) 14008, ''Tackling the Climate Crisis at Home and Abroad.'' Section 207 of E.O. 14008, titled ''Renewable Energy on Public Lands and in Offshore Waters,'' instructs DOI ''to increase renewable energy production on (public) lands.''

The changes in this rulemaking will provide clearer direction for the BLM in processing proposed renewable energy right-of-way applications on public lands while also supporting the goals of the Energy Act of 2020 and E.O. 14008.

Statutory Authority

Section 310 of FLPMA (43 U.S.C. 1740) authorizes the Secretary to promulgate regulations to carry out the purposes of FLPMA and other laws applicable to public lands. Section 302 of FLPMA (43 U.S.C. 1732) also provides comprehensive authority for the administration and protection of the public lands and their resources and directs that the public lands be managed ''under principles of multiple use and sustained yield,'' unless otherwise provided by law (43 U.S.C. 1732(a)). Sections 501, 504, and 505 of FLPMA authorize the Secretary to grant rights-of-way on public lands; to issue regulations governing such rights-of-way and charge rent for such rights-of-way; and to impose terms and conditions on rights-of-way grants, respectively (43 U.S.C. 1761, 1764, and 1765). Sections 304 and 504 of FLPMA (43 U.S.C. 1734(b) and 1764(g)) also authorize the BLM to collect funds from right-of-way applicants or holders to reimburse the agency for its costs incurred while working on a proposed or authorized right-of-way. As defined by FLPMA, the term ''right-of-way'' includes an easement, lease, permit, or license to occupy, use, or traverse public lands (43 U.S.C. 1702(f)). See Title V of FLPMA (43 U.S.C. 1761–1772).

The Energy Act of 2020 authorizes the Secretary to reduce acreage rental rates and capacity fees if the Secretary makes certain findings, which can include that the existing rates ''impose economic hardships'' or ''limit commercial interest in a competitive lease sale or right-of-way grant,'' or ''that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources'' (43 U.S.C. 3003).

III. Discussion of Public Comments on the Proposed Rule

This section of the preamble briefly summarizes broad and general comments on the proposed rule and the BLM's responses. Comment responses within this section of the preamble have been grouped and summarized by category that would apply to one or more sections of this final rule. You will find additional comments that are more specific to sections of this final rule, and their responses, in Section IV (Section-by-Section Discussion) of this preamble.

Solar and Wind Energy Rents and Fees—Part 2806

Summary of Comments: While several commenters supported the proposal for reduced rents and fees, other commenters questioned the need for reduced rents and fees and requested more research and discussion to determine if current costs exceed fair market value, impose economic hardships, limit commercial interest, are not competitively priced, or

[2] *https://www.blm.gov/programs/energy-and-minerals/renewable-energy/active-renewable-projects.*

disincentivize the greatest use of wind and solar energy resources.

Response: Under the Energy Act of 2020 (43 U.S.C. 3003(b)), Congress recognized the need to promote wind and solar energy projects on Federal lands, giving the Secretary the authority to reduce acreage rental rates, capacity fees, or both if she determines that ''the existing rates (A) exceed fair market value; (B) impose economic hardships; (C) limit commercial interest in a competitive lease sale or right-of-way grant; or (D) are not competitively priced compared to other available land;'' or that a reduction is ''necessary to promote the greatest use of wind and solar energy resources.'' 43 U.S.C. 3003(b)(1)–(2). The BLM considered whether capacity fee reductions are necessary to promote the greatest use of wind and solar energy resources and has determined reductions are necessary. This final rule describes how the capacity fee reductions will increase interest in and incentivize wind and solar energy development on public lands and thereby accelerate deployment of renewable energy resources in the United States. This final rule also includes changes to the BLM's rate-setting methodology that improve future rate predictability (see Regulatory Impact Analysis) and reduce potential for economic hardships.

Summary of Comments: Commenters suggested that the BLM should not speculate on the economic impacts of the proposed rule or requested additional analysis and use of additional sources to back up statements made.

Response: The BLM prepared an economic analysis for the proposed rule and then completed a Regulatory Impact Analysis for this final rule that provides a transparent analysis of the anticipated economic consequences for this rulemaking. This analysis informs the agency decision, including whether this rulemaking would accomplish its goals. For further information on the economic impacts of this rule, please see the Regulatory Impact Analysis that is available with a search at *regulations.gov* of this Regulatory Identifying Number ''1004–AE78.''

Summary of Comments: Commenters suggested rents and fees should be increased rather than decreased due to the environmental impacts of solar and wind energy development, as well as their incompatibility with other uses. Some further suggested that reducing fees on projects that are on the margins of being profitable creates the risk of projects failing and not being properly removed and rehabilitated.

Response: The BLM disagrees with the commenters' suggestion that rents and fees should be increased rather than decreased. As explained in more detail in the previous section on Solar and Wind Energy Rents and Fees, the Energy Act of 2020 (43 U.S.C. 3003) provides the BLM with authority to reduce acreage rents and capacity fees, including for the purpose of promoting the greatest use of wind and solar resources. The BLM has determined that reductions in acreage rents and capacity fees will promote wind and solar resources and is within the BLM's discretion under the Energy Act of 2020. Further, the BLM has carefully considered its final rule and concluded that decreasing rents and fees is necessary to accomplish the goals set forth by Congress in the Energy Act of 2020, by the President in E.O. 14008, and by the Secretary in Secretary's Order 3399. Congress set a national goal for renewable energy production on Federal land, directing the Secretary to seek to issue permits authorizing production of not less than 25 gigawatts of electricity from wind, solar, and geothermal energy projects on Federal land by not later than 2025. 43 U.S.C. 3004. Congress further provided the Secretary with discretion to reduce the acreage rental rates and capacity fees, including where necessary to promote the greatest use of solar and wind energy resources on BLM-administered public lands, which would advance the goals set by the Energy Act of 2020, as well as those in E.O. 13990, ''Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis,'' 86 FR 7037; E.O. 14008, ''Tackling the Climate Crisis at Home and Abroad,'' 86 FR 7619; and Secretary's Order 3399, ''Department-Wide Approach to the Climate Crisis and Restoring Transparency and Integrity to the Decision-Making Process.'' The use of public lands for energy generation systems is specifically contemplated in the FLPMA and the Energy Act of 2020. The BLM considers the potential environmental effects of solar or wind energy development when conducting land use planning and evaluating project applications, not when identifying appropriate rental rates and fees for development projects. The BLM considers and analyzes environmental impacts of proposed energy development, including appropriate mitigation measures, before authorizing any such project. Additionally, the BLM does not believe there is any correlation between reductions in capacity fees and the ability of project proponents to properly remove and remediate facilities. Any applicable fee reductions contemplated in this rule would not alter a project proponent's obligations to provide for adequate bonding associated with construction and remediation associated with terminated or abandoned facilities, as required by 43 CFR 2805.12(b), 2805.20, and 2809.18(e).

Summary of Comments: Commenters noted that reducing rents and fees for renewable energy projects on public lands would economically impact the developers of similar projects on private or Tribal lands and could impact property values.

Response: This final rule changes the BLM's administrative processes and rates for solar and wind energy development projects on public lands. While the final rule is intended to encourage solar and wind energy development on the public lands, it would be speculative for the BLM to attempt to analyze whether and to what extent there may be secondary impacts to solar and wind energy development on private or Tribal property. This is particularly the case due to the wide variety of factors that influence developers' decisions about whether and where to pursue solar and wind energy projects, including, but not limited to, state, Tribal, and local permitting requirements, the ability to enter into power purchase or offtake agreements, the availability of existing or proposed transmission, and project-specific financing considerations. Notwithstanding these different factors, the final rule will generally decrease costs for developers on public lands, which may permit them to pursue additional opportunities for development on Tribal, state, and private lands and thereby further promote the greatest use of solar and wind energy.

Summary of Comments: Some comments asked about rate changes that would occur after 2036. Commenters raised four specific issues that the 2036 rate change causes. First, some commenters asserted that rates after 2036 would run higher than fair market value and are therefore a violation of FLPMA's requirement that the BLM charge no more than fair market value. Second, some commenters asserted that the Secretary's authority to reduce rates under the Energy Act extends beyond 2035, and America's need for renewable energy, set by Congressional and Presidential goals, would require incentives beyond 2036. Third, some commenters asserted that the 2036 rate increase would discourage right-of-way renewals after that year. Last, some commenters asserted that the BLM has

not adequately explained why it is choosing to phase out the final rule's rate reductions in 2036.

Response: This final rule helps lead the way to accomplishing the national goal of a carbon pollution-free electricity sector by 2035, as highlighted in Executive Orders 14008 and 14057. Based on its review of comments, the BLM has modified the sunset provision in the final rule. Instead of immediately transitioning the capacity fee reduction from 80 percent to 20 percent, the final rule will lower the reduction by 20 percentage points per year over a period of three years starting in 2036. Instituting a phased sunset period to the 80 percent reduction in the capacity fee is appropriate as the renewable energy industry may no longer need this reduction to achieve the greatest use of wind and solar on public lands, and progress toward our national goal of a carbon-pollution free electricity sector may indicate that a reduction is no longer warranted. After the sunset period ends, this final rule will continue to provide a 20 percent reduction for solar and wind energy development projects. The BLM will evaluate progress towards reaching national goals and the benefit of the reduction before 2036 and could reinitiate rulemaking to adjust incentives, including extending them beyond 2036.

The BLM believes that knowing beforehand what the rates are for a facility and the increased predictability of those rates in the future will improve the economic certainty for project development and support a developer's or operator's decisions in power purchasing, financing, and other agreements that are necessary for a successful renewable energy project. This would be the same for existing authorization holders who choose to change to this new rate setting methodology, as well as for authorization renewals. Lastly, the BLM believes that the economics for renewable energy will continue to improve over time, and that the magnitude of such a reduction in 2036 is uncertain.

Lands Available for Solar and Wind Energy Applications

Summary of Comments: Some commenters recommended that the BLM further restrict renewable energy development outside of solar energy zones and prohibit such development close to sensitive habitats or recreation areas. Commenters stated that competitive offers should not be allowed outside of designated zones.

Response: Through the National Environmental Policy Act (NEPA) process, the BLM considers the environmental impacts of proposed uses on the public lands, including solar and wind energy development, to inform the BLM decisions to deny, approve, or approve with modification the proposed use. The BLM will include terms and conditions as appropriate to address resource and environmental impacts of the project. The BLM also performs broader analysis to inform whether certain lands may be made available for that use through the land use planning process required by FLPMA, 43 U.S.C. 1712. As described further below, the BLM's ongoing planning process to update to its 2012 Western Solar Plan [3] will amend BLM land use plans in 11 Western States (Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming), or portions thereof, to identify new priority areas for solar energy development, variance areas, and public lands that are excluded from solar energy development, and to update requirements that holders must comply with, including for sensitive resources and uses that the BLM has previously authorized. This rulemaking does not make land use planning decisions—including determining whether areas should be excluded from solar and wind energy development because they would impact sensitive habitats or recreation areas—which are completed under a separate BLM process. This rulemaking does not change the competitive process outside of designated zones, but rather aligns the competitive process for solar and wind applications across all areas within and outside of designated areas. The BLM believes that where competitive interest exists—for example, in the form of multiple overlapping applications or a high level of interest in a general area—competitive processes should be used, regardless of whether the lands are in a DLA, to advance the projects that are most likely to proceed to development.

Summary of Comments: Commenters noted that the BLM references solar energy zones from the 2012 Western Solar Plan in the proposed rule without discussing that the 2012 Plan is now under revision and will include an additional 5 states (Idaho, Montana, Oregon, Washington, and Wyoming). Commenters requested that the BLM coordinate the rulemaking process with the land use planning effort accompanying the Western Solar Programmatic Environmental Impact Statement (Western Solar PEIS), recognizing the various alternatives being considered and the impacts that each (Western Solar PEIS vs. proposed rule) have on the other. Commenters believed many of the changes in this rule that refer to decisions or processes that occur prior to project approval are currently being considered as part of the Western Solar PEIS plan amendment process and may be better suited for the PEIS.

Response: This rulemaking effort and the Western Solar PEIS are two separate actions that complement one another, but they have different goals, are subject to different authorities, and will address different aspects of the ROW authorization process. This final rule sets out how the BLM will process applications and calculate rents, in order to implement new authorities and meet National goals established in the Energy Act and directed by Executive Order 14008 for both wind and solar energy development. This rulemaking does not make land use planning decisions. In contrast, the plan amendment process associated with the Western Solar PEIS focuses exclusively on solar development on public lands through a separate process governed by Section 202 of FLPMA (43 U.S.C. 1712) and the BLM resource management planning regulations at 43 CFR 1610, *et seq.* to update the BLM's Western Solar Plan. That programmatic land use planning process will consider updating the BLM's Western Solar Plan, with a primary focus on identifying the best locations for utility-scale solar energy development, as well as restrictions and mitigation applicable to such development, on BLM-managed public lands in 11 Western States. The BLM's land use planning decisions, including any amendments to plans, will comply with applicable laws and regulations.

Comment Summary: The BLM understands from comments it has received that some believe that the proposed rule has insufficient analysis under E.O. 12866. These comments suggest that the BLM must coordinate more closely with local governments to collect economic data.

Response: The BLM appreciates the interest and engagement from partners across the multiple landscapes in the United States, however the BLM disagrees with comments that additional coordination must be performed with local governments for this rulemaking. This rule governs the BLM's administration of applications and authorizations for solar and wind energy development projects on public lands. While the rule does have some financial

[3] *https://www.federalregister.gov/documents/2022/12/08/2022-26659/notice-of-intent-to-prepare-a-programmatic-environmental-impact-statement-to-evaluate-utility-scale.*

implications with adjustments to the BLM's rates, these are transfer payments as explained more fully in the Regulatory Impact Analysis accompanying this final rule and would not materially affect the resources available to the American economy. The BLM will continue to engage with the public it serves, and its many partners through BLM's public processes, including project-specific analysis and programmatic and land use planning analysis through NEPA. No change made based on these comments.

Need for the Rule

Summary of Comments: Commenters requested the BLM include a more meaningful explanation of the necessity of this rulemaking, including technical data that supports a need for increased preferences and favorable treatment for lease terms. Commenters stated that solar development is not in line with FLPMA and does not allow for multiple use on public lands.

Response: The BLM received new authority and guidance from Congress (Energy Act of 2020) and direction from the President (Executive Order 14008, among others) to promote renewable energy generation on public lands. This rule implements the new authority and direction for management of the public lands. The BLM disagrees with the comments suggesting that solar energy development is inconsistent with FLPMA's multiple use mandate. In managing the public lands, the BLM is not required to make every parcel of land available for all purposes. Consistent with FLPMA's multiple use mandate, the BLM has discretion through land use planning to identify areas that are available for, or excluded from, solar or wind energy development and to evaluate each proposed solar or wind energy development through a site-specific environmental analysis, including the need for environmental mitigation, as part of the decision-making process prior to issuing a grant or lease.

Summary of Comments: Other commenters stated that they believe the BLM must improve its approach to facilitating renewable energy development to meet congressional goals. Other commenters expressed a belief that the free market would provide better solutions to greenhouse gas emissions and the climate crisis without authorizing projects on public land or providing additional incentives to site projects on public land.

Response: The BLM does not agree that the free market alone would provide better solutions to greenhouse gas emissions and the climate crisis. Additionally, the approach suggested by commenters would be inconsistent with direction from Congress and the President to promote renewable energy generation on public lands. Particularly, the Energy Act of 2020, which is aimed at facilitating and promoting further development of wind and solar energy on Federal lands, specifically directs the BLM to ''issue permits that, in total, authorize production of not less than 25 gigawatts of electricity from wind, solar, and geothermal energy projects by not later than 2025, *through management of public lands and administration of Federal laws,*'' 43 U.S.C. 3004(b) (emphasis added). Additionally, as described above, on January 27, 2021, President Biden issued E.O. 14008, ''Tackling the Climate Crisis at Home and Abroad.'' Section 207 of E.O. 14008, titled ''Renewable Energy on Public Lands and in Offshore Waters,'' instructs DOI ''to increase renewable energy production on [public] lands.'' This final rule updates and improves the BLM's approach to facilitating renewable energy development on public lands based on lessons learned from implementation of the 2016 rule as well as changes in National renewable energy goals and the maturation of energy market over the past eight years. This update to the BLM's rules improves the BLM's orderly administration of public lands and helps reach the goals set by Congress and at the direction of the President. The BLM expects to continue working with the public to provide better solutions to resource concerns, such as greenhouse gas emissions and climate change, to best manage the public lands and its resources. Addressing such resource solutions are not part of this rulemaking.

Summary of Comments: Commenters stated that the current market conditions, state and Federal mandates and regulations, and demand for green energy makes reducing fees unnecessary and that the BLM has failed to explain why the reductions are necessary.

Response: The changes in this rule clarify how the BLM will process renewable energy right-of-way applications on public lands while supporting the goals of the Energy Act of 2020 and direction from the President (E.O. 14008 and 14057). Through the BLM's experience administering solar and wind energy development rights-of-way, the BLM understands the importance of stable and predictable rates for the term of an authorization. The BLM expects that the rule will help to meet national renewable goals more expeditiously. The BLM expects that the rule will not only increase interest among renewable energy developers to use BLM-administered public lands, but will decrease the cost for developers such that they may be able to invest in additional wind and solar projects on Tribal, State, or private lands. The BLM explains more fully the need for the rule and its reductions in the section-by-section discussion portion of this rule under subpart 2806.

Summary of Comments: A commenter stated that section 3003(b) of the Energy Act does not explicitly authorize the Secretary of the Interior to reduce right-of-way rents and fees below fair market value and that Congress did not explicitly repeal, amend, or supersede FLPMA's unequivocal fair market value requirement. They questioned if the Energy Act supersedes FLPMA's fair market value requirement for rights-of-way.

Response: The BLM disagrees with the comments suggesting that the Energy Act of 2020 does not authorize the Secretary to reduce right-of-way rents and fees below fair market value. First, a plain reading of the Energy Act authorizes the Secretary to reduce rental rates and capacity fees below fair market value. Specifically, it authorizes the Secretary to reduce ''acreage rental rates, capacity fees, and other recurring annual fees in total'' for solar and wind energy generation projects on BLM-managed public lands under a broad set of circumstances. Additionally, Congress presumably understood the fair market value requirement in FLPMA, and the discretion in the Energy Act to reduce rental rates and capacity fees is as a modification of that existing requirement. The reductions authorized in Section 3003 of the Energy Act would be meaningless if Congress intended the reductions to be limited by FLPMA's general requirement to collect fair market value for rights-of-way.

Statutory Authority

Summary of Comments: One commenter expressed concern that this proposed rule will set precedent for a similar issue DOI is trying to address under the Fluid Mineral Leases and Leasing process.

Response: This final rule modifies procedures that are specific to identifying rental rates and capacity fees for wind and solar authorizations; it does not apply to or set a precedent for other BLM authorizations or processes, including those under the Mineral Leasing Act (MLA).

Summary of Comments: Another commenter requested information about how this final rule interacts with other BLM rules and administration

directives, including the Conservation and Landscape Health Rule, Secretary's Order 3362, *Improving Habitat Quality in Western Big-Game Winter Range and Migration Corridors* (Feb. 9, 2018), and BLM Instruction Memorandum 2023–005 Change 1, *Habitat Connectivity on Public Lands* (Nov. 18, 2022).

Response: This final rule updates the processes used in the BLM's orderly administration of the public lands. Any decisions made in connection with right-of-way grants following the procedures laid out in this rule will also be subject to all other applicable legal requirements and administrative directives, including the Conservation and Landscape Health Rule, Secretary's Order 3362, and BLM policies and guidance.

National Environmental Policy Act (NEPA)

Comment Summary: Commenters requested the BLM prepare a NEPA analysis to evaluate the environmental effects of the final rule, including because extraordinary circumstances (43 CFR 46.215) apply and therefore reliance on a Categorical Exclusion is not appropriate.

Response: The BLM disagrees with comments that an environmental assessment or environmental impact statement analysis under NEPA is required, or that extraordinary circumstances apply to this rulemaking. The BLM has determined that the categorical exclusion at 43 CFR 46.210(i), which excludes, ''regulations . . . that are of an administrative, financial, legal, technical, or procedural nature; or whose environmental effects are too broad, speculative, or conjectural to lend themselves to meaningful analysis and will later be subject to the NEPA process, either collectively or case-by-case,'' applies to this final rule. The BLM has reviewed the extraordinary circumstances listed in 43 CFR 46.215 and determined that none applies. This categorical exclusion documentation is provided on the BLM's ePlanning web page at the following URL: *https://eplanning.blm.gov/eplanning-ui/project/2016102/510.* As such, the final rule fits within the categorical exclusion for rules, regulations, or policies to establish bureau-wide administrative procedures, program processes, or instructions. This final rule does not authorize any project or other on-the-ground activity and therefore would have no significant individual or cumulative effect on the quality of the human environment. At such time that specific solar or wind energy development projects are proposed, the BLM will consider those proposed actions in compliance with NEPA.

Comment Summary: Some commenters suggested that there should not be a requirement of a published environmental assessment (EA) or environmental impact statement (EIS) before foreclosing the opportunity to hold a competitive offer. Some commenters believed the BLM should require analysis of a competitive offer through an EIS to identify and disclose the impacts of such an action.

Response: The BLM is not required to perform environmental analyses on whether to hold a competitive process; nonetheless, in § 2809.12(b) the BLM reserves the right to complete a NEPA analysis before holding a competitive process. The BLM does not typically complete a NEPA analysis for a competitive leasing process, but at least one NEPA analysis will be completed before authorizing solar or wind energy development. Determining that there may be competitive interest and utilizing a competitive process is administrative and procedural only, does not trigger the need to prepare an environmental analysis under NEPA or have any significant effect on the human environment, and is simply based on whether there is adequate interest from more than one applicant. The BLM would complete a land use planning and NEPA analysis were it to change allocations in a current land use plan to allocate areas of public lands to either allow or exclude solar or wind energy development—a process the BLM is currently undertaking regarding solar energy for 11 western states by updating the 2012 Western Solar Plan through a PEIS.

For example, in the case of solar or wind energy development leasing, the BLM must first identify public lands as a designated leasing area for solar or wind energy development through a land use planning process with an associated NEPA analysis. If the BLM receives competitive interest in those lands, the BLM would hold a competitive process to determine the presumptive leaseholder. Alternatively, the BLM may determine that the NEPA analysis for a designated leasing area should be updated to reflect new or changing circumstances and in turn may offer such lands competitively to determine a preferred applicant. Upon determining the presumptive leaseholder or preferred applicant, the BLM would then complete a NEPA analysis before determining whether to authorize the wind or solar energy generation project proposed. For either the presumptive leaseholder or preferred applicant, even if the BLM does not complete a NEPA analysis to consider whether to hold a competitive process, the resulting project will be subject to multiple NEPA analyses before it is approved.

Additional comments: Additional comments and their responses are found in Section IV (Section-by-Section Discussion) of this preamble.

The BLM is a multiple-use agency, and solar and wind energy development is one of the many uses for which the BLM manages the public lands. While all comments that the BLM received are important, this final rule does not respond to those that are out of scope for the action the BLM is taking. Comments that are out of scope for this rulemaking include those regarding project-specific considerations, state laws and authorities, national energy policies and priorities that do not affect solar and wind energy or the public lands, engaging in specific partnerships, general statements of support or opposition to the rule which do not require a detailed response, and availability and distribution of financial resources, among others that are not specific to the BLM's administration of solar and wind energy development applications and rights-of-way and rate-setting.

The BLM will continue to engage with the public and Tribal, Federal, State, and local government partners on the BLM's management of its public lands, as appropriate. Subsequent actions that the BLM may take will be subject to the policies, laws, and regulations in place at that time, including those for consultation, environmental review, and entering into agreements or partnerships with others.

IV. Section-by-Section Discussion

43 CFR Part 2800 Rights-of-Way Authorized Under FLPMA

Part 2800 of the CFR describes requirements for rights-of-way issued under Title V of FLPMA. This final rule revises the per acre rent and per MWh capacity fee schedules for solar and wind energy development rights-of-way. It updates the application process for public lands and focuses the BLM's competitive processes to places where there is competitive interest. This final rule also includes the principles for prioritizing solar and wind energy applications, establishing criteria for a ''complete application,'' and corrects or clarifies existing regulations.

The BLM conducted extensive public and Tribal outreach on this rule both prior to its publication as a proposed rule and during the public comment period on the proposed rule. Prior to the

publication of the proposed rule, the BLM notified Tribes in August 2021 of its upcoming rule and requested any comments and concerns that Tribes may have on such a rule. The BLM then held three public listening sessions in September 2021 on its potential use of the Energy Act of 2020 authority. The BLM also requested and received feedback from the public on preferred alternatives to use of the Energy Act of 2020 authority in its Manual 2806.60, ''Rent,'' which was later published in May 2022 after three public listening sessions and public review and comment on the draft Manual. The BLM published its proposed rule in June 2023, receiving nearly 900 comments after holding three virtual public meetings. The BLM also sent Tribes another notice about the rulemaking in July 2023, requesting Tribal input and whether there was any interest to consult on the rule. No Tribes responded with interest to consult on the BLM's rulemaking.

Section 2801.5 What acronyms and terms are used in the regulations in this part?

The existing § 2801.5 contains the acronyms and defines the terms used in this part of the regulations. The BLM proposed to remove, revise, and add acronyms and terms to this section. Section 2801.5 of this final rule has some revisions in response to comments that are discussed further in this section for each respective revision.

Under this section, several commenters recommended the BLM engage relevant stakeholders and industry experts to ensure definitions accurately reflect industry practices and standards. The BLM regularly engages, and will continue to engage with, industry; Tribal, Federal, State and local authorities; and resource experts to supplement its knowledge about renewable energy and market advancements. The BLM sought public comment on the proposed rule and will seek public comment on any changes to its acronyms and terms in future rulemakings.

The BLM received comments requesting the BLM consider the full life cycle of materials, energy inputs and technology types, and resource and land use footprints, and suggesting that labeling all wind and solar energy as renewable energy is misleading. The BLM agrees that it should analyze land use footprints and resource impacts of proposed projects on public lands. However, analyzing the full life cycle of materials, energy inputs, and technology types are addressed by other parts of the Federal government where such analysis is within their expertise. The BLM also believes that for purposes of this final rule, all solar and wind energy generation projects are renewable energy development projects insofar as they use a natural resource on public lands that is not depleted to produce power.

One comment suggested that the BLM should include a definition for ''current land use plan'' to mean ''a document developed through a formal planning process to guide the management of activities and uses of public lands that has been approved, amended, or recertified within the past ten years.'' The BLM has separate rules governing its land use planning processes found at 43 CFR Chapter V, Subchapter A, that provides definitions related to the BLM's land use planning. Accordingly, the BLM did not make changes in response to that comment since they are out of scope for this rule under 43 CFR part 2800.

Commenters suggested that the term ''economic hardship'' under 43 U.S.C. 3003 should be defined in this final rule and that the BLM should require proof of economic hardship for rent and fee reductions. The BLM does not define economic hardship in this rule as suggested. Each instance of hardship is unique to a holder and their circumstances and will be assessed on a case-by-case basis. The BLM does not intend to define hardship (economically, financially, or otherwise) so as not to unintentionally preclude reasonable requests to consider hardship.

Commenters stated that the proposed rule uses unclear language and is inconsistent with underlying resource management plans, agency guidance, and regulatory frameworks, and requested the BLM use more specific language such as pastureland, rangeland, habitat, or other terminology to denote the uses of the landscape. The BLM disagrees with the commenters' suggestion that the proposed rule uses unclear language and that the rule should include other definitions in this final rule. The BLM's use of ''pastureland rents'' comes from the name of the survey data used as the basis in determining the acreage rent in this final rule: The NASS Survey of Pastureland Rents. This is a newer source of data from NASS that was not available in the original 2012 Western Solar Plan or when the BLM promulgated its 2016 rule for solar and wind energy and has not yet carried through to other guidance materials from the BLM. It is appropriate for the BLM to use this terminology in describing the data used and its source in the regulations. Future BLM guidance and actions would include this terminology as appropriate.

Commenters requested the BLM settle on one standard term (''preferred renewable energy development areas'') for the preferred renewable energy project locations to avoid conflicts with other resources and uses. Commenters also suggested that the definitions for ''variance areas'' and ''exclusion areas'' should be added to the rule. The BLM understands the interest in defining such terms and has already done so in its land use planning efforts, such as the ongoing Solar Energy PEIS effort to update the 2012 Western Solar Plan. The BLM believes these terms are best identified and defined as part of the land use planning process and is not making any changes to this rule due to comments.

Paragraph (a) of this final rule provides for the acronyms and paragraph (b) provides for the terms used in this part. The final rule would remove, revise, and add certain terms to the BLM's acronyms and definitions found in part 2800.

This final rule adds the acronym ''FLPMA'' to paragraph (a) meaning the Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 *et seq.*). This acronym replaces the term ''Act'' from paragraph (b), providing clarity as to which act the BLM is referencing.

The BLM received no substantive comments on replacing the term ''Act'' with ''FLPMA,'' and therefore this final rule makes no changes to the proposed rule.

This final rule removes definitions of ''Megawatt (MW) capacity fee,'' ''Net capacity factor,'' ''Megawatt hour (MWh) price,'' ''Rate of return,'' and ''Hours per year.'' The BLM no longer charges a megawatt capacity fee based on solar and wind energy generation facility nameplate capacity; definitions related to the nameplate capacity fee are removed. The BLM did not make changes to the definitions in the final rule.

Some commenters noted inconsistencies related to the terms ''Rate of Return'' and ''Hours per year.'' Commenters pointed out that the proposed rule stated that these terms would be removed from § 2801.5(b), noting the paragraph numbering for the **Federal Register** instructions were confusing whether the terms were removed or not. The BLM agrees with commenters and has revised the **Federal Register** instructions, removing the proposed instruction number vi, ''removing paragraphs (1) and (2) in the term ''Megawatt rate'' and redesignating

paragraphs (3) and (4) as paragraphs (1) and (2). There are no paragraphs for the revised term, and removing the instructions is consistent with the proposed definition. The BLM did not make any other changes to this definition in the final rule.

This final rule adds the term ''Capacity fee'' to mean the fee based on the amount of electricity produced from solar or wind energy resources on the public lands. This is consistent with the BLM's change implementing a capacity fee that is based on electricity production. There were no substantive comments on the term, and the BLM did not make changes to this definition in the final rule.

The BLM includes in this final rule a new term ''Domestic Content reduction'' to define the circumstances in which a holder meets the domestic content criteria and thus qualifies for a fee reduction. This final rule includes changes to the term for ''domestic content'' to mean an item or product that qualifies for the Buy America preference as set forth in Section 70914 of the Build America, Buy American (BABA) Act, Public Law 117–58, 135 Stat. 429, §§ 70901–70927 (Nov. 15, 2021), and implementing guidance at 2 CFR part 184. The final rule modifies the definition for ''domestic content'' from the definition of ''domestic end product,'' as that term is used in Section 52.225–1 of the Federal Acquisition Regulations (FAR) (48 CFR 52.225–1) in the proposed rule, to the criteria for ''domestic content preference'' provided in the BABA Act and 2 CFR part 184. As described below, the qualifying definition in this final rule offers clarity and consistency among Federal programs regarding what constitutes domestic content and therefore is appropriate to apply to determine when a holder may obtain a fee reduction as identified under § 2806.52(b).

The BLM has determined that offering a Domestic Content reduction will further promote the greatest use of solar and wind resources because it will support the development of secure, reliable domestic supply chains while also reducing economic hardships for developers. As discussed in the preamble to the proposed rule, uncertainty in global supply chain dynamics, as seen in recent years, can delay deployment of solar and wind energy development projects on public lands (88 FR 39726, 39740–39742). By offsetting some of the costs of domestically sourced parts and materials, the Domestic Content reduction will insulate developers from global supply chain shocks of all kinds by reducing the economic dependence of developers on global supply chains and will also support the efforts of domestic suppliers. In this way, the proposed Domestic Content reduction supports the transition to more reliable domestic supply chains that will, in turn, increase interest in developing solar and wind energy projects throughout the country, including on public lands (43 U.S.C. 3003(b)(1)(C)), and thereby would promote the development of solar and wind energy resources on public lands (43 U.S.C. 3003(b)(2)).

