
[521] The seven SDOH items are ethnicity, race, preferred language, interpreter services, health literacy, transportation, and social isolation (84 FR 42577 through 42579).

[522] Centers for Medicare & Medicaid Services, FY2024 Inpatient Psychiatric Prospective Payment System—Rate Update (88 FR 51107 through 51121).

[523] Centers for Medicare & Medicaid Services, FY2023 IPPS/LTCH PPS final rule (87 FR 49202 through 49215).

to modify the A1250. Transportation item currently collected in the LCDS in two ways: (1) revise the look-back period for when the patient experienced lack of reliable transportation; and (2) simplify the response options.

First, the proposed modification of the Transportation item would use a defined 12-month look back period, while the current Transportation item uses a look back period of six to 12 months. We believe the distinction of a 12-month look back period would reduce ambiguity for both patients and clinicians, and therefore improve the validity of the data collected. Second, we are proposing to simplify the response options. Currently, LTCHs separately collect information on whether a lack of transportation has kept the patient from medical appointments or from getting medications, and whether a lack of transportation has kept the patient from non-medical meetings, appointments, work, or from getting things they need. Although transportation barriers can directly affect a person's ability to attend medical appointments and obtain medications, a lack of transportation can also affect a person's health in other ways, including accessing goods and services, obtaining adequate food and clothing, and social activities.[524] The proposed modified Transportation item would collect information on whether a lack of reliable transportation has kept the patient from medical appointments, meetings, work *or* from getting things needed for daily living, rather than collecting the information separately. As discussed previously, we believe reliable transportation services are fundamental to a person's overall health, and as a result, the burden of collecting this information separately outweighs its potential benefit.

For the reasons stated, we are proposing to modify A1250. Transportation based on the Transportation item adopted for use in the AHC HRSN Screening Tool and adapted from the PRAPARE tool. The proposed Transportation item asks, ''In the past 12 months, has a lack of reliable transportation kept you from medical appointments, meetings, work or from getting things needed for daily living?'' The proposed response options are: (0) Yes; (1) No; (7) Patient declines to respond; and (8) Patient unable to respond. A draft of the proposed Living Situation item to be adopted as a standardized patient assessment data element under the SDOH category can be found in the Downloads section of the LCDS and LTCH Manual web page at *https://www.cms.gov/medicare/quality/long-term-care-hospital/ltch-care-data-set-ltch-qrp-manual.*

We invite comment on this proposal to modify the current Transportation item previously adopted as a standardized patient assessment data element under the SDOH category beginning with the FY 2028 LTCH QRP.

5. LTCH QRP Quality Measure Concepts Under Consideration for Future Years: Request for Information (RFI)

We are seeking input on the importance, relevance, appropriateness, and applicability of each of the concepts under consideration listed in Table IX.E.–02 for future years in the LTCH QRP. In the FY 2024 LTCH PPS proposed rule (88 FR 27150–27153), we published a request for information (RFI) on the set of principles for selecting and prioritizing LTCH QRP measures, identifying measurement gaps, and suitable measures for filling these gaps. Within this proposed rule, we also sought input on data available to develop measures, approaches for data collection, perceived challenges or barriers, and approaches for addressing identified challenges. We refer readers to the FY 2024 LTCH PPS final rule (88 FR 59250–59252) for a summary of the public comments we received in response to the RFI.

Subsequently, our measure development contractor convened a Technical Expert Panel (TEP) on December 15, 2023 to obtain expert input on future measure concepts that could fill the measurement gaps identified in the FY 2024 RFI.[525] The TEP discussed the alignment of PAC and Hospice measures with CMS's ''Universal Foundation'' of quality measures.[526] The Universal Foundation aims to focus provider attention, reduce burden, identify disparities in care, prioritize development of interoperable, digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps.

In consideration of the feedback we received through these activities, we are seeking input on three measure concepts for the LTCH QRP. One is a composite of vaccinations,[527] which could represent overall immunization status of LTCH patients such as the Adult Immunization Status measure [528] in the Universal Foundation. A second concept we are seeking feedback on is the concept of depression for the LTCH QRP, which may be similar to the Clinical Screening for Depression and Follow-up measure [529] in the Universal Foundation. Finally, we are seeking feedback on the concept of pain management.

TABLE IX.E.-02: FUTURE MEASURE CONCEPTS UNDER CONSIDERATION FOR THE LTCH QRP

Quality Measure Concepts
Vaccination Composite
Pain Management
Depression

While we will not be responding to specific comments in response to this RFI in the FY 2025 LTCH PPS final rule, we intend to use this input to inform our future measure development efforts.

6. Future LTCH Star Rating System: Request for Information (RFI)

Section 1886(m)(5)(E) of the Act requires that the Secretary establish procedures for making data submitted under the LTCH QRP available to the public. Such procedures must ensure the LTCHs participating in the LTCH QRP have the opportunity to review the LTCH-submitted data prior to such data being made public. The Secretary must publicly report quality measures that relate to services furnished in LTCHs on the CMS website. We currently publicly report data we receive on measures under the LTCH QRP on our Care Compare website.[530]

Care Compare displays star ratings for many provider types, specifically: doctors and clinicians, hospitals, nursing homes, home health, hospice, and dialysis facilities. Rating methodologies vary by provider type. Star ratings summarize performance using symbols to help consumers quickly and easily understand quality of care information. Star ratings are designed to enhance and supplement existing publicly reported quality information, and also serve to spotlight differences in health care quality and identify areas for improvement.[531] Some providers receive ''overall star ratings,'' which are a composite score calculated using different data sources, such as quality measures or survey results. Others receive ''patient survey star ratings,'' a composite score derived from patient experience of care surveys. Depending on the provider type, some utilize one—or both—of these rating methodologies.

Star ratings serve an important function for patients, caregivers, and families, helping them to more quickly comprehend complex information about a health care providers' care quality and to easily assess differences among providers. This transparency serves an important educational function, while also helping to promote competition in health care markets. Informed patients and consumers are more empowered to select among health care providers, fostering continued quality improvement. CMS' commitment to establishing star ratings systems across health care settings is consistent with the Biden-Harris Administration's goal to promote an open, transparent, and competitive economy as outlined in President Biden's July 2021 Executive Order on Promoting Competition in the American Economy.[532]

We are seeking feedback on the development of a five-star methodology for LTCHs that can meaningfully distinguish between quality of care offered by providers. Star ratings for LTCHs will be designed to help consumers quickly identify differences in quality when selecting a provider. We are committed to developing a well-tested, data-driven methodology that encourages continuous quality improvement. We plan to engage with the LTCH community and provide multiple opportunities for LTCHs and other interested parties to give input on the development of a star rating system for LTCHs. Additionally, LTCHs would have the ability to preview their own facility's quality data before public posting of the LTCH's star rating on the Care Compare website in accordance with section 1886(j)(7)(E) of the Act.

We invite general comments on a potential star rating system as well as measures suitable to use in a star rating system. Specifically, we invite public comment on the following questions:

- Are there specific criteria CMS should use to select measures for a star rating system?
- How should CMS present star ratings information in a way that it is most useful to consumers?

While we will not be responding to specific comments in response to this RFI in the FY 2025 IPPS/LTCH PPS final rule, we intend to use this input to inform our future star rating development efforts. We intend to consider how a rating system would determine an LTCH's star rating, the methods used for such calculations, and an anticipated timeline for implementation. We will consider comments in response to this RFI for future rulemaking.

7. Form, Manner, and Timing of Data Submission Under the LTCH QRP

a. Background

We refer readers to the regulatory text at 42 CFR 412.560(b) for information regarding the current policies for reporting specified data for the LTCH QRP.

b. Proposed Reporting Schedule for the Submission of Proposed New Items as Standardized Patient Assessment Data Elements and the Modified Transportation Item Beginning With the FY 2028 LTCH QRP

As discussed in section X.4. of this proposed rule, we are proposing to adopt four new items as standardized patient assessment data elements under the SDOH category (one Living Situation item, two Food items, and one Utilities item), and to modify the Transportation standardized patient assessment data elements previously adopted under the SDOH category beginning with the FY 2028 LTCH QRP.

We are proposing that LTCHs would be required to report these new items and the modified Transportation item using the LCDS beginning with patients admitted on October 1, 2026 for purposes of the FY 2028 LTCH QRP. Starting in CY 2027, LTCHs would be required to submit data for the entire calendar year for purposes of the FY 2029 LTCH QRP.

We are also proposing that LTCHs who submit the Living Situation, Food, and Utilities items proposed for adoption as standardized patient assessment data elements under the SDOH category with respect to admission only would be deemed to have submitted those items with respect to both admission and discharge. We propose that LTCHs would be required to submit these items at admission only (and not at discharge), because it is unlikely that the assessment of those items at admission will differ from the assessment of the same item at discharge. This would align the data collection for these proposed items with other SDOH items (that is, Race, Ethnicity, Preferred Language, and Interpreter Services) which are only collected at admission.[533] A draft of the proposed items is available in the Downloads section of the LCDS and LTCH Manual web page at *https://www.cms.gov/medicare/quality/long-term-care-hospital/ltch-care-data-set-ltch-qrp-manual.*

As we noted in Section X.E,4.e. of the preamble of this proposed rule, we continually to assess the implementation of the new SDOH items, including A1250. Transportation, as part of our routine item and measure monitoring work. We received feedback from stakeholders in response to the FY 2020 LTCH PPS proposed rule (84 FR 19551) noting their concern with the burden of collecting the Transportation item at admission and discharge.

[532] Executive Order on Promoting Competition in the American Economy | The White House.

[533] FY 2020 IPPS/LTCH PPS final rule (84 FR 42588 through 42590).

Specifically, commenters stated that a patient's access to transportation is unlikely to change between admission and discharge. We analyzed the data LTCHs reported from October 1, 2022 to June 30, 2023 (Q4 CY 2022 through Q2 CY 2023) and found that patient responses did not significantly change from admission to discharge.[534] Specifically, the proportion of patients [535] who responded ''Yes'' to the Transportation item at admission versus at discharge differed by only 1.65 percentage points during this period. We find these results convincing, and therefore are proposing to require LTCHs to collect and submit the proposed modified standardized patient assessment data element, Transportation, at admission only.

We invite public comment on our proposal to collect data on the following items proposed as standardized patient assessment data elements under the SDOH category at admission beginning October 1, 2026 with the FY 2028 LTCH QRP: (1) Living Situation as described in section X.4.c.(1) of this proposed rule; (2) Food as described in section X.4.c.(2) of this proposed rule; and (3) Utilities as described in section X.4.c.(3) of this proposed rule. We also invite comment on our proposal to submit the proposed modified standardized patient assessment data element, Transportation, at admission only beginning October 1, 2026 with the FY 2028 LTCH QRP as described in section IX.4.e. of this proposed rule.

c. Proposal To Modify the LCDS Admission Assessment Window to Four Days Beginning With the FY 2028 LTCH QRP

Since the FY2012 IPPS/LTCH Final Rule, LTCHs have collected information for the LTCH QRP utilizing the LCDS.[536] Since 2012, the LTCH QRP has evolved in response to both quality initiatives and statutory requirements, and as a result, the LCDS has evolved to support data collection for evaluation of health outcomes in the LTCH. The LCDS Version 5.0 was implemented on October 1, 2022, and is currently in use.[537]

As specified in the LCDS Manual, the LCDS Admission assessment has a maximum three-day assessment period, beginning with the date of admission, in which the patient's assessment must be conducted to obtain information for the LCDS Admission assessment items. All LTCHs are required to record the Assessment Reference Date (ARD) (A0210) on each LCDS, which is defined as the end point of the assessment period for the LCDS assessment record. LTCHs can set their own ARD, as long as it is no later than the third calendar day (date of admission plus two calendar days) of the patient's stay.

We continually look for opportunities to minimize LTCHs' burden associated with collection of the LCDS through strategies that include improving communication and conducting outreach with users, as well as simplifying collection and submission requirements. In recent years, we have received feedback regarding the difficulty of collecting the required LCDS data elements within the three-day assessment window when medically complex patients are admitted prior to and on weekends. On October 17th, 2023, our measure development contractor hosted an LTCH Listening Session on the Administrative Burden of the LTCH QRP, and invited providers to comment on several LTCH QRP topics, including a potential expansion of the assessment period to four days.[538] During the listening session, we received support for revising the Admission assessment window, with participants suggesting that extending the assessment window would ease the difficulties noted above.

We propose to extend the Admission assessment period from three days to four days, beginning with LTCH admissions on October 1, 2026. For example, if a patient was admitted on Friday, October 19, the ARD for the LCDS Admission assessment could be no later than Monday, October 22. This change to the assessment period would only apply to the LCDS Admission assessment, and have no impact on burden.

We invite public comment on our proposal to extend the LCDS Admission assessment window from three to four days beginning with the FY 2028 LTCH QRP.

8. Policies Regarding Public Display of Measure Data for the LTCH QRP

We are not proposing any new policies regarding the public display of measure data at this time. For a more detailed discussion about our policies regarding public display of LTCH QRP measure data and procedures for the opportunity to review and correct data and information, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57231 through 57236).

F. Medicare Promoting Interoperability Program

1. Statutory Authority for the Medicare Promoting Interoperability Program for Eligible Hospitals and Critical Access Hospitals (CAHs)

Sections 1886(b)(3)(B)(ix) and 1814(l)(4) of the Social Security Act (as amended by the Health Information Technology for Economic and Clinical Health Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009, Pub. L. 111–5) authorize downward payment adjustments under Medicare, beginning with fiscal year (FY) 2015 for eligible hospitals and CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for the applicable electronic health record (EHR) reporting periods. Section 602 of Title VI, Division O of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113) added subsection (d) hospitals in Puerto Rico as eligible hospitals under the Medicare EHR Incentive Program and extended the participation timeline for these hospitals such that downward payment adjustments were authorized beginning in FY 2022 for section (d) Puerto Rico hospitals that do not successfully demonstrate meaningful use of CEHRT for the applicable EHR reporting periods.

2. Proposal To Change the Antimicrobial Use and Resistance (AUR) Surveillance Measure Beginning With the EHR Reporting Period in Calendar Year (CY) 2025

a. Proposal To Modify the AUR Surveillance Measure Beginning With the EHR Reporting Period in CY 2025

The Medicare Promoting Interoperability Program encourages healthcare data exchange for public health purposes through the Public Health and Clinical Data Exchange objective. In the FY 2023 Hospital Inpatient Prospective Payment System

[534] Due to data availability of LTCH SDOH standardized patient assessment data elements, this is based on three quarters of Transportation data.

[535] The analysis is limited to patients who responded to the Transportation item at both admission and discharge.

[536] Office of the Federal Register of the National Archives and Records Administration and the U.S. Government Publishing Office. *Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and FY 2012 Rates; Hospitals' FTE Resident Caps for Graduate Medical Education Payment.* 2011. *https://www.federalregister.gov/d/2011-19719/p-3517.*

[537] Centers for Medicare & Medicaid Services (CMS). *Long-Term Care Hospital (LTCH) Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) & LCDS Manual.* 2023. *https://www.cms.gov/medicare/quality/long-term-care-hospital/ltch-care-data-set-ltch-qrp-manual.*

[538] A summary of the LTCH Listening Session can be found on the LTCH QRP Measures Information web page at: *https://www.cms.gov/medicare/quality/long-term-care-hospital/ltch-quality-reporting-measures-information.*

and Long Term Care Hospital Prospective Payment System (IPPS/LTCH PPS) final rule, we finalized the requirement for eligible hospitals and CAHs to report the AUR Surveillance measure with a modification to begin reporting with the EHR reporting period in CY 2024 (87 FR 49337). Under the AUR Surveillance measure, eligible hospitals and CAHs report two kinds of data to the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN): Antimicrobial Use (AU) data and Antimicrobial Resistance (AR) data (87 FR 49335). Separate data elements and technical capabilities are required for reporting the AU data and AR data, and we refer readers to the CDC NHSN AUR protocols for technical details regarding implementation.[539] Eligible hospitals and CAHs that report a ''yes'' response indicate that they have submitted data for both AU and AR, and will receive credit for reporting the measure, unless they claim an exclusion for which they are eligible. Eligible hospitals and CAHs must also use technology certified to the criterion at 45 CFR 170.315(f)(6), ''Transmission to public health agencies—antimicrobial use and resistance reporting'' for data submission (87 FR 49337).

After finalization of the AUR Surveillance measure, we received feedback from some eligible hospitals and CAHs seeking clarity regarding reporting requirements and exclusion eligibility for eligible hospitals and CAHs. Comments and questions included whether eligible hospitals or CAHs with an eligible exclusion preventing their participation in reporting either AU data or AR data were required or able to report any available data to receive credit under the AUR Surveillance measure. Under our current policy, if an eligible hospital or CAH meets the exclusion criteria with respect to reporting either AU data or AR data, the hospital is excluded from the entire AUR Surveillance measure (87 FR 49337).

In collaboration with the CDC, we identified the need to separate the AUR Surveillance measure into two measures to clarify reporting requirements and incentivize greater data reporting from eligible hospitals and CAHs. In addition, because AU and AR reporting rely on different data sources, such as an electronic medication administration record (eMAR)/bar-coded medication administration (BCMA) for AU, and lab information systems (LISs) for AR, we also believe that separating the measure into two measures would more appropriately target the availability of exclusions for participants who have difficulty with data transmission using a single data source.

Specifically, we are proposing to separate the AUR Surveillance measure into two measures, beginning with the EHR reporting period in CY 2025:

- *AU Surveillance measure:* The eligible hospital or CAH is in active engagement with CDC's NHSN to submit AU data for the selected EHR reporting period and receives a report from NHSN indicating its successful submission of AU data for the selected EHR reporting period.
- *AR Surveillance measure:* The eligible hospital or CAH is in active engagement with CDC's NHSN to submit AR data for the selected EHR reporting period and receives a report from NHSN indicating its successful submission of AR data for the selected EHR reporting period.

Under the proposed AU Surveillance measure, eligible hospitals and CAHs would be required to report AU data to CDC's NHSN. Under the proposed AR Surveillance measure, eligible hospitals and CAHs would also be required to report AR data to CDC's NHSN. Under this proposal, eligible hospitals and CAHs must report a ''yes'' response or claim an exclusion, separately, to receive credit for reporting the AU Surveillance measure and the AR Surveillance measure. For both measures, we propose that eligible hospitals and CAHs be required to use technology certified to the Office of the National Coordinator for Health Information Technology (ONC) Certification Program for Health Information Technology (health IT) certification criterion at 45 CFR 170.315(f)(6), ''Transmission to public health agencies—antimicrobial use and resistance reporting,'' as they are for the AUR Surveillance measure. We believe that separating the AUR Surveillance measure into two measures would encourage participation from eligible hospitals and CAHs that could report data for only the AU measure or for only the AR measure that might previously have been excluded because of their inability to report both AU data and AR data as required by the AUR Surveillance measure.

Under current policy with a single AUR Surveillance measure, eligible hospitals and CAHs that meet the exclusion criteria with respect to reporting data of one kind (for example, AR) are excluded from all AUR Surveillance measure reporting requirements, even if they can report data of the other kind (for example, AU). Offering a complete AUR Surveillance measure exclusion, even when participants can report either AU or AR data, is contrary to the goals of the Public Health and Clinical Data Exchange objective, because it discourages the sending of partial data as available. Separating the single AUR Surveillance measure into two measures would better reflect the reality that AU data reporting and AR data reporting rely on different data sources that require different types of exclusions to reflect the separate clinical and data domains of prescribing and microbiological testing. Separation of AU data reporting and AR data reporting into two measures also supports the Medicare Promoting Interoperability Program's administrative requirements with respect to scoring, because the current scoring methodology for the Public Health and Clinical Data Exchange objective does not grant partial credit for reporting on individual measures. We note that the separation of the AUR Surveillance measure does not expand on the previously finalized requirements of the measure; the proposed separation from one measure into two measures allows eligible hospitals and CAHs the opportunity to submit data for either AU or AR if it can only submit data for one of the two, versus an all or nothing approach.

We invite public comment on our proposal to separate the AUR Surveillance measure into two measures, AU Surveillance and AR Surveillance, beginning with the EHR reporting period in CY 2025.

b. Proposal To Adopt Exclusions for the AU Surveillance Measure and the AR Surveillance Measure Beginning With the EHR Reporting Period in CY 2025

We previously finalized the availability of three exclusions for an eligible hospital or CAH reporting on the AUR Surveillance measure that: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have an eMAR/BCMA records or an electronic admission discharge transfer (ADT) system during the EHR reporting period; or (3) Does not have an electronic LIS or electronic ADT system during the EHR reporting period (87 FR 49337).

We have received feedback from eligible hospitals and CAHs requesting clarity on whether an AUR Surveillance exclusion applies when they possess all necessary health IT systems but lack discrete electronic access to data elements necessary for NHSN AUR reporting. For example, an eligible

[539] *https://www.cdc.gov/nhsn/psc/aur/index.html.*

hospital or CAH may possess an LIS, but it may refer AR testing to an outside reference laboratory that does not provide data elements necessary for NHSN AUR reporting results to the referring laboratory. As the eligible hospital or CAH has an LIS system and therefore could not claim the third exclusion, assuming it could not claim another exclusion, the eligible hospital or CAH would be required to manually extract the data elements to successfully report the AUR Surveillance measure.

Our current policy inadvertently causes difficulties for eligible hospitals and CAHs such as the one in the example because manual reporting of NHSN AUR data is both infeasible and against NHSN AUR recommendations.[540] In addition, we require that eligible hospitals and CAHs must use technology certified to the criterion at 45 CFR 170.315(f)(6), ''Transmission to public health agencies—antimicrobial use and resistance reporting'' for data submission (87 FR 49337). We believe an exclusion that applies to eligible hospitals and CAHs that lack discrete electronic access to required data elements, including interface or configuration issues beyond their control, would address the difficulties for eligible hospitals and CAHs engaging in manual data collection to conduct AU or AR reporting. Therefore, we are proposing to add a new exclusion to account for scenarios where eligible hospitals or CAHs lack a data source containing discrete electronic data elements that are required for reporting the AUR Surveillance measure, meaning an eligible hospital or CAH cannot query, extract, or download the data elements in a discrete, structured manner from the systems to which it has access. Specifically, under this new exclusion, an eligible hospital or CAH would be excluded from reporting the AUR Surveillance measure when it does not have a data source containing the minimal discrete data elements that are required for reporting.

Should we finalize our proposal to separate the AUR Surveillance measure into two separate measures, AU Surveillance and AR Surveillance, we propose modifying the existing exclusions under the AUR measure, to maintain applicability to the AU measure and AR measure. For example, we propose to assign current exclusion 2 to the AU Surveillance measure because it relies on eMAR/BCMA data, and current exclusion 3 to the AR Surveillance measure because it relies on LIS data.

Should we finalize our previously discussed proposal to add a new exclusion for the eligible hospitals and CAHs that lack discrete electronic access to data elements that are required for reporting, we propose that the new exclusion would be available for both the AU Surveillance measure and the AR Surveillance measure. Specifically, for the AU Surveillance measure, we propose to adopt three eligible exclusions, as follows: Any eligible hospital or CAH may be excluded from the AU Surveillance measure if the eligible hospital or CAH: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have an eMAR/BCMA electronic records or an electronic ADT system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting. For the AR Surveillance measure, we propose to adopt three eligible exclusions, as follows: Any eligible hospital or CAH may be excluded from the AR Surveillance measure if the eligible hospital or CAH: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have an electronic LIS or electronic ADT system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting.

We invite public comment on our proposals to adopt three eligible exclusions for the proposed AU Surveillance measure and for the AR Surveillance measure, of which the third exclusion for each measure is a new exclusion for eligible hospitals and CAHs that lack discrete electronic access to data elements that are required for reporting.

c. Proposal To Adopt Active Engagement for the Proposed AU Surveillance Measure and AR Surveillance Measure Beginning With the EHR Reporting Period in CY 2025

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a policy to limit the amount of time an eligible hospital or CAH may spend in the Option 1: Pre-production and Validation level of active engagement to one EHR reporting period (87 FR 49340 through 49342). As finalized, this limitation applies beginning with the EHR reporting period in CY 2024. Should we finalize our proposal to modify the AUR Surveillance measure into two new measures, AU Surveillance and AR Surveillance, we propose to treat these two measures as new measures with respect to active engagement, beginning with the EHR reporting period in CY 2025 and subsequent years.

We propose to evaluate the level of active engagement for the AU Surveillance and AR Surveillance measures beginning with the EHR reporting period in CY 2025, independent of the participant's prior level of active engagement for the AUR Surveillance measure in the EHR reporting period in CY 2024. If we finalize the AU Surveillance and AR Surveillance measures, we are proposing that for each measure, eligible hospitals and CAHs may spend only one EHR reporting period at the Option 1: Pre-production and Validation level of active engagement, and they must progress to the Option 2: Validated Data Production level for the next EHR reporting period for which they report the measure.

This proposal would offer eligible hospitals and CAHs an additional year to gain familiarity with reporting in the NHSN AUR Module before they are required to participate in Option 2: Validated Data Production, and if finalized, the AU Surveillance and AR Surveillance measures.

We invite public comment on our proposal to evaluate the level of active engagement for the proposed AU Surveillance and AR Surveillance measures, independent of the participant's prior active engagement for the AUR Surveillance measure.

d. Proposal To Maintain the Scoring Approach for Reporting Required Measures in the Public Health and Clinical Data Exchange Objective Beginning With the EHR Reporting Period in CY 2025

Should we finalize our proposal to separate the AUR Surveillance measure into two measures, AU Surveillance and AR Surveillance, we do not believe this change should affect scoring or the exclusion redistributions for the Public Health and Clinical Data Exchange objective, previously adopted in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59266). We note that the separation of the AUR Surveillance measure does not expand on the previously finalized requirements of the measure. In other words, eligible hospitals and CAHs are required to report AU and AR data, whether combined under the AUR Surveillance measure, or separated into AU Surveillance and AR Surveillance measures.

Therefore, we propose to maintain a scoring value of 25 points for reporting

[540] *https://www.cdc.gov/nhsn/pdfs/pscmanual/11pscaurcurrent.pdf.*

all required measures in the Public Health and Clinical Data Exchange objective, which would increase from five measures to six measures, including the four previously finalized measures and the two proposed required measures (AU Surveillance and AR Surveillance). We also propose to maintain the exclusion redistribution policy we adopted in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59267) but modify it to indicate there are six measures as opposed to five measures. If an eligible hospital or CAH claims an exclusion for each of the six required measures, the 25 points of the Public Health and Clinical Data Exchange objective would continue to be redistributed to the Provide Patients Electronic Access to their Health Information measure.

We invite public comment on our proposals to maintain the current approach to scoring and points redistribution for the proposed AU Surveillance and AR Surveillance measures.

3. Overview of Objectives and Measures for the Medicare Promoting Interoperability Program for the EHR Reporting Period in CY 2025

For ease of reference, Table IX.F.–01 lists the objectives and measures for the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025, as revised, to reflect the proposals in this proposed rule.

BILLING CODE 4120–01–P

TABLE [IX.F.-01.]: SUMMARY OF OBJECTIVES AND MEASURES FOR THE MEDICARE PROMOTING INTEROPERABILITY PROGRAM FOR THE EHR REPORTING PERIOD IN CY 2025

Objective	Measure	Numerator	Denominator	Exclusion	Calculation considerations related to counting unique patients or actions for CY 2025 and subsequent years
Electronic Prescribing (e-Prescribing)	e-Prescribing: For at least one hospital discharge, medication orders for permissible prescriptions (for new and changed prescriptions) are transmitted electronically using CEHRT.*	The number of prescriptions in the denominator generated and transmitted electronically.	The number of new or changed prescriptions written for drugs requiring a prescription in order to be dispensed, other than controlled substances for patients discharged during the EHR reporting period.	Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions, and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of their EHR reporting period.	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.
e-Prescribing	Query of Prescription Drug Monitoring Program (PDMP): For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the EHR reporting period, the eligible hospital or CAH uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Y/N)	N/A (measure is Y/N)	(1) Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions for controlled substances that include Schedule II, III and IV drugs and is not located within 10 miles of any pharmacy that accepts electronic prescriptions for controlled substances at the start of their EHR reporting period. (2) Any eligible hospital or CAH that could not report on this measure in accordance with applicable law.	N/A (measure is Y/N)

Health Information Exchange (HIE)	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the eligible hospital or CAH that transitions or refers its patient to another setting of care or provider of care: (1) Creates a summary of care record using CEHRT; and (2) Electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where a summary of care record was created using CEHRT and exchanged electronically.	Number of transitions of care and referrals during the EHR reporting period for which the eligible hospital or CAH inpatient or emergency department (Place of Service [POS] 21 or 23) was the transitioning or referring provider.	None	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.
HIE	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received using CEHRT for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the receiving party of a transition of care or referral, or for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient, the eligible hospital or CAH conducts clinical information reconciliation for medication, medication allergy, and current problem list using CEHRT.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication Allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the EHR reporting period for which an eligible hospital or CAH was the reconciling party of a transition of care or referral, and for patient encounters during the EHR reporting period in which the eligible hospital or CAH has never before encountered the patient.	None	Measure may be calculated by reviewing only actions for patients whose records are maintained using CEHRT for which sufficient data were entered in the CEHRT to allow the record to be saved and not rejected due to incomplete data.

HIE	HIE Bi-Directional Exchange The eligible hospital or CAH must attest to the following: (*1*) Participating in an IIIE in order to enable secure, bi-directional exchange of information to occur for all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23), and all unique patient records stored or maintained in the EHR for these departments, during the EHR reporting period in accordance with applicable law and policy. (*2*) Participating in an HIE that is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners. (*3*) Using the functions of CEHRT to support bi-directional exchange with an HIE.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)

HIE	Enabling Exchange under the Trusted Exchange Framework and Common Agreement (TEFCA) The eligible hospital or CAH must attest to the following: (1) Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the **Federal Register** and on ONC's website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for all unique patients discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23), and all unique patient records stored or maintained in the EHR for these departments, during the EHR reporting period in accordance with applicable law and policy. (2) Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)

	this Framework Agreement.				
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information: For at least one unique patient discharged from the eligible hospital or CAH inpatient or emergency department (POS 21 or 23): (1) the patient (or patient-authorized representative) is provided timely access to view online, download, and transmit their health information; and (2) the eligible hospital or CAH ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the application programming interface (API) in the eligible hospital's or CAH's CEHRT.	The number of patients in the denominator (or patient authorized representatives) who are provided timely access to health information to view online, download and transmit to a third party and to access using an application of their choice that is configured to meet the technical specifications of the API in the eligible hospital's or CAH's CEHRT.	The number of unique patients discharged from an eligible hospital or CAH inpatient or emergency department (POS 21 or 23) during the EHR reporting period.	None	Measure must be calculated by reviewing all patient records, not just those maintained using CEHRT.

Public Health and Clinical Data Exchange	Immunization Registry Reporting: The eligible hospital or CAH is in active engagement with a public health agency (PHA) to submit immunization data and receive immunization forecasts and histories from the public health immunization registry or immunization information system (IIS).	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the immunization registry reporting measure if the eligible hospital or CAH: (1) Does not administer any immunizations to any of the populations for which data are collected by its jurisdiction's immunization registry or IIS during the EHR reporting period; (2) Operates in a jurisdiction for which no immunization registry or IIS is capable of accepting the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no immunization registry or IIS has declared readiness to receive immunization data as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N)

Public Health and Clinical Data Exchange	Syndromic Surveillance Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit syndromic surveillance data from an emergency department (POS 23).	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the syndromic surveillance reporting measure if the eligible hospital or CAH: (1) Does not have an emergency department; (2) Operates in a jurisdiction for which no PHA is capable of receiving electronic syndromic surveillance data from eligible hospitals or CAHs in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive syndromic surveillance data from eligible hospitals or CAHs as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N)

Public Health and Clinical Data Exchange	Electronic Case Reporting (eCR): The eligible hospital or CAH is in active engagement with a PHA to submit case reporting of reportable conditions.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the case reporting measure if the eligible hospital or CAH: (1) Does not treat or diagnose any reportable diseases for which data are collected by its jurisdiction's reportable disease system during the EHR reporting period; (2) Operates in a jurisdiction for which no PHA is capable of receiving eCR data in the specific standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive eCR data as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N)

Public Health and Clinical Data Exchange	Electronic Reportable Laboratory (ELR) Result Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit ELR results.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any eligible hospital or CAH meeting one or more of the following criteria may be excluded from the ELR result measure if the eligible hospital or CAH: (1) Does not perform or order laboratory tests that are reportable in its jurisdiction during the EHR reporting period; (2) Operates in a jurisdiction for which no PHA is capable of accepting the specific ELR standards required to meet the CEHRT definition at the start of the EHR reporting period; or (3) Operates in a jurisdiction where no PHA has declared readiness to receive ELR results from an eligible hospital or CAH as of 6 months prior to the start of the EHR reporting period.	N/A (measure is Y/N)
Public Health and Clinical Data Exchange	AU Surveillance**: The eligible hospital or CAH is in active engagement with CDC's NHSN to submit AU data for the EHR reporting period and receives a report from NHSN indicating its successful submission of AU data for the EHR reporting period.**	N/A (measure is Y/N)**	N/A (measure is Y/N)**	Any eligible hospital or CAH may be excluded from the measure if the eligible hospital or CAH: (1) Does not have any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have eMAR/BCMA electronic records or an ADT system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting.**	N/A (measure is Y/N)**
Public Health and Clinical Data Exchange	AR Surveillance**: The eligible hospital or CAH is in active engagement with	N/A (measure is Y/N)**	N/A (measure is Y/N)**	Any eligible hospital or CAH may be excluded from the measure if the eligible hospital or CAH: (1) Does not have	N/A (measure is Y/N)**

	CDC's NHSN to submit AR data for the EHR reporting period and receives a report from NHSN indicating its successful submission of AR data for the EHR reporting period.**			any patients in any patient care location for which data are collected by NHSN during the EHR reporting period; (2) Does not have an LIS or ADT system during the EHR reporting period; or (3) Does not have a data source containing the minimal discrete data elements that are required for reporting.**	
Public Health and Clinical Data Exchange	Public Health Registry Reporting: The eligible hospital or CAH is in active engagement with a PHA to submit data to public health registries.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)
Public Health and Clinical Data Exchange	Clinical Data Registry Reporting: The eligible hospital or CAH is in active engagement to submit data to a clinical data registry.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)
Protect Patient Health Information	Security Risk Analysis Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3),	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)

	implement security updates as necessary, and correct identified security deficiencies as part of the provider's risk management process. Actions included in the security risk analysis measure may occur any time during the calendar year in which the EHR reporting period occurs.				
Protect Patient Health Information	Safety Assurance Factors for EHR Resilience (SAFER) Guides Conduct an annual self-assessment using all nine SAFER Guides at any point during the calendar year in which the EHR reporting period occurs.	N/A (measure is Y/N)	N/A (measure is Y/N)	None	N/A (measure is Y/N)

* In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59269) we inadvertently omitted a footnote describing changes to the phrasing of the measure description and description of the numerator in this Table to align with the technical update finalized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49327).

** Signifies a proposal made in this FY 2025 IPPS/LTCH PPS proposed rule that would apply to the EHR reporting period in CY 2025 and subsequent years.

BILLING CODE 4120–01–C

4. Updates to the Definition of CEHRT in the Medicare Promoting Interoperability Program Beginning With the EHR Reporting Period in CY 2024

In the CY 2024 Medicare Physician Fee Schedule (PFS) final rule (88 FR 79307 through 79312), we finalized revisions to the definition of CEHRT for the Medicare Promoting Interoperability Program at 42 CFR 495.4. Specifically, we finalized the addition of a reference to the revised name of ''Base EHR definition,'' proposed in the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI–1) proposed rule (88 FR 23759, 23905), to ensure, if the HTI–1 proposals were finalized, the revised name of ''Base EHR definition'' would be applicable for the CEHRT definitions going forward (88 FR 79309 through 79312). We also finalized the replacement of our references to the ''2015 Edition health IT certification criteria'' with ''ONC health IT certification criteria,'' and the addition of the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315. We finalized the proposal to specify that technology meeting the CEHRT definition must meet ONC's health IT certification criteria ''as adopted and updated in 45 CFR 170.315'' (88 FR 79553). This approach is consistent with the definitions subsequently finalized in ONC's HTI–1 final rule, which appeared in the **Federal Register** on January 9, 2024 (89 FR 1205 through 1210). For additional background and information on this update, we refer readers to the discussion in the CY 2024 PFS final rule on this topic (88 FR 79307 through 79312).

In consideration of the updates finalized in the CY 2024 PFS final rule and the HTI–1 final rule, we refer to ''ONC health IT certification criteria'' throughout this proposed rule where we previously would have referred to ''2015 Edition health IT certification criteria.'' We believe that these revisions to the definition of CEHRT in 42 CFR 495.4 will ensure that updates to the definition of Base EHR in 45 CFR 170.102, and updates to applicable ONC health IT certification criteria in 45 CFR 170.315, will be incorporated into the CEHRT definition without additional regulatory action by CMS. We also believe these updates align with the transition, where the ONC health IT certification criteria were adopted as year themed ''editions,'' to the ''edition-less approach finalized in the ONC HTI–

1 final rule. For ease of reference, Table IX.F.–02. lists the ONC health IT certification criteria required to meet the Medicare Promoting Interoperability Program objectives and measures.

We also wish to highlight certain updates to ONC health IT certification criteria finalized in the ONC HTI–1 final rule that impact certification criteria referenced under the CEHRT definition. ONC adopted the certification criterion, ''decision support interventions (DSI)'' in 45 CFR 170.315(b)(11) to replace the ''clinical decision support (CDS)'' certification criterion in 170.315(a)(9) included in the Base EHR definition (89 FR 1231). The finalized DSI criterion ensures that Health IT Modules certified to 45 CFR 170.315(b)(11) must, among other functions, enable a limited set of identified users to select (activate) evidence-based and Predictive DSIs (as defined in 45 CFR 170.102) and support ''source attributes''—categories of technical performance and quality information—for both evidence-based and Predictive DSIs. ONC further finalized that a Health IT Module may meet the Base EHR definition by either being certified to the existing CDS version of the certification criterion in 45 CFR 170.315(a)(9), or being certified to the revised DSI criterion in 45 CFR 170.315(b)(11), for the period up to, and including, December 31, 2024. On and after January 1, 2025, ONC finalized that only the DSI criterion in 45 CFR 170.315(b)(11) will be included in the Base EHR definition, and the adoption of the criterion in 45 CFR 170.315(a)(9) will expire on January 1, 2025 (89 FR 1281).

In addition to the DSI criterion, which is required to meet the Base EHR definition after January 1, 2025, ONC finalized other updates related to health IT certification criteria referenced in the CEHRT definition in the HTI–1 final rule. For these updates, health IT developers must update and provide certified Health IT Modules to their customers by January 1, 2026, including updates resulting from the following finalized policies:

- ONC updated the ''Transmission to public health agencies—electronic case reporting'' criterion in 45 CFR 170.315(f)(5) specifying consensus-based, industry-developed electronic standards and implementation guides (IGs) to replace functional, descriptive requirements in the existing criterion (89 FR 1226).
- ONC adopted the United States Core Data for Interoperability (USCDI) version 3 in 45 CFR 170.213(b) and finalized that USCDI version 1 in 45 CFR 170.213(a) will expire on January 1, 2026. This change impacts ONC health IT certification criteria that reference the USCDI, including the ''transitions of care'' certification criteria in 45 CFR 170.315(b)(1)(iii)(A)(*1*)–(*2*), ''Clinical information reconciliation and incorporation—Reconciliation'' (45 CFR 170.315(b)(2)(iii)(D)(1) through (3)); and ''View, download, and transmit to 3rd party'' (45 CFR 170.315(e)(1)(i)(A)(*1*)) (89 FR 1210).
- ONC updated the ''demographics'' certification criterion (45 CFR 170.315(a)(5)), including renaming the criterion to ''patient demographics and observations'' (89 FR 1295).
- ONC updated the ''standardized API for patient and population services'' certification criterion in 45 CFR 170.315(g)(10) to include newer versions of certain standards and updated functionality to support the criterion (89 FR 1283).

For complete information about the updates to ONC health IT certification criteria finalized in the HTI–1 Final Rule, we refer readers to the text of the final rule (89 FR 1192) as well as resources available on ONC's website.[541]

TABLE IX.F.-02.: MEDICARE PROMOTING INTEROPERABILITY PROGRAM OBJECTIVES AND MEASURES AND ONC HEALTH IT CERTIFICATION CRITERIA

Objective	Measure	ONC Health IT Certification Criteria as defined in the following sections of Title 45 CFR
e-Prescribing	e-Prescribing	170.315(b)(3) e-Prescribing
	Query of PDMP	170.315(b)(3) e-Prescribing
HIE	Support electronic referral loops by sending health information	170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	170.315(b)(1) Transitions of care
		170.315(b)(2) Clinical information reconciliation and incorporation
HIE (alternative)	HIE Bi-Directional Exchange	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:
		170.315(b)(1) Transitions of care
		170.315(b)(2) Clinical information reconciliation and incorporation
		170.315(g)(7) Application access — patient selection
		170.315(g)(9) Application access — all data request
		170.315(g)(10) Application access — standardized API for patient and population services
HIE (alternative)	Participation in TEFCA	Examples of certified health IT capabilities to support the actions of this measure may include but are not limited to technology certified to the following criteria:
		170.315(b)(1) Transitions of care
		170.315(b)(2) Clinical information reconciliation and incorporation
		170.315(g)(7) Application access — patient selection
		170.315(g)(9) Application access — all data request
		170.315(g)(10) Application access — standardized API for patient and population services
Provider to Patient Exchange	Provide patients electronic access to their health information	170.315(e)(1) View, download, and transmit to 3rd party
		170.315(g)(7) Application access — patient selection
		170.315(g)(9) Application access — all data request
		170.315(g)(10) Application access — standardized API for patient and population services

Public Health and Clinical Data Exchange	Immunization registry reporting	170.315(f)(1) Transmission to immunization registries
	Syndromic surveillance reporting	170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic case reporting	170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
		170.315(f)(7) Transmission to public health agencies — health care surveys
	Clinical data registry reporting	No ONC health IT certification criteria at this time.
	Electronic reportable laboratory result reporting	170.315(f)(3) Transmission to public health agencies — reportable laboratory tests and value/results
	AU Surveillance*	170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
	AR Surveillance*	170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
Electronic Clinical Quality measures (eCQMs)	eCQMs for eligible hospitals and CAHs	170.315(c)(1)
		170.315(c)(2)
		170.315(c)(3)(i) and (ii)
Protect Patient Health Information	Security Risk Assessment	No ONC health IT certification criteria at this time.
	SAFER Guides	No ONC health IT certification criteria at this time.

*Signifies a proposal made in this FY 2025 IPPS/LTCH PPS proposed rule.

5. Proposal To Change the Scoring Methodology Beginning With the EHR Reporting Period in CY 2025

In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41636 through 41645), we adopted a performance-based scoring methodology for eligible hospitals and CAHs reporting under the Medicare Promoting Interoperability Program beginning with the EHR reporting period in CY 2019, which included a minimum scoring threshold of a total score of 50 points or more, that eligible hospitals and CAHs must meet to satisfy the requirement to report on the objectives and measures of meaningful use under 42 CFR 495.24. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45491 through 45492), we increased the minimum scoring threshold from 50 to 60 points beginning with the EHR reporting period in CY 2022 and adopted corresponding changes to the regulatory text at 42 CFR 495.24(e)(1)(i)(C) for the EHR reporting period in CY 2022. In the FY 2023 IPPS/LTCH PPS final rule, we extended the 60-point threshold for the EHR reporting period in CY 2023 and subsequent years in the regulatory text at 42 CFR 495.24(f)(1)(i)(B) (87 FR 49410 through 49411).

For the EHR reporting period in CY 2025 and subsequent years, we are proposing to increase the minimum scoring threshold from 60 points to 80 points and are proposing corresponding changes to the regulation text at 42 CFR 495.24(f)(1)(i). Our review of the CY 2022 Medicare Promoting Interoperability Program's performance results found 98.5 percent of eligible hospitals and CAHs (that is 97 percent of CAHs and 99 percent of eligible hospitals) that reported to the Medicare Promoting Interoperability Program successfully met the minimum threshold score of 60 points, and 81.5 percent of eligible hospitals and CAHs (that is 78 percent of CAHs and 83 percent of eligible hospitals) that reported to the Medicare Promoting Interoperability Program exceeded the score of 80 points. Given the widespread success of eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program in CY 2022, we believe that by adopting a

higher scoring threshold, we would incentivize more eligible hospitals and CAHs to align their health information systems with evolving industry standards and would encourage increased data exchange. We note that eligible hospitals and CAHs would have gained3 years of experience in the Medicare Promoting Interoperability Program (CYs 2022, 2023, and 2024) at the 60-point minimum score threshold to improve performance. We believe an increase from 60 points to 80 points would encourage higher levels of performance through the advanced use of CEHRT to further incentivize eligible hospitals and CAHs to improve interoperability and health information exchange. We are also proposing to make corresponding changes to the regulatory text at 42 CFR 495.24(f)(1)(i) to reflect our proposed scoring threshold change and, if finalized, this would take effect for the EHR reporting period in CY 2025 and subsequent years. Specifically, we propose to adopt 42 CFR 495.24(f)(1)(i)(C), which states ''In 2025 and subsequent years, earn a total score of at least 80 points.''

We invite public comment on our proposal to increase the minimum scoring threshold from 60 points to 80 points for the EHR reporting period in CY 2025 and subsequent years, and to make corresponding changes to the regulatory text at 42 CFR 495.24(f)(1)(i).

As shown in Table [IX.F.–03.], the points associated with the required measures sum to 100 points, and reporting one of the optional measures under the Public Health and Clinical Data Exchange Objective adds an additional 5 bonus points. The scores for each of the measures are added together to calculate a total score of up to 100 possible points for each eligible hospital or CAH. We refer readers to Table [IX.F.–03.] in this proposed rule, which reflects the objectives, measures, maximum points available, and whether a measure is required or optional for the EHR reporting period in CY 2025 based on our previously adopted policies, and the proposals included in this proposed rule.

TABLE IX.F.-03: PERFORMANCE-BASED SCORING METHODOLOGY FOR EHR REPORTING PERIODS IN CY 2025 AND SUBSEQUENT YEARS

Objective	Measure	Maximum Points	Required/Optional
e-Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
HIE	Support Electronic Referral Loops by Sending Health Information	15 points	Required (eligible hospitals and CAHs must choose one of the three reporting options)
	-AND-		
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	HIE Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following six measures: • Syndromic Surveillance Reporting • Immunization Registry Reporting • eCR • Electronic Reportable Laboratory Result Reporting • AU Surveillance* • AR Surveillance*	25 points	Required
	Report one of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting	5 points (*bonus*)	Optional

Notes: The Security Risk Analysis measure, SAFER Guides measure, and attestations required by section 106(b)(2)(B) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) are required but will not be scored. Reporting eCQMs is required but will not be scored. Eligible hospitals and CAHs must also submit their level of active engagement for measures under the Public Health and Clinical Data Exchange objective. Participants may spend only one EHR reporting period at the Option 1: Pre-production and Validation level per measure and must progress to Option 2: Validated Data Production level for the following EHR reporting period. See the FY 2023 IPPS/LTCH PPS final rule (87 FR 49337) for more details about active engagement.

*Signifies a proposal made in this FY 2025 IPPS/LTCH PPS proposed rule. For details on our proposal to modify the AUR Surveillance measure, we refer readers to section IX.F.2 of this proposed rule.

The maximum points available, by measure, in this proposed rule, as shown in Table IX.F.–03, do not include the points that would be redistributed in the event an exclusion is claimed for a given measure. We are not proposing any changes to our policy for point redistribution in the event an exclusion is claimed. We refer readers to Table IX.F.–04 in this proposed rule, which shows how points would be redistributed among the objectives and measures for the EHR reporting period in CY 2025, in the event an eligible hospital or CAH claims an exclusion.

TABLE IX.F.-04: EXCLUSION REDISTRIBUTION FOR THE EHR REPORTING PERIOD IN CY 2025 AND SUBSEQUENT YEARS

Objective	Measure	Redistribution if Exclusion is Claimed
e-Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
HIE	Support Electronic Referral Loops by Sending Health Information	No exclusion
	-AND-	
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	No exclusion
	-OR-	
	HIE Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following six measures: • Syndromic Surveillance Reporting • Immunization Registry Reporting • eCR • Electronic Reportable Laboratory Result Reporting • AU Surveillance* • AR Surveillance*	If an exclusion is claimed for each of the six measures, 25 points are redistributed to the Provide Patients Electronic Access to Their Health Information measure

*Signifies a proposal made in this FY 2025 IPPS/LTCH PPS proposed rule.

6. Clinical Quality Measurement for Eligible Hospitals and CAHs Participating in the Medicare Promoting Interoperability Program

a. Proposal To Update Clinical Quality Measures and Reporting Requirements in Alignment With the Hospital Inpatient Quality Reporting (IQR) Program

(1) Background

Under sections 1814(l)(3)(A) and 1886(n)(3)(A) of the Social Security Act and the definition of ''meaningful EHR user'' under 42 CFR 495.4, eligible hospitals and CAHs must report on clinical quality measures selected by CMS using CEHRT (also referred to as eCQMs), as part of being a meaningful EHR user under the Medicare Promoting Interoperability Program.

Tables IX.F.–05. and IX.F.–06 in this proposed rule summarize the previously finalized eCQMs available for eligible hospitals and CAHs to report under the Medicare Promoting Interoperability Program for the CY 2024 and CY 2025 reporting periods, as finalized in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59280 through 59281). To maintain alignment with the Hospital IQR program, in sections IX.C.5.c and IX.C.5.d of the preamble of this proposed rule, the order of the eCQMs displayed in Tables IX.F.–05 and IX.F.–06 mirrors that of the Hospital IQR program. In addition, the short names and the CBE numbers of the measures in the tables match the measures on the Electronic Clinical Quality Improvement Resource Center website at: *https://ecqi.healthit.gov/.*

TABLE IX.F.-05: PREVIOUSLY FINALIZED ECQMS FOR ELIGIBLE HOSPITALS AND CAHS FOR THE REPORTING PERIOD

Short Name	Measure Name	Consensus-based entity (CBE) #
Safe Use of Opioids	Safe Use of Opioids – Concurrent Prescribing	3316e
PC-02	Cesarean Birth	0471e
PC-07	Severe Obstetric Complications	3687e
STK-2	Discharged on Antithrombotic Therapy	0435e
STK-3	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436e
STK-5	Antithrombotic Therapy by End of Hospital Day Two	0438e
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
HH-HYPO	Hospital Harm - Severe Hypoglycemia	3503e
HH-HYPER	Hospital Harm - Severe Hyperglycemia	3533e
HH-ORAE	Hospital Harm - Opioid-Related Adverse Events	3501e
GMCS	Global Malnutrition Composite Score	3592e

TABLE IX.F.-06: PREVIOUSLY FINALIZED ECQMS FOR ELIGIBLE HOSPITALS AND CAHS FOR THE CY 2025 REPORTING PERIOD

Short Name	Measure Name	CBE #
Safe Use of Opioids	Safe Use of Opioids – Concurrent Prescribing	3316e
PC-02	Cesarean Birth	0471e
PC-07	Severe Obstetric Complications	3687e
STK-2	Discharged on Antithrombotic Therapy	0435e
STK-3	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436e
STK-5	Antithrombotic Therapy by End of Hospital Day Two	0438e
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
HH-HYPO	Hospital Harm - Severe Hypoglycemia	3503e
HH-HYPER	Hospital Harm - Severe Hyperglycemia	3533e
HH-OREA	Hospital Harm - Opioid-Related Adverse Events	3501e
HH-PI	Hospital Harm - Pressure Injury	3498e
HH-AKI	Hospital Harm - Acute Kidney Injury	3713e
GMCS	Global Malnutrition Composite Score	3592e
IP-ExRad	Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level – Inpatient)	3663e

(2) Proposal To Adopt eCQMs

As we stated in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38479), we intend to continue to align the eCQM reporting requirements and eCQM measure set for the Medicare Promoting Interoperability Program with similar requirements under the Hospital IQR Program, to the extent feasible.

As discussed in the sections IX.C.5.c and IX.C.5.d of this proposed rule with respect to the Hospital IQR Program, we are proposing to adopt two new eCQMs for the Medicare Promoting Interoperability Program and to modify one eCQM, beginning with the CY 2026 reporting period. Specifically, we propose to add the following two eCQMs to the Medicare Promoting Interoperability Program eCQM measure set from which eligible hospitals and CAHs could self-select to report, beginning with the CY 2026 reporting period: (1) the Hospital Harm—Falls

with Injury eCQM (CBE #4120e) and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM (CBE #4130e). We are also proposing to modify the Global Malnutrition Composite Score eCQM (CBE #3592e) in the Medicare Promoting Interoperability Program measure set beginning with the CY 2026 reporting period, adding patients ages 18 to 64 to the current cohort of patients 65 years or older. A full description of this proposed change can be found in section IX.F.2 of the preamble of this proposed rule, including where interested parties can find the measure specification and other supporting information, which applies equally to support this proposal for the Medicare Promoting Interoperability Program.

We refer readers to the discussion of the same proposals for the Hospital IQR Program in sections IX.C.5.c and IX.C.5.d of the preamble of this proposed rule for more information about these three measures, and our policy reasons for proposing them for adoption and modification. We propose to adopt the Hospital Harm—Falls with Injury eCQM and the Hospital Harm—Postoperative Respiratory Failure eCQM for the reasons stated in sections IX.C.5.c and IX.C.5.d of the preamble of this proposed rule. We propose to modify the Global Malnutrition Composite Score eCQM for the reasons stated in section IX.C. of the preamble of this proposed rule. Table IX.F.–07 and Table IX.F.–08 in the preamble of this proposed rule summarize previously finalized, newly proposed, and a proposed modification to eCQMs in the Medicare Promoting Interoperability Program for the CY 2026 reporting period, the CY 2027 reporting period, and subsequent years.

TABLE IX.F.-07: PREVIOUSLY FINALIZED AND PROPOSED ECQMS FOR ELIGIBLE HOSPITALS AND CAHS FOR THE CY 2026 REPORTING PERIOD

Short Name	Measure Name	CBE #
Safe Use of Opioids	Safe Use of Opioids – Concurrent Prescribing	3316e
PC-02	Cesarean Birth	0471e
PC-07	Severe Obstetric Complications	3687e
STK-2	Discharged on Antithrombotic Therapy	0435e
STK-3	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436e
STK-5	Antithrombotic Therapy by End of Hospital Day Two	0438e
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
HH-HYPO	Hospital Harm – Severe Hypoglycemia	3503e
HH-HYPER	Hospital Harm – Severe Hyperglycemia	3533e
HH-OREA	Hospital Harm – Opioid-Related Adverse Events	3501e
HH-PI	Hospital Harm – Pressure Injury	3498e
HH-AKI	Hospital Harm – Acute Kidney Injury	3713e
HH-FI*	Hospital Harm – Falls with Injury	4120e
HH-RF**	Hospital Harm – Postoperative Respiratory Failure	4130e
GMCS ***	Global Malnutrition Composite Score	3592e
IP-ExRad	Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Hospital Level – Inpatient)	3663e

* In this proposed rule, we are proposing adoption of the Hospital Harm – Falls with Injury eCQM beginning with the CY 2026 reporting period. We refer readers to section IX.C. of the preamble of this proposed rule for more detailed discussion.

** In this proposed rule, we are proposing adoption of the Hospital Harm – Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period. We refer readers to section IX.C. of the preamble of this proposed rule for more detailed discussion.

*** In this proposed rule, we are proposing modification to the Global Malnutrition Composite Score (GMCS) measure beginning with the CY 2026 reporting period. We refer readers to section IX.C. of the preamble of this proposed rule for more detailed discussion..

TABLE IX.F.-08: PREVIOUSLY FINALIZED AND PROPOSED ECQMS FOR ELIGIBLE HOSPITALS AND CAHS FOR THE CY 2027 REPORTING PERIOD AND SUBSEQUENT YEARS

Short Name	Measure Name	CBE #
Safe Use of Opioids	Safe Use of Opioids – Concurrent Prescribing	3316e
PC-02	Cesarean Birth	0471e
PC-07	Severe Obstetric Complications	3687e
STK-2	Discharged on Antithrombotic Therapy	0435e
STK-3	Anticoagulation Therapy for Atrial Fibrillation/Flutter	0436e
STK-5	Antithrombotic Therapy by End of Hospital Day Two	0438e
VTE-1	Venous Thromboembolism Prophylaxis	0371
VTE-2	Intensive Care Unit Venous Thromboembolism Prophylaxis	0372
HH-HYPO	Hospital Harm – Severe Hypoglycemia	3503e
HH-HYPER	Hospital Harm – Severe Hyperglycemia	3533e
HH-OREA	Hospital Harm – Opioid-Related Adverse Events	3501e
HH-PI	Hospital Harm – Pressure Injury	3498e
HH-AKI	Hospital Harm – Acute Kidney Injury	3713e
HH-FI*	Hospital Harm – Falls with Injury	4120e
HH-RF**	Hospital Harm – Postoperative Respiratory Failure	4130e
GMCS ***	Global Malnutrition Composite Score	3592e
IP-ExRad	Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Hospital Level – Inpatient)	3663e

* In this proposed rule, we are proposing adoption of the Hospital Harm – Falls with Injury eCQM beginning with the CY 2026 reporting period. We refer readers to section IX.C.5.c. of the preamble of this proposed rule for more detailed discussion.

** In this proposed rule, we are proposing adoption of the Hospital Harm – Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period. We refer readers to section IX.C.5.d. of the preamble of this proposed rule for more detailed discussion.

*** In this proposed rule, we are proposing modification to the Global Malnutrition Composite Score measure beginning with the CY 2026 reporting period. We refer readers to section IX.C.5.b. of the preamble of this proposed rule for more detailed discussion

We invite public comment on our proposals to adopt (1) the Hospital Harm—Falls with Injury eCQM (CBE #4120e) and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM (CBE #4130e) to the measure set from which eligible hospitals and CAHs could self-select to report, and to modify the Global Malnutrition Composite Score eCQM (CBE #3592e), in the Medicare Promoting Interoperability Program for the CY 2026 and CY 2027 reporting periods, respectively, and subsequent years.

b. Proposal To Revise the eCQM Reporting and Submission Requirements for the CY 2026 Reporting Period and Subsequent Years

Consistent with our goal to align the eCQM reporting periods and criteria in the Medicare Promoting Interoperability Program with the Hospital IQR Program, eligible hospitals and CAHs are currently required to report four calendar quarters of data for each required eCQM: (1) the Safe Use of Opioids—Concurrent Prescribing eCQM; (2) the Severe Obstetric Complications eCQM; (3) the Cesarean Birth eCQM; and (4) three self-selected eCQMs, for the CY 2024 reporting period and subsequent years (87 FR 49365 through 49367).

In alignment with the Hospital IQR Program, we are proposing that, if our proposals to adopt the Hospital Harm—Falls with Injury eCQM and the Hospital Harm—Postoperative Respiratory Failure eCQM as detailed in sections IX.C and IX.F of the preamble of this proposed rule are finalized, these measures would be available for eligible hospitals and CAHs to select as one of their three self-selected eCQMs for the CY 2026 reporting period and subsequent years.

We are also proposing to add the Hospital Harm—Severe Hypoglycemia eCQM, the Hospital Harm—Severe Hyperglycemia eCQM, and the Hospital Harm—Opioid-Related Adverse Events eCQM to the mandatory eCQM measure set for eligible hospitals and CAHs for the CY 2026 reporting period and subsequent years, bringing the total number of required eCQMs to nine for the CY 2026 reporting period. In summary, we are proposing that eligible hospitals and CAHs under the Medicare Promoting Interoperability Program would be required to report four calendar quarters of data for each of the following: (1) Three self-selected eCQMs; (2) the Safe Use of Opioids—Concurrent Prescribing eCQM; (3) the Severe Obstetric Complications eCQM; (4) the Cesarean Birth eCQM; (5) the Hospital Harm—Severe Hypoglycemia eCQM; (6) the Hospital Harm—Severe Hyperglycemia eCQM; and (7) the

Hospital Harm—Opioid-Related Adverse Events eCQM, for a total of nine eCQMs, beginning with the CY 2026 reporting period.

In addition, we are proposing to add the Hospital Harm—Pressure Injury eCQM and the Hospital Harm—Acute Kidney Injury eCQM to the mandatory eCQM measure set for eligible hospitals and CAHs beginning with the CY 2027 reporting period and subsequent years. In summary, we are proposing that eligible hospitals and CAHs under the Medicare Promoting Interoperability Program would be required to report four calendar quarters of data for each of the following: (1) Three self-selected eCQMs; (2) the Safe Use of Opioids—Concurrent Prescribing eCQM; (3) the Severe Obstetric Complications eCQM; (4) the Cesarean Birth eCQM; (5) the Hospital Harm—Severe Hypoglycemia eCQM; (6) the Hospital Harm—Severe Hyperglycemia eCQM; (7) the Hospital Harm—Opioid-Related Adverse Events eCQM; (8) the Hospital Harm—Pressure Injury eCQM; and (9) the Hospital Harm—Acute Kidney Injury eCQM, for a total of eleven eCQMs, beginning with the CY 2027 reporting period and subsequent years.

We refer readers to the discussion of the same proposals for the Hospital IQR Program in sections [IX.C.5.c.] and [IX.C.5.d.] of the preamble of this proposed rule for more information about the eCQM reporting and submission requirements, and our policy reasons for proposing these changes, which apply equally to support these proposals for the Medicare Promoting Interoperability Program.

We invite public comment on our proposals to increase the number of mandatory eCQM measures to a total of nine beginning with the CY 2026 reporting period, and to increase the number of mandatory eCQM measure to a total of eleven beginning with the CY 2027 reporting period and subsequent years.

7. Potential Future Update of the SAFER Guides Measure

a. Background

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45479 through 45481), we adopted the SAFER Guides measure under the Protect Patient Health Information objective beginning with the EHR reporting period in CY 2022. Eligible hospitals and CAHs are required to attest to whether they have conducted an annual self-assessment using all nine SAFER Guides,[542] at any point during the calendar year in which the EHR reporting period occurs, with one ''yes/no'' attestation statement. Beginning in CY 2022, the reporting of this measure was required, but eligible hospitals and CAHs were not scored, and an attestation of ''yes'' or ''no'' were both acceptable answers without penalty. For additional information, please refer to the discussion of the SAFER Guides measure in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45479 through 45481). In the FY 2024 IPPS/LTCH PPS final rule, we finalized a proposal to modify our requirement for the SAFER Guides measure beginning with the EHR reporting period in CY 2024 and continuing in subsequent years, to require eligible hospitals and CAHs to attest ''yes'' to having conducted an annual self-assessment using all nine SAFER Guides, at any point during the calendar year in which the EHR reporting period occurs to be considered a meaningful user (88 FR 59262).

b. Status of Updates to SAFER Guides

We received comments in the FY 2024 IPPS/LTCH PPS proposed rule recommending that we work with ONC to update the SAFER Guides, citing that the SAFER Guides were last updated in 2016 (88 FR 59264). In response to these comments, we noted that, while the current SAFER Guides reflect relevant and valuable guidelines for safe practices with respect to current EHR systems, we would consider exploring updates in collaboration with ONC. We reminded readers to visit the CMS resource library website at *https://www.cms.gov/regulations-guidance/promoting-interoperability/resource-library* and the ONC website at *https://www.healthit.gov/topic/safety/safer-guides* for resources on the content and appropriate use of the SAFER Guides (88 FR 59262). We also noted that future updates to the SAFER Guides would be provided with accompanying educational and promotional materials to notify participants, in collaboration with ONC, when available (88 FR 59265). In this proposed rule, we are seeking to make readers aware that efforts to update the SAFER Guides are currently underway. We anticipate that updated versions of the SAFER Guides may become available as early as CY 2025, and we would consider proposing a change to the SAFER Guides measure for the EHR reporting period beginning in CY 2026 to permit use of an updated version of the SAFER Guides at that time. We encourage eligible hospitals and CAHs to become familiar with the updated versions of the SAFER Guides when they become available and consider them as they implement appropriate EHR safety practices.

8. Proposal To Update the Definition of Meaningful EHR User for Healthcare Providers That Have Committed Information Blocking

The Department of Health and Human Services (HHS) proposed rule, 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking (hereafter referred to as the Disincentives proposed rule) (88 FR 74947), appeared in the **Federal Register** on November 1, 2023. If finalized, the final rule would implement the provision of the 21st Century Cures Act specifying that a healthcare provider, determined by the HHS Office of the Inspector General (OIG) to have committed information blocking, shall be referred to the appropriate agency to be subject to appropriate disincentives set forth through notice and comment rulemaking. In the Disincentives proposed rule, we proposed that an eligible hospital or CAH would not be considered a meaningful EHR user in an EHR reporting period if the OIG refers, during the calendar year of the reporting period, a determination that the eligible hospital or CAH committed information blocking as defined at 45 CFR 171.103 (88 FR 74968). Furthermore, we proposed to revise the definition of ''Meaningful EHR User'' in 42 CFR 495.4 to state that an eligible hospital or CAH is not a meaningful EHR user in a payment adjustment year if the OIG refers a determination that the eligible hospital or CAH committed information blocking, as defined at 45 CFR 171.103, during the calendar year of the EHR reporting period (88 FR 74968 through 74969). Based upon the proposed revisions to 42 CFR 495.4, the downward payment adjustment would apply 2 years after the year of the referral and the EHR reporting period in which the eligible hospital was not a meaningful EHR user. For CAHs, the downward payment adjustment would apply to the payment adjustment year in which the OIG referral was made (88 FR 74957).

If the Disincentives proposed rule is finalized, an eligible hospital subject to this disincentive would be subject to a three quarters reduction of the annual market basket increase, while a CAH subject to this disincentive would have its payment reduced to 100 percent of reasonable costs, from the 101 percent of reasonable costs it might have otherwise earned, for failing to qualify as a meaningful EHR user in an applicable year. Additional regulatory

[542] *https://www.healthit.gov/topic/safety/safer-guides.*

provisions have been proposed at 45 CFR 171 Subpart J, related to the disincentives application process (88 FR 74953).

We note if the Disincentives proposed rule is finalized as proposed, the revised definition of Meaningful EHR User in 42 CFR 495.4 would become effective when the 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking final rule takes effect. For additional background and information on this proposed update, we refer readers to the discussion in the 21st Century Cures Act: Establishment of Disincentives for Health Care Providers That Have Committed Information Blocking proposed rule on this topic (88 FR 74955 through 74957).

9. Future Goals of the Medicare Promoting Interoperability Program

a. Future Goals With Respect to Fast Healthcare Interoperability Resources® (FHIR) APIs for Patient Access

In partnership with ONC, we envision a future where patients have timely, secure, and easy access to their health information through the health application of their choice. We are working with ONC to enable this type of access to health information by requiring the use of APIs that utilize the Health Level Seven International® (HL7) FHIR. We work with ONC and other federal partners to improve timely and accurate data exchange, partner with industry to enhance digital capabilities, advance adoption of FHIR, support enterprise transformation efforts that increase our technological capabilities, and promote interoperability. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32858), we described our future vision for the Medicare Promoting Interoperability Program and stated that we will continue to consider changes that support a variety of HHS goals, including supporting alignment with the 21st Century Cures Act, advancing interoperability and the exchange of health information, and promoting innovative uses of health IT. We also solicited public comment on issues relevant to the Medicare Promoting Interoperability Program that related to policies finalized in the 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program final rule, including finalization of a new certification criterion for a standards-based API using FHIR, among other health IT topics (85 FR 32858).

ONC finalized the HTI–1 final rule (89 FR 1192), effective March 11, 2024, to further implement the 21st Century Cures Act, among other policy goals. ONC finalized revisions to the ''standardized API for patient and population services'' certification criterion at 45 CFR 170.315(g)(10). It also adopted the HL7 FHIR US Core Implementation Guide (IG) Standard for Trial Use version 6.1.0 at 45 CFR 170.215(b)(1)(ii), which provides the latest consensus-based capabilities aligned with the USCDI version 3 [543] data elements for FHIR APIs. The HTI–1 final rule also created the Insights Condition and Maintenance of Certification requirements (Insights Condition) within the ONC Health IT Certification Program to provide transparent reporting on certified health IT (89 FR 1199). This Insights Condition will require developers of certified health IT subject to the requirements to report on measures that provide information about the use of specific certified health IT functionalities by end users. One such measure calculates the number of unique individuals who access their electronic health information overall and by different methods such as through a standardized API for patient and population services.

By adopting these new and updated standards, implementation specifications, certification criteria, and conditions of certification, provisions in the HTI–1 final rule advance interoperability, improve transparency, and support the access, exchange, and use of electronic health information. CMS aims to further advance the use of FHIR APIs through policies in the Medicare Promoting Interoperability Program to advance interoperability, encourage the exchange of health information, and promote innovative uses of health IT. We also hope to gain insights into the adoption and use of FHIR APIs by eligible hospitals and CAHs due to the ONC Health IT Certification Program Insights Condition. We believe maintaining our focus on promoting interoperability, alignment, and simplification would reduce healthcare provider burden while allowing flexibility to pursue innovative applications that improve care delivery. For additional background and information, we refer readers to the discussion in the ONC HTI–1 final rule on this topic (89 FR 1192).

b. Improving Cybersecurity Practices

The Medicare Promoting Interoperability Program encourages the advancement of patient safety by promoting appropriate cybersecurity practices through the Security Risk Analysis and SAFER Guides measures. On February 14, 2023, the National Institute of Standards and Technology (NIST) published updated guidance for health care entities implementing requirements of the Health Insurance Portability and Accountability (HIPAA) Security Rule (45 CFR *Part 160* and Subparts A and C of *Part 164*; see also, most recently, 75 FR 40868 and 78 FR 5566). The guidance, NIST SP 800–66r2, provides information and resources to HIPAA-covered entities to improve their cybersecurity risk practices.[544] We also wish to alert readers of additional HHS resources and activities regarding cybersecurity best practices as recently summarized in an HHS strategy document that provides an overview of HHS recommendations to help the health care sector address cyber threats.[545] HHS has also recently published a website detailing recommended cybersecurity performance goals.[546] We intend to consider how the Medicare Promoting Interoperability Program can promote cybersecurity best practices for eligible hospitals and CAHs in the future.

c. Improving Prior Authorization Processes

We recently released the CMS Interoperability and Prior Authorization final rule (CMS–0057–F), which appeared in the **Federal Register** on February 8, 2024 (89 FR 8758). This final rule aims to enhance health information exchange and access to health records for patients, healthcare providers, and payers, and improve prior authorization processes. In the final rule, we finalized the ''Electronic Prior Authorization'' measure under the HIE objective of the Merit-based Incentive Payment System (MIPS) Promoting Interoperability performance category and under the HIE objective of the Medicare Promoting Interoperability Program, beginning, for the Medicare Promoting Interoperability Program, in the EHR reporting period in CY 2027 (89 FR 8909 through 8927).

10. Request for Information Regarding Public Health Reporting and Data Exchange

a. Background

The COVID–19 public health emergency (PHE) highlighted the interdependencies of public health and

[543] *https://www.healthit.gov/isa/united-states-core-data-interoperability-uscdi#uscdi-v3.*

[544] *https://csrc.nist.gov/pubs/sp/800/66/r2/final.*

[545] *https://aspr.hhs.gov/cyber/Documents/Health-Care-Sector-Cybersecurity-Dec2023-508.pdf.*

[546] *https://hphcyber.hhs.gov/performance-goals.html.*

healthcare, and the importance of timely, integrated, and interoperable data exchange across the health ecosystem to protect the health and safety of patients, populations, and the broader public. It also called attention to the distance between where we are as a nation and where we want to be with the interoperability of data between healthcare providers and PHAs, especially in the event of a fast-evolving pandemic or other type of PHE. While many jurisdictions were able to demonstrate the advantages of capabilities such as electronic laboratory reporting for reportable conditions, surveillance systems to support case investigations, immunization registries to track COVID–19 immunizations, and syndromic surveillance data for situational awareness, exchange across jurisdictions, and with some healthcare partners, remains inconsistent and, in some cases, burdensome.

The Medicare Promoting Interoperability Program plays an important role in advancing the exchange of health information between PHAs and eligible hospitals and CAHs, using certified Health IT Modules that meet criteria and standards established under the ONC Health IT Certification Program. Measures under the Public Health and Clinical Data Exchange objective focus on a key set of exchange capabilities for healthcare providers that have evolved over time to incorporate new priorities and technical approaches. In recent years, we have also focused on expanding and strengthening the Public Health and Clinical Data Exchange objective to further support the exchange of data that ultimately supports better patient and public health outcomes.

Efforts across HHS to advance the public health information infrastructure offer opportunities to further evolve the Medicare Promoting Interoperability Program. In 2020, the CDC launched the Data Modernization Initiative (DMI),[547] a multi-year, billion-plus dollar public health ecosystem initiative aimed at moving the public health community from a siloed and static public health data system to connected, resilient, adaptable, and sustainable 'response-ready' systems capable of meeting present and future health challenges. The DMI seeks to answer the need for a longer-term, whole-of-public health strategy that prioritizes collaboration and continuous improvement and recognizes that modernization is not a one-time event. To establish clear near-term priorities and milestones that complement the DMI's longer term focus and improve alignment of data modernization efforts at all levels of public health and across partners, CDC released its first Public Health Data Strategy (Ph.D.S) in 2023.[548] The Ph.D.S outlines the data, technology, policy, and administrative actions essential to exchange critical core data efficiently and securely across healthcare and public health.

In tandem with these efforts to chart a new strategic direction for improvements to the nation's public health infrastructure, evolving technical approaches are offering opportunities to automate and expand information exchange between healthcare providers and PHAs. ONC is exploring updates to existing certification criteria for health IT that support current measures in the Medicare Promoting Interoperability Program's Public Health and Clinical Data Exchange objective, new criteria that incorporate modern approaches to exchange, support additional types of information needed by PHAs, and criteria that focus on entities receiving public health data. In the HTI–1 final rule, ONC finalized updates to the health IT certification criterion for electronic case reporting in 45 CFR 170.315(f)(5), incorporating standards-based approaches to existing functional requirements in accordance with the HL7 FHIR Electronic Case Report (eCR) Implementation Guide (IG) or HL7 Clinical Document Architecture (CDA) Electronic Initial Case Report (eICR) IG (89 FR 1226). ONC is also considering recent recommendations from federal advisory committees that have focused on issues related to public health interoperability. These include the Public Health Data Systems Task Force, which was charged by the Health Information Technology Advisory Committee (HITAC) to inform ONC's continued collaborative work with CDC on improving public health data systems, and in support of CDC's greater DMI efforts. In November 2022, the Public Health Data Systems Task Force issued recommendations to the HITAC,[549] which included a focus on new criteria for Health IT Modules that support public health use cases that aim to standardize technology that receives information from healthcare providers. In addition, the CDC Advisory Committee to the Director (ACD) Data and Surveillance Workgroup adopted a report on November 3, 2022, which addressed standards for public health data systems and implementing a certification program for public health IT, and other issues.[550] We are working in partnership with the CDC and ONC to explore how the Medicare Promoting Interoperability Program could advance public health infrastructure through more advanced use of health IT and data exchange standards. This Request for Information (RFI) describes a series of goals and principles for the Medicare Promoting Interoperability Program's Public Health and Clinical Data Exchange objective, provides information about recommended updates to certified health IT under consideration that may impact eligible hospitals and CAHs, and seeks public comment on potential updates to the program that could help achieve these goals.

b. Goals for Public Health Reporting

As we look toward the future of the Public Health and Clinical Data Exchange objective of the Medicare Promoting Interoperability Program, we believe decision-making and prioritization about policy change should adhere to four goals:

- The meaningful use of CEHRT enables continuous improvement in the quality, timeliness, and completeness of public health data being reported.
- The meaningful use of CEHRT allows for flexibility to respond to new public health threats and meet new data needs without requiring new and substantial regulatory and technical development.
- The meaningful use of CEHRT supports mutual data sharing between public health and healthcare providers.
- Reporting burden on eligible hospitals and CAHs is significantly reduced.

These goals inform the questions provided at the end of this RFI. We invite public comment on these four goals.

c. Public Health in the ONC Health IT Certification Program

We continue to collaborate closely with ONC on policy changes in the ONC Health IT Certification Program that either impact existing functionality reflected in the Medicare Promoting Interoperability Program measures or represent new capabilities for eligible

hospitals and CAHs that could offer opportunities to achieve our goals for the Public Health and Clinical Data Exchange objective. In this section we describe recommended updates to health IT certification criteria.

(1) Making Available New Capabilities for Exchanging Data With PHAs Using the FHIR Standard

Current public health related certification criteria at 45 CFR 170.315(f)(1) through (7) generally reference HL7 version 2 and CDA standards that support single-patient, event-based submission of data from healthcare providers to PHAs, such as electronic transmission of laboratory results (HL7® Version 2.5.1 Implementation Guide for Electronic Laboratory Reporting to Public Health, Release 1 with Errata and Clarifications) or electronic initial case reports (HL7 CDA® R2 Implementation Guide: Public Health Case Report—the Electronic Initial Case Report (eICR) Release 2) to public health agencies. However, these standards may not adequately support more complex data exchange use cases, such as bulk exchange of data for patients who received a specific vaccine. Approaches using FHIR could more effectively support a wide-scale public health response and reduce burden of implementation and maintenance for data exchange between and among healthcare providers and PHAs.

Increased availability of FHIR-based APIs across systems used by PHAs and healthcare providers could help to create an ecosystem where PHAs could use health IT to securely query data directly from the source, in real time, based on an initial push of relevant data, when needed. Availability of a FHIR API in a healthcare provider's certified health IT could enable a PHA to query an eligible hospital or CAH's CEHRT for data on any patient with a specific condition when needed, avoiding the need for the eligible hospital or CAH to take additional action to submit additional information.

As noted, ONC has already finalized an update to the electronic case reporting criterion in 45 CFR 170.315(f)(5), which provides an option to implement the HL7 FHIR eCR IG as part of a Health IT Module certified to the criterion (89 FR 1226). The Public Health Data Systems Task Force report stated that ''FHIR-based query may offer public health additional avenues to meet the needs of case investigation to supplement electronic case reporting and emerging public health threats'' and that ''FHIR may support a more focused and relevant response by providers to meet public health queries.'' [551]

While FHIR specifications are not available for all the use cases currently supported in the public health criteria at 45 CFR 170.315(f)(1)–(7), ONC continues to evaluate standards development activities around the use of FHIR for public health data exchange that could be incorporated into existing or new certification criteria, such as replacing HL7 version 2 and CDA exchange specifications with a FHIR approach over time.

(2) Expanding the Scope of Public Health Exchange Supported by Certified Health IT Capabilities

Existing health IT certification criteria are linked to measures under the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, covering use cases from transmission to immunization registries and syndromic surveillance, to reportable laboratory test values/results and eCR.

The Public Health Data Systems Task Force report recommended the addition of several additional certification criteria reflecting exchange of information such as birth and death data, the results of newborn screening services, and situational awareness.[552] ONC is monitoring these and other areas of importance to public health that are not reflected in the current certification criteria.

(3) Introducing Certification Criteria for Systems That Receive Public Health Data

To date, ONC health IT certification criteria have been designed with systems that send data to PHAs in mind, particularly health IT systems used by healthcare providers, that exchange data with PHAs. Misalignment between certified health IT products and technology and systems used by PHA, has created challenges for both healthcare providers and PHAs, including reliance on complex workflows to accommodate non-harmonized and variable data elements and exchange standards. Inefficiencies associated with workarounds and custom processes can lead to further reductions in data quality, completeness, consistency, and interoperability.

The HITAC Public Health Data Systems Task Force's report includes a recommendation ''that ONC establish certification criteria for public health technologies used by Public Health Authorities in support of their responsibilities in exchanging data for public health purposes including those defined in the existing (f) criteria.'' [553]

By establishing minimum functional capabilities and exchange standards to both send and receive public health data, health IT certification criteria could enhance interoperability across healthcare providers and PHAs and provide a long-term mechanism for alignment as data exchange matures over time. An expansion of the ONC Health IT Certification Program to focus on the receiving side could also bolster CDC's public health infrastructure modernization efforts described above, by helping PHAs align with health care provider data sources using the same certification criteria and standards, and enabling entities to move together on a common timeline for updating technology requirements.

d. RFI Questions

(1) Questions for Goal #1: Quality, Timeliness, and Completeness of Public Health Reporting

The Medicare Promoting Interoperability Program's requirement that eligible hospitals and CAHs report their level of ''active engagement'' between the eligible hospital or CAH, and a PHA, as well as the recently established one-year limitation in how long an eligible hospital or CAH may spend in Pre-Production and Validation, has provided a basis that could broadly incentivize the exchange of EHR data (87 FR 49339 through 49340). However, because active engagement reporting only requires an attestation of whether an eligible hospital or CAH is reporting production data or still in the process of validation, this approach does not allow us to assess eligible hospitals and CAHs on the comprehensiveness, quality, or timeliness of the data they provide to PHAs. We are considering whether alternatives to the ''active engagement'' approach could better allow us to assess eligible hospital and CAH performance, meet the data needs of PHAs, and ultimately allow us to incentivize increased performance in these areas. We are interested in how we could

[551] Public Health Data Systems Task Force, Recommendation 23, p. 11 *https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.*

[552] Public Health Data Systems Task Force, Recommendation 18–21, p. 10–11 *https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.*

[553] Public Health Data Systems Task Force, Recommendation 1, p. 7. *https://www.healthit.gov/sites/default/files/page/2022-11/2022-11-10_PHDS_TF_Recommendations_Report_Transmittal_Letter_508.pdf.*

think about alternatives to the ''active engagement'' approach described above. We are also interested in the increasing focus on leveraging FHIR-based data exchange for public health needs. Finally, we are interested in ensuring that any changes to the active engagement approach are implemented in a way that takes advantage of opportunities to further automate reporting and minimize administrative burden for eligible hospitals and CAHs. Therefore, we are seeking public comment and feedback on the questions and topic areas listed:

- Today, the measures in the Public Health and Clinical Data Exchange objective assess whether there is active engagement between an eligible hospital or CAH and a PHA, but do not measure the level of performance the eligible hospital or CAH has achieved in sending information. Specifically, we are seeking public comment on the following questions:

++ Should CMS shift to numerator/denominator reporting requirements for current and future measures in the Public Health and Clinical Data Exchange objective? If so, should CMS prioritize only certain measures for numerator/denominator reporting?

++ New technical approaches such as the use of FHIR APIs to support information exchange with PHAs could enable PHAs to query healthcare provider systems directly, after an initial trigger, rather than solely relying on a healthcare provider to take action to share information. How could performance be measured under approaches such as the use of FHIR APIs to support information exchange with PHAs? Would numerator/denominator reporting be appropriate under such approaches?

- Continued expansion of the measures under the Public Health and Clinical Data Exchange objective to address different reporting use cases can incentivize eligible hospitals and CAHs to make more comprehensive information available to PHAs. We are seeking public comment on the following questions:

++ Should CMS continue to add measures under the Public Health and Clinical Data Exchange objective to include additional system-specific requirements (for example, vital records)? If so, which ones and why?

++ Should CMS create a new measure for each new type of data or use case added to the Public Health and Clinical Data Exchange objective? What are the risks of including too many measures under the objective?

++ Alternatively, should CMS explore ways to group data types and use cases under a more limited set of Public Health and Clinical Data Exchange objective measures?

—Anecdotal reports suggest that some healthcare providers are attesting to active engagement with public health for the ''Electronic Case Reporting'' measure if they report cases for at least one notifiable condition (for example, COVID–19).

++ How can CMS incentivize more complete electronic case reporting to PHAs? For example, should CMS update the measure to require healthcare providers to meet a certain threshold for conditions reported?

++ What potential benefit versus burden trade-offs CMS should consider? How should CMS account for varying levels of public health readiness and capacity for expanding conditions reported electronically, such as in rural areas?

++ What additional levers besides the Medicare Promoting Interoperability Program should CMS explore to improve the completeness of reporting to public health? How should CMS work with other partners to incentivize or require reporting?

(2) Questions for Goal #2, Flexibility and Adaptability of the Public Health Reporting Enterprise

During the COVID–19 and Mpox PHEs, healthcare providers and PHAs often had to quickly update their systems to report case, laboratory, and vaccination data related to these novel pathogens and interventions devised in response to them. In this section, we are seeking information about how the Medicare Promoting Interoperability Program could improve the ability for public health infrastructure [554] to quickly adapt to new threats. Specifically, we are seeking public comment on the following questions:

- How can the Medicare Promoting Interoperability Program support or incentivize response ready reporting capabilities for healthcare providers? What, if any, challenges exist around sharing data with PHAs?
- How can CMS and ONC work with vendors to ensure that provider systems are being continually updated to meet new data needs, such as those in rural areas?

(3) Questions for Goal #3, Increasing Bi-Directional Exchange With Public Health Agencies

The transition to, and use of, more modern, flexible approaches and networks that support data exchange between and across public health and healthcare is a key goal of HHS efforts to modernize the public health information infrastructure. We are interested in ways that the Medicare Promoting Interoperability Program can support this transition. Specifically, we are seeking public comment on the following questions:

- Both CDC's ACD and ONC's HITAC have recommended that CDC and ONC work together to establish certification criteria for public health technologies used by PHAs and implement a coordinated, phased approach to incentivize and eventually require their adoption.[555] How, if at all, could the Medicare Promoting Interoperability Program support or incentivize PHA adoption of certified systems and technologies?
- How can CMS use the Public Health and Clinical Data Exchange objective to incentivize early adoption of FHIR-based APIs for public health data exchange?
- CMS previously finalized the Enabling Exchange under TEFCA measure under the HIE objective for eligible hospitals and CAHs to attest to engaging in health information exchange. Should CMS introduce a similar measure to allow providers to receive credit for the HIE objective by exchanging public health data through participation in TEFCA?

(4) Questions for Goal #4, Eliminating Reporting Burden for Healthcare Providers

We are committed to continuing to reduce reporting burden for healthcare providers, such as in rural areas, as part of any updates to the Medicare Promoting Interoperability Program undertaken to support the priorities described above. Specifically, we are seeking public comment on the following questions:

- Under the current Public Health and Clinical Data Exchange objective, which measures, or other requirements result in the most administrative burden for eligible hospitals and CAHs?
- How can the Medicare Promoting Interoperability Program balance robust Public Health and Clinical Data Exchange objective requirements with our desire to reduce burden on eligible hospitals and CAHs?
- How can new technical approaches to data exchange with PHAs, such as the use of FHIR APIs, reduce burden for health care providers? What are potential barriers to achieving burden

[554] *https://www.cdc.gov/infrastructure/pdfs/PHIC-Overview.pdf.*

reduction as these new approaches are implemented?

X. Other Provisions Included in This Proposed Rule

A. Proposed Transforming Episode Accountability Model (TEAM)

1. General Provisions

a. Introduction

The CMS Innovation Center has designed and tested numerous alternative payment models that each include specific payment, quality, and other policies. However, there are some general provisions that are very similar across models. The general provisions address beneficiary protections, model evaluation and monitoring, audits and record retention, rights in data and intellectual property, monitoring and compliance, remedial action, model termination by CMS, limitations on review, and miscellaneous provisions on bankruptcy and other notifications.

We propose to implement the general provisions, described later in this section and in subpart E of this part 512, based on similar requirements that have been previously finalized in existing model tests. In addition to the general provisions discussed here, TEAM-specific provisions that are uniquely tailored to this model are described elsewhere in this rule.

b. Basis and Scope

In § 512.500, we propose that the proposed general provisions in this section X.A.1. of the preamble of this proposed rule would only be applicable to TEAM. These proposed general provisions would not, except as specifically noted in proposed part 512, subpart E, affect the applicability of other provisions affecting providers and suppliers under Medicare FFS, including the applicability of provisions regarding payment, coverage, and program integrity (such as those in parts 413, 414, 419, 420, and 489 of chapter IV of 42 CFR and those in parts 1001 through 1003 of chapter V of 42 CFR).

We invite public comment on the proposed general provisions discussed in this section of the proposed rule.

c. Definitions

We propose at § 512.505 to define certain terms relevant to the general provisions proposed in this section X.A.1. of the preamble of this proposed rule. We are proposing to define the term ''TEAM participant'' to mean an acute care hospital that is identified as a TEAM participant under the terms of and defined in proposed § 512.505. We propose to define ''downstream participant'' to mean an individual or entity that has entered into a written arrangement with a TEAM participant pursuant to which the downstream participant engages in one or more TEAM activities. A downstream participant may include, but would not be limited to, an individual practitioner, as defined for purposes of TEAM. We propose to define ''TEAM activities'' to mean any activities impacting the care of model beneficiaries related to the test of TEAM performed under the terms of proposed 512 subpart E.

We describe additional proposed definitions in context throughout this section X.A.1. of the preamble of this proposed rule.

d. Cooperation With Model Evaluation and Monitoring

Section 1115A(b)(4) of the Act requires the Secretary to evaluate each model tested under the authority of section 1115A of the Act and to publicly report the evaluation results in a timely manner. The evaluation must include an analysis of the quality of care furnished under the model and the changes in program spending that occurred due to the model. Models tested by the CMS Innovation Center are rigorously evaluated. For example, when evaluating models tested under section 1115A of the Act, we require the production of information that is representative of a wide and diverse group of model participants and includes data regarding potential unintended or undesirable effects, such as cost-shifting. The Secretary must take the evaluation into account if making any determinations regarding the expansion of a model under section 1115A(c) of the Act.

In addition to model evaluations, the CMS Innovation Center regularly monitors model participants for compliance with model requirements. For the reasons described in section X.A.1. of the preamble of this proposed rule, these compliance monitoring activities are an important and necessary part of the model test.

Therefore, we are proposing to codify at § 512.584, that TEAM participants and their downstream participants must comply with the requirements of 42 CFR 403.1110(b) (regarding the obligation of entities participating in the testing of a model under section 1115A of the Act to report information necessary to monitor and evaluate the model), and must otherwise cooperate with CMS' model evaluation and monitoring activities as may be necessary to enable CMS to evaluate TEAM in accordance with section 1115A(b)(4) of the Act. This participation in the evaluation may include, but is not limited to, responding to surveys and participating in focus groups. Additional details on the specific research questions that we propose that the TEAM evaluation will consider can be found in section X.A.3.o. of the preamble of this proposed rule. Further, we propose to conduct monitoring activities according to proposed § 512.590(b), described in section X.A.3.i. of the preamble of this proposed rule, including producing such data as may be required by CMS to evaluate or monitor TEAM, which may include protected health information as defined in 45 CFR 160.103 and other individually identifiable data.

e. Rights in Data and Intellectual Property

To enable CMS to evaluate TEAM as required by section 1115A(b)(4) of the Act and to monitor TEAM pursuant to § 512.590, described at section X.A.3.i. of the preamble of this proposed rule, we are proposing to allow CMS to use any data obtained in accordance with proposed § 512.588 to evaluate and monitor the proposed TEAM. We further propose that, consistent with section 1115A(b)(4)(B) of the Act, that CMS would be allowed to disseminate quantitative and qualitative results and successful care management techniques, including factors associated with performance, to other providers and suppliers and to the public. We propose that the data to be disseminated would include, but would not be limited to, patient de-identified results of patient experience of care and quality of life surveys, as well as patient de-identified measure results calculated based upon claims, medical records, and other data sources.

In order to protect the intellectual property rights of TEAM participants and downstream participants, we propose in § 512.588(c) to TEAM participants and their downstream participants to label data they believe is proprietary and should be protected from disclosure under the Trade Secrets Act. We would note that this approach is already in use in other models currently being tested by the CMS Innovation Center, including the Radiation Oncology and End Stage Renal Disease Treatment Choices models. Any such assertions would be subject to review and confirmation prior to CMS's acting upon such assertion.

We further propose to protect such information from disclosure to the full extent permitted under applicable laws, including the Freedom of Information Act. Specifically, in proposed § 512.588(b), we propose to not release data that has been confirmed by CMS to

be proprietary trade secret information and technology of the TEAM participant or its downstream participants without the express written consent of the TEAM participant or its downstream participants, unless such release is required by law.

f. Remedial Action

As stated earlier in this proposed rule, as part of the CMS Innovation Center's monitoring and assessment of the impact of models tested under the authority of section 1115A of the Act, we have a special interest in ensuring that these model tests do not interfere with the program integrity interests of the Medicare program. For this reason, we monitor for compliance with model terms as well as other Medicare program rules. When we become aware of noncompliance with these requirements, it is necessary for CMS to have the ability to impose certain administrative remedial actions on a noncompliant model participant.

The terms of many models currently being tested by the CMS Innovation Center permit CMS to impose one or more administrative remedial actions to address noncompliance by a model participant. We propose that CMS may impose any of the remedial actions set forth in proposed § 512.592 if we determine that the TEAM participant or a downstream participant—

- Has failed to comply with any or all of the terms of TEAM, if finalized;
- Has failed to comply with any applicable Medicare program requirement, rule, or regulation;
- Has taken any action that threatens the health or safety of a beneficiary or other patient;
- Has submitted false data or made false representations, warranties, or certifications in connection with any aspect of TEAM;
- Has undergone a change in control (as defined in proposed § 512.505) that presents a program integrity risk;
- Is subject to any sanctions of an accrediting organization or a Federal, state, or local government agency;
- Is subject to investigation or action by HHS (including the HHS–OIG and CMS) or the Department of Justice due to an allegation of fraud, a pattern of improper billing, or significant misconduct, including being subject to the filing of a complaint or filing of a criminal charge, being subject to an indictment, being named as a defendant in a False Claims Act qui tam matter in which the Federal Government has intervened, or similar action; or
- Has failed to demonstrate improved performance following any remedial action imposed by CMS.

In § 512.592(b), we propose to codify that CMS may take one or more of the following remedial actions if CMS determined that one or more of the grounds for remedial action described in proposed § 512.592(a) had taken place—

- Notify the TEAM participant and, if appropriate, require the TEAM participant to notify its downstream participants of the violation;
- Require the TEAM participant to provide additional information to CMS or its designees;
- Subject the TEAM participant to additional monitoring, auditing, or both;
- Prohibit the TEAM participant from distributing TEAM payments;
- Require the TEAM participant to terminate, immediately or by a deadline specified by CMS, its agreement with a downstream participant with respect to TEAM;
- Terminate the TEAM participant from the model test;
- Require the TEAM participant to submit a corrective action plan in a form and manner and by a date specified by CMS;
- Discontinue the provision of data sharing and reports to the TEAM participant;
- Recoup TEAM payments;
- Reduce or eliminate a TEAM payment otherwise owed to the TEAM participant, as applicable; or
- Such other action as subpart E of part may be permitted under the terms of proposed 512.

We would note that because TEAM is a mandatory model, we would not expect to use the proposed provision that would allow CMS to terminate a TEAM participant's participation in the model, except in circumstances in which the TEAM participant has engaged, or is engaged in, egregious actions.

We invite public comment on these proposed provisions regarding the proposed grounds for remedial actions, remedial actions generally, and whether additional types of remedial action would be appropriate.

g. CMS Innovation Center Model Termination by CMS

We are proposing certain provisions that would allow CMS to terminate TEAM under certain circumstances. Section 1115A(b)(3)(B) of the Act requires the CMS Innovation Center to terminate or modify the design and implementation of a model, after testing has begun and before completion of the testing, unless the Secretary determines, and the Chief Actuary certifies with respect to program spending, that the model is expected to: improve the quality of care without increasing program spending; reduce program spending without reducing the quality of care; or improve the quality of care and reduce spending.

We propose at § 512.596 that CMS could terminate TEAM for reasons including, but not limited to, one of the following circumstances:

- CMS determines that it no longer has the funds to support TEAM.
- CMS terminates TEAM in accordance with section 1115A(b)(3)(B) of the Act.

As provided by section 1115A(d)(2)(E) of the Act and proposed § 512.596, termination of TEAM in accordance with section 1115A(b)(3)(B) of the Act would not be subject to administrative or judicial review.

To ensure model participants had appropriate notice in the case of the termination of TEAM by CMS, we also propose to codify at § 512.596 that we would provide TEAM participants with written notice of the model termination, which would specify the grounds for termination as well as the effective date of the termination.

h. Limitations on Review

In proposed § 512.594, we propose to codify the preclusion of administrative and judicial review under section 1115A(d)(2) of the Act. Section 1115A(d)(2) of the Act states that there is no administrative or judicial review under section 1869 or 1878 of the Act or otherwise for any of the following:

- The selection of models for testing or expansion under section 1115A of the Act.
- The selection of organizations, sites, or participants to test models selected.
- The elements, parameters, scope, and duration of such models for testing or dissemination.
- Determinations regarding budget neutrality under section 1115A(b)(3) of the Act.
- The termination or modification of the design and implementation of a model under section 1115A(b)(3)(B) of the Act.
- Determinations about expansion of the duration and scope of a model under section 1115A(c) of the Act, including the determination that a model is not expected to meet criteria described in paragraph (1) or (2) of such section.

We propose to interpret the preclusion from administrative and judicial review regarding the CMS Innovation Center's selection of organizations, sites, or participants to test TEAM to preclude from administrative and judicial review our selection of a TEAM participant, as well as our decision to terminate TEAM

participant, as these determinations are part of our selection of participants for TEAM.

We invite public comment on the proposed codification of these statutory preclusions of administrative and judicial review for TEAM, as well as our proposed interpretations regarding their scope.

i. Miscellaneous Provisions on Bankruptcy and Other Notifications

The proposed TEAM would have a defined period of performance, but final payment under the model may occur long after the end of this performance period. In some cases, a TEAM participant could owe money to CMS. We recognize that the legal entity that is the TEAM participant could experience significant organizational or financial changes during or after the period of performance for TEAM. To protect the integrity of the proposed TEAM and Medicare funds, we are proposing a number of provisions to ensure that CMS is made aware of events that could affect a TEAM participant's ability to perform its obligations under TEAM, including the payment of any monies owed to CMS.

First, in proposed § 512.595(a), we propose that a TEAM participant must promptly notify CMS and the local U.S. Attorney Office if it files a bankruptcy petition, whether voluntary or involuntary. Because final payment may not take place until after the TEAM participant ceases active participation in TEAM, we further propose that this requirement would apply until final payment has been made by either CMS or TEAM participant under the terms of the model and all administrative or judicial review proceedings relating to any payments under TEAM has been fully and finally resolved.

Specifically, we propose that notice of the bankruptcy must be sent by certified mail within 5 days after the bankruptcy petition has been filed and that the notice must contain a copy of the filed bankruptcy petition (including its docket number), unless final payment has been made under the terms of TEAM and all administrative or judicial review proceedings regarding TEAM payments between the TEAM participant and CMS have been fully and finally resolved. The notice to CMS must be addressed to the CMS Office of Financial Management, Mailstop C3–01–24, 7500 Security Boulevard, Baltimore, Maryland 21244 or to such other address as may be specified for purposes of receiving such notices on the CMS website.

By requiring the submission of the filed bankruptcy petition, CMS would obtain information necessary to protect its interests, including the date on which the bankruptcy petition was filed and the identity of the court in which the bankruptcy petition was filed. We recognize that such notices may already be required by existing law, but CMS often does not receive them in a timely fashion, and they may not specifically identify TEAM. The failure to receive such notices on a timely basis can prevent CMS from asserting a claim in the bankruptcy case. We are particularly concerned that a TEAM participant may not furnish notice of bankruptcy after it has completed its performance in TEAM, but before final payment has been made or administrative or judicial proceedings have been resolved. We believe our proposal is necessary to protect the financial integrity of the proposed TEAM and the Medicare Trust Funds.

Second, in proposed § 512.595(b), we propose that the TEAM participant would have to provide written notice to CMS within 30 days of any change in the TEAM participant's legal name becoming effective. The notice of legal name change would have to be in a form and manner specified by CMS and include a copy of the legal document effecting the name change, which would have to be authenticated by the appropriate state official. The purpose of this proposed notice requirement is to ensure the accuracy of our records regarding the identity of TEAM participants and the entities to whom TEAM payments should be made or against whom payments should be demanded or recouped. We solicit comment on requiring notice to be furnished promptly, that is, within 30 days after a change in legal name has become effective.

Third, in proposed § 512.595(c), we propose that the TEAM participant would have to provide written notice to CMS at least 90 days before the effective date of any change in control. We propose that the written notification must be furnished in a form and manner specified by CMS. For purposes of this notice obligation, we propose that a ''change in control'' would mean any of the following: (1) The acquisition by any ''person'' (as such term is used in sections 13(d) and 14(d) of the Securities Exchange Act of 1934) of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), directly or indirectly, of voting securities of the TEAM participant representing more than 50 percent of the TEAM participant's outstanding voting securities or rights to acquire such securities; (2) the acquisition of the TEAM participant by any individual or entity; (3) the sale, lease, exchange or other transfer (in one transaction or a series of transactions) of all or substantially all of the assets of the TEAM participant; or (4) the approval and completion of a plan of liquidation of the TEAM participant, or an agreement for the sale or liquidation of the TEAM participant. The proposed requirement and definition of change in control are the same requirements and definition used in certain models that are currently being tested under section 1115A authority. We believe this proposed notice requirement is necessary to ensure the accuracy of our records regarding the identity of model participants and to ensure that we pay and seek payment from the correct entity. For this reason, we propose that if CMS determined in accordance with proposed § 512.592(a)(5) that a TEAM participant's change in control would present a program integrity risk, CMS could take remedial action against the TEAM participant under proposed § 512.592(b). In addition, to ensure payment of amounts owed to CMS, we propose that CMS may require immediate reconciliation and payment of all monies owed to CMS by a model participant that is subject to a change in control.

We invite public comment on these proposed notification requirements.

2. Proposed Transforming Episode Accountability Model (TEAM)—Introduction

We are proposing the implementation and testing of the Transforming Episode Accountability Model (TEAM), a new mandatory alternative payment model under the authority of section 1115A of the Act, beginning on January 1, 2026, and ending on December 31, 2030. TEAM would test whether an episode-based pricing methodology linked with quality measure performance for select acute care hospitals reduces Medicare program expenditures while preserving or improving the quality of care for Medicare beneficiaries who initiate certain episode categories. Specifically, the proposed TEAM would test five surgical episode categories: coronary artery bypass graft (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion.

Under the FFS program, Medicare makes separate payments to providers and suppliers for the items and services furnished to a beneficiary over the

course of an episode. With the amount of payments dependent on the volume of services delivered, acute care hospitals may not have incentives to invest in quality improvement and care coordination activities. As a result, care may be fragmented, unnecessary, or duplicative. By holding acute care hospitals accountable for all items and services provided during an episode, acute care hospitals are better incentivized to coordinate patient care, avoid duplicative or unnecessary services, and improve the beneficiary care experience during care transitions.

This proposed model falls within a larger framework of activities initiated by the CMS Innovation Center during the past several years, including the release of the CMS Innovation Center strategic refresh and the comprehensive specialty strategy.[556] [557] The strategic refresh includes a goal of having 100 percent of Medicare FFS beneficiaries and the vast majority of Medicaid beneficiaries in an accountable care relationship by 2030. Episode-based payment models, such as TEAM, can be a tool to support this goal by increasing provider participation in value-based care initiatives with accountability for quality and cost outcomes. To further the goals of the strategic refresh, the CMS Innovation Center released the comprehensive specialty care strategy in 2022, which includes an element to maintain momentum established by episode-based payment models and supports development of TEAM.[558] In addition, in July 2023, we published a Request for Information (RFI) to gain public input on design elements for a new mandatory bundled payment model.[559] Given TEAM's alignment with many strategic facets of the CMS Innovation Center, our proposal to test a new episode-based payment model for acute care hospitals is based on: (1) lessons learned from testing the Bundled Payments for Care Improvement (BPCI) Initiative, the BPCI Advanced Model, and the Comprehensive Care for Joint Replacement (CJR) Model; and (2) comments received from the Episode-based Payment Model RFI (88 FR 45872) published in the **Federal Register**.

Under this proposed TEAM, TEAM participants continue to bill Medicare under the traditional FFS system for services furnished to Medicare FFS beneficiaries. However, the TEAM participant may also receive a reconciliation payment amount from CMS depending on their Composite Quality Score (CQS) and if their performance year spending is less than their reconciliation target price. As TEAM is a two-sided risk model, meaning the model requires TEAM participants to be accountable for performance year spending that is above or below their reconciliation target price, TEAM participants may also owe CMS a repayment amount depending on their CQS and if their performance year spending is more than their reconciliation target price.

The model performance period for the proposed TEAM would consist of five performance years, beginning January 1, 2026, and ending December 31, 2030, with final data submission of clinical data elements and quality measures in CY 2031 to account for episodes ending in CY 2030, and final reconciliation reports and TEAM reconciliation payment amounts and repayment amounts in CY 2031.

a. Background

CMS is seeking to improve beneficiary care by using an episode-based payment structure to align incentives in pursuit of improved quality and reduced spending. A FFS payment system pays health care providers and suppliers for discrete services over a single episode, potentially resulting in fragmented care and duplicative use of resources. Paying for discrete services may also not provide sufficient financial incentive for health care providers and suppliers to invest in quality improvement and care coordination that could help avoid adverse outcomes. Further, providers and suppliers may be paid under different FFS payment systems which may create challenges managing beneficiaries in an episode. Therefore, providers and suppliers have less of an incentive to collaborate to improve the quality of care and decrease the cost and unnecessary utilization of services.

An episode-based payment methodology creates an incentive for participating providers and suppliers to coordinate across care settings as the participating entity takes responsibility for the quality and cost outcomes across the entire episode. All of the projected payments to the physician, hospital, and other health care provider and supplier services are combined into a target price. This target price represents the expected cost of all items and services furnished to a beneficiary during an episode. Health care providers included in such initiatives may either realize a financial gain or loss, based on how successfully they perform on quality measure assessment and manage resources and total costs throughout each episode. Payment models that hold entities accountable for spending and quality performance metrics for an entire episode can motivate health care providers to furnish services more efficiently, to better coordinate care, and to improve the quality of care.

The CMS Innovation Center has tested episode-based payment models for over a decade, including the BPCI initiative, the BPCI Advanced Model, and the CJR Model. The CJR Model and the BPCI Advanced Models are current CMS Innovation Center model tests that are set to end on December 31, 2024, and December 31, 2025, respectively. When considering the future of episode-based payment models, we reviewed results of the CJR Model and the BPCI Advanced Model given promising evaluation findings that support these models reducing episode payments, before accounting for incentive payments, and maintaining quality of care, as described further in section X.A.2.c. of the preamble of this proposed rule. However, both models experienced significant model changes, including changes in participation volume, in the later years of their model test and assessing the results of these models based on their current methodologies requires additional evaluation data, which would not be available until after each model has concluded. We believe TEAM would allow the CMS Innovation Center to test a new episode-based payment model that builds upon lessons learned in previous episode-based payment models by incorporating the most promising model features, while also continuing care transformation efforts that we have promoted through the CJR or BPCI Advanced models.

If the proposed TEAM is successful, we hope this model would establish the framework for managing episodes as a standard practice in Traditional Medicare. The proposed TEAM includes features that are attentive to operational feasibility for both participants and CMS, such as how often reconciliation would be conducted to minimize administrative burden, a pricing methodology that would be responsive to providers with varying levels of experience and different patient populations, and the selection of episodes with sufficient volume that would warrant standard care pathways

during the acute and post-acute care periods of an episode. Any future policy changes to this proposed model test, such as the addition of episode categories, would be implemented through future notice and comment rulemaking.

Increasing quality, patient-centeredness, and cost-effective care requires collaboration among hospitals, physicians, and post-acute care (PAC) providers. To encourage this collaboration, TEAM proposes to further align incentives between hospitals and physicians by specifying certain types of financial arrangements that participants may elect to pursue to share reconciliation payment amounts received from CMS under the model. By doing so, TEAM participants would be able to share incentives with downstream providers and suppliers when they achieve higher quality and more cost-effective care through collaboration.

b. Evidence Base for Model Proposal

Medicare beneficiaries can experience fragmented and costly care, distinguished by frequent diagnostics, imaging, tests and other treatment approaches delivered by different providers across different sites of care.[560] A 2022 study examining fragmentation of ambulatory care for Medicare FFS beneficiaries found that four in ten beneficiaries experience highly fragmented care, with a mean of 13 ambulatory visits across seven practitioners in one year.[561] Fragmented care is further evident when focusing on the clinical management of Medicare beneficiaries for acute procedural care since these beneficiaries may be receiving care from different physicians in different settings before, during, and after their procedure.[562] In the absence of effective communication between patients, families, physicians, hospitals, and other care settings, beneficiaries receiving acute procedural care may not receive comprehensive care management and coordination. The proposed TEAM is based on the premise that appropriately aligned financial incentives would improve care coordination for beneficiaries who are in an episode, resulting in better health outcomes.

Care fragmentation in acute surgical procedures in the United States is well documented, leading to care variation and inefficiencies producing unfavorable patient outcomes and increased health spending.[563] [564] [565] Given the variation in acute surgical care and costs, including post-acute care costs immediately following a procedure, significant literature has been devoted to evaluating opportunities to improve the quality and efficiency of care.[566] [567] This includes the design and implementation of standardized care processes that emphasize high-value care that can support episode-based care initiatives. For example one study found that, ''Enhanced Recovery After Surgery protocols have resulted in shorter length of hospital stay by 30% to 50% and similar reductions in complications, while readmissions and costs are reduced''.[568] Moreover, other findings focus on perioperative care delivery and indicate, ''that through elements that emphasize care coordination, standardization, and patient-centeredness, perioperative surgical home programs can improve patient postoperative recovery outcomes and decrease hospital utilization''.[569]

CMS, commercial payers, and other stakeholders are continuously testing a variety of approaches to constructing episodes of care, including through different patient populations, clinical episode categories, and pricing methodologies.[570] [571] [572] Though the results of alternative payment models focused on episodes of care have been mixed, evidence related to models' ability to realize savings and improve quality is promising, especially given the 10 years of experience yielded from participants and the CMS Innovation Center model tests. The BPCI Advanced and CJR models are still being tested, and the effects of the models' care redesign changes aimed to achieve Medicare savings and maintain or improve quality of care are still being evaluated, see section X.A.2.c. of the preamble of this proposed rule, but have generated evidence from multiple evaluation reports to support the design of TEAM. Beyond quantitative data, qualitative data collected from model participants and data from site visits indicate care transformation is happening, and quality of care is improving across the spectrum. Qualitative data range from reported improved relationships between inpatient providers and post-acute care (PAC) providers, to reshaping patient and provider expectations about appropriate discharge destinations, to process changes, such as standardized care pathways, identification and mitigation of medical and social risk factors, monitoring patients in the post-discharge period, and connecting patients to primary care providers. As noted in section X.A.2.c. of the preamble of this proposed rule, evaluation results from the previous and current episode-based payment models consistently indicate that these models can reduce episode payments, before

considering incentive payments, and generally without compromising quality of care.

c. ACE, BPCI, BPCI Advanced, and CJR Evaluation Results

The CMS Innovation Center previously tested episode-based payment approaches among acute episodes, including the Medicare Acute Care Episode (ACE) demonstration and the BPCI Initiative, and currently is testing additional approaches under the BPCI Advanced model and the CJR model.[573] The ACE demonstration tested a bundled payment approach for cardiac and orthopedic inpatient surgical services and procedures. All Medicare Part A and Part B services pertaining to the inpatient stay were included in the ACE demonstration episodes of care. Evaluations results found that Medicare saved an average of $585 per episode from the combined Medicare Part A and B expected payments or a total of $7.3 million across all episodes (12,501 episodes), all ACE MS–DRGs, and four ACE Sites. However, increases in post-acute care spending reduced these savings by approximately 45 percent, resulting in per episode savings of $319 and total net savings of approximately $4 million. With respect to quality of care, findings suggest that the ACE sites maintained their quality-of-care levels without any systematic or consistent changes in clinical outcomes or in the type of patients they admitted in response to the demonstration. Despite the lack of strong quantitative evidence for realized improvements in quality, there was qualitative evidence that hospitals worked to improve processes and outcomes.[574]

The BPCI initiative tested whether linking payments for providers that furnish Medicare-covered items and services during an episode related to an inpatient hospitalization could reduce Medicare expenditures while maintaining or improving quality of care.

- Model 1 episodes were limited to the acute inpatient hospitalizations for all MS–DRGs.
- Model 2 episodes began with a hospital admission and extended for 30, 60, or 90 days after discharge.
- Model 3 episodes began with the initiation of post-acute care following a hospital admission and extended for 30, 60, or 90 days.
- Model 4 episodes began with a hospital admission and included readmissions within 30 days after discharge.

Model 1 was unique, as compared to Models 2–4, in that target prices weren't generated but awardees received a predetermined discount percentage to their Medicare Inpatient payment system (IPPS) operating payment rates for episodes at their hospital. Model 1 had a small volume of participants, however, evaluation results found that there were no consistent negative or positive statistically significant impacts to Medicare payments or quality of care effects on Medicare beneficiaries.[575] Similarly, Model 4 had a small volume of participants, and by the end of the model there was no change in allowed payments nor were there any changes in the quality of care as measured by claims-based quality measures.[576]

Evaluation results for BPCI Models 2 and 3 were more robust given the greater volume of participants in each model. Similar to Model 1 and Model 4, quality of care generally remained unchanged in BPCI Models 2 and 3. With respect to the financial performance of the models, findings demonstrated reductions in FFS payments of $1,193 million for Model 2 and $232 million for Model 3. However, Medicare experienced net losses of $418 million ($p<0.05$) for Model 2, or $332 per episode, and $110 million ($p<0.05$) for Model 3, or $714 per episode, after accounting for reconciliation payments to participants. These net losses to Medicare represented 1.3% of what payments would have been absent BPCI under Model 2 and 3.1% under Model 3. The largest contributing factor to these losses was the elimination of participants' repayment responsibility. If CMS had not eliminated repayment responsibility, and assuming model participation remained the same, Model 2 would have resulted in no net losses or savings, and net losses under Model 3 would have been reduced to $ 66 million ($p<0.05$), or 1.9% of what payments would have been absent BPCI.[577]

We currently are testing the BPCI Advanced model, which is a voluntary episode-based model based on the BPCI Initiative's Model 2, that tests whether linking payments for an episode will incentivize health care providers to invest in innovation and care redesign to improve care coordination and reduce expenditures, while maintaining or improving the quality of care for Medicare FFS beneficiaries. We are still evaluating the effects of the BPCI Advanced model on patient experience of care, quality outcomes, and cost of care for Medicare FFS beneficiaries. However, evaluation results to date demonstrated reductions in episode payments and maintenance of quality of care, but the model has thus far been unable to generate Medicare savings. As of Model Year 3 (2020), BPCI Advanced participants reduced average episode payments by 3.8% or $1,028 per episode, and more specifically 3.1% ($796 per episode) for medical episodes and 5.8% ($1,800 per episode) for surgical episodes. Despite the reductions in FFS payments, after accounting for reconciliation payments to participants, Medicare had a net loss of $114 million in 2020, or 0.8% of what Medicare payments would have been in absence of the model. When looking at Medicare savings by episode type, surgical episodes resulted in an estimated net savings of $71.3 million, or 2.3%, but those savings were offset by medical episodes which resulted in an estimated net loss of $200.5 million, or 1.9%.[578] The BPCI Advanced model implemented changes, most notably in 2021–23, and most recently made further changes to extend the model through 2025 and support provider engagement in value-based care.

We are also currently testing the CJR model, which is a mandatory episode-based payment model in 34 metropolitan statistical areas (MSAs) for lower extremity joint replacement episodes that encourages hospitals, physicians, and PAC providers to work

together to improve the quality and coordination of care from the initial hospitalization or outpatient procedure through recovery. Evaluation results to date have indicated that in the first four performance years, mandatory hospitals generated $72 million dollars in savings to Medicare, although not statistically significant. But in Performance Year 5, reconciliation payments substantially increased generating $95.4M in statistically significant Medicare losses, due to adjustments made to the model made during the COVID–19 Public Health Emergency (PHE). CMS enacted these temporary adjustments, which effectively waived downside risk for all CJR episodes, in order to minimize any financial burden associated with model participation given the financial challenges and uncertainties hospitals faced early in the COVID–19 PHE. These adjustments resulted in reconciliation payments being triple what they were in previous years, which reversed the savings trajectory and resulted in statistically significant losses to Medicare for mandatory hospitals. The losses in Performance Year 5 were large enough to offset total estimated savings prior to the public health emergency.[579] Like the BPCI Advanced model, the CJR model was revised and extended until December 31, 2024.

We believe that providers', suppliers', and CMS' experiences with the BPCI Advanced and CJR models support the design of the proposed TEAM. Stakeholders both directly and indirectly involved in testing the BPCI Advanced and CJR models have conveyed that they perceive episode-based payments to be an effective mechanism for advancing better, more accountable care through care coordination and opportunities to improve care efficiency. CMS has also heard similar sentiment through other efforts including the CMS Innovation Center's Specialty Care Strategy Listening Session and recent Episode-based Payment Model Request for Information (RFI) (88 FR 45872).[580]

Further information of why specific elements of the models and initiatives were incorporated into the TEAM's designs is discussed later in this proposed rule.

d. CMS Innovation Center Specialty Care Strategy

In 2021, the CMS Innovation Center announced a strategic refresh with a vision of having a health care system that achieves equitable outcomes through high quality, affordable, person-centered care.[581] To guide this updated vision, the CMS Innovation Center intends to design, implement, and evaluate future models with a focus on five strategic objectives: (i) driving accountable care; (ii) advancing health equity; (iii) supporting innovation; (iv) addressing affordability; and (v) partnering to achieve system transformation. One of the goals established by the strategic refresh was having 100% of traditional Medicare beneficiaries and the vast majority of Medicaid beneficiaries in accountable care relationships by 2030. This means that beneficiaries should experience longitudinal, accountable care with providers that are responsible for the quality and total cost of their care. Beneficiaries will experience accountable care relationships mostly through advanced primary care or accountable care organizations (ACOs), and these entities are expected to coordinate with or fully integrate specialty care to deliver whole-person care.

To support specialty care integration, the CMS Innovation Center released a comprehensive specialty strategy to test models and innovations supporting access to high-quality, integrated specialty care across the patient journey—both longitudinally and for procedural or acute services.[582] Specialty integration cannot be achieved with a single approach given a beneficiary's health needs may change influencing the types of providers and settings where they receive care. Therefore, the specialty care strategy consists of four elements: (i) enhancing specialty care performance data transparency; (ii) maintaining momentum on acute episode payment models and condition-based models; (iii) creating financial incentives within primary care for specialist engagement; and (iv) creating financial incentives for specialists to affiliate with population-based models and move to value-based care. The proposed TEAM falls within the second element of the specialty care strategy and utilizes lessons learned from our experience with the BPCI Advanced model and the CJR model to design TEAM as a new episode-based payment model that would focus on accountability for quality and cost, health equity, and specialty integration. TEAM is further informed by the Episode-Based Payment Model RFI (88 FR 45872) published in July 2023, which gathered public comment on potential model design elements.

The proposed TEAM represents one aspect of the specialty care strategy, and does not capture all beneficiaries, providers, and care settings to achieve complete person-centered value-based care on its own. Improving the health care system for Medicare beneficiaries requires a comprehensive approach that cannot be addressed by a single model or initiative since beneficiary health care needs are dynamic across the patient care continuum. This means TEAM would center accountability on beneficiary health care needs during narrow, focused periods of acute and post-acute care while health care needs outside of this scope would be addressed with other elements of the specialty care strategy. Therefore, we believe TEAM would complement other elements of the specialty care strategy (for example, another element of the strategy is to share TEAM-style episode data with ACOs) and would promote care transformation that generates standard care pathways and new best practices across broad patient populations (not just Medicare FFS).

3. Provisions of Proposed Transforming Episode Accountability Model

a. Model Performance Period, TEAM Participants, Participation Tracks, and Geographic Area Selection

(1) Model Performance Period

We are proposing a 5-year ''model performance period'', defined as the 60-month period from January 1, 2026, to December 31, 2030, during which TEAM is being tested and the TEAM participants is held accountable for spending and quality. The model would have 5 ''performance years'' (PYs), which we propose to define as a 12-month period beginning on January 1 and ending on December 31 of each year during the model performance period in which TEAM is being tested and TEAM participants are held accountable for spending and quality. We are proposing to define the start of the model performance period as the ''model start date''.

We are proposing a 5-year model performance period to allow for a sufficient time period for TEAM

[579] CMS Comprehensive Care for Joint Replacement Model: Performance Year 5 Evaluation Report. (2023). Centers for Medicare & Medicaid Services. Retrieved December 1, 2023, from *https://www.cms.gov/priorities/innovation/data-and-reports/2023/cjr-py5-annual-report.*

[580] CMS Innovation Center's Specialty Care Strategy Listening Session (*https://www.cms.gov/priorities/innovation/media/document/spec-care-listening-session-slides*).

[581] Centers for Medicare & Medicaid Services. (2021). Innovation Center Strategy Refresh. *https://www.cms.gov/priorities/innovation/strategic-direction-whitepaper.*

[582] The CMS Innovation Center's strategy to support person-centered, value-based specialty care | CMS. (2022). *https://www.cms.gov/blog/cms-innovation-centers-strategy-support-person-centered-value-based-specialty-care#_ftn1.*

Participants to invest in care delivery transformation and observe return on investments. A five-year period would also allow for an adequate evaluation period to determine model results, given that many of the episode categories we are proposing to test under TEAM have thus far only been tested among voluntary model participants.

We alternatively considered a 3- or 10-year model performance period. However, we believe a 3-year period to be too short to allow adequate time to invest in transformations and achieve considerable model savings to the Medicare trust fund. We also considered a 10-year model performance period, similar to several recently announced CMS Innovation Center models; however, given this would be a mandatory model, we believe 5 years would be sufficient to gather the necessary data to evaluate whether the model is successful for the included episode categories.

We also considered beginning TEAM on April 1, 2026, July 1, 2026, or October 1, 2026, to allow selected TEAM participants more time to prepare for model implementation. However, based on our experience with prior and current episode-based payment models, we believe that potential participants would have sufficient time to prepare to participate in a model that begins January 1, 2026, which is why we are proposing TEAM at least 18 months before the proposed model start date. In addition, given that the current BPCI Advanced model concludes on December 31, 2025, beginning TEAM on January 1, 2026, would ensure continuity between models for those hospitals in BPCI Advanced that are in the CBSAs selected to participate in TEAM. We also recognize the potential misalignment between the performance measurement period based on the calendar year and an alternative model start date, so if we were to adjust the model start date based on public input, we propose that we would also alter the model performance period. For example, if TEAM were to begin April 1, 2026, the PY would still be defined as a 12-month period from the start date, meaning April 1, 2026, to March 31, 2027. As a result, the model performance period end date would also shift to reflect a 60-month period from the model start date of the first PY—for example, April 1, 2026, to March 31, 2031.

We seek comment on the proposed model performance period of 5 years and proposed model start date of January 1, 2026, for Performance Year 1, and on the alternatively considered start dates (April 1, 2026, July 1, 2026, and October 1, 2026), and the subsequent adjustment to dates of the model performance period if we were to change the model start date.

(2) Participants

(a) Background

The proposed TEAM builds upon previous CMS Innovation Center episode-based payment models, including the BPCI Advanced and CJR models. While these models have similarities, they have some notable differences with regard to participant structure and the entity who can initiate episodes. The BPCI Advanced model is a voluntary model that includes convener and non-convener participants. A non-convener participant initiates episodes, is either an acute care hospital or physician group practice (PGP) and bears financial risk for itself. A convener participant is an entity willing to bear financial risk for downstream episode initiators, either acute care hospitals or PGPs, and generally provides supportive services such as data analytics or clinical care navigators. In contrast, the CJR model is a mandatory model in 34 MSAs that does not include convener participants or allow PGPs to initiate episodes but does parallel BPCI Advanced by including participant hospitals (non-convener) that initiate episodes. While the CJR Model does not have a formal convener role, some CJR participant hospitals contract with (non-model participant) convener-organizations to provide administrative, operational, analytical, and clinical services.

We are interested in testing and evaluating the impact of a mandatory episode-based payment model in selected geographic areas, see section X.A.3.a.(4) of the preamble of this proposed rule, for acute care hospitals that initiate certain episode categories, including among those hospitals that have not chosen to voluntarily participate in the BPCI Advanced model or those that were selected to participate in the CJR model. Testing the model among acute care hospitals in select geographic areas would allow CMS and participants to gain experience testing and evaluating an episode-based payment approach for certain episodes furnished by hospitals with a variety of historic utilization patterns; roles within their local markets, including with regard to accountable care organization participation or affiliation; volume of services provided; access to financial, community, or other resources; and population and health care provider density. Further, Medicare beneficiaries and providers in rural and underserved areas can be underrepresented in voluntary models, whereas under a mandatory model we may include these entities, with safeguards as appropriate, for participation so that beneficiaries have equitable access to care redesign approaches intended to improve the quality care, and such providers gain experience in value-based care. Lastly, participation of hospitals in selected geographic areas would allow CMS to test episode-based payments without introducing participant attrition or selection bias such as the selection bias inherent in the BPCI Advanced model due to self-selected participation in the model and self-selection of episode categories.

(b) Proposed TEAM Participant Definition

As previously discussed, the CJR model has participant hospitals who are acute care hospitals that initiate episodes whereas the BPCI Advanced model allows either acute care hospitals or PGPs to initiate episodes, who may or may not be the participant in the model. Since two different types of entities are permitted to initiate episodes and they may be co-located, meaning the PGP may initiate episodes and practices at a hospital that also initiates episodes, the BPCI Advanced model includes precedence rules. Precedence rules dictate which entity will be attributed the episode and accountable for quality and cost performance, but they also contribute to operational complexity. For example, in BPCI Advanced a single episode could be attributed to one of three potential provider or suppliers: the attending PGP, the operating PGP, or the hospital. Data feeds can help inform entities of episode attribution when multiple provider or suppliers have interacted with the beneficiary, but BPCI Advanced participants have expressed challenges with identifying their potential episodes due to lack of real-time data.

Given the challenges of having multiple provider or suppliers in a single model initiate an episode, we believe it would benefit TEAM to only allow a single entity to initiate episodes and be the participant in TEAM. This is because it would simplify episode attribution, meaning it would avoid precedence rules, and make it easier for the single entity to identify beneficiaries that may be included in the model. Therefore, similar to the CJR model, we propose that acute care hospitals would be the TEAM participant and the only entity able to initiate an episode in TEAM. Specifically, we propose defining a TEAM participant as an acute

care hospital that initiates episodes and paid under the IPPS with a CMS Certification Number (CCN) primary address located in one of the geographic areas selected for participation in TEAM, as described in section X.A.3.a.(4) of the preamble of this proposed rule. We are also proposing that the term ''hospital'' has the same meaning as hospital as defined in section 1886(d)(1)(B) of the Act. This statutory definition of hospital includes only acute care hospitals paid under the IPPS.

We believe that hospitals are more likely than other providers or suppliers to have an adequate volume of episodes to justify an investment in episode management. We also believe that hospitals, compared to other providers or suppliers, are most likely to have access to resources that would allow them to appropriately manage and coordinate care throughout these episodes. Further, the hospital staff is already involved in discharge planning and placement recommendations for Medicare beneficiaries, and more efficient PAC service delivery provides substantial opportunities for improving quality and reducing costs in TEAM.

We also believe hospitals being TEAM participants aligns with how episodes are initiated in TEAM, as described in section X.A.3.b.(5)(c) of the preamble of this proposed rule, since it relies on a beneficiary's inpatient admission to a hospital or a beneficiary receiving a procedure in a hospital outpatient department. Additionally, we believe that utilizing the hospital as the TEAM participant is a straightforward approach for this model because the hospital furnishes the acute surgical procedure and plans for and manages post-discharge (or post-procedure) care. We also want to test a broad model in a variety of hospitals, including safety net hospitals specified in section X.A.3.f.(2) and rural hospitals specified in section X.A.3.f.(3) of the preamble of this proposed rule, under TEAM to examine results from a more generalized payment model. Finally, as described in the following sections that present our proposed approach to geographic area selection, our geographic area selection approach relies upon our definition of hospitals as the TEAM participant and the entity that initiates episodes.

We seek comment on our proposal at § 512.505 to define TEAM participants as an acute care hospital that initiates episodes and paid under the IPPS with a CMS CCN primary address located in one of the geographic areas selected for participation in TEAM. We also seek comment on our proposal at § 512.505 to define hospital as defined in section 1886(d)(1)(B) of the Act.

(i) TEAM Participant Exclusions and Considerations

Under this proposal, all acute care hospitals in Maryland would be excluded from being TEAM participants because Maryland hospitals are not currently paid under the IPPS and OPPS. Therefore, any acute care hospital located in Maryland would not be able to satisfy the definition of TEAM participant. Currently, CMS and the State of Maryland are testing the Maryland Total Cost of Care (TCOC) Model, which sets a per capita limit on Medicare total cost of care in Maryland. The TCOC Model holds the State fully at risk for the total cost of care for Medicare beneficiaries. Maryland acute care hospitals are not paid under the IPPS or OPPS, but rather are paid using a global budget methodology that establishes pricing of medical services provided by hospitals, primary care doctors, and specialists across all payers. Therefore, we are also proposing that payments to Maryland acute care hospitals would be excluded in the pricing calculations as described in section X.A.3.d. of the preamble of this proposed rule. We seek comment on this proposal and whether there are potential approaches for including Maryland acute care hospitals as TEAM participants. In addition, we seek comment on whether Maryland hospitals should be TEAM participants in the future.

We also recognize that the Maryland TCOC Model may not be the only CMS model or initiative that may use hospital global budgets as part of their alternative payment models. The States Advancing All-Payer Health Equity Approaches and Development (AHEAD) Model is a State-based voluntary TCOC model that will incorporate hospital global budgets. There are several cohorts in which states may participate, and we expect that the AHEAD Model implementation period would overlap with the performance years of TEAM. Given that CMS envisions that up to eight states would participate in the AHEAD Model, unlike the Maryland TCOC Model, we are hesitant to propose excluding hospitals that participate in the AHEAD Model from being TEAM participants because it may reduce the volume of beneficiaries that may benefit from episodic, acute coordinated care. We are also aware that allowing overlap may introduce model complexities with respect to constructing TEAM prices or the AHEAD global budgets and statewide total cost of care calculations. However, there may be other opportunities, such as sharing of TEAM-style summary episode data (not beneficiary-identifiable) with AHEAD hospitals, to support episodes without allowing hospitals participating in the AHEAD Model to participate in TEAM as TEAM participants. Thus, we are unsure if we should allow AHEAD hospitals located in areas selected for TEAM participation to participate in TEAM as TEAM participants. We seek comment on whether there may be potential approaches for including hospitals participating in the AHEAD Model in TEAM as TEAM participants, or other approaches that may not result in participation in both models but support the integration of episodes and hospital global budgets. We gather that the AHEAD Model would be voluntary for participating states and hospitals within those states, and as such, we also seek comment on whether hospitals located in AHEAD states should be required to participate in TEAM as TEAM participants if they either do not participate in in the AHEAD Model or if they terminate their participation in the AHEAD Model (or CMS terminates them) before the AHEAD Model ends.

Since TEAM is built from lessons learned from previous episode-based payment models, including the BPCI Advanced model, we considered including PGPs in the definition of TEAM participant in the future. We recognize that PGPs demonstrated some successes in the BPCI Advanced model, most specifically that BPCI Advanced PGPs reduced average episode payments by $2,157 for surgical episodes in Model Year 3 (2020) and reduced unplanned hospital readmissions for surgical episodes in Model Years 1&2 (October 2018–December 2019).[583] [584] Despite these favorable findings, we have concerns about requiring PGPs, who are generally smaller entities and care for a lower volume of Medicare beneficiaries, to participate in an Advanced APM such as TEAM given the more than nominal financial risk standard required of Advanced APMs set forth in 42 CFR 414.1415I. While BPCI Advanced is an Advanced APM, participation is voluntary, and PGPs have the autonomy to determine if they have the infrastructure and resources to take on

[583] CMS Bundled Payments for Care Improvement Advanced Model: Third Evaluation Report. (2022). Centers for Medicare & Medicaid Services. Retrieved November 28, 2023, from *https://www.cms.gov/priorities/innovation/data-and-reports/2022/bpci-adv-ar3.*

[584] CMS Bundled Payments for Care Improvement Advanced Model: Year 2 Evaluation Report. (2021). Centers for Medicare & Medicaid Services. Retrieved November 28, 2023, from *https://www.cms.gov/priorities/innovation/data-and-reports/2021/bpci-yr2-annual-report.*

the level of financial risk to participate in the model and determine if they have sufficient episode volume to create systematic care redesign efficiencies. Further, most eligible clinicians in the BPCI Advanced model do not meet Qualifying APM Participant determinations in the model due to not meeting the required thresholds for Medicare Part B payments or Medicare beneficiaries, suggesting that acute care-based episodes may not sufficiently capture the full panel of patients a PGP manages. We believe there are other meaningful opportunities for PGPs to engage in TEAM, specifically through financial arrangements with TEAM participants, or through other CMS value-based care initiatives, including future PGP-specific opportunities under development through the CMS Innovation Center specialty care strategy. For these reasons, we are not proposing PGPs to be included in the definition of TEAM participant in TEAM at this time. However, we seek comment on whether we should include PGPs in the definition of TEAM participant through future rulemaking, or if there are other ways, beyond financial arrangements, that we can incorporate PGPs to promote collaboration between TEAM participants and other providers who may care for a TEAM beneficiary over the course of the episode.

We seek comment on our proposal to exclude hospitals located in Maryland from TEAM participation, and how to address hospitals that would participate in the AHEAD model. We also seek comment on including PGPs in the definition of TEAM participant.

(c) Proposed Mandatory Participation

We are proposing to require hospitals located in selected geographic areas, as described in section X.A.3.a.(4) of the preamble of this proposed rule, that meet the proposed TEAM participant definition to participate in TEAM. Such hospitals would be required to participate in the Model even if they have not had previous episode-based payment model or value-based care experience. Shifting hospitals away from the traditional Medicare FFS payment system to value-based care may require significant time, effort, and resources to build infrastructure and establish care redesign processes.[585] We intend to provide sufficient time for potential TEAM participants to prepare for model implementation, which is why we are proposing TEAM at least 18 months before the proposed model start date. However, we acknowledge that time alone may not be adequate to prepare TEAM participants for model participation, especially those with limited or no value-based care experience. We seek comment on whether 1 year would be a sufficient amount of time for hospitals required to participate in TEAM to prepare for TEAM participation or whether a longer timeframe (for example, 18 months) or shorter timeframe (for example, 6 months) would be sufficient time for hospitals to prepare to become TEAM participants, effective on the model start date.

We alternatively considered making participation in TEAM voluntary. However, we would be concerned that a fully voluntary model would not lead to meaningful evaluation findings especially since the CMS Innovation Center has tested voluntary episode-based payment models for over a decade. We recognize that a mandatory model test limits the selection of participants to only those captured within the selected geographic areas. We also recognize there may be participants of previous or current models that wish to continue their care redesign efforts, further care transformation, and maintain efficiencies to avoid reliance on the volume-based FFS payment system. We considered allowing hospitals that have previously participated (or are currently participating) in a Medicare episode-based payment model to voluntarily opt-into TEAM to increase the footprint of the model and allow those entities to maintain their momentum in value-based care. However, we recognize several challenges with including a voluntary opt-in for a model such as TEAM. First, allowing an opt-in may limit the ability of the model to achieve Medicare savings, given that opt-in participants may self-select into the model based on their belief that they would benefit financially. Second, an opt-in may compromise the rigor of our evaluation of TEAM, because it could limit the number of hospitals available for our comparison group and our ability to detect generalizable evaluation results, due to participant self-selection into the model. Finally, we note that we have been testing the five episode categories that we have proposed to include in TEAM, as described in section X.A.3.b. of the preamble of this proposed rule, on a voluntary basis via BPCI Advanced and the BPCI Initiative, so we have a significant amount of data on the performance of those episode categories in a voluntary structure already.

For these reasons, we are not proposing a voluntary opt-in participation arm to TEAM. However, for the reasons discussed below, we are considering and seek comment regarding a voluntary opt-in participation arm in the proposed TEAM. Specifically, we are considering limiting voluntary opt-in participation to TEAM for hospitals that currently participate in the BPCI Advanced or the CJR model, that are not located in an area mandated for TEAM participation, and continue to participate until completion, of the model in which they are currently participating.[586] For those hospitals that meet this criteria and that would want to voluntarily opt into TEAM participation, we would require those hospitals to participate in all TEAM episode categories for the full five-year model performance period and they would not be permitted to voluntarily terminate model participation. The TEAM voluntary opt-in would be a one-time opportunity to join TEAM participation and those hospitals would need to complete and submit an application to CMS in a form and manner and by a date specified by CMS, prior to the first performance year of TEAM. Further, hospitals that submit an application would need to undergo and pass at minimum multiple levels of program integrity and law enforcement screening. Hospitals that pass screening would be offered a participation agreement from CMS to participate in TEAM, which would at minimum subject them to all the same terms, conditions and requirements of those hospitals mandated to participate in TEAM. Lastly, hospitals offered a participation agreement to voluntarily opt into TEAM would be required to submit and execute a participation agreement with CMS in a manner and form, and by a date specified by CMS prior to the model start date.

We believe that offering this potential voluntary opt-in consideration would allow those hospitals that have made significant investments in care redesign and episode management to further their efforts to improve beneficiary quality of care and reduce Medicare spending. We recognize the pool of hospitals that could potentially apply for voluntary opt-in participation may be narrow. However, we believe extending the voluntary opt-in opportunity to hospitals that terminated

[585] Erikson, C., Pittman, P., LaFrance, A., & Chapman, S. (2017). Alternative payment models lead to strategic care coordination workforce investments. Nursing Outlook, 65(6), 737–745. *https://doi.org/10.1016/j.outlook.2017.04.001.*

[586] Current BPCI Advanced hospitals would need to participate in BPCI Advanced until December 31, 2025 and current CJR participant hospitals would need to participate in the CJR model until December 31, 2024.