Similar to the BLM's use in the proposed rule of a definition for Buy American based on section 52.225–1(b) of the FAR, this final rule's use of the term ''domestic content,'' following the BABA Act and 2 CFR part 184, identifies the components of projects through categories—iron or steel products, manufactured products, or construction material—that must be produced or manufactured in the United States in order to qualify for the Domestic Content reduction. The BABA Act applies to Federal financial assistance funds for ''infrastructure projects,'' which require the use of material produced in the United States. The Office of Management and Budget (OMB) published its final guidance implementing the BABA Act on August 23, 2023, under 2 CFR part 184. Generally, under 2 CFR 184.4(e), a ''domestic content'' preference would apply to three separate product categories: (i) iron or steel products; (ii) manufactured products; and (iii) construction materials. The OMB's guidance defines each of these categories and makes clear how a proponent satisfies the categorical requirements to demonstrate that the components of an infrastructure project meet the domestic content standards. This final rule uses the term ''domestic content'' as a catch-all term to refer to items for which the holder might satisfy the Domestic Content reduction based on the definitions established 2 CFR part 184.

Some commenters suggested that the proposed Buy American definition should be revised to reflect eligibility for the reduction to mimic the guidance published by the Treasury Department and Internal Revenue Service for the domestic content bonus credit from section 13701 of the Inflation Reduction Act (IRA), 117 Public Law 169, 136 Stat. 1818 (Aug. 16, 2022). Other commenters requested the BLM utilize a domestic content definition that incentivizes the use of domestically manufactured core solar components, as laid out in Section 13502 of the Inflation Reduction Act. Commenters also urged the BLM to refine its approach and apply more robust origin standards to its domestic content proposal.

The BLM has considered the various comments suggesting different definitions for what constitutes American-made products for the purposes of this reduction. In response to this public input, the BLM has changed from the FAR definition to the BABA Act (and implementing guidance at 2 CFR part 184) definition for the domestic content preference. The BLM is aware that the Treasury Department and Internal Revenue Service have issued guidance about the domestic content bonus under the Inflation Reduction Act for clean energy projects and facilities that meet American manufacturing and sourcing requirements. However, that guidance describes an intent to propose regulations that have not yet been finalized. This final rule's definition for domestic content aligns with definitions in other Federal programs with oversight over domestic products and content. This approach will promote consistency among these Federal programs, reducing the potential for unintended consequences resulting from conflicting definitions. As noted above, the BABA Act definition focuses on construction materials and components for infrastructure projects and is closely aligned with the type of projects covered in this final rule.

The final rule revises the term ''grant'' to reflect that solar or wind energy leases are not covered under the definition. The change provides clarity for where the BLM will issue a solar or wind energy grant and where a solar or wind energy lease will be issued.

Commenters suggested the term ''lease'' is unnecessary and to use ''grants'' instead, as the difference between a lease and a grant under the proposed rule is the location of a right-of-way either inside or outside a DLA. As identified in the BLM's 2012 Western Solar Plan, leases will be issued in areas designated for leasing under the relevant land use plan. The BLM disagrees with these comments and retains the distinction between solar and wind energy grants and leases in this final rule based on location of their issuance. The BLM did not make any change to this definition in the final rule.

This final rule adds the term ''Capacity fee'' to mean the fee based on the amount of electricity produced from solar or wind energy resources on the public lands. This is consistent with the BLM's change implementing a capacity fee that is based on electricity production. There were no substantive

comments on the term, and the BLM did not make changes to this definition in the final rule.

The final rule revises the definition of the term ''Megawatt hour (MWh) rate'' to mean the five-calendar-year average of the annual weighted average wholesale prices per MWh for major trading hubs serving the 11 western states of the continental United States. This revision is consistent with the BLM's change to implement a capacity fee for solar and wind energy development projects.

Some commenters were unclear whether the BLM had revised the definition of ''Megawatt hour (MWh) rate'' in the existing regulations, as § 2801.5(b) currently does not define that term. Commenters presumed that the BLM proposes to revise the existing definition of ''Megawatt rate.'' The BLM understands the confusion raised by these comments. The BLM revises the term ''Megawatt rate'' to ''Megawatt hour (MWh) rate'' in this final rule, consistent with the change to implement a capacity fee for solar and wind energy development projects. The BLM did not make any other changes to this definition in the final rule.

This final rule revises the term ''Reasonable costs'' to be consistent with the rule change replacing the words ''the Act'' with the acronym ''FLPMA.'' There were no substantive comments on the term, and the BLM did not make changes to this definition in the final rule.

''Renewable Energy Coordination Office (RECO)'' is added in this final rule to mean one of the National, State, district, or field offices established by the Secretary under 43 U.S.C. 3002(a) that is responsible for implementing a program to improve Federal permitting coordination with respect to eligible projects on covered land and such other activities as the Secretary determines necessary. There were no substantive comments on the term, and the BLM did not make changes to this definition in the final rule.

This final rule includes the new term ''solar or wind energy development'' to mean the use of public lands to generate electricity from solar or wind energy resources on public lands. This definition clarifies that the term ''energy development'' refers to uses of public lands that directly involve the generation of electricity on public lands. This definition clarifies which right-of-way grants and leases are subject to the conditions in Section 50265(b)(1) of the IRA, which apply to ''a right-of-way for wind or solar energy development on Federal land.''

Commenters suggested revising the definition of ''solar or wind energy development'' to include language from the BLM's recent Instruction Memorandum 2023–036, *Inflation Reduction Act Conditions for Issuing Rights-of-Way for Solar or Wind Energy Development* (April 23, 2023), according to which solar or wind energy development ''does not include site-testing, communication sites, transmission lines, gen-tie lines, pipelines, roads, installation of batteries and other energy storage systems, or other uses that might indirectly support energy production or transmission.'' The BLM does not agree that adding additional language to the definition is necessary for this final rule. This rule and the BLM's policies were written to complement each other in how the BLM administers applications and rights-of-way for such projects. The BLM did not make a change to this definition in the final rule.

This final rule adds ''Solar and wind energy lease'' to mean any right-of-way issued under Title V of FLPMA within an area identified in a BLM land use plan as a DLA. Any right-of-way not issued within an area identified as a DLA would be a grant. The BLM received comments on this term, which are discussed with regard to the definition of ''grant'' in this final rule. The BLM did not make changes to this definition in the final rule.

Section 2801.6 Scope

Section 2801.6 describes the scope of 43 CFR part 2800's applicability. Paragraph (a)(1) of this final rule includes the additional language ''or leases'' describing that this part applies to both authorization types: grants and leases.

A comment requested the following language be added to § 2801.6 Scope: ''Applications for transportation or utility right-of-way crossing conservation system units, national recreation areas, or national conservation areas in Alaska are subject to the provisions of Title XI of the Alaska National Interest Lands Conservation Act and 43 CFR part 36.''

This rule focuses on the BLM's generally applicable process for administering applications and rights-of-way for solar and wind energy development projects on the public lands. It does not modify or amend other applicable statutory or regulatory requirements, and the BLM would comply with all such requirements during the process set forth in this rule. The BLM made no changes to this section in the final rule based upon public comments.

Section 2801.9 When do I need a grant or lease?

Section 2801.9 explains when a grant or lease is required for systems or facilities located on public lands. Paragraph (d) of this final rule extends the term for solar or wind energy development authorizations up to 50 years, and authorizations for other uses that support solar or wind energy development, to up to 50 years, and make other technical changes. Paragraph (d)(3) provides that solar or wind energy development facilities authorized with a grant or lease may be issued for up to 50 years (plus initial partial year of issuance). Paragraph (d)(4) provides that energy storage facilities that are authorized separate from an energy generation facility are authorized with a right-of-way grant for up to 50 years. Paragraph (d)(6) provides that electric transmission lines with a capacity of 100 kV or more are authorized with a right-of-way grant for up to 50 years. The BLM did not make a change to this section of the final rule.

Commenters raised concerns with a 50-year authorization term for large development projects because, they suggested, the longer the public lands are occupied by a wind or solar project the longer it will likely take for those lands to fully recover after removing the project. Commenters also suggested that the longer-term authorization may unreasonably occupy the public lands with a solar or wind energy development when preferable or newer energy technology could be deployed there.

The BLM disagrees with comments that assert the increase of the maximum term of an authorization from 30 years to 50 years is inappropriate because preferable technology may be desired at that location in the future. The BLM acknowledges that recovery of impacts might be greater for a 50-year right-of-way term. However, the BLM will analyze the environmental impacts of each proposed project, including the end of project life activities such as reclamation and restoration of public lands, under NEPA, and will consider the appropriate term for each proposed right-of-way, before deciding whether to approve for deny a proposed right-of-way for energy development. Additionally, BLM notes that most of the ground-disturbing impacts of solar or wind development come during the construction phase, so the environmental effects of a 50-year authorization are therefore likely to be similar to the effects of a 30-year authorization with respect to recovery. Any such impacts, however, will be

considered on a case-by-case basis, in compliance with NEPA, when the BLM evaluates each proposed project. Through this process, the BLM will consider the reasonably foreseeable use of public lands, including the technology proposed by an applicant and the environmental consequences of that use, when deciding whether and for what duration to authorize solar or wind energy development on the public lands.

Some commenters argued against increasing the maximum term length for a right-of-way and expressed concerns about the economic and environmental impacts and the lifespan of energy generation equipment. Commenters suggested that a longer term to an authorization may not be appropriate due to the shorter lifespans of solar panels and wind turbines (30 years for solar and 20–25 years for wind), and that a shorter initial term, like the current 30-year term, instead of 50 years may be more suitable.

The BLM understands the concerns raised by commenters regarding the proposal to increase the maximum term length for solar and wind energy development authorizations. In the BLM's experience, the lifespan of solar and wind energy projects has been increasing over time as the technologies advance. When the BLM last updated its rules for solar and wind energy in 2016, the lifespan of a solar or wind project was approximately 20 years. The 30-year term was appropriate for such a length, considering the amount of time necessary to construct a project and then the expected time to decommission and reclaim and restore the public lands during the authorization term. With increasing lifespans of solar and wind equipment, a longer-term right-of-way is appropriate. See recent Berkeley National Laboratory, *Results from a Survey of U.S. Wind Industry Professionals,*[4] and the Department of Energy's, *Photovoltaics End-of-Life Action Plan,*[5] for a discussion of wind and solar energy project lifespans.

However, the BLM has made changes to other parts of the rule to address the commenters' concerns about dedicating public lands for up to 50 years to certain projects or uses that, over time, may become less efficient, see a significant decrease in production, or become entirely inactive. These changes also address concerns about public lands being used unlawfully for purposes other than those identified in the ROW grant (*e.g.,* a former solar or wind generating site being used for equipment storage). In particular, the changes impose conditions aimed at ensuring diligent operations on the public lands, see § 2805.12(c)(8). These are in addition to the BLM's existing diligent development requirements under § 2805.12(c)(7).

Commenters suggested that the BLM evaluate changes to the environment or technology during the term of an authorization after it has been approved. The BLM did not adopt this suggestion. Once the BLM issues a final decision, the BLM would only re-address technological changes or environmental impacts during the term of an authorization if the BLM undertakes a new decision-making process, such as in response to a ROW holder's proposed change in technology. The BLM's original analysis for a proposed facility considers the environmental effects of the facility and technology proposed by the applicant for the term of the proposed authorization, informing the BLM's decision to deny, approve, or approve with modification the proposed project. Any subsequent changes in equipment used at the site that would result in changes to environmental impacts that may occur after the BLM issues its decision, would be analyzed at the time the BLM considers issuing a new decision, based on the relevant information available at that time. The BLM may complete a new decision-making process to adjust the terms and conditions of the authorization under existing § 2805.15(e) under certain circumstances, such as a change to legislation or regulations, when necessary to protect public safety, an environmental change (*e.g.,* new threatened or endangered species listing), or if proposed changes to technology may result in additional or different environmental impacts.

One comment requested clarification on how § 2801.9 may be modified based on outcomes of the ongoing update to the Western Solar Plan. The analysis of environmental impacts of energy development and decisions made in updating the Western Solar Plan do not affect this final rule, which that provides BLM procedures and requirements when administering applications and authorizations for solar and wind energy development projects.

Some comments suggested that proposed energy storage facilities and proposed energy generation facilities should be reviewed in separate NEPA documents due to differences in fire risk and toxicity concerns. While it is beyond the scope of this rulemaking to speculate as to how the BLM will comply with NEPA when evaluating individual projects, the BLM agrees that energy storage facilities may have environmental impacts that are distinct from those posed by energy generation facilities. Nevertheless, the BLM can prepare a single NEPA document to evaluate impacts from energy generation facilities and energy storage facilities and may find it appropriate to do so in certain circumstances.

Subpart 2802—Lands Available for FLPMA Grants or Leases

The BLM proposed to revise the title of subpart 2802 to include ''or leases'' to clarify for readers that public lands are available for both grants and leases, consistent with other revisions in this rule regarding leases. No comments were received on this, and the BLM did not make changes to the final rule.

Section 2802.11 How does the BLM designate right-of-way corridors and DLAs?

Section 2802.11 explains how the BLM designates right-of-way corridors and DLAs through its land use planning process. This section includes a non-exhaustive list of factors the BLM could consider when designating such areas under its land use planning process described in 43 CFR part 1600. Other technical changes in § 2802.11(b) improve readability and consistency between the BLM's regulatory authority under part 2800 and its statutory authority under FLPMA. The BLM did make changes to this section of the final rule.

Paragraph (b)(1) is unchanged from the proposed rule and includes Tribal land use plans that BLM reviews for consistency when it is developing, amending, or revising a land use plan in accordance with Section 202(c)(9) of FLPMA (43 U.S.C. 1712(c)(9)).

Paragraphs (b)(10) and (b)(11) add criteria that the BLM may consider when designating new leasing areas for solar and wind energy. Paragraph (b)(10) adds ''access to electric transmission,'' and paragraph (b)(11) provides for consideration of relatively large areas where energy development is feasible and there is a low potential for conflict due to environmental, cultural, and other relevant criteria, including assessing the demand for new or expanded areas; applying environmental, cultural, and other screening criteria; and analyzing proposed areas through the land use planning process described in part 1600.

The BLM received comments about whether the BLM's proposal to carry forward three of the four criteria from

[4] *https://emp.lbl.gov/publications/benchmarking-anticipated-wind-project.*

[5] *https://www.energy.gov/sites/default/files/2022-03/Solar-Energy-Technologies-Office-PV-End-of-Life-Action-Plan_0.pdf.*

the 2012 Western Solar Plan is consistent with other BLM planning actions. The BLM carried these three criteria forward from the 2012 Western Solar Plan, which is consistent with other BLM plans identifying solar and wind energy development areas.

Some commenters suggested that the BLM redesignate proposed paragraph (b)(11) as paragraph (b) and redesignate existing paragraphs (b)–(d) as newly designated paragraphs (c)–(e). The BLM did not change the rule due to this comment. Reorganizing the paragraphs as suggested would be confusing to a reader as considerations for solar energy would no longer be located together in one subparagraph. The BLM did revise paragraph (b)(11) to clarify that the factors BLM considers include ''whether there are areas'' consistent with revisions under paragraph (b).

One comment requested that wording be amended to ''clarify that BLM may require sharing a gen-tie right of way subject to reasonable terms.'' The term ''gen-tie'' refers to a generation interconnect transmission line that connects the original source electric generation (for the purposes of this rule, a wind or solar energy development) to the transmission system. These gen-tie lines are typically less than 5 miles long and require a right-of-way grant if they cross public lands. The BLM retains authority under 43 CFR 2805.15(b) to allow or not allow such common use of the right-of-way.

Commenters suggested that the BLM alter the language of proposed § 2802.11(b), which identifies factors or criteria that the BLM may consider when designating an area of public land as a right-of-way corridor or a DLA. Some commenters recommended replacing the proposed term ''may'' with ''must.'' Other commenters suggested expressly incorporating all of the considerations listed in 43 U.S.C. 1712(c), which governs criteria for consideration by BLM when it prepares land use plans, to this section. Other commenters suggested that the BLM add transmission and electric infrastructure to the list of criteria or factors. Finally, some commenters agreed with the language in the proposed rule, which provides a non-exclusive list of factors or criteria that the BLM may consider when designating a corridor or a DLA.

After considering comments on this section, the BLM did make some changes to this paragraph in the final rule. While § 2802.11(b) provides examples of criteria that the BLM may consider, some of the listed criteria might not be relevant in all cases, and the BLM may consider additional factors or criteria as appropriate. Further, the BLM's land use planning regulations, 43 CFR 1600, provide additional direction for complying with the requirements of Section 202 of FLPMA, 43 U.S.C. 1712. The BLM did not add transmission and electric infrastructure to the list of criteria or factors because the proposed rule already included ''access to electric transmission,'' which is retained as a criterion or factor in the final rule. However, the BLM revised paragraph (b) to replace ''factors the BLM may consider include, but are not limited to, the following'' to read as ''the BLM may consider various factors, including'' to clarify what the BLM considers when designating such areas.

Commenters suggested that adding three criteria to a list of other criteria for the BLM to consider may create confusion. Some commenters supported the BLM adding paragraphs (b)(10) and (b)(11) to provide more detail of what and how the BLM considers when designating new leasing areas. Other commenters requested the BLM evaluate criteria for designating exclusion areas in addition to the criteria for designating DLAs and right-of-way corridors. The BLM believes that adding the three additional criteria for consideration when designated corridors and leasing areas is appropriate and provides for transparency when the BLM begins its land use planning processes to designate leasing areas. The BLM does not agree that exclusion criteria are appropriate when identifying DLAs. However, paragraph (d) of the existing regulations provides broad discretion for the BLM to identify areas where the BLM will not allow rights-of-way, which may include criteria to identify exclusion areas during the land use planning process. During the land use planning process, the BLM engages Federal, Tribal, State, and local government partners and the public to inform and clarify the factors analyzed when considering whether to designate exclusion areas. Including these criteria in the final rule will minimize the confusion that may arise in the future.

Some comments requested that the final rule include additional criteria for designating exclusion and avoidance or variance areas. Commenters suggested that including these criteria would encourage the appropriate designation of such areas and thus focus on processing right-of-way applications only in areas where development is best suited. The BLM disagrees with commenters that additional criteria for designating exclusion and avoidance or variance areas should be included in the final rule. Such criteria do not need to be included in the final rule and are better suited for policy (*e.g.,* instruction memoranda), which can be implemented consistent with this rule and other applicable regulatory authority and environmental analysis, while also providing appropriate flexibility in the process. Further, exclusion criteria are based on the environmental impacts of a program on the public lands, which are identified through a NEPA analysis, such as the ongoing Western Solar PEIS that is updating the 2012 Western Solar Plan. Lastly, this final rule updates its prioritization principles under 2804.35, which were not in place in 2012 with the Western Solar Plan. The BLM believes that with the robust public engagement, prioritization principles, and other preliminary application review meetings, holding a variance process is not necessary in administering applications for solar and wind energy development.

Section 2803.10 Who may hold a grant or lease?

Section 2803.10 provides the criteria for who may hold a grant or lease. In this final rule, the BLM clarifies that a holder who is of legal age and authorized to do business in one State must also meet this requirement in each other State in which the right-of-way grant they seek is located. No comments were received on this section, and the BLM did not make changes to this section of the final rule.

Section 2803.12 What happens to my grant if I die?

In the notice of proposed rulemaking for this rule, the BLM proposed to add new paragraph (a) and redesignate existing paragraphs (a) and (b) as paragraphs (b) and (c). This final rule does not carry forward those proposed revisions because another final rule included revisions that addressed those concerns. The BLM's final rule ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way,'' (89 FR 25922) [April 12, 2024] updated § 2803.12 to remove reference to applications in the section title and paragraph (a).

This final rule retitles this section and revises paragraphs (a) and (b) to include ''or lease'' clarifying that this section applies to both grants and leases.

Paragraph (b) of this final rule replaces the word ''distributee'' with ''receiver'' to improve clarity to readers that when the BLM distributes a grant or lease, the instrument would be received by the holder. This final rule also includes the provision that unqualified receivers of a right-of-way

must comply with all terms, conditions, and stipulations.

One comment suggested that the BLM clarify paragraph (b) to state that distribution will take place under state law in the state where the grant or lease is located. Including this suggested change could be inaccurate and potentially unenforceable. The BLM's rules should not dictate distribution of a lease as an inheritable interest in all instances.

Section 2804.12 What must I do when submitting my application?

Section 2804.12 explains what an applicant must do when submitting a right-of-way application. The BLM proposed changes to paragraphs (c) and proposed to add paragraphs (f) and (j). The BLM did make a change to this section of the final rule.

Paragraph (c) provides for additional requirements for solar and wind energy development or short-term rights-of-way. Paragraph (c)(1) requires payment of an application filing fee for solar and wind energy development and short-term applications as an initial payment toward cost recovery payments. The BLM will refund the balance of the application filing fee if it exceeds the processing costs. Paragraph (c)(1) is revised for readability and now reads ''payment toward cost recovery'' instead of ''payment towards cost recovery.'' Paragraph (c)(2) requires payment of additional reasonable costs in addition to application filing fees. See existing § 2804.14 of this part for further information on reasonable costs in processing an application. Payment of category 6 cost recovery fees—which are based on full costs and are collected if the BLM has determined that processing efforts will take more than 64 hours to complete—may be reduced by the application filing fee that is paid when submitting an application.

Some comments requested lower fees for application submittal. Another comment suggested that the BLM keep the application fee until all ''reasonable costs'' are paid before any refund is given. Under the existing regulations, application filing fees are a payment of reasonable costs for the United States to process an application and are intended to discourage applicants from unnecessarily applying for more land than is reasonable for a solar or wind energy development. As updated by this final rule, these application filing fees continue to be a payment of reasonable costs and may now clearly be applied to the processing fees, such as through a cost recovery agreement. Any overpayment of these costs may be reimbursed to the applicant or carried to cover the inspection and monitoring of the right-of-way, if authorized. Entering into a cost recovery agreement requires action by the BLM and applicant to complete, including the prioritization of an application under § 2804.35 by the BLM and payment of reasonable costs identified by the BLM in a cost recovery agreement.

Multiple comments suggested the BLM issue a cost recovery agreement within a certain timeframe, such as 30 days of receiving the required information. The BLM agrees that it is important for the BLM to be responsive to applicants who have provided the required information under this section. The proposed rule added paragraph (j) providing that an application is complete when an applicant submits the required information under this section. Upon receiving a complete application, the BLM would determine what cost recovery amounts would be necessary, and whether that should be under a cost recovery agreement. See § 2804.14 for further information. The BLM would notify an applicant within 30 days pursuant to § 2804.25(d) whether processing their application will take longer than 60 calendar days and what the expected processing timeframe is for the application. Section 2804.19 of the BLM's right-of-way regulations provides that the BLM and applicant work together to establish and issue the cost recovery agreement; the length of that process can vary widely based on a number of variables including project complexity, analysis of the needs from a cost recovery agreement, and needed inputs from the developer. As noted under the previous comment response, entering into a cost recovery agreement requires action by the BLM and applicant to complete, including prioritization under § 2804.35 by the BLM and payment of reasonable costs identified by the BLM in a cost recovery agreement.

Section 2804.12(f) of this final rule clarifies that the BLM may require additional information at any time while processing an application. Additional information may be necessary, such as environmental resource data. The BLM will issue a deficiency notice pursuant to existing § 2804.25(c) to inform applicants of additional information requirements.

Comments requested that the BLM provide clear application requirements and limit the BLM's ability to request additional information beyond those requirements. The BLM believes that the existing rules clearly state what is required for applications under 2804.10, *What Should I do before I file my application?*; in § 2804.11, *Where do I file my grant application?*; and as updated by this final rule, § 2804.12, *What must I do when submitting my application?* Paragraph (f) of this final rule provides that BLM may request additional information while processing an application. Additional information may be requested under 2804.25(c) after an application is determined to be complete pursuant to added paragraph (j) of this final rule.

Paragraph (j) describes that a complete application meets or addresses the requirements of § 2804.12, as appropriate for the application submitted. Some comments asked the BLM to clarify the definition of ''complete application'' in paragraph (j). The BLM believes that new paragraph (j) clearly describes what a complete application is. Upon satisfying the requirements of this section, the BLM will provide the applicant notice in writing that the application is complete.

Some commenters suggested that the BLM provide a determination of application completeness within specified timeframes to promote a timelier application process. The BLM agrees that it is important to remain diligent in processing an application. However, the BLM did not propose to implement any timeframes for determining an application is complete as this section of the rules applies to applications for all rights-of-way, not just solar or wind energy applications. Reasonable expectations for timely and diligent application requirements will vary depending on the complexity of processing a certain type of system or use on the public lands.

Section 2804.14 What is the processing fee for a grant application?

The BLM recently published its final rule ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way'' (89 FR 25922) [April 12, 2024]. In that final rule, the BLM updated its address within this section. The proposed updates that the BLM included in this rulemaking are no longer necessary. No comments were received, and the BLM did not make a change to this section in this final rule.

Section 2804.22 How will the availability of funds affect the timing of the BLM's processing?

Section 2804.22 of this final rule clarifies how the availability of funds may affect the BLM's schedule for processing an application. Paragraph (a) clarifies that when the BLM is processing an application, it will not continue to process the application until funds become available or the applicant

elects to pay full actual costs under § 2804.14(f). Paragraph (b) provides that the BLM may deny an application after 90 days if it has requested reasonable costs for processing an application and the proponent has failed to provide funds for reimbursement. The BLM did not change this section of the final rule.

One commenter supported denying applications for which fees had not been paid. Such a procedure, the commenter suggested, would disincentivize applicants from submitting applications that they do not intend to diligently process. While the BLM will not deny an application without cause, as described in more detail under § 2804.26, the BLM agrees that failure to diligently pursue an application, including unfunded application cost recovery agreements, and incomplete applications, among other reasons are good cause for denying an application. Denying applications for these reasons would deter applicants from submitting applications for projects that they do not intend to diligently pursue. Paragraph (c) of this final rule provides that funds paid towards the cost recovery agreement for a project may not be refundable. Such funds would be those identified in the cost recovery agreement for hiring additional staff or contractors and agreed to by the applicant or right-of-way holder.

Some comments supported the idea of cost recovery agreements that would allow the BLM to hire additional staff or contractors to aid in application processing and reduce processing times. This requirement helps ensure that there is available funding to the United States for reasonable costs of the government, including those BLM hiring and contracting decisions made to support processing applications.

Section 2804.23 What costs am I responsible for when the BLM decides to use a competitive process for my application?

Section 2804.23 of the final rule describes what costs an applicant is responsible for when the BLM decides to use a competitive process. Paragraph (b) requires, for cost recovery processing categories one through four, payment of cost recovery processing fees as if the other applications had not been filed. Paragraph (c) clarifies who is responsible for processing costs within processing category six.

The BLM did not make a change to this section of the final rule.

One comment suggested the language be changed to read, ''What costs am I responsible for *if* the BLM decides to use a competitive process for my application?'' The BLM considered this change in title to the section and believes that the proposed naming of this section is clear with respect to what costs the applicant will be responsible for when the BLM determines it will use a competitive process.

Section 2804.25 How will the BLM process my application?

In the final rule, the BLM revised § 2804.25(c) to add that, if an applicant fails to comply with a deficiency notice under this section, the BLM may deny the application. To ensure that developers proceed diligently after entering into a cost recovery agreement, § 2804.25(c)(1) requires applicants to ''commence any required resource surveys or inventories within one year of the request date, unless otherwise specified by the BLM.'' If the applicant fails to comply with a deficiency notice under that provision, the BLM may deny the application. See § 2804.26(a)(9). To clarify that the BLM retains the discretion to deny an application where the applicant does not proceed diligently, the final rule adds to § 2804.25(c): ''Failure to meet requirements under this section may result in the BLM denying your application pursuant to § 2804.26.''

This added provision clarifies that the BLM retains the discretion to deny an application where the applicant does not proceed diligently. This change is consistent with changes made to § 2809.10(e) regarding when the BLM will no longer hold a competitive process. Together these amendments give the industry the certainty it needs to proceed with projects while retaining the BLM's discretion to deny an application or offer lands competitively if the applicant does not proceed diligently. In that way, these amendments balance the BLM's obligations to incentivize renewable energy development on public lands and to recover a fair return for U.S. taxpayers.

In this section, the BLM proposed removing a mandatory public meeting that is unique to solar and wind energy rights-of-way applications and is in addition to other public participation that would occur as part of the BLM's environmental review process. Paragraph (e)(2) describes public meeting requirements for solar or wind energy right-of-way applications. In the final rule, paragraph (e)(2) provides that the BLM may hold a local public meeting if there is no other public meeting or opportunity for early engagement. In other words, the final rule would require the BLM to hold a public meeting, offering the public opportunity to engage early, though the BLM could satisfy this requirement by holding a public scoping meeting or other public meeting that facilitates early engagement by the public.

Commenters suggested that the BLM provide a website of applications and authorizations for interested parties so that they could receive up-to-date information on the applications and authorized projects. The BLM agrees with comments about maintaining a site that is accessible to the public on existing and proposed (*i.e.,* applications for) projects on public lands. The BLM currently maintains an active web page at *https://www.blm.gov/programs/energy-and-minerals/renewable-energy/active-renewable-projects* where the public may access the most recent information on applications for solar, wind, and geothermal development projects, gen-tie-lines, upcoming lease sales, and other relevant application and development information about these sites.

Some comments supported the removal of the requirement that BLM hold pre-processing public meetings, noting that solar and wind energy technologies are better known now than they have been previously and that these meetings are unnecessary. The BLM also received comments that did not support removing that requirement. These comments expressed concerns that by removing this public meeting the BLM would be excluding the public and should instead increase outreach to the public in the area affected by these proposed development projects. To address these concerns, the BLM has changed the regulatory text in paragraph (e)(2)(i) to ensure that a public meeting is held if there is no other opportunity for the public's early engagement. The BLM also would retain discretion to hold additional public meetings under § 2804.25(e).

Paragraph (e)(4) is updated to replace ''the National Environmental Policy Act (NEPA)'' with ''NEPA,'' consistent with the changes in paragraph (e)(2) of this section. The BLM updates the reference in this final rule, consistent with changes that CEQ has made to its regulations, such that 40 CFR parts 1501 through 1508 are now referred to as 40 CFR Chapter V, Subchapter A.

Paragraph (e)(5) provides that the BLM will determine whether the proposed use complies with applicable Federal laws.

Paragraph (f) addresses the segregation of lands within a right-of-way application. Paragraph (f)(3) now provides that a segregation may be extended when an application is complete and cost recovery has been received.

Some comments suggested that the 2-year segregation limit is appropriate, that the BLM should begin NEPA within 2 years of segregating the lands, and that such limitations should be consistent with the NEPA timeline requirements within the Fiscal Responsibility Act. The BLM agrees that the agency should be diligent in processing applications, including initiating NEPA. Because separate legal authority and policy guidance applies to NEPA compliance procedures, including applicable timelines to complete the NEPA process, the BLM did not make a change to this paragraph of the final rule in response to these comments.

Some comments suggested additional language should be added to establish timelines and deadlines supporting quick action in processing applications. Section 2804.25(c) in the existing regulations provides specific due diligence requirements for applications. Unless another timeline is specified by the BLM, applicants have one year to complete certain actions, and the BLM may deny an application for failure to comply with the one-year requirement or other specified timeframe for submitting necessary information to the BLM. The BLM believes this timeline is generally adequate to promote the timely processing of applications and permitting of solar and wind development projects and to ensure that developers cannot hold public lands by submitting, but not diligently pursuing, an application, thus precluding other uses of such lands. The BLM did not change the final rule in response to these comments.

The BLM received requests to revise the rule to require automatic segregation once an applicant has filed a complete application and has paid the required application fees and grant extensions past the four-year mark. Changing the method to segregate lands and the timeframes of those segregations is outside the scope of this rule. The BLM did not propose to change the method and timing of segregation, but only to make this paragraph consistent with new provisions in the final rule for complete applications and cost recovery.

Section 2804.26 Under what circumstances may the BLM deny my application?

Section 2804.26 of this final rule explains the circumstances under which the BLM may deny an application.

Paragraph (a)(4), consistent with this final rule replacing the term ''the Act'' with ''FLPMA'' discussed under § 2801.5, provides that the BLM may deny your application if issuing the grant would be inconsistent with applicable law or regulation.

The BLM did not carry forward paragraph (a)(9) of the proposed rule because the BLM's final rule, ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way,'' 89 FR 25922 (April 12, 2024) revised the BLM regulations at § 2804.26(a) to add the same provision allowing the BLM to deny applications that fail to comply with a deficiency notice . Thus, the revision in the proposed rule that would have added this provision is no longer necessary.

Paragraph (10) incorporate requirements of this final rule that are discussed elsewhere. Paragraph (a)(10) provides that an application may be denied for failing to pay costs, as noted in § 2804.22(b).

As proposed, paragraph (c) is removed in this final rule. Any request for an alternative requirement received after an application has been denied is not a timely request. Requests for an alternative requirement must be timely. See § 2804.40(c) for further information on timely requests.

The BLM received a comment recommending that the BLM add another provision following section (a)(4), suggesting that this new provision address protection of special conservation areas managed by the BLM or other federal or state agencies. The BLM believes that including the suggested change to this section is unnecessary. The BLM's process to deny an application under this section is addressed in the existing regulations at § 2804.26. The BLM's management of special conservation and other sensitive areas is generally determined through the BLM's resource management planning and NEPA processes. The BLM retains broad authority to deny an application on the basis that it would not be in the public interest, which may also address this concern to deny certain applications.

Section 2804.30 [Removed and Reserved]

Section 2804.30 is removed and reserved in this final rule. No comments were received on this section and the BLM did not make any changes to this section in the final rule. Prior § 2804.30 addressed competitive leasing inside of designated areas. The content of the prior § 2804.30 is now duplicative of this final rule in §§ 2809.13, 2809.14, and 2809.17.

Section 2804.31 [Removed and Reserved]

Section 2804.31 is removed and reserved in this final rule. Prior § 2804.31 addressed competitive process for site testing. This portion of the rule was not used since first put in place in 2016 and is removed. The BLM may still hold competitive processes for site testing if there is a competitive interest or other reasons as identified in § 2809.10 of this final rule.

Some comments supported the removal of competitive processes for site testing grants, and other commenters suggested that the section may be useful in local field office decision making in the future. The BLM agrees that retaining requirements for competitive processes related to solar and wind energy is important. Subpart 2809 of this final rule provides the requirements for solar and wind energy competitive processes, which includes the requirements of this section.

Section 2804.35 Application Prioritization for Solar and Wind Energy Development Rights-of-Way

Section 2804.35 is retitled to ''Application prioritization for solar and wind energy development rights-of-way.'' This section provides for the relative importance of different criteria that vary from location to location, giving weight to local resource issues and circumstances that are not equally relevant for every application. Additionally, there are practical concerns for the BLM when processing solar and wind energy applications. This section provides that the relevant criteria are to be applied holistically to prioritize applications in a manner that would facilitate environmentally responsible projects and ensure that agency workloads are allocated appropriately. The revised section would also explicitly recognize that the BLM may identify additional criteria in guidance, which may be national in scope or specific to an area.

Paragraph (a) clarifies that the purpose of prioritizing applications is to allocate agency resources to processing applications that have the greatest potential for approval and implementation. The BLM revised this section from the proposed rule to clarify that the BLM's prioritization of an application is not a decision and is not subject to appeal under 43 CFR part 4.

One commenter asked whether the BLM's prioritization process might hinder development of renewable energy and potentially conflict with national priorities for renewable energy deployment. The BLM is endeavoring to

increase the responsible deployment of renewable energy on the public lands consistent with congressional and presidential direction. In addition, the BLM must continue to manage public lands under the principles of multiple use and sustained yield unless otherwise provided by law (43 U.S.C. 1732(a)). The prioritization criteria support national renewable energy goals by helping the BLM to consider applications for the projects that are most likely to succeed and ensure the BLM's continued stewardship of the public lands.

Paragraph (b) identifies criteria that the BLM may consider when prioritizing applications. This section provides discretion to the BLM as to how best to apply the criteria to prioritize processing solar or wind energy generation applications.

Some comments suggested prioritizing applications for projects inside DLAs. Other comments suggested other criteria that should be considered when prioritizing applications, such as the presence of existing leasing agreements and rights-of-way, whether the application complies with all state and federal regulations, the size or location of the project, project features, proximity to transmission, and protection of natural resources.

The BLM believes that these considerations are important, but no changes to the regulatory text are warranted since these considerations were already included in the proposed rule. The six listed criteria in the rule provide flexibility in how the BLM may apply the criteria for applications in the BLM's varied landscapes on which a resource may have different sensitivities in one location as compared to another location. Prioritizing projects based on siting in designated or preferred areas is addressed in paragraph (b)(1). The BLM addressed comments concerning existing leasing agreements or rights-of-way in the BLM's application processing steps in subpart 2804 of these rules. Paragraph (b)(4) addresses commenter suggestions regarding prioritizing applications based on compliance with federal regulation. Paragraphs (b)(2) and (b)(5) address the size or location, project features, proximity to electric transmission, and the protection of natural resources.

Several comments requested clarity on the application of the prioritization criteria, including a description of the relative importance of each criterion. Other commenters also suggested that they believe the BLM should be prohibited from prioritizing applications based on additional criteria that are not expressly listed in this section of the rule. In the BLM's experience, the relative importance of different criteria may vary from location to location due to resource considerations. Likewise, not all prioritization criteria are equally relevant for every application. The BLM has intentionally not set specific preferences or weights for the criteria it will apply when prioritizing applications. This final rule confirms that the BLM will consider the prioritization criteria holistically when considering applications, and that the BLM may establish additional criteria through local or national policy guidance.

In the final rule, the BLM changed paragraph (b) to refer to ''criteria'' instead of ''factors'' as proposed. This change is consistent with the BLM's use of the term ''criteria'' in paragraph (b)(6).

The first criterion is whether the proposed project is located within an area preferred for such development, such as a DLA. The BLM may reasonably presume that development projects proposed within these areas are more likely to proceed to approval as they pose less severe resource conflicts than other lands.

Some comments suggested that wind energy is disadvantaged since there are no wind energy designated leasing areas or equivalents. The BLM disagrees with these comments. First, the 2016 Desert Renewable Energy Conservation Plan (*https://blmsolar.anl.gov/documents/drecp/*) designated more than 192,000 acres of preferred development locations for solar, wind, and geothermal energy. Additionally, the criteria are not given specific preferences or weights when compared with one another, and, as such, the BLM would take into account the lack of wind DLAs when prioritizing wind energy development applications.

The second criterion is whether the proposed development avoids adverse impacts to or conflicts with known resources or uses on or adjacent to public lands and includes specific measures designed to further mitigate impacts or conflicts. When submitting an application to the BLM, the applicant must address known potential adverse resource conflicts, including those for sensitive resources and values that are the basis for special designations and protections, as well as potential conflicts with existing uses on or adjacent to the proposed energy generation facility. Under section 2804.12(b)(2), the applicant must also include specific measures to mitigate impacts or conflicts with resources and uses. Including this information is necessary for the BLM to determine that an application is complete. While subsequent consultation, public comment, and environmental review processes may reveal unknown resource or use conflicts, based on previous experience permitting wind and solar projects on public land, the BLM understands that projects with fewer known conflicts are more likely to proceed to approval and successful implementation.

The third criterion is whether the proposed project is in conformance with the governing BLM land use plans. Applications identify whether the proposed project is in conformance with the governing land use plan or would require an amendment or revision to the plan. The BLM may, in its discretion, consider applications for solar or wind energy generation facilities that would require an amendment or a revision to the governing land use plan under part 1600 of these regulations. However, such application could require greater resources to process and could present resource conflicts, which would result in a lower priority.

The fourth criterion is whether the proposed project is consistent with relevant State, local, and Tribal government laws, plans, or priorities. The purpose of this determination is not to enforce these State, local, or Tribal laws, plans, or priorities, but rather to promote comity and identify projects that are more likely to be successfully approved. In addition, applying this principle helps to ensure that the BLM takes into account the existing resource knowledge and expertise that may be available through State, local, and Tribal plans and priorities. To carry out this prioritization, the BLM may enter into or rely on existing agreements with State, local, or Tribal governments.

Some comments suggested that prioritization of an application should be subject to Tribal consultation. The BLM engages Federally recognized Tribes early in the application process under § 2804.12(b)(4), which allows Tribes to participate in preliminary application review meetings with the BLM and provide early information to the BLM about an application. Additionally, under paragraph (b)(4), the BLM will consider ''whether the proposed project is consistent with relevant State, Tribal, and local government laws, plans, or priorities,'' which may also include consultation with Tribes. Finally, the BLM acknowledges that E.O. 13175 sets forth criteria for when the BLM is required to consult with Tribes, and the BLM is committed to consulting with Tribes whenever such consultation is required

under the E.O., without regard to whether that requirement is specifically articulated in this rule.

The fifth criterion is whether the proposed project incorporates the best management practices set forth in the applicable BLM land use plans and other BLM plans and policies. This principle ensures that the BLM takes into account the knowledge and expertise that has gone into formulating these existing plans and policies. Should an application require amending a BLM land use or other plan, it is likely to require more time and effort to process.

The sixth criterion considers any other circumstances or prioritization criteria identified by the BLM in subsequent policy guidance or land use planning for an area.

Paragraph (c) provides that the BLM will prioritize applications, once complete (as described in § 2804.12(j) of this part). The BLM's prioritization may use any available information provided in the application or its Plan of Development, applicant responses to deficiency notices, and information provided to the BLM in public meetings or by other Federal agencies and State, local, or Tribal governments.

Paragraph (d) clarifies the BLM discretion to re-categorize an application's priority at any time. Re-categorizing an application may be based on new information that the BLM has received or on changes the applicant has made to the application. Re-categorizing an application may also be based on the BLM's need to adjust its workload, if circumstances warrant such re-prioritization.

Some comments expressed concern that denying or de-prioritizing an application prior to any final land use designation, such as those which may be made in the ongoing update to the 2012 Western Solar Plan, is inappropriate or pre-decisional. Comments further expressed that pending applications should not be denied before land use designations are made. The BLM is not constrained by ongoing or potential future land use planning processes, but it must manage public lands in conformance with the land use plans currently in effect. Accordingly, the BLM generally will not deny or deprioritize an application based on non-conformance with a future or ongoing land use planning effort. The criteria in the rule refer to consideration of governing land use plans. The BLM would deny or de-prioritize an application pursuant to its broad discretion in considering right-of-way applications based on existing information and existing land use plans. At the same time, the BLM retains authority to deny an application based on appropriate information even if the project would conform to the applicable land use plan, including, for example, where an application conflicts with current management policies that have not yet been incorporated into a land use plan.

Some comments suggested that the BLM should adopt a first-come, first-served system when processing applications or self-prioritization by an applicant for multiple applications within a single BLM field office. While in practice the BLM often processes applications on a first-come, first-served basis, it retains discretion to prioritize applications according to other considerations including input from an applicant about their applications. In practice, the BLM has observed that the prioritization of projects, particularly in Field and District Offices with high workloads, provides a number of benefits for the BLM and applicants. In coordinating with applicants, the BLM discusses workload capacities and will receive input from developers on the priority of their applications and whether there is a specific preferred order. Due to the many factors the BLM considers in this decision, however, the BLM's determination on a project's priority for processing may be different than that requested by a particular developer. Targeting workloads for BLM staff and management facilitates accelerated decision-making for those solar and wind energy development proposals with the greatest technical and financial feasibility and the least anticipated natural and cultural resource conflicts and increases consistency in processing project applications for the BLM and applicant. As detailed in the discussion of subpart 2809 in this rule, the BLM may also determine that there is a competitive interest for a right-of-way or system and hold a competitive process.

Section 2804.40 Alternative Requirements

Section 2804.40 of this final rule provides for situations when an applicant requests alternative requirements from the BLM if the requestor is unable to meet the requirements of this subpart. The final rule clarifies that this section applies specifically to the BLM's consideration of alternatives to the application requirements set forth in subpart 2804. Other requirements related to rights-of-way, such as the requirement to pay rent as set forth in subpart 2806, cannot be adjusted under this section. The BLM did not make a change to this section of the final rule.

Some commenters suggested that state and local governments should be brought into the decision-making process if an applicant is unable to meet the application requirements and they request an alternative to one or more application requirements. It is the BLM's responsibility to determine whether an alternative requirement for the application process should be allowed. Through agreements, including with cooperating agencies, the BLM engages with Tribal, Federal, State, and local government offices when it considers solar and wind energy development projects. The BLM would inform such partners of any changes to its requirements. Additionally, the BLM will consider under this section only requests for alternatives to modify the alternative requirements found in part 2804—*Applying for FLPMA Grants.* Requests to modify other requirements, including those identified in a decision authorizing a right-of-way, such as terms and conditions, cannot be approved under this section. This would include requests for alternative access.

Section 2805.10 How will I know whether the BLM has approved or denied my application or if my bid for a solar or wind energy development grant or lease is successful or unsuccessful?

Section 2805.10 of this final rule clarifies that agency decisions about whether to approve rights-of-way are generally administratively appealable while the issuance of a right-of-way grant or lease itself is not an opportunity for appeal.

Paragraph (c) of this final rule clarifies that ''The BLM will issue the right-of-way by signing the grant or lease and transmitting it to you.'' The BLM's act of returning the signed instrument to the holder constitutes the ''issuance'' of the right-of-way. Identifying the point in time at which the right-of-way is ''issued'' is important for calculating when the term of a right-of-way begins to run (see § 2805.11) and when the holder's obligation to pay rent begins (see § 2806.12). Identifying the point at which the right-of-way is ''issued'' is also important for clarifying which actions are subject to the conditions in Section 50265(b)(1) of the IRA, which imposes conditions on when the Secretary may ''issue a right-of-way for wind or solar energy development on Federal land.'' The BLM did not make a change to this section of the final rule.

Section 2805.11 What does a grant or lease contain?

Section 2805.11 of this final rule revises the right-of-way authorization term length for certain facilities, and the final rule includes minor updates to the proposed rule to improve technical clarity. No change was made in this section of the final rule due to public comment.

The BLM's final rule ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way,'' 89 FR 25922 (April 12, 2024), updated § 2805.11 to redesignate paragraph (b) to paragraph (c). Proposed revisions from this rule under § 2805.11(b) are now finalized under 2805.11(c) consistent with the redesignation of this paragraph.

Redesignated § 2805.11(c) addresses the duration of rights-of-way. Section 2805.11(c)(2) provides specific terms for solar and wind energy grants and leases. Paragraphs (c)(2)(iv), (c)(2)(v), and (c)(4) now show the maximum terms for solar and wind energy generation facilities, energy storage facilities that are separate from energy generation facilities, and electric transmission lines with a capacity of 100 kV or more. The term for a grant or lease for these types of authorizations may be up to 50 years. Revisions under this section are consistent with those made under § 2801.9(d).

Paragraph (c)(2)(iv) is updated for the maximum term for both grants and leases, for up to 50 years (plus initial partial year of issuance).

Paragraph (c)(2)(v) is updated for the maximum term for rights-of-way for energy storage facilities that are separate from energy generation facilities. Although the BLM generally treats energy storage facilities as linear rights-of-way, rather than solar or wind energy development rights-of-way, for purposes such as rent calculation, the BLM believes that the longer term of ''up to 50 years,'' commensurate with the maximum term for solar or wind energy development rights-of-way, will facilitate the transition to cleaner sources of energy in the United States.

Paragraph (c)(4) would be added to update the term for electric transmission lines with a capacity of 100 kV or more, for up to 50 years, commensurate with the term for solar and wind energy development projects and energy storage facilities that are separate from energy generation facilities.

Some comments sought clarification on whether a presumptive leaseholder's (which is defined at § 2809.15(b)(1)) control of the property would preclude other uses, such as grazing or recreation, or during any period when use is not immediately initiated. Prior to the competitive process, a prospective bidder would be informed as to whether they were bidding on a location with existing authorized uses, such as recreation or grazing or other known casual uses. The BLM's identification of a presumptive leaseholder or issuance of a lease would not automatically exclude authorized uses. Rather, the BLM must follow its existing processes prior to ending existing uses; for example, in the context of livestock grazing, notice and cancellation is provided, subject to any required public comment periods.

The BLM understands from comments it has received that there is some confusion whether solar and wind energy developments may also be projects. In the final rule, the BLM revised paragraph (b)(2) to add ''projects'' to clarify that solar and wind energy developments may be projects.

Section 2805.12 What terms and conditions must I comply with?

Section 2805.12 of this final rule lists certain terms and conditions that apply to all right-of-way grants and leases. The BLM revised this section to address public comments regarding the term length authorized for certain facilities. The BLM also included revisions to prevent a holder's non-use of the public lands for the authorized energy generation facilities.

Paragraph (c)(8) is added to this final rule addressing concerns raised in relation to § 2801.9(d) regarding the longer term for grants and leases. This rule provides diligent operation requirements wherein the holder of a solar or wind energy development grant or lease must maintain at least 75 percent of energy generation capacity for the authorized facility for the grant or lease term. A failure to meet this operational capacity for two consecutive years may support the suspension or termination of the grant or lease under §§ 2807.17 through 2807.19. The BLM would send notice to the grant or leaseholder with a reasonable opportunity to correct any noncompliance with the diligent operation requirement, including resuming use of the right-of-way.

The BLM believes it is reasonable to establish a requirement that solar and wind energy generation developments must operate within 75 percent of their generation capacity, allowing a 25 percent operational change for each year. [6] This allows a solar or wind operator to safely accommodate operational changes related to unforeseen circumstances and maximize their energy production without the need to coordinate with the BLM for normal operations. A sustained reduction in output, such as for anomalous storm years or changes to a development's technology, that reduce the energy generation below 75 percent of the project's capacity would require coordination with the BLM to update project information. The energy generation capacity is first established by the right-of-way holder under section 2806.52(b)(5) in the first annual certified statement, and then informed by subsequent years' operational capacities in the annual statement. Since the BLM bills in advance for a calendar year (see part 2806 for further information on solar and wind energy capacity fee), the BLM believes that this operational standard is appropriate for the orderly administration of the public lands and to ensure appropriate use of its resources.

In response to the BLM's notice, a holder must provide reasonable justification for the reductions in energy generation, such as delays in equipment delivery, legal challenges, or Acts of God. Holders must also provide the anticipated date when energy generation will resume and a request for extension under paragraph (e) for an extension of operations period to satisfy the two-year diligent operation requirements of paragraph (c)(8). The BLM may deny a request for extension for failure to comply with this section.

The BLM will use the annual certified statement required under § 2806.52(b)(5) to determine whether a holder has been meeting the minimum energy generation capacity for the diligent operation requirement. Under paragraph 2806.52(b)(5)(vi), the holder must notify the BLM if they will reduce the amount of energy generated by 25 percent or more for that year. Two consecutive years with reduced energy generation would support the BLM's notice to the grant or leaseholder of noncompliance with the diligent operation requirement.

Paragraph (e)(2) of this final rule clarifies that the option of requesting alternative stipulations, terms, or conditions does not apply to terms or conditions related to rents or fees. As with requests for alternative application requirements under § 2804.40, requests

[6] As demonstrated in a 2018 NREL study, forecast modeling for solar photovoltaic and wind energy developments is generally within 10 percent of expected capacities over a one-year period. *https://www.nrel.gov/docs/fy23osti/79498.pdf,* Solar PV, Wind Generation, and Load Forecasting Dataset for ERCOT 2018: Performance-Based Energy Resource Feedback, Optimization, and Risk Management (P.E.R.F.O.R.M.)

for alternative stipulations, terms, or conditions under § 2805.12 are limited to technical obligations of the applicant or holder and not to the holder's obligation to compensate the United States for the use of the public lands and their resources. Requests for exemptions or deviations from the general rent provisions of subpart 2806 should be made under provisions of that subpart that specifically address such exemptions or deviations, such as existing § 2806.15(c) (not revised in this rulemaking), which sets forth a procedure for asking the BLM State Director to waive or reduce a holder's rent payment, or § 2806.52(b)(1)(i), which describes certain circumstances under which the BLM may calculate the capacity fee based on an alternative MWh rate.

A comment suggested that the fees could be based on third-party evaluations, such as an appraisal. The BLM considered whether an appraisal specific to each authorization would be appropriate and determined that using such a process would be costly and add considerable time to the processing of an application. The BLM chose not to use an appraisal, except when it determines under § 2806.70 that its rent schedules do not apply to the underlying right-of-way use. For example, if the BLM receives a right-of-way application requesting a permit for a long-term landscape art installation, the schedules for transmission, solar or wind energy development, or communications sites would not apply, and the BLM may elect to use an appraisal to determine the appropriate rent. This final rule also provides for a specific alternative MWh rate for determining the capacity fee under § 2805.62(b)(1)(i) for development projects that use a Power Purchase Agreement (PPA). Such agreements must be provided to the BLM for review. If the BLM determines the lower rate is appropriate, it will use such agreements in place of the calculated MWh rate. The BLM did not make a change in response to this comment.

A comment requested that the BLM require applicants to include PLAs and add union labor protections as a term and condition of solar and wind energy rights-of-way. In this final rule, the BLM has elected to provide an opportunity for holders to receive capacity fee reductions under certain conditions, including where the holder can show it is using PLAs for the construction of the planned facility (see § 2806.52(b)), consistent with the reduction authority under the Energy Act of 2020. However, in administering the public lands, the BLM is making such compliance voluntary, offering the capacity fee reduction to incentivize the use of PLAs for solar and wind energy development projects instead of mandating compliance with such a term. The BLM believes this voluntary option provides opportunities to a wide variety of potential holders and recognizes the effort of those who qualify for such reductions consistent with criteria in § 2806.52(b). No change was made in the final rule due to this comment.

Section 2805.13 When is a grant or lease effective?

Section 2805.13 of this final rule includes a minor technical clarification to the title and section, adding ''or lease,'' to build consistency for authorization term lengths inside and outside of DLAs.

The BLM received comments opposing this section regarding term length of authorizations. One comment recommended the BLM extend the maximum term from 30 years to 50 years only for leases inside DLAs. Another comment opposed extending the maximum term to 50 years for any authorization. The BLM addressed this and other similar comments under § 2801.9 of this preamble.

Section 2805.14 What rights does a right-of-way grant or lease convey?

Section 2805.14 of this final rule clarifies that the term ''right-of-way'' is the category of authorizations that generally are issued as a grant or a lease under Title V of FLPMA. This clarity has become increasingly important for the internal and external understanding of right-of-way authorizations with the passage of new legislation. The BLM did not receive comments on this section.

The title is revised to ''What rights does a right-of-way grant or lease convey?'' The title clarifies that this section applies to both grants and leases.

Paragraph (g) removes the text ''solar or wind energy development'' and adds ''right-of-way'' to now read as ''right-of-way grant or lease.'' This section provides for when an applicant applies to renew any right-of-way grant or lease under § 2807.22.

Section 2805.16 If I hold a grant or lease, what monitoring fees must I pay?

The BLM's final rule ''Update of the Communications Uses Program, Cost Recovery Fee Schedules, and Section 512 of FLPMA for Rights-of-Way'' 89 FR 25922 (April 12, 2024) updated the BLM Headquarters address in § 2805.16. Thus, the proposed rule's update to the BLM Headquarters address is no longer necessary. The BLM did not receive comments on this section and did not include it in the final rule.

Subpart 2806 Annual Rents and Payments

Subpart 2806 of this final rule clarifies that the term ''right-of-way'' is the category of authorizations that are generally issued as a grant or a lease under Title V of FLPMA. This clarity has become increasingly important for the internal and external understanding of right-of-way authorizations with the passage of new legislation.

In subpart 2806, the BLM sets the acreage rent and capacity fee calculation methodologies for solar and wind energy development rights-of-way. Section 504(g) of FLPMA, 43 U.S.C. 1764(g), requires right-of-way holders, subject to several narrow exceptions, ''to pay in advance the fair market value'' for the use of the public lands. Section 102(a) of FLPMA, 43 U.S.C. 1701(a), clarifies that ''it is the policy of the United States that . . . the United States receive fair market value of the use of the public lands and their resources unless otherwise provided for by statute.'' The BLM has consistently taken the position that this statutory mandate includes the authority to charge acreage rent and capacity fees that reflect the fair market value of the public lands and their resources. For example, the preamble to the BLM's 2016 Final Rule, *Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development and Technical Changes and Corrections,* explained that ''(t)he BLM has determined that the most appropriate way to obtain fair market value is through the collection of multicomponent fee [sic] that comprises an acreage rent, a MW capacity fee, and, where applicable, a minimum and a bonus bid for lands offered competitively . . . . [T]he collection of this multicomponent fee will ensure that the BLM obtains fair market value for the BLM authorized uses of the public lands, including for solar and wind energy generation.'' 81 FR 92122, 92134 (Dec. 19, 2016). In that final rule, the BLM further explained that the use of a multicomponent rent and fee structure that comprises an acreage rent, a MW capacity fee, and in some cases also a minimum and a bonus bid assists the BLM in achieving important objectives, including identifying and capturing fair market value for the use of public land, providing a consistent approach with other categories of public land uses, encouraging efficient use of the public lands by reducing relative costs for comparable projects using fewer acres, and employing an approach

consistent with existing policies and regulations governing the BLM's renewable energy program. *See id.* The multicomponent fee of this final rule will continue to advance important objectives that serve the public interest, including allowing the BLM to capture fair market value for use of the land (subject to reductions pursuant to Energy Act of 2020 authority).

In the Energy Act of 2020, 43 U.S.C. 3003, Congress amended the fair market value requirement of Section 504(g) of FLPMA by providing the Secretary with discretion to ''consider acreage rental rates, capacity fees, and other recurring annual fees in total when evaluating existing rates paid for the use of Federal land'' for solar and wind energy projects and reduce acreage rental rates and capacity fees if the Secretary makes certain findings, including ''that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources.'' Consistent with FLPMA and the Energy Act of 2020, the BLM will continue to charge solar and wind energy rights-of-way acreage rent and capacity fees. The final rule implements a methodology that bases rent and fee rates on local land values and wholesale energy market prices. This methodology also supports the direction in the Energy Act of 2020, 43 U.S.C. 3004, of meeting national clean energy objectives, including the congressional goal of permitting 25 GW of renewable energy by 2025 on Federal lands through reductions in rental rates and capacity fees. As described in the section-by-section discussion for subpart 2806, this final rule is utilizing the authority in 43 U.S.C. 3003 to adjust the fair market value requirement through reductions in rental rates and capacity fees for solar and wind energy projects on public lands.

Under the final rule, acreage rent rates for solar and wind energy rights-of-way are determined using the NASS Cash Rents Survey, which reflects a nominal value of the land at the time the right-of-way is issued and prior to commercial use. This per-acre land rental value will be multiplied by an encumbrance factor (which differentiates between solar and wind energy facilities) and an annual adjustment factor that accounts for changes in the value of the land over the lifetime of the right-of-way due to inflation and similar factors. Because the NASS Cash Rents Survey used for solar and wind acreage rents reflects a valuation of annual rent, no rate of return is applied when determining solar and wind energy acreage rents. The acreage rent rate reflects a nominal value of the land to continue to maintain site control after the right-of-way is issued.

Once a solar or wind energy generation facility is utilizing the solar or wind resources on public land to produce electricity, the BLM may charge the capacity fee for the right-of-way unless the acreage rent remains higher than the fee. The capacity fee is determined in part using the annual MWh production multiplied by either wholesale power pricing information or pricing figures specific to a project's PPA to determine the market value of the electricity generated from the project. The wholesale power pricing information or other pricing basis variables in the BLM's calculation, like the pastureland rental value based on the NASS Cash Rents Survey used for calculating acreage rents, will be fixed at the time the right-of-way is issued and will be updated using a fixed annual adjustment factor. This market value of the electricity generated will then be multiplied by a rate of return based on a percentage of wholesale pricing and by certain qualifying fee reductions to arrive at a capacity fee for the authorized project.

Some comments suggested that fees should be compared with the fees associated with other energy sources instead of being based on the per-acre values for pastureland. Other comments expressed support for the BLM using the NASS Cash Rents Survey to calculate acreage rent rates. The BLM manages different energy sources, *e.g.,* oil and gas and geothermal, consistent with the applicable laws for each. As such, rent and fee values promulgated in regulations consider differences under law. Solar and wind energy generation facilities on public lands are authorized under Title V of the FLPMA (43 U.S.C. 1761–1771) and its implementing regulations at 43 CFR part 2800. Section 504(g) of FLPMA generally sets the requirements for how the BLM will collect rents and fees for use of the public lands and their resources through a right-of-way. These requirements differ from those in the MLA (30 U.S.C. 181 *et seq.*) and the Geothermal Steam Act (30 U.S.C. 1001 *et seq.*), and thus a comparison of fees for production of these different energy sources on public lands would be inappropriate and irrelevant. In this final rule, the BLM updates rents and fees for solar and wind energy development rights-of-way under the authority provided by FLPMA to reflect the fair market value for use of the public lands and their resources by using acreage rental rates that reflect local land values prior to commercial electricity production through using pastureland cash rent survey values by NASS. The BLM then applies its authority under the Energy Act of 2020 to provide reductions that are necessary to promote the greatest use of wind and solar energy resources.

One comment suggested that the proposed rule should not offer acreage rent and capacity fee reductions to projects outside DLAs and instead should implement project-specific reductions and other incentives to promote responsible development inside DLAs. DLAs are locations on public lands that the BLM has designated through the land use planning process as priority areas for solar and/or wind energy development. Limiting acreage rent and capacity fee reductions to DLAs would not, however, meet the Energy Act of 2020's direction to promote the greatest use of wind and solar resources. To date, the BLM has only allocated DLAs for solar facilities on public lands within six southwestern states for locations that are predominately favorable for thermal solar projects (*i.e.,* concentrated solar). The BLM currently has no DLAs allocated for solar in other states. Furthermore, the BLM has no DLAs allocated for wind energy development on public lands in any state. The BLM determined that limiting rent and fee reductions to only DLAs would be sub-optimal in supporting clean energy goals. As such, the final rule will provide for rent and fee reductions on public lands both inside and outside DLAs, which will serve the BLM's purpose of promoting the greatest use of wind and solar energy resources on public lands.

One comment suggested that subpart 2806 should not eliminate fair market value for rental and leases on public lands or the competitive bid process. The commenter did not support incentivizing renewable development for a specific project by eliminating the competitive leasing process. Contrary to the commenter's suggestion, this final rule does not eliminate the BLM's ability to utilize a competitive bid process for solar and wind energy development. The final rule adjusts the competitive process requirements for wind and solar energy development proposals within DLAs by aligning it to be consistent with agency discretion for utilizing a competitive process outside DLAs when the BLM's authorized officer decides to use a competitive process.

Some comments suggested that this rule should generally raise fees for developers and require more upfront mitigation money to address long term environmental issues. Related

comments suggested that the BLM should establish an environmental mitigation fund in addition to rents and fees to accommodate the high probability of direct and cumulative impacts. The BLM considered these comments and is not making these suggested changes. The BLM believes such changes are unnecessary because the final rule does not limit the BLM's existing authority and ability to appropriately impose mitigation requirements as a component of the terms, conditions, and stipulations for a solar or wind energy development. The BLM will continue to require appropriate mitigation and conditions of approval to address environmental impacts for right-of-way grants and leases without further requirements promulgated under this final rule.

Other commenters stated that the BLM should implement a minimum efficiency criterion to ensure that consumers receive the necessary amount of power to keep up with demand. The BLM disagrees with comments suggesting that the BLM should regulate how efficiently a project must operate. Developing a project is a complex process that depends on several factors, including the availability and cost of appropriate technology. The BLM has included a provision in this final rule that sets an operational standard requiring a development project to annually maintain at least 75 percent of its energy generation capacity. See § 2805.12(c)(8) for further information on the operational standards for solar and wind energy development projects on public lands.

Section 2806.10 What rent must I pay for my grant or lease?

Section 2806.10 of this final rule provides a minor technical clarification described below. The BLM did not receive comments on this section and has made no changes to it in the final rule.

Section 2806.10 provides rent requirements that apply to all grants and leases, requiring payment in advance, consistent with Section 504(g) of FLPMA, as amended. New § 2806.10(c) would clarify to a reader that the per acre rent schedule for linear right-of-way grants must be used unless a separate rent schedule is established for your use—such as with communication sites under § 2806.30 or solar and wind energy development facilities per § 2806.50—or the BLM determines under § 2806.70 that its rent schedules do not apply to the underlying right-of-way use.

Section 2806.12 When and where do I pay rent?

Section 2806.12 of this final rule provides a minor technical clarification as described below. The BLM did not receive comments on this section and has made no changes to it in the final rule.

Paragraphs 2806.12(a) and (b) describe the proration of rent for the first year of a grant and the schedule for payment of rents. Paragraphs 2806.12(a) and (b) would be revised by deleting the term ''non-linear,'' which is not defined in the regulations, to clarify that these provisions apply to all right-of-way grants or leases.