BPCI Advanced or CJR model participation or to hospitals not mandated to participate in TEAM would jeopardize the model's ability to have a robust evaluation. This is because we would want to ensure we have a sufficient comparison group of hospitals not participating in TEAM to produce generalizable findings. As previously indicated, we are not proposing a voluntary opt-in participation arm to TEAM; however, we are considering and seek comment regarding a voluntary opt-in participation arm in the proposed TEAM. Lastly, we seek comment on our proposal for hospitals located in selected geographic areas that meet the proposed TEAM participant definition to participate in TEAM.

(d) Financial Accountability of a TEAM Participant

As we did with the CJR model, we continue to believe it is most appropriate to identify a single entity to bear financial accountability for making repayment if quality and spending performance metrics are not met to CMS under the model after reconciliation has been performed. Consistent with the CJR model, we propose to make TEAM participants financially accountable for the episode for the following reasons:

- We believe hospitals would play a central role in coordinating episode-related care and ensuring smooth transitions for beneficiaries undergoing services related to episodes. A large portion of a beneficiary's recovery trajectory from an episode would begin during the hospital inpatient stay or procedure performed in the hospital outpatient department.
- Most hospitals already have some infrastructure related to health information technology, patient and family education, and care management and discharge planning. This infrastructure includes post-acute care coordination infrastructure and resources such as case managers, which hospitals can build upon to achieve efficiencies under TEAM.
- We are proposing that episodes in TEAM begin with an acute care hospital stay or hospital outpatient department procedure visit. Some episodes may be preceded by an emergency room visit and possible transfer from another hospital's emergency room, or followed by PAC. However, we do not believe it would be appropriate to hold a PAC provider or a hospital other than the TEAM participant where the inpatient stay or initial hospital outpatient procedure that initiated the episode happened fully financially accountable for an episode under this model.

Episodes in TEAM may be associated with multiple hospitalizations through readmissions or transfers. When more than one hospitalization occurs during a single episode, we propose to hold the TEAM participant to which the episode is initiated, as described in section X.A.3.b.(5)(c) of the preamble of this proposed rule, financially accountable for the episode nonetheless. We recognize that, particularly where the hospital admission may be preceded by an emergency room visit and subsequent transfer to a tertiary or other regional hospital facility, patients often wish to return home to their local area for post-acute care. Many hospitals have recently heightened their focus on aligning their efforts with those of community providers, both those in the immediate area as well as more outlying areas from which they receive transfers and referrals, to provide an improved continuum of care. In many cases, this heightened focus on alignment is due to the incentives under other CMS models and programs, including ACO initiatives such as the Shared Savings Program or the Hospital Readmissions Reduction Program (HRRP). By focusing on the TEAM participant as the accountable or financially responsible entity, we hope to continue to encourage this coordination across providers and seek comment on ways we can best encourage these relationships within the scope of TEAM.

We seek comment on our proposal to require TEAM participants to be financially accountable for episodes in TEAM.

(i) Financial Accountability Considerations

We recognize in the proposed TEAM that a beneficiary in an episode may receive care from multiple providers and suppliers, and not just from the TEAM participant where the episode was initiated. We considered allowing providers or suppliers, other than the TEAM participant, to bear financial accountability for episodes given their involvement in a TEAM beneficiary's care. Specifically, we considered splitting financial accountability between the TEAM participant and other providers and suppliers that provide items and services to the TEAM beneficiary. For example, we considered the TEAM participant being financially accountable for a majority of the episode spending, such as all Medicare Part A spending, and other suppliers, such as PGPs, being accountable for a portion episode spending related to Medicare Part B spending. However, we have concerns about how to accurately determine a reasonable sharing methodology that reflects the portion of spending either the TEAM participant or the PGP should be financially accountable for. Further, we have concerns about requiring PGPs to be financially accountable given practices can vary by size and resources. As previously noted, the BPCI Advanced model includes PGPs, and the physician groups electing to participate in BPCI Advanced have done so because their practice structure supports care redesign and other infrastructure necessary to bear financial accountability for episodes. However, these physician groups are not necessarily representative of the typical group practice. The infrastructure necessary to accept financial accountability for episodes is not present across all PGPs, and thus we do not believe it would be appropriate to designate PGPs to bear a portion of the financial accountability for episodes under the proposed TEAM. Further, shared financial accountability would require more than hospitals being TEAM participants and introduces model complexity. We seek comment on approaches to splitting financial accountability when multiple providers care for a single beneficiary in an episode.

While we propose that the TEAM participant be financially responsible for the episode, we also believe that effective care redesign requires meaningful collaboration among acute care hospitals, PAC providers, physicians, and other providers and suppliers within communities to achieve the highest value care for Medicare beneficiaries. We believe it may be essential for key providers and suppliers to be aligned and engaged, financially and otherwise, with the TEAM participants, with the potential to share financial accountability for an episode with those TEAM participants. We note that all relationships between and among TEAM participants and other providers and suppliers would still need to comply with all relevant laws and regulations, including the fraud and abuse laws and all Medicare payment and coverage requirements unless otherwise specified further in this section and in section X.A.3.g of the preamble of this proposed rule. Depending on a TEAM participant's current degree of clinical integration, new and different contractual relationships among hospitals and other health care providers may be important, although not necessarily required, for TEAM success in a community. We acknowledge that there may need to be incentives for other providers and suppliers to partner with TEAM

participants and develop strategies to improve episode efficiency.

We acknowledge the important role that conveners play in the BPCI Advanced model with regard to providing financial responsibility and infrastructure support to hospitals and PGPs participation in BPCI Advanced. The convener relationship (where another entity assumes financial responsibility) may take numerous forms, including contractual (such as a separate for-profit company that agrees to take on a hospital or PGP's financial risk in the hopes of achieving financial gain through better management of the episodes) and through ownership (such as when risk is borne at a corporate level within a hospital chain). We considered allowing convener entities, like those recognized in the BPCI Advanced model, to have formal roles in TEAM. At peak BPCI Advanced participation, over 70%, or 1,439, of the hospitals and PGPs in Model Year 3 (2020) participated as downstream episode initiators under one of the 92 convener participants.[587] While the majority of BPCI Advanced hospitals and PGPs participated under a convener participant, some hospitals and PGPs found the participation relationship with a convener challenging. Specifically, some hospitals and PGPs felt removed from participation decisions since they were not party to the participation agreement between CMS and the convener participant. Additionally, convener participants that are not Medicare providers or suppliers may need financial guarantees that can impose significant upfront financial investment for participation and be administratively burdensome for CMS and the participant. We are not proposing to require convener entities in this model and we do not intend to identify or require any Medicare-enrolled providers or suppliers (or providers and suppliers that are not enrolled in Medicare) to be convener entities in TEAM, in light of the experiences and resources that would be needed to ''convene'' over one or more TEAM participants. As with the CJR model, we do not intend to restrict the ability of TEAM participants to enter into administrative or risk sharing arrangements related to TEAM with entities that may provide similar support as a convener, except to the extent that such arrangements are already restricted or prohibited by existing law. We are also not proposing to require TEAM participants to partner with convener entities and we are not proposing to require any entities, providers, or suppliers to serve as conveners for purposes of TEAM. We refer readers to section X.A.3.g. of the preamble of this proposed rule for further discussion of model design elements that may outline financial arrangements between TEAM participants and other providers and suppliers.

We seek comment on approaches to splitting financial accountability when multiple providers or suppliers care for a single beneficiary in an episode.

(3) TEAM Participation Tracks

One way to help providers and suppliers gain experience in alternative payment models is through model participation tracks where the levels of risk and reward are reduced while the participants establish and hone their care redesign processes. Stakeholders have urged CMS to offer a glide path in its models, most recently in the Episode-based Payment Model RFI (88 FR 45872), to smooth the transition to risk. Such a glide path could provide more time for participants to gain experience with two-sided financial risk by phasing-in risk rather than requiring full-risk participation at the start of the model. Previous and current CMS models and programs have implemented this approach, including the recently announced Making Care Primary Model, which offers a progressive three-track approach that increases participants' accountability, and the Medicare Shared Savings Program, which offers an incremental glide path for ACOs to transition to higher levels of potential risk and reward. We note that these models and programs have longer durations than the model duration that we are proposing in TEAM, which makes it easier to offer a gradual transition to two-sided financial risk or higher levels of risk and reward. However, in light of our proposal to make TEAM a five-year model test, we believe that TEAM participants would still benefit from the opportunity to ease into two-sided financial risk participation as they develop efficiencies.

We are proposing that there will be three tracks in TEAM, each with differing financial risk and quality performance adjustments. Track 1 would be available only in PY 1 for all TEAM participants and would have only upside financial risk with quality adjustment applied to positive reconciliation amounts. Track 2 would be available in PYs 2 through 5 to a limited set of TEAM participants, including safety net hospitals, and would have two-sided financial risk with quality adjustment to reconciliation amounts. Lastly, Track 3 would be available in PYs 1 through 5 for all TEAM Participants and would have two-sided financial risk with quality adjustment to reconciliation amounts.

We are proposing a one-year glide path to two-sided risk for TEAM participants in an effort to ensure that TEAM participants have time to prepare for two-sided financial risk. We are proposing to allow all TEAM participants to select between one of two tracks for the first performance year of TEAM. For PY 1, a TEAM participant may elect to participate in either Track 1 or Track 3. For PY 1, Track 1 would have upside-only financial risk provided through reconciliation payments, subject to a 10% stop-gain limit and a Composite Quality Score (CQS) adjustment percentage of up to 10%, as described in sections X.A.3.d.(5)(h) and X.A.3.d.(5)(g) of the preamble of this proposed rule, that would allow TEAM participants to be rewarded for their work to improve quality and cost outcomes for their episodes, but not be held financially accountable if spending exceeds the reconciliation target price. We believe the 10% stop-gain limit and a CQS adjustment percentage of up to 10% for Track 1 are appropriate and would allow TEAM participants to be rewarded for spending and quality performance while easing into financial risk. We propose that Track 3 would have two-sided financial risk in the form of reconciliation payments or repayment amounts, subject to 20% stop-gain and stop-loss limits and a CQS adjustment percentage of up to 10%, as described in sections X.A.3.d.(5)(h) and X.A.3.d.(5)(g) of the preamble of this proposed rule, that would allow TEAM participants to have higher levels of reward and risk based on their quality and cost performance for their episodes. We are proposing to only allow TEAM participants to participate in Track 1 for one performance year, specifically PY 1. We are proposing a five-year model test, and we do not believe that making Track 1 available for more than one performance year would motivate TEAM participants to improve quality or spending performance since there would be no financial accountability when spending reductions are not achieved.

We believe a one-year glide path is an appropriate length of time for a five-year model test that aims to improve patient quality of care and reduce Medicare

[587] CMS Bundled Payments for Care Improvement Advanced Model: Year 2 Evaluation Report. (2021). Centers for Medicare & Medicaid Services. Retrieved November 28, 2023, from *https://www.cms.gov/priorities/innovation/data-and-reports/2021/bpci-yr2-annual-report.*

spending. We considered limiting eligibility for Track 1 during PY 1 to TEAM participants that have not previously participated in a Medicare episode-based payment model, but given that TEAM would be a mandatory model, we believe prior experience does not guarantee successful participation, and that it is important for TEAM participants to consider their own unique organizational position and characteristics when determining their desired track selection for PY 1. We seek comment on this proposal and whether there are alternative potential approaches for constructing a glide path in TEAM.

We are also proposing that TEAM participants would be required to notify CMS of their track selection prior to the start of PY 1, in a form and manner and by a date specified by CMS. TEAM participants who fail to timely notify CMS would be automatically assigned to Track 1 for PY 1. We seek comment on the proposal to require TEAM participants to notify CMS of their track selection and to automatically assign TEAM participants to Track 1 if they fail to timely notify CMS of their desired track selection.

The proposed glide path opportunity is limited to one year. We propose that TEAM participants who elected to participate in Track 1 for PY 1 would automatically be assigned to Track 3 for PY 2 and would remain in Track 3 for the remainder of the model (PYs 2 through 5). We recognize that offering different participation tracks in TEAM presents an opportunity to provide flexibilities to TEAM participants that may care for a greater proportion of underserved beneficiaries and TEAM participants that lack the financial reserves to invest in value-based care, including safety net, rural, and other hospital providers. Research has identified APM participation challenges for these types of providers, such as a lack of capital to finance the upfront costs of transitioning to an APM, including purchasing electronic health record technology, and challenges acquiring or conducting data analysis necessary for participation.[588] CMS has taken significant steps to address and improve health equity in value-based care models and programs, including health equity adjustments to the Hospital Value-Based Purchasing Program (88 FR 58640) and the Medicare Shared Savings Program (87 FR 69404).

We are proposing to require different types of hospitals to participate in TEAM, and we believe that certain TEAM participants may benefit from a participation option that has limited two-sided financial risk so that their beneficiaries may receive high quality, coordinated care without imposing significant financial pressure. Therefore, we propose that rather than automatically being assigned to Track 3 beginning in PY 2, certain TEAM participants could elect to participate in Track 2 beginning in PY 2 and stay in Track 2 for the remainder of the model (PYs 2 through 5). As further described in sections X.A.3.d.(5)(h) and X.A.3.d.(5)(g) of the preamble of this proposed rule, we propose that Track 2 would have two-sided financial risk in the form of reconciliation payments and repayment amounts, subject to 10% stop-gain and stop-loss limits, a CQS adjustment percentage of up to 10% for positive reconciliation amounts, and a CQS adjustment percentage of up to 15% for negative reconciliation amounts. We believe the CQS adjustment percentage of up to 15% for negative reconciliation amounts, is appropriate for Track 2 because it further limits a TEAM participant's financial risk given that a higher CQS adjustment percentage for negative reconciliation amounts results in a lower repayment amount. These proposed payments and payment adjustments would allow TEAM participants to receive reconciliation payment amounts or owe repayment amounts based on their quality and cost performance for their episodes.

We propose that only the following types of TEAM participants would be eligible to participate in Track 2 for PYs 2 through 5:

- Hospitals that are safety net hospitals, as further described in section X.A.3.f.(2) of the preamble of this proposed rule. For purposes of TEAM, we propose that a TEAM participant must meet at least one of the following criteria in order to be considered a safety net hospital:

++ Exceeds the 75th percentile of the proportion of Medicare beneficiaries considered dually eligible for Medicare and Medicaid across all PPS acute care hospitals in the baseline period (as described in section X.A.3.d.(3)(a)).

++ Exceeds the 75th percentile of the proportion of Medicare beneficiaries partially or fully eligible to receive Part D low-income subsidies across all PPS acute care hospitals in the baseline period.

- Hospitals that are rural hospitals, as further described in section X.A.3.f.(3) of the preamble of this proposed rule. For purposes of TEAM, we propose that a TEAM participant must meet at least one of the following criteria in order to be considered a rural hospital:

++ Is located in a rural area as defined under § 412.64.

++ Is located in a rural census tract defined under § 412.103(a)(1).

++ Has reclassified as a rural hospital under § 412.103.

++ Is a rural referral center (RRC), which has the same meaning given this term under § 412.96.

- Hospitals that are Medicare dependent hospitals (MDH) as defined under 42 CFR 412.108.
- Hospitals that are sole community hospitals (SCHs) as defined under 42 CFR 412.92.
- Hospitals that are essential access community hospitals as defined under 42 CFR 412.109.

We believe that allowing TEAM participants that meet the safety net hospital or rural hospital criteria, as well as those that are Medicare dependent hospitals, sole community hospitals, or essential access community hospitals to participate in Track 2 during PYs 2 through 5 would provide an opportunity for these hospitals to develop capabilities to deliver value-based care and would avoid the financial pressures of a two-sided financial risk model that could make their participation in TEAM untenable.

We propose that TEAM participants that meet the Track 2 hospital criteria described above would be required to notify CMS on an annual basis prior to the start of every performance year, beginning for PY 2, of their desire to participate in Track 2. We propose that TEAM participants that meet the Track 2 hospital criteria could switch between Track 2 and Track 3 on an annual basis. Such TEAM participants would need to notify CMS of their preference, in a form and manner and by the date specified by CMS. We propose that TEAM participants would need to meet the hospital criteria for Track 2 participation by the date CMS requires notification of their preference. TEAM participants who fail to timely notify CMS or do not meet the Track 2 hospital criteria would not be approved by CMS to participate in Track 2 and would be automatically by assigned to Track 3 for the given performance year. We recognize that allowing these specific TEAM participants to self-select into Track 2 for PYs 2 through 5 could create challenges when evaluating the model, such as the generalizability of evaluation findings. We also recognize

[588] Medicare Information on the Transition to Alternative Payment Models by Providers in Rural, Health Professional Shortage, or Underserved Areas: Report to Congressional Committees. (2021). United States Government Accountability Office. Retrieved December 1, 2023, from *https://www.gao.gov/assets/gao-22-104618.pdf.*

that requiring these specific TEAM participants to notify CMS every year would permit them to switch tracks if they no longer desire to be participate in Track 2 or no longer meet the Track 2 hospital criteria. Therefore, we seek comment on whether we should prohibit TEAM participants from switching tracks after PY2 or if there are other options we should consider to mitigate evaluation challenges.

We considered but are not proposing allowing TEAM participants who meet the safety net hospital criteria to remain in Track 1 for all performance years so that they would not be subject to downside financial risk during their participation in the model. Further, we considered not allowing these TEAM participants who meet the safety net hospital criteria to switch between tracks, meaning that they would have to participate in Track 1 for all performance years. However, we did not want to limit a TEAM participant who meets the safety net hospital criteria from making their own decision about whether to participate in a track with downside financial risk. Further, we believe that having downside risk by PY 2 for all TEAM participants would help to drive care improvements and establish care efficiencies that could lead to better outcomes on cost and quality of care. We seek comment on whether we should consider allowing TEAM participants who meet the safety net hospital criteria to participate in Track 1 for all performance years.

Table X.A.–01 summarizes the proposed TEAM tracks.

TABLE X.A.-01 – SUMMARY OF PROPOSED TEAM PARTICIPATION TRACKS

Track	Performance Year (PY)	TEAM Participant Eligibility	Financial Risk
Track 1	PY 1	All TEAM participants	• Upside risk only (10% stop-gain limit) • CQS adjustment percentage of up to 10% for positive reconciliation amounts
Track 2	PYs 2-5	TEAM participants that meet one of following hospital criteria: • Safety net hospital • Rural hospital • Medicare Dependent Hospital • Sole Community Hospital • Essential Access Community Hospital	• Upside and downside risk (10% stop-gain/stop-loss limits) • CQS adjustment percentage of up to 10% for positive reconciliation amounts and CQS adjustment percentage of up to 15% for negative reconciliation amounts
Track 3	PYs 1-5	All TEAM participants	• Upside and downside risk (20% stop-gain/stop-loss limits) • CQS adjustment percentage of up to 10% for positive and negative reconciliation amounts

We seek comment on the proposals for the TEAM Participation Tracks at § 512.520. We also seek comment on the proposal that TEAM participants who meet the eligibility criteria for Track 2 may self-select into Track 2 and change which track their track selection annually.

(4) Proposed Approach To Select TEAM Participants and Statistical Power

Our proposed participant selection methodology for TEAM is designed to provide adequate statistical power for evaluating and detecting changes in cost and quality.

We are proposing that TEAM would be an episode-based payment model implemented at the hospital level that captures all items and services furnished to a beneficiary over a defined period of time. We are proposing to test five episode categories in TEAM, as described in section X.A.3.b. of the preamble of this proposed rule, focusing on acute clinical procedures initiated in the hospital inpatient and outpatient settings. Specifically, TEAM is proposing to test episodes that begin with CABG, LEJR, major bowel procedure, SHFFT, and spinal fusion. We considered whether the model should be limited to hospitals where a high volume of the proposed five episode categories are performed, which would result in a more narrow test on the effects of an episode-based payment approach, or whether to include all hospitals in particular geographic areas, which would result in testing the effects of an episode-based payment approach more broadly across an accountable care community seeking to coordinate care longitudinally across settings. Selecting only those hospitals where a high volume of the proposed episode categories are performed may result in fewer hospitals being selected as TEAM participants, but could still result in a sufficient number of episodes to evaluate the success of the model. However, there would be more potential for behaviors that could impact the model test, such as patient shifting and steering between hospitals in a given geographic area.

We propose to select geographic areas and require all hospitals, as defined in section X.A.3.a.(2).(b). of the preamble of this proposed rule, in those selected areas to participate in TEAM to help minimize the risk of TEAM participants shifting higher cost cases to hospitals not participating in TEAM. We propose that, instead of taking a simple random sampling where all geographic areas have the same chance for selection, we would group these geographic areas according to certain characteristics and then randomly select geographic areas from within those groups, also known as strata, for model implementation. Such a stratified random sampling method based on geographic area would provide several benefits. We expect that this method would allow us to observe the experiences of hospitals in geographic areas with various characteristics, such as variations in the number of hospitals, average episode spending, number of hospitals that serve a higher proportion

of historically underserved beneficiaries, and differing experience with previous CMS bundled payment models. We could then examine whether these characteristics impact the effect of the model on patient outcomes and Medicare expenditures within episodes of care. Using a stratified random sampling based on geographic area would also substantially reduce the extent to which the selected hospitals would differ from other hospitals on the characteristics used for stratification, compared to a simple random sample. Simple randomization may ensure similarity between the selected hospitals and hospitals that are not selected, but simple randomization can also lead to differences if enough units are drawn in a group-randomized design where the number of available groups is relatively small,. Finally, using a stratified random sampling of geographic areas would improve the statistical power of the subsequent model evaluation improve our ability to reach conclusions about the model's effects on episode spending and the quality of patient care. Section 1115A(a)(5) of the Act allows the Secretary to limit the testing of a model to certain geographic areas, and we propose for the reasons stated above to use a stratified random sampling method to select geographic areas and require all hospitals within those selected geographic areas to participate in TEAM.

(a) Overview and Options for Geographic Area Selection

We considered using a stratified random sampling methodology to select the following geographic areas: (1) certain counties based on their CBSAs, (2) certain ZIP codes based on their Hospital Referral Regions (HRR) or (3) certain states. We address each geographic unit in turn.

We considered selecting certain counties based on their CBSA. CBSA includes a core area with a substantial portion of the population in adjacent communities having a high degree of economic and social integration with that core. A county is designated as part of a CBSA when the county is associated with at least one core (urbanized area or urban cluster) with a population of at least 10,000, with the adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties with the other counties associated with the core.

OMB Bulletin 23–01, issued on July 21, 2023, states that there are 935 CBSAs in the United States and Puerto Rico. The 935 CBSAs include 393 Metropolitan Statistical Areas (MSAs), which have an urban core population of at least 50,000, and 542 Micropolitan Statistical Areas (mSAs), which have an urban core population of at least 10,000 but less than 50,000. CBSAs may be further combined into a Combined Statistical Area (CSA) which consists of two or more adjacent CBSAs (including MSAs, mSAs, or both) with substantial employment interchange. Counties not classified as a CBSA are typically categorized and examined at a state level.

The choices for a geographical unit based on CBSA include a CBSA, an MSA, or a CSA. We propose to select CBSAs in this model, which we will discuss later in this section. We note that CJR, a previous mandatory episode-based payment model, utilized MSAs as the geographic unit. Under TEAM, we are proposing to expand upon the CJR model's representation of geographic units by also including smaller geographic units, mSAs, in addition to MSAs. We propose that counties and other areas not located in a CBSA would not be included in the TEAM selection method.

We considered, but ultimately decided against, using CSAs instead of CBSAs as the geographic unit of selection. Under this scenario, we would look at how OMB classifies counties. We would first assess whether a county has been identified as belonging to a CSA, a unit which consists of adjacent CBSAs. If the county was not in a CSA, we would determine if it was in a CBSA that is not part of a larger CSA. Counties not located in a CBSA would be excluded from selection.

We considered a number of factors to decide whether to select geographic areas on the basis of CSAs and CBSAs or just on CBSAs alone, including an assessment of the anticipated degree to which patients who have one of the proposed episode categories would be willing to travel for their initial hospitalization, the extent to which surgeons are expected to have admitting privileges in multiple hospitals located in different CBSAs, and statistical power considerations related to the number of independent geographic units available for selection (there are only 184 CSAs vs. 935 CBSAs). We also considered the risk for patient shifting and steering between CBSAs within a CSA, and we believe that the anticipated risk is not severe enough to warrant selecting CSAs.

We next considered selecting hospital referral regions (HRRs). HRRs represent regional health care markets for tertiary medical care. HRRs are defined by determining where the majority of patients were referred for major cardiovascular surgical procedures and for neurosurgery. There are 306 HRRs with at least one city where both major cardiovascular surgical procedures and neurosurgery are performed. HRRs may not sufficiently reflect referral patterns for the five episode categories we are proposing to test in TEAM, as only one of the five proposed episode categories is cardiovascular (coronary artery bypass graft surgery), and this episode category has the smallest procedure volume. Therefore, we believe that CBSAs as a geographic unit are preferable over HRRs for this model.

We also considered selecting states as the geographic areas for TEAM. However, we concluded that CBSAs as a geographic unit are preferable over states. Choosing states as the geographic unit would require us to automatically include hospitals in all rural areas within the selected states. Using a unit of selection smaller than a state would allow for a more deliberate choice about the extent of inclusion of rural or small population areas. Selecting states rather than CBSAs would also greatly reduce the number of independent geographic areas subject to selection under the model, which would decrease the statistical power of the model evaluation. Finally, CBSAs straddle state lines where providers and Medicare beneficiaries can easily cross these boundaries for health care. Choosing states as the geographic unit would potentially divide a hospital market and set up a greater potential for patient shifting and steering to different hospitals under the model. CMS decided that the CBSA-level analysis was more analytically appropriate based on the specifics of this model.

For the reasons previously discussed, we propose to require all hospitals, as defined in section X.A.3.a.(2).(b). of the preamble of this proposed rule and in proposed § 512.505, within a CBSA that CMS selects through the stratified random sampling methodology, described in section X.A.3.a.(4).(d). of the preamble of this proposed rule, to participate in TEAM. Although CBSAs are revised periodically, with additional counties added to or removed from certain CBSAs, we propose to use the CBSA designations in OMB Bulletin 23–01 issued on July 21, 2023 as the CBSA designations for purposes of selecting participants for this model, regardless of whether such CBSA designations have changed since July 21, 2023, or will change at some point during the model performance period. We believe that this approach would best maintain the consistency of the TEAM participants in

the model, which is crucial for our ability to evaluate the effects of the model test on quality of care and changes in Medicare spending.

(b) Exclusion of Certain CBSAs

We propose to exclude from the stratified random sampling of geographic areas any CBSAs that are located entirely in the state of Maryland, and certain CBSAs that straddle Maryland and another state. If a CBSA: (1) includes a portion of Maryland; and (2) more than 50 percent of the episodes that initiated at hospitals within that CBSA between January 1, 2022 and June 30, 2023 for any of the five episode categories proposed for testing in TEAM did so at hospitals in Maryland, that CBSA will also be excluded from TEAM. We are proposing to exclude these CBSAs from selection because the state of Maryland is currently participating in another Innovation Center Model—the Maryland Total Cost Of Care Model, as further described in section X.A.3.a.(2).(b).(i). of the preamble of this proposed rule.

We also propose to exclude CBSAs in which no episodes were initiated at hospitals for any of the five episode categories proposed for testing in TEAM between January 1, 2022 and June 30, 2023. We believe it will be highly unlikely for these CBSAs to have data available for evaluation after the model starts. After applying these criteria, 803 CBSAs remain available for selection in TEAM. We propose to use a stratified random sampling method as described below to select approximately 25 percent of eligible CBSAs in TEAM following the process we describe in the next two sections. We are providing the proposed list of CBSAs eligible for selection in TEAM in Table X.A.–02.[589]

BILLING CODE 4120–01–P

[589] This list was generated using the criteria and methods that are being proposed, and is subject to change if different criteria and methods end up being finalized.

BILLING CODE 4120–01–C

(c) Selection Strata

We propose to stratify CBSAs into groups based on average historical episode spending, the number of hospitals, the number of safety net hospitals, and the CBSA's exposure to prior CMS bundled payment models.

Stratification enables certain groups of interest to be represented at a higher level, or oversampled, in the model test. One of CMS' policy objectives is to extend the reach of value-based care to more beneficiaries, including beneficiaries from underserved communities. Consistent with that objective, CMS proposes to oversample CBSAs that have limited previous exposure to CMS' bundled payment models and CBSAs with a higher number of safety net hospitals.

We considered stratifying eligible CBSAs into mutually exclusive groups corresponding to the 16 unique combinations of ''high'' and ''low'' values for the following four CBSA-level characteristics (based on the median values across all CBSAs):

• *Average spend for a broad set of episode categories in the CBSA.* There are significant healthcare cost differences across geographic regions. One of the main objectives of TEAM is to reduce episode spending, and the proposed pricing methodology for episodes is regional. Thus, it will be important for the TEAM design to account for the significant variation in average episode spending across geographic regions. We propose to use the episode categories included in the predecessor bundled payment model, BPCI Advanced, initiated between January 1, 2022 and June 30, 2023 to determine the average spend for broad set of episode categories for each CBSA. The episode categories are: Acute myocardial infarction; Cardiac arrhythmia; Congestive heart failure; Cardiac defibrillator; Cardiac valve; Coronary artery bypass graft; Endovascular cardiac valve replacement; Pacemaker; Percutaneous coronary intervention; Cardiac defibrillator; Percutaneous coronary intervention; Disorders of liver except malignancy; cirrhosis or alcoholic hepatitis; Gastrointestinal hemorrhage; Gastrointestinal obstruction; Inflammatory bowel disease; Bariatric surgery; Major bowel procedure; Cellulitis; Chronic obstructive pulmonary disease; bronchitis, asthma, Renal failure; Sepsis; Simple pneumonia and respiratory infections; Urinary tract infection; Seizures; Stroke; Double joint replacement of the lower extremity; Fractures of the femur and hip or pelvis; Hip & femur procedures except major joint; Lower extremity and humerus procedure except hip, foot, femur; Major joint replacement of the lower extremity; Major joint replacement of the upper extremity; Back & neck except spinal fusion; Spinal fusion; Back & neck except spinal fusion. [590]

• *Number of hospitals within the CBSA.* We are proposing to select CBSAs for purposes of model implementation, which include mSA areas in addition to MSAs, meaning that TEAM would be highly representative of the United States and would include many areas with only a single hospital as well as areas with a high number of hospitals. We expect significant differences in the healthcare environment and beneficiary characteristics across CBSAs with low and high numbers of hospitals. Consequently, we believe it is important to select areas above and below the median to have broad representation of CBSAs included in the model.

• *CBSA's past exposure to CMS' bundled payment models* (BPCI Models 2, 3, and 4, CJR, or BPCI Advanced) during the period from October 1, 2013 to December 31, 2022. The extent of previous participation in bundled payment models in a CBSA may be a factor in how successful TEAM participants will be at reducing costs and improving quality of care under the model. This stratification will allow CMS to assess how TEAM's impacts vary by past regional exposure to bundled payment models.

• *Number of safety net hospitals in the CBSA.* Safety net providers have historically not participated in voluntary episode-based payment models as frequently as other providers. Through TEAM, we see an opportunity to improve care for beneficiaries served by safety net providers and want to ensure focus on care redesign and improving quality of care for beneficiaries in underserved communities, consistent with CMS' objectives to improve health equity. Stratifying CBSAs by the number of safety net hospitals will allow CMS to gather robust data to assess TEAM's effects across a range of provider types.

We ultimately decided to create an additional stratum from one of these 16 strata for a total of 17 strata to select CBSAs into TEAM. Below, we identify the stratum we propose to split into two strata and how we would do that; and describe the reasons for this decision.

We note that there are only a handful of outlier CBSAs with a very high number of safety net hospitals. Inclusion of these outlier CBSAs result in an extremely lopsided or asymmetrical distribution when stratifying CBSAs by this characteristic. Depending on the circumstances, these handful of CBSAs may potentially lead to significant differences in the total number of safety net hospitals between the CBSAs that are selected for TEAM and those that are not selected. We therefore propose to move these CBSAs into a new 17th stratum. The proposed stratification process would result in 17 mutually exclusive strata of CBSAs.

(d) Random Selection of CBSAs from Strata

We propose to randomly select CBSAs for TEAM from the 17 stratified groups using a method that reflects CMS' policy objectives described above, including expanding the reach of value-based care. We propose to oversample CBSAs with low past exposure to CMS' bundled payment models and CBSAs with a high number of safety net hospitals. The selection probability for a given CBSA would differ across strata, but all CBSAs

[590] See the technical resources section of the following web page on how these episode categories were constructed: *https://www.cms.gov/priorities/innovation/innovation-models/bpci-advanced/participant-resources.*

within a particular stratum, will have the same chance of being selected. The hospitals located in the selected CBSAs will be required to participate. CMS' proposed method of randomly selecting CBSAs while oversampling CBSAs with certain characteristics would result in the following selection probabilities:

- 33.3% (one out of three) CBSAs will be selected in strata with high number of safety net hospitals and low past exposure to CMS' bundled payment models. Four strata have this selection probability.
- 25% (1 out of 4) CBSAs will be selected in strata with either high number of safety net hospitals or low past exposure to CMS' bundled payment models (but not both). Eight strata have this selection probability.
- 20% (1 out of 5) CBSAs will be selected in strata with neither high number of safety net hospitals nor low past exposure to CMS' bundled payment models. Four strata have this selection probability.
- 50% (1 out of 2) CBSAs will be selected with the highest number of safety net hospitals (One strata has this selection probability: the 17th stratum).

The 17 selection strata and their relationship to the dimensions discussed above are represented in Table X.A.–03.

BILLING CODE 4120–01–P

TABLE X.A.-03: SELECTION STRATA AND THEIR PROPOSED SELECTION PERCENTAGES

Selection Strata	Number of safety net hospitals in the CBSA	CBSA's past exposure to CMS' bundled payment models	Average Spend for a Broad Range of Episode Categories in the CBSA	Number of Hospitals within the CBSA	Selection Percentage for CBSAs in strata
1	Low	Low	Low	Low	1/4
2	Low	Low	Low	High	1/4
3	Low	Low	High	Low	1/4

16	High	High	High	High	1/4
17	Very High	High	High	High	1/2

BILLING CODE 4120–01–C

Through this selection scheme, CMS would select approximately a quarter of eligible CBSAs listed in Table X.A.–03 across the CBSAs in which TEAM would be implemented. A hospital's probability of being required to participate in TEAM would depend on the stratum their CBSA is in, and would range from 20% to 50%.

We conducted power analyses to identify detectable changes in episode spending between a potential group of CBSAs selected for the model and a potential control group of CBSAs using a Type I error of 0.05 and Type 2 error of 0.2 (implying a power of 0.8). The analysis shows that, if a quarter of eligible CBSAs are selected for TEAM, we will be able to detect 1.5% changes in episode spending, all else being equal. This change in episode spending is within the savings range that CMS might expect to achieve given estimates for surgical episodes from previous episode-based payment models, including BPCI Model 2, CJR, and BPCI Advanced. This is critical to ensuring that CMS is able to assess the model's impact on Medicare spending.

We seek comment on our proposed approach to selecting TEAM participants at § 512.515.

b. Proposed Episodes

(1) Background

A key model design feature for episode-based payment models is the definition of the episodes included in the model. The episode definition has two significant dimensions—(1) a clinical dimension that describes which clinical conditions and associated services are included in the episode; and (2) a time dimension that describes the beginning and end of the episode, its length, and when the episode may be cancelled prior to the end of the episode.

(2) Overview of Proposed Episodes

In selecting episodes to test in TEAM, we considered a variety of factors, including the number and type of episodes best suited to meet the goals of the model. We chose to limit episode categories for TEAM to those that were included in BPCI Advanced through a robust selection process similar to that used for the CJR model (80 FR 73277). These episode categories represent high-expenditure, high-volume care delivered to Medicare beneficiaries and are evaluable in an episode-based payment model. BPCI Advanced clinical episodes include both surgical episodes, which are triggered by a surgical procedure, and medical episodes that are primarily non-surgical in nature.

While we continue to strive for our models to reduce Medicare expenditures and improve quality of care, we also want to ensure that there is a potential for participating hospitals to succeed. We want the conditions captured by episode categories in TEAM to be clinically similar enough that participants could drive care improvements by streamlining care pathways and transitions between clinical settings. In general, elective surgical procedures are associated with greater clinical homogeneity than unplanned hospitalizations or medical conditions. In addition, when episodes are clinically similar, episode spending is more predictable. Unsurprisingly, medical episodes are associated with greater spending variability. Medical episodes may also be more difficult to manage for hospitals without previous experience implementing value-based care and care redesign activities.

Notably, evaluations of CJR and BPCI Advanced suggest that surgical episode categories do not capture underserved populations to the same degree as medical episodes and that medical episodes may offer relatively greater opportunity to address health equity. Specifically, medical episodes generally have a higher proportion of dual-eligible beneficiaries when compared to surgical episodes. TEAM will test novel ways to improve representation of underserved populations in surgical episodes through targeted flexibilities for safety net hospitals and more broadly defined beneficiary-level social risk adjustment described in section X.A.3.f. of the preamble of this proposed rule). Although we are not proposing medical episodes for TEAM at this time due to their relatively greater clinical heterogeneity, we will consider adding medical episodes in future years of the model. We are soliciting comments on including medical episodes in TEAM, as well as input on which specific medical episodes would best support the goals of the model.

We also selected episodes for this proposed model with a greater proportion of spending in the post-acute period relative to the anchor hospitalization or procedure as such episodes may reflect a greater opportunity to improve care transitions for beneficiaries and reduce unnecessary hospitalizations and emergency care.

Finally, we acknowledge that testing all of the BPCI Advanced episodes in a novel mandatory model could overwhelm participants, as previous mandatory models have only tested a single episode category.

For the reasons discussed previously, we propose testing five surgical episodes in the model—Coronary Artery Bypass Grafting (CABG), Lower Extremity Joint Replacement (LEJR), Surgical Hip and Femur Fracture Treatment (SHFFT), Spinal Fusion, and Major Bowel Procedure. Based on our experience with the BPCI Advanced and CJR models and the stakeholder feedback received in response to the July 2023 Episode-Based Payment Model Request for Information, we believe that beginning the model with these five episode categories is the most reasonable course for TEAM.[591] Specifically, we are proposing to test surgical episodes because they are time-limited with well-defined triggers, have clinically similar patient populations with common care pathways, and have sufficient spending or quality variability, particularly in the post-acute period, to offer participants the opportunity for improvement.

The proposed episodes have been previously tested in BPCI Advanced voluntarily, allowing CMS to assess engagement and gather data. The proposed episodes represent the highest volume and highest cost surgical episodes performed in the inpatient setting. Although CABG and SHFFT episodes were finalized in the Advancing Care Coordination through Episode Payment Models (Cardiac and Orthopedic Bundled Payment Models) Final Rule (CMS–5519–F) on December 20, 2016, that mandatory test was not implemented. The proposed TEAM is the next logical step for applying lessons learned from BPCI Advanced in a mandatory model. TEAM would enable CMS to capture a more diverse population of providers, and potentially beneficiaries.

The proposed Lower Extremity Joint Replacement (LEJR) episode category would include hip, knee, and ankle replacements performed in either the hospital inpatient or outpatient setting. This episode category was selected because, using 2021 data, it was the highest volume, highest cost BPCI Advanced surgical episode category. There were 204,160 episodes with a total cost of $5.01 billion, with more than 40% of spending occurring in the post-acute period.

The proposed SHFFT episode category, referred to as Hip and Femur Procedures except Major Joint in BPCI Advanced, would include beneficiaries who receive a hip fixation procedure in the presence of a hip fracture. It would not include fractures treated with a joint replacement. This episode was selected because it was the second highest volume, and second-highest cost BPCI Advanced surgical episode performed in the inpatient setting, using 2021 data. There were 69,076 episodes with a total cost of $3.22 billion, with more than 63% of spending occurring in the post-acute period.

The proposed CABG episode category would include beneficiaries undergoing coronary revascularization by CABG.[592] This episode was selected because we wanted to maintain the engagement of cardiac surgeons who have participated in prior episode-based models. Among cardiac procedures it was the second highest cost and second highest volume BPCI Advanced surgical episode performed in the inpatient setting using 2021 data. There were 26,259 episodes with a total cost of $1.39 billion; approximately 22% of spending occurred in the post-acute period. We also considered percutaneous coronary intervention (PCI) for TEAM because it was the highest volume and highest cost surgical cardiac episode. However, we did not select this episode because PCI has been described as a low-value service by the Medicare Payment Advisory Commission when performed for stable coronary artery disease,[593] and the majority of PCIs are performed in the outpatient setting and are not associated with an acute event.

The proposed Spinal Fusion episode category would include beneficiaries who undergo certain spinal fusion procedures in either a hospital inpatient or outpatient setting. This episode was selected because it was the third-highest cost BPCI Advanced surgical episode performed in the inpatient setting using

[591] Request for Information; Episode-Based Payment Model.

[592] *https://www.cms.gov/icd10m/version38-fullcode-cms/fullcode_cms/P0008.html.*

[593] MedPAC March 2021 Report to the Congress. *https://www.medpac.gov/.*

2021 data. There were 62,345 episodes with a total cost of $3.2 billion; more than 27% of spending occurred in the post-acute period.

The proposed Major Bowel Procedure episode would include beneficiaries who undergo a major small or large bowel surgery.[594] This episode was selected because it was the fifth-highest volume and fourth-highest cost BPCI Advanced surgical episode performed in the inpatient setting using 2021 data. There were 54,848 episodes with a total cost of $1.95 billion; 37% of spending occurred in the post-acute period.

Each of the episodes provides different opportunities in TEAM to improve the coordination and quality of care, as well as efficiency of care during the episode, based on varying current patterns of utilization and Medicare spending. While these episode categories have been tested previously, we believe TEAM will provide additional information that can be used for potential expansion through its greater focus on care transitions back to primary care, health equity, and refined payment methodology, as described elsewhere in this proposed rule.

In addition, the mandatory nature of TEAM would address selection bias, where high performing hospitals have elected to voluntarily participate in a model but then withdrew from the model in the face of financial losses or uncertainty of receiving financial rewards. In BPCI Advanced, participants were able to select clinical episode categories and, later, service lines, which further ensures selection bias.

We performed an analysis of Medicare FFS claims data, beginning in CY 2021, to estimate the average annual number of historical episodes that extended 30 days post-hospital discharge, and, therefore, would have been included in TEAM. Based on that analysis, we anticipate the number of episodes that TEAM would capture to be approximately 28,088 for CABG; 75,254 for SHFFT; 59,983 for Major Bowel Procedure; 215,957 for LEJR; and 65,968 for Spinal Fusion. The average episode cost for these historical episodes was approximately $48,905 for CABG, $35,501 for SHFFT, $29,184 for Major Bowel Procedure, $21,063 for LEJR, and $46,326 for Spinal Fusion.

As previously stated, we are proposing five episode categories for TEAM to ease TEAM participants into episode accountability. We also intend to add additional episode categories in future performance years of the model, offering a gradual transition to greater episode accountability, and ultimately capturing a larger proportion of FFS spending in value-based care. We would use future notice and comment rulemaking to add episode categories in future performance years.

We seek comment on the five proposed episode categories, described at § 512.525(d) and any additional episode categories we should consider for the model.

(3) Clinical Dimensions of Episodes

We believe that a straightforward approach for hospitals and other providers to identify Medicare beneficiaries in this payment model is important for the care redesign that is required for model success. Some of the inpatient procedures that group to the included MS–DRGs are also performed in the outpatient setting. To identify outpatient episodes for TEAM, we propose to use methods similar to BPCI Advanced and CJR. Specifically, we propose to match a hospital's institutional claim for TEAM procedure codes billed through the OPPS.

Therefore, as in the BPCI Advanced and CJR models, hospitals participating in the proposed TEAM would be able to identify beneficiaries in included episodes through their Medicare Severity–Diagnosis Related Group (MS–DRG) during the anchor hospitalization or, for hospital outpatient procedures, by their Healthcare Common Procedure Coding System (HCPCS) codes, allowing active coordination of beneficiary care during and after the procedure.

The MS–DRG for inpatient procedures would determine the ultimate MS–DRG assignment for the hospitalization, unless additional surgeries higher in the MS–DRG hierarchy also are reported.[595] This approach offers operational simplicity for providers and CMS and is consistent with the approach taken by the BPCI Advanced and CJR models to identify beneficiaries whose care is included in those episodes.

We seek comment on our proposal to identify episodes with MS–DRGs and HCPCS for inclusion in TEAM.

(4) Episode Category Definitions

Episode definitions have two significant dimensions—(1) a clinical dimension that describes which clinical conditions and associated services are included in the episode category; and (2) a time dimension that describes the beginning and end of the episode, its length, and when the episode may be cancelled prior to the end of the episode.

For the purposes of TEAM, we propose to define episodes as including all Medicare Part A and Part B items and services described in § 512.525(e), with some exceptions described below and at § 512.525(f), beginning with an admission to an acute care hospital stay (hereinafter ''the anchor hospitalization'') or an outpatient procedure at a hospital outpatient department (HOPD) (hereinafter ''anchor procedure''), and ending 30 days following hospital discharge or anchor procedure.

As previously discussed in section X.A.3.b.(2) of the preamble of this proposed rule, the proposed episode categories were previously tested in BPCI Advanced and were voluntarily selected by BPCI Advanced participants. They represent the highest volume and highest cost surgical episode categories performed in the inpatient setting. We believe, based on current patterns of utilization and Medicare spending, there are still efficiencies to be gained by streamlining care pathways and transitions between clinical settings.

We selected these episode categories because elective surgical procedures are more clinically similar and have greater spending predictability. In addition, these episode categories have a significant proportion of spending in the post-acute period, reflecting a greater opportunity to improve care transitions for beneficiaries and reduce unnecessary hospitalizations and emergency care.

(a) Lower Extremity Joint Replacement Episode Category

As mentioned previously in this section of the proposed rule, we have identified the LEJR episode category for inclusion in this model. This proposed episode category would include hip, knee, and ankle replacements, but exclude arthroplasty of the small joints in the foot. The proposed LEJR episode category would include both hospital inpatient and outpatient procedures reimbursed through the Inpatient Prospective Payment System (IPPS) under select Medicare Severity-Diagnosis Related Groups (MS–DRG) and HOPD procedures billed under select HCPCS codes through the Outpatient Prospective Payment System (OPPS).[596]

[594] *https://www.cms.gov/icd10m/version38-fullcode-cms/fullcode_cms/P0009.html.*

[595] Medical Severity Diagnosis Related Groups (MS–DRGs): Definitions Manual. Version 33.0A. 3M Health Information Systems. (October 1, 2015). *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2016-IPPS-Final-Rule-Home-Page-Items/FY2016-IPPS-Final-Rule-Data-Files.html.*

[596] ICD–10–CM/PCS MS–DRG v38.0 Definitions Manual: *https://www.cms.gov/icd10m/version38-fullcode-cms/fullcode_cms/P0011.html.*

We recognize LEJR has been tested in other episode-based payment models. Given the promising findings for this episode category in those model tests, we believe there is value in continuing to test this episode category under an alternate payment methodology, particularly given the high volume of such procedures among the Medicare population. In addition, as previously mentioned, TEAM would potentially capture underserved populations who were disproportionately underrepresented in CJR. Therefore, we propose to define the LEJR episode category as a hip, knee, or ankle replacement that is paid through the IPPS under MS–DRG 469, 470, 521, or 522 or through the OPPS under HCPCS code 27447, 27130, or 27702. This approach offers operational simplicity for providers and CMS and is consistent with the approach taken by previous models to identify beneficiaries whose care is included in the LEJR episode category.

We note that Medicare-covered outpatient total ankle arthroplasty (TAA) was excluded from both BPCI Advanced and CJR models. However, since its removal from the Inpatient-Only List in 2021, the majority of TAA procedures have shifted to the outpatient setting. For example, in 2022, there were approximately 2,600 outpatient TAAs and only 600 TAAs performed in the inpatient setting. For this reason, and to be consistent with other episodes in the LEJR episode category, we propose that both inpatient and outpatient TAAs would trigger an episode in TEAM.

Based on an analysis of 2021 Medicare FFS claims data for historical LEJR episodes and an estimated number of additional outpatient TAAs, the annual number of potentially eligible beneficiary discharges for this mandatory model nationally would be approximately 226,000. We seek public comment on our proposed definition of LEJR episodes for TEAM at § 512.525(d)(1). We also seek comment on the proposed MS–DRG and HCPCS codes and our proposal to include outpatient TAA in the LEJR episode category.

(b) Surgical Hip & Femur Fracture Treatment (Excluding Lower Extremity Joint Replacement) Episode Category

We propose to define the Surgical Hip and Femur Fracture Treatment (SHFFT) episode as a hip fixation procedure, with or without fracture reduction, but excluding joint replacement, that is paid through the IPPS under MS–DRG 480–482. The SHFFT episode would include beneficiaries treated surgically for hip and femur fractures, other than hip arthroplasty. SHFFT procedures include open and closed surgical hip fixation, with or without reduction of the fracture. The SHFFT episode was selected because it was the second highest volume, and second-highest cost BPCI Advanced surgical episode performed in the inpatient setting, based on an analysis of 2021 Medicare FFS claims data. There were 69,076 episodes with a total cost of $3.22 billion. In addition, more than 63% of spending occurring in the post-acute period, signifying potential opportunity for care improvement. Using that same data for historical SHFFT episodes, the annual number of potentially eligible beneficiary discharges for this episode category nationally would be approximately 85,000.

Together, the LEJR and SHFFT episode categories cover all surgical treatment options for Medicare beneficiaries with hip fracture (that is, hip arthroplasty and fixation). Although a small number of SHFFT procedures are furnished in the outpatient hospital setting, TEAM would only include inpatient procedures, which conforms with hip and femur procedure except major joint episodes under BPCI Advanced.

Thus, we propose to include episodes for beneficiaries admitted and discharged from an anchor hospitalization paid under a SHFFT MS–DRG (480–482) under the IPPS in TEAM. We seek comment on our proposed definition of SHFFT and our proposal to include the SHFFT episode category at § 512.525(d)(2).

(c) Coronary Artery Bypass Graft Episode Category

The proposed CABG episode category would include beneficiaries undergoing coronary revascularization by CABG.[597] This episode category was selected in order to maintain the engagement of cardiac surgeons who have participated in prior episode-based models. Among cardiac procedures, it was the second highest cost and second highest volume BPCI Advanced surgical episode performed in the inpatient setting using 2021 data. There were 26,259 episodes with a total cost of $1.39 billion.

We also considered the percutaneous coronary intervention (PCI) episode category for TEAM because it was the highest volume and highest cost surgical cardiac episode. However, we did not select this episode because PCI has been described as a low-value service by the Medicare Payment Advisory Commission when performed for stable coronary artery disease,[598] and the majority of PCIs are not associated with an acute care hospitalization.

We propose to define the Coronary Artery Bypass Graft (CABG) episode category as any coronary revascularization procedure that is paid through the IPPS under MS–DRG 231–236, including both elective CABG and CABG procedures performed during initial acute myocardial infarction treatment (AMI). Based on an analysis of 2021 Medicare FFS claims data for historical CABG episodes, the annual number of potentially eligible beneficiary discharges for CABG episodes in TEAM would be approximately 30,000. We seek comment on our proposed definition of the CABG episode category and our proposal to include emergent CABG in episodes at § 512.525(d)(3).

(d) Spinal Fusion Category

We propose to include in TEAM the Spinal Fusion episode category for beneficiaries undergoing inpatient and outpatient spinal fusion. The spinal fusion episode category was selected because it was the third-highest cost BPCI Advanced surgical episode performed in the inpatient setting using 2021 data. There were 62,345 episodes with a total cost of $3.2 billion. Based on the high number of episodes and its voluntary selection by participants in BPCI Advanced, we believe there are additional opportunities to improve care for beneficiaries undergoing these procedures.

We propose to define the spinal fusion episode category as any cervical, thoracic, or lumbar spinal fusion procedure paid through the IPPS under MS–DRG 453–455, 459–460, or 471–473, or through the OPPS under HCPCS codes 22551, 22554, 22612, 22630, or 22633. Based on an analysis of 2021 Medicare FFS claims data and an estimated number of additional outpatient episodes, the annual number of potentially eligible TEAM Spinal Fusion episodes would be approximately 94,000. We seek comment on our definition and inclusion of the Spinal Fusion episode category at § 512.525(d)(4).

(e) Major Bowel Procedure Episode Category

We propose to include in TEAM the Major Bowel Procedure episode category for beneficiaries undergoing inpatient major small bowel and large bowel procedures. This episode

[597] *https://www.cms.gov/icd10m/version38-fullcode-cms/fullcode_cms/P0008.html.*

[598] MedPAC March 2021 Report to the Congress. *https://www.medpac.gov/.*

category was selected because it was the fifth-highest volume and fourth-highest cost BPCI Advanced surgical episode performed in the inpatient setting using 2021 data. There were 54,848 episodes with a total cost of $1.95 billion. We believe there are still opportunities to streamline care pathways and improve care transitions for beneficiaries receiving this care.

We proposed to define the Major Bowel Procedure episode category as any small or large bowel procedure paid through the IPPS under MS–DRG 329–331. Based on an analysis of 2021 Medicare FFS claims data for historical Major Bowel Procedure episodes, the annual number of potentially eligible beneficiary discharges for episodes in TEAM would be approximately 64,000. We seek comment on our proposed definition and inclusion of the Major Bowel Procedure episode at § 512.525(d)(5).

The following Table X.A.-04 summarizes the five proposed episodes and corresponding billing codes that would be used to identify episodes.

TABLE X.A.-04: PROPOSED EPISODE CATEGORIES AND BILLING CODES

Episode Category	Billing Codes (MS-DRG/HCPCS)
LEJR	MS-DRG 469, 470, 521, 522 HCPCS 27447, 27130, 27702
SHFFT	MS-DRG 480, 481, 482
CABG	MS-DRG 231, 232, 233, 234, 235, 236
Spinal fusion	MS-DRG 453, 454, 455, 459, 460, 471, 472, 473 HCPCS 22551, 22554, 22612, 22630, 22633
Major bowel procedure	MS-DRG 329, 330, 331

(5) Items and Services Included in Episodes

Like previous episode-based payment models, TEAM would incentivize comprehensive, coordinated, patient-centered care through inclusive episodes. We propose to include in the episode all items and services paid under Medicare Part A and Part B during the performance period, unless such items and services fall under a proposed exclusion described in section X.A.3.b.(5)(a) of the preamble of this proposed rule.

We propose to include all Part A services furnished during the proposed 30-day post-discharge period of the episode, other than certain excluded hospital readmissions, as post-hospital discharge Part A services are typically intended to be comprehensive in nature. In particular, we believe that claims for services with diagnosis codes that are directly related to the proposed episode categories or the quality and safety of care furnished during the episode, based on clinical judgment (for example, surgical wound infection) and taking into consideration coding guidelines, should be included in an episode. Thus, we propose that items and services for episodes would include the following items and services paid under Medicare Part A and Part B, subject to the proposed exclusions in section X.A.3.b.(5)(a) of the preamble of this proposed rule:

- Physicians' services.
- Inpatient hospital services, including services paid through IPPS operating and capital payments.
- Inpatient psychiatric facility (IPF) services.
- Long-Term Care Hospital (LTCH) services.
- Inpatient Rehabilitation Facility (IRF) services.
- Skilled Nursing Facility (SNF) services.
- Home Health Agency (HHA) services.
- Hospital outpatient services.
- Outpatient therapy services.
- Clinical laboratory services.
- Durable medical equipment.
- Part B drugs and biologicals except for those excluded under § 512.525 (f) as proposed.
- Hospice services.
- Part B professional claims dated in the 3 days prior to an anchor hospitalization if a claim for the surgical procedure for the same episode category is not detected as part of the hospitalization because the procedure was performed by the TEAM participant on an outpatient basis but the patient was subsequently admitted as an inpatient.

We seek comment on the items and services we are proposing to include in TEAM in proposed § 512.525(e).

(a) Items and Services Excluded From Episodes

We propose to exclude from episodes certain Part A and B items and services that are clinically unrelated to the anchor hospitalization or anchor procedure. The proposed exclusions would be applicable to episodes included during the baseline period, the three-year historical period used to construct target prices, as described in section X.A.3.d.(3) of the preamble of this proposed rule, and episodes initiated during a performance year. The proposed exclusions are similar to those excluded from BPCI Advanced, as discussed in detail later in this section.[599] We have used similar exclusions in CMS Innovation Center Models, with minor adjustments, since BPCI and intend to continue to apply them to TEAM. These exclusion lists were developed through a collaborative effort between CMS and external stakeholders and have been vetted broadly in the health care community. We propose to use the BPCI Advanced exclusions list in TEAM based on several years of experience with them and their suitability for episodes in TEAM. The rationale for these exclusions described below is consistent with the rationale for exclusions in the CJR model (80 FR 73304) and in BPCI Advanced.

We propose to exclude from episodes all Part A and B items and services, for both the baseline period and performance years, for hospital admissions and readmissions for specific categories of diagnoses, such as oncology, trauma medical admissions, organ transplant, and ventricular shunts determined by MS–DRGs, as well as all of the following excluded Major Diagnostic Categories (MDC):[600]

[599] A complete list of excluded items, services, and readmission MS–DRGs can be found in the ''BPCI Advanced Exclusions List—MY7 (XLS)'' available under Participant Resources at the CMS BPCI Advanced website.

[600] MDCs are formed by dividing all possible principal diagnoses (from ICD–10–CM) into 25 mutually exclusive diagnosis areas. The diagnoses

- MDC 02 (Diseases and Disorders of the Eye).
- MDC 14 (Pregnancy, Childbirth, and Puerperium).
- MDC 15 (Newborns).
- MDC 25 (Human Immunodeficiency Virus).

We propose to exclude from episodes IPPS new technology add-on payments for drugs, technologies, and services identified by value code 77 on IPPS hospital claims for episodes in the baseline period and performance years.[601] New technology add-on payments are made separately and in addition to the MS–DRG payment under the IPPS for specific new drugs, technologies, and services that substantially improve the diagnosis or treatment of Medicare beneficiaries and would be inadequately paid under the MS–DRG system. We believe it would not be appropriate for TEAM to potentially diminish beneficiaries' access to new technologies or to burden hospitals who choose to use these new drugs, technologies, or services with concern about these payments counting toward TEAM participants' actual episode spending. Additionally, new drugs, technologies, or services approved for the add-on payments vary unpredictably over time in their application to specific clinical conditions. Exclusion of new technology add-on payments for drugs, technologies, or services approved for add-on payments from episodes in TEAM is similar to episode exclusions in the CJR model (80 FR 73303 and73304 and 73315).

We also propose to exclude from episodes OPPS transitional pass-through payments for medical devices as identified through OPPS status indicator H for episodes in the baseline period and performance years. Through the established OPPS review process, we have determined that these technologies have a substantial cost but also lead to substantial clinical improvement for Medicare beneficiaries. This proposal also is consistent with the BPCI Advanced and CJR model final exclusions policy (80 FR 73308 and 73315).

We propose to exclude from episodes drugs or biologics that are paid outside of the MS–DRG, specifically hemophilia clotting factors (§ 412.115), identified through HCPCS code, diagnosis code, and revenue center on IPPS claims for episodes in the baseline period and performance years. Hemophilia clotting factors, in contrast to other drugs and biologics that are administered during an inpatient hospitalization and paid through the MS–DRG, are paid separately by Medicare in recognition that clotting factors are costly and essential to appropriate care for certain beneficiaries. Because we do not believe that there are any spending efficiencies to be gained by including hemophilia clotting factors, we propose to exclude these high-cost drugs from episodes initiated during the baseline period and performance year.

We propose to exclude from episodes certain Part B payments for high-cost drugs and biologicals, low-volume drugs,[602] and blood clotting factors for hemophilia patients billed on outpatient, carrier, and durable medical equipment claims for episodes in the baseline period and initiated in the performance years. These high-cost items are essential to appropriate care of certain beneficiaries and we do not believe including them in the episode would improve any spending or quality of care efficiencies. Specifically, this proposed list would include:

- For episodes included during the baseline period:

++ Drug/biological HCPCS codes that are billed in fewer than 31 episodes in total across all episodes in TEAM during the baseline period;

++ Drug/biological HCPCS codes that are billed in at least 31 episodes in the baseline period, and have a mean allowed cost of greater than $25,000 per episode in the baseline period; and

++ HCPCS codes corresponding to clotting factors for hemophilia patients, identified in the quarterly average sales price file[603] for certain Medicare Part B drugs and biologicals as HCPCS codes with clotting factor = 1, HCPCS codes for new hemophilia clotting factors not in the baseline period, and other HCPCS codes identified as hemophilia.

- For episodes initiated during a performance year, in addition to those listed in the previous bullet, Part B payments for high-cost drugs and biologicals, low-volume drugs, and blood clotting factors for hemophilia billed on outpatient, carrier, and durable medical equipment (DME) claims, including, but not limited to:

++ Drug/biological HCPCS codes that were not included in the baseline period, and appear in 10 or fewer episodes in the performance year;

++ Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, have a mean cost of greater than $25,000 per episode in the performance year; and

++ Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, have a mean cost of $25,000 or less per episode in the performance year, and correspond to a drug/biological that appears in the baseline period list but was assigned a new HCPCS code between the baseline period and performance year.

++ HCPCS codes for new hemophilia clotting factors not in the baseline period.

Complete lists of proposed excluded MS–DRGs for readmissions and proposed excluded HCPCS codes for Part B services furnished during TEAM episodes after TEAM beneficiary discharge from an anchor hospitalization would be posted on the CMS TEAM website at *https://innovation.cms.gov/initiatives/TEAM.* The lists would apply to all performance years of the model until and unless the lists are updated. We propose that revisions to the exclusion lists would be initiated through rulemaking to allow for public input. Potential updates to the lists could include additions to or deletions from the list, reflect changes to ICD–10–CM coding and the MS–DRGs under the IPPS, or address any other issues that are brought to our attention throughout the course of the TEAM performance period.

We seek comment on the proposed excluded services, the lists of excluded services, and the process for updating the lists of excluded services for TEAM included in § 512.525(f), § 512.525(g), and § 512.525(h).

(b) Beneficiary Inclusion Criteria

We propose to begin an episode with an anchor hospitalization or anchor procedure because of the challenges related to clinical variability leading up to the episodes and identifying unrelated services, given the multiple chronic conditions experienced by many TEAM beneficiaries. We propose that all services that are included in the IPPS (for example, 3-day payment window payment policies) would be included in the episodes. We further propose that the population of Medicare beneficiaries whose care would be included in TEAM would be those beneficiaries who meet all of the following criteria at the time of admission to the anchor hospitalization or anchor procedure:

in each MDC correspond to a single organ system or etiology and in general are associated with a particular medical specialty.

[601] This exclusion is applied during the payment standardization process.

[602] To determine if a drug HCPCS meets the cost or volume thresholds for exclusion, the episodes are pooled across all episode categories.

[603] *https://www.cms.gov/medicare/payment/all-fee-service-providers/medicare-part-b-drug-average-sales-price/asp-pricing-files.*

- Enrolled in Medicare Part A and Part B.
- Not eligible for Medicare on the basis of end-stage renal disease.
- Not enrolled in any managed care plan (for example, Medicare Advantage, Health Care Prepayment Plans, cost-based health maintenance organizations).
- Not covered under a United Mine Workers of America health plan, which provides health care benefits for retired mine workers.
- Have Medicare as their primary payer.

We seek comment on the proposed beneficiary inclusion criteria included in § 512.535.

(c) Initiating Episodes

We propose that, if the beneficiary meets the beneficiary inclusion criteria, an episode would begin when a beneficiary is admitted for an anchor hospitalization or anchor procedure for one of the following MS–DRGs, or by the presence of one of the following HCPCS codes on an outpatient claim (specifically, a hospital's institutional claim for an included outpatient procedure billed through the OPPS):

LEJR MS–DRGs and HCPCS—

- 469 (Major joint replacement or reattachment of lower extremity with major complications or comorbidities (MCC)).
- 470 (Major joint replacement or reattachment of lower extremity without MCC).
- 521 (Hip replacement with principal diagnosis of hip fracture with MCC).
- 522 (Hip replacement with principal diagnosis of hip fracture without MCC).
- 27447 (Total knee arthroplasty).
- 27130 (Total hip arthroplasty).
- 27702 (Total ankle arthroplasty).

SHFFT MS–DRGs—

- 480 (Hip and femur procedures except major joint with MCC).
- 481 (Hip and femur procedures except major joint with complication or comorbidity (CC)).).
- 482 (Hip and femur procedures except major joint without CC/MCC).

CABG MS–DRGs—

- 231 (Coronary bypass with percutaneous transluminal coronary angioplasty (PTCA) with MCC).
- 232 (Coronary bypass with PTCA without MCC).
- 233 (Coronary bypass with cardiac catheterization with MCC).
- 234 (Coronary bypass with cardiac catheterization without MCC).
- 235 (Coronary bypass without cardiac catheterization with MCC).
- 236 (Coronary bypass without cardiac catheterization without MCC).

Spinal fusion MS–DRGs and HCPCS—

- 453 (Combined anterior/posterior spinal fusion with MCC).
- 454 (Combined anterior/posterior spinal fusion with CC).
- 455 (Combined anterior/posterior spinal fusion without CC/MCC).
- 459 (Spinal fusion except cervical with MCC).
- 460 (Spinal fusion except cervical without MCC).
- 471 (Cervical spinal fusion with MCC).
- 472 (Cervical spinal fusion with CC).
- 473 (Cervical spinal fusion without CC/MCC).
- 22551 (Anterior cervical spinal fusion with decompression below C2).
- 22554 (Anterior cervical spinal fusion without decompression).
- 22612 (Posterior or posterolateral lumbar spinal fusion).
- 22630 (Posterior lumbar interbody lumbar spinal fusion).
- 22633 (Combined posterior or posterolateral lumbar and posterior lumbar interbody spinal fusion).

Major small and large bowel procedure MS–DRGs—

- 329 (Major small and large bowel procedures with MCC).
- 330 (Major small and large bowel procedures with CC).
- 331 (Major small and large bowel procedures without CC/MCC).

We propose that the episode start date will be the day of the anchor procedure for outpatient procedures or the date of admission on the IPPS claim associated with the anchor hospitalization that triggered the episode. However, if an anchor hospitalization is initiated on the same day as or within 3 days of an outpatient procedure for the same episode category, we propose to begin the episode on the date of the outpatient procedure rather than the date of the inpatient admission.

We recognize there could potentially be episodes initiated in TEAM as a result from a TEAM beneficiary being transferred from one hospital to another, where at least one or both hospitals are TEAM participants and where at least one of the hospital admissions are for a MS–DRG that would initiate an anchor hospitalization in TEAM. In the BPCI Advanced model, this is viewed as one continuous hospitalization, whereas in the CJR model and in the proposed TEAM, it is viewed as two separate hospitalizations that may result in an episode initiating depending on the hospital participation in the model and the MS–DRGs involved in the hospital admissions. Specifically, if the initial inpatient admission is at a TEAM participant for a proposed MS–DRG in TEAM, then it would initiate an anchor hospitalization and the resulting transfer to the second hospital would not initiate a new anchor hospitalization, rather it would be included in the episode initiated from the first hospitalization. However, if the initial inpatient admission is for an MS–DRG not proposed in TEAM, then an anchor hospitalization is not initiated and the resulting transfer to the second hospital could initiate an episode depending on the second hospitals participation status and the MS–DRG for the inpatient admission.

We considered mimicking the BPCI Advanced model and proposing a transfer policy where a TEAM beneficiary that is transferred from one hospital to another would be considered one continuous hospitalization. Specifically, we considered defining an acute-to-acute hospital transfer as consecutive inpatient stays for a TEAM beneficiary where the admission date of the latter inpatient hospital stay is the same as the discharge date of the initial hospital inpatient stay for different acute care hospitals. This would mean that acute-to-acute hospital transfers are treated as one continuous hospitalization and would be assigned the admission date and the hospital from the first leg of the transfer and the MS–DRG and discharge date from the last leg of the transfer. For example, hospital A is a TEAM participant and hospital B is not a TEAM participant. A beneficiary is admitted to hospital A on January 1st for an MS–DRG 637 (diabetes) not in TEAM and discharged on January 5th with a transfer to hospital B on the same day. The beneficiary is admitted to hospital B for MS–DRG 470 (LEJR) and is discharged on January 10th. In this example, the episode is attributed to hospital A and is considered a LEJR episode with an anchor hospitalization start date of January 1st and an anchor hospitalization end date of January 10th. All of the spending between both hospitalizations would be captured in the episode. If the example would be reversed, and hospital A was not a TEAM participant and hospital B was a TEAM participant, then neither hospital would be attributed the episode since hospital A is not a participant and the transfer policy prevents the episode from being attributed to hospital B. We recognize this policy helps to keep the initial hospital accountable and may mitigate perverse incentives to transfer a beneficiary, however, it does increase complexity when determining when an episode is initiated, and which hospital

is accountable for the episode. We also note that the BPCI Advanced model included additional requirements in their transfer policy, where if one of the hospitals was a critical access hospital or a PPS-exempt cancer hospital or if one of the inpatient admissions was for a MS–DRG on the exclusions list, the episode was cancelled. We seek comment on whether we should consider a transfer policy similar to BPCI Advanced for TEAM.

We seek comment on our proposal for initiating TEAM episodes based on MS–DRG or HCPCS included in § 512.510.

(d) Episode Length

The proposed episodes would cover time periods marked by significant PAC needs, potential complications of surgery, and short-term, intense management of chronic conditions that may be destabilized by the surgery. We believe that hospitals have substantial ability to influence the quality and efficiency of care that TEAM beneficiaries receive over the weeks and months following a procedure. For this reason, both CJR and BPCI Advanced utilize a 90-day post-discharge episode duration.

An episode duration longer than 30 days poses a greater risk for the hospital because of variability due to medical events outside the intended scope of the model. Our analysis of BPCI Advanced episodes found that the need for care for chronic conditions and other non-anchor MS–DRG-related conditions becomes much more prevalent in days 31 to 90 following hospital discharge. Longer episodes increase the potential for ACO overlap (where a beneficiary aligned or assigned to an ACO has an episode included in TEAM), are associated with a greater number of episode-level exclusions in the post-discharge period and are more likely to include potential readmissions for an unrelated condition. Shorter episode lengths are used in other models that employ total cost-of-care approaches. In the Medicare Spending Per Beneficiary (MSPB) measure of the Hospital Value-Based Program (HVBP), episodes include Part A and Part B payments for services furnished three days prior to a patient's inpatient stay and extend for 30 days after discharge.

We believe reducing episode duration to 30 days could both sustain the spending reductions demonstrated in BPCI Advanced and CJR and mitigate some of the current challenges experienced between ACOs, hospitals, and other providers. A 30-day episode would position the specialist as the principal provider near the anchor event with a hand off back to the primary care provider for longitudinal care management and we believe that ACOs are better equipped to address the population health needs of Medicare beneficiaries.

Additionally, the majority of episode spending occurs in the first 30 days following discharge or the anchor procedure. Based on an internal analysis of BPCI Advanced episodes between 2020 and 2022, seventy-five percent of episode spending occurred in the first 30 days of the episode and 90 percent occurred in the first 60 days. We expect TEAM would continue to provide hospitals with opportunities to improve care and incentivize coordinated, quality care among acute care hospitals, HOPDs, physicians, and PAC providers throughout care transitions, given that the majority of episode spending during 90-day episodes occurred in the first 30 days.

Based on the rationale noted earlier, we propose that episodes end 30 days after discharge from the anchor hospitalization or anchor procedure and that day 1 of the 30-day post-acute portion of the episode is the date of the anchor procedure or the date of discharge from an anchor hospitalization. To the extent that a Medicare payment for services included in an episode spans a period of care that extends beyond the episode duration, we propose that these payments would be prorated so that only the portion attributable to care during the fixed duration of the episode is attributed to the episode spending. The proposal for a 30-day post-discharge episode length is included in § 512.537(a)(1). We seek comment on our proposal to implement a 30-day post-discharge episode length. We also seek comment on alternative episode durations, such as a 60-day or 90-day post-discharge episode length.

(e) Cancelling Episodes

Similar to the CJR model, we propose that once an episode begins, the episode continues until the end of the episode as described in the following section, unless the episode is cancelled because the beneficiary ceases to meet any of the general beneficiary inclusion criteria described in section X.A.3.b.(5)(b) of the preamble of this proposed rule.

We believe it would be appropriate to cancel the episode when a beneficiary's status changes during the episode such that they no longer meet the criteria for inclusion because the episode target price reflects full payment for the episode, yet we would not have full Medicare episode payment data for the beneficiary to reconcile against the target price.

In the case that a beneficiary has a subsequent admission for an episode on the same day as or within 3 days of an outpatient procedure from the same episode category, the outpatient episode would be not initiate an anchor procedure and the outpatient procedure would instead initiate an anchor hospitalization. That is, the anchor hospitalization start date will be that of the outpatient procedure. We propose this policy in order because we believe that an inpatient episode should take precedence over an outpatient procedure performed on the same day, given the likelihood of higher spend associated with the inpatient episode and potential for higher clinical acuity.

We propose to cancel the episode if a beneficiary dies during the anchor hospitalization or anchor procedure, rather than at any point during the post-discharge period of the episode, as is done in BPCI Advanced. As discussed in the CJR Final Rule, we believe there would be limited incentive for efficiency that could be expected when death occurs during the anchor hospitalization itself (80 FR 73318).

As discussed in the EPM proposed rule (81 FR 50841), we consider mortality to be a harmful beneficiary outcome that should be targeted for improvement through care redesign for these clinical conditions. We do not believe that it would be appropriate to exclude beneficiaries from episodes who die any time during the episode. Instead, we propose to maintain beneficiary episodes in TEAM unless death occurs during the anchor hospitalization or anchor procedure. We would calculate actual episode spending when beneficiaries die following discharge from the anchor hospitalization or anchor procedure, but within the 30-day post-hospital discharge episode duration and reconcile it against the target price. We believe this proposal would encourage TEAM participants to actively manage beneficiaries to reduce their risk of death, especially as death would often be preceded by expensive care for emergencies and complications. Therefore, we propose to cancel episodes for death only during the anchor hospitalization or anchor procedure.

Finally, we propose that episodes subject to extreme and uncontrollable circumstances (EUC) would be canceled, meaning that the services associated with the episode would continue to be paid through Medicare FFS but the episode would not be reconciled against a target price. We propose to base the TEAM EUC definition on the definition finalized in

the CJR 2018 Final Rule (83 FR 26604), which was designed to address the extreme and uncontrollable costs associated with natural disasters such as hurricanes, flooding, and wildfires. Specifically, we propose that the EUC policy would apply to TEAM participants located in a county where both: (1) a major disaster has been declared under the Stafford Act; and (2) section 1135 waivers have been issued. We believe that it is appropriate for our EUC policy to apply only in the narrow circumstance of a major disaster, which is catastrophic in nature and tends to have significant impacts on infrastructure, rather than the broader grounds for which an emergency could be declared. In regard to determining the start date of episodes to which the EUC would apply, we stated our belief that a episodes initiated during an emergency period or in the 30 days before the start date of an emergency period (as defined in section 1135(g) of the Act) should reasonably capture those beneficiaries whose high episode costs could be attributed to extreme and uncontrollable circumstances.

In summary, we propose that the following circumstances would cancel an episode:

- The beneficiary no longer meets the criteria for inclusion.
- The beneficiary dies during the anchor hospitalization or anchor procedure.
- The participating hospital is subject to the EUC policy.

When an episode is canceled, we propose that the services furnished to beneficiaries prior to and following the episode cancellation would continue to be paid by Medicare as usual but there would be no episode spending calculation that would be reconciled against the TEAM target price (see section X.A.3.d.(5)(f) of the preamble of this proposed rule). As discussed in section X.A.3.h. of the preamble of this proposed rule, waivers of program rules applicable to beneficiaries in episodes would apply to the care of beneficiaries who are in episodes at the time the waiver is used to bill for a service that is furnished, even if the episode is later canceled.

We seek comment on our proposals to cancel episodes once they have begun but prior to the end of the 30-day post-discharge period included in § 512.537(b).

c. Quality Measures and Reporting

(1) Background

As discussed in the CJR model final rule (80 FR 73358), Medicare payment policy has moved away from FFS payments unlinked to quality of care. Through the Medicare Modernization Act and the Affordable Care Act, we have implemented specific IPPS programs like the Hospital Inpatient Quality Reporting (IQR) Program (section 1886(b)(3)(B)(viii) of the Act), the Hospital Value-Based Purchasing (VBP) Program (subsection (o) of section 1886), the Hospital-Acquired Condition (HAC) Reduction Program (subsection (q) of section 1886), and the Hospital Readmissions Reduction Program (subsection (p) of section 1886), where payment reflects the quality of care delivered to Medicare beneficiaries. The CJR model similarly incorporates pay-for-performance, offering TEAM participants the potential for financial reward based on quality performance or, in some cases, quality improvement. Through the use of quality measures, CMS is also able to pursue objectives beyond resource alignment, such as the development of new quality measures and performance indicators.[604] Additionally, CMS may incorporate new quality measures, re-evaluate or improve existing quality measures, or adjust a quality measure set to take effect at the start of each Model Year, or at other times specified by CMS.

We believe that episode payment models such as the proposed TEAM should include pay-for performance methodologies that incentivize improvements in patient outcomes while simultaneously lowering health care spending. We also believe that improved quality of care, specifically achieved through coordination and communication among providers, patients, and their caregivers, can favorably influence patient outcomes. We are proposing that TEAM would incorporate quality measures that focus on care coordination, patient safety, and patient reported outcomes (PROs) which we believe represents areas of quality that are particularly important to patients undergoing acute procedures. Finally, wherever possible, we would align TEAM quality measures with those used in ongoing models and programs to minimize participant burden. Our goal is to focus on improving beneficiary quality of care and capture meaningful quality data for use in the TEAM pay-for-performance methodologies.

We are starting with a parsimonious set of quality measures that are being tied to payment and plan to incorporate more PRO–PMs in the future of the model. We recognize that there are some gaps in the proposed measures with respect to post-acute care settings and limited measures for episode-specific PROs. We considered including generic PRO data to support the collection and reporting of PROs, similar to the CJR model requiring voluntary submission of the Veterans RAND 12 Item Health Survey (VR–12) or Patient-Reported Outcomes Measurement Information System (PROMIS) Global-10 generic PRO survey. However, we recognize PRO collection and reporting may increase participant and patient burden and we do not want to impose this on TEAM participants for generic PRO data since it may be less clinically meaningful to the episodes that would be tested in TEAM. We will continue to assess the evolving inventory of measures and refine measures based on public comments, changes to payment methodologies, recommendations from TEAM participants and their collaborators, and new CMS episode measure development activities.

We are proposing that the proposed TEAM's quality measures would be scored according to the methodology described in section X.A.3.d.(5)(e) of the preamble of this proposed rule to calculate the CQS. The CQS would be combined with the TEAM participants' reconciliation amount, as specified in section X.A.3.d.(5)(g) of the preamble of this proposed rule, during the reconciliation process to tie quality performance to payment.

While we believe the proposed measure set would provide CMS with sufficient measures to monitor quality, and to calculate scoring on quality performance, we may adjust the measure set in future performance years by adding new measures or removing measures, if we determine those adjustments to be appropriate at the time. We note that a selection of these measures may be used for evaluation purposes as well. Prior to adding or removing measures for monitoring quality and calculating scores for quality performance, we would use notice and comment rulemaking.

(2) Selection of Proposed Quality Measures

As proposed, TEAM is designed to provide financial incentives for improving coordination of care for beneficiaries. We expect care redesign activities to reduce post-surgical complications and hospital readmissions and enhance patient experience and outcome. Furthermore, we acknowledge that achieving savings while continuing to ensure high-quality

[604] Damberg CL et al., Research Report: Measuring Success in Health Care Value-Based Purchasing Programs, Summary and Recommendations. RAND (2014). Available from *http://www.rand.org/content/dam/rand/pubs/research_reports/RR300/RR306z1/RAND_RR306z1.pdf.*

care for Medicare FFS beneficiaries will require close collaboration among hospitals, physicians, PAC providers, and other providers. In order to encourage greater care collaboration among the providers of TEAM beneficiaries, we propose three measures as described in section X.A.3.c.(3) of the preamble of this proposed rule. These measures would be used to determine hospital quality of care and eligibility for a TEAM reconciliation payment.

The measures we are proposing are—

- For all TEAM episodes: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356);
- For all TEAM episodes: CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135); and
- For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618).

Beginning in Performance Year 1 and continuing for the duration of the model, we propose to adjust reconciliation amounts by the TEAM participants' CQS based on their performance of quality measures previously listed.

We are initially proposing these three quality measures due to their: (1) Alignment with the goals of TEAM; (2) hospitals' familiarity with the measures due to their use in other CMS hospital quality programs, including the Hospital IQR and HAC Reduction Programs; and (3) alignment to CMS priorities, including the CMS National Quality Strategy which has goals that support safety, outcomes, and engagement. We believe the three quality measures we propose to link to payment reflect these goals and accurately measure hospitals' level of achievement on such goals.

We note that shared-decision making (SDM) is an important aspect of care around elective procedures, including elective procedures captured in episodes such as the LEJR episode and Spinal Fusion episode. Use of SDM prior to episode initiation can serve as an important tool to ensure appropriate care. SDM allows the clinician and patient to have informed discussion about treatment options, balancing the risks and expected outcomes with a patient's preferences and values, and can help contribute to ensuring appropriate use of procedures and minimization of low value care. CMS has taken steps to incorporate SDM in care pathways, such as requiring SDM interaction prior to ICD implantation for certain patients for national coverage determinations.[605] However, implementing SDM in episode-based payment models such as TEAM poses challenges with respect to the timing of the patient/provider interaction and when an episode is initiated. While there are upstream opportunities for SDM in the case of elective surgical episodes, unplanned or non-elective episodes may be less conducive to SDM. Although we are not proposing a measure initially, we are seeking feedback on the opportunity for TEAM to capture quality data related to SDM between patients and providers, and avoidance of low value care and procedures. We invite public comment on whether such a measure concept or any existing measures would be appropriate for TEAM.

Lastly, we also recognize that there are certain measures on the 2023 Measures Under Consideration (MUC) List[606] [607] that may be more clinically meaningful and specific to the episodes in TEAM. These measures are as follows:

- Hospital Harm—Falls with Injury (MUC2023–048).
- Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (MUC2023–049).
- Hospital Harm—Postoperative Respiratory Failure (MUC2023–050).

These three outcome measures focus on improving quality and health outcomes across a beneficiary's care journey and allow for hospitals to better align and coordinate care across various programs and care settings. TEAM is seeking further comment on these three MUC measures, and potentially replacing the CMS PSI 90 measure beginning in 2027, TEAM's second performance year. This timeline will allow TEAM participants to have one year to gain experience with reporting the measures in the Hospital IQR program before their performance is tied to payment beginning in TEAM's second performance year. Further details on these MUC measures can be found in section X.A.3.c.(3)(d) of the preamble of this proposed rule.

(3) Proposed Quality Measures

(a) Hybrid Hospital-Wide All-Cause Readmission Measure With Claims and Electronic Health Record Data (CMIT ID #356)

Hospital readmission, for any reason, is disruptive to patients and caregivers, costly to the healthcare system, and puts patients at additional risk of hospital-acquired infections and complications. Readmissions are also a major source of patient and family stress and may contribute substantially to loss of functional ability, particularly in older patients. Some readmissions are unavoidable and result from inevitable progression of disease or worsening of chronic conditions. However, readmissions may also result from poor quality of care or inadequate transitional care. Transitional care includes effective discharge planning, transfer of information at the time of discharge, patient assessment and education, and coordination of care and monitoring in the post-discharge period. Numerous studies have found an association between quality of inpatient or transitional care and early (typically 30-day) readmission rates for a wide range of conditions.[608] In 2013, CMS contracted with Yale New Haven Services Corporation, Center for Outcomes Research and Evaluation (CORE) to demonstrate whether clinical data derived from electronic health records (EHRs) could be used to reengineer and enhance the Hospital-Wide All-Cause Unplanned Readmission (HWR) measure.[609] Under the contract with CMS, Yale CORE identified a set of core clinical data elements (CCDE) that are feasibly extracted from hospital EHRs and are related to patients' clinical status at the start of an inpatient encounter.

We propose including the Hybrid Hospital-Wide Readmission (HWR) Measure with Claims and Electronic Health Record Data (CMIT ID #356) measure in TEAM, for all episode categories. Previously, within the CJR rule, CMS proposed using the Hospital-Level 30-day, All-Cause Risk-Standardized Readmission Rate (RSRR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (NQF #1551) measure because we believed that this measure aligned with CMS priorities to improve the rate of LEJR complications and readmissions, while improving the

[608] Frankl SE, Breeling JL, Goldman L. Preventability of emergent hospital readmission. American Journal of Medicine. Jun 1991;90(6):667–674.

[609] *https://qualitynet.cms.gov/inpatient/measures/hybrid/methodology.*

overall patient experience. As a result of stakeholder feedback voicing concerns over the requirements already set in place by the Hospital Readmissions Reduction Program for this measure, the Hospital-level 30-day, all-cause RSRR following elective primary THA and/or TKA (NQF #1551) was not included in the CJR Model. Our rationale for including the Hybrid HWR measure within TEAM is because the increased use of EHRs by hospitals creates an opportunity to incorporate clinical data into outcome measures without the laborious process of extracting them from paper medical records. Although claims-based risk adjustment has been shown to be comparable to risk adjustment using clinical data when observing hospital-level performance, clinical providers continue to express preference for using patient-level clinical data.[610] [611] Additionally, we believe this version of HWR provides an opportunity to align the measure with clinical decision support systems that many providers utilize to alert care teams about patients at increased risk of poor outcomes, such as readmission, in real time during the inpatient stay. Further, utilizing the same variables to calculate hospital performance that are used to support clinical decision, we believe, would be clinically sensible and cost effective, as it may reduce the burden of EHR data mapping and extraction required for quality reporting.

In addition, clinical data captured in electronic health records are recorded by clinicians who are interacting with the patient and who value the accuracy of the data to guide the care they provide. Therefore, many clinical data elements that are captured in real-time to support patient care are less susceptible to gaming, coding drift, and variations in billing practices compared with administrative data used for billing purposes. These reporting processes allow for more stable measurements over time. Finally, the measures that are included within HRRP do not capture some of the episodes that we are proposing for TEAM. The Hybrid HWR measure is one of the only existing readmission measures that captures readmission data for patients following procedures such as spine surgery. By using the Hybrid HWR measure, we are inclusive of the specified episodes and encourage broader efforts to reduce unnecessary returns to the hospital at participating hospitals within TEAM.

For TEAM, we propose to use the measure specifications detailed here: *https://ecqi.healthit.gov/sites/default/files/ecqm/measures/CMS529v4.html* and *https://qualitynet.cms.gov/inpatient/measures/hybrid/methodology.* If we were to remove the measure, we would use notice and comment rulemaking. This measure would be a pay-for-performance measure beginning in Performance Year 1 and scored in accordance with our proposed methodology in section X.A.3.d.(5)(e) of the preamble of this proposed rule.

We seek public comment on our proposal to include the Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data measure in TEAM at § 512.547(a)(1).

(b) CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135)

The Agency for Healthcare Research and Quality (AHRQ) developed patient safety indicators for health providers to identify potential in hospital patient safety problems for targeted institution-level quality improvement efforts. These Patient Safety Indicators (PSIs) are comprised of 26 measures (including 18 provider-level indicators) that highlight safety-related adverse events occurring in hospitals following operations, procedures, and childbirth. AHRQ developed the PSIs after a comprehensive literature review, analysis of available ICD codes, review by clinical panels, implementation of risk adjustment, and empirical analyses. The CMS Patient Safety and Adverse Events Composite (CMS PSI 90) is used in the HAC Reduction Program to support CMS public reporting and pay-for-performance. The CMS PSI 90 measure is calibrated using the Medicare fee-for-service population and based on the AHRQ Patient Safety Indicators. The CMS PSI 90 measure summarizes patient safety across multiple indicators, monitors performance over time, and facilitates comparative reporting and quality improvement at the hospital level. The CMS PSI 90 composite measure intends to reflect the safety climate of a hospital by providing a marker of patient safety during the delivery of care. However, we are aware of the common stakeholder concerns surrounding the CMS PSI 90 measure, including the following: [612]

- PSI 90 may be associated with adverse prioritization for preventing some conditions over others. Not all conditions are equal with respect to prevention guidelines.

++ Sepsis prevention may include use of prophylactic antibiotics.

++ Fall prevention requires assessment of fall risk and appropriately applied remediation methods.

- Pressure injury prevention consists of a time-consuming, complex series of unrelated tasks for nurses, consisting of daily skin checks and risk assessments, repositioning every 3 to 4 hours, and managing moisture and incontinence among other tasks.
- Simple clinical decision points can expose patients to many risks reflected in PSI 90; however, PSI 90 weighting system may influence risk because HACs are weighted in PSI 90 based on volume and harm.
- The PSI 90 composite score could create incentives to prioritize low hanging fruit (for example, procedures and treatments that are directly remunerated) over pressure injury prevention.

We propose including the CMS PSI 90 measure in TEAM, for all episode categories, because it includes a broad array of safety events, many of which are relevant to patients in the episodes, are familiar to hospitals and have no additional burden. CMS would use the CMS PSI 90 software to produce the CMS PSI 90 results. Since CMS is currently using the CMS PSI 90 measure in certain quality programs, including the Hospital-Acquired Condition Reduction Program, we do not anticipate additional administrative burden for TEAM participants.

For TEAM, we propose to use the measure specifications detailed here: *https://qualitynet.cms.gov/inpatient/measures/psi/resources.* If we were to remove the measure, we would use notice and comment rulemaking. This measure would be a pay-for-performance measure beginning in performance year 1 and scored in accordance with our proposed methodology in section X.A.3.d.(5)(e) of the preamble of this proposed rule.

We seek public comment on our proposal to include the CMS PSI 90 measure in TEAM at proposed § 512.547(a)(2) and are also seeking comment on other hospital level safety measures appropriate for these episodes

that are not already tied to payment in CMS programs. We also invite public comment on the ones that were on the 2023 MUC list and the possible approach to transition from CMS PSI 90 to the three measures beginning in TEAM's second performance year.

(c) Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618)

As part of the CMS Innovation Center's Strategy Refresh, TEAM is working to align with the Center's Patient-Reported Outcome Measure Strategy. This strategy supports the CMS Innovation Center's Advancing Quality Initiative, which aims to support a more person-centered quality strategy in accountable care and specialty care models and demonstrations. The Patient-Reported Outcome Measure Strategy aims to increase the use of patient-reported measures in CMS Innovation Center models and demonstrations. PROs are reported by the patient and capture a person's perception of their own health through surveys and questionnaires. Broadly, patient-reported data includes PROs and ePROs, which is the electronic capture of this data; patient-reported outcome measures (PROMs), which reflect how the PRO data is reported (for example, a survey instrument); and patient-reported outcome-based performance measures (PRO–PMs), which are reliable and valid quality measures of aggregated PRO data reported through a PROM and potentially used for performance assessment.

The CJR model includes voluntary reporting of PRO data. In order to meet the requirements for successful submission of PRO data, hospitals must submit the Veterans RAND 12 Item Health Survey (VR–12) or Patient-Reported Outcomes Measurement Information System (PROMIS) Global-10 generic PRO survey; and the (HOOS Jr.)/(KOOS Jr). or HOOS/KOOS subscales PRO survey for patients undergoing eligible elective primary THA/TKA procedures. The Center for Clinical Standards and Quality (CCSQ) was able to use the CJR THA/TKA PRO data collection to develop the THA/TKA PRO–PM as a part of the Hospital IQR Program, included in the FY 2023 IPPS/LTCH PPS Final rule (87 FR 48780).

Elective THA/TKAs are most commonly performed for degenerative joint disease, or osteoarthritis, which is the most common joint disorder in the US, affecting more than 32.5 million, or 1 in every 7, US adults.[613] [614] This condition is one of the leading causes of disability among non-institutionalized adults; roughly 80% of patients with osteoarthritis have some limitation in mobility.[615] [616] Osteoarthritis also significantly burdens the health care system—in 2017, it was the second most expensive treated condition across all payers in US hospitals, and in 2018, it accounted for approximately 1,128,000 hospitalizations.[617] [618] [619] THAs and TKAs offer significant improvement in quality of life by decreasing pain and improving function in a majority of patients, without conferring a high risk of complications or death.[620] [621] Over 1 million hip and knee replacements are performed annually in the US, 60% of which are paid for by Medicare. This number is expected to double by 2030 with an estimated annual cost of $50 billion to Medicare.[622]

In order to encourage greater use of patient-reported outcome data, we are proposing to require submission of THA/TKA PRO–PM. However, we recognize that this PRO–PM is only applicable to the LEJR episode category and seek comment on other PROs or PROMs that would be applicable to other episode categories tested and could be incorporated in future performance years of TEAM. Please note, that the addition of the use of generic PROs may be applicable across numerous episodes versus PROs that are more episode specific to given procedures. Also, we recognize that hospitals will be newly adapting to the Hospital IQR Program requirement for the THA/TKA PRO–PM but that infrastructure and process development should make the incorporation of future PRO–PMs less burdensome.

For TEAM, we propose to use the measure specifications detailed here: *https://qualitynet.cms.gov/files/631b6163642a6000163edbf0?filename=THA_TKA-PRO-PM_MeasMthdlgy.pdf.* If we were to remove the measure, we would use notice and comment rulemaking. This measure would be a pay-for-performance measure beginning in performance year 1 and scored in accordance with our proposed methodology in section X.A.3.d.(5)(e) Of the preamble of this proposed rule.

We seek public comment on our proposal to include the Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary THA/TKA measure in TEAM at § 512.547(a)(3).

(d) Measures Under Consideration for Future Rulemaking

We recognize there are other measures that may be more clinically relevant to the proposed TEAM clinical episode categories but are not yet being used in the Hospital IQR Program. Therefore, we are seeking comment on requiring submission of the Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (MUC2023–049) measure for use in all of our episode categories. This measure assesses the percentage of surgical inpatients who experienced a complication and then died within 30-days from the date of their first ''operating room'' procedure. Failure-to-rescue (FTR) is defined as the probability of death given a postoperative complication.

We believe inclusion of the potential FTR measure in TEAM would allow hospitals to identify opportunities to improve their quality of care. Hospitals and health care providers benefit from knowing not only their institution´s mortality rate, but also their institution´s ability to rescue patients after an adverse occurrence. Using a failure-to-rescue measure is especially important if hospital resources needed for preventing complications are different from those needed for rescue. From a research and policy perspective,

knowing the failure-to-rescue rate in addition to the mortality rate would improve our understanding of mortality statistics. Since the death rate appears to be composed of two distinct rates, quality of care measurement may be improved if both mortality and FTR rates are reported instead of relying on the adjusted mortality rate alone. Failure to rescue measures have been repeatedly validated by their consistent association with nurse staffing, nursing skill mix, technological resources, rapid response systems, and other activities that improve early identification and prompt intervention when complications arise after surgery.

We are also seeking comment on requiring submission of two hospital harm measures for potential use in TEAM; the Hospital Harm—Falls with Injury (MUC2023–048) and the Hospital Harm—Postoperative Respiratory Failure (MUC2023–050).

We believe including the Hospital Harm—Falls with Injury (MUC2023–048) would address the importance of patient safety in the acute care setting. We recognize that inpatient falls are among the most common incidents reported in hospitals and can increase length of stay and patient costs. Due to the potential for serious harm associated with patient falls, ''patient death or serious injury associated with a fall while being cared for in a health care setting'' is considered a Serious Reportable Event by the National Quality Forum (NQF).

Falls (including unplanned or unintended descents to the floor) can result in patient injury ranging from minor abrasion or bruising to death as a result of injuries sustained from a fall. While major injuries (for example, fractures, closed head injuries, internal bleeding) (Mintz, 2022) have the biggest impact on patient outcomes, 2008–2021 data findings from the 2022 Network of Patient Safety Databases (NPSD) demonstrated that 41.8% of falls resulted in moderate injuries such as skin tear, avulsion, hematoma, significant bruising, dislocations and lacerations requiring suturing. Moderate injury is, as defined by NDNQI, that resulted in suturing, application of steric-strips or skin glue, splinting, or muscle/joint strain (Press Ganey, 2020). NPSD findings also demonstrated that mild to moderate level of harm represent 24.2%, 0.4%—severe harm, and 0.1%—death (levels of harm definitions developed by WHO, 2009).

By focusing on falls with major and moderate injuries, the goal of this hospital harm eCQM is to raise awareness of fall rates and, ultimately, to improve patient safety by preventing falls with injury in all hospital patients. The purpose of measuring the rate of falls with major and moderate injury events is to improve hospitals' practices for monitoring patients at high risk for falls with injury and, in so doing, to reduce the frequency of patient falls with injury.[623] [624] [625] [626]

Additionally, we are considering including the Hospital Harm—Postoperative Respiratory Failure (MUC2023–050). This eCQM assesses the proportion of elective inpatient hospitalizations for patients aged 18 years and older without an obstetrical condition who have a procedure resulting in postoperative respiratory failure (PRF). PRF is defined as unplanned endotracheal reintubation, prolonged inability to wean from mechanical ventilation, or inadequate oxygenation and/or ventilation, and is the most common serious postoperative pulmonary complication, with an incidence of up to 7.5% (the incidence of any postoperative pulmonary complication ranges from 10–40%).[627] This measure addresses the prevalence of PRF and the incidence variance between hospitals. PRF is a serious complication that can increase the risk of morbidity and mortality, with in-hospital mortality resulting from PRF estimated at 25% to 40%.[628] Surgical procedures complicated by PRF have 3.74 times higher adjusted odds of death than those not complicated by respiratory failure, 1.47 times higher odds of 90-day readmission, and 1.86 times higher odds of an outpatient visit with one of 44 postoperative conditions (for example, bacterial infection, fluid and electrolyte disorder, abdominal hernia) within 90 days of hospital discharge.[629] PRF is additionally associated with prolonged mechanical ventilation and the need for rehabilitation or skilled nursing facility placement upon discharge.[630]

The incidence of PRF varies by hospital, with higher reported rates of PRF in nonteaching hospitals than teaching hospitals (Rahman, et al., 2013). Additionally, one study found that the odds of developing PRF increased by 6% for each level increase in hospital size from small to large.[631] This finding suggests that there remains room for improvement in hospitals reporting higher rates of PRF.

The most widely used current measures of PRF are based on either claims data (CMS Patient Safety Indicator PSI 11) or proprietary registry data (National Surgical Quality Improvement Program (NSQIP) of the American College of Surgeons). The proposed eCQM is closely modeled after the NSQIP measure of PRF, which has been widely adopted across American hospitals, and is intended to complement and eventually supplant CMS PSI 11. As mentioned of section X.A.3.c.(3)(b) of the preamble of this proposed rule, these three MUC measures would potentially take the place of the CMS PSI 90 measure beginning in TEAM's second performance year. These three MUC measures will be available for optional reporting in the Hospital IQR Program beginning in 2026.

(4) Form, Manner, and Timing of Quality Measures Reporting

We believe it is important to be transparent and to outline the form, manner, and timing of quality measure data submission so that accurate measure results are provided to hospitals, and that timely and accurate calculation of measure results are consistently produced to determine reconciliation payment amounts and repayment amounts. We propose that data submission for the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health

[628] Arozullah AM, Daley J, Henderson WG, Khuri SF. (2000). Multifactorial risk index for predicting postoperative respiratory failure in men after major noncardiac surgery. The National Veterans Administration Surgical Quality Improvement Program. Annals of surgery. 232(2):242–253.

[629] Miller MR, Elixhauser A, Zhan C, Meyer GS. (2001). Patient Safety Indicators: using administrative data to identify potential patient safety concerns. Health services research. 36(6 Pt 2):110–132.

[630] Thompson SL, Lisco SJ. Postoperative Respiratory Failure. Int Anesthesiol Clin. 2018;56(1):147–164.

[631] Rahman M, Neal D, Fargen KM, Hoh BL. Establishing standard performance measures for adult brain tumor patients: a Nationwide Inpatient Sample database study. Neuro Oncol. 2013;15(11):1580–1588.

Record Data (CMIT ID #356), CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135), Hospital-Level, and Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (THA/TKA) (CMIT ID #1618) be accomplished through existing Hospital IQR Program processes. Since these measures are or will soon be reported to the Hospital IQR and HAC Reduction Programs, hospitals would not need to submit additional data for TEAM.

For the Measures Under Consideration (MUC) measures, Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) (MUC2023–049), Hospital Harm—Postoperative Respiratory Failure (MUC2023–050) and Hospital Harm—Falls with Injury (MUC2023–048) measures, we would propose that data submission for these measures align with the Hospital IQR Program if they are finalized for that program as proposed. Similar to the proposed required measures noted previously, hospitals would not need to submit any additional data on these proposed measures if they are finalized and implemented for the Hospital IQR Program. We invite public comment on the proposal to collect quality measure data through the existing mechanisms of the Hospital IQR and HAC Reduction Program.

(5) Display of Quality Measures and Availability of Information for Public

We believe that the display of measure results is an important way to educate the public on hospital performance and increase the transparency of the model. We propose to display quality measure results on the publicly available CMS website in a form and manner consistent with other publicly reported measures. CMS would share each TEAM participants' quality metrics with the hospital prior to display on the CMS website. The timeframe for when TEAM participants would receive data on our proposed measures align with the Care Compare schedule that can be found here: *https://data.cms.gov/provider-data/topics/hospitals/measures-and-current-data-collection-periods.* The Hybrid HWR and CMS PSI 90 measure results are posted annually in July. The THA/TKA PRO–PM is still in the voluntary reporting stage and the public reporting schedule for this measure will be reported on an annual basis. All measures under the statutory hospital quality programs have a 30-day preview period prior to results being posted on the Care Compare web page. TEAM participant measure scores will be delivered to TEAM participants confidentially. We propose to publicly report PY1 measure scores in 2027 and we would continue to publicly report scores every performance year with a one-year lag. TEAM has proposed 2027 as the first performance year for when scores will be publicly available due to the amount of lag time it takes for a few of our measures to fully process. For example, the Hybrid HWR measure which uses claims data and core clinical data elements from the EHR has about a year between from when the data is submitted and when that data is publicly posted. The applicable time periods for the measures during TEAM are summarized in the Table X.A.–05:

TABLE X.A.-05– SUMMARY OF PROPOSED QUALITY MEASURE PERFORMANCE PERIODS BY YEAR OF TEAM

Measure Title	TEAM Performance Year				
	1st	2nd	3rd	4th	5th
Hybrid Hospital-Wide Readmission Measure *	July 1, 2024 – June 30, 2025	July 1, 2025 – June 30, 2026	July 1, 2026 – June 30, 2027	July 1, 2027 – June 30, 2028	July 1, 2028 – June 30, 2029
CMS PSI 90 **	July 1, 2023 – June 30, 2025	July 1, 2024 – June 30, 2026	July 1, 2025 – June 30 - 2027	July 1, 2026 – June 30, 2028	July 1, 2027 – June 30, 2029
THA/TKA PRO-PM ***	July 1, 2024 – June 30, 2025	July 1, 2025 – June 30, 2026	July 1, 2026 – June 30, 2027	July 1, 2027 – June 30, 2028	July 1, 2028 – June 30, 2029

* Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356).
** CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135).
*** Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (THA/TKA) (CMIT ID #1618).

The proposed time periods for the Hybrid Hospital-Wide Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356), CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135) and Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (THA/TKA) (CMIT ID #1618) are consistent with the Hospital IQR Program performance periods for the Hybrid HWR measure and THA/TKA PRO–PM and consistent with the HAC Reduction Program performance period for the CMS PSI 90 measure. We believe the public is familiar with the proposed measures, which have mostly been publicly reported in past releases of Care Compare as part of the Hospital IQR and HAC Reduction Programs. We are aware that the Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (THA/TKA) PRO–PM is new to the Hospital IQR Program, although it has been used in the CJR model for several years, and are seeking comment on the use of this measure for TEAM. To minimize confusion and facilitate access to the data on the measures included in TEAM, we propose to post the data on each TEAM participant's performance on each of the three proposed quality measures in a downloadable format in a section of the website specific to TEAM, similar to

what is done for the Hospital Readmissions Reduction Program and the HAC Reduction Program. We invite public comments on these proposals to post data for the required measures on the TEAM specific website.

d. Pricing and Payment Methodology

(1) Background

In determining the best methodology for setting target prices for episodes, we can draw on lessons learned from multiple iterations of both the CJR and BPCI Advanced target price methodologies. As we developed the methodologies for CJR and BPCI Advanced, and refined them over time in response to observed changes in nationwide spending trends and payment system changes (such as the removal of TKA and THA from the IPO list, and the reclassification of certain MS–DRGs), each new iteration drew from lessons learned in the previous iteration. For purposes of TEAM, we aim to find the balance between simplicity and predictive accuracy. CMS aims to choose a payment methodology that will be as transparent and understandable as possible for participants of varying levels of statistical background and knowledge; proposing calculations that are relatively straightforward and easy to explain would further this goal. On the other hand, the more elements we consider and more sophisticated statistical modeling we use, the better able we are to accurately predict performance period spending. Accurate performance period spending predictions increase the likelihood of achieving our model goals of setting target prices that provide a reasonable opportunity to achieve savings for Medicare but are not too onerous for participants.

(i) Previous Episode-Based Payment Methodologies

(A) CJR

When designing the CJR payment methodology, one goal was to be as simple and straightforward as possible, given that it was a mandatory model covering only one episode category. The initial CJR payment methodology included a 3-year baseline period that rolled forward every 2 years. Target prices used a blend of participant-specific and regional spending, which shifted towards 100% regional spending for PY 4–5. Downside risk was waived for the first performance year of the model to allow participants time to enact practice changes that would help them succeed in the model. Beginning in PY 2, participants were subject to both upside and downside risk, within stop-loss and stop-gain limits that increased to a maximum of 20% by PY 3 for most hospitals. The stop-loss and stop-gain limits were designed to ensure that participants would neither be subject to an unmanageable level of risk, nor be incentivized to stint on care to achieve savings. The initial CJR payment methodology is described in detail in the final rule titled ''Medicare Program; Comprehensive Care for Joint Replacement Payment Model for Acute Care Hospitals Furnishing Lower Extremity Joint Replacement Service'' that appeared in the November 24, 2015 **Federal Register** (80 FR 73274) (referred to in this proposed rule as the ''2015 CJR Final Rule''), starting at 80 FR 73324.

The initial CJR payment methodology was modified in the final rule titled ''Medicare Program: Comprehensive Care for Joint Replacement Model Three-Year Extension and Changes to Episode Definition and Pricing; Medicare and Medicaid Programs; Policies and Regulatory Revisions in Response to the COVID–19 Public Health Emergency'' that appeared in the May 3, 2021 **Federal Register** (86 FR 23496) (referred to in this proposed rule as the ''2021 CJR 3-Year Extension Final Rule''). The CJR model's 3-year extension and modification was due to a number of factors, as described in detail starting at 86 FR 23508. A principal reason for the modifications to the payment methodology was the fact that the initial CJR target price methodology did not account for changing downward trends in spending on LEJR episodes, both among CJR participant hospitals and non-participant hospitals. The resulting reconciliation payments under the initial methodology rewarded participants for spending reductions that likely would have happened regardless of the model, which led to concerns that target prices could be too high for Medicare to achieve savings in the model over time.

The changes to the model increased the complexity in some ways (for example, the addition of risk adjustment multipliers) while simplifying it in other ways (for example, the removal of update factors) in order to calculate target prices that would more accurately reflect performance period spending. A retrospective Market Trend Factor was applied to target prices at reconciliation to capture changes in spending patterns that occurred nationally during the performance period. This market trend factor, in combination with the change from a 3-year baseline to a 1 year baseline, negated the need for setting-specific update factors that we had used previously to set purely prospective target prices. At the same time, our added risk adjustment increased target prices for episodes with more complex patients, to better reflect the higher costs associated with those patients. The changes to the CJR payment methodology are described in detail in the 2021 CJR 3-Year Extension Final Rule starting at 86 FR 23508.

(B) BPCI Advanced

By contrast, the BPCI Advanced methodology is more complex. The target price calculation method was designed to support participation from a broad range of providers by accounting for variation in episode payments and factors that contribute to differences that are beyond providers' control. In Model Years 1–3, BPCI Advanced target prices were constructed using a 4-year rolling baseline period and were based on hospital historical payments, patient risk adjustment, a prospective peer group trend factor, and 3% CMS discount. PGP target prices adjusted hospital target prices for PGP-specific patient case mix and differences between PGP and hospital historical payments. Risk adjustment is performed using a 2-stage model, with Stage 1 consisting of a compound log-normal model with episode cost as the dependent variable, and Stage 2 consisting of an Ordinary Least Squares regression with case mix adjusted spending as the dependent variable.

The use of a prospective trend in Model Years 1–3 resulted in prices not accurately predicting spending that arose from unanticipated, systematic factors. For example, changes in coding guidelines can lead to cost changes. In fiscal year 2017, there were changes to the guidelines for coding the congestive heart failure (CHF) and simple pneumonia episodes, two of the highest-volume episodes in the BPCI Advanced model. The change resulted in an increase in the share of patients classified as having more serious CHF and simple pneumonia diagnoses in the performance period than in the baseline period. Because target prices are based on the seriousness of a patient's diagnosis, target prices increased leading to larger reconciliation payments to participants and losses to Medicare.

The losses to Medicare spurred changes to the BPCI Advanced pricing methodology. Similar to CJR, the prospective trend factor used in Model Years 1–3 was replaced in Model Year 4 with a retrospective trend factor adjustment at reconciliation, although this retrospective trend adjustment was

subject to guardrails. Specifically, the trend at reconciliation could not exceed +/−10% of the prospective trend for Model Years 4 and 5, and in response to participant feedback, the trend adjustment was limited to +/−5% beginning in Model Year 6. The CMS discount was also reduced in Model Year 6 from 3% to 2% for medical episodes. Pricing methodology changes since Model Year 4 were intended to improve pricing accuracy and reflect actual spending trends during the performance period. Future evaluation reports will assess the effectiveness of these changes. Additional information on the BPCI Advanced pricing methodology may be found on the BPCI Advanced participant resources page.[632]

In TEAM, our goal is a target price methodology that blends the most successful elements of each of these model iterations, striking a balance of predictability and accuracy.

(2) Overview of TEAM Pricing and Payment Methodology

While we describe each element of the pricing and payment methodology in detail in the following sections, here we present an overview of the proposed TEAM pricing and payment methodology. At proposed § 512.540, we are proposing to use3 years of baseline data, trended forward to the performance year, to calculate target prices at the level of MS–DRG/HCPCS episode type and region. We propose to group episodes from the baseline period by applicable MS–DRG for episode types that include only inpatient hospitalizations, and by applicable MS–DRG or HCPCS code for episode types that include both inpatient hospitalizations and outpatient procedures. For episodes types that include both inpatient hospitalizations (identified by MS–DRGs) and outpatient procedures (identified by HCPCS codes), HCPCS codes are combined for purposes of target pricing with the applicable MS–DRG representing an inpatient hospitalization without Major Complications and Comorbidities, as we expect those beneficiaries to have similar clinical characteristics and costs. After capping high-cost outlier episodes at the 99th percentile for each of the 24 proposed MS–DRG/HCPCS episode types and 9 regions (which we propose at proposed § 512.505 to define as the 9 U.S. census divisions, as defined by the U.S. Census Bureau), we propose to use average standardized spending for each MS–DRG/HCPCS episode type in each region as the benchmark price for that MS–DRG/HCPCS episode type for that specific region, resulting in 216 MS–DRG/HCPCS episode type/region-level benchmark prices. We propose to apply a prospective trend factor and a discount factor to benchmark prices (as well as a prospective normalization factor, described later in this section) to calculate preliminary target prices. The prospective trend factor would represent expected changes in overall spending patterns between the most recent calendar year of the baseline period and the performance year, based on observed changes in overall spending patterns between the earliest calendar year of the baseline period and the most recent year of the baseline period. The discount factor would represent Medicare's portion of potential savings from the episode.

At proposed § 512.545, we propose to risk adjust episode-level target prices at reconciliation by the following beneficiary-level variables: age group, Hierarchical Condition Category count (a measure of clinical complexity), and social risk (the components of which are described in more detail in sections X.A.3.d.(4) and X.A.3.f of the preamble of this proposed rule). We propose to calculate risk adjustment multipliers prospectively at the MS–DRG/HCPCS episode type level based on baseline data and hold those multipliers fixed for the performance year. To ensure that risk adjustment does not inflate target prices overall, we further propose to calculate a prospective normalization factor based on the data used to calculate the risk adjustment multipliers. We propose to apply the prospective normalization factor, in addition to the prospective trend factor and discount factor described previously, to the benchmark price to calculate the preliminary target price for each MS–DRG/HCPCS episode type and region. We propose that the prospective normalization factor would be subject to a limited adjustment at reconciliation based on TEAM participants' observed performance period case mix, such that the final normalization factor would not exceed +/−5% of the prospective normalization factor.

(3) Target Prices

(a) Baseline Period for Benchmarking

At proposed § 512.540(b)(2) we propose to use 3 years of baseline episode spending to calculate benchmark prices, which we would further adjust as described in section X.A.3.d.(3)(i) of the preamble of this proposed rule to create preliminary target prices. We propose to roll this 3-year baseline period forward every year. Specifically, we propose that—

- To determine baseline episode spending for PY1, CMS would use baseline episode spending for episodes that started between January 1, 2022 and December 31, 2024;
- To determine baseline episode spending for PY2, CMS would use baseline episode spending for episodes that started between January 1, 2023 and December 31, 2025;
- To determine baseline episode spending for PY 3, CMS would use baseline episode spending for episodes that started between January 1, 2024 and December 31, 2026;
- To determine baseline episode spending for PY 4, CMS would use baseline episode spending for episodes that started between January 1, 2025 and December 31, 2027;
- To determine baseline episode spending for P Y 5, CMS would use baseline episode spending for episodes that started between January 1, 2026 and December 31, 2028.

The use of 3 years of baseline episode spending is consistent with our initial CJR methodology, as described in the 2015 CJR Final Rule at 80 FR 73340. In that case, the 3-year baseline period moved forward every 2 years. However, in combination with the lack of a retrospective trend factor, the use of a 3-year baseline period that only moved forward every 2 years meant that our methodology was not able to capture the degree to which spending on LEJR episodes was decreasing nationwide, both among CJR and non-CJR hospitals. As a result, we believe our target prices partially reflected spending decreases that were not due specifically to participation in CJR.

Subsequently, in the 2021 CJR 3-Year Extension Final Rule, we finalized a policy to use a 1-year baseline period that would move forward every year (with the exception of skipping data from 2020 due to COVID–19 irregularities) (86 FR 23514). In combination with a retrospective market trend factor, using 1 year of baseline episode spending updated every year meant that our target prices would not be inflated as they had been under the initial CJR methodology. BPCI Advanced employs a strategy that blends elements of both CJR approaches, with a longer baseline period (4 years) similar to the initial CJR methodology, but shifting forward every year, as we do in the CJR extension.

Participants in episode-based payment models have expressed concerns about a concept known as the ''ratchet effect'' when choosing the baseline period from which to calculate

[632] *https://www.cms.gov/priorities/innovation/innovation-models/bpci-advanced/participant-resources.*

target prices. That is, participants do not want to be penalized for achieving lower spending by having lower target prices in subsequent years. The use of fewer years of the most recent baseline episode spending, as well as more frequent rebasing, will generally decrease target prices more quickly year over year if overall episode spending is decreasing, as opposed to a longer, fixed baseline. However, we need to balance this concern against the likelihood of having inaccurate target prices if we use older baseline episode spending or rebase less frequently.

One way that we propose to mitigate the ratchet effect is that we propose to use a 3-year baseline period and rebase annually. We believe this approach would achieve a balance between having target prices based on sufficiently up-to-date spending patterns but not requiring participants to compete against only the most recent spending patterns.

We propose to adjust baseline episode spending to trend all episode spending to the most recent year of the baseline period. The adjustment would reflect the impact of inflation and any changes in episode spending due to evolving patterns of care, Medicare payment policies, payment system updates, and other factors during the baseline period. We propose to define a baseline year as any of the three CYs during a given baseline period. For example, baseline year 1 for PY 1 will be CY 2022, baseline year 2 will be CY 2023, and baseline year 3 will be CY 2024. We propose to calculate the adjustment factors for baseline years 1 and 2 by dividing average episode spending for baseline year 3 episodes by average episode spending for episodes from baseline years 1 and 2, respectively. We would then apply the applicable adjustment factors to the episode spending of each episode in baseline years 1 and 2. This adjustment would bring all baseline episode spending forward to the most recent baseline year, so that baseline year 1 and 2 spending would be expressed in baseline year 3 dollars. This method would be consistent with how we calculated the baseline trend factor for CJR in the performance years that used the 3-year baseline period, as described in the 2015 CJR Final Rule (80 FR 73342). We propose to calculate these baseline trend factor adjustments at the MS–DRG/HCPCS episode type and region level.

In recognition of the fact that baseline episode spending from more recent years are likely to be a better predictor of performance year spending, we propose to weight recent baseline episode spending more heavily than episode spending from earlier baseline years. Specifically, we propose to weight episode spending from baseline year 1 at 17%, baseline year 2 at 33%, and baseline year 3 at 50%. This method of weighting would mean that the most recent episode spending patterns, expected to be the most accurate predictor of performance year spending, would contribute most strongly to the benchmark price at 50%. The remaining 50% would be divided into thirds, with baseline year 2 contributing approximately ⅔, while baseline year 1, which is likely to be the least accurate predictor of performance year spending, would contribute ⅓.

We seek comment on our proposal at proposed § 512.540(b)(2–3) to use 3 years of baseline episode spending, rolled forward for each performance year, with more recent baseline years weighted more heavily, to calculate TEAM target prices.

(b) Regional Target Prices

We are proposing to provide to TEAM participants target prices for each proposed MS–DRG/HCPCS episode type and region based on 100% regional data for all TEAM participants prior to each PY. This approach would be consistent with PY 4–8 of CJR. While CJR target prices used a blend of ⅔ hospital-specific data and ⅓ regional data for PY 1–2, and ⅓ hospital-specific data and ⅔ regional data for PY 3, we stated our reasons in the 2015 CJR Final Rule for moving towards fully regional target pricing as participants gained more experience in the model (80 FR73347). Target prices based on hospital-specific data would require a TEAM participant to compete against its own previous performance, such that improvement over previous performance would result in a reconciliation payment. Conversely, target prices based on regional data would require a TEAM participant to compete against its peers in that region, such that only a specific level of achievement, as opposed to improvement alone, would result in a reconciliation payment. For TEAM participants that are historically inefficient compared to their peers, hospital-specific target prices would be higher than regional target prices because hospital-specific baseline episode spending would be greater than average baseline episode spending for the region. For TEAM participants that are historically efficient compared to their peers, hospital-specific target prices would be lower than regional target prices because hospital-specific baseline episode spending would be lower than average baseline episode spending for the region. We noted in the 2015 CJR Final Rule that if we used 100% hospital-specific pricing in CJR, historically efficient hospitals could have fewer opportunities for achieving additional efficiencies under the model and would not be rewarded for maintaining high quality and efficiency, whereas less efficient hospitals would be rewarded for improvement even if they did not reach the same level of high quality and efficiency as the more historically efficient hospitals. However, as described in section X.A.3.f of the preamble of this proposed rule, health equity has been a priority in the proposed design of TEAM. We are concerned by literature stating that safety net hospitals in CJR were disproportionately likely to owe a repayment once we moved to 100% regional pricing.[633] [634] We note that these findings reflect the original CJR payment methodology, which did not include risk adjustment at the beneficiary level. For PY 6–8, the modified CJR payment methodology incorporates beneficiary level risk adjustment, including an adjustment for dual income eligibility. Additionally, although we provided lower stop-loss limits for rural and low-volume hospitals, we did not identify or provide protective stop-loss limits for safety net hospitals.

Therefore, in addition to lower stop-loss limits for Track 1 and Track 2 TEAM participants as compared to Track 3 TEAM participants, and the incorporation of additional measures of social need in our beneficiary-level risk adjustment, we considered an alternative target price proposal to provide Track 1 and Track 2 TEAM participants with 100% hospital-specific, rather than regional, target prices. However, given our proposal to calculate target prices at the MS–DRG/HCPCS episode type level, we are concerned that many Track 1 or Track 2 TEAM participants would not meet the low volume threshold of baseline episodes to calculate reliable target prices for many of the MS–DRG/HCPCS episode types included in TEAM. Additionally, there may be some hospitals that serve a high proportion of underserved populations, yet have already achieved high levels of quality and efficiency, such that a 100%

[633] Carey, K., & Lin, M–Y. (2022). Safety-net hospital performance under Comprehensive Care for Joint Replacement. Health Services Research, 2022(1–6). *https://doi:10.1111/1475-6773.14042*.

[634] Shashikumar, S.A., Ryan, A.M., & Joynt Maddox, K.E. (2022). Equity implications of hospital penalties during 4 years of the Comprehensive Care for Joint Replacement Model, 2016 to 1019. JAMA Health Forum, 3(12). *https://doi.org/10.1001/jamahealthforum.2022.4455*.

hospital-specific target price would be disadvantageous.

We also considered blending hospital-specific pricing with regional pricing as we did in the first 3 years of CJR. For instance, we considered using a blend of 50% hospital-specific data and 50% regional data to calculate target prices for Track 1 and Track 2 participants. We further considered using a different blend for Track 1 and Track 2 participants vs. Track 3 participants. For example, we considered using a blend of ⅔ hospital-specific data and ⅓ regional data for Track 1 and Track 2 participants, and a blend of ⅓ hospital-specific data and ⅔ regional data for Track 3 hospitals. However, blending hospital-specific pricing with regional pricing could be subject to the same concerns regarding low volume or disadvantaging efficient hospitals as 100% hospital-specific pricing, though to a lesser degree.

We also considered, but are not proposing, calculating target prices at the region/episode category level as compared to our proposed region/MS–DRG/HCPCS level. Calculating target prices at the region/episode category would help to mitigate some concerns with certain MS–DRG/HCPCS episode types having a low volume of episodes in a given region. However, to ensure target prices are sufficiently risk-adjusted to capture spending differences between the different MS–DRG/HCPCS within a given episode category, we considered including MS–DRG/HCPCS risk adjusters in TEAM's risk adjustment methodology if we calculated target prices at the region/episode category level. We seek comment on calculating target prices at the region/episode category level.

We seek comment on our proposal at proposed § 512.540(b)(1) to provide regional target prices to all TEAM participants for each PY during the model performance period. We also seek comment on other potential ways to set target prices for Track 1 or Track 2 TEAM participants, including adjustments to regional target prices for Track 1 or Track 2 TEAM participants, that would decrease the likelihood of safety net hospitals being disproportionately penalized by regional target prices.

(c) Services That Extend Beyond an Episode

As we are proposing a fixed 30-day post discharge episode length as discussed in section X.A.3.b.(5)(d) of the preamble of this proposed rule, we recognize that there may be some instances where a service included in the episode begins during the episode but concludes after the end of the episode and for which Medicare makes a single payment under an existing payment system. An example would be a beneficiary in an episode who is admitted to a SNF for 15 days, beginning on Day 26 post-discharge from the TEAM anchor hospitalization or anchor procedure. The first 5 days of the SNF admission would fall within the episode, while the subsequent 10 days would fall outside of the episode.

We propose that, to the extent that a Medicare payment for included episode services spans a period of care that extends beyond the episode, these payments would be prorated so that only the portion attributable to care during the episode is attributed to the episode payment when calculating actual Medicare payment for the episode. For non-IPPS inpatient hospital (for example, CAH) and inpatient PAC (for example, SNF, IRF, LTCH, IPF) services, we propose to prorate payments based on the percentage of actual length of stay (in days) that falls within the episode window. For HHA services that extend beyond the episode, we propose that the payment proration be based on the percentage of days, starting with the first billable service date (''start of care date'') and through and including the last billable service date, that fall within the episode. This proposed policy would ensure that TEAM participants are not held responsible for the cost of services that did not overlap with the episode period.

For IPPS services that extend beyond the episode (for example, readmissions included in the episode definition), we propose to separately prorate the IPPS claim amount from episode target price and actual episode payment calculations, called the normal MS–DRG payment amount for purposes of this proposed rule. The normal MS–DRG payment amount would be pro-rated based on the geometric mean length of stay, comparable to the calculation under the IPPS PAC transfer policy at § 412.4(f) and as published on an annual basis in Table 5 of the IPPS/LTCH PPS final rules. Consistent with the IPPS PAC transfer policy, the first day for a subset of MS–DRGs (indicated in Table 5 of the IPPS/LTCH PPS final rules) would be doubly weighted to count as 2 days to account for likely higher hospital costs incurred at the beginning of an admission. If the actual length of stay that occurred during the episode is equal to or greater than the MS–DRG geometric mean, the normal MS–DRG payment would be fully allocated to the episode. If the actual length of stay that occurred during the episode is less than the geometric mean, the normal MS–DRG payment amount would be allocated to the episode based on the number of inpatient days that fall within the episode. If the full amount is not allocated to the episode, any remainder amount would be allocated to the 30-day post-episode payment calculation discussed in section X.A.3.(d)(5) of the preamble of this proposed rule. The proposed approach for prorating the normal MS–DRG payment amount is consistent with the IPPS transfer per diem methodology.

This methodology would be consistent with CJR, and is described as applied to CJR in the 2015 CJR Final Rule (80 FR 73333). We seek comment on our proposed methodology at proposed § 512.555 for prorating services that extend beyond the episode.

(d) Episodes That Begin in One Performance Year and End in the Subsequent Performance Year

Given that we are proposing episodes with a 30-day post discharge period, we recognize that some episodes will begin during one performance year and end during the following performance year. We propose that all episodes would receive the target price associated with the date of discharge from the anchor hospitalization or the anchor procedure, as applicable, regardless of the episode end date, which determines the performance year in which the episode would be reconciled. We note that the assignment of target prices based on the date of discharge from the anchor hospitalization or the anchor procedure is different from CJR, where the target price was assigned based on the episode start date rather than the discharge date, but it is consistent with BPCI Advanced. As noted in section X.A.3.d.(5)(a) of the preamble of this proposed rule, annual reconciliation is based on episodes that end during a PY, so if an episode extends past the end of a PY, that episode would factor into the next PY's reconciliation, when the episode ends, which is consistent with both CJR and BPCI Advanced. Accordingly, if an episode were to end after the final performance year of the model, we propose that it would not be reconciled. We seek comment on our proposal at proposed § 512.540(a)(3) for applying target prices to an episode that begins in one performance year and ends in the subsequent performance year.

(e) High-Cost Outlier Cap

Given the broad proposed episode definition and 30-day proposed post-discharge period, we want to ensure that hospitals have some protection from the downside risk associated with especially high payment episodes,

where the clinical scenarios for these cases each year may differ significantly and unpredictably. As we stated in the 2015 CJR Final Rule (80 FR 73335), we do not believe that the opportunity for a hospital's systematic care redesign of particular surgical episodes has the significant potential to impact the clinical course of these extremely disparate high payment cases. In the 2015 CJR Final Rule (80 FR 73335) we finalized a policy to limit the hospital's responsibility for high episode payment cases by utilizing a high price payment ceiling at two standard deviations above the mean episode payment amount in calculating the target price and in comparing actual episode payments during the performance year to the target prices. This policy was designed to prevent participant hospitals from being held responsible for catastrophic episode spending amounts that they could not reasonably have been expected to prevent. The policy, and the reasoning behind it, is described in detail at (80 FR 73335).

However, as we described in 86 FR 23518, based on data from the first few years of the CJR model, we observed that the original 2 standard deviation methodology was insufficient to identify and cap high episode spending, as more episodes than expected exceeded the spending cap. We describe in detail our reasoning for finalizing a change to the high episode spending cap in the 2021 CJR 3-Year Extension Final Rule (86 FR 23518). We finalized a change to the calculation of the high episode spending cap to derive the amount by setting the high episode spending cap at the 99th percentile of historical costs for each MS–DRG for each region. The resulting methodology was similar to the BPCI Advanced methodology for capping high-cost episode spending at the 99th percentile for each MS–DRG.

We propose a similar high-cost outlier policy for TEAM. We propose to cap both baseline episode spending and performance year episode spending at the 99th percentile of spending at the MS–DRG/HCPCS episode type and region level, referred to as the high-cost outlier cap. We propose to determine the 99th percentile of spending at the MS–DRG/HCPCS episode type and region level during the applicable time period, and then set spending amounts that exceed the high-cost outlier cap to the amount of the high-cost outlier cap. For instance, if the high-cost outlier cap was set at $30,000, an episode that had actual episode spending of $45,000 would have its spending amount, for purposes of the model, reduced by $15,000 when the cap was applied and therefore, the spending for that episode would be held at $30,000. We propose to use capped episode spending when calculating benchmark prices in order to ensure that high-cost outlier episodes do not artificially inflate the benchmark. When calculating performance year episode spending at reconciliation, we propose to use capped episode spending so that a TEAM participant would not be held responsible for catastrophic episode spending amounts that they could not reasonably have been expected to prevent. We seek comment on our proposal at proposed § 512.540(b)(4) for calculating and applying the high-cost outlier cap.

(f) Trending Prices

Target prices are derived from a prediction based on previous Medicare spending patterns, but it is not possible to perfectly predict how Medicare spending patterns may change over the course of the performance year. In the original BPCI model, prospective target prices were not provided to participants, so the trend factor was calculated retrospectively based on the observed spending during the performance period. Quarterly reconciliations in BPCI meant that participants could gain a sense of how their target prices tended to change over time and get relatively frequent feedback on their performance in the model. However, BPCI participants did not like the uncertainty of not knowing their target prices in advance.

In the initial CJR methodology and Model Years 1–3 of BPCI Advanced, CMS provided fully prospective target prices to participants. Participants appreciated the certainty of prospective target prices, where we predict in advance how spending patterns might shift and hold those target prices firm even if we underpredicted or overpredicted spending. This methodology included applying update factors to account for setting-specific payment system updates, allowing us to estimate how a given set of services performed during the baseline would be priced had those same services been subject to the fee schedules in effect during the performance period.

In CJR, we originally overpredicted performance period spending, not accounting for the overall decline in spending on LEJR episodes nationwide that occurred outside of the model during its first few performance years. In BPCI Advanced, we similarly overpredicted performance period spending for certain episodes because our methodology was unable to account for medical coding changes that occurred between the baseline and performance period, or during the performance period itself. For instance, in FY 2016, changes to medical coding guidance were made for Inpatient Congestive Heart Failure, such that certain patients who during the baseline would have been coded as the less expensive MS–DRG 292, were instead coded as the more expensive MS–DRG 291, in spite of having the same clinical characteristics. This meant that many beneficiaries who received a target price associated with the more expensive MS–DRG 291, actually had the lower performance period costs previously associated with the less expensive MS–DRG 292. The use of a fully prospective trend factor was unable to capture these changes in both practice patterns and coding guidelines.

Subsequently, we modified both models' methodologies to include a retrospective trend adjustment. Starting in Model Year 4, we continued to provide BPCI Advanced participants with a prospective target price using an estimated trend factor, but we adjusted the target price at reconciliation based on the retrospective calculation of the trend factor using performance period data. Initially, this policy included guardrails around the magnitude of the retrospective trend factor adjustment of +/−10%. In response to participant feedback, we lowered the maximum level of the retrospective trend factor adjustment to +/−5% starting in Model Year 6.

In the CJR extension, the retrospective trend is known as the market trend factor adjustment. It is fully retrospective and calculated at reconciliation, meaning that the unadjusted target price we post on the CJR website prior to the performance year does not include a prospective trend factor. In response to participant requests, we provided estimates of the market trend factor on the CJR website based on the most recently available data to help participants estimate their potential target prices. The market trend factor is calculated separately for each MS–DRG/region combination. For the PY 6 reconciliation (corresponding to episodes that ended between October 1, 2021 and December 31, 2022), the highest market trend factor was 1.294 for MS–DRG 469 episodes in the West South Central region, while the lowest market trend factor was 0.972 for MS–DRG 521 episodes in the New England region.

For TEAM, we are proposing to provide preliminary target prices that incorporate a prospective trend factor to TEAM participants. We propose at § 512.540(b)(7) to calculate this prospective trend factor as the percent difference between the average regional

MS–DRG/HCPCS episode type expenditures computed using the most recent year of the applicable baseline period, and the comparison average regional MS–DRG/HCPCS episode type expenditures during the first year of the baseline. By comparing baseline year 3 to baseline year 1, the prospective trend would capture changes across a two-year period, which we believe is appropriate given that we would be projecting spending patterns in the performance year which would be 2 years after baseline year 3. This proposed trend factor calculation would be similar to how the market trend factor is currently calculated in the CJR extension, but instead of retrospectively comparing average regional MS–DRG/HCPCS episode type spending during the performance year to spending during the baseline year, the calculation would be performed prospectively, so that performance year expenditures would not be considered. A fully prospective trend factor would give participants more certainty about what their reconciliation target prices would be, although reconciliation target prices as proposed would incorporate both beneficiary-level risk adjustment and an adjustment to the prospective normalization factor, as applicable (as described in section X.A.3.d.(4) of the preamble of this proposed rule).

Given our proposal to use a prospective trend factor to predict future spending for the purposes of pricing stability, we considered but are not proposing to include update factors that take into account Medicare payment systems updates for each fiscal year (FY) or calendar year (CY) and could improve pricing accuracy. Specifically, we considered a methodology similar to BPCI Advanced and Performance Years 1–5 of CJR, where preliminary target prices are updated to reflect the most current FY and CY payment system rates using setting-specific update factors for payment system, including the IPPS, the OPPS, the Physician Fee Schedule (PFS), the Home Health Prospective Payment System (HH PPS), the Medicare Economic Index (MEI), the Inpatient Rehabilitation Facility (IRF) Prospective Payment System (PPS), and the Skilled Nursing Facility (SNF) PPS. However, updating target prices using setting-specific update factors would result in TEAM participants receiving more than one target price for a MS–DRG/HCPCS episode type in a performance year which can increase complexity. Further, while including update factors would generally increase target prices, it also decreases pricing stability since the preliminary target price would change due to the application of update factors. We seek comment on whether we should include setting-specific update factors in preliminary target prices to improve pricing accuracy, or if there are other ways we should consider updating target prices that would reflect Medicare payment system updates.

We considered, but are not proposing, an alternative proposal to adjust the preliminary target price at reconciliation based on the observed trend during the performance year. We considered proposing to limit the magnitude of this retrospective trend adjustment by applying guardrails, similar to what we currently do in BPCI Advanced. Specifically, if the trend factor calculated at reconciliation based on performance year expenditures differed from the prospective trend factor by up to +/−5%, we considered proposing to adjust the preliminary target price at reconciliation by applying the final trend factor to the baseline target price. If the final trend factor differed from the prospective trend factor by more than +/−5%, we considered proposing to only adjust the preliminary target price by +/−5%. In other words, we considered proposing that the maximum upward trend adjustment we would make to the preliminary target price at reconciliation would be 5%, and the maximum downward trend adjustment we would make to the preliminary target price at reconciliation would be −5%. We also considered lower percentages for the guardrails, including 3% and 1%, given the BPCI Advanced model's experience initially having a higher percentage maximum adjustment and then reducing the percentage in later years of the model. We considered these alternative proposals because we believed that these guardrails would help us achieve a balance of providing predictability to participants and mitigating the risk that target prices would be disproportionately impacted by performance year shifts in spending patterns that could not have been foreseen.

We are also requesting comment on alternative ways to calculate the trend factor to both increase accuracy of prospective target prices and to mitigate the ratchet effect. We recognize that spending on some episodes, such as Lower Extremity Joint Replacement, has been decreasing over time and may reach a point where further decreases in spending could compromise quality and patient safety. While in the early years of CJR, our target prices failed to account for decreasing trends in spending for LEJR nationwide and thus were overinflated, that downward trend has since stabilized, suggesting that there may no longer be as much of an opportunity for participant savings as there was in the early years of CJR. In the case of an episode where spending has been decreasing but has since stabilized, trending the target price forward based on previous years' trends could result in target prices that are too low. In such a scenario, a retrospective trend adjustment might actually result in a higher target price than a fully prospective trend. We are seeking comment on ways to construct a trend factor that can result in a reasonable target price regardless of whether spending has been increasing, decreasing, or stabilizing.

For example, in the CY 2023 Physician Fee Schedule final rule, CMS finalized a policy to include a prospectively-determined component, the Accountable Care Prospective Trend (ACPT), in the factor used to update the benchmark to the performance year for ACO agreement periods starting on or after January 1, 2024 (see 87 FR 69881 to 69898) to help address the ratchet effect by insulating a portion of the update factor from the impact that ACO savings can have on retrospective national and regional spending trends. This type of trend is referred to as an administrative trend, because it is not directly linked to ongoing observed FFS spending. However, we recognize that there may be some concerns using administrative trends for episode-based payment models, as opposed to population-based payment models like ACOs, because administrative trends may not capture episode-specific trends, which could lead to higher or lower preliminary target prices when compared to actual performance year spending. We request comment on this type of trending approach, or other potential ways to increase the accuracy of prospective target prices and mitigate the ratchet effect when we update TEAM target prices.

We seek comment on our proposal at proposed § 512.540(b)(7) for calculating and applying a prospective trend factor.

(g) Discount Factor

In addition to the prospective trend factor, at proposed § 512.540(c) we propose to apply a discount factor to the benchmark price when calculating preliminary target prices. Specifically, we propose to apply a 3% discount factor to the benchmark price to serve as Medicare's portion of reduced expenditures from the episode. This discount would be similar to the 3% discount factor applied to target prices

in the CJR model and to surgical episode target prices in BPCI Advanced.

However, we recognize that there may be different levels of opportunity for savings within different episode types. For instance, in BPCI Advanced, in recognition of the fact that participants were generally able to achieve greater savings in surgical, as opposed to medical, episodes, we incorporated a 3% discount into surgical episode target prices and a 2% discount into medical episode target prices. Given differential opportunities for savings across the different types of proposed episode categories, as well as our intention to incorporate additional episodes in future years of TEAM, we considered but are not proposing varying the Medicare discount based on episode category. Specifically, we considered but are not proposing lower discount factors including 2%, 1%, 0.5%, or no discount factor. We also considered linking the discount to variability in episode spending during the baseline, such that an episode with minimal variability in baseline spending might have a lower discount percentage, given that lower variability in baseline spending might indicate fewer opportunities for savings in that episode, as opposed to episodes with greater spending variability. We also considered but are not proposing lower discount factors, including 2%, 1%, 0.5%, or no discount factor, for specific types of TEAM participants. For example, we considered no discount factor for safety net hospitals given the proportion of underserved beneficiaries they care for and many of these safety net hospitals may be new to episode-based payment participation. Although we are not proposing these alternatives, we seek comment on whether we should include any of these alternatives in TEAM and also seek comment on different ways to adjust the Medicare discount based on differential savings opportunities for different episode types.

We seek comment on our proposal at proposed § 512.540(c) to apply a 3% discount factor to preliminary episode target prices for episodes.

(h) Special Considerations for Low Volume Hospitals

In both CJR and BPCI Advanced, we recognized that hospitals that perform a number of episodes below a certain volume threshold would have insufficient volume to receive a target price based on their own baseline data. In the 2015 CJR Final Rule (80 FR 73285), we acknowledged that such hospitals might not find it in their financial interests to make systemic care redesigns or engage in an active way with the CJR model. At 80 FR 73292, we acknowledged commenter concerns about low volume providers, including but not limited to, observations that low volume providers could be less proficient in taking care of LEJR patients in an efficient and cost-effective manner, more financially vulnerable with fewer resources to respond to the financial incentives of the model, and disproportionately impacted by high-cost outlier cases. In spite of these potential challenges, we stated that the inclusion of low volume hospitals in CJR was consistent with the goal of evaluating the impact of bundled payment and care redesign across a broad spectrum of hospitals with varying levels of infrastructure, care redesign experience, market position, and other considerations and circumstances (80 FR 73292).

In CJR, we set the low volume threshold as fewer than 20 CJR episodes across the 3-year baseline years of 2012–2014. Low volume hospitals received target prices based on 100% regional data, rather than a blended target price that incorporated their participant-specific data, because a target price based on limited data is less likely to be accurate and reliable. These hospitals were also subject to the lower stop-loss limits that we offered to rural hospitals, in recognition of the fact that they might be less prepared to take on downside risk than hospitals with higher episode volume. In the CJR 2017 Final Rule that reduced the number of mandatory MSAs, low volume hospitals were among the types of hospitals that were required to opt in if they wanted to remain in the model (82 FR 57072). In the 2020 Final Rule, we removed the remaining low volume hospitals from the CJR extension when we limited the CJR participant hospital definition to those hospitals that had been mandatory participants throughout the model (86 FR 23497).

In BPCI Advanced, our low volume threshold policy was to not provide a target price for a given clinical episode category if performed at a hospital that did not meet the 41 clinical episode minimum volume threshold during the 4-year baseline period. This meant that no BPCI Advanced episodes would be triggered for that particular clinical episode category during the applicable performance period at that hospital. However, participants could continue to trigger other clinical episode categories for which they had enrolled and for which there was sufficient baseline volume. Additionally, clinical episodes that occurred at the hospital during the performance period, though not triggering a BPCI Advanced episode, would count toward the low volume threshold when that year became part of the baseline. Therefore, as the baseline shifted forward each year, bringing a more recent year into the baseline and dropping the oldest year, a hospital could potentially meet the volume threshold and receive a target price for the clinical episode category for a subsequent performance period.

In TEAM, we propose that there will be a low volume threshold for purposes of reconciliation. This low volume threshold would apply to total episodes across all episode categories in the baseline period for a given PY. If a TEAM Participant did not meet the proposed low volume threshold of at least 31 total episodes in the baseline period for PY1, CMS would still reconcile their episodes, but the TEAM participant would be subject to the Track 1 stop-loss and stop-gain limits for PY1. If a TEAM Participant did not meet the proposed low volume threshold of at least 31 total episodes in the applicable baseline periods for PYs 2–5, the TEAM Participant would be subject to the Track 2 stop-loss and stop-gain limits for PY 2–5, as described in section X.A.3.d.(5)(h) of the preamble of this proposed rule.

We considered, but are not proposing, including alternative approaches to a minimum episode volume threshold in TEAM, including an approach similar to BPCI Advanced, where if a TEAM participant did not meet the 31 episode minimum volume threshold for a given episode category in the 3-year baseline period, the TEAM participant would not be held accountable for that episode category for the performance year that aligned with the 3-year baseline period. We also considered different minimum volume thresholds in the baseline period, including 51, 21, and 11. However, we are concerned that imposing a minimum volume threshold that removes TEAM participant accountability may restrict the number of hospitals eligible to participate in TEAM and limit beneficiary access to the benefits of value-based, coordinated care. We also considered implementing minimum episode volume thresholds during the performance year. Specifically, we considered not holding TEAM participants accountable for a given episode category if they initiated less than 11 or 6 episodes in a given episode category or less than 31 or 21 total episodes across episode categories in a performance year. However, we are concerned that including minimum episode volume thresholds during the performance year may introduce program integrity issues where TEAM

participants steer TEAM beneficiaries to other providers to be below the threshold and not be accountable for episodes in TEAM. We seek comment on whether TEAM should consider implementing the alternatives to the minimum volume thresholds for either the 3-year baseline period or the performance year.

We seek comment on our proposal at proposed § 512.550(e)(3) for setting and applying the low volume threshold at reconciliation.

(i) Preliminary Target Prices

We propose that CMS would provide preliminary target prices to TEAM participants prior to the start of each performance year. For instance, since the earliest episodes for a given performance year would end on January 1, and most of these episodes would have been initiated by an anchor hospitalization or anchor procedure that occurred near the end of November or the beginning of December of the previous calendar year, we propose to provide preliminary target prices to the TEAM participant by the end of November prior to each performance year. We propose that preliminary target prices would be based on regional episode spending during the baseline period. TEAM participants would receive the preliminary target prices for each MS–DRG/HCPCS episode type that corresponded to their region. We propose that these preliminary target prices would incorporate a prospective trend factor (as described in section X.A.3.d.(3)(f) of the preamble of this proposed rule) and a discount factor (as described in section X.A.3.d.(3)(g) of the preamble of this proposed rule), as well as a prospective normalization factor (as described in section X.A.3.d.(4) of the preamble of this proposed rule) that would be subject to limited adjustment at reconciliation (as described in section X.A.3.d.(5)(h) of the preamble of this proposed rule).

(4) Risk Adjustment and Normalization

In the original CJR methodology, we first proposed that risk adjustment be limited to providing separate target prices for episodes initiated by MS–DRG 469 versus MS–DRG 470, because MS–DRGs under the IPPS are designed to account for some of the clinical and resource variations that exist and that impact hospitals' costs of providing care (80 FR 73338). In response to comments requesting further risk adjustment, in the 2015 CJR Final Rule we finalized a policy to risk adjust target prices based on the presence of hip fractures in order to capture a significant amount of patient-driven episode expenditure variation (80 FR 73339). As a result, we provided four separate target prices to participant hospitals based on MS–DRG 469 versus MS–DRG 470, and presence versus absence of a primary hip fracture. The impact of hip fractures on inpatient costs associated with a hip replacement was subsequently acknowledged by CMS' decision to create two new MS–DRGs (521 and 522) for hip replacements in the presence of a primary hip fracture (85 FR 58432). We incorporated these new MS–DRGs into the CJR model episode definition as of October 1, 2020 via the November 2020 Interim Final Rule with Comment (IFC) (85 FR 71170).

In the 2021 CJR 3-Year extension Final Rule, we acknowledged the need for further risk adjustment to account for beneficiary-level factors that tend to impact spending in a way that is beyond the control of the provider. We introduced age bracket (less than 65 years, 65 to 74 years, 75 to 84 years, and 85 years or more), CJR HCC count (zero, one, two, three, and four or more), and dual eligibility (receiving both full Medicare and Medicaid benefits) as beneficiary-level risk adjustment factors that would be applied to each episode at reconciliation. The definition of these risk adjustment variables, and our reasoning for incorporating them into the risk adjustment methodology, is described in detail at 86 FR 23523.

The coefficients for the risk adjustment variables in the CJR extension were calculated prospectively, prior to the beginning of each performance year, using a linear regression model. As we stated at 86 FR 23524, this regression model approach would allow us to estimate the impact of each risk adjustment variable on the episode cost of an average beneficiary, based on typical spending patterns for a nationwide sample of beneficiaries with a given number of CMS–HCC conditions, within a given age bracket, and with dual eligibility or non-dual eligibility status. We used an exponential model to account for the fact that CJR episode costs are not normally distributed. A detailed description of the regression model begins at 86 FR 23524.

At reconciliation, after applying the high-cost episode cap to remove outliers, the risk adjustment coefficients for the three risk adjustment variables were applied to the episode-level target price based on the applicable episode region and MS–DRG. However, since age, CJR HCC count, and dual eligibility status are inherently included in the regional target price, since regions with beneficiaries who are older, more medically complex, and socioeconomically disadvantaged tend to have higher average episode costs, we applied a normalization factor to remove the overall impact of adjusting for age, CJR HCC count, and dual eligibility on the national average target price, as described at 86 FR 23527.

By contrast, BPCI Advanced has used a more complex risk adjustment model that includes many more risk adjustment coefficients, including both patient and provider characteristics. Categories of patient characteristics include (but are not limited to): HCCs (individual flags, interactions, and counts), recent resource use, and demographics. Provider characteristics, which are used to group hospitals into peer groups, include bed size, rural vs. urban, safety net vs. non-safety net, and whether or not the participant is a major teaching hospital. The first stage of the BPCI Advanced risk adjustment methodology uses a compound log-normal model in order to account for the substantial right skew of the distribution of episode costs. This means that it combines two log-normal distributions in order to capture costs associated with both low-cost episodes (which are the majority of episodes) and very high cost episodes (which are fewer in number but exert a strong influence on spending averages). However, participants have found the risk adjustment model difficult to interpret, particularly since is it is not widely used in other research or healthcare models.

In an effort to simplify the risk adjustment methodology for TEAM and allow participants to more easily calculate an episode level estimated target price, we propose to base our methodology on the CJR extension methodology, with a few key differences. Rather than calculate one national set of risk adjusters across all MS–DRGs for a given episode category, we propose to calculate risk adjustment coefficients at the MS–DRG/HCPCS episode type level. We considered calculating risk adjustment at the MS–DRG/HCPCS episode type/region level, but we believe that, when further subdivided into regions, the low volume of episodes for certain MS–DRG/HCPCS episode types would be insufficient to create accurate and reliable risk adjustment multipliers.

We propose to use the same age bracket risk adjustment variable (less than 65 years, 65 to less than 75 years, 75 to less than 85 years, and 85 years or more) that we use in the CJR extension, based on the participant's age on the first day of the episode, as determined through Medicare enrollment data. We also propose to use

an HCC count risk adjustment variable, but we propose to calculate it differently than the CJR HCC count risk adjustment variable. For this risk adjustment variable, which we would call the TEAM HCC count, we propose to conduct a 90-day lookback for each beneficiary, beginning with the day prior to the anchor hospitalization or anchor procedure. We propose to use the beneficiary's Medicare FFS claims from that 90-day lookback period to determine which HCC flags the beneficiary is assigned, and create a count of those HCC flags. This methodology would be consistent with BPCI Advanced, and would represent a more uniform way of measuring clinical complexity across beneficiaries, as opposed to using the annual HCC file that is used in CJR. It would also reduce the incentive for increased coding intensity at the time of the initiating procedure.

We propose to use an expanded risk adjustment variable that accounts for multiple potential markers of beneficiary social risk. Although it would function as a single, binary (yes=1 or no=0) variable in our risk adjustment model, the variable would represent the union of three different potential markers of beneficiary social risk. The first would be full Medicare/Medicaid dual eligibility status, which is currently used in both CJR and BPCI Advanced. We further propose to incorporate two additional elements to the beneficiary social risk adjustment variable. We propose that beneficiaries would also be assigned the value of yes=1 for the social risk adjustment variable if they either fall into a state or national Area Deprivation Index percentile beyond a certain threshold, or if they qualify for the Medicare Part D Low Income Subsidy. The beneficiary would be assigned a value of yes=1 on this single, binary social risk variable if one or more of these three indicators of social risk applied to the beneficiary. We propose to use a threshold of the 80th percentile for the national ADI and the 8th decile for the state ADI. Across other CMS Innovation Center models, as well as peer reviewed publications, and we did not find a consensus on a specific threshold that is universally used. For example, the Making Care Primary Model uses 75th percentile for the national ADI and in existing literature, some papers use a continuous measure, and some use a 75%, an 80%, or 85% cut-off.[635] [636] [637] [638] [639] Therefore, we feel that an 80% threshold is comparable to other risk adjustment methodologies. We seek comment on whether there are different thresholds for national and state ADI that we should consider. Lastly, we propose to enforce sign restrictions to avoid negative coefficients for beneficiary social risk adjustment. In other words, the adjustment to the preliminary or reconciliation target prices would only happen if the coefficient on the beneficiary social risk adjustment variable is positive. We believe enforcing sign restrictions will more accurately reflect episode spending for underserved beneficiaries who may experience access and underutilization issues. The proposed beneficiary social risk variable and our reasons for choosing each component are described in detail in section X.A.3.f of the preamble of this proposed rule.

While we are proposing a limited set of risk adjusters that is closer in number to the CJR methodology for simplicity, we considered using the same set of risk adjusters in the BPCI Advanced model because we recognize that there may be particular episode categories or MS–DRGs that would benefit from additional clinical risk adjusters. For instance, in BPCI Advanced, just over half (53%) of CABG procedures have been performed electively, with the remainder performed emergently. Some clinicians have stated their belief that CABG episodes should be priced differently based on whether they are performed electively (that is, scheduled in advance) or emergently, even when they are assigned to the same MS–DRG. They stated their belief that non-emergent procedures are generally performed on relatively healthier beneficiaries, and providers may have greater control over outcomes. Conversely, they stated that episodes following an emergency room visit on the same day or the day before tend to involve sicker patients, leading to greater clinical variability and less predictable episode spending. We are therefore requesting comment on whether TEAM's should use the BPCI Advanced episode-specific risk adjuster or if there are other potential episode-specific or MS–DRG-specific clinical risk adjusters, and how those clinical risk adjusters should be defined based on information available on the IPPS claim associated with the episode trigger.

We also considered including peer group or hospital-specific risk adjusters in TEAM. Similar to the BPCI Advanced model, we considered including peer group adjusters that would be based off of hospital characteristics, including hospital size (for example, number of hospital beds), safety net hospital status, location (for example, CBSA urban and rural indicators and census division), and if the hospital was a major teaching hospital determined by looking at the intern to bed ratio in the provider specific files.[640] We recognize including this level of risk adjustment may improve pricing accuracy for hospitals, but it introduces an additional layer of complexity to the risk adjustment model that could be challenging for TEAM participants understand when factoring in the existing risk adjustment variable and other pricing components. Since TEAM is a mandatory model, and it may capture more hospitals that have not previously participated in an episode-based payment model, we are want to create a pricing methodology that all TEAM participants, regardless of experience or resource, can understand. We seek comment on whether target prices in TEAM should include risk adjustment variables based on hospital characteristics.

Another key difference between our proposal and the current CJR risk adjustment methodology is that we propose to provide a prospective normalization factor with preliminary target prices. We propose that the prospective normalization factor would be subject to a limited adjustment at reconciliation based on the observed case mix, up to +/−5%. This would allow participants to better estimate their target prices, as it would incorporate the normalization factor prospectively, rather than only introducing the normalization factor at

reconciliation. We believe that this approach strikes a balance between predictability and protecting TEAM participants and CMS from significant shifts in patient case mix between the final baseline year and the performance year.

A goal of TEAM's risk adjustment approach is to balance simplicity with accuracy to ensure our pricing methodology reflects episode spending that accounts for provider spending trends by region and MS–DRG as well as accounting for beneficiary acuity. Our proposed risk adjustment approach relies on capturing data from Medicare claims or other sources of information that do not include patient functional assessment data. Evidence suggests that risk adjustment models may be improved when taking into account patient functional status.[641] We recognize there are existing data sets that capture patient functional status information. Specifically, the Improving Medicare Post-Acute Care Transformation Act of 2014 (the IMPACT Act) requires the reporting of standardized patient assessment data with regard to quality measures and standardized patient assessment data elements. The standardized patient assessment elements include functional status and are collected and reported by Long-Term Care Hospitals (LTCHs), Skilled Nursing Facilities (SNFs), Home Health Agencies (HHAs) and Inpatient Rehabilitation Facilities (IRFs). Since an episode encompasses post-acute care spend, the standardized patient assessment data could be incorporated into TEAM's risk adjustment methodology. However, we recognize inclusion of such data may increase the risk adjustment methodology complexity and make it challenging for TEAM participants to understand how it affects their preliminary or reconciliation target price. Therefore, we seek comment on the utility of including standardized patient assessment data in TEAM's risk adjustment methodology or whether there is other functional status data we should consider and whether standardized patient assessment data or other functional status data should be included in TEAM's risk adjustment methodology in future performance years.

To summarize, for TEAM we propose a risk adjustment methodology based on the CJR extension methodology, but with key differences that we believe would maximize target price predictability and transparency. As in CJR, we propose to use baseline data to calculate risk adjustment multipliers and hold them constant at reconciliation. We propose that participants would be provided with these risk adjustment multipliers prior to the start of the Performance Year and would be able to use them to estimate their episode-level target prices. We propose that, unlike in CJR, these risk adjustment multipliers would be calculated at the MS–DRG level, resulting in a separate set of risk adjustment multipliers for each MS–DRG episode type. We also propose to incorporate a prospective normalization factor into preliminary target prices, which would be subject to a limited adjustment at reconciliation. We seek comment on our proposals at proposed § 512.545(a–d) for risk adjusting episodes.

(5) Proposed Process for Reconciliation

This section outlines our proposals on how we intend to reconcile performance year spending for a TEAM participant's beneficiaries in episodes against the reconciliation target price in order to determine if CMS owes the TEAM participant a reconciliation payment, or if the TEAM participant owes CMS a repayment (for all Track 3 participants and beginning in performance year 2 for Track 2 hospitals). We propose to adjust the reconciliation amount for quality based on the TEAM participant's CQS, which would be constructed from their quality measure performance, to calculate the quality-adjusted reconciliation amount. We propose to apply stop-loss/stop-gain limits to the quality-adjusted reconciliation amount to determine the TEAM participant's Net Payment Reconciliation Amount (NPRA). Finally, we propose to adjust the NPRA for post-episode spending, when applicable, to determine the reconciliation payment or repayment amount.

We refer readers to section X.A.3.b.(5) of the preamble of this proposed rule for our proposed definition of related services for our proposed episodes, to section X.A.3.a.(1) of the preamble of this proposed rule for our proposed definition of performance years, and to section X.A.3.d.(3) of the preamble of this proposed rule for our proposed approach to establish preliminary target prices.

(a) Annual Reconciliation

At proposed § 512.550 we propose to conduct an annual reconciliation calculation that would compare performance year spending on episodes that ended during that PY with reconciliation target prices for those episodes to calculate a reconciliation amount for each TEAM participant. We would reconcile, on an annual basis, all episodes attributed to a TEAM participant that end in a given calendar year during the model performance period. This would be consistent with CJR and numerous other CMS value-based payment programs. We believe that one annual reconciliation accommodates the need for regular performance feedback while minimizing the administrative burden of more frequent reconciliations. Therefore, we propose to align the TEAM reconciliation approach with reconciliation in CJR, and to reconcile episodes based on performance years. We seek comment on this proposal to conduct one reconciliation for each performance year.

(b) Timing

We propose to conduct the annual reconciliation of each TEAM participant's actual episode payments against the target price(s) 6 months after the end of the performance year. This policy would be consistent with the 6 months of claims runout we allow for the CJR reconciliation for PY6–8. We believe that 6 months is sufficient time for claims runout given that an internal review of Medicare claims data found that 98.71% of IP claims had been received, and 89.96% were considered final, by 6 months after the date of service.[642] For HOPD claims, those rates were 98.10% and 95.78%, respectively. Similar rates were found for all other types of claims, including Carrier, SNF, HH, and DME, indicating that we would have a nearly complete picture of performance year spending by 6 months after the end of the performance year. For TEAM, we propose to capture claims submitted by July 1st following the end of the performance year and carry out the NPRA calculation as described previously to make a reconciliation payment or hold TEAM participants responsible for repayment, as applicable, in quarters 3 or 4 of that calendar year. We seek comment on our proposal at proposed § 512.550(b) to perform reconciliation 6 months after the end of the performance year.

(c) TEAM Participants That Experience a Reorganization Event

We recognize that there may be TEAM participants that experience a reorganization event during a given performance year. At proposed § 512.505, we propose to define a reorganization event as a merger, consolidation, spin off or other restructuring that results in a new hospital entity under a given CCN. As a result of such an event, the TEAM participant may begin billing under a different CCN, or an additional entity could be incorporated into the TEAM participant's existing CCN, resulting in a new hospital entity. For instance, TEAM participant A may merge with, or be purchased by, TEAM participant B and begin billing under TEAM participant B's CCN. In this case, we propose to perform separate reconciliation calculations for TEAM participant A and TEAM participant B for those episodes where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the merger or purchase. We propose to reconcile episodes where the anchor hospitalization admission or the anchor procedure occurred on or after the effective date of the merger or purchase under the new or surviving CCN that applies to the blended entity. We are proposing this policy in recognition that the blended entity may have different spending patterns, or a different overall patient case mix, than the two separate entities prior to the merger. In a different instance, if a TEAM participant merges into or is purchased by a non-TEAM participant and begins billing under the CCN on the non-TEAM participant, we propose to reconcile episodes for the TEAM participant where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the merger or purchase. This policy would allow for the TEAM participant to earn a reconciliation payment or owe a repayment for the episodes that occurred during the portion of the performance year that they were in the model. However, once the TEAM participant begins to bill under the non-TEAM participant's CCN, the blended entity would not be considered a TEAM participant and we would not reconcile episodes where the anchor hospitalization admission or the anchor procedure occurred on or after the effective date of the merger or purchase under the new or surviving CCN that applies to the blended entity. We seek comment on our proposal at proposed § 512.550(b)(2) for conducting reconciliations for TEAM participants that experience a reorganization event during a given performance year.

(d) Updating Preliminary Target Prices To Create Reconciliation Target Prices

As discussed in section X.A.3.d.(4) of the preamble of this proposed rule, we are proposing to apply beneficiary-level risk adjustment and a limited adjustment to the prospective normalization factor, as applicable, to increase the accuracy of our reconciliation calculations. At the time of reconciliation, we would apply these adjustments, if applicable, to the preliminary target prices we calculated and communicated to TEAM participants prior to the applicable performance year, as described in Section X.A.3.d.(3)(i) of the preamble of this proposed rule. We note that in some cases, the final target price applied to an episode in a given performance year at reconciliation will not change. In addition, in some cases the reconciliation target price will increase from the preliminary target price provided prior to the performance year, potentially benefitting TEAM participants. For instance, if the prospective normalization factor were calculated as 0.85, but the beneficiary case mix during the performance year differed from the case mix during the final year of the baseline such that the final normalization factor were calculated as 0.89, the reconciliation target price would incorporate the final normalization factor and therefore be higher than the preliminary target price.

(e) Composite Quality Score

(i) Overview

Incorporating quality performance into the model payment structure is an essential component of TEAM, just as it is for the CJR model (80 FR 73370) and BPCI Advanced. Section X.A.3.c of the preamble of this proposed rule discusses the specific measures for which we propose that TEAM participants would be held accountable. In addition to Quality Payment Program requirements to tie quality performance to payment for Advanced APMs, we believe it is important for TEAM to link the opportunity to earn a reconciliation payment with performance on quality measures to place greater emphasis on beneficiary quality of care and patient-centered care.

As discussed in section X.A.3.d.(5)(g) of the preamble of this proposed rule, which outlines the proposed process for incorporating quality into the reconciliation calculation, for each TEAM participant, we propose to calculate the difference between the TEAM participant's performance year spending and their reconciliation target price at reconciliation, identified as the reconciliation amount. We propose that the reconciliation amount would then be adjusted based on the TEAM participant's quality performance. We propose to use the quality measures discussed in section X.A.3.c of the preamble of this proposed rule to calculate a Composite Quality Score, in a similar manner to what we have implemented for many CMS models and initiatives, including CJR and BPCI Advanced. The Composite Quality Score (CQS) methodology would allow performance on each required TEAM quality measure to be meaningfully valued in the TEAM pay- for-performance methodology, incentivizing and rewarding cost savings in relation to the quality of episode care provided by the TEAM participant.

For TEAM, the actual level of quality performance achieved will be the most important factor in calculating the CQS to reward those TEAM participants furnishing high quality care to TEAM beneficiaries. Like the CJR model, TEAM would include a wide range of participants with varying levels of experience with value-based care and different current levels of quality performance. Other CMS programs, also capture a wide range of participants and include quality performance methodologies that may directly affect the participant's financial performance. We note that the Shared Savings Program utilizes similar features as the proposed TEAM CQS methodology, such as benchmarking quality performance, calculating scores for each measure and constructing an overall score (see 42 CFR 425.502). Additionally, the Hospital VBP Program and the HAC Reduction Program also utilize a similar scoring methodology, which applies weights to various measures and assigns an overall score to a hospital (42 CFR 412.165 and 42 CFR 412.172). Despite the small number of quality measures proposed for TEAM, the measures represent both clinical outcomes and patient experience, and each would carry substantial value in the TEAM composite quality score.

Although performance on each measure would be valued in the TEAM composite quality score methodology, it is the TEAM participant's overall quality performance that would be considered in the pay-for-performance approach, rather than performance on each quality measure individually determining the financial opportunity under TEAM. The TEAM composite score methodology also provides a framework for incorporating additional

measures of meaningful outcomes for episodes in the future. The TEAM composite score methodology would provide the potential for financial reward for TEAM participants that reach an overall acceptable quality performance, thus incentivizing their continued efforts to improve the quality and efficiency of episodes. We seek comment on our proposal to use a composite quality score in the pay-for-performance methodologies of TEAM.

(ii) Determining Composite Quality Score

The CQS is one component of the reconciliation process and we propose that it would be calculated based on the TEAM participant's performance on the quality measures proposed for the model. One of the primary purposes of the CQS is to create a comparative assessment for performance across episode categories and TEAM participants. Since not all quality measures apply to all episode categories, quality measures that apply to more episode categories will be volume-weighted more heavily in the CQS.

As indicated in section X.A.3.c.(3) of the preamble of this proposed rule, the proposed TEAM quality measures would be collected from the CMS Hospital IQR Program and the HAC Reduction Program. The proposed TEAM quality measures collected from the Hospital IQR Program and HAC Reduction Program would have raw quality measure scores, however, these raw quality measure scores may be in different measurement units making it difficult to make comparisons. Therefore, raw quality measure scores must be manipulated in order to produce a CQS. Similar to the BPCI Advanced model, for each TEAM performance year we propose for each quality measure to convert raw quality measure scores into scaled quality measure scores by comparing the raw quality measure score to the distribution of raw quality measure score percentiles among the national cohort of hospitals, which would consist of TEAM participants and hospitals not participating in TEAM, in the CQS baseline period, so that each measure has a scaled quality measure score between 0 and 100 for each episode category. For example, if a TEAM participant's raw quality measure score of 71% in PY 1 is equivalent to the 60th percentile during the CQS baseline period, their scaled quality measure score for that measure will be 60 in the performance year. We recognize there may be instances where the raw quality score may fall between percentiles or may be higher or lower than the raw quality scores in the CQS baseline period. Therefore, we propose if the raw quality measure score could belong to either of two percentiles in the CQS baseline period, then we would assign the higher percentile. Further we would assign a scaled score of 100 if the TEAM participant has a raw quality measure score greater than the maximum of the raw quality measure scores in the CQS baseline period and assign a scaled quality measure score of zero if the TEAM participant has a raw quality score less than the minimum of the raw scores in the CQS baseline period. Lastly, we would not assign a scaled quality measure score if the TEAM participant has no raw quality measure score.

We propose the CQS baseline period to be calendar year 2025 for the duration of TEAM. We believe using calendar year 2025 as the CQS baseline period is similar with other CMS Innovation Center models, including the BPCI Advanced model, where the baseline period was established before the incentives of the model were in place in order to assess quality improvement. We considered using a contemporaneous CQS baseline period, where the CQS baseline period would be the same as the performance year for each performance year, but we believe that may increase CQS calculation complexity and may create challenges for TEAM participants to implement meaningful quality improvement efforts. Lastly, we also considered a rolling CQS baseline period, where the CQS baseline period would move forward by one year each performance year, but similar to a contemporaneous CQS baseline period, we believe the simplicity of have a fixed CQS baseline period will be easier for TEAM participants to understand the CQS calculation methodology. However, as indicated in section X.A.3.b.(1) of the preamble of this proposed rule, we recognize the potential for additional episodes added to TEAM in future performance years, which may result in different quality measures being used in the CQS calculation. If new episodes categories or quality measures are introduced to TEAM, we would reassess the CQS baseline period and implement any changes in future notice and comment rulemaking.

Prior to calculating the CQS, we propose volume weighting the quality measures based on the volume of episodes for a TEAM participant. Specifically, a normalized weight would be calculated by dividing the TEAM participant's volume of episodes for a given quality measure by the total volume of all the TEAM participant's episodes. This calculation would be applied to all quality measures for the TEAM participant (see Table X.A.–06). We believe it is important to volume weight the quality measures so that more weight is given to the quality measures that apply to more episode categories.

TABLE X.A.-06 – EXAMPLE QUALITY MEASURE NORMALIZED WEIGHTS CALCULATION

Quality Measure	Volume of Episodes	Normalized Weight
Hybrid Hospital-Wide Readmission (CMIT ID 356)	650	0.38
CMS Patient Safety and Adverse Events Composite (CMIT ID 135)	650	0.38
Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (CMIT ID 1618)	400	0.24
	1,700	1.00

We would then take the quality measures normalized weights and combine it with the scaled quality measure scores to determine the weighted scaled score. Specifically, we propose to calculate a weighted average by multiplying each quality measure's scaled quality measure score by its normalized weight to create weighted scaled scores for a TEAM participant. The weighted scaled scores would then be added together to construct the CQS

for the TEAM participant (see Table X.A.–07)

TABLE X.A.-07 – EXAMPLE WEIGHTED SCALED SCORE AND CQS CACLULATION

Quality Measure	Scaled Quality Measure Score	Normalized Weight	Weighted Scaled Score
Hybrid Hospital-Wide Readmission (CMIT ID 356)	60	0.38	22.8
CMS Patient Safety and Adverse Events Composite (CMIT ID 135)	50	0.38	19
Hospital-Level, Risk-Standardized Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (CMIT ID 1618)	40	0.24	9.6
Composite Quality Score			51.4

Lastly, although the required set of quality measures proposed for TEAM are ones currently being reported through the Hospital IQR Program and HAC Reduction Program, we recognize that CMS may, in future regulations, remove current measures or require different measures for hospitals to report in the Hospital IQR Program and HAC Reduction Program. Therefore, CMS may propose changes to the TEAM measures and the methodology for constructing the composite quality score through future notice and comment rulemaking. We seek comment on our proposed methodology to calculate the TEAM composite quality score.

(f) Calculating the Reconciliation Payment Amount or Repayment Amount

After the completion of a performance year, we propose to retrospectively calculate a TEAM participant's actual episode performance based on the episode definition. We note that episode spending would be subject to proration for services that extend beyond the episode (as described in section X.A.3.d.(3)(c) of the preamble of this proposed rule). We propose to cap performance year spending at the high-cost outlier cap as described in section X.A.3.d.(3)(e) of the preamble of this proposed rule. We propose to apply the high-cost outlier cap to episodes in the performance year similarly to how we propose to apply it to baseline episodes, using the 99th percentile for each MS–DRG/HCPCS episode type and region as the maximum. Any performance year episode spending amount above the high cost outlier cap would be set to the amount of the high cost outlier cap. We then propose to compare each TEAM participant's performance year spending to its reconciliation target prices. Specifically, we propose to define the reconciliation amount as the dollar amount representing the difference between the reconciliation target price and performance year spending, prior to adjustments for quality, stop-gain/stop-loss limits, and post-episode spending. We note that, as discussed in section X.A.3.d.(3) of the preamble of this proposed rule, a TEAM participant would have multiple target prices for episodes ending in a given performance year, based on the MS–DRG/HCPCS episode type and the performance year when the episode was initiated. We propose to determine the applicable reconciliation target price for each episode using the aforementioned criteria, and calculate the difference between each TEAM participant's performance year spending and its aggregated reconciliation target price for all episodes in the performance year, resulting in the reconciliation amount. Specifically, we propose to define the reconciliation amount as the dollar amount representing the difference between the reconciliation target price and performance year spending, prior to adjustments for quality, stop-gain/stop-loss limits, and post-episode spending. We propose to adjust the reconciliation amount for quality performance as discussed in section X.A.3.d.(5)(e) of the preamble of this proposed rule to determine the quality-adjusted reconciliation amount. We then propose to apply the stop-loss and stop-gain limits to the quality-adjusted reconciliation amount, as discussed in section X.A.3.d.(5)(f) of the preamble of this proposed rule, creating the Net Payment Reconciliation Amount (NPRA). Finally, we propose to combine the NPRA with the results of the post-episode payment calculation (as discussed in section X.A.3.d.(5)(g) of the preamble of this proposed rule), to create the reconciliation payment amount or repayment amount. We seek comment on our proposal at proposed § 512.550(c-g) for calculating the reconciliation payment amount or repayment amount.

We do not propose to include any TEAM reconciliation payments or repayments to Medicare under this model for a given performance year in the reconciliation amount for a subsequent performance year. We want to incentivize providers to provide high quality and efficient care in all years of the model. If reconciliation payments for a performance year are counted as performance year spending in a subsequent performance year, a hospital would experience higher performance year spending in the subsequent performance year as a consequence of providing high quality and efficient care in the prior performance year, negating some of the incentive to perform well in the prior year. Therefore, we propose to not have the reconciliation amount for a given performance year be impacted by TEAM Medicare repayments or reconciliation payments made in a prior performance year. We seek comment on our proposal not to include TEAM reconciliation payments or repayments in performance year spending.

(g) Incorporating the Composite Quality Score Into the Reconciliation Amount

As indicated in section X.A.3.c of the preamble of this proposed rule, the TEAM quality measure assessment is a pay-for-performance methodology aimed to incentivize and reward cost savings in relation to the quality of episode care provided by the TEAM participant. Similar to the BPCI Advanced model, we propose that a TEAM participant's quality performance would be linked to payment by translating the CQS into a CQS adjustment percentage and applying the CQS adjustment percentage to any positive or negative reconciliation amount. Specifically, for Track 1 TEAM

participants we propose that the CQS adjustment percentage would adjust a positive reconciliation amount up to 10%, and because Track 1 does not have downside risk, there would be no CQS adjustment percentage for negative reconciliation amounts. In the event a TEAM participant in Track 1 would have earned a negative reconciliation amount, their CQS would still be reported in their reconciliation report so that they may use this information to improve their quality measure performance in the next performance year. For Track 2 we propose that the CQS adjustment percentage would adjust a positive reconciliation amount up to 10% and a negative reconciliation amount up to 15%. In other words, the CQS adjustment percent would not adjust the positive reconciliation amount down by more than 10%, nor would it adjust the negative reconciliation amount up (meaning more towards a positive amount) by more than 15%. For Track 3 TEAM participants, we propose that the CQS adjustment percentage would adjust a positive reconciliation amount up to 10% and a negative reconciliation amount up to 10%. We would determine the CQS adjustment percentage using the following proposed formulas in Table X.A.–08.

TABLE X.A.-08 – TEAM PROPOSED CQS ADJUSTMENT PERCENTAGE FORMULAS

Track	Reconciliation Amount	CQS Adjustment Percentage Formula
Track 1	Positive Reconciliation Amount	CQS adjustment percentage = (10%-10% * (CQS/100))
Track 2	Positive Reconciliation Amount	CQS adjustment percentage = (10%-10% * (CQS/100))
Track 2	Negative Reconciliation Amount	CQS adjustment percentage = (15% * (CQS/100))
Track 3	Positive Reconciliation Amount	CQS adjustment percentage = (10%-10% * (CQS/100))
Track 3	Negative Reconciliation Amount	CQS adjustment percentage = (10% * (CQS/100))

The CQS adjustment percentage would be multiplied with the TEAM participant's positive or negative reconciliation amount to produce the CQS adjustment amount. The CQS adjustment amount would then be subtracted from the positive or negative reconciliation amount to create the quality-adjusted reconciliation amount. We propose to define the quality-adjusted reconciliation amount as the dollar amount representing the difference between the reconciliation target price and performance year spending, after adjustments for quality, but prior to application of stop-gain/stop-loss limits and the post-episode spending adjustment, as described in sections X.A.3.d.(5)(h). and X.A.3.d.(5)(i). of the preamble of this proposed rule. Since Track 2 participation after is limited to TEAM participants who may care for a higher proportion of underserved TEAM beneficiaries, we believe an asymmetric application of the CQS adjustment percentage for Track 2 TEAM participants may help to mitigate some the negative financial burden that may be associated with caring for underserved beneficiaries who tend to be higher cost and have worse health outcomes. Table X.A.–09 illustrates TEAM's proposed methodology of incorporating CQS into payment using the different CQS adjustment percentage scenarios using rounded values.

TABLE X.A.-09 – EXAMPLE OF PROPOSED CQS APPLICATION

Participant Track	Reconciliation Amount	CQS	CQS Adjustment Percentage	CQS Adjustment Amount	Quality-Adjusted Reconciliation Amount
Track 1	$24,000	72	2.8%	$672	$23,328
Track 1	-$19,500	88	0.0%	$0	$0.00
Track 2	$10,000	45	5.5%	$550	$9,450
Track 2	-$7,500	66	9.9%	$743	-$6,757
Track 3	$38,000	51	4.9%	$1,862	$36,138
Track 3	-$26,500	93	9.3%	$2,465	-$24,035

We considered an asymmetric application of the CQS adjustment percentage for TEAM participants in Track 3, but we believe the proposed symmetric application is appropriate to balance the amount of financial risk associated with quality performance since Track 3 is meant to have higher risks and rewards. Further, we also considered different CQS adjustment percentages for TEAM participants in all tracks including 20%, 25%, 33% and 50% but felt that these percentages may be too high given TEAM participants will have varying levels of experience with value-based care and a pay-for-performance methodology. We also considered lower CQS adjustment percentages for TEAM participants in all tracks including 1%, 3%, and 5%, but we believe these percentages would be too low and minimize the importance of quality improvement and thus would not incentivize TEAM participants to strive for quality of care improvements.

We also considered other approaches to tying TEAM quality measure performance to payment, including how the CJR Model applied their CQS methodology to adjust the discount factor. However, we believe the TEAM's proposed approach creates a greater incentive to improve quality measure performance because a TEAM participant must achieve of a CQS of 100 in order to receive the maximum quality-adjusted reconciliation amount. While this may be perceived as setting

a high standard, it is consistent with the approach we have taken in BPCI Advanced and also emphasizes the importance of beneficiary quality of care. Lastly, we considered applying a CQS threshold in order to be eligible to receive a reconciliation payment in TEAM. A similar approach was used in the CJR model where a participant hospital had to achieve a minimum CQS in order to receive a reconciliation payment, however, a level of quality performance that was below acceptable would not affect participant hospitals' repayment responsibility. We believe TEAMs proposed pay-for-performance methodology does not need a CQS threshold since poor quality performance in TEAM would negatively affect any positive or negative reconciliation amount.

We seek comment on TEAM's proposed methodology at proposed § 512.550(d) to calculate and apply the CQS. We also seek comment on our proposed definition of quality-adjusted reconciliation amount at § 512.505.

(h) Limitations on NPRA

In CJR and BPCI Advanced, we included both stop-loss and stop-gain limits on the total amount that a participant could owe to CMS as a repayment or receive from CMS as a reconciliation payment. For CJR, this policy and its justification is described in the 2015 CJR Final Rule at 80 FR 73398. For both CJR and BPCI Advanced, these limits were applied as a percentage of a participant's total aggregate target price at reconciliation. Stop-loss and stop-gain limits gradually increased over the first few years of the CJR model, reaching a maximum of 20% for most hospitals for performance years 4–8, while the BPCI Advanced model has maintained 20% limits every model year for all participants.

As with CJR, we propose to phase in risk in TEAM. We propose that Track 1 TEAM participants would not be subject to downside risk in performance year 1. We also propose a stop-gain limit of 10% for Track 1 TEAM participants in performance year 1. We propose that TEAM participants in Track 2 would be subject to downside and upside risk with a symmetric stop-gain and stop-loss limits of 10% for PY 2–5. We believe a 10% stop-gain and stop-loss limit of 10% is appropriate for Track 2 participants who can gain value-based care experience but have less financial risk. However, since Track 3 would be designed for TEAM participants with prior experience in value-based care or those who are prepared to accept greater financial risk in the first year of TEAM, we propose that TEAM participants that opt into Track 3 of the model would be subject to both upside and downside risk, with symmetric stop-gain and stop-loss limits of 20% for all performance years. The greater level of downside risk in Track 3 would therefore be balanced by higher stop-gain limits for Track 3 compared to Track 1 or Track 2, which we propose to continue for all performance years.

We considered, but are not proposing, higher and lower stop-gain and stop-loss limits for Track 3, including 25%, 15%, and 10% but we believe maintaining consistency with 20% stop-gain and stop-loss limits of previous episode-based payment models provides the appropriate balance of financial risk and reward to promote spending reductions with reasonable risk thresholds. We also considered lower stop-gain and stop-loss limits for Track 2, including 5%, 3% and 1% limits, or asymmetric limits, such as 10% stop-gain and 5% stop-loss limits or 5% stop-gain and 3% or 1% stop-loss. We also considered, but are not proposing, lower and asymmetric limits for certain TEAM participants. For example, we considered a 10% or 5% stop-gain paired with a 3% or 1% stop-loss for TEAM participants who meet the criteria of a safety net hospitals. Since TEAM offers a one-year glide path where all TEAM participants could elect to participate in Track 1 with no downside risk for PY1, we don't believe lower or asymmetric limits would be necessary for Track 2. By PY2 when Track 2 is available for certain TEAM participants, they should have sufficient infrastructure in place to assume two-sided risk while having less financial risk compared to Track 3. We seek comment on these alternative proposals for stop-gain and stop-loss limits and whether there are other mechanisms we should consider to help limit a TEAM participant's financial risk in the model.

We also propose to apply stop-loss and stop-gain limits after application of the CQS which would result in the NPRA. We propose to define NPRA as the dollar amount representing the difference between the reconciliation target price and performance year spending, after adjustments for quality and stop-gain/stop-loss limits, but prior to the post-episode spending adjustment, which is described in section X.A.3.d.(5)(g) of the preamble of this proposed rule. We believe applying the stop-loss and stop-gain limits after the CQS is appropriate because it limits the financial risk associated with episode spending and quality performance, which is similar to how the BPCI Advanced model and CJR model apply stop-loss and stop-gain limits.

We seek comment on our proposal at proposed § 512.550(c)(vi) for differential stop-gain and stop-loss limits for TEAM participants by Track and Performance Year. We also seek comment on our NPRA definition at proposed § 512.505.

(i) Participant Responsibility for Increased Post-Episode Payments

While the proposed episodes would extend 30 days post-discharge from the anchor hospitalization or post-procedure (for outpatient episodes), some hospitals may have an incentive to withhold or delay medically necessary care until after an episode ends to reduce their actual episode payments. We do not believe this would be likely, but in order to identify and address such inappropriate shifting of care, we propose to calculate for each performance year the total Medicare Parts A and B expenditures in the 30-day period following completion of each episode for all services covered under Medicare Parts A and B, regardless of whether the services are included in the proposed episode definition (section X.A.3.b.(5) of the preamble of this proposed rule). Because we base the proposed episode definition on exclusions, identified by MS–DRGs for readmissions and ICD–10–CM diagnosis codes for Part B services as discussed in section X.A.3.b.(5)(a) of the preamble of this proposed rule, and Medicare beneficiaries may typically receive a wide variety of related (and unrelated) services during episodes, there is some potential for hospitals to inappropriately withhold or delay a variety of types of services until the episode concludes regardless of whether the service is included in the episode definition, especially for Part B services where diagnosis coding on claims may be less reliable. This inappropriate shifting could include both those services that are related to the episode (for which the hospital would bear financial responsibility as they would be included in the actual episode spending calculation) and those that are unrelated (which would not be included in the actual episode spending calculation), because a hospital engaged in shifting of medically necessary services outside the episode for potential financial benefit may be unlikely to clearly distinguish whether the services were related to the episode or not.

This calculation would include prorated payments for services that extend beyond the episode as discussed in section X.A.3.d.(3)(c) of this proposed rule. Specifically, at proposed

§ 512.550(f) we propose to identify whether the average 30-day post-episode spending for a TEAM participant in any given performance year is greater than three standard deviations above the regional average 30-day post-episode spending, based on the 30-day post-episode spending for episodes attributed to all TEAM regional hospitals in the same region as the TEAM participant. We proposed that beginning with PY1 for Track 3 TEAM participants, and PY2 for Track 2 TEAM participants, if the TEAM participant's average post-episode spending exceeds this threshold, the amount above the threshold would be subtracted from the reconciliation amount or added to the repayment amount for that performance year. The amount above the threshold would not be subject to the stop-loss limits proposed elsewhere in the proposed rule. We seek comment on this proposal at proposed § 512.550(f) to make TEAM participants responsible for making repayments to Medicare based on high spending in the 30 days after the end of the episode and for our proposed methodology to calculate the threshold for high post-episode spend.

(j) Reconciliation Payments and Repayments

For the performance year 1 reconciliation process for Track 1 TEAM participants, we would combine a TEAM participant's NPRA and post-episode spending amount, as described previously in this section, and if positive, the TEAM participant would receive the amount as a one-time lump sum reconciliation payment from Medicare. If negative, the TEAM participant would not be responsible for repayment to Medicare, consistent with our proposal for a 1-year glide path to phase in greater financial responsibility in the model. For TEAM participants in Track 3 for PY 1, and Track 2 or Track 3 for PYs 2–5, if the amount is positive, the TEAM participant would receive the amount as a one-time lump sum reconciliation payment from Medicare. If the amount is negative, Medicare would hold the TEAM participant responsible for a one-time lump sum repayment. CMS would collect the one-time lump sum repayment in a manner that is consistent with all relevant federal debt collection laws and regulations.

We want participants to succeed in TEAM by providing high quality care to TEAM beneficiaries and reducing episode spending, but we understand there may be instances when a TEAM participant does not meet performance metrics and owes a repayment amount. We acknowledge paying back Medicare in a lump sum for a repayment amount may introduce financial hardship for some TEAM participants, especially those who may be new to value-based care with downside risk or those who have fewer financial resources. In some CMS Innovation Center models, certain participants are required to have financial guarantees, which act as a reinsurance policy for CMS if the participant is unable to pay back debts owed as a result of their performance in the model. For example, the BPCI Advanced model requires certain participants to have secondary repayment sources, generally in the form of a letter of credit or escrow agreement, that can be drawn upon if the participant is unable or fails to pay their repayment amount. Yet, financial guarantees require upfront capital and must be replenished in a timely manner for potential use in future debts. Further, financial guarantees generally need to be established before the model starts, thus before the TEAM participant would be eligible to use any TEAM payment amounts to fund the financial guarantee.

We do not believe financial guarantees would be appropriate for TEAM given the aforementioned concerns but recognize that providing some process to prolong recovery of a repayment amount may be needed to mitigate potential financial hardships. Existing Medicare policy allows the recovery of Medicare debt, defined as recoupment in 42 CFR 405.370, and non-Medicare debt, defined as offset in 42 CFR 405.370, by reducing present or future Medicare payments and applying the amount withheld to the indebtedness. To leverage the existing Medicare policy to recover debts in TEAM, we considered whether the reduction of present or future Medicare payments should be a dollar amount reduction, for example a $100 reduction of all Medicare payments, or a percentage reduction applied to all Medicare payments, for example a 2% reduction to Medicare payments. A dollar amount reduction may be simpler to calculate while translating a debt to a percentage reduction may be more complex to calculate. We also considered whether the reduction of present or future Medicare payments should only be associated with a TEAM participant's Medicare Part A payments for the corresponding episode categories tested in TEAM or for all of a TEAM participant's Medicare Part A payments. Limiting the Medicare payment reduction to only corresponding episode categories tested in TEAM may draw out the length of time for debt recovery, but it may ease TEAM participant bookkeeping when accounting for TEAM financial performance. Conversely, reduction of Medicare payments for all of a TEAM participant's Medicare Part A payments may reduce the length of time for debt recovery, but it may be more challenging to identify and track TEAM participant financial performance.

We are not proposing to require financial guarantees or change existing Medicare recoupment or offsetting policies, but we are seeking comment on whether we should consider these options further or if there are other ways to reduce financial hardship for TEAM participants that owe a repayment amount. We also seek comment on whether we should consider a Medicare payment policy waiver to reduce financial hardship, what the waiver would waive, and if the waiver is necessary to avoid undue burden on TEAM participants.

We also considered an alternative approach to making reconciliation payments and collecting repayments from TEAM participants. Under this alternative approach, in lieu of making a lump sum payment to TEAM participants, or collecting a repayment amount from TEAM participants, we would instead make a percentage adjustment to future FFS claims for TEAM participants. The magnitude of the adjustments would be intended to approximate the same dollar amount that would be paid or recouped via a reconciliation process; adjustments would be made in the form of a multiplier on claims for the anchor procedures for the episodes included in TEAM. For example, we would make adjustments to IPPS claims containing the MS–DRGs included in the model, and the amounts of the adjustments for each TEAM participant over the course of a year would, in aggregate, be intended to approximately equal the dollar amount that would have otherwise been paid via a reconciliation payment (or recouped via a repayment amount). The alternative approach would look similar to the operational payment mechanisms used in other Medicare programs and initiatives such as the Hospital Value-Based Purchasing Program, the SNF Value-Based Purchasing Program, the Expanded Home Health Value-Based Purchasing Model, and the Hospital Readmissions Reduction Program. We considered a value-based purchasing payment approach because we believe it has the potential to be less operationally cumbersome than making separate reconciliation payments if TEAM is expanded nationally in the future. We

also believe that a value-based purchasing payment approach that adjusts future FFS claims up or down would provide financial stability for TEAM participants, because they would receive notice of their adjustment amounts ahead of the year in which those adjustments would apply, and TEAM participants that would otherwise owe a repayment amount could effectively pay that debt over time automatically via claims adjustments, versus writing a check to CMS.

A value-based purchasing approach for TEAM would not be without challenges, however. First, preliminary modeling indicates that payment adjustment percentages for the proposed episodes may need to be relatively large in order to approximate the same dollar amount that would otherwise be paid out via a reconciliation payment, or paid to CMS via a repayment amount. Although the adjustment percentages would be limited to a subset of FFS claims for a given TEAM participant, we believe we must be cautious that particularly for some providers, a negative adjustment to FFS claims could represent a financial hardship. Second, we considered whether claims adjustments should be made to only IPPS claims (for the MS–DRGs that trigger an anchor procedure/hospitalization for an episode), or also to OPPS claims, given that we are proposing to include episodes that initiate in the outpatient setting in TEAM for certain episode categories. Making adjustments to both IPPS and OPPS claims would add complexity, particularly since the IPPS payment updates are made on a fiscal year schedule, while the OPPS updates payments on a calendar year cycle. We seek comment on whether, for TEAM or other future initiatives that may consider a similar value-based purchasing approach, we should make adjustments to IPPS claims only or also OPPS claims that trigger model episodes.

We seek comment on our proposal making reconciliation payments to, and collecting repayment amounts from, TEAM participant as a one-time, lump sum payment, as well as the alternative considered to implement a value-based purchasing approach where we make payment adjustments to future FFS claims in lieu of lump sum payments or repayments.

(6) Proposed Appeals Process

(a) First Level Appeal Process

At proposed § 512.560, we propose the following first level appeal process for TEAM participants to contest matters related to payment or reconciliation, of which the following is a non-exhaustive list: The calculation of the TEAM participant's reconciliation amount or repayment amount as reflected on a TEAM reconciliation report; the calculation of NPRA; and the calculation of the CQS. We propose that TEAM participants would review their TEAM reconciliation report and be required to provide a notice of calculation error that must be submitted in a form and manner specified by CMS. Unless the participant provides such notice, we propose that the reconciliation report would be deemed final within 30 calendar days after it is issued, and CMS would proceed with payment or repayment. We propose that if CMS receives a timely notice of an error in the calculation, CMS would respond in writing within 30 calendar days to either confirm or refute the calculation error, although CMS would reserve the right to an extension upon written notice to the TEAM participant. We propose that if a TEAM participant does not submit timely notice of calculation error in accordance with the timelines and processes specified by CMS, the TEAM participant would be precluded from later contesting any element of the TEAM reconciliation report for that performance year.

At proposed § 512.560(b) we propose an exception to the appeals process. We propose that if a TEAM participant contests a matter that does not involve an issue contained in, or a calculation that contributes to, a TEAM reconciliation report, a notice of calculation error is not required. A notice of calculation error form would not be an appropriate format for addressing issues other than calculation errors, given that it is tailored specifically to calculation errors. In these instances, we propose that if CMS does not receive a request for reconsideration from the TEAM participant within 10 calendar days of the notice of the initial reconciliation, the initial determination is deemed final and CMS proceeds with the action indicated in the initial determination. We note that this proposed exception does not apply to the limitations on review in § 512.594.

We solicit comment on our proposal for the first level appeals process.

(b) Reconsideration Review Process

At proposed § 512.561, we propose a reconsideration process that is based on processes implemented under current models being tested by the CMS Innovation Center. The process would enable TEAM participants to contest determinations made by CMS. We propose at to waive section 1869 of the Act, which governs determinations and appeals in Medicare and instead we propose to codify a reconsideration process for TEAM participants to utilize. We propose at § 512.561(a) that only TEAM participants may utilize the dispute resolution process. We believe establishing a reconsideration process is necessary to give TEAM participants a means to dispute certain determinations made by CMS.

This proposed reconsideration review process would be utilized in the case that a determination has been made and the TEAM participant disagrees with that determination. Part 512 subpart E would include specific details about when a determination is final and may be disputed through the reconsideration review processes.

We propose at § 512.561(b) that TEAM participants may request reconsideration of a determination made by CMS, only if such reconsideration is not precluded by section 1115A(d)(2) of the Act or this subpart. We propose at § 512.561(b)(1)(i) that a request for review of those final determinations made by CMS that are not precluded from administrative or judicial review would be submitted to a CMS reconsideration official. The CMS reconsideration official would be authorized to receive such requests and would not have been involved in the initial determination or, if applicable, the notice of calculation error process. We propose at § 512.561(b)(1)(ii) that the reconsideration review request would be required to include a copy of CMS's initial determination, contain a detailed written explanation of the basis for the dispute, and at § 512.561(b)(1)(iii) that the request would have to be made within 30 days of the date of CMS's initial determination via email addressed to an address specified by CMS. At § 512.561(b)(2), we propose that requests that do not meet the requirements of paragraphs (b)(1) are denied.

We propose that the reconsideration official would send a written acknowledgement to CMS and to the TEAM participant requesting reconsideration within 10 business days of receiving the reconsideration request. The acknowledgement would set forth the review procedures and a schedule that permits each party an opportunity to submit documentation in support of their position for consideration by the reconsideration official.

We propose at § 512.561(b)(1)(i)(B), that, to access the reconsideration process for a determination concerning a TEAM payment, the TEAM participant

would be required to satisfy the notice of calculation error requirements specified in section X.A.3.d.(6)(a) of the preamble of this proposed rule before submitting a reconsideration request under this process. In the event that the model participant fails to timely submit an error notice with respect to a TEAM payment, we propose that the reconsideration review process would not be available to the TEAM participant with regard to that payment.

We propose to codify standards for the reconsideration at § 512.561(c). First, during the course of the reconsideration, both CMS and the party requesting the reconsideration must continue to fulfill all responsibilities and obligations during the course of any dispute arising under TEAM. Second, the reconsideration would consist of a review of documentation timely submitted to the reconsideration official and in accordance with the standards specified by the reconsideration official in the acknowledgement at § 512.561(b)(3). Finally, we propose that the burden of proof would be on the TEAM participant to prove to the reconsideration official, by a standard of clear and convincing evidence, that the determination made by CMS was inconsistent with the terms of TEAM.

We propose to codify at § 512.561(d) that the reconsideration determination would be an on-the-record review. By this, we mean a review that would be conducted by a CMS reconsideration official who is a designee of CMS who is authorized to receive such requests under proposed § 512.561(b)(1)(i), of the position papers and supporting documentation that are timely submitted and meet the standards of submission under proposed § 512.561(b)(1) as well as any documents and data timely submitted to CMS by the TEAM participant in the required format before CMS made the initial determination. Under the proposed § 512.561(d)(2), the reconsideration official would issue to CMS and the TEAM participant a written reconsideration determination. Absent unusual circumstances in which the reconsideration official would reserve the right to an extension upon written notice to the TEAM participant, the reconsideration determination would be issued within 60 days of CMS's receipt of the timely filed position papers and supporting documentation. Under proposed § 512.561(d)(3), the determination made by the CMS reconsideration official would be final and binding 30 days after its issuance, unless the TEAM participant or CMS were to timely request review of the reconsideration determination by the CMS Administrator in accordance with § 512.5610(e)(1) and (2).

(c) CMS Administrator Review Process

We propose to codify at § 512.561(e) a process for the CMS Administrator to review reconsideration determinations made under proposed§ 512.561(d). We propose that either the TEAM participant or CMS may request that the CMS Administrator review the reconsideration determination made by the reconsideration official. Under proposed § 512.561(e)(1), the request to the CMS Administrator would have to be made via email, within 30 days of the reconsideration determination, to an email address specified by CMS. The request would have to include a copy of the reconsideration determination, as well as a detailed written explanation of why the model participant or CMS disagrees with the reconsideration determination. Under proposed § 512.561(e)(4), promptly after receiving the request for review, the CMS Administrator would send the parties an acknowledgement of receipt that outlines whether the request for review was granted or denied and, should the request for review be granted, the review procedures and a schedule that would permit both CMS and the TEAM participant an opportunity to submit a brief in support of their positions for consideration by the CMS Administrator. Should the request for review be denied, under proposed § 512.561(e)(5), the reconsideration determination would be final and binding as of the date of denial of the request for review by the CMS Administrator. Under proposed § 512.561(e)(6), should the request for review by the CMS Administrator be granted, the record for review would consist solely of timely submitted briefs and evidence contained in the record before the reconsideration official and evidence as set forth in the documents and data described in proposed § 512.561(d)(1)(ii); the CMS Administrator would not consider evidence other than information set forth in the documents and data described in proposed § 512.561(d)(1)(ii). The CMS Administrator would review the record and issue to CMS and the TEAM participant a written determination that would be final and binding as of the date the written determination was sent.

We invite public comment on the proposed reconsideration review process for TEAM.

e. Model Overlap

(1) Background

When determining the best strategy for addressing model overlap, we recognize we need to consider how to promote meaningful collaboration between providers and TEAM participants. In prior models, overlap policies were intended to be simple by avoiding duplicative incentive payments or giving precedence to a single accountable entity. However, what resulted were confusing methodologies or misaligned incentives which were difficult to navigate. Participants from prior models have also cited confusion with identifying to which model(s) a beneficiary may be aligned or attributed.

In earlier episode-based payment models, such as CJR (in certain circumstances) and BPCI, CMS addressed overlap by implementing a complex calculation and recouping a portion of the pricing discount for providers also participating in certain ACO initiatives. The recoupment was intended to prevent duplicate incentive payments for the same beneficiary's care; however, some participants perceived the resulting recoupment as a financial loss, discouraging providers from participating in both initiatives.

(2) Previous Episode-Based Model Overlap Policies

To avoid complexity, the CJR and BPCI Advanced models exclude beneficiaries aligned or assigned to certain ACOs, and these beneficiaries will not trigger a clinical episode.[643] While this exclusionary approach creates a clean demarcation of who is accountable for a beneficiary's care, it also limits the number of providers in accountable care relationships and becomes less tenable as we work towards the goal of increased accountability. Additionally, participants may be informed of beneficiary ACO alignment or assignment after the potential episode has been initiated and the expending of resources on unattributed beneficiaries. This concern highlights the opportunity to incentivize coordinated care, expand care redesign efforts to more patients, and strengthen APM participation.

Even passive avoidance of duplicated payments has its drawbacks such as lack

[643] Currently, the BPCI Advanced model does not allow overlap with the ACO Realizing Equity, Access, and Community Health (ACO REACH) model, the Vermont Medicare ACO Initiative, and the Comprehensive Kidney Care Contracting (CKCC) Options of the Kidney Care Choices (KCC) Model. The CJR model does not allow overlap with the ENHANCED Track of the Medicare Shared Savings Program.

of incentive to coordinate care. For example, the CJR and BPCI Advanced models allow overlap with the Medicare Shared Savings Program without a financial recoupment.[644] [645] However, this policy does not encourage behavior change to ensure a smooth transition back to population-based providers.

(3) Beneficiary Overlap

We acknowledge that there may be circumstances where a Medicare beneficiary in an episode may also be assigned to an ACO, advanced primary care model, or other model or initiative being implemented through the CMS Innovation Center or otherwise through CMS. For the purposes of this proposed rule, ''total cost of care'' models or programs refer to models or programs in which episodes or performance periods include participant financial responsibility for all Part A and Part B spending, as well as some Part D spending in select cases. We use the term ''shared savings'' in this proposed rule to refer to models or programs in which the payment structure includes a calculation of savings (that is, the difference between FFS amounts and program or model benchmark) and CMS and the model or program participant each retain a particular percentage of that savings. We note that there exists the possibility for overlap between episode-based payment model and shared savings models or programs such as Shared Savings Program, specialty care models such as the Enhancing Oncology Model (EOM), advanced primary care models such as Making Care Primary (MCP), state-based models such as the All-Payer Health Equity Approaches and Development model (AHEAD), or other CMS Innovation Center payment models that incorporate per-beneficiary-per-month (PBPM) fees or other payment structures. In addition to the Shared Savings Program, there are other ACO and CMS Innovation Center models that make or will make, once implemented, providers accountable for total cost of care over a period of time (for example, 6 to 12 months). Some of these are shared savings models (or programs, in the case of the Shared Savings Program), while others are not shared savings but hold participating providers accountable for the total cost of care during a defined episode. Each of these payment models or programs holds providers accountable for the total cost of care over the course of an extended period or episode by applying various payment methodologies. We believe it is important to simultaneously allow beneficiaries to participate in broader population-based and other total cost of care models, as well as episode payment models that target a specific episode with a shorter duration, such as TEAM. Allowing beneficiaries to receive care under both types of models may maximize the potential benefits to the Medicare Trust Funds and participating providers and suppliers, as well as beneficiaries. Research suggests that shared beneficiaries in episode-based payment models and ACOs can lead to lower post-acute care spending and reduced readmissions.[646] Beneficiaries stand to benefit from care redesign that may lead to improved quality for episodes even while also receiving care under these broader models, while entities that participate in other models and programs that assess total cost of care stand to benefit, at least in part, from the cost savings that accrue under TEAM. For example, a beneficiary receiving a procedure under TEAM may benefit from a hospital's care coordination efforts regarding care during the inpatient hospital stay. The same beneficiary may be attributed to a primary care physician affiliated with an ACO who is actively engaged in coordinating care for all the beneficiary's clinical conditions throughout the entire performance year, beyond the 30-day post-discharge period of the episode.

We propose that a beneficiary could be in an episode in TEAM, as described in section X.A.3.b. of the preamble of this proposed rule, by undergoing a procedure at a TEAM participant, and be attributed to a provider participating in a total cost of care or shared savings model or program. For example, a beneficiary may be attributed to a provider participating in the Shared Savings Program for an entire performance year, as well as have initiated an episode in TEAM during the ACO's performance year. Each model or program incorporates a reconciliation process, where total included spending during the performance period or episode are calculated, as well as any potential savings achieved by the model or program. We propose to allow any savings generated on an episode in TEAM and any contribution to savings in the total cost of care model be retained by each respective participant. This would mean the episode spending in TEAM would be accounted for the in the total cost of care model's total expenditures, but TEAM's reconciliation payment amount or repayment amount would not be included in the total cost of care model's total expenditures. Likewise, the total cost of care model's savings payments or losses would not be included in the episode spending in TEAM.

By allowing a beneficiary aligned to a total cost of care model participant to also be attributed to an episode in TEAM, we would be eliminating complexities experienced in prior models where it was difficult for participants to know when a beneficiary would trigger an episode and when the episode would be excluded. In prior models such as BPCI, we implemented a recoupment process after reconciliation to account for any duplicative savings generated on overlapping beneficiaries. This process involved disbursing reconciliation payments to BPCI participants and then submitting a recoupment demand for any savings generated on overlap. Overwhelming feedback from participants indicated that this recoupment process was perceived negatively and postured participants in BPCI and the total cost of care model into an adversarial relationship. Allowing overlap between beneficiaries aligned to a total cost of care model who also initiate an episode in TEAM and by allowing both participants to retain savings will have a positive impact on beneficiaries by fostering a cooperative relationship between accountable care and TEAM participants where all parties have interest in providing coordinated, longitudinal care.

Allowing overlap does mean that episode expenditures will be included in ACO expenditures and thus, have a potential impact on ACO performance. Whether or not this benefits an ACO's shared savings involves a variety of contributing factors that span beyond merely the results of episodes in TEAM. For example, an ACO's size and volume of aligned beneficiaries or the dynamics of certain markets in which an ACO operates could impact an ACO's expenditure calculations and shared savings. CMS cannot isolate each variable that could influence an ACO's expenditures and shared savings, nor can CMS propose a singular policy that will ensure all ACOs benefit from interaction, or lack thereof, with TEAM.

[644] The Medicare Shared Savings Program benchmark updates include retrospective county-level trends that implicitly reflect BPCI Advanced and CJR spending changes; such methodology helps mitigate potential overlap of federal outlays.

[645] The CJR model only allows overlap with the BASIC track of the Medicare Shared Savings Program.

[646] Navathe, A.S., Liao, J.M., Wang, E., Isidro, U., Zhu, J., Cousins, D., & Werner, R.M. (2021). Association of patient outcomes with bundled payments among hospitalized patients attributed to accountable care organizations. JAMA Health Forum, 2(8), e212131. *https://doi.org/10.1001/jamahealthforum.2021.2131.*

But because TEAM will be mandatory in specific markets, the model will be generally expected to similarly impact a Shared Savings Program ACO's episode spending and corresponding regional episode spending that contributes most of its retrospective benchmark update. This interaction is anticipated to largely mitigate potential overlapping incentive payments for the largest ACO program in traditional Medicare. CMS believes that allowing overlap and the retention of savings by ACOs and TEAM participants will encourage providers to collaboratively deliver coordinated care and yield improved outcomes to beneficiaries. This aligns with broader agency goals to foster increased beneficiary alignment to value-based care and allows us to learn from experience and avoid creating challenges managing shared beneficiaries between ACOs and episodes of care participants. In addition, there are other potential benefits to allowing overlap between a beneficiary aligned to a total cost of care model and initiate an episode in TEAM, such as strengthening the volume of episodes a TEAM participant is responsible for. We know from prior experience that low episode volume creates challenges for participants to generate meaningful savings and manage outlier cases with unusually high episode expenditures.

We also acknowledge that certain ACOs may prefer for their aligned beneficiary population to not be included in TEAM. Since ACOs are accountable for total cost of care, they may prefer to manage their beneficiaries and have full control over all expenditures and beneficiary care instead of sharing that responsibility with a TEAM participant. Alternatively, we seek comment on prohibiting aligned beneficiaries from full-risk population-based care relationships (for example, Shared Savings Program Enhanced Track) from being in an episode in TEAM. We seek comment specifically on non-condition specific care relationships (that is, this would exclude condition-specific models such as the Enhancing Oncology Model (EOM)).

Additionally, we seek comment on the use of supplemental data (for example, shadow bundles[647] data) as providing a total cost of care or shared savings model participant with the ability to utilize episodes to improve care coordination and reduce cost.

(a) Considerations for Notification Process for Shared Savings or Total Cost of Care Model

Prior model experience has shown that it can be challenging for model participants to understand in real time whether a beneficiary's episode will be excluded, and we know that prior recoupment policies created friction between episode model participants and total cost of care model participants. We recognize the importance of coordination between a TEAM participant and total cost of care participant to ensure the beneficiary has continuous care moving beyond the structure of an episode. In order to accommodate a smooth transition for the aligned beneficiary, we considered, but are not proposing there be a notification process required of the TEAM participant to ensure they are alerting the total cost of care participant of their aligned beneficiary's episode during the anchor hospitalization or anchor procedure. This notification process would allow the total cost of care participant the time to deploy their resources (for example, care coordination staff) and be prepared as the patient discharges from their anchor hospitalization or anchor procedure. However, we recognize that identifying beneficiaries aligned to a total cost of care participant may be challenging because it would require timely access to beneficiary alignment list for total cost of care participants and would increase burden to implement a notification process. We seek comment on ways to implement a notification process for shared savings or total cost of care participants that would be used to alert a shared savings or total cost of care participant that one of their aligned beneficiaries has initiated an episode in TEAM.

Many total cost of care models (that is, ACOs) use their market's Health Information Exchange (HIE) to provide admission, discharge, and transfer (ADT) alerts. Others use less automated processes including fax or telephone to provide the alert. We recognize there is variation in the capabilities and sophistication of HIEs nationally and we recognize there is an increased administrative burden on participants when providing a telephonic or fax alert. Additionally, we recognize that there is a variation in the timeframe in which these alerts can be issued based on the mechanism in which they are provided. We seek comment on what timeframe should be required to issue the notification and what process(es) should be used to provide the notification without causing undue burden on the TEAM participant, including both the processes cited previously or other processes not mentioned. We also seek comment on how broader use of ADT data exchange between TEAM participants and ACOs could improve care coordination, including any perceived barriers to better ADT exchange, and opportunities to improve ADT exchange, and how CMS could address these barriers and opportunities.

(b) Accounting for Beneficiary Overlap With New CMS Models and Programs

We acknowledge there may be new models or programs that could have overlap with TEAM. This could occur because a beneficiary may trigger an episode in TEAM while being aligned to a new CMS model or program or because a TEAM participant also participates in another CMS model or program. We would plan to assess each new model to determine if the structure of payment and savings calculation are subject to the current proposed overlap policy or if there would be a need to bring forward any additional overlap requirements to account for the new model.

f. Health Equity

(1) Background

Consistent with President Biden's Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' and Executive Order 14091 on ''Further Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' CMS has made advancing health equity the first pillar in its Strategic Plan.[648] [649] We define health equity as the attainment of the highest level of health for all people, where everyone has a fair and just opportunity to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, and other factors that affect access to care and health outcomes. We are working to advance health equity by designing,

[647] Shadow bundles are claims data for services, supplies, and their associated payments grouped into discrete procedural- and/or condition-specific episodes of care. Episodes are constructed based on a consistent set of rules for ACO-attributed beneficiaries who meet the criteria to trigger an episode. Target prices are incorporated to measure performance and provide opportunity for sharing savings with providers.

[648] *https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government.*

[649] 88 FR 10825 (February 22, 2023) (*https://www.federalregister.gov/documents/2023/02/22/2023-03779/further-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal*).

implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our beneficiaries need to thrive.[650]

Disparities in access to surgical care by race/ethnicity, insurance status, income, and geography are well-documented, including disparities in the progression to surgery once surgical indication is determined and disparities in receipt of optimal surgical care.[651] Research has also highlighted disparities in readmissions rates following surgical intervention, indicating opportunities to tailor readmission-focused interventions to specific sites of care, such as safety net hospitals, to improve surgical outcomes.[652] [653] For Medicare beneficiaries, higher health-related social need is also associated with a higher risk of complications, length of stay, and 30-day readmission, and mortality following surgery.[654] Accordingly, there are opportunities to improve disparities in surgical outcomes by transforming infrastructure and care delivery processes, particularly for hospitals that serve higher proportions of historically underserved populations.

In this section, we discuss proposals for identifying safety net hospitals and rural hospitals within TEAM, and the associated flexibilities for TEAM participants meeting these definitions. We are seeking comment on the proposed safety net hospital and rural hospital definitions for TEAM, proposed model flexibilities for participants meeting each of these definitions, and the alternatives discussed.

(2) Identification of Safety Net Hospitals

(a) Background

Among the goals of CMS's health equity pillar is to evaluate policies to determine how we can support safety net providers, partner with providers in underserved communities, and ensure care is accessible to those who need it.[655] There are also opportunities to engage more safety net providers in CMS Innovation Center models to increase the diversity of Medicare beneficiaries reached by models.[656] Although various approaches exist to identify ''safety net providers,'' this term is commonly used to refer to health care providers that furnish a substantial share of services to uninsured and low-income patients.[657] As such, safety net providers, including acute care hospitals, play a crucial role in the advancement of health equity by making essential services available to the uninsured, underinsured, and other populations that face barriers to accessing healthcare, including people from racial and ethnic minority groups, the LGBTQ+ community, rural communities, and members of other historically disadvantaged groups. Whether located in urban centers or geographically isolated rural areas, safety net hospitals are often the sole providers in their communities of specialized services such as burn and trauma units, neonatal care and inpatient psychiatric facilities.[658] They also frequently partner with local health departments and other institutions to sponsor programs that address homelessness, food insecurity and other social determinants of health, and offer culturally and linguistically appropriate care to their patients.

Because they serve many low-income and uninsured patients, safety net hospitals may experience greater financial challenges compared to other hospitals. Among the factors that negatively impact safety net hospital finances, MedPAC has pointed specifically to the greater share of patients insured by public programs, which it stated typically pay lower rates for the same services than commercial payers; the increased costs associated with treating low-income patients, whose conditions may be complicated by social determinants of health, such as homelessness and food insecurity; and the provision of higher levels of uncompensated care.[659]

In its June 2022 Report to Congress, MedPAC expressed concern over the financial position of safety net hospitals.[660] The Commission noted that the limited resources of many safety net hospitals may make it difficult for them to compete with other hospitals for labor and technology, and observed that ''[t]his disadvantage, in turn, could lead to difficulty maintaining quality of care and even to hospital closure.'' [661] Other research shows that the closure of a safety net hospital can have ripple effects within the community, making it more difficult for disadvantaged patients to access care and shifting uncompensated care costs onto neighboring facilities.[662] [663]

Given the critical importance of safety net hospitals to the communities they serve, we have considered different safety net hospital definitions to identify the best way to represent providers serving historically underserved populations in TEAM and/or provide flexibilities to those deemed as safety net providers. In the following section, we discuss multiple methodological options for identifying safety net providers in TEAM.

(b) Methodological Considerations

(i) CMS Innovation Center Strategy Refresh Safety Net Definition

The CMS Innovation Center's Strategy Refresh developed a definition of safety net providers to monitor the percent of safety net facilities participating in CMS Innovation Center models. The CMS Innovation Center's Strategy Refresh defined safety net hospitals as short-term hospitals and critical access hospitals (CAHs) that serve above a

[663] *https://www.healthaffairs.org/do/10.1377/forefront.20180503.138516/full/.*

baseline threshold of beneficiaries with dual eligibility or Part D Low-Income Subsidy (LIS), as a proxy for low-income status.[664] Under the CMS Innovation Center's Strategy Refresh definition, hospitals are identified as safety net when their patient mix of beneficiaries with dual eligibility or Part D LIS exceeds the 75th percentile threshold for all congruent facilities who bill Medicare.

To calculate the hospital-level proportions of beneficiaries with dual eligibility and Part D LIS, a one-year or multiple-year retrospective baseline (for example, weighted three-year average) for each measure could be calculated for each TEAM participant. We would then determine the 75th percentile threshold for each measure separately based on the distribution of the two proportions (beneficiaries with dual eligibility or Part D LIS) for all PPS hospitals who bill Medicare. TEAM participants with proportions that meet or exceed the determined threshold for either dual eligibility or Part D LIS will be considered as a safety net hospital for the purposes of TEAM.

We could make safety net determinations based on the CMS Innovation Center's Strategy Refresh's definition using the described approach as of the model start date and hold the determinations constant for TEAM's duration. Alternatively, we could calculate the hospital-level proportions of beneficiaries with dual eligibility and Part D LIS and the corresponding 75th percentile threshold for each measure annually, using a single year or rolling multiple-year weighted average of data from all PPS hospitals who bill Medicare. We could then make redeterminations of safety net qualification under TEAM annually. This annual approach could mean that TEAM participants' safety net hospital qualifications could vary over the model's duration.

(ii) Medicare Safety Net Index (MSNI)

Another approach to identify safety net hospitals would be to use MedPAC's Safety Net Index (SNI), which is calculated as the sum of—(1) the share of the hospital's Medicare volume associated with low-income beneficiaries; (2) the share of its revenue spent on uncompensated care; and (3) an indicator of how dependent the hospital is on Medicare. MSNI is calculated at the hospital level using data from CMS cost reports for each hospital.[665]

For the share of the hospital's Medicare volume associated with low-income beneficiaries, MedPAC's definition of low-income beneficiaries includes all those who are dually eligible for full or partial Medicaid benefits, and those who do not qualify for Medicaid benefits in their states but who receive the Part D LIS because they have limited assets and an income below 150 percent of the Federal poverty level. Collectively, MedPAC refers to this population as ''LIS beneficiaries'' because those who receive full or partial Medicaid benefits are automatically eligible to receive the LIS. MedPAC states that its intent in defining low-income beneficiaries in this manner is to reduce the effect of variation in states' Medicaid policies on the share of beneficiaries whom MedPAC considers low-income, but to allow for appropriate variation across states based on the share of beneficiaries who are at or near the Federal poverty level. To calculate the LIS ratio for a hospital for a given fiscal year, we could use the number of inpatient discharges of Medicare beneficiaries who are also LIS beneficiaries, using the most recent MedPAR claims for the discharge information, divided by the total number of inpatient discharges of Medicare beneficiaries.

For the share of a hospital's revenue spent on uncompensated care, we could use the ratio of uncompensated care costs to total operating hospital revenue from the most recent available audited cost report data.[666] For further discussion on how this ratio could be calculated using audited cost report, please refer to 88 FR 26658.

For the indicator of how dependent a hospital is on Medicare, MedPAC's recommendation is to use one-half of the Medicare share of total inpatient days. In calculating the Medicare share of total inpatient days for a hospital, we could use the most recent available audited cost report data. For further information on how the numerator and denominator could be determined to calculate the indicator of how dependent a hospital is on Medicare from audited cost report data, please refer to 88 FR 26658.

Using the sum of the three indicators as described, each TEAM participant could be assigned an SNI score, where a higher value means that a participant has either a high Medicare share of services, low incomes among a high share of its Medicare patients, and/or a high share of its revenue spent on uncompensated care.

To apply the Medicare Safety Net Index (MSNI) to identify safety net hospital participants in TEAM, we could calculate the SNI for TEAM *participants* using a one-year or multiple-year baseline period (for example, a three-year average). We could then set a threshold to identify safety net providers with TEAM based on the distribution of scores for all PPS hospitals that bill Medicare (for example, providers with scores in the 75th percentile of SNI scores could be considered safety net providers). We could make safety net determinations based on the described approach as of the model start date and hold the determinations constant for TEAM's duration. Alternatively, we could calculate the SNI and corresponding threshold annually using a one-year or multiple-year moving average and make redeterminations of safety net designations annually. This annual approach could mean that TEAM participant safety net qualifications for TEAM could vary over the model's duration.

(iii) Area Deprivation Index

Another approach to identifying safety net hospitals could be to use area-level indices. This approach could potentially better target policies to address the social determinants of health as well as address the lack of community resources that may increase risk of poor health outcomes and risk of disease in the population. In a recent environmental scan, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) suggested that an area-level index could be used to prioritize communities for funding and other assistance to improve social determinants of health (SDOH)—such as affordable housing, availability of food stores, and transportation infrastructure. Although ASPE concluded that none of the existing area-level indices identified in the environmental scan were ideal, they concluded that the area deprivation index (ADI) was one of the best available choices when selecting an index for addressing health related

[666] The most recent available cost report data for this purpose generally lags 4 years behind the rulemaking year (for example, FY 2020 cost report data are available for this FY 2024 proposed rule).

social needs or social determinants of health.[667]

The ADI was developed through research supported by the National Institutes of Health'' (NIH) with the goal of quantifying and comparing social disadvantage across geographic neighborhoods. It is a composite measure derived through a combination of 17 input variables—including measures of income, education, employment, and housing quality—from the American Community Survey (ACS) 5-year estimate datasets.[668] Each neighborhood is assigned an ADI value from 1 to 100 (corresponding to percentile), where a higher value means that a neighborhood is more deprived. The ADI measure is intended to capture local socioeconomic factors correlated with medical disparities and underservice. Several peer reviewed research studies demonstrate that neighborhood-level factors for those residing in disadvantaged neighborhoods also have a relationship to worse health outcomes for these residents.[669] [670] [671]

Medicare already uses ADI to assess underserved beneficiary populations in the Shared Savings Program, and ADI is also used in CMS Innovation Center models. In the CY 2023 PFS final rule, CMS adopted a policy to provide eligible Accountable Care Organizations (ACOs) with an option to receive advanced investment payments (87 FR 69778). Advance investment payments are intended to encourage low-revenue ACOs that are inexperienced with risk to participate in the Shared Savings Program and to provide additional resources to such ACOs in order to support care improvement for underserved beneficiaries (87 FR 69845 through 69849). The risk-factors based (using ADI) scores assigned to the beneficiaries assigned to the ACO form the basis for determining the quarterly advanced investment payment to the ACO. For additional detail, please see the quarterly payment amount calculation methodology at 42 CFR 425.630(f)(2).

To use ADI to identify safety net hospitals for TEAM, episodes could be assigned an ADI value based on the beneficiary's address found in the Common Medicare Environment (CME) file. Episodes meeting an established national ADI percentile threshold (for example, ADI >80) could be classified as high-ADI episodes, and a distribution of the proportion of high-ADI episodes could be constructed. Those TEAM participants that fell above an established threshold of high-ADI episodes (for example, 75th percentile) could be classified as safety net hospitals. For PY1, the proportion of high-ADI episodes and its corresponding distribution could be determined based on a single-year or multiple-year retrospective baseline (for example, three-year average). Those TEAM participants that met or exceeded the determined threshold would be designated as safety net. We could hold these designations constant for TEAM's duration or recalculate the proportion of high-ADI episodes annually (using a one-year or multiple-year moving average) and make safety net redeterminations based on an updated threshold on an annual basis. This annual approach could mean that TEAM participants' safety net qualifications for TEAM could vary over the model's duration.

(c) Proposed Methodology for Identifying Safety Net Hospitals

We considered the previously mentioned methods for identifying safety net hospitals and we propose to use the CMS Innovation Center's Strategy Refresh definition for identifying safety net hospitals within TEAM. Use of the CMS Innovation Center's Strategy Refresh's safety net definition allows for a consistent and streamlined approach to how the CMS Innovation Center plans to monitor safety net participation with CMS Innovation Center models. Further, the definition uses two recognized measures of social risk to identify hospitals serving a higher proportion of beneficiaries that may face barriers to receiving or accessing care.

Beneficiaries with dual eligibility are considered a vulnerable group for several reasons including the nature of dual eligibility requirements, a higher proclivity for experiencing chronic conditions, and an increased likelihood of mental health diagnosis.[672] [673] In its 2016 ''Report to Congress Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs,'' the Office of the Assistant Secretary for Planning and Evaluation (ASPE) found that dual eligibility status was the strongest predictor of poor outcomes of quality measures among multiple social risk factors examined.[674] TEAM's proposed approach to identify safety net hospitals is also similar to other approaches used in CMS Innovation Center models. For example, BPCI Advanced identifies safety net hospitals by tabulating the proportion of episodes with fully or partially dual eligible beneficiaries; if a hospital exceeded a 60% threshold of episodes based on the previous model year, then they would be considered a safety net hospital.[675]

While dual eligibility status does not fully capture all aspects of social risk, the incorporation of the proportion of patients with Part D LIS as a proxy for income into TEAM's proposed safety net definition broadens the range of possible beneficiary social risk factors used to make safety net hospital designations under the model. In its 2017 report on ''Accounting for Social Risk Factors in Medicare Payment,'' the National Academies found that accounting for dual eligibility alone may not be sufficient to capture all social risk factors, and the incorporation of multiple measures may help to better characterize overall social risk.[676]

We seek comment on our proposal to identify safety net hospitals using the CMS Innovation Center's Strategy Refresh's definition in TEAM at § 512.505.

(3) Identification of Rural Hospitals

(a) Background

Americans who live in rural areas of the nation make up about 20 percent of the United States (U.S.) population, and

[676] National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press. doi: 10.17226/23635.

they often experience shorter life expectancy, higher all-cause mortality, higher rates of poverty, fewer local doctors, and greater distances to travel to see health care providers, compared to their urban and suburban counterparts.[677] The health care inequities that many rural Americans face raise serious concerns that the trend for poor health care access and worse outcomes overall in rural areas will continue unless the potential causes of such health care inequities are addressed. Barriers such as workforce shortages can impact health care access in rural communities and can lead to unmet health needs, delays in receiving appropriate care, inability to get preventive services, financial burdens, and preventable hospitalizations.[678]

Hospitals in rural areas often face other unique challenges. Rural hospitals may be the only source of healthcare services for beneficiaries living in rural areas, and beneficiaries have limited alternatives. Rural hospitals may also be in areas with fewer providers including fewer physicians and PAC facilities, rural hospitals may have more limited options in coordinating care and reducing spending while maintain quality of care under a value-based care arrangement. We believe that urban hospitals may not have similar concerns as they are often in areas with many other providers and have greater opportunity to develop efficiencies.

(b) Definition of Rural Hospital

We do not propose to include any geographically rural areas for TEAM based on the proposed CBSAs as defined in section X.A.3.a.(4) of the preamble of this proposed rule. However, some hospitals in the proposed CBSAs for TEAM may be considered rural for other reasons, such as being reclassified as rural under the Medicare wage index regulations or being designated a rural referral center (RRC).

For the purposes of TEAM, we propose a rural hospital to mean an IPPS hospital that is located in a rural area as defined under § 412.64 of this chapter; is located in a rural census tract defined under § 412.103(a)(1) of this chapter; has reclassified as a rural hospital under § 412.103 of this chapter, or is designated a rural referral center (RRC) under § 412.96 of this chapter. This definition would be an expanded version of the rural hospital definition used by the CJR model as defined in 42 CFR 510.

For PY1, rural designations under TEAM would be based on the TEAM participant's rural classification as of the model start date. We recognize that rural designations and rural reclassification requests in accordance with § 412.103 may occur over on a rolling basis over the course of the model and can take several months to be reviewed and approved by CMS. TEAM participants that receive an approved rural designation under the criteria defined in the preceding paragraph or an approved rural reclassification in accordance with § 412.103 must notify CMS at least 60 calendar days prior to the start of a model's performance year for CMS to consider classifying the TEAM participant as rural under the model for the following performance year. We propose that model rural designations will occur only once at the beginning of each model performance year regardless of when a TEAM participant's rural classification may change within a given performance year.

We propose that if a TEAM participant's classification is no longer rural pursuant to § 412.103 or any other criteria previously qualifying them as rural as defined earlier in this section, the TEAM participant must notify CMS in a manner chosen by CMS within 60 calendar days of receipt of this designation change. We propose that TEAM participants would continue to receive the flexibilities for rural hospitals as described in section X.A.3.a.(3) of the preamble of this proposed rule through the remainder of the performance year in which the redesignation occurs, but the TEAM participant would no longer qualify for rural hospital flexibilities at the start of the next performance year.

We seek comment on our proposal to identify rural hospitals in this section. We are not proposing to include a measure of hospital rurality within our risk adjustment model as described in sectionX.A.3.d.(4) of the preamble of this proposed rule but seek comments on whether inclusion of this risk adjustor would be warranted.

(4) Beneficiary Social Risk Adjustment

In recent years there has been a push for Medicare and other payers to include beneficiary social risk adjustment into financial methodologies that determine health care payments.[679] It is believed that the inclusion of beneficiary social risk adjustment may provide more resources to providers who care for underserved beneficiaries to offset the additional costs often attributed to SDOH. In other words, patients with limited resources or access to care may require more spending from providers to achieve equitable outcomes. Beneficiary social risk adjustment has been limited in previous episode-based payment models. The BPCI Advanced and CJR models included beneficiary social risk adjustment for beneficiary dual eligibility status, yet that single adjuster alone may not be sufficient in capturing spending differences for beneficiary social risk. Findings from the CJR model's 5th Annual Report found that, during the baseline period, historically underserved populations generally had higher episode payments, used more institutional post-acute care, had higher rates of emergency department use and readmissions, and received elective LEJRs at a lower rate than their reference populations.[680]

There is significant literature and research surrounding the inclusion of social risk adjustment in health care payments, especially given the varying social risk adjustment indicators available.[681] [682] [683] In a recent environmental scan, ASPE indicated that area-level deprivation indices tend to have the broadest coverage across the entire range of social risk factors. According to ASPE's report, area-level deprivation indices are, by definition, measured for geographic areas, which presents challenges in including them in payment models because a provider's patients are unlikely to be representative of the population of the

geographic area in which the provider is located.[684]

Several CMS Innovation Center initiatives incorporate (or may incorporate) beneficiary social risk adjustment into their financial calculations or determining payment amounts, including the ACO REACH model, the Enhancing Oncology Model (EOM), the Making Care Primary (MCP) model, and the Guiding an Improved Dementia Experience (GUIDE) model. To avoid relying on a single indicator that may not be representative of the beneficiaries a provider cares for, these models incorporate multiple social risk indicators. Specifically, these models take into account one or more of the following indicators in their risk adjustment models: state and national ADI, Medicare Part D Low-Income Subsidy (LIS), and dually eligible beneficiaries enrolled in both Medicare and Medicaid. Factoring in multiple indices may avoid challenges when an underserved beneficiary lives in higher cost-of-care area or beneficiaries that have difficulty accessing care. For example, incorporating both state and national ADI allows the for the risk adjustment model to capture national and local socioeconomic factors correlated with medical disparities and underservice, while including the LIS measure will capture socioeconomic challenges that could affect a beneficiary's ability to access care. For these reasons, and to align with other CMS Innovation Center models, we propose to incorporate and equally weight three social risk indicators in TEAM's target price methodology, see section X.A.3.d.(4) of the preamble of this proposed rule, specifically state and national ADI indicators, the Medicare Part D LIS indicator, and Dual-eligibility status for Medicare and Medicaid. We believe that including these social risk indicators would ensure TEAM participants that serve disproportionately high numbers of underserved beneficiaries are not inadvertently penalized when setting TEAM target prices.

We seek comment on the proposed beneficiary social risk adjusters for TEAM and whether there are potential beneficiary social risk indicators we should consider in TEAM's target price methodology.

(5) Health Equity Plans and Reporting

(a) Health Equity Plans

We believe it is important for TEAM participants to identify and monitor where disparities exist in their TEAM beneficiary population, and to use the data that they collect to implement evidence-based strategies aimed at addressing the identified health disparities and advancing health equity. To further align with other CMS Innovation Center models and promote health equity, we are proposing that TEAM participants can voluntarily submit to CMS, in a form and manner and by the date(s) specified by CMS, a health equity plan for the first performance year. This proposal to make submission of a health equity plan voluntary in PY1 recognizes that constructing a health equity plan may require significant time and effort by the TEAM participant. Beginning in PY2, we propose that TEAM participants would be required to submit a health equity plan in a form and manner and by the date(s) specified by CMS. Beginning in PY2 for those TEAM participants that voluntarily submitted a health equity plan in PY1 and beginning in PY3 for those TEAM participants that first reported a health equity plan in PY2, we propose that the TEAM participant would submit updates to their previously submitted health equity plans in a form and manner and by date(s) specified by CMS. We propose that the health equity plans submitted in all performance years would include the following elements:

- Identifies health disparities. We propose to define ''health disparities'' as preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health, health quality, or health outcomes that are experienced by one or more ''underserved communities'' [685] within the TEAM participant's population of TEAM beneficiaries that the participant will aim to reduce. We propose to define ''underserved communities'' as populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.[686] We propose that the data sources used to inform the identification of health disparities should also be noted in the plan.
- Identifies health equity goals and describes how the TEAM participant will use the health equity goals to monitor and evaluate progress in reducing the identified health disparities. We propose to define ''health equity goals'' as targeted outcomes relative to the health equity plan performance measures for the first PYs and all subsequent PYs.
- Describes the health equity plan intervention strategy. We propose to define ''health equity plan intervention strategy'' as the initiative(s) the TEAM participant will create and implement to reduce the identified health disparities.
- Identifies health equity plan performance measure(s), the data sources used to construct the health equity plan performance measures, and an approach to monitor and evaluate the health equity plan performance measures. We propose to define ''health equity plan performance measure(s)'' as one or more quantitative metrics that the TEAM participant will use to measure changes in health disparities arising from the health equity plan interventions.

We solicit comment on the proposed voluntary health equity plan submission in PY1 and mandatory health equity plan submission in PY2 and all following performance years as proposed in § 512.563. We also solicit comment on whether TEAM participants should be required to submit a health equity plan in PY2 and for all subsequent performance years if a TEAM participant submits a health equity plan to CMS for another CMMI model in the same performance year, or if the TEAM participant should be required to submit a health equity plan that is specific to TEAM and the TEAM participant's population of TEAM beneficiaries. We also solicit comment on the proposed elements of the health equity plan.

(b) Demographic Data Reporting

We recognize disparities exist for beneficiaries in the health care system, including those receiving episodic care. Health care disparities highlight the importance of data collection and analysis that includes race, ethnicity, language, disability, sexual orientation, gender identity, and sex characteristics or other demographics by health care facilities. Such data are necessary for integration of health equity in quality programs, because the data permits stratification by patient

[684] Landscape of Area-Level Deprivation Measures and Other Approaches to Account for Social Risk and Social Determinants of Health in Health Care Payments. (2022). Office of the Assistant Secretary for Planning and Evaluation. Retrieved December 1, 2023, from *https://aspe.hhs.gov/sites/default/files/documents/ce8cdc5da7d1b92314eab263a06efd03/Area-Level-SDOH-Indices-Report.pdf.*

[685] *https://www.cms.gov/priorities/innovation/key-concepts/health-equity#:~:text=(Source%3A%20CMS),underserved%20populations%20(Adapted%20from%20CDC).*

[686] *https://www.federalregister.gov/d/2021-01753/p-6.*

subpopulation.[687] [688] Stratified data can produce meaningful measures that can be used to expose health disparities, develop focused interventions to reduce them, and monitor performance to ensure interventions to improve care do not have unintended consequences for certain patients.[689] Furthermore, quality programs are carried out with well-known and widely used standardized procedures including but not limited to root cause analysis, plan-do-study-act (PDSA) cycles, health care failure mode effects analysis, and fish bone diagrams. These are common approaches in the health care industry to uncover the causes of problems, to show the potential causes of a specific event, test a change that is being implemented, prevent failure by correcting a process proactively, and identify possible causes of a problem and soft ideas into useful categories, respectively.[690] [691] [692] [693] Adding a health equity prompt to these standardized procedures integrates a health equity lens within the quality structure and cues considerations of the patient subpopulations who receive care and services from a hospital.[694]

To align with other CMS efforts, we are proposing that TEAM participants could voluntarily report to CMS demographic data of TEAM beneficiaries pursuant to 42 CFR 403.1110(b) in PY1. Beginning in PY2 and all subsequent performance years, we propose that TEAM participants would be required to report demographic data of TEAM beneficiaries to CMS in a form and manner and by a date specified by CMS. The demographic data would also be required to conform to USCDI version 2 data standards, at a minimum. Collection of this data could provide synergies with goals articulated in health equity plans of TEAM participants. Further, this expanded demographic data would allow CMS to gain more nuanced understanding of the expanded demographics of TEAM beneficiaries—including data on race, ethnicity, language, disability, sexual orientation, gender identity, sex characteristics, and other demographics—to monitor and evaluate the model.

We propose that in conducting the collection required beginning in PY2 under this section that the TEAM participant would make a reasonable effort to collect demographic data from all TEAM beneficiaries; however, we recognize this may require additional administrative effort to collect this data or identify TEAM beneficiaries that may elect to not provide this data. We recognize that CEHRT may help to reduce administrative burden once EHR platforms have been programmed to capture and exchange the types of demographic date elements of interest. We also recognize that this demographic data may already be reported to CMS for other CMS initiatives.

We seek comment on the proposed voluntary reporting of demographic data of TEAM beneficiaries in PY1 with mandatory reporting beginning in PY2 and all following performance years. As we wish to minimize reporting burden on TEAM participants to ensure sufficient time and effort is spent adjusting to the requirements of a mandatory model, we seek comments on how reporting of this demographic data could minimize burden and if it could be collected from existing data sources.

(c) Health Related Social Needs Data Reporting

The CMS Innovation Center is charged with testing innovations that improve quality and reduce the cost of health care. There is strong evidence that non-clinical drivers of health are the largest contributor to health outcomes and are associated with increased health care utilization and costs.[695] [696] These individual-level, adverse social conditions that negatively impact a person's health or healthcare are referred to as ''health-related social needs'' or HRSNs. CMS aims to expand the collection, reporting, and analysis of standardized HRSNs data in its efforts to drive quality improvement, reduce health disparities, and better understand and address the unmet social needs of patients. Standardizing HRSN screening and referral as a practice can inform larger, community-wide efforts to ensure the availability of and access to community services that are responsive to the needs of Medicare beneficiaries. While screening for HRSN is an important step to identify the unmet HRSNs of patients, it is also critical for providers to build referral relationships with community-based organizations and other social service organizations that can more directly support patients identified to have unmet HRSNs.

While more common nationally, HRSN screening is not uniform across geography or health care setting. A literature review of national surveys measuring prevalence of HRSN screening found that 56–77 percent of health care payers and/or delivery organizations screened for HRSN.[697] The review also found that almost half of state Medicaid agencies have established managed care contracting requirements for HRSN screening in Medicaid.[698] Despite screening proliferation and generally positive views toward screening among both patients and health care providers, implementation of screening and referral policies for beneficiaries of CMS programs with similar health—and even demographic—profiles may be inconsistent, potentially exacerbating disparities in the comprehensiveness and quality of care.

To help facilitate alignment of HRSN screening within inpatient settings, beginning in 2024, the Hospital Inpatient Quality Reporting Program began mandatory reporting of a Screening for Social Drivers of Health (SDOH–1) measure, the proportion of

[698] De Marchis EH, Brown E, Aceves B, et al. State of the Science of Screening in Healthcare Settings. Social Interventions Research & Evaluation Network, 2022. *https://sirenetwork.ucsf.edu/tools-resources/resources/state-science-social-screening-healthcare-settings.*

admitted adults screened for five HRSNs, and a Screen Positive Rate for Social Drivers of Health (SDOH–2) measure, the percentage of screened admitted adults that screened positive for one or more HRSN. The measures reflect screening for five HRSNs: housing instability, food insecurity, transportation needs, utility difficulties, and interpersonal safety. The CMS Innovation Center Strategy Refresh also established a goal to require all new models to collect and report demographic and social determinants of health (SDOH) data in support of broader system transformation that support goals of advancing health equity.

Beginning in PY1, we propose that TEAM participants would be required to screen attributed TEAM beneficiaries for at least four HRSN domains—such as but not limited to food insecurity, housing instability, transportation needs, and utilities difficulty—because we believe these areas are most pertinent for the TEAM beneficiary population. We also considered requiring TEAM participants to screen on a standardized set of HRSN domains.

We also propose that TEAM participants would need to report aggregated HRSN screening data and screened-positive data for each HRSN domain for TEAM beneficiaries that received screening to CMS in a form and manner and by date(s) specified by CMS beginning in PY1 and for all following performance years. As part of this reporting to CMS, we also propose that TEAM participants would report on policies and procedures for referring beneficiaries to community-based organizations, social service agencies, or similar organizations that may support patients in accessing services to address unmet social needs.

We recognize TEAM participants may already report some of this HRSN screening data through other CMS initiatives and requiring reporting of aggregated HRSN screening data in TEAM may be redundant. For example, the Hospital Inpatient Quality Reporting Program will begin mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination of two evidence-based measures related to HRSN screening: the Screening for Social Drivers of Health measure and the Screen Positive Rate for Social Drivers of Health measure (87 FR 49201 through 49220). We therefore seek comment on reporting processes that would streamline reporting of aggregated HRSN screening data for attributed TEAM beneficiaries, including potential use of the Hospital Inpatient Quality Report Program measures related to HRSN screening.

We also seek comment on how the reporting of aggregated HRSN screening data could incorporate data on referrals of beneficiaries screening positive for HRSNs to community-based organizations and other organizations helping to address beneficiaries' HRSNs.

(6) Other Considerations

In addition to the preceding health equity proposals, we seek comment on possibly providing upfront infrastructure payments to qualified safety net hospital participants to further support safety net hospitals in the transformation of care delivery. Subject to certain limitations, these funds could be available to cover approved expenses aimed at supporting beneficiaries with unmet health and social needs. Payment could support Health Information Technology (health IT)/Electronic Health Records (EHR) enhancements, to the extent they involve population health analytics, support care coordination with other providers within and across care settings, and support referrals to address HRSNs (such as closed loop community-based organization referrals). Participants might also use the infrastructure payment to fund the upfront expenses involved in recruiting dedicated staff (for example, care managers). Participants could distribute or use infrastructure payments received under this model in accordance with existing law or the terms of applicable waivers. Such funds would ensure the infrastructure of safety net hospitals could support the transformational goals of the model, and would not come out of the Medicare Parts A and B Trust Funds.

We believe that transformation of acute care delivery in underserved areas is fundamental to addressing persistent disparities and engaging safety net hospitals may broaden the landscape of clinicians focusing on value-based care. We would need to consider the amount of the infrastructure payment, which may include a standard fixed funding component and a variable component that depends on the size of the population served by the safety net hospital participant. We would also need to define a specific set of parameters and formula to calculate the infrastructure payment for each qualifying TEAM participant and seek feedback on the set of parameters we could consider using.

We seek feedback from hospitals and health IT vendors for estimates on the potential upfront start-up costs of health IT investments for safety net hospitals, such as new health information exchange capabilities, solutions to provide patients with access to their health data (for instance, patient portals), capabilities to capture patient-reported outcomes, event notification systems, and community referral capacity. Should we decide to provide such payments, we also expect the infrastructure improvement would require financial investment on the part of the participant, clinicians, and other payer partners, including those on the commercial side.

The goal of the infrastructure payment would be to assist safety net hospital participants, many of whom have less access to capital, participate in and be successful in this model. CMS recognizes that start-up and ongoing annual operating costs could vary greatly between participants for various reasons, including those related to the experience, size, and funding available to the participant.

Past CMS Innovation Center models have proven the utility of infrastructure payments in certain circumstances, which may or may not apply to TEAM. These models include the ACO Investment Model (AIM), a CMS Innovation Center model that tested the effects of making advanced payments to certain ACOs participating in the Shared Savings Program to assist them in transforming care by funding infrastructure investments or staffing. AIM ACOs overwhelmingly used these funds to invest in health IT systems and care management staff and to cover administrative and program compliance costs. At the start of the model, many AIM ACOs lacked the capacity and knowledge to implement population health initiatives, to manage claims-based analytics, and to coordinate practice management. The demonstrated Medicare savings by AIM ACOs suggest that financial accountability with upfront investments can succeed in allowing under-resourced clinicians serving underserved areas to deliver care more efficiently and afford them more flexibility in how they meet beneficiaries' needs without increasing Medicare spending.

To receive an infrastructure payment, we could consider the following requirements and seek comment on any changes: (1) require TEAM participants to be a safety net hospital, as defined by section X.A.3.f.(2)(c) of the preamble of this proposed rule. The TEAM participant would also submit a detailed plan that describes their intended use of the funds and how those funds would support the goals of the model and improve the care of underserved beneficiaries.

With respect to use of funds for technology investments that involve implementing, acquiring, or upgrading health IT, the hospital would also be required to ensure such technology is certified under the ONC Health IT Certification Program or utilizes nationally recognized, consensus-based standards adopted under section 3004 of the PHSA,[699] where such criteria or standards are available for the health IT-related activity. Use of these standards and certification criteria ensure that technology investments would support interoperability across systems. Should we make an infrastructure payment to a safety net hospital, we would need to monitor the spending of infrastructure payments to prevent funds from being misdirected and ensure they are used for activities that constitute a permitted use of the funds (for example, health IT/EHR enhancements to the extent those involve population health analytics and support for referrals to address HRSNs, in addition to costs associated with recruiting and hiring dedicated staff). In addition to the initial plan of anticipated spending, should a safety net hospital participant receive upfront funds, they could also be required to submit annual reports (in a standardized format specified by CMS) that includes an itemization of how infrastructure payments were actually spent during the performance year, including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan, and such other information as may be specified by CMS. This itemization could include expenditures not identified or anticipated in the submitted spend plan and any amounts remaining unspent. Any infrastructure payments that are spent for unauthorized purposes or are unspent at the end of a specified timeframe, that is, 3 years, must be repaid to CMS.

Should safety net hospital participants receive such payments, they would be required to retain adequate records to ensure that we have the information necessary to conduct appropriate monitoring and oversight of the use of infrastructure payments (for example, invoices, receipts, and other supporting documentation of disbursements). CMS would need to conduct audits on a percentage of funding recipients annually to monitor and assess a safety net hospital participant's use of infrastructure funds and participant compliance related to such payments. To encourage speedy resolution of noncompliance and provide an added safeguard against abuse, if CMS determines that a participant has spent infrastructure funds on an identified prohibited use, has unspent funds at the end of the designated eligible spending period, otherwise fails to comply with infrastructure requirements, and/or meets any of the grounds for termination, CMS may require repayment equal to the amount of any infrastructure funds spent on a prohibited use.

As mandatory model, one consideration in potentially implementing an infrastructure payment for qualifying safety net hospital TEAM participants is the long-term scalability of the model. With the goal of longer-term expansion of the TEAM model, inclusion of a one-time infrastructure payment for qualifying safety net hospitals as part of model design could present challenges to the financial sustainability of the model. Accordingly, the potential objectives and benefits of the infrastructure payment would need to be considered against the feasibility of implementing this model feature should the model be expanded.

We seek comment on the considerations surrounding provision of infrastructure payments and their utility in the acute care setting, including how to identify participants most likely to benefit. We also seek comment on how best to ensure the integrity of such payments in supporting the goal of addressing known health disparities among the episode categories we are proposing to test via TEAM. We also seek comment on the proposed methodology and/or parameters that could be used in a formula to determine the infrastructure payment amounts for qualifying TEAM participants.

g. Financial Arrangements

(1) Background

We believe it is necessary to provide TEAM participants with flexibilities that could support their performance in TEAM and allow for greater support for the needs of beneficiaries. These flexibilities are outlined in this section and include the ability to engage in financial arrangements to share a TEAM participant's reconciliation payment amounts and repayment amounts. Such flexibilities would allow TEAM participants to share all or some of the TEAM participant's reconciliation payment amount or repayment amount. Finally, we believe that TEAM participants caring for beneficiaries may want to offer beneficiary incentives to encourage adherence to recommended treatment and beneficiary engagement in recovery. These financial and beneficiary incentives may help a TEAM participant reach their quality and efficiency goals for the model. They may also provide a benefit to beneficiaries and benefit the Medicare Trust Fund if the TEAM participant improves the quality and efficiency of care that results in reductions in hospital readmissions, complications, days in acute care, and mortality, while recovery continues uninterrupted or accelerates.

(2) Overview of TEAM Financial Arrangements

We believe that TEAM participants may wish to enter into financial arrangements with certain providers and suppliers participating in TEAM activities to share their reconciliation payment amount or repayment amount resulting from participation in TEAM. Allowing these types of financial arrangements would allow the alignment of financial incentives of those providers and suppliers participating in TEAM activities to improve quality of care, drive equitable outcomes, and reduce Medicare spending through improved beneficiary care transitions and reduced fragmentation following select episodes of care. We expect that TEAM participants would identify key providers and suppliers caring for beneficiaries in the surrounding communities, and then could establish partnerships with these individuals and entities to promote accountability for the quality, cost, and overall care for beneficiaries, including managing and coordinating care; encouraging investment in infrastructure, enabling technologies, and redesigning care processes for high quality and efficient service delivery; and carrying out other obligations or duties under TEAM . These providers and suppliers may invest substantial time and other resources in these activities, yet they would not be the direct recipients of any reconciliation payment amounts or repayment amounts as they are not the risk bearing entity and do not directly participate in TEAM. Therefore, we believe it is possible that a TEAM participant that may receive a reconciliation payment amount or repayment amount may want to enter into financial arrangements with other providers or suppliers to share this reconciliation payment amount or repayment amount with the TEAM participant. We expect that all financial

[699] For more information ONC Health IT Certification Criteria, see *https://www.healthit.gov/topic/certification-ehrs/certification-criteria.* For standards and implementation specifications adopted under PHSA section 3004, see 45 CFR part 170, subpart B.

relationships established between TEAM participants and providers or suppliers for purposes of TEAM would be those permitted only under applicable law and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements. As discussed in section X.A.3.g.(9) of the preamble of this proposed rule, CMS expects, if the proposed arrangements are finalized, to make a determination that the anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)) is available to protect certain remuneration proposed in this section when arrangements with eligible providers and suppliers are in compliance with the requirements established in the final rule and the conditions of the safe harbor for CMS-sponsored model arrangements established at 42 CFR 1001.952(ii).

We recognize that there are numerous arrangements that TEAM participants may wish to enter other than the financial arrangements described in the proposed regulations for which safe harbor protection may be extended that could be beneficial to the TEAM participants. For example, TEAM participants may choose to engage with organizations that are neither providers nor suppliers to assist with matters such as data analysis; local provider and supplier engagement; care redesign planning and implementation; beneficiary outreach; beneficiary care coordination and management; monitoring TEAM participants' compliance with the model's terms and conditions; or other model-related activities. Such organizations may play important roles in a TEAM participant's plans to implement the model based on the experience these organizations may bring, such as prior experience with episode-based payment models, care coordination expertise, familiarity with a particular local, or knowledge of bundled data. We expect that all relationships established between TEAM participants and these organizations for purposes of the model would be those permitted only under existing law and regulation, including any relationships that would include the TEAM participant's sharing of the reconciliation payment amount or repayment amount. We would expect these relationships to be solely based on the level of engagement of the organization's resources to directly support the TEAM participants' model implementation.

(3) TEAM Collaborators

As proposed, TEAM is a two-sided financial risk model and the TEAM participant would bear sole financial risk for any repayment amount to CMS in the absence of financial arrangements. However, given the incentive to reduce episode spending to earn a reconciliation payment amount, as described in section X.A.3.d.(5)(j) of the preamble of this proposed rule, a TEAM participant may want to engage in financial arrangements with providers and suppliers or participants in Medicare ACO initiatives who are making contributions to the TEAM participant's performance in the model. Such arrangements would allow the TEAM participant to share reconciliation payment amounts or repayment amounts with individuals and entities that have a role in the TEAM participant's performance in the model. We propose to use the term ''TEAM collaborator'' to refer to these individuals and entities.

Because TEAM participants would be accountable for spending and quality during the anchor hospitalization or anchor procedure and the 30-day post discharge period, as described in section X.A.3.b.(5) of the preamble of this proposed rule, providers and suppliers other than the TEAM participant may furnish services to the beneficiary during the model performance period. As such, for purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we propose at § 512.505 that the following types of providers and suppliers that are Medicare-enrolled and eligible to participate in Medicare or entities that are participating in a Medicare ACO initiative may be TEAM collaborators:

- Skilled Nursing Facility (SNF).
- Home Health Agency (HHA).
- Long-Term Care Hospital (LTCH).
- Inpatient Rehabilitation Facility (IRF).
- Physician.
- Nonphysician practitioner.
- Therapist in a private practice.
- Comprehensive Outpatient Rehabilitation Facility (CORF).
- Provider or supplier of outpatient therapy services.
- Physician Group Practice (PGP).
- Hospital.
- Critical Access Hospital (CAH).
- Non-physician provider group practice (NPPGP).
- Therapy group practice (TGP).
- Medicare ACO.

We seek comment on the proposed definition of TEAM collaborators and any additional Medicare-enrolled providers or suppliers, such as Rural Emergency hospitals, Rural Health Clinics, and Federally Qualified Health Centers, that should be included in this definition.

(4) Sharing Arrangements

(a) General

Similar to the CJR Model (42 CFR 510.500), we propose that certain financial arrangements between a TEAM participant and a TEAM collaborator be termed ''sharing arrangements.'' For purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we propose that a sharing arrangement would be to share reconciliation payment amounts or repayment amounts. Where a payment from a TEAM participant to a TEAM collaborator is made pursuant to a sharing arrangement, we propose to define that payment as a ''gainsharing payment,'' which is discussed in section X.A.3.g.(4)(c) of the preamble of this proposed rule. Where a payment from a TEAM collaborator to a TEAM participant is made pursuant to a sharing arrangement, we propose to define that payment as an ''alignment payment,'' which is discussed in section X.A.3.g.(4)(c) of the preamble of this proposed rule. A TEAM participant must not make a gainsharing payment or receive an alignment payment except in accordance with a sharing arrangement. We propose that a sharing arrangement must comply with the provisions of section X.A.3.g.(b) of the preamble of this proposed rule. And all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements. We propose that the TEAM participant and TEAM collaborator must document this agreement in writing and, per monitoring and compliance guidelines (§ 512.590), we propose that it must be made available to CMS upon request.

We propose that the TEAM participant must develop, maintain, and use a set of written policies for selecting individuals and entities to be TEAM collaborators. To safeguard against potentially fraudulent or abusive practices, we propose that the selection criteria determined by the TEAM participant must include the quality of care delivered by the potential TEAM collaborator. Moreover, the selection criteria cannot be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. In addition to including quality of care in their selection criteria, TEAM participants must also consider selection of TEAM

collaborators based on criteria that include the anticipated contribution to the performance of the TEAM participant in the model by the potential TEAM collaborator to ensure that the selection of TEAM collaborators takes into consideration the likelihood of their future performance.

Finally, we propose that if a TEAM participant enters a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of the model. Requiring oversight of sharing arrangements to be included in the compliance program provides a program integrity safeguard.

We seek comment about all provisions described in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

(b) Requirements

We propose several requirements for sharing arrangements to help ensure that their sole purpose is to create financial alignment between TEAM participants and TEAM collaborators toward the goals of the model while maintaining adequate program integrity safeguards. We propose that the sharing arrangement must be in writing, signed by the parties, and entered into before care is furnished to TEAM beneficiaries under the sharing arrangement. In addition, participation in a sharing arrangement must be voluntary and without penalty for nonparticipation. It is important that providers and suppliers rendering items and services to beneficiaries during the model performance period have the freedom to provide medically necessary items and services to beneficiaries without any requirement that they participate in a sharing arrangement to safeguard beneficiary freedom of choice, access to care, and quality of care. The sharing arrangement must set out the mutually agreeable terms for the financial arrangement between the parties to guide and reward model care redesign for future performance toward model goals, rather than reflect the results of model performance years that have already occurred and where the financial outcome of the sharing arrangement terms would be known before signing.

We propose that the sharing arrangement must require the TEAM collaborator and its employees, contractors, and subcontractors to comply with certain requirements that are important for program integrity under the arrangement. We note that the terms contractors and subcontractors include collaboration agents as defined later in this section. The sharing arrangement must require all of the individuals and entities party to the arrangement to comply with the applicable provisions of this proposed rule, including proposed requirements regarding beneficiary notifications, at proposed § 512.582(b), access to records and record retention, at proposed § 512.586, and participation in any evaluation, monitoring, compliance, and enforcement activities performed by CMS or its designees, at proposed § 512.590 because these individuals and entities all would play a role in model care redesign and be part of financial arrangements under the model as proposed. The sharing arrangement must also require all individuals and entities party to the arrangement who are providers or suppliers to comply with the applicable Medicare provider enrollment requirement at § 424.500, including having a valid and active TIN or NPI, during the term of the sharing arrangement. This proposed requirement is to ensure that the individuals and entities have the required enrollment relationship with CMS under the Medicare program, although we note that they are not responsible for complying with requirements that do not apply to them. Finally, the sharing arrangement must require individuals and entities to comply with all other applicable laws and regulations.

We propose that the sharing arrangement must not pose a risk to beneficiary access, beneficiary freedom of choice, or quality of care so that financial relationships between TEAM participants and TEAM collaborators do not negatively impact beneficiary protections under the model. The sharing arrangement as proposed must require the TEAM collaborator to have a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of the model, just as we require TEAM participants to have a compliance program that covers oversight of the sharing arrangement for this purpose as a program integrity safeguard. We seek comment on the anticipated effect of the proposed compliance program requirement for TEAM collaborators, particularly with regard to individual physicians and nonphysician practitioners, small PGPs, NPPGPs, and TGPs and whether alternative compliance program requirements for all or a subset of TEAM collaborators should be adopted to mitigate any effect of the proposal that could make participation as a TEAM collaborator infeasible for any provider, supplier, or other entity on the proposed list of types of TEAM collaborators.

It is necessary that TEAM participants have adequate oversight over sharing arrangements to ensure that all arrangements meet the requirements of this section and provide program integrity protections. Therefore, we propose that the board or other governing body of the TEAM participant have responsibility for overseeing the TEAM participant's' participation in the model, its arrangements with TEAM collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in the model. Additionally, we propose that the TEAM participant and TEAM collaborator must document this agreement in writing and, as part of the model's monitoring and compliance activities as proposed in (§ 512.590), we propose that this agreement must be made available to CMS upon request.

For purposes of sharing arrangements under the model, we propose at § 512.505 to define activities related to promoting accountability for the quality, cost, and overall care for TEAM beneficiaries and performance in the model, including managing and coordinating care; encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty under the model as TEAM activities. In addition to the quality of care provided during episodes, we believe the activities that would fall under this proposed definition encompass the totality of activities upon which it would be appropriate for sharing arrangements under the model to be based in order to value the contributions of providers, suppliers, and other entities toward meeting the performance goals of the model. We seek comment on the proposed definition of TEAM activities as an inclusive and comprehensive framework for capturing direct care and care redesign that contribute to performance toward model goals.

We propose that the written agreement memorializing a sharing arrangement must specify the following parameters of the arrangement:

- The purpose and scope of the sharing arrangement.
- The identities and obligations of the parties, including specified TEAM activities and other services to be performed by the parties under the sharing arrangement.

- The date of the sharing arrangement.
- Management and staffing information, including type of personnel or contractors that will be primarily responsible for carrying out TEAM activities.
- The financial or economic terms for payment, including the following:

++ Eligibility criteria for a gainsharing payment.

++ Eligibility criteria for an alignment payment.

++ Frequency of gainsharing or alignment payment.

++ Methodology and accounting formula for determining the amount of a gainsharing payment that is solely based on quality of care and the provision of TEAM activities.

++ Methodology and accounting formula for determining the amount of an alignment payment.

Finally, we propose to require that the terms of the sharing arrangement must not induce the TEAM participant, TEAM collaborator, or any employees, contractors, or subcontractors of the TEAM participant or TEAM collaborator to reduce or limit medically necessary services to any beneficiary or restrict the ability of a TEAM collaborator to make decisions in the best interests of its patients, including the selection of devices, supplies, and treatments. These requirements are to ensure that the quality of care for beneficiaries is not negatively affected by sharing arrangements under the model.

The proposals for the requirements for sharing arrangements under the model are included in § 512.565. We seek comment on all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

(c) Gainsharing Payment and Alignment Payment Conditions and Limitations

We propose several conditions and limitations for gainsharing payments and alignment payments as program integrity protections for the payments to and from TEAM collaborators. We propose to require that gainsharing payments be derived solely from a TEAM participant's reconciliation payment amounts, internal costs savings, or both; that they be distributed on an annual basis, not more than once per calendar year; that they not be a loan, advance payment, or payment for referrals or other business; and that they be clearly identified as a gainsharing payment at the time they are paid.

We believe that gainsharing payment eligibility for TEAM collaborators should be conditioned on two requirements—(1) quality of care criteria; and (2) the provision of TEAM activities. With respect to the first requirement, we propose that to be eligible to receive a gainsharing payment, the TEAM collaborator must meet quality of care criteria during the performance year for which the TEAM participant earned a reconciliation payment amount that comprises the gainsharing payment. We propose that this quality of care criteria will be included in the sharing arrangement and mutually agreed upon by the TEAM participant and TEAM collaborator. With regard to the second requirement, to be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator other than a PGP, NPPGP, or TGP must have directly furnished a billable item or service to a TEAM beneficiary during the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. For purposes of this requirement, we consider a hospital, CAH or post-acute care provider to have ''directly furnished'' a billable service if one of these entities billed for an item or service for a TEAM beneficiary in the performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. The phrase ''episode'' refers to all Part A and B items and services described in section X.A.3.b.(5) (excluding the items and services described in section X.A.3.b.(5)(a)) of the preamble of this proposed rule that are furnished to a beneficiary described in section X.A.3.b.(5).(b) of the preamble of this proposed rule. During the time period that begins with the beneficiary's admission to an anchor hospitalization or the date of the anchor procedure, as applicable, and ends on the 30th day of either the date of discharge from the anchor hospitalization or the date of service for the anchor procedure. These requirements ensure that there is a required relationship between eligibility for a gainsharing payment and the direct care for TEAM beneficiaries during an episode for these TEAM collaborators. We believe the provision of direct care is essential to the implementation of effective care redesign, and the requirement provides a safeguard against payments to TEAM collaborators other than a PGP, NPPGP, or TGP that are unrelated to direct care for TEAM beneficiaries during the model's performance year.

We propose to establish similar requirements for PGPs, NPPGPs and TGPs that vary because these entities do not themselves directly furnish billable services. To be eligible to receive a gainsharing payment or required to make an alignment payment for a given performance year, a PGP, NPPGP or TGP must have billed for an item or service that was rendered by one or more members of the PGP, NPPGP or TGP to a TEAM beneficiary during the episode that is attributed to the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount. Like the proposal for TEAM collaborators that are not PGPs, these proposals also require a link between the TEAM collaborator that is the PGP, NPPGP or TGP and the provision of items and services to beneficiaries during the episode by PGP, NPPGP or TGP members.

Moreover, we further propose that, because PGPs, NPPGPs and TGPs do not directly furnish items and services to beneficiaries, in order to be eligible to receive a gainsharing payment or be required to make an alignment payment, for a given performance year the PGP, NPPGP or TGP must have contributed to TEAM activities and been clinically involved in the care of beneficiaries during an episode that is attributed to the same performance year for which the TEAM participant earned a reconciliation payment amount or repayment amount that comprises the gainsharing payment.

We propose that the amount of any gainsharing payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of TEAM activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with TEAM activities. The gainsharing methodology may take into account the amount of such TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators. While we emphasize that financial arrangements may not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among TEAM participants, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator,

or collaboration agent so that their sole purpose is to align the financial incentives of the TEAM participant and TEAM collaborators toward the model, we believe that accounting for the relative amount of TEAM activities by TEAM collaborators in the determination of gainsharing payments does not undermine this objective. Rather, the proposed requirement allows flexibility in the determination of gainsharing payments where the amount of a TEAM collaborator's provision of TEAM activities (including direct care) to beneficiaries during a performance year may contribute to the TEAM participant's reconciliation payment amount that may be available for making a gainsharing payment. Greater contributions of TEAM activities by one TEAM collaborator versus another TEAM collaborator that result in greater differences in the funds available for gainsharing payments may be appropriately valued in the methodology used to make gainsharing payments to those TEAM collaborators in order to reflect these differences in TEAM activities among TEAM collaborators.

However, we do not believe it would be appropriate to allow the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment to take into account the amount of TEAM activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators because these financial relationships are not to be based directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. Specifically, with respect to the selection of TEAM collaborators or the opportunity to make or receive a gainsharing payment or an alignment payment, we do not believe that the amount of model activities provided by a potential or actual TEAM collaborator relative to other potential or actual TEAM collaborators could be taken into consideration by the TEAM participant without a significant risk that the financial arrangement in those instances could be based directly or indirectly on the volume or value of referrals or business generated by, between or among the parties. Similarly, if the methodology for determining alignment payments was allowed to take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators there would be a significant risk that the financial arrangement could directly account for the volume or value of referrals or business generated by, between or among the parties and, therefore, we propose that the methodology for determining alignment payments may not directly take into account the volume or value of referrals or business generated by, between or among the parties.

We seek comment on this proposal, where any gainsharing payments must be determined in accordance with a methodology that is based on quality of care and the provision of TEAM activities. We also seek comment on whether the methodology must be based solely on these two elements, or if, alternately, the methodology must be based substantially on these two elements. We seek comment on this proposal for gainsharing payments, where the methodology could take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators. We are particularly interested in comments about whether this standard would provide sufficient additional flexibility in the gainsharing payment methodology to allow the financial reward of TEAM collaborators commensurate with their level of effort that achieves model goals. In addition, we are interested in comment on whether additional safeguards or a different standard is needed to allow for greater flexibility to provide certain performance-based payments consistent with the goals of program integrity, protecting against abuse and ensuring the goals of the model are met.

We propose that for each performance year, the aggregate amount of all gainsharing payments that are derived from a reconciliation payment amount by the TEAM participant must not exceed the amount of the reconciliation payment amount. In accordance with the prior discussion, no entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. We propose that a TEAM participant must not make a gainsharing payment to a TEAM collaborator that is subject to any action for noncompliance by CMS or any other federal or state entity or subject to noncompliance with any other federal or state laws or regulations, or for the provision of substandard care to beneficiaries or other integrity problems. Finally, the sharing arrangement must require the TEAM participant to recover any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data. These requirements provide program integrity safeguards for gainsharing under sharing arrangements.

With respect to alignment payments, we propose that alignment payments from a TEAM collaborator to a TEAM participant may be made at any interval that is agreed upon by both parties. Alignment payments must not be issued, distributed, or paid prior to the calculation by CMS of the repayment amount, and cannot be assessed in the absence of a repayment amount. The TEAM participant must not receive any amounts under a sharing arrangement from a TEAM collaborator that are not alignment payments.

We also propose certain limitations on alignment payments that are consistent with the CJR model. For a performance year, the aggregate amount of all alignment payments received by the TEAM participant from all of the TEAM participant's TEAM collaborators must not exceed 50 percent of the repayment amount. Given that the TEAM participant would be responsible for developing and coordinating care redesign strategies in response to its TEAM participation, we believe it is important that the TEAM participant retain a significant portion of its responsibility for repayment amounts. In addition, the aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant for a TEAM collaborator other than an ACO may not be greater than 25 percent of the TEAM participant's repayment amount. The aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant for a TEAM collaborator that is an ACO may not be greater than 50 percent of the TEAM participant's repayment amount.

We seek comment on our proposed aggregate and individual TEAM collaborator limitations on alignment payments.

We propose that all gainsharing payments and any alignment payments must be administered by the TEAM participant in accordance with GAAP and Government Auditing Standards (The Yellow Book). Additionally, we

propose that all gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction. We make this proposal to mitigate the administrative burden that the electronic fund transfer (EFT) requirement would place on the financial arrangements between certain TEAM participants and TEAM collaborators, especially individual physicians and nonphysician practitioners and small PGPs, NPPGPs or TGPs which could discourage participation of those suppliers as TEAM collaborators. We seek comment on the effect of this proposal.

The proposals for the conditions and restrictions on gainsharing payments, alignment payments, and internal cost savings under the model are included in proposed § 512.56. We seek comment about all of the conditions and restrictions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of TEAM are met.

(d) Documentation Requirements

To ensure the integrity of the sharing arrangements, we propose that TEAM participants must meet a variety of documentation requirements for these arrangements. Specifically, the TEAM participant must—

- Document the sharing arrangement contemporaneously with the establishment of the arrangement;
- Maintain accurate current and historical lists of all TEAM collaborators, including TEAM collaborator names and addresses; update such lists on at least a quarterly basis; and publicly report the current and historical lists of TEAM collaborators on a web page on the TEAM participant's website; and
- Maintain and require each TEAM collaborator to maintain contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes at a minimum the—

++ Nature of the payment (gainsharing payment or alignment payment);

++ Identity of the parties making and receiving the payment;

++ Date of the payment;

++ Amount of the payment;

++ Date and amount of any recoupment of all or a portion of a TEAM collaborator's gainsharing payment; and

++ Explanation for each recoupment, such as whether the TEAM collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment amount, or was based on the submission of false or fraudulent data.

In addition, we propose that the TEAM participant must keep records for all of the following:

- Its process for determining and verifying its potential and current TEAM collaborators' eligibility to participate in Medicare if the TEAM collaborator is a Medicare-enrolled provider or supplier.
- A description of current health information technology, including systems to track reconciliation payment amounts and repayment amounts.
- Its plan to track gainsharing payments and alignment payments.

Finally, we propose that the TEAM participant must retain and provide access to, and must require each TEAM collaborator to retain and provide access to, the required documentation in accordance with section X.A.3.j. of the preamble of this proposed rule and 42 CFR 1001.952(ii).

The proposals for the requirements for documentation of sharing arrangements under the model are included in § 512.565. We seek comment about all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

(5) Distribution Arrangements

(a) General

Similar to the CJR model, we propose that certain financial arrangements between TEAM collaborators and other individuals or entities called ''collaboration agents'' be termed ''distribution arrangements.'' A collaboration agent is an individual or entity that is not a TEAM collaborator and that is a PGP, NPPGP, or TGP member that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee. For purposes of the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)), we propose that a distribution arrangement is a financial arrangement between a TEAM collaborator that is a PGP, NPPGP or TGP and a collaboration agent for the sole purpose of sharing a gainsharing payment received by the PGP, NPPGP or TGP. Where a payment from a TEAM collaborator to a collaboration agent is made pursuant to a TEAM distribution arrangement, we define that payment as a ''distribution payment.'' A collaboration agent may only make a distribution payment in accordance with a distribution arrangement which complies with the provisions of this proposed model and all other applicable laws and regulations, including the fraud and abuse laws.

Like our proposal for gainsharing payments, we propose that the amount of any distribution arrangements must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities. We considered whether this methodology could substantially, rather than solely, be based on quality of care and the provision of TEAM activities, but ultimately determined that basing the methodology solely on these two elements creates a model safeguard where gainsharing aligns directly with the model goal of quality of care and with TEAM activities.

The proposals for the general provisions for distribution arrangements under the model are included in § 512.568. We seek comment about all of the provisions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

(b) Requirements

We propose several specific requirements for distribution arrangements as a program integrity safeguard to help ensure that their sole purpose is to create financial alignment between TEAM collaborators and collaboration agents and performance toward TEAM goals. These requirements largely parallel those proposed in section X.A.3.g.(4) Of the preamble of this proposed rule for sharing arrangements and gainsharing payments based on similar reasoning for these two types of arrangements and payments. We propose that all distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the distribution arrangement. Furthermore, we propose that participation must be voluntary and without penalty for nonparticipation, and the distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

We seek comment on this proposal, where any distribution payments must be determined in accordance with a

methodology that is based on quality of care and the provision of TEAM activities. We also seek comment on whether the methodology must be based solely on these two elements, or if the methodology must be based substantially on these two elements. Additionally, and also like our proposal for gainsharing payments, we propose that the opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, or collaboration agent. We propose more flexible standards for the determination of the amount of distribution payments from PGPs, NPPGPs and TGPs allowing TEAM collaborators and collaboration agents to create tailored distribution payments that supports the individual structure of their arrangement.

We note that for distribution payments made by a PGP to PGP members, by NPPGPs to NPPGP members, or TGPs to TGP members, the requirement that the amount of any distribution payments must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities may be more limiting in how a PGP, NPPGP or TGP pays its members than is allowed under existing law. However, we believe quality of care is an important facet of episode-based payment models and making this a requirement for distribution payment supports greater emphasis on quality of care improvement in TEAM. Further this is consistent with the BPCI Advanced model that required their NPRA Shared Payments and Partner Distribution Payments to achieve quality performance targets to receive these payments.

We seek comment on this proposal and specifically whether there are additional safeguards or a different standard is needed to allow for greater flexibility in calculating the amount of distribution payments that would avoid program integrity risks and whether additional or different safeguards are reasonable, necessary, or appropriate for the amount of distribution payments from a PGP to its members, a NPPGP to its members or a TGP to its members.

Similar to our proposed requirements for sharing arrangements for those TEAM collaborators that furnish or bill for items and services, we propose that a collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a beneficiary during an episode that occurred during the same performance year for which the TEAM participant accrued the internal cost savings or earned a reconciliation payment amount that comprises the gainsharing payment being distributed. We note that all individuals and entities that fall within our proposed definition of collaboration agent may either directly furnish or bill for items and services rendered to beneficiaries. This proposal ensures that, there is the same required relationship between direct care for beneficiaries during a performance year and distribution payment eligibility that we require for gainsharing payment eligibility. We believe this requirement provides a safeguard against payments to collaboration agents that are unrelated to direct care for beneficiaries during the performance year.

We further propose that with respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP or TGP, the total amount of all distribution payments in a performance year must not exceed the amount of the gainsharing payment received by the TEAM collaborator from the TEAM participant for that performance year. Like gainsharing and alignment payments, we propose that all distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. The collaboration agent must retain the ability to make decisions in the best interests of the beneficiary, including the selection of devices, supplies, and treatments. Finally, the distribution arrangement must not induce the collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

We propose that the TEAM collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with § 512.586, including—

- The relevant written agreements;
- The date and amount of any distribution payment(s);
- The identity of each collaboration agent that received a distribution payment; and
- A description of the methodology and accounting formula for determining the amount of any distribution payment.

We propose that the TEAM collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same TEAM participant. This proposal ensures that the proposed separate limitations on the total amount of gainsharing payment and distribution payment to PGPs, NPPGPs, TGPs, physicians, and nonphysician practitioners that are solely based on quality of care and the provision of TEAM activities are not exceeded in absolute dollars by a PGP, NPPGP, TGP, physician, or nonphysician practitioner's participation in both a sharing arrangement and distribution arrangement for the care of the same TEAM beneficiaries during the performance year. Allowing both types of arrangements for the same individual or entity for care of the same beneficiary during the performance year could also allow for duplicate counting of the individual or entity's same contribution toward model goals and provision of TEAM activities in the methodologies for both gainsharing and distribution payments, leading to financial gain for the individual or entity that is disproportionate to the contribution toward model goals and provision of TEAM activities by that individual or entity. However, we recognize there could be instances where an individual or entity could have distribution arrangements with multiple TEAM collaborators. For example, a physician may practice with and have reassigned their Medicare billing rights to multiple PGPs, and those PGPs may each be TEAM collaborators. We seek comment on allowing an individual or entity to have distribution arrangements with multiple TEAM collaborators and whether there are additional program integrity safeguards that should be established in those scenarios. Finally, we propose that the TEAM collaborator must retain and provide access to, and must require collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

The proposals for requirements for distribution arrangements under the model are included in § 512.568. We seek comment about all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met. In addition, we seek comment on how the regulation of the financial arrangements under this proposal may interact with how these or similar financial arrangements are regulated under the Medicare Shared Savings Program.

(6) Downstream Distribution Arrangements

(a) General

We propose that TEAM allow for certain financial arrangements within an ACO between a PGP and its members. Specifically, we propose that certain financial arrangements between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and other individuals termed ''downstream collaboration agents'' be termed a ''downstream distribution arrangement.'' A downstream distribution arrangement is a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP. A downstream collaboration agent is an individual who is not a TEAM collaborator or a collaboration agent and who is a PGP member, a NPPGP member, or a TGP member that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration agent. Where a payment from a collaboration agent to a downstream collaboration agent is made pursuant to a downstream distribution arrangement, we define that payment as a ''downstream distribution payment.'' A collaboration agent may only make a downstream distribution payment in accordance with a downstream distribution arrangement which complies with the requirements of this section and all other applicable laws and regulations, including the fraud and abuse laws.

We seek comment about all of the provisions set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the TEAM are met.

(b) Requirements

We propose several specific requirements for downstream distribution arrangements as a program integrity safeguard to help ensure that their sole purpose is to create financial alignment between collaboration agents that are PGPs, NPPGPs, or TGPs which are also ACO participants and downstream collaboration agents toward the goals of the TEAM to improve the quality and efficiency of episodes. These requirements largely parallel those proposed for sharing and distribution arrangements at proposed § 512.565 and § 512.568 and gainsharing and distribution payments at proposed § 512.565 and § 512.568 based on similar reasoning for these types of arrangements and payments. We propose that all downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and entered into before care is furnished to TEAM beneficiaries under the downstream distribution arrangement. Furthermore, we propose that participation must be voluntary and without penalty for nonparticipation, and the downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

Like our proposals for gainsharing and distribution payments, we propose that the opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent. We propose the amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents. We believe that the amount of a downstream collaboration agent's provision of TEAM activities (including direct care) to TEAM beneficiaries during episodes may contribute to the TEAM participant's internal cost savings and reconciliation payment amount that may be available for making a gainsharing payment to the TEAM collaborator that is then shared through a distribution payment to the collaboration agent with which the downstream collaboration agent has a downstream distribution arrangement. Greater contributions of TEAM activities by one downstream collaboration agent versus another downstream collaboration agent that result in different contributions to the distribution payment made to the collaboration agent with which the downstream collaboration agents both have a downstream distribution arrangement may be appropriately valued in the methodology used to make downstream distribution payments to those downstream collaboration agents.

Similar to our proposed requirements for distribution arrangements for those TEAM collaborators that are PGPs, we propose that a downstream collaboration agent is eligible to receive a downstream distribution payment only if the PGP billed for an item or service furnished by the downstream collaboration agent to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprise the gainsharing payment from which the ACO made the distribution payment to the PGP that is an ACO participant. This proposal ensures that there is the same required relationship between direct care for TEAM beneficiaries during episodes and downstream distribution payment eligibility that we require for gainsharing and distribution payment eligibility. We believe this requirement provides a safeguard against payments to downstream collaboration agents that are unrelated to direct care for TEAM beneficiaries during episodes.