Section 2806.20 What is the rent for a linear right-of-way grant?

Section 2806.20 of this final rule clarifies the BLM's mailing address. Section 2806.20(c) addresses how to obtain a current rent schedule for linear rights-of-way. This paragraph provides the BLM's mailing address of record by reference to § 2804.14(c).

Solar and Wind Energy Development Rights-of-Way

The existing regulations contain two undesignated center headings to organize and differentiate sections pertaining to solar (see existing §§ 2806.50 through 58) and wind (see existing §§ 2806.60 through 68) energy rights-of-way. The final rule revises those sections and undesignated headings to provide a single set of provisions for all solar and wind energy development rights-of-way. The rent, fee, and payment requirements under the final rule are discussed in the following sections and are identical for solar and wind except for the difference in the encumbrance factor used in calculating the acreage rent that is discussed under § 2806.52(a). Sections 2806.50 through 2806.58 address solar and wind energy rents and capacity fees.

The final rule updates the acreage rent and capacity fee calculation methods to improve predictability of rates for solar and wind energy development projects on public land. The combined rent and fee calculation methodologies have the flexibility to meet FLPMA's fair market value requirement while also applying calculation factors to reduce rates to promote the greatest use of wind and solar energy resources on the public lands consistent with the Energy Act of 2020.

The final rule retains flexibility to utilize different data sources for electricity market values over time. Developers of solar and wind energy on public lands will have improved rate predictability over the term of an authorization. This is accomplished by establishing an acreage rate and capacity fee rate at the beginning of a grant or lease term with upfront built-in rate adjustments and by indexing the capacity fee to the annual energy production.

The BLM's acreage rent is the average of the state-wide pastureland rent from the NASS Cash Rent Survey. The acreage rent is the minimum payment made to the BLM each year by the developer. See § 2806.52(a) for further information on the acreage rent.

The capacity fee, based on wholesale power prices, serves to compensate the United States for long-term site control and the production value of the electricity generated by solar and wind energy projects on public lands. The capacity fee will be collected annually, but only when the capacity fee exceeds the acreage rent for the year. See § 2806.52(b) for further information on the capacity fee.

The final rule includes certain reductions that may be applied under the authority granted to the Secretary in the Energy Act of 2020, which provides that annual acreage rent and capacity fees may be reduced if the Secretary determines that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources, among other reasons. Adjustments to the capacity fee from the MWh rate reduction, The Domestic Content reduction, and PLA reduction are discussed in greater detail in § 2806.52(b)(1)(ii) through (iv). The BLM has determined that the rate reductions in this final rule would help to promote the greatest use of wind and solar energy resources on public lands.

Section 2806.50 Rents and Fees for Solar and Wind Energy Development

Section 2806.50 of the final rule requires the holder of a solar or wind energy right-of-way to pay in advance the greater of either an annual acreage rent or a capacity fee, consistent with Section 504(g) of FLPMA (43 U.S.C. 1764(g)). There are no provisions in this rule for a phased-in rent or fee.

The acreage rent or capacity fee, as applicable, is calculated based on the requirements found in §§ 2806.11 and 2806.12. The acreage rent is calculated according to the formula set forth in § 2806.52(a), while the capacity fee is calculated according to the formula set forth in § 2806.52(b).

Some comments expressed concern that this rule creates negative market incentives by keeping acreage rents and capacity fees artificially low. These

commenters suggest that the BLM should implement a consistent yearly increase in acreage rent and capacity fees based on initial rates, with reductions provided only for projects in specific circumstances, such as siting within solar zones or on disturbed lands, and with strong commitments to domestic content. The BLM is cognizant that the rent and fee rate structure is important for promoting the greatest use of wind and solar energy resources and is a critical component to providing short- to medium-term stability for emerging energy markets. There is a strong public interest in maintaining rate predictability for electricity generating entities that are subject to long-term interconnect and PPAs. This final rule sets rates that are also increased annually, through the annual adjustment factor (see § 2806.52(b)(2)). The annual adjustment continues through the term of the authorization. Additionally, this final rule provides an opportunity for rate reductions for all solar and wind energy development projects that further the goals of the Energy Act of 2020, which is to authorize 25 gigawatts of renewable energy on Federal lands by 2025 and further national clean energy priorities. The BLM did not make a change to this section of the final rule.

Section 2806.51 Grant and Lease Rate Adjustments

Section 2806.51's title is changed from the proposed rule to clarify that this section applies to all grants and leases. This section provides for right-of-way grant and leaseholders to transition to the new rate making under this final rule through an affirmative request to the BLM. Absent a request, they would retain the rate setting method in effect prior to this final rule.

Paragraph (c) informs holders of existing solar or wind energy development rights-of-way that they may request the new rate methodology in this final rule be applied to their existing grant or lease. Existing holders have two years from the date this final rule becomes effective to request a change to the new rate making method. The BLM will continue to apply the grant holder's or lessee's current rate methodology if a timely request is not received.

The BLM received a comment that does not support any rate reduction based on an estimation of energy generated because all rates should be assessed on actual production. The BLM has the administrative flexibility to collect payment in advance based on estimated energy. The amount the BLM may collect for the right-of-way may change once the BLM determines the actual energy production on the right-of-way. The BLM will reconcile any difference in the amount due and credit any overpayment, and right-of-way grant holders and lessees are liable for any underpayment. See § 2806.52(b)(5) of this rule for the BLM's annual certified statement that provides more information about the estimated and actual energy generation. The BLM did not change this section of the final rule in response to this comment.

Some comments recommended that the final rule cap the total amount of reduction in acreage rents and capacity fees that an individual leaseholder can claim for a right-of-way. The final rule does not cap the number or level of reductions an applicant or holder may qualify for; however, the final rule does require that the BLM collect no less than the acreage rent for the right-of-way each year, notwithstanding the number of reductions that apply to the grant per § 2806.52(b). The BLM did not change this section of the final rule in response to this comment.

Some comments suggested that rate reductions may be achieved without any changes to where the BLM sources its market pricing data. In the final rule, the BLM preserves its discretion to change the source of market data. In the BLM's experience, access to such information may change over time. For this final rule, the BLM is using the Energy Information Administration pricing data that may be found at *https://www.eia.gov/electricity/wholesale/*. Energy Information Administration data is free and open to the public, increasing transparency into the BLM's rate schedule. The BLM did not change to this section of the final rule in response to this comment.

Some comments recommended that the BLM seek to increase domestically sourced products and materials and that the BLM should use this rule to mandate robust domestic content thresholds for projects permitted on Federal land. The BLM agrees with these commenters' interest in increased use of domestic content for solar and wind energy development projects. This final rule includes a financial incentive in the form of a ''Domestic Content reduction'' under § 2806.52(b)(1)(iii) to encourage holders to use components made or manufactured in the United States in the construction of the solar or wind energy project. This capacity fee reduction is intended to offset costs associated with using only iron, steel, manufactured products, and construction materials incorporated into the project that are produced in the United States consistent with the direction in the Energy Act of 2020. The BLM anticipates that this proposed capacity fee reduction would increase economic certainty for renewable energy projects on BLM-managed public lands. By incentivizing the use of domestically made parts and materials in exchange for a reduced capacity fee, the BLM expects to reduce costs for developers that choose to incorporate domestically produced materials into their projects. The BLM believes that this reduction will help increase demand for domestically produced renewable energy parts and materials. These intended outcomes would serve to promote the greatest use of wind and solar energy resources on public lands. Currently, wind and solar energy developers face a choice between relying on foreign-sourced parts and materials or paying higher prices for domestically sourced parts and materials, if available. (See for example the Department of Energy's Solar Photovoltaics—Supply Chain Deep Dive Assessment, available at *https://www.energy.gov/sites/default/files/2022-02/Solar%20Energy%20Supply%20Chain%20Report%20-%20Final.pdf*). As seen in recent years, uncertainty in global supply chain dynamics has the potential to delay deployment of solar and wind energy development projects on public lands. Using incentives to create demand for American-made renewable energy parts and materials will help develop domestic supply chains and reduce impacts on renewable energy deployment on public lands from potential supply chain delays. The BLM believes that incentivizing the use of parts and materials that qualify for the Domestic Content reduction will increase the responsible deployment of renewable energy and will increase commercial interest in the use of public lands, promoting the development of solar and wind energy resources on public lands. This final rule changes the definition used for domestic content to align with the BABA Act and implementing guidance at 2 CFR 184. See § 2806.52(b) for further information on the domestic content reduction.

Some comments suggested that a broad approach to rate reductions may have revenue implications and fail to guarantee that taxpayers obtain a fair return for the utilization of our public lands. Consistent with congressional and presidential direction, the BLM is endeavoring to increase the responsible deployment of renewable energy on the public lands and as part of that direction has been authorized to reduce rents and fees to promote the greatest

use of wind and solar resources on public lands. As part of this rulemaking process, the BLM carefully deliberated on how to implement the directives and new authorities while maintaining a reasonable return for the use of the public lands and their resources. Following the BLM's implementation of previous rate reductions in calendar year 2022 for solar and wind energy development projects, the agency received feedback which generally indicated that overall costs for permitting, development, and operations on Federal public lands were still perceived as a barrier to entry and a disincentive to the BLM's ability to promote solar and wind deployment on public lands. The BLM believes the fee reductions will assist in removing barriers inhibiting deployment of solar and wind development on public lands.

Section 2806.52 Annual Rents and Fees for Solar and Wind Energy Development

Section 2806.52 of this final rule describes the BLM's methodology to determine the acreage rent and capacity fee for solar and wind development rights-of-way. Payment is required of the greater of either an acreage rent, which is calculated in advance of authorization, or a capacity fee, which is calculated upon the start of energy generation. This section was revised based on public comments.

Section 2806.52(a) provides that acreage rent would be determined by multiplying the number of acres authorized for a project (rounded up to the nearest tenth) by the state-specific per-acre rate from the solar and wind energy acreage rent schedule in effect at the time a grant or lease is issued. The acreage rent would be the minimum yearly payment for a grant or lease and would not be required if the capacity fee under paragraph (b) of this section exceeds the acreage rent.

Paragraph (a)(1) explains that the per-acre rate is calculated by multiplying the state-specific per-acre value by the encumbrance factor and a factor that reflects the compound annual adjustment since the start of the grant or lease term, according to the formula A $\times$ B $\times$ ((1 + C) ^ D)).

Paragraph (a)(1)(i) identifies ''A'' as the per-acre rate, using the state-specific per-acre value from the solar or wind energy acreage rent schedule for the state where a project is located for the year when the grant or lease is issued. The average per acre value will be determined using the NASS pastureland rents reported within the previous 5-year period. The BLM will update the acreage rent schedule and its per-acre rate every 5 years consistent with the timing of rent adjustments under § 2806.22 for the linear rents schedule. Based on the pastureland rent value in the NASS Cash Rents Survey through 2021, the most recent 5-year average ranges from $2.10 per acre in Arizona to $12.60 per acre in California with a median value of $6.62 per acre in the Western States. The next year the BLM will update its rent schedule will be for calendar year 2026.

Using Nevada as an example for how the BLM will average NASS pastureland rents, assume that NASS reported values of $10.00, $13.00, and $10.00 per acre respectively for 2019, 2020, and 2021. NASS reported values during the 5-year period only for those 3 years and did not report values for 2017 and 2018. In that case, the BLM would average the reported values using three years for that 5-year period, which would equate to $11.00 per acre.

The per-acre rate charged to the right-of-way holder for a grant or lease will not change once calculated and the authorization is issued. Rates for an existing authorization will not change with updates to the acreage rent schedule; instead, the acreage rent will be adjusted by the annual adjustment factor, ''C'' in the formula above, under 2806.52(a)(1)(iii).

Paragraph (a)(1)(ii) identifies ''B'' in the formula above as the encumbrance factor. The encumbrance factor is applied to account for the intensity of the solar or wind development's surface use of the public lands. In the final rule, solar energy generation facilities are subject to a 100 percent encumbrance factor and wind energy generation facilities are subject to a five percent encumbrance factor. The 100 percent encumbrance factor for solar facilities reflects a greater intensity of development on the surface of public lands and a virtual exclusion of other uses on the right-of-way. The five percent encumbrance factor for wind facilities recognizes that a wind energy facility only partially encumbers the land, allowing other uses to co-exist.

Some comments suggest that a lower encumbrance value for solar is appropriate, noting that facilities may incorporate design elements or construction methods that reduce impacts to resources, such as raised fences for wildlife passage or vegetation disturbance caps. The BLM appreciates that projects incorporating such improvements may cause fewer impacts to public land resources. However, the BLM disagrees that such improvements reduce the encumbrance factor, which is based on the occupancy of the land and impact to other uses of the land. Solar energy developments have a greater occupancy of the land and impact to other uses because they preclude the majority and sometimes all other uses. This encumbrance factor for solar energy developments is appropriate for public lands, and the BLM retains its 100 percent encumbrance factor for this rule.

One comment asserted that the proposed encumbrance value of five percent for wind energy is too low and should be set around 50 percent and that if the BLM decreases the encumbrance factor from 10 percent, the BLM should a explain its rationale in this rule. Others believed the encumbrance factor should be lower, asserting that a mid-point encumbrance factor of 3 percent is appropriate based on the Department of Energy's Wind Vision analysis. The BLM considered the intensity of the surface use and exclusion of other uses when setting the encumbrance factor in this final rule. While the commenters that advocated for a 50 percent encumbrance factor did not provide data supporting that figure, the National Renewable Energy Laboratory has found that generally ''only a small fraction of that area (<1%–4%) is estimated to be directly impacted or permanently occupied by physical wind energy infrastructure.'' [7] In practice, the BLM has found that, based on geography or project design, and effect on other uses, the encumbrance may be more or less than that reported by NREL occupied land percentages and therefore set a five percent encumbrance factor for wind energy.

Paragraph (a)(1)(iii) clarifies that ''C'' in the formula above is the annual adjustment factor, which is three percent, and Paragraph (a)(1)(iv) clarifies that ''D'' is the year of the grant or lease term, where the first year (whether partial or a full year) would be 0 (that is, there is no inflation for the first year of the term). Under the final rule, the annual adjustment factor would be fixed at three percent and compounded annually for the term of the authorization.

Paragraph (a)(2) describes where you may obtain a copy of the current per-acre rates for the solar and wind energy rent schedule.

Paragraph (b) describes that the capacity fee is calculated by multiplying the MWh rate or the alternative MWh rate (which is described below), the MWh rate reduction, the Domestic Content reduction, PLA reduction, the

[7] *https://www.nrel.gov/news/program/2022/nrel-explores-the-dynamic-nature-of-wind-deployment-and-land-use.html.*

rate of return, and the annual power generated on public lands for the grant or lease in question (measured in MWh) by a factor that reflects the compound annual adjustment. The capacity fee is required to be paid annually beginning in the first year that generation begins for the energy generation facility. There will be no capacity fee levied for the first year or any other year if the acreage rent exceeds the capacity fee. The formula for calculating the annual capacity fee is A × B × C × D × [(1 + E) ^F] × G × H.

Paragraph (b)(1)(i) describes that ''A'' is either the MWh rate, an amount determined based on the average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States, or the alternative MWh rate. The MWh rate is calculated based on the wholesale prices from the full five calendar-year period preceding the most recent MWh rate adjustment before the right-of-way was issued, rounded to the nearest dollar. There is no MWh rate phase-in for energy generation facilities except for existing holders that elect to continue paying under their current rate adjustment method per § 2806.51(c).

The BLM may use an alternative MWh rate when a grant or leaseholder enters into a PPA with a utility for a price per MWh that is lower than the average of the annual weighted average wholesale price. In those instances, the BLM will determine if the rate in the PPA is appropriate to use instead of the MWh rate. For example, an alternative MWh rate may not be appropriate if a utility issues itself a PPA for its solar or wind energy development. If the rate in the PPA is appropriate, then the BLM would set an alternative MWh rate for the grant or lease at the rate in the PPA.

The BLM received a request to remove the BLM's discretion to use an alternative MWh rate rather than a MWh rate calculated on the average wholesale pricing as described under § 2806.52(b)(1)(i). The BLM provides an opportunity for an alternative MWh rate in this rule in the event that there is a difference between wholesale pricing (energy pricing at market) compared to the negotiated pricing that may be achieved in a PPA. The BLM understands from a recent report from Lawrence Berkeley National Lab (available at *https://emp.lbl.gov/utility-scale-solar/)* that PPA pricing may be less than wholesale market pricing. The BLM does not want to disincentivize reasonable development on public lands or more favorable power purchase rates, which would be contrary to national goals set by law and directed by executive order, by disincentivizing such actions. However, the BLM also wishes to ensure it retains the discretion necessary to ensure that an alternative MWh rate is appropriate. The BLM did not make changes in the final rule due to these comments.

In paragraph (b)(1)(ii), ''B'' is the *MWh rate reduction.* The final rule sets the capacity fee at 20 percent of the wholesale price per MWh or alternative MWh rate through calendar year 2035. This reduction is consistent with the authority provided in the Energy Act of 2020 allowing the Secretary to reduce acreage rental rates and capacity fees if, among other things, the Secretary determines ''that a reduced rental rate or capacity fee is necessary to promote the greatest use of wind and solar energy resources.'' Further, this reduction would help BLM meet the goal under the Energy Act of 2020 of ''authoriz[ing] production of not less than 25 gigawatts of electricity from wind, solar, and geothermal projects by not later than 2025.'' Implementing this reduction is necessary to promote the greatest use of wind and solar energy resources and maximize commercial interest in lease sales by lowering the entry cost of prospective energy generating facilities. Additionally, implementing this reduction puts the rates the BLM charges closer to what the BLM charged developers in 2007 and 2008 when interest in solar and wind energy development on public lands began to increase. The reduced rates and new rate setting methodology lower the potential that existing right-of-way holders who agreed to terms and conditions for using public lands that were later updated based on market changes will experience economic hardship as a result of those adjustments. This final rule uses predetermined adjustments instead.

For example, the MWh rate reduction for a newly authorized solar or wind energy grant or lease in 2035 will be set at 20 percent of the wholesale price per MWh or alternative MWh rate. This will yield a continued 80 percent reduction through the end of that authorization's term consistent with the Energy Act of 2020 authority.

Starting in 2036, the BLM will begin to transition the MWh rate reduction to 20 percent by 2038. The MWh rate reduction will be reduced to 60 percent for new projects authorized in 2036, 40 percent for new projects authorized in 2037, and 20 percent for new projects authorized in 2038 and beyond. The rates for existing authorizations will not change with this transition to a 20 percent reduction. For example, an authorization for solar or wind energy development in 2037 would receive a 40 percent reduction through the end of the authorization's term. The BLM would similarly apply this reduction to authorizations it issues based on the year of issuance.

Some comments suggested the transition from an 80 percent MWh rate reduction to a 20 percent MWh rate reduction appears arbitrary and without grounding in economic analysis of market conditions and suggested instead allowing the 80 percent reduction to continue until a future rulemaking. The BLM understands the concerns raised by the commenters regarding the change to the reduction in the proposed rule. However, the BLM disagrees that the 80 percent MWh rate reduction should continue until a future rulemaking. Instituting a phased sunset period to the 80 percent reduction in the capacity fee is appropriate as the renewable energy industry may no longer need this reduction to achieve the greatest use of wind and solar on public lands, and progress toward our national goal of a carbon-pollution free electricity sector may indicate that a reduction is no longer warranted. In this final rule, the BLM is revising the transition from MWh rate reduction from 80 percent to 20 percent over several years. This transition would lessen the year-over-year rate change until 2038, when the MWh rate reduction would remain at 20 percent. The BLM will evaluate progress towards reaching national goals before 2036 and could reinitiate rulemaking to adjust incentives, including extending them beyond 2036, if appropriate under the authority in the Energy Act of 2020 or other applicable authority.

In paragraph (b)(1)(iii), ''C'' is the *Domestic Content reduction.* This paragraph is revised consistent with the changes discussed under § 2801.5. As explained previously, the BLM is promoting the development of solar and wind energy resources on public lands by offsetting some of the costs of using items and materials produced in the United States in the construction of solar and wind energy development facilities. The BABA Act, Public Law 117–58, 135 Stat. 429, §§ 70901 through 70927 (Nov. 15, 2021) and the implementing regulations at 2 CFR part 184, describe certain categories of items or products that are eligible for the domestic content preference. As noted in § 2801.5, the BLM adopts the term ''domestic content'' to refer to the items and materials associated with the construction of a solar or wind energy facility on public lands that are eligible for the domestic content preference. Paragraph (b)(1)(iii) of § 2806.52 of the BLM's regulation would reduce the

capacity fee for solar or wind energy generation facilities if the holder can demonstrate that the construction of the facilities for the right-of-way—excluding labor costs—qualify as produced in the United States as described in 2 CFR 184.4. The Domestic Content reduction is 20 percent for facilities qualifying for the domestic content preference defined in 2 CFR part 184. To qualify for this capacity fee reduction, the percent of the energy generation facility's total cost that consists of items qualifying for the domestic content preference would have to meet or exceed the ''Produced in the United States'' requirements in 2 CFR 184.3. Generally, this would mean that: (1) all manufacturing processes for iron or steel products used as a component of the project occurred in the United States; (2) manufactured products (a) were manufactured in the United States, and (b) the cost of the components of the manufactured product that are mined, produced, or manufactured in the United States is greater than 55 percent of the total cost of the manufactured product, as determined in 2 CFR 184.5; and (3) all manufacturing processes for construction materials occurred in the United States, as defined in 2 CFR 184.6. The holder would have to provide sufficient documentation (*e.g.,* purchase orders for end products, materials, and supplies of the facility; as-built or construction plans) to demonstrate that the products used in the energy generation facility meet the thresholds identified in 2 CFR part 184.

Once an energy generation facility qualifies for a Domestic Content reduction, the facility will continue to benefit from the reduction for the term of the grant or lease. The BLM will only revisit the reduction at the time of an assignment, amendment, or renewal of an energy generation facility grant or lease to determine what reduction, if any, it may qualify for. The BLM will apply the criteria defining the domestic content preference and the components of construction for the version of 2 CFR part 184 in effect at the time the right-of-way is issued unless OMB amends that guidance in the future in such a way that the current definition contemplated in this final rule no longer provides a clear meaning. In that circumstance, the BLM will apply the most recent version of 2 CFR part 184 that provides a workable definition until such time as the BLM is able to amend its rules.

In addition to changing the definition to qualify for a domestic content reduction from a FAR to a BABA-based definition, this final rule only provides for a single 20 percent reduction that interested parties qualify for if they meet the requirements of 2 CFR part 184 instead of the incremental reduction that the BLM had proposed. Under the BABA definition described above, projects qualify for the domestic content preference by meeting or exceeding specific materials requirements. As this is a binary qualification, an incremental reduction would be untenable. Further, using a single reduction based on the BABA threshold will provide for simpler implementation of the regulation and more clarity to applicants.

One comment suggested that the BLM use the Electronic Product Environmental Assessment Tool (EPEAT) product registry for photovoltaic module use in development projects and any Domestic Content reduction. EPEAT is a global label managed by the Global Electronics Council that identifies environmentally sustainable electronic products. Currently, however, EPEAT only covers a narrow set of products and construction material related to solar development facilities (specifically, photovoltaic modules and inverters) and does not cover any materials related to wind energy generation facilities. As a result, requiring applicants to use EPEAT-registered products for renewable energy facilities on public lands could frustrate the goals of the Domestic Content reduction. Further, such a requirement would not serve the purposes Energy Act of 2020 or relevant direction in Executive Orders because it would limit the technology that could be deployed on public lands. The BLM may, however, consider such criteria for the Domestic Content reduction in the future once the EPEAT covers a broader range of solar and wind energy materials. The BLM made no changes to the final rule due to this comment.

Some comments suggested that the BLM should require proof of compliance with the domestic content incentive prior to reducing rates. The BLM agrees with these comments and will require confirmation that the holder seeking to obtain this reduction satisfies the qualifying definitions the BLM is utilizing: the standard in 2 CFR part 184. See § 2806.52(b)(5) regarding conditional approvals where the BLM makes it clear that approval will be granted by the BLM once it has been demonstrated to the satisfaction of the BLM that the facility qualifies for the reduction.

Some comments suggested that rate reductions in the final rule should be consistent with the IRA. The BLM considered a reduction based on the domestic content bonus tax credits in the IRA and its definition of Buy America bonus tax credits. The BLM is aware that the Treasury Department has issued guidance about the domestic content bonus under the IRA for clean energy projects and facilities that meet American manufacturing and sourcing requirements. However, that guidance describes an intent to propose regulations that have not yet been finalized, and this final rule's definition for domestic content aligns with definitions in other Federal programs with oversight over domestic products and content. No changes were made due to these comments.

Paragraph (b)(1)(iv) is ''D'', the *Project Labor Agreement reduction.* The BLM is promoting the development of solar and wind energy resources on public lands by offsetting some of the costs when using a PLA during construction of solar and wind energy development projects consistent with authority under the Energy Act of 2020. The BLM's approach also is consistent with the policy direction in Executive Order 14063 directing Federal agencies to use PLAs in connection with large-scale construction projects to promote economy and efficiency in the context of Federal procurement. A PLA is a pre-hire collective bargaining agreement negotiated between one or more construction unions and one or more construction employers that establishes the terms and conditions of employment for a specific construction project, consistent with 29 U.S.C. 158(f).

The 20 percent reduction of the capacity fee offered in this final rule to incentivize the use of a PLA is necessary to promote the greatest use of solar and wind energy resources on public land, as authorized by the Energy Act of 2020 (43 U.S.C. 3003(b)(2). In particular, PLAs lead to better and more efficient outcomes in the construction of solar and wind energy projects in the following ways, which in turn leads to the greatest use of solar and wind resources. First, PLAs provide better access to and retention of skilled laborers, especially in a limited labor market.[8] Studies and reports demonstrate that skilled labor provided through PLAs offer a higher quality of work, increased labor standards, more timely construction, and fewer

[8] Greg Lacurci, CNBC: *Workers till Quitting At High Rates—And Getting a Big Bump In Pay* (Jan. 4, 2023); Jo Constantz, Bloomberg: *The Great Resignation Worked: Most Job-Swappers Got a Raise* (July 29, 2022); Frank Manzo IV, Larissa Petrucci, & Robert Bruno, Ill. Econ. Policy Inst.: *The Union Advantage During the Construction Labor Shortage* 5 (2022).

deviations from construction plans.[9] Second, PLAs improve workplace safety by offering more apprentice-trained journey workers, which studies have shown lead to fewer injuries.[10] Third, PLAs can ensure construction administration is streamlined, which minimizes undue costs, delays, and inefficiencies in construction projects, particularly complex projects such as wind or solar energy generation facilities.[11] Finally, PLAs contain no-strike, no-lockout clauses that can prevent project construction delays associated with labor disputes.[12]

The benefits associated with PLAs, in turn, would have positive impacts for renewable energy projects on public lands, including ensuring responsible and productive construction, and minimizing the potential duration. These improved construction standards will better meet resource management objectives and ensure authorized uses on public lands are meeting the goal of the Energy Act of 2020 to promote the greatest use of solar and wind energy resources. These improved construction standards also are consistent with the BLM's authority under FLPMA to incorporate right-of-way terms and conditions that, among other things, ''protect Federal property and economic interests,'' ''manage efficiently the lands . . . subject to the right-of-way,'' and ''protect lives and property.'' (43 U.S.C. 1765(b)). Further, as demonstrated by the reports and studies cited above, the use of PLAs leads to higher and more stable wages for workers. These reductions to the rates will further incentivize the use of PLAs by developers and will help to offset higher wages for workers, which, in turn, may help to reduce or eliminate economic hardships for workers who would otherwise not benefit from the higher standards and protections in PLAs.

Some comments argued against the use of the labor union incentives included in the proposed rule and questioned the BLM's authority to offer these incentives. Other comments requested additional provisions be added to ensure responsible use of labor. As described above, the BLM has concluded that, under the authority provided in the Energy Act of 2020 and FLPMA, it has discretion to include reductions for the use of PLAs. These reductions will incentivize the use of PLAs, providing for increased assurances of timely, efficient construction; improved worker safety; and higher and more stable wages for workers. The BLM expects to publish additional policy guidance, such as through instruction memoranda, to clarify how qualifying PLAs will be identified, among other things. In providing this reduction in the final rule, the BLM is promoting responsible use of labor and the greatest use of solar and wind energy resources, as authorized by the Energy Act of 2020, by encouraging solar and wind energy development on public lands.

Some comments suggested that the rule should apply a tiered incentive for developers based on the percentage of local labor they commit to hire, which could be implemented by certified payroll reports that include employee permanent addresses and in consultation with local officials. Several comments supported the inclusion of a reduction for Union Labor or PLAs. In the proposed rule, the BLM described the potential of adding a 20 percent capacity fee reduction for a holder's use of Union Labor or on the contingency of a PLA. In this final rule, the BLM has decided to include a reduction for holders who have entered into, or expect to enter into, a PLA for the construction of a project, based on comments and additional support for the benefits of using PLAs to advance infrastructure projects such as renewable energy projects. This additional reduction parallels the domestic content reduction in this rule in how it is applied in the calculation. This reduction is based on the use of a PLA in project construction and would offset some developer costs. The BLM does not include in this final rule the suggested local labor reduction, but the BLM believes the reduction for a PLA may also support the use of local labor.

Paragraph (b)(1)(v) explains how the BLM applies the alternative MWh rate and the Domestic Content and PLA reductions from paragraphs (b)(1)(ii), (iii), and (iv) of this section. By default, the BLM will apply the ordinary MWh rate under paragraph (b)(1)(i) and the MWh rate reduction under paragraph (b)(1)(ii). A developer who wished to benefit from the alternative MWh rate, the domestic content reduction, or the PLA reduction will need to submit a request for conditional approval prior to the issuance of a grant or lease, along with sufficient documentation to demonstrate that the development qualifies or may later qualify for these rate reductions. In some cases, the BLM will not be able to determine definitively in advance whether the proponent qualifies for these reductions. The BLM may then conditionally approve the requested reductions, but the reductions will not go into effect until the proponent adequately demonstrates that the facility qualifies for the relevant reduction. If energy generation begins before the holder has demonstrated that the facility qualifies, the BLM will charge the holder the capacity fee absent the reduction. The capacity fee could be updated for subsequent calendar years after the holder demonstrates that the facility qualifies, but the BLM will not refund past payments made before the holder demonstrates that they qualify and rate reductions go into effect.

For example, an applicant or presumptive leaseholder (see §§ 2809.13 and 2809.15, below) might request conditional approval of an alternative MWh rate. In that situation, a request for conditional approval for an energy generation facility may be granted if the presumptive leaseholder has entered into or intends to enter into a PPA (see (b)(1)(i) of this section) that has a lower rate than the MWh rate. Documentation submitted to the BLM when requesting conditional approval may include draft or interim PPAs or confirmation in writing from the purchasing party that the parties have entered into negotiations. While the BLM may then conditionally approve the request for an alternative MWh rate, the alternative rate would not go into effect and be used when calculating the payment obligations until the PPA is finalized and the BLM determines, in writing, that the facility qualifies for the alternative rate. The holder's MWh rate would then be updated for the next year's billing. Payments for past years would not be adjusted retroactively.

In another example of a request for conditional approval, an applicant or presumptive leaseholder might request conditional approval of a Domestic Content reduction. In this example, a request for conditional approval may be granted if the proponent demonstrates that it has firm plans to use items

qualifying for the preference. Documentation submitted to the BLM when requesting conditional approval may include procurement contracts or design documents showing that the facility would qualify for this reduction. While the BLM may then conditionally approve the request for a Domestic Content reduction, the reduction would not go into effect and be used to calculate the proponent's payment obligations until the proponent submits documentation of actual costs associated with the construction of the facility, such as fulfilled purchase orders and as-built design documents demonstrating installation of the qualifying domestic content items in that facility and the BLM determines, in writing, that the facility actually qualifies for the reduction. The holder's MWh rate then would be updated for the next year's billing. Payments for past years would not be adjusted retroactively.

Paragraph (b)(2) clarifies that ''E'' is the annual adjustment factor, which is set at three percent. This is the same adjustment factor used for the annual acreage rent under § 2806.52(a)(1)(iii). See § 2806.52(a) of this preamble for further discussion on the annual adjustment factor.