We further propose that the total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the amount of the distribution payment received by the collaboration agent (that is, the PGP, NPPGP, or TGP that is an ACO participant) from the ACO that is a TEAM collaborator. Like gainsharing, alignment, and distribution payments, we propose that all downstream distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction. The downstream collaboration agent must retain the ability to make decisions in the best interests of the patient, including the selection of devices, supplies, and treatments. The distribution arrangement must not induce a downstream collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary or reward the provision of items and services that are medically unnecessary.

We propose that the PGP, NPPGP, or TGP must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with § 512.586, including all of the following:

- The relevant written agreements.
- The date and amount of any downstream distribution payment(s).

- The identity of each downstream collaboration agent that received a downstream distribution payment.
- A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

We propose that the PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP, NPPGP, or TGP member who has a sharing arrangement with a TEAM participant or distribution arrangement with the ACO the PGP, NPPGP, or TGP is a participant in. This proposal ensures that the proposed separate limitations on the total amount of gainsharing payment, distribution payment, and downstream distribution payment to PGP, NPPGP, or TGP members that are solely based on quality of care and the provision of TEAM activities are not exceeded in absolute dollars by a PGP, NPPGP, or TGP member's participation in more than one type of arrangement for the care of the same TEAM beneficiaries during episodes. Allowing more than one arrangement for the same PGP, NPPGP, or TGP member for the care of the same TEAM beneficiaries during episodes could also allow for duplicate counting of the PGP, NPPGP, or TGP member's effort in TEAM activities in the methodologies for the different payments. Finally, we propose that the PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

We seek comment about all of the requirements, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of TEAM are met.

(7) Beneficiary Incentives

We believe it is necessary and appropriate to provide additional flexibilities to TEAM participants for purposes of testing the Model, to give TEAM participants additional access to the tools necessary to improve beneficiaries' quality of care, drive equitable outcomes, and reduce Medicare spending through improved beneficiary care transitions and reduced fragmentation during episodes of care. *TEAM participants* may choose to provide in-kind *patient* engagement incentives to beneficiaries in an episode, which may include but not be limited to items of technology, subject to the following conditions consistent with 42 CFR 510.515.

As discussed in section X.A.3.g.(9) of the preamble of this proposed rule, if the proposed beneficiary incentives are finalized, we expect to make a determination that the anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)) is available to protect the beneficiary incentives proposed in this section when the incentives are offered in compliance with the requirements established in the final rule and the conditions for use of the anti-kickback statute safe harbor set out at 42 CFR 1001.952(ii).

As stated previously, TEAM participants may choose to provide in-kind engagement incentives, which may include but not be limited to items of technology, to TEAM beneficiaries in an episode, subject to the following proposed conditions. We propose that the incentive must be provided directly by the TEAM participant or by an agent of the TEAM participant under their direction and control to the TEAM beneficiary during an episode. Additionally, we propose that the item or service provided must be reasonably connected to the TEAM beneficiary's medical care, and be a preventive care item or service or an item of service that advances a clinical goal, as described in section X.A.3.g.(7)(b) of the preamble of this proposed rule, by engaging the TEAM beneficiary in better managing their own health. We seek comment on the proposed conditions for TEAM beneficiary incentives, as outlined in 512.575. Specifically, we seek comment on whether these proposed conditions are reasonable, and whether additional conditions are appropriate to further engage TEAM beneficiaries in their own healthcare management while preventing fraud or abuse.

(a) Technology Provided to a TEAM Beneficiary

In some cases, items or services involving technology may be useful as beneficiary engagement incentives that can advance a clinical goal of TEAM by engaging a beneficiary in managing their health during the 30 days following discharge from the anchor hospitalization or anchor procedure. However, we believe specific enhanced safeguards are necessary for these items and services to prevent abuse, and our proposals are consistent with the CJR model policies (80 FR 73437). Specifically, we propose that items or services involving technology provided to a beneficiary may not exceed $1,000 in retail value for any TEAM beneficiary in any episode (per episode), and that items or services involving technology provided to a TEAM beneficiary must be the minimum necessary to advance a clinical goal as discussed in this section for a TEAM beneficiary in an episode. We propose additional enhanced requirements for items of technology exceeding $75 in retail value as an additional safeguard against misuse of these items as beneficiary engagement incentives. Specifically, we propose that these items of technology that exceed $75 in retail value remain the property of the TEAM participant and be retrieved from the TEAM beneficiary at the end of the episode. The TEAM participant must document all retrieval attempts, including the ultimate date of retrieval. We understand that TEAM participants may not always be able to retrieve these items after the episode ends, such as when a TEAM beneficiary dies or moves to another geographic area. Therefore, in cases when the item of technology is not able to be retrieved, the TEAM participant must determine why the item was not retrievable and if it was determined that the item was used inappropriately (if it were sold, for example) preventing future beneficiary incentives for that TEAM beneficiary. Following this process, the documentation of diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

Our proposals for enhanced requirements for technology provided to TEAM beneficiaries as beneficiary engagement incentives under TEAM are included in proposed § 512.578. We seek comment on our proposed requirements for beneficiary engagement incentives that involve technology. Additionally, we seek comment on the types of technology that may be useful to advance the goals of the Model. We welcome comment on additional or alternative program integrity safeguards for this type of beneficiary engagement incentive, including whether the financial thresholds proposed in this section are reasonable, necessary, and appropriate.

(b) Clinical Goals of TEAM

As discussed in section X.A.3.b. of the preamble of this proposed rule, the proposed episodes are broadly defined to include most Part A and Part B items and services furnished during episodes of care that extend 30 days following discharge from the anchor hospitalization or anchor procedure that begins the episode. Therefore, we believe that in-kind beneficiary engagement incentives may appropriately be provided for managing acute conditions arising from episodes, as well as chronic conditions if the condition is likely to have been affected

by care during the episode or when substantial services are likely to be provided for the chronic condition during the episode. We are proposing to allow TEAM participants to offer in-kind beneficiary engagement incentives, where such incentives must be closely related to the provision of high-quality care and advance a clinical goal for a TEAM beneficiary and should not serve as inducements for TEAM beneficiaries to seek care from the TEAM participants or other specific suppliers and providers. We propose that beneficiary incentives must advance one of the following clinical goals of TEAM:

- Beneficiary adherence to drug regimens.
- Beneficiary adherence to a care plan.
- Reduction of readmissions and complications resulting from treatment during the episode.
- Management of chronic diseases and conditions that may be affected by treatment for the TEAM clinical condition.

Our proposals for beneficiary engagement incentives are included in § 512.575. We seek comment on our proposed clinical goals of TEAM, as well as whether the advancement of additional or different clinical goals through beneficiary engagement incentives may better advance the overarching goals of TEAM while maintaining appropriate program integrity safeguards.

(c) Documentation of Beneficiary Engagement Incentives

As a program safeguard against misuse of beneficiary engagement incentives under TEAM, we propose that TEAM participants must maintain documentation of items and services furnished as beneficiary engagement incentives that exceed $25 in retail value including items of technology. In addition, we propose to require that the documentation established contemporaneously with the provision of the items and services must include at least the following:

- The date the incentive is provided.
- The incentive and estimated value of the item or service.
- The identity of the beneficiary to whom the item or service was provided.

We further propose that the documentation regarding items of technology exceeding $75 in retail that are required to be retrieved from the beneficiary at the end of an episode must also include contemporaneous documentation of any attempt to retrieve technology. In instances where the item of technology is not able to be retrieved, the TEAM participant must determine why it is not retrievable, and if the item were misappropriated (if it were sold, for example), then further steps must be taken to ensure that TEAM beneficiary does not receive further TEAM beneficiary incentives. Following this process, documented, diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

Finally, we propose that the TEAM participant must retain and provide access to the required documentation in accordance with § 512.586.

Our proposals for the documentation requirements for beneficiary engagement incentives under TEAM are included in proposed§ 512.578(d). We seek comment on our proposed documentation requirements, including whether additional or different documentation requirements may provide better program integrity safeguards.

(8) Enforcement Authority

OIG authority is not limited or restricted by the provisions of the model, including the authority to audit, evaluate, investigate, or inspect the TEAM participant, TEAM collaborators, collaboration agents, downstream collaboration agents, or any other person or entity or their records, data, or information, without limitations. Additionally, no model provisions limit or restrict the authority of any other Government Agency to do the same.

The proposals for enforcement authority under the model are included in § 512.575. We seek comment about all of the requirements set out in the preceding discussion, including whether additional or different safeguards would be needed to ensure program integrity, protect against abuse, and ensure that the goals of the model are met.

(9) Fraud and Abuse Waiver and OIG Safe Harbor Authority

Under section 1115A(d)(1) of the Act, the Secretary may waive such requirements of Titles XI and XVIII and of sections 1902(a)(1), 1902(a)(13), 1903(m)(2)(A)(iii) of the Act, and certain provisions of section 1934 of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act.

For this model and consistent with the authority under section 1115A(d)(1) of the Act, the Secretary may consider issuing waivers of certain fraud and abuse provisions in sections 1128A, 1128B, and 1877 of the Act. No fraud or abuse waivers are being issued in this document; fraud and abuse waivers, if any, would be set forth in separately issued documentation. Any such waiver would apply solely to TEAM and could differ in scope or design from waivers granted for other programs or models. Thus, notwithstanding any provision of this proposed rule, TEAM participants, TEAM collaborators, collaboration agents, and downstream collaboration agents must comply with all applicable laws and regulations, except as explicitly provided in any such separately documented waiver issued pursuant to section 1115A(d)(1) of the Act specifically for TEAM.

In addition to or in lieu of a waiver of certain fraud and abuse provisions in sections 1128A and 1128B of the Act, CMS expects to make a determination that the anti-kickback statute safe harbor for CMS-sponsored model arrangements and CMS-sponsored model patient incentives (42 CFR 1001.952(ii) (1) and 42 CFR 1001.952(ii)(2)) is available to protect remuneration exchanged pursuant to certain financial arrangements and patient incentives that may be permitted under the final rule, if issued. Specifically, if the proposed rule is finalized, we expect to determine that the CMS-sponsored models safe harbor will be available to protect the following financial arrangements and incentives: the TEAM sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments with TEAM collaborators and collaboration agents, the downstream distribution arrangements and downstream distribution payments with collaboration agents and downstream collaboration agents, and TEAM beneficiary incentives. At proposed § 512.576, we propose to make the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements available to protect remuneration furnished in the TEAM in the form of sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments, and the downstream distribution arrangement's distribution payments provided that all of the financial arrangements associated with such payment meet all safe harbor requirements set forth in 42 CFR 1001.952(ii), proposed § 512.565, proposed § 512.568, and proposed § 512.570. We considered, but are not proposing, adopting an alternative approach in which the availability of the safe harbor for a specific type of financial arrangement would only be conditioned on compliance with the specific requirements for that type of financial arrangement and the

compliance of the other financial arrangements associated with such payment would not implicate the availability of the safe harbor. For example, we considered, but are not proposing, an alternative proposal making the availability of the safe harbor for sharing arrangement's gainsharing payments only conditioned on compliance with the requirements associated with that type of financial arrangement and not also conditioned on the compliance of a downstream financial arrangement associated with such payment.

We considered not allowing use of the safe harbor provisions. However, we decided that use of the safe harbor will encourage the goals of the model. We believe that a successful model requires integration and coordination among TEAM participants and other health care providers and suppliers. We believe the use of the safe harbor will encourage and improve beneficiary experience of care and coordination of care among providers and suppliers. We also believe these safe harbors offer flexibility for innovation and customization. The safe harbors allow for emerging arrangements that reflect up-to-date understandings in medicine, science, and technology.

We seek comment on this proposal, including that the anti-kickback safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) and CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) be available to TEAM participants and TEAM collaborators, collaboration agents, and downstream collaboration agents.

h. Proposed Waivers of Medicare Program Requirements

(1) Overview

We believe it may be necessary and appropriate to provide flexibilities to hospitals participating in TEAM, as well as other providers and suppliers that furnish services to beneficiaries in episodes. The purpose of such flexibilities would be to increase episode quality, decrease episode spending or internal costs, or both of providers and suppliers, resulting in better, more coordinated care for beneficiaries and improved financial efficiencies for Medicare, providers, and beneficiaries. These possible additional flexibilities could include use of our waiver authority under section 1115A of the Act, which provides authority for the Secretary to waive such requirements of title XVIII of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models described in section 1115A(b) of the Act. This provision affords broad authority for the Secretary to waive statutory Medicare program requirements as necessary to carry out the provisions of section 1115A of the Act.

As we have stated elsewhere in section X.A.2.c. of the preamble of this proposed rule, our previous and current efforts in testing episode payment models have led us to believe that models where entities bear financial responsibility for total Medicare spending for episodes of care hold the potential to incentivize the most substantial improvements in episode quality and efficiency. As discussed in section X.A.3.a.(3) of the preamble of this proposed rule, we are proposing that TEAM participants participating in Track 1 of this model be eligible for reconciliation payment amounts based on spending and quality performance in PY1. TEAM participants in Track 2 would be eligible for repayment amounts and reconciliation payment amounts starting in PY2, while TEAM participants in Track 3 are eligible for repayment amounts and reconciliation payment amounts starting in PY1. We believe that where TEAM participants bear financial accountability for excess episode spending beyond the reconciliation target price while high quality care is valued, they will have an increased incentive to coordinate care furnished by the hospital and other providers and suppliers throughout the episode to improve the quality and efficiency of care. With these incentives present, there may be a reduced likelihood of over-utilization of services that could otherwise result from waivers of Medicare program rules. Given these circumstances, waivers of certain program rules for providers and suppliers furnishing services to TEAM beneficiaries may be appropriate to offer more flexibility than under existing Medicare rules for such providers and suppliers, so that they may provide appropriate, efficient care for beneficiaries. An example of such a program rule that could be waived to potentially allow more efficient inpatient episodes would be the 3-day inpatient hospital stay requirement prior to a covered skilled nursing facility (SNF) stay for beneficiaries who could appropriately be discharged to a SNF after less than a 3-day inpatient hospital stay. This type of waiver was implemented in a range of previous and existing CMS initiatives, including various episode-based payment models and accountable care initiatives.

We welcome comments on possible waivers under section 1115A of the Act of certain Medicare program rules beyond those specifically discussed in this proposed rule that might be necessary to test this model. We will consider the comments that are received during the public comment period and may make future proposals regarding program rule waivers during the course of the model test. We are especially interested in comments explaining how such waivers could provide providers and suppliers with additional flexibilities that are not permitted under existing Medicare rules to increase quality of care and reduce unnecessary episode spending, but that could be appropriately used in the context of TEAM where TEAM participants bear full responsibility for total episode spending.

Specific program rules for which we propose waivers under TEAM to support provider and supplier efforts to increase quality and decrease episode spending and for which we invite comments are included in the sections that follow. We propose that these waivers of program rules would apply to the care of beneficiaries who are in episodes at the time when the waiver is used to bill for a service that is furnished to the beneficiary, even if the episode is later cancelled as described in section X.A.3.b.(5)(e) of the preamble of this proposed rule. Finally, we propose that if a service is found to have been billed and paid by Medicare under circumstances only allowed by a program rule waiver for a beneficiary not in TEAM at the time the service was furnished, CMS would recover payment for that service from the provider or supplier who was paid, and require that provider and supplier to repay the beneficiary for any coinsurance previously collected.

(2) Post-Discharge Home Visits and Homebound Requirement

We expect that the broadly defined episodes with a duration of 30 days following an anchor hospitalization or anchor procedure discharge as we propose in section X.A.3.b. of the preamble of this proposed rule would result in TEAM participants redesigning care by increasing care coordination and management of beneficiaries following discharge from an anchor hospitalization or anchor procedure. This result would require TEAM participants to pay close attention to any underlying medical conditions that could be affected by the anchor hospitalization or anchor procedure and improving coordination of care across care settings and providers. Beneficiaries may have mobility limitations during certain episodes

following discharge to their home or place of residence that may interfere with their ability to travel easily to physicians' offices or other health care settings. Increasing beneficiary adherence to and engagement with recommended treatment and follow-up care following discharge from the hospital or PAC setting would be important to high quality episode care. Evidence exists to support the use of home visits among Medicare beneficiaries in improving clinical outcomes and reducing readmissions following hospital discharge.[700] [701] In addition, we believe the financial incentives in TEAM would encourage hospitals to closely examine the most appropriate PAC settings for beneficiaries, taking into consideration beneficiary choice and location of beneficiary home or place of residence, so that the clinically appropriate setting of the lowest acuity is recommended following discharge from the anchor hospitalization or anchor procedure. We expect that all these considerations would lead to greater interest on the part of hospitals and other providers and suppliers caring for TEAM beneficiaries in furnishing services to beneficiaries in their home or place of residence. Such services could include visits by licensed clinicians other than physicians and nonphysician practitioners.

In order for Medicare to pay for home health services, a beneficiary must be determined to be ''homebound''. Specifically, sections 1835(a) and 1814(a) of the Act require that a physician certify (and recertify) that in the case of home health services under the Medicare home health benefit, such services are or were required because the individual is or was ''confined to the home'' and needs or needed skilled nursing care on an intermittent basis, or physical or speech therapy or has or had a continuing need for occupational therapy. A beneficiary is considered to be confined to the home if the beneficiary has a condition, due to an illness or injury, that restricts his or her ability to leave home except with the assistance of another individual or the aid of a supportive device (that is, crutches, a cane, a wheelchair or a walker) or if the beneficiary has a condition such that leaving his or her home is medically contraindicated. While a beneficiary does not have to be bedridden to be considered confined to the home, the condition of the beneficiary must be such that there exists a normal inability to leave home and leaving home requires a considerable and taxing effort by the beneficiary. Absent this condition, it would be expected that the beneficiary could typically get the same services in an outpatient or other setting. Thus, the homebound requirement provides a way to help differentiate between patients that require medical care at home versus patients who could more appropriately receive care in a less costly outpatient setting. Additional information regarding the homebound requirement is available in the Medicare Benefit Manual (Pub 100–02); Chapter 7, ''Home Health Services,'' Section 30.1.1, ''Patient Confined to the Home.''

We considered whether a waiver of the homebound requirement would be appropriate under TEAM. Waiving the homebound requirement would allow additional beneficiaries to receive home health care services in their home or place of residence. As previously discussed, physician certification that a beneficiary meets the homebound requirement is a prerequisite for Medicare coverage of home health services, and waiving the homebound requirement could result in lower episode spending in some instances. For example, if a beneficiary is allowed to have home health care visits, even if the beneficiary is not considered homebound, the beneficiary may avoid a hospital readmission. All other requirements for the Medicare home health benefit would remain unchanged. Thus, under such a waiver, only beneficiaries who otherwise meet all program requirements to receive home health services would be eligible for coverage of home health services without being homebound.

However, we are not proposing to waive the homebound requirement under TEAM for several reasons. Based on the typical clinical course of beneficiaries after certain surgical procedures, we believe that many beneficiaries would meet the homebound requirement for home health services immediately following discharge from the anchor hospitalization or following discharge to their home or place of residence from a SNF that furnished PAC services immediately following the hospital discharge, so they could receive medically necessary home health services under existing program rules. Home health agencies (HHAs) are paid a national, standardized 30-day period payment rate if a period of care meets a certain threshold of home health visits. 30-day periods of care that do not meet the visit threshold are paid a per-visit payment rate for the discipline providing care. For those TEAM beneficiaries who could benefit from home visits by a licensed clinician for purposes of assessment and monitoring of their clinical condition, care coordination, and improving adherence with treatment but who are not homebound, we do not believe that paying for these visits as home health services under Medicare is necessary or appropriate, especially given that Medicare payments for home health services are set based on the clinical care furnished to beneficiaries who are truly homebound. Finally, in other CMS episode payment models, such as BPCI Advanced and CJR, we have not waived the homebound requirement for home health services.

In the BPCI Advanced and CJR models, we have provided a waiver of the ''incident to'' rule to allow a physician or nonphysician practitioner participating in care redesign under a participating provider to bill for services furnished to a beneficiary who does not qualify for Medicare coverage of home health services as set forth under § 409.42 where the services are furnished in the beneficiary's home during the episode after the beneficiary's discharge from an acute care hospital. The ''incident to'' rules are set forth in § 410.26(b)(5), which requires services and supplies furnished incident to the service of a physician or other practitioner must be provided under the direct supervision (as defined at § 410.32(b)(3)(ii)) of a physician or other practitioner.

In the BPCI Advanced and CJR models, the waiver is available only for services that are furnished by licensed clinical staff under the general supervision (as defined at § 410.32(b)(3)(i)) of a physician (or other practitioner), or other qualified health care professional, and who are allowed by law, regulation, and facility policy to perform or assist in the performance of a specific professional service, but do not individually report that professional service. While the services may be furnished by licensed clinical staff, they must be billed by the physician (or other practitioner) or participant to which the supervising physician has reassigned their billing rights in accordance with CMS instructions using a Healthcare Common Procedures Coding System (HCPCS) G-code created by CMS

[701] Hall, M.L., Esposito, G., Pekmezaris, R., Lesser, M., Moravick, D., Jahn, L., Blenderman, R., Akerman, M., Nouryan, C., & Hartman, A.R. (2014). Cardiac surgery nurse practitioner home visits prevent coronary artery bypass graft readmissions. The Annals of Thoracic Surgery, 97(5), 1488–1495. *https://doi.org/10.1016/j.athoracsur.2013.12.049.*

specifically for the BPCI Advanced or CJR model. In the case of the incident to waiver under BPCI Advanced, the waiver allows physician and nonphysician practitioners to furnish the services up to 13 home visits during each 90-day clinical episode. In the case of the incident to waiver under CJR, the waiver allows physician and nonphysician practitioners to furnish the services up to 9 home visits during each 90-day clinical episode. All other Medicare coverage and payment criteria must be met for both BPCI Advanced and CJR models.

We considered waiving the ''incident to'' rule set forth in § 410.26(b)(5) for TEAM, similar to the BPCI Advanced and CJR models, however, we reviewed this specific waiver utilization and found that there was very low uptake in these models. While waiving the ''incident to'' rule set forth in § 410.26(b)(5) could be beneficial in furnishing services to beneficiaries in their home or place of residence, we believe there has been a greater shift towards telemedicine as a modality for post-discharge follow-up, especially after the COVID–19 public health emergency which drove greater adoption and standard practice of telehealth services. Evidence suggests that telemedicine post-discharge visits were effective, safe, and did not negatively affect health care utilization as compared to in-person visits.[702] [703] For these reasons, we are not proposing to waive the ''incident to'' rule set forth in § 410.26(b)(5) for TEAM, but we seek comment if we should waive the ''incident to'' rule set forth in § 410.26(b)(5), if we should consider modifications or alternatives to this waiver, and how we could make this waiver beneficial to TEAM participants and beneficiaries.

(3) Telehealth

As discussed in the previous section, we expect that the proposed TEAM design features would lead to greater interest on the part of hospitals and other providers and suppliers caring for TEAM beneficiaries in furnishing services to beneficiaries in their home or place of residence, including physicians' professional services. TEAM would create new incentives for comprehensive episode care management for beneficiaries, including early identification and intervention regarding changes in health status following discharge from the anchor hospitalization or anchor procedures. Given that we are not waiving the ''incident to'' rule set forth in § 410.26(b)(5) for TEAM, we understand that TEAM participants may still want to engage physicians in furnishing timely visits to homebound or non-homebound TEAM beneficiaries in their homes or places of residence to address concerning symptoms or observations raised by beneficiaries themselves, clinicians furnishing home health services, or licensed clinicians furnishing post-discharge home visits, while physicians committed to TEAM care redesign may not be able to revise their practice patterns to meet this home visit need for TEAM beneficiaries.

Under section 1834(m) of the Act, Medicare pays for telehealth services furnished by a physician or practitioner under certain conditions even though the physician or practitioner is not in the same location as the beneficiary. The telehealth services must be furnished to a beneficiary located in one of the eight types of originating sites specified in section 1834(m)(4)(C)(ii) of the Act and the site must satisfy at least one of the requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act. Generally, for Medicare payment to be made for telehealth services under the Medicare Physician Fee Schedule several conditions must be met, as set forth under § 410.78(b). Specifically, the service must be on the Medicare list of telehealth services and meet all of the following other requirements for payment:

- The service must be furnished via an interactive telecommunications system.
- The service must be furnished to an eligible telehealth individual.
- The individual receiving the services must be in an eligible originating site.

When all of these conditions are met, Medicare pays a facility fee to the originating site and provides separate payment to the distant site practitioner for the service. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include professional consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. For the list of approved Medicare telehealth services, see the CMS website at *https://www.cms.gov/medicare/coverage/telehealth/list-services.* Under section 1834(m)(4)(F)(ii) of the Act, CMS has an annual process to consider additions to and deletions from the list of telehealth services. We do not include any services as telehealth services when Medicare does not otherwise make a separate payment for them.

Some literature suggests the benefits of telehealth technologies that enable health care providers to deliver care to patients in locations remote from providers are being increasingly used to complement face-to-face patient-provider encounters to increase access to care, especially in rural or underserved areas.[704] In these cases, the use of remote access technologies may improve the accessibility and timeliness of needed care, increase communication between providers and patients, enhance care coordination, and improve the efficiency of care. We note that certain professional services that are commonly furnished remotely using telecommunications technology are paid under the same conditions as in-person physicians' services, and thus do not require a waiver to be considered as telehealth services. Such services that do not require the patient to be present in person with the practitioner when they are furnished are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in person at the medical facility furnishing care to the patient.

In other CMS episode-based payment models, such as the BPCI Advanced and CJR models, participants were permitted to use telehealth waivers that applied to two provisions:

- CMS waived the geographic site requirements under 1834(m)(4)(C)(i)(I) through (III) of the Act which allowed telehealth services to be furnished to eligible telehealth individuals when they are located at one of the eight originating sites at the time the service is furnished via a telecommunications system but without regard to the site meeting one of the geographic site requirements.
- CMS waived the originating site requirements under section 1834(m)(4)(C)(ii)(I) through (VIII) of the Act which allowed the eligible telehealth individual to not be in an originating site when the otherwise eligible individual is receiving telehealth services in their home or place of residence.

These telehealth waivers allowed providers and suppliers furnishing

services to model beneficiaries to utilize telemedicine for beneficiaries that are not classified as rural and allowed the greatest degree of efficiency and communication between providers and suppliers and beneficiaries by allowing beneficiaries to receive telehealth services at their home or place of residence. We believe similar telehealth waivers would be essential to maximize the opportunity to improve the quality of care and efficiency for episodes of care in TEAM.

Specifically, like the telehealth waivers in the BPCI Advanced and CJR models, we propose to waive the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act that limit telehealth payment to services furnished within specific types of geographic areas or in an entity participating in a federal telemedicine demonstration project approved as of December 31, 2000. Waiver of this requirement would allow beneficiaries located in any region to receive services related to the episode to be furnished via telehealth, as long as all other Medicare requirements for telehealth services are met. Any service on the list of Medicare approved telehealth services and reported on a claim that is not excluded from the proposed episode definition (see section X.A.3.b. of the preamble of this proposed rule) could be furnished to a TEAM beneficiary, regardless of the beneficiary's geographic location. Under TEAM, this waiver would support care coordination and increasing timely access to high quality care for all TEAM beneficiaries, regardless of geography. Additionally, we propose for TEAM waiving the originating site requirements of section 1834(m)(4)(C)(ii)(I)–(VIII) of the Act that specify the particular sites at which the eligible telehealth individual must be located at the time the service is furnished via a telecommunications system. Specifically, we propose to waive the requirement only when telehealth services are being furnished in the TEAM beneficiary's home or place of residence during the episode. Any service on the list of Medicare approved telehealth services that is not excluded from the proposed episode definition (see section X.A.3.b.(5)(a) of the preamble of this proposed rule) could be furnished to a TEAM beneficiary in their home or place of residence, unless the service's HCPCS code descriptor precludes delivering the service in the home or place of residence. For example, subsequent hospital care services could not be furnished to beneficiaries in their home since those beneficiaries would not be inpatients of the hospital.

The existing set of codes used to report evaluation and management (E/M) visits are extensively categorized and defined by the setting of the service, and the codes describe the services furnished when both the patient and the practitioner are located in that setting. Section 1834(m) of the Act provides for particular conditions under which Medicare can make payment for office visits when a patient is located in a health care setting (the originating sites authorized by statute) and the eligible practitioner is located elsewhere. However, we do not believe that the kinds of E/M services furnished to patients outside of health care settings via real-time, interactive communication technology are accurately described by any existing E/M codes. This would include circumstances when the patient is located in his or her home and the location of the practitioner is unspecified. In order to create a mechanism to report E/M services accurately, the BPCI Advanced and CJR models created specific sets of HCPCS G-codes to describe the E/M services furnished to the model beneficiaries in their homes via telehealth. Similarly for TEAM, we propose to create a specific set of nine HCPCS G-codes to describe the E/M services furnished to TEAM beneficiaries in their homes via telehealth. If the proposed TEAM is finalized, we would specify the precise G-code created for TEAM and share them to TEAM participants prior to the first performance year.

Among the existing E/M visit services, we envision these services would be most similar to those described by the office and other outpatient E/M codes. Therefore, we propose to structure the new codes similarly to the office/outpatient E/M codes but adjusted to reflect the location as the beneficiary's residence and the virtual presence of the practitioner. Specifically, we propose to create a parallel structure and set of descriptors currently used to report office or other outpatient E/M services, see Table FF–A 10, for CPT codes 99201 through 99205 for new patient visits and CPT codes 99212 through 99215 for established patient visits. For example, the proposed G- code for a level 3 E/M visit for an established patient would be a telehealth visit for the evaluation and management of an established patient in the patient's home, which requires at least 2 of the following 3 key components:

- An expanded problem focused history;
- An expanded problem focused examination;
- Medical decision making of low complexity.

Counseling and coordination of care with other physicians, other qualified health care professionals or agencies are provided consistent with the nature of the problem(s) and the patient's or family's needs or both. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent with the patient or family or both via real-time, audio and video intercommunications technology.

TABLE X.A.-10 – PROPOSED TEAM TELEHEALTH WAIVER G-CODE CROSSWALK

TEAM G-Code (used for illustrative purposes. Specific G-codes will be created if TEAM is finalized)	Short Descriptor	Corresponding Office/Outpatient E/M CPT Code
GXX01	Remote E/M new pt 10mins	99201
GXX02	Remote E/M new pt 20mins	99202
GXX03	Remote E/M new pt 30 mins	99203
GXX04	Remote E/M new pt 45mins	99204
GXX05	Remote E/M new pt 60mins	99205
GXX12	Remote E/M est. pt 10mins	99212
GXX13	Remote E/M est. pt 15mins	99213
GXX14	Remote E/M est. pt 25mins	99214
GXX15	Remote E/M est. pt 40mins	99215

We note that we are not proposing a G-code to parallel the level 1 office/outpatient visit for an established patient, since that service does not require the presence of the physician or other qualified health professional.

We propose to develop payment rates for these new telehealth G-codes for E/M services in the patient's home that are similar to the payment rates for the office/outpatient E/M services, since the codes will describe the work involved in furnishing similar services. Therefore, we propose to include the resource costs typically incurred when services are furnished via telehealth. In terms of the relative resource costs involved in furnishing these services, we believe that the efficiencies of virtual presentation generally limit resource costs other than those related to the professional time, intensity, and malpractice risk to marginal levels. Therefore, we propose to adopt work and malpractice (MP) RVUs associated with the corresponding level of office/outpatient codes as the typical service because the practitioner's time and intensity and malpractice liabilities when conducting a visit via telehealth are comparable to the office visit. We would include final RVUs under the CY 2026 Medicare Physician Fee Schedule for PY 1. Additionally, we propose to update these values each performance year to correspond to final values established under the Medicare Physician Fee Schedule.

We considered whether each level of visit typically would warrant support by auxiliary licensed clinical staff within the context of TEAM. The cost of such staff and any associated supplies, for example, would be incorporated in the practice expense (PE) RVUs under the PFS. For the lower level visits, levels 1 through 3 for new and 2 and 3 for established visits, we did not believe that the visit would necessarily require auxiliary medical staff to be available in the patient's home. We anticipate these lower level visits would be the most commonly furnished and would serve as a mechanism for the patient to consult quickly with a practitioner for concerns that can be easily described and explained by the patient. We do not propose to include PE RVUs for these services, since we do not believe that virtual visits envisioned for this model typically incur the kinds of costs included in the PE RVUs under the Medicare Physician Fee Schedule. For higher level visits, we typically would anticipate some amount of support from auxiliary clinical staff. For example, wound examination and minor wound debridement would be considered included in an E/M visit and would require licensed clinical staff to be present in the beneficiary's home during the telehealth visit in order for the complete service to be furnished. We believe it would be rare for a practitioner to conduct as complex and detailed a service as a level 4 or 5 E/M home visit via telehealth for TEAM beneficiaries in episodes without licensed clinical staff support in the home.

We have considered support by auxiliary clinical staff to be typical for level 4 or 5 E/M visits furnished to TEAM beneficiaries in the home via telehealth, however, we do not propose to incorporate these costs through PE RVUs. Given the anticipated complexity of these visits, we would expect to observe level 4 and 5 E/M visits to be reported on the same claim with the same date of service as a home visit or during a period of authorized home health care. If neither of these occurs, we propose to require the physician to document in the medical record that auxiliary licensed clinical staff were available on site in the patient's home during the visit and if they were not, to document the reason that such a high-level visit would not require such personnel.

We note that because the services described by the proposed G-codes, by definition, are furnished remotely using telecommunications technology, they therefore are paid under the same conditions as in-person physicians' services and they do not require a waiver to the requirements of section 1834(m) of the Act. We also note that

because these home telehealth services are E/M services, all other coverage and payment rules regarding E/M services would continue to apply.

Under TEAM, this proposal to waive the originating site requirements and create new home visit telehealth HCPCS codes would support the greatest efficiency and timely communication between providers and beneficiaries by allowing beneficiaries to receive telehealth services at their places of residence.

With respect to home health services paid under the home health prospective payment system (HH PPS), we emphasize that telehealth visits under this model cannot substitute for in-person home health visits per section 1895(e)(1)(A) of the Act. Furthermore, telehealth services by social workers cannot be furnished for TEAM beneficiaries who are in a home health episode because medical social services are included as home health services per section 1861(m) of the Act and paid for under the Medicare HH PPS. However, telehealth services permitted under section 1834 of the Act and furnished by physicians or other practitioners, specifically physician assistants, nurse practitioners, clinical nurse specialists, certified nurse midwives, nurse anesthetists, psychologists, and dieticians, can be furnished for TEAM beneficiaries who are in a home health episode. Finally, sections 1835(a) and 1814(a) of the Act require that the patient has a face-to-face encounter with the certifying physician or an allowed nonphysician practitioner (NPP) working in collaboration with or under the supervision of the certifying physician before the certifying physician certifies that the patient is eligible for home health services. Under § 424.22(a)(1)(v), the face-to-face encounter can be performed up to 90 days prior to the start of home health care or within 30 days after the start of home health care. Section 424.22(a)(1)(v)(A) also allows a physician, with privileges, who cared for the patient in an acute or PAC setting (from which the patient was directly admitted to home health) or an allowed NPP working in collaboration with or under the supervision of the acute or PAC physician to conduct the face-to-face encounter.

Although sections 1835(a) and 1814(a) of the Act allow the face-to-face encounter to be performed via telehealth, we are not proposing that the waiver of the telehealth geographic site requirement for telehealth services and the originating site requirement for telehealth services furnished in the TEAM beneficiary's home or place of residence would apply to the face-to-face encounter required as part of the home health certification when that encounter is furnished via telehealth. In other words, when a face-to-face encounter furnished via telehealth is used to meet the requirement for home health certification, the usual Medicare telehealth rules apply with respect to geography and eligibility of the originating site. We expect that this policy would not limit TEAM beneficiaries' access to medically necessary home health services because beneficiaries receiving home health services during an episode will have had a face-to- face encounter with either the physician or an allowed NPP during their anchor hospitalization or a physician or allowed NPP during a post-acute facility stay prior to discharge directly to home health services.

Under the proposed waiver of the geographic site requirement and originating site requirement, all telehealth services would be required to be furnished in accordance with all Medicare coverage and payment criteria, and no additional payment would be made to cover set-up costs, technology purchases, training and education, or other related costs. The facility fee paid by Medicare to an originating site for a telehealth service would be waived if there is no facility as an originating site (that is, the service was originated in the beneficiary's home). Finally, providers and suppliers furnishing a telehealth service to a TEAM beneficiary in his or her home or place of residence during the episode would not be permitted to bill for telehealth services that were not fully furnished when an inability to provide the intended telehealth service is due to technical issues with telecommunications equipment required for that service. Beneficiaries would be able to receive services furnished pursuant to the telehealth waivers only during the episode.

We plan to monitor patterns of utilization of telehealth services under TEAM to monitor for overutilization or reductions in medically necessary care, and significant reductions in face-to-face visits with physicians and NPPs. We plan to specifically monitor the distribution of new telehealth home visits that we are proposing, as we anticipate greater use of lower level visits. Given our concern that auxiliary licensed clinical staff be present for level 4 and 5 visits, we will monitor our proposed requirement that these visits be billed on the same claim with the same date of service as a home nursing visit, during a period authorized home health care, or that the physician document the presence of auxiliary licensed clinical staff in the home or an explanation as to the specific circumstances precluding the need for auxiliary staff for the specific visit. We seek comments on the proposed waivers with respect to telehealth services, and the proposed creation of the home visit telehealth codes.

(4) 3-Day SNF Rule

Pursuant to section 1861(i) of the Act, a beneficiary must have a prior inpatient hospital stays of no fewer than 3 consecutive days to be eligible for Medicare coverage of inpatient SNF care. We refer to this as the SNF 3-day rule. We note that the SNF 3-day rule has been waived for Medicare SNF coverage under other episode payment models, including the BPCI Advanced the CJR models. Model participants that elect to use the waiver can discharge model beneficiaries in fewer than 3 days from an anchor hospital stay or anchor procedure (in the case of the CJR model) to a SNF, where services are covered under Medicare Part A if all other coverage requirements for such services are satisfied.

Episode-based payment models like BPCI Advanced and CJR have the potential to mitigate the existing incentives under the Medicare program to overuse SNF benefits for beneficiaries, as well as to furnish many fragmented services that do not reflect significant coordinated attention to and management of complications following hospital discharge. These model participants considering the early discharge of a beneficiary pursuant to the waiver must evaluate whether early discharge to a SNF is clinically-appropriate and SNF services are medically necessary. Next, they must balance that determination and the potential benefits to the hospital in the form of internal cost savings due to greater financial efficiency with the understanding that a subsequent hospital readmission, attributable to premature discharge or low quality SNF care, could substantially increase episode spending while also resulting in poorer quality of care for the beneficiary. Furthermore, early hospital discharge for a beneficiary who would otherwise not require a SNF stay (that is, the beneficiary has no identified skilled nursing or rehabilitation need that cannot be provided on an outpatient basis) following a hospital stay of typical length does not improve episode efficiency.

Because of the potential benefits we see for TEAM participants, their provider partners, and beneficiaries, we propose to waive the SNF 3-day rule for coverage of a SNF stay following the

anchor hospitalization or anchor procedure under TEAM. We propose to use our authority under section 1115A of the Act with respect to certain SNFs that furnish Medicare Part A post-hospital extended care services to beneficiaries included in an episode in TEAM. We believe this waiver is necessary to the model test so that TEAM participants can redesign care throughout the episode continuum of care extending to 30 days post-discharge from the anchor hospital stay or anchor procedure to maximize quality and hospital financial efficiency, as well as reduce episode spending under Medicare. All other Medicare rules for coverage and payment of Part A-covered SNF services would continue to apply to TEAM beneficiaries in all performance years of the model. Further, to ensure protection to TEAM beneficiary safety and optimize health outcomes, we propose to require that TEAM participants may only discharge a TEAM beneficiary under this proposed waiver of the SNF 3-day rule to a SNF rated an overall of three stars or better by CMS based on information publicly available at the time of hospital discharge from an anchor hospital stay or anchor procedure. Problem areas due to early hospital discharge may not be discovered through model monitoring and evaluation activities until well after the episode has concluded, and the potential for later negative findings alone may not afford sufficient beneficiary protections. CMS created a Five-Star Quality Rating System for SNFs to allow SNFs to be compared more easily and to help identify areas of concerning SNF performance. The Nursing Home Compare website gives each SNF an overall rating of between 1 and 5 stars.[705] Those SNFs with 5 stars are considered to have much above average quality, and SNFs with 1 star are considered to have quality much below average. Published SNF ratings include distinct ratings of health inspection, staffing, and quality measures, with ratings for each of the three sources combined to calculate an overall rating. These areas of assessment are all relevant to the quality of SNF care following discharge from the anchor hospitalization or anchor procedure initiating an episode, especially if that discharge occurs after fewer than 3 days in the hospital. Because of the potential greater risks following early inpatient hospital discharge, we believe it is appropriate that all TEAM beneficiaries discharged from the TEAM participant to a SNF in fewer than 3 days be admitted to a SNF that has demonstrated that it can provide quality care to patients with significant unresolved post- surgical symptoms and problems. We believe such a SNF would need to provide care of at least average overall quality, which would be represented by an overall SNF 3-star or better rating.

Thus, the TEAM participant must discharge the beneficiary to a SNF that is qualified under the SNF 3-day rule waiver. We are proposing that to be qualified under the SNF 3-day rule waiver a SNF must be included in the most recent calendar year quarter Five-Star Quality Rating System listing for SNFs on the Nursing Home Compare website for the date of the beneficiary's admission to the SNF. The qualified SNF must be rated an overall 3 stars or better for at least 7 of the 12 months based on a review of the most recent rolling 12 months of overall star ratings. We propose to post on the CMS website the list of qualified SNFs in advance of the calendar quarter.

We recognize that there may be instances where a TEAM participant would like to use the 3-day SNF rule waiver, but the TEAM beneficiary receives inpatient PAC through swing bed arrangements in a hospital or Critical Access Hospital (CAH), as designated in § 485.606 of this chapter, which is not subject to the Five-Star Quality Rating System. For example, a TEAM beneficiary located in a rural area may wish to receive PAC care closer to their home but there are no qualified SNFs in their area. Allowing TEAM participants to use the 3-day SNF rule waiver for hospitals and CAHs operating under swing bed agreements may support beneficiary freedom of choice and provide greater flexibility to TEAM participants for their care coordination efforts. This approach is consistent with the Shared Savings Program, which offers a similar 3-day SNF rule waiver and allows their ACOs to partner with hospitals and CAHs to with swing bed arrangements to utilize the waiver. Therefore, we seek comment on whether we should allow TEAM participants to use hospitals and CAHs operating under swing bed agreements for the 3-day SNF rule waiver and what beneficiary protections we should include since the Five-Star Quality Rating System would not apply.

We plan to monitor patterns of SNF utilization under the TEAM, particularly with respect to hospital discharge in fewer than 3 days to a SNF, to ensure that beneficiaries are not being discharged prematurely to SNFs and that they are able to exercise their freedom of choice without patient steering. We seek comment on our proposal to waive the SNF 3-day stay rule for stays in SNFs rated overall as 3 stars or better following discharge from the anchor hospitalization or anchor procedures for episodes in TEAM.

(a) Additional Beneficiary Protections Under the SNF 3-Day Stay Rule Waiver

We believe that it will be necessary to propose beneficiary protections against financial liability in addition to the beneficiary protections discussed elsewhere in this proposed rule. Specifically, we believe it is important to discern whether a waiver applies to SNF services furnished to a particular beneficiary to ensure compliance with the conditions of the waiver and improve our ability to monitor waivers for misuse.

In considering additional beneficiary protections that may be necessary to ensure proper use of SNF 3-day rule waiver under the TEAM, we note that there are existing, well-established payment and coverage policies for SNF services based on sections 1861(i), 1862(a)(1), and 1879 of the Act that include protections for beneficiaries from liability for certain non-covered SNF charges. These existing payment and coverage policies for SNF services continue to apply under the TEAM, including SNF services furnished pursuant to the SNF 3-day waiver. (For example, see section 70 in the Medicare Claims Processing Manual, Chapter 30—Financial Liability Protections on the CMS website at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c30.pdf*; and Medicare Coverage of Skilled Nursing Facility Care *https://www.medicare.gov/coverage/skilled-nursing-facility-snf-care*; Medicare Benefit Policy Manual, Chapter 8—Coverage of Extended Care (SNF) Services Under Hospital Insurance at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c08pdf.pdf*). In general, CMS requires that the SNF inform a beneficiary in writing about services and fees before the beneficiary is discharged to the SNF (§ 483.10(b)(6)); the beneficiary cannot be charged by the SNF for items or services that were not requested (§ 483.10(c)(8)(iii)(A)); a beneficiary cannot be required to request extra services as a condition of continued stay (§ 483.10(c)(8)(iii)(B)); and the SNF must inform a beneficiary that requests an item or service for which a charge will be made that there will be a charge for the item or service and what the charge will be (§ 483.10(c)(8)(iii)(C)). (See also section 6 of Medicare Coverage of Skilled

Nursing Facility Care at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c06.pdf.*)

As we discussed in the CJR final rule (80 FR 73454 through 73460), commenters expressed concern regarding the lag between a CJR beneficiary's Medicare coverage or eligibility status change and a TEAM participant's awareness of that change. There may be cases in which a SNF waiver is used by a TEAM participant because the TEAM participant believes that the beneficiary meets the inclusion criteria, based on the information available to the hospital and SNF at the time of the beneficiary's admission to the SNF, but in fact the beneficiary's Medicare coverage has changed and the hospital was unaware of it based on available information. We recognize that despite good faith efforts by TEAM participants and SNFs to determine a beneficiary's Medicare status for the model, it may occur that a beneficiary is not eligible to be included in the TEAM at the time the SNF waiver is used. In these cases, we will cover services furnished under the waiver when the information available to the provider at the time the services under the waiver were furnished indicated that the beneficiary was included in the model.

Based on our experience with SNF 3-day rule waiver, including the CJR model, we believe there are situations where it would be appropriate to require additional beneficiary financial protections under the SNF 3-day waiver for the TEAM. Specifically, we are concerned about potential beneficiary financial liability for non-covered Part A SNF services that might be directly related to use of the SNF 3-day waiver under the TEAM. We are concerned that there could be scenarios where a beneficiary could be charged for non-covered SNF services that were a result of a TEAM participant's inappropriate use of the SNF waiver. Specifically, we are concerned that a beneficiary could be charged for non-covered SNF services if a TEAM participant discharges a beneficiary to a SNF that does not meet the quality requirement (3 stars or higher in 7 of the last 12 months), and payment for SNF services is denied for lack of a qualifying inpatient hospital stay. We recognize that requiring a discharge planning notice would help mitigate concerns about beneficiaries' potential financial liability for non-covered services. Nevertheless, we are concerned that in this scenario, once the claim is rejected, the beneficiary may not be protected from financial liability under existing Medicare rules because the waiver would not be available, and the beneficiary would not have had a qualifying inpatient hospital stay. Thus, the TEAM beneficiary could be charged by the SNF for non-covered SNF services that were a result of an inappropriate attempt to use the waiver. In this scenario, Medicare would deny payment of the SNF claim, and the beneficiary could potentially be charged by the SNF for these non-covered SNF services, potentially subjecting such beneficiaries to significant financial liability. In this circumstance, we assume the TEAM participant's intent was to rely upon the SNF 3-day waiver, but the waiver requirements were not met. We believe that in this scenario, the rejection of the claim could easily have been avoided if the hospital had confirmed that the requirements for use of the SNF 3-day waiver were satisfied or if the beneficiary had been provided the discharge planning notice and elected to go to a SNF that met the quality requirement.

The CJR model (82 FR 180) addressed beneficiary liability financial concerns for non- covered SNF services related to the waiver by generally placing the risk on the participant hospital and we believe it is appropriate to propose a similar policy for TEAM. CJR participant hospitals are generally held financially responsible for misusing the waiver in situations where waiver requirements are not met, because participant hospitals are required to be aware of the 3-day waiver requirements. Participant hospitals are the entities financially responsible for episode spending under the model and will make the decision as to whether it is appropriate to discharge a beneficiary without a 3-day stay. In addition, the requirements for use of the SNF waiver are clearly laid out in the CJR final rule (80 FR 73273). CMS posts on the public website a list of qualifying SNFs (those with a 3-star or higher rating for 7 of the last 12 months). CJR participant hospitals are required to consult the published list of SNFs prior to utilizing the SNF 3-day rule waiver.

For participant hospitals that provide a beneficiary with the discharge planning notice, the hospital would not have financial liability for non-covered SNF services that result from inapplicability of the waiver. In other words, when the participant hospital has discharged a beneficiary to a SNF that does not qualify under the conditions of the waiver, and has not provided the required discharge planning notice so that the beneficiary is aware that he or she is accepting financial liability for non-covered SNF services as a result of not having a qualifying inpatient stay, the ultimate responsibility and financial liability for the non-covered SNF stay rests with the participant hospital. For this reason, we are proposing to align with the CJR model policy and require TEAM participants to keep a record of discharge planning notice distribution to TEAM beneficiaries. We will monitor TEAM participants' use of discharge planning notices to assess the potential for their misuse.

To protect TEAM beneficiaries from being charged for non-covered SNF charges in instances when the waiver was used inappropriately, and similar to the CJR model (82 FR 180), we are proposing to add certain beneficiary protection requirements that would apply for SNF services that would otherwise have been covered except for lack of a qualifying hospital stay. Specifically, we propose that if a TEAM participant discharges a beneficiary without a qualifying 3-day inpatient stay to a SNF that is not on the published list of SNFs that meet the TEAM SNF 3-Day Rule waiver quality requirements as of the date of admission to the SNF, the TEAM participant will be financially liable for the SNF stay if no discharge planning notice is provided to the beneficiary, alerting them of potential financial liability. If the TEAM participant provides a discharge planning notice then the TEAM participant will not be financially liable for the cost of the SNF stay and the normal Medicare FFS rules for coverage of SNF services will apply. In cases where the TEAM participant provides a discharge planning notice and the beneficiary chooses to obtain care from a non- qualified SNF without a qualifying inpatient stay, the beneficiary assumes financial liability for services furnished (except those that are covered by Medicare Part B during a non-covered inpatient SNF stay).

In the event a TEAM beneficiary is discharged to a SNF without a qualifying 3-day inpatient stay, but the SNF is not on the qualified list as of the date of admission to the SNF, and the TEAM participant has failed to provide a discharge planning notice, we propose that CMS apply the following rules:

- CMS shall make no payment to the SNF for such services.
- The SNF shall not charge the beneficiary for the expenses incurred for such services; and the SNF shall return to the beneficiary any monies collected for such services.
- The hospital shall be responsible for the cost of the uncovered SNF stay.

We seek comment on these proposals. Specifically, we seek comment on

whether it is reasonable to—(1) cover services furnished under the SNF waiver based on TEAM participant knowledge of beneficiary eligibility for the TEAM as determined by Medicare coverage status at the time the services under the waiver were furnished; and (2) to hold the TEAM participant financially responsible for rejected SNF claims if a TEAM beneficiary is discharged to a SNF without a qualifying 3-day inpatient stay, but the SNF is not on the qualified list as of the date of admission to the SNF, and the TEAM participant has failed to provide a discharge planning notice. Finally, we seek comment on any other related issues that we should consider in connection with these proposals to protect beneficiaries from significant financial liability for non-covered SNF services related to the waiver of the SNF 3-day rule under the proposed TEAM. We may address those issues through future notice and comment rulemaking.

i. Monitoring and Beneficiary Protection

(1) Overview

We are proposing the TEAM as we believe it is an opportunity to improve the quality of care and that the policies of the model support making care more easily accessible to consumers when and where they need it, increasing consumer engagement and thereby informing consumer choices. For example, under this model we are proposing certain waivers which would offer TEAM participants additional flexibilities with respect to furnishing telehealth services and care in SNFs, as discussed in section X.A.3.h. of the preamble of this proposed rule. We believe that this model will improve beneficiary access and outcomes. Conversely, we do note that these same opportunities could be used to try to steer beneficiaries into lower cost services without an appropriate emphasis on maintaining or increasing quality. We direct readers to sections X.A.3.d.(5) of the preamble of this proposed rule for discussion of the methodology for calculating the reconciliation payment amount or repayment amount to determine the cost and quality performance utilized for this model. We believe that existing Medicare provisions can be effective in protecting beneficiary freedom of choice and access to appropriate care under the TEAM. However, because the TEAM is designed to promote care delivery efficiencies for episodes, providers may seek greater control over the continuum of care and, in some cases, could attempt to direct beneficiaries into care pathways that save money at the expense of beneficiary choice or even beneficiary outcomes. As such, we acknowledge that some additional safeguards may be necessary under the TEAM for program integrity purposes as providers are simultaneously seeking opportunities to decrease costs and utilization. We believe that it is important to consider any possibility of adverse consequences to patients and to ensure that sufficient controls are in place to protect Medicare beneficiaries in episodes under the TEAM.

(2) Beneficiary Choice and Notification

Because we have proposed that hospitals in selected geographic areas would be required to participate in the model, individual beneficiaries would not be able to opt out of the TEAM when they receive care from a TEAM participant in the model. We do not believe that it is consistent with other Medicare programs to allow patients to opt out of a payment system that is unique to a particular geographic area. For example, the state of Maryland has a unique payment system under Medicare, but that payment system does not create an alternative care delivery system, and we do not expect it in any way impact beneficiary decisions. Moreover, we do not believe that an ability to opt out of a payment system is a critical factor in upholding beneficiary choice if other safeguards are in place given that this model does not increase beneficiary cost-sharing. However, a beneficiary is not precluded from seeking care from providers or suppliers who do not participate in TEAM. We do believe that full notification and disclosure of the payment model and its possible implications is critical for beneficiary understanding and protection. It is important to create safeguards for beneficiaries to ensure that care recommendations are based on clinical needs and not inappropriate cost savings. It is also important for beneficiaries to know that they can raise any concerns with their clinicians, with 1–800–Medicare, or with their local Quality Improvement Organizations (QIOs).

This proposed payment model would not limit a beneficiary's ability to choose among Medicare providers or limit Medicare's coverage of items and services available to the beneficiary. Beneficiaries may continue to choose any Medicare participating provider, or any provider who has opted out of Medicare, with the same costs, copayments and responsibilities as they have with other Medicare services. The proposed model would allow TEAM participants to enter into TEAM sharing arrangements, as proposed in section X.A.3.g.(4) of the preamble of this proposed rule, with certain providers and these preferred providers may be recommended to beneficiaries as long as those recommendations are made within the constraints of current law. However, TEAM Participants may not limit beneficiaries to a preferred or recommended providers list that is not compliant with restrictions existing under current statutes and regulations.

Moreover, TEAM participants may not charge any TEAM collaborator, as proposed in section X.A.3.g.(3) of the preamble of this proposed rule, a fee to be included on any list of preferred providers or suppliers, nor may the hospital accept such payments, which would be considered to be outside the realm of risk-sharing agreements. Thus, this proposed payment model does not create any restriction of beneficiary freedom to choose providers, including surgeons, hospitals, post-acute care or any other providers or suppliers. Moreover, as TEAM participants redesign care pathways, it may be difficult for providers to sort individuals based on health care insurance and to treat them differently. We anticipate that care pathway redesign occurring in response to the model will increase coordination of care, improve the quality of care, and decrease cost for all patients, not just for Medicare beneficiaries. We anticipate this broader care delivery impact to all patients may further promote consistent treatment of all beneficiaries.

We believe that beneficiary notification and engagement is essential because there will be a change in the way participating hospitals are paid. We believe that appropriate beneficiary notification should explain the model, advise patients of both their clinical needs and their care delivery choices, and should clearly specify any providers, suppliers, and ACOs holding a sharing arrangement with the TEAM participant should be identified to the beneficiary as a ''financial partner of the hospital for the purposes of participation in TEAM.'' These policies seek to enhance beneficiaries' understanding of their care, improve their ability to share in the decision-making, and ensure that they have the opportunity to consider competing benefits even as they are presented with cost-saving recommendations. We believe that appropriate beneficiary notification should do all of the following:

- Explain the model and how it will or will not impact the beneficiary's care.

- Inform patients that they retain freedom of choice to choose providers and services.
- Explain how patients can access care records and claims data through an available patient portal and through sharing access to care-givers to their Blue Button® electronic health information.
- Explain that TEAM participants may receive beneficiary-identifiable claims data.
- Advise patients that all standard Medicare beneficiary protections remain in place, including the ability to report concerns of substandard care to QIOs and 1–800–MEDICARE.
- Provide a list of the providers, suppliers, and ACOs with whom the TEAM participant has a sharing arrangement. We recognize an exhaustive list of providers, suppliers, and ACOs may lengthen the beneficiary notification unnecessarily, therefore this requirement may be fulfilled by the TEAM participant including in the beneficiary notification a web address where beneficiaries may access the list.

After carefully considering the appropriate timing and circumstances for the necessary beneficiary notification, we are proposing that TEAM participants must require all ACOs, providers, and suppliers who execute a Sharing Arrangement with a TEAM participant to share beneficiary notification materials, to be developed or approved by CMS, that detail this proposed payment model with the beneficiary prior to discharge from the anchor hospitalization, or prior to discharge from the anchor procedure for a Medicare FFS patient who would be included under the model. TEAM participants must require this notification as a condition of any Sharing Arrangement. Where a TEAM participant does not have Sharing Arrangements with providers or suppliers that furnish services to beneficiaries during an episode, or where the anchor hospitalization or anchor procedure for a Medicare FFS patient who would be included under the model was ordered by a physician who does not have a Sharing Arrangement, the beneficiary notification materials must be provided to the beneficiary by the TEAM participant. The purpose of this proposed policy is to ensure that all TEAM beneficiaries receive the beneficiary notification materials, and that they receive such materials as early as possible but no later than discharge from the hospital or hospital outpatient department. We believe that this proposal targets beneficiaries for whom information is relevant, and increases the likelihood that patients will become engaged and seek to understand the model and its potential impact on their care.

In addition, we propose at § 512.582(b)(2) requiring that TEAM participants must require every TEAM collaborator to provide written notice, to be developed by CMS, to applicable TEAM beneficiaries of the existence of its sharing arrangement with the TEAM participant and the basic quality and payment incentives under the model. We propose that the notice must be provided no later than the time at which the beneficiary first receives an item or service from the TEAM collaborator during an episode. We recognize that due to the patient's condition, it may not be feasible to provide notification at such time, in which case the notification must be provided to the beneficiary or his or her representative as soon as is reasonably practicable. We note that beneficiaries are accustomed to receiving similar notices of rights and obligations from healthcare providers prior to the start of inpatient care. However, we also considered that this information might be best provided by hospitals at the point of admission for all beneficiaries, as hospitals provide other information concerning patient rights and responsibilities at that time. We invite comment on ways in which the timing and source of beneficiary notification could best serve the needs of beneficiaries without creating unnecessary administrative work for providers and suppliers. We believe that this notification is an important safeguard to help ensure that beneficiaries in the model receive all medically necessary services, but it is also an important clinical opportunity to better engage beneficiaries in defining their goals and preferences as they share in the planning of their care.

(3) Monitoring for Access to Care

Given that TEAM participants would receive a reconciliation payment when they are able to meet certain cost and quality performance thresholds, they could have an incentive to avoid complex, high-cost cases by referring them to nearby facilities or specialty referral centers. We intend to monitor the claims data from TEAM participants—for example, to compare a hospital's case mix relative to a pre-model historical baseline to determine whether complex patients are potentially being systematically excluded. We will publish these data as part of the model evaluation to promote transparency and an understanding of the model's effects. We also propose to continue to review and audit hospitals if we have reason to believe that they are compromising beneficiary access to care. For example, we may audit a hospital or conduct additional claims analyses where initial claims analysis indicates an unusual pattern of referral to regional hospitals located outside of the model catchment area or a clinically unexplained increase or decrease in surgical rates for procedures included in TEAM. We seek comment on our proposals to monitor TEAM participants at § 512.584.

(4) Monitoring for Quality of Care

As we noted previously, in any payment system that promotes efficiencies of care delivery, there may be opportunities to direct patients away from more expensive services at the expense of outcomes and quality. We believe that professionalism, the quality measures in the model, and clinical standards can be effective in preventing beneficiaries from being denied medically necessary care in the inpatient setting, outpatient setting, and in post-acute care settings during the 30 days post- discharge. Accordingly, we believe that the potential for the denial of medically necessary care within the TEAM will not be greater than that which currently exists under IPPS. However, we also believe that we have the authority and responsibility to audit the medical records and claims of participating hospitals and their TEAM collaborators in order to ensure that beneficiaries receive medically necessary services. Similarly, at § 512.590, we propose to monitor arrangements between TEAM participants and their TEAM collaborators to ensure that such arrangements do not result in the denial of medically necessary care or other program or patient abuse. We invite public comment on these proposals and on whether there are elements of the TEAM that would require additional beneficiary protection for the appropriate delivery of inpatient care, and if so, what types of monitoring or safeguards would be most appropriate.

We believe that these safeguards are all enhanced by beneficiary knowledge and engagement. Therefore, we are proposing at § 512.582(a)(3) to require that TEAM participants must, as part of discharge planning, account for potential financial bias by providing TEAM beneficiaries with a complete list of all available post-acute care options in the Medicare program, including HHAs, SNFs, IRFs, or LTCHs, in the service area consistent with medical need, including beneficiary cost-sharing and quality information (where available and when applicable). This list

should also indicate whether the TEAM participant has a sharing arrangement with the post-acute care provider. We expect that the treating surgeons or other treating practitioners, as applicable, will continue to identify and discuss all medically appropriate options with the beneficiary, and that hospitals will discuss the various facilities and providers who are available to meet the clinically identified needs. These proposed requirements for TEAM participants would supplement the existing discharge planning requirements under the hospital Conditions of Participation. We also specifically note that neither the Conditions of Participation nor this proposed transparency requirement preclude hospitals from recommending preferred providers within the constraints created by current law, as coordination of care and optimization of care are important factors for successful participation in this model. We invite comment on this proposal, including additional opportunities to ensure high quality care.

(5) Monitoring for Delayed Care

We believe the proposed TEAM would incent TEAM participants to create efficiencies in the delivery of care within a 30-day episode following an acute clinical event. Theoretically, the proposed TEAM also could create incentives for TEAM participants or their TEAM collaborators to delay services until after such 30-day window has closed. Consistent with the CJR model, we believe that existing Medicare safeguards are sufficient to protect beneficiaries in the TEAM.

First, our experience with other episode-based payment models such as the BPCI Advanced model has shown that providers focus first on appropriate care and then on efficiencies only as obtainable in the setting of appropriate care. We believe that a 30-day post-discharge episode is sufficient to minimize the risk that TEAM participants and their TEAM collaborators would compromise services furnished in relation to a beneficiary's care. While we recognize that ongoing care for underlying conditions may be required after the 30-day episode, we believe that TEAM participants and other providers and suppliers would be unlikely to postpone key services beyond a 30-day period because the consequences of delaying care beyond such episode duration would be contrary to usual standards of care.

However, we also note that additional monitoring would occur as a function of the proposed TEAM. As with the CJR model, we propose as part of the reconciliation process (see section X.A.3.d.(5)(i) of the preamble of this proposed rule) that TEAM participants would be financially accountable for certain post- episode payments occurring in the 30 days after conclusion of the episode. We believe that including such a payment adjustment would create an additional deterrent to delaying care beyond the episode duration. In addition, we believe the data collection and calculations used to determine such adjustment would provide a mechanism to check whether providers are inappropriately delaying care. Finally, we note that the proposed quality measures create additional safeguards as such measures are used to monitor and influence clinical care at the institutional level.

We invite public comment on our proposed requirements for notification of beneficiaries and our proposed methods for monitoring participants' actions and ensuring compliance as well as on other methods to ensure that beneficiaries receive high quality, clinically appropriate care.

j. Access to Records and Record Retention

By virtue of their participation in an CMS Innovation Center model, TEAM participants and TEAM collaborators may receive model-specific payments, access to payment rule waivers, or some other model-specific flexibility. Therefore, we believe that CMS's ability to audit, inspect, investigate, and evaluate records and other materials related to participation in CMS Innovation Center models is necessary and appropriate. There is a need for CMS to be able to audit, inspect, investigate, and evaluate records and materials related to participation in CMS Innovation Center models to allow us to ensure that TEAM participants are not denying or limiting the coverage or provision of benefits for beneficiaries as part of their participation in the CMS Innovation Center model. We propose at § 512.505 to define ''model-specific payment'' to mean a payment made by CMS only to TEAM participants, under the terms of the CMS Innovation Center model that is not applicable to any other providers or suppliers; the term ''model-specific payment'' would include, unless otherwise specified, the reconciliation payment, described in section X.A.3.d.(5)(j) of the preamble of this proposed rule.

We note that there are audit and record retention requirements under the Medicare Shared Savings Program (42 CFR 425.314) and in current models being tested under section 1115A (such as under 42 CFR 510.110 for the CMS Innovation Center's Comprehensive Care for Joint Replacement Model). Building off those existing requirements, we propose in § .135(a), that the Federal Government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, would have a right to audit, inspect, investigate, and evaluate any documents and other evidence regarding implementation of a CMS Innovation Center model. Additionally, in order to align with the policy of current models being tested by the CMS Innovation Center, we are proposing that the TEAM participant and its TEAM Collaborators must maintain and give the Federal Government, including, but not limited to, CMS, HHS, and the Comptroller General, or their designees, access to all documents (including books, contracts, and records) and other evidence sufficient to enable the audit, evaluation, inspection, or investigation of the CMS Innovation Center model, including, without limitation, documents and other evidence regarding all of the following:

- Compliance by the TEAM participant and its TEAM Collaborators with the terms of the CMS Innovation Center model, including proposed new subpart A of proposed part 512.
- The accuracy of model-specific payments made under the CMS Innovation Center model.
- The TEAM participant's payment of amounts owed to CMS, or payment adjustments, under the CMS Innovation Center model.
- Quality measure information and the quality of services performed under the terms of the CMS Innovation Center model, including proposed new subpart A of proposed part 512.

Utilization of items and services furnished under the CMS Innovation Center model.

- The ability of the TEAM participant to bear the risk of potential losses and to repay any losses through claims adjustments to CMS, as applicable.
- Patient safety under TEAM.
- Any other program integrity issues.

We propose that TEAM participants must maintain the documents and other evidence for a period of 6 years from the last payment determination for the TEAM participant under the CMS Innovation Center model or from the date of completion of any audit, evaluation, inspection, or investigation, whichever is later, unless—

- CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the TEAM participant at least 30

days before the normal disposition date; or

- There has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant in which case the records must be maintained for an additional 6 years from the date of any resulting final resolution of the termination, dispute, or allegation of fraud or similar fault.

If CMS notifies the TEAM participant of a special need to retain a record or group of records at least 30 days before the normal disposition date, we propose that the records must be maintained for such period of time determined by CMS. We also propose that, if CMS notifies the TEAM participant of a special need to retain records or there has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its TEAM Collaborators, the TEAM participant must notify its TEAM Collaborators of the need to retain records for the additional period specified by CMS. This provision will ensure that that the government has access to the records.

To avoid any confusion or disputes regarding the timelines outlined in this section of this proposed rule, we propose to define the term ''days'' to mean calendar days.

We invite public comment on these proposed provisions described at § 512.586 regarding audits and record retention.

Historically, the CMS Innovation Center has required participants in section 1115A models to retain records for at least 10 years, which is consistent with the outer limit of the statute of limitations for the Federal False Claims Act and is consistent with the Shared Savings Program's policy outlined at 42 CFR 425.314(b)(2). For this reason, we also solicit public comments on whether we should require hospital participants and TEAM Collaborators to maintain records for less than 10 years.

k. Data Sharing

(1) Overview

In this proposed rule, we aim to incentivize TEAM participants to engage in care redesign efforts to improve quality of care and reduce Medicare FFS spending for beneficiaries included in the model during the anchor hospitalization or anchor procedure and the 30 days post-discharge from the hospital or hospital outpatient department. These care redesign efforts would require TEAM participants to work with and coordinate care with other health care providers and suppliers to improve the quality and efficiency of care for Medicare beneficiaries.

We have experience with a range of efforts designed to improve care coordination for Medicare beneficiaries, including the BPCI Advanced and CJR models, both of which make certain Medicare data available to participants to better enable them to achieve their goals. For example, both the BPCI Advanced and CJR participants may request to receive beneficiary-identifiable claims data and financial performance data from the baseline period and throughout their tenure in the model to help them better understand the FFS beneficiaries that are receiving services from their providers and help them improve quality of care and conduct care coordination and other care redesign activities to improve patient outcomes or reduce health care for beneficiaries that could have initiated an episode in the model.

Based on our experience with these efforts, as set forth later in this section, we propose to make certain beneficiary-identifiable claims data and regional aggregate data available to participants in TEAM regarding Medicare FFS beneficiaries who may initiate an episode and be attributed to them in the model. However, we also expect that TEAM participants are able to, or will work toward, independently identifying and producing their own data, through electronic health records, health information exchanges, or other means that they believe are necessary to best evaluate the health needs of their patients, improve health outcomes, and produce efficiencies in the provision and use of services.

(2) Beneficiary-Identifiable Claims Data

(a) Legal Authority To Share Beneficiary-Identifiable Data

We believe that TEAM participants may need access to certain Medicare beneficiary-identifiable data for the purposes of evaluating their performance, conducting quality assessment and improvement activities, conducting population-based activities relating to improving health or reducing health care costs, or conducting other health care operations listed in the first or second paragraph of the definition of ''health care operations'' under the HIPAA Privacy Rule, 45 CFR 164.501. We recognize that there are issues and sensitivities surrounding the disclosure of beneficiary-identifiable health information, and that several laws place constraints on sharing individually identifiable health information. For example, section 1106 of the Act generally bars the disclosure of information collected under the Act without consent unless a law (statute or regulation) permits the disclosure. Here, the HIPAA Privacy Rule would allow for the proposed disclosure of individually identifiable health information by CMS. In this proposed rule, we propose to make TEAM participants accountable for quality and cost outcomes for TEAM beneficiaries during an anchor hospitalization or anchor procedure and during the 30-day post-discharge period. We believe that it is necessary for the purposes of this model to offer TEAM participants the ability to request summary or raw beneficiary-identifiable claims data for a 3-year baseline period as well as on a monthly basis during the performance year to help TEAM participants engage in care coordination and quality improvement activities for TEAM beneficiaries in an episode. For the 3-year baseline period, TEAM participants would only receive beneficiary-identifiable claims data for beneficiaries that initiated an episode in their hospital or hospital outpatient department in the 3-year baseline period, and the beneficiary-identifiable claims data shared with the TEAM participant would be limited to the items and services included in the episode. In other words, the TEAM participant would not receive beneficiary-identifiable claims data for beneficiaries that were admitted to their hospital or hospital outpatient department and did not initiate an episode in the baseline period. Nor would the TEAM participant receive beneficiary-identifiable claims data, for beneficiaries who did initiate an episode in their hospital or hospital outpatient department during the baseline period, for items and services that are not included in an episode, such as a primary care visit 5 days before the episode or a hospital readmission 1 day after the episode ends. We are proposing to apply a similar approach for the beneficiary-identifiable claims data sharing during the performance year. We believe that these data would constitute the minimum information necessary to enable the TEAM participant to understand spending patterns during the episode, appropriately coordinate care, and target care strategies toward individual beneficiaries furnished care by the TEAM participant and other providers and suppliers.

Under the HIPAA Privacy Rule, covered entities (defined as health care plans, providers that conduct covered transactions, including hospitals, and health care clearinghouses) are barred from using or disclosing individually

identifiable health information that is ''protected health information'' or PHI in a manner that is not explicitly permitted or required under the HIPAA Privacy Rule, without the individual's authorization. The Medicare FFS program, a ''health plan'' function of the Department, is subject to the HIPAA Privacy Rule limitations on the disclosure of PHI. Hospitals, which would be TEAM participants, and other Medicare providers and suppliers are also covered entities, provided they are health care providers as defined by 45 CFR 160.103 and they conduct (or someone on their behalf conducts) one or more HIPAA standard transactions electronically, such as for claims transactions. Since TEAM participants are hospitals who are covered entities and are the only entity able to request the beneficiary-identifiable data and with whom CMS would share the beneficiary-identifiable data, we believe that the proposed disclosure of the beneficiary claims data for an anchor hospitalization or an anchor procedure plus 30-day post-discharge for episodes included under the TEAM model would be permitted by the HIPAA Privacy Rule under the provisions that permit disclosures of PHI for ''health care operations'' purposes. Under those provisions, a covered entity is permitted to disclose PHI to another covered entity for the recipient's health care operations purposes if both covered entities have or had a relationship with the subject of the PHI to be disclosed, the PHI pertains to that relationship, and the recipient will use the PHI for a ''health care operations'' function that falls within the first two paragraphs of the definition of ''health care operations'' in the HIPAA Privacy Rule (45 CFR 164.506(c)(4)).

The first paragraph of the definition of health care operations includes ''conducting quality assessment and improvement activities, including outcomes evaluation and development of clinical guidelines,'' and ''population-based activities relating to improving health or reducing health costs, protocol development, case management and care coordination'' (45 CFR 164.501).

Under our proposal, TEAM participants would be using the data on their patients to evaluate the performance of the TEAM participant and other providers and suppliers that furnished services to the patient, conduct quality assessment and improvement activities, and conduct population-based activities relating to improved health for their patients. When done by or on behalf of a covered entity, these are covered functions and activities that would qualify as ''health care operations'' under the first and second paragraphs of the definition of health care operations at 45 CFR 164.501. Hence, as previously discussed, we believe that this provision is extensive enough to cover the uses we would expect a TEAM participant to make of the beneficiary-identifiable data and would be permissible under the HIPAA Privacy Rule. Moreover, our proposed disclosures would be made only to HIPAA covered entities, specifically hospitals that are TEAM participants that have (or had) a relationship with the subject of the information, the information we would disclose would pertain to such relationship, and those disclosures would be for purposes listed in the first two paragraphs of the definition of ''health care operations.''

When using or disclosing PHI, or when requesting this information from another covered entity, covered entities must make ''reasonable efforts to limit'' the information that is used, disclosed, or requested to a ''minimum necessary'' to accomplish the intended purpose of the use, disclosure, or request (45 CFR 164.502(b)). We believe that the provision of the proposed data elements, as described in section X.A.3.k.(2).(c). of the preamble of this proposed rule, would constitute the minimum data necessary to accomplish the TEAM's model goals of the TEAM participant.

The Privacy Act of 1974 also places limits on agency data disclosures. The Privacy Act applies when the federal government maintains a system of records by which information about individuals is retrieved by use of the individual's personal identifiers (names, Social Security numbers, or any other codes or identifiers that are assigned to the individual). The Privacy Act prohibits disclosure of information from a system of records to any third party without the prior written consent of the individual to whom the records apply (5 U.S.C. 552a(b)).

''Routine uses'' are an exception to this general principle. A routine use is a disclosure outside of the agency that is compatible with the purpose for which the data was collected. Routine uses are established by means of a publication in the **Federal Register** about the applicable system of records describing to whom the disclosure will be made and the purpose for the disclosure. For the proposed TEAM, the system of records would be covered in Master Demonstration, Evaluation, and Research Studies (DERS) for the Office of Research, Development and Information (ORDI) system of record (72 FR 19705). We believe that the proposed data disclosures are consistent with the purpose for which the data discussed in the proposed rule was collected and may be disclosed in accordance with the routine uses applicable to those records.

We note that, as is the case with the CJR model, in this proposed rule, we propose to disclose beneficiary-identifiable data to only the hospitals that are bearing risk for episodes and not with their collaborators. As stated in the final CJR rule (80 FR 73515), we believe that the hospitals that are specifically held financially responsible for an episode should make the determination as to which data are needed to manage care and care processes with their collaborators as well as which data they might want to re-disclose, if any, to their collaborators provided they are in compliance with the HIPAA Privacy Rule.

We believe our data sharing proposals are permitted by and are consistent with the authorities and protections available under the aforementioned statutes and regulations. We seek comments on our proposals regarding the authority to share beneficiary-identifiable data with TEAM participants.

(b) Summary and Raw Beneficiary-Identifiable Claims Data Reports

Based on our experience with BPCI Advanced and CJR participants, we recognize that TEAM participants could vary with respect to the kinds of beneficiary-identifiable claims information that would best meet their needs. For example, while many TEAM participants might have the ability to analyze raw claims data, other TEAM participants could find it more useful to have a summary of these data. Given this, we propose to make beneficiary-identifiable claims data for episodes in TEAM available through two formats, summary and raw, both for the baseline period and on an ongoing monthly basis during their participation in the model as we do for BPCI Advanced and CJR. Summary beneficiary-identifiable claims data summarizes the claims data by combining and categorizing claims data to provide a broad view of the TEAM participant's health care expenditures and utilization. For example, a TEAM participant may use summary beneficiary-identifiable data to identify total episode spending for a given episode category across all of a TEAM participant's episodes in a given performance year. Raw beneficiary-identifiable claims data is unrefined and has not been grouped or combined and includes the specific claims fields, as described in the minimum necessary data section X.A.3.k.(2).(c). of the

preamble of this proposed rule, at the episode level. For example, a TEAM participant may use raw beneficiary-identifiable data to look at a particular episode to identify the diagnosis code(s) that were associated with a hospital readmission for a TEAM beneficiary.

First, for TEAM participants who wish to receive summary Medicare Parts A and B claims data, we propose to offer TEAM participants, that enter into a TEAM data sharing agreement with CMS, as specified in section X.A.3.k.(6). of the preamble of this proposed rule, the option to submit a formal data request for summary beneficiary-identifiable claims data that have been aggregated to provide summary-level spending and utilization data on TEAM beneficiaries who would be in an episode during the baseline period and performance years in accordance with applicable privacy and security laws and established privacy and security protections. Such summary beneficiary-identifiable claims data would provide tools to monitor, understand, and manage utilization and expenditure patterns as well as to develop, target, and implement quality improvement programs and initiatives. For example, if the data provided by CMS to a particular TEAM participant reflects that, relative to their peers, a certain provider is associated with significantly higher rates of inpatient readmissions than the rates experienced by other beneficiaries with similar care needs, that may be evidence that the TEAM participant could consider, among other things, the appropriateness of that provider, whether other alternatives might be more appropriate, and whether there exist certain care interventions that could be incorporated post-discharge to lower readmission rates.

Secondly, for TEAM participants who wish to receive raw Medicare Parts A and B claims data, we propose to offer TEAM participants, that enter into a TEAM data sharing agreement with CMS, the opportunity to submit a formal data request for raw beneficiary-identifiable claims data for TEAM beneficiaries who would be in an episode during the baseline period and performance years in accordance with applicable privacy and security laws and established privacy and security protections. These raw beneficiary-identifiable claims data would be much more detailed compared to the summary beneficiary-identifiable claims data and include all beneficiary-identifiable claims for all episodes in TEAM. In addition, they would include episode summaries, indicators for excluded episodes, diagnosis and procedure codes, and enrollment and dual eligibility information for beneficiaries that initiate episodes in TEAM. Through analysis, these raw beneficiary-identifiable claims data would provide TEAM participants with information to improve their ability to coordinate and target care strategies as well as to monitor, understand, and manage utilization and expenditure patterns. Such data would also aid them in developing, targeting, and implementing quality improvement programs and initiatives.

The summary and raw beneficiary-identifiable data would allow TEAM participants to assess summary and raw data on their relevant TEAM beneficiary population, giving them the flexibility to utilize the data based on their analytic capacity. Therefore, for both the baseline period and at a minimum on a monthly basis during an TEAM participant's performance year, we propose to provide TEAM participants with an opportunity to request summary beneficiary-identifiable claims data and raw beneficiary-identifiable claims data that would meet minimum necessary requirements in 45 CFR 164.502(b) and 164.514(d) and include Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year. This means the summary and raw beneficiary-identifiable claims data would encompass the total expenditures and claims for the proposed episodes, including the anchor hospitalization or anchor procedure, and all non-excluded items and services in an episode covered under Medicare Parts A and B within the 30 days after discharge, including hospital care, post- acute care, and physician services for the TEAM participant's beneficiaries.

We propose that if a TEAM participant wishes to receive beneficiary-identifiable claims data, they must submit a formal request for data on an annual basis in a manner form and by a date specified by CMS, indicating if they want summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and sign a TEAM data sharing agreement. To comply with applicable laws and safeguards, we propose the TEAM participant must attest that—

- The TEAM participant is requesting claims data of TEAM beneficiaries who would be in an episode during the baseline period or performance year as a HIPAA-covered entity;
- The TEAM participant's request reflects the minimum data necessary for the TEAM participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501;
- The TEAM participant's use of claims data will be limited to developing processes and engaging in appropriate activities related to coordinating care and improving the quality and efficiency of care and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all TEAM beneficiaries, in an episode during the baseline period or performance year, and that these data will not be used to reduce, limit or restrict care for specific Medicare beneficiaries.

We propose that the summary and raw beneficiary-identifiable data would be packaged and sent to a data portal (to which the TEAM participants must request and be granted access) in a ''flat'' or binary format for the TEAM participant to retrieve. We also note that, for both the summary and raw beneficiary-identifiable claims data, we would exclude information that is subject to the regulations governing the confidentiality of substance use disorder patient records (42 CFR part 2) from the data shared with a TEAM participant. We believe our proposal to make data available to TEAM participants, through the most appropriate means, may be useful to TEAM participants to determine appropriate ways to increase the coordination of care, improve quality, enhance efficiencies in the delivery system, and otherwise achieve the goals of the proposed model. TEAM beneficiaries would be informed of TEAM and the potential sharing of Medicare beneficiary-identifiable claims data through the beneficiary notification, as discussed in section X.A.3.i.(2) of the preamble of this proposed rule. Further, CMS would make beneficiary-identifiable claims data available to a TEAM participant for beneficiaries who may be included in episodes, in accordance with applicable privacy and security laws and only in response to the TEAM participant's request for such data, through the use of an executed TEAM data sharing agreement with CMS.

We request comments on this proposal to share beneficiary-identifiable claims data with TEAM participants at § 512.562(b).

(c) Minimum Necessary Data

We propose TEAM participants must limit their beneficiary-identifiable data requests, for TEAM beneficiaries who are in an episode during the baseline period or performance year, to the minimum necessary to accomplish a permitted use of the data. We propose

the minimum necessary Parts A and B data elements may include but are not limited to the following data elements:

- Medicare beneficiary identifier (ID).
- Procedure code.
- Gender.
- Diagnosis code.
- Claim ID.
- The from and through dates of service.
- The provider or supplier ID.
- The claim payment type.
- Date of birth and death, if applicable.
- Tax identification number.
- National provider identifier.

We seek comment on the minimum data necessary beneficiary-identifiable information for TEAM participants to request beneficiary-identifiable information for purposes of conducting permissible health care operations purposes under this model at § 512.562(c).

(3) Regional Aggregate Data

As discussed in section X.A.3.d.(3) of the preamble of this proposed rule, we propose to incorporate regional pricing data when establishing target prices for TEAM participants, similar to the CJR model's target prices that are constructed at the regional level. As indicated in the CJR final rule (80 FR 73510), we finalized our proposal to share regional pricing data with CJR participants because it was a factor affecting target prices. Given some of the similar features between the CJR model and the TEAM proposed in this proposed rule, particularly our proposal to incorporate regional pricing data when establishing target prices under the model, we propose to provide regional aggregate expenditure data available for all Parts A and B claims associated with episodes in TEAM for the U.S. Census Division in which the TEAM participant is located, as we similarly provide to hospitals participating in the CJR model. Specifically, we propose to provide TEAM participants with regional aggregate data on the total expenditures during an anchor hospitalization or anchor procedure and the 30-day post-discharge period for all Medicare FFS beneficiaries who would have initiated an episode under our proposed episode definitions in section X.A.3.b. of the preamble of this proposed rule during the baseline period and performance years. This data would be provided at the regional level; that is, we propose to share regional aggregate data with a TEAM participant for episodes initiated in the U.S. Census Division where the TEAM participant is located. These regional aggregate data would be in a format similar to the proposed summary beneficiary-identifiable claims data and would provide summary information on the average episode spending for episodes in TEAM in the U.S. Census Division in which the TEAM participant is located. However, the regional aggregate data would not be beneficiary-identifiable and would be de-identified in accordance with HIPAA Privacy Rule, 45 CFR 164.514(b). Further, the regional aggregate data would also comply with CMS data sharing requirements, including the CMS cell suppression policy which stipulates that no cell (for example, admissions, discharges, patients, services, etc.) containing a value of 1 to 10 can be reported directly. Given the regional aggregate data is de-identified, we propose TEAM participants would not have to submit a request to receive this data and the data would not be subject to the terms and conditions of the TEAM data sharing agreement.

We seek comments on our proposal at § 512.562(d) to provide these data to TEAM participants.

(4) Timing and Period of Baseline Period Data

We recognize that providing the ability for TEAM participants to request the summary and raw beneficiary-identifiable claims baseline data and receive regional aggregate baseline data would be important for TEAM participants to be able to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation, and that early provision of this data, specifically before the model start date, as defined in § 512.505, could facilitate their efforts to do so. Also, as discussed in section X.A.3.d.(3)(a) of the preamble of this proposed rule, target prices would be calculated using a TEAM participant's historical episode spending during their baseline period. Further, we believe that TEAM participants would view the episode payment model effort as one involving continuous improvement. As a result, changes initially contemplated by a TEAM participant could be subsequently revised based on updated information and experiences.

Therefore, as with the BPCI Advanced model, we propose to make 3-years of baseline period data available to TEAM participants, who enter into a TEAM data sharing agreement with CMS, for beneficiaries who would have been included in an episode had the model been implemented during the baseline period, and intend to make these data available upon request prior to the start of each performance year and in accordance with applicable privacy and security laws and established privacy and security protections. We would provide the 3 years of baseline period data for the summary and raw beneficiary-identifiable data and for the regional aggregate data. We believe that 3 years of baseline period data is sufficient to support a TEAM participant's ability to detect unnecessary episode spending, coordinate care, and identify areas for practice transformation. We believe that if a TEAM participant has access to baseline period data for the 3-year period for each performance year used to set target prices, then it would be better able to assess its practice patterns, identify cost drivers, and ultimately redesign its care practices to improve efficiency and quality. We considered proposing to make available 4 years of baseline period data, or offering 1 year of baseline period data, but we believe offering 4 years of baseline period data would not be necessary since target prices in TEAM are constructed from a 3-year baseline period and 1 year of data may not sufficiently help TEAM participants identify areas to improve beneficiary health and care coordination or reducing health costs.

Therefore, we propose that the 3-year period utilized for the baseline period match the baseline data used to create TEAM participants target prices every performance year, and roll forward one year every performance year, as discussed in section X.A.3.d.(3)(a) of the preamble of this proposed rule. Specifically, we propose that the baseline period data for the summary and raw beneficiary-identifiable data reports and regional aggregate data report would be shared annually at least 1 month prior to the start of a performance year and available for episodes for each of the following performance years:

- Performance Year 1: Episodes that began January 1, 2022 through December 31, 2024
- Performance Year 2: Episodes that began January 1, 2023 through December 31, 2025
- Performance Year 3: Episodes that began January 1, 2024 through December 31, 2026
- Performance Year 4: Episodes that began January 1, 2025 through December 31, 2026
- Performance Year 5: Episodes that began January 1, 2026 through December 31, 2027

We request comments on these proposals at proposed § 512.562(b)(6)(i) and § 512.562(d)(1)(i) to share beneficiary-identifiable data and regional aggregate data for a 3-year

baseline period at least 1 month prior to the start of a performance year.

(5) Timing and Period of Performance Year Data

The availability of periodically updated raw and summary beneficiary-identifiable claims data and regional aggregate data would assist TEAM participants to identify areas where they might wish to change their care practice patterns, as well as monitor the effects of any such changes. With respect to these purposes, we have considered what would be the most appropriate period for making updated raw and summary beneficiary-identifiable claims data and regional aggregate data available to TEAM participants, while complying with the HIPAA Privacy Rule's ''minimum necessary'' provisions, described in 45 CFR 164.502(b) and 164.514(d). We believe that monthly data updates would align with a 30-day post-discharge episode window given the episode's duration and the need to share data in a timely manner and identify areas for care improvement. Accordingly, we are proposing to make updated raw and summary beneficiary-identifiable claims data and regional aggregate data available for a given performance year to TEAM participants upon receipt of a request for such information and execution of a TEAM data sharing agreement with CMS, that meets CMS's requirements to ensure the applicable HIPAA conditions for disclosure have been met, as frequently as on a monthly basis during the performance year and continue sharing the claims data for up to 6 months beyond the end of that performance year to capture claims run out. We believe 6 months of claims run out is sufficient given that an internal review of Medicare claims data found that the majority of Medicare claims had been received, and were considered final, by 6 months after the date of service and is also consistent with how we are proposing claims run out for the reconciliation process, as described in section X.A.3.d.(5). of the preamble of this proposed rule.[706]

To accomplish this for the first performance year of the TEAM (2026), we would propose to provide, upon request and execution of a TEAM data sharing agreement with CMS, and in accordance with the HIPAA Privacy Rule, beneficiary-identifiable claims data and aggregate regional data from January 1, 2026 to December 30, 2026 on as frequently as a running monthly basis, as claims are available. We would continue sharing beneficiary-identifiable claims data and regional aggregate data for episodes in performance year 1 for an additional 6 months, so until June 30, 2027, to capture claims run out for items and services billed during this time period. These datasets would represent all potential episodes that were initiated in 2026 and capture sufficient amount of time, up to 6 months, for relevant claims to have been processed. We would limit the content of this data set to the minimum data necessary for the TEAM participant to conduct quality assessment and improvement activities and effectively coordinate care of its patient population. This data sharing process would continue each performance year of TEAM. We considered proposing to extend this period to capture more than 30 days of data or updating on a quarterly frequency. However, we do not believe this would benefit the TEAM participant since it may create challenges to timely identify potential TEAM beneficiaries for care coordination efforts. We seek comment on whether we should consider extending the period to capture more than 30 days of data or updating the data on a frequency other than monthly.

We seek comments on this proposal at proposed § 512.562(b)(6)(ii) and § 512.562(d)( )(ii) to make beneficiary-identifiable data and regional aggregate data available on a monthly basis and for up to 6 months after a performance year.

(6) TEAM Data Sharing Agreement

We propose that if a TEAM participant wishes to retrieve the beneficiary-identifiable data, the TEAM participant would be required to first complete, sign, and submit—and thereby agree to the terms of—a data sharing agreement with CMS, which we would call the TEAM data sharing agreement. We propose to define the TEAM data sharing agreement as an agreement between the TEAM participant and CMS that includes the terms and conditions for any beneficiary-identifiable data being shared with the TEAM participant under § 512.562. Further, we propose to require TEAM participants to comply with all applicable laws and the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data. We also propose that the TEAM data sharing agreement would include certain protections and limitations on the TEAM participant's use and further disclosure of the beneficiary-identifiable data and would be provided in a form and manner specified by CMS. Additionally, we propose that a TEAM Participant that wishes to retrieve the beneficiary-identifiable data would be required to complete, sign, and submit a signed TEAM data sharing agreement at least annually. We believe that it is important for the TEAM Participant to complete and submit a signed TEAM data sharing agreement at least annually so that CMS has up-to-date information that the TEAM participant wishes to retrieve the beneficiary-identifiable data and information on the designated data custodian(s). As described in greater detail later in this section, we propose that a designated data custodian would be the individual(s) that a TEAM participant would identify as responsible for ensuring compliance with all privacy and security requirements and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

CMS believes it is important for the TEAM participant to first complete and submit a signed TEAM data sharing agreement before it retrieves any beneficiary-identifiable data to help protect the privacy and security of any beneficiary-identifiable data shared by CMS with the TEAM participant. There are important sensitivities surrounding the sharing of this type of individually identifiable health information, and CMS must ensure to the best of its ability that any beneficiary-identifiable data that it shares with TEAM participants would be further protected in an appropriate fashion.

We considered an alternative proposal under which TEAM participants would not need to complete and submit a signed TEAM data sharing agreement, but we concluded that, if we proceeded with this option, we would not have adequate assurances that the TEAM participants would appropriately protect the privacy and security of the beneficiary-identifiable data that we are proposing to share with them. We also considered an alternative proposal under which the TEAM participant would need to complete and submit a signed TEAM data sharing agreement only once for the duration of the TEAM. However, we concluded that this similarly would not give CMS adequate assurances that the TEAM participant would protect the privacy and security of the beneficiary-identifiable data from CMS. We concluded that it is critical that we have up-to-date information and designated data custodians, and that requiring the TEAM participant to

[706] Medicare Claims Maturity: CCW White Paper accessed at *https://www2.ccwdata.org/web/guest/white-papers?p_l_back_url=%2Fweb%2Fguest%2Fsearch%3Fq%3Dmedicare%2Bclaims%2Bmaturity* on Jan, 26, 2024.

submit an TEAM data sharing agreement at least annually would represent the best means of achieving this goal.

We solicit public comment on our proposal to define TEAM data sharing agreement at § 512.505. We also seek comment on our proposal to require, in § 512.562(e)(2), that the TEAM participant agree to comply with all applicable laws and the terms of the TEAM data sharing agreement as a condition of retrieving the beneficiary-identifiable data, and on our proposal in § 512.562(e)(1) that the TEAM participant would need to submit the signed TEAM data sharing agreement at least annually if the TEAM participant wishes to retrieve the beneficiary-identifiable data.

(a) Content of TEAM Data Sharing Agreement

We are proposing that, under the TEAM data sharing agreement, TEAM participants would agree to certain terms, namely: (1) To comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations and the requirements of the proposed TEAM; (2) to comply with additional privacy, security, and breach notification requirements to be specified by CMS in the TEAM data sharing agreement; (3) to contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant or performs a similar function for the TEAM participant, to the same terms and conditions to which the TEAM participant is itself bound in its data sharing agreement with CMS as a condition of the downstream recipient's receipt of the beneficiary-identifiable data retrieved by the TEAM participant under the TEAM; and (4) that if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement, the TEAM participant would no longer be eligible to retrieve the beneficiary-identifiable data and may be subject to additional sanctions and penalties available under the law. CMS believes that these terms for sharing beneficiary-identifiable data with TEAM participants are appropriate and important, as CMS must ensure to the best of its ability that any beneficiary identifiable data that it shares with TEAM participants would be further protected by the TEAM participant, and any business associates of the TEAM participant, in an appropriate fashion. CMS believes that these proposals would allow CMS to accomplish that.

CMS seeks public comment on the additional privacy, security, breach notification, and other requirements that we would include in the TEAM data sharing agreement. CMS has these types of agreements in place as part of the governing documents of other models tested under section 1115A of the Act and in the Medicare Shared Savings Program. In these agreements, CMS typically requires the identification of data custodian(s) and imposes certain requirements related to administrative, physical, and technical safeguards relating to data storage and transmission; limitations on further use and disclosure of the data; procedures for responding to data incidents and breaches; and data destruction and retention. These provisions would be imposed in addition to any restrictions required by law, such as those provided in the HIPAA privacy, security and breach notification regulations. These provisions would not prohibit the TEAM participant from making any disclosure of the data otherwise required by law.

CMS also seeks public comment on what disclosures of the beneficiary-identifiable data might be appropriate to permit or prohibit under the TEAM data sharing agreement. For example, CMS is considering prohibiting, in the TEAM data sharing agreement, any further disclosure, not otherwise required by law, of the beneficiary-identifiable data to anyone who is not a HIPAA covered entity or business associate, as defined in 45 CFR 160.103, or to an individual practitioner in a treatment relationship with the TEAM beneficiary, or that practitioner's business associates. Such a prohibition would be similar to that imposed by CMS in other models tested under section 1115A of the Act in which CMS shares beneficiary identifiable data with model participants.

CMS is considering these possibilities because there exist important legal and policy limitations on the sharing of the beneficiary-identifiable data and CMS must carefully consider the ways in which and reasons for which we would provide access to this data for purposes of the TEAM. CMS believes that some TEAM participants may require the assistance of business associates, such as contractors, to perform data analytics or other functions using this beneficiary-identifiable data to support the TEAM participant's review of their care management and coordination, quality improvement activities, or clinical treatment of TEAM beneficiaries. CMS also believes that this beneficiary-identifiable data may be helpful for any HIPAA covered entities who are in a treatment relationship with the TEAM beneficiary.

We seek public comment on how a TEAM participant might need to, and want to, disclose the beneficiary-identifiable data to other individuals and entities to accomplish the goals of the TEAM, in accordance with applicable law.

Under our proposal, the TEAM data sharing agreement would include other provisions, including requirements regarding data security, retention, destruction, and breach notification. For example, we are considering including, in the TEAM data sharing agreement, a requirement that the TEAM participant designate one or more data custodians who would be responsible for ensuring compliance with the privacy, security and breach notification requirements for the data set forth in the TEAM data sharing agreement; various security requirements like those found in other models tested under section 1115A of the Act, but no less restrictive than those provided in the relevant Privacy Act system of records notices; how and when beneficiary-identifiable data could be retained by the TEAM participant or its downstream participants of the beneficiary identifiable data; procedures for notifying CMS of any breach or other incident relating to the unauthorized disclosure of beneficiary-identifiable data; and provisions relating to destruction of the data. These are only examples and are not the only terms CMS would potentially include in the TEAM data sharing agreement.

We solicit public comment on this proposal that CMS, by adding § 512.562(e)(1)(ii), would impose certain requirements in the TEAM data sharing agreement related to privacy, security, data retention, breach notification, and data destruction.

Finally, CMS proposes, at § 512.562(e)(1)(iv), that the TEAM data sharing agreement would include a term providing that if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the TEAM data sharing agreement, the TEAM participant would no longer be eligible to retrieve beneficiary-identifiable data under proposed § 512.562(b) and may be subject to additional sanctions and penalties available under law. We also propose that if CMS determines that one or more grounds for remedial action specified in § 512.592(a) has taken

place, CMS may discontinue the provision of data sharing and reports to the model participant. We propose that CMS may take remedial action if the model participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the applicable data sharing agreement.

We solicit public comment on this proposal, to prohibit the TEAM participant from obtaining beneficiary-identifiable data pertaining to the TEAM if the TEAM participant fails to comply with applicable laws and regulations, the terms of the TEAM, or the TEAM data sharing agreement.

l. Referral to Primary Care Services

As noted elsewhere in this proposed rule, the CMS Innovation Center has placed accountable care at the center of our comprehensive strategy, with a goal of 100 percent of Medicare FFS beneficiaries (and most Medicaid beneficiaries as well) being in an accountable care relationship by 2030. Achieving the goal of increasing the number of beneficiaries in accountable care relationships and testing models and innovations supporting access to high-quality, integrated specialty care across the patient journey—both longitudinally and for procedural or acute services—will greatly depend on numerous factors, including the models and initiatives available for providers in value-based payment, but also our ability to create incentives for providers and suppliers to coordinate care across different aspects of care. With TEAM, we have an opportunity to further integrate care during the transition from an acute event- an episode- back to longitudinal care relationships, such as primary care.

Acute care hospitals commonly refer patients back to primary care providers in the community upon discharge from the hospital, given the connection between ongoing care follow-up and reduced readmissions, among other benefits. While the hospital Conditions of Participation for discharge planning at § 482.43(a) outline requirements for referring patients to post-acute providers as well as community-based providers and suppliers, there is no specific requirement for referral back to a supplier, as defined in in section 1861(d) of the Act and codified at § 400.202, of primary care services, as defined in section 1842(i)(4) of the Act, at hospital discharge for all patients. Under TEAM, we are proposing that TEAM participants be required to include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to discharge from an anchor hospitalization or anchor procedure. We also propose that the TEAM participant must comply with beneficiary freedom of choice requirements, as described in section X.A.3.i.(2) of the preamble of this proposed rule and proposed at § 512.582(a), and not limit a TEAM beneficiary's ability to choose among Medicare providers or suppliers. If a TEAM participant fails to comply with requiring a referral to a supplier of primary care services during hospital discharge planning then we propose the TEAM participant would be subject to remedial action, as described in section X.A.1.f. of the preamble of this proposed rule.

Referring TEAM beneficiaries to a supplier of primary care services would require the TEAM participant to confirm the TEAM beneficiary's primary care provider status during the anchor hospitalization or anchor procedure and make the referral to primary care services by the point of the hospital discharge. By requiring a referral to primary care services, TEAM would be used to connect TEAM beneficiaries with ongoing care beyond the course of the episode. Further, TEAM participants would be required to ensure TEAM beneficiaries preference of suppliers are taken into account to ensure proper beneficiary protections.

We recognize that TEAM is comprised of procedural episodes, which may mean TEAM beneficiaries have a greater need to stay connected to their surgeon or specialist involved in their episode, rather than make a connection to primary care for ongoing care. Additionally, we also recognize requiring a referral to primary care services for all TEAM beneficiaries may increase TEAM participant burden. However, we believe many hospitals already have this perform this process as a standard of care for discharge planning, therefore the burden on TEAM participants should be minimal.

We seek comment on our proposal at proposed § 515.564 to require TEAM participants during hospital discharge planning to make a referral to a supplier of primary care services for a TEAM beneficiary on or prior to discharge from the anchor hospitalization or anchor procedure. We also seek comment on whether there are other mechanisms or ways to connect the TEAM beneficiary back to a supplier of primary care services that would support a patient's continuum of care.

m. Alternative Payment Model Options

(1) Background

As specified in the Quality Payment Program (42 CFR 414.1415), an APM must meet three criteria to be considered an Advanced APM:

- Beginning with the calendar year 2025 Qualifying APM Participant (QP) performance period, an Advanced APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use Certified Electronic Health Record Technology (CEHRT).
- An Advanced APM must include quality measure performance as a factor when determining payment to participants for covered professional services under the terms of the APM.
- Meet the financial risk standard under 42 CFR 414.1415(c)(1) or (2) and the nominal amount standard under 42 CFR 414.1415(c)(3) or (4).

We seek to align the design of TEAM with the Advanced APM criteria in the Quality Payment Program and enable CMS to have the necessary information on eligible clinicians to make the requisite QP determinations. Eligible clinicians, as defined in 42 CFR 414.1305, that are captured on a CMS-maintained list for the APM entity, as defined in 42 CFR 414.1305, may be eligible to receive benefits for participating in an Advanced APM, including burden reduction and financial incentives. We propose that the TEAM participant would be considered the APM entity, but that the TEAM participant's eligible clinicians may be assessed for QP determinations depending on which track the TEAM participant is in and whether the CEHRT criteria are met. However, we also seek to ensure the design of TEAM meets the Merit-based Incentive Payment System (MIPS) APM criteria and that CMS has the necessary information on MIPS eligible clinicians, as defined in 42 CFR 414.1305, so that they may be eligible for certain scoring benefits under MIPS. We therefore propose to adopt two different APM options for TEAM—an AAPM option in which TEAM participants would attest to meeting the CEHRT standards and in which the TEAM participant's eligible clinicians may be assessed for QP determinations (to the extent TEAM is determined to be an Advanced APM for Track 2 and Track 3), and a non-AAPM option in which TEAM participants would not meet CEHRT or financial risk standards and in which the TEAM participant's MIPS eligible clinicians may be assessed for reporting and scoring through the APM Performance

Pathway (APP) (to the extent the TEAM is determined to be a MIPS APM for all tracks).

(2) TEAM APM Options

As previously stated, an Advanced APM must require participants to use CEHRT (42 CFR 414.1415(a)), make payment based on quality measures (42 CFR 414.1415(b)) and meet financial risk standards (42 CFR 414.1415(c)). We propose to have two APM options in TEAM: a non-Advanced APM (non-AAPM) option and an Advanced APM (AAPM) option. The non-AAPM option would be for TEAM participants that do not meet the CEHRT or financial risk standards. These TEAM participants may still be considered APM entities in a MIPS APM. The AAPM option would be for TEAM participants in Tracks 2 and 3 that meet the CEHRT and financial risk standards. These TEAM participants would be considered APM entities in an Advanced APM., TEAM participants in Track 1 would automatically be assigned into the non-AAPM option since Track 1 would have no downside financial risk. The financial risk that we propose in Tracks 2 and 3 would meet the generally applicable nominal amount standard, as defined in 42 CFR 414.1415(c)(3), but there may be TEAM participants in Tracks 2 and 3 who do not meet the CEHRT standard. TEAM participants in Tracks 2 or 3 that do not meet and attest to the CEHRT use requirement would fall into the non-AAPM option of TEAM, but these TEAM participants may still be considered APM entities in a MIPS APM. TEAM participants that participate in Tracks 2 or 3 and meet and attest to the CEHRT use requirement would be in the AAPM option of TEAM.

We propose to require TEAM participants who wish to participate in the AAPM option to attest to meeting the CEHRT use requirement that meets the CEHRT definition in our regulations at section 414.1305 on an annual basis prior to the start of each performance year in a form and manner and by a date specified by CMS. We propose that the TEAM participant would be required to retain and provide CMS access to the attestation upon request. We further propose that meeting and attesting to the CEHRT use criteria would be voluntary, and that CMS would assign TEAM participants who choose not to do so to the non-AAPM option. Lastly, we propose to require TEAM participants who wish to participate in the AAPM option to provide their CMS Electronic Health Record (EHR) Certification IDs on an annual basis prior to the end of each performance year in a form and manner and by a date specified by CMS.

We believe that a TEAM participant's decision to meet and attest to the CEHRT use criteria would not create significant additional administrative burden for the TEAM participant. Moreover, the choice of whether to meet and attest to the CEHRT use criteria would not otherwise affect the TEAM participant's requirements or opportunities under the model. However, a TEAM participant's decision to attest to CEHRT use may affect the ability of its clinicians to qualify as a QP. In other words, if a TEAM participant chose not to attest to CEHRT use, its clinicians would not be assessed for QPs status.

We seek comment on our proposals for the TEAM Advanced APM options and the associated requirements at § 512.522. We also seek comment on our proposed definitions for the AAPM option and non-AAPM option at § 512.505.

(3) Financial Arrangements List and Clinician Engagement List

We propose that each TEAM participant would be required to submit information about the eligible clinicians or MIPS eligible clinicians who enter into financial arrangements with the TEAM participant for purposes of supporting the TEAM participants' cost or quality goals as discussed in section X.A.3.g. of the preamble of this proposed rule. This information would enable CMS to make determinations as to eligible clinicians who could be considered QPs based on the services furnished under TEAM (to the extent the model is determined to be an AAPM) and would be necessary for APP reporting and scoring for MIPS eligible clinicians (to the extent the model is determined to be a MIPS APM), We are proposing that for purposes of TEAM, the eligible clinicians or MIPS eligible clinicians could be: (1) TEAM collaborators, as described in section X.A.3.g.(3). of the preamble of this proposed rule, engaged in sharing arrangements with a TEAM participant; (2) PGP, NPPGP, or TGP members who are collaboration agents engaged in distribution arrangements with a PGP, NPPGP, or TGP that is a TEAM collaborator, as described in section X.A.3.g.(5). of the preamble of this proposed rule; or (3) PGP, NPPGP, or TGP members who are downstream collaboration agents engaged in downstream distribution arrangements with a PGP, NPPGP, or TGP that is also an ACO participant in an ACO that is a TEAM collaborator, as described in section X.A.3.g.(6). of the preamble of this proposed rule. The list of physicians and nonphysician practitioners in these three groups that we are proposing to require TEAM participants to submit to CMS would satisfy the criteria to be considered an Affiliated Practitioner List, as defined in § 414.1305. We are proposing to use the list submitted by TEAM participants to make determinations regarding which physicians and nonphysician practitioners should receive QP determinations or be reported for the APP based on the services they furnish under TEAM.

We propose for the reasons detailed above that each TEAM participant with eligible clinicians or MIPS eligible clinicians must submit to CMS a financial arrangements list in a form and manner and by the date specified by CMS on a quarterly basis during each performance year, or attest that there are no individuals to report on the financial arrangements list. We believe submission of the financial arrangements list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as described in § 414.1425. We are proposing to define the financial arrangements list as the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent. We propose that the TEAM participant would be required to retain and provide CMS access to the financial arrangements list upon request. The proposed list must include the following information:

- For each TEAM collaborator who is a physician, nonphysician practitioner, or therapist during the performance year—

++ The name, tax identification number (TIN), and national provider identifier (NPI) of the TEAM collaborator; and

++ The start date and, if applicable, end date, for the sharing arrangement between the TEAM participant and the TEAM collaborator.

- For each collaboration agent who is a physician, nonphysician practitioner, or therapist during the performance year—

++ The name, TIN, and NPI of the collaboration agent and the name and TIN of the TEAM collaborator with which the collaboration agent has entered into a distribution arrangement; and

++ The start date and, if applicable, end date, for the distribution arrangement between the TEAM collaborator and the collaboration agent.

• For each downstream collaboration agent who is a physician or nonphysician practitioner, or therapist during the performance year—

++ The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent; and

++ The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

• If there are no individuals that meet the reporting criteria above for TEAM collaborators, collaboration agents, or downstream collaboration agents, then the TEAM participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that there are no individuals to report on the financial arrangements list.

While the proposed submission of the financial arrangements list may create some additional administrative burdens for certain TEAM participants, we expect that TEAM Participants could modify their contractual relationships with their TEAM collaborators and, correspondingly, require those TEAM collaborators to include similar requirements in their contracts with collaboration agents and in the contracts of collaboration agents with downstream collaboration agents.

We also recognize there may be physicians and nonphysician practitioners who would not be listed on the financial arrangements list because they have not entered into a financial arrangement as a TEAM collaborator, collaboration agent, or downstream collaboration agent, but who may nevertheless participate in TEAM activities, as defined at proposed § 512.505, and may be eligible for QP determinations or eligible for APP reporting because they are affiliated with and support the APM Entity. We propose that, in order to capture these physicians and nonphysician practitioners who are not listed on the TEAM participant's financial arrangements list for QP determinations or APP reporting, TEAM participants must also submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis every performance year. We propose to use the clinician engagement list for assessing QP determinations and for APP reporting. The submission of the clinician engagement lists may create some additional administrative burdens for TEAM participants, but we expect the effort to be worthwhile since some of these QP determinations may result in eligible clinicians receiving burden reduction benefits and financial incentives, and some MIPS eligible clinicians may receive MIPS APM scoring benefits.

We are proposing to define the clinician engagement list as the list of eligible clinicians or MIPS eligible clinicians that participate in TEAM activities and have a contractual relationship with the TEAM participant, and who are not listed on the financial arrangements list . We propose that the TEAM participant must submit the list to CMS on a quarterly basis during each performance year in a form and manner and by a date specified by CMS or attest that there are no individuals to report on the clinician engagement list. We believe submission of the clinician engagement list on a quarterly basis would align with the Quality Payment Program's QP determination dates, as described in § 414.1425. We propose that the TEAM participant would be required to retain and provide CMS access to the clinician engagement list upon request. We propose that the clinician engagement list must include the following information:

• For each physician, nonphysician practitioner, or therapist who is not listed on the TEAM participant's financial arrangements list during the performance year but who does have a contractual relationship with the TEAM participant and participates in TEAM activities during the performance year—

++ The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist; and

++ The start date and, if applicable, end date, for the contractual relationship between the physician, nonphysician practitioner, or therapist and the TEAM participant.

• We are proposing that if there are no individuals that meet the requirements to be reported on the clinician engagement list, then the TEAM participant must attest on a quarterly basis in a form and manner and by a date specified by CMS that there are no individuals to report on the clinician engagement list.

We seek comments on the proposal to require TEAM participants to submit a financial arrangements list and clinician engagement list on a quarterly basis or attest that there are no individuals to report. We are especially interested in comments about approaches to information submission, including the content of the lists, and periodicity and method of submission to CMS that would minimize the reporting burden on TEAM participants while providing CMS with sufficient information about eligible clinicians to facilitate QP determinations and APP reporting to the extent that TEAM is considered to be an Advanced APM for Track 2 and Track 3 and a MIPS APM for all tracks, respectively.

n. Interoperability

Improved interoperability of software systems and tools used to manage patients supports the goals of value-based care, enabling care coordination and data-driven decision making to improve outcomes and lower healthcare expenditures. Hospitals use electronic health record (EHR) systems to document patient medical history, which may include clinical data relevant to that person's care, including demographics, clinical notes, medications, vital signs, past medical and surgical history, immunizations, laboratory data and radiology reports. The EHR also has the ability to support other care-related and administrative activities directly or indirectly through various interfaces, including clinical decision support, quality improvement, and population-health outcomes reporting. While EHRs also include capabilities to coordinate care by sharing data in a structured system with other health care providers, health information exchanges (HIEs) and health information networks (HINs), as defined in 45 CFR 171.102, have played an increasingly important role in assisting hospitals to connect with other health care providers and ensure that information supporting care coordination is consistently shared.[707] A hospital may be connected to an HIE or HIN, that focuses on exchange within a defined geographic area, or nationally across systems and regions. Evidence suggests that participation with an entity facilitating cross-system exchange may improve patient outcomes, including decreased hospital readmission rates, as well as decreased utilization, such as repeat laboratory or radiology studies.[708] [709]

Despite the growth of HIEs and HINs, important gaps remain for an infrastructure that supports the seamless exchange of clinical data across disparate healthcare organizations and software vendors. Barriers to

[707] *https://www.healthit.gov/topic/health-it-and-health-information-exchange-basics/health-information-exchange.*

[708] Chen, M., Guo, S., & Tan, X. (2019). Does health information exchange improve patient outcomes? Empirical evidence from Florida hospitals. Health Affairs, 38(2), 197–204. *https://doi.org/10.1377/hlthaff.2018.05447.*

[709] Menachemi, N., Rahurkar, S., Harle, C. A., & Vest, J. R. (2018). The benefits of health information exchange: an updated systematic review. Journal of the American Medical Informatics Association, 25(9), 1259–1265. *https://doi.org/10.1093/jamia/ocy035.*

interoperability create silos that limit care coordination between hospitals and other health care providers, especially during care transitions such as a patient being discharged from a hospital to a post-acute care facility. Existing HHS and CMS initiatives aim to support health care organizations engaging in interoperable exchange of health information. The Office of the National Coordinator for Health Information Technology (ONC) launched The Trusted Exchange Framework and Common Agreement (TEFCA), which establishes a universal governance, policy, and technical floor for nationwide interoperability; simplifies connectivity for organizations to securely exchange information to improve patient care, enhance the welfare of populations, and generate health care value; and enables individuals to gather their healthcare information.[710]

CMS acknowledged the importance of TEFCA in the FY 2023 Inpatient Prospective Payment System (IPPS) final rule (87 FR 48780) by adding the Enabling Exchange under TEFCA (87 FR 49329) as a new measure under the Health Information Exchange Objective for the Medicare Promoting Interoperability Program. Participants in the Medicare Promoting Interoperability Program may also earn credit for the Health Information Exchange Objective by reporting on the previously finalized Health Information Exchange (HIE) Bidirectional Exchange measure (86 FR 45465).

In the CY 2023 Physician Fee Schedule final rule (87 FR 70067 through 70071), CMS also added a new optional measure, Enabling Exchange Under TEFCA, to the Health Information Exchange objective for the Merit-based Incentive Payment System (MIPS) Promoting Interoperability performance category beginning with the CY 2023 performance period/2025 MIPS payment year. Currently, for the CY 2024 performance period/2026 MIPS payment year, MIPS eligible clinicians may fulfill the Health Information Exchange objective via three avenues by reporting: (1) the two Support Electronic Referral Loops measures; (2) the Health Information Exchange Bidirectional Exchange measure; or (3) the Enabling Exchange under TEFCA measure (88 FR 79357 through 79362).

TEAM would like to support TEAM participants' interoperability efforts that could lead to best practices across U.S. health care landscape. However, we recognize that given the existing federal interoperability initiatives, we do not want to create duplicate efforts or create unnecessary burden on TEAM participants. We are seeking comment on how CMS can promote interoperability in the proposed TEAM, in particular, to what extent TEAM participants are planning on participating in TEFCA in the next 1–2 years, as well as other means by which interoperability may support care coordination for an episode. Any further proposals related to interoperability included in TEAM would be done in future notice and comment rulemaking.

o. Evaluation Approach

(1) Background

The proposed TEAM is intended to enable CMS to better understand the effects of bundled payments models on a broader range of Medicare providers and capture a greater number of episodes of care than what is currently available under the CJR model and BPCI Advanced. Obtaining information that is representative of a wide and diverse group of providers and episodes of care will best inform us on how such a payment model might function were it to be more fully integrated within the Medicare program. All CMS Innovation Center models, which would include the proposed TEAM, are rigorously evaluated on their ability to improve quality and reduce costs. In addition, we routinely monitor CMS Innovation Center models for potential unintended consequences of the model that run counter to the stated objective of lowering costs without adversely affecting quality of care. Outlined later in this section are the proposed design and evaluation methods, the data collection methods, key evaluation research questions, and the evaluation period and anticipated reports for the proposed TEAM.

(2) Design and Evaluation Methods

Our evaluation methodology for TEAM would be consistent with the standard CMS Innovation Center evaluation approaches we have taken in other projects such as the BPCI initiative, BPCI Advanced and the CJR model, and other CMS Innovation Center models. Specifically, the evaluation design and methodology for the proposed TEAM would be designed to allow for a comparison of historic patterns of care among the TEAM participants to any changes made in these patterns in response to the TEAM. In addition, the overall design would include a comparison of TEAM participants with hospitals not participating in TEAM to help us discern simultaneous and competing provider and market level forces that could influence our findings.

Our evaluation methodology for this model builds upon the fact that we are proposing CBSAs to be selected for participation in the model based on a stratified random assignment. In this approach, researchers evaluate the effects of the model on outcomes of interest by directly comparing CBSAs that are randomly selected to participate in the model to a comparison group of CBSs that were not randomly selected for the model (but could have been). Randomized evaluation designs of this kind are widely considered the ''gold standard'' for social science and medical research because they ensure that the systematic differences are reduced between units that do and do not experience an intervention, which ensures that (on average) differences in outcomes between participating and non-participating units reflect the effect of the intervention.

We plan to use a range of analytic methods, including regression and other multivariate methods appropriate to the analysis of stratified randomized experiments to examine each of our measures of interest. Measures of interest could include, for example, quality of and access to care, utilization patterns, expenditures, and beneficiary experience. With these methodologies, we would be able to examine the experience of the TEAM participants over time relative to those in the comparison group controlling for as many of the relevant confounding factors as is possible. The evaluation would also include rigorous qualitative analyses in order to capture the evolving nature of care delivery transformation.

In our design, we plan to take into account the impact of the TEAM at the geographic unit level, the hospital level, and at the patient level. We are also considering various statistical methods to address factors that could confound or bias our results. For example, we would use statistical techniques to account for clustering of patients within hospitals and markets. Clustering allows our evaluation to compensate for commonalities in beneficiary outcomes by hospitals and by markets. Accounting for clustering ensures that we do not overstate our effective sample size by failing to account for the fact that performance of hospitals in a given market may not be fully independent of one another. Alternatively, accounting for clustering may improve statistical precision or allow us to better examine how patterns of performance vary across hospitals. Thus, in our analysis, if a

[710] *https://www.healthit.gov/topic/interoperability/policy/trusted-exchange-framework-and-common-agreement-tefca.*

large hospital consistently has poor performance, clustering would allow us to still be able to detect improved performance in the other, smaller hospitals in a market rather than place too much weight on the results of one hospital and potentially lead to biased estimates and mistaken inferences.

Finally, we plan to use various statistical techniques to examine the effects of the TEAM while also taking into account the effects of other ongoing interventions such as Medicare Shared Savings Program. For example, we are considering additional regression techniques to help identify and evaluate the incremental effects of adding the TEAM in areas where patients and market areas are already subject to these other interventions as well as potential interactions among these efforts.

(3) Data Collection Methods

We are considering multiple sources of data to evaluate the effects of the TEAM. We expect to base much of our analysis on secondary data sources such as the Medicare FFS claims. The beneficiary claims data would provide information such as expenditures in total and by type of provider and service as well as whether or not there was an inpatient hospital readmission. In conjunction with the secondary data sources mentioned previously, we are considering a CMS-administered survey, guided interviews and focus groups of beneficiaries who were in an episode during the performance year. This survey would be administered to TEAM beneficiaries who were in an episode or similar patients selected as part of a control group. The primary focus of this survey would be to obtain information on the TEAM beneficiary's experience in episodes relative to usual care. The administration of this beneficiary survey would be coordinated with administration of the HCAHPS (Hospital Consumer Assessment of Healthcare Providers and Systems) survey so as to not conflict with or compromise this HCAHPS efforts. Likewise, we are considering a survey administered by CMS with providers including, but not limited to, TEAM participants, physicians, and PAC providers participating in the TEAM. These surveys would provide insight on providers' experience under the model and further information on the care redesign strategies undertaken by health care providers.

In addition, we are considering CMS evaluation contractor administered site visits and focus groups with selected TEAM participants, physicians and PAC providers. We believe that these qualitative methods would provide contextual information that would help us better understand the dynamics and interactions occurring among the providers in TEAM. For example, these data could help us better understand hospitals' intervention plans as well as how they were implemented and what they achieved. Moreover, in contrast to relying on quantitative methods alone, qualitative approaches would enable us to capture variations in implementation as well as identify factors that are associated with successful interventions and distinguish the effects of multiple interventions that may be occurring within participating providers, such as simultaneous ACO and bundled payment participation.

We are considering primary data collection efforts with providers and beneficiaries within the control group. The systematic data collection from control group providers would allow for parsing out changes in standard of care from the TEAM impact. Additionally, primary data collection with beneficiaries who received care at control group providers will provide critical information about the impact of the model on self-reported health status, experience of care and overall satisfaction.

(4) Key Evaluation Research Questions

Our evaluation would assess the impact of the TEAM on the aims of improved care quality and efficiency as well as reduced health care costs. This would include assessments of patient experience of care, utilization, outcomes, Medicare expenditures, provider costs, quality, and access. Our key evaluation questions would include, but are not limited to, the following:

- Payment. Is there a reduction in Medicare expenditures in absolute terms? By subcategories? Do the TEAM participants reduce or eliminate variations in expenditures that are not attributable to differences in health status? If so, how have they accomplished these changes? Did TEAM result in net savings to the Medicare program, after accounting for the financial incentives distributed under the model?
- Utilization. Are their changes in Medicare utilization patterns overall and for specific types of services? How do these patterns compare to historic patterns, regional variations, and national patterns of care? How are these patterns of changing utilization associated with Medicare payments, patient outcomes and general clinical judgment of appropriate care?
- Referral Patterns and Market Impact. How has provider behavior in the selected CBSAs changed under the model? Is there evidence of broader changes to the market? Are provider relationships changing over the course of the model? Is the model facilitating continuity of care by connecting beneficiaries with new or existing primary care providers?
- Outcomes/Quality. Is there either a negative or positive impact on quality of care and/or better patient experiences of care? Did the incidence of relevant clinical outcomes such as complications remain constant or decrease? Were there changes in beneficiary outcomes under the model compared to appropriate comparison groups?
- Equity. Were there notable impacts by subgroups based on beneficiary characteristics such as race/ethnicity, dual status, rurality, or other measures of socio-economic disadvantage? How did TEAM participants address health disparities in care? Did the financial performance differ for hospitals furnishing a substantial share of services to uninsured and low-income patients?
- Transformation. Is there evidence that the participants' changes in care delivery, that were made in the response to the model, will be sustained? Did TEAM enable positive spillover effects to other episodes of care, or other providers across the local market of the health system?
- Unintended Consequences. Did TEAM result in any unintended consequences, including adverse selection of patients, access problems, cost shifting beyond the agreed upon episode, evidence of stinting on appropriate care, anti-competitive effects on local health care markets, evidence of inappropriate referrals practices? Is so, how, to what extent, and for which beneficiaries or providers?
- Potential for Extrapolation of Results. What was the typical patient case mix in the participating practices and how did this compare to regional and national patient populations? What were the characteristics of participating practices and to what extent were they representative of practices treating Medicare FFS beneficiaries? Was the model more successful in certain types of markets? To what extent would the results be able to be extrapolated to similar markets and/or nationally?
- Explanations for Variations in Impact. What factors are associated with the pattern of results (previously)? Specifically, are they related to:
- Characteristics of the model including variations by year and factors such as presence of downside risk or track assignment?

The TEAM participant's specific features and structure, including such

factors as the number of relevant cases, provider mix, and health system affiliation?

- The TEAM participant's organizational culture and readiness
- The TEAM participant's care redesign interventions and their ability to carry out their proposed intervention?
- Characteristics and nature of interaction with partner providers including PAC provider community?
- Characteristics of market and CBSA such as resources, care infrastructure and supply of physicians and associated providers?
- Characteristics associated with the patient populations served?

(5) Evaluation Period and Anticipated Reports

As discussed in section X.A.3.a.(1). of the preamble of this proposed rule, TEAM would have a 5-year model performance period. The evaluation period would encompass this entire 5-year model performance period and up to 2 years after. We plan to evaluate the TEAM on an annual basis. However, we recognize, that interim results are subject to issues such as sample size and random fluctuations in practice patterns. Hence, while CMS intends to conduct periodic summaries to offer useful insight during the course of the model test, a final analysis after the end of the 5-year model performance period will be important for ultimately synthesizing and validating results.

We seek comments on our design, evaluation, data collection methods, and research questions.

p. Decarbonization and Resilience Initiative

In this section, we discuss a proposal for a voluntary Decarbonization and Resilience Initiative within TEAM to assist hospitals in addressing the threats to the nation's health and its health care system presented by climate change and the effects of hospital carbon emissions on health outcomes, health care costs and quality of care. The voluntary initiative would have two elements: technical assistance for all interested TEAM participants and a proposed voluntary reporting option to capture information related Scope 1 and Scope 2 emissions as defined by the Greenhouse Gas Protocol (GHGP) framework,[711] with the potential to add Scope 3 in future years.

The threats presented by climate change to the health of beneficiaries and to health care operations are growing. These include acute climate-related events (for example, wildfires, high—powered storms, flooding) that can harm exposed populations and disrupt service delivery, exacerbations of chronic illness (for example, extreme heat impacts on cardiovascular and pulmonary health) and increases in water-borne and insect-borne illness.[712] These risks often fall disproportionately on traditionally underserved populations, heightening existing health disparities.[713] In view of these challenges, health care organizations must increase their resilience, and understand and address their patients' climate-related health risks.

Health systems have reduced their own significant emissions and ground-level air pollution, often through the introduction of energy efficiency solutions, renewable energy initiatives, and focused efficiency measures in clinical care delivery in areas including surgery (described throughout section X.A.3.p. of the preamble of this proposed rule). We believe these types of cumulative reductions have the potential to make significant contributions to nationwide emission reductions and produce savings. At an individual facility level, these reductions have the potential to save the facility money and enhance their operational resilience (as many sustainable energy solutions can create more energy independence for facilities), meaning decarbonization has bearing on quality of care and cost. More efficient utilization of resources in the surgical setting, specifically, can also reduce cost and improve sustainability; for example, although operating rooms represent a relatively small proportion of hospitals' physical footprint, they typically consume 3–6 times more energy per square foot as the hospital as a whole,[714] account for 40–60 percent of the hospital's supply costs, and produce 30 percent of the hospital's waste.[715]

Because hospital activities (such as surgical procedures) impact emissions and the work of hospitals requires uninterrupted service delivery, we believe TEAM presents an opportunity for CMS to learn more about key strategies for decarbonization (for example, clinical decarbonization approaches, approaches to reducing low-value services and physical waste) and improving resiliency in the health care system. It is hoped that this initiative would help bring savings to the health system and the Medicare Program, consistent with TEAM's goals.

(1) Background

(a) Climate Impact on Health

Climate change driven by greenhouse gas (GHG) emissions threatens patients' health. The health care industry's contribution to those emissions is well-documented and accounts for between 4.4 and 4.6 percent of worldwide GHG emissions.[716] In the U.S. in 2018, GHG emissions from the health care sector accounted for 8.5 percent of total U.S. GHG emissions.[717] According to the National Climate Assessment, the US Government's official report on climate change impacts, children, older adults, and low-income communities are disproportionately affected by climate change and pollution, meaning the Medicare, Medicaid, and CHIP programs bear much of the medical expenses and caregiving services related to emissions.[718] Medicare beneficiaries face several health conditions related to GHG emissions, including, but not limited to, heart disease, stroke, cancer, and

Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, 1515 pp. doi: 10.7930/NCA4.2018.

respiratory diseases.'' [719] More discussion on the impact of climate to Medicare, Medicaid, and CHIP beneficiaries is presented in section X.A.3.p.(1).(c).(v). of the preamble of this proposed rule. The estimated disease burden from U.S. health care pollution is the same order of magnitude as years of life lost as a result of deaths from preventable medical errors.[720]

In keeping with an increased focus on climate resilience and sustainability across HHS, the Biden Administration in 2021 called for the creation of a new Office of Climate Change and Health Equity (OCCHE) within HHS via executive order (E.O. 14008), and for the first time HHS set an aim for addressing climate-related threats to health in its 2022–2026 strategic plan, requiring all Operating Divisions to contribute. In 2022, the Biden Administration launched the Health Sector Climate Pledge, a voluntary commitment to climate resilience and emissions reduction that invites health sector organizations to align with administration goals, cutting GHG emissions by 50 percent by 2030 and achieving net zero emissions by 2050. A group of 133 organizations representing 900 hospitals have signed the Pledge as of November 16, 2023.[721] To support health sector efforts with climate resilience and emissions reduction, OCCHE developed a resource hub [722], featuring tools from across HHS such as a compendium of federal resources for the healthcare sector, information on how to leverage the IRA, an educational webinar series, and the Agency for Healthcare Research and Quality (AHRQ)'s Decarbonization Primer [723] (referred to hereafter as the AHRQ primer). OCCHE also convenes federal health systems (for example, Indian Health Service, Veteran's Health Administration) to collaborate on meeting the administration's goals for emissions reduction, which can inform this initiative.

(b) Greenhouse Gas Protocol and Health

CMS has twice sought and received feedback on approaches to decarbonization and resilience through requests for information in proposed rules. The feedback to these requests was summarized in the final rules. The first request for information was published in the Patient Protection and Affordable Care Act; HHS Notice of Benefit and Payment Parameters for 2023 proposed rule (87 FR 693 through 694) and a summary presented in the final rule (87 FR 27354). The second was in the in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28478 through 28479) and the summary was presented in the final rule (87 FR 49167). Overall, respondents showed a notable interest in reducing health sector emissions and increasing transparent GHG emissions reporting. CMS continues to update policies to promote energy efficiency and reduce GHG emissions. For example, in 2023, CMS issued the Categorical Waiver Health Care Microgrid System. CMS requires specified providers to have ''emergency power for an essential electrical system (EES) to be supplied by a generator or batter system.'' [724] The waiver permits normal and emergency power to be supplied by sources other than a generator or battery system, including a health care microgrid systems that use sustainable sources of energy such as solar power.

When discussing GHG for this initiative, we refer to the Greenhouse Gas Protocol (GHGP) framework, which is a globally recognized standard for quantifying and reporting on emissions. The framework defines 3 scope levels.[725] We have included examples that relate to health care. [726] [727]

- Scope 1: Direct emissions. Direct GHG emissions occur from sources that are owned or controlled by an organization or company. For health care, Scope 1 captures health care operations such as direct facilities emissions, anesthetic gases, and GHG emissions from leased or owned vehicles.
- Scope 2: Indirect emissions from purchased energy. GHG emissions from the generation of purchased electricity consumed by the organization or company. For health care facilities, Scope 2 includes purchased or acquired electricity, and steam, heat, or cooling consumed by the reporting organization or company.
- Scope 3: Other indirect GHG emissions. Scope 3 allows for the treatment of all other indirect emissions. Scope 3 incorporates upstream and downstream emissions in the supply chain. For health care, Scope 3 may include purchased pharmaceuticals and chemicals, medical devices and supplies, food, water, waste, employee and patient transportation, and additional emissions outside of Scopes 1 and 2. In Scope 3, all purchased and sold goods have an estimated emissions factor for their production, transportation, and life cycle. For example, in a health care setting, Scope 3 emissions may include prescribed medicine such as metered dose inhalers (MDI). Scope 3 uniquely incorporates intangible emissions through the organization's reported investments.

In a 2018 analysis, Scope 1 accounted for 7 percent of the U.S. National Health Care GHG emissions, Scope 2 accounted for 11 percent, and Scope 3 accounted for the remaining 82 percent.[728] We

believe that Scopes 1 and 2 emissions reduction measures represent areas where there are significant opportunities to increase hospital operating efficiency and reduce operating costs. Therefore, we are proposing in section X.A.3.p.(4). of the preamble of this proposed rule that TEAM participants could voluntarily report on organizational questions and Scopes 1 and 2 metrics, as participants in TEAM would have direct oversight of these items. While we are not proposing Scope 3 metrics in this rule, we recognize Scope 3 accounts for the largest portion of GHG emissions. Therefore, we are seeking comment in section X.A.3.p.(4).(a).(vii). of the preamble of this proposed rule on how we might be able to standardize and collect this information in the future.

(c) Rationale for Establishing the Decarbonization and Resilience Initiative

(i) GHG Emissions Are Relevant to Monitoring and Evaluating Quality Outcomes

The CMS Innovation Center is granted discretion to collect data necessary for the purposes of evaluating and monitoring its models under section 1115A(b)(4)(B) of the Act. Overwhelming evidence points to GHG emission's deleterious effect on patient health and the disproportionate impact born by Medicare, Medicaid, and CHIP beneficiaries. See section X.A.3.p.(1).(c).(v). of the preamble of this proposed rule, for GHG Emissions Impact on Medicare, Medicaid, and CHIP populations.

Given the established impact GHG emissions have on Medicare, Medicaid, and CHIP beneficiary health, CMS proposes to collect data on GHG emissions, through voluntary reporting, as part of our monitoring and evaluation of the model, just as CMS monitors for other quality indicators that may impact beneficiary health.

(ii) Measuring GHG Emissions is a Key First Step To Reducing GHG Emissions Which Could Improve Quality Outcomes for Beneficiaries

Measuring GHG emissions is an important first step toward reducing GHG emissions, and such reductions could lead to outcome quality improvements among beneficiaries. By organizing a GHG emissions reporting system, CMS is supporting TEAM participants in establishing a baseline understanding of their GHG emissions, how much and how efficiently energy is used in their facilities, and the emissions generated by their facilities or activities. Establishing this baseline understanding is a necessary first step to lowering emissions. The proposed decarbonization initiative could directly lead to lower emissions through: (1) sharing benchmarkable data back to TEAM participants, which will support identification of opportunities to improve energy efficiency; (2) supporting their GHG emissions reporting activities, which will support TEAM participants in better understanding their current state energy consumption, GHG emissions, and opportunities to improve energy efficiency; and (3) providing technical assistance related to reporting, identifying, and accessing resources for and undertaking activities to reduce GHG emissions.

Given the association of emissions with chronic diseases, including respiratory and cardiovascular disease, the decarbonization and resilience initiative could improve health outcomes for the Medicare, Medicaid, and CHIP beneficiaries disproportionately affected by GHG emissions. In particular, the Environmental Protection Agency (EPA) released a report on the health impacts of GHG emissions, pollution, and climate change and health and pointed towards key health outcomes that are impacted—new asthma diagnoses in children age 0–17 due to particulate air pollution, premature deaths in adults ages 65 and older due to particulate air pollution, and deaths due to extreme temperatures.[729] We would expect reductions in GHG emissions to improve these health outcomes for its patient populations.

(iii) Measuring GHG Emissions Could Improve Hospitals' Resilience and Beneficiaries' Continuity of Care, Both of Which Impact Quality Outcomes

In addition to these general health quality impacts, there are also resilience and continuity of care impacts associated with energy efficiency and a transition to sustainable energy sources for hospitals, which also impact quality outcomes. One study that examined 158 hospital evacuations between 2000 and 2017 found that nearly three-quarters were for climate-sensitive events such as wildfires or hurricanes.[730] In addition to causing hospital evacuations, climate change can disrupt health care system operations by causing facility damage and closures, power outages, displacement of health care professionals, and disruptions in transportation. These climate impacts affect access to and quality of care.

By sharing back benchmarkable data with TEAM participants (as described in section X.A.3.p.(6).(a). of the preamble of this proposed rule, Individualized Feedback Reports to TEAM Participants, of the preamble of this proposed rule), providing technical assistance related to GHG emissions reporting, and providing technical assistance to improve energy efficiency and energy resilience, the Decarbonization and Resilience Initiative could directly support TEAM participants in building greater energy resilience to disasters and ensuring greater continuity of care. We expect the Decarbonization and Resilience Initiative to increase the energy efficiency of participating TEAM participants and the degree to which they have sustainable, more localized sources of energy that are resilient to disasters and other climate change related hazards.[731] We expect this to lead to fewer hospital closures during disasters and therefore improve continuity of care and other health quality outcomes for effected beneficiaries. Greenwich Hospital offers an example of this. In 2008, the hospital invested in building a low- carbon, energy efficient energy infrastructure with the intention of it being able to withstand the impact of an extreme weather event. The investment proved to be valuable because when Hurricane Sandy hit the New Jersey coast in 2012, the hospital was still able to carry on with normal healthcare operations.

(iv) GHG Emissions are Relevant To Reducing Program Expenditures

Reductions in operating costs and spending due to energy efficiency and more efficient provision of care (in the case of anesthetic gases) directly contribute to savings for CMS. GHG

emissions reporting is a necessary first step for hospitals to begin to understand their emissions, how energy efficient their facilities and processes are, and to identify opportunities to increase efficiencies and lower operating costs and spending tied to GHG emissions and to overutilization of anesthetic gas. In turn, increased energy efficiency and reduced energy expenditures may reduce Medicare Program costs. Technical assistance provided under the initiative would also further help hospitals identify, resource, and implement energy efficiency improvements.

Medicare pays Critical Access Hospitals based on each hospital's reported costs outside of IPPS. Therefore, reductions in operating costs and some capital costs could lead to cost savings for the Medicare program. Medicare pays for capital and operating costs as part of IPPS payments, and efficiencies achieved through decarbonization could lead to savings to the Medicare program. In addition, reporting questions and metrics related to energy use could improve understanding of those costs and inform potential future policy development to secure further savings.