The BLM understands that generally when a solar or wind energy operator begins generating electricity, it has entered into an agreement with a utility or other party to sell its power. It is customary that such agreements include an escalation clause that increases the purchase price of power each year of the agreement. These annual escalations vary by agreement; however, in general, the annual increase is approximately one percent to five percent each year for the contract term to account for gradual decreases in system operational efficiency, operating and maintenance costs, and increases in the retail rate of electricity. There may be some higher annual escalation rates, but that is not common. The BLM determined that a three percent annual adjustment factor is a reasonable escalation for the MWh rate based on a review of the average inflation rate over the previous fifteen years. The BLM considered both an adjustment for inflation that is predictable and an adjustment that changes more precisely with inflation over time. The BLM determined that a set inflationary adjustment that would alter the starting electricity price per MWh by a fixed factor each year was preferrable, because it would increase the predictability of future annual payments. While it is possible that the market price of electricity will deviate from this fixed rate over time, the benefit of rate predictability is important to renewable energy deployment on public lands. Future inflation may be higher than the historically low inflation of the decade or more prior to 2019. To accommodate the more recent inflationary trends, the BLM relied on the IDP–GDP average annual change for the most recent five-year period, 2018–2022 (estimating 2022 with data for three available quarters), which was 3.36 percent, while taking into account that for the ten-year period preceding 2018, the rate was 1.52 percent. The BLM derived the 3 percent rate in the final rule by rounding to the nearest whole percent of the recent inflationary trends.

Some comments requested that the BLM remove the annual adjustment factor or reduce it, possibly using the prior year's IPD–GDP calculation as an adjustment factor. These comments noted that the BLM should be promoting the greatest use of solar and wind energy resources and maximize commercial interest in development on public lands. Other commenters suggested a higher annual adjustment factor, noting that recent inflation amounts are higher than the three percent proposed.

The BLM considered a range of annual adjustment factors, including those based on IPD–GDP calculations. The BLM's use of three percent aims to capture a reasonable annual adjustment based on changes over time. This rule promotes the greatest use of solar and wind energy resources by applying and offering reductions to the capacity fee for qualifying developments. Additionally, the BLM's methodology focuses on rate predictability; making a recurring calculation using the IPD–GDP is a disincentive for solar or wind development because future rates change by uncertain amounts making the BLM rates unpredictable. This final rule does not change the annual adjustment factor due to these comments.

The regular adjustment factor also provides improved predictability of rates over time for renewable energy developers compared to the BLM's previous periodic adjustments of the MWh fee, which were based on a combination of the annual weighted average wholesale price per MWh and the adjusted rate of return for certain U.S. Treasury Bonds, both of which are variable.

Paragraph (b)(3) clarifies that ''F'' is the year of the grant or lease term, which is the same number used for the annual acreage rent under § 2806.52(a)(1)(iv). See § 2806.52(a) of this preamble for further discussion on the year of the grant or lease term.

Paragraph (b)(4) clarifies that ''G'' is the rate of return, which is set at seven percent. By setting the rate of return in this rule, the BLM increases the rate predictability of its capacity fee. This rate of return will not adjust during the term of the authorization. In this final rule, the rate of return is the relationship of income to the total value for a granted use of the public land resource. The rate of return accounts for the value of the authorization each year for use of the resource on public lands that is provided to the BLM through an annual payment.

A comment recommended that the BLM recalculate the rate of return using a 30-year average rate of return for 10-year Treasury Bond rates. The BLM appreciates the suggested recalculation of the rate of return over a 30-year period. The BLM selected the 50-year average of the 10-year Treasury Bond as the reasonable rate to set its rate of return for this rule. See the BLM's Regulatory Impact Analysis accompanying this final rule for further information on how the BLM calculated the rate of return. No changes were made in this final rule due to this comment.

The 50-year simple (*i.e.,* arithmetic) average of the real annual return on 10-year Treasury Bonds is approximately seven percent. This 50-year period includes times when the United States went through periods of stagflation, high inflation, economic boom, and relatively calm market conditions. The BLM's use of the average of the 10-year Treasury Bond rates is a reasonable reflection of a modest return to the government reflective of relatively low risk to the public. The proposed seven percent rate of return is also supported by the Council of Economic Advisors, which estimates a real return to U.S. capital of around seven percent from 1960 to 2014 using data from the National Income Product Accounts and other sources.[13] By setting the rate of return in this final rule, it would not be adjusted in the future, except by further rulemaking.

One comment suggested that the rate of return stay at two percent as currently provided in BLM Manual 2806.60. The comment further suggested that the proposed increase from two to seven percent does not appear to be reasonable and is inconsistent with the Energy Act of 2020. The updated rate setting

[13] Council of Economic Advisers Issue Brief, ''Discounting for Public Policy: Theory and Recent Evidence on the Merits of Updating the Discount Rate'' (January 2017).

methodology in this final rule includes an increased rate of return, consistent with the BLM's authority under FLPMA to collect fair market value. The change in the rate of return is commensurate with other sectors of the energy market that base their return on a percentage of the commodity or energy generation value. It is appropriate that the rate of return change when transitioning from a capacity fee based on nameplate capacities to one based on the value of energy generation at market. The former rate setting methodology (see BLM Manual 2806.60) implemented the authority of the Energy Act of 2020 by reducing the rate of return to two percent. In this final rule, the BLM is applying the authority of the Energy Act of 2020 to the MWh Rate as reductions under § 2806.52(b) instead of reducing the rate of return. In this final rule, the BLM has determined that reductions under § 2806.52(b) for solar and wind energy are more meaningful than the reductions in the Manual 2806.60 and are necessary to promote the greatest use of solar and wind energy resources on the public lands. The BLM did not change this section of the final rule in response to this comment.

Paragraph (b)(5) clarifies that ''H'' is the annual energy generated on public lands for the right-of-way in question. The BLM will issue a bill to coincide with the calendar year based on the annual certified statement provided to the BLM that gives either the amount of estimated or actual electricity generated by the development. The payment for the first year of energy generation will be based on an estimate of energy generation, and then the BLM will determine final payment for that first year based on actual energy generation. The following years of payments made in advance, pursuant to 504(g) of FLPMA, will be based on the most recent calendar year's actual energy generation reported on the certified statement. Exception to using actual energy generation is provided for, in certain circumstances, under paragraph (b)(5)(vi) of this section. Paragraph (vii) addresses late payments specific to underestimating energy generation in certain circumstances.

Paragraph (b)(5) has changed from the proposed rule due to public comments. The BLM proposed to require developers to provide an estimate for each year of energy generation of a development project to calculate the payment in advance. Those estimated energy generation amounts would be updated after that calendar year using actual energy generation amounts and any over or underpayment would be determined at that time. Revisions to this paragraph now provide in the following subparagraphs that:

(i) The holder must submit an annual certified statement to the BLM before the first year of energy generation begins or is scheduled to begin. Thereafter, annual certified statements must be submitted by the end of October.

(ii) Prior to the start of energy generation, the holder must submit the annual certified statement containing an estimate of energy generation on the right-of-way (estimate of first year's energy generation).

(iii) Once energy generation has begun, the holder must submit to the BLM an annual certified statement of the most recent calendar year's actual energy generation on the right-of-way.

(iv) The BLM's calculation for payment of the capacity fee will be based on the certified annual statement. Calculation for payment of the capacity fee for development projects that contain both public and non-public lands will be prorated by multiplying the total energy generated by the percentage of the total development area made up of the right-of-way footprint on public lands.

(v) If the year's actual energy generation exceeds or is less than the amount of energy generation used to bill for the payment in advance, the holder will be billed, credited, or refunded for the underpayment or overpayments pursuant to §§ 2806.13(e) and 2806.16. In no event will the total payment required be less than the annual acreage rent.

(vi) The BLM may approve a request by a holder to provide a new estimate of energy generation in certain circumstances. Circumstances would including those when energy generation is expected to be interrupted, such as with planned maintenance activities, where the amount of energy generated is expected to interrupt energy generation by 25 percent or more, or where the right-of-way holder is aware that the energy generation in the subsequent year will exceed the actual energy generation for the previous year by 25 percent or more such that the BLM's use of the actual generation from the previous year as the basis for a bill would result in an underestimate of more than 25 percent.

(vii) The BLM may assess a late payment fee of 10 percent of actual energy generation for the year in which the underestimation occurs. The holder will pay a late payment fee for each year of underestimation if the right-of-way holder underestimates energy generation by 25 percent or more of the actual energy generation or does not provide the BLM with a new estimate when energy production will exceed the previous year's actual production by more than 25 percent. The BLM may decide not to assess the late payment if the right-of-way holder provides an adequate justification that the underestimation was reasonably unforeseeable prior to payment of the annual bill, consistent with § 2805.12(e).

Some comments asserted that penalties for underestimating generation are inappropriate as factors outside of a developer's control, such as weather or grid related interruptions, may cause unexpected generation shortfalls. Additionally, comments noted that developers have every incentive to maximize production, which may itself cause a developer to underestimate generation. The BLM has revised the rule to reduce the potential that a holder would be subject to a penalty while minimizing the potential for underestimation. Consistent with other comments related to the term length under 2801.9, the BLM has made revisions to § 2806.52(b)(5) that are consistent with revisions made under §§ 2805.12(c)(8) and 2807.17(c). The BLM revised paragraph (vi) and added paragraph (vii) to this final rule due to comments.

Pursuant to § 2805.12(c)(8), a holder may receive a notice from the BLM of their noncompliance with the right-of-way and that they are subject to right-of-way termination. Additionally, the BLM may address a holder's chronic underestimation through existing § 2807.17(a), resulting in suspension or termination of the authorization. The BLM may make such a determination after collecting relevant information, including information provided pursuant to § 2805.12(a)(15).

Some comments requested that the rule preserve sensitive competitive information amongst operators of solar and wind energy development projects. These comments suggested that the BLM could allow developers to submit generation data based on Form 923, which is provided to the Energy Information Administration. The final rule does not carry forward the suggested use of Form 923. The BLM disagrees with waiting the additional time to collect actual energy generation and update or validate prior year bill and payments with rights-of-way holders. As suggested by commenters, using Form 923 would delay billing for actual energy generation amount by an additional year, which is not acceptable for the BLM's responsible stewardship of the public lands. No changes were made due to this comment.

Section 2805.12(c)(8) sets the diligent operation standards for solar and wind

energy development projects and provides steps to follow when a holder expects to fail in meeting diligent operation requirements. Holders may follow the steps outlined in this section to ensure compliance with this final rule.

Paragraph (b)(6) of this section describes where you may obtain a copy of the current MWh rate schedule for solar and wind energy generation.

Paragraph (b)(7) of this section provides for periodic adjustments to the MWh rate. This paragraph applies unless you are an existing holder and elect to continue paying under your current rate adjustment method per § 2806.51(c).

Paragraph (b)(7)(i) of this section clarifies that the rate from the MWh rate schedule for the first year of energy generation will not change once your grant or lease is authorized. The annual adjustment factor under § 2806.52(b)(1)(i) applies to the MWh rate during the term of the grant or lease. Any subsequent MWh rate schedule updates will apply to new grants and leases.

Paragraph (b)(7)(ii) of this section provides that the MWh rate schedule will be updated once every five years consistent with the timing of acreage rent adjustments. The MWh rate schedule will include the annual adjustment factor for the five-year period it covers.

Paragraph (b)(8) of this section provides that the general payment provisions for rents under § 2806.14(a)(4) also apply to the capacity fee.

Paragraph (c) applies unless you are an existing grant or leaseholder and elect to continue with your current MW capacity fee adjustment method. The fee is set at the time of authorization or re-issuance and not adjusted further except by the annual adjustment factor from § 2806.52(b)(2).

Some comments suggested that the BLM should retain discretion under § 2805.12(e) to adjust rent and fee values, including at the request of a right-of-way applicant or holder. While section 2805.12(e)(2) of this final rule does not include a mechanism for applicants or holders to request alternative rent or fee rates in general, the BLM has revised § 2806.52(b)(1)(i) to identify circumstances where the BLM would have discretion to select an alternative MWh rate.

Some comments suggested a wide range of potential fee structures to address environmental and economic factors. Some comments also requested that the BLM clarify how the rents and fee numbers were developed. The BLM's development of the acreage rent and capacity fee was an iterative process that included consideration of the BLM's legal authority; taxpayer concerns for the collection of reasonable rent for the use of public lands and resources; the BLM's prior policies for rents and fees and their impact to solar and wind deployment on public lands; and the national renewable energy goals on public lands set in section 3004 of the Energy Act of 2020. The BLM initially solicited comments in September 2021 after which the BLM published interim guidance in Manual section 2806.60—Rent.

Some comments requested a publication or annual report from the BLM on the payments it has received from solar and wind energy development projects. This information can be found in the BLM's annual publication of Public Land Statistics, which enumerates annual revenues from energy resources including wind and solar rents and fees.

Some comments requested that the BLM provide fee reductions for projects that are sited on previously disturbed lands or outside of sensitive wildlife habitats. The BLM contemplated various methods and models by which to potentially apply rate reductions in this final rule. Additional information on the alternatives considered may be seen in the proposed rule's preamble discussion under subpart 2806. The BLM determined that an across-the-board reduction best meets national energy goals. This methodology provides flexibility and financial incentives without regard to where projects may be sited. Having reduced rent and fee rates that are independent of location complements the BLM's ability to update land use planning, which defines where project applications may be proposed and where projects will not become obsolete if or when technology advances and siting needs shift for economic or environmental reasons.

One comment suggested that a holder should be able to select whether they wish to pay an acreage rent or capacity fee. The BLM disagrees with this comment. This final rule clearly provides for both an acreage rent or a capacity fee for solar and wind energy development projects. Generally, the acreage rent is required for the intensity of use and the occupancy, including site control, of the surface of the public lands. The capacity fee reflects the value of the energy generated from the solar or wind energy resource located on public lands. The BLM will collect the greater of either the acreage rent or the capacity fee for a solar or wind energy development.

One comment suggested rate reductions be made available for existing right-of-way holders who enter into new PPAs for a project during the term of an authorization, such as when they repower. This final rule provides for greatly increased rate predictability for solar and wind energy development rights-of-way. Under § 2806.52(b)(v), the BLM provides an opportunity for conditionally approving a reduction if it receives a request with sufficient documentation demonstrating that the holder may qualify for the reduction before the BLM issues the right-of-way. No other opportunity for later qualifying for a reduction is made available in this rule as the reductions to its rates are available prior to the BLM issuing the ROW. The BLM believes that the adjustments to improve rate predictability, including allowing for a longer term (see § 2801.9) for certain rights-of-way, will provide for the longer economical life of a particular project. An operator or a holder of an existing authorization may elect to keep their current rate methodology, including future adjustments that may be made, if they do not wish to change to the rate-setting methodology of this final rule.

Some comments suggested that the 80 percent reduction of capacity fees without any qualifying stipulations will adversely distort the energy market and land uses. The BLM does not expect this final rule to alter the solar or wind energy markets or uses of public lands adversely. This final rule implements the authority of the Energy Act of 2020 and direction of Executive Order 14008, among others, that set goals to promote the greatest use of solar and wind energy resources on public lands. The rule is intended to incentivize development of wind and solar energy projects on BLM-managed lands. The BLM sees any resulting change that benefits solar or wind in energy markets as a positive development. See *Reductions and Discounts* under 5.1 of the Regulatory Impact Analysis for further information on the 80 percent reduction and the economic impacts of the rule.

Some comments suggested that the BLM should collect fair market value for the use of federal lands under the BLM's rule. While FLPMA generally requires the BLM to collect the fair market value for the use of the public lands, the Energy Act of 2020 provides the Secretary of the Interior with additional authority to reduce acreage rents and capacity fees, including to less than fair market value in certain circumstances. The BLM is implementing this authority to reduce the financial burden to solar

and wind energy developers to promote the national interest of developing a clean energy economy.

Section 2806.54 Energy Storage Facilities That are Not Part of a Solar or Wind Energy Development

Section 2806.54 clarifies that the rent the BLM determines for an energy storage facility that is not part of a solar or wind energy development facility is based on the linear rent schedule. Energy storage facilities may be authorized separately from a solar or wind energy development facility. In these instances, the BLM will apply the linear rent schedule unless the BLM determines that the linear rent schedule does not apply to the underlying right-of-way use under § 2806.70, such as when the BLM may determine that a small site rent schedule applies to an energy storage facility.

The BLM will not charge the rent or fee of a solar or wind energy development right-of-way for an energy storage facility that is separate and independent from a right-of-way for an energy generation facility. Charging a capacity fee would be inappropriate as no energy generation from the facility would be occurring from the use of public lands. Using the pastureland rents for energy storage would also be inappropriate, as use of those acreage rates is intended to be coupled with the capacity fee to determine solar and wind energy generation payments for use of public lands.

Sections 2806.60 through 2806.68 are removed from the final rule. Information formerly contained in these sections is now found in sections 2806.50 through 2806.58.

Subpart 2807—Grant Administration and Operation

Section 2807.17 Under what conditions may BLM suspend or terminate my grant?

Section 2807.17 of this final rule is updated based upon comments on § 2801.9 regarding term length and updates to § 2805.12 regarding new diligent operation requirements for solar and wind energy development. See the respective sections of this preamble for further information on the term length and the terms and conditions of grants and leases for solar and wind energy.

Section 2807.17(c) provides that the BLM may suspend or terminate a right-of-way upon abandonment. The BLM presumes that a right-of-way holder has abandoned its right-of-way by failing to use it for a continuous 5-year period, except for solar and wind energy. Solar and wind energy rights-of-way are presumed to be abandoned after two continuous years of insufficient productivity or upon abandonment. This section is updated consistent with the new provision in § 2805.12(c)(8), which provides for a holder to receive notice of the BLM's presumption and gives a reasonable time to cure the noncompliance with the diligent operations requirement.

Section 2807.20 When must I amend my application, seek an amendment of my grant or lease, or obtain a new grant or lease?

Section 2807.20 describes when a right-of-way applicant must seek to amend its application, grant, or lease.

Paragraph (b) clarifies that ''except for qualifying energy development grants and leases per § 2806.51(c),'' the requirements for amending an application or grant are the same as processing a new application, including payment of processing and monitoring cost recovery fees. Section 2806.51(c) provides a unique exception for existing solar and wind energy rights-of-way authorized before this final rule that may convert to the rent adjustment methodology of this final rule. See § 2806.51(c) of this preamble for further information on qualifying authorizations.

Paragraph (f) describes how the BLM would administer an approved solar and wind energy grant or lease if the holder requests to change the rent adjustment methodology. Any request would have to be received within 2 years of the date this rule becomes effective and would be processed as an amendment by which the BLM would re-issue the grant or lease and update the terms and conditions under § 2805.12 and rent provisions under §§ 2806.50 through 2806.52. The BLM would be able to collect or use processing and monitoring costs under §§ 2804.14 and 2805.16 for handling the request. See § 2806.51(c) for further discussion regarding requests to use the rent adjustment methodology of this rule.

One comment suggested that State and local governments should have a shared decision-making role with the BLM when the BLM considers re-issuing a grant or lease to convert the right-of-way over to the new rate adjustment methodology. The BLM does not agree with the suggestion that State or local government offices should share in a decision-making role when the BLM decides whether to authorize a change to the rent adjustment methodology. Re-issuing an authorization under this final rule is an administrative action that will convert existing authorized projects to the new rate setting methodology for the use of BLM-administered public lands and resources. The BLM will continue to engage with the public, and Tribal, Federal, State and local government partners on the BLM's management of its public lands, as appropriate. The BLM did not change this section of the final rule.

Section 2807.21 May I assign or make other changes to my grant or lease?

Section 2807.21 describes the requirements for a holder seeking to assign or make other changes to a grant or lease.

Paragraph (e) clarifies that when the BLM assigns a right-of-way from one holder to another, it may modify a grant or lease, such as by adding additional terms and conditions. The paragraph exempts solar and wind energy leases from that provision unless modifications are warranted under § 2805.15(e), which provides for changes to terms and conditions as a result of changes in legislation, regulation, or as otherwise necessary to protect the public health or safety or the environment. This final rule removes provisions that distinguished between inside and outside DLAs for solar and wind energy development. The BLM may assign leases inside of DLAs without competition.

One comment suggested that the BLM should retain the authority to impose additional requirements on solar and wind projects. The commenter expressed concern that the BLM may be constrained when it comes to regulating a bad operator especially with regards to excepting a bond requirement and that bond requirements should be mandatory on solar and wind projects, so the BLM does not have to clean up sites after company closure or refusal to perform reclamation. The BLM requires a bond for all solar and wind energy grants and leases. The BLM requires this bonding upfront to cover reclamation costs and to enforce the terms and conditions, such as those for rent and capacity fees. Paragraph (e) provides that the BLM, when assigning a grant or lease to a new holder, may modify the right-of-way and add bonding and other requirements, including additional terms and conditions, except for wind and solar leases which the BLM can only modify when warranted as a result of changes in legislation, regulation, or as otherwise necessary to protect public health or safety or the environment as reflected in § 2805.15(e). The BLM also has diligent development and operation requirements, among other terms and conditions, in § 2805.12 that further ensure a holders' compliance with the

right-of-way authorization and all its requirements. The BLM did not change this section of the final rule.

Subpart 2809—Competitive Process for Solar and Wind Energy Development Applications or Leases

Subpart 2809, ''Competitive Process for Leasing Lands for Solar and Wind Energy Development Inside Designated Leasing Areas'' is dedicated to competitive solar and wind energy processes. In the final rule, Subpart 2809 generally applies the same competitive process both within and outside DLAs.

Section 2809.10 Competitive Process for Energy Development Grants and Leases

Section 2809.10, ''Competitive process for energy development grants and leases,'' applies to public lands located both inside and outside of DLAs. Paragraphs (a) through (d) explain that the BLM may conduct a competitive process to consider solar or wind energy development applications or leases: (1) on its own initiative; (2) based on responses to a call for nominations; (3) based on a request submitted by a member of the public in writing; or (4) when it receives two or more competing applications. These provisions incorporate the BLM's broad discretion under FLPMA to determine under what circumstances it may utilize a competitive process. This section is revised to replace ''offer'' with ''process'' to remain consistent with this section's requirements for solar and wind energy development grant and leases competitive process.

The BLM has determined that it will implement its discretion under FLPMA to potentially utilize a competitive process for lands both inside and outside of DLAs and thus standardize a competitive process where competitive interest exists. More specifically, the BLM will use the most appropriate process given the circumstances of a particular location, spurring more competition for the most desirable areas, while continuing to increase solar and wind energy deployment consistent with the statutory direction in the Energy Act of 2020.

As proposed, prior paragraph (d) is removed consistent with changes made under § 2804.35(b) and elsewhere in subpart 2809. The BLM has discretion to process applications inside DLAs without going through a competitive process. Accepting applications inside DLAs reduces timelines and costs and removes barriers for considering development projects where there is no competitive interest.

Proposed § 2809.10(e) would have precluded the BLM from holding a competitive process when the BLM has accepted a complete application, received a Plan of Development, entered into a cost recovery agreement, and published an EA or Draft EIS. Industry comments suggested that the BLM commit to not holding a competitive process earlier than in the proposed rule. In response to those comments, the final rule establishes that the BLM will not initiate a competitive process for those lands where the BLM has accepted a completed application, received a Plan of Development, and entered into a cost recovery agreement, while removing the requirement that the BLM must have published an EA or a draft EIS.

The final rule also adds to § 2809.10(e) an exception referencing § 2804.25(c). Even where the BLM has accepted a complete application, received a Plan of Development, and entered into a cost recovery agreement, it may nonetheless offer lands in a competitive process if the applicant has not proceeded diligently as required by § 2804.25(c). These amendments give the industry the certainty it needs to proceed with projects while retaining the BLM's discretion to deny an application or offer lands competitively if the applicant does not proceed diligently. In that way, these amendments balance the BLM's obligations to incentivize renewable energy development on public lands and to recover a fair return for U.S. taxpayers.

Some comments suggested that requiring a competitive leasing process in designated leasing areas has helped ensure that only well-thought-out projects are proposed. These commenters raised concerns that eliminating a required competitive process will cause a rush of poorly planned projects and will decrease use of the designated leasing areas. Several comments argued in favor of requiring a competitive process in designated areas, emphasizing that it shifts the burden from taxpayers to those who stand to profit, validates demand, increases financial return for use of public lands, drives innovation, and ensures transparency and fairness in the process. These comments expressed concerns that non-competitive leasing may discourage investment and lead to inefficiencies.

In this final rule, the BLM's change in the use of competitive processes is intended to provide flexibility in addressing interest in the use of public lands for solar and wind energy and will not allow for or authorize poorly planned projects. The BLM retains its discretion to authorize or deny solar or wind energy development projects. As explained in the preamble to the proposed rule, the requirement to undertake competitive processes for all applications in DLA's extends the timeline and increases costs, creating a barrier for authorizing projects in areas where there is no competitive interest. The BLM has broad discretion under FLPMA to determine under what circumstances it may utilize a competitive process for lands both inside and outside of DLAs and to use competitive processes only where competitive interest exists. The BLM anticipates that accepting applications in DLAs without the prerequisite of holding a competitive process will likely generate more applications in the most desirable locations. The final rule also provides the BLM with the flexibility to utilize a competitive process where there are multiple competing applications. The purpose of these changes is to ensure that the BLM can use the most appropriate process given the circumstances of a particular location, which the BLM believes will spur more competition for the most desirable areas, while continuing to increase solar and wind energy deployment consistent with the statutory direction in the Energy Act of 2020.

For the same reasons, the BLM disagrees with the comments that focusing the BLM's competitive process and resources to where there is competitive interest on public lands is a negative impact to taxpayers, demand, financial return, innovation, and transparency. This final rule improves transparency over all processes of the BLM's administration of applications and right-of-way authorizations and achieves the goals set by the Energy Act of 2020 and direction of Executive Order 14008. Moreover, although DLAs represent areas specifically designated for renewable energy development, they are not the only areas where such development may be appropriate, nor are they the only areas where use of a competitive process may be appropriate. These projects are complex and require many different steps and actions to occur to be successful. The BLM believes offering areas outside of DLAs for a competitive process is appropriate and would help to meet the goals of the Energy Act of 2020 and direction of Executive Order 14008.

Some comments suggested leasing should not be competitive, or at least only be considered in specific circumstances, such as when multiple applications for the same area are

submitted or when certain conditions are met, such as when labor agreements are not used. This section of the final rule clarifies when the BLM may conduct a competitive process, including for competing applications under paragraph (d). The BLM disagrees that attaining an agreement to use certain labor should determine whether the BLM holds a competitive process or not. The BLM's discretion to hold a competitive process includes when there is competitive interest for that system or land or upon the BLM's own initiative, among other reasons identified in this section of the rule.

Some comments highlighted the interest in a clear and standardized process and suggested that the potential for competition should be limited to avoid deterring investment. In this final rule, the BLM has provided a clear process that the BLM will follow for solar and wind energy development projects when a competitive process is held. However, the BLM does not agree with comments to limit competition. The BLM will generally hold a competitive process where there is a competitive interest, whether it is inside or outside of designated leasing areas, or on its own initiative.

Other comments recommended adding steps to ensure no competition exists before processing applications without a competitive process. Suggestions given to the BLM include filing a notice in the local newspaper, online, or in the **Federal Register** whenever the BLM receives an application requesting any other applications to be submitted. This final rule does not include provisions to require solicitation of public interest with every application submitted to the BLM for a solar or wind energy development. The Energy Act of 2020 and direction of Executive Order 14008 are clear in seeking expedited deployment of renewable energy projects on public lands. Adding provisions in the BLM's rules that require additional steps to solicit competitive interest where there may not be any may slow the deployment of renewable energy. Historically, the majority of solar and wind rights-of-way authorized on BLM-administered public lands have been authorized after an application process without a competitive process, and there are only six existing competitively issued leases, which is only approximately six percent of authorized development projects on public lands. You may find information on the BLM's authorized and pending solar and wind energy projects on its website at: *https://www.blm.gov/programs/energy-and-minerals/renewable-energy/active-renewable-projects.* More specifically, since the BLM began using competitive processes for permitting solar leases on BLM public lands, the agency has held five competitive processes for 16 parcels. These have resulted in multiple bids for nine parcels, a single bid for three parcels, and no bids for four parcels. In the circumstances that BLM held a competitive process and received no bids, the BLM had previously received several expressions of interest and applications for those public lands. The BLM then held a competitive auction resulting in no bids for three parcels. The BLM did not change this section of the final rule.

A comment requested that the final rule clarify when the BLM will not require an auction. The BLM does not believe additional clarification is necessary, as § 2809.10(e) provides that the BLM would not offer lands through a competitive process when the BLM has accepted a completed application, received a Plan of Development, and entered into a cost recovery agreement.

One comment suggested that the final rule clarify that the BLM should be precluded from using a competitive process to award a solar or wind energy development lease or grant on an area of public lands once an applicant has either submitted a right-of-way application for solar or wind energy development or made substantial investments in potentially developing that area of the public lands. While the proposed rule provided that BLM would not offer lands in a competitive process if four criteria were met, this final rule removes the fourth proposed criterion in section (e): ''on publication of an Environmental Assessment or Draft Environmental Statement.'' The final rule retains the first three, such that the BLM would not offer lands in a competitive process for which it has accepted a complete application (see § 2804.12(j)), received a Plan of Development (see § 2804.12(b)), and entered into a cost recovery agreement (see § 2804.14). This change requires fewer milestones to close the window for holding a competitive process than the proposed rule and improves certainty for interested developers to proceed with applications but it does not move the threshold for prohibiting competitive processes earlier than in the existing regulations as the commenter suggested.

In addition to the changes under 2809.10(e), the BLM revised § 2804.25(c) to clarify that the BLM retains discretion to deny an application where the applicant does not proceed diligently. An applicant's failure to remain diligent in processing an application may result in the BLM denying the application and offering the lands competitively. These amendments balance the BLM's obligations to incentivize renewable energy development on public lands and to recover a fair return for U.S. taxpayers.

A comment suggested that the BLM should not require a competitive process where an applicant's facilities are located on both private and federal lands and the applicant has secured agreements with the adjacent landowners. This final rule governs the BLM's administration of applications and authorizations, including competitive processes. The BLM will consider all relevant and available information when determining whether a competitive process is appropriate, including whether separate agreements had already been met for adjacent lands. However, this rule does not preclude the BLM from holding a competitive process when agreements are held for adjacent lands, which would allow developers and adjacent landholders to effectively monopolize the use of the public lands without first obtaining authorization from the BLM. In instances where the BLM believes it is appropriate, it may determine to hold a competitive process.

Other commenters suggested that the BLM should only have the discretion to move to a competitive process in the initiation phase of a project and not after an application is complete and the cost recovery is funded. This final rule maintains the BLM's discretion to determine whether there is a competitive interest in the public lands. In the BLM's experience, some applications progress more slowly than others once the existing requirements of the BLM rules are met. By requiring a complete application pursuant to § 2804.12(j), a Plan of Development pursuant to § 2804.12(b), and a cost recovery agreement pursuant to § 2804.14, the BLM will help ensure that applicants remain diligent in pursuing their use of the public lands, while preserving discretion to utilize a competitive process. Even after that point, § 2804.25(c) of the final rule clarifies that the BLM retains discretion to deny an application where the applicant does not proceed diligently. These additional conditions will not unreasonably burden diligent applicants and will help identify those applicants who are not working with the BLM to process applications diligently.

Section 2809.11 How will the BLM call for nominations?

Section 2809.11 is retitled to improve consistency with this section of the final rule. No changes were made to this section due to comments. Consistent with the change in terminology of § 2809.10, the BLM changed ''offer'' with ''process'' throughout this section.

Paragraph (a) provides that the BLM may publish a notice in the **Federal Register** calling for nominations of lands to be offered through a competitive process for solar and wind energy development. Other notification methods may also be used, such as a newspaper of general circulation in the affected area or the internet. The section allows for the BLM's discretionary use of a competitive process discussed in § 2809.10. The paragraph would also specify information that will be included in a call for nominations as follows:

(1) The date, time, and location by which nominations must be submitted;

(2) The date by which nominators will be notified of the BLM's decision on timely submissions;

(3) The area or areas for which nominations are being requested; and

(4) The qualification for a nominator, which must include at a minimum the requirements for an applicant, see § 2803.10.

Paragraph (b) provides the requirements for nominating a parcel of land for a competitive process. Paragraph (b)(1) requires payment of $5 per acre for nominated parcels. The nomination fee is collected by the BLM under its cost recovery authority under Sections 304(b) and 504(g) of FLPMA, and the portion not spent in processing the nomination and preparing for a competitive process may be refunded to the nominator if not successful in the competitive process. These fees reimburse the BLM for the expense of preparing and holding a competitive process.

Paragraph (b)(2) requires the nomination to include the nominator's name and address of record. This information is necessary for the BLM to communicate with the nominator about a future competitive process for the parcel.