Medicare covers anesthesia services through both Part A and Part B. Research has shown that low-flow anesthesia techniques (≤1 L/min) are associated with lower costs, reduced emissions, and do not impact quality of care or health outcomes.[732] The Patient Safety and Support of Positive Experiences with Anesthesia MIPS Value Pathway already includes an efficiency measure focused on encouraging the use of low flow inhalation general anesthesia during the maintenance phase of the anesthetic for patients aged 18 years or older who undergo an elective procedure lasting 30 minutes or longer (ABG44). Such improvements to the provision of care and anesthesia could simultaneously lower emissions and reduce costs/produce savings.

(v) GHG Emissions Impact on Medicare, Medicaid, and CHIP Populations

Medicare and Medicaid beneficiary health and program expenditures are directly impacted by GHG emissions. Older adults, or those 65 years old and older, experience poorer health outcomes because of rising temperatures, air pollution, and disaster events. Depending on global trajectories of global warming, particulate matter concentrations are estimated to result in approximately 2,000 to 6,000 premature U.S. deaths for those over 65 years old on an annual basis. Air pollution has other negative health consequences, including the exacerbation of chronic obstructive pulmonary disease and increased occurrence of heart attacks, especially for those living with diabetes or obesity.[733]

Other studies have documented the impact of weather-related events such as high temperatures, flood, storms, or hurricanes that may disproportionately affect older adults.[734] [735] [736] [737]

Medicaid beneficiaries are typically lower-income populations, pregnant people, and children, all of whom experience many direct and indirect health challenges because of climate drivers and events, including greater exposure to air pollution, mortality and injury from extreme temperatures, and food insecurity.[738]

Medicare and Medicaid beneficiaries are among the groups most vulnerable to the health effects of climate change and GHG emissions and bear the highest share of climate-sensitive health costs including those from GHG emissions which may account for billions in health-related costs to both programs.[739] [740] The Office of Management and Budget's (OMB) 2022 Assessment of the Federal Government's Financial Risks to Climate Change estimates that ''Federal climate-related healthcare spending in a few key areas could increase by between $824 million and $22 billion (2020$) by the end of the century.'' [741]

(2) Defining the Decarbonization and Resilience Initiative

We are proposing at § 512.505 that a Decarbonization and Resilience Initiative is an initiative for TEAM participants that includes technical assistance on decarbonization and a voluntary reporting program where TEAM participants may annually report questions and metrics related to emissions to CMS based on information that we describe in section X.A.3.p.(4). of the preamble of this proposed rule.

We are proposing that CMS would make available to TEAM participants technical assistance related to decarbonization, emissions reduction, and energy efficiency as described in section X.A.3.p.(4). of the preamble of this proposed rule. The voluntary reporting component of the initiative described in section X.A.3.p.(4). of the preamble of this proposed rule would allow TEAM participants to elect to report metrics including emissions data and assessment questions on four potential categories: organizational questions, building energy metrics, anesthetic gas metrics, and transportation metrics to CMS. We are proposing the building metrics would be reported to CMS using the ENERGY STAR® PortfolioManager® and all other metrics would be reported to CMS in a manner and form specified by CMS. TEAM participants that elect to report all the metrics after a performance year would receive individualized feedback reports and public recognition from CMS.

(3) Technical Assistance

For the technical assistance portion of the Decarbonization and Resilience Initiative we are proposing that CMS

[741] U.S. Office of Management & Budget. Climate Risk Exposure: An Assessment of the Federal Government's Financial Risks to Climate Change. OMB White Paper. April 2022. *https://www.whitehouse.gov/wp-content/uploads/2022/04/OMB_Climate_Risk_Exposure_2022.pdf.*

would provide three types of support to interested TEAM participants:

- Developing approaches to enhance organizational sustainability and resilience;
- Transitioning to care delivery methods that result in lower GHG emissions and are clinically equivalent to or better than previous care delivery methods (for example, switching from Desflurane to alternative inhaled anesthetics); and
- Identifying and using tools to measure emissions and associated measurement activities.

In the first support type, developing organizational approaches, CMS would entail offer interested TEAM participants guidance on best practices and methods for identifying opportunities to reduce GHG emissions while promoting sustainability and resilience. Particular attention will be placed on building efficiency and sustainable transportation. We would also help to identify potential non-Medicare financing strategies for this work, noting that TEAM participants have access to tax credits and grant programs that can support decarbonization and climate resilience investments through the Inflation Reduction Act,[742] as well as other federal funding opportunities.[743] OCCHE is leading a Catalytic Program to support safety-net health providers in taking advantage of these unprecedented opportunities; TEAM participants would be encouraged to take advantage of the recorded content and other materials from that program.[744]

With respect to the second type of support transitioning to lower-carbon clinical alternatives, we would offer guidance on strategies for reducing emissions associated with inhaled anesthetic gases in pursuit of improvements on the measures described later in this section (drawing in part on ongoing work by federal health systems in this area). Other types of care delivery transitions could benefit patients by reducing demand for hospital services through education, addressing health inequities, improving telehealth options, and improving upstream care management.

For the third type of support, developing emissions measurement strategies, we would identify relevant measures, existing tools (for example, the ENERGY STAR Portfolio Manager platform described in section X.A.3.p.(4). of the preamble of this proposed rule) and new tools as needed. We would also offer guidance on strategies for using emissions data to identify opportunities to save energy and reduce emissions (for example, ENERGY STAR® Treasure Hunt to identify potential areas to reduce energy usage).[745]

We are proposing that this technical assistance would be targeted to interested TEAM participants, but we would also make this information available to other hospitals that might request it, as feasible.

(4) Voluntary Reporting

For the voluntary reporting portion of the TEAM Decarbonization and Resiliency Initiative, we are proposing at § 512.598 that TEAM participants may elect to report metrics and questions related to emissions to CMS on an annual basis following each performance year. TEAM participants that elect to report on all the initiative metrics and questions to CMS, in the form and manner required by CMS, would be eligible for benefits such as receiving individualized feedback reports and public recognition as well as potentially achieving operational savings (please note these savings would be incidental and not a result of model-related payments). In section X.A.3.p.(4). of the preamble of this proposed rule, we propose the metrics and questions that would be included in the voluntary reporting initiative. In section X.A.3.p.(5). of the preamble of this proposed rule, we propose how and when the metrics and questions would be reported to CMS. Finally, in section X.A.3.p.(6). of the preamble of this proposed rule, we outline our proposals for benefits for TEAM participants that elect to engage in the voluntary reporting portion of the Decarbonization and Resiliency Initiative as well as document some potential indirect benefits, such as operational savings.

(a) Decarbonization and Resilience Initiative Metrics

(i) Background on Scope and Metrics Sources

As discussed in section X.A.3.p.(1). of the preamble of this proposed rule, the GHGP establishes a framework for measuring Scope 1 and Scope 2 emissions. In identifying priority Scope 1 and Scope 2 categories and metrics for emissions reporting for TEAM participants, we considered guidance and research from several sources. In 2022, AHRQ convened an expert panel to develop a primer for identifying, prioritizing, monitoring, and reducing health care carbon emissions. In developing our proposals, we referred to this AHRQ primer to identify potential measures for Scopes 1 and 2. We also looked at guideline sources, such as the new Sustainable Healthcare Certification requirements by The Joint Commission (TJC), for their elements on leadership, measurement, and performance improvement; and guidance from the National Academy of Medicine (NAM) for steps and key actions to reduce GHG emission within health care systems.

The AHRQ primer identified three categories that fit into Scopes 1 and 2: building energy, anesthetic gases, and transportation. NAM published key actions that facilities could take to address greenhouse gas emissions.[746] These actions are broken into two steps. Step I focuses on actions to start a decarbonization journey and includes activities like assembling an executive sustainability team, performing a GHG inventory, and establishing specific decarbonization goals. Step II actions, which focus on specific interventions, include activities for reducing emissions from building energy, anesthetic gas, and transportation. TJC launched a Sustainable Healthcare Certification program that includes required standards for organizational performance and leadership, such as a sustainability plan, as well as requirements for collection of detailed emissions information for at least 3 different sources out of six—energy use (fuel combustion), purchased electricity

(purchased grid electricity, district steam, chilled and hot water), anesthetic gas use (including volatile agents and nitrous oxide), pressurized metered-dose inhaler use), fleet vehicle carbon-based fuel use (from organization-owned vehicles), and waste disposal.

(ii) Proposed Scope and Sources for Metrics

At this time, we are proposing to limit metrics that TEAM participants may voluntarily report for the Decarbonization and Resilience Initiative to Scope 1 (direct emissions related to health care operations) and Scope 2 (emissions related to purchased electricity consumption). We believe that TEAM participants have more ability to track and report these metrics at this time and could use information from these metrics to assess ways to reduce their carbon emissions and improve their operating efficiency. TEAM participants would be encouraged to look at emissions across all three Scopes, but for this initial program, the proposed metrics would include Scopes 1 and 2. We seek comment on our proposal to limit the focus of the Decarbonization and Resilience Initiative to Scopes 1 and 2 for the initial years of the TEAM Model.

Based on programs and publications discussed in section X.A.3.p.(4).(a).(i). of the preamble of this proposed rule, we are proposing four areas for reporting: (1) Organizational Questions; (2) Building Energy Metrics; (3) Anesthetic Gas Metrics; and (4) Transportation Metrics. We are proposing at § 512.598(a) the metrics for the voluntary program. TEAM participants, if they so choose, would report on these four categories. In proposing these voluntary questions and areas for voluntary metric reporting, CMS is prioritizing alignment with existing initiatives such as those described in section X.A.3.p.(4).(a).(i). of the preamble of this proposed rule.

(iii) Organizational Questions

For the Decarbonization and Resilience Initiative, we are proposing at § 512.598(a)(1) a set of organizational questions about the TEAM participants' sustainability team and sustainability activities. These questions are generally based on NAM's key action Step I shortlist. We propose the organizational questions would include the following:

- Does your facility have a sustainability team? If so, does your facility's sustainability team include broad representation, seeking input across operational and clinical lines, and engaging staff, executive leaders, clinicians, board members, and patients?
- Does your facility perform a GHG inventory? If so, which of the following are included in your facility's GHG inventory:
  - ++ Scope 1 emissions.
  - ++ Scope 2 emissions.
  - ++ Scope 3 emissions (business travel, employee commuting, waste)?
- Has your facility implemented a decarbonization goal that compares performance to a baseline year?
- What are your facility's decarbonization goals (for example, 10 percent GHG reduction annually across all operations, aiming to achieve 50 percent reduction by 2030)? What is the baseline year used to measure your facility's decarbonization success?
- Has your facility implemented a decarbonization plan?
- What is your facility's implementation plan? What milestones and deliverables to track progress are you documenting?
- Has your facility designated resources for decarbonization and resilience initiatives?
- Does your facility track operation room (OR) specific energy use or waste? If so, what, if any, OR energy efficiency or waste reduction initiatives have you implemented?

We anticipate these questions would be relatively straightforward to report on and may encourage TEAM participants who that have not yet started working on decarbonization and/or resilience initiatives to see what other hospitals are doing to implement decarbonization efforts. We seek feedback on the potential burden of adding overall organizational questions to the Decarbonization and Resilience Initiative.

(iv) Building Energy Metrics

For building energy usage, we are proposing metrics that would assess both the raw GHG emissions (location-based and market-based methods of calculation) from energy use (direct and indirect), source information, and information to normalize these metrics. Specifically, we are proposing at § 512.598(a)(2) a set of building energy metrics related to measuring and reporting GHG emissions related to energy use at TEAM participant facilities. We are proposing at § 512.598(a)(2)(i) that these proposed building energy metrics would be based on the ENERGY STAR® Portfolio Manager® guidelines for the time of submission and that TEAM participants choosing to report these metrics must submit using ENERGY STAR® Portfolio Manager® according to the reporting and timing requirements proposed in section X.A.3.p.(5). of the preamble of this proposed rule. We are proposing to adopt the ENERGY STAR® Portfolio Manager® guidelines at the time of submission to ensure that the metrics collected are consistent with current standards.

For the Decarbonization and Resilience initiative, we are proposing at § 512.598(a)(2)(ii) the following metrics: ENERGY STAR® Score for Hospitals, as well as the supporting data that goes into that calculation, and energy costs and basic energy consumption metrics such as total, direct, and indirect GHG emissions and emissions intensity as specified in the ENERGY STAR® Portfolio Manager®.[747] As of this publication, the most recent ENERGY STAR® Score for Hospitals methodology was published in February 2021[748] and requires information such as energy use intensity, electricity, natural gas, and other source emissions usage and several normalizing factors such as building size, number of full-time equivalent workers, number of staffed beds, number of magnetic resonance imaging (MRI) machines, and zip code (to pull weather and climate related data such as the number of heating and cooling days).[749] We propose that this supporting data would be reported to CMS, as well. Having both the aggregate score and the underlying details would provide CMS additional detail to monitor the impact of emissions. As described in section X.A.3.p.(5). of the preamble of this proposed rule, TEAM participants who elect to report data would submit after the performance year. Should the ENERGY STAR® Score for Hospitals method change, we would default to the methods that ENERGY STAR® is using at the time of submission so that the data reported to CMS would be consistent with ENERGY STAR® Score for Hospitals.

ENERGY STAR® Portfolio Manager® also allows users to track GHG

emissions and energy costs, which captures total energy cost and can inform tracking of potential savings.

There are several reasons we are proposing that TEAM participants use the ENERGY STAR® Portfolio Manager® for submitting building energy metrics. First, ENERGY STAR® Portfolio Manager® is a free, on-line benchmarking tool used by over 3,000 hospitals as of January 2024 (approximately half of the number of U.S. hospitals [750]) to benchmark energy, water, and waste. Approximately forty-seven state and local governments [751] require its use to track and report energy usage and emissions on an annual basis. We believe that by using data and information collected in the ENERGY STAR® Portfolio Manager® tool, we would minimize the reporting burden for TEAM participants and maximize the benchmarking value of reporting, which should make comparisons and measuring progress easier. We also believe the information collected in the ENERGY STAR® Score for Hospitals are similar to recommended measures in the AHRQ primer.

Finally, we also considered an alternative where we instead allowed private vendors with a relationship to the facility to submit equivalent information, aligned to the GHG Protocol, instead of ENERGY STAR Portfolio Manager. Ideally, we would like TEAM participants to have options to collect and capture their emissions data, but we also want to ensure that any benchmarks are consistent across TEAM participants.

We seek feedback on our proposed metrics reported through ENERGY STAR Portfolio Manager and on the alternative of allowing private vendors to submit equivalent information.

(v) Anesthetic Gas Metrics

We believe anesthetic gas metrics are important to collect for the TEAM Decarbonization and Resilience Initiative because the TEAM's proposed initial performance focus is on surgical procedures which regularly utilize anesthetic gas, as discussed previously. We are proposing at § 512.598(a)(3) a set of metrics related to measuring and managing emissions from anesthetic gas. These metrics include total GHG emissions from inhaled anesthetic gasses (based on purchase records) along with the associated normalization factors, and additional assessment questions.

We evaluated methods to consistently capture anesthesia metrics. ENERGY STAR Portfolio Manager currently does not collect information or calculate benchmarks on anesthetic gases. There are other calculators, such as Practice Greenhealth's ® Health Care Emissions Impact Calculator that collect and calculate data related to anesthetic metrics,[752] but we were concerned that using multiple tools to report metrics (considering we are already proposing to use ENERGY STAR® Portfolio Manager® for the building energy metrics) would increase reporting complexity and reporting burden. The AHRQ primer recommended total GHG emissions from inhaled anesthetics and mean gas flow rates, but we were concerned on the feasibility of capturing mean gas flow rates. Based on all these factors, we are therefore proposing at § 512.598(a)(3)(i) to include a metric for total GHG emissions from inhaled anesthetics using purchased records. The metric would include information such as volume of the bottle, the number of bottles, and/or the number of pounds, depending on the anesthetic gas.[753] We believe purchase records provide a proxy for actual utilization and that purchased records may be easier for TEAM participants to report compared to actual usage which generally would have to be extracted from electronic health records. Also, we are proposing at § 512.598(a)(3)(ii) normalization factors which we propose to be anesthetic hours so we could more accurately compare the carbon impact across different facilities. We believe these metrics would provide information on anesthetic gases which would be most relevant to the episodes and provide a means for which to create anesthetic gas metric benchmarks.

At § 512.598(a)(3)(iii), we are also proposing to include assessment questions broadly based on the key actions recommended by NAM Step II for reducing emissions from anesthetic gases that TEAM participants may choose to answer. Assessment questions include the following:

- Has your facility set an emissions reduction goal related to anesthetic gases?
- Does your facility track and benchmark anesthetic gas emissions at the procedure and provider level?
- Has your facility removed the use of desflurane or removed vaporizers when using desflurane?
- Has your facility decommissioned piped nitrous oxide and substituted e-cylinders? If not, are these activities in process?

We believe answering these assessment questions would provide facilities with ideas and actions that could in turn reduce impact on emissions and would supplement the other anesthesia gases data.

We seek comment on our proposed anesthesia gas metrics which would include the total GHG emissions from inhaled anesthetics and anesthetic hours and assessment questions for anesthetic gases. We particularly seek feedback on the feasibility of reporting data based on purchase records or whether we should require actual records. We also seek comment on the feasibility of capturing anesthetic hours or if we should consider a different normalization factor such as number of operating rooms. We are also seeking feedback on whether we should consider other calculators, metrics and inputs to determine GHG emissions from anesthetic gases, or quality measures such as ABG44: Low Flow Inhalational General Anesthesia.

Finally, while we believe it is important to capture the data on total GHG emissions from inhaled anesthetics, anesthetic hours, and the assessment questions for anesthetic gases, we also considered whether we provide the TEAM participants an option of reporting either the total GHG emissions from inhaled anesthetics (with anesthetic hours) or reporting the assessment questions for the voluntary reporting program. We believe this flexibility for TEAM participants could reduce reporting burden and enhance participation, but we are concerned this alternative may not provide comparable data across the TEAM participants who voluntarily submit data. We seek feedback on this alternative for TEAM participants who choose to submit to report either anesthetic gases and anesthetic hours or to report the assessment questions.

(vi) Transportation Metrics

The third category of information relevant to health care facilities is the GHG emissions related to leased or owned vehicles. We are proposing at § 512.598(a)(4) a set of metrics that focus on greenhouse gases related to leased or owned vehicles. We are proposing § 512.598(a)(4)(i) through (a)(4)(iii)

[750] AHA Health Forum. Fast Facts on Hospitals. American Hospital Association. 2024. *https://www.aha.org/statistics/fast-facts-us-hospitals.*

[752] Practice Greenhealth. Health Care Emissions Impact Calculator. 2023. *https://practicegreenhealth.org/tools-and-resources/health-care-emissions-impact-calculator.*

[753] We recognize that certain gases and compounds are most easily measured by volume and others in weight as they are not purchased by bottle (for example, Nitrous Oxide).

metrics that include gallons for owned and leased vehicles consistent with GHGP Scope 1 requirements, patient encounter volume as a normalization factor, and assessment questions. For transportation emissions related to patient transportation and supply chain, please see the RFI on Scope 3 emissions which seeks comment on the feasibility of reporting Scope 3 emissions such as those from Scope 3 transportation emissions (for example, patient transportation).

Including information on gallons for owned and leased vehicles aligns with the AHRQ primer core measure for transportation, and we anticipate that TEAM participants can capture this information. We also propose that if TEAM participants choose to partake in the Decarbonization and Resilience Initiative Voluntary Reporting, we would require TEAM participants to capture patient encounter volume as a normalization factor and are considering a range of other factors consistent with GHG protocols such as full-time equivalents (FTEs).

We are also proposing a series of assessment questions that align with the NAM recommended key actions to reduce transportation emissions. Assessment questions include the following:

- Has your facility set an emissions reduction goal related to transportation?
- Has your facility executed plans to reduce fleet emissions (either from reducing miles or replacing with electric vehicles [EVs])?
- Has your facility identified measures to optimize product delivery?
- Has your facility provided (or in the process of providing) EV charging infrastructure?

We seek feedback on the proposed transportation metrics. Additionally, we seek feedback to the extent hospitals are tracking this information and the operational feasibility to track and report this information or if other alternative metrics may be more feasible (for example, mileage). Finally, while we believe it is important to capture both the data on the gallons of gas as well as the assessment questions, we also considered whether we provide the TEAM participants an option of reporting either the gallons data or reporting the assessment questions for the voluntary reporting program. We believe this flexibility for TEAM participants could reduce reporting burden and enhance participation, but we are concerned this alternative may not provide comparable data across the TEAM participants who voluntarily submit data. We seek feedback on this alternative for TEAM participants who choose to submit to report either gallons and patient encounter or to report the assessment questions.

(vii) Request for Information on Scope 3 Metrics and MDIs

Both Scope 3 and MDI emissions account for a large percentage of medical carbon emissions and CMS is interested in potential ways in which to provide technical assistance to TEAM participants to assess available metrics to help reduce the enormity of this impact.

(a) Scope 3 Metrics

We believe Scope 3 emissions are relevant to a Decarbonization and Resilience Initiative connected to TEAM because Scope 3 emissions account for 82 percent of all U.S. health care emissions. Scope 3 includes all emissions upstream and downstream in the supply chain and other indirect emissions. We seek additional information regarding potential future voluntary reporting of Scope 3 emissions.

- What metrics or data collection elements would be appropriate for TEAM participants to accurately report Scope 3 emissions?
- Is there an industry standard tool that can be utilized for Scope 3 reporting?
- Which Scope 3 categories are most feasible and appropriate for hospitals participating in TEAM to report at this time?
- How can CMS and hospitals engage other parts of supply chain that contribute to Scope 3 emissions or incentivize their reduction of Scope 3 GHGs?
- Would hospital burden of Scope 3 reporting differ from Scope 1 and 2 reporting?

(b) MDIs

Also, under Scope 3, we seek additional information regarding MDIs. We believe that further understanding of the MDI prescription and usage rates could assist in finding pathways of reduction and substitution to a less harmful environmental option. However, we understand that most MDI prescriptions and the management of related conditions occur in the outpatient setting and may not be directly relevant to TEAM participants. Hospital reductions in MDI prescriptions can still result in significant reductions of GHG emissions. For example, Providence Oregon hospitals identified clinically equivalent MDI formulations of albuterol with 3-fold differences in emissions.[754] By prioritizing the lower emissions intensity inhalers, these emissions are projected to drop by 42 percent, or 298 tons of CO2e (the equivalent of 64 gasoline powered passenger vehicles driven) per year. We are seeking information on the feasibility of capturing information on MDI outpatient prescriptions as a percentage of all inhaler prescriptions relevant to TEAM participants.

- What role do acute care hospitals, hospital-based pharmacies, or other providers in the inpatient setting play in prescribing MDIs and guiding patients toward environmentally preferable selections, such as dry powder inhaler,[755] when clinically safe to do so?

We believe it would be important to record data such as the volume of each MDI cannister (micrograms) and number of MDI cannisters prescribed on an annual basis and this would be helpful to capture. We are seeking feedback on the feasibility of capturing information for the following questions:

- What is the utilization rate of MDIs and dry powder inhalers, for inpatients?
- What is the prescription rate of MDIs and dry powder inhalers?
- Is there a way to replace the MDI propellant from a hydrofluorocarbon to hydrofluoroalkane?

(5) Report Timing

For the Decarbonization and Resilience Initiative, we are proposing at § 512.598(b) that if TEAM participants so choose, they would report information annually to CMS after each performance period. The form and manner would be specified by CMS for each performance period including using ENERGY STAR® Portfolio Manager® for building energy metrics proposed in section X.A.3.p.(4).(a).(iv). of the preamble of this proposed rule. We anticipate reporting for the other metrics and assessment questions would be a survey and questionnaire in a form and manner specified by CMS. We are also proposing at § 512.598(b) that the Decarbonization and Resilience Initiative information would need to be reported to CMS by no later than 120 days in the year following the

Reducing Health care Carbon Emissions: A Primer on Measures and Actions for Health Care Organizations to Mitigate Climate Change. U.S. Agency for Healthcare Research & Quality. AHRQ pub. No. 22–M011. September 2023. Reducing Healthcare Carbon Emissions: A Primer on Measures and Actions to Mitigate Climate Change (*ahrq.gov*).

[755] Kimberly Wintemute & Fiona Miller. Dry Powder Inhalers Are Environmentally Preferable to Metered-Dose Inhalers. CMAJ, vol. 192, no. 29, pp. E846. July 20, 2020. *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7828988/*.

performance period, or a later date as determined by CMS. We believe it is important to have flexibility to delay the reporting in case of an emergency or technical issue.

We also considered requiring reporting by June 1 after the performance period to align with the majority of the local decarbonization programs that report to ENERGY STAR®.[756] We are seeking comment on the proposed report timing and alternatives.

(6) Benefits for TEAM Participants Who Elect To Report in the Decarbonization and Resiliency Initiative

We are proposing at § 512.598(c) that TEAM participants who elect to report all the metrics identified in section X.A.3.p.(4). of the preamble of this proposed rule in the manner described in section X.A.3.p.(5). of the preamble of this proposed rule would receive individualized feedback reports and be eligible to receive public recognition for their commitment to decarbonization. In addition to these proposed benefits, we believe TEAM participants may receive additional indirect benefits from engaging in the voluntary reporting portion of the Decarbonization and Resiliency Initiative.

(a) Individualized Feedback Reports to TEAM Participants

We are proposing at § 512.598(c)(1) to provide individualized feedback reports to TEAM participants who voluntarily report to CMS the four emissions-related metrics in the Decarbonization and Resilience Initiative. We anticipate these reports would summarize facilities' emissions metrics and would include benchmarks, as feasible, for normalized metrics to compare facilities, in aggregate, to other TEAM participants in the Decarbonization and Resilience Initiative. While ENERGY STAR has many robust benchmarks related to building energy efficiency, we believe that TEAM participants would be able to learn additional information from peers about emissions from anesthetic gases and transportation emissions. See section X.A.3.p.(4).(a). of the preamble of this proposed rule for discussion of the proposed metrics and calculator tools to be used as part of the Decarbonization and Resilience Initiative. CMS does not intend to make these individualized feedback reports available to the public or other TEAM participants and intends them for the purpose of learning and improvement.

We invite public comment on this proposal.

(b) Establishment of a Publicly Reported Hospital Recognition of Decarbonization Commitment

We propose at § 512.598(c)(2) to establish a publicly reported hospital recognition badge for the TEAM participant's commitment to decarbonization; CMS would post a hospital recognition badge on a CMS website. We would provide annual recognition to TEAM participants for reporting all the metrics detailed in section X.A.3.p.(4).(a). of the preamble of this proposed rule. The recognition badge would be reevaluated each year based on the reporting of performance year metrics to CMS. We believe adding this recognition to a consumer-facing CMS website would allow patients and families to choose hospitals that have participated in efforts to measure health care carbon emissions.

To encourage meaningful reductions in emissions, we are seeking comments on potentially expanding to a tiered recognition in future years. We believe a tiered approach could better acknowledge TEAM participants that have elected to voluntarily report their emissions data, actively engage in decarbonization activities that would result in reduced Scopes 1, 2, and 3 emissions, and meet absolute or relative standards of reported energy efficiency and lowered emissions. We seek comment on tiering such badging so as to recognize TEAM Participants that meet certain absolute or relative standards based on emissions reporting measures or other standards such as the Department of Energy's National Definition for a Zero Emission Building and may consider making select reported information public.[757] Any modifications to the public recognition benefit would be addressed through future rulemaking.

We invite public comment on the proposed publicly reported hospital recognition of decarbonization commitment.

(c) Indirect Benefits

We believe that in addition to the direct benefits of participating in the Decarbonization and Resilience Initiative there are several indirect benefits associated with the Initiative's efforts to assist interested TEAM participants in undertaking decarbonization and resilience activities. Decarbonization can help improve the financial well-being of health care facilities by reducing operational costs. Estimates indicate that up to 30 percent of the energy used in hospitals and other commercial buildings is consumed unnecessarily and investing in decarbonization has been shown to decrease operational costs through supply chain optimization and reduced energy consumption and expenditures.[758]

Beyond the potential cost reduction benefit of decarbonization, investing in decarbonization may help to improve patient care and outcomes. For example, facilities that opt to reduce GHG emissions by switching to renewable energy sources increase their resilience and thus can bypass power outages in the electric grid during climate emergencies. Furthermore, by reducing GHG emissions, healthcare facilities are contributing to preventing or ameliorating adverse health outcomes that are linked to air pollution and climate change-related hazards like hurricanes (for example, respiratory illnesses, injury).[759] Health systems could benefit patients by reduced demand for hospital services through encouraging health education, addressing health inequities perpetuated by social determinants of health, improving telehealth options, and improving upstream care management. A well-developed sustainability strategy could allow health systems to become more resilient to the consequences of extreme weather events, which exacerbate patients' chronic cardiac, respiratory, and other conditions.[760]

(d) Request for Information on Potential Future Incentives for Participation in the Voluntary Decarbonization and Resilience Initiative

At this time, we are not proposing any bonuses, payments, or payment adjustments to TEAM participants for voluntary reporting in the Decarbonization and Resilience Initiative. We may add such a policy to the Decarbonization and Resilience Initiative in future years, subject to additional rulemaking. We seek feedback on the ways we could structure potential payments, bonuses, or payment adjustments. To offer some examples:

- A potential bonus added to the Composite Quality Score (CQS), which is discussed in section X.A.3.d.(5).(e). of the preamble of the proposed rule, for TEAM participants who report the information for the Decarbonization and Resilience Initiative. This would reward TEAM participants for collecting and reporting data, but not necessarily for better performance.
- We could elect to modify the CQS score by providing a bonus for those who perform well on the Decarbonization and Resilience Initiative. We welcome thoughts on which metrics we should identify for measuring performance and how a bonus could be structured.

We invite public comment on the future bonuses, payments, or adjustments for participation in the Decarbonization and Resilience Initiative.

q. Termination of the TEAM

The general provisions relating to termination of the model by CMS in 42 CFR 512.596 would apply to the TEAM. Consistent with these provisions, in the event we terminate the TEAM, we would provide written notice to TEAM participants specifying the grounds for termination and the effective date of such termination or ending. As provided by section 1115A(d)(2) of the Act and § 512.594, termination of the model under section 1115A(b)(3)(B) of the Act would not be subject to administrative or judicial review.

B. Provider Reimbursement Review Board (PRRB) (§ 405.1845)

Section 1878 of the Act (42 U.S.C. 1395oo) established by the Social Security Amendments of 1972, describes the role and function of the Provider Reimbursement Review Board (PRRB), a five-member administrative tribunal that adjudicates disputes over Medicare reimbursement for certain providers of services in the Medicare program. The statute requires the HHS Secretary to appoint individuals to the PRRB for a 3-year term of office; the law also established a shorter length of office for the first appointments for the newly created PRRB to permit staggered terms of office. To qualify for appointment to the PRRB, all members must be knowledgeable in the field of payment of providers of services; two members must be representative of a Medicare provider of services; and at least one member must be a certified public accountant. In 1974, the Social Security Administration (SSA), which administered the Medicare program prior to its transfer to the Health Care Financing Administration in the Department of Health and Human Services, promulgated the implementing regulations for the PRRB. The regulations governing the operation and administration of the PRRB reside at 42 CFR part 405 subpart R, with the provision governing the composition of the PRRB at 42 CFR 405.1845. In addition to codifying the statutory requirements governing the composition of the PRRB, the regulations established that no Board Member is permitted to serve more than two consecutive 3-year terms of office and that the Secretary has the authority to terminate a Board Member's term of office for good cause.

When the PRRB was established more than 50 years ago, payment to providers participating in the Medicare program was on a cost reimbursement basis. Beginning October 1, 1983, Medicare transitioned to a prospective payment system for inpatient hospitals. These changes in reimbursement have led to changes in the types of cases adjudicated by the Board, the complexity of the matters that come before the Board, and often, the amount of time required to bring matters to resolution. While the limit on the number of consecutive terms served by a Board Member was established in the 1974 implementing regulations, CMS no longer believes that the current limitation on the number of consecutive terms a Board Member may serve makes good sense.

In this proposed rule, we propose to amend paragraphs (a) and (b) of 42 CFR 405.1845, effective January 1, 2025.

- First, we seek to modify the requirement that Board Members shall be knowledgeable in the area of cost reimbursement, so that it instead requires them to be knowledgeable in the field of payment of providers under Medicare Part A.
- Second, we propose to permit a Board Member to serve no more than three consecutive terms, instead of two consecutive terms allowed under current regulations.
- Third, we propose to permit a Board Member who is designated as Chairperson in their second or third consecutive term to serve a fourth consecutive term to continue leading the Board as Chairperson.

The proposed change to paragraph (a) is intended to align the regulatory language with the statute, which, at section 1878(h) of the Act states, ''All of the members of the Board shall be persons knowledgeable in the field of payment of providers of services . . .'' As explained earlier in this preamble, it was the case that Medicare payment to providers was on cost reimbursement basis when this provision became law; however, this change would clarify that a Board Member must have knowledge of Medicare Part A payment (which broadly covers the category of cases adjudicated by the PRRB, as opposed to the narrower subcategory of cost reimbursement matters). The proposed changes to paragraph (b) are intended to reduce the amount of turnover that occurs on the PRRB, enabling CMS to recruit and retain highly qualified individuals as they gain experience in adjudicating cases. We believe that these changes have the potential to expand the pool of applicants seeking to serve on the Board and who, because of the current two-term limitation, may not be willing to entertain a job change for what would be at most a 6-year period of service. These changes would also create a new pathway for advancement for an experienced Board Member to continue their service to the PRRB in the Chairperson position. Under current regulations, if a Board Member is serving in their first or second consecutive term and later designated as Chairperson, the total length of service on the PRRB remains 6 years, or two consecutive terms. In other words, a Board Member who is designated as Chairperson in year 4 or 5 of their second consecutive term is only permitted to serve 1 to 2 more years as Chairperson. Under this proposal, the PRRB would continue to benefit from having an experienced Board Member serve for a total of 12 years, if they were designated as Chairperson in their second or third consecutive term.

We recognize that the limit of two consecutive terms under current regulations creates more openings on the PRRB, which offers opportunities for newly appointed individuals to apply their unique skill sets, experience, and perspective to the work. However, there is an opportunity cost associated with the current level of turnover. Recruitment of Board Members occurs

with regularity, generally every 1 to 3 years, and considerable time and effort have been expended by CMS and HHS in recruiting and vetting candidates as well as training newly appointed Board Members. Over time, it has been increasingly challenging to attract a large pool of qualified candidates who have relevant skills and experience in matters that come before the PRRB.

Even after a candidate is identified, they must be formally appointed to the PRRB by the Secretary. Upon accepting the appointment, a Board Member must devote significant time to learning the duties of the job. As a result, in our experience, a newer Board Member takes more time to complete tasks relative to their colleagues who have more experience in the role. While Board Members may have a strong legal, accounting, health care, or other professional background, this position often is the first time they are in an adjudicatory role. Conversely, when a Board Member departs, there is a loss of institutional knowledge and expertise that adversely impacts efficiency and productivity. Turnover also impacts the relationships among and between the Board Members, and it takes time for the newly constituted Board to learn how to work together. This proposal would decrease the frequency of turnover and permit lengthier periods of service for Board Members, which we believe would have the potential to increase the PRRB's efficiency and productivity.

The volume of cases filed with the PRRB has remained relatively steady over the past several decades with the average number of appeals filed and closed annually hovering around 2,000. The PRRB's docket has experienced years in which fewer appeals were filed in large part due to holds on issuing Notices of Program Reimbursement from which many providers file their appeals. A year or years with a lower appeals volume was then followed in subsequent years by spikes of new appeals once the holds were lifted. The PRRB's total docket has ranged from about 5,000 appeals to about 10,000 appeals over the last 30 years, with an average ending annual inventory of 8,700 cases. The PRRB's fiscal year 2023 docket ended with 8,698 open appeals.

Additionally, the nature of the PRRB's cases has evolved. For example, in the past decade, the PRRB has seen an increase in broad-based legal challenges to regulatory interpretations and fewer appeals of reimbursable expenses specific to individual providers, which were common in the early years of the PRRB's operation. Early on, disputes over a provider's allowable costs in its cost report involving such expenses as owners' compensation, malpractice insurance, and marketing expenses were the norm, and generally these issues are simpler matters to adjudicate. With the evolution of Part A reimbursement to a prospective payment system, the issues on appeal with the PRRB frequently involve nuanced issues that implicate highly specialized and complex areas of law. Cases that have been adjudicated by the PRRB often reach the federal courts, and on occasion, are decided by the U.S. Supreme Court.[761] Permitting Board Members to serve more than two consecutive terms would allow them greater opportunity to follow the landscape of issues under judicial review, as it is not unusual for it to take years for cases to wind their way through the courts. Over their length of service, a Board Member develops an understanding of how certain issues are decided in the courts and applies that knowledge to the issues presented to the PRRB. The longer length of service would allow Board Members to obtain a deeper understanding of, and knowledge about, the issues and caselaw.

We also are considering a policy of permitting a Board Member to serve four consecutive 3-year terms, which would effectively permit an individual to serve as long as 12 years (with the potential of serving another 3 years, or 15 years total, if the Board Member would later be designated as Chairperson), as opposed to 9 years under this proposed regulatory change (with the potential of serving a total of 12 years by concluding their service on the PRRB as Chairperson). Making a Board Member eligible to serve as many four consecutive terms could have an advantage over three consecutive terms, which means even less turnover and a greater ability to retain highly qualified Board Members. We seek public comment on this alternative option of four consecutive terms rather than three.

We also are considering permitting a Board Member who ascends to the position of Chairperson to serve an additional two or three consecutive terms, instead of the proposed one additional consecutive term. Such a policy would permit an individual to serve 15 or 18 years (three 3-year terms as a Board Member and another two or three 3-year terms as Chairperson). Allowing a Board Member who is later designated as Chairperson to serve two or three additional consecutive terms would likely make all Board vacancies more attractive relative to current regulations (given the prospect of career progression and a longer tenure) and provide a longer period for a Board Member to gain experience prior to assuming the role of Chairperson, as they develop the knowledge, skills, and abilities in serve in a leadership capacity on the Board. Our intent in this proposal is to strike an appropriate balance between an appropriate level of turnover and CMS's desire to recruit and retain qualified Board Members. We solicit comment on these alternative options for the extended tenure of the Chairperson and whether our proposal or one of the alternative proposals best strikes this balance.

C. Maternity Care Request for Information (RFI)

1. Overview

As described in the White House Blueprint for Addressing the Maternal Health Crisis and in the CMS Maternity Care Action Plan we are committed to reducing maternal health disparities and improving maternal health outcomes during pregnancy, childbirth, and the postpartum period.[762] [763] In alignment with our commitment to addressing the maternal health crisis, this RFI seeks to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients. To the extent that the resources required differ between patient populations, we also wish to gather information on the extent to which non-Medicare payers, or other commercial insurers, may be using the IPPS as a basis for determining their payment rates for inpatient pregnancy and childbirth services and the effect, if any, that the use of the IPPS as a basis for determining payment by those payers may have on maternal health outcomes.

2. Use of Medicare Data for the Calculation of the IPPS MS–DRG Relative Weights

As explained in section II.A. of the preamble of this proposed rule, section 1886(d)(4) of the Act requires the Secretary to establish a classification of inpatient hospital discharges by diagnosis-related groups and a

[761] See *e.g.: Becerra* v. *Empire Health Found., for Valley Hosp. Med. Ctr.,* 142 S. Ct. 2354 (2022); *Sebelius* v. *Auburn Reg'l Med. Ctr.,* 568 U.S. 145 (2013); *Your Home Visiting Nurse Servs., Inc.* v. *Shalala,* 525 U.S. 449 (1999); and *Bethesda Hosp. Ass'n* v. *Bowen,* 485 U.S. 399 (1988).

[762] White House. White House Blueprint for Addressing the Maternal Health Crisis. 2022. Accessed January 2, 2024. *https://www.whitehouse.gov/wp-content/uploads/2022/06/Maternal-Health-Blueprint.pdf.*

[763] CMS. CMS Cross Cutting Initiative: Maternity Care Action Plan. 2022. Accessed January 2, 2023. *https://www.cms.gov/files/document/cms-maternity-care-action-plan.pdf.*

methodology for classifying specific hospital discharges within these groups. We refer to these groups of diagnoses as the IPPS Medicare Severity Diagnosis Related Groups (MS–DRGs). For each MS–DRG, the Secretary is required to assign an appropriate weighting factor which reflects the relative hospital resources used with respect to discharges classified within that group compared to discharges classified within other groups. The Secretary is also required to adjust the MS–DRG classifications and weighting factors at least annually to reflect changes in treatment patterns, technology, and other factors which may change the relative use of hospital resources.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58652), our goal is always to use the best available data overall for ratesetting, including the calculation of the IPPS MS–DRG relative weights. We primarily utilize Medicare claims data and Medicare cost report data for IPPS ratesetting for inpatient hospital services. The claims data we utilize is specific to the Medicare beneficiaries population, which includes people 65 and older or people with disabilities, End-Stage Renal Disease, or amyotrophic lateral sclerosis (ALS) that qualifies them for Medicare earlier than the age of 65.[764] Although most Medicare beneficiaries are 65 and older, in 2021 around 13% of the total share of Medicare beneficiaries were under the age of 65.[765] Therefore, people of reproductive age may have Medicare as their primary health insurance. Notably, a study from the National Institutes of Health found that pregnant women with disabilities have higher risks for maternal mortality and severe complications during birth and pregnancy compared to other pregnant women.[766] Thus, considering we utilize data that is specific to the Medicare beneficiary population in our ratesetting for inpatient hospital services we caution against using the IPPS rates and DRGs without first taking into account the characteristics of the Medicare beneficiary population.

3. Request for Information

This RFI seeks to gather information on differences between the resources required to provide inpatient obstetrical services to Medicare patients, on which the IPPS MS–DRGs relative weights for those services are based, as compared to non-Medicare patients. To the extent that the resources required differ, we also seek information regarding the extent to which non-Medicare payers, such as state Medicaid programs, may be using the IPPS MS–DRG relative weights to determine payment for inpatient obstetrical services and the effect, if any, that the use of those relative weights by those payers may have on maternal health outcomes. For instance, what types of modifications or assumptions, if any, are being made by payers when they are using the IPPS MS–DRG relative weights to account for the fact they are based on the Medicare beneficiary population? For example, one area where we are seeking additional information is the extent to which the use of the IPPS MS–DRG relative weights by state Medicaid programs may influence the number of low-risk cesarean deliveries for Medicaid patients. There are state Medicaid programs that have implemented payment initiatives, such as bundled payment models, blended payments, reduced payment or nonpayment for some procedures, and pay-for-performance models to improve maternal health outcomes. Some initiatives have demonstrated improved outcomes, such as a reduction in unnecessary cesarean deliveries.[767] Does the use of the IPPS MS–DRG relative weights as the basis for setting rates for other payers, to the extent it occurs, impact efforts to reduce low-risk cesarean deliveries? For example, if the differential between the hospital resources required for vaginal versus cesarean births is not the same for Medicare and non-Medicare patients, does the use of the IPPS MS–DRG relative weights for non-Medicare patients impact the number of low-risk cesarean deliveries? If so, how? For reference, IPPS MS–DRG relative weights and arithmetic length of stay for MS–DRGs for vaginal births and cesarean births are shown in Table X.C.–01.[768]

In summary, we pose the following questions to help facilitate feedback. We note that posing these questions to facilitate feedback in no way alters our longstanding principle, reiterated each year in the IPPS rulemaking, that facilities should not consider differences in relative weights when making treatment decisions.

- What policy options could help drive improvements in maternal health outcomes?
- How can CMS support hospitals in improving maternal health outcomes?
- What, if any, payment models have impacted maternal health outcomes, and how?
- What, if any, payment models have been effective in improving maternal health outcomes, especially in rural areas?
- What factors influence the number of vaginal deliveries and cesarean deliveries?
- To what extent do non-Medicare payers, such as state Medicaid programs, use the IPPS MS–DRG relative weights to determine payment for inpatient obstetrical services? What effect, if any, does the use of those relative weights by those payers have on maternal health outcomes?
- To what extent are Medicare claims and cost report data reflective of the differences in relative costs between vaginal births and cesarean section births for non-Medicare patients?
- Are there other data beyond claims and cost reports that Medicare should consider incorporating in development of relative weights for vaginal births and cesarean section births?
- What impact, if any, does the relatively lower numbers of births in Medicare have on the variability of the relative weights?
- What effect, if any, does potential variability in the relative weights on an annual basis have on maternal health outcomes?

[1] MS-DRG definitions can be located in the ICD-10 MS-DRG Definitions Manual Files V41.1 located at: https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software

[2] CC refers to complications and comorbidities. MCC refers to major complications and comorbidities.

[3] For purposes of illustrating the approximate annual number of Medicare FFS cases in each MS-DRG, this column shows case counts based on the data used to develop the proposed FY 2025 MS-DRG relative weights, as discussed in section II.D. of the preamble of this proposed rule.

BILLING CODE 4120–01–C

D. Request for Information on Obstetrical Services Standards for Hospitals, CAHs, and REHs

1. Background

CMS establishes health and safety requirements for Medicare-certified providers and suppliers and selected Medicaid provider types. The requirements apply to all patients served by these facilities and must be met in order for facilities to participate in the Medicare and Medicaid programs. Conditions of participation (CoPs) for hospitals, CAHs, and rural emergency hospitals (REHs) set regulatory standards for many of the basic functions of such hospitals, as well as for some optional services that hospitals are not required by law to provide. Hospital CoPs at 42 CFR part 482 include standards regarding the responsibilities of the governing body, requirements for protecting patient rights, quality assessment and performance improvement requirements (QAPI), medical staff standards, and infection prevention and control and antibiotic stewardship requirements. All of these current standards together exist to protect patient health and safety, including the health and safety of pregnant, postpartum, and birthing patients. Similar provisions for CAHs and REHs are found at 42 CFR 485 subparts F and E, respectively.

Currently, there are no baseline care requirements for hospitals, CAHs, and REHs that are specific to maternal-child services (that is, labor and delivery, prenatal and post-partum care, and care for newborn infants, alternately referred to in this discussion as obstetrical services, obstetrics, maternal health, or maternity care). In addition to obstetrical units, care for pregnant and postpartum patients may also occur in other parts of facilities such as other inpatient wards, emergency departments, hospital-associated outpatient departments, as well as in facilities without obstetrical units and/or emergency services. Such care may occur before, during, or after delivery. Given the ongoing concerns about the delivery of maternity care in Medicare and Medicaid certified hospitals, CAHs, and REHs, CMS plans to propose baseline health and safety standards for obstetrical services in the calendar year (CY) 2025 Outpatient Prospective Payment System/Ambulatory Surgical Center (ASC) proposed rule.

Access to maternity care in the U.S. has continued to decline in recent years. Specifically, it is estimated that up to 6.9 million women have low to no access to maternity care.[769] From 2014 to 2018, 53 rural counties experienced closures of their hospital-based obstetrical (OB) services. This is in addition to the 1,045 counties that already did not have obstetric services in 2014.[770] Furthermore, 200 urban counties lost one or more obstetric units between 2019 and 2020.[771] The March of Dimes published a report which found that there were closures across 12 states from 2019 to 2020, in which 21 rural counties lost one or more hospital obstetric units.[772] In 2019, an estimated 58.7 percent of rural counties had no obstetricians, 81.7 percent had no advanced practice midwives, 86.3 percent had no midwives, and 56.9 percent had no family physicians who delivered babies, and nearly a third of rural counties (608, 30.8 percent) had none of these types of OB clinicians.[773] Explanations for these closures include shortages of obstetricians and family physicians, low volume of births, and low-income/poor payer-mix in these communities.[774] When these units close, women must travel long distances to a hospital that has obstetrical services. Specifically, in a survey of 133 hospital administrators, those in areas that lost access to inpatient obstetric services also reported limited access to many supports and services (such as midwifery and doula care) indirectly related to inpatient obstetric care that have strong evidence of improving maternal and infant health outcomes.[775] Factors that affect the availability of rural hospital-based obstetric care include labor costs, liability insurance costs, a high proportion of births to people who are uninsured or covered by Medicaid, and low payment rates for maternity care services.[776] Lack of access contributes to women in rural areas having a nine percent increased probability of maternal mortality or morbidity as compared to women in urban areas.[777] Poor maternal health access disproportionately affects non-Hispanic black women, American Indian and Alaska Native women (AI/AN), low-income women and women with disabilities. For example, in 2021, the maternal mortality rate for non-Hispanic Black women was 69.9 deaths per 100,000 live births, 2.6 times the rate for non-Hispanic White women. Rates for Black women were significantly higher than rates for White and Hispanic women. The increases from 2020 to 2021 for all race and Hispanic-origin groups were significant.[778] CMS considers it imperative to address disparities in care when discussing policy changes for improving maternal health care.

In Fall 2023, CMS launched the first-ever ''Birthing-Friendly'' designation icon on CMS's Care Compare online tool to describe facilities with high-quality maternity care. To earn the designation, hospitals and health systems report their progress on our Maternal Morbidity Structural Measure to the Hospital Inpatient Quality Reporting (IQR) Program. The measure identifies whether a hospital or health system has participated in a statewide or national perinatal quality improvement collaborative program and implemented evidence-based quality interventions in hospital settings to improve maternal health, such as maternal safety bundles. Maternal safety bundles have demonstrated success in driving improvements, particularly with regards to obstetric hemorrhage, severe hypertension in pregnancy, and non-medically indicated Cesarean deliveries.[779] [780] [781] Hospitals and health professionals also have access to evidence-based best practices for determining the risk of obstetric

hemorrhage and hypertension and for managing patients with these complications (including in the emergency setting). Yet, these best practices are not universally utilized nor incorporated into facilities' standards of care.[782] We direct readers to the quality, safety, and oversight memorandum (QSO–22–05-Hospitals) released by CMS,[783] which encourages hospitals to consider implementation of evidence-based best practices for the management of obstetric emergencies, along with interventions to address other key contributors to maternal health disparities, to support the delivery of equitable, high-quality care for all pregnant and postpartum individuals. Facilities could implement these best practices voluntarily as part of a hospital's QAPI program (§ 482.21), which requires that hospitals develop, implement, and maintain an effective, ongoing, hospital wide, data-driven quality assessment and performance improvement program. The Quality Safety and Oversight (QSO) memo (QSO–22–05–Hospitals) further directs hospitals to a variety of resources available to assist in improvement efforts. These include the following:

- Agency for Healthcare Research and Quality Toolkit for Improving Perinatal Safety *https://www.ahrq.gov/patient-safety/settings/labor-delivery/perinatal-care/index.html*
- Centers for Disease Control and Prevention-Funded Perinatal Quality Collaboratives *https://www.cdc.gov/reproductivehealth/maternalinfanthealth/pqc.htm*

- HRSA-Funded Rural Health Information Hub Rural Maternal Health Toolkit *https://www.ruralhealthinfo.org/toolkits/maternal-health*
- Institute for Healthcare Improvement Tools *https://www.ihi.org/resources/tools*
- National Institute for Children's Health Quality National Network of Perinatal Quality Collaboratives *https://nichq.org/project/national-network-perinatal-quality-collaboratives*
- The Joint Commission Provision of Care, Treatment, and Services Standards for Maternal Safety *https://www.jointcommission.org/standards/r3-report/r3-report-issue-24-pc-standards-for-maternal-safety/*
- U.S. Department of Health and Human Services and March of Dimes Public-Private Partnership, Maternal Health Collaborative to Advance Racial Equity (Maternal HealthCARE), Quality Improvement Initiative *https://www.maternalhealthcare.org/*

This list is not exhaustive. We recommend that hospitals also explore other national resources, as well as those specific to their state and region.

In the FY 2023 IPPS/LTCH PPS proposed rule, we published a maternal health RFI that solicited feedback on a wide range of maternal health issues and opportunities for CMS to improve maternal health care (87 FR 28549).[784] In response, some commenters were concerned that failure to comply with the new CoP would result in the loss of Medicare certification, that access to obstetrical care would be negatively impacted, that a new CoP may potentially exacerbate rates of maternal morbidity/mortality, and that a new maternal health CoP would exacerbate disparities in obstetrical care. Other commenters, including the American College of Obstetrics and Gynecology (ACOG) and the American Medical Association (AMA) supported the creation of a CoP specifically for labor and delivery, recognizing that CoPs establish minimum health and safety standards across participating entities and institutions, and recommending that CMS explore options to establish such CoPs for participating hospitals with relevant stakeholders.[785]

2. Obstetrical Services CoP

With this RFI, we hope to further explore such options and plan to propose a targeted obstetrical services CoP to establish baseline requirements for obstetrical care within participating facilities in the CY 2025 OPPS/ASC proposed rule based in part on public comments received in response to this RFI. The comments that we receive on this RFI will help to inform CMS on potential proposals that may be included in the proposed rule. Therefore, we are seeking public comment on potential solutions that could reduce the rates of maternal mortality and reduce disparities in maternal mortality and morbidity, which can be implemented through the hospital CoPs. We believe it is necessary to develop a standard by which obstetrics care delivery is performed in order to address well-documented concerns regarding maternal morbidity, mortality, and maternity care access in the United States. The goal would be to ensure that any policy change to obstetrical services improves maternal health care outcomes and addresses preventable disparities in care but does not exacerbate access to care issues. We recognize that section 1801 of the Act prohibits federal interference in the practice of medicine and therefore we are seeking comment on interventions that do not interfere in medical practice.

Specifically, we are soliciting comment on what should be the overarching requirement, scope, and structure for an obstetrical services CoP. What types of facilities and care settings should such a CoP apply to (that is, all hospitals, hospitals with/without OB units, hospitals with/without emergency services, CAHs, REHs, outpatient settings, which may include inpatient and outpatient prenatal, postpartum, emergency, and birthing care services)? CoP policy options could include (but are not limited to) the following. We welcome data, alternatives, benefits, and descriptions of possible unintended consequences on these potential options:

- Creating an optional services CoP specific to obstetrical services, similar to the current Optional Services CoPs for Surgical services (42 CFR 482.51), Anesthesia services (42 CFR 482.52), Outpatient services (42 CFR 482.54), or Emergency services (42 CFR 482.55). In this case, hospitals providing obstetrical services would be required to ensure that obstetrical services are well organized and provided in accordance with nationally recognized standards of care and evidence-based best practices. Such a requirement would be flexible enough to be tailored to hospitals of differing sizes and capabilities. The organization of OB services would be required to be appropriate to the scope of the services offered, and to integrate the OB services with other departments

[785] Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2023 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Costs Incurred for Qualified and Non-Qualified Deferred Compensation Plans; and Changes to Hospital and Critical Access Hospital Conditions of Participation, (August 10, 2022; (87 FR 49291)) *https://www.govinfo.gov/content/pkg/FR-2022-08-10/pdf/2022-16472.pdf.*

of the hospital, as appropriate. Policies governing obstetrical care would need to be designed to assure the achievement and maintenance of high standards of medical practice and patient care and safety.

- Modelling an OB services CoP after infection prevention and control stewardship program CoPs (42 CFR 482.42). This could include requirements relating to service organization and policies, leadership responsibilities, and application to multi-hospital systems.
- Requiring hospitals to develop standard processes for managing pregnant, birthing, and postpartum patients with or at risk for: (1) obstetric hemorrhage (a leading cause of maternal mortality); and (2) severe hypertension (a common pregnancy complication). Best practices for handling these issues, such as those highlighted in the resources cited above, already exist and CMS could require that hospitals establish policies that adopt or are consistent with existing accredited protocols.

Additionally, we solicit public comment on the following questions:

- What are existing acceptable standards of practice, organization, and staffing for obstetrical services (including staff qualifications and scope of practice considerations) in hospital obstetrical wards, emergency departments, CAHs, and REHs?
- What are existing regulatory barriers to quality care for pregnant and postpartum patients in hospital obstetrical wards, hospitals and CAHs that do not operate obstetrical wards, emergency departments, and in REHs?
- What regulatory changes are needed to ensure quality care for all pregnant, laboring, and postpartum patients across all care settings? Would establishing regulatory standards for organization, staffing, and for delivery of services for obstetrical units, similar to the existing standards for surgical services, advance this goal? What additional standards should be considered?
- How could CMS better understand patients' experience of maternity care? What tools or instruments exist to understand individuals' experience of maternity care? How might CMS incorporate these tools or instruments into an obstetrical CoP?
- How would an obstetrical services CoP impact access to care for pregnant, birthing, and postpartum individuals? How will the CoP impact hospitals with respect to factors that have led some facilities to close their maternity units, including high costs, labor shortages, and declining birth rates?
- What policy options would help alleviate any potential unintended consequences of an obstetrical services CoP and the impact on maternity care access and workforce? How should these policy options account for variation in hospital size, volume, and complexity of services? What other hospital-specific factors should be accounted for?
- How would the growth in the number of birth centers affect the impact of establishing an obstetrical services CoP? As of February 2022, 400 midwifery-led birth centers exist across 40 states and Washington DC, with their numbers more than doubling in the last decade (representing 0.52 percent of births in 2017).[786] Birth centers, which are not subject to the Emergency Medical Treatment and Labor Act (EMTALA),[787] treat primarily low risk pregnancies. However, in approximately 18 percent of cases birth centers will direct or transfer pregnant or postpartum individuals or newborns to a hospital.[788]
- What should minimum oversight requirements be for an obstetrical unit? We believe it is necessary to require that obstetrical units (including patient rooms/suites, operation rooms, and postpartum/recovery rooms whether combined or separate) be supervised by an experienced certified nurse practitioner, physician assistant, certified nurse midwife, or a doctor of medicine or osteopathy. Experienced oversight is necessary to ensure safe, high-quality care. However, we welcome comments on staffing and oversight requirements for obstetrical units, including whether these oversight requirements in an obstetric unit lead to improved quality outcomes for the mother and the baby or may result in unintended consequences. We also welcome comments on whether there should be similar or different oversight requirements for small hospitals, CAHs, and REHs.
- What should be required with respect to credentialling of health professionals to provide obstetrical services within a specific facility? We understand that health professionals (midwives, advanced practice providers, physicians, doulas, etc.) have differing skill sets and expertise. Therefore, we would expect that facility credentialling of health professionals to provide obstetrical services, consistent with state law, must be delineated for all practitioners providing obstetrical care in the facility in accordance with the competencies of each practitioner and that the facility maintain a roster of practitioners specifying the duties and privileges of each practitioner. Such a requirement would be consistent with the existing surgical services CoP (42 CFR 482.51(a)(4)).
- Should obstetrical units be required to maintain a minimum set of obstetrical care equipment and supplies? We recognize that facilities have different capacities and populations, and we are seeking comment on whether there is a core set of equipment and supplies that could enhance obstetrical readiness. For example, facilities might need to ensure that all delivery rooms have a call-system, fetal monitoring capabilities, adult and neonatal resuscitation equipment, accessible medical equipment, and adequate provisions for emergent/precipitous deliveries, obstetrical emergencies (such as hypertensive emergencies and hemorrhage), and immediate post-delivery care. Should hospitals and CAHs without obstetrical units, emergency departments, and REHs have similar requirements? Such requirements would be consistent with the existing surgical services CoP (42 CFR 482.51(b)(3)).
- Beyond what is already required for emergency department (ED) patients under EMTALA, should a hospital obstetrical services CoP include a requirement for transfer protocols for when a non-ED patient needs care that exceed the capability of the hospital (that is, inpatient to inpatient transfers)? Should a similar requirement apply to hospitals and CAHs without emergency services and/or obstetrical services?
- Are there additional ways the CoPs could improve or address the health and safety of pregnant and postpartum patients across all care settings?
- Are there refinements to Medicare and/or Medicaid payment structures for obstetrics care, and/or perinatal care that could improve the delivery of maternal care, and also address existing disparities? We are interested in specific refinements that are within CMS statutory authorities.

3. Staff Training

According to the AHA, between 2015 and 2019, there were at least 89 obstetric unit closures in the U.S.,[789]

with a disproportionate impact on rural and underserved communities.[790] [791] [792] [793] Given the increasing number of areas across the country with limited to no access to maternal health care, emergency departments, CAHs, and REH and non-obstetrical professionals working in these settings may experience a higher acuity and frequency of patients needing obstetrical care. Moreover, a number of emergency departments, CAHs, and REHs, especially in rural areas, may be staffed by clinicians with less training in obstetrical emergencies.[794] [795] [796] [797] [798] Rural hospitals with and without obstetric units report that their greatest concerns in responding to local obstetric emergencies include a lack of specialty care providers and a lack of skills to address emergency births.

We note that existing hospital CoPs for emergency services (42 CFR 482.55) already require that ''there must be adequate medical and nursing personnel qualified in emergency care to meet the written emergency procedures and needs anticipated by the facility.'' In addition, EMTALA requires Medicare-participating hospitals, CAHs, and REHs with emergency departments to ''provide a medical screening examination (MSE) [. . .] for an emergency medical condition (EMC), including active labor, regardless of an individual's ability to pay. Applicable facilities are then required to provide stabilizing treatment for patients with EMCs.'' [799] Furthermore, existing the Joint Commission (TJC) standards on the provision of care, treatment, and services standards for maternal safety require the education of all staff and providers who treat pregnant/postpartum patients on the hospital's evidence-based severe hypertension/preeclampsia and hemorrhage procedures.[800] The standards also recommend that hospitals use in-situ training and drills that include multidisciplinary teams. We expect that facilities will ensure their emergency staff are trained to handle obstetrical related emergencies in compliance with CMS' CoPs, EMTALA, and TJC standards.

Despite these existing regulations and standards, several organizations have cited that obstetrical readiness for hospitals with and without obstetrical services is suboptimal.[801] [802] [803] In these situations, appropriate training, best practice protocols (such as recognizing early warning signs of hemorrhage and other adverse events associated with pregnancy and birth), and transfer protocols are critical to averting avoidable maternal complications and deaths, establishing and maintaining facilities' obstetrical readiness,[804] and ensuring compliance with existing CoP and EMTALA regulations.

We are interested in feedback on requiring additional training, protocols, or equipment for hospital non-OB unit, emergency department, CAH, and REH staff that treat pregnant and postpartum patients as a stop-gap measure to ensure individuals living without access to maternal health care can safely and effectively receive necessary services. Training requirements could encompass training in common obstetrical conditions and emergencies or training on methods for improving the respectful delivery of care to pregnant and postpartum patients or both. This could be connected to the hospital emergency services CoPs or applied more broadly to all or a subset of hospital, CAH, and REH staff and require that such facilities demonstrate that staff have adequate or minimum obstetrical training as well as training in hospital protocols, such as transfer protocols for when a pregnant, birthing, or postpartum persons under the facilities' care (including emergency department patients) need a higher level of obstetrical care than the hospital is able to provide. We also seek feedback on how potential challenges with such a requirement could be mitigated.

We note that since hospitals are neither required to provide obstetrical services nor emergency services, we are interested in ways to mitigate potential impacts and costs to hospitals in implementing such a possible requirement. We seek feedback from the public to learn more about the impact of this particular potential requirement and evidence supporting the need for such a requirement.

Therefore, we are seeking public comment specifically on the following:

- Should minimum OB staff training requirements (both initial and ongoing) be included in an obstetric services CoP? The Joint Commission (TJC) requires the education of all staff and providers who treat pregnant/postpartum/birthing patients on the hospital's evidence-based severe hypertension/preeclampsia and hemorrhage procedures.[805] Should a similar requirement be included in an OB services CoP? Are there other requirements for training that should be included, such as neonatal resuscitation?
- Given the rate of OB unit closures, should CMS require a minimum obstetrical training standard for hospital/CAH non-OB unit, emergency department, REH, or other non-OB staff that may care for pregnant, birthing, and postpartum patients to improve maternal health outcomes? What evidence exists to support the need for further or baseline obstetrical training for these non-obstetrical health professionals? What might this training entail? Which clinical staff and which facility types should such requirements apply to? What intervals should such training be required? Is there data and evidence that demonstrates that such training improves maternal health care outcomes? If so, what evidenced-based trainings, best practice standards, and protocols are currently available? What are the barriers to accessing such obstetrical training, including in rural areas? What are policy options to mitigate any potential unintended consequences or provider burden of such a requirement? Should this training apply to all hospitals or a subset (that is, those with emergency services; or those with emergency services but no obstetrical services)? For example, the existing Emergency Services CoP at 42 CFR 482.55 could be revised to require that hospitals with emergency services (which would include hospitals with and without obstetrical services units) establish best

practice protocols, transfer protocols, and regular staff training for management of common obstetrical conditions and emergencies.

- Should such additional staff training include separate training on methods for providing respectful care for pregnant, birthing, and postpartum patients in an effort to improve maternal health outcomes? Which staff should this apply to? Is there data and evidence that demonstrates that such training improves maternal health care outcomes? If so, what evidenced-based trainings on respectful care for pregnant, birthing, and postpartum patients are currently available?
- Should staff also be trained on implicit bias, trauma-informed care, or other specific training topics aimed at addressing bias and reducing disparities in maternity care? Which staff should this apply to? Is there data and evidence that demonstrates that implicit bias and trauma-informed care training improves maternal health care outcomes? If so, what evidenced-based trainings are currently available?
- Should additional staff training include separate training on the screening, assessment, treatment, and referral for maternal depression and related behavioral health disorders by staff? Which staff should this apply to? Is there data and evidence that demonstrates that such training improves maternal health care outcomes? If so, what evidenced-based trainings are currently available?
- For all possible training topics discussed in above bullets of this section, what is the recommended frequency of staff training needed to balance maintaining skills and teamwork with minimizing associated burdens (*i.e.,* staff time, costs), especially for rural facilities?
- What additional policies should CMS consider to support the obstetrical readiness of hospitals with and without labor and delivery units for obstetrical emergencies, high-risk pregnancy related conditions, and common obstetrical conditions?

4. Data

We are also interested in understanding if and how requiring hospitals to submit data related to maternal morbidity and mortality could be incorporated into any maternal services CoP. In January 2010, the Transforming Maternity Care Symposium Steering Committee issued a Blueprint for Action that included improving the availability and ease of collection of standardized maternity care data in order to encourage high quality clinical care, allow performance measurement and comparison, and support creation and implementation of a national public reporting system for maternity care data available to all relevant stakeholders in order to drive improvements in maternity care.[806] Maternal health advocates have stated that the lack of maternal morbidity and mortality data limits where meaningful changes can occur. Currently, Maternal Mortality Review Committee (MMRC) data reporting is dependent upon state requirements and often voluntary reporting by health care facilities. While there are concerns about a lack of data, some parties have suggested that, though voluntary, MMRC data collection from facilities is robust and timely. We encourage facilities to report data to their state MMRC, where they exist and in alignment with requirements in their specific states. However, not all states have an MMRC. We believe that improving the available data would enable facilities to compare data and conduct more complete assessments of their maternal health readiness and opportunities for growth and improvement. To that end, we are interested in public comment on the following:

- How could CMS help improve data collection related to maternal morbidity and mortality across all demographics?
- Should hospitals be required to directly report to MMRCs when available? (*https://www.cdc.gov/reproductivehealth/maternal-mortality/erase-mm/index.html#maternal-mortality-review*)
- Could such a data collection requirement be incorporated into an obstetrical services CoP, or would it be more appropriately incorporated into another existing hospital CoP, such as QAPI?
- Are there common critical data elements that would be most important and appropriate to collect through a CoP aimed at improving maternal health data? Are there data standards currently available or under development that can support standardized reporting? How do we ensure data collection encompasses all demographics?
- How can any associated burden of possible future data collection and reporting requirements for providers be mitigated?

D. Proposed Changes to the Payment Error Rate Measurement (PERM)

The Payment Integrity Information Act of 2019 requires federal agencies to annually review programs susceptible to significant improper payments, estimate the amount of improper payments, report those estimates to Congress, and submit a report on actions the agency is taking to reduce the improper payments.

Medicaid and the Children's Health Insurance Program (CHIP) were identified as programs at risk for significant improper payments. We measure Medicaid and CHIP improper payments through the Payment Error Rate Measurement (PERM) program. Under PERM, reviews are conducted in three component areas (FFS, managed care, and eligibility) for both the Medicaid program and CHIP. The results of these reviews are used to produce national program improper payment rates, as well as state-specific program improper payment rates. The PERM program uses a 17-state, 3-year rotation cycle for measuring improper payments, so every state is measured once every 3 years.

Section 202 of Division N of the Further Consolidated Appropriations Act, 2020 (FCAA, 2020) (Pub. L. 116–94) amended Medicaid program integrity requirements in Puerto Rico. Puerto Rico was required to publish a plan, developed by Puerto Rico in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the FCAA's enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Puerto Rico published this plan on June 20, 2021,[807] and it was approved by the CMS Administrator on June 22, 2021. We propose to remove the exclusion of Puerto Rico from the PERM program found at 42 CFR 431.954(b)(3). In compliance with section 202 of Division N of the FCAA, 2020, Puerto Rico has developed measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Including Puerto Rico in the PERM program will increase transparency in its Medicaid and CHIP operations and will improve program integrity efforts, that protect taxpayer dollars from improper payments.

Puerto Rico would be incorporated into the PERM program starting in RY27 (Cycle 3), which covers the payment period between July 1, 2025 through June 30, 2026.

F. CoP Requirements for Hospitals and CAHs To Report Acute Respiratory Illnesses

1. Background

Under sections 1866 and 1902 of the Act, providers of services seeking to participate in the Medicare or Medicaid program, or both, must enter into an agreement with the Secretary or the state Medicaid agency, as appropriate. Hospitals (all hospitals to which the requirements of 42 CFR part 482 apply, including short-term acute care hospitals, LTC hospitals, rehabilitation hospitals, psychiatric hospitals, cancer hospitals, and children's hospitals) and CAHs seeking to be Medicare and Medicaid providers of services under 42 CFR part 485, subpart F, must be certified as meeting Federal participation requirements. Our conditions of participation (CoPs), conditions for coverage (CfCs), and requirements set out the patient health and safety protections established by the Secretary for various types of providers and suppliers. The specific statutory authority for hospital CoPs is set forth in section 1861(e) of the Act; section 1820(e) of the Act provides similar authority for CAHs. The hospital provision at section 1861(e)(9) of the Act authorizes the Secretary to issue any regulations he or she deems necessary to protect the health and safety of patients receiving services in those facilities; the CAH provision at section 1820(e)(3) of the Act authorizes the Secretary to issue such other criteria as he or she may require. The CoPs are codified at 42 CFR part 482 for hospitals, and at 42 CFR part 485, subpart F, for CAHs.

Our CoPs at § 482.42 for hospitals and § 485.640 for CAHs require that hospitals and CAHs, respectively, have active facility-wide programs for the surveillance, prevention, and control of healthcare-associated infections (HAIs) and other infectious diseases and for the optimization of antibiotic use through stewardship. Additionally, the programs must demonstrate adherence to nationally recognized infection prevention and control guidelines, as well as to best practices for improving antibiotic use where applicable, and for reducing the development and transmission of HAIs and antibiotic-resistant organisms. Infection prevention and control problems and antibiotic use issues identified in the required hospital and CAH programs must also be addressed in coordination with facility-wide quality assessment and performance improvement (QAPI) programs.

Infection prevention and control is a primary goal and responsibility of hospitals and CAHs in their normal day-to-day operations, and these programs have been at the center of initiatives taking place in hospitals and CAHs since the beginning of the Public Health Emergency (PHE) for COVID–19. Our regulations for hospitals and CAHs at §§ 482.42(a)(3) and 485.640(a)(3), respectively, require infection prevention and control program policies to address any infection control issues identified by public health authorities.

On March 4, 2020, we issued guidance stating that hospitals should inform infection prevention and control services, local and state public health authorities, and other health care facility staff as appropriate about the presence of a person under investigation for COVID–19 (QSO–20–13-Hospitals). CMS followed this guidance with an interim final rule with comment period (IFC), ''Medicare and Medicaid Programs, Clinical Laboratory Improvement Amendments (CLIA), and Patient Protection and Affordable Care Act; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency,'' published on September 2, 2020 (85 FR 54820), that required hospitals and CAHs to report important data critical to support the fight against COVID–19. The IFC provisions specifically required that hospitals and CAHs report specified information about COVID–19 in a format and frequency specified by the Secretary. Examples of data elements that could be required to be reported included things such as the number of staffed beds in a hospital and the number of those that are occupied, information about its supplies, and a count of patients currently hospitalized who have laboratory-confirmed COVID–19. These elements proved essential for developing and directing implementation of infection prevention and control guidance, as well as resource allocations and technical assistance during the PHE.

On August 10, 2022, we finalized revisions to the COVID–19 and Seasonal Influenza reporting standards for hospitals and CAHs (at §§ 482.42(e) and (f); and 485.640(d) and (e), respectively) in the FY 2023 IPPS final rule ''Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2023 Rates'' (87 FR 48780, 49409), to require that, beginning at the conclusion of the COVID–19 PHE declaration and continuing until April 30, 2024, hospitals and CAHs must electronically report information about COVID–19 and seasonal influenza virus, influenza-like illness, and severe acute respiratory infection in a standardized format specified by the Secretary. In establishing these requirements, we stressed that such reporting continued to be necessary for CMS to monitor whether individual hospitals and CAHs were appropriately tracking, planning for, responding to, and mitigating the spread and impact of COVID–19 and influenza on patients, the staff who care for them, and the general public (87 FR 49377). We also noted that the approach finalized in that rule would provide a path towards ending the overall reporting of COVID–19-related data between the end of the current PHE and April 2024, when those requirements would sunset (87 FR 49379).

2. Hospital Respiratory Illness Data Are and Will Continue To Be Critical for Patient Health and Safety

The COVID–19 pandemic highlighted the importance of taking a broad view of patient safety—one that recognizes patient safety is determined not just by what is happening at the bedside, but also what is happening in the broader hospital, and in hospitals across the region, state, and country. At the same time, it also demonstrated the patient benefits of strong integration between public health and health care systems, particularly when data are available to direct collaborative actions that protect patient and public health and safety. Data from health care providers remain the key driver to identify and respond to public health threats, yet health care and public health data systems have long persisted on separate, often poorly compatible tracks.

Hospital and CAH-reported data on COVID–19, influenza, and RSV infections among patients, as well as hospital bed capacity and occupancy rates, continue to play a critical role in infection prevention and control efforts at every level of the health system. The value of these data extend beyond the COVID–19 PHE. For example, source control remains an important intervention during periods of higher respiratory virus transmission.[808] Data on hospital admissions reported under the current CoPs continue to inform national, state, and county recommendations for community and health care mitigation measures.[809]

[808] *https://www.cdc.gov/infectioncontrol/guidelines/core-practices/index.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fhicpac%2Frecommendations%2Fcore-practices.html.*

[809] Infection Control: Severe acute respiratory syndrome coronavirus 2 (SARS-CoV–2) | CDC; 2023.12.14—IDPH Recommends Healthcare

Continued

Notably, the CDC recommends that health care facilities consider levels of respiratory virus transmission in the whole community when making decisions about source control. Comprehensive and consistent surveillance across hospitals creates a shared resource that all health care facilities in a community can use to inform infection control policies. Hospitals and CAH requirement to report this data ends in April 2024. Not maintaining this reporting would result in an absence of vital information on local, regional, and national transmission and impact of respiratory illness, with significant implications for both patient care and public health mitigation.

The data produced by hospital respiratory virus reporting requirements under the PHE informed coordination of hospital operations and were especially important to anticipate and prepare for surge conditions. Collaborative, data driven approaches can help to manage patient transfers and alleviate strained hospitals, ultimately aiding to improve patient care. Medical operations coordination centers (MOCCs) and similar structures showed promise as effective tools for facilitating medical surge response.[810] MOCCs are often rapidly stood up as needed and reliant on shared visibility across multiple, often competitive, hospitals. Standardized data collections enable MOCCs and other partners to support patient placements and transfers and identify patient load balancing needs.[811] This helps the health care community to prepare for and effectively respond to respiratory illness surges in ways that maintain the safety and availability of critical care services. MOCCs or similar structures were implemented in multiple jurisdictions to help place patients and mitigate strain.[812] Even without formal MOCCs, jurisdictions, health care coalitions, and health systems have used hospital capacity data to coordinate patient placement and reduce ED boarding and overcrowding.[813] These efforts are especially critical as surge conditions can impact quality of care and patient outcomes—many COVID–19 deaths were potentially attributable to surge-strained hospitals.[814] The data reported under the COP were important to inform MOCC operations and identify and mitigate strain on health care systems.

Insight into hospital and CAH capacity helps ensure capabilities are available to meet patient needs with quality care through enhanced planning, technical assistance, resource allocation, and coordination.[815] While health care entities often work independently within their own systems, health care partners are ultimately part of an ecosystem caring for patients in their community. This interdependency is especially highlighted during times of strain—whether it is due to temporary conditions such as diversion, permanent changes with facility closures, or PHEs. Regardless of facility status, the need for patient care remains—resulting in increased strain on surrounding hospitals. Health care coalitions (HCCs) are one example of local health care partners working together to increase local and regional health care resilience during respiratory illness surges and more.[816] HCCs plan and respond together, sharing real-time information and providing technical assistance to support their partners.[817] At the state level, in addition to patient placements and load balancing operations, hospital associations and state health departments have used hospital data to monitor for potential trends and to inform their response. Hospital capacity data helped to inform and monitor triggers for patient load balancing, allocations of scarce resources, and requests for additional resources or mutual aid.[818] Hospitals and health care systems can also use the information for planning purposes, identifying how their facility may be impacted and to help prepare accordingly.[819] Information sharing across the health care ecosystem helps the health care community to prepare for, and effectively respond to, respiratory illness surges in ways that maintain the safety and availability of critical care services.

Data from hospitals play a central role in guiding actions to reduce the prevalence of respiratory infections in the community.[820] In recognition of this point, the Biden-Harris Administration's National Biodefense Strategy includes a goal to, ''maintain and enhance an enduring domestic all-hazards hospital data collection capability, including data reporting and management systems, governance processes, and user guidance, to enable comprehensive data reporting for biosurveillance, situational awareness, and emergency response operations at the federal and STLT levels.'' [821]

The prevalence of respiratory infections in the community affects patient safety within hospitals in at least two ways: First, community prevalence is a key risk factor for within-facility pathogen transmission. Higher infection

---

prevalence in the community unavoidably translates to higher prevalence among staff, patients, and visitors entering a facility. The more times a pathogen is introduced into a facility, the more times it has a chance to spread onward within that facility. Within-facility infection control measures can substantially mitigate this risk, but no single action confers absolute protection—rather, layered mitigation measures, particularly when those include community level actions, are most effective. Second, the community prevalence of respiratory infections is a key driver of health care worker absenteeism, which can lead to staff shortages that adversely affect patient safety.

Data on hospitalizations feature prominently on CDC's website and are directly tied to specific disease-prevention guidance (for example, whether mask-wearing is recommended in public indoor spaces). Additionally, analyses that measure the trajectory of waves of COVID–19 and seasonal influenza and analyses that generate forecasts have relied on nationally comprehensive data on hospital admissions.[822] Similarly, scenario models that have been used to generate seasonal projections for COVID–19 and that have informed vaccination policy are based on hospital admissions data.[823] The incidence of COVID–19 and influenza hospital admissions inform urgent messages from CDC on actions health care providers can take to protect their patients from respiratory viruses.[824] No other data source available to CDC has the same level of timeliness, geographic resolution and coverage, and interpretability as nationally comprehensive hospitalization surveillance.

Respiratory illness reporting proved invaluable during the COVID–19 PHE, and these data have significant and ongoing value for protecting patient health and safety. While the COVID–19 PHE has ended, SARS–CoV–2 continues to circulate throughout the globe. Although COVID–19 activity and hospitalization rates have been lower, than those of 2020 through early 2022, there was no epidemiologic bright line associated with the end of the PHE. For example, in January 2024, COVID–19 hospital admissions were only modestly lower than they were at the July 2022 or December 2022 peaks.[825] At the same time, other respiratory viruses have seen a resurgence, and the moderate COVID–19 burden coinciding with resurgent influenza and RSV has led to an overall hospitalization burden larger than observed during severe influenza and RSV seasons prior to the COVID–19 pandemic, placing patient health and safety at risk.[826]

The result of this ''new normal'' will be more burdensome respiratory virus seasons for the foreseeable future, which promises to place continued strain on the nation's hospitals.[827] In response to this changed landscape, public health agencies such as CDC have shifted prevention and control strategies from a focus on specific viruses to an approach that addresses the threats presented by the broader respiratory virus season, including overall impacts on hospital capacity and patient health and safety.[828]

The elevated risks of respiratory viruses in the post-PHE era present ongoing threats, both direct and indirect, to patient health and safety. As discussed elsewhere in this proposed rule, the COVID–19 PHE strained the health care system substantially, introducing new safety risks and negatively impacting patient safety in the normal delivery of care. Data from the pandemic showed that the incidence of health care associated infections would increase when COVID–19 hospitalizations were high,[829] creating a feedback loop between increased stress on hospitals, increased illness in the community, and negative effects on patient health and safety. Degradation in other measures of patient safety, including pressure ulcers and falls, further demonstrate how the strains associated with surge response adversely affect routine safety practices.[830] Elevated respiratory virus activity also impacts patient access to hospital care and services and the resiliency of the health care system overall. During the most severe waves of respiratory illness, hospitals see delays in elective procedures, bed capacity issues that require diversion, and other disruptions to routine patient care.[831]

3. Proposal To Continue Respiratory Illness Reporting in a Modified Form

In light of continued utility of respiratory illness data, we propose to revise the hospital and CAH infection prevention and control and antibiotic stewardship programs CoPs to extend a modified form of the current COVID–19 and influenza reporting requirements that will include data for RSV and reduce the frequency of reporting for hospitals and CAHs. These proposed requirements would take effect on October 1, 2024. While hospitals and CAHs are encouraged to voluntarily continue reporting these data in the interim, we recognize that there would be a 5-month gap between the sunset date for current reporting requirements (April 30, 2024) and the proposed implementation date for these new requirements. We welcome public comment on strategies to mitigate challenges and support an informed transition.

Specifically, we propose to replace the COVID–19 and Seasonal Influenza reporting standards for hospitals and CAHs at § 482.42(e) and (f) and § 485.640(d) and (e), respectively, with a new standard addressing respiratory illnesses to require that, beginning on October 1, 2024, hospitals and CAHs electronically report information about COVID–19, influenza, and RSV in a standardized format and frequency specified by the Secretary. To the extent determined by the Secretary, *we propose that* the data elements for which reporting would be required at this time include—

- Confirmed infections of respiratory illnesses, including COVID–19, influenza, and RSV, among hospitalized patients;
- Hospital bed census and capacity (both overall and by hospital setting and population group [adult or pediatric]); and

• Limited patient demographic information, including age.

We considered the data elements that proved most actionable and informative over the course of the COVID–19 PHE with evidence of protecting health and safety, as well as more recent lessons that have emerged during the 2023–2024 respiratory virus response.[832] We also considered ways to balance the burden of reporting on hospitals and CAHs with the need to maintain a level of situational awareness that will benefit hospitals and the patients and communities they serve. Therefore, outside a declared national PHE for an acute respiratory illness (as discussed further below), we propose that hospitals and CAHs would have to report these data on a weekly basis (either in the form of weekly totals or snapshots of key indicators) through a CDC-owned or supported system.

Sustained data collection and reporting outside of emergencies would help ensure that hospitals and CAHs maintain a functional reporting capacity that can be mobilized quickly when a new threat emerges to inform and direct response efforts (for example, resource allocations or patient load balancing within and across facilities) that protect patients and their communities. It will also provide the baseline data necessary to forecast, detect, quantify and, ultimately, direct responses to signals of strain. For example, to estimate the extent to which a novel SARS-CoV–2 variant threatens hospital capacity, analysts need data on a population's epidemiologic history (for example, the presence and magnitude of prior waves of SARS-CoV–2) and they need data to infer the relationship between respiratory virus admissions and strain on hospital capacity.

Unlike the previous and sunsetting hospital and CAH reporting CoPs, the reporting requirements proposed in this rule are not tied to a specific PHE declaration. PHE declarations are valuable tools to marshal nimble and fast emergency responses. However, there are many respiratory disease threats to hospital operations and patient safety that would not necessarily be subject to a PHE declaration nor have significant potential to become a PHE. In those instances, routine data about influenza hospitalizations and admissions are critical to inform allocation of resources to hospitals and planning to prevent disruptions to patient care.

These proposals are scaled back and tailored from the current post-COVID–19 PHE requirements, continuing the collection of the minimal necessary data to maintain a level of situational awareness that would benefit patients and hospitals across the country while reducing reporting burden on hospitals and CAHs.

We welcome public comments on our proposals, and on ways that reporting burden can be minimized while still providing adequate data. We also welcome feedback on any challenges of collecting and reporting these data; ways that CMS could reduce reporting burden for facilities; and alternative reporting mechanisms or quality reporting programs through which CMS could instead effectively and sustainably incentivize reporting. Finally, we welcome comments on the value of these data in protecting the health and safety of individuals receiving treatment and working in hospitals and CAHs.

4. Soliciting Input on Collecting Data by Race and Ethnicity

The COVID–19 pandemic devastated communities across the United States, and socially vulnerable populations have been disproportionately affected. From the beginning, reports indicated that people of color and people from economically disadvantaged communities were at an increased risk of becoming sick from COVID–19, being hospitalized due to COVID–19, and dying from COVID–19, compared to members of predominantly white and/or affluent communities.[833] At the same time, the data necessary to detect and respond to these disparities were not consistently available from core data sources, including hospitalization data reported by hospitals and CAHs under §§ 482.42(e) and (f); and 485.640(d) and (e), respectively.

We are committed to protecting patients from all communities and preventing inequities caused or exacerbated by respiratory viruses like COVID–19, influenza, and RSV. Timely, complete data on racial and ethnic differences in hospitalizations are critical to meeting that commitment in policy solutions. In addition, timely, complete data on granular demographic information can assist us in assuring the health and safety of individuals receiving health care services to the greatest extent possible. For that reason, we seek comment on expanding the scope of demographic information collection to further support improvements in clinical outcomes while also protecting privacy and the safety of demographic groups.

At the same time, we recognize that efforts to improve the collection of race/ethnicity data and standards for how these data are captured are still evolving.[834] We also recognize that in the context of aggregate data collection, requesting multiple demographic details for each data element may increase data collection and reporting burdens.

For this reason, we invite comment as to whether race/ethnicity demographic information should be explicitly included as part of requirements for ongoing reporting beginning on October 1, 2024. We are particularly interested in comments that address the ways these additional data elements could be used to better protect patient and community health and safety both during and outside of a declared PHE. We are interested in comments on how to protect patient privacy within demographic groups and best use the data to inform public health efforts without stigmatizing demographic groups.[835] We are also interested in comments that address system readiness and capacity to collect and report these data. Finally, we request comments as to whether the additional demographic factors including socioeconomic or disability status that may be associated with disparities in outcome, should be required for mandatory ongoing reporting starting on October 1, 2024. After considering the public comments on this issue, we may decide to finalize a policy of collecting demographic information on race/ethnicity and/or additional factors.

5. Proposal To Collect Additional Elements During a PHE

Routinely collected data from hospitals also power forecasts that inform decision making during an emergency response.[836] In the face of future illness emergencies, we anticipate stakeholders—including health care systems—will continue to

[835] Landers S, Kapadia F, Tarantola D. Monkeypox, After HIV/AIDS and COVID–19: Suggestions for Collective Action and a Public Health of Consequence, November 2022. Am J Public Health. 2022 Nov;112(11):1564–1566. doi: 10.2105/AJPH.2022.307100. PMID: 36223580; PMCID: PMC9558195. *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9558195/.*

[836] JMIR Preprints #54340: Responding to the return of influenza in the United States: applying CDC surveillance, analysis, and modeling to inform understanding of seasonal influenza.

need data on how respiratory illnesses are affecting and burdening the health care system. Better understanding anticipated impacts empower hospitals and CAHs, health systems, and jurisdictions to take steps that protect patient safety and health care system capacity in the face of surges in respiratory virus cases, including low-probability, high-impact events such as pandemics that pose catastrophic risks to patient safety and the health care system. These include facility-initiated actions, such as delaying elective procedures or activating contracts for additional surge staffing support, as well as jurisdiction or federal-level actions to mobilize supplies, staffing, or other forms of support. Collaborations during the COVID–19 pandemic demonstrated the value of bringing together analysts, public health officials, and health care practitioners and leaders to use advanced analytics to guide emergency response, and data from hospitals were central to some of these efforts.[837] The federal government has made significant investments to consolidate these gains and develop response-ready analytic tools that work at scale to meet the needs of the health care and public health systems.[838]

These proposed requirements would provide a foundation for response-ready hospitals, CAHs, and the broader health system. However, we also recognize that, while necessary, they may not be sufficient in the course of an actual emergency response. Accordingly, we propose that—

- During a declared federal, state, or local PHE for an infectious disease the Secretary may require hospitals to report data up to a daily frequency without notice and comment rulemaking.
- During a declared PHE for infectious disease, the Secretary may require the reporting of additional or modified data elements relevant to infectious disease PHE including but not limited to: confirmed infections of the infectious disease, facility structure and infrastructure operational status; hospital/ED diversion status; staffing and staffing shortages; supply inventory shortages (for example, equipment, blood products, gases); medical countermeasures and therapeutics; and additional, demographic factors.
- If the Secretary determines that an event is significantly likely to become a PHE for an infectious disease, the Secretary may require hospitals to report data up to a daily frequency without notice and comment rulemaking.

We invite comments on if, during a PHE, there should be any limits to the data the Secretary can require without notice and comment rulemaking, such as limits on the duration of additional reporting or the scope of the jurisdiction of reporting (that is, state or local PHEs). We also seek comments on whether and how the Secretary should still seek stakeholder feedback on additional elements during a PHE without notice and comment rulemaking and how HHS should notify hospitals of new required infectious disease data. We also invite comments on the evidence HHS should provide to demonstrate: (1) that an event is ''significantly likely to become a PHE''; or (2) that the increased scope of required data will be used to protect patient and community health and safety. Finally, we invite comment on whether hospitals should be incentivized for this data if the burden of collecting and reporting reaches a certain threshold of cost or time.

6. Collaboration

To further reduce burden in the short term, we will work with the CDC to ensure hospitals can continue to use existing, established systems to report data in the interim. The CDC will continue increasing the automation capabilities of the surveillance systems like NHSN and its ability to connect with other data submission techniques, vendors, and systems. The CDC, CMS, and ASPR are also working with Office of the National Coordinator for Health Information Technology (ONC), jurisdictions, health information technology (health IT) vendors, hospitals and CAHs, and other public and private partners to establish national standards and interoperability requirements that reduce burden and promote standardization. We request comment from facilities on the existing, established data systems; what has worked well and what has been the challenges? Do facilities recommend alternative data reporting mechanisms?

We recognize that some of the proposed data elements are currently reported via multiple mechanisms, and this could place unnecessary burdens on hospitals. If finalized, CMS, CDC, and ASPR will work with hospitals, health systems, and state, territorial, local and tribal agencies (STLTs) to streamline this federal, state, and local reporting burden, utilizing the least burdensome technical exchange mechanism for reporting. CDC and ASPR, together with ONC, would also take steps to encourage state, local, jurisdictional partners to utilize the same HHS-adopted health IT standards like USCDI for data exchange, which would further reduce burden on health care systems. We will also explore where guidance can leverage data sets being developed under the USCDI+ initiative, which focuses on develop and advancing use of standardized data elements for exchange for additional use cases that build on the USCDI.[839]

CMS, CDC, and ASPR recognize the immense value of partnerships with hospitals, health systems, STLTs, associations, and other partners. Throughout the COVID–19 PHE, partners at all levels worked alongside CMS, CDC, and ASPR to provide additional context, insight, and feedback based on conditions on the ground. This context helped data collections be more effective and helped provide a fuller picture than data alone. CMS, CDC, and ASPR are grateful for the many collaborations with partners on data and beyond. CDC, ASPR, and ONC will explore opportunities to codify continued partnerships to prepare for and respond to incidents such as respiratory illnesses more effectively. We welcome public comment on ways that all public agencies involved in these types of data collections can be good partners.

7. Request for Information on Health Care Reporting to the National Syndromic Surveillance Program

CDC's National Syndromic Surveillance Program (NSSP) is a collaboration among CDC, other federal agencies, local and state health departments, and academic and private sector partners who have formed a Community of Practice. They collect, analyze, and share electronic patient encounter data received from emergency departments, urgent and ambulatory care centers, inpatient health care settings, and laboratories.

The electronic health data are integrated through a shared platform; the BioSense Platform. The public health community uses analytic tools on the platform to analyze data received as early as 24 hours after a patient's visit to a participating facility. Public health officials use these timely and actionable data to detect, characterize, monitor, and respond to events of public health concern.

The primary dataset used for analysis is Emergency Department patient visit data obtained through data leveraging

[837] Real-time pandemic surveillance using hospital admissions and mobility data | PNAS Coordinated Strategy for a Model-Based Decision Support Tool for Coronavirus Disease, Utah, USA—Volume 27, Number 5—May 2021—Emerging Infectious Diseases journal—CDC.

[838] *cdc-cfa-annual-report-2023.pdf.*

[839] For more information about USCDI+ *https://www.healthit.gov/topic/interoperability/uscdi-plus.*

HL7v2 ADT-based messaging among CDC, local and state health departments, and the nation's acute care hospitals. By tracking symptoms and diagnoses of patients using this electronic health data source, analysts can detect unusual levels or changing patterns of illness. Every day, more than 2,000 users (analysts at all levels of government including 73 state and local health departments) conduct 4,000 searches of these data for response, decision-making, and action. In 2022–23, these data were used to provide critical insights for more than 40 responses across infectious diseases (including COVID–19, RSV, influenza, tickborne disease, domestic polio, and Mpox), disasters (including hurricanes and typhoons, extreme heat and cold, flooding, chemical exposure, food and water contamination), injuries (including overdose, poisonings, boating injuries in collaboration with the Coast Guard, child abuse and elder abuse) and for mental health, mass gatherings, and other conditions. These data provide public health with a common situational awareness of health threats over time and across regional boundaries. New responses between 2022 and 2023 included the Mpox public health emergency, domestic malaria, asthma from Canadian wildfire smoke, Hurricane Ian, Typhoon Mawar, volcanic eruption in Hawaii, the train derailment in Ohio, hepatitis of unknown cause in children, encephalitis and meningitis in young children, group A Streptococcal Disease, and pertussis. Nationwide, CDC's NSSP data are presented on many local, state, and federal public websites.

CDC's NSSP data provide crucial insights that inform hospital preparedness and better prepare for emerging health events. Syndromic surveillance relies on the secondary use of EHR data that supports delivery of care, enabling an efficient and cost-effective way to identify and characterize public health threats. The provision of these data requires no ongoing action from a health care provider, with data exchange automated from the EHR.

Currently, CDC receives data from 78 percent of the non-federal emergency departments across 50 states, Washington DC, and Guam. In most cases, the technical pathway for these data is from health care facilities' and health care systems' EHRs to their state or local public health agency, which then further shares these data with CDC. However, a number of other options exist, and CDC has worked with Health Information Exchanges, EHR vendors, and individual facilities and health systems to support the technical provisioning of ED data feeds to CDC's NSSP and to supplement the technical capacity of some state and local public health agencies. Recognizing the tremendous value that these data offer in providing a fast and broad look at the trends and patterns of illness and injury across the county, CDC is seeking to close the remaining participation gap to ensure all communities served by acute care hospitals and CAHs are well represented in CDC's NSSP.

The current level of reporting and participation has been the result of many years of active effort by state and local public health agencies, CDC, and hospitals devoted to building a broad network of data providers and program participants. The CMS EHR Incentive Program, and subsequently the Promoting Interoperability Program, have helped to incentivize and offset some of the health care system investment that has been needed for this public health reporting activity to occur. However, some challenges remain in closing the participation gap. In some instances, data are already being shared locally between health care and public health agencies, but they are not yet provided to the national system, CDC's NSSP. In other cases, some health care facilities have not yet begun providing data despite their jurisdictional public health agency already actively participating in CDC's NSSP.

Syndromic surveillance is not a part of any condition of participation under this program, but the continued growth of national syndromic surveillance would benefit hospitals, health care, and public health. The goal of this RFI is better understand what else can be done to ensure that this effort can continue to make progress and that this critical data source is available at all levels of public health to support health care preparedness, public health readiness, and responsiveness to existing and emerging health threats. We seek input on the following:

- How can CMS further advance hospital and CAH participation in CDC's NSSP?
- Should CMS require hospitals and CAHs to report data to CDC's NSSP, whether as a condition of participation or as a modification to current requirements under the Promoting Interoperability Program?
- Should CMS explore other incentive or existing quality and reporting programs to collect this information?
- What would be the potential burden for facilities in creating these connections in state and local public health jurisdictions that have not yet established syndromic programs and/or where state and local public health are not presently exchanging data with CDC's NSSP? Are there unique challenges in rural areas that CMS should take into consideration?
- Data reported as part of syndromic surveillance requirements could serve as an alternative source for the COVID–19, influenza, and RSV hospitalization reporting requirements proposed in this rule—and even support eventual evolution towards an all-hazards approach for monitoring inpatient hospitalizations for conditions of public health significance. Should CMS consider a future requirement or otherwise incentivize facilities to expand ADT-based reporting currently provided for emergency department visits to include data collected from inpatient settings as defined in the HHS COVID–19 reporting guidance,[840] or a subset of these? If the latter, should a subset of inpatient locations be subject to such a requirement? What would be the potential value and burden trade-offs to facilities? And, should any requirement specify that reporting also be to CDC's NSSP (in addition to more general reporting to state/local syndromic surveillance systems? (noting that often the reporting to CDC's NSSP happens through a given state/local system and that applicable law may apply).
- How can CMS leverage its authorities and programs to improve the quality of data reported to CDC's NSSP, especially for key elements that are sometimes incomplete, including discharge diagnoses, discharge disposition, and patient class? [841]
- In addition to its value for public health, how could CDC's NSSP serve as a tool to directly improve clinical practice, patient safety, and overall situational awareness? What types of questions would you like the system to help answer?

XI. MedPAC Recommendations and Publicly Available Files

A. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have

[840] *https://www.hhs.gov/sites/default/files/covid-19-faqs-hospitals-hospital-laboratory-acute-care-facility-data-reporting.pdf.*

[841] *https://www.cdc.gov/nssp/technical-pubs-and-standards.html#Dictionaries.*

reviewed MedPAC's March 2024 ''Report to the Congress: Medicare Payment Policy'' and have given the recommendations in the report consideration in conjunction with the policies set forth in this proposed rule. MedPAC recommendations for the IPPS for FY 2025 are addressed in Appendix B to this proposed rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC's website at *https://www.medpac.gov.*

B. Publicly Available Files

IPPS-related data are available on the internet for public use. The data can be found on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.* Following is a listing of the IPPS-related data files that are available.

Commenters interested in discussing any data files used in construction of this proposed rule should contact Michael Treitel at (410) 786–4552.

1. CMS Wage Data Public Use File

This file contains the hospital hours and salaries from Worksheet S–3, parts II and III from FY 2021 Medicare cost reports used to create the proposed FY 2025 IPPS wage index. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.C.4. of the preamble of this proposed rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Periods Available: FY 2007 through FY 2025 IPPS Update.

2. CMS Occupational Mix Data Public Use File

This file contains the CY 2022 occupational mix survey data to be used to compute the occupational mix adjusted wage indexes. Multiple versions of this file are created each year. For a discussion of the release of different versions of this file, we refer readers to section III.C.4 of the preamble of this proposed rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Period Available: FY 2025 IPPS Update.

3. Provider Occupational Mix Adjustment Factors for Each Occupational Category Public Use File

This file contains each hospital's occupational mix adjustment factors by occupational category. Two versions of these files are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Period Available: FY 2025 IPPS Update.

4. Other Wage Index Files

CMS releases other wage index analysis files after each proposed and final rule.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Files.html.*

Periods Available: FY 2005 through FY 2025.

5. FY 2025 IPPS FIPS CBSA State and County Crosswalk

This file contains a crosswalk of State and county codes used by the Federal Information Processing Standards (FIPS), county name, and a list of Core Based Statistical Areas (CBSAs).

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2025 proposed rule home page or the FY 2025 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2025 IPPS Update.

6. HCRIS Cost Report Data

The data included in this file contain cost reports with fiscal years ending on or after September 30, 1996. These data files contain the highest level of cost report status.

Media: internet at *https://www.cms.gov/Research-Statistics-Data-and-Systems/Downloadable-Public-Use-Files/Cost-Reports/Cost-Reports-by-Fiscal-Year.*

(We note that data are no longer offered on a CD. All of the data collected are now available free for download from the cited website.)

7. Provider-Specific File

This file is a component of the PRICER program used in the MAC's system to compute DRG/MS–DRG payments for individual bills. The file contains records for all prospective payment system eligible hospitals, including hospitals in waiver States, and data elements used in the prospective payment system recalibration processes and related activities. Beginning with December 1988, the individual records were enlarged to include pass-through per diems and other elements.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ProspMedicareFeeSvcPmtGen/psf_text.*

Period Available: Quarterly Update.

8. CMS Medicare Case-Mix Index File

This file contains the Medicare case-mix index by provider number based on the MS–DRGs assigned to the hospital's discharges using the GROUPER version in effect on the date of the discharge. The case-mix index is a measure of the costliness of cases treated by a hospital relative to the cost of the national average of all Medicare hospital cases, using DRG/MS–DRG weights as a measure of relative costliness of cases. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html,* or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 1985 through FY 2025.

9. MS–DRG Relative Weights (Also Table 5—MS–DRGs)

This file contains a listing of MS–DRGs, MS–DRG narrative descriptions, relative weights, and geometric and arithmetic mean lengths of stay for each fiscal year. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html,* or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or the fiscal year final rule home page desired).

Periods Available: FY 2005 through FY 2025 IPPS Update.

10. IPPS Payment Impact File

This file contains data used to estimate payments under Medicare's hospital inpatient prospective payment systems for operating and capital-related costs. The data are taken from various sources, including the Provider-Specific File, HCRIS Cost Report Data, MedPAR Limited Data Sets, and prior impact files. The data set is abstracted from an internal file used for the impact analysis of the changes to the prospective payment systems published in the **Federal Register**. Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Historical-Impact-Files-for-FY-1994-through-Present,* or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 1994 through FY 2025 IPPS Update.

11. AOR/BOR File

This file contains data used to develop the MS–DRG relative weights. It contains mean, maximum, minimum, standard deviation, and coefficient of variation statistics by MS–DRG for length of stay and standardized charges. The BOR file are ''Before Outliers Removed'' and the AOR file is ''After Outliers Removed.'' (Outliers refer to statistical outliers, not payment outliers.) Two versions of this file are created each year to support the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html,* or for the more recent data files, *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of page, click on the specific fiscal year proposed rule home page or fiscal year final rule home page desired).

Periods Available: FY 2005 through FY 2025 IPPS Update.

12. Prospective Payment System (PPS) Standardizing File

This file contains information that standardizes the charges used to calculate relative weights to determine payments under the hospital inpatient operating and capital prospective payment systems. Variables include wage index, cost-of-living adjustment (COLA), case-mix index, indirect medical education (IME) adjustment, disproportionate share, and the Core-Based Statistical Area (CBSA). The file supports the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2025 proposed rule home page or the FY 2025 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2025 IPPS Update.

13. MS–DRG Relative Weights Cost Centers File

This file provides the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center cost-to-charge ratios (CCRs) that we used in the relative weight calculation.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2025 proposed rule home page or the FY 2025 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2025 IPPS Update.

14. Hospital Readmissions Reduction Program Supplemental File

The Hospital Readmissions Reduction Program Supplemental File is only available and updated for the final rule, when the most recent data is available. Therefore, we refer readers to the FY 2024 IPPS/LTCH PPS final rule supplemental file, which has the most recent finalized payment adjustment factor components and is the same data as would have been used to create the FY 2025 IPPS/LTCH PPS proposed rule supplemental file.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2025 proposed rule home page or the FY 2025 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2025 IPPS Update.

15. Medicare Disproportionate Share Hospital (DSH) Supplemental File

This file contains information on the calculation of the uncompensated care payments for DSH-eligible hospitals as well as the supplemental payments for eligible IHS and Tribal hospitals and hospitals located in Puerto Rico for FY 2025. Variables include the data used to determine a hospital's share of uncompensated care payments, total uncompensated care payments, estimated per-claim uncompensated care payment amounts, and if applicable, supplemental payment amounts. The file supports the rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the FY 2025 proposed rule home page or the FY 2025 final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Period Available: FY 2025 IPPS Update.

16. New Technology Thresholds File

This file contains the cost thresholds by MS–DRG that are generally used to evaluate applications for new technology add-on payments for the fiscal year that follows the fiscal year that is otherwise the subject of the rulemaking. (As discussed in section II.G. of this proposed rule, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.) Two versions of this file are created each year to support rulemaking.

Media: internet at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Index.html* (on the navigation panel on the left side of the page, click on the applicable fiscal year's proposed rule or final rule home page) or *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download.html.*

Periods Available: For FY 2025 and FY 2026 applications.

XII. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act (PRA) of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In this proposed rule, we are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). The following ICRs are listed in the order of appearance within the preamble (see sections II. through X. of the preamble of this proposed rule).

B. Collection of Information Requirements

1. ICRs Regarding the Implementation of Section 4122 of the Consolidated Appropriations Act, 2023—Distribution of Additional Residency Positions

As discussed in section V.G.2. of the preamble of this proposed rule, teaching hospitals would be able to submit electronic applications to CMS for resident slot increase requests under section 4122 of the Consolidated Appropriations Act (CAA), 2023. The burden associated with these requests will be captured under OMB control number 0938–1417 (expiration date March 31, 2025), currently approved for CMS to receive electronic applications for Medicare-funded GME Residency Positions submitted in accordance with Section 126 of the CAA, 2021. For that information collection, we estimated each eligible hospital (1,325 hospitals) would require 8 hours per eligible hospital annually to gather appropriate documentation, prepare and submit an application for a total burden of 10,600 hours (8 hours × 1,325 hospitals). The most recent data from the BLS reflects a mean salary for legal secretaries and administrative assistants of $26.05.[842] With the fringe benefits included the salary is $52.10 ($26.05 × 2). The total cost related to this information collection is approximately $416.80 per eligible hospital per year ($52.10 × 8.0 hours per hospital). The total estimated burden is $552,260 ($52.10 × 10,600 hours). As a result of the proposed policies in this proposed rule, for FY 2026, if an eligible hospital submits an electronic application to CMS for section 126 of the CAA, 2021 or for section 4122 of the CAA, 2023, the total annual burden remains the same. However, if an eligible hospital submits an electronic application to CMS for both section 126 of the CAA, 2021, and section 4122 of the CAA, 2023, we estimate that the new total annual burden to be 16 hours per eligible hospital. We estimate the adjustment in the number of hours from 8 hours to 16 hours, results in 21,200 hours (16 hours × 1,325 hospitals) at a cost of $1,104,520 ($52.10 × 21,200 hours) for FY 2026 only. We will submit the revised information collection request to OMB for approval under OMB control number 0938–1417 (expiration date March 31, 2025).

2. ICRs for Payment Adjustments for Establishing and Maintaining Access to Essential Medicines

In section V.J. of the preamble of this proposed rule, we are proposing, for cost reporting periods beginning on or after October 1, 2024, a separate payment under IPPS to small, independent hospitals for establishing and maintaining access to buffer stocks of essential medicines to foster a more reliable, resilient supply of these medicines for these hospitals. The proposed payment adjustments would be based on the reasonable cost incurred by the hospital for establishing and maintaining access to a 6-month buffer stock of one or more essential medicines during the cost reporting period. In order to calculate the essential medicines payment adjustment for each eligible cost reporting period, we propose to create a new supplemental cost reporting form that would collect the additional information from hospitals.

Specifically, the new cost reporting worksheet would only collect the costs of a hospital that voluntarily requests separate payment under this proposed policy for the costs associated with establishing and maintaining access to its buffer stock of one or more essential medicines. This new information would include the costs associated with contractual arrangements to establish and maintain access to buffer stock(s) of essential medicine(s) as well as the costs associated with directly establishing and maintaining buffer stock(s) of essential medicine(s) such as (but not limited to) utilities like cold chain storage and heating, ventilation, and air conditioning, warehouse space, refrigeration, management of stock including stock rotation, managing expiration dates, and managing recalls, administrative costs related to contracting and record-keeping, and dedicated staff for maintaining the buffer stock(s). This information would be used, along with other information already collected on the Hospitals and Health Care Complex Cost Report (Form CMS–2552–10) approved under OMB control number 0938–0050, to calculate the IPPS payment adjustment amount. This new cost report worksheet may be submitted by a provider of service as part of the annual filing of the cost report and the provider should make available to its contractor and CMS, documentation to substantiate the data included on this Medicare cost report worksheet. The documentation requirements are based on the recordkeeping requirements at current § 413.20, which require providers of services to maintain sufficient financial records and statistical data for proper determination of costs payable under Medicare.

The burden associated with filling out this new essential medicine cost report worksheet would be the time and effort necessary for the provider to locate and obtain the relevant supporting documentation to report the costs of a hospital to establish and maintain access to its buffer stock for the cost reporting period. We estimate the number of respondents to be 493. This number is comprised of Medicare certified section 1886(d) hospitals that are small, independent hospitals that would be eligible for the proposed payment adjustment. We estimate the average burden hours per facility to be 1.0 hour. This breaks down to approximately 0.4 hours per provider for recordkeeping, which includes a 0.10-hour burden associated with monitoring the FDA Drug Shortage Database once when the hospital elects to establish a buffer stock of an essential medicine and again when the hospital is not able to maintain a previously established 6-month buffer stock of an essential medicine. We estimate 0.6

[842] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Legal Secretaries and Administrative Assistants. Accessed on February 6, 2024. Available at: *https://www.bls.gov/oes/current/oes436012.htm.*

hour per provider for obtaining and analyzing the data and reporting. We recognize this average varies depending on the provider size and complexity. In addition to seeking general comment on this burden estimate, we are specifically seeking feedback on the burden estimate that is associated with monitoring the FDA shortage list as described. CMS would conduct provider education regarding additions and deletions to the publicly available FDA Drug Shortages Database to assist hospitals with this proposed policy.

We estimate the associated labor costs as follows. As explained earlier, the estimate of 0.4 hour is required for recordkeeping including time for bookkeeping activities. Based on the most recent data published by Bureau of Labor Statistics (BLS) in its 2022 Occupation Employment and Wage Statistics Program, the mean hourly wage for Bookkeeping, Accounting, and Auditing Clerks (Category 43–3031) is $22.81. We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $45.62 ($22.81 + $22.81) and multiplied it by 0.4 hour, to determine the annual recordkeeping costs per hospital to be $18.25 ($45.62 per hour multiplied by 0.4 hour). The estimated 0.6 hours for reporting include time for accounting and audit professionals' activities. The mean hourly wage for Accountants and Auditors (Category 13–2011) is $41.70. We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $83.40 ($41.70 plus $41.70) and multiplied it by 0.6 hour, to determine the annual reporting costs per hospital to be $50.04 ($83.40 per hour multiplied by 0.6 hour). We calculated the total average annual cost per hospital of $68.29 by adding the recordkeeping costs (which includes monitoring the FDA Drug Shortages Database) of $18.25 plus the reporting costs of $50.04. We estimated the total annual cost to be $33,667 ($68.29 cost per hospital multiplied by 493 hospitals). We seek comment on our estimates and cost of recordkeeping and oversight.

3. ICRs Relating to the Hospital Readmissions Reduction Program

In this proposed rule, we are not proposing any changes to the Hospital Readmissions Reduction Program for FY 2025. All six of the current Hospital Readmissions Reduction Program's measures are claims-based measures. We believe that continuing to use these claims-based measures would not create or reduce any information collection burden for hospitals because they will continue to be collected using Medicare FFS claims that hospitals are already submitting to the Medicare program for payment purposes.

4. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IX.B.2. of the preamble of this proposed rule, we discuss our proposed updates to the Hospital VBP Program. Specifically, in this proposed rule, we are proposing to adopt an updated version of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey measure beginning with the FY 2030 program year to align with the proposed adoption of the updated measure in the Hospital IQR Program beginning with the CY 2025 reporting period/FY 2027 payment determination. The proposed updated HCAHPS Survey measure in the Hospital VBP Program would add three new survey dimensions, remove one existing survey dimension, and modify one existing survey dimension. We are also proposing to modify scoring on the HCAHPS Survey measure beginning with the FY 2030 program year to account for the proposed updates to the survey. We are also proposing to modify scoring of the HCAHPS Survey measure in the Hospital VBP Program for the FY 2027 to FY 2029 program years to only score on the six unchanged dimensions of the survey while the updates to the survey are adopted and publicly reported on in the Hospital IQR Program.

Data collections for the Hospital VBP Program are associated with the Hospital IQR Program under OMB control number 0938–1022 (expiration date January 31, 2026), the National Healthcare Safety Network under OMB control number 0920–0666 (expiration date December 31, 2026), and the HCAHPS Survey under OMB control number 0938–0981 (expiration date January 31, 2025). The Hospital VBP Program would use data that are also used to calculate quality measures in these programs and Medicare FFS claims data that hospitals are already submitting to CMS for payment purposes, therefore, the program does not anticipate any additional change in burden associated with these proposed updates outside of the burden that is associated with collecting that data under the Hospital IQR Program. There is also no estimated change in burden related to the proposed scoring methodology change because the proposal does not require hospitals to submit any additional information specific to the Hospital VBP Program but instead would change how hospitals are scored based on the information already being submitted under the Hospital IQR Program.

We discuss the burden associated with the similar proposal to adopt the updated HCAHPS Survey measure under the Hospital IQR Program in section XII.B.6. of the preamble of this proposed rule. We note that respondents would only complete the HCAHPS Survey once for use in both programs, so there is no additional information collection burden for the Hospital VBP Program.

5. ICRs Relating to the Hospital-Acquired Condition (HAC) Reduction Program

OMB has currently approved 28,800 hours of burden and approximately $1.2 million under OMB control number 0938–1352 (expiration date November 30, 2025), accounting for information collection burden experienced by 400 subsection (d) hospitals selected for validation each year in the HAC Reduction Program.

In section V.M. of the preamble of this proposed rule, we state that we are not proposing to add or remove any measures from the HAC Reduction Program.

6. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

a. Background

Data collections for the Hospital IQR Program are associated with OMB control number 0938–1022. OMB has currently approved 2,286,977 hours of burden at a cost of approximately $80.3 million under OMB control number 0938–1022 (expiration date January 31, 2026), accounting for information collection burden experienced by approximately 3,150 IPPS hospitals and 1,350 non-IPPS hospitals for the FY 2026 payment determination. In this proposed rule, we describe the burden changes regarding collection of information, under OMB control number 0938–1022, for IPPS hospitals.

For more detailed information on our proposals for the Hospital IQR Program, we refer readers to sections IX.B.1., IX.B.2., and IX.C. of the preamble of this proposed rule. We are proposing to adopt seven new measures: (1) Age-Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (3) Catheter-Associated Urinary Tract Infection (CAUTI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the

CY 2026 reporting period/FY 2028 payment determination; (4) Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 reporting period; (5) Hospital Harm—Falls with Injury electronic clinical quality measure (eCQM) beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; and (7) Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination. We are proposing refinements to two measures: (1) the Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; and (2) the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 payment determination. We are proposing to remove five measures: (1) Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI–04) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; and (5) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021–March 31, 2024 reporting period which is associated with the FY 2026 payment determination. We are proposing to increase the total number of eCQMs reported from six to nine for the CY 2026 reporting period/FY 2028 payment determination and then from nine to eleven beginning with the CY 2027 reporting period/FY 2029 payment determination. Lastly, we are proposing to update the scoring methodology for eCQM validation, to remove the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination, and to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation beginning with CY 2025 discharges affecting the FY 2028 payment determination.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the Hospital IQR Program (88 FR 59312). Using the most recent data the May 2022 National Occupational Employment and Wage Estimates (OEWS) from the BLS reflects a mean hourly wage of $24.56 per hour for all medical records specialists (SOC 29–2072), however, we are proposing to use the mean hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $26.06.[843] We believe the industry of ''general medical and surgical hospitals'' is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $52.12 per hour throughout the discussion in this section of this rule for the Hospital IQR Program.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59312), our burden estimates were based on an assumption of approximately 3,150 IPPS hospitals. For this proposed rule, based on data from the FY 2024 Hospital IQR Program payment determination, we are updating our assumption and estimate that approximately 3,050 IPPS hospitals will report data to the Hospital IQR Program for the CY 2025 reporting period.

[843] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed January 3, 2024. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

b. Information Collection Burden Estimate for the Proposed Adoption of the Age-Friendly Hospital Measure Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.C.5.a. of the preamble of this proposed rule, we discuss the proposal to adopt the Age-Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination. Hospitals would submit responses on an annual basis during the submission period through CMS' Hospital Quality Reporting (HQR) System. Specifically, for the Age-Friendly Hospital measure, hospitals would be required to attest ''yes'' or ''no'' in response to questions across five domains annually for a given reporting period. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control number 0938–1022 (expiration date January 31, 2026), which also requires a ''yes'' or ''no'' attestation to questions across five domains, we estimate the information collection burden associated with this measure to be, on average across all 3,050 IPPS hospitals, no more than 10 minutes per hospital per year (87 FR 49385). Using the estimate of 10 minutes (or 0.167 hour) per hospital per year, we estimate that the adoption of this measure would result in a total annual burden increase of 509 hours across all participating IPPS hospitals (0.167 hour × 3,050 IPPS hospitals) at a cost of $26,529 (509 hours × $52.12).

c. Information Collection Burden Estimate for the Proposed Adoption of the Patient Safety Structural Measure Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.B.1. of the preamble of this proposed rule, we discuss the proposal to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination. Hospitals would submit responses on an annual basis during the submission period through the Center for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN). Specifically, hospitals would be required to provide responses and attest ''yes'' or ''no'' in response to a total of five domains for a given reporting period. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control

number 0938–1022 (expiration date January 31, 2026), which also requires a ''yes'' or ''no'' response to each of five domains, we estimate the information collection burden associated with this measure to be, on average across all 3,050 IPPS hospitals, no more than 10 minutes per hospital per year. Using the estimate of 10 minutes (or 0.167 hour) per hospital per year, and the updated wage estimate as described previously, we estimate that the adoption of this measure would result in a total annual burden increase of 509 hours across all participating IPPS hospitals (0.167 hour × 3,050 IPPS hospitals) at a cost of $26,529 (509 hours × $52.12).

We discuss the burden associated with the proposal to adopt the Patient Safety Structural measure for the PCHQR Program in section XII.B.7.a. We will submit the revised information collection estimates to OMB for approval under OMB control number 0920–0666.

d. Information Collection Burden Estimate for the Proposed Adoption of Two Healthcare-Associated Infection (HAI) Measures Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In section IX.C.5.b. of the preamble of this proposed rule, we are proposing to adopt two HAI measures beginning with the CY 2026 reporting period/FY 2028 payment determination: (1) the CAUTI Standardized Infection Ratio Stratified for Oncology Locations measure, and (2) the CLABSI Standardized Infection Ratio Stratified for Oncology Locations measure. We are proposing to collect data for both measures via the National Healthcare Safety Network (NHSN), which is a secure, internet-based surveillance system maintained and managed by the CDC that is provided free of charge to providers. To report to the NHSN, hospitals must first agree to the NHSN Agreement to Participate and Consent form, which specifies how NHSN data will be used, including fulfilling CMS's quality measurement reporting requirements for NHSN data.[844] Hospitals would provide data for both measures from their EHRs and report on a quarterly basis. The burden associated with submission of data via the NHSN continues to be accounted for under OMB control number 0920–0666 (expiration date December 31, 2026). Therefore, we do not anticipate any changes in burden associated with OMB control number 0938–1022.

[844] CDC. (2023). FAQs About NHSN Agreement to Participate and Consent. Available at: *https://www.cdc.gov/nhsn/about-nhsn/faq-agreement-to-participate.html.*

e. Information Collection Burden for the Proposed Adoption of Two eCQMs and Modification of One eCQM Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In sections IX.C.5.c. and IX.C.5.d of the preamble of this proposed rule, we are proposing to adopt two new eCQMs beginning with the CY 2026 reporting period/FY 2028 payment determination: (1) the Hospital Harm—Falls With Injury eCQM, and the (2) Hospital Harm—Postoperative Respiratory Failure eCQM, to add to the set of eCQMs from which hospitals may self-select to meet their eCQM reporting requirements. In section IX.C.7.a. of the preamble of this proposed rule, we are proposing to modify the GMCS eCQM to add patients ages 18 to 64 to the current cohort of patients 65 years or older beginning with the CY 2026 reporting period/FY 2028 payment determination.

Under OMB control number 0938–1022 (expiration date January 31, 2026), the currently approved burden estimate for reporting and submission of eCQM measures is one hour per quarter per IPPS hospital (0.167 hours/eCQM x 6 eCQMs) for all six required eCQM measures. The addition of these two new eCQMs and modification of the GMCS eCQM would not affect the information collection burden associated with submitting eCQM measure data under the currently established Hospital IQR Program, which is that hospitals are not required to report more than a total of six eCQMs (87 FR 49299 through 49302). However, in the immediately following section of this Collection of Information section, we discuss the burden associated with our proposal to increase the total number of eCQMs.

f. Information Collection Burden for the Modification of the eCQM Reporting and Submission Requirements Beginning With the CY 2026 Reporting Period/FY 2028 Payment Determination

In section IX.C.9.c. of the preamble of this proposed rule, we are proposing to modify the eCQM reporting and submission requirements whereby we would increase the total number of eCQMs to be reported from six to nine eCQMs for the CY 2026 reporting period/FY 2028 payment determination and then from nine to eleven eCQMs beginning with the CY 2027 reporting period/FY 2029 payment determination.

We previously finalized in the FY 2023 IPPS/LTCH PPS final rule that, for the CY 2024 reporting period/FY 2026 payment determination and subsequent years, hospitals are required to submit data quarterly for six eCQMs each year which must include the Safe Use of Opioids-Concurrent Prescribing, Cesarean Birth, and Severe Obstetric Complications eCQMs in addition to three self-selected eCQMs (87 FR 49387). In this proposed rule, we are proposing that, for the CY 2026 reporting period/FY 2028 payment determination, hospitals would be required to submit data for nine total eCQMs: three self-selected, Safe Use of Opioids, Severe Obstetric Complications, Cesarean Birth, Hospital Harm—Severe Hypoglycemia, Hospital Harm—Severe Hyperglycemia, and Hospital Harm—Opioid-Related Adverse Events. We are also proposing that, beginning with the CY 2027 reporting period/FY 2029 payment determination, hospitals would be required to submit data for these nine eCQMs as well as the Hospital Harm—Pressure Injury and Hospital Harm—Acute Kidney Injury eCQMs.

We continue to estimate the information collection burden associated with the eCQM reporting and submission requirements to be 10 minutes per measure per quarter. For the increase in submission from six to nine eCQMs for the CY 2026 reporting period/FY 2028 payment determination, we estimate a total of 30 minutes or 0.5 hour (10 minutes × 3 eCQMs) per hospital per quarter. We estimate a total burden increase of 6,100 hours (0.5 hour x 3,050 IPPS hospitals × 4 quarters) at a cost of $317,932 (6,100 hours × $52.12). For the additional increase in submission from nine to eleven eCQMs beginning with the CY 2027 reporting period/FY 2029 payment determination, we estimate a total of 50 minutes or 0.83 hours (10 minutes × 5 eCQMs) per hospital per quarter, accounting for both the increase of three eCQMs for the CY 2026 reporting period/FY 2028 payment determination and the increase of two eCQMs for the CY 2027 reporting period/FY 2029 payment determination. We estimate a total burden increase of 10,126 hours annually (0.83 hour × 3,050 IPPS hospitals x 4 quarters) at a cost of $527,767 (10,126 hours × $52.12) compared to the currently approved burden estimate.

g. Information Collection Burden for the Proposed Adoption of Thirty-day Risk-Standardized Death Rate Among Surgical Inpatients With Complications (Failure-to-Rescue) Measure Beginning with the July 1, 2023—June 30, 2025 Reporting Period/FY 2027 Payment Determination

In section IX.C.5.e. of the preamble of this proposed rule, we are proposing to adopt the Thirty-day Risk-standardized Death Rate among Surgical Inpatients

with Complications (Failure-to-Rescue) claims measure beginning with the July 1, 2023—June 30, 2025 reporting period/FY 2027 payment determination. Because this measure is calculated using Medicare Advantage data and Medicare FFS claims that are already reported to the Medicare program for payment purposes, adopting this measure would not result in a change in burden associated with OMB control number 0938–1022 (expiration date January 31, 2026).

h. Information Collection Burden for the Proposed Removal of Four Payment Measures and One Claims-Based Measure

In section IX.C.6.b. of the preamble of this proposed rule, we are proposing to remove four claims-based payment measures beginning with the FY 2026 payment determination: (1) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for AMI measure; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for HF measure; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia measure; and (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary THA and/or TKA measure. In section IX.C.6.a., we are also proposing to remove the Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI–04) claims-based measure beginning with the FY 2027 payment determination.

Because these measures are calculated using Medicare FFS claims that are already reported to the Medicare program for payment purposes, removing these measures would not result in a change in burden associated with OMB control number 0938–1022.

i. Information Collection Burden for the Proposed Modification of the HCAHPS Survey Beginning With the CY 2025 Reporting Period/FY 2027 Payment Determination

In section IX.B.2.e.of the preamble of this proposed rule, we are proposing to modify the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 program year. Specifically, the updated measure includes adding three new sub-measures, removing one existing sub-measure, and revising one existing sub-measure. The new sub-measures would include: ''Care Coordination,'' ''Restfulness of Hospital Environment,'' and ''Information about Symptoms.''

Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimate the time to complete the HCAHPS Survey is approximately 7.25 minutes per respondent and approximately 2,309,985 respondents would complete and submit the HCAHPS Survey as part of the Hospital IQR Program. As stated in section IX.B.2.b. of this proposed rule, we estimate the combination of survey sub-measure removals and additions would result in an additional 0.75 minute (0.0125 hour) per respondent to complete the updated version of the HCAHPS Survey. Therefore, we estimate the updated time to complete the HCAHPS Survey would be 8 minutes per respondent (0.133 hour).

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.[845] To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers from BLS's Labor Force Statistics program, Current Population Survey (CPS) of $1,118, divided by 40 hours to calculate an hourly pre-tax wage rate of $27.95/hr.[846] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[847] resulting in the post-tax hourly wage rate of $24.04/hr. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment. We therefore estimate a burden increase of 28,875 hours (2,309,985 respondents × 0.0125 hour) at a cost of $694,155 (28,875 hours × $24.04).

We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–0981.

j. Information Collection Burden for the Proposed Changes to Data Validation Policies

In section IX.C.10. of the preamble of this proposed rule, we are proposing to update the scoring methodology for eCQM validation, replace the existing combined validation score for eCQMs and chart-abstracted measures with two separate validation scores for chart-abstracted measures and eCQMs beginning with the FY 2028 payment determination, and remove the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination. We are also proposing in section IX.C.13 of this proposed rule to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation, beginning with CY 2025 discharges affecting the FY 2028 payment determination.

Proposed changes to the scoring methodology and validation score would not affect burden as neither the amount of data nor frequency of data submission is impacted. The proposal to remove the requirement that hospitals must submit 100 percent of eCQM records to pass validation would not affect burden, as the proposal to implement eCQM validation scoring would still require hospitals to submit the same number of requested medical records to validate the accuracy of eCQM data (the extent to which data abstracted from the submitted medical record matches the data submitted in the QRDA I file). Lastly, as finalized in the FY 2011 IPPS/LTCH PPS final rule regarding information collection burden associated with the Hospital IQR Program's request for reconsideration process, information collection requirements imposed subsequent to an administrative action are not subject to the Paperwork Reduction Act (PRA) under 5 CFR 1320.4(a)(2), therefore the proposal to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation would not affect burden (75 FR 50411).

k. Summary of Information Collection Burden Estimates for the Hospital IQR Program

In summary, under OMB control number 0938–1022 (expiration date January 31, 2026), we estimate that the policies promulgated in this proposed rule would result in a total increase of 10,635 hours at a cost of $554,296 annually for 3,050 IPPS hospitals from the CY 2025 reporting period/FY 2027

payment determination through the CY 2027 reporting period/FY 2029 payment determination. Under OMB control number 0920–0666 (expiration date December 31, 2026), we estimate that the policies being proposed in this proposed rule would result in a total increase of 509 hours at a cost of $26,529 annually for 3,050 IPPS hospitals beginning with the CY 2025 reporting period/FY 2027 payment determination. Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimate that the policies promulgated in this proposed rule would result in a total increase of 28,875 hours at a cost of $694,155 annually for 3,050 hospitals beginning with the CY 2025 reporting period/FY 2027 payment determination. The total increase in burden associated with the proposed information collections under OMB control numbers 0938–1022, 0920–0666, and 0938–0981 is approximately 40,019 hours (10,635 + 509 + 28,875) at a cost of $1,274,980 ($554,296 + $26,529 + $694,155). We will submit the revised information collection estimates to OMB for approval under OMB control numbers 0938–1022, 0920–0666, and 0938–0981.

With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.K. of Appendix A of this proposed rule).

BILLING CODE 4120–01–C

7. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

OMB has currently approved 109 hours of burden at a cost of $2,452 under OMB control number 0938–1175 (expiration date January 31, 2027), accounting for the annual information collection requirements for 11 PCHs for the PCHQR Program. In the preamble of this proposed rule, we are proposing to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year, which we anticipate would affect the information collection burden. We are also proposing to modify the HCAHPS survey beginning with the CY 2025 reporting period/FY 2027 program year, which is currently approved under OMB control number 0938–0981 (expiration date January 31, 2025). We are also proposing to move up the start date for public display of the Hospital Commitment to Health Equity (HCHE) measure. This proposal would not affect the information collection burden associated with the PCHQR Program.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the PCHQR Program (88 FR 59317). While the most recent data from the BLS reflects a mean hourly wage of $24.56 per hour for all medical records specialists, $26.06 is the mean hourly wage for "general medical and surgical

hospitals,'' which is an industry within medical records specialists.[848] We believe the industry of ''general medical and surgical hospitals'' is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to hospitals using a wage plus benefits estimate of $52.12 per hour throughout the discussion in this section of this rule for the PCHQR Program.

a. Information Collection Burden Estimate for the Proposal To Adopt the Patient Safety Structural Measure Beginning With the CY 2025 Reporting Period/FY 2027 Program Year

In section IX.B.1. of the preamble of this proposed rule, we discuss the proposal to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year. PCHs would submit responses on an annual basis during the submission period through the Center for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN). Specifically, PCHs would be required to provide responses and attest ''yes'' or ''no'' in response to a total of five domains for a given reporting period. Similar to the Hospital Commitment to Health Equity measure currently approved under OMB control number 0938–1022 (expiration date January 31, 2026), which also requires a yes or no response to each of five domains, we estimate the information collection burden associated with this measure to be, on average across all 11 PCHs, no more than 10 minutes per PCH per year. Using the estimate of 10 minutes (or 0.167 hours) per PCH per year, and the updated wage estimate as described previously, we estimate that the adoption of this measure would result in a total annual burden increase of 2 hours across all participating PCHs (0.167 hours × 11 PCHs) at a cost of $104 (2 hours × $52.12).

We discuss the burden associated with the proposal to adopt the Patient Safety Structural measure for the Hospital IQR Program in section XII.B.6.c. of the preamble of this proposed rule. We will submit the revised information collection estimates to OMB for approval under OMB control number 0920–0666.

b. Information Collection Burden for the Proposed Modification of the HCAHPS Survey Beginning With the CY 2025 Reporting Period/FY 2027 Program Year

In section IX.B.2.e of the preamble of this proposed rule, we are proposing to modify the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 program year. Specifically, we are proposing to refine the current HCAHPS Survey by adding three new sub-measures, removing one existing sub-measure, and revising one existing sub-measure. The new sub-measures would include: ''Care Coordination,'' ''Restfulness of Hospital Environment,'' and ''Information about Symptoms.''

Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimate the time to complete the HCAHPS Survey is approximately 7.25 minutes per respondent and approximately 13,105 respondents would complete and submit the HCAHPS survey as part of the PCHQR Program. As stated in section IX.B.2.b of this proposed rule, we estimate the combination of sub-measure removals and additions would result in an additional 0.75 minutes (0.0125 hours) per respondent to complete the HCAHPS Survey. Therefore, we estimate the updated time to complete the HCAHPS Survey would be 8.0 minutes per respondent (0.133 hours).

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.[849] To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of $1,118, divided by 40 hours to calculate an hourly pre-tax wage rate of $27.95/hr. [850] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[851] resulting in the post-tax hourly wage rate of $24.04/hr. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment. We therefore estimate a burden increase of 164 hours (13,105 respondents × 0.0125 hours) at a cost of $3,943 (164 hours × $24.04).

We will submit the revised information collection request to OMB for approval under OMB control number 0938–0981.

c. Information Collection Burden Estimate for the Proposal To Move Up the Start Date of Public Display of the Hospital Commitment to Health Equity Measure

In section IX.D.5. of the preamble of this proposed rule, we are proposing to move up the start date of PCH performance on the Hospital Commitment to Health Equity measure. Because we are not proposing to require PCHs to collect or submit any additional data, we do not estimate any change in information collection burden associated with this proposal.

d. Summary of Information Collection Burden Estimates for the PCHQR Program

In summary, under OMB control number 0920–0666 (expiration date December 31, 2026), we estimate that the policies being proposed in this proposed rule would result in a total increase of 2 hours at a cost of $104 annually for 11 PCHs beginning with the CY 2025 reporting period/FY 2027 program year. Under OMB control number 0938–0981 (expiration date January 31, 2025), we estimate that the policies being proposed in this proposed rule would result in a total increase of 164 hours at a cost of $3,943 annually for 11 PCHs beginning with the CY 2025 reporting period/FY 2027 program year. The total increase in burden associated with this information collection would be approximately 166 hours at a cost of $4,047. We will submit the revised information collection request to OMB for approval under OMB control numbers 0920–0666 and 0938–0981.

8. ICRs for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

An LTCH that does not meet the requirements of the LTCH QRP for a fiscal year will receive a 2-percentage point reduction to its otherwise applicable annual update for that fiscal year.

We believe that the burden associated with the LTCH QRP is the time and effort associated with complying with the requirements of the LTCH QRP. In sections IX.E.4.c. and IX.E.4.e. of the preamble of this proposed rule, we proposed to add four items to the LCDS and replace one item on the LCDS. The

TABLE XII.B-06: SUMMARY OF PCHQR PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2025 REPORTING PERIOD/FY 2027 PROGRAM YEAR

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-0981 for the CY 2025 Reporting Period/FY 2027 Program Year								
Activity	**Estimated time per record (minutes)**	**Number reporting quarters per year**	**Number of respondents reporting**	**Average number records per respondent per quarter**	**Annual burden (hours) per respondent**	**Proposed Annual burden (hours) across hospitals**	**Previously finalized annual burden (hours) across hospitals**	**Net difference in annual burden hours**
Adopt Proposed Measure Updates to the HCAHPS Survey	0.75	1	13,105	1	0.133	1,747	1,583	+164
	Total Change in Information Collection Burden Hours: +164							
	Total Cost Estimate: Updated Hourly Wage ($24.04) x Change in Burden Hours (+164) = **$3,943**							

LCDS V5.1 has been approved under OMB control number 0938–1163 (Expiration date: 08/31/2025). The following is a discussion of this information collection.

In section IX.E.4.c. of the preamble of this proposed rule, we are proposing to adopt four new items as standardized patient assessment data elements under the SDOH category beginning with the FY 2028 LTCH QRP. The proposed items, Living Situation (one item), Food (two items), and Utilities (one item), would be collected at admission using the LCDS. If adopted as proposed, four new items would be added to the LCDS and would result in an increase of 0.02 hours (1.2 minutes/60) of clinical staff time at admission. We are also proposing to modify the current Transportation item on the LCDS, which is currently collected at admission and discharge. We are proposing that the Transportation item would only be collected at admission beginning with the FY 2028 LTCH QRP as described in sections IX.E.4.e. and E.7.b. of the preamble of this proposed rule. The burden associated with collecting this item at admission and discharge was accounted for in the FY 2020 IPPS/LTCH final rule (84 FR 42606) when the item was originally adopted. If adopted as proposed, LTCHs would no longer have to collect one item at discharge to meet LTCH QRP reporting requirements, which would result in a decrease of 0.005 hours (0.3 minutes/60) of clinical staff time at discharge. Using data collected for FY 2023, we estimated 130,050 total admissions and 96,890 planned discharges from 329 LTCHs annually. This equates to an increase of 2,117 hours for all LTCHs [(130,050 × 0.02 hour) − (96,890 × 0.005 hour)] and 6.43 hours per LTCH.

We believe that the additional SDOH items would be completed equally by RNs and LPN/LVNs. Individual LTCHs determine the staffing resources necessary. We averaged BLS' National Occupational Employment and Wage Estimates (see Table XII.B–05) for these labor types and established a composite cost estimate using our adjusted wage estimates. The composite estimate of $65.31/hr was calculated by weighting each hourly wage equally [($78.10 + $52.52)/2]. We estimate the total cost would be increased by $420.16 per LTCH annually, or $138,231.88 for all LTCHs annually ([(130,050 admission assessments × 0.02 hour = 2,601 hours) × $65.31/hr] − [(96,890 planned discharge assessments × 0.005 hour = 484.45 hours) × $65.31/hr] = $138,231.88); ($138,231.88/329 LTCHs = $420.16/LTCH).

TABLE XII.B-05: U.S. BUREAU OF LABOR AND STATISTICS' MAY 2021 NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation Title	Occupation Code	Median Hourly Wage ($/hr)	Overhead and Fringe Benefit ($/hr)	Adjusted Hourly Wage ($/hr)
Registered Nurse (RN)	29-1141	$39.05	$39.05	$78.10
Licensed Practical Nurse/Licensed Vocational Nurse (LPN/LVN)	29-2061	$26.26	$26.26	$52.52

As described in Table XII.B–06, under OMB control number 0938–1163, we estimate that the policies finalized in this final rule for the LTCH QRP would result in an overall increase of 2,117 hours annually for 329 LTCHs. The total cost increase related to this proposed information collection is estimated at approximately $138,231.88. The increase in burden would be accounted for in a revised information collection request under OMB control number (0938–1163).