Paragraph (b)(3) requires that a nomination be accompanied by a legal land description and a map of the parcel of land. This information helps identify nominated parcels for the competitive process.

Paragraph (c) provides that the BLM will not accept nomination submissions that do not comply with this section or from submitters who are not qualified per § 2803.10 to hold a grant or lease.

Paragraph (d) provides that a nomination cannot be withdrawn except by the BLM for cause, in which case the nomination fee would be refunded.

Paragraph (e) provides that the decision whether to hold a competitive process in response to a nomination lies in the BLM's discretion.

Some comments requested that the BLM make the nomination fee non-refundable. One comment further suggested that the BLM require ''skin in the game'' from project proponents and that the BLM should keep the fee to cover at least any reasonable costs it incurred in pursuing the nomination. The BLM agrees with comments suggesting that the fee should be used in recovering its reasonable costs in processing the nomination and preparing for a competitive process. The BLM's authority under Sections 304(b) and 504(g) of FLPMA allows for the use of these funds in processing applications. Per existing rules, the BLM may refund the balance, if any, of collected cost recovery funds when they are no longer needed. Please see existing subpart 2804, starting with § 2804.14, for more information on the BLM's administration of cost recovery fees.

Section 2809.12 How will the BLM select and prepare parcels?

Section 2809.12 describes how the BLM identifies parcels suitable for competitive processes. The BLM did not make changes to this section of the final rule in response to comments received, except that, consistent with the change in terminology of prior sections, the BLM changed ''offer'' to ''process'' throughout this section. The BLM also removed ''on existing'' when describing land use designations to avoid confusion and clarify that only existing land use designations may be considered.

Paragraph (a) clarifies that the BLM may rely on any information it deems relevant in identifying parcels for competitive processes, but also describes more precisely the most common sources of information, which include public nominations and existing land use designations. The BLM is not constrained to consider only these listed sources of information when deciding whether to conduct competitive processes for certain parcels.

Paragraph (b) clarifies that the BLM may conduct necessary studies and site evaluation work, including applicable environmental reviews and public meetings, either before or after offering lands for a competitive process. The BLM has sometimes found that the necessary studies and site evaluation work cannot be completed until the competitive process is held and the successful bidder has submitted an application or Plan of Development. The BLM must complete site-specific NEPA analysis even when the BLM has identified a successful bidder as the presumptive leaseholder. The BLM retains discretion to approve, approve with modification, or deny a proposed energy development.

The BLM revised the language of proposed paragraph (c) to clarify that it is the BLM's choice whether to use a competitive process or not and that such choices do not constitute a decision to approve or deny a grant or lease and are not subject to appeal under 43 CFR part 4.

A comment suggested that under paragraph (c), the final rule should allow for administrative appeals, as it relates to BLM procedures used to make decisions. Paragraph (c) of the final rule clarifies that the BLM's choice about whether to use a competitive process is not a decision to grant or deny a right-of-way or otherwise final agency action; instead it represents only an intermediate step that may or may not lead to a decision. The public's ability to administratively appeal an agency decision to grant or deny a right-of-way is unaffected by this provision. The BLM will continue to provide ample opportunities to the public for engagement throughout both the competitive and non-competitive permitting processes. An appeal may be considered when the BLM issues a decision under 43 CFR part 2800.

A comment suggested that allowing for an administrative appeal process to challenge a BLM choice to use a non-competitive process would assist the BLM in identifying whether there is any competitive interest in the public land, getting a better return for the public. The BLM disagrees with this comment. Administrative appeals may be submitted only for agency decisions (see existing § 2801.10). Additionally, allowing for administrative appeals over interim choices by the BLM about which procedures to follow to reach a decision would likely delay its decision-making process substantially.

Section 2809.13 How will the BLM conduct competitive processes?

Section 2809.13 is retitled from the proposed rule consistent with other changes to replace ''offer'' with ''process.'' The change from the proposed rule to read ''process'' when describing the BLM's competitive process is made throughout this section when appropriate.

This section describes how the BLM conducts competitive processes.

Paragraph (b) provides that the BLM publishes a notice of competitive process in the **Federal Register** and through other notification methods, such as a newspaper of general circulation in the area affected or the internet. Paragraph (b)(7) clarifies that the notice of competitive process would state whether a successful bidder would become a preferred applicant or a presumptive leaseholder. Preferred applicants are required to meet application submission requirements under § 2804.12, and presumptive leaseholders are required to submit a Plan of Development per § 2809.18. The preferred applicants and presumptive leaseholders are discussed further in § 2809.15.

Under paragraph (c) of this final rule, the BLM will notify nominators of its decision to conduct a competitive process at least 30 days in advance of the bidding for the lands that were nominated if the nominator has paid the nomination fees and demonstrated qualifications to hold a grant or lease.

Some comments suggested that under paragraph (b)(7) the BLM should continue to require a successful bidder to submit a Plan of Development. The BLM agrees with these comments. A Plan of Development is required in this final rule by a presumptive leaseholder under paragraph 2809.15(a)(ii) and by a preferred applicant who would follow the application process for solar and wind energy applications, including the submission of a Plan of Development required under § 2804.25(c).

Section 2809.15 How will the BLM select the successful bidder?

Section 2809.15 explains how the successful bidder is selected. In this final rule, the distinction between preferred applicants and presumptive leaseholders reflects the fact that the BLM may conduct competitive processes in a variety of circumstances with different outcomes. The distinction between presumptive leaseholder and preferred applicant is intended to ensure that the BLM can expedite approval of proposed projects in areas where the environmental impacts of solar and wind energy development have been previously analyzed and disclosed through a land use planning process. This will help ensure that the BLM does not commit public land resources before completing the necessary analyses. This section is also revised, consistent with other changes in this rule, to refer to ''process'' where appropriate when describing the BLM's competitive process.

Paragraph (a) of this final rule provides that the highest bidder, prior to any variable offsets, is the successful bidder. Successful bidders may become either the presumptive leaseholder or the preferred applicant.

The term ''presumptive leaseholder'' describes situations in which at least one round of environmental review for solar or wind energy development has been conducted before the competitive process is held, so that the environmental impacts of potential development are relatively well understood before the competitive process is held and the successful bidder has a high likelihood of being able to obtain an authorization to develop its proposed project. As set forth in paragraph (b)(1)(i), a successful bidder would only be designated as a presumptive leaseholder if the lands for which the competitive process is held are located within a DLA and the BLM has indicated in advance that the successful bidder would become a presumptive leaseholder (see also § 2809.13(b)(7)). These requirements would limit the use of the term ''presumptive leaseholder'' to situations in which the BLM has previously completed an environmental analysis for solar or wind energy development in the area through the land use planning process and has specified in advance (through the notice of competitive process) many of the terms, conditions, and mitigation measures that would need to be incorporated into an approved authorization. A presumptive leaseholder does not have to complete the initial application review stage, which is designed to ensure that the site is generally appropriate for solar or wind energy development. A presumptive leaseholder has site control for a solar or wind energy development, precluding other competing solar or wind energy development projects from siting on that land, unless allowed by the presumptive leaseholder. The BLM would also not process other applications for use of that land unless allowed by the presumptive leaseholder.

This final rule also recognizes that even with a presumptive leaseholder, an additional site-specific environmental analysis may be required before the BLM irretrievably commits to allowing a facility to be developed. The BLM retains its full discretion in considering whether to approve a presumptive leaseholder's proposal based on site-specific environmental analysis, which would typically be tiered to the area-wide environmental analysis accompanying the identification of the area as a DLA. Paragraph (b)(1)(ii) therefore notes that the presumptive leaseholder's right to develop a project on the site is contingent upon the BLM's approval of the presumptive leaseholder's Plan of Development. Once the BLM approves the proposed Plan of Development, following a site-specific environmental analysis, a lease could be awarded, conferring a right to develop a project on the site, and the presumptive leaseholder would become a leaseholder.

In other cases, the BLM could conduct a competitive process without having completed an initial environmental analysis for solar or wind energy development for that area. In such cases, as set forth in paragraph (b)(2), the successful bidder would become the ''preferred applicant'' and would obtain only the exclusive right to submit an application for solar or wind energy development on that site without further competition from other applicants for solar or wind energy development. Such an application would be processed under subpart 2804 in the same manner as other, non-competitive applications. The BLM would conduct a full environmental analysis before the preferred applicant may obtain a grant and the right to develop a project on the site. A preferred applicant that fails to meet the requirements of subpart 2804 may lose their status as the preferred applicant, and the BLM may deny their application consistent with § 2804.26.

Paragraph (b) provides that a successful bidder becomes a presumptive leaseholder or preferred applicant only after making payments required in paragraph (d) of this section and satisfying the requirements for holding a grant or lease under § 2803.10. The BLM could move on to the next highest bidder or re-offer the lands under § 2809.17 if the successful bidder does not satisfy these requirements.

Paragraph (b)(1) describes the requirements to become a presumptive leaseholder, which are that the public lands successfully bid upon are located within a DLA and that the notice of competitive process indicated successful bidders would become presumptive leaseholders. This paragraph also provides that the BLM would only award a presumptive leaseholder a lease if the BLM approves the Plan of Development that is submitted in accordance with § 2804.25(c).

Paragraph (b)(2) describes the requirements for a preferred applicant. A successful bidder who does not become a presumptive leaseholder in accordance with paragraph (b)(1) would become a preferred applicant. The BLM would process applications for a grant or lease under § 2809.12. As with presumptive leaseholders, approval of a

preferred applicant's application is not guaranteed. However, the BLM would not process other applications for solar and wind energy development on lands where a preferred applicant has been identified, unless allowed by the preferred applicant.

The BLM may consider issuing authorizations for other uses, such as roadways, testing facilities, recreation permits, or even rights-of-way under MLA authority on the lands for which there is a preferred applicant. Processing authorizations for other uses under Title V of FLPMA would be performed under subpart 2804. Recreation permits and rights-of-way under MLA authority would be processed under parts 2920 and 2880, respectively. In some instances, such as with applications for incompatible uses, the BLM may determine that the proposed uses would be incompatible, and therefore that processing these other applications must wait until it issues a decision on a preferred applicant's application for solar or wind energy development.

Previous paragraphs (b) and (c) are redesignated as (c) and (d) respectively. Redesignated paragraph (c) is not revised; it provides that the BLM will determine variable offsets for the successful bidder in accordance with § 2809.16.

Redesignated paragraph (d) provides for bidder payment terms. Paragraph (d)(1) provides for certain payment methods, such as personal check, cashier's check, certified check, bank draft, or money order, as well as other methods deemed acceptable by the BLM, should be paid to the Department of the Interior—Bureau of Land Management.

Paragraph (d)(2) requires payment of 20 percent of the bonus bid and the minimum bid amount by the close of official business hours on the day on which the BLM conducts the competitive process or other time the BLM has specified in its notice.

Paragraph (d)(3) requires payment of the balance of the bonus bid within 15 days after the day on which the BLM conducts the competitive process. Variable offsets are applied under paragraph (c) of this section. Such payments are made to the BLM office conducting the competitive process.

Paragraph (d)(4) requires payment within 15 days after the day on which the BLM conducts the competitive process to pay: for preferred applicants, the application filing fee under § 2804.12(c) less any application fee already paid under § 2809.11(c)(1); or for presumptive leaseholders, the acreage rent for the first full year of the lease as provided in subpart 2806.

Paragraph (d)(5) clarifies that the BLM may require successful bidders to pay reasonable costs in addition to the application filing fee when processing an application. Additional reasonable costs may include a Category 6 cost recovery for the BLM to complete processing the application. If a Category 6 cost recovery fee is required, it will be reduced by the amount of the application filing fee already paid. See § 2804.19 of existing regulations for further information on Category 6 cost recovery.

Paragraph (e) explains that the successful bidder will not become a preferred applicant or a presumptive leaseholder and the BLM will keep all money that has been submitted with the competitive process if the successful bidder does not satisfy the payment terms under paragraph (d) of this section. In such a case, the BLM could proceed to the next highest bidder or re-offer the lands through a competitive process under § 2809.17.

A comment questioned the rationale behind determining the highest bidder as the presumptive leaseholder instead of the BLM making an offer to the highest bidder. The commenter suggested that the BLM would then offer the lease to subsequent bidders if the preceding highest bidder declines. The BLM's competitive process in this final rule informs prospective bidders what they would be bidding for in advance of a competitive process. The BLM's required process under this final rule provides important information to prospective bidders up front, reducing uncertainty on what they may bid on. Prospective bidders will be able to bid more confidently with that information. This will also likely result in more and higher bids than would be received if the BLM provided such information after a competitive process and will reduce the need for the BLM to engage the second highest bidder should the highest bidder decline.

The BLM understands from a comment that there may have been some confusion on how the rule distinguishes between holding a competitive process and selecting a presumptive leaseholder or preferred applicant. In this final rule, § 2809.15(b) makes clear that both of the following criteria must be met to be a presumptive leaseholder: first, lands offered must be located within a DLA, and second, the notice of competitive process must indicate that bidders are bidding to become a presumptive leaseholder. The requirement that the lands be within a DLA is important because DLAs, by definition, have been subject to prior environmental analysis and a land use plan decision to designate the area for solar or wind energy leasing. The environmental analysis would have identified potential conflicts and assessed the environmental impacts of siting a solar or wind energy generation facility, and through the land use planning process the BLM would have determined any necessary mitigation measures prior to the BLM offering the site for leasing. The requirement that the notice of competitive process must indicate that bidders are bidding to become a presumptive leaseholder, meanwhile, is important because it ensures that the terms and consequences of the competitive process are clear to all parties before the bidding occurs, and because it retains the BLM's discretion to conduct a competitive process for a preferred applicant, rather than a presumptive leaseholder, even within a DLA.

Some comments expressed concern that the BLM continues to determine that processing of applications for ''incompatible'' uses must wait until it issues a decision for a first-in-line solar or wind energy development and believe this violates the intent of FLPMA. Commenters believed the language of the rule is unclear about whether these other applications are from other applicants for a similar right-of-way or whether it would apply to applications for other land uses. These commenters assert that either scenario is inconsistent with FLPMA's multiple-use mandate.

In this portion of the rule, the BLM's presumption is that the BLM has already identified a ''preferred applicant'' or that the lands have already been identified in the BLM's land use planning process as a DLA. The FLPMA gives BLM discretion as to how it will process applications, including competing ones for the same parcel. This does not violate FLPMA's multiple-use mandate.

Section 2809.16 When do variable offsets apply?

Section 2809.16 provides that a successful bidder may be eligible for a variable offset of bonus bids. This section is also revised, consistent with other changes in this rule, to read as ''process'' where appropriate when describing the BLM's competitive process.

Paragraph (c) in this final rule clarifies to readers that the offsets are not limited explicitly to what is listed and that the BLM may use other factors, including progressive steps towards the listed factors.

Paragraph (c)(10) is unchanged except for formatting to account for new paragraphs (c)(11) and (12).

Paragraph (c)(11) provides an incentive for use of items that qualify for the Domestic Content preference in solar and wind energy generation facilities on public lands, to complement the fee reduction described in § 2806.52(b)(1)(iii). To qualify for the Domestic Content variable offset, prospective bidders must demonstrate how they will meet the thresholds to qualify for the variable offset. Similar to the Domestic Content reduction for the capacity fee described in 2806.52(b)(1)(iii), the thresholds identified in the notice of competitive process are consistent with the requirements for the domestic content preference in 2 CFR part 184. A prospective bidder is required to provide sufficient documentation to the BLM prior to the competitive process to show how the bidder qualifies or will qualify for this variable offset. This may be documentation in an initial Plan of Development provided to the BLM or other methods discussed in § 2806.52(b)(1)(v) of this preamble. As discussed below, the BLM may hold in suspense the amounts corresponding to the variable offset until construction of the facility is substantially complete or the successful bidder otherwise demonstrates to the BLM that the project has met the domestic content thresholds.

Some comments suggested that including a requirement for a domestic content preference as a variable offset would raise the cost to taxpayers. The BLM disagrees with commenters that this rule will increase costs to taxpayers. This final rule does not require bidders or holders to qualify for the Domestic Content preference as a variable offset or other reductions and variable offsets. As the comments were based on an incorrect assumption that the rule requires buying domestic equipment, no change was made in response to comments.

Paragraph (c)(12) provides an incentive for use of qualifying PLAs, such as during the construction of a solar or wind energy generation facility on public lands, to complement the fee reduction described in § 2806.52(b)(1)(iv). To receive the PLA variable offset, prospective bidders must demonstrate how they qualify in the notice of competitive process. A prospective bidder is required to provide sufficient documentation to the BLM to show how they qualify, such as in an initial Plan of Development or other methods discussed in § 2806.52(b)(1)(v) of this final rule. The BLM may hold in suspense the amounts corresponding to the variable offset until construction of the facility is substantially complete or the successful bidder can otherwise demonstrate to the BLM that the PLA has been executed for the facility.

Some comments supported the use of a PLA as a basis for offering a variable offset. These comments requested that the BLM hold a second competitive process if the BLM does not receive bidders qualifying for a PLA variable offset. This second competitive process would allow for other potential bidders to qualify. The final rule does not limit the number of competitive processes that the BLM may hold. However, the BLM has included PLAs as an optional variable offset.

Some comments noted that union labor laws vary from State to State, suggesting that oversight should be by the State. This final rule provides a variable offset for interested bidders when using a qualifying PLA for competitive processes for solar or wind energy. The BLM's offer of a PLA variable offset does not rely on or necessarily preclude applicable State laws as they may apply to project labor. The BLM may not approve a variable offset from a bidder if it does not comply with applicable laws.

Some commenters disagreed with the BLM offering variable offsets, such as for domestic content and the use of union labor, because developers may also receive reduced payments under § 2806.52. This final rule offers a bidder potential benefits from both a variable offset and a capacity fee reduction. The BLM believes these variable offsets will incentivize prospective bidders to initiate projects with known benefits and approaches that will further benefit the public. Moreover, as described above, reductions to the capacity fee under § 2806.52(b) will promote the greatest use of solar and wind energy resources on public lands consistent with 43 U.S.C. 3003.

Paragraph (c)(13) provides that the BLM may use other factors when determining whether additional types of variable offsets for a competitive process are appropriate.

Some comments requested additional variable offsets to promote responsible wind and solar development, using efficient technology, agreements with local authorities that benefit communities, redevelopment of disturbed sites, and combining or collocating energy infrastructure. The final rule continues to provide an opportunity for additional variable offsets in a competitive process under § 2809.16(c)(13). The BLM will describe the additional variable offsets, including how you may qualify for such additional variable offsets, in the notice of competitive process.

Paragraph (e) provides for bidders to qualify for a variable offset after the BLM holds a competitive process. This final rule recognizes that a bidder may not be able to demonstrate the qualifications for some variable offsets to the BLM's satisfaction until after the BLM holds the competitive process, such as with new provisions in §§ 2809.16(c)(11) or 2809.16(c)(12) for energy development facilities that would contain items qualifying for the Domestic Content preference or use of a PLA. A bidder may conditionally qualify for a variable offset before the competitive process and then later demonstrate their qualification to the BLM and perfect their qualification. The BLM will describe in the notice of competitive process the way a bidder may conditionally qualify for the variable offset and could include methods such as a written statement to the BLM that they intend to qualify for the variable offset. The bidder, if successful, must later demonstrate to the BLM that they have qualified for the variable offset. The BLM may set a deadline in the notice for bidders to demonstrate that the proposed facility qualifies for the variable offset. If the bidder does not qualify for the variable offset in the time provided or the bidder is not able to adequately demonstrate they qualify for the variable offset, the U.S. Government will retain the bid money as the balance of the bonus bid.

A comment stated that if the BLM sets a deadline to qualify for a variable offset in the notice of competitive process, there should be a reasonable deadline given to demonstrate qualifications. The BLM agrees with this comment and provides a deadline, including the timeframe to qualify for the variable offset, in its notice of competitive process. See § 2809.16(e) of this part.

Section 2809.17 Will the BLM ever reject bids or re-conduct a competitive process?

Section 2809.17 identifies situations when the BLM may reject a bid, offer a lease to another bidder, or re-offer a parcel. This section is retitled from the proposed rule, consistent with other changes in the final rule to read ''process'' when describing the BLM's competitive process.

Paragraph (b) provides that the BLM may make the next highest bidder the successful bidder if the named successful bidder does not satisfy the successful bidder requirements identified under § 2809.15, does not

execute the lease, or is for any reason disqualified from holding the lease.

As proposed, paragraph (d) is removed from this section as it is unnecessary with other revisions made in this final rule to make public lands inside of DLAs available to application without a competitive process.

Section 2809.18 What terms and conditions apply to a solar or wind energy development lease?

Section 2809.18 lists the terms and conditions of solar and wind energy leases, which are issued inside of areas classified or allocated for solar or wind energy (*e.g.,* DLAs).

Paragraph (a) clarifies that a lease awarded from a competitive process provides site control to a lessee. However, the presumptive leaseholder may not construct any facilities on the right-of-way until the BLM issues a subsequent notice to proceed, see paragraph 2809.15(b)(1)(ii) of this final rule. The term of a lease is consistent with § 2805.11(c) of this final rule, which provides for a reasonable term up to 50 years, considering the cost of the facility, its useful life, and the public purpose it serves.

Paragraph (b) provides for rent terms for solar and wind energy leases as specified in § 2806.52.

Paragraph (f) provides that lease assignments are applied for under § 2807.21. The BLM will not make any changes to the lease terms or conditions, as provided in § 2807.21(e), except for modifications required under § 2805.15(e). Changes to right-of-way terms or conditions would involve an amendment action by the BLM in addition to the assignment action.

One comment recommended that the BLM adjust the terms and conditions with an assignment to provide for land access, lease length, processes, collaboration with other agencies, and decommissioning. This final rule maintains the BLM's process for assigning leases. Generally, a solar or wind energy lease assignment is an administrative action transferring the lease from a holder to a prospective holder. The BLM's analysis to approve or approve with modification the development lease includes analyzing the access, lease term length, participation from public and partners, and the end-of-life decommissioning and restoration of the public lands. The BLM does not need to revisit these considerations before assigning a lease unless there are substantial changes that may justify a change to the lease. For example, the BLM may modify a lease under § 2805.15(e), which reserve the BLM's right to change the terms and conditions as a result in changes in legislation, regulation, or as otherwise necessary to protect public health or safety or the environment.

Section 2809.19 Applications in Designated Leasing Areas or on Lands That Later Become Designated Leasing Areas

As proposed, Section 2809.19 is removed from the BLM's rules in its entirety. In this former section, the BLM explained how it would evaluate applications for public lands that later become a DLA. The former section is inconsistent with the changes in this rule that allow for applications in DLAs without first holding a competitive process. Because designation of a DLA does not preclude non-competitive leasing, there is no need for the BLM to automatically suspend a non-competitive leasing application because the lands at issue are being considered for designation. At the same time, the BLM may in its discretion deny an application or assign the application a low priority under § 2804.35.

Some commenters supported the BLM making public lands inside DLAs available for non-competitive leasing by application. These commenters continued to suggest that the BLM should provide public notice regarding how the BLM will handle non-competitive lease applications. The notice should provide for at least a 30-day cutoff date for any expressions of interest regarding a competitive interest for offering lands within the DLA. The BLM agrees with comments that notice to the public is appropriate regarding how the BLM will administer solar and wind energy applications in an area affected by a land use plan amendment. However, each planning action or programmatic analysis is unique, and the BLM will respond to the unique conditions for solar and wind energy applications specific to that plan amendment or programmatic analysis. This may or may not include a period of time in which the BLM would continue to accept applications.

Severability

Existing § 2801.8 provides: ''If a court holds any provisions of the regulations in this part or their applicability to any person or circumstances invalid, the remainder of these rules and their applicability to other people or circumstances will not be affected.'' If any portion of this final rule were to be stayed or invalidated by a reviewing court, the remaining elements would continue to provide BLM with important and independently effective tools relating to the administration of its right-of-way and renewable energy programs. Hence, if a court prevents any provision of one part of this rule from taking effect, that should not affect the other parts of the rule. The remaining provisions would remain in force because they could still operate sensibly.

For example, the provisions that reduce rents and fees to implement the Energy Act of 2020 may function independently of the rest of the rule. Indeed, each particular change in rents and fees may function independently. Thus, if a court were to invalidate the Domestic Content reduction or Project Labor Agreement reduction, the other rent and fee provisions should remain undisturbed. Similarly, the provisions that reduce rents and fees may function independently of the provisions that allow the BLM to choose whether to conduct competitive processes inside and outside DLAs.

V. Procedural Matters

Regulatory Planning and Review (Executive Orders 12866 and 13563) and Modernizing Regulatory Review (Executive Order 14094)

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will review all significant rules. E.O. 14094 updates the significance criteria in section 3(f) of E.O. 12866.

OIRA has determined that this final rule is a ''significant regulatory action'' within the scope of E.O. 12866, as amended by E.O. 14094.

The BLM's Regulatory Impact Analysis concluded that the rule may have an annual effect on the economy of $200 million or more. These effects are associated with construction of projects induced by this rule. Additionally, the BLM estimated that the rule would have distributional impacts in the form of transfer payments from right-of-way applicants and holders to the BLM. Transfer payments are monetary payments from one group to another that do not affect total resources available to society. While disclosing the estimated transfers are important for describing the distributional effects of the rule, these payments should not be included in the estimated costs and benefits per OMB Circular A–4.

For more detailed information, see the Regulatory Impact Analysis for Revisions to 43 CFR 2800 (Regulatory Impact Analysis) prepared for this rule. This Regulatory Impact Analysis has been posted in the docket for the rule on the Federal eRulemaking Portal: *https://*

www.regulations.gov. In the Searchbox, enter ''RIN 1004–AE78,'' click the ''Search'' button, open the Docket Folder, and look under Supporting Documents.

E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the Nation's regulatory system to promote predictability, reduce uncertainty, and use the best, most innovative, and least burdensome tools for achieving regulatory ends. The E.O. directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rule making process must allow for public participation and an open exchange of ideas. The BLM has developed this rule in a manner consistent with these requirements.

Regulatory Flexibility Act

This rule will not likely have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*). The RFA generally requires that Federal agencies prepare a regulatory flexibility analysis for rules subject to the ''notice-and-comment'' rulemaking requirements found in the Administrative Procedure Act (5 U.S.C. 500 *et seq.*), if the rule would have a significant economic impact, whether detrimental or beneficial, on a substantial number of small entities. See 5 U.S.C. 601–612. Congress enacted the RFA to ensure that government regulations do not unnecessarily or disproportionately burden small entities. Small entities include small businesses, small governmental jurisdictions, and small not-for-profit enterprises.

The BLM reviewed the Small Business Size standards for the affected industries. We determined that a small share of the entities in the affected industries are small businesses as defined by the Small Business Act (SBA). However, the BLM believes that the impact on the small entities is not significant. Although the rule could potentially affect a substantial number of small entities, the BLM does not believe that these effects would be economically significant.

The rule would benefit small businesses by streamlining the BLM's processes and reducing annual rent and capacity fee payments. These reductions may motivate investment in additional generation capacity and facilities by freeing up money that would have otherwise been paid to the BLM as rents or fees. The rule also modifies provisions that allow for an entity to request a waiver or reduction to annual rent and capacity fee payments.

For the purpose of conducting its review pursuant to the RFA, the BLM believes that the rule would not likely have a ''significant economic impact on a substantial number of small entities,'' as that phrase is used in 5 U.S.C. 605. Therefore, the BLM has not prepared a final regulatory flexibility analysis.

Some comments noted that they believe there has been insufficient analysis on this rule and request the BLM perform an initial and final regulatory flexibility analysis, as it is required by Sections 603 and 604 of the Regulatory Flexibility Act for rules that may have a significant economic impact on a substantial number of small business and governmental entities. Some commenters also believe the BLM has broken down connected and interrelated rule-making processes to avoid significance and therefore has failed to conduct the necessary impacts analysis under the Regulatory Flexibility Act, NEPA, E.O. 12866 and other applicable authorities as required under the Administrative Procedure Act.

The BLM determines that solar and wind projects with generating capacities of less than 100 MW have average annual receipts of $5.2 million (solar) and $4.1 million (wind), which falls within the range of receipts identified for small businesses in the SBA size standards. The average size of projects currently under review by the BLM is 500MW. Also, projects smaller than 100MW may still fail to be small businesses if they are owned by larger corporations or governmental entities. While it is reasonable to expect that some small businesses will be affected, it is not expected to be a substantial number. Further, the principal effect will be a reduction in rents and capacity fees for the small businesses—a benefit. In general, the share of rents and capacity fees is small relative to project revenues. Therefore, the benefits are not a significant economic impact on the small businesses.

Congressional Review Act

This action is subject to the CRA, and BLM will submit a rule report to each chamber of Congress and to the Comptroller General of the United States. This action meets the criteria in 5 U.S.C. 804(2).

Comment Summary: In response to the proposed rule, a commenter requested that the BLM explain contradictory conclusions of regulatory impact in accordance with the Congressional Review Act and E.O 12866, and coordinate with local governments and businesses to collect inclusive and broad economic data to make an informed determination.

Response: The commenter's concern has been overtaken because DOI will report to Congress on the promulgation of this rule prior to its effective date. The report will state that the Office of Information and Regulatory Affairs has determined that this rule meets the criteria set forth in 5 U.S.C. 804(2).''

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or Tribal governments, or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on State, local, or Tribal governments, or the private sector. Under the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1531 *et seq.*), agencies must prepare a written statement about benefits and costs, prior to issuing a proposed or final rule that may result in aggregate expenditure by State, local, and Tribal governments, or the private sector, of $100 million or more in any 1 year.

This rule is not subject to the requirements under the UMRA. The rule does not contain a Federal mandate that may result in expenditures of $100 million or more for State, local, and Tribal governments, in the aggregate, or to the private sector in any one year. The rule would not significantly or uniquely affect small governments. A statement containing the information required by the UMRA is not required.

One comment requested that the BLM submit documentation that is complete, transparent, and factual for this rulemaking and that is informed by economic data obtained through coordination with local governments and a diverse range of private sector industries, such as grazing, mining and recreation. The resubmitted documentation should support the claim that this rule does not impose an unfunded mandate under the UMRA. If a finding shows that the rule does impose an unfunded mandate, then the BLM must complete a cost and benefit analysis as required by the UMRA. The BLM disagrees that this rule requires resubmitting documentation supporting the BLM's unfunded mandate determination. This final rule, including its Regulatory Impact Analysis, clearly, transparently, and factually discusses the impacts of the rule, which governs the BLM's administration of applications and right-of-way grants and

leases for solar and wind energy. This rule does not result in Tribal, State, or local governments having to expend funds. Therefore, this rule does not impose an unfunded federal mandate and does not require a cost and benefit analysis. In any event, this rule and the accompanying Regulatory Impact Analysis provide all the information the UMRA requires.

Governmental Actions and Interference With Constitutionally Protected Property Right—Takings (E.O. 12630)

This rule does not affect a taking of private property or otherwise have taking implications under E.O. 12630. Section 2(a) of E.O. 12630 identifies policies that do not have takings implications, such as those that abolish regulations, discontinue governmental programs, or modify regulations in a manner that lessens interference with the use of private property. The rule would not interfere with private property. A takings implication assessment is not required.

Some comments noted that access across federal, state, or county managed lands should not entail encumbrances or restrictions on private property. This final rule does not restrict access across any lands. Through separate environmental review, such as through land use planning, the BLM may consider actions that affect access. Tribal, Federal, State, and local government offices, as well as communities and private citizens will have opportunity to engage in those environmental processes.

Federalism (E.O. 13132)

Under the criteria in Section 1 of E.O. 13132, this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. It does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. A federalism summary impact statement is not required.

Civil Justice Reform (E.O. 12988)

This rule complies with the requirements of E.O. 12988. Specifically, this rule:

a. Meets the criteria of Section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

b. Meets the criteria of Section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Consultation and Coordination With Indian Tribes (E.O. 13175 and Departmental Policy)

DOI strives to maintain and strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and Tribal sovereignty. We have evaluated this rule under the DOI's consultation policy and under the criteria in E.O. 13175 and have determined that it has no substantial direct effects on federally recognized Indian Tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes, and that consultation under the DOI's Tribal consultation policy is not required. However, consistent with the DOI's consultation policy (52 Departmental Manual 4) and the criteria in E.O. 13175, the BLM will consult with federally recognized Indian Tribes on any renewable energy project proposals that may have a substantial direct effect on the Tribes.

Paperwork Reduction Act

The Paperwork Reduction Act (PRA) (44 U.S.C. 3501–3521) generally provides that an agency may not conduct or sponsor and, not withstanding any other provision of law, a person is not required to respond to a collection of information, unless it displays a currently valid OMB control number. Collections of information include any request or requirement that persons obtain, maintain, retain, or report information to an agency, or disclose information to a third party or to the public (44 U.S.C. 3502(3) and 5 CFR 1320.3(c)).

This rule contains information-collection requirements that are subject to review by OMB under the PRA. OMB has generally approved the existing information-collection requirements contained in 43 CFR part 2800 associated with wind and solar rights-of-way grants or leases under OMB control number 1004–0206 (expiration date: June 30, 2026). Additionally, the BLM's regulations at 43 CFR part 2800 require the use of Standard Form 299 (SF–299), ''Application for Transportation and Utility Systems and Facilities on Federal Lands,'' for right-of-way applications and the regulations at 43 CFR part 2800. OMB has approved the requirements associated with SF–299 and has assigned control number 0596–0249.

This rule does not include any changes to the information-collection requirements currently contained in 43 CFR parts 2800 and 2880 and approved by OMB as noted above. There is a new information-collection requirement contained in 43 CFR 2806.52(b)(5) regarding an annual certified statement. The rule would require that by October of each year wind and solar grant or leaseholders must submit to the BLM a certified statement identifying the first year's estimated energy generation on public lands and the prior year's actual energy generation on public lands. The BLM will determine the capacity fee based on the certified statement provided. To prepare the annual certified statement, grant or leaseholders will need to compile information based on capacity fee as instructed in 43 CFR 2806.

The information-collection requirements contained in 43 CFR 2800 and 2880 and approved under OMB Control Number 1004–0206 and the aforementioned new information-collection pertaining to 43 CFR 2806.52(b)(5) are described below.

Activities That Require SF–299

The following discussion describes the information-collection activities in this control number that require use of SF–299.

Application for a Solar or Wind Energy Development Project Outside Any Designated Leasing Area (43 CFR 2804.12, 2804.25(c), 2804.26(a)(5), and 2804.30(g)); and Application for an Electric Transmission Line With a Capacity of 100 kV or More (43 CFR 2804.12, 2804.25(c), and 2804.26(a)(5))

Section 2804.12(b) applies to solar and wind energy development grants outside any DLA and electric transmission lines with a capacity of 100 kV or more.

Section 2804.12(b) includes the following requirements for applications for a solar or wind energy development project outside a DLA and for applications for a transmission line project with a capacity of 100 kV or more:

- A discussion of all known potential resource conflicts with sensitive resources and values, including special designations or protections; and
- Applicant-proposed measures to avoid, minimize, and compensate for such resource conflicts, if any.

Section 2804.12(b) also requires applicants to initiate early discussions with any grazing permittees that may be affected by the proposed project. This

requirement stems from FLPMA Section 402(g) (43 U.S.C. 1752(g)) and a BLM grazing regulation (section 4110.4–2(b)) that require 2 years' prior notice to grazing permittees and lessees before cancellation of their grazing privileges.

In addition to the information listed at § 2804.12(b), an application for a solar or wind project, or for a transmission line of at least 100 kV, must include the information listed at §§ 2804.12(a)(1) through (a)(7).

Section 2804.25 provides that the BLM will notify an applicant upon receipt of an application and may require the applicant to submit additional information necessary to process the application (such as a Plan of Development or cultural resource surveys). As amended, § 2084.25(c) provides that, for solar or wind energy development projects and transmission lines with a capacity of 100 kV or more, the applicant must commence any required resource surveys or inventories within 1 year of the request date, unless otherwise specified by the BLM. The amended regulation also authorizes an applicant to submit a request for an alternative requirement by showing good cause under § 2804.40.

Applications for solar or wind energy development outside any DLA, but not applications for large-scale transmission lines, are subject to a requirement (at § 2804.12(c)(2)) to submit an ''application filing fee'' of $15 per acre. As defined in an amendment to § 2801.5, an application filing fee is specific to solar and wind energy right-of-way applications. Section 2804.30(e)(4) provides that the BLM will refund the fee, except for the reasonable costs incurred on behalf of the applicant, if the applicant is not a successful bidder in the competitive process outlined in subpart 2804.

Section 2804.26(a)(5) provides the authority that allows the BLM to deny an application for a right-of-way grant if the applicant does not have or cannot demonstrate the technical or financial capability to construct the project or operate facilities within the right-of-way. Amendments to that provision list the following ways an applicant may demonstrate their financial and technical capability to construct, operate, maintain, and terminate a project:

- Documenting any previous successful experience in construction, operation, and maintenance of similar facilities on either public or non-public lands;
- Providing information on the availability of sufficient capitalization to carry out development, including the preliminary study stage of the project and the environmental review and clearance process; or
- Providing written copies of conditional commitments of Federal and other loan guarantees; confirmed power purchase agreements; engineering, procurement, and construction contracts; and supply contracts with credible third-party vendors for the manufacture or supply of key components for the project facilities.

General Description of a Proposed Project and Schedule for Submittal of a Plan of Development (43 CFR 2804.12(b)(1) and (b)(2))

Sections 2804.12(b)(1) and (b)(2) require applicants for a solar or wind development project outside a DLA to submit the following information, using Form SF–299:

- A general description of the proposed project and a schedule for the submission of a Plan of Development (POD) conforming to the POD template at *http://www.blm.gov;*
- A discussion of all known potential resource conflicts with sensitive resources and values, including special designations or protections; and
- Proposals to avoid, minimize, and compensate for such resource conflicts, if any.

Application for an Energy Site-Specific Testing Grant (43 CFR 2804.12(a), and 2804.30(g)); Application for an Energy Project-Area Testing Grant (43 CFR 2804.12(a), and 2804.30(g)); and Application for a Short-Term Grant (43 CFR 2804.12(a))

Section 2804.12(a) addresses the general requirements of an application for a FLPMA right-of-way grant. Section 2804.30(g) authorizes only one applicant (*i.e.,* a ''preferred applicant'') to apply for an energy project-area testing grant or an energy site-specific testing grant for land outside any DLA.

Each of these grants is for 3 years or less, in accordance with § 2805.11(c)(2). All of these applications must be submitted on SF–299. Applications for project-area grants (but not site-specific grants) are subject to a $2 per-acre application filing fee in accordance with § 2804.12(c)(2). Applicants for short-term grants for other purposes (such as geotechnical testing and temporary land-disturbing activities) are subject to a processing fee in accordance with § 2804.1.

Request To Assign a Solar or Wind Energy Development Right-of-Way (43 CFR 2807.21)

Section 2807.21, as amended, provides for assignment, in whole or in part, of any right or interest in a grant or lease for a solar or wind development right-of-way. Actions that may require an assignment include the transfer by the holder (assignor) of any right or interest in the grant or lease to a third party (assignee) or any change in control transaction involving the grant holder or leaseholder, including corporate mergers or acquisitions. The proposed assignee must file an assignment application, using SF–299, and pay application and processing fees.

The assignment application must include:

- Documentation that the assignor agrees to the assignment; and
- A signed statement that the proposed assignee agrees to comply with and be bound by the terms and conditions of the grant that is being assigned and all applicable laws and regulations.

Environmental, Technical, and Financial Records, Reports, and Other Information (43 CFR 2805.12(a)(15))

Section 2805.12(a)(15) authorizes the BLM to require a holder of any type of right-of-way to provide, or give the BLM access to, any pertinent environmental, technical, and financial records, reports, and other information. The use of SF–299 is required. The BLM will use the information for monitoring and inspection activities.

Application for Renewal of a Solar or Wind Energy Development Grant or Lease (43 CFR 2805.14(g) and 2807.22)

Section 2805.14(g) provides that a holder of a right-of-way grant, which includes solar or wind energy generating facilities, may apply for renewal in accordance with § 2807.22. Section 2807.22(c) provides that an application to renew a grant must include the same information, on SF–299, that is necessary for a new application. It also provides that processing fees, in accordance with § 2804.14, as amended, apply to these renewal applications. Sections 2807.22(a) and (b) provide that an application for renewal of any right-of-way grant or lease, including a solar or wind energy development grant or lease, must be submitted at least 120 calendar days before the grant or lease expires. The application must show that the grantee or lessee is complying with the renewal terms and conditions (if any), with the other terms, conditions, and stipulations of the grant or lease, and with other applicable laws and regulations. The application also must explain why a renewal of the grant or lease is necessary.

Request for Amendment, Assignment, or Other Change (FLPMA) (43 CFR 2807.11(b) and (d) and 2807.21)

Section 2807.11(b) requires a holder of any type of right-of-way grant to contact the BLM to seek an amendment to the grant under § 2807.20 and obtain the BLM's approval before beginning any activity that is a ''substantial deviation'' from what is authorized.

Section 2807.11(d) requires contacting the BLM to request an amendment to the pertinent right-of-way grant or lease and prior approval whenever site-specific circumstances or conditions result in the need for changes to an approved right-of-way grant or lease, Plan of Development, site plan, mitigation measures, or construction, operation, or termination procedures that are not ''substantial deviations.''

Section 2807.21 authorizes assignment of a grant or lease with the BLM's approval. It also authorizes the BLM to require a grant or leaseholder to file new or revised information in circumstances that include, but are not limited to:

- Transactions within the same corporate family;
- Changes in the holder's name only; and
- Changes in the holder's articles of incorporation.

A request for an amendment of a right-of-way, using SF–299, is required in cases of a substantial deviation (for example, a change in the boundaries of the right-of-way, major improvements not previously approved by the BLM, or a change in the use of the right-of-way). Other changes, such as changes in project materials, or changes in mitigation measures within the existing, approved right-of-way area, must be submitted to the BLM for review and approval. In order to assign a grant, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, as well as pay application and processing fees. In order to request a name change, the holder will be required to file an application and follow the same procedures and standards as for a new grant or lease and pay processing fees, but no application fee is required. The following documents are also required in the case of a name change:

- A copy of the court order or legal document effectuating the name change of an individual; or
- If the name change is for a corporation, a copy of the corporate resolution proposing and approving the name change, a copy of a document showing acceptance of the name change by the State in which incorporated, and a copy of the appropriate resolution, order, or other document showing the name change.

In all these cases, the BLM will use the information to monitor and inspect rights-of-way, and to maintain current data.

Activities That Do Not Require Any Form

Preliminary Application Review Meetings for a Large-Scale Right-of-Way (43 CFR 2804.12(b)(4))

''Preliminary application review meetings'' are required after submission of an application for a large-scale right-of-way. A large-scale right-of-way is for solar or wind energy development outside a DLA, or for a transmission line with a capacity of 100 kV or more.

Within 6 months from the date that the BLM receives the cost recovery fee for an application for a large-scale project, the applicant must schedule and hold at least two preliminary application review meetings.

In the first meeting, the BLM will collect information from the applicant to supplement the application on subjects such as the general project proposal. The BLM will also discuss with the applicant subjects such as the status of the BLM's land use planning for the lands involved, potential siting issues or concerns, potential environmental issues or concerns, potential alternative site locations, and the right-of-way application process.

In the second meeting, the applicant and the BLM will meet with appropriate Federal and State agencies and Tribal and local governments to facilitate coordination of potential environmental and siting issues and concerns.

The applicant and the BLM may agree to hold additional preliminary application review meetings.

Application for Renewal of an Energy Project-Area Testing Grant or Other Short-Term Grant (43 CFR 2805.11(c)(2)(ii), 2805.14(h), and 2807.22)

Section 2805.11(c)(2)(ii) provides that holders of energy project-area testing grants may seek renewal of those grants. The initial term for such a grant is 3 years or less, with the option to renew for one additional 3-year period.

For other short-term grants, such as for geotechnical testing and temporary land-disturbing activities, the initial term is 3 years or less. Short-term grants include an option for renewal.

Section 2805.14(h) provides that applications to renew an energy project-area testing grant must include an energy development application submitted in accordance with § 2801.9(d)(2). Cost recovery fees in accordance with § 2804.14, as amended, apply to these renewal applications.

Section 2807.22 provides that an application for renewal of any right-of-way grant or lease, including an energy project-area testing grant or a short-term grant, must be submitted at least 120 calendar days before the grant or lease expires. The application must show that the grantee or lessee is complying with the renewal terms and conditions (if any), with the other terms, conditions, and stipulations of the grant or lease, and with other applicable laws and regulations. The application also must explain why a renewal of the grant or lease is necessary.

Showing of Good Cause (43 CFR 2804.40 and 2805.12)

Under § 2804.40, an applicant for a FLPMA right-of-way grant who is unable to meet any of the requirements in subpart 2804 may request approval for an alternative requirement from the BLM. Any such request is not approved until the applicant receives BLM approval in writing. This type of request to the BLM must:

(a) Show good cause for the applicant's inability to meet a requirement;

(b) Suggest an alternative requirement and explain why that requirement is appropriate; and

(c) Be received in writing by the BLM in a timely manner, before the deadline to meet a particular requirement has passed.

The BLM will use the information to determine whether to apply an alternative requirement.

Other showings of good cause are authorized or may be required by § 2805.12, which requires due diligence in development and operations of any right-of-way grant or lease. In accordance with § 2805.12(c)(6) and (c)(8), the BLM will notify the holder before suspending or terminating a right-of-way for lack of due diligence. This notice will provide the holder with a reasonable opportunity to correct any noncompliance or to start or resume use of the right-of-way. A showing of good cause will be required in response. That showing must include:

- Reasonable justification for any delays in construction or reductions in energy generation (for example, delays in equipment delivery, legal challenges, and acts of God);
- The anticipated date for the completion of construction or resumption of energy generation; and

evidence of progress toward the start or resumption of construction; and

• A request for extension of the timelines in the approved POD or extension of the period in which the holder must satisfy the minimum energy threshold.

Section 2805.12(e), as amended, applies as soon as a right-of-way holder anticipates noncompliance with stipulation, term, or condition of the approved right-of-way grant or lease, or in the event of noncompliance with any such stipulation, term, or condition. In these circumstances, the holder must notify the BLM in writing and show good cause for the noncompliance, including an explanation of the reasons for the noncompliance.

In addition, the holder may request that the BLM consider alternative stipulations, terms, or conditions. Any request for an alternative stipulation, term, or condition must comply with applicable law in order to be considered. Any proposed alternative to applicable bonding requirements must provide the United States with adequate financial assurance for potential liabilities associated with the right-of-way grant or lease. Any such request is not approved until the holder receives the BLM's approval in writing.

Bonding Requirements (43 CFR 2805.20)

Section 2805.20 provides that the bond amount for projects other than a solar or wind energy lease under subpart 2809 (*i.e.,* inside a DLA) will be determined based on the preparation of a reclamation cost estimate that includes the cost to the BLM to administer a reclamation contract and review it periodically for adequacy.

Section 2805.20(a)(5) provides that the reclamation cost estimate must include at a minimum:

• Remediation of environmental liabilities such as use of hazardous materials waste and hazardous substances, herbicide use, the use of petroleum-based fluids, and dust control or soil stabilization materials;

• The decommissioning, removal, and proper disposal, as appropriate, of any improvements and facilities; and

• Interim and final reclamation, re-vegetation, recontouring, and soil stabilization.

Sections 2805.20(b) and 2805.20(c) identify specific bond requirements for solar and wind energy development respectively outside of DLAs. A holder of a solar or wind energy grant outside of a DLA will be required to submit a reclamation cost estimate to help the BLM determine the bond amount. For solar energy development grants outside of DLAs, the bond amount will be no less than $10,000 per acre. For wind energy development grants outside of DLAs, the bond amount will be no less than $10,000 per authorized turbine with a nameplate generating capacity of less than one Megawatt (MW), and no less than $20,000 per authorized turbine with a nameplate generating capacity of one MW or greater.

Section 2805.20(d) separates site- and project-area testing authorization bond requirements from § 2805.20(c). Meteorological and other instrumentation facilities are required to be bonded at no less than $2,000 per location. These bond amounts are the same as standard bond amounts for leases required under § 2809.18(e)(3).

Annual Certified Statement (43 CFR 2806.52(b)(5))—New Information Collection

The rule requires that by October of each year, wind and solar grant or leaseholders must submit to the BLM a certified statement identifying the first year's estimated energy generation on public lands and the prior year's actual energy generation on public lands. The BLM will determine the capacity fee based on the certified statement provided. To prepare the annual certified statement, grant or leaseholders will need to compile information based on the capacity fee as instructed in subpart 2806. This is the only new information-collection requirement contained in this rule.

Nomination of a Parcel of Land Inside a Designated Leasing Area (43 CFR 2809.11)

Sections 2809.10 and 2809.11 authorize the BLM, on its own initiative, to offer land through a competitive process for solar or wind energy development. These regulations also authorize the BLM to solicit nominations for such development by publishing a notice in the **Federal Register**. To nominate a parcel under this process, the nominator must be qualified to hold a right-of-way under 43 CFR 2803.10. After publication of a notice by the BLM, anyone meeting the qualifications may submit a nomination for a specific parcel of land to be developed for solar or wind energy. There is a fee of $5 per acre for each nomination. The following information is required:

• The nominator's name and personal or business address;

• The legal land description; and

• A map of the nominated lands.

The BLM will use the information to communicate with the nominator and to determine whether to proceed with a competitive process.

Plan of Development for a Solar or Wind Energy Development Lease Inside a Designated Leasing Area (43 CFR 2809.18)

Section 2809.l8(c) requires the holder of a lease for solar or wind energy development to submit a Plan of Development (POD) within 2 years of the lease issuance date. The POD must be consistent with the development schedule and other requirements in the POD template posted at *http://www.blm.gov*; and must address all pre-development and development activities.

Section 2809.18(d) requires the holder of a solar or wind energy development lease for land inside a DLA to pay reasonable costs for the BLM or other Federal agencies to review and approve the POD and monitor the lease. To expedite review and monitoring, the holder may notify the BLM in writing of an intention to pay the full actual costs incurred by the BLM.

Request for Amendment, Assignment, or Other Change (MLA) (43 CFR 2886.12(b) and (d) and 43 CFR 2887.11)

Sections 2886.12 and 2887.11 pertain to holders of rights-of-way and temporary use permits authorized under the MLA. A temporary use permit authorizes a holder of a MLA right-of-way to use land temporarily in order to construct, operate, maintain, or terminate a pipeline, or for purposes of environmental protection or public safety. See § 2881.12. The regulations require these holders to contact the BLM:

• Before engaging in any activity that is a ''substantial deviation'' from what is authorized;

• Whenever site-specific circumstances or conditions arise that result in the need for changes that are not substantial deviations;

• When the holder submits a certification of construction;

• Before assigning, in whole or in part, any right or interest in a grant or lease;

• Before any change in control transaction involving the grant- or lease-holder; and

• Before changing the name of a holder (*i.e.,* when the name change is not the result of an underlying change in control of the right-of-way).

A request for an amendment of a right-of-way or temporary use permit is required in cases of a substantial deviation (*e.g.,* a change in the boundaries of the right-of-way, major improvements not previously approved by the BLM, or a change in the use of the right-of-way). Other changes, such

as changes in project materials, or changes in mitigation measures within the existing, approved right-of-way area are required to be submitted to the BLM for review and approval. In order to assign a grant, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, as well as pay processing fees. In order to request a name change, the holder will be required to file an application and follow the same procedures and standards as for a new grant or lease and pay processing fees, but no application fee is required. The following documents are also required in the case of a name change:

- A copy of the court order or legal document effectuating the name change of an individual; or
- If the name change is for a corporation, a copy of the corporate resolution proposing and approving the name change, a copy of a document showing acceptance of the name change by the State in which incorporated, and a copy of the appropriate resolution, order, or other document showing the name change.

In all these cases, the BLM will use the information gathered for monitoring and inspection purposes, and to maintain current data on rights-of-way.

Certification of Construction (43 CFR 2886.12(f))

A certification of construction is a document a holder of an MLA right-of-way must submit to the BLM after finishing construction of a facility, but before operations begin. The BLM will use the information to verify that the holder has constructed and tested the facility to ensure that it complies with the terms of the right-of-way and is in accordance with applicable Federal and State laws and regulations.

The information-collection request for this rule has been submitted to OMB for review under 44 U.S.C. 3507(d). You may view the information-collection request(s) at *http://www.reginfo.gov/public/do/PRAMain.*

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on any aspect of this information-collection, including:

- Whether the collection of information is necessary for the proper functioning of the BLM, including whether the information will have practical utility;
- The accuracy of the BLM's estimate of the burden of collecting the information, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information to be collected; and
- How to minimize the information-collection burden on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other forms of information technology.

Currently, the information-collection requirements contained in 43 CFR parts 2800 and 2880 and approved under OMB control number 1004–0206 are estimated as follows: 3,042 annual responses; 47,112, annual burden hours; and $2,182,302 annual cost burden. We are projecting a burden increase of 75 new annual responses and 150 new annual burden hours as result of this rule. This burden hour increase would result from a new information collection requirement contained in § 2806.52(b)(5) pertaining to the annual certified statement. This new information collection is needed to help the BLM more accurately determine the capacity fee based on the certified statement provided.

The final rule also removes an existing information collection previously contained in 43 CFR 2809.11(c) titled, *Expression of Interest in a Parcel of Land Inside a Designated Leasing Area.* The removal of this information collection results in the reduction of 1 annual response and 4 annual burden hours.

Therefore, we estimate that the final rule will result in a net increase of 74 annual responses and 226 annual burden hours.

We are also adjusting the burden for two existing and unchanged information collections to reflect more accurately the burden those activities would involve the industry. These adjustments include the following:

- *Preliminary Application Review Meetings for 2 public meetings for a Large-Scale Right-of-Way (43 CFR 2804.12(b)(4)).* The average response time is adjusted from 2 hours to 4 hours. This adjustment resulted in a 40-hour burden increase (from 40 hours to 80 hours).
- *Environmental, Technical, and Financial Records, Reports, and Other Information (43 CFR 2805.12(a)(15)).* We have added a 50 percent increase in the hours required to prepare reports (from 4 per response to 6 per response). This resulted in an increasing the estimated annual burden hours for these activities from 80 hours to 120 hours.

There are no projected changes to the non-hour cost burdens as a result of this rule. The resulting new estimated total burdens for OMB Control Number 1004–0206 are provided below.

Title of Collection: Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development (43 CFR parts 2800 and 2880).

OMB Control Number: 1004–0206.

Form Number: SF–299 (Burden approved by OMB in Request for Common Form under OMB Control Number 0596–0249).

Type of Review: Revision of a currently approved collection of information.

Respondents/Affected Public: Private sector (applicants for and holders of wind and solar rights-of-way grants or leases on Federal public lands.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion and annually for the Annual Certified Statement in 43 CFR 2806.52(i).

Number of Respondents: 75.

Annual Responses: 3,116.

Annual Burden Hours: 47,338.

Annual Burden Cost: $2,182,302.

If you want to comment on the information-collection requirements this in this rule, please send your comments and suggestions on this information-collection request within 30 days of publication of this final rule in the **Federal Register** to OMB at *www.reginfo.gov.* Click on the link, ''Currently under Review—Open for Public Comments.''

National Environmental Policy Act

These proposed regulatory amendments are of an administrative or procedural nature and thus are eligible to be categorically excluded from the requirement to prepare an EA or an EIS. See 43 CFR 46.205 and 46.210(i). They do not present any of the extraordinary circumstances listed at 43 CFR 46.215.

Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use (Executive Order 13211)

Federal agencies are to prepare and submit to OMB a Statement of Energy Effects for any proposed significant energy action. A ''significant energy action'' is defined as any action by an agency that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order, and (2) Is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (3) Is designated by the Administrator of OIRA as a significant energy action.

The BLM reviewed the rule and determined that it is not likely a significant energy action as defined by E.O. 13211. While the rights-of-way affected by this rule are for solar and

wind energy generation, the rule is limited in scope and would not likely have a significant, adverse effect on the supply, distribution, or use of energy from these sources. The rule would not result in a shortfall in supply, price increases, or increase the use of foreign supplies.

Authors

The principal authors of this rule are: Jayme M. Lopez, BLM National Renewable Energy Coordination Office; Jeremy Bluma, BLM National Renewable Energy Coordination Office; Radford Schantz, Division of Lands, Realty and Cadastral Survey; Patrick Lee, DOI, Office of Policy Analysis; Jeff Holdren, BLM Division of Lands, Realty and Cadastral Survey; Darrin King, BLM Division of Regulatory Affairs; Jennifer Noe, BLM Division of Regulatory Affairs, assisted by the DOI Office of the Solicitor. This action by the Principal Deputy Assistant Secretary is taken pursuant to an existing delegation of authority.

Steven H. Feldgus, Ph.D.,

Principal Deputy Assistant Secretary, Land and Minerals Management.

List of Subjects in 43 CFR Part 2800

Electric power, Highways and roads, Penalties, Public lands and rights-of-way, Reporting and recordkeeping requirements.

Accordingly, for the reasons stated in the preamble, the BLM amends 43 CFR part 2800 as set forth below:

PART 2800—RIGHTS–OF–WAY UNDER THE FEDERAL LAND POLICY AND MANAGEMENT ACT

■ 1. The authority citation for part 2800 is revised to read as follows:

Authority: 43 U.S.C. 1733, 1740, 1763, 1764, and 3003.

Subpart 2801—General information

■ 2. Amend § 2801.5:
■ a. In paragraph (a) by adding the acronym for ''FLPMA'' in alphabetical order;
■ b. In paragraph (b) by:
■ i. Removing the term ''Act'';
■ ii. Adding in alphabetical order the terms ''Domestic Content'' and ''Capacity fee'';
■ iii. Revising the term for ''Grant'';
■ iv. Removing the term ''Megawatt (mw) capacity fee'';
■ v. Revising the terms ''Megawatt hour (MWh) rate'' and ''Reasonable costs''; and
■ vi. Adding in alphabetical order the terms ''Renewable energy coordination office (RECO)'', ''Solar or wind energy development'', and ''Solar or wind energy lease''.

The additions and revisions to read as follows:

§ 2801.5 What acronyms and terms are used in the regulations in this part?

(a) * * *

FLPMA means the Federal Land Policy and Management Act of 1976, as amended (43 U.S.C. 1701 *et seq.*).

* * * * *

(b) * * *

Domestic Content reduction means an item or product that qualifies for the domestic content preference under the Build America, Buy America Act, Public Law 117–58, 135 Stat. 429, §§ 70901 through 70927 (Nov. 15, 2021), and the implementing guidance at 2 CFR part 184.

Capacity fee is the fee charged to right-of-way holders once energy production commences that is based on the production of energy on public lands from solar and wind energy generating facilities.

* * * * *

Grant means an authorization or instrument (*e.g.,* easement, license, or permit) the BLM issues under Title V of the Federal Land Policy and Management Act, 43 U.S.C. 1761 *et seq.,* and any authorization or instrument the BLM and its predecessors issued for like purposes before October 21, 1976, under then existing statutory authority, except for solar or wind energy leases. It does not include authorizations issued under the Mineral Leasing Act (30 U.S.C. 185).

* * * * *

Megawatt hour (MWh) rate means the 5 calendar-year average of the annual average wholesale electricity prices per MWh for the major trading hubs serving the 11 western States of the continental United States.

* * * * *

Reasonable costs has the meaning found in Section 304(b) of FLPMA.

* * * * *

Renewable energy coordination office (RECO) means one of the National, State, district, or field offices established by the Secretary under 43 U.S.C. 3002(a) that is responsible for implementing a program for improving Federal permit coordination with respect to solar, wind, and geothermal projects on BLM-administered land, and such other activities as the Secretary determines necessary.

* * * * *

Solar or wind energy development means the use of public lands to generate electricity from solar or wind energy resources. It includes the construction, operation, maintenance, and decommissioning of any such facilities, as well as the subsequent reclamation of the site.

Solar or wind energy lease means any right-of-way issued for solar or wind energy development in an area classified or allocated for solar or wind energy (*i.e.,* a designated leasing area) in a resource management plan.

* * * * *

■ 3. Amend § 2801.6 by revising paragraph (a)(1) to read as follows:

§ 2801.6 Scope.

(a) * * *

(1) Grants or leases for necessary transportation or other systems and facilities that are in the public interest and require the use of public lands for the purposes identified in 43 U.S.C. 1761, and administering, amending, assigning, monitoring, renewing, and terminating them;

* * * * *

■ 4. Amend § 2801.9 by revising paragraphs (d) introductory text, (d)(3) and (4), and adding paragraph (d)(6) to read as follows:

§ 2801.9 When do I need a grant?

* * * * *

(d) All systems, facilities, and related activities for energy generation, storage, or transmission projects are specifically authorized as follows:

* * * * *

(3) Energy generation facilities, including solar and wind energy development facilities, are authorized with a right-of-way grant or lease that may be issued for up to 50 years (plus initial partial year of issuance);

(4) Energy storage facilities, which are separate from energy generation facilities, are authorized with a right-of-way grant that may be issued for up to 50 years;

* * * * *

(6) Electric transmission lines with a capacity of 100 kV or more are authorized with a right-of-way grant that may be issued for up to 50 years.

■ 5. Revise the heading for subpart 2802 to read as follows:

Subpart 2802—Lands Available for FLPMA Grants or Leases

■ 6. Amend § 2802.11 by revising paragraphs (b) introductory text and (b)(1) and adding paragraphs (b)(10) and (11) to read as follows:

§ 2802.11 How does the BLM designate right-of-way corridors and designated leasing areas?

* * * * *

(b) When determining which public lands may be suitable for right-of-way corridors or designated leasing areas, the BLM may consider various factors, including:

(1) Federal, State, Tribal, and local land use plans, and applicable Federal, State, Tribal, and local laws;

* * * * *

(10) Access to electric transmission; and

(11) Whether there are areas for solar and wind energy development with low potential for conflict with resources or uses due to environmental, cultural, and other relevant criteria, which the BLM will identify by:

(i) Assessing the demand for new or expanded areas;

(ii) Applying environmental, cultural, and other screening criteria; and

(iii) Analyzing proposed areas through the land use planning process described in part 1600 of this chapter.

* * * * *

■ 7. Amend § 2803.10 by revising paragraph (c) to read as follows:

§ 2803.10 Who may hold a grant or lease?

* * * * *

(c) Of legal age and authorized to do business in the State or States where the right-of-way you seek is located.

■ 8. Revise § 2803.12 to read as follows:

§ 2803.12 What happens to my grant or lease if I die?

(a) If a grant holder dies, any inheritable interest in a grant or lease will be distributed under State law.

(b) If the receiver of a grant or lease is not qualified to hold a grant or lease under § 2803.10 of this subpart, the BLM will recognize the receiver as grant or leaseholder for up to two years, subject to full compliance with all terms, conditions, and stipulations. During that period, the receiver must either become qualified or divest itself of the interest.

Subpart 2804—Applying for FLPMA Grants

■ 9. Amend § 2804.12 by revising paragraphs (c) and (f) and adding paragraph (j) to read as follows:

§ 2804.12 What must I do when submitting my application?

* * * * *

(c) You must meet additional requirements when applying for a solar or wind energy development or short-term right-of-way, as follows:

(1) Pay an application filing fee of $2 per acre for short-term right-of-way applications or $15 per acre for solar or wind energy development applications. The BLM will apply the application filing fee toward the processing fees described in §§ 2804.14 through 2804.22. The BLM will refund the balance of any application filing fee at the end of the BLM's application review process if the application filing fee exceeds the amount of the processing fee.

(2) Pay additional reasonable costs in addition to payment of the application filing fee when processing your application, pursuant to § 2804.14. A processing or monitoring Category 6 cost recovery fee may be reduced by the application filing fee paid when submitting an application.

* * * * *

(f) The BLM may require you to submit additional information at any time while processing your application. The BLM will identify additional information in a written deficiency notice asking you to provide the information within a specified time pursuant to § 2804.25(c).

* * * * *

(j) Your application will not be complete until you have met or addressed the requirements of this section to the satisfaction of the BLM. The BLM will notify you in writing when your application is complete.

■ 10. Revise § 2804.22 to read as follows:

§ 2804.22 How will the availability of funds affect the timing of the BLM's processing your application?

(a) If the BLM has insufficient funds to process your application, we will not continue to process it until funds become available or you elect to pay full actual costs under § 2804.14(f) of this part.

(b) The BLM may deny your application if we have not received requested reasonable costs for processing your application within 90 days.

(c) If your cost recovery agreement provides that a portion of the funds you pay will be used in the hiring of additional staff or contractors, such funds may not be refundable.