TABLE XII.B-06: ESTIMATED LTCH QRP PROGRAM IMPACTS FOR FY 2028

Proposal	Per LTCH		All LTCHs	
	Change in Annual Burden Hours	Change in Annual Cost	Change in Annual Burden Hours	Change in Annual Cost
Estimated change in burden associated with Proposal to Collect Four New Items As Standardized Patient Assessment Data Elements and Modify One Item Collected as a Standardized Patient Assessment Data Element beginning with the FY 2028 LTCH QRP	+6.43 hours	+$420.16	+2,117 hours	+$138,231.88

In section IX.E.7.c. of the preamble of this proposed rule, we are proposing to extend the LCDS Admission assessment window from three days to four days beginning with the FY 2028 LTCH QRP. However, this change would have no impact on burden.

We invite public comments on the proposed information collection requirements.

9. ICRs for the Medicare Promoting Interoperability Program

a. Background

In section IX.F. of the preamble of this proposed rule, we discuss several proposed policies for the Medicare

Promoting Interoperability Program. As discussed in the most recent Paperwork Reduction Act (PRA) notice pending approval under OMB control number 0938–1278 (expiration date December 31, 2025), we have requested approval for 29,625 hours of burden at a cost of approximately $1.3 million, accounting for information collection burden experienced by approximately 3,150 eligible hospitals and 1,350 CAHs for the EHR reporting period in CY 2024. In this proposed rule, we describe the burden changes regarding collection of information under OMB control number 0938–1278 for eligible hospitals and CAHs. The collection of information burden analysis in this proposed rule focuses on all eligible hospitals and CAHs that could participate in the Medicare Promoting Interoperability Program and report the objectives and measures, and report eCQMs, under the Medicare Promoting Interoperability Program for the EHR reporting periods in CY 2025 through CY 2027.

We are proposing to adopt two new eCQMs beginning with the CY 2026 reporting period: (1) the Hospital Harm—Falls with Injury eCQM, and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM. We are proposing to separate the previously finalized Antimicrobial Use and Resistance (AUR) Surveillance measure into two separate measures, beginning with the EHR reporting period in CY 2025: (1) the Antimicrobial Use (AU) Surveillance measure and (2) the Antimicrobial Resistance (AR) Surveillance Measure. We are also proposing to modify the Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period. In addition, we are proposing to increase the total number of eCQMs eligible hospitals and CAHs report from six to nine for the CY 2026 reporting period, and then from nine to eleven beginning with the CY 2027 reporting period. Lastly, we are proposing to increase the minimum scoring threshold from 60 points to 80 points beginning with the EHR reporting period in CY 2025; this proposal would not affect the information collection burden associated with the Medicare Promoting Interoperability Program.

In the FY 2024 IPPS/LTCH PPS final rule, we utilized the median hourly wage rate for Medical Records Specialists, in accordance with the BLS, to calculate our burden estimates for the Medicare Promoting Interoperability Program (88 FR 59325). Using the most recent data, the May 2022 National Occupational Employment and Wage Estimates (OEWS) from the BLS reflects a mean hourly wage of $24.56 per hour for all medical records specialists (SOC 29–2072), however, we are proposing to use the mean hourly wage for medical records specialists for the industry, ''general medical and surgical hospitals,'' which is $26.06.[852] We believe the industry of ''general medical and surgical hospitals'' is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We calculated the cost of overhead, including fringe benefits, at 100 percent of the median hourly wage, consistent with previous years. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly by employer and methods of estimating these costs vary widely in the literature. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate total cost is a reasonably accurate estimation method. Accordingly, unless otherwise specified, we will calculate cost burden to eligible hospitals and CAHs using a wage plus benefits estimate of $52.12 per hour throughout the discussion in this section of this rule for the Medicare Promoting Interoperability Program.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59325), our burden estimates were based on an assumption of 4,500 eligible hospitals and CAHs. In the FY 2024 IPPS/LTCH PPS final rule, the Medicare Promoting Interoperability Program and Hospital IQR Program used the same estimate for the number of eligible hospitals and IPPS hospitals for both programs (88 FR 59325). In section XII.B.6.a. of the preamble of this proposed rule, we provide our updated estimate of 3,050 IPPS hospitals for the Hospital IQR Program for the CY 2025 reporting period. Upon further analysis, we believe it is no longer appropriate to use the same estimate for both programs as the approximately 100 eligible hospitals located in Maryland and Puerto Rico which were previously excluded from our estimate of IPPS hospitals and included in our estimate of non-IPPS hospitals should be included as eligible hospitals for the Medicare Promoting Interoperability Program. Therefore, for this proposed rule, based on data from the EHR reporting period in CY 2022, we estimate approximately 3,150 eligible hospitals and 1,400 CAHs will report data to the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025, for a total number of 4,550 respondents.

b. Information Collection Burden for the Proposed Adoption of the Two eCQMs and Modification of One eCQM Beginning With the CY 2026 Reporting Period

In section IX.F.6.a. of the preamble of this proposed rule, we are proposing to adopt two new eCQMs beginning with the CY 2026 reporting period: (1) the Hospital Harm—Falls With Injury eCQM and (2) the Hospital Harm—Postoperative Respiratory Failure eCQM, to add to the set of eCQMs from which hospitals may self-select to meet their eCQM reporting requirements. In section IX.F.6.a. of the preamble of this proposed rule, we are proposing to modify the GMCS eCQM to add patients ages 18 to 64 to the current cohort of patients 65 years or older beginning with the CY 2026 reporting period.

Under OMB control number 0938–1278 (expiration date December 31, 2025), the currently approved burden estimate for reporting and submission of eCQM measures is one hour per CAH for all six required eCQM measures. The addition of these two eCQMs and modification of the GMCS eCQM do not affect the information collection burden associated with submitting eCQM measure data under the Medicare Promoting Interoperability Program. As finalized in the FY 2023 IPPS/LTCH PPS final rule, current policy requires CAHs to select six eCQMs from the eCQM measure set on which to report (87 FR 49365 through 49367). In other words, although these new eCQMs are being added to the eCQM measure set, CAHs are not required to report more than a total of six eCQMs.

In section XII.B.9.c. (of the Collection of Information section of this proposed rule), we account for the burden associated with our proposal to increase the total number of eCQMs reported from six to nine for the CY 2026 reporting period and then from nine to eleven beginning with the CY 2027 reporting period. We refer readers to section XII.B.7.f. of this Collection of Information section for discussion of the similar proposals impacting eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program).

c. Information Collection Burden for the Modification of the eCQM Reporting and Submission Requirements Beginning With the CY 2026 Reporting Period

In section IX.F.6.b. of the preamble of this proposed rule, we are proposing to modify our eCQM reporting and submission requirements by increasing

the total number of eCQMs to be reported from six to nine eCQMs for the CY 2026 reporting period and from nine to eleven beginning with the CY 2027 reporting period.

We previously finalized in the FY 2023 IPPS/LTCH PPS final rule that, for the CY 2024 reporting period, CAHs are required to annually submit quarterly data for six eCQMs each year, which must consist of the Safe Use of Opioids-Concurrent Prescribing, Cesarean Birth, and Severe Obstetric Complications eCQMs in addition to three self-selected eCQMs (87 FR 49394 through 49395). In this proposed rule, we are proposing that, for the CY 2026 reporting period, CAHs would be required to submit data for nine total eCQMs: three self-selected, Safe Use of Opioids, Severe Obstetric Complications, Cesarean Birth Rate, Hospital Harm—Severe Hypoglycemia, Hospital Harm—Severe Hyperglycemia, and Hospital Harm—Opioid-Related Adverse Events. We are also proposing that, beginning with the CY 2027 reporting period, CAHs would be required to submit data for these nine eCQMs as well as the Hospital Harm—Pressure Injury and Hospital Harm—Acute Kidney Injury eCQMs.

To calculate the information collection burden associated with this proposal, we estimate a total of 1,500 respondents, which includes the 100 eligible hospitals not included as IPPS hospitals for the Hospital IQR Program as well as the 1,400 CAHs required to report eCQM data for the Medicare Promoting Interoperability Program. We continue to estimate the information collection burden associated with the eCQM reporting and submission requirements to be 10 minutes per measure per quarter. For the increase in submission from six to nine eCQMs for the CY 2026 reporting period, we estimate a total of 30 minutes or 0.5 hour (10 minutes × 3 eCQMs) per CAH per quarter. We estimate a total burden increase of 3,000 hours (0.5 hour × 1,500 CAHs × 4 quarters) at a cost of $156,360 (3,000 hours × $52.12). For the additional increase in submission from nine to eleven eCQMs beginning with the CY 2027 reporting period, we estimate a total of 50 minutes or 0.83 hour (10 minutes × 5 eCQMs) per CAH per quarter. We estimate a total burden increase of 5,000 hours annually (0.83 hour × 1,500 CAHs × 4 quarters) at a cost of $260,600 (5,000 hours × $52.12).

With respect to any costs/burdens related to eligible hospitals (referred to as IPPS hospitals under the Hospital IQR Program), we refer readers to section XII.B.7.f. of the preamble of this proposed rule.

d. Information Collection Burden for the Proposal To Separate the AUR Surveillance Measure Into Two Measures Beginning With the EHR Reporting Period in CY 2025

In section IX.F.2. of the preamble of this proposed rule, we are proposing to modify the AUR Surveillance measure by separating the single measure into two measures: (1) AU Surveillance and (2) AR Surveillance, beginning with the EHR reporting period in CY 2025. In the CY 2023 IPPS/LTCH PPS final rule, we finalized a burden estimate of 0.5 minutes per eligible hospital and CAH to attest the AUR Surveillance measure (87 FR 49394). In association with this proposal, we estimate an annual increase in burden for each eligible hospital and CAH to attest to both measures of 0.5 minutes (.0083 hours). Therefore, we estimate a total increase in burden of 38 hours across all eligible hospitals and CAHs (.0083 hours × 4,550 eligible hospitals and CAHs) annually at a cost of $1,981 (38 hours × $52.12).

e. Information Collection Burden for the Proposed Increase to the Minimum Scoring Threshold From 60 Points to 80 Points Beginning With the EHR Reporting Period in CY 2025

In section IX.F.5. of the preamble of this proposed rule, we are proposing to increase the minimum scoring threshold from 60 points to 80 points beginning with the EHR reporting period in CY 2025. Because we are not requiring eligible hospitals or CAHs to collect or submit any additional data, we do not estimate any change in information collection burden associated with this proposal.

f. Summary of Estimates Used To Calculate the Collection of Information Burden

In summary, under OMB control number 0938–1278 (expiration date December 31, 2025), we estimate that the policies in this proposed rule would result in an increase in burden of 5,038 hours at a cost of $262,581. Based on these proposed policies, the annual burden per eligible hospital and CAH would increase to 6 hours and 36 minutes (6.6 hours) as well as an additional 7.33 hours annually for CAHs to report eCQMs. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1278.

With respect to any costs/burdens unrelated to data submission, we refer readers to the Regulatory Impact Analysis (section I.N. of Appendix A of this proposed rule).

TABLE XII.B-07: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE REPORTING PERIOD IN CY 2025

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1278 for the Reporting Period in CY 2025								
Activity	Estimated time per record (minutes)	Number reporting quarters per year	Number of respondents reporting	Average number records per respondent per quarter	Annual burden (hours) per hospital	Proposed Annual burden (hours) across hospitals	Previously finalized annual burden (hours) across hospitals	Net difference in annual burden hours
Adopt Modification to the AUR Surveillance Measure	0.5	1	4,550	1	0.0083	38	N/A	+38
	Total Change in Information Collection Burden Hours: +38							
	Total Cost Estimate: Updated Hourly Wage ($52.12) x Change in Burden Hours (+38) = **$1,981**							

TABLE XII.B-08: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE REPORTING PERIOD IN CY 2026

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1278 for the Reporting Period in CY 2026								
Activity	Estimated time per record (minutes)	Number reporting quarters per year	Number of respondents reporting	Average number records per respondent per quarter	Annual burden (hours) per respondent	Proposed Annual burden (hours) across hospitals	Previously finalized annual burden (hours) across hospitals	Net difference in annual burden hours
Adopt Modification to the AUR Surveillance Measure	0.5	1	4,550	1	0.0083	38	N/A	38
Adopt Modification to eCQM Reporting	90	4	1,500	9	1.5	9,000	6,000	+3,000
	Total Change in Information Collection Burden Hours: +3,038							
	Total Cost Estimate: Updated Hourly Wage ($52.12) x Change in Burden Hours (+3,038) = **$158,341**							

TABLE XII.B-09: SUMMARY OF MEDICARE PROMOTING INTEROPERABILITY PROGRAM ESTIMATED INFORMATION COLLECTION BURDEN CHANGE FOR THE REPORTING PERIOD IN CY 2027

Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1278 for the Reporting Period in CY 2027								
Activity	Estimated Time per Record (minutes)	Number Reporting Quarters per Year	Number of Respondents Reporting	Average Number Records per Respondent per quarter	Annual Burden (hours) per Respondent	Proposed Annual burden (hours) Across Hospitals	Previously Finalized Annual Burden (hours) across hospitals	Net Difference in Annual Burden Hours
Adopt Modification to the AUR Surveillance Measure	0.5	1	4,550	1	0.0083	38	N/A	+38
Adopt Modification to eCQM Reporting	110	4	1,500	11	1.83	11,000	6,000	+5,000
	Total Change in Information Collection Burden Hours: +5,038							
	Total Cost Estimate: Updated Hourly Wage ($52.12) x Change in Burden Hours (+5,038) = **$262,581**							

10. ICRs for the Transforming Episode Accountability Model

In section X.A. of the preamble of this proposed rule, we are proposing to test the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. As stated in section 1115A(d)(3) of the Act, Chapter 35 of title 44, United States Code, shall not apply to the testing and evaluation of models under section 1115A of the Act. As a result, the information collection requirements contained in this proposed rule for TEAM need not be reviewed by the Office of Management and Budget.

11. ICRs for Payment Error Rate Measurement (PERM)

a. ICRs Regarding § 431.970 Information Submission and Systems Access Requirements

Section 431.970 defines state and provider submission responsibilities, including state submission of Medicaid and CHIP FFS claims and managed care payments on a quarterly basis; and provider submission of medical records. These claims and payments are rigorously reviewed by the federal statistical contractor. Additionally, states are required to collect and submit (with an estimate of 4 submissions) state policies. There would be an initial submission and quarterly updates. The ongoing burden associated with the requirements under § 431.970 is the time and effort it would take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP agencies for 17–18 states equates to maximum 36 total respondents each PERM year) to submit its claims universe, and collect and submit state policies, and the time and effort it would take providers to furnish medical record documentation. We estimate that it will take 1,350 hours annually per state program to develop and submit its claims universe and state policies. The total estimated hours is broken down between the FFS, managed care, and eligibility components and is estimated at 900 hours for universe development and submission, and 450 hours for policy collection and submission. Per component it is estimated at 1,150 FFS hours, 100 managed care hours, and 100 eligibility hours for a total of 48,600 annual hours (1,350 hours × 36 respondents). The total estimated annual cost per respondent is $86,832 (1,350 hours × $64.32), and the total estimated annual cost across all respondents is $3,125,952 ($86,832 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as reinstatements with changes of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. Inclusion of Puerto Rico has added an additional burden of 2,700 hours and $173,664 for Information Submission and Systems Access Requirements.

b. ICRs Regarding § 431.992 Corrective Action Plan

Section 431.992 requires states to submit corrective action plans to address all improper payments and deficiencies found through the PERM review as defined at § 431.960(f)(1) and evaluate corrective actions from the previous PERM cycle as defined at § 431.992(b)(4). The ongoing burden associated with the requirements under § 431.992 is the time and effort it would take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP agencies for 17–18 states equates to maximum 36 total respondents per PERM cycle) to submit its corrective action plan. We estimate that it will take 750 hours (250 hours for FFS, 250 hours for managed care and an additional 250 hours for eligibility), per PERM cycle per state program to submit its corrective action plan for a total estimated annual burden of 27,000 hours (750 hours × 36 respondents). We estimate the total cost per respondent to be $48,240 (750 hours × $64.32). The

total estimated cost for all respondents is $1,736,640 ($48,240 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as part of reinstatement of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. total burden would amount to: 36 annual respondents, 36 annual responses, and 750 hours per corrective action plan Inclusion of Puerto Rico has added an additional burden of 1,500 hours and $96,480 for Corrective Action Plan requirements.

c. ICRs Regarding § 431.998 Difference Resolution and Appeal Process

Section 431.998 allows states to dispute federal contractor findings. The ongoing burden associated with the requirements under § 431.998 is the time and effort it would take each of the up to 36 state programs (17–18 Medicaid and 17–18 CHIP agencies for 17–18 states equates to maximum 36 total respondents per PERM cycle) to review PERM findings and inform the federal contractor(s) of any additional information and/or dispute requests. We estimate that it will take 1,625 hours (500 hours for FFS, 475 hours for managed care and an additional 650 hours for eligibility) per PERM cycle per state program to review PERM findings and inform federal contractor(s) of any additional information or dispute requests for FFS, managed care, and eligibility components for a total estimated annual burden of 58,500 hours (1,625 hours × 36 respondents). We estimate the total cost per respondent to be $104,520 (1,625 hours × $64.32). The total estimated cost for all respondents is $3,762,720 ($104,520 × 36 respondents). The preceding requirements and burden estimates will be submitted to OMB as reinstatements of the information collection requests previously approved under control numbers 0938–0974, 0938–0994, and 0938–1012. total burden would amount to: 36 annual respondents, 36 annual responses, and 1,625 hours per PERM cycle.

Inclusion of Puerto Rico has added an additional burden of 3,250 hours and $209,040 for Difference Resolution and Appeal Process requirements.

12. ICRs for the CoP Requirements for Hospitals and CAHs To Report Acute Respiratory Illnesses

a. Ongoing Reporting

The hospital must electronically report information on acute respiratory illnesses, including influenza, SARS–CoV–2/COVID–19, and RSV, in a standardized format and frequency specified by the Secretary. To the extent as required by the Secretary, this report must include the following data elements:

- Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS–CoV–2/COVID–19, and RSV, among newly admitted and hospitalized patients.
- Total bed census and capacity, including for critical hospital units and age groups.
- Limited patient demographic information, including but not limited to age.

For purposes of burden estimates, we do not differentiate among hospitals and CAHs as they all would collect data. For the estimated costs contained in the analysis that follows, we used data from the BLS to determine the mean hourly wage for the staff member responsible for reporting the required information for a hospital (or a CAH).[1] Based on our experience with hospitals and CAHs and the previous COVID–19 and related reporting requirements, we believe that this would primarily be the responsibility of a registered nurse and we have used this position in this analysis at an average hourly salary of $39.05. For the total hourly cost, we doubled the mean hourly wage for a 100 percent increase to cover overhead and fringe benefits, according to standard HHS estimating procedures. If the total cost after doubling resulted in 0.50 or more, the cost was rounded up to the next dollar. If it was 0.49 or below, the total cost was rounded down to the next dollar. Therefore, we estimated the total hourly cost for a registered nurse to perform these duties would be $78.

Based on the assumption of weekly reporting frequency, we estimate that total annual burden hours for all participating hospitals and CAHs to comply with these requirements would be 248,976 hours based on weekly reporting of the required information by approximately 6,384 hospitals and CAHs × 52 weeks per year and at an average weekly response time of 0.75 hours for a registered nurse with an average hourly salary of $78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly would be $19,420,128 (248,976 hours × 6,384 facilities) or approximately $3,042 per facility annually ($19,420,128/6,384 facilities).

Furthermore, we note that this estimate likely overestimates the costs associated with reporting because it assumes that all hospitals and CAHs would report manually. Efforts are underway to automate hospital and CAH reporting that have the potential to significantly decrease reporting burden and improve reliability. Our preliminary estimates for these reporting activities (OMB control numbers 0938–0328 for hospitals and 0938–1043 for CAHs) can be found in the tables that follow.

ESTIMATED ANNUALIZED BURDEN HOURS					
Type of Respondent	Form Name	Number of Respondents	Number of Responses per Respondent (low range - high range)	Average Burden per Response (in hours)	Total Burden Hours (low range – high range)
Hospitals and CAHs	Standardized format as determined by the Secretary	6,384	52	0.75	248,976
Total					248,976

ESTIMATED ANNUALIZED RESPONDENT BURDEN COSTS			
Type of Respondent	Total Burden Hours	Hourly Wage Rate	Total Respondent Costs
Hospitals and CAH Staff – Registered Nurses	248,976	*$78	$19,420,128
Total			$19,420,128

b. PHE Reporting

In the event that the Secretary has declared a national Public Health Emergency (PHE) for an acute respiratory illness or determined that a significant threat for one exists, the hospital must also electronically the report the following data elements in a standardized format and frequency specified by the Secretary:

- Supply inventory shortages.
- Staffing shortages.
- Relevant medical countermeasures and therapeutic inventories, usage, or both.
- Facility structure and operating status, including hospital/ED diversion status.

In addition, we propose reporting requirements for future acute respiratory illness PHEs or significant threats thereof that would require hospitals and CAHs to electronically report additional information on acute respiratory illnesses and related impacts on facility operations only when the Secretary has declared a national PHE directly related to such illnesses or determined that a significant threat for one exists. Specifically, we proposed that when the Secretary has declared an applicable PHE or identified a threat thereof, hospitals and CAHs would be required to report specific data elements to the CDC's National Health Safety Network (NHSN), or other CDC-supported surveillance systems, as determined by the Secretary.

For purposes of burden estimates, we do not differentiate among hospitals and CAHs as they all would complete the same data collection. For the estimated costs contained in the analysis that follows, we used data from the U.S. Bureau of Labor Statistics (BLS) to determine the mean hourly wage for the staff member responsible for reporting the required information for a hospital (or a CAH).[2] Based on our experience with hospitals and CAHs and the previous COVID–19 and related reporting requirements, we believe that this would primarily be the responsibility of a registered nurse and we have used this position in this analysis at an average hourly salary of $39.05. For the total hourly cost, we doubled the mean hourly wage for a 100 percent increase to cover overhead and fringe benefits, according to standard HHS estimating procedures. If the total cost after doubling resulted in 0.50 or more, the cost was rounded up to the next dollar. If it was 0.49 or below, the total cost was rounded down to the next dollar. Therefore, we estimated the total hourly cost for a registered nurse to perform these duties would be $78.

We acknowledge that the data elements and reporting frequency could increase or decrease due to the what the Secretary deems necessary for the given PHE; the changes would impact this burden estimate. For instance, data reporting requirements may be active for less than or more than a year. During the COVID–19 PHE, facilities reported daily. However, we cannot predict how often the Secretary would require data reporting for future PHE. Therefore, we included two burden estimates to encapsule a range in frequency of reporting. The lower range is based on twice a week reporting. The higher range is based on daily reporting.

Based on the assumption of twice weekly reporting frequency, we estimated that total annual burden hours for all participating hospitals and CAHs to comply with these requirements would be 995,904 hours based on twice weekly reporting of the required information by approximately 6,384 hospitals and CAHs × 104 days a year and at an average twice weekly response time of 1.5 hours for a registered nurse with an average hourly salary of $78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly would be $77,680,512 (995,904 hours × $78) or approximately $12,168 ($77,680,512/6,384 facilities) per facility annually.

Based on the assumption of daily reporting frequency, we estimated that total annual burden hours for all participating hospitals and CAHs to comply with these requirements would be 3,495,240 hours based on daily reporting of the required information by approximately 6,384 hospitals and CAHs × 365 days a year and at an average daily response time of 1.5 hours for a registered nurse with an average hourly salary of $78. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly would be $272,628,720 (3,495,240 hours × $78) or approximately $42,705 ($272,628,720/6,384 facilities) per facility annually.

Furthermore, we note that this estimate likely overestimates the costs associated with reporting because it assumes that all hospitals and CAHs would report manually. Efforts are underway to automate hospital and CAH reporting that have the potential to significantly decrease reporting burden and improve reliability. Our preliminary estimates for these reporting activities (OMB control numbers 0938–0328 for hospitals and 0938–1043 for CAHs) can be found in the tables that follow.

ESTIMATED ANNUALIZED BURDEN HOURS					
Type of Respondent	Form Name	Number of Respondents	Number of Responses per Respondent (low range -high range)	Average Burden per Response (in hours)	Total Burden Hours (low range – high range)
Hospitals and CAHs	Standardized format as determined by the Secretary	6,384	104 to 365	1.5	995,904 to 3,495,240
Total					

ESTIMATED ANNUALIZED RESPONDENT BURDEN COSTS			
Type of Respondent	**Total Burden Hours**	**Hourly Wage Rate**	**Total Respondent Costs**
Hospitals and CAH Staff – Registered Nurses	995,904 to 3,495,240	*$78	$ 77,680,512 to $ 272,628,720
Total			

XIII. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this proposed rule, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 2, 2024.

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.1845 is amended by—

■ a. Revising paragraphs (a) and (b); and

■ b. Revising the paragraph (c) paragraph heading.

The revisions read as follows:

§ 405.1845 Composition of Board; hearings, decisions, and remands.

(a) *Composition of the Board.* The Board consists of five members appointed by the Secretary.

(1) All members must be knowledgeable in the field of payment of providers under Medicare Part A.

(2) At least one member must be a certified public accountant.

(3) At least two Board members must be representative of providers of services.

(b) *Terms of office.* The term of office for Board members must be 3 years, except that initial appointments may be for such shorter terms as the Secretary may designate to permit staggered terms of office.

(1) No member may serve more than three consecutive terms of office, except a Board member who, in their second or third consecutive term, is designated as Chairperson, as described in paragraph (c) of this section, may serve a maximum of four consecutive terms, provided that the Member continues to serve as Chairperson once so designated.

(2) The Secretary has the authority to terminate a Board member's term of office for good cause.

(c) *Role of the Chairperson.* * * *

* * * * *

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 3. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 4. Section 412.1 is amended by revising paragraph (a)(1)(iv) to read as follows:

§ 412.1 Scope of part.

(a) * * *

(1) * * *

(iv) Additional payments are made for outlier cases, bad debts, indirect medical education costs, for serving a disproportionate share of low-income patients, for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators, and for the additional resource costs for small, independent hospitals to establish and maintain access to buffer stocks of essential medicines.

* * * * *

■ 5. Section 412.2 is amended by adding paragraph (f)(11) to read as follows:

§ 412.2 Basis of payment.

* * * * *

(f) * * *

(11) A payment adjustment for small, independent hospitals for the additional resource costs of establishing and maintaining access to buffer stocks of essential medicines as specified in § 412.113.

* * * * *

■ 6. Section 412.23 is amended by revising paragraphs (e)(3)(i), (iii), and (iv) and revising and republish paragraph (e)(4) to read as follows:

§ 412.23 Excluded hospitals: Classifications.

* * * * *

(e) * * *

(3) * * *

(i) Subject to the provisions of paragraphs (e)(3)(ii) through (vii) of this section and paragraphs (e)(4)(iv) and (v) of this section as applicable, the average Medicare inpatient length of stay specified under paragraph (e)(2)(i) of this section is calculated by dividing the total number of covered and noncovered days of stay of Medicare inpatients (less leave or pass days) by the number of total Medicare discharges for the hospital's most recent complete cost reporting period. Subject to the provisions of paragraphs (e)(3)(ii) through (vii) of this section, the average inpatient length of stay specified under paragraph (e)(2)(ii) of this section is calculated by dividing the total number of days for all patients, including both Medicare and non-Medicare inpatients (less leave or pass days) by the number of total discharges for the hospital's most recent complete cost reporting period.

* * * * *

(iii) If a change in a hospital's average length of stay specified under paragraph (e)(2)(i) or (e)(2)(ii) of this section would result in the hospital not maintaining an average Medicare inpatient length of stay of greater than 25 days, the calculation is made by the same method for the period of at least 5 months of the immediately preceding 6-month period.

(iv) [Reserved]

* * * * *

(4) For the purpose of calculating the average length of stay for hospitals

seeking to become long-term care hospitals, with the exception of paragraphs (e)(3)(iii) and (v) of this section, the provisions of paragraph (e)(3) of this section apply.

(i) *Definition.* For the purpose of payment under the long-term care hospital prospective payment system under subpart O of this part, a new long-term care hospital is a provider of inpatient hospital services that meets the qualifying criteria in paragraphs (e)(1) and (e)(2) of this section; meets the applicable requirements of paragraphs (e)(4)(ii) through (v) of this section; and, under present or previous ownership (or both), its first cost reporting period as a LTCH begins on or after October 1, 2002.

(ii) *Satellite facilities and remote locations of hospitals seeking to become new long-term care hospitals.* Except as specified in paragraph (e)(4)(iii) of this section, a satellite facility (as defined in § 412.22(h)) or a remote location of a hospital (as defined in § 413.65(a)(2) of this chapter) that voluntarily reorganizes as a separate Medicare participating hospital, with or without a concurrent change in ownership, and that seeks to qualify as a new long-term care hospital for Medicare payment purposes must demonstrate through documentation that it meets the average length of stay requirement as specified under paragraphs (e)(2)(i) or (e)(2)(ii) of this section based on discharges that occur on or after the effective date of its participation under Medicare as a separate hospital.

(iii) *Provider-based facility or organization identified as a satellite facility and remote location of a hospital prior to July 1, 2003.* Satellite facilities and remote locations of hospitals that became subject to the provider-based status rules under § 413.65 as of July 1, 2003, that become separately participating hospitals, and that seek to qualify as long-term care hospitals for Medicare payment purposes may submit to the fiscal intermediary discharge data gathered during 5 months of the immediate 6 months preceding the facility's separation from the main hospital for calculation of the average length of stay specified under paragraph (e)(2)(i) or paragraph (e)(2)(ii) of this section.

(iv) *Qualifying period for hospitals seeking to become long-term care hospitals.* A hospital may be classified as a long-term care hospital after a 6-month qualifying period, provided that the average length of stay during at least 5 consecutive months of that 6-month qualifying period, calculated under paragraph (e)(2) of this section, is greater than 25 days. The 6-month qualifying period for a hospital is the 6 months immediately preceding the date of long-term care hospital classification.

(v) *Special rule for hospitals seeking to become long-term care hospitals that experience a change in ownership.* If a hospital seeks exclusion from the inpatient prospective payment system as a long-term care hospital and a change of ownership (as described in § 489.18 of this chapter) occurs within the period of at least 5 months of the 6-month period preceding its petition for long-term care hospital status, the hospital may be excluded from the inpatient prospective payment system as a long-term care hospital for the next cost reporting period if, for the period of at least 5 months of the 6 months immediately preceding the start of the cost reporting period for which the hospital is seeking exclusion from the inpatient prospective payment system as a long-term care hospital (including time before the change of ownership), the hospital has met the required average length of stay, has continuously operated as a hospital, and has continuously participated as a hospital in Medicare.

* * * * *

■ 7. Section 412.88 is amended by adding paragraphs (a)(2)(ii)(C) and (b)(2)(iv) to read as follows:

§ 412.88 Additional payment for new medical service or technology.

* * * * *

(a) * * *

(2) * * *

(ii) * * *

(C) For a medical product that is a gene therapy that is indicated and used specifically for the treatment of sickle cell disease and approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule, for discharges occurring on or after October 1, 2024, if the costs of the discharge (determined by applying the operating cost-to-charge ratios as described in § 412.84(h)) exceed the full DRG payment, an additional amount equal to the lesser of—

(*1*) 75 percent of the costs of the new medical service or technology; or

(*2*) 75 percent of the amount by which the costs of the case exceed the standard DRG payment.

* * * * *

(b) * * *

(2) * * *

(iv) For discharges occurring on or after October 1, 2024, for a medical product that is a gene therapy that is indicated and used specifically for the treatment of sickle cell disease and approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule, 75 percent of the estimated costs of the new medical service or technology.

■ 8. Section 412.90 is amended by revising paragraph (j) to read as follows:

§ 412.90 General rules.

* * * * *

(j) Medicare-dependent, small rural hospitals. For cost reporting periods beginning on or after April 1, 1990, and before October 1, 1994, and for discharges occurring on or after October 1, 1997 and before January 1, 2025, CMS adjusts the prospective payment rates for inpatient operating costs determined under subparts D and E of this part if a hospital is classified as a Medicare-dependent, small rural hospital.

* * * * *

■ 9. Section 412.96 is amended by revising paragraph (c)(2)(ii) to read as follows:

§ 412.96 Special treatment: Referral centers.

* * * * *

(c) * * *

(2) * * *

(ii) For cost reporting periods beginning on or after January 1, 1986, an osteopathic hospital, recognized by the American Osteopathic Healthcare Association (or any successor organization), that is located in a rural area must have at least 3,000 discharges during its cost reporting period that began during the same fiscal year as the cost reporting periods used to compute the regional median discharges under paragraph (i) of this section to meet the number of discharges criterion. A hospital applying for rural referral center status under the number of discharges criterion in this paragraph must demonstrate its status as an osteopathic hospital.

* * * * *

■ 10. Section 412.101 is amended by revising paragraphs (b)(2)(i), (b)(2)(iii), (c)(1), and (c)(3) introductory text to read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *

(2) * * *

(i) For FY 2005 through FY 2010, the portion of FY 2025 beginning on January 1, 2025 and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this

section) from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

* * * * *

(iii) For FY 2019 through FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024, a hospital must have fewer than 3,800 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital's most recently submitted cost report, and be located more than 15 road miles (as defined in paragraph (a) of this section) from the nearest ''subsection (d)'' (section 1886(d) of the Act) hospital.

* * * * *

(c) * * *

(1) For FY 2005 through FY 2010, the portion of FY 2025 beginning on January 1, 2025 and subsequent fiscal years, the adjustment is an additional 25 percent for each Medicare discharge.

* * * * *

(3) For FY 2019 through FY 2024 and the portion of FY 2025 beginning on October 1, 2024, and ending on December 31, 2024, the adjustment is as follows:

* * * * *

■ 11. Section 412.103 is amended by revising paragraph (a)(1) to read as follows:

§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.

(a) * * *

(1) The hospital is located in a rural census tract of a Metropolitan Statistical Area (MSA) as determined under the most recent version of the Goldsmith Modification, using the Rural-Urban Commuting Area codes and additional criteria, as determined by the Federal Office of Rural Health Policy (FORHP) of the Health Resources and Services Administration (HRSA), which is available at the web link provided in the most recent **Federal Register** notice issued by HRSA defining rural areas.

* * * * *

■ 12. Section 412.104 is amended by revising paragraphs (b)(2) through (b)(4) to read as follows:

§ 412.104 Special treatment: Hospitals with high percentage of ESRD discharges.

* * * * *

(b) * * *

(2)(i) Effective for cost reporting periods beginning before October 1, 2024, the estimated weekly cost of dialysis is the average number of dialysis sessions furnished per week during the 12-month period that ended June 30, 1983, multiplied by the average cost of dialysis for the same period.

(ii) Effective for cost reporting periods beginning on or after October 1, 2024, the estimated weekly cost of dialysis is calculated as 3 dialysis sessions per week multiplied by the applicable ESRD prospective payment system (PPS) base rate (as defined in 42 CFR 413.171) that corresponds with the fiscal year in which the cost reporting period begins.

(3) The average cost of dialysis used for purposes of determining the estimated weekly cost of dialysis for cost reporting periods beginning before October 1, 2024, includes only those costs determined to be directly related to the renal dialysis services. (These costs include salary, employee health and welfare, drugs, supplies, and laboratory services.)

(4) Effective for cost reporting periods beginning before October 1, 2024, the average cost of dialysis is reviewed and adjusted, if appropriate, at the time the composite rate reimbursement for outpatient dialysis is reviewed.

* * * * *

■ 13. Section 412.105 is amended by adding paragraph (f)(1)(iv)(C)(*4*) to read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(f) * * *

(1) * * *

(iv) * * *

(C) * * *

(*4*) Effective for portions of cost reporting periods beginning on or after July 1, 2026, a hospital may qualify to receive an increase in its otherwise applicable FTE resident cap if the criteria specified in § 413.79(q) of this subchapter are met.

* * * * *

■ 14. Section 412.106 is amended by revising paragraph (i)(1) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(i) * * *

(1) Interim payments are made during the payment year to each hospital that is estimated to be eligible for payments under this section at the time of the annual final rule for the hospital inpatient prospective payment system, subject to the final determination of eligibility at the time of cost report settlement for each hospital. For FY 2025 and subsequent fiscal years, interim uncompensated care payments are calculated based on an average of the most recent 3 years of available historical discharge data.

* * * * *

■ 15. Section 412.108 is amended by revising paragraphs (a)(1) introductory text and (c)(2)(iii) introductory text to read as follows:

§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.

(a) * * *

(1) *General considerations.* For cost reporting periods beginning on or after April 1, 1990, and ending before October 1, 1994, or for discharges occurring on or after October 1, 1997, and before January 1, 2025, a hospital is classified as a Medicare-dependent, small rural hospital if it meets all of the following conditions:

* * * * *

(c) * * *

(2) * * *

(iii) For discharges occurring during cost reporting periods (or portions thereof) beginning on or after October 1, 2006, and before January 1, 2025, 75 percent of the amount that the Federal rate determined under paragraph (c)(1) of this section is exceeded by the highest of the following:

* * * * *

■ 16. Section 412.113 is amended by adding paragraph (g) to read as follows:

§ 412.113 Other payments.

* * * * *

(g) *Additional resource costs of establishing and maintaining access to buffer stocks of essential medicines.* (1) Essential medicines are the 86 medicines prioritized in the report Essential Medicines Supply Chain and Manufacturing Resilience Assessment developed by the U.S. Department of Health and Human Services Office of the Assistant Secretary for Preparedness and Response and published in May of 2022, and any subsequent revisions to that list of medicines. A buffer stock of essential medicines for a hospital is a supply, for no less than a 6-month period of one or more essential medicines.

(2) The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines for a hospital are the additional resource costs incurred by the hospital to directly hold a buffer stock of essential medicines for its patients or arrange contractually for such a buffer stock to be held by another entity for use by the hospital for its patients. The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines does not include the resource costs of the essential medicines themselves.

(3) For cost reporting periods beginning on or after October 1, 2024, a payment adjustment to a small, independent hospital for the additional resource costs of establishing and maintaining access to buffer stocks of essential medicines is made as described in paragraph (g)(4) of this section. For purposes of this section, a small, independent hospital is a hospital with 100 or fewer beds as defined in § 412.105(b) during the cost reporting period that is not part of a chain organization, defined as a group of two or more health care facilities which are owned, leased, or through any other device, controlled by one organization.

(4) The payment adjustment is based on the estimated reasonable cost incurred by the hospital for establishing and maintaining access to buffer stocks of essential medicines during the cost reporting period.

■ 17. Section 412.140 is amended by revising paragraphs (d)(2)(ii) and (e)(2)(vii) introductory text to read as follows:

§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(d) * * *

(2) * * *

(ii)(A) Prior to the FY 2028 payment determination, a hospital meets the eCQM validation requirement with respect to a fiscal year if it submits 100 percent of sampled eCQM measure medical records in a timely and complete manner, as determined by CMS.

(B) For the FY 2028 payment determination and later years, a hospital meets the eCQM validation requirement with respect to a fiscal year if it achieves a 75-percent score, as determined by CMS.

* * * * *

(e) * * *

(2) * * *

(vii) If the hospital has requested reconsideration on the basis that CMS concluded it did not meet the validation requirement set forth in paragraph (d) of this section, the reconsideration request must contain a detailed explanation identifying which data the hospital believes was improperly validated by CMS and why the hospital believes that such data are correct.

* * * * *

§ 412.230 [Amended]

■ 18. In § 412.230 amend paragraph (a)(5)(i) by removing the phrase ''in the rural area of the state'' and adding in its place the phrase ''either in its geographic area or in the rural area of the State''.

■ 19. Amend § 412.273 by revising paragraphs (c)(1)(ii) and (c)(2) to read as follows:

§ 412.273 Withdrawing an application, terminating an approved 3-year reclassification, or canceling a previous withdrawal or termination.

* * * * *

(c) * * *

(ii) After the MGCRB issues a decision, provided that the request for withdrawal is received by the MCGRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator's in accordance with § 412.278, whichever is later concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the application has been filed.

(2) A request for termination must be received by the MGCRB within 45 days of the date of filing for public inspection of the proposed rule at the website of the Office of the Federal Register, or within 7 calendar days of receiving a decision of the Administrator's in accordance with § 412.278, whichever is later concerning changes to the inpatient hospital prospective payment system and proposed payment rates for the fiscal year for which the termination is to apply.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 20. The authority citation for part 413 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww.

§ 413.75 [Amended]

■ 21. Section 413.75 is amended in paragraph (b), in the definition of ''Emergency Medicare GME Affiliated Group'' by removing the reference ''§ 413.79(f)(6)'' and adding in its place the reference ''§ 413.79(f)(7)''.

§ 413.78 [Amended]

■ 22. Section 413.78 is amended by—

■ a. In paragraph (e)(3)(iii), removing the reference ''§ 413.79(f)(6)'' and adding in its place the reference ''§ 413.79(f)(7)''; and

■ b. In paragraph (f)(3)(iii) introductory text, removing the reference ''§ 413.79(f)(6)'' and adding in its place the reference ''§ 413.79(f)(7)''.

■ 23. Section 413.79 is amended by—

■ a. Revising paragraphs (d)(6), (f)(8) and (k)(2)(i); and

■ b. Adding paragraph (q).

The revisions and addition read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

* * * * *

(d) * * *

(6) Subject to the provisions of paragraph (h) of this section, FTE residents who are displaced by the closure of either another hospital or another hospital's program are added to the FTE count after applying the averaging rules in this paragraph (d), for the receiving hospital for the duration of the time that the displaced residents are training at the receiving hospital.

* * * * *

(f) * * *

(8) FTE resident cap slots added under section 126 of Public Law 116–260 and section 4122 of Public Law 117–328 may be used in a Medicare GME affiliation agreement beginning in the fifth year after the effective date of those FTE resident cap slots.

* * * * *

(k) * * *

(2) * * *

(i)(A) For rural track programs started before October 1, 2012, for the first 3 years of the rural track's existence, the rural track FTE limitation for each urban hospital will be the actual number of FTE residents, subject to the rolling average specified in paragraph (d)(7) of this section, training in the rural track at the urban hospital and the rural nonprovider site(s).

(B) For rural track programs started on or after October 1, 2012, and before October 1, 2022, prior to the start of the urban hospital's cost reporting period that coincides with or follows the start of the sixth program year of the rural track's existence, the rural track FTE limitation for each urban hospital will be the actual number of FTE residents, subject to the rolling average specified in paragraph (d)(7) of this section, training in the rural track at the urban hospital and the rural nonprovider site(s).

(C) For cost reporting periods beginning on or after October 1, 2022, before the start of the urban or rural

hospital's cost reporting period that coincides with or follows the start of the sixth program year of the Rural Track Program's existence, the rural track FTE limitation for each hospital will be the actual number of FTE residents training in the Rural Track Program at the urban or rural hospital and subject to the requirements under § 413.78(g), at the rural nonprovider site(s).

* * * * *

(q) *Determination of an increase in the otherwise applicable resident cap under section 4122 of the Consolidated Appropriations Act (Pub. L. 117—328).* For portions of cost reporting periods beginning on or after July 1, 2026, a hospital may receive an increase in its otherwise applicable FTE resident cap (as determined by CMS) if the hospital meets the requirements and qualifying criteria under section 1886(h)(10) of the Act and if the hospital submits an application to CMS within the timeframe specified by CMS.

PART 431—STATE ORGANIZATION AND GENERAL ADMINISTRATION

■ 24. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 1302.

§ 431.954 [Amended]

■ 25. Section 431.954 is amended in paragraph (b)(3) by removing the phrase ''Puerto Rico, Guam,'' and adding in its place the word ''Guam,''.

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS

■ 26. The authority citation for part 482 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr, unless otherwise noted.

■ 27. Section 482.42 is amended by revising paragraph (e) and removing paragraph (f) to read as follows:

§ 482.42 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

* * * * *

(e) *Respiratory illness reporting*—(1) *Ongoing reporting.* The hospital must electronically report information on acute respiratory illnesses, including influenza, SARS–CoV–2/COVID–19, and RSV.

(i) The report must be in a standardized format and frequency specified by the Secretary.

(ii) To the extent as required by the Secretary, this report must include all of the following data elements:

(A) Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS–CoV–2/COVID–19, and RSV, among newly admitted and hospitalized patients.

(B) Total bed census and capacity, including for critical hospital units and age groups.

(C) Limited patient demographic information, including but not limited to age.

(2) *Public health emergency (PHE) reporting.* In the event that the Secretary has declared a national, state, or local PHE for an acute infectious illness or determined that a significant threat for one exists, the hospital must also electronically the report the following data elements in a standardized format and frequency specified by the Secretary:

(i) Supply inventory shortages.

(ii) Staffing shortages.

(iii) Relevant medical countermeasures and therapeutic inventories, usage, or both.

(iv) Facility structure and operating status, including hospital/ED diversion status.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 28 The authority citation for part 482 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 29. Section 485.640 is amended revising paragraph (d) and removing paragraph (e) to read as follows:

§ 485.640 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

* * * * *

(d) *Respiratory illness reporting*—(1) *Ongoing reporting.* The CAH must electronically report information on acute respiratory illnesses, including influenza, SARS–CoV–2/COVID–19, and RSV.

(i) The report must be in a standardized format and frequency specified by the Secretary.

(ii) To the extent as required by the Secretary, the report must include the following data elements:

(A) Confirmed infections for a limited set of respiratory illnesses, including but not limited to influenza, SARS–CoV–2/COVID–19, and RSV, among newly admitted and hospitalized patients.

(B) Total bed census and capacity, including for critical hospital units and age groups.

(C) Limited patient demographic information, including but not limited to age.

(2) *Public health emergency (PHE) reporting.* In the event that the Secretary has declared a national, state, or local PHE for an acute infectious illness or determined that a significant threat for one exists, the CAH must also electronically the report the following data elements in a standardized format and frequency specified by the Secretary:

(i) Supply inventory shortages.

(ii) Staffing shortages.

(iii) Relevant medical countermeasures and therapeutic inventories, usage, or both.

(iv) Facility structure and operating status, including CAH/ED diversion status.

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 30. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 31. Section 495.24 is amended by—

■ a. In paragraph (f)(1)(i)(B) removing the phrase ''In 2023 and subsequent years'' and adding in its place the phrase ''In 2023 and 2024,''; and

■ b. Adding paragraph (f)(1)(i)(C).

The addition reads as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

(f) * * *

(1) * * *

(i) * * *

(C) In 2025 and subsequent years, earn a total score of at least 80 points.

* * * * *

■ 32. Revise the heading for part 512 to read as follows:

PART 512—STANDARD PROVISIONS FOR INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR CERTAIN MODELS

■ 33. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 34. Amend part 512 by adding subparts D and E to read as follows:

Subpart D [Reserved]

Subpart E—Transforming Episode Accountability Model (TEAM)

Sec.

General

512.500 Basis and scope of subpart.
512.505 Definitions

TEAM Participation

512.515 Geographic areas.

General

§ 512.500 Basis and scope of subpart.

(a) *Basis.* This subpart implements the test of the Transforming Episode Accountability Model (TEAM) under section 1115A(b) of the Act. Except as specifically noted in this part, the regulations under this subpart do not affect the applicability of other provisions affecting providers and suppliers under Medicare FFS, including the applicability of provisions regarding payment, coverage, and program integrity.

(b) *Scope.* This subpart sets forth the following:

(i) Participation in TEAM.

(ii) Scope of episodes being tested.

(iii) Pricing methodology.

(iv) Quality measures and quality reporting requirements.

(v) Reconciliation and review processes.

(vi) Data sharing and other requirements

(vii) Financial arrangements and beneficiary incentives.

(viii) Medicare program waivers

(ix) Beneficiary protections.

(x) Cooperation in model evaluation and monitoring.

(xi) Audits and record retention.

(xii) Rights in data and intellectual property.

(xiii) Monitoring and compliance.

(xiv) Remedial action.

(xv) Limitations on review.

(xvi) Miscellaneous provisions on bankruptcy and other notifications.

(xvii) Model termination by CMS.

(xviii) Decarbonization.

§ 512.505 Definitions

For the purposes of this part, the following definitions are applicable unless otherwise stated:

AAPM stands for Advanced Alternative Payment Model.

AAPM option means the advanced alternative payment model option of TEAM for Track 2 and Track 3 TEAM participants that provide their CMS EHR Certification ID and attest to their use of CEHRT in accordance with § 512.522.

ACO means an accountable care organization, as defined at § 425.20 of this chapter.

ACO participant has the meaning set forth in § 425.20 of this chapter.

ACO provider/supplier has the meaning set forth in § 425.20 of this chapter.

Acute care hospital means a provider subject to the prospective payment system specified in § 412.1(a)(1) of this chapter.

Age bracket risk adjustment factor means the coefficient of risk associated with a patient's age bracket, calculated as described in § 512.545(a)(1).

Aggregated reconciliation target price refers to the sum of the reconciliation target prices for all episodes attributed to a given TEAM participant for a given performance year.

Alignment payment means a payment from a TEAM collaborator to a TEAM participant under a sharing arrangement, for the sole purpose of sharing the TEAM participant's responsibility for making repayments to Medicare.

Anchor hospitalization means the initial hospital stay upon admission for an episode category included in TEAM, as described in § 512.525(c), for which the institutional claim is billed through the inpatient prospective payment system (IPPS).

Anchor procedure means a procedure related to an episode category, as described in § 512.525(c), included in TEAM that is permitted and paid for by Medicare when performed in a hospital outpatient department (HOPD) and billed through the Hospital Outpatient Prospective Payment System (OPPS).

ADI stands for Area Deprivation Index.

APM stands for Alternative Payment Model.

APM Entity means an entity as defined in § 414.1305 of this chapter.

Baseline episode spending refers to total episode spending by all providers and suppliers associated with a given MS–DRG/HCPCS episode type for all hospitals in a given region during the baseline period.

Baseline period means the 3-year historical period used to construct the preliminary target price and reconciliation target price for a given performance year.

Baseline year means any one of the3 years included in the baseline period.

Benchmark price means average standardized episode spending by all providers and suppliers associated with a given MS–DRG/HCPCS episode type for all hospitals in a given region during the applicable baseline period.

Beneficiary means an individual who is enrolled in Medicare FFS.

BPCI stands for the Bundled Payments for Care Improvement Model, which was an episode-based payment initiative with four models tested by the CMS Innovation Center from April 2013 to September 2018.

BPCI Advanced stands for the Bundled Payments for Care Improvement Advanced Model, which is an episode-based payment model tested by the CMS Innovation Center from October 2018 to December 2025.

CCN stands for CMS certification number.

CEHRT means certified electronic health record technology that meets the requirements set forth in § 414.1305 of this chapter.

Change in control means any of the following:

(1) The acquisition by any ''person'' (as this term is used in sections 13(d)

and 14(d) of the Securities Exchange Act of 1934) of beneficial ownership (within the meaning of Rule 13d–3 promulgated under the Securities Exchange Act of 1934), directly or indirectly, of voting securities of the TEAM participant representing more than 50 percent of the TEAM participant's outstanding voting securities or rights to acquire such securities.

(2) The acquisition of the TEAM participant by any individual or entity.

(3) The sale, lease, exchange or other transfer (in one transaction or a series of transactions) of all or substantially all of the assets of the TEAM participant.

(4) The approval and completion of a plan of liquidation of the TEAM participant, or an agreement for the sale or liquidation of the TEAM participant.

CJR stands for the Comprehensive Care for Joint Replacement Model, which is an episode-based payment model tested by the CMS Innovation Center from April 2016 to December 2024.

Clinician engagement list means the list of eligible clinicians or MIPS eligible clinicians that participate in TEAM activities and have a contractual relationship with the TEAM participant, and who are not listed on the financial arrangements list, as described in § 512.522(c).

CMS Electronic Health Record (EHR) Certification ID means the identification number that represents the combination of Certified Health Information Technology that is owned and used by providers and hospitals to provide care to their patients and is generated by the Certified Health Information Technology Product List.

Collaboration agent means an individual or entity that is not a TEAM collaborator and that is either of the following:

(1) A member of a PGP, NPPGP, or TGP that has entered into a distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a TEAM collaborator.

(2) An ACO participant or ACO provider/supplier that has entered into a distribution arrangement with the same ACO in which it is participating, and where the ACO is a TEAM collaborator.

Composite quality score (CQS) means a score computed for each TEAM participant to summarize the TEAM participant's level of quality performance and improvement on specified quality measures as described in § 512.547.

Core-based statistical area (CBSA) means a statistical geographic entity defined by the Office of Management and Budget (OMB) consisting of the county or counties associated with at least one core (urbanized area or urban cluster) of at least 10,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties with the counties containing the core.

CORF stands for comprehensive outpatient rehabilitation facility.

Coronary artery bypass graft (CABG) means any coronary revascularization procedure paid through the IPPS under MS–DRG 231–236, including both elective CABG and CABG procedures performed during initial acute myocardial infarction treatment (AMI).

Covered services means the scope of health care benefits described in sections 1812 and 1832 of the Act for which payment is available under Part A or Part B of Title XVIII of the Act.

Critical access hospital (CAH) means a hospital designated under subpart F of part 485 of this chapter.

CQS adjustment amount means the amount subtracted from the positive or negative reconciliation amount to generate the reconciliation payment or repayment amount.

CQS adjustment percentage means the percentage CMS applies to the positive or negative reconciliation amount based on the TEAM participant's CQS performance.

CQS baseline period means calendar year 2025 and is the time period used to benchmark quality measure performance.

Days means calendar days.

Decarbonization and Resilience Initiative means an initiative for TEAM participants that includes technical assistance on decarbonization and a voluntary reporting program where TEAM participants may annually report metrics and questions related to emissions in accordance with § 512.598.

Descriptive TEAM materials and activities means general audience materials such as brochures, advertisements, outreach events, letters to beneficiaries, web pages, mailings, social media, or other materials or activities distributed or conducted by or on behalf of the TEAM participant or its downstream participants when used to educate, notify, or contact beneficiaries regarding TEAM. All of the following communications are not descriptive TEAM materials and activities:

(1) Communications that do not directly or indirectly reference TEAM (for example, information about care coordination generally).

(2) Information on specific medical conditions.

(3) Referrals for health care items and services, except as required by § 512.564.

(4) Any other materials that are excepted from the definition of ''marketing'' as that term is defined at 45 CFR 164.501.

Discount factor means a set percentage included in the preliminary target price and reconciliation target price intended to reflect Medicare's potential savings from TEAM.

Distribution arrangement means a financial arrangement between a TEAM collaborator that is an ACO, PGP, NPPGP, or TGP and a collaboration agent for the sole purpose of distributing some or all of a gainsharing payment received by the ACO, PGP, NPPGP, or TGP.

Distribution payment means a payment from a TEAM collaborator that is an ACO, PGP, NPPGP, or TGP to a collaboration agent, under a distribution arrangement, composed only of gainsharing payments.

DME stands for durable medical equipment.

Downstream collaboration agent means an individual who is not a TEAM collaborator or a collaboration agent and who is a member of a PGP, NPPGP, or TGP that has entered into a downstream distribution arrangement with the same PGP, NPPGP, or TGP in which he or she is an owner or employee, and where the PGP, NPPGP, or TGP is a collaboration agent.

Downstream distribution arrangement means a financial arrangement between a collaboration agent that is both a PGP, NPPGP, or TGP and an ACO participant and a downstream collaboration agent for the sole purpose of sharing a distribution payment received by the PGP, NPPGP, or TGP.

Downstream participant means an individual or entity that has entered into a written arrangement with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent under which the downstream participant engages in one or more TEAM activities.

Dually eligible beneficiary means a beneficiary enrolled in both Medicare and full Medicaid benefits.

EHR stands for electronic health record.

Eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Episode category means one of the five episodes tested in TEAM as described at § 512.525(d).

Episode means all Medicare Part A and B items and services described in § 512.525(e) (and excluding the items and services described in § 512.525(f)) that are furnished to a beneficiary

described in § 512.535 during the time period that begins on the date of the beneficiary's admission to an anchor hospitalization or the date of the anchor procedure, as described at § 512.525(c), and ends on the 30th day following the date of discharge from the anchor hospitalization or anchor procedure, with the date of discharge or date of the anchor procedure itself being counted as the first day in the 30-day post-discharge period, as described at § 512.537. In the case that an anchor hospitalization for the same episode category occurs within 3 days of an anchor procedure, the anchor procedure episode is canceled, and the episode start date for the anchor hospitalization is the same as the outpatient procedure.

Essential access community hospital means a hospital as defined under § 412.109 of this chapter.

Final normalization factor refers to the national mean of the benchmark price for each MS–DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type.

Financial arrangements list means the list of eligible clinicians or MIPS eligible clinicians that have a financial arrangement with the TEAM participant, TEAM collaborator, collaboration agent, and downstream collaboration agent, as described in § 512.522(b).

Gainsharing payment means a payment from a TEAM participant to a TEAM collaborator, under a sharing arrangement, composed of only reconciliation payments, internal cost savings, or both.

HCPCS stands for Healthcare Common Procedure Coding System, which is used to bill for items and services.

Health disparities means preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health, health quality, or health outcomes that are experienced by one or more underserved communities within the TEAM participant's population of TEAM beneficiaries that the participant will aim to reduce.

Health equity goal means a targeted outcome relative to health equity plan performance measures.

Health equity plan means a document that identifies health equity goals, intervention strategies, and performance measures to improve health disparities identified within the TEAM participant's population of TEAM beneficiaries that the TEAM participant will aim to reduce as described in § 512.563.

Health equity plan intervention strategy means the initiative the TEAM participant creates and implements to reduce the identified health disparities as part of the health equity plan.

Health equity plan performance measure means a quantitative metric that the TEAM participant uses to measure changes in health disparities arising from the health equity plan intervention strategies.

HHA means a Medicare-enrolled home health agency.

High-cost outlier cap refers to the 99th percentile of regional spending for a given MS–DRG/HCPCS episode type in a given region, which is the amount at which episode spending would be capped for purposes of determining baseline and performance year episode spending.

Hospital means a hospital as defined in section 1886(d)(1)(B) of the Act.

Hospital discharge planning means the standards set forth in § 482.43 of this chapter.

ICD–CM stands for International Classification of Diseases, Clinical Modification.

Internal cost savings means the measurable, actual, and verifiable cost savings realized by the TEAM participant resulting from care redesign undertaken by the TEAM participant in connection with providing items and services to TEAM beneficiaries within an episode. Internal cost savings does not include savings realized by any individual or entity that is not the TEAM participant.

IPF stands for inpatient psychiatric facility.

IPPS stands for Inpatient Prospective Payment System, which is the payment system for subsection (d) hospitals as defined in section 1886(d)(1)(B) of the Act.

IRF stands for inpatient rehabilitation facility.

LIS stands for Medicare Part D Low-Income Subsidy.

Lower-extremity joint replacement (LEJR) means any hip, knee, or ankle replacement that is paid under MS–DRG 469, 470, 521, or 522 through the IPPS or HCPCS code 27447, 27130, or 27702 through the OPPS.

LTCH stands for long-term care hospital.

Major bowel procedure means any small or large bowel procedure paid through the IPPS under MS–DRG 329–331.

Mandatory CBSA means a core-based statistical area selected by CMS in accordance with § 512.520 where all eligible hospitals are required to participate in TEAM.

MDC stands for Major Diagnostic Category.

Medically necessary means reasonable and necessary for the diagnosis or treatment of an illness or injury, or to improve the functioning of a malformed body member.

Medicare severity diagnosis-related group (MS–DRG) means, for the purposes of this model, the classification of inpatient hospital discharges updated in accordance with § 412.10 of this chapter.

Medicare-dependent, small rural hospital (MDH) means a specific type of hospital that meets the classification criteria specified under § 412.108 of this chapter.

Member of the NPPGP or *NPPGP member* means a nonphysician practitioner or therapist who is an owner or employee of an NPPGP and who has reassigned to the NPPGP his or her right to receive Medicare payment.

Member of the PGP or *PGP member* means a physician, nonphysician practitioner, or therapist who is an owner or employee of the PGP and who has reassigned to the PGP his or her right to receive Medicare payment.

Member of the TGP or *TGP member* means a therapist who is an owner or employee of a TGP and who has reassigned to the TGP his or her right to receive Medicare payment.

MIPS stands for Merit-based Incentive Payment System

MIPS eligible clinician means a clinician as defined in § 414.1305 of this chapter.

Model-specific payment means a payment made by CMS only to TEAM participants and includes, unless otherwise specified, the reconciliation payment.

Model performance period means the 60-month period from January 1, 2026, to December 31, 2030, during which TEAM is being tested and the TEAM participant is held accountable for spending and quality.

Model start date means January 1, 2026, the start of the model performance period.

MS–DRG/HCPCS episode type refers to the subset of episodes within an episode category that are associated with a given MS–DRG/HCPCS, as set forth at § 512.540(a)(1).

Non-AAPM option means the option of TEAM for TEAM participants in Track 1 or for TEAM participants in Track 2 or Track 3 that do not attest to use of CEHRT as described in § 512.522.

Nonphysician practitioner means one of the following:

(1) A physician assistant who satisfies the qualifications set forth at § 410.74(a)(2)(i) and (ii) of this chapter.

(2) A nurse practitioner who satisfies the qualifications set forth at § 410.75(b) of this chapter.

(3) A clinical nurse specialist who satisfies the qualifications set forth at § 410.76(b) of this chapter.

(4) A certified registered nurse anesthetist (as defined at § 410.69(b) of this chapter).

(5) A clinical social worker (as defined at § 410.73(a) of this chapter).

(6) A registered dietician or nutrition professional (as defined at § 410.134 of this chapter).

NPI stands for National Provider Identifier.

NPPGP stands for Non-Physician Provider Group Practice, which means an entity that is enrolled in Medicare as a group practice, includes at least one owner or employee who is a nonphysician practitioner, does not include a physician owner or employee, and has a valid and active TIN.

NPRA stands for Net Payment Reconciliation Amount, which means the dollar amount representing the difference between the reconciliation target price and performance year spending, after adjustments for quality and stop-gain/stop-loss limits, but prior to the post-episode spending adjustment.

OIG stands for the Department of Health and Human Services Office of the Inspector General.

OP means an outpatient procedure for which the institutional claim is billed by the hospital through the OPPS.

OPPS stands for the Outpatient Prospective Payment System.

PAC stands for post-acute care.

PBPM stands for per-beneficiary-per-month.

Performance year means a 12-month period beginning on January 1 and ending on December 31 of each year during the model performance period.

Performance year spending means the sum of standardized Medicare claims payments during the performance year for the items and services that are included in the episode in accordance with § 512.525(e), excluding the items and services described in § 512.525(f).

PGP stands for physician group practice.

Physician has the meaning set forth in section 1861(r) of the Act.

Post-episode spending amount means the sum of all Medicare Parts A and B payments for items and services furnished to a beneficiary within 30 days after the end of an episode and includes the prorated portion of services that began during the episode and extended into the 30-day post-episode period.

Preliminary target price refers to the target price provided to the TEAM participant prior to the start of the performance year, which is subject to adjustment at reconciliation, as set forth at § 512.540.

Primary care services has the meaning set forth in section 1842(i)(4) of the Act.

Prospective normalization factor refers to the multiplier incorporated into the preliminary target price to ensure that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price, calculated as set forth in § 512.540(b)(6).

Prospective trend factor refers to the multiplier incorporated into the preliminary target price to estimate changes in spending patterns between the baseline period and the performance year, calculated as set forth in § 512.540(b)(7).

Provider means a ''provider of services'' as defined under section 1861(u) of the Act and codified in the definition of ''provider'' at § 400.202 of this chapter.

Provider of outpatient therapy services means an entity that is enrolled in Medicare as a provider of therapy services and furnishes one or more of the following:

(1) Outpatient physical therapy services as defined in § 410.60 of this chapter.

(2) Outpatient occupational therapy services as defined in § 410.59 of this chapter.

(3) Outpatient speech-language pathology services as defined in § 410.62 of this chapter.

QP stands for Qualifying APM Participant as defined in § 414.1305 of this chapter.

Quality-adjusted reconciliation amount refers to the dollar amount representing the difference between the reconciliation target price and performance year spending, after adjustments for quality, but prior to application of stop-gain/stop-loss limits and the post-episode spending adjustment.

Raw quality measure score means the quality measure value as obtained from the Hospital Inpatient Quality Reporting Program and the Hospital-Acquired Condition Reduction Program.

Reconciliation amount means the dollar amount representing the difference between the reconciliation target price and performance year spending, prior to adjustments for quality, stop-gain/stop-loss limits, and post-episode spending.

Reconciliation payment amount means the amount that CMS may owe to a TEAM participant after reconciliation as determined in accordance with § 512.550(g).

Reconciliation target price means the target price applied to an episode at reconciliation, as determined in accordance with § 512.545.

Region means one of the nine U.S. census divisions, as defined by the U.S. Census Bureau.

Reorganization event refers to a merger, consolidation, spin off or other restructuring that results in a new hospital entity under a given CCN.

Repayment amount means the amount that the TEAM participant may owe to Medicare after reconciliation as determined in accordance with § 512.550(g).

Rural hospital means an IPPS hospital that meets one of the following criteria:

(1) Is located in a rural area as defined under § 412.64 of this chapter.

(2) Is located in a rural census tract defined under § 412.103(a)(1) of this chapter.

(3) Has reclassified as a rural hospital under § 412.103 of this chapter.

(4) Is a rural referral center (RRC), which has the same meaning given this term under § 412.96 of this chapter.

Safety Net hospital means an IPPS hospital that meets at least one of the following criteria:

(1) Exceeds the 75th percentile of the proportion of Medicare beneficiaries considered dually eligible for Medicare and Medicaid across all PPS acute care hospitals in the baseline period.

(2) Exceeds the 75th percentile of the proportion of Medicare beneficiaries partially or fully eligible to receive Part D low-income subsidies across all PPS acute care hospitals in the baseline period.

Scaled quality measure score means the score equal to the percentile to which the TEAM participant's raw quality measure score would have belonged in the CQS baseline period.

Sharing arrangement means a financial arrangement between a TEAM participant and a TEAM collaborator for the sole purpose of making gainsharing payments or alignment payments under TEAM.

SNF stands for skilled nursing facility.

Sole community hospital (SCH) means a hospital that meets the classification criteria specified in § 412.92 of this chapter.

Spinal fusion means any cervical, thoracic, or lumbar spinal fusion procedure paid through the IPPS under MS–DRG 453–455, 459–460, or 471–473, or through the OPPS under HCPCS codes 22551, 22554, 22612, 22630, or 22633.

SHFFT (Surgical Hip and Femur Fracture Treatment) means a hip fixation procedure, with or without

fracture reduction, but excluding joint replacement, that is paid through the IPPS under MS–DRGs 480–482.

Supplier means a supplier as defined in section 1861(d) of the Act and codified at § 400.202 of this chapter.

TAA stands for total ankle arthroplasty.

TEAM activities mean any activity related to promoting accountability for the quality, cost, and overall care for TEAM beneficiaries and performance in the model, including managing and coordinating care; encouraging investment in infrastructure and redesigned care processes for high quality and efficient service delivery; or carrying out any other obligation or duty under the model.

TEAM beneficiary means a beneficiary who meets the beneficiary inclusion criteria in § 512.535 and who is in an episode.

TEAM collaborator means an ACO or one of the following Medicare-enrolled individuals or entities that enters into a sharing arrangement:

(1) SNF.
(2) HHA.
(3) LTCH.
(4) IRF.
(5) Physician.
(6) Nonphysician practitioner.
(7) Therapist in private practice.
(8) CORF.
(9) Provider of outpatient therapy services.
(10) PGP.
(11) Hospital.
(12) CAH.
(13) NPPGP.
(14) Therapy Group Practice (TGP).

TEAM data sharing agreement means an agreement between the TEAM participant and CMS that includes the terms and conditions for any beneficiary-identifiable data shared with the TEAM participant under § 512.562.

TEAM HCC count refers to the TEAM Hierarchical Condition Category count, which is a categorical risk adjustment variable designed to reflect a beneficiary's overall health status during a 90-day lookback period by grouping similar diagnoses into one related category and counting the total number of diagnostic categories that apply to the beneficiary.

TEAM participant means an acute care hospital that initiates episodes and is paid under the IPPS with a CCN primary address located in one of the geographic areas selected for participation in TEAM in accordance with § 512.515.

TEAM payment means a payment made by CMS only to TEAM participants, or a payment adjustment made only to payments made to TEAM participants, under the terms of TEAM that is not applicable to any other providers or suppliers.

TEAM reconciliation report means the report prepared after each reconciliation that CMS provides to the TEAM participant notifying the TEAM participant of the outcome of the reconciliation.

TGP or therapy group practice means an entity that is enrolled in Medicare as a therapy group in private practice, includes at least one owner or employee who is a therapist in private practice, does not include an owner or employee who is a physician or nonphysician practitioner, and has a valid and active TIN.

THA means total hip arthroplasty.

Therapist means one of the following individuals as defined at § 484.4 of this chapter:

(1) Physical therapist.
(2) Occupational therapist.
(3) Speech-language pathologist.

Therapist in private practice means a therapist that—

(1) Complies with the special provisions for physical therapists in private practice in § 410.60(c) of this chapter;

(2) Complies with the special provisions for occupational therapists in private practice in § 410.59(c) of this chapter; or

(3) Complies with the special provisions for speech-language pathologists in private practice in § 410.62(c) of this chapter.

TIN stands for taxpayer identification number.

TKA stands for total knee arthroplasty.

Track 1 means a participation track in TEAM in which a TEAM participant may participate for the first performance year. TEAM participants in Track 1 are subject to the CQS adjustment percentage described in § 512.550(d)(1)(i), the limitations on gain described in § 512.550(e)(2) and the calculation of the reconciliation payment described in § 512.550(g).

Track 2 means a participation track in TEAM in which certain TEAM participants, as described in § 512.520(b)(3), may request to participate in for performance years 2 through 5. TEAM participants in Track 2 are subject to the CQS adjustment percentage described in § 512.550(d)(1)(ii), limitations on gain and loss described in § 512.550(e)(2) and § 512.550(e)(3), and the calculation of the reconciliation payment or repayment amount described in § 512.550(g).

Track 3 means a participation track in TEAM in which a TEAM participant may participate in for performance years 1 through 5. TEAM participants in Track 3 are subject to the CQS adjustment percentage described in § 512.550(d)(1)(iii), limitations on loss and gain described in § 512.550(e)(1) and in § 512.550(e)(2), and the calculation of the reconciliation payment or repayment amount described in § 512.550(g).

Underserved community means a population sharing a particular characteristic, including geography, that has been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.

U.S. Territories means American Samoa, the Federated States of Micronesia, Guam, the Marshall Islands, and the Commonwealth of the Northern Mariana Islands, Palau, Puerto Rico, U.S. Minor Outlying Islands, and the U.S. Virgin Islands.

Weighted scaled score means the scaled quality measure score multiplied by its normalized weight.

TEAM Participation

§ 512.515 Geographic areas.

(a) *General.* CMS selects the CBSAs included in TEAM. All acute care hospitals paid under the IPPS and located within the selected CBSAs must participate in TEAM. CMS uses a stratified random sampling to select the CBSAs.

(b) *Exclusions.* CMS excludes from the selection of geographic areas CBSAs that meet any of the following criteria:

(1) Are located entirely in the State of Maryland.

(2) Are located partially in Maryland, and in which more than 50 percent of the five episode categories tested in TEAM were initiated at a Maryland hospital between January 1, 2022 and June 30, 2023.

(3) Did not have at least one episode for at least one of the five episode categories tested in TEAM between January 1, 2022 and June 30, 2023.

(c) *Stratification.* CMS stratifies the CBSAs that are not excluded in accordance with paragraph (b) of this section into ''high'' and ''low'' categories based four characteristics. CMS then stratifies the CBSAs into mutually exclusive groups corresponding to the 16 unique combinations of high and low values, based on the median, across the four characteristics. CMS then moves outlier CBSAs with a very high number of safety net hospitals into a separate group and thereby creates a total of 17 mutually exclusive stratified groups. The four characteristics are as follows:

(1) Average episode spend for a broad set of episode categories tested in the

BPCI Advanced Model, as described in § 512.505, between January 1, 2022 and June 30, 2023.

(2) Number of acute care hospitals paid under the IPPS between January 1, 2022 and June 30, 2023.

(3) Past exposure to Bundled Payments for Care Improvement (BPCI) Models 2, 3, and 4, as described in § 512.505, Comprehensive Care for Joint Replacement (CJR) as described in § 512.505, or BPCI Advanced between October 1, 2013 and December 31, 2022.

(4) Number of Safety Net hospitals in 2022 that have initiated at least one episode between January 1, 2022 and June 30, 2023 for at least one of the five episode categories tested in TEAM.

(d) *Random selection.* CMS randomly selects CBSAs from the 17 stratified groups, with a higher chance of selection for those CBSAs with a high number of safety net hospitals or low past exposure to bundles and a lower chance of selection for all other CBSAs.

§ 512.520 Participation tracks.

(a) *For performance year 1:* (1) The TEAM participant may choose to participate in Track 1 or Track 3.

(2) The TEAM participant must notify CMS of its track choice, prior to performance year 1, in a form and manner and by a date specified by CMS.

(3) CMS assigns the TEAM participant to Track 1 for performance year 1 if a TEAM participant does not choose a track in the form and manner and by the date specified by CMS.

(b) *For performance years 2 through 5:* (1) CMS assigns a TEAM participant to participate in Track 3 unless the TEAM participant requests to participate in Track 2 and receives approval from CMS to participate in Track 2.

(2) The TEAM participant must notify CMS of its Track 2 request prior to performance year 2, and prior to every performance year thereafter, in a form and manner and by a date specified by CMS.

(3) CMS does not approve a TEAM participant's request to participate in Track 2 submitted in accordance with paragraph (b)(2) of this section unless the TEAM participant is one of the following hospital types at the time of the request:

(i) Medicare-dependent hospital (as defined in § 512.505).

(ii) Rural hospital (as defined in § 512.505).

(iii) Safety Net hospital (as defined in § 512.505).

(iv) Sole community hospital (as defined in § 512.505).

(v) Essential access community hospital (as defined in § 512.505).

(4) A TEAM participant who does not notify CMS of its Track 2 request prior to a given performance year in the form and manner and by the date specified by CMS or who is not one of the hospital types specified in paragraph (b)(3) of this section at the time of the request is assigned to Track 3 for the applicable performance year.

§ 512.522 APM options.

(a) *TEAM APM options.* For performance years 1 through 5, a TEAM participant may choose either of the following options based on their CEHRT use and track participation:

(1) *AAPM option.* A TEAM participant participating in Track 2 or Track 3 may select the AAPM option by attesting in a form and manner and by a date specified by CMS to their use of CEHRT, as defined in § 414.1305 of this chapter, on an annual basis prior to the start of each performance year.

(i) A TEAM participant that selects the AAPM option as provided for in paragraph (a)(1) must provide their CMS electronic health record certification ID in a form and manner and by a date specified by CMS on annual basis prior to the end of each performance year.

(ii) A TEAM participant that selects the AAPM option as provided for in paragraph (a)(1) must retain documentation of their attestation to CEHRT use and provide access to the documentation in accordance with § 512.586.

(2) *Non-AAPM option.* CMS assigns the TEAM participant to the non-AAPM option if the TEAM participant is in Track 1 or if the TEAM participant is in Track 2 or Track 3 and does not attest in a form and manner and by a date specified by CMS to their use of CEHRT as defined in § 414.1305 of this chapter.

(b) *Financial arrangements list.* A TEAM participant with TEAM collaborators, collaboration agents, or downstream collaboration agents during a performance year must submit to CMS a financial arrangements list in a form and manner and by a date specified by CMS on a quarterly basis for each performance year. The financial arrangements list must include the following:

(1) *TEAM collaborators.* For each physician, nonphysician practitioner, or therapist who is a TEAM collaborator during the performance year:

(i) The name, TIN, and NPI of the TEAM collaborator.

(ii) The start date and, if applicable, end date, for the sharing arrangement between the TEAM participant and the TEAM collaborator.

(2) *Collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a collaboration agent during the performance year:

(i) The name, TIN, and NPI of the collaboration agent and the name and TIN of the TEAM collaborator with which the collaboration agent has entered into a distribution arrangement.

(ii) The start date and, if applicable, end date, for the distribution arrangement between the TEAM collaborator and the collaboration agent.

(3) *Downstream collaboration agents.* For each physician, nonphysician practitioner, or therapist who is a downstream collaboration agent during the performance year:

(i) The name, TIN, and NPI of the downstream collaboration agent and the name and TIN of the collaboration agent with which the downstream collaboration agent has entered into a downstream distribution arrangement.

(ii) The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

(c) *Clinician engagement list.* A TEAM participant must submit to CMS a clinician engagement list in a form and manner and by a date specified by CMS on a quarterly basis during each performance year. The clinician engagement list must include the following:

(1) For each physician, nonphysician practitioner, or therapist who is not on a TEAM participant's financial arrangements list during the performance year but who does have a contractual relationship with the TEAM participant and participates in TEAM activities during the performance year:

(i) The name, TIN, and NPI of the physician, nonphysician practitioner, or therapist.

(ii) The start date and, if applicable, the end date for the contractual relationship between the physician, nonphysician practitioner, or therapist and the TEAM participant.

(d) *Attestation to no individuals.* A TEAM participant with no individuals that meet the criteria specified in paragraphs (b)(1) through (3) of this section for the financial arrangements list or paragraph (c) of this section for the clinician engagement list must attest in a form and manner and by a date specified by CMS that there are no financial arrangements or clinician engagements to report.

(e) *Documentation requirements.* A TEAM participant that submits a financial arrangements list specified in paragraph (b) of this section or a clinician engagement list specified in paragraph (c) of this section must retain and provide access to the documentation in accordance with § 512.586.

Scope of Episodes Being Tested

§ 512.525 Episodes.

(a) *Time periods.* All episodes must begin on or after January 1, 2026 and end on or before December 31, 2030.

(b) *Episode attribution.* All items and services included in the episode are attributed to the TEAM participant at which the anchor hospitalization or anchor procedure, as applicable, occurs.

(c) *Episode initiation.* An episode is initiated by—

(1) A beneficiary's admission to a TEAM participant for an anchor hospitalization that is paid under a MS–DRG specified in paragraph (d) of this section; or

(2) A beneficiary's receipt of an anchor procedure billed under a HCPCS code specified in paragraph (d) of this section. If an anchor hospitalization is initiated on the same day as or within 3 days of an outpatient procedure for the same episode category, the episode start date will be that of the outpatient procedure rather than the admission date, and an anchor procedure will not be initiated.

(d) *Episode categories.* The MS–DRGs and HCPCS codes included in the episodes are as follows:

(1) *Lower extremity joint replacement (LEJR):*

(i) IPPS discharge under MS–DRG 469, 470, 521, or 522; or

(ii) OPPS claim for HCPCS codes 27447, 27130, or 27702.

(2) *Surgical hip/femur fracture treatment (SHFFT).* IPPS discharge under MS–DRG 480 to 482.

(3) *Coronary artery bypass graft (CABG).* IPPS discharge under MS–DRG 231 to 236.

(4) *Spinal fusion:*

(i) IPPS discharge under MS–DRG 453, 454, 455, 459, 460, 471, 472, 473; or

(ii) OPPS claim for HCPCS codes 22551, 22554, 22612, 22630, or 22633.

(5) *Major bowel procedure.* IPPS discharge under MS–DRG 329 to 331.

(e) *Included services.* All Medicare Part A and B items and services are included in the episode, except as specified in paragraph (f) of this section. These services include, but are not limited to, the following:

(1) Physicians' services.

(2) Inpatient hospital services (including hospital readmissions).

(3) IPF services.

(4) LTCH services.

(5) IRF services.

(6) SNF services.

(7) HHA services.

(8) Hospital outpatient services.

(9) Outpatient therapy services.

(10) Clinical laboratory services.

(11) DME.

(12) Part B drugs and biologicals, except for those excluded under paragraph (f) of this section.

(13) Hospice services.

(14) Part B professional claims dated in the 3 days prior to an anchor hospitalization if a claim for the surgical procedure for the same episode category is not detected as part of the hospitalization because the procedure was performed by the TEAM participant on an outpatient basis but the patient was subsequently admitted as an inpatient.

(f) *Excluded services.* The following items, services, and payments are excluded from the episode:

(1) Select items and services considered unrelated to the anchor hospitalization or the anchor procedure for episodes in the baseline period and performance year, including, but not limited to, the following:

(i) Inpatient hospital admissions for MS–DRGs that group to the following categories of diagnoses:

(A) Oncology.

(B) Trauma medical.

(C) Organ transplant.

(D) Ventricular shunt.

(ii) Inpatient hospital admissions that fall into the following Major Diagnostic Categories (MDCs):

(A) MDC 02 (Diseases and Disorders of the Eye).

(B) MDC 14 (Pregnancy, Childbirth, and Puerperium).

(C) MDC 15 (Newborns).

(D) MDC 25 (Human Immunodeficiency Virus).

(2) New technology add-on payments, as defined in part 412, subpart F of this chapter for episodes in the baseline period and performance year.

(3) Transitional pass-through payments for medical devices as defined in § 419.66 of this chapter for episodes initiated in the baseline period and performance year.

(4) Hemophilia clotting factors provided in accordance with § 412.115 of this chapter for episodes in the baseline period and performance year.

(5) Part B payments for low-volume drugs, high-cost drugs and biologicals, and blood clotting factors for hemophilia for episodes in the baseline period and performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biological HCPCS codes that are billed in fewer than 31 episodes in total across all episodes in TEAM during the baseline period;

(ii) Drug/biological HCPCS codes that are billed in at least 31 episodes in the baseline period and have a mean cost of greater than $25,000 per episode in the baseline period; and

(iii) HCPCS codes corresponding to clotting factors for hemophilia patients, identified in the quarterly average sales price file for certain Medicare Part B drugs and biologicals as HCPCS codes with clotting factor equal to 1, HCPCS codes for new hemophilia clotting factors not included in the baseline period, and other HCPCS codes identified as hemophilia.

(6) Part B payments, in addition to those listed in paragraph (f)(5) of this section, for low-volume drugs, high-cost drugs and biologicals, and blood clotting factors for hemophilia for episodes initiated in the performance year, billed on outpatient, carrier, and DME claims, defined as—

(i) Drug/biological HCPCS codes that were not captured in the baseline period and appear in 10 or fewer episodes in the performance year;

(ii) Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, and have a mean cost of greater than $25,000 per episode in the performance year; and

(iii) Drug/biological HCPCS codes that were not included in the baseline period, appear in more than 10 episodes in the performance year, have a mean cost of $25,000 or less per episode in the performance year, and correspond to a drug/biological that appears in the baseline period but was assigned a new HCPCS code between the baseline period and the performance year.

(iv) HCPCS codes for new hemophilia clotting factors not included in the baseline period.

(g) *List of excluded services.* The list of excluded MS–DRGs, MDCs, and HCPCS codes is posted on the CMS website.

(h) *Updating the list of excluded services.* The list of excluded services is updated through rulemaking to reflect:

(1) Changes to the MS–DRGs under the IPPS.

(2) Coding changes.

(3) Other issues brought to CMS' attention.

§ 512.535 Beneficiary inclusion criteria.

(a) Episodes tested in TEAM include only those in which care is furnished to beneficiaries who meet all of the following criteria upon admission for an anchor procedure or anchor hospitalization:

(1) Are enrolled in Medicare Parts A and B.

(2) Are not eligible for Medicare on the basis of having end stage renal disease, as described in § 406.13 of this chapter.

(3) Are not enrolled in any managed care plan (for example, Medicare

Advantage, health care prepayment plans, or cost-based health maintenance organizations).

(4) Are not covered under a United Mine Workers of America health care plan.

(5) Have Medicare as their primary payer.

(b) The episode is canceled in accordance with § 512.537(b) if at any time during the episode a beneficiary no longer meets all of the criteria in this section.

§ 512.537 Determination of the episode.

(a) *Episode conclusion.* (1) An episode ends on the 30th day following the date of the anchor procedure or the date of discharge from the anchor hospitalization, as applicable, with the date of the anchor procedure or the date of discharge from the anchor hospitalization being counted as the first day in the 30-day post-discharge period.

(b) *Cancellation of an episode.* The episode is canceled and is not included in the reconciliation calculation as specified in § 512.545 if any of the following occur:

(1) The beneficiary ceases to meet any criterion listed in § 512.535.

(2) The beneficiary dies during the anchor hospitalization or the outpatient stay for the anchor procedure.

(3) The episode qualifies for cancellation due to extreme and uncontrollable circumstances. An extreme and uncontrollable circumstance occurs if both of the following criteria are met:

(i) The TEAM participant has a CCN primary address that—

(A) Is located in an emergency area, as those terms are defined in section 1135(g) of the Act, for which the Secretary has issued a waiver under section 1135 of the Act; and

(B) Is located in a county, parish, or tribal government designated in a major disaster declaration or emergency disaster declaration under the Stafford Act.

(ii) The date of admission to the anchor hospitalization or the date of the anchor procedure is during an emergency period (as defined in section 1135(g) of the Act) or in the 30 days before the date that the emergency period (as defined in section 1135(g) of the Act) begins.

Pricing Methodology

§ 512.540 Determination of preliminary target prices.

(a) *Preliminary target price application.* CMS establishes preliminary target prices for TEAM participants for each performance year of the model as follows:

(1) *MS–DRG/HCPCS episode type.* CMS uses the MS–DRGs and, as applicable, HCPCS codes specified in § 512.525(d) when calculating the preliminary target prices for each MS–DRG/HCPCS episode type.

(i) CMS determines a separate preliminary target price for each of the 24 MS–DRGs specified in § 512.525(d).

(ii) Preliminary target prices for a subset of the MS–DRGs specified in § 512.525(d) include certain HCPCS codes as follows:

(A) HCPCS 27130 and 27447 are included in MS–DRG 470

(B) HCPCS 27702 is included in MS–DRG 469.

(C) HCPCS 22633 is included in MS–DRG 455.

(D) HCPCS 22612 and 22630 are included in MS–DRG 460.

(E) HCPCS 22551 and 22554 are included in MS–DRG 473.

(2) *Applicable time period for preliminary target prices.* CMS calculates preliminary target prices for each MS–DRG/HCPCS episode type and region for each performance year and applies the preliminary target price to each episode based on the episode's date of discharge from the anchor hospitalization or the episode's date of the anchor procedure, as applicable.

(3) *Episodes that begin in one performance year and end in the subsequent performance year.* CMS applies the preliminary target price to the episode based on the date of discharge from the anchor hospitalization or the date of the anchor procedure, as applicable, but reconciles the episode based on the end date of the episode.

(b) *Preliminary target price calculation.*

(1) CMS calculates preliminary target prices based on average baseline episode spending for the region where the TEAM participant is located.

(i) The region used for calculating the preliminary target price corresponds to the U.S. Census Division associated with the primary address of the CCN of the TEAM participant, and the regional episode spending amount is based on all hospitals in the region, except as specified in § 512.540(b)(1)(ii).

(ii) In cases where a TEAM participant is located in a CBSA selected for participation in TEAM which spans more than one region, the TEAM participant and all other hospitals in the CBSA will be grouped into the region where the most populous city in the CBSA is located for pricing and payment calculations.

(2) CMS uses the following baseline periods to determine baseline episode spending:

(i) *Performance Year 1:* Episodes beginning on January 1, 2022 through December 31, 2024.

(ii) *Performance Year 2:* Episodes beginning on January 1, 2023 through December 31, 2025.

(iii) *Performance Year 3:* Episodes beginning on January 1, 2024 through December 31, 2026.

(iv) *Performance Year 4:* Episodes beginning on January 1, 2025 through December 31, 2027.

(v) *Performance Year 5:* Episodes beginning on January 1, 2026 through December 31, 2028.

(3) CMS calculates the benchmark price as the weighted average of baseline episode spending, applying the following weights:

(i) Baseline episode spending from baseline year 1 is weighted at 17 percent.

(ii) Baseline episode spending from baseline year 2 is weighted at 33 percent.

(iii) Baseline episode spending from baseline year 3 is weighted at 50 percent.

(4) *Exception for high episode spending.* CMS applies a high-cost outlier cap to baseline episode spending at the 99th percentile of regional spending for each of the MS–DRG/HCPCS episode types specified in § 512.540(a)(1)(ii).

(5) *Exclusion of incentive programs and add-on payments under existing Medicare payment systems.* Certain Medicare incentive programs and add-on payments are excluded from baseline episode spending by using, with certain modifications, the CMS Price (Payment) Standardization Detailed Methodology used for the Medicare spending per beneficiary measure in the Hospital Value-Based Purchasing Program.

(6) *Prospective normalization factor.* Based on the episodes in the most recent calendar year of the baseline period, CMS calculates a prospective normalization factor, which is a multiplier that ensures that the average risk adjusted target price does not exceed the average unadjusted target price, by doing the following:

(i) CMS applies risk adjustment multipliers, as specified in § 512.545(a)(1) through (3), to the most recent baseline year episodes to calculate the estimated risk-adjusted target price for all performance year episodes.

(ii) CMS divides the mean of the preliminary target price for each episode across all hospitals and regions by the mean of the estimated risk-adjusted

target price calculated in § 512.540(b)(6)(i) for the same episode types across all hospitals and regions.

(7) *Prospective trend factor.* CMS calculates the average regional episode spending for each MS–DRG/HCPCS episode type using the most recent calendar year of the applicable baseline period. CMS then calculates the difference between the average regional spending for each MS–DRG/HCPCS episode type during the most recent calendar year of the baseline period and the average regional spending for each MS–DRG/HCPCS episode type during the first years of the baseline period to determine the prospective trend factor.

(8) *Communication of preliminary target prices.* CMS communicates the preliminary target prices for each MS–DRG/HCPCS episode type for each region to the TEAM participant before the performance year in which they apply.

(c) *Discount factor.* CMS incorporates a discount factor of 3 percent to the TEAM participant's preliminary episode target prices intended to reflect Medicare's potential savings from TEAM.

§ 512.545 Determination of reconciliation target prices.

CMS calculates the reconciliation target price as follows:

(a) CMS risk adjusts the preliminary episode target prices computed under § 512.540 at the beneficiary level using a TEAM Hierarchical Condition Category (HCC) count risk adjustment factor, an age bracket risk adjustment factor, and a social need risk adjustment factor.

(1) The TEAM HCC count risk adjustment factor uses five variables, representing beneficiaries with zero, one, two, three, or four or more CMS–HCC conditions based on a 90-day lookback period that begins 91 days prior to the anchor hospitalization or anchor procedure and ends on the day prior to the anchor hospitalization or anchor procedure.

(2) The age bracket risk adjustment factor uses four variables, representing beneficiaries in the following age groups as of the first day of the episode:

(i) Less than 65 years.

(ii) 65 to less than 75 years.

(iii) 75 years to less than 85 years.

(iv) 85 years or more.

(3) The social need risk adjustment factor uses two variables, representing beneficiaries that, as of the first day of the episode—

(i) Meet one or more of the following measures of social need:

(A) State ADI above the 8th decile.

(B) National ADI above the 80th percentile.

(C) Eligibility for the low-income subsidy.

(D) Eligibility for full Medicaid benefits.

(ii) Do not meet any of the three measures of social need in § 512.545(a)(1)(iii)(A).

(b) All risk adjustment factors are computed prior to the start of the performance year via a linear regression analysis. The regression analysis is computed using 3 years of claims data as follows:

(1) For performance year 1, CMS uses claims data with dates of service dated January 1, 2022 to December 31, 2024.

(2) For performance year 2, CMS uses claims data with dates of service dated January 1, 2023 to December 31, 2025.

(3) For performance year 3, CMS uses claims data with dates of service dated January 1, 2024 to December 31, 2026.

(4) For performance year 4, CMS uses claims data with dates of service dated January 1, 2025 to December 31, 2027.

(5) For performance year 5, CMS uses claims data with dates of service dated January 1, 2026 to December 30, 2028.

(c) The annual linear regression analysis produces exponentiated coefficients to determine the anticipated marginal effect of each risk adjustment factor on episode costs. CMS transforms, or exponentiates, these coefficients, and the resulting coefficients are the TEAM HCC count risk adjustment factor, the age bracket risk adjustment factor, and the social need risk adjustment factor that would be used during reconciliation for the subsequent performance year.

(d) At the time of reconciliation, the preliminary target prices computed under § 512.540 are risk adjusted at the beneficiary level by applying the applicable TEAM HCC count risk adjustment factor, the age bracket risk adjustment factor, and the social need risk adjustment factor specific to the beneficiary in the episode, as set forth in paragraph (a)(1) of this section.

(e) The risk-adjusted preliminary target prices are normalized at reconciliation to ensure that the average of the total risk-adjusted preliminary target price does not exceed the average of the total non-risk adjusted preliminary target price.

(1) The final normalization factor at reconciliation—

(i) Is the national mean of the benchmark price for each MS–DRG/HCPCS episode type divided by the national mean of the risk-adjusted benchmark price for the same MS–DRG/HCPCS episode type.

(ii) As applied, cannot exceed + / − 5 percent of the prospective normalization factor (as specified in § 512.540(b)(7)).

(2) CMS applies the final normalization factor to the previously calculated, beneficiary level, risk-adjusted target prices specific to each region and MS–DRG/HCPCS episode type (as specified in paragraph (a)(4) of this section) to calculate the reconciliation target prices, which are compared to performance year spending at reconciliation, as specified in § 512.550(c).

Quality Measures and Composite Quality Score

§ 512.547 Quality measures, composite quality score, and display of quality measures.

(a) *Quality measures.* CMS calculates the quality measures used to evaluate the TEAM participant's performance using Medicare claims data or patient-reported outcomes data that requires no action or reporting by the TEAM participants beyond what is currently required in the Hospital Inpatient Quality Reporting Program and the Hospital-Acquired Condition Reduction Program. The following quality measures are used for public reporting and for determining the TEAM participant's CQS as described in paragraph (b) of this section:

(1) For all episode categories: Hybrid Hospital-Wide All-Cause Readmission Measure with Claims and Electronic Health Record Data (CMIT ID #356);

(2) For all episode categories: CMS Patient Safety and Adverse Events Composite (CMS PSI 90) (CMIT ID #135); and

(3) For LEJR episodes: Hospital-Level Total Hip and/or Total Knee Arthroplasty (THA/TKA) Patient-Reported Outcome-Based Performance Measure (PRO–PM) (CMIT ID #1618).

(b) *Calculation of the composite quality score (CQS).* (1) CMS converts the TEAM participant's raw quality measure score for the performance year into a scaled quality measure score by comparing the raw quality measure score to the distribution of raw quality measure score percentiles among a national cohort of hospitals, consisting of TEAM participants and hospitals not participating in TEAM, in the CQS baseline period.

(i) CMS assigns a scaled quality measure score equal to the percentile to which the TEAM Participant's raw quality measure score would have belonged in the CQS baseline period.

(A) CMS assigns the higher scaled quality measure score if the TEAM participant's raw quality measure score straddles two percentiles in the CQS baseline period.

(B) CMS assigns a scaled quality measure score of 100 if the TEAM

participant's raw quality measure score is greater than the maximum of the raw quality measure scores in the CQS baseline period.

(C) CMS assigns a scaled quality measure score of 0 if the raw quality measure score is less than the minimum of the raw quality measure scores in the baseline period.

(D) CMS does not assign a scaled quality measure score if the TEAM participant has no raw quality measure score.

(2) CMS calculates a normalized weight for each quality measure by dividing the TEAM participant's volume of attributed episodes for a given quality measure by the total volume of all the TEAM participant's attributed episodes.

(3) CMS calculates a weighted scaled score for each quality measure by multiplying each quality measure's scaled quality measure score, computed under paragraph (b)(2) of this section, by its normalized weight, computed under paragraph (b)(3) of this section.

(4) CMS sums each quality measure's weighted scaled score, computed under paragraph (b)(4) of this section, to construct the CQS.

(c) *Display of quality measures.* (1) CMS displays quality measure results on the publicly available CMS website that is specific to TEAM, in a form and manner consistent with other publicly reported measures.

(2) CMS shares quality measures with the TEAM participant prior to display on the CMS website.

(3) CMS uses the following time periods to share quality measure performance:

(i) Quality measure performance in performance year 1 is reported in 2027.

(ii) Quality measure performance in performance year 2 is reported in 2028.

(iii) Quality measure performance in performance year 3 is reported in 2029.

(iv) Quality measure performance in performance year 4 is reported in 2030.

(v) Quality measure performance in performance year 5 is reported in 2031.

Reconciliation and Review Process

§ 512.550 Reconciliation process and determination of the reconciliation payment or repayment amount.

(a) *General.* Providers and suppliers furnishing items and services included in the episode bill for such items and services in accordance with existing Medicare rules.

(b) *Reconciliation process.* Six months after the end of each performance year, CMS does the following:

(1) Performs a reconciliation calculation to establish a reconciliation payment or repayment amount for each TEAM participant.

(2) For TEAM participants that experience a reorganization event in which one or more hospitals reorganize under the CCN of a TEAM participant, performs—

(i) Separate reconciliation calculations for each predecessor TEAM participant for episodes where the anchor hospitalization admission or the anchor procedure occurred before the effective date of the reorganization event; and

(ii) Reconciliation calculations for each new or surviving TEAM participant for episodes where the anchor hospitalization admission or anchor procedure occurred on or after the effective date of the reorganization event.

(c) *Calculation of the reconciliation amount.* CMS compares the reconciliation target prices described in § 512.545 and the TEAM participant's performance year spending to establish a reconciliation amount for the TEAM participant for each performance year as follows:

(1) CMS determines the performance year spending for each episode included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)) using claims data that is available 6 months after the end of the performance year.

(2) CMS calculates and applies the high-cost outlier cap for performance year episode spending by applying the calculation described in § 512.540(b)(4) to performance year episode spending.

(3) CMS applies the adjustments specified in § 512.545 to the preliminary target prices computed in accordance with § 512.540 to calculate the reconciliation target prices.

(4) CMS aggregates the reconciliation target prices computed in accordance with paragraph (c)(3) of this section for all episodes included in the performance year (other than episodes that have been canceled in accordance with § 512.537(b)).

(5) CMS subtracts the performance year spending amount determined under paragraph (c)(1–2) of this section from the aggregated reconciliation target price amount determined under paragraph (c)(4) of this section to determine the reconciliation amount.

(d) *Calculation of the quality-adjusted reconciliation amount.* CMS adjusts the reconciliation amount based on the Composite Quality Score as follows:

(1) CMS calculates a CQS adjustment percentage based on a TEAM participant's CQS, computed in accordance with § 512.547(b).

(i) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts for TEAM participants in Track 1.

(ii) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts and up to 15 percent for negative reconciliation amounts for TEAM participants in Track 2.

(iii) CMS applies a CQS adjustment percentage up to 10 percent for positive reconciliation amounts and up to 10 percent for negative reconciliation amounts for TEAM participants in Track 3.

(2) CMS multiplies the CQS adjustment percentage, computed under paragraph (d)(1) of this section, by the TEAM participant's positive or negative reconciliation amount calculated in paragraph (c) of this section to construct the CQS adjustment amount.

(3) CMS subtracts the CQS adjustment amount, computed from paragraph (d)(2) of this section, from the positive or negative reconciliation amount calculated in paragraph (c) of this section to construct the quality-adjusted reconciliation amount.

(e) *Calculation of the net payment reconciliation amount (NPRA).* CMS applies stop-loss and stop gain limits to the quality-adjusted reconciliation amount computed in paragraph (d) of this section to calculate the NPRA as follows:

(1) *Limitation on loss.* For TEAM participants in Track 3, except as provided in paragraph (e)(3) of this section, the repayment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in paragraph (c)(3) of this section for the performance year. The post-episode spending calculation amount in paragraph (f) of this section is not subject to the limitation on loss.

(2) *Limitation on gain.* For TEAM participants in Tracks 1 or 2, the reconciliation payment amount for a performance year cannot exceed 10 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section for the performance year. For TEAM participants in Track 3, the reconciliation payment amount for a performance year cannot exceed 20 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section for the performance year. The post-episode spending amount calculated in accordance with paragraph (f) of this section is not subject to the limitation on gain.

(3) *Limitation on loss for certain providers.* For performance years 2–5, the repayment amount for a TEAM

participant in Track 2 defined at § 512.505, or a TEAM participant that does not meet the low volume threshold of at least 31 episodes across the applicable 3-year baseline period, cannot exceed 10 percent of the aggregated reconciliation target price amount calculated in accordance with paragraph (c)(3) of this section.

(f) *Post-episode spending calculation.* CMS calculates the post-episode spending amount as follows: If the average post-episode spending amount for a TEAM participant in the performance year being reconciled is greater than 3 standard deviations above the regional average post-episode spending amount for the performance year, then the post-episode spending amount that exceeds 3 standard deviations above the regional average post-episode spending amount for the performance year is subtracted from the NPRA for that performance year.

(g) *Calculation of the reconciliation payment or repayment amount.* (1) CMS applies the results of the post-episode spending calculation set forth in paragraph (f) of this section to the NPRA as follows:

(i) For TEAM participants whose post-episode spending amount does not exceed the limit calculated in paragraph (f) of this section, the reconciliation payment or repayment amount is equal to the NPRA.

(ii) If the TEAM participant's post-episode spending exceeds the limit calculated in paragraph (f) of this section, CMS subtracts the amount of post-episode spending exceeding the limit from the NPRA to calculate the reconciliation payment or repayment amount.

(2) If the amount calculated in paragraph (g)(1) of this section is positive, the TEAM participant is owed a reconciliation payment in that amount, to be paid by CMS in one lump sum payment.

(3) If the amount calculated in paragraph (g)(1) of this section is negative, CMS determines the repayment amount as follows:

(i) For TEAM participants in Track 1 for Performance Year 1, the TEAM participant will not owe a repayment amount.

(ii) For TEAM participants in Track 2 or Track 3 for Performance Years 1–5, the Team participant will owe that amount as a repayment to CMS.

(h) *TEAM reconciliation report.* CMS issues each TEAM participant a TEAM reconciliation report for the performance year. Each TEAM reconciliation report contains the following:

(1) The total performance year spending for the TEAM participant.

(2) The TEAM participant's reconciliation target prices.

(3) The TEAM participant's reconciliation amount.

(4) The TEAM participant's composite quality score calculated in accordance with § 512.547(b).

(5) The TEAM participant's quality-adjusted reconciliation amount.

(6) The stop-loss and stop-gain limits that apply to the TEAM participant.

(7) The TEAM participant's NPRA.

(8) The TEAM participant's post-episode spending amount, if applicable.

(9) The amount of any reconciliation payment owed to the TEAM participant or repayment owed by the TEAM participant to CMS for the performance year, if applicable.

§ 512.552 Treatment of incentive programs or add-on payments under existing Medicare payment systems.

The TEAM does not replace any existing Medicare incentive programs or add-on payments. The TEAM payments are independent of, and do not affect, any incentive programs or add-on payments under existing Medicare payment systems.

§ 512.555 Proration of payments for services that extend beyond an episode.

(a) *General.* CMS prorates services included in the episode that extend beyond the episode so that only those portions of the services that were furnished during the episode are included in the calculation of the actual episode payments.

(b) *Proration of services.* CMS prorates payments for services that extend beyond the episode for the purposes of calculating both baseline episode spending and performance year spending using the following methodology:

(1) *Non-IPPS inpatient services.* Non-IPPS inpatient services that extend beyond the end of the episode are prorated according to the percentage of the actual length of stay (in days) that falls within the episode.

(2) *Home health agency services.* Home health agency services paid under the Medicare prospective payment system in accordance with part 484, subpart E of this chapter that extend beyond the episode are prorated according to the percentage of days, starting with the first billable service date and through and including the last billable service date, that occur during the episode.

(3) *IPPS services.* IPPS services that extend beyond the end of the episode are prorated according to the MS–DRG geometric mean length of stay, using the following methodology:

(i) The first day of the IPPS stay is counted as 2 days.

(ii) If the actual length of stay that occurred during the episode is equal to or greater than the MS–DRG geometric mean, the full MS–DRG payment is allocated to the episode.

(iii) If the actual length of stay that occurred during the episode is less than the MS–DRG geometric mean length of stay, the MS–DRG payment amount is allocated to the episode based on the number of inpatient days that fall within the episode.

(4) If the full amount of the payment is not allocated to the episode, any remainder amount is allocated to the post-episode spending calculation (defined in § 512.550(f)).

§ 512.560 Appeals process.

(a) *Notice of calculation error (first level of appeal).* Subject to the limitations on review in § 512.594, if a TEAM participant wishes to dispute calculations involving a matter related to payment, reconciliation amounts, repayment amounts, the use of quality measure results in determining the composite quality score, or the application of the composite quality score during reconciliation, the TEAM participant is required to provide written notice of the calculation error, in a form and manner and by a date specified by CMS.

(1) Unless the TEAM participant provides such written notice, CMS deems the TEAM reconciliation report to be final 30 calendar days after it is issued and proceeds with the payment or repayment processes as applicable.

(2) If CMS receives a notice of a calculation error within 30 calendar days of the issuance of the TEAM reconciliation report, CMS responds in writing within 30 calendar days to either confirm that there was an error in the calculation or verify that the calculation is correct. CMS reserves the right to extend the time for its response upon written notice to the TEAM participant.

(3) Only TEAM participants may use the calculation error process described in this part.

(b) *Exception to the appeals process.* If the TEAM participant contests a matter that does not involve an issue contained in, or a calculation that contributes to, a TEAM reconciliation report, a notice of calculation error is not required. In these instances, if CMS does not receive a request for reconsideration from the TEAM participant within 10 calendar days of the notice of the initial reconciliation,

the initial determination is deemed final and CMS proceeds with the action indicated in the initial determination. This does not apply to the limitations on review in § 512.594.

§ 512.561 Reconsideration review processes.

(a) Applicability of this section. This section is applicable only where section 1869 of the Act has been waived or is not applicable for TEAM participants. This section is only applicable to TEAM participants.

(b) Right to reconsideration. The TEAM participant may request reconsideration of a determination made by CMS only if such reconsideration is not precluded by section 1115A(d)(2) of the Act or this subpart.

(1) A request for reconsideration by the TEAM participant must satisfy the following criteria:

(i) The request must be submitted to a designee of CMS (''Reconsideration Official'') who—

(A) Is authorized to receive such requests; and

(B) Did not participate in the determination that is the subject of the reconsideration request or, if applicable, the notice of calculation error process.

(ii) The request must include a copy of the initial determination issued by CMS and contain a detailed, written explanation of the basis for the dispute, including supporting documentation.

(iii) The request must be made within 30 days of the date of the initial determination for which reconsideration is being requested via email to an address as specified by CMS.

(2) Requests that do not meet the requirements of paragraph (b)(1) of this section are denied.

(3) Within 10 business days of receiving a request for reconsideration, the Reconsideration Official sends the parties a written acknowledgement of receipt of the reconsideration request. This acknowledgement sets forth the following:

(i) The review procedures.

(ii) A schedule that permits each party to submit position papers and supporting documentation in support of the party's position for consideration by the reconsideration official.

(4) The TEAM participant must satisfy the notice of calculation error requirements specified in this part before submitting a reconsideration request under paragraph (b) of this section.

(c) *Standards for reconsideration.* (1) The parties must continue to fulfill all responsibilities and obligations under TEAM during the course of any dispute arising under this part.

(2) The reconsideration consists of a review of documentation that is submitted timely and in accordance with the standards specified by the reconsideration official.

(3) The burden of proof is on the TEAM participant to demonstrate to the reconsideration official with clear and convincing evidence that the determination is inconsistent with the terms of this subpart.

(d) *Reconsideration determination.* (1) The reconsideration determination is based solely upon—

(i) Position papers and supporting documentation that are timely submitted to the reconsideration official per the schedule defined in paragraph (b)(3)(ii) and meet the standards for submission under paragraph (b)(1) of this section; and

(ii) Documents and data that were timely submitted to CMS in the required format before CMS made the determination that is the subject of the reconsideration request.

(2) The reconsideration official issues the reconsideration determination to CMS and to the TEAM participant in writing.

(3) Absent unusual circumstances, in which case the reconsideration official reserves the right to an extension upon written notice to the TEAM participant, the reconsideration determination is issued within 60 days of receipt of timely filed position papers and supporting documentation per the schedule defined in paragraph (b)(3)(ii) of this section.

(4) The reconsideration determination is final and binding 30 days after its issuance, unless the TEAM participant or CMS timely requests review of the reconsideration determination in accordance with paragraphs (e)(1) and (2) of this section.

(e) *CMS Administrator review.* The TEAM participant or CMS may request that the CMS Administrator review the reconsideration determination.

(1) The request must be made via email within 30 days of the date of the reconsideration determination to the address specified by CMS.

(2) The request must include a copy of the reconsideration determination and a detailed written explanation of why the TEAM participant or CMS disagrees with the reconsideration determination.

(3) The CMS Administrator promptly sends the parties a written acknowledgement of receipt of the request for review.

(4) The CMS Administrator sends the parties notice of the following:

(i) Whether the request for review is granted or denied.

(ii) If the request for review is granted, the review procedures and a schedule that permits each party to submit a brief in support of the party's position for consideration by the CMS Administrator.

(5) If the request for review is denied, the reconsideration determination is final and binding as of the date the request for review is denied.

(6) If the request for review is granted—

(i) The record for review consists solely of—

(A) Timely submitted briefs and the evidence contained in the record of the proceedings before the reconsideration official; and

(B) Evidence as set forth in the documents and data described in paragraph (d)(1)(ii) of this section;

(ii) The CMS Administrator reviews the record and issues to CMS and to the TEAM participant a written determination; and

(iii) The written determination of the CMS Administrator is final and binding as of the date the written determination is sent.

Data Sharing and Other Requirements

§ 512.562 Data sharing with TEAM participants.

(a) *General.* CMS shares certain beneficiary-identifiable data as described in paragraphs (b), (c), and (e) of this section and certain regional aggregate data as described in paragraph (d) of this section with TEAM participants regarding TEAM beneficiaries and performance under the model.

(b) *Beneficiary-identifiable claims data.* CMS shares beneficiary-identifiable claims data with TEAM participants as follows:

(1) CMS makes available certain beneficiary-identifiable claims data described in paragraph (b)(5) of this section for TEAM participants to request for purposes of conducting health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 regarding their TEAM beneficiaries.

(2) A TEAM participant that wishes to receive beneficiary-identifiable claims data for its TEAM beneficiaries must do all of the following:

(i) Submit a formal request for the data on an annual basis in a manner and form and by a date specified by CMS, indicating their selection of summary beneficiary-identifiable data, raw beneficiary-identifiable data, or both, and attest that—

(A) The TEAM participant is requesting claims data of TEAM

beneficiaries who would be in an episode during the baseline period or performance year, as a HIPAA covered entity.

(B) The TEAM participant's request reflects the minimum data necessary, as set forth in paragraph (c) of this section, for the TEAM participant to conduct health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501.

(C) The TEAM participant's use of claims data will be limited to developing processes and engaging in appropriate activities related to coordinating care, improving the quality and efficiency of care, and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all TEAM beneficiaries, in an episode during the baseline period or performance year, and that these data will not be used to reduce, limit or restrict care for specific Medicare beneficiaries.

(ii) Sign and submit a TEAM data sharing agreement, as defined in § 512.505, with CMS as set forth in paragraph (e) of this section.

(3) CMS shares this beneficiary-identifiable claims data with a TEAM participant in accordance with applicable privacy and security laws and established privacy and security protections.

(4) CMS omits from the beneficiary-identifiable claims data any information that is subject to the regulations in 42 CFR part 2 governing the confidentiality of substance use disorder patient records.

(5) The beneficiary-identifiable claims data will include, when available, the following:

(i) Unrefined (raw) Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year.

(ii) Summarized (summary) Medicare Parts A and B beneficiary-identifiable claims data for TEAM beneficiaries in an episode during the 3-year baseline period and performance year.

(6) CMS makes available the beneficiary-identifiable claims data for retrieval by TEAM participants at the following frequency:

(i) Annually, at least 1 month prior to every performance year for baseline period data, based on the baseline periods described in § 512.540(b)(2).

(ii) Monthly during the performance year and for up to 6 months after the performance year for performance year data.

(c) *Minimum necessary data.* The TEAM participant must limit its request for beneficiary-identifiable data under paragraph (b) of this section to the minimum necessary Parts A and B data elements which may include, but are not limited to the following:

(1) Medicare beneficiary identifier (ID).

(2) Procedure code.

(3) Gender.

(4) Diagnosis code.

(5) Claim ID.

(6) The from and through dates of service.

(7) The provider or supplier ID.

(8) The claim payment type.

(9) Date of birth and death, if applicable.

(10) Tax identification number.

(11) National provider identifier.

(d) *Regional aggregate data.* (1) CMS shares regional aggregate data for the 3-year baseline period and performance years with TEAM participants as follows.

(i) CMS shares 3-year baseline period regional aggregate data annually at least 1 month before the performance year, based on the baseline periods described in § 512.540(b)(2).

(ii) CMS shares performance year regional aggregate data on a monthly basis during the performance year and for up to 6 months after the performance year.

(2) Regional aggregate data will—

(i) Be aggregated based on all Parts A and B claims associated with episodes in TEAM for the U.S. Census Division in which the TEAM participant is located.

(ii) Summarize average episode spending for episodes in TEAM in the U.S. Census Division in which the TEAM participant is located.

(iii) Be de-identified in accordance with 45 CFR 164.514(b).

(e) *TEAM data sharing agreement.* (1) A TEAM participant who wishes to retrieve the beneficiary-identifiable data specified in paragraph (b) of this section, must complete and submit, on at least an annual basis, a signed TEAM data sharing agreement, as defined in § 512.505, to be provided in a form and manner and by a date specified by CMS, under which the TEAM participant agrees:

(i) To comply with the requirements for use and disclosure of this beneficiary-identifiable data that are imposed on covered entities by the HIPAA regulations and the requirements of the TEAM set forth in this part.

(ii) To comply with additional privacy, security, breach notification, and data retention requirements specified by CMS in the TEAM data sharing agreement.

(iii) To contractually bind each downstream recipient of the beneficiary-identifiable data that is a business associate of the TEAM participant to the same terms and conditions to which the TEAM participant is itself bound in its TEAM data sharing agreement with CMS as a condition of the business associate's receipt of the beneficiary-identifiable data retrieved by the TEAM participant under the TEAM.

(iv) That if the TEAM participant misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the data sharing agreement, CMS may deem the TEAM participant ineligible to retrieve beneficiary-identifiable data under paragraph (b) of this section for any amount of time, and the TEAM participant may be subject to additional sanctions and penalties available under the law.

(2) A TEAM participant must comply with all applicable laws and the terms of the TEAM data sharing agreement in order to retrieve the beneficiary-identifiable data.

§ 512.563 Health equity plans.

(a) The TEAM participant may voluntarily submit a health equity plan to CMS for performance year 1 that includes the elements specified in paragraph (c) of this section,.

(b) For performance years 2 through 5, the TEAM participant must submit a health equity plan in a form and manner and by the dates specified by CMS.

(c) Health equity plans must include the following elements:

(1) Identifies health disparities in the TEAM participant's population of TEAM beneficiaries.

(2) Identifies health equity goals and describes how the TEAM participant will use the health equity goals to monitor and evaluate progress in reducing the identified health disparities.

(3) Describes the health equity plan intervention strategy.

(4) Identifies health equity plan performance measure(s), the data sources used to construct the performance measures, and an approach to monitor and evaluate the measures.

§ 512.564 Referral to primary care services.

(a) A TEAM participant must include in hospital discharge planning a referral to a supplier of primary care services for a TEAM beneficiary, on or prior to

discharge from an anchor hospitalization or anchor procedure.

(b) In making the referral described in paragraph (a), the TEAM participant must comply with beneficiary freedom of choice, as described in § 512.582(a) of this subpart.

(c) A TEAM participant that does not comply with paragraph (a) of this section, may be subject to remedial action as described in § 512.592.

Financial Arrangements and Beneficiary Incentives

§ 512.565 Sharing arrangements.

(a) *General.* (1) A TEAM participant may enter into a sharing arrangement with a TEAM collaborator to make a gainsharing payment, or to receive an alignment payment, or both. A TEAM participant must not make a gainsharing payment to a TEAM collaborator or receive an alignment payment from a TEAM collaborator except in accordance with a sharing arrangement.

(2) A sharing arrangement must comply with the provisions of this section and all other applicable laws and regulations, including the applicable fraud and abuse laws and all applicable payment and coverage requirements.

(3) TEAM participants must develop, maintain, and use a set of written policies for selecting individuals and entities to be TEAM collaborators.

(i) These policies must contain criteria related to, and inclusive of, the quality of care delivered by the potential TEAM collaborator and the provision of TEAM activities.

(ii) The selection criteria cannot be based directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(iii) A selection criterion that considers whether a potential TEAM collaborator has performed a reasonable minimum number of services that would qualify as TEAM activities, as determined by the TEAM participant, will be deemed not to violate the volume or value standard if the purpose of the criterion is to ensure the quality of care furnished to TEAM beneficiaries.

(4) If a TEAM participant enters into a sharing arrangement, its compliance program must include oversight of sharing arrangements and compliance with the applicable requirements of TEAM.

(b) *Requirements.* (1) A sharing arrangement must be in writing and signed by the parties, and entered into before care is furnished to TEAM beneficiaries under the sharing arrangement.

(2) Participation in a sharing arrangement must be voluntary and without penalty for nonparticipation.

(3) The sharing arrangement must require the TEAM collaborator and its employees, contractors (including collaboration agents), and subcontractors (including downstream collaboration agents) to comply with all of the following:

(i) The applicable provisions of this part (including requirements regarding beneficiary notifications, access to records, record retention, and participation in any evaluation, monitoring, compliance, and enforcement activities performed by CMS or its designees).

(ii) All applicable Medicare provider enrollment requirements at § 424.500 of this chapter, including having a valid and active TIN or NPI, during the term of the sharing arrangement.

(iii) All other applicable laws and regulations.

(4) The sharing arrangement must require the TEAM collaborator to have or be covered by a compliance program that includes oversight of the sharing arrangement and compliance with the requirements of TEAM that apply to its role as a TEAM collaborator, including any distribution arrangements.

(5) The sharing arrangement must not pose a risk to beneficiary access, beneficiary freedom of choice, or quality of care.

(6) The board or other governing body of the TEAM participant must have responsibility for overseeing the TEAM participant's participation in TEAM, its arrangements with TEAM collaborators, its payment of gainsharing payments, its receipt of alignment payments, and its use of beneficiary incentives in the TEAM model.

(7) The specifics of the agreement must be documented in writing and must be made available to CMS upon request (as outlined in § 512.590).

(8) The sharing arrangement must specify the following:

(i) The purpose and scope of the sharing arrangement.

(ii) The obligations of the parties, including specified TEAM activities and other services to be performed by the parties under the sharing arrangement.

(iii) The date range for which the sharing arrangement is effective.

(iv) The financial or economic terms for payment, including the following:

(A) Eligibility criteria for a gainsharing payment.

(B) Eligibility criteria for an alignment payment.

(C) Frequency of gainsharing or alignment payments.

(D) Methodology and accounting formula for determining the amount of a gainsharing payment or alignment payment.

(9) The sharing arrangement must not—

(i) Induce the TEAM participant, TEAM collaborator, or any employees, contractors, or subcontractors of the TEAM participant or TEAM collaborator to reduce or limit medically necessary services to any Medicare beneficiary; or

(ii) Restrict the ability of a TEAM collaborator to make decisions in the best interests of its patients, including the selection of devices, supplies, and treatments.

(c) *Gainsharing payment, alignment payment, and internal cost savings conditions and restrictions.* (1) Gainsharing payments, if any, must—

(i) Be derived solely from reconciliation payment amounts, or internal cost savings, or both;

(ii) Be distributed on an annual basis (not more than once per calendar year);

(iii) Not be a loan, advance payment, or payment for referrals or other business; and

(iv) Be clearly identified as a gainsharing payment at the time it is paid.

(2)(i) To be eligible to receive a gainsharing payment, a TEAM collaborator must meet quality of care criteria for the performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment that comprises the gainsharing payment. The quality-of-care criteria must be established by the TEAM participant and directly relate to the episode.

(ii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator other than ACO, PGP, NPPGP, or TGP must have directly furnished a billable item or service to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(iii) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator that is a PGP, NPPGP, or TGP must meet the following criteria:

(A) The PGP, NPPGP, or TGP must have billed for an item or service that was rendered by one or more PGP member, NPPGP member, or TGP member respectively to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment.

(B) The PGP, NPPGP, or TGP must have contributed to TEAM activities and been clinically involved in the care of TEAM beneficiaries during the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of examples where, a PGP, NPPGP, or TGP might have been clinically involved in the care of TEAM beneficiaries includes—

(*1*) Providing care coordination services to TEAM beneficiaries during or after inpatient admission;

(*2*) Engaging with a TEAM participant in care redesign strategies, and actually performing a role in implementing such strategies, that are designed to improve the quality of care for episodes and reduce episode spending; or

(*3*) In coordination with other providers and suppliers (such as PGP members, NPPGP members, or TGP members; the TEAM participant; and post-acute care providers), implementing strategies designed to address and manage the comorbidities of TEAM beneficiaries.

(iv) To be eligible to receive a gainsharing payment, or to be required to make an alignment payment, a TEAM collaborator that is an ACO must meet the following criteria:

(A) The ACO must have had an ACO provider/supplier that directly furnished, or an ACO participant that billed for, an item or service that was rendered to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment; and

(B) The ACO must have contributed to TEAM activities and been clinically involved in the care of TEAM beneficiaries during the performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount or repayment amount that comprises the gainsharing payment or the alignment payment. A non-exhaustive list of ways in which an ACO might have been clinically involved in the care of TEAM beneficiaries could include—

(*1*) Providing care coordination services to TEAM beneficiaries during and/or after inpatient admission;

(*2*) Engaging with a TEAM participant in care redesign strategies and performing a role in implementing such strategies that are designed to improve the quality of care and reduce spending for episodes; or

(*3*) In coordination with providers and suppliers (such as ACO participants, ACO providers/suppliers, the TEAM participant, and post-acute care providers), implementing strategies designed to address and manage the comorbidities of TEAM beneficiaries.

(3)(i) The methodology for accruing, calculating and verifying internal cost savings will be determined by the TEAM participant; however, the methodology must be transparent, measurable, and verifiable in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(ii) The methodology used to calculate internal cost savings must reflect the actual, internal cost savings achieved by the TEAM participant through the documented implementation of TEAM activities identified by the TEAM participant and must exclude—

(A) Any savings realized by any individual or entity that is not the TEAM participant; and

(B) ''Paper'' savings from accounting conventions or past investment in fixed costs.

(4) The amount of any gainsharing payments must be determined in accordance with a methodology that is based solely on quality of care and the provision of TEAM activities. The methodology may take into account the amount of TEAM activities provided by a TEAM collaborator relative to other TEAM collaborators.

(5) For a performance year, the aggregate amount of all gainsharing payments that are derived from reconciliation payment amounts must not exceed the amount of that year's reconciliation payment amount.

(6) No entity or individual, whether a party to a sharing arrangement or not, may condition the opportunity to make or receive gainsharing payments or to make or receive alignment payments directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(7) A TEAM participant must not make a gainsharing payment to a TEAM collaborator if CMS has notified the TEAM participant that such TEAM collaborator is subject to any action by CMS, HHS or any other governmental entity, or its designees, for noncompliance with this part or the fraud and abuse laws, for the provision of substandard care to TEAM beneficiaries or other integrity problems, or for any other program integrity problems or noncompliance with any other laws or regulations.

(8) The sharing arrangement must require the TEAM participant to recoup any gainsharing payment that contained funds derived from a CMS overpayment on a reconciliation payment amount or was based on the submission of false or fraudulent data.

(9) Alignment payments from a TEAM collaborator to a TEAM participant may be made at any interval that is agreed upon by both parties, and must not be—

(i) Issued, distributed, or paid prior to the calculation by CMS of a repayment amount; payment;

(ii) Loans, advance payments, or payments for referrals or other business; or

(iii) Assessed by a TEAM participant in the absence of a repayment amount.

(10) The TEAM participant must not receive any amounts under a sharing arrangement from a TEAM collaborator that are not alignment payments.

(11) For a performance year, the aggregate amount of all alignment payments received by the TEAM participant must not exceed 50 percent of the TEAM participant's repayment amount.

(12) The aggregate amount of all alignment payments from a TEAM collaborator to the TEAM participant may not be greater than—

(i) With respect to a TEAM collaborator other than an ACO, 25 percent of the TEAM participant's repayment amount.

(ii) With respect to a TEAM collaborator that is an ACO, 50 percent of the TEAM participant's repayment amount.

(13) The amount of any alignment payments must be determined in accordance with a methodology that does not directly account for the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM

participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(14) All gainsharing payments and any alignment payments must be administered by the TEAM participant in accordance with generally accepted accounting principles (GAAP) and Government Auditing Standards (The Yellow Book).

(15) All gainsharing payments and alignment payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(d) *Documentation requirements.* (1) TEAM participants must—

(i) Document the sharing arrangement contemporaneously with the establishment of the arrangement;

(ii) Publicly post (and update on at least a quarterly basis) on a web page on the TEAM participant's website—

(A) Accurate lists of all current TEAM collaborators, including the TEAM collaborators' names and addresses as well as accurate historical lists of all TEAM collaborators.

(B) Written policies for selecting individuals and entities to be TEAM collaborators as required by § 512.565(a)(3).

(iii) Maintain, and require each TEAM collaborator to maintain, contemporaneous documentation with respect to the payment or receipt of any gainsharing payment or alignment payment that includes, at a minimum:

(A) Nature of the payment (gainsharing payment or alignment payment);

(B) Identity of the parties making and receiving the payment;

(C) Date of the payment;

(D) Amount of the payment; and

(E) Date and amount of any recoupment of all or a portion of a TEAM collaborator's gainsharing payment.

(F) Explanation for each recoupment, such as whether the TEAM collaborator received a gainsharing payment that contained funds derived from a CMS overpayment of a reconciliation payment or was based on the submission of false or fraudulent data.

(2) The TEAM participant must keep records of all of the following:

(i) Its process for determining and verifying its potential and current TEAM collaborators' eligibility to participate in Medicare.

(ii) Its plan to track internal cost savings.

(iii) Information on the accounting systems used to track internal cost savings.

(iv) A description of current health information technology, including systems to track reconciliation payment amounts, repayment amounts, and internal cost savings.

(v) Its plan to track gainsharing payments and alignment payments.

(3) The TEAM participant must retain and provide access to and must require each TEAM collaborator to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.568 Distribution arrangements.

(a) *General.* (1) An ACO, PGP, NPPGP, or TGP that is a TEAM collaborator and has entered into a sharing arrangement with a TEAM participant may distribute all or a portion of any gainsharing payment it receives from the TEAM participant only in accordance with a distribution arrangement.

(2) All distribution arrangements must comply with the provisions of this section and all other applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.* (1) All distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the distribution arrangement.

(2) Participation in a distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The distribution arrangement must require the collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any distribution payments from an ACO, from an NPPGP to an NPPGP member, or from a TGP to a TGP member, must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a collaboration agent relative to other collaboration agents.

(6) The amount of any distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a collaboration agent relative to other collaboration agents.

(7) A collaboration agent is eligible to receive a distribution payment only if the collaboration agent furnished or billed for an item or service rendered to a TEAM beneficiary during an episode that was attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment being distributed.

(8) With respect to the distribution of any gainsharing payment received by an ACO, PGP, NPPGP, or TGP, the total amount of all distribution payments for a performance year must not exceed the amount of the gainsharing payment received by the TEAM collaborator from the TEAM participant for the same performance year.

(9) All distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(10) The collaboration agent must retain the ability to make decisions in the best interests of the patient, including the selection of devices, supplies, and treatments.

(11) The distribution arrangement must not—

(i) Induce the collaboration agent to reduce or limit medically necessary items and services to any Medicare beneficiary; or

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The TEAM collaborator must maintain contemporaneous documentation regarding distribution arrangements in accordance with § 512.586, including all of the following:

(i) The relevant written agreements.

(ii) The date and amount of any distribution payment(s).

(iii) The identity of each collaboration agent that received a distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any distribution payment.

(13) The TEAM collaborator may not enter into a distribution arrangement with any individual or entity that has a sharing arrangement with the same TEAM participant.

(14) The TEAM collaborator must retain and provide access to and must require collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.570 Downstream distribution arrangements.

(a) *General.* (1) An ACO participant that is a PGP, NPPGP, or TGP and that has entered into a distribution arrangement with a TEAM collaborator that is an ACO, may distribute all or a portion of any distribution payment it receives from the TEAM collaborator only in accordance with a downstream distribution arrangement.

(2) All downstream distribution arrangements must comply with the provisions of this section and all applicable laws and regulations, including the fraud and abuse laws.

(b) *Requirements.* (1) All downstream distribution arrangements must be in writing and signed by the parties, contain the effective date of the agreement, and be entered into before care is furnished to TEAM beneficiaries under the downstream distribution arrangement.

(2) Participation in a downstream distribution arrangement must be voluntary and without penalty for nonparticipation.

(3) The downstream distribution arrangement must require the downstream collaboration agent to comply with all applicable laws and regulations.

(4) The opportunity to make or receive a downstream distribution payment must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business otherwise generated by, between or among the TEAM participant, any TEAM collaborator, any collaboration agent, any downstream collaboration agent, or any individual or entity affiliated with a TEAM participant, TEAM collaborator, collaboration agent, or downstream collaboration agent.

(5) The amount of any downstream distribution payments from an NPPGP to an NPPGP member or from a TGP to a TGP member must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(6) The amount of any downstream distribution payments from a PGP must be determined in accordance with a methodology that is solely based on quality of care and the provision of TEAM activities and that may take into account the amount of such TEAM activities provided by a downstream collaboration agent relative to other downstream collaboration agents.

(7) A downstream collaboration agent is eligible to receive a downstream distribution payment only if the downstream collaboration agent furnished an item or service to a TEAM beneficiary during an episode that is attributed to the same performance year for which the TEAM participant accrued the internal cost savings or earned the reconciliation payment amount that comprises the gainsharing payment from which the ACO made the distribution payment to the PGP, NPPGP, or TGP that is an ACO participant.

(8) The total amount of all downstream distribution payments made to downstream collaboration agents must not exceed the amount of the distribution payment received by the PGP, NPPGP, or TGP from the ACO.

(9) All downstream distribution payments must be made by check, electronic funds transfer, or another traceable cash transaction.

(10) The downstream collaboration agent must retain his or her ability to make decisions in the best interests of the beneficiary, including the selection of devices, supplies, and treatments.

(11) The downstream distribution arrangement must not—

(i) Induce the downstream collaboration agent to reduce or limit medically necessary services to any Medicare beneficiary; or

(ii) Reward the provision of items and services that are medically unnecessary.

(12) The PGP, NPPGP, or TGP must maintain contemporaneous documentation regarding downstream distribution arrangements in accordance with § 512.586, including the following:

(i) The relevant written agreements.

(ii) The date and amount of any downstream distribution payment.

(iii) The identity of each downstream collaboration agent that received a downstream distribution payment.

(iv) A description of the methodology and accounting formula for determining the amount of any downstream distribution payment.

(13) The PGP, NPPGP, or TGP may not enter into a downstream distribution arrangement with any PGP member, NPPGP member, or TGP member who has—

(i) A sharing arrangement with a TEAM participant.

(ii) A distribution arrangement with the ACO that the PGP, NPPGP, or TGP is a participant in.

(14) The PGP, NPPGP, or TGP must retain and provide access to, and must require downstream collaboration agents to retain and provide access to, the required documentation in accordance with § 512.586.

§ 512.575 TEAM beneficiary incentives.

(a) *General.* TEAM participants may choose to provide in-kind patient engagement incentives including but not limited to items of technology to TEAM beneficiaries in an episode, subject to the following conditions:

(1) The incentive must be provided directly by the TEAM participant or by an agent of the TEAM participant under the TEAM participant's direction and control to the TEAM beneficiary during an episode.

(2) The item or service provided must be reasonably connected to medical care provided to a TEAM beneficiary during an episode.

(3) The item or service must be a preventive care item or service or an item or service that advances a clinical goal, as listed in paragraph (c) of this section, for a TEAM beneficiary in an episode by engaging the TEAM beneficiary in better managing his or her own health.

(4) The item or service must not be tied to the receipt of items or services outside the episode.

(5) The item or service must not be tied to the receipt of items or services from a particular provider or supplier.

(6) The availability of the items or services must not be advertised or promoted, except that a TEAM beneficiary may be made aware of the availability of the items or services at the time the TEAM beneficiary could reasonably benefit from them.

(7) The cost of the items or services must not be shifted to any Federal health care program, as defined at section 1128B(f) of the Act.

(b) *Technology provided to a TEAM beneficiary.* TEAM beneficiary engagement incentives involving technology are subject to the following additional conditions:

(1) Items or services involving technology provided to a TEAM beneficiary may not exceed $1,000 in retail value for any one TEAM beneficiary during any one episode.

(2) Items or services involving technology provided to a TEAM beneficiary must be the minimum necessary to advance a clinical goal, as listed in paragraph (c) of this section, for a beneficiary in an episode.

(3) Items of technology exceeding $75 in retail value must—

(i) Remain the property of the TEAM participant; and

(ii) Be retrieved from the TEAM beneficiary at the end of the episode, with documentation of the ultimate date of retrieval. The TEAM participant must document all retrieval attempts. In cases when the item of technology is not able to be retrieved, the TEAM participant

must determine why the item was not retrievable. If it was determined that the item was misappropriated (if it were sold, for example), the TEAM participant must take steps to prevent future beneficiary incentives for that TEAM beneficiary. Following this process, documented, diligent, good faith attempts to retrieve items of technology will be deemed to meet the retrieval requirement.

(c) *Clinical goals of TEAM.* The following are the clinical goals of TEAM, which may be advanced through TEAM beneficiary incentives:

(1) Beneficiary adherence to drug regimens.

(2) Beneficiary adherence to a care plan.

(3) Reduction of readmissions and complications following an episode.

(4) Management of chronic diseases and conditions that may be affected by the TEAM procedure.

(d) *Documentation of TEAM beneficiary incentives.* (1) TEAM participants must maintain documentation of items and services furnished as beneficiary incentives that exceed $25 in retail value.

(2) The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the following:

(i) The date the incentive is provided.

(ii) The identity of the TEAM beneficiary to whom the item or service was provided.

(3) The documentation regarding items of technology exceeding $75 in retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable, as described in paragraph (b)(3) of this section.

(4) The TEAM participant must retain and provide access to the required documentation in accordance with § 512.586.

§ 512.576 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(a) *Application of the CMS-sponsored model arrangements safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (42 CFR 1001.952(ii)(1)) is available to protect remuneration furnished in the TEAM in the form of sharing arrangement's gainsharing payments and alignment payments, the distribution arrangement's distribution payments, and the downstream distribution arrangement's distribution payments that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii), and §§ 512.565, 512.568, 512.570.

(b) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (42 CFR 1001.952(ii)(2)) is available to protect TEAM beneficiary incentives that meet all safe harbor requirements set forth in 42 CFR 1001.952(ii) and § 512.575.

Medicare Program Waivers

§ 512.580 TEAM Medicare Program Waivers

(a) *Waiver of certain telehealth requirements*—(1) *Waiver of the geographic site requirements.* Except for the geographic site requirements for a face-to-face encounter for home health certification, CMS waives the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act for episodes being tested in TEAM solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.525(e).

(2) *Waiver of the originating site requirements.* Except for the originating site requirements for a face-to-face encounter for home health certification, CMS waives the originating site requirements under section 1834(m)(4)I(ii)(I) through (VIII) of the Act for episodes to permit a telehealth visit to originate in the beneficiary's home or place of residence solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are included in the episode in accordance with § 512.525(e).

(3) *Waiver of selected payment provisions.* (i) CMS waives the payment requirements under section 1834(m)(2)(A) of the Act so that the facility fee normally paid by Medicare to an originating site for a telehealth service is not paid if the service is originated in the beneficiary's home or place of residence.

(ii) CMS waives the payment requirements under section 1834(m)(2)(B) of the Act to allow the distant site payment for telehealth home visit HCPCS codes unique to TEAM.

(4) *Other requirements.* All other requirements for Medicare coverage and payment of telehealth services continue to apply, including the list of specific services approved to be furnished by telehealth.

(b) *Waiver of the SNF 3-day rule*—(1) *Episodes initiated by an anchor hospitalization.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of discharge from the anchor hospitalization for a beneficiary who is a TEAM beneficiary on the date of discharge from the anchor hospitalization if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the TEAM beneficiary's admission to the SNF.

(2) *Episodes initiated by an anchor procedure.* CMS waives the SNF 3-day rule for coverage of a SNF stay within 30 days of the date of service of the anchor procedure for a beneficiary who is a TEAM beneficiary on the date of service of the anchor procedure if the SNF is identified on the applicable calendar quarter list of qualified SNFs at the time of the TEAM beneficiary's admission to the SNF.

(3) *Determination of qualified SNFs.* CMS determines the qualified SNFs for each calendar quarter based on a review of the most recent rolling 12 months of overall star ratings on the Five-Star Quality Rating System for SNFs on the Nursing Home Compare website. Qualified SNFs are rated an overall of 3 stars or better for at least 7 of the 12 months.

(4) *Posting of qualified SNFs.* CMS posts to the CMS website the list of qualified SNFs in advance of the calendar quarter.

(5) *Financial liability for non-covered SNF services.* If CMS determines that the waiver requirements specified in paragraph (b) of this section were not met, the following apply:

(i) CMS makes no payment to a SNF for SNF services if the SNF admits a TEAM beneficiary who has not had a qualifying anchor hospitalization or anchor procedure.