■ 11. Revise § 2804.23 to read as follows:

§ 2804.23 What costs am I responsible for when the BLM decides to use a competitive process for lands included in my application?

If the BLM decides to use a competitive process for lands included in your application and your application is in:

(a) *Processing Categories 1 through 4.* You must reimburse the Federal Government for processing costs as if the other application or applications had not been filed.

(b) *Processing Category 6.* You are responsible for processing costs identified in your application. If the BLM cannot readily separate costs, such as costs associated with preparing environmental analyses, you and any competing applicants must pay an equal share, or a proportion agreed to in writing among all applicants and the BLM. If you agree to share the costs that are common to your application and that of a competing applicant, and the competitor does not pay the agreed upon amount, you are liable for the entire amount due. You must pay the entire processing fee in advance. The BLM will not process your application until we receive the advance payments.

■ 12. Amend § 2804.25 by revising paragraphs (c), (e)(2), (e)(4), (e)(5), and (f)(3) to read as follows:

§ 2804.25 How will the BLM process my application?

* * * * *

(c) The BLM may require you to submit additional information necessary to process the application. This information may include a detailed construction, operation, rehabilitation, and environmental protection plan (*i.e.,* a POD), and any needed cultural resource surveys or inventories for threatened or endangered species. If the BLM needs more information, the BLM will identify this information in a written deficiency notice asking you to provide the additional information within a specified period of time. The failure to provide additional information requested by the BLM under this section may result in the BLM denying your application pursuant to § 2804.26.

(e) * * *

(2) If your application is for solar or wind energy development;

(i) Hold a local public meeting if there is no other public meeting or opportunity for early engagement on the project, such as those completed when complying with the National Environmental Policy Act (NEPA).

(ii) Prioritize the application in accordance with § 2804.35; and

(iii) Evaluate the application based on the information provided by the applicant and input from other parties, such as Federal, State, Tribal, and local government agencies, as well as comments received in preliminary application review meetings held under § 2804.12(b)(4) and any public meeting held under paragraph (e)(1) of this section. Based on these evaluations, the BLM will either deny your application or continue processing it.

* * * * *

(4) Complete appropriate NEPA compliance for the application, as required by 43 CFR part 46 and 40 CFR chapter V, subchapter A;

(5) Determine whether your proposed use complies with applicable Federal laws;

* * * * *

(f) * * *

(3) The segregation period may not exceed 2 years from the date of publication in the **Federal Register** of the notice initiating the segregation, unless the state director determines and documents in writing, prior to the expiration of the segregation period, that an extension is necessary for the orderly administration of the public lands. If the state director determines an extension is necessary, the BLM will extend the segregation for up to 2 years by publishing a notice in the **Federal Register**, prior to the expiration of the initial segregation period. A segregation will not be extended unless the application is complete and cost recovery has been received. Segregations under this part may only be extended once and the total segregation period may not exceed 4 years.

■ 13. Amend § 2804.26 by revising the section heading, paragraphs (a)(4) and (9) and adding paragraph (a)(10), and removing paragraph (c).

The revisions and additions read as follows:

§ 2804.26 Under what circumstances may the BLM deny my application?

(a) * * *

(4) Issuing the grant would be inconsistent with FLPMA, other laws, or these or other regulations;

* * * * *

(10) You fail to pay costs for processing your application within 90 days of receiving the BLM's request for funds under § 2804.22(b).

* * * * *

§ 2804.30 [Removed and Reserved]

■ 14. Remove and reserve § 2804.30.

§ 2804.31 [Removed and Reserved]

■ 15. Remove and reserve § 2804.31.

■ 16. Revise § 2804.35 to read as follows:

§ 2804.35 Application prioritization for solar and wind energy development rights-of-way.

(a) The BLM will prioritize the processing of applications to ensure that agency resources are allocated to applications with the greatest potential for approval and implementation. The BLM's prioritization of an application is not a decision and is not subject to appeal under 43 CFR part 4.

(b) The BLM will consider relevant criteria when prioritizing applications, including the following:

(1) Whether the proposed project is located within an area preferred for solar or wind energy development, such as designated leasing areas, which include solar energy zones, development focus areas, and renewable energy development areas;

(2) Whether the proposed project is likely to avoid adverse impacts to or conflicts with known resources or uses on or adjacent to public lands, and includes specific measures designed to further mitigate impacts or conflicts;

(3) Whether the proposed project is in conformance with the governing BLM land use plans;

(4) Whether the proposed project is consistent with relevant State, Tribal, and local government laws, plans, or priorities;

(5) Whether the proposed project incorporates the best management practices set forth in the applicable BLM land use plans and other BLM plans and policies; and

(6) Any other circumstances or prioritization criteria identified by the BLM in subsequent policy guidance or management direction through land use planning.

(c) The BLM will prioritize your complete application based on all available information, including information you provide to the BLM in the application or in response to deficiency notices, and information provided to the BLM in public meetings or consultations.

(d) The BLM may re-prioritize your application at any time.

■ 17. Amend § 2804.40 by revising the introductory text to read as follows:

§ 2804.40 Alternative requirements.

If you are unable to meet any of the application requirements in this subpart, you may request approval for an alternative requirement from the BLM. Any such request is not approved until you receive BLM approval in writing. Your request to the BLM must:

* * * * *

Subpart 2805—Terms and Conditions of Grants

■ 18. Amend § 2805.10 by revising paragraph (c) to read as follows:

§ 2805.10 How will I know whether the BLM has approved or denied my application or if my bid for a solar or wind energy development grant or lease is successful or unsuccessful?

* * * * *

(c) If you agree with the terms and conditions of the unsigned grant or lease, you should sign and return it to the BLM with any payment required under § 2805.16. The BLM will issue the right-of-way by signing the grant or lease and transmitting it to you, if the regulations in this part, including § 2804.26, remain satisfied.

* * * * *

■ 19. Amend § 2805.11 by revising the section heading and paragraphs (c)(2) introductory text and (c)(2)(iv) and (v) and adding paragraph (b)(4) to read as follows:

§ 2805.11 What does a grant or lease contain?

* * * * *

(c) * * *

(2) Specific terms for energy grants and leases, such as solar or wind energy development projects, are as follows:

* * * * *

(iv) Energy generation facilities, including solar or wind energy development facilities, are authorized with a grant or lease for up to 50 years (plus initial partial year of issuance), subject to the terms and conditions including but not limited to § 2805.12(c); and

(v) Energy storage facilities which are separate from energy generation facilities are authorized with a right-of-way grant for up to 50 years, subject to the terms and conditions including but not limited to § 2805.12(c);

* * * * *

(4) Electric transmission lines with a capacity of 100 kV or more are authorized with a right-of-way grant for up to 50 years.

* * * * *

■ 20. Amend § 2805.12 by adding paragraph (c)(8) and by revising paragraph (e)(2) to read as follows:

§ 2805.12 What terms and conditions must I comply with?

* * * * *

(c) * * *

(8) Comply with the operational standards in this section for solar or wind energy development projects on public lands. The holder of a grant or lease for solar or wind energy development is authorized to operate for the purpose of generating energy. Diligent operation requires the holder to annually maintain at least 75 percent of energy generation capacity for the authorized development. Failure to meet this required generation in continuous two calendar year period during the term of the grant or lease may support suspension or termination of the grant or lease under §§ 2807.17 through 2807.19. Before suspending or terminating the authorization, the BLM will send you a notice that gives you a reasonable opportunity to correct any

noncompliance or to start or resume use of the right-of-way (see § 2807.18). In response to this notice, you must:

(i) Provide reasonable justification for any reductions in energy generation (for example, delays in equipment delivery, legal challenges, and Acts of God);

(ii) Provide the anticipated date in which production of energy generation will resume; and

(iii) Submit a written request under paragraph (e) of this section for extension of the period in which the holder must satisfy the minimum energy threshold. If you do not comply with the requirements of paragraph (c)(8) of this section, the BLM may deny your request for an extension of the period for complying with the minimum energy generation threshold.

* * * * *

(e) * * *

(2) You may also request that the BLM consider alternative stipulations, terms, or conditions, other than rents or fees, and except as provided in § 2806.52(b)(1)(i). Any proposed alternative stipulation, term, or condition must comply with applicable law in order to be considered. Any proposed alternative to applicable bonding requirements must provide the United States with adequate financial assurance for potential liabilities associated with your right-of-way grant or lease. Any such request is not approved until you receive BLM approval in writing.

■ 21. Revise § 2805.13 to read as follows:

§ 2805.13 When is a grant or lease effective?

A grant is effective after both you and the BLM sign it. You must accept its terms and conditions in writing and pay any necessary rent and monitoring fees as set forth in subpart 2806 of this part and § 2805.16 of this subpart. Your written acceptance constitutes an agreement between you and the BLM that your right to use the public lands, as specified in the grant or lease, is subject to the terms and conditions of the grant or lease and applicable laws and regulations.

■ 22. Amend § 2805.14 by revising the section heading and paragraph (g) to read as follows:

§ 2805.14 What rights does a right-of-way grant or lease convey?

* * * * *

(g) Apply to renew your right-of-way grant or lease under § 2807.22;

* * * * *

Subpart 2806—Annual Rents and Payments

■ 23. Amend § 2806.10 by revising the section heading and adding paragraph (c) to read as follows:

§ 2806.10 What rent must I pay for my grant or lease?

* * * * *

(c) You must pay rent for your grant or lease using the per-acre rent schedule for linear right-of-way grants (see § 2806.20) unless a separate rent schedule is established for your use, such as for communication sites per § 2806.30 or solar and wind energy development per § 2806.50. The BLM may also determine that these schedules do not apply to your right-of-way pursuant to § 2806.70.

■ 24. Amend § 2806.12 by revising paragraphs (a)(1) introductory text, (a)(2), and (b) to read as follows:

§ 2806.12 When and where do I pay rent?

(a) * * *

(1) If your grant or lease is effective on:

* * * * *

(2) If your grant or lease allows for multiyear payments, such as a short-term grant issued for energy site-specific testing, you may request that your initial rent bill be for the full term instead of the initial rent bill periods provided under paragraph (a)(1)(i) or (ii) of this section.

(b) You must make all rent payments for rights-of-way according to the payment plan described in § 2806.24.

* * * * *

■ 25. Amend § 2806.20 by revising paragraph (c) to read as follows:

§ 2806.20 What is the rent for a linear right-of-way grant?

* * * * *

(c) You may obtain a copy of the current Per Acre Rent Schedule from any BLM state, district, or field office or by writing the address found under § 2804.14(c) of this part. We also post the current rent schedule at *http://www.blm.gov.*

■ 26. Revise the undesignated center heading that precedes § 2806.50 and § 2806.50 to read as follows:

Solar and Wind Energy Development Rights-of-Way

§ 2806.50 Rents and fees for solar and wind energy development.

If you hold a right-of-way for solar or wind energy development, you must pay an annual rent and fee in accordance with this section and subpart. The annual rent and fee is the greater of the acreage rent or the capacity fee that would be due in a given year, and must be paid in advance each year. The acreage rent will be calculated consistent with § 2806.11 and prorated consistent with § 2806.12(a). The capacity fee will vary depending on the project's annual energy generation on public lands and will be calculated consistent with § 2806.52(b). Any underpayment will be billed pursuant to § 2806.13 and any overpayment will be credited pursuant to § 2806.16.

■ 27. Amend § 2806.51 by revising the section heading and paragraph (c) to read as follows:

§ 2806.51 Grant and lease rate adjustments.

* * * * *

(c) If you hold a right-of-way for solar or wind energy development that is in effect prior to July 1, 2024, you may either request that the BLM apply the annual rent and fee set forth in § 2806.52 or use the rate methodology applicable to your authorization immediately prior to this rule. If you wish to use the annual rent and fee set forth in § 2806.52, your request must be received by the BLM before July 1, 2026. The BLM will continue to apply the rate in effect immediately prior to this rule unless it receives your request to use the rate adjustments in this part. A request to change your rate methodology will include your agreement to a re-issuance of the grant or lease with updated Terms and Conditions found under this part, pursuant to § 2807.20(f).

■ 28. Amend § 2806.52 by revising the section heading, the introductory text and paragraphs (a), (b), and (c) to read as follows:

§ 2806.52 Annual rents and fees for solar and wind energy development.

You must pay the greater of either an annual acreage rent or a capacity fee. The acreage rent and capacity fee are determined as follows:

(a) *Acreage rent.* The BLM will calculate the acreage rent for your grant or lease by multiplying the number of acres of the authorized area (rounded up to the nearest tenth of an acre) by the annual per-acre rate for the year in which the payment is due.

(1) *Per-acre rate.* The annual per-acre rate for your grant or lease is calculated using the State per-acre value from the solar or wind energy acreage rent schedule, the encumbrance factor, the year of the grant or lease term, and the annual adjustment factor. The calculation for determining the annual per-acre rate is $A \times B \times [(1 + C) \wedge D]$ where:

(i) A is the state per-acre value from the solar or wind energy acreage rent schedule published by the BLM for the year on which your right-of-way grant or lease is issued and is based on the National Agricultural Statistics Service (NASS) Survey of Pastureland Rents. The BLM will prepare the rent schedule by averaging the NASS reported pastureland rents for the most recent 5-year period, using only those years for which rent is reported by NASS. The BLM will update the rent schedule every 5 years consistent with the timing of rent adjustments under § 2806.22.

(ii) B is the encumbrance factor, which is 100 percent for solar energy and 5 percent for wind energy;

(iii) C is the annual adjustment factor, which is 3 percent; and,

(iv) D is the year of the grant or lease term, which is the number of years the grant or lease has been authorized. For example, the first year (whether partial or full year) would be 0 and the second year would be 1.

(2) You may obtain a copy of the current solar or wind energy acreage rent schedule from any BLM state, district, or field office or by writing the address found under § 2804.14(c) of this part, Attention: Renewable Energy Coordination Office. The BLM also posts the current solar energy acreage rent schedule at *http://www.blm.gov.*

(b) *Capacity fee.* (1) The capacity fee is calculated using the MWh rate or the alternative MWh rate, the MWh rate reduction, the domestic content reduction, the Project Labor Agreement (PLA) reduction, the rate of return, the year of the grant or lease, the annual adjustment factor, and the annual power generated on the right-of-way. You must pay the capacity fee annually, beginning the year in which electricity generation begins or is scheduled to begin in the approved POD, whichever comes first, unless the acreage rent (see paragraph (a) of this section) exceeds the capacity fee in a given year. The calculation for determining the capacity fee is $A \times B \times C \times D \times [(1 + E) \text{^} F] \times G \times H$ where:

(i) A is the *MWh rate* or the *alternative MWh rate.* The MWh rate is the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States for the full 5 calendar-year period preceding the year in which your grant or lease was issued, rounded to the nearest dollar increment (see paragraph (7)). An Alternative MWh rate may be approved by the BLM if you have entered into a power purchase agreement, such as with a utility, and that rate is lower than the MWh rate. You must provide proof of the lower rate to the BLM, and if the BLM determines the lower rate is appropriate, the alternative MWh rate will be used in place of the MWh rate.

(ii) B is the *MWh rate reduction,* which is equal to 80 percent for fee payments due before 2036. Starting 2036, the MWh rate reduction for new authorizations transitions to 20 percent, as follows:

TABLE 1 TO PARAGRAPH (b)(1)(ii)

Calendar year	MWh rate reduction (%)	B—calculation multiplier (%)
2035	80	20
2036	60	40
2037	40	60
2038 and beyond	20	80

(iii) C is the *Domestic Content reduction,* which is equal to 1.0 for fee payments when a holder's project does not qualify for the domestic content reduction. C is equal to 0.8 when the holder can demonstrate that a facility qualifies for the domestic content reduction. A facility qualifies for the domestic content reduction if a holder documents that the facility would qualify as ''Produced in the United States'', consistent with 2 CFR part 184.

(iv) D is the factor for the *Project Labor Agreement reduction,* which is equal to 1.0 for fee payments when the holder does not execute a PLA. D is equal to 0.8 if the holder executes a PLA for the construction of the project.

(v) *Request for conditional approval: Alternative MWh rate, Domestic Content reduction and PLA reduction.* The alternative MWh rate, the Domestic Content reduction and PLA reduction (paragraphs (b)(1)(ii) and (iii) and (iv) of this section) may only be applied if a request for conditional approval is received by the BLM prior to the issuance of a grant or lease. A request for conditional approval must be submitted with sufficient documentation to demonstrate that the development qualifies or may later qualify for the rate reductions. A request for conditional approval is subject to the holder demonstrating, to the satisfaction of the BLM's Authorized Officer, that the development qualifies. If energy generation begins before the holder has demonstrated that the facility qualifies, the BLM will charge the holder the full capacity fee, without the alternative MWh rate, Domestic Content reduction, or PLA reduction. The capacity fee may be updated for subsequent calendar years after the holder demonstrates that the facility qualifies, but the BLM will not refund past payments made before the alternative MWh rate, domestic content reduction, or PLA reduction went into effect.

(2) E is the annual adjustment factor, which is 3 percent.

(3) F is the year of the grant or lease term, which is the number of years the grant or lease has been authorized. For example, the first year (whether partial or full year) would be 0 and the second year would be 1.

(4) G is the rate of return, which is 7 percent.

(5) H is the annual energy generated on the right-of-way and will be provided to the BLM by the grant or leaseholder in an annual certified statement. The BLM will bill to coincide with the start of the calendar year. The first-year payment in advance will be based on estimated energy generation and the BLM will determine final payment for the first year based on actual energy generation. Subsequent payments in advance will be based on the most recent calendar year's actual energy generation reported on the certified statement, unless exception is approved in paragraph (vi) of this section.

(i) The holder must submit the annual certified statement to the BLM before the first year of energy generation begins or is scheduled to begin as approved in the Plan of Development, whichever comes first. Certified annual statements must be submitted to the BLM by October, each year.

(ii) Prior to the start of energy generation, the holder must submit to the BLM in the certified statement the estimated energy generation of the development for the first year.

(iii) Once energy generation has begun, the holder must submit to the BLM in the certified statement the most recent calendar year's actual energy generation of the development.

(iv) The BLM will calculate the capacity fee from the certified statement. For projects that include generation on public and non-public lands, the holder will prorate the total energy generation by the percentage of the right-of-way footprint on public lands relative to the total development area footprint.

(v) If the year's actual energy generation exceeds or is less than the amount of energy generation used to bill for the payment in advance, the holder will be billed, credited, or refunded for the underpayment or overpayments pursuant to §§ 2806.13(e) and 2806.16. In no event will the total payment be less than the annual acreage rent.

(vi) The BLM may approve a request made by a right-of-way holder to provide a new estimate of energy generation to the BLM in the annual

certified statement to use for billing the next year's payment in advance if: the right-of-way holder has planned maintenance activities, or other interruptions to energy generation, that would reduce the amount of energy generated by 25 percent or more; or, the right-of-way holder is aware that the energy generation in the subsequent year will exceed the actual energy generation for the previous year by 25 percent or more. See § 2805.12(c)(8)(i) through (iii) for the steps to follow when failing to meet diligent operation requirements.

(vii) If the right-of-way holder underestimates energy generation by 25 percent or more of the actual energy generation or does not provide the BLM with a new estimate when energy production will exceed the previous year's actual production by more than 25 percent, the BLM may assess the holder a late payment fee of 10 percent of the actual generation for each year of underestimation. This section applies unless the BLM has approved a request to provide a new estimate under § 2806.52(b)(5)(vi), and the approved new estimate does not underestimate energy generation by 25 percent or more of actual energy generation or if the holder can provide the BLM with justification consistent with § 2805.12(e).

(6) *MWh rate schedule.* You may obtain a copy of the current MWh rate schedule from any BLM state, district, or field office or by writing the address found under § 2804.14(c) of this part, Attention: Renewable Energy Coordination Office. The BLM also posts the current MWh rate schedule at *http://www.blm.gov.*

(7) *Periodic adjustments.* (i) The MWh rate applicable to your right-of-way will be the MWh rate in effect the first year for your grant or lease and will not be updated with subsequent MWh rate schedule adjustments. The MWh rate applicable to your right-of-way will only be updated each year by the annual adjustment factor under paragraph (b)(2) of this section.

(ii) The MWh rate schedule for new grants and leases will be adjusted once every 5 years consistent with the timing of rent adjustments under § 2806.22 of this part and consistent with paragraph (b)(1) of this section.

(8) The general payment provisions for rents described in this subpart, except for § 2806.14(a)(4), also apply to the capacity fee.

(c) *Implementation of the acreage rent and capacity fee.* The rates for acreage rent and capacity fees apply to all grants and leases issued after the effective date of this rule, and to existing grants and leases if the holder elects to continue paying under the rate setting methodology established at the time of your authorization per § 2806.51(c).

* * * * *

■ 29. Add an undesignated center heading between §§ 2806.52 and 2806.54 and revise § 2806.54 to read as follows:

Renewable Energy Rights-of-Way

§ 2806.54 Rent for energy storage facilities that are not part of a solar or wind energy development facility.

Rent for energy storage facilities that are not part of a solar or wind energy development facility will be determined pursuant to the linear rent formula set forth in § 2806.23. The BLM may determine your rent pursuant to § 2806.70 if we determine the linear rent schedule does not apply.

§ § 2806.60 through 2806.68 [Removed]

■ 30. Remove the undesignated center heading ''Wind Energy Rights-of-Way'' and §§ 2806.60 through 2806.68.

Subpart 2807—Grant Administration and Operation

■ 31. Amend § 2807.17 by revising paragraph (c) to read as follows:

§ 2807.17 Under what conditions may BLM suspend or terminate my grant or lease?

* * * * *

(c) Your failure to use your right-of-way for its authorized purpose for any continuous 5-year period creates a presumption of abandonment, except for solar and wind energy rights-of-way. Consistent with § 2805.12(c)(8), a presumption of abandonment or insufficient productivity of a grant or lease for a solar or wind energy generation occurs for any continuous two calendar-year period.

■ 32. Amend § 2807.20 by revising paragraph (b) and adding paragraph (f) to read as follows:

§ 2807.20 When must I amend my application, seek an amendment of my grant or lease, or obtain a new grant or lease?

* * * * *

(b) The requirements to amend an application or grant are the same as those for a new application, including paying processing and monitoring fees and rent according to §§ 2804.14, 2805.16, and 2806.10, except for solar and wind energy development grants and leases per § 2806.51(c) requesting a rent adjustment addressed under paragraph (f) of this section.

* * * * *

(f) A request to the BLM per § 2806.51(c) to adjust your solar or wind energy rates must be received before July 1, 2026. The BLM will re-issue your grant or lease, without further review, for the remainder of your existing term consistent with the requirements of this part, including processing and monitoring costs under §§ 2804.14 and 2805.16, the terms and conditions under § 2805.12, and rent provision under § 2806.50.

■ 33. Amend § 2807.21 by revising paragraph (e) to read as follows:

§ 2807.21 May I assign or make other changes to my grant or lease?

* * * * *

(e) Your assignment is not recognized until the BLM approves it in writing. We will approve the assignment if doing so is in the public interest. We may modify the grant or lease or add bonding and other requirements, including additional terms and conditions, to the grant or lease when approving the assignment, except that we may only modify solar or wind energy leases where modification is warranted under § 2805.15(e). We may decrease rents if the new holder qualifies for an exemption (see § 2806.14) or waiver or reduction (see § 2806.15) and the previous holder did not. Similarly, we may increase rents if the previous holder qualified for an exemption or waiver or reduction and the new holder does not. If we approve the assignment, the benefits and liabilities of the grant or lease apply to the new grant or leaseholder.

* * * * *

■ 34. Revise the heading of subpart 2809 to read as follows:

Subpart 2809—Competitive Process for Solar and Wind Energy Development Applications or Leases

■ 35. Revise § 2809.10 to read as follows:

§ 2809.10 Competitive process for energy development grants and leases.

(a) The BLM may conduct a competitive process for solar and wind energy development grants or leases on its own initiative; or

(b) The BLM may solicit nominations for public lands to be included in a competitive process by publishing a call for nominations under § 2809.11(a); or

(c) You may request that the BLM conduct a competitive process by submitting a request in writing that complies with § 2809.11(b); or

(d) The BLM may conduct a competitive process if it receives two or more competing applications.

(e) Except where an applicant has failed to timely provide information requested by the BLM under § 2804.25(c), the BLM will not offer lands in a competitive process for which the BLM has accepted a complete application, received a Plan of Development, and entered into a cost recovery agreement.

■ 36. Revise § 2809.11 to read as follows:

§ 2809.11 How will the BLM call for nominations?

(a) *Call for nominations.* The BLM may publish a call for nominations for lands to be included in a competitive process. The BLM will publish this notice in the **Federal Register** and may also use other notification methods, such as a newspaper of general circulation in the area affected, or the internet. The **Federal Register** notice and any other notices will include:

(1) The date, time, and location by which nominations must be submitted;

(2) The date by which nominators will be notified of the BLM's decision on timely submissions;

(3) The area or areas within which nominations are being requested; and

(4) The qualification for a nominator, which must include, at a minimum, the requirements for an applicant, see § 2803.10.

(b) *Nomination submission.* Nominations for lands to be included in a competitive process must be in writing, and include the following:

(1) A refundable nomination fee of $5 per acre;

(2) The nominator's name and personal or business address. The name of only one citizen, association, partnership, corporation, or municipality may appear as the nominator. All communications relating to submissions will be sent to that name and address, which constitutes the nominator's name and address of record; and

(3) The legal land description and a map of the nominated lands. The lands nominated may be the entire area or part of the area made available under the call for nominations.

(c) The BLM will not accept your submission if it does not comply with the requirements of this section, or if you are not qualified to hold a grant or lease under § 2803.10.

(d) *Withdrawing a nomination.* A nomination cannot be withdrawn, except by the BLM for cause, in which case the nomination fee will be refunded.

(e) The BLM may decide whether to conduct an offer for nominated lands.

■ 37. Revise § 2809.12 to read as follows:

§ 2809.12 How will the BLM select and prepare parcels?

(a) The BLM will identify parcels for a competitive process based on information received in public nominations, land use designations, and on any other information it deems relevant.

(b) The BLM and other Federal agencies, as applicable, may conduct necessary studies and site evaluation work, including applicable environmental reviews and public meetings, before offering lands in a competitive process.

(c) The BLM's choice to conduct a competitive process is not a decision to grant or deny a right-of-way application and is not subject to appeal under 43 CFR part 4.

■ 38. Amend § 2809.13 by revising paragraphs (b)(7) and (c) to read as follows:

§ 2809.13 How will the BLM conduct competitive processes?

* * * * *

(b) * * *

(7) The terms and conditions of the process, including whether a successful bidder will become a preferred applicant or a presumptive leaseholder; the requirements for the successful bidder to submit an application, see § 2804.12, or a Plan of Development, see § 2809.18; and any mitigation requirements, including compensatory mitigation.

(c) We will notify you in writing of our decision to conduct a competitive process at least 30 days prior to the competitive process if you nominated lands that are included in the process, paid the nomination fees, and demonstrated your qualifications to hold a grant or lease as required by § 2809.11.

■ 39. Amend § 2809.15 by:
■ a. Revising paragraph (a);
■ b. Removing paragraph (d);
■ c. Redesignating paragraphs (b) and (c) as paragraphs (c) and (d), respectively;
■ d. Adding a new paragraph (b); and
■ e. Revising newly redesignated paragraphs (d)(1) through (4);
■ f. Adding paragraph (d)(5); and
■ f. Revising paragraph (e).

The revisions and addition read as follows:

§ 2809.15 How will the BLM select the successful bidder?

(a) The bidder with the highest total bid, prior to any variable offset, is the successful bidder, and may become the preferred applicant or the presumptive leaseholder in accordance with § 2809.15(b).

(b) The successful bidder will become the presumptive leaseholder or preferred applicant only after making the payments required in paragraph (d) and satisfying the requirements of this section and § 2803.10. If the successful bidder does not satisfy these requirements, the BLM may make the next highest bidder the successful bidder under § 2809.17(b) or re-offer the lands under § 2809.17(d).

(1) *Presumptive leaseholder.* (i) The successful bidder will become a presumptive leaseholder if:

(A) The lands for which the bidder has successfully bid are located within a designated leasing area; and,

(B) The notice of the competitive process indicated that a successful bidder will become a presumptive leaseholder.

(ii) A presumptive leaseholder will be awarded a lease only if the presumptive leaseholder submits a proposed Plan of Development in accordance with § 2804.25(c) and the proposed Plan of Development is approved by the BLM.

(2) *Preferred applicant.* A successful bidder who does not become a presumptive leaseholder in accordance with § 2809.15(b)(1) may become a preferred applicant. The preferred applicant's application for a grant or lease will be processed for the parcel identified in the submission under § 2809.12(b). Approval of the application is not guaranteed and is solely at the BLM's discretion. The BLM will not process other applications for solar and wind energy development on lands where a preferred applicant has been identified, unless allowed by the preferred applicant.

* * * * *

(d) * * *

(1) Make payments by personal check, cashier's check, certified check, bank draft, or money order, or by other means deemed acceptable by the BLM, payable to the Department of the Interior—Bureau of Land Management;

(2) By the close of official business hours on the day on which the BLM conducts the competitive process or such other time as the BLM may have specified in the offer notices, submit for each parcel:

(3) Within 15 calendar days after the day on which the BLM conducts the competitive process, submit the balance of the bonus bid (after the variable offsets are applied under paragraph (c) of this section) to the BLM office conducting the process; and

(4) Within 15 calendar days after the day on which the BLM conducts the

competitive process, submit the application filing fee under § 2804.12(c) less the application fee submitted under § 2809.11(c)(1) (if you are the preferred applicant), or submit the acreage rent for the first full year of the lease as provided in part 2806 (if you are the presumptive leaseholder).

(5) You may be required to pay reasonable costs in addition to payment of the application filing fee when processing your application, pursuant to § 2804.14. A processing or monitoring Category 6 cost recovery fee may be reduced by the application filing fee paid when submitting an application.

(e) The successful bidder will not become the preferred applicant or be offered a lease and the BLM will keep all money that has been submitted with the competitive process if the successful bidder does not satisfy the requirements of paragraph (d) of this section. In this case, the BLM may make the next highest bidder the successful bidder under § 2809.17(b) or re-offer the lands.

■ 40. Amend § 2809.16 by redesignating paragraph (c)(11) as paragraph (c)(13), revising paragraphs (c) introductory text and (c)(10), adding paragraphs (c)(11) and (12), revising newly redesignated paragraph (c)(13), and adding paragraph (e) to read as follows:

§ 2809.16 When do variable offsets apply?

* * * * *

(c) The variable offset may be based on the following factors, including progressive steps towards:

* * * * *

(10) Public benefits;

(11) Use of items qualifying for the Domestic Content preference;

(12) Use of a project labor agreement; and

(13) Other factors.

* * * * *

(e) If the successful bidder's eligibility for a variable offset cannot be verified until a later time, the BLM may require the successful bidder to submit the full bid amount, without taking into account the variable offset, and hold the amount of the variable offset in suspense. The amount of the bonus bid corresponding to the variable offset will be refunded or credited to the successful bidder once the successful bidder has demonstrated that it has qualified for the variable offset. The BLM may set a deadline in the notice of competitive process by which the successful bidder must demonstrate its qualifications.

■ 41. Amend § 2809.17 by revising paragraph (b) and removing paragraph (d) to read as follows:

§ 2809.17 Will the BLM ever reject bids or re-conduct a competitive process?

* * * * *

(b) We may make the next highest bidder the successful bidder if the first successful bidder does not satisfy the requirements of § 2809.15, does not execute the lease, or is for any reason disqualified from holding the lease.

* * * * *

■ 42. Amend § 2809.18 by revising the introductory text and paragraphs (a), (b), and (f) to read as follows:

§ 2809.18 What terms and conditions apply to a solar and wind energy development lease?

The lease will be issued subject to the following terms and conditions:

(a) *Site control.* A lease provides site control to the leaseholder. The term of your lease will be consistent with § 2805.11(b) and will terminate on December 31 of the final year of the lease term. You may submit an application for renewal under § 2805.14(g). A leaseholder may not construct any facilities on the right-of-way until the BLM issues a notice to proceed or other written form of approval to begin surface disturbing activities.

(b) *Rent.* You must pay any rent as specified in § 2806.52.

* * * * *

(f) *Assignments.* You may apply to assign your lease under § 2807.21, and if an assignment is approved, the BLM will not make any changes to the lease terms or conditions, as provided for by § 2807.21(e), except for modifications required under § 2805.15(e).

* * * * *

§ 2809.19 [Removed]

■ 43. Remove § 2809.19.