(ii) In the event that CMS makes no payment for SNF services furnished by a SNF as a result of paragraph (5)(i) of this section, the beneficiary protections specified in paragraph (5)(iii) of this section apply, unless the TEAM participant has provided the beneficiary with a discharge planning notice in accordance with § 512.582(b)(3).

(iii) If the TEAM participant does not provide the beneficiary with a discharge planning notice in accordance with § 512.582(b)(3)—

(A) The SNF must not charge the beneficiary for the expenses incurred for such services;

(B) The SNF must return to the beneficiary any monies collected for such services; and

(C) The TEAM participant is financially liable for the expenses incurred for such services.

(4) If the TEAM participant provided a discharge planning notice to the

beneficiary in accordance with § 512.582(b)(3), then normal SNF coverage requirements apply and the beneficiary may be financially liable for non-covered SNF services.

(c) *Other requirements.* All other Medicare rules for coverage and payment of Part A-covered services continue to apply except as otherwise waived in this part.

General Provisions

§ 512.582 Beneficiary protections.

(a) *Beneficiary freedom of choice.* (1) A TEAM participant, TEAM collaborators, collaboration agents, downstream collaboration agent and downstream participants must not restrict Medicare beneficiaries' ability to choose to receive care from any provider or supplier.

(2) The TEAM participant and its downstream participants must not commit any act or omission, nor adopt any policy that inhibits beneficiaries from exercising their freedom to choose to receive care from any provider or supplier or from any health care provider who has opted out of Medicare. The TEAM participant and its downstream participants may communicate to TEAM beneficiaries the benefits of receiving care with the TEAM participant, if otherwise consistent with the requirements of this part and applicable law.

(3) As part of discharge planning and referral, TEAM participants must provide a complete list of HHAs, SNFs, IRFs, or LTCHs that are participating in the Medicare program, and that serve the geographic area (as defined by the HHA) in which the patient resides, or in the case of a SNF, IRF, or LTCH, in the geographic area requested by the patient.

(i) This list must be presented to TEAM beneficiaries for whom home health care, SNF, IRF, or LTCH services are medically necessary.

(ii) TEAM participants must specify on the list those post-acute care providers on the list with whom they have a sharing arrangement.

(iii) TEAM participants may recommend preferred providers and suppliers, consistent with applicable statutes and regulations.

(iv) TEAM participants may not limit beneficiary choice to any list of providers or suppliers in any manner other than as permitted under applicable statutes and regulations.

(v) TEAM participants must take into account patient and family preferences for choice of provider and supplier when they are expressed.

(4) TEAM participants may not charge any TEAM collaborator a fee to be included on any list of preferred providers or suppliers, nor may the TEAM participant accept such payments.

(b) *Required beneficiary notification*—(1) *TEAM participant beneficiary notification*—(i) *Notification to beneficiaries.* Each TEAM participant must provide written notification to any TEAM beneficiary that meets the criteria in § 512.535 of his or her inclusion in the TEAM model.

(ii) *Timing of notification.* Prior to discharge from the anchor hospitalization, or prior to discharge from the anchor procedure, as applicable, the TEAM participant must provide the TEAM beneficiary with a beneficiary notification as described in paragraph (b)(1)(iv) of this section.

(iii) *List of beneficiaries who have received a notification.* The TEAM participant must be able to generate a list of all beneficiaries who have received such notification, including the date on which the notification was provided to the beneficiary, to CMS or its designee upon request.

(iv) *Content of notification.* The beneficiary notification must contain all of the following:

(A) A detailed explanation of TEAM and how it might be expected to affect the beneficiary's care.

(B) Notification that the beneficiary retains freedom of choice to choose providers and services.

(C) Explanation of how patients can access care records and claims data through an available patient portal, if applicable, and how they can share access to their Blue Button® electronic health information with caregivers.

(D) Explanation of the type of beneficiary-identifiable claims data the TEAM participant may receive.

(E) A statement that all existing Medicare beneficiary protections continue to be available to the TEAM beneficiary. These include the ability to report concerns of substandard care to Quality Improvement Organizations or the 1–800–MEDICARE helpline.

(F) A list of the providers, suppliers, and ACOs with whom the TEAM participant has a sharing arrangement. This requirement may be fulfilled by the TEAM participant including in the detailed notification a Web address where beneficiaries may access the list.

(2) *TEAM collaborator notice.* A TEAM participant must require every TEAM collaborator to provide written notice to applicable TEAM beneficiaries of TEAM, including information on the quality and payment incentives under TEAM, and the existence of its sharing arrangement with the TEAM participant.

(i) With the exception of ACOs, PGPs, NPPGPs, and TGPs, a TEAM participant must require every TEAM collaborator that furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the existence of the TEAM collaborator's sharing arrangement. The notice must be provided no later than the time at which the beneficiary first receives an item or service from the TEAM collaborator during an episode. In circumstances where, due to the patient's condition, it is not feasible to provide notification at such time, the notification must be provided to the beneficiary or his or her representative as soon as is reasonably practicable. The TEAM collaborator must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(ii) A TEAM participant must require every PGP, NPPGP, or TGP that is a TEAM collaborator where a member of the PGP, member of the NPPGP, or member of the TGP furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the existence of the entity's sharing arrangement. The notice must be provided no later than the time at which the beneficiary first receives an item or service from any member of the PGP, member of the NPPGP, or member of the TGP, and the required PGP, NPPGP, or TGP notice may be provided by that member respectively. In circumstances where, due to the patient's condition, it is not feasible to provide notice at such times, the notice must be provided to the beneficiary or his or her representative as soon as is reasonably practicable. The PGP, NPPGP, or TGP must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(iii) A TEAM participant must require every ACO that is a TEAM collaborator where an ACO participant or ACO provider/supplier furnishes an item or service to a TEAM beneficiary during an episode to provide written notice to the beneficiary of TEAM, including basic information on the quality and payment incentives under TEAM, and the existence of the entity's sharing arrangement. The notice must be provided no later than the time at which the beneficiary first receives an item or

service from any ACO participant or ACO provider/supplier and the required ACO notice may be provided by that ACO participant or ACO provider/supplier respectively. In circumstances where, due to the patient's condition, it is not feasible to provide notice at such times, the notice must be provided to the beneficiary or his or her representative as soon as is reasonably practicable. The ACO must be able to provide a list of all beneficiaries who received such a notice, including the date on which the notice was provided to the beneficiary, to CMS upon request.

(3) *Discharge planning notice.* A TEAM participant must provide the beneficiary with a written notice of any potential financial liability associated with non-covered services recommended or presented as an option as part of discharge planning, no later than the time that the beneficiary discusses a particular post-acute care option or at the time the beneficiary is discharged from an anchor procedure or anchor hospitalization, whichever occurs earlier.

(i) If the TEAM participant knows or should have known that the beneficiary is considering or has decided to receive a non-covered post-acute care service or other non-covered associated service or supply, the TEAM participant must notify the beneficiary in writing that the service would not be covered by Medicare.

(ii) If the TEAM participant is discharging a beneficiary to a SNF after an inpatient hospital stay, and the beneficiary is being transferred to or is considering a SNF that would not qualify under the SNF 3-day waiver in § 512.580, the TEAM participant must notify the beneficiary in accordance with paragraph (b)(3)(i) of this section that the beneficiary will be responsible for payment for the services furnished by the SNF during that stay, except those services that would be covered by Medicare Part B during a non-covered inpatient SNF stay.

(4) *Access to records and retention.* Lists of beneficiaries that receive notifications or notices must be retained, and access provided to CMS, or its designees, in accordance with § 512.586.

(c) *Availability of services.* (1) The TEAM participant and its downstream participants must continue to make medically necessary covered services available to beneficiaries to the extent required by applicable law. TEAM beneficiaries and their assignees retain their rights to appeal claims in accordance with part 405, subpart I of this chapter.

(2) The TEAM participant and its downstream participants must not take any action to select or avoid treating certain Medicare beneficiaries based on their income levels or based on factors that would render the beneficiary an ''at-risk beneficiary'' as defined at § 425.20 of this chapter.

(3) The TEAM participant and its downstream participants must not take any action to selectively target or engage beneficiaries who are relatively healthy or otherwise expected to improve the TEAM participant's or downstream participant's financial or quality performance, a practice commonly referred to as ''cherry-picking.''

(d) *Descriptive TEAM materials and activities.* (1) The TEAM participant and its downstream participants must not use or distribute descriptive TEAM materials and activities that are materially inaccurate or misleading.

(2) The TEAM participant and its downstream participants must include the following statement on all descriptive TEAM materials and activities: ''The statements contained in this document are solely those of the authors and do not necessarily reflect the views or policies of the Centers for Medicare & Medicaid Services (CMS). The authors assume responsibility for the accuracy and completeness of the information contained in this document.''

(3) The TEAM participant and its downstream participants must retain copies of all written and electronic descriptive TEAM materials and activities and appropriate records for all other descriptive TEAM materials and activities in a manner consistent with § 512.135(c).

(4) CMS reserves the right to review, or have a designee review, descriptive TEAM materials and activities to determine whether or not the content is materially inaccurate or misleading. This review takes place at a time and in a manner specified by CMS once the descriptive TEAM materials and activities are in use by the TEAM participant.

§ 512.584 Cooperation in model evaluation and monitoring.

The TEAM participant and its TEAM collaborators must comply with the requirements of § 403.1110(b) of this chapter and must otherwise cooperate with CMS' TEAM evaluation and monitoring activities as may be necessary to enable CMS to evaluate TEAM in accordance with section 1115A(b)(4) of the Act and to conduct monitoring activities under § 512.590, including producing such data as may be required by CMS to evaluate or monitor TEAM, which may include protected health information as defined in 45 CFR 160.103 and other individually-identifiable data.

§ 512.586 Audits and record retention.

(a) *Right to audit.* The Federal government, including CMS, HHS, and the Comptroller General, or their designees, has the right to audit, inspect, investigate, and evaluate any documents and other evidence regarding implementation of TEAM.

(b) *Access to records.* The TEAM participant and its TEAM collaborators must maintain and give the Federal government, including CMS, HHS, and the Comptroller General, or their designees, access to all such documents and other evidence sufficient to enable the audit, evaluation, inspection, or investigation of the implementation of TEAM, including without limitation, documents and other evidence regarding all of the following:

(1) The TEAM participant's and its downstream participants' compliance with the terms of TEAM.

(2) The accuracy of TEAM reconciliation payment amounts and repayment amounts.

(3) The TEAM participant's payment of amounts owed to CMS under TEAM.

(4) Quality measure information and the quality of services performed under the terms of TEAM.

(5) Utilization of items and services furnished under TEAM.

(6) The ability of the TEAM participant to bear the risk of potential losses and to repay any losses to CMS, as applicable.

(7) Patient safety.

(8) Other program integrity issues.

(c) *Record retention.* (1) The TEAM participant and its downstream participants must maintain the documents and other evidence described in paragraph (b) of this section and other evidence for a period of 6 years from the last payment determination for the TEAM participant under TEAM or from the date of completion of any audit, evaluation, inspection, or investigation, whichever is later, unless—

(i) CMS determines there is a special need to retain a particular record or group of records for a longer period and notifies the TEAM participant at least 30 days before the normal disposition date; or

(ii) There has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its downstream participants, in which case the records must be maintained for an additional 6 years from the date of any resulting final resolution of the

termination, dispute, or allegation of fraud or similar fault.

(2) If CMS notifies the TEAM participant of the special need to retain records in accordance with paragraph (c)(1)(i) of this section or there has been a termination, dispute, or allegation of fraud or similar fault against the TEAM participant or its downstream participants described in paragraph (c)(1)(ii) of this section, the TEAM participant must notify its downstream participants of this need to retain records for the additional period specified by CMS.

§ 512.588 Rights in data and intellectual property.

(a) CMS may—

(1) Use any data obtained under §§ 512.584, 512.586, or 512.590 to evaluate and monitor TEAM; and

(2) Disseminate quantitative and qualitative results and successful care management techniques, including factors associated with performance, to other providers and suppliers and to the public. Data disseminated may include patient—

(i) De-identified results of patient experience of care and quality of life surveys, and patient;

(ii) De-identified measure results calculated based upon claims, medical records, and other data sources.

(b) Notwithstanding any other provision of this part, for all data that CMS confirms to be proprietary trade secret information and technology of the TEAM participant or its downstream participants, CMS or its designee(s) will not release this data without the express written consent of the TEAM participant or its downstream participant, unless such release is required by law.

(c) If the TEAM participant or its downstream participant wishes to protect any proprietary or confidential information that it submits to CMS or its designee, the TEAM participant or its downstream participant must label or otherwise identify the information as proprietary or confidential. Such assertions are subject to review and confirmation by CMS prior to CMS' acting upon such assertions.

§ 512.590 Monitoring and compliance.

(a) *Compliance with laws.* The TEAM participant and each of its downstream participants must comply with all applicable laws and regulations.

(b) *CMS monitoring and compliance activities.* (1) CMS staff, or its approved designee, may conduct monitoring activities to ensure compliance by the TEAM participant and each of its downstream participants with the terms of TEAM under this subpart to—

(i) Understand TEAM participants' use of TEAM payments; and

(ii) Promote the safety of beneficiaries and the integrity of TEAM.

(2) Monitoring activities may include, without limitation, all of the following:

(i) Documentation requests sent to the TEAM participant and its downstream participants, including surveys and questionnaires.

(ii) Audits of claims data, quality measures, medical records, and other data from the TEAM participant and its downstream participants.

(iii) Interviews with members of the staff and leadership of the TEAM participant and its downstream participants.

(iv) Interviews with beneficiaries and their caregivers.

(v) Site visits to the TEAM participant and its downstream participants, performed in a manner consistent with paragraph (c) of this section.

(vi) Monitoring quality outcomes and clinical data, if applicable.

(vii) Tracking patient complaints and appeals.

(3) In conducting monitoring and oversight activities, CMS or its designees may use any relevant data or information including without limitation all Medicare claims submitted for items or services furnished to TEAM beneficiaries.

(c) *Site visits.* (1) In a manner consistent with § 512.584, the TEAM participant and its downstream participants must cooperate in periodic site visits performed by CMS or its designees in order to facilitate the evaluation of TEAM and the monitoring of the TEAM participant's compliance with the terms of TEAM.

(2) CMS or its designee provides, to the extent practicable, the TEAM participant or downstream participant with no less than 15 days advance notice of any site visit. CMS—

(i) Attempts, to the extent practicable, to accommodate a request for particular dates in scheduling site visits; and

(ii) Does not accept a date request from a TEAM participant or downstream participant that is more than 60 days after the date of the CMS initial site visit notice.

(3) The TEAM participant and its downstream participants must ensure that personnel with the appropriate responsibilities and knowledge associated with the purpose of the site visit are available during all site visits.

(4) Additionally, CMS may perform unannounced site visits at the office of the TEAM participant and any of its downstream participants at any time to investigate concerns about the health or safety of beneficiaries or other patients or other program integrity issues.

(5) Nothing in this part shall be construed to limit or otherwise prevent CMS from performing site visits permitted or required by applicable law.

(d) *Reopening of payment determinations.* (1) CMS may reopen a TEAM payment determination on its own motion or at the request of a TEAM participant, within 4 years from the date of the determination, for good cause (as defined at § 405.986 of this chapter).

(2) CMS may reopen a TEAM payment determination at any time if there exists reliable evidence (as defined in § 405.902 of this chapter) that the determination was procured by fraud or similar fault (as defined in § 405.902 of this chapter).

(3) CMS's decision regarding whether to reopen a TEAM payment determination is binding and not subject to appeal.

(e) *OIG authority.* Nothing contained in the terms of TEAM limits or restricts the authority of the HHS Office of Inspector General or any other Federal government authority, including its authority to audit, evaluate, investigate, or inspect the TEAM participant or its downstream participants for violations of any Federal statutes, rules, or regulations.

§ 512.592 Remedial action.

(a) *Grounds for remedial action.* CMS may take one or more remedial actions described in paragraph (b) of this section if CMS determines that the TEAM participant or a downstream participant:

(1) Has failed to comply with any of the terms of TEAM, included in this subpart.

(2) Has failed to comply with any applicable Medicare program requirement, rule, or regulation.

(3) Has taken any action that threatens the health or safety of a beneficiary or other patient.

(4) Has submitted false data or made false representations, warranties, or certifications in connection with any aspect of TEAM.

(5) Has undergone a change in control that presents a program integrity risk.

(6) Is subject to any sanctions of an accrediting organization or a Federal, State, or local government agency.

(7) Is subject to investigation or action by HHS (including the HHS Office of Inspector General and CMS) or the Department of Justice due to an allegation of fraud or significant misconduct, including any of the following:

(i) Being subject to the filing of a complaint or filing of a criminal charge.

(ii) Being subject to an indictment.

(iii) Being named as a defendant in a False Claims Act qui tam matter in

which the Federal government has intervened, or similar action.

(8) Has failed to demonstrate improved performance following any remedial action imposed under this section.

(9) Has misused or disclosed beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the applicable data sharing agreement.

(b) *Remedial actions.* If CMS determines that one or more grounds for remedial action described in paragraph (a) of this section has taken place, CMS may take one or more of the following remedial actions:

(1) Notify the TEAM participant and, if appropriate, require the TEAM participant to notify its downstream participants of the violation.

(2) Require the TEAM participant to provide additional information to CMS or its designees.

(3) Subject the TEAM participant to additional monitoring, auditing, or both.

(4) Prohibit the TEAM participant from distributing TEAM payments, as applicable.

(5) Require the TEAM participant to terminate, immediately or by a deadline specified by CMS, its agreement with a downstream participant with respect to TEAM.

(6) Require the TEAM participant to submit a corrective action plan in a form and manner and by a date specified by CMS.

(7) Discontinue the provision of data sharing and reports to the TEAM participant.

(8) Recoup TEAM payments.

(9) Reduce or eliminate a TEAM payment otherwise owed to the TEAM participant.

(10) Such other action as may be permitted under the terms of this part.

§ 512.594 Limitations on review.

There is no administrative or judicial review under sections 1869 or 1878 of the Act or otherwise for all of the following:

(a) The selection of models for testing or expansion under section 1115A of the Act.

(b) The selection of organizations, sites, or participants to test TEAM, including a decision by CMS to remove a TEAM participant or to require a TEAM participant to remove a downstream participant from TEAM.

(c) The elements, parameters, scope, and duration of testing or dissemination, including without limitation the following:

(1) The selection of quality performance standards for TEAM by CMS.

(2) The methodology used by CMS to assess the quality of care furnished by the TEAM participant.

(3) The methodology used by CMS to attribute TEAM beneficiaries to the TEAM participant, if applicable.

(d) Determinations regarding budget neutrality under section 1115A(b)(3) of the Act.

(e) The termination or modification of the design and implementation of TEAM under section 1115A(b)(3)(B) of the Act.

(f) Determinations about expansion of the duration and scope of TEAM under section 1115A(c) of the Act, including the determination that TEAM is not expected to meet criteria described in paragraph (a) or (b) of this section.

§ 512.595 Bankruptcy and other notifications.

(a) *Notice of bankruptcy.* If the TEAM participant has filed a bankruptcy petition, whether voluntary or involuntary, the TEAM participant must provide written notice of the bankruptcy to CMS and to the U.S. Attorney's Office in the district where the bankruptcy was filed, unless final payment has been made by either CMS or the TEAM participant under the terms of TEAM and all administrative or judicial review proceedings relating to any TEAM payments have been fully and finally resolved. The notice of bankruptcy must be sent by certified mail no later than 5 days after the petition has been filed and must contain a copy of the filed bankruptcy petition (including its docket number). The notice to CMS must be addressed to the CMS Office of Financial Management at 7500 Security Boulevard, Mailstop C3–01–24, Baltimore, MD 21244 or such other address as may be specified on the CMS website for purposes of receiving such notices.

(b) *Notice of legal name change.* A TEAM participant must furnish written notice to CMS within 30 days of any change in its legal name becomes effective. The notice of legal name change must be in a form and manner specified by CMS and must include a copy of the legal document effecting the name change, which must be authenticated by the appropriate State official.

(c) *Notice of change in control.* (1) A TEAM participant must furnish written notice to CMS in a form and manner specified by CMS at least 90 days before any change in control becomes effective.

(2) If CMS determines, in accordance with § 512.592(a)(5), that a TEAM participant's change in control would present a program integrity risk, CMS may—

(i) Take remedial action against the TEAM participant under § 512.160(b).

(ii) Require immediate reconciliation and payment of all monies owed to CMS by a TEAM participant that is subject to a change in control.

§ 512.596 Termination of TEAM or TEAM participant from model by CMS.

(a) *Termination of TEAM.* (1) CMS may terminate TEAM for reasons including, but not limited to, the following:

(i) CMS determines that it no longer has the funds to support TEAM.

(ii) CMS terminates TEAM in accordance with section 1115A(b)(3)(B) of the Act.

(2) If CMS terminates TEAM, CMS provides written notice to the TEAM participant specifying the grounds for termination and the effective date of such termination.

(b) *Notice of a TEAM participant's termination from TEAM.* If a TEAM participant receives notification that it has been terminated from TEAM and wishes to dispute the termination, it must provide a written notice to CMS requesting review of the termination within 10 calendar days of the notice. CMS has 30 days to respond to the TEAM participant's request for review. If the TEAM participant fails to notify CMS, the termination is deemed final.

§ 512.598 Decarbonization and Resilience initiative.

TEAM participants may elect to report questions and metrics related to emissions to CMS on an annual basis following each performance period.

(a) Voluntary Reporting includes the following metrics:

(1) Organizational questions, which are a set of questions about the TEAM participants' sustainability team and sustainability activities.

(2) Building energy metrics, which are a set of metrics related to measuring and reporting GHG emissions related to energy use at TEAM participant facilities.

(i) Building energy metrics are based on the ENERGY STAR® PortfolioManager® guidelines for the time of submission. TEAM participants reporting these metrics must submit using ENERGY STAR Portfolio Manager in manner described in paragraph (b).

(ii) Metrics to be collected include:

(A) ENERGY STAR Score for Hospitals as defined in the ENERGY STAR Portfolio Manager as well as supporting data which may include energy use intensity, electricity, natural

gas, and other source emissions and normalizing factors such as building size, number of full-time equivalent workers, number of staffed beds, number of magnetic resonance imaging machines, zip codes, and heating and cooling days, as specified in the ENERGY STAR Portfolio Manager.

(B) Energy cost, to capture total energy costs, as specified in the ENERGY STAR Portfolio Manager.

(C) Total, direct, and indirect GHG emissions and emissions intensity as specified in the ENERGY STAR Portfolio Manager.

(3) Anesthetic gas metrics, which are a set of metrics related to measuring and managing emissions from anesthetic gas which include all of the following:

(i) Total greenhouse gas emissions from inhaled anesthetics based on purchase records.

(ii) Normalization factors that may include information on anesthetic hours.

(iii) Assessment questions based on key actions recommended for reducing emissions for anesthetic gases.

(4) Transportation metrics, which are a set metrics that focus on greenhouse gases related to leased or owned vehicles and may include any of the following:

(i) Gallons for owned and leased vehicles.

(ii) Normalization factors that may include patient encounter volume.

(iii) Assessment questions on key actions to reduce transportation emissions.

(A) If the TEAM Participant elects to report the metrics in paragraph (a) of this section to CMS, such information must be reported to CMS in a form and manner specified by CMS for each performance year, including the use of ENERGY STAR Portfolio Manager for the building energy metrics at paragraph (a)(2) of this section and a survey and questionnaire for questions and metrics at paragraphs (a)(1), (3), and (4) of this section. If the TEAM participant chooses to participate, the TEAM participant must report the information to CMS no later than 120 days in the year following the performance year, or a later date as specified by CMS.

(B) If a TEAM participant elects to report all the metrics specified in paragraph (a) of this section to CMS, in the manner specified in paragraph (b) of this section, CMS annually provides to the TEAM participant with the following:

(*1*) Individualized feedback reports, which may summarize facilities' emissions metrics and would include benchmarks, as feasible, for normalized metrics to compare facilities, in aggregate, to other TEAM participants in the Decarbonization and Resilience Initiative.

(*2*) Publicly reported hospital recognition for the TEAM participant's commitment to decarbonization through a hospital recognition badge publicly reported on a CMS website.

Xavier Becerra,

Secretary, Department of Health and Human Services.

The following addendum and appendices will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2024, and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2024

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the proposed prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2025 for acute care hospitals. We also are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS for FY 2025. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the proposed figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this proposed rule, we are setting forth the rate-of-increase percentage for updating the target amounts for certain hospitals excluded from the IPPS that would be effective for cost reporting periods beginning on or after October 1, 2024. In addition, we are setting forth a description of the methods and data we used to determine the LTCH PPS standard Federal payment rate that would be applicable to Medicare LTCHs for FY 2025.

In general, except for SCHs and MDHs, for FY 2025, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (including, as discussed in section IV.E. of the preamble of this proposed rule, uncompensated care payments under section 1886(r)(2) of the Act).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs historically were paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever was higher. However, section 5003(a)(1) of Public Law 109–171 extended and modified the MDH special payment provision that was previously set to expire on October 1, 2006, to include discharges occurring on or after October 1, 2006, but before October 1, 2011. Under section 5003(b) of Public Law 109–171, if the change results in an increase to an MDH's target amount, we must rebase an MDH's hospital specific rates based on its FY 2002 cost report. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor. Section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), enacted on December 29, 2022, extended the MDH program through FY 2024 (that is, for discharges occurring on or before September 30, 2024). Subsequently, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Under current law, the MDH program will expire for discharges on or after January 1, 2025. We refer readers to section V.F. of the preamble of this proposed rule for further discussion of the MDH program.

As discussed in section V.B.2. of the preamble of this proposed rule, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. In general, Puerto Rico hospitals are paid 100 percent of the national standardized amount and are subject to the same national standardized amount as subsection (d) hospitals that receive the full update. Accordingly, our discussion later in this section does not include references to the Puerto Rico standardized amount or the Puerto Rico-specific wage index.

As discussed in section II. of this Addendum, we are proposing to make changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2025. In section III. of this Addendum, we discuss our proposed policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2025. In section IV. of this Addendum, we are setting forth the rate-

of-increase percentage for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2025. In section V. of this Addendum, we discuss proposed policy changes for determining the LTCH PPS standard Federal rate for LTCHs paid under the LTCH PPS for FY 2025. The tables to which we refer in the preamble of this proposed rule are listed in section VI. of this Addendum and are available via the internet on the CMS website.

II. Proposed Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2025

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. In this section, we discuss the factors we are proposing to use for determining the proposed prospective payment rates for FY 2025.

In summary, the proposed standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the internet on the CMS website) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section V.B. of the preamble of this proposed rule for a complete discussion on the FY 2025 inpatient hospital update. The table that follows shows these four scenarios:

Proposed FY 2025 Applicable Percentage Increase for the IPPS				
FY 2025	**Hospital Submitted Quality Data and is a Meaningful EHR User**	**Hospital Submitted Quality Data and is NOT a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is a Meaningful EHR User**	**Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User**
Proposed Market Basket Rate-of-Increase	3.0	3.0	3.0	3.0
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.75	-0.75
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.25	0	-2.25
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.4	-0.4	-0.4	-0.4
Proposed Applicable Percentage Increase Applied to Standardized Amount	**2.6**	**0.35**	**1.85**	**-0.4**

We note that section 1886(b)(3)(B)(viii) of the Act, which specifies the adjustment to the applicable percentage increase for ''subsection (d)'' hospitals that do not submit quality data under the rules established by the Secretary, is not applicable to hospitals located in Puerto Rico. In addition, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016, and also to apply the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022. Accordingly, the applicable percentage increase for subsection (d) Puerto Rico hospitals that are not meaningful EHR users for FY 2025 and subsequent fiscal years is adjusted by the proposed adjustment for failure to be a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act. The regulations at 42 CFR 412.64(d)(3)(ii) reflect the current law for the update for subsection (d) Puerto Rico hospitals for FY 2022 and subsequent fiscal years.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for the permanent 10 percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as discussed in section II.D.2.c. of the preamble of this proposed rule, consistent with our current methodology for implementing DRG recalibration and reclassification budget neutrality under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index and labor-related share changes (depending on the fiscal year) are budget neutral, as provided for under section 1886(d)(3)(E)(i) of the Act (as discussed in the FY 2006 IPPS final rule (70 FR 47395) and the FY 2010 IPPS final rule (74 FR 44005)). We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62-percent labor-related share in certain circumstances) had not been enacted.
- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2024 budget neutrality factor and applying a revised factor.
- An adjustment to the standardized amount to implement in a budget neutral manner the increase in the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (as described in section III.G.5 of the preamble of this proposed rule).
- An adjustment to the standardized amount to implement in a budget neutral manner the wage index cap policy (as described in section III.G.6. of the preamble of this proposed rule).
- An adjustment to ensure the effects of the Rural Community Hospital Demonstration program required under section 410A of Public Law 108–173 (as amended by sections 3123 and 10313 of Pub. L. 111–148, which extended the demonstration program for an additional 5 years and section 15003 of Pub. L. 114–255), are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- An adjustment to remove the FY 2024 outlier offset and apply an offset for FY 2025, as provided for in section 1886(d)(3)(B) of the Act.

For FY 2025, consistent with current law, we are proposing to apply the rural floor budget neutrality adjustment to hospital wage indexes. Also, consistent with section 3141 of the Affordable Care Act, instead of

applying a State-level rural floor budget neutrality adjustment to the wage index, we are proposing to apply a uniform, national budget neutrality adjustment to the FY 2025 wage index for the rural floor.

For FY 2025, we are proposing to continue to not remove the Stem Cell Acquisition Budget Neutrality Factor from the prior year's standardized amount and to not apply a new factor. If we removed the prior year's adjustment, we would not satisfy budget neutrality. We believe this approach ensures the effects of the reasonable cost-based payment for allogeneic hematopoietic stem cell acquisition costs under section 108 of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94) are budget neutral as required under section 108 of Public Law 116–94. For a discussion of Stem Cell Acquisition Budget Neutrality Factor, we refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 59032 and 59033).

A. Calculation of the Proposed Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

For FY 2025, we are proposing to continue to use the national labor-related and nonlabor-related shares (which are based on the 2018-based hospital IPPS market basket) that were used in FY 2024. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related and adjusts the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the ''labor-related share.'' For FY 2025, as discussed in section III.I. of the preamble of this proposed rule, we are proposing to use a labor-related share of 67.6 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000.

The proposed standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this proposed rule and are available via the internet on the CMS website.

2. Computing the National Average Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage increase. Accordingly, we are proposing to calculate the FY 2025 national average standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, we are proposing to use the 2018-based IPPS operating and capital market baskets for FY 2025. As discussed in section IV.B. of the preamble of this proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are proposing to reduce the FY 2025 applicable percentage increase (which for this proposed rule is based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket) by the productivity adjustment, as discussed elsewhere in this proposed rule.

Based on IGI's fourth quarter 2023 forecast of the hospital market basket percentage increase (as discussed in appendix B of this proposed rule), the forecast of the hospital market basket percentage increase for FY 2025 for this proposed rule is 3.0 percent and the forecast of the productivity adjustment for FY 2025 for this proposed rule is 0.4 percent. As discussed earlier, for FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that can be applied to the standardized amount. We refer readers to section V.B. of the preamble of this proposed rule for a complete discussion on the FY 2025 inpatient hospital update to the standardized amount. We also refer readers to the previous table for the four possible applicable percentage increases that would be applied to update the national standardized amount. The proposed standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the internet on the CMS website reflect these differential amounts.

Although the update factors for FY 2025 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2025 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our recommendations in the **Federal Register** for public comment. Our recommendation on the proposed FY 2025 update factors is set forth in appendix B of this proposed rule.

4. Methodology for Calculation of the Average Standardized Amount

The methodology we used to calculate the proposed FY 2025 standardized amount is as follows:

- To ensure we are only including hospitals paid under the IPPS in the calculation of the standardized amount, we applied the following inclusion and exclusion criteria: include hospitals whose last four digits fall between 0001 and 0879 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); exclude CAHs at the time of this proposed rule; exclude hospitals in Maryland (because these hospitals are paid under an all payer model under section 1115A of the Act); and remove PPS excluded-cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.

Section 125 of Division CC (section 125) of the CAA 2021 established a new rural Medicare provider type: Rural Emergency Hospitals (REHs). (We refer the reader to the CMS website at *https://www.cms.gov/medicare/health-safety-standards/guidance-for-laws-regulations/hospitals/rural-emergency-hospitals* for additional information on REHs.) In doing so, section 125 amended section 1861(e) of the Act, which provides the definition of a hospital and states that the term ''hospital'' does not include, unless the context otherwise requires, a critical access hospital (as defined in subsection (mm)(1)) or a rural emergency hospital (as defined in subsection (kkk)(2)). Section 125 also added section 1861(kkk) to the Act, which sets forth the requirements for REHs. Per section 1861(kkk)(2) of the Act, one of the requirements for an REH is that it does not provide any acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility (SNF)). Therefore, we believe hospitals that have subsequently converted to REH status should be removed from the calculation of the standardized amount, because they are a separately certified Medicare provider type and are not comparable to other short-term, acute care hospitals as they do not provide inpatient hospital services. For FY 2025, we are proposing to exclude REHs from the calculation of the standardized amount, including hospitals that subsequently became REHs after the period from which the data were taken.

- As in the past, we are proposing to adjust the FY 2025 standardized amount to remove the effects of the FY 2024 geographic reclassifications and outlier payments before applying the FY 2025 updates. We then applied budget neutrality offsets for outliers

and geographic reclassifications to the standardized amount based on proposed FY 2025 payment policies.

• We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

• Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total ''operating DRG payments,'' which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

• Consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).

• Consistent with our methodology established in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57277), in order to further ensure that we capture only FFS claims, we are excluding claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).

• Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examine the MedPAR file and remove pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field for the budget neutrality adjustments. We are proposing to remove organ acquisition charges, except for cases that group to MS–DRG 018, from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS. Revenue centers 081X–089X are typically excluded from ratesetting, however, we are proposing to not remove revenue center 891 charges from MS–DRG 018 claims during ratesetting because those revenue 891 charges were included in the relative weight calculation for MS–DRG 018, which is consistent with the policy finalized in the FY 2021 final rule (85 FR 58600). We note that a new MedPAR variable for revenue code 891 charges was introduced in April 2020.

• For FY 2025, we are continuing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).

• The participation of hospitals under the BPCI (Bundled Payments for Care Improvement) Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in the BPCI Advanced model in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals would continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at: *https://innovation.cms.gov/initiatives/bpci-advanced/*.

For FY 2025, consistent with how we treated hospitals that participated in the BPCI Advanced Model in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59029 and 59030), we are proposing to include all applicable data from subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations. We believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act. For the same reasons, we are proposing to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

• Consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for the Hospital Readmissions Reduction Program and the Hospital VBP Program (established under the Affordable Care Act) within our budget neutrality calculations.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations.

In order to properly determine aggregate payments on each side of the comparison, consistent with the approach we have taken in prior years, for FY 2025, we are proposing to continue to apply a proxy based on the prior fiscal year hospital readmissions payment adjustment and a proxy based on the prior fiscal year hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). Under this proposed policy for FY 2025, we used the final FY 2024 readmissions adjustment factors from Table 15 of the FY 2024 IPPS/LTCH PPS final rule and the final FY 2024 hospital VBP adjustment factors from Table 16B of the FY 2024 IPPS/LTCH PPS final rule. These proxy factors are applied on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum. We refer the reader to section V.K. of the preamble of this proposed rule for a complete discussion on the Hospital Readmissions Reduction Program and section V.L. of the preamble of this proposed rule for a complete discussion on the Hospital VBP Program.

• The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals who are uninsured and any additional statutory adjustment, is available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2025 (as we did for the last 11 fiscal years), we are proposing to include estimated empirically justified Medicare DSH payments that would be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we are proposing to consider estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We also are proposing to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

• When calculating total payments for budget neutrality, to determine total payments for SCHs, we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.G. of the preamble to this proposed rule and later in this section, we are proposing to continue to use the FY 2014 finalized methodology under which we take into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are proposing to include estimated uncompensated care payments in this comparison.

As discussed elsewhere in this proposed rule, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. As a result, MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting January 1, 2025. Because of the timing of this legislation, the total payments for budget neutrality discussed in this section do not reflect the extension of the MDH program for the first quarter of FY 2025. This extension will be reflected in the total payments for budget neutrality for the final rule. We note, for the final rule, consistent with historical practice for MDHs, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, we are proposing to continue to take into consideration uncompensated care payments in the computation of payments under the Federal rate and the hospital-specific rate for MDHs under the extension.

• We are proposing to include an adjustment to the standardized amount for those hospitals that are not meaningful EHR users in our modeling of aggregate payments for budget neutrality for FY 2025. Similar to FY 2024, we are including this adjustment based on data on the prior year's performance. Payments for hospitals would be estimated based on the proposed applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2025.

• In our determination of all budget neutrality factors described in section II.A.4. of this Addendum, we used transfer-adjusted discharges.

We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49414 through 49415), we finalized a change to the ordering of the budget neutrality factors in the calculation so that the RCH Demonstration budget neutrality factor is applied after all wage index and other budget neutrality factors. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

We note that the wage index value is calculated and assigned to a hospital based on the hospital's labor market area. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The current statistical areas used in FY 2024 are based on the OMB delineations that were adopted beginning with FY 2015 (based on the revised delineations issued in OMB Bulletin No. 13–01) to calculate the area wage indexes, with updates as reflected in OMB Bulletin Nos. 15–01, 17–01, and 18–04. For purposes of determining all of the FY 2024 budget neutrality factors, we determined aggregate payments on each side of the comparison for our budget neutrality calculations using wage indexes based on the current CBSAs.

On July 21, 2023, OMB released Bulletin No. 23–01. A copy of OMB Bulletin No. 23–01 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.* According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards''), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (*e.g.,* 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). In order to implement these revised standards for the IPPS, it was necessary to identify the new OMB labor market area delineation for each county and hospital in the country. As stated in section III.B. of the preamble of this proposed rule, we believe that using the revised delineations based on OMB Bulletin No. 23–01 will increase the integrity of the IPPS wage index system by more accurately representing current geographic variations in wage levels. As discussed in section III. of the preamble of this proposed rule, we are proposing to adopt the new OMB labor market area delineations as described in the July 21, 2023 OMB Bulletin No. 23–01, effective for the FY 2025 IPPS wage index.

Consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations, we are proposing to use wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors discussed later in this section. We also note that, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an ''adjustment or update'' to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

a. Proposed Reclassification and Recalibration of MS–DRG Relative Weights Before Cap

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.D. of the preamble of this proposed rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are proposing to make a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

For this FY 2025 proposed rule, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the standardized amount and the hospital-specific rates, we used FY 2023 discharge data to simulate payments and compared the following:

• Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the FY 2024 labor-related share percentages, the FY 2024 relative weights, and the FY 2024 pre-reclassified wage data, and applied the proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments (as described previously); and

• Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the FY 2024 labor-related share percentages, the proposed FY 2025 relative weights before applying the 10 percent cap, and the FY 2024 pre-reclassified wage data, and applied the same proxy hospital readmissions payment adjustments and proxy hospital VBP payment adjustments applied previously.

Because this payment simulation uses the proposed FY 2025 relative weights (before applying the 10 percent cap), consistent with our proposal in section V.I. of the preamble to this proposed rule, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments. We note that because the simulations of payments for all of the budget neutrality factors discussed in this section also use the FY 2025 relative weights, we are proposing to apply the adjustor for certain MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and other immunotherapies) cases in all simulations of payments for the budget neutrality factors discussed later in this section. We refer the reader to section V.I. of the preamble of this proposed rule for a complete discussion on the proposed adjustor for certain cases that group to MS–DRG 018 and to section II.D.2.b. of the preamble of this proposed rule, for a complete discussion of the proposed adjustment to the FY 2025 relative weights to account for certain cases that group to MS–DRG 018.

Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, we are proposing to apply the MS–DRG reclassification and recalibration budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2024. Please see the table later in this section setting forth each of the proposed FY 2025 budget neutrality factors.

b. Proposed Budget Neutrality Adjustment for Reclassification and Recalibration of MS–DRG Relative Weights With Cap

As discussed in section II.D.2.c of the preamble of this proposed rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900), we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. As also discussed in section II.D.2.c of the preamble of this proposed rule, and consistent with our current methodology for implementing budget neutrality for MS–DRG reclassification and recalibration of the relative weights under section 1886(d)(4)(C)(iii) of the Act, we apply a budget neutrality adjustment to the standardized amount for all hospitals so that this 10-percent cap on relative weight reductions does not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion.

To calculate this proposed budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the FY 2024 labor-related share percentages, the proposed FY 2025 relative weights before applying the 10-percent cap, and the FY 2024 pre-reclassified wage data, and applied the proposed proxy FY 2025 hospital readmissions payment adjustments and the proposed proxy FY 2025 hospital VBP payment adjustments; and
- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the FY 2024 labor-related share percentages, the proposed FY 2025 relative weights after applying the 10-percent cap, and the FY 2024 pre-reclassified wage data, and applied the same proposed proxy FY 2025 hospital readmissions payment adjustments and proposed proxy FY 2025 hospital VBP payment adjustments applied previously.

Because this payment simulation uses the FY 2025 relative weights, consistent with our proposal in section V.I. of the preamble to this proposed rule and our historical policy, and as discussed in the preceding section, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

In addition, we applied the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor before the cap (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2024 to FY 2025. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount. As discussed in section IV. of this Addendum, as we are proposing to apply this budget neutrality factor to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2024. Please see the table later in this section setting forth each of the proposed FY 2025 budget neutrality factors.

c. Updated Wage Index—Proposed Budget Neutrality Adjustment

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2025, we are proposing to adjust 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.E. of the preamble of this proposed rule.

To compute a proposed budget neutrality adjustment factor for wage index and labor-related share percentage changes, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 relative weights and the FY 2023 pre-reclassified wage indexes, applied the FY 2024 labor-related share of 67.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the proxy FY 2025 hospital readmissions payment adjustment and the proxy FY 2025 hospital VBP payment adjustment.
- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 relative weights and the proposed FY 2025 pre-reclassified wage indexes, applied the proposed labor-related share for FY 2025 of 67.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same proxy FY 2025 hospital readmissions payment adjustments and proxy FY 2025 hospital VBP payment adjustments applied previously.

In addition, we applied the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor before the proposed cap (derived in the first step) and the 10 percent cap on relative weight reductions adjustment factor (derived from the second step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2024 to FY 2025. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this factor to the standardized amount for changes to the wage index. Please see the table later in this section for a summary of the proposed FY 2025 budget neutrality factors.

d. Reclassified Hospitals—Proposed Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971–77), we finalized a policy beginning with FY 2024 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and only exclude ''dual reclass'' hospitals (hospitals with simultaneous

§ 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of ''the wage index for rural areas in the State in which the county is located'' as referred to in section 1886(d)(8)(C)(iii) of the Act.

We refer the reader to the FY 2015 IPPS final rule (79 FR 50371 and 50372) for a complete discussion regarding the requirement of section 1886(d)(8)(C)(iii) of the Act. We further note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) of the Act shall not be taken into account in applying any budget neutrality adjustment with respect to such index under section 1886(d)(8)(D) of the Act. To calculate the proposed budget neutrality adjustment factor for FY 2025, we used FY 2022 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 labor-related share percentage, the proposed FY 2025 relative weights, and the proposed FY 2025 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments.
- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 labor-related share percentage, the proposed FY 2025 relative weights, and the proposed FY 2025 wage data after such reclassifications, and applied the same proxy FY 2025 hospital readmissions payment adjustments and the proxy FY 2025 hospital VBP payment adjustments applied previously.

We note that the reclassifications applied under the second simulation and comparison are those listed in Table 2 associated with this proposed rule, which is available via the internet on the CMS website. This table reflects reclassification crosswalks for FY 2025 and applies the policies explained in section III. of the preamble of this proposed rule. Based on this comparison, we computed a proposed budget neutrality adjustment factor and applied this proposed factor to the standardized amount to ensure that the effects of these provisions are budget neutral, consistent with the statute. Please see the table later in this section for a summary of the proposed FY 2025 budget neutrality factors.

The proposed FY 2025 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2024 budget neutrality adjustment factor. We note that the proposed FY 2025 budget neutrality adjustment reflects FY 2025 wage index reclassifications approved by the MGCRB or the Administrator at the time of development of this proposed rule.

e. Proposed Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) are equal to the aggregate prospective payments that would have been made in the absence of this provision. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this proposed rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural floor is a national adjustment to the wage index.

Similar to our calculation in the FY 2015 IPPS/LTCH PPS final rule (79 FR 50369 through 50370), for FY 2025, we are proposing to calculate a national rural Puerto Rico wage index. Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2025 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous to (share a border with) the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the proposed FY 2025 rural Puerto Rico wage index is calculated based on the average of the proposed FY 2025 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660); San German, PR (CBSA 41900); and San Juan-Carolina-Caguas, PR (CBSA 41980).

We note, in the FY 2024 IPPS/LTCH final rule (88 FR 58971–77), we finalized a policy beginning with FY 2024 to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations and are only excluding ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and MGCRB reclassifications) in accordance with the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act. Consistent with the previous policy, beginning with FY 2024, we include the data of all § 412.103 hospitals (including those that have an MGCRB reclassification) in the calculation of the rural floor.

To calculate the proposed national rural floor budget neutrality adjustment factor, we used FY 2023 discharge data to simulate payments, the new OMB labor market area delineations proposed for FY 2025, and the post-reclassified national wage indexes and compared the following:

- National simulated payments without the rural floor.
- National simulated payments with the rural floor.

Based on this comparison, we determined a proposed national rural floor budget neutrality adjustment factor. The proposed national adjustment was applied to the national wage indexes to produce proposed rural floor budget neutral wage indexes. Please see the table later in this section for a summary of the proposed FY 2025 budget neutrality factors.

As further discussed in section III.G.2. of this proposed rule, we note that section 9831 of the American Rescue Plan Act of 2021 (Pub. L. 117–2), enacted on March 11, 2021 amended section 1886(d)(3)(E)(i) of the Act (42 U.S.C. 1395ww(d)(3)(E)(i)) and added section 1886(d)(3)(E)(iv) of the Act to establish a minimum area wage index (or imputed floor) for hospitals in all-urban States for discharges occurring on or after October 1, 2022. Unlike the imputed floor that was in effect from FY 2005 through FY 2018, section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index shall not be applied in a budget neutral manner. Specifically, section 9831(b) of Public Law 117–2 amends section 1886(d)(3)(E)(i) of the Act to exclude the imputed floor from the budget neutrality requirement under section 1886(d)(3)(E)(i) of the Act. In the past, we budget neutralized the estimated increase in payments each year resulting from the imputed floor that was in effect from FY 2005 through FY 2018. For FY 2022 and subsequent years, in applying the imputed floor required under section 1886(d)(3)(E)(iv) of the Act, we are applying the imputed floor after the application of the rural floor and would apply no reductions to the standardized amount or to the wage index to fund the increase in payments to hospitals in all-urban States resulting from the application of the imputed floor. We refer the reader to section III.G.2. of the preamble of this proposed rule for a complete discussion regarding the imputed floor.

f. Proposed Continuation of the Low Wage Index Hospital Policy—Proposed Budget Neutrality Adjustment

As discussed in section III.G.5. of the preamble of this proposed rule, we are proposing to continue for FY 2025 the wage index policy finalized in the FY 2020 IPPS/LTCH PPS final rule to address wage index disparities by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index value across all hospitals (the low wage index hospital policy). As discussed in section III.G.3. of this proposed rule, consistent with our current methodology for implementing wage index budget neutrality under section 1886(d)(3)(E) of the Act, we are proposing to make a budget neutrality adjustment to the national standardized amount for all hospitals so that the increase in the wage index for hospitals with a wage index below the 25th percentile wage index, is implemented in a budget neutral manner.

To calculate this proposed budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 labor-related share percentage, the proposed FY 2025 relative weights, and the proposed FY 2025 wage index for each hospital before adjusting the wage indexes under the low wage index hospital policy, and applied the proposed proxy FY 2025 hospital readmissions

payment adjustments and the proposed proxy FY 2025 hospital VBP payment adjustments; and

- Aggregate payments using the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 labor-related share percentage, the proposed FY 2025 relative weights, and the proposed FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the same proxy FY 2025 hospital readmissions payment adjustments and the proposed proxy FY 2025 hospital VBP payment adjustments applied previously.

This proposed FY 2025 budget neutrality adjustment factor was applied to the standardized amount.

g. Permanent Cap Policy for Wage Index—Proposed Budget Neutrality Adjustment

As noted previously, in section III.G. 6. of the preamble to this proposed rule, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021) we finalized a policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We also finalized the application of this permanent cap policy in a budget neutral manner through an adjustment to the standardized amount to ensure that estimated aggregate payments under our wage index cap policy for hospitals that will have a decrease in their wage indexes for the upcoming fiscal year of more than 5 percent will equal what estimated aggregate payments would have been without the permanent cap policy.

To calculate a wage index cap budget neutrality adjustment factor for FY 2025, we used FY 2023 discharge data to simulate payments and compared the following:

- Aggregate payments without the 5-percent cap using the proposed FY 2025 labor-related share percentages, the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 relative weights, the proposed FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the proposed proxy FY 2025 hospital readmissions payment adjustments and the proposed proxy FY 2025 hospital VBP payment adjustments.
- Aggregate payments with the 5-percent cap using the proposed FY 2025 labor-related share percentages, the new OMB labor market area delineations proposed for FY 2025, the proposed FY 2025 relative weights, the proposed FY 2025 wage index for each hospital after adjusting the wage indexes under the low wage index hospital policy, and applied the same proxy FY 2025 hospital readmissions payment adjustments and the proposed proxy FY 2025 hospital VBP payment adjustments applied previously.

We note, Table 2 associated with this proposed rule contains the wage index by provider before and after applying the low wage index hospital policy and the proposed cap.

h. Proposed Rural Community Hospital Demonstration Program Adjustment

In section V.N. of the preamble of this proposed rule, we discuss the Rural Community Hospital (RCH) Demonstration program, which was originally authorized for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and extended for another 5-year period by sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148). Subsequently, section 15003 of the 21st Century Cures Act (Pub. L. 114–255), enacted December 13, 2016, amended section 410A of Public Law 108–173 to require a 10-year extension period (in place of the 5-year extension required by the Affordable Care Act, as further discussed later in this section). Finally, Division CC, section 128(a) of the Consolidated Appropriations Act of 2021 (Pub. L. 116–260) again amended section 410A to require a 15-year extension period in place of the 10-year period. We make an adjustment to the standardized amount to ensure the effects of the RCH Demonstration program are budget neutral as required under section 410A(c)(2) of Public Law 108–173. We refer readers to section V.N. of the preamble of this proposed rule for complete details regarding the Rural Community Hospital Demonstration.

With regard to budget neutrality, as mentioned earlier, we make an adjustment to the standardized amount to ensure the effects of the Rural Community Hospital Demonstration are budget neutral, as required under section 410A(c)(2) of Public Law 108–173. For FY 2025, based on the latest data for this proposed rule, the total amount that we are applying to make an adjustment to the standardized amounts to ensure the effects of the Rural Community Hospital Demonstration program are budget neutral is $ 49,522,206. Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2025, we computed a factor for the Rural Community Hospital Demonstration budget neutrality adjustment that would be applied to the standardized amount. Please see the table later in this section for a summary of the Proposed FY 2025 budget neutrality factors. We refer readers to section V.N. of the preamble of this proposed rule on complete details regarding the calculation of the amount we are applying to make an adjustment to the standardized amounts.

The following table is a summary of the proposed FY 2025 budget neutrality factors, as discussed in the previous sections.

Summary of Proposed FY 2025 Budget Neutrality Factors	
MS-DRG Reclassification and Recalibration Budget Neutrality Factor	0.997055
Cap Policy MS-DRG Weights Budget Neutrality Factor	0.999617
Wage Index Budget Neutrality Factor	0.999957
Reclassification Budget Neutrality Factor	0.976773
*Rural Floor Budget Neutrality Factor	0.985868
Low Wage Index Hospital Policy Budget Neutrality Factor	0.997498
Cap Policy Wage Index Budget Neutrality Factor	0.997162
Rural Demonstration Budget Neutrality Factor	0.999513

*The rural floor budget neutrality factor is applied to the national wage indexes while the rest of the budget neutrality adjustments are applied to the standardized amounts.

i. Proposed Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for ''outlier'' cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the ''outlier threshold'' or ''fixed-loss'' amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the MS–DRG, any IME and DSH payments, uncompensated care payments, supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, any new technology add-on payments, and the outlier threshold as the outlier ''fixed-loss cost threshold.'' To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital's CCR is applied to the total covered charges for the

case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2025 is 80 percent, or 90 percent for burn MS–DRGs 927, 928, 929, 933, 934 and 935. We have used a marginal cost factor of 90 percent since FY 1989 (54 FR 36479 through 36480) for designated burn DRGs as well as a marginal cost factor of 80 percent for all other DRGs since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the percent target by dividing the total projected operating outlier payments by the total projected operating DRG payments plus projected operating outlier payments. As discussed in the next section, for FY 2025, we are incorporating an estimate of the impact of outlier reconciliation when setting the outlier threshold. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated total of outlier payments as a proportion of total DRG payments. More information on outlier payments may be found on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.html.*

(1) Proposed Methodology To Incorporate an Estimate of the Impact of Outlier Reconciliation in the FY 2025 Outlier Fixed-Loss Cost Threshold

The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement will be based on operating and capital cost-to-charge ratios (CCRs) calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. Instructions for outlier reconciliation are in section 20.1.2.5 of chapter 3 of the Claims Processing Manual (on line at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*). The original instructions issued in July 2003 [853] instruct MACs to identify for CMS any instances where: (1) a hospital's actual operating CCR for the cost reporting period fluctuates plus or minus 10 percentage points or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed; and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. Cost reports that meet these criteria will have the hospital's outlier payments reconciled at the time of cost report final settlement if approved by the CMS Central Office. For the remainder of this discussion, we refer to these criteria as the original criteria for outlier reconciliation (or the original criteria).

On March 28, 2024, we issued Change Request (CR) 13566, which is available at *https://www.cms.gov/medicare/regulations-guidance/transmittals/2024-transmittals/r12558cp*. CR 13566 provides additional instructions to MACs that expand the criteria for identifying cost reports MACs are to refer to CMS for approval of outlier reconciliation. We anticipate that MACs will identify more cost reports to refer to CMS for outlier reconciliation approval. A report issued by the Office of the Inspector General (OIG) recommended that CMS require reconciliation of all hospital outlier payments during a cost-reporting period in its November 2019 report titled ''Hospitals Received Millions in Excessive Outlier Payments Because CMS Limits the Reconciliation Process'' (A–05–16–00060).[854] CMS concurs with the OIG's recommendation.

Consistent with the OIG recommendation, CMS modified the original criteria for identifying cost reports to refer to CMS for outlier reconciliation approval in instructions to MACs in CR 13566. Specifically, CR 13566 states that for cost reports beginning on or after October 1, 2024, MACs shall identify for CMS any instances where: (1) the actual operating CCR is found to be plus or minus 20 percent or more from the operating CCR used during that time period to make outlier payments, and (2) the total operating and capital outlier payments for the hospital exceeded $500,000 for that cost reporting period. For the remainder of this discussion, we refer to these criteria as the new criteria for outlier reconciliation (or the new criteria). We believe the new criteria balance current administrative feasibility with the goal of expanding the scope of cost reports identified for outlier reconciliation approval to increase the accuracy of outlier payments. These new criteria for identifying hospital cost reports that MACs should identify for outlier reconciliation approval are in addition to the original criteria for reconciliation described previously. That is, under the new criteria, MACs identify hospitals for outlier reconciliation that would not have met the original criteria. For example, in an instance where a hospital was paid with an operating CCR of 0.09 and its actual operating CCR was 0.07, then the hospital would not have met the 10-percentage point criterion under the original criteria (the hospital's operating CCR would have to be a negative number, which is not possible). Under the new criteria, a hospital that had a change in their actual operating CCR that was greater than 20 percent from the CCR used for payment during the cost reporting period would be referred to CMS. Using the same example, while the operating CCR changed by a difference of −0.02 percentage point (0.07 minus 0.09), the percentage change operating CCR is −22.2 percent ((0.07/0.09)−1), which meets the new 20 percent criterion. In addition, CR 13566 instructs that for cost reporting periods that begin on or after October 1, 2024, a hospital in its first cost reporting period will be referred for reconciliation of outlier payments at the time of cost report final settlement. As such, new hospitals will be referred for outlier reconciliation regardless of the change to the operating CCR and no matter the amount of outlier payments during the cost reporting period.

If we determine that a hospital's outlier payments should be reconciled, we reconcile both operating and capital outlier payments. We refer readers to section 20.1.2.5 of Chapter 3 of the Medicare Claims Processing Manual for complete instructions regarding outlier reconciliation, including the update to the outlier reconciliation criteria provided in CR 13566.

The regulations at § 412.84(m) further state that at the time of any outlier reconciliation under § 412.84(i)(4), outlier payments may be adjusted to account for the time value of any underpayments or overpayments. Section 20.1.2.6 of Chapter 3 of the Medicare Claims Processing Manual contains instructions on how to assess the time value of money for reconciled outlier amounts.

If the operating CCR of a hospital approved for outlier reconciliation is lower at cost report settlement compared to the operating CCR used for payment, the hospital would owe CMS money. Conversely, if the operating CCR increases at cost report settlement compared to the operating CCR used for payment, CMS would owe the hospital money.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42635), we finalized a methodology to incorporate outlier reconciliation in the FY 2020 outlier fixed loss cost threshold. As discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19592), we stated that rather than trying to predict which claims and/or hospitals may be subject to outlier reconciliation, we believe a methodology that incorporates an estimate of outlier reconciliation dollars based on actual outlier reconciliation amounts reported in historical cost reports would be a more feasible approach and provide a better estimate and predictor of outlier reconciliation for the upcoming fiscal year. We also stated that we believe the methodology addresses stakeholders' concerns about the impact of outlier reconciliation on the modeling of the outlier threshold. For a detailed discussion of additional background regarding the incorporation of outlier reconciliation into the outlier fixed loss cost threshold, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule. Consistent with the instructions to MACs that added new criteria that identify additional cost reports for reconciliation beginning with FY 2025 cost reports, we are proposing changes to our methodology to reflect the estimated reconciled outlier payments of the additional hospital cost reports identified under the new criteria. Specifically, we are proposing to make modifications to the steps of our

[853] Change Request 2785 (Transmittal A–03–058; July 3, 2003) found at *https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/a03058.pdf.*

[854] This report is available on the OIG website at: *https://oig.hhs.gov/oas/reports/region5/51600060.pdf.*

methodology in section II.A.4.i.1.a. of this Addendum to reflect the estimated reconciled outlier payments under the new criteria in the projection of outlier reconciliations for the FY 2025 outlier fixed loss cost threshold.

(a) Incorporating a Proposed Projection of Outlier Reconciliations for the FY 2025 Outlier Threshold Calculation

Based on the methodology finalized in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625), for FY 2025, we are proposing to continue to incorporate outlier reconciliation in the FY 2025 outlier fixed loss cost threshold, with modifications to reflect the expansion of outlier reconciliations under the new criteria in CR 13566 (described previously).

As discussed in the FY 2020 IPPS/LTCH PPS final rule, for FY 2020, we used the historical outlier reconciliation amounts from the FY 2014 cost reports (cost reports with a begin date on or after October 1, 2013, and on or before September 30, 2014), which we believed would provide the most recent and complete available data to project the estimate of outlier reconciliation. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42623 through 42625) for a discussion on the use of the FY 2014 cost report data for purposes of projecting outlier reconciliations for the FY 2020 outlier threshold calculation. For FY 2024, we applied the same methodology finalized in FY 2020, using the historical outlier reconciliation amounts from the FY 2018 cost reports (cost reports with a begin date on or after October 1, 2017, and on or before September 30, 2018).

Similar to the FY 2024 methodology, we are proposing to determine a projection of outlier reconciliations for the FY 2025 outlier threshold calculation by advancing the historical data used by 1 year. Specifically, we are proposing to use FY 2019 cost reports (cost reports with a begin date on or after October 1, 2018, and on or before September 30, 2019). For FY 2025, we are proposing to use the methodology from FY 2020 to incorporate a projection of operating outlier reconciliations for the FY 2025 outlier threshold calculation, modified to reflect additional cost reports that would be identified for reconciliation under the new criteria in CR 13566. Because the new criteria are not effective until FY 2025 cost reports, to estimate outlier reconciliation dollars under the new criteria, we are proposing to apply the new criteria to FY 2019 cost reports as if they had been in place at the time of final cost report settlement (as described in more detail later in this section).

As described previously, under the expanded outlier reconciliation criteria in CR 13566, for cost reporting periods beginning on or after October 1, 2024, new hospitals will have their outlier payments referred for outlier reconciliation by the MAC to CMS in their first cost reporting period regardless of the change to the operating CCR and no matter the amount of outlier payments during the cost reporting period. For purposes of the methodology for incorporating a projection of operating outlier reconciliations for the FY 2025 outlier threshold calculation to reflect additional cost reports that would be identified for reconciliation under the criteria added by CR 13566, we are not proposing to include the first cost reporting periods of new hospitals because the lack of predictability of new hospitals' data may impact the reliability of our projection. We note we expect the proposed modifications to our methodology for incorporating a projection of operating outlier reconciliations into the outlier threshold calculation would be necessary for 6 years, at which point the additional FY 2025 cost reports with outlier payments reconciled under the new criteria will be reflected in the HCRIS data available to be used to set the threshold.

For FY 2019 hospital cost reports that were reconciled using the original criteria for referral for outlier reconciliation, for this FY 2025 proposed rule, we used the December 2023 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2025 final rule, we propose to use the latest quarterly HCRIS extract that is publicly available at the time of the development of that rule which, for FY 2025, would be the March 2024 extract. As discussed in the FY 2024 IPPS/LTCH final rule (88 FR 59346), we generally expect historical cost reports for the applicable fiscal year to be available by March, and we have worked with our MACs so that historical cost reports for the applicable fiscal year can be made available with the March HCRIS update for the final rule.

To account for the additional hospital cost reports that would be reconciled as a result of the new criteria, we are proposing to use data from the Provider Specific File (PSF) and the cost report to identify the FY 2019 cost reports that would have met the new criteria if those criteria had been in effect. This is because the FY 2019 cost reports in HCRIS would not have been identified as meeting the new criteria for outlier reconciliation since those new criteria are not being used until cost reports beginning with FY 2025. As such, these FY 2019 cost reports do not have an amount reported for operating or capital outlier reconciliation dollars. Therefore, we are proposing to modify our methodology to estimate the outlier reconciliation dollars based on the operating and capital outlier amounts reported on the FY 2019 cost reports and supplemental data collected from the MACs, as described further in this section.

The following proposed steps are similar to those finalized in the FY 2020 final rule, with updated data for FY 2025 and additional steps to reflect the cost reports that would be identified with new criteria under the updated instructions:

Step 1.—Identify hospital cost reports that meet the original criteria or the new criteria.

Step 1a.—Identify hospitals that report on their cost report the operating outlier reconciliation dollars on Worksheet E, Part A, Line 2.01. We note, these were hospitals that were identified by the MACs that met the original criteria for outlier reconciliation and were approved by CMS for outlier reconciliation. We use the Federal FY 2019 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules, and exclude sole community hospitals (SCHs) that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule.

Step 1b.—For hospitals that were not included in Step 1a, to identify hospitals that would be referred for outlier reconciliation under the new criteria, we are proposing to use data from the latest PSF and cost report data from the most recent publicly available quarterly HCRIS extract. We identified hospitals with cost reports where the actual operating CCR for the cost reporting period fluctuates plus or minus 20 percent or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed. To do this, we compared the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for this proposed rule) to the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for this proposed rule). We then determined whether the hospital had total operating and capital outlier payments greater than $500,000 during the FY 2019 cost reporting period based on the most recent publicly available quarterly HCRIS (the December 2023 HCRIS for this proposed rule). If the hospital met both of these criteria, we included the operating outlier payments from the MAC using CCRs from the FY 2019 cost report (as described in Step 2b–2). For the final rule, to identify hospitals that would be referred for reconciliation, we propose to use the most recent HCRIS and PSF data available, which would be the March 2024 update.

Step 2.—Determine the aggregate amount of operating outlier reconciliation dollars (under both the original criteria and the new criteria).

Step 2a.—Calculate the aggregate amount of historical total of operating outlier reconciliation dollars (Worksheet E, Part A, Line 2.01) using the Federal FY 2019 cost reports from Step 1a.

Step 2b.—For the hospitals that would have met the new criteria as identified in Step 1b, to determine the aggregate amount of operating outlier reconciliation dollars, we propose to use the following process:

We collected supplemental estimated outlier payment data from the MACs for claims with discharges occurring during the hospital's FY 2019 cost reporting period to estimate the change in the hospital's outlier payments. Specifically, for each hospital identified in Step 1b, the MACs used the actual operating CCR calculated from the FY 2019 cost report and the utility in the claims system along with that CCR to determine total outlier payments for claims with discharges occurring during the hospital's FY

2019 cost report (this is the same process MACs would have used if the cost report had been identified for reconciliation had the new criteria been in place for FY 2019 cost reports). For those same claims with discharges occurring during the hospital's 2019 cost report, the MAC provided to CMS the outlier payment as reported on the claim (which was based on the hospital's CCR in the PSF at the time of claim payment).

Using this supplemental estimated outlier payment data, we computed a ratio of the outlier payments based on the actual operating CCR for the FY 2019 cost reporting period and the CCR used at the time of claim payment. This ratio is then applied to the operating outlier payment reported on the FY 2019 cost report to impute an operating outlier payment for the FY 2019 cost report. We believe it is appropriate to impute the operating outlier payment for the cost report using the supplemental data from the MACs described previously rather than use the actual amount reported on the cost report because the claims data in the claims processing system may slightly differ from the cost report data in the HCRIS due to timing. This approach would also allow CMS to use more recent data (from the most recent publicly available quarterly HCRIS extract, which is December 2023 for this proposed rule) to estimate outlier reconciliation dollars as compared to estimating outlier reconciliation dollars using the supplemental outlier payment data from the MACs, which was submitted by the MACs to CMS beginning in November 2022 (as described in this section). This is also the same data used to determine the aggregate amount of operating outlier reconciliation dollars for hospitals from the FY 2019 cost report data using the December 2023 HCRIS extract in Step 2a.

As presented in the table that follows, to calculate the imputed operating outlier payment for the FY 2019 cost report, we multiplied the operating outlier payment reported on the FY 2019 cost report by the following ratio (determined from the supplemental data collected from the MACs described previously): Operating Outlier Payments from MAC using the CCR from FY 2019 Cost Report divided by Operating Outlier Payments from MAC Based on Claim Payment. The general formula is the following: Operating Outlier Payments Reported on the Cost Report * (Operating Outlier Payments from MAC Using CCRs from FY 2019 Cost Report/Operating Outlier Payments from MAC Based on Claim Payment).

To calculate the Estimated Operating Outlier Reconciliation Dollars, we then subtracted the Imputed Operating Outlier Amount for the FY 2019 Cost Report (Step 2b–5) from the Operating Outlier Payment Reported on the FY 2019 Cost Report (Step 2b–1).

The following is an example to illustrate our proposed calculation to determine the estimated amount of operating outlier reconciliation dollars for the hospitals that would have met the new criteria:

	Description	Amount
Step 2b-1	Operating Outlier Payment Reported on the FY 2019 Cost Report	$1,000,000
Step 2b-2	Operating Outlier Payments from MAC Using CCRs from FY 2019 Cost Report	$800,000
Step 2b-3	Operating Outlier Payments from MAC Based on Claim Payment	$975,000
Step 2b-4	Ratio of Step 2b-2 Divided by Step 2b-3	0.82
Step 2b-5	Imputed Operating Outlier Payment for the FY 2019 Cost Report (Step 2b-1 * Step 2b-4)	$820,513
Step 2b-6	Estimated Operating Outlier Reconciliation Dollars (Step 2b-1 - Step 2b-5)	$179,487

We note the following, with regard to the data used in the calculation:

- Due to system limitations the MACs needed 13 months to process all providers' claims through the claims utility (for Steps 2b–;2 and 2b–;3). The MACs used the operating and capital CCR from the FY 2019 cost reports based on the September 2022 HCRIS extract and began processing the supplemental data for FY 2019 outlier payments in November 2022. We propose to move this forward each year, using the September HCRIS for future fiscal years for the CCRs (for example, for FY 2026, MACs would use CCRs from the FY 2020 cost reports based on the September 2023 HCRIS).
- For FY 2025, for the ''Operating Outlier Payment Reported on the FY 2019 Cost Report'' (Step 2b–;1) we used operating outlier payments reported on Worksheet E, Part A, Lines 2.02, 2.03, and 2.04 from the FY 2019 cost report using the most recent publicly available quarterly HCRIS extract for this proposed rule (that is, the December 2023 HCRIS extract). We propose to move this forward each year and use the most recent publicly available quarterly HCRIS extract (for example, for FY 2026, we would use operating outlier payments reported on Worksheet E, Part A, Lines 2.02, 2.03, and 2.04 from the FY 2020 cost reports using the most recent publicly available quarterly HCRIS extract).
- For the hospitals identified in Step 1b, we have posted a public use file that includes the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for this proposed rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for this proposed rule), supplemental data from the MACs and operating outlier payment reported on the FY 2019 cost report.

Step 3.—Calculate the aggregate amount of total Federal operating payments across all applicable hospitals using the Federal FY 2019 cost reports. The total Federal operating payments consist of the Federal payments (Worksheet E, Part A, Line 1.01 and Line 1.02, plus Line 1.03 and Line 1.04), outlier payments (Worksheet E, Part A, Lines 2.02, 2.03, and 2.04), and the outlier reconciliation amounts from Steps 2a and 2b. We note that a negative amount on Worksheet E, Part A, Line 2.01 from Step 2a for outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital. Similarly, a negative amount from Step 2b for outlier reconciliation indicates an amount that would have been owed by the hospital, and a positive amount indicates an amount that would have been paid to the hospital.

Step 4.—Divide the aggregate amount from Step 2 (that is, the sum of the amounts from Steps 2a and 2b) by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total operating outlier reconciliation dollars to total Federal operating payments for FY 2019. For FY 2025, the proposed ratio is a negative 0.03979 percent ((−$34,513,755/$86,740,955,496) × 100), which, when rounded to the second digit, is −0.04 percent. This percentage amount would be used to adjust the outlier target for FY 2025 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the Medicare claims data in the MedPAR file used to model the outlier threshold, we are proposing to target 5.1 percent minus the percentage determined in Step 4 in determining the outlier threshold. Using the FY 2019 cost reports, because the aggregate outlier reconciliation dollars from Step 2 are negative, we are targeting an amount higher than 5.1 percent for outlier payments for FY 2025 under our proposed methodology. Therefore, for FY 2025, we are proposing to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent − (−0.04 percent)].

When the percentage of operating outlier reconciliation dollars to total Federal operating payments rounds to a negative value (that is, when the aggregate amount of outlier reconciliation as a percent of total operating payments rounds to a negative percent), the effect is a decrease to the outlier threshold compared to an outlier threshold that is calculated without including this estimate of operating outlier reconciliation dollars. In section II.A.4.i.(2). of this Addendum, we provide the FY 2025 outlier threshold as calculated for this proposed rule both with and without including this proposed percentage estimate of operating outlier reconciliation.

As explained in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19593), we would continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount. Therefore, the proposed operating outlier offset to the standardized amount was 0.949 (1 − 0.051).

We are inviting public comment on our proposed methodology for projecting an estimate of outlier reconciliation and incorporating that estimate into the modeling for the fixed-loss cost outlier threshold for FY 2025.

(b) Proposed Reduction to the FY 2025 Capital Standard Federal Rate by an Adjustment Factor To Account for the Projected Proportion of Capital IPPS Payments Paid as Outliers

We establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital related costs (58 FR 46348). Similar to the calculation of the adjustment to the standardized amount to account for the projected proportion of operating payments paid as outlier payments, as discussed in greater detail in section III.A.2. of this Addendum, we are proposing to reduce the FY 2025 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers. The regulations in 42 CFR 412.84(i)(4) state that any outlier reconciliation at cost report settlement would be based on operating and capital CCRs calculated based on a ratio of costs to charges computed from the relevant cost report and charge data determined at the time the cost report coinciding with the discharge is settled. As such, any reconciliation also applies to capital outlier payments.

For FY 2025, we are proposing to continue to use the methodology from FY 2020 to adjust the FY 2025 capital standard Federal rate by an adjustment factor to account for the projected proportion of capital IPPS payments paid as outliers, with modifications to reflect the expansion of outlier reconciliations under the new criteria in CR 13566 (described previously).

For purposes of the methodology for incorporating a projection of capital outlier reconciliations for the FY 2025 outlier adjustment to the capital standard Federal rate to reflect additional cost reports that would be identified for reconciliation under the criteria added by CR 13566, as we discussed in section II.A.4.i.1.a. of the Addendum of this proposed rule regarding the projection of the operating outlier reconciliation, we are not proposing to include the first cost reporting periods of new hospitals because the lack of predictability of new hospitals' data may impact the reliability of our projection. As noted, we expect the proposed modifications to our methodology for incorporating a projection of capital outlier reconciliations into the outlier adjustment to the capital standard federal rate would be necessary for 6 years, at which point the additional FY 2025 cost reports with outlier payments reconciled under the new criteria will be reflected in the HCRIS data available to be used to determine this adjustment.

For FY 2019 hospital cost reports that were reconciled using the original criteria for referral for outlier reconciliation, for this FY 2025 proposed rule, we used the December 2023 HCRIS extract of the cost report data to calculate the proposed percentage adjustment for outlier reconciliation. For the FY 2025 final rule, we propose to use the latest quarterly HCRIS extract that is publicly available at the time of the development of that rule which, for FY 2025, would be the March 2024 extract. As discussed in the FY 2024 IPPS/LTCH final rule (88 FR 59347), we generally expect historical cost reports for the applicable fiscal year to be available by March, and we have worked with our MACs so that historical cost reports for the applicable fiscal year can be made available with the March HCRIS update for the final rule.

To account for the additional hospital cost reports that would be reconciled as a result of the new criteria, we are proposing to use data from the PSF and the cost report to identify the FY 2019 cost reports that would have met the new criteria if those criteria had been in effect. This is because the FY 2019 cost reports in HCRIS would not have been identified as meeting the new criteria for outlier reconciliation since those new criteria are not being used until cost reports beginning with FY 2025. As such, these FY 2019 cost reports do not have an amount reported for operating or capital outlier reconciliation dollars. Therefore, we are proposing to modify our methodology to estimate the outlier reconciliation dollars based on the operating and capital outlier amounts reported on the FY 2019 cost reports and supplemental data collected from the MACs as described further in this section.

Similar to FY 2020, as part of our proposal for FY 2025 to incorporate into the outlier model the total outlier reconciliation dollars from the most recent and most complete fiscal year cost report data, we also are proposing to adjust our estimate of FY 2025 capital outlier payments to incorporate a projection of capital outlier reconciliation payments when determining the adjustment factor to be applied to the capital standard Federal rate to account for the projected proportion of capital IPPS payments paid as outliers (that is, the capital outlier payment adjustment factor). To do so, we are proposing to use the following methodology, which generally parallels the proposed methodology to incorporate a projection of operating outlier reconciliation payments for the FY 2025 outlier threshold calculation, including updated data for FY 2025 and additional steps to reflect the cost reports that would be identified with new criteria under the updated instructions.

Step 1.—Identify hospital cost reports that meet the original criteria or the new criteria.

Step 1a.—Identify hospitals that report on their cost report the capital outlier reconciliation dollars on Worksheet E, Part A, Line 93, Column 1. We note, these were hospitals that were identified by the MACs that met the original criteria for outlier reconciliation and were approved by CMS for outlier reconciliation. We use the Federal FY 2019 cost reports for hospitals paid under the IPPS from the most recent publicly available quarterly HCRIS extract available at the time of development of the proposed and final rules and exclude SCHs that were paid under their hospital-specific rate (that is, if Worksheet E, Part A, Line 48 is greater than Line 47). We note that when there are multiple columns available for the lines of the cost report described in the following steps and the provider was paid under the IPPS for that period(s) of the cost report, then we believe it is appropriate to use multiple columns to fully represent the relevant IPPS payment amounts, consistent with our methodology for the FY 2020 final rule.

Step 1b.—For hospitals that were not included in Step 1a, to identify hospitals that would be referred for outlier reconciliation under the new criteria, we used the same hospitals that were identified in Step 1b of the operating methodology. We note, as discussed previously, the new criteria from CR 13566 is based on the change to the operating CCR (not the capital CCR) where the actual operating CCR for the cost reporting period fluctuates plus or minus 20 percent or more compared to the interim operating CCR used to calculate outlier payments when a bill is processed and the hospital had total operating and capital outlier payments greater than $500,000 during the cost reporting period.

Step 2.—Determine the aggregate amount of capital outlier reconciliation dollars (under both the original criteria and the new criteria).

Step 2a.—Calculate the aggregate amount of the historical total of capital outlier reconciliation dollars (Worksheet E, Part A, Line 93, Column 1) using the Federal FY 2019 cost reports from Step 1.

Step 2b.—For the hospitals that would have met the new criteria as identified in Step 1b, to determine the aggregate amount of capital outlier reconciliation dollars, we propose to use the following process (we note this process is the same as Step 2b of the operating methodology):

We collected supplemental estimated outlier payment data from the MACs for claims with discharges occurring during the hospital's FY 2019 cost reporting period to estimate the change in the hospital's outlier payments. Specifically, for each hospital identified in Step 1b, the MACs used the actual capital CCR calculated from the FY 2019 cost report and the utility in the claims system along with that CCR to determine total outlier payments for claims with discharges occurring during the hospital's FY 2019 cost report (this is the same process MACs would have used if the cost report had been identified for reconciliation had the new criteria been in place for FY 2019 cost reports). For those same claims with discharges occurring during the hospital's 2019 cost report, the MAC provided to CMS the outlier payment as reported on the claim (which was based on the hospital's CCR in the PSF at the time of claim payment).

Using this supplemental estimated outlier payment data, we computed a ratio of the outlier payments based on the actual capital CCR for the FY 2019 cost reporting period and the capital CCR used at the time of claim payment. This ratio is then applied to the capital outlier payment reported on the FY

2019 cost report to impute a capital outlier payment for the FY 2019 cost report. We believe it is appropriate to impute the capital outlier payment for the cost report using the supplemental data from the MACs described previously rather than use the actual amount reported on the cost report because the claims data in the claims processing system may slightly differ from the cost report data in the HCRIS due to timing. This approach would also allow CMS to use more recent data (from the most recent publicly available quarterly HCRIS extract, which is December 2023 for this proposed rule) to estimate outlier reconciliation dollars as compared to estimating outlier reconciliation dollars using the supplemental data from the MACs which was submitted by the MACs to CMS beginning in November 2022 (as described in this section). This is also the same data used to determine the aggregate amount of capital outlier reconciliation dollars for hospitals from the FY 2019 cost report data using the December 2023 HCRIS extract in Step 2a.

As presented in the table that follows, to calculate the imputed capital outlier payment for the FY 2019 cost report, we multiplied the capital outlier payment reported on the FY 2019 cost report by the following ratio (determined from the supplemental data collected from the MACs described previously): Capital Outlier Payments from MAC using the CCR from FY 2019 Cost Report divided by Capital Outlier Payments from MAC Based on Claim Payment. The general formula is the following: Capital Outlier Payments Reported on the Cost Report * (Capital Outlier Payments from MAC Using CCRs from FY 2019 Cost Report/ Capital Outlier Payments from MAC Based on Claim Payment).

To calculate the Estimated Capital Outlier Reconciliation Dollars, we then subtracted the Imputed Capital Outlier Amount for the FY 2019 Cost Report (Step 2b–5) from the Capital Outlier Payment Reported on the FY 2019 Cost Report (Step 2b–1).

The following is an example to illustrate our proposed calculation to determine the estimated amount of capital outlier reconciliation dollars for the hospitals that would have met the new criteria:

	Description	Amount
Step 2b-1	Capital Outlier Payment Reported on the FY 2019 Cost Report	$1,000,000
Step 2b-2	Capital Outlier Payments from MAC Using CCRs from the FY 2019 Cost Report	$800,000
Step 2b-3	Capital Outlier Payments from MAC Based on Claim Payment	$975,000
Step 2b-4	Ratio of Step 2b-2 Divided by Step 2b-3	0.82
Step 2b-5	Imputed Capital Outlier Payment for the FY 2019 Cost Report (Step 2b-1 * Step 2b-4)	$820,513
Step 2b-6	Estimated Capital Outlier Reconciliation Dollars (Step 2b-1 - Step 2b-5)	$179,487

We note the following, with regard to the data used in the calculation:

- Due to system limitations the MACs needed 13 months to process all providers' claims through the claims utility (for Steps 2b-2 and 2b-3). The MACs used the operating and capital CCR from the FY 2019 cost reports based on the September 2022 HCRIS extract and began processing the supplemental data for FY 2019 outlier payments in November 2022. We propose to move this forward each year, using the September HCRIS for future fiscal years for the CCRs (for example, for FY 2026, MACs would use CCRs from the 2020 cost reports based on the September 2023 HCRIS).
- For FY 2025, for the ''Capital Outlier Payment Reported on the FY 2019 Cost Report'' (Step 2b-1) we used capital outlier payments reported on Worksheet L, Part I, Line 2 and Line 2.01 from the FY 2019 cost report using the most recent publicly available quarterly HCRIS extract for this proposed rule (that is, the December 2023 HCRIS extract). We propose to move this forward each year and use the most recent publicly available quarterly HCRIS extract (for example, for FY 2026, we would use operating capital payments reported on Worksheet L, Part I, Line 2 and Line 2.01 from the FY 2020 cost reports using the most recent publicly available quarterly HCRIS extract).
- For the hospitals identified in Step 1b, we have posted a public use file that includes the operating CCR calculated from the FY 2019 cost report in the most recent publicly available quarterly HCRIS extract (the December 2023 HCRIS for this proposed rule), the weighted operating CCR used for claim payment during the FY 2019 cost reporting period from the latest quarterly PSF update (December 2023 for this proposed rule), supplemental data from the MACs and capital outlier payments reported on the FY 2019 cost report.

Step 3.—Calculate the aggregate amount of total capital Federal payments across all applicable hospitals using the Federal FY 2019 cost reports. The total capital Federal payments consist of the capital DRG payments, including capital outlier payments, capital indirect medical education (IME) and capital disproportionate share hospital (DSH) payments (Worksheet E, Part A, Line 50, Column 1) and the capital outlier reconciliation amounts from Steps 2a and 2b. We note that a negative amount on Worksheet E, Part A, Line 93 from Step 2a for capital outlier reconciliation indicates an amount that was owed by the hospital, and a positive amount indicates this amount was paid to the hospital. Similarly, a negative amount from Step 2b for capital outlier reconciliation indicates an amount that would have been owed by the hospital, and a positive amount indicates an amount that would have been paid to the hospital.

Step 4.—Divide the aggregate amount from Step 2 (that is, the sum of the amounts from Steps 2a and 2b) by the amount from Step 3 and multiply the resulting amount by 100 to produce the percentage of total capital outlier reconciliation dollars to total capital Federal payments for FY 2019. This percentage amount would be used to adjust the estimate of capital outlier payments for FY 2025 as described in Step 5.

Step 5.—Because the outlier reconciliation dollars are only available on the cost reports, and not in the specific Medicare claims data in the MedPAR file used to estimate outlier payments, we are proposing that the estimate of capital outlier payments for FY 2025 would be determined by adding the percentage in Step 5 to the estimated percentage of capital outlier payments otherwise determined using the shared outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. (We note that this percentage is added for capital outlier payments but subtracted in the analogous step for operating outlier payments. We have a unified outlier payment methodology that uses a shared threshold to identify outlier cases for both operating and capital payments. The difference stems from the fact that operating outlier payments are determined by first setting a ''target'' percentage of operating outlier payments relative to aggregate operating payments which produces the outlier threshold. Once the shared threshold is set, it is used to estimate the percentage of capital outlier payments to total capital payments based on that threshold. Because the threshold is already set based on the operating target, rather than adjusting the threshold (or operating target), we adjust the percentage of capital outlier to total capital payments to account for the estimated effect of capital outlier reconciliation payments. This percentage is adjusted by adding the capital outlier reconciliation percentage from Step 5 to the estimate of the percentage of capital outlier payments to total capital payments based on the shared threshold.) We note, when the aggregate capital outlier reconciliation dollars from Steps 2a and 2b are negative, the estimate of capital outlier payments for FY 2025 under our proposed methodology would be lower than the percentage of capital outlier payments otherwise determined using the shared outlier threshold.

For this FY 2025 proposed rule, the estimated percentage of FY 2025 capital outlier payments otherwise determined using the shared outlier threshold is 4.26 percent (estimated capital outlier payments of $290,612,698 divided by (estimated capital outlier payments of $290,612,698 plus the estimated total capital Federal payment of

$6,532,600,813)). The proposed ratio in Step 5 is a negative −0.026446 percent ((−$2,056,344/$7,775,606,401) × 100), which, when rounded to the second digit, is −0.03 percent. Therefore, for this FY 2025 proposed rule, taking into account projected capital outlier reconciliation under our proposed methodology would decrease the estimated percentage of FY 2025 aggregate capital outlier payments by 0.03 percent.

As discussed in section III.A.2. of this Addendum, we are proposing to incorporate the capital outlier reconciliation dollars from Step 5 when applying the outlier adjustment factor in determining the capital Federal rate based on the estimated percentage of capital outlier payments to total capital Federal rate payments for FY 2025.

We are inviting public comment on our proposed methodology for projecting an estimate of capital outlier reconciliation and incorporating that estimate into the modeling of the estimate of FY 2025 capital outlier payments for purposes of determining the capital outlier adjustment factor.

(2) Proposed FY 2025 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977 through 50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a detailed discussion of the changes.

As we have done in the past, to calculate the proposed FY 2025 outlier threshold, we simulated payments by applying proposed FY 2025 payment rates and policies using cases from the FY 2023 MedPAR file. As noted in section II.C. of this Addendum, we specify the formula used for actual claim payment which is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the Provider-Specific File (PSF) while CMS uses an adjusted CCR (as described later in this section) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

In order to determine the proposed FY 2025 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2023 to FY 2025. Consistent with the FY 2020 IPPS/LTCH PPS final rule (84 FR 42626 and 42627), we are proposing to use the following methodology to calculate the charge inflation factor for FY 2025:

- Include hospitals whose last four digits fall between 0001 and 0899 (section 2779A1 of Chapter 2 of the State Operations Manual on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/som107c02.pdf*); include CAHs and REHs that were IPPS hospitals for the time period of the MedPAR data being used to calculate the charge inflation factor; include hospitals in Maryland; and remove PPS-excluded cancer hospitals that have a ''V'' in the fifth position of their provider number or a ''E'' or ''F'' in the sixth position.
- Include providers that are in both periods of charge data that are used to calculate the 1-year average annual rate of-change in charges per case. We note this is consistent with the methodology used since FY 2014.
- We excluded Medicare Advantage IME claims for the reasons described in section I.A.4. of this Addendum. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.
- In order to ensure that we capture only FFS claims, we included claims with a ''Claim Type'' of 60 (which is a field on the MedPAR file that indicates a claim is an FFS claim).
- In order to further ensure that we capture only FFS claims, we excluded claims with a ''GHOPAID'' indicator of 1 (which is a field on the MedPAR file that indicates a claim is not an FFS claim and is paid by a Group Health Organization).
- We examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of ''3'' for blood clotting with a revenue code of ''0636'' from the covered charge field. We also removed organ acquisition charges from the covered charge field because organ acquisition is a pass-through payment not paid under the IPPS. As noted previously, we proposing to remove allogeneic hematopoietic stem cell acquisition charges from the covered charge field for budget neutrality adjustments. As discussed in the FY 2021 IPPS/LTCH PPS final rule, payment for allogeneic hematopoietic stem cell acquisition costs is made on a reasonable cost basis for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842).
- Because this payment simulation uses the proposed FY 2025 relative weights, consistent with our proposal discussed in section IV.I. of the preamble to this final rule, we applied the proposed adjustor for certain cases that group to MS–DRG 018 in our simulation of these payments.

Our general methodology to inflate the charges computes the 1-year average annual rate-of-change in charges per case which is then applied twice to inflate the charges on the MedPAR claims by 2 years since we typically use claims data for the fiscal year that is 2 years prior to the upcoming fiscal year.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42627), we modified our charge inflation methodology. We stated that we believe balancing our preference to use the latest available data from the MedPAR files and stakeholders' concerns about being able to use publicly available MedPAR files to review the charge inflation factor can be achieved by modifying our methodology to use the publicly available Federal fiscal year period (that is, for FY 2020, we used the charge data from Federal fiscal years 2017 and 2018), rather than the most recent data available to CMS which, under our prior methodology, was based on calendar year data. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for a complete discussion regarding this change.

For the same reasons discussed in that rulemaking, for FY 2025, we are proposing to use the same methodology as FY 2020 to determine the charge inflation factor. That is, for FY 2025, we are proposing to use the MedPAR files for the two most recent available Federal fiscal year time periods to calculate the charge inflation factor, as we did for FY 2020. Specifically, for this proposed rule we used the December 2022 MedPAR file of FY 2022 (October 1, 2021 to September 30, 2022) charge data (released for the FY 2024 IPPS/LTCH PPS proposed rule) and the December 2023 MedPAR file of FY 2023 (October 1, 2022 to September 30, 2023) charge data (released for this FY 2025 IPPS/LTCH PPS proposed rule) to compute the proposed charge inflation factor. We are proposing that for the FY 2025 final rule, we would use more recently updated data, that is the MedPAR files from March 2023 for the FY 2022 time period and March 2024 for the FY 2023 time period.

For FY 2025, under this proposed methodology, to compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $82,570.13 ($574,544,024,043/6,958,255) from October 1, 2021 through September 30, 2022, to the average covered charge per case of $85,990.03 ($593,444,028,889/6,901,312) from October 1, 2022 through September 30, 2023. This rate-of-change was 4.142 percent (1.04142) or 8.4555 percent (1.084555) over 2 years. The billed charges are obtained from the claims from the MedPAR file and inflated by the inflation factor specified previously.

As we have done in the past, in this FY 2025 IPPS/LTCH PPS proposed rule, we are proposing to establish the FY 2025 outlier threshold using hospital CCRs from the December 2023 update to the Provider-Specific File (PSF), the most recent available data at the time of the development of the proposed rule. We are proposing to apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF or whose CCRs exceed the ceilings described later in this section (3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals). We do not apply the adjustment factors described later in this section to hospitals assigned the statewide average CCR. For FY 2025, we are proposing to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained later in this section). We also are proposing that, if more recent data become available, we would use that data to calculate the final FY 2025 outlier threshold.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new

methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we have done in the past, we are proposing to adjust the CCRs from the December 2023 update of the PSF by comparing the percentage change in the national average case weighted operating CCR and capital CCR from the December 2022 update of the PSF to the national average case weighted operating CCR and capital CCR from the December 2023 update of the PSF. We note that we used total transfer-adjusted cases from FY 2023 to determine the national average case weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology, for this proposed rule, we calculated a December 2022 operating national average case-weighted CCR of 0.246416 and a December 2023 operating national average case-weighted CCR of 0.254624. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2022 operating national average case-weighted CCR from the December 2023 operating national average case-weighted CCR and then dividing the result by the December 2022 national operating average case-weighted CCR. This resulted in a proposed one-year national operating CCR adjustment factor of 1.03331.

We used this same proposed methodology to adjust the capital CCRs. Specifically, we calculated a December 2022 capital national average case-weighted CCR of 0.018005 and a December 2023 capital national average case-weighted CCR of 0.017765. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2022 capital national average case-weighted CCR from the December 2023 capital national average case-weighted CCR and then dividing the result by the December 2022 capital national average case-weighted CCR. This resulted in a proposed one-year national capital CCR adjustment factor of 0.98667.

For purposes of estimating the proposed outlier threshold for FY 2025, we used a wage index that reflects the policies discussed in this proposed rule. This includes the following:

- Application of the proposed rural and imputed floor adjustment.
- The proposed frontier State floor adjustments in accordance with section 10324(a) of the Affordable Care Act.
- The proposed out-migration adjustment as added by section 505 of Public Law 108–173.
- Incorporating the proposed FY 2025 low wage index hospital policy (described in section III.G.5 of the preamble of this proposed rule) for hospitals with a wage index value below the 25th percentile, where the increase in the wage index value for these hospitals would be equal to half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals.
- Incorporating our policy (described in section III.6. of the preamble of this proposed rule) to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline.

If we did not take the aforementioned into account, our estimate of total FY 2025 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments (which includes outlier reconciliation).

As described in sections V.K. and V.L., respectively, of the preamble of this proposed rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the proposed hospital VBP payment adjustments and the hospital readmissions payment adjustments in the proposed outlier threshold calculation or the proposed outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments would continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we are proposing to exclude the estimated hospital VBP payment adjustments and the estimated hospital readmissions payment adjustments from the calculation of the proposed outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the DSH payment methodology under section 1886(d)(5)(F) of the Act, the uncompensated care payment under section 1886(r)(2) of the Act, like the empirically justified Medicare DSH payment under section 1886(r)(1) of the Act, may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A) of the Act. As we have done since the implementation of uncompensated care payments in FY 2014, for FY 2025, we are proposing to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used since FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2025, we are proposing to include estimated FY 2025 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we are proposing to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

In addition, consistent with the methodology finalized in the FY 2023 final rule, we are proposing to include the estimated supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals in the computation of the FY 2025 proposed outlier fixed-loss cost threshold. Specifically, we are proposing to use the estimated per-discharge supplemental payments to hospitals eligible for the supplemental payment for all cases in the calculation of the proposed outlier fixed-loss cost threshold methodology.

Using this methodology, we used the formula described in section I.C.1. of this Addendum to simulate and calculate the Federal payment rate and outlier payments for all claims. In addition, as described in the earlier section to this Addendum, we are proposing to incorporate an estimate of FY 2025 outlier reconciliation in the methodology for determining the outlier threshold. As noted previously, for the FY 2025 proposed rule, the ratio of outlier reconciliation dollars to total Federal Payments (Step 4) is a negative 0.039789 percent, which, when rounded to the second digit, is −0.04 percent. Therefore, for FY 2025, we are proposing to incorporate a projection of outlier reconciliation dollars by targeting an outlier threshold at 5.14 percent [5.1 percent −(−.04 percent)]. Under this proposed approach, we determined a proposed threshold of $49,237 and calculated total outlier payments of $4,330,371,122 and total operating Federal payments of $79,917,085,666. We then divided total outlier payments by total operating Federal payments plus total outlier payments and determined that this threshold matched with the 5.14 percent target, which reflected our proposal to incorporate an estimate of outlier reconciliation in the determination of the outlier threshold (as discussed in more detail in the previous section of this Addendum). We note that, if calculated without applying

our proposed methodology for incorporating an estimate of outlier reconciliation in the determination of the outlier threshold, the proposed threshold would be $49,601. We are proposing an outlier fixed-loss cost threshold for FY 2025 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus $49,237.

(3) Other Proposed Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a higher percentage of outlier payments for capital-related costs than for operating costs. We project that the threshold for FY 2025 (which reflects our methodology to incorporate an estimate of operating outlier reconciliation) would result in outlier payments that would equal 5.1 percent of operating DRG payments and we estimate that capital outlier payments would equal 4.23 percent of capital payments based on the Federal rate (which reflects our methodology discussed previously to incorporate an estimate of capital outlier reconciliation).

In accordance with section 1886(d)(3)(B) of the Act and as discussed previously, we are proposing to reduce the FY 2025 standardized amount by 5.1 percent to account for the projected proportion of payments paid as outliers.

The proposed outlier adjustment factors that would be applied to the operating standardized amount and capital Federal rate based on the proposed FY 2025 outlier threshold are as follows:

	Operating Standardized Amounts	Capital Federal Rate*
National	0.949	0.957708

*The adjustment factor for the capital Federal rate includes an adjustment to the estimated percentage of FY 2025 capital outlier payments for capital outlier reconciliation, as discussed previously and in section III.A.2 in this Addendum.

We are proposing to apply the outlier adjustment factors to the FY 2025 payment rates after removing the effects of the FY 2024 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we currently apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the MAC computes operating CCRs greater than 1.288 or capital CCRs greater than 0.129 or hospitals for which the MAC is unable to calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the proposed statewide average operating CCRs for urban hospitals and for rural hospitals for which the MAC is unable to compute a hospital-specific CCR within the range previously specified. These statewide average ratios would be effective for discharges occurring on or after October 1, 2024 and would replace the statewide average ratios from the prior fiscal year. Table 8B listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the comparable proposed statewide average capital CCRs. As previously stated, the proposed CCRs in Tables 8A and 8B would be used during FY 2025 when hospital-specific CCRs based on the latest settled cost report either are not available or are outside the range noted previously. Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website) contains the proposed statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that section 20.1.2 of chapter three of the Medicare Claims Processing Manual (on the internet at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf*) covers an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their MAC on a possible alternative operating and/or capital CCR as explained in the manual. Use of an alternative CCR developed by the hospital in conjunction with the MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR at any time as long as the guidelines of the manual are followed. In addition, the manual outlines the outlier reconciliation process for hospitals and Medicare contractors. We refer hospitals to the manual instructions for complete details on outlier reconciliation.

(4) FY 2023 Outlier Payments

Our current estimate, using available FY 2023 claims data, is that actual outlier payments for FY 2023 were approximately 5.23 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2023, the percentage of actual outlier payments relative to actual total payments is higher than we projected for FY 2023. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2023 are equal to 5.1 percent of total MS–DRG payments. As explained in the FY 2003 Outlier final rule (68 FR 34502), if we were to make retroactive adjustments to all outlier payments to ensure total payments are 5.1 percent of MS–DRG payments (by retroactively adjusting outlier payments), we would be removing the important aspect of the prospective nature of the IPPS. Because such an across-the-board adjustment would either lead to more or less outlier payments for all hospitals, hospitals would no longer be able to reliably approximate their payment for a patient while the patient is still hospitalized. We believe it would be neither necessary nor appropriate to make such an aggregate retroactive adjustment. Furthermore, we believe it is consistent with the statutory language at section 1886(d)(5)(A)(iv) of the Act not to make retroactive adjustments to outlier payments. This section states that outlier payments be equal to or greater than 5 percent and less than or equal to 6 percent of projected or estimated (not actual) MS–DRG payments. We believe that an important goal of a PPS is predictability. Therefore, we believe that the fixed-loss outlier threshold should be projected based on the best available historical data and should not be adjusted retroactively. A retroactive change to the fixed-loss outlier threshold would affect all hospitals subject to the IPPS, thereby undercutting the predictability of the system as a whole.

We note that, because the MedPAR claims data for the entire FY 2024 period would not be available until after September 30, 2024, we are unable to provide an estimate of actual outlier payments for FY 2024 based on FY 2024 claims data in this proposed rule. We will provide an estimate of actual FY 2024 outlier payments in the FY 2026 IPPS/LTCH PPS proposed rule.

5. Proposed FY 2025 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the internet on the CMS website) contain the national standardized amounts that we are proposing to apply to all

hospitals, except hospitals located in Puerto Rico, for FY 2025. The proposed standardized amount for hospitals in Puerto Rico is shown in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). The proposed amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 67.6 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are proposing to apply a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we would apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the proposed standardized amounts reflecting the proposed applicable percentage increases for FY 2025.

The proposed labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2025 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the internet on the CMS website). Similarly, section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.

The following table illustrates the changes from the FY 2024 national standardized amounts to the proposed FY 2025 national standardized amounts. The second through fifth columns display the changes from the FY 2024 standardized amounts for each proposed applicable FY 2025 standardized amount. The first row of the table shows the updated (through FY 2024) average standardized amount after restoring the FY 2024 offsets for outlier payments, geographic reclassification, rural demonstration, lowest quartile, and wage index cap policy budget neutrality. The MS–DRG reclassification and recalibration wage index, and stem cell acquisition budget neutrality factors are cumulative (that is, we have not restored the offsets). Accordingly, those FY 2024 adjustment factors have not been removed from the base rate in the following table. Additionally, for FY 2025 we have applied the proposed budget neutrality factors for the lowest quartile hospital policy, described previously.

CHANGES FROM FY 2024 STANDARDIZED AMOUNTS TO THE PROPOSED FY 2025 STANDARDIZED AMOUNTS

	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
FY 2025 Base Rate after removing: 1. FY 2024 Geographic Reclassification Budget Neutrality (0.971295) 2. FY 2024 Operating Outlier Offset (0.949)	If Wage Index is Greater Than 1.0000: Labor (67.6%): $ 4,782.01 Nonlabor (32.4%): $ 2,291.97	If Wage Index is Greater Than 1.0000: Labor (67.6%): $4,628.54 Nonlabor (32.4%): $2,218.41	If Wage Index is Greater Than 1.0000: Labor (67.6%): $4,628.54 Nonlabor (32.4%): $2,218.41	If Wage Index is Greater Than 1.0000: Labor (67.6%): $4,628.54 Nonlabor (32.4%): $2,218.41
3. FY 2024 Rural Demonstration Budget Neutrality Factor (0.999463) 4. FY 2024 Lowest Quartile Budget Neutrality Factor (0.997402) 5. FY 2024 Cap Policy Wage Index Budget Neutrality Factor (0.999645)	If Wage Index is less Than or Equal to 1.0000: Labor (62%): $4,385.87 Nonlabor (38%): $2,688.11	If Wage Index is less Than or Equal to 1.0000: Labor (62%): $4,385.87 Nonlabor (38%): $2,688.11	If Wage Index is less Than or Equal to 1.0000: Labor (62%): $4,385.87 Nonlabor (38%): $2,688.11	If Wage Index is less Than or Equal to 1.0000: Labor (62%): $4,385.87 Nonlabor (38%): $2,688.11
Proposed FY 2025 Update Factor	1.026	1.0035	1.0185	0.996
Proposed FY 2025 MS-DRG Reclassification and Recalibration Budget Neutrality Factor Before Cap	0.997055	0.997055	0.997055	0.997055
Proposed FY 2025 Cap Policy MS-DRG Weight Budget Neutrality Factor	0.999617	0.999617	0.999617	0.999617
Proposed FY 2025 Wage Index Budget Neutrality Factor	0.999957	0.999957	0.999957	0.999957
Proposed FY 2025 Reclassification Budget Neutrality Factor	0.976773	0.976773	0.976773	0.976773
Proposed FY 2025 Lowest Quartile Budget Neutrality Factor	0.997498	0.997498	0.997498	0.997498
Proposed FY 2025 Cap Policy Wage Index Budget Neutrality Factor	0.997162	0.997162	0.997162	0.997162
Proposed FY 2025 RCH Demonstration Budget Neutrality Factor	0.999513	0.999513	0.999513	0.999513
Proposed FY 2025 Operating Outlier Factor	0.949	0.949	0.949	0.949
Proposed National Standardized Amount for FY 2025 if Wage Index is Greater Than 1.0000; Labor/Non-Labor Share Percentage (67.6/32.4)	**Labor: $4,506.29 Nonlabor: $2,159.81**	**Labor: $4,407.47 Nonlabor: $2,112.45**	**Labor: $4,473.35 Nonlabor: $2,144.02**	**Labor: $4,374.53 Nonlabor: $2,096.66**
Proposed National Standardized Amount for FY 2025 if Wage Index is Less Than or Equal to 1.0000; Labor/Non-Labor Share Percentage (62/38)	**Labor: $4,132.98 Nonlabor: $2,533.12**	**Labor: $4,042.35 Nonlabor: $2,477.57**	**Labor: $4,102.77 Nonlabor: $2,514.60**	**Labor: $4,012.14 Nonlabor: $2,459.05**

B. Proposed Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the internet on the CMS website), contain the proposed labor-related and nonlabor-related shares that we are proposing to use to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2025. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Proposed Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national prospective payment rate to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. For FY 2025, as discussed in section IV.B.3. of the preamble of this proposed rule, we are proposing to apply a labor-related share of 67.6 percent for the national standardized amounts for all IPPS hospitals (including hospitals in Puerto Rico) that have a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are proposing to apply the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals (including hospitals in Puerto Rico) whose wage index values are less than or equal to 1.0000. In section III. of the preamble of this proposed rule, we discuss

the data and methodology for the FY 2025 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make adjustments as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described previously. To account for higher non-labor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (coinciding with the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively). For FY 2022, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45546 through 45547), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule. Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are continuing to use the same COLA factors in FY 2025 that were used in FY 2024 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. The following table lists the COLA factors for FY 2025.

FY 2025 Cost-of-Living Adjustment Factors (COLA): Alaska and Hawaii Hospitals

Area	FY 2022 through FY 2025
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Lastly, as we finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53700 and 53701), we intend to update the COLA factors at the same time as the update to the labor-related share of the IPPS market basket.

C. Calculation of the Proposed Prospective Payment Rates

1. General Formula for Calculation of the Prospective Payment Rates for FY 2025

In general, the operating prospective payment rate for all hospitals (including hospitals in Puerto Rico) paid under the IPPS, except SCHs and MDHs, for FY 2025 equals the Federal rate (which includes uncompensated care payments). As previously discussed, section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), enacted on December 29, 2022, extended the MDH program through FY 2024 (that is, for discharges occurring on or before September 30, 2024). Subsequently, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Under current law, the MDH program will expire for discharges on or after January 1, 2025.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment:

- The Federal national rate (which, as discussed in section IVE. of the preamble of this proposed rule, includes uncompensated care payments).
- The updated hospital-specific rate based on FY 1982 costs per discharge.
- The updated hospital-specific rate based on FY 1987 costs per discharge.
- The updated hospital-specific rate based on FY 1996 costs per discharge.
- The updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2025 equals the higher of the applicable Federal rate, or the hospital-specific rate as described later in this section. The prospective payment rate for MDHs for FY 2025 discharges occurring before January 1, 2025 equals the higher of the Federal rate, or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described in this section. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

2. Operating and Capital Federal Payment Rate and Outlier Payment Calculation

Note: The formula specified in this section is used for actual claim payment and is also used by CMS to project the outlier threshold for the upcoming fiscal year. The difference is the source of some of the variables in the formula. For example, operating and capital CCRs for actual claim payment are from the PSF while CMS uses an adjusted CCR (as described previously) to project the threshold for the upcoming fiscal year. In addition, charges for a claim payment are from the bill while charges to project the threshold are from the MedPAR data with an inflation factor applied to the charges (as described earlier).

Step 1—Determine the MS–DRG and MS–DRG relative weight (from Table 5) for each claim primarily based on the ICD–10–CM diagnosis and ICD–10–PCS procedure codes on the claim.

Step 2—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described previously.

Step 3—Compute the operating and capital Federal payment rate:

—Federal Payment Rate for Operating Costs = MS–DRG Relative Weight × [(Labor-Related Applicable Standardized Amount

× Applicable CBSA Wage Index) + (Nonlabor-Related Applicable Standardized Amount × Cost-of-Living Adjustment)] × (1 + IME + (DSH * 0.25))

—Federal Payment for Capital Costs = MS–DRG Relative Weight × Federal Capital Rate × Geographic Adjustment Fact × (1 + IME + DSH)

Step 4—Determine operating and capital costs:

—Operating Costs = (Billed Charges × Operating CCR)

—Capital Costs = (Billed Charges × Capital CCR).

Step 5—Compute operating and capital outlier threshold (CMS applies a geographic adjustment to the operating and capital outlier threshold to account for local cost variation):

—Operating CCR to Total CCR = (Operating CCR)/(Operating CCR + Capital CCR)

—Operating Outlier Threshold = [Fixed Loss Threshold × ((Labor-Related Portion × CBSA Wage Index) + Nonlabor-Related portion)] × Operating CCR to Total CCR + Federal Payment with IME, DSH + Uncompensated Care Payment + supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals + New Technology Add-On Payment Amount

—Capital CCR to Total CCR = (Capital CCR)/(Operating CCR + Capital CCR)

—Capital Outlier Threshold = (Fixed Loss Threshold × Geographic Adjustment Factor × Capital CCR to Total CCR) + Federal Payment with IME and DSH

Step 6—Compute operating and capital outlier payments:

—Marginal Cost Factor = 0.80 or 0.90 (depending on the MS–DRG)

—Operating Outlier Payment = (Operating Costs—Operating Outlier Threshold) × Marginal Cost Factor

—Capital Outlier Payment = (Capital Costs – Capital Outlier Threshold) × Marginal Cost Factor

The payment rate may then be further adjusted for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b). The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Payments also may be reduced by the 1-percent adjustment under the HAC Reduction Program as described in section 1886(p) of the Act. We also make new technology add-on payments in accordance with section 1886(d)(5)(K) and (L) of the Act. Finally, we add the uncompensated care payment and supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals to the total claim payment amount. As noted in the previous formula, we take uncompensated care payments, supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and new technology add-on payments into consideration when calculating outlier payments.

3. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment. As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge. As noted, under current law, the MDH program is effective for FY 2025 discharges on or before December 31, 2024.

For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082).

b. Updating the FY 1982, FY 1987, FY 1996, FY 2002 and FY 2006 Hospital-Specific Rate for FY 2025

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the proposed applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Proposed Market Basket Rate-of-Increase	3.0	3.0	3.0	3.0
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.75	-0.75
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.25	0	-2.25
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.4	-0.4	-0.4	-0.4
Proposed Applicable Percentage Increase Applied to Standardized Amount	**2.6**	**0.35**	**1.85**	**-0.4**

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section V.F. of the preamble of this proposed rule.

In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, the hospital specific-rate for an SCH or MDH is adjusted by the proposed MS–DRG reclassification and recalibration budget neutrality factor, as discussed in section III. of this Addendum and listed in the table in section II. of this Addendum. In addition, as discussed in section II.E.2.d. of the preamble this proposed rule and previously, we are applying a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, as finalized in the FY 2023 IPPS/LTCH PPS final rule. Because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, consistent with the policy adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48897 through 48900 and 49432 through 49433), the

hospital specific-rate for an SCH or MDH would be adjusted by the proposed MS–DRG 10-percent cap budget neutrality factor. The resulting rate is used in determining the payment rate that an SCH or MDH would receive for its discharges beginning on or after October 1, 2024.

III. Proposed Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2025

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. In this section of this Addendum, we discuss the factors that we are proposing to use to determine the capital Federal rate for FY 2025, which would be effective for discharges occurring on or after October 1, 2024.

All hospitals (except ''new'' hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. We annually update the capital standard Federal rate, as provided in § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs, which currently specifies capital IPPS payments to hospitals located in Puerto Rico are based on 100 percent of the Federal rate.

A. Determination of the Proposed Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update for FY 2025

In the discussion that follows, we explain the factors that we are proposing to use to determine the capital Federal rate for FY 2025. In particular, we explain why the proposed FY 2025 capital Federal rate would increase approximately 2.50 percent, compared to the FY 2024 capital Federal rate. As discussed in the impact analysis in Appendix A to this proposed rule, we estimate that capital payments per discharge would increase approximately 2.4 percent during that same period. Because capital payments constitute approximately 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only approximately a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate of change, as appropriate, each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The proposed update factor for FY 2025 under that framework is 3.0 percent based on a projected 2.5 percent increase in the 2018-based CIPI, a proposed 0.0 percentage point adjustment for intensity, a proposed 0.0 percentage point adjustment for case-mix, a proposed 0.0 percentage point adjustment for the DRG reclassification and recalibration, and a proposed forecast error correction of 0.5 percentage point. As discussed in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2025 CIPI projection in that same section of this Addendum. In this proposed rule, we describe the policy adjustments that we are proposing to apply in the update framework for FY 2025.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons—

- The average resource use of Medicare patient changes (''real'' case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (''coding effects''); or
- The annual DRG reclassification and recalibration changes may not be budget neutral (''reclassification effect'').

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients, as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts, as discussed in section II. of appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2025, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase would equal 0.5 percent for FY 2025. The net adjustment for change in case-mix is the difference between the projected real increases in case mix and the projected total increase in case mix. Therefore, the proposed net adjustment for case-mix change in FY 2025 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, for this proposed rule, we have the FY 2023 MedPAR claims data available to evaluate the effects of the FY 2023 DRG reclassification and recalibration as part of our update for FY 2025. We assume for purposes of this adjustment, that the estimate of FY 2023 DRG reclassification and recalibration would result in no change in the case-mix when compared with the case mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are proposing to make a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2025.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is greater than 0.25 percentage point in absolute terms. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. Historically, when a forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. A forecast error of 0.5 percentage point was calculated for the FY 2023 update, for which there are historical data. That is, current historical data indicate that the forecasted FY 2023 CIPI increase (2.5 percent) used in calculating the FY 2023 update factor is 0.5 percentage point lower than actual realized price increases (3.0 percent). As this exceeds the 0.25 percentage point threshold, we are proposing an adjustment of 0.5 percentage point for the FY 2023 forecast error in the update for FY 2025.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculate this adjustment using the same methodology and

data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity changes that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual change is due to each of these factors. Thus, the capital update framework provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this proposed rule, we are proposing to continue to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2025 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 0436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2025, we are proposing to use an intensity measure that is based on an average of cost-per-discharge data from the 5-year period beginning with FY 2018 and extending through FY 2022. Based on these data, we estimated that case-mix constant intensity declined during FYs 2018 through 2022. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimated that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero-intensity adjustment for FY 2025. Therefore, we are proposing to make a 0.0 percentage point adjustment for intensity in the update for FY 2025.

Earlier, we described the basis of the components we used to develop the proposed 3.0 percent capital update factor under the capital update framework for FY 2025, as shown in the following table.

PROPOSED FY 2025 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	2.5
Intensity:	0.0
Case-Mix Adjustment Factors:	
Projected Case-Mix Change	-0.5
Real Across DRG Change	0.5
Subtotal	0.0
Effect of FY 2023 Reclassification and Recalibration	0.0
Forecast Error Correction	0.5
Total Update	3.0

*The capital input price index represents the 2018-based CIPI.

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A shared threshold is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier threshold is set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments. For FY 2025, we are proposing to continue to incorporate the impact of estimated operating outlier reconciliation payment amounts into the outlier threshold model. (For more details on our proposal to incorporate an estimate of the impact of operating outlier reconciliation payment amounts into the outlier threshold model, including modifications we are proposing to our methodology to reflect the estimate of operating outlier reconciliation payment amounts under the new criteria which expands the scope of cost reports identified for outlier reconciliation approval in FY 2025, see section II.A.4.i. of this Addendum to this proposed rule.)

For FY 2024, we estimated that outlier payments for capital-related PPS payments would equal 4.02 percent of inpatient capital-related payments based on the capital Federal rate. Based on the threshold discussed in section II.A. of this Addendum, we estimate that prior to taking into account projected capital outlier reconciliation payments, outlier payments for capital-related costs would equal 4.26 percent of inpatient capital-related payments based on the proposed capital Federal rate in FY 2025. Using the proposed methodology outlined in section II.A.4.i. of this Addendum, we estimate that taking into account projected capital outlier reconciliation payments would decrease the estimated percentage of FY 2025 capital outlier payments by 0.03 percent. Therefore, accounting for estimated capital outlier reconciliation, the estimated outlier payments for capital-related PPS payments would equal 4.23 percent (4.26 percent − 0.03 percent) of inpatient capital-related payments based on the proposed capital Federal rate in FY 2025. Accordingly, we are proposing to apply an outlier adjustment factor of 0.9577 in determining the capital Federal rate for FY 2025. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2025 would be higher than the percentage we estimated for FY 2024. (For more details on our proposed methodology for incorporating the impact of estimated capital outlier reconciliation payment amounts into the calculation of the capital outlier adjustment factor for FY 2025, including modifications we are proposing to make to our methodology to reflect the estimate of capital outlier reconciliation payment amounts under the new criteria which expands the scope of cost reports identified for outlier reconciliation approval in FY 2025, see section II.A.4.i. of this Addendum to this proposed rule.)

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The proposed FY 2025 outlier adjustment of 0.9577 is a −0.21 percent change from the FY 2024 outlier adjustment of 0.9598. Therefore, the proposed net change in the outlier adjustment to the capital Federal rate for FY 2024 is 0.9979 (0.9577/0.9598) so that the proposed outlier adjustment would decrease the FY 2025 capital Federal rate by approximately −0.21 percent compared to the FY 2024 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate, after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF, are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

As discussed in section III.G.5. of the preamble of this proposed rule, in the FY

2020 IPPS/LTCH PPS final rule (84 FR 42325 through 42339), we finalized a policy to help reduce wage index disparities between high and low wage index hospitals by increasing the wage index values for hospitals with a wage index value below the 25th percentile wage index. We stated that this policy would be effective for at least 4 years, beginning in FY 2020. This policy was applied in FYs 2020 through 2024, and we are proposing to continue to apply this policy for at least 3 more years, beginning in FY 2025. In addition, beginning in FY 2023, we finalized a permanent 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY regardless of the circumstances causing the decline. That is, under this policy, a hospital's wage index value would not be less than 95 percent of its prior year value (87 FR 49018 through 49021).

We have established a 2-step methodology for computing the budget neutrality factor for changes in the GAFs in light of the effect of those wage index changes on the GAFs. In the first step, we first calculate a factor to ensure budget neutrality for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy, consistent with our historical GAF budget neutrality factor methodology. In the second step, we calculate a factor to ensure budget neutrality for changes to the GAFs due to our policy to increase the wage index for hospitals with a wage index value below the 25th percentile wage index, which we are proposing to continue in FY 2025, and our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year. In this section, we refer to the policy that we applied in FYs 2020 through FY 2024 and are proposing to continue to apply in FY 2025, of increasing the wage index for hospitals with a wage index value below the 25th percentile wage index, as the lowest quartile hospital wage index adjustment (also known as low wage index hospital policy). We refer to our policy to place a 5-percent cap on any decrease in a hospital's wage index from the hospital's final wage index in the prior fiscal year as the 5-percent cap on wage index decreases policy.

The budget neutrality factors applied for changes to the GAFs due to the update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are built permanently into the capital Federal rate; that is, they are applied cumulatively in determining the capital Federal rate. However, the budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy is not permanently built into the capital Federal rate. This is because the GAFs with the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy applied from the previous year are not used in the budget neutrality factor calculations for the current year. Accordingly, and consistent with this approach, prior to calculating the proposed GAF budget neutrality factors for FY 2025, we removed from the capital Federal rate the budget neutrality factor applied in FY 2024 for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. Specifically, we divided the capital Federal rate by the FY 2024 budget neutrality factor of 0.9964 (88 FR 59362). We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45552) for additional discussion on our policy of removing the prior year budget neutrality factor for the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases from the capital Federal rate.

In light of the proposed changes to the wage index and other proposed wage index policies for FY 2025 discussed previously, which directly affect the GAF, we are proposing to continue to compute a budget neutrality adjustment for changes in the GAFs in two steps. We discuss our proposed 2-step calculation of the proposed GAF budget neutrality factors for FY 2025 as follows.

To determine the GAF budget neutrality factors for FY 2025, we first compared estimated aggregate capital Federal rate payments based on the FY 2024 MS–DRG classifications and relative weights and the FY 2024 GAFs to estimated aggregate capital Federal rate payments based on the FY 2024 MS–DRG classifications and relative weights and the proposed FY 2025 GAFs without incorporating the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. To achieve budget neutrality for these proposed changes in the GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 1.0029 for FY 2025. Next, we compared estimated aggregate capital Federal rate payments based on the proposed FY 2025 GAFs with and without the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. For this calculation, estimated aggregate capital Federal rate payments were calculated using the proposed FY 2025 MS–DRG classifications and relative weights (after application of the 10-percent cap discussed later in this section) and the proposed FY 2025 GAFs (both with and without the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy). (We note, for this calculation the proposed GAFs included the imputed floor, out-migration, and Frontier State adjustments.) To achieve budget neutrality for the effects of the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy on the proposed FY 2025 GAFs, we calculated an incremental GAF budget neutrality adjustment factor of 0.9943. As discussed earlier in this section, the budget neutrality factor for the lowest quartile hospital wage index adjustment factor and the 5-percent cap on wage index decreases policy is not permanently built into the capital Federal rate. Consistent with this, we present the proposed budget neutrality factor for the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy calculated under the second step of this 2-step methodology separately from the other proposed budget neutrality factors in the discussion that follows, and this proposed factor is not included in the calculation of the proposed combined GAF/DRG adjustment factor described later in this section.

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. Consistent with our historical methodology for adjusting the capital standard Federal rate to ensure that the effects of the annual DRG reclassification and the recalibration of DRG weights are budget neutral under § 412.308(c)(4)(ii), we finalized to apply an additional budget neutrality factor to the capital standard Federal rate so that the 10-percent cap on decreases in an MS–DRG's relative weight is implemented in a budget neutral manner (87 FR 49436). Specifically, we augmented our historical methodology for computing the budget neutrality factor for the annual DRG reclassification and recalibration by computing a budget neutrality adjustment for the annual DRG reclassification and recalibration in two steps. We first calculate a budget neutrality factor to account for the annual DRG reclassification and recalibration prior to the application of the 10-percent cap on MS–DRG relative weight decreases. Then we calculate an additional budget neutrality factor to account for the application of the 10-percent cap on MS–DRG relative weight decreases.

To determine the proposed DRG budget neutrality factors for FY 2025, we first compared estimated aggregate capital Federal rate payments based on the FY 2024 MS–DRG classifications and relative weights to estimated aggregate capital Federal rate payments based on the proposed FY 2025 MS–DRG classifications and relative weights prior to the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were calculated using the proposed FY 2025 GAFs without the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. The proposed incremental adjustment factor for DRG classifications and changes in relative weights prior to the application of the 10-percent cap is 0.9969. Next, we compared estimated aggregate capital Federal rate payments based on the proposed FY 2025 MS–DRG classifications and relative weights prior to the application of the 10-percent cap to estimated aggregate capital Federal rate payments based on the proposed FY 2025 MS–DRG classifications and relative weights after the application of the 10-percent cap. For these calculations, estimated aggregate capital Federal rate payments were also calculated using the proposed FY 2025 GAFs without the proposed lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy. The proposed incremental adjustment factor for the application of the 10-percent cap on relative weight decreases is 0.9996. Therefore, to achieve budget neutrality for the proposed FY 2025 MS–DRG reclassification and recalibration (including

the 10-percent cap), based on the calculations described previously, we are proposing to apply an incremental budget neutrality adjustment factor of 0.9965 (0.9969 × 0.9996) for FY 2025 to the capital Federal rate. We note that all the values are calculated with unrounded numbers.

The proposed incremental adjustment factor for the proposed FY 2025 MS–DRG reclassification and recalibration (0.9965) and for proposed changes in the FY 2025 GAFs due to the proposed update to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy (1.0029) is 0.9994 (0.9965 × 1.0029). This incremental adjustment factor is built permanently into the capital Federal rates. To achieve budget neutrality for the effects of the proposal to continue the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy on the FY 2025 GAFs, as described previously, we calculated a proposed budget neutrality adjustment factor of 0.9943 for FY 2025. We refer to this budget neutrality factor for the remainder of this section as the lowest quartile/cap adjustment factor.

We applied the budget neutrality adjustment factors described previously to the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy are determined separately. Under the capital IPPS, there is a single budget neutrality adjustment factor for changes in the GAF that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy. In addition, there is no adjustment for the effects that geographic reclassification, the proposed continuation of the lowest quartile hospital wage index adjustment, or the 5-percent cap on wage index decreases policy described previously have on the other payment parameters, such as the payments for DSH or IME.

The proposed incremental GAF/DRG adjustment factor of 0.9994 accounts for the proposed MS–DRG reclassifications and recalibration (including application of the 10-percent cap on relative weight decreases) and for proposed changes in the GAFs that result from proposed updates to the wage data, the effects on the GAFs of FY 2025 geographic reclassification decisions made by the MGCRB compared to FY 2024 decisions, and the application of the rural floor policy. The proposed lowest quartile/cap adjustment factor of 0.9943 accounts for changes in the GAFs that result from our proposal to continue the policy to increase the wage index values for hospitals with a wage index value below the 25th percentile wage index and the 5-percent cap on wage index decreases policy. However, these factors do not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2025

For FY 2024, we established a capital Federal rate of $503.83 (88 FR 59363). We are proposing to establish an update of 3.0 percent in determining the FY 2025 capital Federal rate for all hospitals. As a result of this proposed update and the proposed budget neutrality factors discussed earlier, we are proposing to establish a national capital Federal rate of $516.41 for FY 2025. The proposed national capital Federal rate for FY 2025 was calculated as follows:

- The proposed FY 2025 update factor is 1.03; that is, the proposed update is 3.0 percent.
- The proposed FY 2025 GAF/DRG budget neutrality adjustment factor that is applied to the capital Federal rate for proposed changes in the MS–DRG classifications and relative weights (including application of the 10-percent cap on relative weight decreases) and proposed changes in the GAFs that result from updates to the wage data, wage index reclassifications and redesignations, and application of the rural floor policy is 0.9994.
- The proposed FY 2025 lowest quartile/cap budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the GAFs that result from our proposal to continue to increase the wage index values for hospitals with a wage index value below the 25th percentile wage index and the 5-percent cap on wage index decreases policy is 0.9943.
- The proposed FY 2025 outlier adjustment factor is 0.9577.

We are providing the following chart that shows how each of the proposed factors and adjustments for FY 2025 affects the computation of the proposed FY 2025 national capital Federal rate in comparison to the FY 2024 national capital Federal rate. The proposed FY 2025 update factor has the effect of increasing the capital Federal rate by 3.0 percent compared to the FY 2024 capital Federal rate. The proposed GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.06 percent. The proposed FY 2025 lowest quartile/cap budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.21 percent compared to the FY 2024 capital Federal rate. The proposed FY 2025 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.21 percent compared to the FY 2024 capital Federal rate. The combined effect of all the proposed changes would increase the national capital Federal rate by approximately 2.5 percent, compared to the FY 2024 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2024 CAPITAL FEDERAL RATE AND THE PROPOSED FY 2025 CAPITAL FEDERAL RATE

	FY 2024	Proposed FY 2025	Change	Percent Change
Update Factor[1]	1.0380	1.0300	1.0300	3.00
GAF/DRG Adjustment Factor[1]	0.9885	0.9994	0.9994	-0.06
Quartile/Cap Adjustment Factor[2]	0.9964	0.9943	0.9979	-0.21
Outlier Adjustment Factor[3]	0.9598	0.9577	0.9979	-0.21
Capital Federal Rate	$503.83	$516.41	1.0250	2.50[4]

[1] The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rate. Thus, for example, the incremental change from FY 2024 to FY 2025 resulting from the application of the proposed 0.9994 GAF/DRG budget neutrality adjustment factor for FY 2025 is a net change of 0.9994 (or -0.06 percent).

[2] The lowest quartile/cap budget neutrality adjustment factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the proposed FY 2025 lowest quartile/cap budget neutrality adjustment factor is 0.9943/0.9964 or 0.9979 (or -0.21 percent).

[3] The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the proposed FY 2025 outlier adjustment factor is 0.9577/0.9598 or 0.9979 (or -0.21 percent).

[4] Percent change may not sum due to rounding.

B. Calculation of the Proposed Inpatient Capital-Related Prospective Payments for FY 2025

For purposes of calculating payments for each discharge during FY 2025, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. Section 412.312(c) provides for a shared threshold to identify outlier cases for both inpatient operating and inpatient capital-related payments. The proposed outlier threshold for FY 2025 is in section II.A. of this Addendum. For FY 2025, a case will qualify as a cost outlier if the cost for the case is greater than the prospective payment rates for the MS–DRG plus IME and DSH payments (including the empirically justified Medicare DSH payment and the estimated uncompensated care payment), estimated supplemental payment for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and any add-on payments for new technology, plus the proposed fixed-loss amount of $49,237.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation, unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

For this proposed rule, we are proposing to use the IPPS operating and capital market baskets that reflect a 2018 base year. For a complete discussion of the 2018-based market baskets, we refer readers to section IV. of the preamble of the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45213).

2. Forecast of the CIPI for FY 2025

Based on IHS Global Inc.'s (IGI) fourth quarter 2023 forecast, for this proposed rule, we are forecasting the 2018-based CIPI to increase 2.5 percent in FY 2025. This reflects a projected 3.0 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 3.9 percent increase in other capital expense prices in FY 2025, partially offset by a projected 1.1 percent decline in vintage-weighted interest expense prices in FY 2025. The weighted average of these three factors produces the forecasted 2.5 percent increase for the 2018-based CIPI in FY 2025.

We are also proposing that if more recent data become available (for example, a more recent estimate of the percentage increase in the 2018-based CIPI), we would use such data, if appropriate, to determine the FY 2025 percentage increase in the 2018-based CIPI for the final rule.

IV. Proposed Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2025

Payments for services furnished in children's hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are paid on the basis of reasonable costs based on the hospital's own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount, as defined in § 413.40(a) of the regulations) is set for each hospital, based on the hospital's own cost experience in its base year, and updated annually by a rate-of-increase percentage specified in § 413.40(c)(3). In addition, as specified in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38536), effective for cost reporting periods beginning during FY 2018, the annual update to the target amount for extended neoplastic disease care hospitals (hospitals described in § 412.22(i) of the regulations) also is the rate-of-increase percentage specified in § 413.40(c)(3). (We note that, in accordance with § 403.752(a), religious nonmedical health care institutions (RNHCIs) are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

For this FY 2025 IPPS/LTCH PPS proposed rule, based on IGI's 2023 fourth quarter forecast, we estimate that the 2018-based IPPS operating market basket rate-of-increase for FY 2025 is 3.0 percent. Based on this estimate, the proposed FY 2025 rate-of-increase percentage that will be applied to the FY 2024 target amounts in order to calculate the proposed FY 2025 target amounts for children's hospitals, the 11 cancer hospitals, RNCHIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals will be 3.0 percent, in accordance with the applicable regulations at 42 CFR 413.40. We are also proposing that if more recent data subsequently become available (for example, a more recent estimate of the market basket rate-of-increase, we would use such data, if appropriate, to calculate the final IPPS operating market basket rate-of-increase for FY 2025.

IRFs and rehabilitation distinct part units, IPFs and psychiatric units, and LTCHs are excluded from the IPPS and paid under their respective PPSs. The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VIII. of the preamble and section V. of the Addendum of this proposed rule for the changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2025. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Proposed Changes to the Payment Rates for the LTCH PPS for FY 2025

A. Proposed LTCH PPS Standard Federal Payment Rate for FY 2025

1. Overview

In section VIII. of the preamble of this proposed rule, we discuss our annual updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2025.

Under § 412.523(c)(3) of the regulations, for FY 2012 and subsequent years, we updated the standard Federal payment rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by sections 1886(m)(3) (citing sections 1886(b)(3)(B)(xi)(II) and 1886(m)(4) of the Act as set forth in the regulations at § 412.523(c)(3)(viii) through (xvii)). (For a summary of the payment rate development prior to FY 2012, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38310 through 38312) and references therein.)

Section 1886(m)(3)(A) of the Act specifies that, for rate year 2012 and each subsequent rate year, any annual update to the standard Federal payment rate shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act as discussed in section VIII.C.2. of the preamble of this proposed rule. This section of the Act further provides that the application of section 1886(m)(3)(B) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VIII.C.2. of the preamble of this proposed rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term ''fiscal year'' (FY) rather than ''rate year'' (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term ''fiscal year'' rather than ''rate year'' for 2011 and subsequent years.)

For LTCHs that fail to submit the required quality reporting data in accordance with the LTCH QRP, the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

2. Development of the Proposed FY 2025 LTCH PPS Standard Federal Payment Rate

Consistent with our historical practice and § 412.523(c)(3)(xvii), for FY 2025, we are proposing to apply the annual update to the LTCH PPS standard Federal payment rate from the previous year. Furthermore, in determining the proposed LTCH PPS standard Federal payment rate for FY 2025,

we also are proposing to make certain regulatory adjustments, consistent with past practices. Specifically, in determining the proposed FY 2025 LTCH PPS standard Federal payment rate, we are proposing to apply a budget neutrality adjustment factor for the changes related to the area wage level adjustment (that is, changes to the wage data and labor-related share) as discussed in section V.B.6. of this Addendum.

In this proposed rule, we are proposing to establish an annual update to the LTCH PPS standard Federal payment rate of 2.8 percent (that is, the most recent estimate of the proposed 2022-based LTCH market basket increase of 3.2 percent less the proposed productivity adjustment of 0.4 percentage point). Therefore, in accordance with § 412.523(c)(3)(xvii), we are proposing to apply an update factor of 1.028 to the FY 2024 LTCH PPS standard Federal payment rate of $48,116.62 to determine the proposed FY 2025 LTCH PPS standard Federal payment rate. Also, in accordance with § 412.523(c)(3)(xvii) and (c)(4), we are required to reduce the annual update to the LTCH PPS standard Federal payment rate by 2.0 percentage points for LTCHs that fail to submit the required quality reporting data for FY 2025 as required under the LTCH QRP. Therefore, for LTCHs that fail to submit quality reporting data under the LTCH QRP, we are proposing to establish an annual update to the LTCH PPS standard Federal payment rate of 0.8 percent (or an update factor of 1.008). This proposed update reflects the proposed annual market basket update of 3.2 percent reduced by the proposed 0.4 percentage point productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act, minus 2.0 percentage points for LTCHs failing to submit quality data under the LTCH QRP, as required by section 1886(m)(5) of the Act. Consistent with § 412.523(d)(4), we are proposing to apply an area wage level budget neutrality factor to the FY 2025 LTCH PPS standard Federal payment rate of 0.9959347, based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment (that is, the proposed annual update of the wage index (including the proposed update to the CBSA labor market areas and the application of the 5-percent cap on wage index decreases, discussed later in this section), and proposed labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. Accordingly, we are proposing to establish an LTCH PPS standard Federal payment rate of $49,262.80 (calculated as $48,116.62 × 1.028 × 0.9959347) for FY 2025. For LTCHs that fail to submit quality reporting data for FY 2025, in accordance with the requirements of the LTCH QRP under section 1866(m)(5) of the Act, we are proposing to establish an LTCH PPS standard Federal payment rate of $48,304.38 (calculated as $48,116.62 × 1.008 × 0.9959347) for FY 2025.

B. Proposed Adjustment for Area Wage Levels Under the LTCH PPS for FY 2025

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal payment rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal payment rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

The proposed FY 2025 LTCH PPS standard Federal payment rate wage index values that would be applicable for LTCH PPS standard Federal payment rate discharges occurring on or after October 1, 2024, through September 30, 2025, are presented in Table 12A (for urban areas) and Table 12B (for rural areas), which are listed in section VI. of this Addendum and available via the internet on the CMS website.

2. Proposed Geographic Classifications (Labor Market Areas) Under the LTCH PPS

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an ''urban area,'' or a ''rural area,'' as defined in § 412.503. Under § 412.503, an ''urban area'' is defined as a Metropolitan Statistical Area (MSA) (which includes a Metropolitan division, where applicable), as defined by the Executive OMB, and a ''rural area'' is defined as any area outside of an urban area (75 FR 37246).

The geographic classifications (labor market area definitions) currently used under the LTCH PPS, effective for discharges occurring on or after October 1, 2014, are based on the Core Based Statistical Areas (CBSAs) established by OMB, which are based on the 2010 decennial census data. In general, the current statistical areas (which were implemented beginning with FY 2015) are based on revised OMB delineations issued on February 28, 2013, in OMB Bulletin No. 13–01. (We note we have adopted minor revisions and updates in the years between the decennial censuses.) We adopted these labor market area delineations because they were at that time based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believed that these OMB delineations would ensure that the LTCH PPS area wage level adjustment most appropriately accounted for and reflected the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We noted that this policy was consistent with the IPPS policy adopted in FY 2015 under § 412.64(b)(1)(ii)(D) (79 FR 49951 through 49963). (For additional information on the CBSA-based labor market area (geographic classification) delineations currently used under the LTCH PPS and the history of the labor market area definitions used under the LTCH PPS, we refer readers to the FY 2015 IPPS/LTCH PPS final rule (79 FR 50180 through 50185).)

In general, it is our historical practice to update the CBSA-based labor market area delineations annually based on the most recent updates issued by OMB. Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. OMB Bulletin No. 17–01, issued August 15, 2017, established the delineations for the Nation's statistical areas, and the corresponding changes to the CBSA-based labor market areas were adopted in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41731). A copy of this bulletin may be obtained on the website at: *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/bulletins/2017/b-17-01.pdf*.

On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded OMB Bulletin No. 17–01 (August 15, 2017). On September 14, 2018, OMB issued OMB Bulletin No. 18–04, which superseded OMB Bulletin No. 18–03 (April 10, 2018). Historically OMB bulletins issued between decennial censuses have only contained minor modifications to CBSA delineations based on changes in population counts. However, OMB's 2010 Standards for Delineating Metropolitan and Micropolitan Standards created a larger mid-decade redelineation that takes into account commuting data from the American Commuting Survey. As a result, OMB Bulletin No. 18–04 (September 14, 2018) included more modifications to the CBSAs than are typical for OMB bulletins issued between decennial censuses. We adopted the updates set forth in OMB Bulletin No. 18–04 in the FY 2021 IPPS/LTCH PPS final rule (85 FR 59050 through 59051). A copy of OMB Bulletin No. 18–04 (September 14, 2018) may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf*.

On March 6, 2020, OMB issued Bulletin No. 20–01, which provided updates to and superseded OMB Bulletin No. 18–04, which was issued on September 14, 2018. The attachments to OMB Bulletin No. 20–01 provided detailed information on the update to statistical areas since September 14, 2018. (For a copy of this bulletin, we refer readers to the following website: *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf*.) In OMB Bulletin No. 20–01, OMB announced one new Micropolitan Statistical Area and one new component of an existing Combined Statistical Area. After reviewing OMB Bulletin No. 20–01, we determined that the changes in OMB Bulletin 20–01 encompassed delineation changes that would not affect the CBSA-based labor market area delineations used under the LTCH PPS. Therefore, we adopted the updates set forth in OMB Bulletin No. 20–01 in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45556 through 45557) consistent with our general policy of adopting OMB delineation updates;

however, the LTCH PPS area wage level adjustment was not altered as a result of adopting the updates because the CBSA-based labor market area delineations were the same as the CBSA-based labor market area delineations adopted in the FY 2021 IPPS/LTCH PPS final rule based on OMB Bulletin No. 18–04 (85 FR59050 through 59051). Thus, most recently in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59366), we continued to use the CBSA-based labor market area delineations as established in OMB Bulletin 18–04 and OMB Bulletin 20–01.

In the July 16, 2021 **Federal Register** (86 FR 37777), OMB finalized a schedule for future updates based on results of the decennial Census updates to commuting patterns from the American Community Survey. In accordance with that schedule, on July 21, 2023, OMB released Bulletin No. 23–01, which superseded OMB Bulletin No. 20–01. A copy of OMB Bulletin No. 23–01 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2023/07/OMB-Bulletin-23-01.pdf.* According to OMB, the delineations reflect the 2020 Standards for Delineating Core Based Statistical Areas (''the 2020 Standards''), which appeared in the **Federal Register** on July 16, 2021 (86 FR 37770 through 37778), and the application of those standards to Census Bureau population and journey-to-work data (that is, 2020 Decennial Census, American Community Survey, and Census Population Estimates Program data). In this proposed rule, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are proposing to adopt the revised delineations announced in OMB Bulletin No. 23–01 effective for FY 2025 under the LTCH PPS. We believe that adopting the CBSA-based labor market area delineations established in OMB Bulletin 23–01 would ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas (81 FR 57298). This proposal to adopt the revised delineations announced in OMB Bulletin No. 23–01 is consistent with the changes proposed under the IPPS for FY 2025 as discussed in section III.B. of the preamble of this proposed rule. A summary of these proposed changes is presented in the discussion that follows in this section. For complete details on the proposed changes, we refer readers to section III.B. of the preamble of this proposed rule.

a. Urban Counties That Would Become Rural Under the Revised OMB Delineations

CBSAs are made up of one or more constituent counties. Analysis of the revised labor market area delineations (based upon OMB Bulletin No. 23–01) that we propose to implement, beginning in FY 2025, shows that a total of 53 counties (and county equivalents) that were located in an urban CBSA pursuant to OMB Bulletin No. 20–01 would be located in a rural area under the revised OMB delineations. The chart in section III.B.4. of the preamble of this proposed rule lists the 53 urban counties that would be rural under these revised OMB delineations.

b. Rural Counties That Would Become Urban Under the Revised OMB Delineations

Analysis of the revised labor market area delineations (based upon OMB Bulletin No. 23–01) that we propose to implement, beginning in FY 2025, shows that a total of 54 counties (and county equivalents) that were located in a rural area pursuant to OMB Bulletin No. 20–01 would be located in an urban CBSA under the revised OMB delineations. The chart in section III.B.5. of the preamble of this proposed rule lists the 54 rural counties that would be urban under these revised OMB delineations.

c. Urban Counties That Would Move to a Different Urban CBSA Under the Revised OMB Delineations

In addition to rural counties becoming urban and urban counties becoming rural, some urban counties would shift from one urban CBSA to another urban CBSA under our proposal to adopt the revised delineations announced in OMB Bulletin No. 23–01. In other cases, adopting the revised delineations announced in OMB Bulletin No. 23–01 would involve a change only in CBSA name and/or number, while the CBSA continues to encompass the same constituent counties. For example, CBSA 23844 (Gary, IN) would experience both a change to its number and its name and become CBSA 29414 (Lake County-Porter County-Jasper County, IN), while all of its four constituent counties would remain the same. In other cases, only the name of the CBSA would be modified, and none of the currently assigned counties would be reassigned to a different urban CBSA. The chart in section III.B.6. of the preamble of this proposed rule lists the CBSAs where we are proposing to change the name and/or CBSA number only.

There are also counties that would shift between existing and new CBSAs, changing the constituent makeup of the CBSAs, under our proposal to adopt the revisions to the OMB delineations based on OMB Bulletin No. 23–01. For example, some CBSAs would be split into multiple new CBSAs, or a CBSA would lose one or more counties to other urban CBSAs. The chart in section III.B.6 of the preamble of this proposed rule lists the urban counties that would move from one urban CBSA to a new or modified CBSA under our proposal to adopt these revisions to the OMB delineations.

d. Change to County-Equivalents in the State of Connecticut

For FY 2025, we are continuing to use the Federal Information Processing Standard (FIPS) county codes, maintained by the U.S. Census Bureau, for purposes of cross walking counties to CBSAs. In a June 6, 2022 **Federal Register** notice (87 FR 34235 through 34240), the Census Bureau announced that it was implementing the State of Connecticut's request to replace the 8 counties in the State with 9 new ''Planning Regions.'' Planning regions now serve as county-equivalents within the CBSA system. OMB Bulletin No. 23–01 is the first set of revised delineations that referenced the new county-equivalents for Connecticut. We have evaluated the change in hospital assignments for Connecticut LTCHs and are proposing to adopt the planning regions as county equivalents for wage index purposes. As all forthcoming county-based delineation data will utilize these new county-equivalent definitions for the Connecticut, we believe it is necessary to adopt this migration from counties to planning region county-equivalents in order to maintain consistency with OMB Bulletin No. 23–01 and future OMB updates. This proposal to adopt the planning regions as county equivalents for wage index purposes is consistent with the changes proposed under the IPPS for FY 2025 as discussed in section III.B.3. of the preamble of this proposed rule. We are providing the following crosswalk for each LTCH in Connecticut with the current and proposed FIPS county and county-equivalent codes and CBSA assignments.

CCN	Current FIPS	Current County	Current CBSA	Proposed FIPS	Proposed Planning Area (County Equivalent)	Proposed CBSA
072003	09009	NEW HAVEN	35300	09170	SOUTH CENTRAL CONNECTICUT	35300
072004	09003	HARTFORD	25540	09110	CAPITOL	25540

As previously discussed, we are proposing to adopt the revisions announced in OMB Bulletin No. 23–01 to the CBSA-based labor market area delineations under the LTCH PPS, effective October 1, 2024. Accordingly, the proposed FY 2025 LTCH PPS wage index values in Tables 12A and 12B listed in section VI. of the Addendum to this proposed rule (which are available via the internet on the CMS website) reflect the proposed revisions to the CBSA-based labor market area delineations previously described. We also are including in a supplemental data file an updated county-to-CBSA crosswalk that reflects the proposed revisions to the CBSA-based labor market area delineations. This supplemental data file for public use will be posted on the CMS website for this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

3. Proposed Labor-Related Share for the LTCH PPS Standard Federal Payment Rate

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH's standard Federal payment rate is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs and a labor-related portion of capital costs using the applicable LTCH market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we rebased and revised the market basket used under the LTCH PPS by adopting a 2009-based LTCH market basket. In addition, for FY 2013 through FY 2016, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2009-based LTCH market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).) For FY 2017, we rebased and revised the 2009-based LTCH market basket to reflect a 2013 base year. In addition, for FY 2017 through FY 2020, we determined the labor-related share annually as the sum of the relative importance of each labor-related cost category of the 2013-based LTCH market basket for the respective fiscal year based on the best available data. (For more details, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 57085 through 57096).) Then, effective for FY 2021, we rebased and revised the 2013-based LTCH market basket to reflect a 2017 base year and determined the labor-related share annually as the sum of the relative importance of each labor-related cost category in the 2017-based LTCH market basket using the most recent available data. (For more details, we refer readers to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58909 through 58926).)

As discussed in section VIII.D of the preamble to this proposed rule, effective for FY 2025, we are proposing to rebase and revise the 2017-based LTCH market basket to reflect a 2022 base year. In conjunction with that proposal, as discussed in section VIII.D. of the preamble of this proposed rule, we are also proposing that the LTCH PPS labor-related share for FY 2025 would be the sum of the FY 2025 relative importance of each labor-related cost category in the proposed 2022-based LTCH market basket using the most recent available data. Table VIII.D–09 in section VIII.D. of the preamble of this proposed rule shows the proposed FY 2025 labor-related share using the proposed 2022-based LTCH market basket and the FY 2024 labor-related share using the 2017-based LTCH market basket. The proposed labor-related share for FY 2025 is the sum of the labor-related portion of operating costs from the proposed 2022-based LTCH market basket (that is, the sum of the FY 2025 relative importance shares of Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; All Other: Labor-Related Services) and a portion of the relative importance of Capital-Related cost weight from the proposed 2022-based LTCH market basket. The relative importance reflects the different rates of price change for these cost categories between the base year (2022) and FY 2025. Based on IHS Global Inc.'s fourth quarter 2023 forecast of the proposed 2022-based LTCH market basket, the sum of the FY 2025 relative importance for Wages and Salaries; Employee Benefits; Professional Fees: Labor-Related; Administrative and Facilities Support Services; Installation, Maintenance, and Repair Services; and All Other: Labor-Related Services was 68.9 percent. The portion of capital-related costs that is influenced by the local labor market is estimated to be 46 percent (that is, the same percentage applied to the 2009-based, 2013-based, and 2017-based LTCH market basket capital-related costs relative importance). Since the FY 2025 relative importance for capital-related costs was 8.4 percent based on IHS Global Inc.'s fourth quarter 2023 forecast of the proposed 2022-based LTCH market basket, we took 46 percent of 8.4 percent to determine the labor-related share of capital-related costs for FY 2025 of 3.9 percent. Therefore, we are proposing a total labor-related share for FY 2025 of 72.8 percent (the sum of 68.9 percent for the labor-related share of operating costs and 3.9 percent for the labor-related share of capital-related costs). The total difference between the FY 2025 labor-related share using the proposed 2022 based LTCH market basket (72.8 percent) and the FY 2024 labor-related share using the 2017 based LTCH market basket (68.5 percent) is 4.3 percentage points. As discussed in greater detail in section VIII.D. of the preamble of this proposed rule, this difference is primarily attributable to the revision to the base year cost weights for those categories included in the labor-related share. Consistent with our historical practice, we are proposing that if more recent data becomes available after the publication of the proposed rule and before the publication of the final rule (for example, a more recent estimate of the relative importance of each labor-related cost category of the proposed 2022-based LTCH market basket), we will use such data, if appropriate, to determine the FY 2025 LTCH PPS labor-related share.

4. Proposed Wage Index for FY 2025 for the LTCH PPS Standard Federal Payment Rate

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the ''urban'' or ''rural'' designation of any related or affiliated provider. As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also employ a policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, to determine the applicable area wage index values for the FY 2025 LTCH PPS standard Federal payment rate, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are proposing to continue to employ our historical practice of using the same data we used to compute the proposed FY 2025 acute care hospital inpatient wage index, as discussed in section III. of the preamble of this proposed rule (that is, wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2021) because these data are the most recent complete data available.

In addition, we are proposing to compute the FY 2025 LTCH PPS standard Federal payment rate area wage index values consistent with the ''urban'' and ''rural'' geographic classifications (that is, the proposed labor market area delineations as previously discussed in section V.B. of this Addendum) and our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. We are also proposing to continue to apportion the wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, consistent with our existing methodology for determining the LTCH PPS wage index values, for FY 2025, we are proposing to continue to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2021 IPPS wage data that we are proposing to use to determine the proposed FY 2025 LTCH PPS area wage index values in this proposed rule, there are no IPPS wage data for the urban area of Hinesville, GA (CBSA 25980). Consistent with our existing methodology, we calculated the proposed FY 2025 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, proposed CBSAs 10500, 12020, 12054, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 31924, 40660, 42340, 46660, and 47580), as shown in Table 12A, which is listed in section VI. of this Addendum.

Based on the FY 2021 IPPS wage data that we are proposing to use to determine the proposed FY 2025 LTCH PPS area wage index values in this proposed rule, there are no IPPS wage data for rural North Dakota (CBSA 35). Consistent with our existing methodology, we calculated the proposed FY

2025 wage index value for CBSA 35 as the average of the wage index values for all proposed CBSAs that are contiguous to the rural counties of the State (that is, proposed CBSAs 13900, 22020, 24220, and 33500), as shown in Table 12B, which is listed in section VI. of this Addendum. We note that, as IPPS wage data are dynamic, it is possible that the number of urban and rural areas without IPPS wage data will vary in the future.

5. Permanent Cap on Wage Index Decreases

a. Permanent Cap on LTCH PPS Wage Index Decreases

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49440 through 49442), we finalized a policy that applies a permanent 5-percent cap on any decrease to an LTCH's wage index from its wage index in the prior year. Consistent with the requirement at § 412.525(c)(2) that changes to area wage level adjustments are made in a budget neutral manner, we include the application of this policy in the determination of the area wage level budget neutrality factor that is applied to the standard Federal payment rate, as is discussed later in section V.B.6. of this Addendum.

Under this policy, an LTCH's wage index will not be less than 95 percent of its wage index for the prior fiscal year. An LTCH's wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the LTCH PPS wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2025 would not be eligible for the LTCH PPS wage index cap in FY 2025. These LTCHs would receive the calculated wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage index cap. The cap on wage index decreases policy is reflected at § 412.525(c)(1).

For each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped wage index. This includes the LTCH's final prior year wage index value, the LTCH's uncapped current year wage index value, and the LTCH's capped current year wage index value. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact their MAC to ensure that its wage index value is not less than 95 percent of the value paid to it for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

b. Permanent Cap on IPPS Comparable Wage Index Decreases

Determining LTCH PPS payments for short-stay-outlier cases (reflected in § 412.529) and site neutral payment rate cases (reflected in § 412.522(c)) requires calculating an ''IPPS comparable amount.'' For information on this ''IPPS comparable amount'' calculation, we refer the reader to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49608 through 49610). Determining LTCH PPS payments for LTCHs that do not meet the applicable discharge payment percentage (reflected in § 412.522(d)) requires calculating an ''IPPS equivalent amount.'' For information on this ''IPPS equivalent amount'' calculation, we refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42439 through 42445).

Calculating both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' requires adjusting the IPPS operating and capital standardized amounts by the applicable IPPS wage index for nonreclassified IPPS hospitals. That is, the standardized amounts are adjusted by the IPPS wage index for nonreclassified IPPS hospitals located in the same geographic area as the LTCH. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49442 through 49443), we finalized a policy that applies a permanent 5-percent cap on decreases in an LTCH's applicable IPPS comparable wage index from its applicable IPPS comparable wage index in the prior year. Historically, we have not budget neutralized changes to LTCH PPS payments that result from the annual update of the IPPS wage index for nonreclassified IPPS hospitals. Consistent with this approach, the cap on decreases in an LTCH's applicable IPPS comparable wage index is not applied in a budget neutral manner.

Under this policy, an LTCH's applicable IPPS comparable wage index will not be less than 95 percent of its applicable IPPS comparable wage index for the prior fiscal year. An LTCH's applicable IPPS comparable wage index cap adjustment is determined based on the wage index value applicable to the LTCH on the last day of the prior Federal fiscal year. However, for newly opened LTCHs that become operational on or after the first day of the fiscal year, these LTCHs will not be subject to the applicable IPPS comparable wage index cap since they were not paid under the LTCH PPS in the prior year. For example, newly opened LTCHs that become operational during FY 2025 would not be eligible for the applicable IPPS comparable wage index cap in FY 2025. This means that these LTCHs would receive the calculated applicable IPPS comparable wage index for the area in which they are geographically located, even if other LTCHs in the same geographic area are receiving a wage cap. The cap on IPPS comparable wage index decreases policy is reflected at § 412.529(d)(4)(ii)(B) and (d)(4)(iii)(B).

Similar to the information we are making available for the cap on the LTCH PPS wage index values (described previously), for each LTCH we identify in our rulemaking data, we are including in a supplemental data file the wage index values from both fiscal years used in determining its capped applicable IPPS comparable wage index. Due to the lag in rulemaking data, a new LTCH may not be listed in this supplemental file for a few years. For this reason, a newly opened LTCH could contact its MAC to ensure that its applicable IPPS comparable wage index value is not less than 95 percent of the value paid to them for the prior Federal fiscal year. This supplemental data file for public use will be posted on the CMS website for this proposed rule at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

6. Proposed Budget Neutrality Adjustments for Changes to the LTCH PPS Standard Federal Payment Rate Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage level adjustment budget neutrality factor that is applied to the standard Federal payment rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we have applied an area wage level adjustment budget neutrality factor in determining the standard Federal payment rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

For FY 2025, in accordance with § 412.523(d)(4), we are applying a proposed area wage level budget neutrality factor to adjust the LTCH PPS standard Federal payment rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments, consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). As discussed in section V.B.6. of this Addendum, consistent with, § 412.525(c)(2), we include the application of the 5-percent cap on wage index decreases in the determination of the proposed area wage level budget neutrality factor. Specifically, we are proposing to determine an area wage level adjustment budget neutrality factor that is applied to the LTCH PPS standard Federal payment rate under § 412.523(d)(4) for FY 2025 using the following methodology:

Step 1—Simulate estimated aggregate LTCH PPS standard Federal payment rate payments using the FY 2024 wage index values and the FY 2024 labor-related share of 68.5 percent. We note that the FY 2024 wage index values are based on the existing CBSA labor market areas used in the FY 2024 IPPS/LTCH PPS final rule.

Step 2—Simulate estimated aggregate LTCH PPS standard Federal payment rate

payments using the proposed FY 2025 wage index values (including the proposed update to the CBSA labor market areas and the application of the 5 percent cap on wage index decreases) and the proposed FY 2025 labor-related share of 72.8 percent. (As noted previously, the proposed changes to the wage index values based on updated hospital wage data are discussed in section V.B.4. of this Addendum and the proposed labor-related share is discussed in section V.B.3. of this Addendum.)

Step 3—Calculate the ratio of these estimated total LTCH PPS standard Federal payment rate payments by dividing the estimated total LTCH PPS standard Federal payment rate payments using the FY 2024 area wage level adjustments (calculated in Step 1) by the estimated total LTCH PPS standard Federal payment rate payments using the proposed FY 2025 updates to the area wage level adjustment (calculated in Step 2) to determine the proposed budget neutrality factor for updates to the area wage level adjustment for FY 2025 LTCH PPS standard Federal payment rate payments.

Step 4—Apply the proposed FY 2025 updates to the area wage level adjustment budget neutrality factor from Step 3 to determine the proposed FY 2025 LTCH PPS standard Federal payment rate after the application of the proposed FY 2025 annual update.

We are proposing to use the most recent data available, including claims from the FY 2023 MedPAR file, in calculating the FY 2025 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor. We note that, because the area wage level adjustment under § 412.525(c) is an adjustment to the LTCH PPS standard Federal payment rate, consistent with historical practice, we only used data from claims that qualified for payment at the LTCH PPS standard Federal payment rate under the dual rate LTCH PPS to calculate the FY 2025 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49448), we discussed the abnormal charging practices of an LTCH (CCN 312024) in FY 2021 that led to the LTCH receiving an excessive amount of high-cost outlier payments. In that rule, we stated our understanding that, based on information we received from the provider, these abnormal charging practices would not persist into FY 2023. Therefore, we did not include their cases in our model for determining the FY 2023 outlier fixed-loss amount. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59376), we stated that the FY 2022 MedPAR claims also reflect the abnormal charging practices of this LTCH. Therefore, we removed claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2024 and all other FY 2024 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor. Given recent actions by the Department of Justice regarding CCN 312024 (see *https://www.justice.gov/opa/pr/new-jersey-hospital-and-investors-pay-united-states-306-million-alleged-false-claims-related*), we are proposing to again remove claims from CCN 312024 when determining the area wage level adjustment budget neutrality factor for FY 2025 and all other FY 2025 ratesetting calculations, including the MS–LTC–DRG relative weights and the fixed-loss amount for LTCH PPS standard Federal payment rate cases.

For this proposed rule, using the steps in the methodology previously described, we determined a proposed FY 2025 LTCH PPS standard Federal payment rate area wage level adjustment budget neutrality factor of 0.9959347. Accordingly, in section V.A. of this Addendum, we applied the proposed area wage level adjustment budget neutrality factor of 0.9959347 to determine the proposed FY 2025 LTCH PPS standard Federal payment rate, in accordance with § 412.523(d)(4).

C. Proposed Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels previously described. The methodology used to determine the COLA factors for Alaska and Hawaii is based on a comparison of the growth in the Consumer Price Indexes (CPIs) for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also includes a 25-percent cap on the CPI-updated COLA factors. Under our current policy, we have updated the COLA factors using the methodology as previously described every 4 years (at the same time as the update to the labor-related share of the IPPS market basket) and we last updated the COLA factors for Alaska and Hawaii published by OPM for 2009 in FY 2022 (86 FR 45559 through 45560).

We continue to believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the LTCH PPS standard Federal payment rate for LTCHs located in Alaska and Hawaii. Therefore, in this proposed rule, for FY 2025, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are proposing to continue to use the COLA factors based on the 2009 OPM COLA factors updated through 2020 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2022 IPPS/LTCH PPS final rule. (For additional details on our current methodology for updating the COLA factors for Alaska and Hawaii and for a discussion on the FY 2022 COLA factors, we refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45559 through 45560).)

PROPOSED COST-OF-LIVING ADJUSTMENT FACTORS (COLA): ALASKA AND HAWAII UNDER THE LTCH PPS FOR FY 2025

Area	FY 2025
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.22
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.22
City of Juneau and 80-kilometer (50-mile) radius by road	1.22
Rest of Alaska	1.24
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.22
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Proposed Adjustment for LTCH PPS High Cost Outlier (HCO) Cases

1. HCO Background

From the beginning of the LTCH PPS, we have included an adjustment to account for cases in which there are extraordinarily high costs relative to the costs of most discharges. Under this policy, additional payments are made based on the degree to which the estimated cost of a case (which is calculated by multiplying the Medicare allowable covered charge by the hospital's overall hospital CCR) exceeds a fixed-loss amount. This policy results in greater payment accuracy under the LTCH PPS and the Medicare program, and the LTCH sharing the financial risk for the treatment of extraordinarily high-cost cases.

We retained the basic tenets of our HCO policy in FY 2016 when we implemented the dual rate LTCH PPS payment structure under section 1206 of Pub. L. 113–67. LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid at the LTCH PPS standard Federal payment rate, which includes, as applicable, HCO payments under § 412.523(e). LTCH discharges that do not meet the criteria for exclusion are paid at the site neutral payment rate, which includes, as applicable, HCO payments under § 412.522(c)(2)(i). In the FY 2016 IPPS/LTCH PPS final rule, we established separate fixed-loss amounts and targets for the two different LTCH PPS payment rates. Under this bifurcated policy, the historic 8-percent HCO target was retained for LTCH PPS standard Federal payment rate cases, with the fixed-loss amount calculated using only data from LTCH cases that would have been paid at the LTCH PPS standard Federal payment rate if that rate had been in effect at the time of those discharges. For site neutral payment rate cases, we adopted the operating IPPS HCO target (currently 5.1 percent) and set the fixed-loss amount for site neutral payment rate cases at the value of the IPPS fixed-loss amount. Under the HCO policy for both payment rates, an LTCH receives 80 percent of the difference between the estimated cost of the case and the applicable HCO threshold, which is the sum of the LTCH PPS payment for the case and the applicable fixed-loss amount for such case.

To maintain budget neutrality, consistent with the budget neutrality requirement at § 412.523(d)(1) for HCO payments to LTCH PPS standard Federal rate payment cases, we also adopted a budget neutrality requirement for HCO payments to site neutral payment rate cases by applying a budget neutrality factor to the LTCH PPS payment for those site neutral payment rate cases. (We refer readers to § 412.522(c)(2)(i) of the regulations for further details.) We note that, during the 4-year transitional period, the site neutral payment rate HCO budget neutrality factor did not apply to the LTCH PPS standard Federal payment rate portion of the blended payment rate at § 412.522(c)(3) payable to site neutral payment rate cases. (For additional details on the HCO policy adopted for site neutral payment rate cases under the dual rate LTCH PPS payment structure, including the budget neutrality adjustment for HCO payments to site neutral payment rate cases, we refer readers to the FY 2016 IPPS/LTCH PPS final rule (80 FR 49617 through 49623).)

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

As noted previously, CCRs are used to determine payments for HCO adjustments for both payment rates under the LTCH PPS and are also used to determine payments for site neutral payment rate cases. As noted earlier, in determining HCO and the site neutral payment rate payments (regardless of whether the case is also an HCO), we generally calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. An overall CCR is used because the LTCH PPS uses a single prospective payment per discharge that covers both inpatient operating and capital-related costs. The LTCH's overall CCR is generally computed based on the sum of LTCH operating and capital costs (as described in section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges), with those values determined from either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period. However, in certain instances, we use an alternative CCR, such as the statewide average CCR, a CCR that is specified by CMS, or one that is requested by the hospital. (We refer readers to § 412.525(a)(4)(iv) of the regulations for further details regarding CCRs and HCO adjustments for either LTCH PPS payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate.)

The LTCH's calculated CCR is then compared to the LTCH total CCR ceiling. Under our established policy, an LTCH with a calculated CCR in excess of the applicable maximum CCR threshold (that is, the LTCH total CCR ceiling, which is calculated as 3 standard deviations from the national geometric average CCR) is generally assigned the applicable statewide CCR. This policy is premised on a belief that calculated CCRs in excess of the LTCH total CCR ceiling are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases.

b. Proposed LTCH Total CCR Ceiling

Consistent with our historical practice, we are proposing to use the best available data to determine the LTCH total CCR ceiling for FY 2025 in this proposed rule. Specifically, in this proposed rule, we are proposing to use our established methodology for determining the LTCH total CCR ceiling based on IPPS total CCR data from the December 2023 update of the Provider Specific File (PSF), which is the most recent data available. Accordingly, we are proposing an LTCH total CCR ceiling of 1.371 under the LTCH PPS for FY 2025 in accordance with § 412.525(a)(4)(iv)(C)(*2*) for HCO cases under either payment rate and § 412.522(c)(1)(ii) for the site neutral payment rate. Consistent with our historical practice, we are proposing to use the best available data, if applicable, to

determine the LTCH total CCR ceiling for FY 2025 in the final rule. (For additional information on our methodology for determining the LTCH total CCR ceiling, we refer readers to the FY 2007 IPPS final rule (71 FR 48117 through 48119).)

c. LTCH Statewide Average CCRs

Our general methodology for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling because it is based on ''total'' IPPS CCR data. (For additional information on our methodology for determining statewide average CCRs under the LTCH PPS, we refer readers to the FY 2007 IPPS final rule (71 FR 48119 through 48120).) Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C), the SSO policy at § 412.529(f)(4)(iii), and the site neutral payment rate at § 412.522(c)(1)(ii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) New LTCHs that have not yet submitted their first Medicare cost report (a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose calculated CCR is in excess of the LTCH total CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example, missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this proposed rule, we are proposing to use our established methodology for determining the LTCH PPS statewide average CCRs, based on the most recent complete IPPS ''total CCR'' data from the December 2023 update of the PSF. We are proposing LTCH PPS statewide average total CCRs for urban and rural hospitals that would be effective for discharges occurring on or after October 1, 2024, through September 30, 2025, in Table 8C listed in section VI. of this Addendum (and available via the internet on the CMS website). Consistent with our historical practice, we also are proposing to use the best available data, if applicable, to determine the LTCH PPS statewide average total CCRs for FY 2025 in the final rule.

Under the proposed LTCH PPS labor market areas, all areas in the District of Columbia, New Jersey, and Rhode Island are classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, we are proposing to continue to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are proposing to use this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

Furthermore, although Connecticut, Massachusetts, Nevada, and North Dakota have areas that are designated as rural under the proposed LTCH PPS labor market areas, in our calculation of the LTCH statewide average CCRs, there were no trimmed CCR data available from IPPS hospitals located in these rural areas as of December 2023. We refer the reader to section II.A.4.i.(2). of this Addendum for details on the trims applied to the IPPS CCR data from the December 2023 update of the PSF, which are the same data used to calculate the LTCH statewide average total CCRs. Therefore, consistent with our existing methodology, we are proposing to use the national average total CCR for rural IPPS hospitals for rural Connecticut, Massachusetts, Nevada, and North Dakota in Table 8C. We note that there were no LTCHs located in these rural areas as of December 2023.

d. Reconciliation of HCO Payments

Under the HCO policy at § 412.525(a)(4)(iv)(D), the payments for HCO cases are subject to reconciliation (regardless of whether payment is based on the LTCH standard Federal payment rate or the site neutral payment rate). Specifically, any such payments are reconciled at settlement based on the CCR that was calculated based on the cost report coinciding with the discharge. For additional information on the reconciliation policy, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4), as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the RY 2009 LTCH PPS final rule (73 FR 26820 through 26821), and most recently modified by Change Request 13566 (Transmittal 12558; March 28, 2024) with an update to the outlier reconciliation criteria.

3. Proposed High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

a. High-Cost Outlier Payments for LTCH PPS Standard Federal Payment Rate Cases

Under the regulations at § 412.525(a)(2)(ii) and as required by section 1886(m)(7) of the Act, the fixed-loss amount for HCO payments is set each year so that the estimated aggregate HCO payments for LTCH PPS standard Federal payment rate cases are 99.6875 percent of 8 percent (that is, 7.975 percent) of estimated aggregate LTCH PPS payments for LTCH PPS standard Federal payment rate cases. (For more details on the requirements for high-cost outlier payments in FY 2018 and subsequent years under section 1886(m)(7) of the Act and additional information regarding high-cost outlier payments prior to FY 2018, we refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38542 through 38544).)

b. Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

In this section of this Addendum, we discuss our proposed methodology for determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025. As we state later in this section, the proposed fixed-loss amount we determined for FY 2025 is significantly higher than the fixed-loss amount we finalized for FY 2024 (88 FR 59377). As we discuss later in this section, we are soliciting comments on our proposed fixed-loss amount as well as an alternative approach that we considered for determining the fixed-loss amount for FY 2025. We refer the reader to section I.O.4. of Appendix A of this proposed rule for our full discussion on the alternative approach.

When we implemented the LTCH PPS, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments (that is, the target percentage) under the LTCH PPS (67 FR 56022 through 56026). When we implemented the dual rate LTCH PPS payment structure beginning in FY 2016, we established that, in general, the historical LTCH PPS HCO policy would continue to apply to LTCH PPS standard Federal payment rate cases. That is, the fixed-loss amount for LTCH PPS standard Federal payment rate cases would be determined using the LTCH PPS HCO policy adopted when the LTCH PPS was first implemented, but we limited the data used under that policy to LTCH cases that would have been LTCH PPS standard Federal payment rate cases if the statutory changes had been in effect at the time of those discharges.

To determine the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases, we estimate outlier payments and total LTCH PPS payments for each LTCH PPS standard Federal payment rate case (or for each case that would have been an LTCH PPS standard Federal payment rate case if the statutory changes had been in effect at the time of the discharge) using claims data from the MedPAR files. In accordance with § 412.525(a)(2)(ii), the applicable fixed-loss amount for LTCH PPS standard Federal payment rate cases results in estimated total outlier payments being projected to be equal to 7.975 percent of projected total LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49448), we discussed the abnormal charging practices of an LTCH (CCN 312024) in FY 2021 that led to the LTCH receiving an excessive amount of high-cost outlier payments. In that rule, we stated our belief, based on information we received from the provider, that these abnormal charging practices would not persist into FY 2023. Therefore, we did not include their cases in our model for determining the FY 2023 outlier fixed-loss amount. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59376), we

stated that the FY 2022 MedPAR claims also reflect the abnormal charging practices of this LTCH. Therefore, we removed claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2024 and all other FY 2024 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor. Given recent actions by the Department of Justice regarding CCN 312024 (see *https://www.justice.gov/opa/pr/new-jersey-hospital-and-investors-pay-united-states-306-million-alleged-false-claims-related*), we are proposing to again remove claims from CCN 312024 when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 and all other FY 2025 ratesetting calculations, including the MS–LTC–DRG relative weights and the calculation of the area wage level adjustment budget neutrality factor.

(1) Proposed Charge Inflation Factor for Use in Determining the Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

Under the LTCH PPS, the cost of each claim is estimated by multiplying the charges on the claim by the provider's CCR. Due to the lag time in the availability of claims data, when estimating costs for the upcoming payment year we typically inflate the charges from the claims data by a uniform factor.

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the charge inflation factor. Similar to the method used under the IPPS hospital payment methodology (as discussed in section II.A.4.i.(2). of this Addendum), our methodology determines the LTCH charge inflation factor based on the historical growth in charges for LTCH PPS standard Federal payment rate cases, calculated using historical MedPAR claims data. In this section of this Addendum, we describe our charge inflation factor methodology.

Step 1—Identify LTCH PPS Standard Federal Payment Rate Cases

The first step in our methodology is to identify LTCH PPS standard Federal payment rate cases from the MedPAR claim files for the two most recently available Federal fiscal year time periods. For both fiscal years, consistent with our historical methodology for determining payment rates for the LTCH PPS, we remove any claims submitted by LTCHs that were all-inclusive rate providers as well as any Medicare Advantage claims. For both fiscal years, we also remove claims from providers that only had claims in one of the fiscal years.

Step 2—Remove Statistical Outliers

The next step in our methodology is to remove all claims from providers whose growth in average charges was a statistical outlier. We remove these statistical outliers prior to calculating the charge inflation factor because we believe they may represent aberrations in the data that would distort the measure of average charge growth. To perform this statistical trim, we first calculate each provider's average charge in both fiscal years. Then, we calculate a charge growth factor for each provider by dividing its average charge in the most recent fiscal year by its average charge in the prior fiscal year. Then we remove all claims for providers whose calculated charge growth factor was outside 3 standard deviations from the mean provider charge growth factor.

Step 3—Calculate the Charge Inflation Factor

The final step in our methodology is to use the remaining claims to calculate a national charge inflation factor. We first calculate the average charge for those remaining claims in both fiscal years. Then we calculate the national charge inflation factor by dividing the average charge in the more recent fiscal year by the average charge in the prior fiscal year.

Following the methodology described previously, we computed a proposed charge inflation factor based on the most recently available data. Specifically, we used the December 2023 update of the FY 2023 MedPAR file and the December 2022 update of the FY 2022 MedPAR as the basis of the LTCH PPS standard Federal payment rate cases for the two most recently available Federal fiscal year time periods, as described previously in our methodology. Therefore, we trimmed the December 2023 update of the FY 2023 MedPAR file and the December 2022 update of the FY 2022 MedPAR file as described in steps 1 and 2 of our methodology. To compute the 1-year average annual rate-of-change in charges per case, we compared the average covered charge per case of $280,441 ($11,524,447,130/41,094 cases) from FY 2022 to the average covered charge per case of $301,155 ($12,627,438,548/41,930 cases) from FY 2023. This rate-of-change was 7.3863 percent, which results in a 1-year charge inflation factor of 1.073863, and a 2-year charge inflation factor of 1.153182 (calculated by squaring the 1-year factor). We propose to inflate the billed charges obtained from the FY 2023 MedPAR file by this 2-year charge inflation factor of 1.153182 when determining the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025.

(2) CCRs for Use in Determining the Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

For greater accuracy in calculating the fixed-loss amount, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45562 through 45566), we finalized a technical change to our methodology for determining the CCRs used to calculate the fixed-loss amount. Similar to the methodology used for IPPS hospitals (as discussed in section II.A.4.i.(2). of this Addendum), our methodology adjusts CCRs obtained from the best available PSF data by an adjustment factor that is calculated based on historical changes in the average case-weighted CCR for LTCHs. We believe these adjusted CCRs more accurately reflect CCR levels in the upcoming payment year because they account for historical changes in the relationship between costs and charges for LTCHs. In this section of this Addendum, we describe our CCR adjustment factor methodology.

Step 1—Assign Providers Their Historical CCRs

The first step in our methodology is to identify providers with LTCH PPS standard Federal payment rate cases in the most recent MedPAR claims file (excluding all-inclusive rate providers and providers with only Medicare Advantage claims). For each of these providers, we then identify the CCR from the most recently available PSF. For each of these providers we also identify the CCR from the PSF that was made available one year prior to the most recently available PSF.

Step 2—Trim Providers With Insufficient CCR Data

The next step in our methodology is to remove from the CCR adjustment factor calculation any providers for which we cannot accurately measure changes to their CCR using the PSF data. We first remove any provider whose CCR was missing in the most recent PSF or prior year PSF. We next remove any provider assigned the statewide average CCR for their State in either the most recent PSF or prior year PSF. We lastly remove any provider whose CCR was not updated between the most recent PSF and prior year PSF (determined by comparing the effective date of the records).

Step 3—Remove Statistical Outliers

The next step in our methodology is to remove providers whose change in their CCR is a statistical outlier. To perform this statistical trim, for those providers remaining after application of Step 2, we calculate a provider-level CCR growth factor by dividing the provider's CCR from the most recent PSF by its CCR in the prior year's PSF. We then remove any provider whose CCR growth factor was outside 3 standard deviations from the mean provider CCR growth factor. These statistical outliers are removed prior to calculating the CCR adjustment factor because we believe that they may represent aberrations in the data that would distort the measure of average annual CCR change.

Step 4—Calculate a CCR Adjustment Factor

The final step in our methodology is to calculate, across all remaining providers after application of Step 3, an average case-weighted CCR from both the most recent PSF and prior year PSF. The provider case counts that we use to calculate the case-weighted average are determined from claims for LTCH standard Federal rate cases from the most recent MedPAR claims file. We note when determining these case counts, consistent with our historical methodology for determining the MS–LTC–DRG relative weights, we do not count short stay outlier claims as full cases but instead as a fraction of a case based on the ratio of covered days to the geometric mean length of stay for the MS–LTC–DRG grouped to the case. We calculate the national CCR adjustment factor by dividing the case-weighted CCR from the most recent PSF by the case-weighted CCR from the prior year PSF.

Following the methodology described previously, we computed a CCR adjustment factor based on the most recently available data. Specifically, we used the December 2023 PSF as the most recently available PSF

and the December 2022 PSF as the PSF that was made available one year prior to the most recently available PSF, as described in our methodology. In addition, we used claims from the December 2023 update of the FY 2023 MedPAR file in our calculation of average case-weighted CCRs described in Step 4 of our methodology. Specifically, following the methodology described previously and, for providers with LTCH PPS standard Federal payment rate cases in the December 2023 update of the FY 2023 MedPAR file, we identified their CCRs from both the December 2022 PSF and December 2023 PSF. After performing the trims outlined in our methodology, we used the LTCH PPS standard Federal payment rate case counts from the FY 2023 MedPAR file (classified using proposed Version 42 of the GROUPER) to calculate case-weighted average CCRs. Based on this data, we calculated a December 2022 national average case-weighted CCR of 0.232841 and a December 2023 national average case-weighted CCR of 0.238141. We then calculated the proposed national CCR adjustment factor by dividing the December 2023 national average case-weighted CCR by the December 2022 national average case-weighted CCR. This results in a proposed 1-year national CCR adjustment factor of 1.02276. When calculating the proposed fixed-loss amount for FY 2025, we assigned the statewide average CCR for the upcoming fiscal year to all providers who were assigned the statewide average in the December 2023 PSF or whose CCR was missing in the December 2023 PSF. For all other providers, we multiplied their CCR from the December 2023 PSF by the proposed 1-year national CCR adjustment factor of 1.02276.

(3) Proposed Fixed-Loss Amount for LTCH PPS Standard Federal Payment Rate Cases for FY 2025

In this proposed rule, for FY 2025, using the best available data and the steps described previously, we calculated a proposed fixed-loss amount that would maintain estimated HCO payments at the projected 7.975 percent of total estimated LTCH PPS payments for LTCH PPS standard Federal payment rate cases as required by section 1886(m)(7) of the Act and in accordance with § 412.525(a)(2)(ii) (based on the proposed payment rates and policies for these cases presented in this proposed rule). Consistent with our historical practice, we are proposing to use the best available LTCH claims data and CCR data, if applicable, when determining the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 in the final rule. Therefore, based on LTCH claims data from the December 2023 update of the FY 2023 MedPAR file adjusted for charge inflation and adjusted CCRs from the December 2023 update of the PSF, under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we are proposing a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 of $90,921 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2025 payments for such cases. As such, we would make an additional HCO payment for the cost of an LTCH PPS standard Federal payment rate case that exceeds the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the proposed adjusted LTCH PPS standard Federal payment rate payment and the proposed fixed-loss amount for LTCH PPS standard Federal payment rate cases of $90,921).

The proposed fixed-loss amount for FY 2025 ($90,921) is significantly higher than the fixed-loss amount for FY 2024 ($59,873). Each year the fixed-loss amount is determined prospectively based on the best available data at the time. Using the FY 2023 MedPAR file, we estimate that actual high-cost outlier payments accounted for 11.6 percent of total LTCH PPS standard Federal payment rate payments in FY 2023. This percentage is much higher than the budget neutral target of 7.975 percent that we modelled, using the best available data at the time, when determining the FY 2023 fixed-loss amount of $38,518 (87 FR 49449). We currently estimate that for actual high-cost outlier payments to have accounted for 7.975 percent of total LTCH PPS standard Federal payment rate payments in FY 2023, the fixed-loss amount would have needed to have been set at approximately $65,260. Furthermore, as discussed in Appendix A to this proposed rule, we currently model that high-cost outlier payments in FY 2024 will account for 9.3 percent of total LTCH PPS standard Federal payment rate payments. This percentage is also much higher than the budget neutral target of 7.975 percent that we modelled, using the best available data at the time, when determining the FY 2024 fixed-loss amount of $59,873 (88 FR 59377). Based on this model, we estimate that the FY 2024 fixed-loss amount would have needed to have been set at approximately $72,275 to meet the requirement that high-cost outlier payments account for 7.975 percent of total LTCH PPS standard Federal payment rate payments in FY 2024.

Based on this recent experience, we believe a large increase to the fixed-loss amount would be warranted to ensure that estimated outlier payments in FY 2025 return to our statutorily required budget neutral target of 7.975 percent. However, we acknowledge that the proposed increase to the fixed-loss amount is substantial. In section I.O.4. of Appendix A of this proposed rule, we discuss an alternative approach we considered for determining the proposed FY 2025 fixed-loss amount that may have mitigated the magnitude of the increase in the proposed fixed-loss amount for FY 2025. As stated in that section, we are soliciting comments on both our proposed methodology for determining the FY 2025 fixed-loss amount and the alternative approach. We will consider these comments when finalizing the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 in the final rule.

4. High-Cost Outlier Payments for Site Neutral Payment Rate Cases

When we implemented the application of the site neutral payment rate in FY 2016, in examining the appropriate fixed-loss amount for site neutral payment rate cases issue, we considered how LTCH discharges based on historical claims data would have been classified under the dual rate LTCH PPS payment structure and the CMS' Office of the Actuary projections regarding how LTCHs will likely respond to our implementation of policies resulting from the statutory payment changes. We again relied on these considerations and actuarial projections in FY 2017 and FY 2018 because the historical claims data available in each of these years were not all subject to the LTCH PPS dual rate payment system. Similarly, for FYs 2019 through 2024, we continued to rely on these considerations and actuarial projections because, due to the transitional blended payment policy for site neutral payment rate cases and the provisions of section 3711(b)(2) of the CARES Act, the historical claims data available in each of these years were not subject to the full effect of the site neutral payment rate.

For FYs 2016 through 2024, our actuaries projected that the proportion of cases that would qualify as LTCH PPS standard Federal payment rate cases versus site neutral payment rate cases under the statutory provisions would remain consistent with what is reflected in the historical LTCH PPS claims data. Although our actuaries did not project an immediate change in the proportions found in the historical data, they did project cost and resource changes to account for the lower payment rates. Our actuaries also projected that the costs and resource use for cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and would likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what is found based on the historical data. As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49619), this actuarial assumption is based on our expectation that site neutral payment rate cases would generally be paid based on an IPPS comparable per diem amount under the statutory LTCH PPS payment changes that began in FY 2016, which, in the majority of cases, is much lower than the payment that would have been paid if these statutory changes were not enacted. In light of these projections and expectations, we discussed that we believed that the use of a single fixed-loss amount and HCO target for all LTCH PPS cases would be problematic. In addition, we discussed that we did not believe that it would be appropriate for comparable LTCH PPS site neutral payment rate cases to receive dramatically different HCO payments from those cases that would be paid under the IPPS (80 FR 49617 through 49619 and 81 FR 57305 through 57307). For those reasons, we stated that we believed that the most appropriate fixed-loss amount for site neutral payment rate cases for FYs 2016 through 2024 would be equal to the IPPS fixed-loss amount for that particular fiscal year. Therefore, we established the fixed-loss amount for site neutral payment rate cases as the corresponding IPPS fixed-loss amounts for FYs 2016 through 2024. In particular, in

FY 2024, we established the fixed-loss amount for site neutral payment rate cases as the FY 2024 IPPS fixed-loss amount of $42,750 (88 FR 59378).

For this proposed rule, we used FY 2023 data in the FY 2025 LTCH PPS proposed ratesetting. We note that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases admitted during the COVID–19 PHE period. The COVID–19 PHE expired on May 11, 2023. Therefore, all LTCH PPS cases in FY 2023 with admission dates on or before the PHE expiration date were paid the LTCH PPS standard Federal rate regardless of whether the discharge met the statutory patient criteria. Because not all FY 2023 claims in the data used for this proposed rule were subject to the site neutral payment rate, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2024 when developing a fixed-loss amount for site neutral payment rate cases for FY 2025. Our actuaries continue to project that the costs and resource use for FY 2025 cases paid at the site neutral payment rate would likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG, regardless of whether the proportion of site neutral payment rate cases in the future remains similar to what was found based on the historical data. (Based on the FY 2023 LTCH claims data used in the development of this final rule, if the provisions of the CARES Act had not been in effect, approximately 71 percent of LTCH cases would have been paid the LTCH PPS standard Federal payment rate and approximately 29 percent of LTCH cases would have been paid the site neutral payment rate for discharges occurring in FY 2023.)

For these reasons, we continue to believe that the most appropriate fixed-loss amount for site neutral payment rate cases for FY 2025 is the IPPS fixed-loss amount for FY 2025. Therefore, for FY 2025, we are proposing that the applicable HCO threshold for site neutral payment rate cases is the sum of the site neutral payment rate for the case and the proposed IPPS fixed-loss amount. That is, we are proposing a fixed-loss amount for site neutral payment rate cases of $49,237, which is the same proposed FY 2025 IPPS fixed-loss amount discussed in section II.A.4.i.(2). of this Addendum. Accordingly, under this policy, for FY 2025, we would calculate an HCO payment for site neutral payment rate cases with costs that exceed the HCO threshold amount that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the site neutral payment rate payment and the proposed fixed-loss amount for site neutral payment rate cases of $49,237).

In establishing an HCO policy for site neutral payment rate cases, we established a budget neutrality adjustment under § 412.522(c)(2)(i). We established this requirement because we believed, and continue to believe, that the HCO policy for site neutral payment rate cases should be budget neutral, just as the HCO policy for LTCH PPS standard Federal payment rate cases is budget neutral, meaning that estimated site neutral payment rate HCO payments should not result in any change in estimated aggregate LTCH PPS payments.

To ensure that estimated HCO payments payable to site neutral payment rate cases in FY 2025 would not result in any increase in estimated aggregate FY 2025 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce site neutral payment rate payments by 5.1 percent to account for the estimated additional HCO payments payable to those cases in FY 2025. Consistent with our historical practice, we are proposing to continue this policy.

As discussed earlier, consistent with the IPPS HCO payment threshold, we estimate the proposed fixed-loss threshold would result in FY 2025 HCO payments for site neutral payment rate cases to equal 5.1 percent of the site neutral payment rate payments that are based on the IPPS comparable per diem amount. As such, to ensure estimated HCO payments payable for site neutral payment rate cases in FY 2025 would not result in any increase in estimated aggregate FY 2025 LTCH PPS payments, under the budget neutrality requirement at § 412.522(c)(2)(i), it is necessary to reduce the site neutral payment rate amount paid under § 412.522(c)(1)(i) by 5.1 percent to account for the estimated additional HCO payments payable for site neutral payment rate cases in FY 2025. To achieve this, for FY 2025, we are proposing to apply a budget neutrality factor of 0.949 (that is, the decimal equivalent of a 5.1 percent reduction, determined as 1.0—5.1/100 = 0.949) to the site neutral payment rate for those site neutral payment rate cases paid under § 412.522(c)(1)(i). We note that, consistent with our current policy, this proposed HCO budget neutrality adjustment would not be applied to the HCO portion of the site neutral payment rate amount (81 FR 57309).

E. Proposed Update to the IPPS Comparable Amount To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766), we established a policy to reflect the changes to the Medicare IPPS DSH payment adjustment methodology made by section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' under the SSO policy at § 412.529 and the ''IPPS equivalent amount'' under the site neutral payment rate at § 412.522. Historically, the determination of both the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' includes an amount for inpatient operating costs ''for the costs of serving a disproportionate share of low-income patients.'' Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all hospitals that receive Medicare DSH payments.

To reflect the Medicare DSH payment adjustment methodology statutory changes in section 3133 of the Affordable Care Act in the calculation of the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS, we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50766) that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating Medicare DSH payment amount that has historically been reflected in the LTCH PPS payments that are based on IPPS rates). We also stated, in the FY 2014 IPPS/LTC PPS final rule (78 FR 50766), that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. We believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the ''IPPS comparable amount'' and the ''IPPS equivalent amount'' under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS (79 FR 50766 through 50767).

For FY 2025, as discussed in greater detail in section IV.E.2.b. of the preamble of this proposed rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) is adjusted to 62.14 percent of that amount to reflect the change in the percentage of individuals who are uninsured. The resulting amount is then used to determine the amount available to make uncompensated care payments to eligible IPPS hospitals in FY 2025. In other words, the amount of the Medicare DSH payments that would have been made prior to the amendments made by the Affordable Care Act is adjusted to 46.61 percent (the product of 75 percent and 62.14 percent) and the resulting amount is used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2025, we project that the reduction in the amount of Medicare

DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 71.61 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of the amendments made by the Affordable Care Act (that is, 25 percent + 46.61 percent = 71.61 percent).

Therefore, for FY 2025, we are proposing to establish that the calculation of the ''IPPS comparable amount'' under § 412.529 would include an applicable operating Medicare DSH payment amount that is equal to 71.61 percent of the operating Medicare DSH payment amount that would have been paid based on the statutory Medicare DSH payment formula absent the amendments made by the Affordable Care Act. Furthermore, consistent with our historical practice, we are proposing that, if more recent data became available, we would use that data to determine the applicable operating Medicare DSH payment amount used to calculate the ''IPPS comparable amount'' in the final rule.

F. Computing the Proposed Adjusted LTCH PPS Federal Prospective Payments for FY 2025

Under the dual rate LTCH PPS payment structure, only LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate are paid based on the LTCH PPS standard Federal payment rate. Under § 412.525(c), the LTCH PPS standard Federal payment rate is adjusted to account for differences in area wages; we make this adjustment by multiplying the labor-related share of the LTCH PPS standard Federal payment rate for a case by the applicable LTCH PPS wage index (the proposed FY 2025 values are shown in Tables 12A through 12B listed in section VI. of this Addendum and are available via the internet on the CMS website). The LTCH PPS standard Federal payment rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the proposed FY 2025 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this proposed rule, we are proposing to establish an LTCH PPS standard Federal payment rate for FY 2025 of $49,262.80, as discussed in section V.A. of this Addendum. We illustrate the methodology to adjust the proposed LTCH PPS standard Federal payment rate for FY 2025, applying our proposed LTCH PPS amounts for the standard Federal payment rate, MS–LTC–DRG relative weights, and wage index in the following example:

Example:

During FY 2025, a Medicare discharge that meets the criteria to be excluded from the site neutral payment rate, that is, an LTCH PPS standard Federal payment rate case, is from an LTCH that is located in CBSA 16984, which has a proposed FY 2025 LTCH PPS wage index value of 1.0237 (as shown in Table 12A listed in section VI. of this Addendum). The Medicare patient case is classified into proposed MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a proposed relative weight for FY 2025 of 0.9791 (as shown in Table 11 listed in section VI. of this Addendum). The LTCH submitted quality reporting data for FY 2025 in accordance with the LTCH QRP under section 1886(m)(5) of the Act.

To calculate the LTCH's total adjusted proposed Federal prospective payment for this Medicare patient case in FY 2025, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted proposed FY 2025 LTCH PPS standard Federal payment rate ($49,262.80) by the proposed labor-related share (72.8 percent) and the proposed wage index value (1.0237). This wage-adjusted amount was then added to the proposed nonlabor-related portion of the unadjusted proposed LTCH PPS standard Federal payment rate (27.2 percent; adjusted for cost of living, if applicable) to determine the adjusted proposed LTCH PPS standard Federal payment rate, which is then multiplied by the proposed MS–LTC–DRG relative weight (0.9791) to calculate the total adjusted proposed LTCH PPS standard Federal prospective payment for FY 2025 ($49,065.40). The table illustrates the components of the calculations in this example.

Unadjusted Proposed LTCH PPS Standard Federal Prospective Payment Rate	$49,262.80
Proposed Labor-Related Share	x 0.728
Proposed Labor-Related Portion of the LTCH PPS Standard Federal Payment Rate	= $35,863.32
Proposed Wage Index (CBSA 16984)	x 1.0237
Proposed Wage-Adjusted Labor Share of the LTCH PPS Standard Federal Payment Rate	= $36,713.28
Proposed Nonlabor-Related Portion of the LTCH PPS Standard Federal Payment Rate ($49,262.80 x 0.272)	+ $13,399.48
Adjusted Proposed LTCH PPS Standard Federal Payment Amount	= $50,112.76
Proposed MS-LTC-DRG 189 Relative Weight	x 0.9791
Total Adjusted Proposed LTCH PPS Standard Federal Prospective Payment	= $49,065.40

VI. Tables Referenced in This Proposed Rule Generally Available Through the Internet on the CMS Website

This section lists the tables referred to throughout the preamble of this proposed rule and in the Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2024, for the FY 2025 rulemaking cycle, the IPPS and LTCH PPS tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be on the CMS website. Specifically, all IPPS tables listed in the proposed rule, with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E, will generally be available on the CMS website. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

Tables 7A and 7B historically contained the Medicare prospective payment system selected percentile lengths of stay for the MS–DRGs for the prior year and upcoming fiscal year. We note, in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49452), we finalized beginning with FY 2023, to provide the percentile length of stay information previously included in Tables 7A and 7B in the supplemental AOR/BOR data file. The AOR/BOR files can be found on the FY 2025 IPPS proposed rule home page on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

After hospitals have been given an opportunity to review and correct their calculations for FY 2025, we will post Table 15 (which will be available via the CMS website) to display the final FY 2025 readmissions payment adjustment factors that will be applicable to discharges occurring on or after October 1, 2024. We expect Table 15 will be posted on the CMS website in the Fall 2024.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites identified in this proposed rule should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this proposed rule are generally available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled ''FY 2025 IPPS Proposed Rule Home Page'' or ''Acute Inpatient -Files- for Download.''

* For LTCHs that fail to submit quality reporting data for FY 2025 in accordance with the LTCH Quality Reporting Program (LTCH QRP), the annual update is reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act.

BILLING CODE 4120–01–C

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Statement of Need

This proposed rule is necessary to make payment and policy changes under the IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This proposed rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS. Also, as we note later in this Appendix, the primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the proposed changes in this proposed rule, such as the proposed updates to the IPPS and LTCH PPS rates, and the proposals and discussions relating to applications for new technology add-on payments, are needed to further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries.

We expect that these proposed changes would ensure that the outcomes of the prospective payment systems are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

a. Proposed Update to the IPPS Payment Rates

In accordance with section 1886(b)(3)(B) of the Act and as described in section V.B. of the preamble to this proposed rule, we are proposing to update the national standardized amount for inpatient hospital operating costs by the proposed applicable percentage increase of 2.6 percent (that is, a proposed 3.0 percent market basket update with a proposed reduction of 0.4 percentage point for the productivity adjustment). We are also proposing to apply the proposed applicable percentage increase (including the market basket update and the proposed productivity adjustment) to the hospital-specific rates.

Subsection (d) hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act would receive a proposed applicable percentage increase of 1.850 percent which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data. Hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act would receive a proposed applicable percentage increase of 0.350 percent which reflects a three-quarter percent reduction of the market basket update for being identified as not a meaningful EHR user.

Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act would receive a proposed applicable percentage increase of −0.4 percent, which reflects a one-quarter percent reduction of the market basket update for failure to submit quality data and a three-quarter percent reduction of the market basket update for being identified as not a meaningful EHR user.

b. Proposed Changes for the Add-On Payments for New Services and Technologies

Consistent with sections 1886(d)(5)(K) and (L) of the Act, we review applications for new technology add-on payments based on the eligibility criteria at 42 CFR 412.87. As set forth in 42 CFR 412.87(f)(1), we consider whether a technology meets the criteria for the new technology add-on payment and announce the results as part of the annual updates and changes to the IPPS. New technology add-on payments are not budget neutral.

As discussed in section II.E.7. of the preamble of this proposed rule, we are

proposing that beginning with new technology add-on payments for FY 2026, in assessing whether to continue the new technology add-on payments for those technologies that are first approved for new technology add-on payments in FY 2025 or a subsequent year, we would extend new technology add-on payments for an additional fiscal year when the three-year anniversary date of the product's entry onto the U.S. market occurs on or after October 1 of the upcoming fiscal year. For technologies that were first approved for new technology add-on payments prior to FY 2025, including for technologies we determine to be substantially similar to those technologies, we would continue to use the midpoint of the upcoming fiscal year (April 1) when determining whether a technology would still be considered ''new'' for purposes of new technology add-on payments. Similarly, we are also proposing that beginning with applications for new technology add-on payments for FY 2026, we would use the start of the fiscal year (October 1) instead of April 1 to determine whether to approve new technology add-on payment for that fiscal year. We note that this proposal, if finalized, would be effective beginning with new technology add-on payments for FY 2026, and there would be no impact of this proposal in FY 2025. We note that it is premature to estimate the potential payment impact for this proposal because we have not yet determined whether any of the FY 2025 new technology add-on payment applications will meet the specified criteria for new technology add-on payments for FY 2025. However, for purposes of estimating the impact of our proposed changes to the calculation of the inpatient new technology add-on payment—if we determine that all 10 of the FY 2025 new technology add-on payment applications that have been FDA-approved or cleared since the start of FY 2024 (as discussed in section II.E.5. and section II.E.6. of the preamble of this proposed rule) meet the specified criteria for new technology add-on payments for FY 2025, FY 2026, and FY 2027, and if we determine that none of these technologies would be substantially similar to those technologies that were first approved for new technology add-on payments prior to FY 2025—based on preliminary information from the applicants at the time of this proposed rule, this proposal, if finalized, would increase IPPS spending by approximately $380 million in FY 2027.

As discussed in section II.E.8. of the preamble of this proposed rule, we are proposing that beginning with new technology add-on payment applications for FY 2026, we would no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment under our existing policy for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application. Under this existing policy, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. We note that the cost impact of this proposal is not estimable. We expect that some applicants who were ineligible to apply in FY 2025 may apply for new technology add-on payments for FY 2026.

As discussed in section II.E.9. of the preamble of this proposed rule, we are proposing that, subject to our review of the new technology add-on payment eligibility criteria, for a gene therapy approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024 and concluding at the end of the 2- to 3-year newness period for such therapy, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) involving the use of such therapy for the treatment of SCD exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare would make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. We note that it is premature to estimate the potential payment impact for FY 2025 because we have not yet determined whether any gene therapy indicated and used specifically for the treatment of SCD will meet the specified criteria for new technology add-on payments for FY 2025.

c. Proposed Continuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We also stated we intended to revisit the issue of the duration of this policy in future rulemaking as we gained experience under the policy. As discussed in section III.G.5. of the preamble of this proposed rule, while we are using the FY 2021 cost report data for the FY 2025 wage index, we are unable to comprehensively evaluate the effect, if any, the low wage index hospital policy had on hospitals' wage increases during the years the COVID–19 PHE was in effect. We believe it is necessary to wait until we have useable data from fiscal years after the PHE before reaching any conclusions about the efficacy of the policy. Therefore, we are proposing that the low wage index hospital policy and the related budget neutrality adjustment would be effective for at least 3 more years, beginning in FY 2025.

d. Proposed Implementation of Section 4122 of the Consolidated Appropriations Act, 2023 (CAA, 2023)

As discussed in section V.G.2. of the preamble of this proposed rule, we are we are including a proposal to implement section 4122 of the Consolidated Appropriations Act (CAA) of 2023. Section 4122(a) of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also referred to as slots) to hospitals. Section 4122 makes available 200 residency positions, to be distributed beginning in FY 2026, with priority given to hospital sin 4 statutorily specified categories. At least 100 of the 200 residency positions made available under section 4122 shall be distributed for psychiatry or psychiatry subspecialty residency training programs. We expect these changes will make appropriate Medicare GME payments to hospitals for Medicare's share of the direct costs to operate the hospital's approved medical residency program, and for IPPS hospitals the indirect costs associated with residency programs that may result in higher patient care costs, consistent with the law. We expect that these changes will ensure that the outcomes of these Medicare payment policies are reasonable and provide equitable payments, while avoiding or minimizing unintended adverse consequences.

e. Additional Payment for Uncompensated Care to Medicare Disproportionate Share Hospitals (DSHs) and Supplemental Payment

In this proposed rule, as required by section 1886(r)(2) of the Act, we are updating our estimates of the 3 factors used to determine uncompensated care payments for FY 2025. Beginning with FY 2023, we adopted a multiyear averaging methodology to determine Factor 3 of the uncompensated care payment methodology, which would help to mitigate against large fluctuations in uncompensated care payments from year to year. Under this methodology, for FY 2025 and subsequent fiscal years, we would determine Factor 3 for all eligible hospitals using a 3-year average of the data on uncompensated care costs from Worksheet S–10 for the 3 most recent fiscal years for which audited data are available. Specifically, we would use a 3-year average of audited data on uncompensated care costs from Worksheet S–10 from the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 for FY 2025 for all eligible hospitals.

Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico. In section IV.D. of the preamble of this proposed rule, we summarize the ongoing methodology for supplemental payments.

f. Rural Community Hospital Demonstration Program

The Rural Community Hospital Demonstration (RCHD) was authorized originally for a 5-year period by section 410A of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), and it was extended for another 5-year period by section 3123 and 10313 of the Affordable Care Act

(Pub. L. 111–148). Section 15003 of the 21st Century Cures Act (Cures Act) (Pub. L. 114–255) extended the demonstration for an additional 5-year period, and section 128 of the Consolidated Appropriations Act of 2021 (Pub. L. 116–159) included an additional 5-year re-authorization. CMS has conducted the demonstration since 2004, which allows enhanced, cost-based payment for Medicare inpatient services for up to 30 small rural hospitals.

The authorizing legislation imposes a strict budget neutrality requirement. In this proposed rule, we summarize the status of the demonstration program, and the ongoing methodologies for implementation and budget neutrality.

2. Frontier Community Health Integration Project (FCHIP) Demonstration

The Frontier Community Health Integration Project (FCHIP) demonstration was authorized under section 123 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275), as amended by section 3126 of the Affordable Care Act of 2010 (Pub. L. 114–158), and most recently re-authorized and extended by the Consolidated Appropriations Act of 2021 (Pub. L. 116–159). The legislation authorized a demonstration project to allow eligible entities to develop and test new models for the delivery of health care in order to improve access to and better integrate the delivery of acute care, extended care and other health care services to Medicare beneficiaries in certain rural areas. The FCHIP demonstration initial period was conducted in 10 critical access hospitals (CAHs) from August 1, 2016, to July 31, 2019, and the demonstration ''extension period'' began on January 1, 2022, to run through June 30, 2027.

The authorizing legislation requires the FCHIP demonstration to be budget neutral. In this proposed rule, we propose to continue with the budget neutrality approach used in the demonstration initial period for the demonstration extension period—to offset payments across CAHs nationally—should the demonstration incur costs to Medicare.

3. Proposed Update to the LTCH PPS Payment Rates

As discussed in section VIII.D. of the preamble of this proposed rule, we are proposing to rebase and revise the 2017-based LTCH market basket to reflect a 2022 base year. The proposed update to the LTCH PPS standard Federal payment rate for FY 2025 is discussed in section VIII.C.2. of the preamble of this proposed rule. For FY 2025, we are proposing to update the LTCH PPS standard Federal payment rate by 2.8 percent (that is, a 3.2 percent proposed market basket update with a proposed reduction of 0.4 percentage point for the productivity adjustment, as required by section 1886(m)(3)(A)(i) of the Act). LTCHs that failed to submit quality data, as required by 1886(m)(5)(A)(i) of the Act would receive a proposed update of 0.80 percent for FY 2025, which reflects a 2.0 percentage point reduction for failure to submit quality data.

4. Hospital Quality Programs

Section 1886(b)(3)(B)(viii) of the Act requires subsection (d) hospitals to report data in accordance with the requirements of the Hospital IQR Program for purposes of measuring and making publicly available information on health care quality and links the quality data submission to the annual applicable percentage increase. Sections 1886(b)(3)(B)(ix), 1886(n), and 1814(l) of the Act require eligible hospitals and CAHs to demonstrate they are meaningful users of certified EHR technology for purposes of electronic exchange of health information to improve the quality of health care and links the submission of information demonstrating meaningful use to the annual applicable percentage increase for eligible hospitals and the applicable percent for CAHs. Section 1886(m)(5) of the Act requires each LTCH to submit quality measure data in accordance with the requirements of the LTCH QRP for purposes of measuring and making publicly available information on health care quality, and in order to avoid a 2-percentage point reduction. Section 1886(o) of the Act requires the Secretary to establish a value-based purchasing program under which value-based incentive payments are made in a fiscal year to hospitals that meet the performance standards established on an announced set of quality and efficiency measures for the fiscal year. The purposes of the Hospital VBP Program include measuring the quality of hospital inpatient care, linking hospital measure performance to payment, and making publicly available information on hospital quality of care. Section 1886(p) of the Act requires a reduction in payment for subsection (d) hospitals that rank in the worst-performing 25 percent with respect to measures of hospital-acquired conditions under the HAC Reduction Program for the purpose of measuring HACs, linking measure performance to payment, and making publicly available information on health care quality. Section 1886(q) of the Act requires a reduction in payment for subsection (d) hospitals for excess readmissions based on measures for applicable conditions under the Hospital Readmissions Reduction Program for the purpose of measuring readmissions, linking measure performance to payment, and making publicly available information on health care quality. Section 1866(k) of the Act applies to hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as ''PPS-exempt cancer hospitals'' or ''PCHs'') and requires PCHs to report data in accordance with the requirements of the PCHQR Program for purposes of measuring and making publicly available information on the quality of care furnished by PCHs. However, there is no reduction in payment to a PCH that does not report data.

5. Other Proposed Provisions

a. Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this proposed rule, we are proposing the creation and testing of a new alternative payment model called the Transforming Episode Accountability Model (TEAM). Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and CHIP beneficiaries while reducing program expenditures. The underlying issue addressed by the proposed model is that under FFS, Medicare makes separate payments to providers and suppliers for items and services furnished to a beneficiary over the course of an episode. Because providers and suppliers are paid for each individual item or service delivered, this may lead to care that is fragmented, unnecessary or duplicative, while making it challenging to invest in quality improvement or care coordination that would maximize patient benefit. We anticipate the proposed model may reduce costs while maintaining or improving quality of care by bundling payment for items and services for a given episode and holding TEAM participants accountable for spending and quality performance, as well as by providing incentives to promote high quality and efficient care.

We propose to create and test an episode-based payment model under the authority at section 1115A of the Act in which selected acute care hospitals would be required to participate. The model would build on and incorporate the most promising model features from other CMS Innovation Center episode-based payment models such as the BPCI Advanced Model and the CJR Model. Testing this new model would allow us to learn more about the patterns of potentially inefficient utilization of health care services, as well as how to improve the beneficiary care experience during care transitions and incentivize quality improvements for common surgical episodes. This information could inform future Medicare payment policy and potentially establish the framework for managing clinical episodes as a standard practice in Traditional Medicare.

Under the proposed model, acute care hospitals in certain selected geographic areas, Core-Based Statistical Areas, would be accountable for five initial episode categories: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment excluding lower extremity joint replacement, and spinal fusion. We believe the model may benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode. The model will also provide an opportunity to evaluate the nature and extent of reductions in the cost of treatment by providing financial incentives for providers to coordinate their efforts to meet patient needs and prevent future costs. The proposed model may benefit beneficiaries by holding hospitals accountable for the quality and cost of care for 30 day episodes after a beneficiary is discharged from the inpatient stay or hospital outpatient procedure, which could encourage investment in infrastructure and redesigned care processes the promote high quality and efficient service delivery that focuses on patient-centered care.

b. Provider Reimbursement Review Board (PRRB)

Section 1878 of the Act (42 U.S.C. 1395oo) established by the Social Security Amendments of 1972, requires the Secretary to appoint individuals to the PRRB for a 3-year term of office. In regulations promulgated after the enactment of this provision, 42 CFR 405.1845 stipulated that no member shall serve more than two consecutive 3-year terms of office. In section X.B. of the preamble of this proposed rule, we discuss our proposal to increase from two to three the number of consecutive terms that a PRRB Member is eligible to serve, while also permitting a Board Member who is designated as Chairperson in their second or third consecutive term to serve a fourth consecutive term as Chairperson. We believe that extending the length of service of Board Members could have an increased effect on the PRRB's productivity and efficiency as well as increase the number of individuals who seek a position on the PRRB.

c. Payment Error Rate Measurement (PERM)

Section 202 of the Further Consolidated Appropriations Act of 2020 (CAA; Pub. L. 116–94) amended Medicaid program integrity requirements in Puerto Rico. Puerto Rico was required to publish a plan, developed by Puerto Rico in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the CAA's enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Puerto Rico published this plan on June 20, 2021, that was approved by the CMS Administrator on June 22, 2021.

In section X.E. of the preamble of this proposed rule, we discuss our proposal to remove the exclusion of Puerto Rico from the PERM program found at 42 CFR 431.954(b)(3). In compliance with section 202 of the CAA, Puerto Rico has developed measures to comply with the PERM requirements of 42 CFR part 431, subpart Q, and we therefore propose that the PERM program become applicable to Puerto Rico. We believe that including Puerto Rico in the PERM program would increase visibility into its Medicaid and CHIP operations and ought to improve its program integrity efforts, that protect taxpayer dollars from improper payments.

d. Hospital CoP Reporting Requirements

Under sections 1861(e)(9) and 1820(e)(3) of the Act, hospitals and CAHs, respectively, under the Medicare and Medicaid programs must meet standards for the health and safety of patients receiving services in those facilities. Rules issued under that statutory authority require such facilities to engage in the surveillance, prevention, and control of health care-associated acute respiratory illnesses. In 2020, we published detailed reporting standards related specifically to COVID–19 for hospitals and CAHs. Those standards sunset on April 30, 2024. In section X.F. of the preamble of this proposed rule, we would establish streamlined standards that apply to a range of acute respiratory illnesses, not just to COVID–19, and would contribute to the ability to combat potential future threats from either existing or potential future sources of such infections.

B. Overall Impact

We have examined the impacts of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 on Modernizing Regulatory Review (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (CRA) (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094 amends section 3(f) of Executive Order 12866 to define a ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $200 million or more in any 1 year, or adversely affect in a material way the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, territorial, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in this Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) of $200 million or more in any 1 year. Based on our estimates, OMB'S Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1) as measured by the $200 million or more in any 1 year. We have prepared a regulatory impact analysis that to the best of our ability presents the costs and benefits of the rulemaking. OMB has reviewed these regulations, and the Departments have provided the following assessment of their impact.

We estimate that the proposed changes for FY 2025 acute care hospital operating and capital payments would redistribute amounts in excess of $200 million to acute care hospitals. The proposed applicable percentage increase to the IPPS rates required by the statute, in conjunction with other proposed payment changes in this proposed rule, would result in an estimated $3.0 billion increase in FY 2025 payments, primarily driven by the changes in FY 2025 operating payments, including uncompensated care payments, FY 2025 capital payments, the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program. These changes are relative to payments made in FY 2024. The impact analysis of the capital payments can be found in section I.I. of the Appendix in this proposed rule. In addition, as described in section I.J. of this Appendix, LTCHs are expected to experience an increase in payments by approximately $40 million in FY 2025 relative to FY 2024.

Our operating payment impact estimate includes the proposed 2.6 percent hospital update to the standardized amount (reflecting the proposed 3.0 percent market basket update reduced by the proposed 0.4 percentage point productivity adjustment). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which would also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this proposed rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This proposed rule would affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Office of Management and Budget has reviewed this proposed rule.

C. Objectives of the IPPS and the LTCH PPS

The primary objective of the IPPS and the LTCH PPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs, while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this proposed rule would further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these proposed changes would ensure that the outcomes of the prospective payment systems are reasonable and equitable, while avoiding or minimizing unintended adverse consequences.

Because this proposed rule contains a range of policies, we refer readers to the section of the proposed rule where each policy is discussed. These sections include the rationale for our decisions, including the need for the proposed policy.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our proposed policy changes, as well as statutory changes effective for FY 2025, on various hospital groups. We estimate the effects of individual proposed policy changes by estimating payments per case, while holding all other

payment policies constant. We use the best data available, but, generally unless specifically indicated, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, case mix, changes to the Medicare population, or incentives. In addition, we discuss limitations of our analysis for specific proposed policies in the discussion of those policies as needed.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related-costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 25 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland Total Cost of Care Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 6 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2023, there were 3,090 IPPS acute care hospitals included in our analysis. This represents approximately 53 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,376 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs, rather than under the IPPS. IPPS-excluded hospitals and units, which are paid under separate payment systems, include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, cancer hospitals, extended neoplastic disease care hospital, and short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts of changes to the prospective payment systems for these IPPS-excluded hospitals and units are not included in this proposed rule. The impact of the update and policy changes to the LTCH PPS for FY 2025 is discussed in section I.J. of this Appendix.

F. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this proposed rule, we are announcing proposed policy changes and payment rate updates for the IPPS for FY 2025 for operating costs of acute care hospitals. The proposed FY 2025 updates to the capital payments to acute care hospitals are discussed in section I.I. of the Appendix in this proposed rule.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2025 operating payments would increase by 2.4 percent, compared to FY 2024. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the proposed changes to each system. This section deals with the proposed changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the best available claims data to enable us to estimate the impacts on payments per case of certain proposed changes in this proposed rule. However, there are other proposed changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of proposed changes in payments per case presented in this section are taken from the FY 2023 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the proposed changes to the operating PPS do not incorporate cost data, data from the best available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not adjust for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each proposed change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2023 MedPAR file, we simulate payments under the operating IPPS given various combinations of payment parameters. As described previously, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of proposed payments under the capital IPPS, and the impact of proposed payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2025 are discussed in section I.I. of this Appendix. We note, as discussed in section III. of the preamble of this proposed rule, we are proposing to adopt the new OMB labor market area delineations as described in the July 21, 2023 OMB Bulletin No. 23–01, effective for the FY 2025 IPPS wage index. We also note, as discussed in section II.A.4. of the Addendum of this proposed rule, we used wage indexes based on the new OMB delineations in determining aggregate payments on each side of the comparison for the changes discussed below, except where otherwise noted (for example, the FY 2024 baseline simulation model). This is consistent with our proposal discussed in section II.A.4. of the Appendix of this proposed rule, to use wage indexes based on the proposed new OMB delineations in the determination of all of the budget neutrality factors in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations. We further note that as discussed in that same section, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an ''adjustment or update'' to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

We discuss the following changes:

- The effects of the application of the proposed applicable percentage increase of 2.6 percent (that is, a proposed 3.0 percent market basket update with a proposed reduction of 0.4 percentage point for the productivity adjustment), and the proposed applicable percentage increase (including the proposed market basket update and the proposed productivity adjustment) to the hospital-specific rates.
- The effects of the proposed changes to the relative weights and MS–DRG GROUPER.
- The effects of the proposed changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2021, compared to the FY 2020 wage data, to calculate the FY 2025 wage index.
- The effects of the geographic reclassifications by the MGCRB (as of publication of this proposed rule) that would be effective for FY 2025.
- The effects of the proposed rural floor with the application of the national budget neutrality factor to the wage index.
- The effects of the proposed imputed floor wage index adjustment. This provision is not budget neutral.
- The effects of the proposed frontier State wage index adjustment under the statutory provision that requires hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
- The effects of the implementation of section 1886(d)(13) of the Act, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes for FY 2025. This provision is not budget neutral.
- The effects of the expiration of the special payment status for MDHs beginning January 1, 2025 under current law. As discussed elsewhere in this proposed rule, section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for

discharges on or after January 1, 2025. As a result, MDHs that currently receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate plus 75 percent of the difference between payments based on the Federal rate and the hospital-specific rate will be paid based on the Federal rate starting January 1, 2025. As discussed later in this section, because of the timing of this legislation, the payment impacts set forth in Tables I and II of this section and discussed elsewhere in this regulatory impact analysis do not reflect extension of the MDH program for the first quarter of FY 2025. This extension will be reflected in the payment impacts for the final rule.

- The total estimated change in payments based on the proposed FY 2025 policies relative to payments based on FY 2024 policies.

In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient hospital operating costs by a factor called the ''applicable percentage increase.'' For FY 2025, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible proposed applicable percentage increases that can be applied to the national standardized amount.

We refer readers to section V.B. of the preamble of this proposed rule for a complete discussion on the FY 2025 inpatient hospital update. The table that follows shows these four scenarios:

PROPOSED FY 2025 APPLICABLE PERCENTAGE INCREASE FOR THE IPPS				
FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Proposed Market Basket Rate-of-Increase	3.0	3.0	3.0	3.0
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0	0	-0.75	-0.75
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0	-2.25	0	-2.25

PROPOSED FY 2025 APPLICABLE PERCENTAGE INCREASE FOR THE IPPS				
FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.4	-0.4	-0.4	-0.4
Proposed Applicable Percentage Increase Applied to Standardized Amount	2.6	0.35	1.85	-0.4

To illustrate the impact of the proposed FY 2025 changes, our analysis begins with a FY 2024 baseline simulation model using: the FY 2024 applicable percentage increase of 2.6 percent; the FY 2024 MS–DRG GROUPER (Version 41); the FY 2024 CBSA designations for hospitals based on the OMB definitions from the 2010 Census; the FY 2024 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes.

We note the following at the time this impact analysis was prepared:

- 91 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they failed the quality data submission process or did not choose to participate, but are meaningful EHR users. For purposes of the simulations shown later in this section, we modeled the proposed payment changes for FY 2025 using a reduced update for these hospitals.
- 87 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they are identified as not meaningful EHR users that do submit quality information under section 1886(b)(3)(B)(viii) of the Act. For purposes of the simulations shown in this section, we modeled the proposed payment changes for FY 2025 using a reduced update for these hospitals.
- 26 hospitals are estimated to not receive the full market basket rate-of-increase for FY 2025 because they are identified as not meaningful EHR users that do not submit quality data under section 1886(b)(3)(B)(viii) of the Act.

Each proposed policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2025 model incorporating all of the proposed changes. This simulation allows us to isolate the effects of each proposed change.

Our comparison illustrates the proposed percent change in payments per case from FY 2024 to FY 2025. Two factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount (see the table earlier in this section that shows the four proposed applicable percentage increases that can be applied to the national standardized amount for FY 2025). We note, section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the proposed applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs for FY 2025 are the same as the four proposed applicable percentage increases in the table earlier in this section.

A second significant factor that affects the changes in hospitals' payments per case from FY 2024 to FY 2025 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2024 that are no longer reclassified in FY 2025. Conversely, payments may increase for hospitals not reclassified in FY 2024 that are reclassified in FY 2025.

2. Analysis of Table I

Table I displays the results of our analysis of the proposed changes for FY 2025. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The

top row of the table shows the overall impact on the 3,090 acute care hospitals included in the analysis.

The next two rows of Table I contain hospitals categorized according to their geographic location: urban and rural. There are 2,390 hospitals located in urban areas and 700 hospitals in rural areas included in our analysis. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The last groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2025 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act) are 1,705, and 1,385, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 1,843 nonteaching hospitals in our analysis, 959 teaching hospitals with fewer than 100 residents, and 288 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next six rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs and RRCs) and reclassification status from urban to rural in accordance with section 1886(d)(8)(E) of the Act. Of the hospitals that are not reclassified from urban to rural, there are 142 RRCs, 249 SCHs, and 120 hospitals that are both SCHs and RRCs. Of the hospitals that are reclassified from urban to rural, there are 586 RRCs, 38 SCHs, and 43 hospitals that are both SCHs and RRCs. As previously noted, this analysis does not reflect the recent 3-month extension of the MDH program through December 31, 2024, under section 307 of the CAA, 2024 (Pub. L. 118–42).

The next series of groupings are based on the type of ownership and the hospital's Medicare and Medicaid utilization expressed as a percent of total inpatient days. These data were taken from the most recent available Medicare cost reports.

The next grouping concerns the geographic reclassification status of hospitals. The first subgrouping is based on whether a hospital is reclassified or not. The second and third subgroupings are based on whether urban and rural hospitals were reclassified by the MGCRB for FY 2025 or not, respectively. The fourth subgrouping displays hospitals that reclassified from urban to rural in accordance with section 1886(d)(8)(E) of the Act. The fifth subgrouping displays hospitals deemed urban in accordance with section 1886(d)(8)(B) of the Act.

BILLING CODE 4120–01–P

TABLE I.—IMPACT ANALYSIS OF PROPOSED CHANGES TO THE IPPS FOR OPERATING COSTS FOR FY 2025

	Number of Hospitals[1]	Proposed Hospital Rate Update (1)[2]	Proposed FY 2025 Weights and DRG Changes with Application of Recalibration Budget Neutrality (2)[3]	Proposed FY 2025 Wage Data with Application of Wage Budget Neutrality (3)[4]	FY 2025 MGCRB Reclassifications (4)[5]	Proposed Rural Floor with Application of National Rural Floor Budget Neutrality (5)[6]	Application of Imputed Floor, the Frontier Wage Index, and Outmigration Adjustment (6)[7]	MDH Expiration (7)[8]	All Proposed FY 2025 Changes (8)[9]

[1] Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2023, and hospital cost report data are from the latest available reporting periods.

[2] This column displays the payment impact of the proposed hospital rate update, including the proposed 2.6 percent update to the national standardized amount and the hospital-specific rate (the proposed 3.0 percent market basket rate-of-increase reduced by 0.4 percentage point for the proposed productivity adjustment).

[3] This column displays the proposed payment impact of the changes to the Version 42 GROUPER, the proposed changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2023 MedPAR data, and the permanent 10-percent cap where the relative weight for a MS-DRG would decrease by more than ten percent in a given fiscal year. This column displays the application of the proposed recalibration budget neutrality factors of 0.997301 and 0.999873.

[4] This column displays the payment impact of the proposed update to wage index data using FY 2021 cost report data. This column displays the payment impact of the application of the proposed wage budget neutrality factor. The proposed wage budget neutrality factor is 1.000014.

[5] Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2025 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2025. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the proposed geographic budget neutrality factor of 0.972192.

[6] This column displays the effects of the proposed rural floor. The Affordable Care Act requires the rural floor budget neutrality adjustment to be a 100 percent national level adjustment. The proposed rural floor budget neutrality factor applied to the wage index 0.981486.

[7] This column shows the combined impact of (1) the imputed floor for all-urban states; (2) the policy that requires hospitals located in frontier States have a wage index no less than 1.0; and (3) the policy which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are not budget neutral policies.

[8] This column displays the impact of the expiration of the MDH status for FY 2025, a non-budget neutral payment provision. As previously noted, this analysis does not reflect the 3-month extension of the MDH program through December 31, 2024 under section 307 of the CAA, 2024 (Pub. L. 118-42).

[9] This column shows the estimated change in proposed payments from FY 2024 to FY 2025.

BILLING CODE 4120–01–C

a. Effects of the Proposed Hospital Update (Column 1)

As discussed in section V.B. of the preamble of this proposed rule, this column includes the proposed hospital update, including the proposed 3.0 percent market basket rate-of-increase reduced by the 0.4 percentage point for the proposed productivity adjustment. As a result, we are proposing to make a 2.6 percent update to the national standardized amount. This column also includes the proposed update to the hospital-specific rates which includes the proposed 3.0 percent market basket rate-of-increase reduced by 0.4 percentage point for the proposed productivity adjustment. As a result, we are proposing to make a 2.6 percent update to the hospital-specific rates.

Overall, hospitals would experience a 2.6 percent increase in payments primarily due to the combined effects of the proposed hospital update to the national standardized amount and the proposed hospital update to the hospital-specific rate.

b. Effects of the Proposed Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 2)

Column 2 shows the effects of the proposed changes to the MS–DRGs and relative weights with the application of the proposed recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a proposed recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral. We also applied the permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given year and an associated recalibration cap budget neutrality factor to account for the 10-percent cap on relative weight reductions to ensure that the overall payment impact is budget neutral.

As discussed in section II.D. of the preamble of this proposed rule, for FY 2025, we calculated the proposed MS–DRG relative weights using the FY 2023 MedPAR data grouped to the proposed Version 42 (FY 2025) MS–DRGs. The proposed reclassification changes to the GROUPER are described in more detail in section II.C. of the preamble of this proposed rule.

The ''All Hospitals'' line in Column 2 indicates that changes due to the proposed MS–DRGs and proposed relative weights would result in a 0.0 percent change in payments with the application of the proposed recalibration budget neutrality factor of 0.997055 and the proposed recalibration cap budget neutrality factor of 0.999617 to the standardized amount.

c. Effects of the Proposed Wage Index Changes (Column 3)

Column 3 shows the impact of the proposed updated wage data, with the application of the proposed wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical standards (based on OMB standards) that we are proposing to use in FY 2025 are discussed in section III.A.2. of the preamble of this proposed rule. Specifically, we are proposing to implement the new OMB delineations as described in the July 21, 2023 OMB Bulletin No. 23–01, effective beginning with the FY 2025 IPPS wage index.

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the proposed wage index for acute care hospitals for FY 2025 is based on data submitted for hospital cost reporting periods, beginning on or after October 1, 2020 and before October 1, 2021. The estimated impact of the proposed updated wage data on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the proposed percentage change in payments when going from a model using the FY 2024 wage index, the labor-related share of 67.6 percent, and having a 100-percent proposed occupational mix adjustment applied, to a model using the proposed FY 2025 pre-reclassification wage index with the proposed labor-related share of 67.6 percent, also having a 100-percent proposed occupational mix adjustment applied, while holding other payment parameters, such as use of the proposed Version 42 MS–DRG GROUPER constant. As noted earlier and as discussed in section II.A.4. of the Addendum of this proposed rule, we used wage indexes based on the new OMB delineations in determining aggregate payments on each side of the comparison/model. The proposed FY 2025 occupational mix adjustment is based on the CY 2022 occupational mix survey.

In addition, the column shows the impact of the application of the proposed wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2025, we are proposing to calculate the wage budget neutrality factor to ensure that payments under the proposed updated wage data and the proposed labor-related share of 67.6 percent are budget neutral, without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the proposed wage budget neutrality factor is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The proposed FY 2025 wage budget neutrality factor is 0.999957 and the overall payment change is 0 percent.

Column 3 shows the impacts of updating the wage data. Overall, the proposed new wage data and the proposed labor-related share, combined with the proposed wage budget neutrality adjustment, would lead to no change for all hospitals, as shown in Column 3.

In looking at the wage data itself, the national average hourly wage would increase 8.75 percent compared to FY 2024. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the proposed 8.75 percent increase in the national average hourly wage.

The following chart compares the shifts in wage index values for hospitals due to proposed changes in the average hourly wage data for FY 2025 relative to FY 2024. These figures reflect proposed changes in the ''pre-reclassified, occupational mix-adjusted wage index,'' that is, the wage index before the application of geographic reclassification, the rural floor, the out-migration adjustment, and other wage index exceptions and adjustments. We note that the ''post-reclassified wage index'' or ''payment wage index,'' which is the wage index that includes all such exceptions and adjustments (as reflected in Tables 2 and 3 associated with this proposed rule) is used to adjust the labor-related share of a hospital's standardized amount, either 67.6 percent (as proposed) or 62 percent, depending upon whether a hospital's wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the proposed pre-reclassified wage index figures in the following chart may illustrate a somewhat larger or smaller proposed change than would occur in a hospital's payment wage index and total payment.

The following chart shows the projected impact of proposed changes in the area wage index values for urban and rural hospitals based on the wage data used for this proposed rule.

Proposed FY 2025 Percentage Change in Area Wage Index Values	Number of Hospitals	
	Urban	Rural
Increase 10 percent or more	76	0
Increase greater than or equal to 5 percent and less than 10 percent	245	105
Increase or decrease less than 5 percent	1,886	582
Decrease greater than or equal to 5 percent and less than 10 percent	151	1
Decrease 10 percent or more	9	0
Unchanged	0	0

d. Effects of MGCRB Reclassifications (Column 4)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located, such as hospitals with a § 412.103 reclassification or ''LUGAR'' status). The changes in Column 4 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2025.

By spring of each year, the MGCRB makes reclassification determinations that would be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials by the MGCRB of reclassification requests to the CMS Administrator. Further, hospitals have 45 days from the date the IPPS proposed rule is issued in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are proposing to apply an adjustment of 0.976773 to ensure that the effects of the reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this proposed rule).

Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification would increase payments to rural hospitals by an average of 2.4 percent. By region, most rural hospital categories would experience increases in payments due to MGCRB reclassifications.

Table 2 listed in section VI. of the Addendum to this proposed rule and available via the internet on the CMS website reflects the reclassifications for FY 2025.

e. Effects of the Proposed Rural Floor, Including Application of National Budget Neutrality (Column 5)

As discussed in section III.G.1. of the preamble of this proposed rule, section 4410 of Pub. L. 105–33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index applicable to hospitals located in rural areas in the same state. We apply a uniform budget neutrality adjustment to the wage index. Column 5 shows the effects of the rural floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally. We have calculated a proposed FY 2025 rural floor budget neutrality factor to be applied to the wage index of 0.985868, which would reduce wage indexes by 1.4 percent compared to the rural floor provision not being in effect.

Column 5 shows the projected impact of the rural floor with the proposed national rural floor budget neutrality factor applied to the wage index. The column compares the proposed post-reclassification FY 2025 wage index of providers before the proposed rural floor adjustment to the proposed post-reclassification FY 2025 wage index of providers with the proposed rural floor adjustment.

We estimate that 492 hospitals would receive the rural floor in FY 2025. All IPPS hospitals in our model would have their wage indexes reduced by the proposed rural floor budget neutrality adjustment of 0.985868. We project that, in aggregate, rural hospitals would experience a 0.4 percent decrease in payments as a result of the application of the proposed rural floor budget neutrality adjustment because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project that, in the aggregate, hospitals located in urban areas would experience no change in payments, because increases in payments to hospitals benefitting from the rural floor offset decreases in payments to non-rural floor urban hospitals whose wage index is downwardly adjusted by the proposed rural floor budget neutrality factor. Urban hospitals in the Pacific region would experience a 2.6 percent increase in payments primarily due to the application of the rural floor in California.

f. Effects of the Application of the Proposed Imputed Floor, Proposed Frontier State Wage Index and Proposed Out-Migration Adjustment (Column 6)

This column shows the combined effects of the application of the following: (1) the imputed floor under section 1886(d)(3)(E)(iv)(I) and (II) of the Act, which provides that for discharges occurring on or after October 1, 2021, the area wage index applicable to any hospital in an all-urban State may not be less than the minimum area wage index for the fiscal year for hospitals in that State established using the methodology described in § 412.64(h)(4)(vi) as in effect for FY 2018; (2) section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage index of 1.00 for all hospitals located in ''frontier States;'' and (3) the effects of section 1886(d)(13) of the Act, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index.

These three wage index provisions are not budget neutral and would increase payments overall by 0.4 percent compared to the provisions not being in effect.

Section 1886(d)(3)(E)(iv)(III) of the Act provides that the imputed floor wage index for all-urban States shall not be applied in a budget neutral manner. Therefore, the proposed imputed floor adjustment is estimated to increase IPPS operating payments by approximately $246 million. There are an estimated 99 providers in Connecticut, Washington DC, New Jersey, Puerto Rico, and Rhode Island that would receive the imputed floor wage index.

The term ''frontier States'' is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, 5 States (Montana, Nevada, North Dakota, South Dakota, and Wyoming) are considered frontier States, and an estimated 41 hospitals located in Montana, North Dakota, South Dakota, and Wyoming would receive a frontier wage index of 1.0000. We note, the rural floor for Nevada exceeds the frontier state wage index of 1.000, and therefore no hospitals in Nevada receive the frontier state wage index. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately $52 million.

In addition, section 1886(d)(13) of the Act provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment would receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are

an estimated 196 providers that would receive the proposed out-migration wage adjustment in FY 2025. This out-migration wage adjustment is not budget neutral, and we estimate the impact of these providers receiving the proposed out-migration increase would be approximately $55 million.

g. Effects of the Expiration of MDH Special Payment Status (Column 7)

Column 7 shows our estimate of the changes in payments due to the expiration of MDH status, a nonbudget neutral payment provision. Section 102 of the Continuing Appropriations and Ukraine Supplemental Appropriations Act, 2023 (Pub. L. 117–180), extended the MDH program (which, under previous law, was to be in effect for discharges before October 1, 2022 only) through December 16, 2022. Section 102 of the Further Continuing Appropriations and Extensions Act, 2023 (Pub. L. 117–229) extended the MDH program through December 23, 2022. Section 4102 of the Consolidated Appropriations Act, 2023 (Pub. L. 117–328), extended the MDH program through FY 2024 (that is for discharges occurring before October 1, 2024). As previously noted, section 307 of the CAA, 2024 (Pub. L. 118–42), enacted on March 9, 2024, further extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. Hospitals that qualify to be MDHs receive the higher of payments made based on the Federal rate or the payments made based on the Federal rate amount plus 75 percent of the difference between payments based on the Federal rate and payments based on the hospital-specific rate (a hospital-specific cost-based rate). Because this provision is not budget neutral, the expiration of this payment provision is estimated to result in a 0.2 percent decrease in payments overall, not taking into consideration the extension through the first quarter of FY 2025. There are currently 173 MDHs, of which we estimate 114 would be paid under the blended payment of the Federal rate and hospital-specific rate if the MDH program were not set to expire. Because those 114 MDHs will no longer receive the blended payment and will be paid only under the Federal rate for FY 2025 discharges beginning on or after January 1, 2025, it is estimated that those hospitals would experience an overall decrease in payments of approximately $151 million. The $151 overall decrease reflects the 3-month extension of the MDH program through December 31, 2024 under section 307 of the CAA, 2024. However, we note that because of the timing of this legislation, the payment impacts set forth in Tables I and II of this section and discussed elsewhere in this regulatory impact analysis do not reflect extension of the MDH program for the first quarter of FY 2025. This extension will be reflected in the payment impacts for the final rule.

h. Effects of All Proposed FY 2025 Changes (Column 8)

Column 8 shows our estimate of the proposed changes in payments per discharge from FY 2024 and FY 2025, resulting from all changes reflected in this proposed rule for FY 2025. It includes combined effects of the year-to-year change of the factors described in previous columns in the table.

The proposed average increase in payments under the IPPS for all hospitals is approximately 2.4 percent for FY 2025 relative to FY 2024 and for this row is primarily driven by the proposed changes reflected in Column 1. Column 8 includes the proposed annual hospital update of 2.6 percent to the national standardized amount. This annual hospital update includes the proposed 3.0 percent market basket rate-of-increase reduced by the 0.4 percentage point proposed productivity adjustment. Hospitals paid under the hospital-specific rate would receive a 2.6 percent proposed hospital update. As described in Column 1, the proposed annual hospital update for hospitals paid under the national standardized amount, combined with the proposed annual hospital update for hospitals paid under the hospital-specific rates, combined with the proposed other adjustments described previously and shown in Table I, would result in a 2.4 percent increase in payments in FY 2025 relative to FY 2024.

This column also reflects the estimated effect of outlier payments returning to their targeted levels in FY 2025 as compared to the estimated outlier payments for FY 2024 produced from our payment simulation model. As discussed in section II.A.4.i. of the Addendum to this proposed rule, the statute requires that outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments, and also requires that the average standardized amount be reduced by a factor to account for the estimated proportion of total DRG payments made to outlier cases. We continue to use a 5.1 percent target (or an outlier offset factor of 0.949) in calculating the outlier offset to the standardized amount, just as we did for FY 2024. Therefore, our estimate of payments per discharge for FY 2025 from our payment simulation model reflects this 5.1 percent outlier payment target. Our payment simulation model shows that estimated outlier payments for FY 2024 exceed that target by approximately 0.01 percent. Therefore, our estimate of the changes in payments per discharge from FY 2024 to FY 2025 in Column 8 reflects the estimated −0.01 percent change in outlier payments produced by our payment simulation model when returning to the 5.1 percent outlier target for FY 2025. There are also interactive effects among the various factors comprising the payment system that we are not able to isolate, which may contribute to our estimate of the changes in payments per discharge from FY 2024 and FY 2025 in Column 8.

Overall payments to hospitals paid under the IPPS due to the proposed applicable percentage increase and proposed changes to policies related to MS–DRGs, geographic adjustments, and outliers are estimated to increase by 2.4 percent for FY 2025. Hospitals in urban areas would experience a 2.4 percent increase in payments per discharge in FY 2025 compared to FY 2024. Hospital payments per discharge in rural areas are estimated to increase by 1.9 percent in FY 2025.

3. Impact Analysis of Table II

Table II presents the projected impact of the proposed changes for FY 2025 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2024 with the estimated average payments per discharge for FY 2025, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the proposed changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 8 of Table I.

BILLING CODE 4120–01–C

4. Impact Analysis of Table III: Provider Deciles by Beneficiary Characteristics

Advancing health equity is the first pillar of CMS's 2022 Strategic Framework.[855] To gain insight into how the IPPS policies could affect health equity, we have added Table III, Provider Deciles by Beneficiary Characteristics, for informational purposes. Table III details providers in terms of the beneficiaries they serve, and shows differences in estimated average payments per case and changes in estimated average payments per case relative to other providers.

As noted in section I.C. of this Appendix, this proposed rule contains a range of proposed policies, and there is a section of the proposed rule where each policy is discussed. Each section includes the rationale for our proposals, including the need for the proposed policy. The information contained in Table III is provided solely to demonstrate the quantitative effects of our proposed policies across a number of health equity dimensions and does not form the basis or rationale for the proposed policies.

Patient populations that have been disadvantaged or underserved by the healthcare system may include patients with the following characteristics, among others: members of racial and ethnic minorities; members of federally recognized Tribes, people with disabilities; members of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; individuals with limited English proficiency, members of rural communities, and persons otherwise adversely affected by persistent poverty or inequality. The CMS Framework for Health Equity was developed with particular attention to disparities in chronic and infectious diseases; as an example of a chronic disease associated with significant disparities, we therefore also detail providers in terms of the percentage of their claims for beneficiaries receiving ESRD Medicare coverage.

Because we do not have data for all characteristics that may identify disadvantaged or underserved patient populations, we use several proxies to capture these characteristics, based on claims data from the FY 2023 MedPAR file and Medicare enrollment data from Medicare's Enrollment Database (EDB), including: race/ethnicity, dual eligibility for Medicaid and Medicare, Medicare low income subsidy (LIS) enrollment, a joint indicator for dual or LIS enrollment, presence of an ICD–10–CM Z code indicating a ''social determinant of health'' (SDOH), presence of a behavioral health diagnosis code, receiving ESRD Medicare coverage, qualifying for Medicare due to disability, living in a rural area, and living in an area with an area deprivation index (ADI) greater than or equal to 85. We refer to each of these proxies as characteristics in Table III and the discussion that follows.

a. Race

The first health equity-relevant grouping presented in Table III is race/ethnicity. To assign the race/ethnicity variables used in Table III, we utilized the Medicare Bayesian Improved Surname Geocoding (MBISG) data in conjunction with the MedPAR data. The method used to develop the MBISG data involves estimating a set of six racial and ethnic probabilities (White, Black, Hispanic, American Indian or Alaskan Native, Asian or Pacific Islander, and multiracial) from the

[855] Available at: *https://www.cms.gov/files/document/2022-cms-strategic-framework.pdf.*

surname and address of beneficiaries by using previous self-reported data from a national survey of Medicare beneficiaries, post-stratified to CMS enrollment files. The MBISG method is used by the CMS Office of Minority Health in its reports analyzing Medicare Advantage plan performance on Healthcare Effectiveness Data and Information Set (HEDIS) measures, and is being considered by CMS for use in other CMS programs. To estimate the percentage of discharges for each specified racial/ethnic category for each hospital, the sum of the probabilities for that category for that hospital was divided by the hospital's total number of discharges.

b. Income

The two main proxies for income available in the Medicare claims and enrollment data are dual eligibility for Medicare and Medicaid and Medicare LIS status. Dual-enrollment status is a powerful predictor of poor outcomes on some quality and resource use measures even after accounting for additional social and functional risk factors.[856] Medicare LIS enrollment refers to a beneficiary's enrollment in the low-income subsidy program for the Part D prescription drug benefit. This program covers all or part of the Part D premium for qualifying Medicare beneficiaries and gives them access to reduced copays for Part D drugs. (We note that beginning on January 1, 2024, eligibility for the full low-income subsidy was expanded to include individuals currently eligible for the partial low-income subsidy.) Because Medicaid eligibility rules and benefits vary by state/territory, Medicare LIS enrollment identifies beneficiaries who are likely to have low income but may not be eligible for Medicaid. Not all beneficiaries who qualify for the duals or LIS programs actually enroll. Due to differences in the dual eligibility and LIS qualification criteria and less than complete participation in these programs, sometimes beneficiaries were flagged as dual but not LIS or vice versa. Hence this analysis also used a ''dual or LIS'' flag as a third proxy for low income. The dual and LIS flags were constructed based on enrollment/eligibility status in the EDB during the month of the hospital discharge.

c. Social Determinants of Health (SDOH)

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.[857] These circumstances or determinants influence an individual's health status and can contribute to wide health disparities and inequities. ICD–10–CM contains Z-codes that describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. The presence of ICD–10–CM Z-codes in the range Z55–Z65 identifies beneficiaries with these SDOH characteristics. The SDOH flag used for this analysis was turned on if one of these Z-codes was recorded on the claim for the hospital stay itself (that is, the beneficiary's prior claims were not examined for additional Z-codes). Since these codes are not required for Medicare FFS patients and did not impact payment under the IPPS in FY 2023, we believe they may be underreported in the claims data from the FY 2023 MedPAR file used for this analysis and not reflect the actual rates of SDOH. In 2019, 0.11 percent of all Medicare FFS claims were Z code claims and 1.59 percent of continuously enrolled Medicare FFS beneficiaries had claims with Z codes.[858] However, we expect the reporting of Z codes on claims may increase over time, because of newer quality measures in the Hospital Inpatient Quality Reporting (IQR) Program that capture screening and identification of patient-level, health-related social needs (MUC21–134 and MUC21–136) (87 FR 49201 through 49220). In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58755 through 58759), we also finalized a change to the severity designation of the following three ICD–10–CM diagnosis codes from non-CC to CC: Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness) and Z59.02 (Unsheltered homelessness). We also refer the reader to section II.C.12.c.1. of the preamble of this proposed rule, where we discuss our proposal to change the severity level designation of the following seven ICD–10–CM diagnosis codes from non-CC to CC for FY 2025: Z59.10 (Inadequate housing, unspecified), Z59.11 (Inadequate housing environmental temperature), Z59.12 (Inadequate housing utilities), Z59.19 (Other inadequate housing), Z59.811 (Housing instability, housed, with risk of homelessness), Z59.812 (Housing instability, housed, homelessness in past 12 months), and Z59.819 (Housing instability, housed unspecified).

d. Behavioral Health

Beneficiaries with behavioral health diagnoses often face co-occurring physical illnesses, but often experience difficulty accessing care.[859] The combination of physical and behavioral health conditions can exacerbate both conditions and result in poorer outcomes than one condition alone.[860] Additionally, the intersection of behavioral health and health inequities is a core aspect of CMS' Behavioral Health Strategy.[861] We used the presence of one or more ICD–10–CM codes in the range of F01–F99 to identify beneficiaries with a behavioral health diagnosis.

e. Disability

Beneficiaries with disabilities are categorized as being disabled because of a medically determinable physical or mental impairment(s) that has lasted or is expected to last for a continuous period of at least 12 months or is expected to result in death.[862] Beneficiaries with disabilities often have complex healthcare needs and difficulty accessing care. Beneficiaries with disabilities were classified as such persons for the purposes of this analysis if their original reason for qualifying for Medicare was disability; this information was obtained from Medicare's EDB. We note that this is likely an underestimation of disability because it does not account for beneficiaries who became disabled after becoming entitled to Medicare. This metric also does not capture all individuals who would be considered to have a disability under 29 U.S.C. 705(9)(B).

f. ESRD

Beneficiaries with ESRD have high healthcare needs and high medical spending, and often experience comorbid conditions and poor mental health. Beneficiaries with ESRD also experience significant disparities, such as a limited life expectancy.[863] Beneficiaries were classified as ESRD for the purposes of this analysis if they were receiving Medicare ESRD coverage during the month of the discharge; this information was obtained from Medicare's EDB.

g. Geography

Beneficiaries in some geographic areas—particularly rural areas or areas with concentrated poverty—often have difficulty accessing care.[864] [865] For this impact analysis, beneficiaries were classified on two dimensions: from a rural area and from an area with an area deprivation index (ADI) greater than or equal to 85.

Rural status is defined for purposes of this analysis using the primary Rural-Urban Commuting Area (RUCA) codes 4–10 (including micropolitan, small town, and rural areas) corresponding to each beneficiary's zip code. RUCA codes are defined at the census tract level based on

measures of population density, urbanization, and daily commuting. The ADI is obtained from a publicly available dataset designed to capture socioeconomic disadvantage at the neighborhood level.[866] It utilizes data on income, education, employment, housing quality, and 13 other factors from the American Community Survey and combines them into a single raw score, which is then used to rank neighborhoods (defined at various levels), with higher scores reflecting greater deprivation. The version of the ADI used for this analysis is at the Census Block Group level and the ADI corresponds to the Census Block Group's percentile nationally. Living in an area with an ADI score of 85 or above, a validated measure of neighborhood disadvantage, is shown to be a predictor of 30-day readmission rates, lower rates of cancer survival, poor end of life care for patients with heart failure, and longer lengths of stay and fewer home discharges post-knee surgery even after accounting for individual social and economic risk factors.[867] [868] [869] [870] [871] The MedPAR discharge data was linked to the RUCA using beneficiaries' five-digit zip code and to the ADI data using beneficiaries' 9-digit zip codes, both of which were derived from Common Medicare Enrollment (CME) files. Beneficiaries with no recorded zip code were treated as being from an urban area and as having an ADI less than 85.

For each of these characteristics, the hospitals were classified into groups as follows. First, all discharges at IPPS hospitals (excluding Maryland and IHS hospitals) in the FY 2023 MedPAR file were flagged for the presence of the characteristic, with the exception of race/ethnicity, for which probabilities were assigned instead of binary flags, as described further in this section. Second, the percentage of discharges at each hospital for the characteristic was calculated. Finally, the hospitals were divided into four groups based on the percentage of discharges for each characteristic: decile group 1 contains the 10% of hospitals with the lowest rate of discharges for that characteristic; decile group 2 to 5 contains the hospitals with less than or equal to the median rate of discharges for that characteristic, excluding those in decile group 1; decile group 6 to 9 contains the hospitals with greater than the median rate of discharges for that characteristic, excluding those in decile group 10; and decile group 10 contains the 10% of hospitals with the highest rate of discharges for that characteristic. These decile groups provide an overview of the ways in which the average estimated payments per discharge vary between the providers with the lowest and highest percentages of discharges for each characteristic, as well as those above and below the median.

We note that a supplementary provider-level dataset containing the percentage of discharges at each hospital for each of the characteristics in Table III is available on our website.

- Column 1 of Table III specifies the beneficiary characteristic.
- Column 2 specifies the decile group.
- Column 3 specifies the percentiles covered by the decile group.
- Column 4 specifies the percentage range of discharges for each decile group specified in the first column.
- Columns 5 and 6 present the average estimated payments per discharge for FY 2024 and average estimated payments per discharge for FY 2025, respectively.
- Column 7 shows the percentage difference between these averages.

The average payment per discharge, as well as the percentage difference between the average payment per discharge in FY 2024 and FY 2025, can be compared across decile groups. For example, providers with the lowest decile of discharges for Dual (All) or LIS Enrolled beneficiaries have an average FY 2024 payment per discharge of $13,660.95, while providers with the highest decile of discharges for Dual (All) or LIS Enrolled beneficiaries have an average FY 2024 payment per discharge of $21,150.86. This pattern is also seen in the proposed average FY 2025 payment per discharge.

* Decile group 1 contains the 10% of hospitals with the lowest rate of discharges for that characteristic; decile group 2 to 5 contains the hospitals with less than or equal to the median rate of discharges for that characteristic, excluding those in decile group 1; decile group 6 to 9 contains the hospitals with greater than the median rate of discharges for that characteristic, excluding those in group 10; and decile group 10 contains the 10% of hospitals with the highest rate of discharges for that characteristic.

** Greater than 10 percent of providers did not report discharges associated with this characteristic. Therefore, we have randomly allocated those providers to decile groups 1 and 2.

BILLING CODE 4120–01–C

G. Effects of Other Policy Changes

In addition to those proposed policy changes discussed previously that we are able to model using our IPPS payment simulation model, we are proposing to make various other changes in this proposed rule. As noted in section I.D. of this Appendix A, our payment simulation model uses the most recent available claims data to estimate the impacts on payments per case of certain proposed changes in this proposed rule. Generally, we have limited or no specific data available with which to estimate the impacts of these proposed changes using that payment simulation model. For those proposed changes, we have attempted to predict the payment impacts based upon our experience and other more limited data. Our estimates of the likely impacts associated with these other proposed changes are discussed in this section.

1. Effects of the Proposed Policy Changes Relating to New Medical Service and Technology Add-On Payments

a. Proposed FY 2025 Status of Technologies Approved for FY 2024 New Technology Add-On Payments

In section II.E.4. of the preamble of this proposed rule, we are proposing to continue to make new technology add-on payments for the 24 technologies listed in the following table in FY 2025 because these technologies would still be considered new for purposes of new technology add-on payments. Under § 412.88(a)(2), the new technology add-on payment for each case would be limited to the lesser of: (1) 65 percent of the costs of the new technology (or 75 percent of the costs for technologies designated as Qualified Infectious Disease Products (QIDPs) or approved under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD) pathway); or (2) 65 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case (or 75 percent of the amount for technologies designated as QIDPs or approved under the LPAD pathway). Because it is difficult to predict the actual new technology add-on payment for each case, our estimates in this proposed rule are based on the applicant's estimate at the time they submitted their original application and the increase in new technology add-on payments for FY 2025 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment.

In the following table are estimates for the 24 new technology add-on payments which we are proposing to continue in FY 2025:

BILLING CODE 4120–01–P

FY 2025 ESTIMATES FOR NEW TECHNOLOGY ADD-ON PAYMENTS PROPOSED TO CONTINUE FOR FY 2025

Technology Name	Estimated Cases	Proposed FY 2025 NTAP Amount (65 % or 75 %)	Estimated Total FY 2025 Impact
Thoraflex™ Hybrid Device	800	$22,750.00	$18,200,000.00

Aggregate Estimated Total FY 2025 Impact			**$416,316,321.73**

BILLING CODE 4120–01–C

b. Proposed FY 2025 Applications for New Technology Add-On Payments

In sections II.E.5. and 6. of the preamble to this proposed rule are 27 discussions of technologies with respect to add-on payments for new medical services and technologies for FY 2024 (including Casgevy™ (exagamglogene autotemcel) for which the applicant submitted a single application for two separate indications, each of which is discussed separately). We note that of the 39 applications (23 alternative and 16 traditional) we received, 8 applications were not eligible for consideration for new technology add-on payment (7 alternative and 1 traditional), and 5 applicants withdrew their application (2 alternative and 3 traditional) prior to the issuance of this proposed rule (including the withdrawal of the application for DefenCath™ (taurolidine/heparin), which received conditional approval for new technology add-on payments for FY 2024, subsequently was eligible to receive new technology add-on payments beginning with discharges on or after January 1, 2024, and for which we are proposing to continue making new technology add-on payments for FY 2025). As explained in the preamble to this proposed rule, add-on payments for new medical services and technologies under

section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.E.6. of the preamble of this proposed rule, under the alternative pathway for new technology add-on payments, new technologies that are medical products with a QIDP designation, approved through the FDA LPAD pathway, or are designated under the Breakthrough Device program will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to demonstrate that the technology represents a substantial clinical improvement. These technologies must still be within the 2- to 3-year newness period, as discussed in section II.E.1.a.(1). of the preamble this proposed rule, and must also still meet the cost criterion.

As also discussed in section II.E.6. of the preamble of this proposed rule, we are proposing to approve 15 new technology add-on payments for 14 alternative pathway applications submitted for FY 2025 new technology add-on payments (including ZEVTERA™ (ceftobiprole medocaril) for which the applicant submitted a single application for multiple indications, and for which we are proposing two separate new technology add-on payments).

Based on preliminary information from the applicants at the time of this proposed rule, we estimate that total payments for the 14 technologies that applied under the alternative pathway, if approved, would be approximately $172.7 million for FY 2025. Total estimated FY 2025 payments for new technologies that are designated as a QIDP are approximately $5.6 million, and the total estimated FY 2025 payments for new technologies that are part of the Breakthrough Device program are approximately $167 million. Because cost or volume information has not yet been provided for 3 of the 14 technologies under the alternative pathway, we have not included those technologies in the estimate. We did not receive any LPAD applications for add-on payments for new technologies for FY 2025. We note that the estimated payments may be updated in the final rule based on revised or additional information CMS receives prior to the final rule.

We have not yet determined whether any of the technologies discussed in section II.E.5. of the preamble of this proposed rule will meet the criteria for new technology add-on payments for FY 2025 under the traditional pathway. Consequently, it is premature to estimate the potential payment impact of these technologies for any potential new technology add-on payments for FY 2025. We note that, as in past years, if any of the technologies that applied under the traditional pathway are found to be eligible for new technology add-on payments for FY 2025, we would discuss the estimated payment impact for FY 2025 in the FY 2025 IPPS/LTCH PPS final rule.

2. Medicare DSH Uncompensated Care Payments and Supplemental Payment for Indian Health Service Hospitals and Tribal Hospitals and Hospitals Located in Puerto Rico

As discussed in section IV.E. of the preamble of this proposed rule, under section 3133 of the Affordable Care Act, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments under section 1886(d)(5)(F) of the Act. The remainder, equal to an estimate of 75 percent of what formerly would have been paid as Medicare DSH payments (Factor 1), reduced to reflect changes in the percentage of uninsured individuals (Factor 2), is available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has reported uncompensated care. Each hospital that is eligible for Medicare DSH payments will receive an additional payment based on its estimated share of the total amount of uncompensated care for all hospitals eligible for Medicare DSH payments. The uncompensated care payment methodology has redistributive effects based on the proportion of a hospital's amount of uncompensated care relative to the aggregate amount of uncompensated care of all hospitals eligible for Medicare DSH payments (Factor 3). The change to Medicare DSH payments under section 3133 of the Affordable Care Act is not budget neutral.

In this proposed rule, we are proposing to establish the amount to be distributed as uncompensated care payments (UCP) to DSH-eligible hospitals for FY 2025, which is $6,498,135,150.00. This figure represents 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 62.14 percent. For FY 2024, the amount available to be distributed for uncompensated care was $5,938,006,756.87 or 75 percent of the amount that otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 59.29 percent. In addition, eligible IHS/Tribal hospitals and hospitals located in Puerto Rico are estimated to receive approximately $91,084,288 million in supplemental payments in FY 2025, as determined based on the difference between each hospital's FY 2022 UCP (increased by 9.43 percent, which is the projected change between the FY 2025 total uncompensated care payment amount and the total uncompensated care payment amount for FY 2022) and its FY 2025 UCP as calculated using the methodology for FY 2025. If this difference is less than or equal to zero, the hospital will not receive a supplemental payment. For this proposed rule, the total proposed UCP and proposed supplemental payments equal approximately $6.589 billion. For FY 2025, we are proposing to use 3 years of data on uncompensated care costs from Worksheet S–10 of the FYs 2019, 2020, and 2021 cost reports to calculate Factor 3 for all DSH-eligible hospitals, including IHS/Tribal hospitals and Puerto Rico hospitals. For a complete discussion regarding the methodology for calculating Factor 3 for FY 2025, we refer readers to section IV.E. of the preamble of this proposed rule. For a discussion regarding the methodology for calculating the supplemental payments, we refer readers to section IV.D. of the preamble of this proposed rule.

To estimate the impact of the combined effect of the proposed changes in Factors 1 and 2, as well as the changes to the data used in determining Factor 3, on the calculation of Medicare UCP along with changes to supplemental payments for IHS/Tribal hospitals and hospitals located in Puerto Rico, we compared total UCP and supplemental payments estimated in the FY 2024 IPPS/LTCH PPS final rule correction notice (88 FR 68484) to the combined total of the proposed UCP and the proposed supplemental payments estimated in this FY 2025 IPPS/LTCH PPS proposed rule. For FY 2024, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 59.29 percent and multiplied by a Factor 3 calculated using the methodology described in the FY 2024 IPPS/LTCH PPS final rule. For FY 2025, we calculated 75 percent of the estimated amount that would be paid as Medicare DSH payments during FY 2025 absent section 3133 of the Affordable Care Act, adjusted by a Factor 2 of 62.14 percent and multiplied by a Factor 3 calculated using the methodology described previously. For this proposed rule, the supplemental payments for IHS/Tribal hospitals and Puerto Rico hospitals are calculated as the difference between the hospital's adjusted base year amount (as determined based on the hospital's FY 2022 uncompensated care payment) and the hospital's FY 2025 uncompensated care payment.

Our analysis included 2,422 hospitals that are projected to be DSH-eligible in FY 2025. Our analysis did not include hospitals that had terminated their participation in the Medicare program as of February 2, 2024, Maryland hospitals, new hospitals, and SCHs that are expected to be paid based on their hospital-specific rates. The 23 hospitals that are anticipated to be participating in the Rural Community Hospital Demonstration Program were also excluded from this analysis, as participating hospitals are not eligible to receive empirically justified Medicare DSH payments and uncompensated care payments. In addition, the data from merged or acquired hospitals were combined under the surviving hospital's CMS certification number (CCN), and the non-surviving CCN was excluded from the analysis. The estimated impact of the changes in Factors 1, 2, and 3 on UCP and supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals across all hospitals projected to be DSH-eligible in FY 2025, by hospital characteristic, is presented in the following table:

BILLING CODE 4120–01–P

Source: Dobson | DaVanzo analysis of 2019, 2020, and 2021 Hospital Cost Reports.
*Dollar UCP calculated by [0.75 * estimated section 1886(d)(5)(F) payments * Factor 2 * Factor 3]. When summed across all hospitals projected to receive DSH payments, UCP and supplemental payments are estimated to be $6,021 million in FY 2024, and UCP and supplemental payments are estimated to be $ 6,589 million in FY 2025.
** For IHS/Tribal hospitals and Puerto Rico hospitals, this impact table reflects the supplemental payments.
*** Percentage change is determined as the difference between Medicare UCP and supplemental payments modeled for this FY 2025 IPPS/LTCH PPS proposed rule (column 3) and Medicare UCP and supplemental payments modeled for the FY 2024 IPPS/LTCH PPS final rule correction notice (column 2) divided by Medicare UCP and supplemental payments modeled for the FY 2024 IPPS/LTCH PPS final rule correction notice (column 2) times 100 percent.
****Hospitals with missing or unknown Medicare utilization or Medicaid utilization are not shown in the table.

BILLING CODE 4120–01–C

The changes in projected FY 2025 UCP and supplemental payments compared to the total of UCP and supplemental payments in FY 2024 are driven by increases in Factor 1 and Factor 2. The proposed Factor 1 has increased from the FY 2024 final rule's Factor 1 of $10.015 billion to this proposed rule's Factor 1 of $10.457 billion. The proposed Factor 2 has increased from FY 2024 final rule's Factor 2 of 59.29 percent to this proposed rule's Factor 2 of 62.14 percent. In addition, we note that there is a slight increase in the number of projected DSH-eligible hospitals to 2,422 at the time of the development for this proposed rule compared to the 2,384 DSHs in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58640). Based on the changes, the impact analysis found that, across all projected DSH-eligible hospitals, FY 2025 UCP and supplemental payments are estimated at approximately $6.589 billion, or an increase of approximately 9.43 percent from FY 2024 UCP and supplemental payments (approximately $6.021 billion). While the changes result in a net increase in the total amount available to be distributed in UCP and supplemental payments, the projected payment increases vary by hospital type. This redistribution of payments is caused by changes in Factor 3 and the amount of the supplemental payment for DSH-eligible IHS/Tribal hospitals and Puerto Rico hospitals. As seen in the previous table, a percent change of less than 9.43 percent indicates that hospitals within the specified category are projected to experience a smaller increase in payments, on average, compared to the universe of projected FY 2025 DSH-eligible hospitals. Conversely, a percentage change greater than 9.43 percent indicates that a hospital type is projected to have a larger increase compared to the overall average. The variation in the distribution of overall payments by hospital characteristic is largely dependent on a given hospital's uncompensated care costs as reported on the Worksheet S–10 and used in the Factor 3 computation and whether the hospital is eligible to receive the supplemental payment.

Rural hospitals, in general, are projected to experience a slightly larger increase in UCP compared to the increase their urban counterparts are projected to experience. Overall, rural hospitals are projected to receive a 13.47 percent increase in payments, while urban hospitals are projected to receive a 9.20 percent increase in payments, which is slightly less than the overall hospital average.

By bed size, rural hospitals with 0 to 99 beds and rural hospitals with 100 to 249 beds are projected to receive larger than average increases of a 12.33 percent and 16.89 percent, respectively, while rural hospitals with 250+ beds are projected to receive a smaller than average increase of 6.86 percent. Among urban hospitals, the smallest urban hospitals, those with 0 to 99 beds, are projected to receive an increase in payments that is greater than the overall hospital average, an increase of 16.33 percent. In contrast, larger urban hospitals with 100–249

beds and urban hospitals with 250+ beds are projected to receive 9.23 and 8.79 percent increases in payments, respectively.

By region, rural hospitals are projected to receive a varied range of payment changes. Rural hospitals in the New England and South Atlantic regions are projected to receive smaller than average increases in payments. Rural hospitals in all other regions are projected to receive larger than average increases in payments. Urban hospitals in the West South Central, Mountain, and Pacific regions are projected to receive larger than average increases in payments, while urban hospitals in all other regions are projected to receive smaller than average increases in payments.

By payment classification, although hospitals in urban payment areas overall are expected to receive a 9.56 percent increase in UCP and supplemental payments, hospitals in large urban payment areas are projected to receive a larger than average increase in payments of 11.00 percent. In contrast, hospitals in other urban payment areas and hospitals in rural payment areas are projected to receive a smaller than average increase in payments of 7.47 and 9.29 percent, respectively.

Nonteaching hospitals and teaching hospitals with 100+ residents are projected to receive a larger than average payment increase of 10.88 percent and 9.60 percent, respectively. Teaching hospitals with fewer than 100 residents are projected to receive smaller than average payment increases of 8.20 percent. Voluntary hospitals are projected to receive smaller than average increases of 8.85 percent, while government-owned hospitals and proprietary hospitals are expected to receive a larger than average payment increase of 10.60 percent and 9.52 percent, respectively. Hospitals with less than 25 percent Medicare utilization and those with greater than 65 percent Medicare utilization are projected to receive larger than average increases of 9.84 percent and 27.26 percent, respectively, while hospitals with Medicare utilization between 25–50 percent and 50–65 percent are projected to receive smaller than average payment increases of 8.47 percent and 2.91 percent, respectively. Hospitals with 50–65 percent Medicaid utilization and those with greater than 65 percent Medicaid utilization are projected to receive larger than average increases in payments of 13.58 and 12.66 percent, respectively, while hospitals with less than 25 percent Medicaid utilization and those with Medicaid utilization between 25–50 percent are projected to receive smaller than average increases of 9.17 percent and 8.61 percent, respectively.

The impact table reflects the modeled FY 2025 UCP and supplemental payments for IHS/Tribal and Puerto Rico hospitals. We note that the supplemental payments to IHS/Tribal hospitals and Puerto Rico hospitals are estimated to be approximately $91.1 million in FY 2025.

3. Effects of the Changes to Low-Volume Hospital Payment Adjustment Policy

In section V.D. of the preamble of this proposed rule, we discuss the extension of the temporary changes to the low-volume hospital payment policy originally provided for by the Affordable Care Act and extended by subsequent legislation. Specifically, section 306 of the CAA, 2024 further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) through December 31, 2024. Beginning January 1, 2025, the low-volume hospital qualifying criteria and payment adjustment will revert to the statutory requirements that were in effect prior to FY 2011, and the preexisting low-volume hospital payment adjustment methodology and qualifying criteria, as implemented in FY 2005, will resume. Effective for FY 2025, discharges occurring on or after January 1, 2025 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year. We recognize the importance of this extension with respect to the goal of advancing health equity by addressing the health disparities that underlie the health system, which is one of CMS' strategic pillars and a Biden-Harris Administration priority, as described in section I.A.2. of the preamble of this proposed rule. The provisions of section 306 of the CAA, 2024 are projected to increase payments to IPPS hospitals by approximately $87 million in FY 2025 relative to what the payments would have been in the absence of section 306.

Based upon the best available data at this time, we estimate the expiration of the temporary changes to the low-volume hospital payment policy for FY 2025 discharges occurring on or after January 1, 2025 would decrease aggregate low-volume hospital payments by $261 million in FY 2025 as compared to FY 2024. These payment estimates were determined based on the estimated payments for the 608 providers that are expected to no longer qualify under the criteria that will apply beginning on January 1, 2025. These impacts were calculated using the same methodology used in developing the quantitative analyses of changes in payments per case discussed previously in section I.G. of this Appendix A of this proposed rule.

4. Effects of the Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

In section V.F.2. of this proposed rule we are proposing to implement section 4122 of the CAA, 2023, which requires that the Secretary initiate an application round to distribute 200 residency positions (also referred to as slots) with at least 100 of the positions being distributed for psychiatry or psychiatry subspecialty residency programs. The residency positions distributed under section 4122 are effective July 1, 2026.

We are proposing to first distribute slots by prorating the available 200 positions among all qualifying hospitals such that each qualifying hospital receives up to 1.00 FTE—that is, 1.00 FTE or a fraction of 1.00 FTE. We are proposing that a qualifying hospital is a Category One, Category Two, Category Three, or Category Four hospital, or one that meets the definitions of more than one of these categories, as defined at section 1886(h)(10)(F)(iii) of the Act.[872] We are proposing that if any residency slots remain after distributing up to 1.00 FTE to each qualifying hospital, we will prioritize the distribution of the remaining slots based on the HPSA score associated with the program for which each qualifying hospital is applying using the methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). Using this HPSA prioritization method, we are proposing to limit a qualifying hospital's total award under section 4122 of the CAA, 2023, to 10.00 additional FTEs consistent with section 1886(h)(10)(C)(i) of the Act. We believe including such a prioritization will further support the training of residents in underserved and rural areas thereby helping to address physician shortages and the larger issue of health inequities in these areas.

The Office of the Actuary estimates an increase of $10 million in Medicare payments to teaching hospitals for FY 2026, and an increase in Medicare payments to teaching hospitals of $280 million for FYs 2026 through 2030 (over 5 years). In total, for FYs 2026 through 2036, Medicare payments to teaching hospitals are estimated to increase by $740 million.

In addition, we are proposing a modification to our methodology for distributing slots under section 126 of the CAA, 2021. Section 1886(h)(9)(B)(ii) of the Act requires the Secretary to distribute at least 10 percent of the aggregate number of total residency positions available to the same four categories of hospitals. Section 126 of the CAA, 2021, makes available 1,000 residency positions and therefore, at least 100 residency positions must be distributed to hospitals qualifying in each of the four categories. In the final rule implementing section 126 of the CAA, 2021, we stated we would track progress in meeting all statutory

[872] Category One consists of hospitals that are located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or have been reclassified being located in a rural area (pursuant to section 1886(d)(8)(E) of the Act). Category Two consists of hospitals in which the reference resident level of the hospital (as specified in section 1886(h)(10)(F)(iv) of the Act) is greater than the otherwise applicable resident limit. Category Three consists of hospitals located in States with new medical schools that received 'Candidate School' status from the Liaison Committee on Medical Education (LCME) or that received 'Pre-Accreditation' status from the American Osteopathic Association (AOA) Commission on Osteopathic College Accreditation (the COCA) on or after January 1, 2000, and that have achieved or continue to progress toward 'Full Accreditation' status (as such term is defined by the LCME) or toward 'Accreditation' status (as such term is defined by the COCA); or additional locations and branch campuses established on or after January 1, 2000, by medical schools with 'Full Accreditation' status (as such term is defined by LCME) or 'Accreditation' status (as such term is defined by the COCA). Category Four consists of hospitals that serve areas designated as HPSAs under section 332(a)(1)(A) of the Public Health Service Act (PHSA), as determined by the Secretary.

requirements and evaluate the need to modify the distribution methodology in future rulemaking (86 FR 73441). To date, we have the completed the distribution of residency slots under rounds 1 and 2 of the section 126 distributions and have determined that only 12.76 DGME slots and 18.06 IME slots were distributed to hospitals qualifying under Category Four. We are proposing that in rounds 4 and 5 we will prioritize the distribution of slots to hospitals that qualify under Category Four, regardless of HPSA score, to ensure that at least 100 residency slots are distributed to these hospitals. The remaining slots awarded under rounds 4 and 5 will be distributed using the existing methodology based on HPSA score (86 FR 73434 through 73440). That is, the remaining slots will be distributed to hospitals qualifying under Category One, Category Two, or Category Three, or hospitals that meet the definition of more than one of these categories, based on the HPSA score associated with the program for which each hospital is applying. We believe there is a minimal impact associated with this proposed change in methodology as the number of total slots distributed will remain the same.

5. Effects of Proposed Changes to Additional Payment for Hospitals With a High Percentage of ESRD Beneficiary Discharges

As discussed in section V.I. of the preamble of this proposed rule, we are proposing to update our payment methodology for determining the ESRD add-on payment for hospitals with a high percentage of ESRD beneficiary discharges. Under § 412.104(b), the ESRD add-on is based on the average length of stay (in days) for ESRD beneficiaries in the hospital, expressed as a ratio to 1 week (7 days), multiplied by the estimated weekly cost of dialysis, then multiplied by the number of ESRD beneficiary discharges (Worksheet E Part A Column 1 line 41.01). We are proposing that effective for cost reporting periods beginning on or after October 1, 2024, the estimated weekly cost of dialysis would be calculated as the ESRD PPS base rate (as defined in 42 CFR 413.171) multiplied by three. As discussed in section V.I. of the preamble of this proposed rule, under our proposal, the CY 2025 ESRD PPS base rate would be used for all cost reports beginning during Federal FY 2025 (that is, for cost reporting periods starting on or after October 1, 2024, through September 30, 2025).

Our impact analysis includes 91 hospitals that were eligible for the ESRD add-on payment based on the historical composite rate in the FY 2017 cost report data, which is a historical year that has a high percentage of final settled cost report data regarding ESRD add-on payments. To estimate the impact of the proposed change to the payment methodology, we compared total ESRD add-on payments from the December 2023 update of the FY 2017 cost report data to the estimated FY 2025 ESRD add-on payments using, for illustrative purposes, the CY 2024 ESRD PPS base rate published in the CY 2024 ESRD PPS final rule (88 FR 76345), which is $271.02. (As previously noted, under our proposal, the CY 2025 ESRD PPS base rate would be used for all cost reports beginning during Federal FY 2025 (that is, for cost reporting periods starting on or after October 1, 2024, through September 30, 2025).) The total ESRD add-on payments based on the FY 2017 cost report data are approximately $22 million. The total estimated FY 2025 ESRD add-on payments under this proposal, as estimated using the CY 2024 ESRD PPS base rate, would be approximately $31.4 million. Therefore, we estimate the proposal would increase ESRD add-on payments by approximately $10 million.

6. Estimated Effects of the Proposed IPPS Payment Adjustment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.K.1. of the preamble of this proposed rule, we propose IPPS payment adjustments for the additional resource costs that small, independent hospitals incur in establishing and maintaining access to a 6-month buffer stock of one or more essential medicine(s). We propose that the payment adjustments would commence for cost reporting periods beginning on or after October 1, 2024.

We propose to make this payment adjustment under the IPPS for the additional resource costs of establishing and maintaining access to a buffer stock of essential medicines under section 1886(d)(5)(I) of the Act. We are not proposing to make the IPPS payment adjustment budget neutral under the IPPS.

The data currently available to calculate a spending estimate for FY 2025 under the IPPS is limited. However, we believe the methodology described in this section to calculate this spending estimate under the IPPS for FY 2025 is reasonable based on the information available.

To estimate total spending associated with this proposed policy under the IPPS, we used the following information for all eligible hospitals with completed 12-month or greater cost reporting periods concluding in CY 2021 (the most recent cost reporting period for which data was available):

- Estimated spend per eligible hospital on its applicable essential medicines, expressed as a percentage of the total Drugs Charged to Patients cost center, as found on Worksheet B, Part 1, line 73, column 26 on Form CMS–2552–2010. For purposes of this estimate, we believe it is reasonable to assume that the cost of a given hospital's essential medicines will be 1 percent of its total Drugs Charged to Patients costs.
- Multiplicative factor of 50 percent to estimate the total cost of the essential medicines that are in the 6-month buffer stock.
- Assumed cost of carrying essential medicines, expressed as a percentage of the total cost of the essential medicines that are in the buffer stock. Based on commenter feedback on the CY 2024 OPPS/ASC proposed rule,[873] we believe it is reasonable to assume for purposes of this spending estimate a cost of carrying essential medicines of 20 percent of the cost of the essential medicines themselves. This assumption of a 20 percent cost of carrying would apply to any size of buffer stock of essential medicine.
- The provider-specific inpatient Medicare share percentage, expressed as the percentage of inpatient Medicare costs to total hospital costs.

To calculate the estimated aggregate IPPS payments under this proposed policy, we multiplied together the four factors listed for each eligible hospital and summed across all eligible hospitals. Based on the latest hospital cost report data available, we identified 493 IPPS hospitals that would potentially be eligible for this proposed payment. These 493 IPPS hospitals are those providers that: (1) had 100 or fewer beds as defined in § 412.105(b); and (2) answered ''N'' to line 140, column 1 and did not fill out any part of lines 141 through 143 on Worksheet S2 Part I on Form CMS–2552–10. We estimate that the aggregate FY 2025 IPPS payments under this proposed policy, given the assumptions detailed previously, would be approximately $0.3 million, and the average IPPS payment per eligible hospital would be approximately $620. As noted previously and as stated in section V.K.2 of the preamble of this proposed rule, we are not proposing to make this policy budget neutral under the IPPS.

We also estimated the total costs for eligible hospitals to establish and maintain buffer stocks of essential medicines in order to inform the public what portion of the total costs would be separately paid under the proposed policy. To calculate this, we multiplied together the first three factors listed previously for each eligible hospital, but not the fourth factor (*i.e.* we did not multiply by the provider specific inpatient Medicare share percentage) and summed across all eligible hospitals. We estimate that the total costs for eligible hospitals to establish and maintain buffer stocks of essential medicines would be approximately $2.8 million, and the average cost per eligible hospital would be approximately $5,610. The IPPS payments under this proposed policy represent approximately 11 percent of that amount, or $0.3 million.

As discussed earlier, our estimate was calculated at the hospital level and then summed. However, for illustrative purposes the calculation can be described alternatively as starting with the aggregated total Drugs Charged to Patients across all 493 eligible hospitals of approximately $2.8 billion, assuming the annual cost of essential medicines to be 1 percent of that amount or $28 million (= $2.8 billion * .01), calculating the cost of 6 months of essential medicines as half that amount or $14 million (= $28 million * .50), assuming that the cost of carrying essential medicines is 20 percent of that amount or $2.8 million (= $14 million * .20), and then calculating the Medicare inpatient share of that amount at 11 percent or $0.3 million (= $2.8 million * .11).

We seek comment on these assumptions and estimates.

7. Effects Under the Hospital Readmissions Reduction Program for FY 2025

In section V.K. of the preamble of this proposed rule, we note that we are not proposing to add, modify, or remove any

[873] *https://www.regulations.gov/comment/CMS-2023-0120-3326.*

policies for the FY 2025 Hospital Readmissions Reduction Program; the policies finalized in FY 2023 IPPS/LTCH PPS final rule (87 FR 49081 through 49094) continue to apply. This program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions and procedures. Table I.G.7.-01 and the analysis in this proposed rule illustrate the estimated financial impact of the Hospital Readmissions Reduction Program payment adjustment methodology by hospital characteristic. Hospitals are sorted into quintiles based on the proportion of dual-eligible stays among Medicare fee-for-service (FFS) and managed care stays between July 1, 2019 and June 30, 2022 (that is, the FY 2024 Hospital Readmissions Reduction Program's applicable period, which is the most recently available data at the time of publication of this proposed rule).[874]

[874] Although the FY 2024 performance period is July 1, 2019 through June 30, 2022, we note that first and second quarter data from CY 2020 is excluded from program calculations due to the nationwide ECE that was granted in response to the COVID–19 PHE. Taking into consideration the 30-day window to identify readmissions, the period for calculating DRG payments will be adjusted to July 1, 2019 through December 1, 2019 and July 1, 2020 through June 30, 2022.

Hospitals' excess readmission ratios (ERRs) are assessed relative to their peer group median and a neutrality modifier is applied in the payment adjustment factor calculation to maintain budget neutrality. In the FY 2025 IPPS/LTCH PPS final rule, we will provide an updated estimate of the financial impact using the proportion of dually-eligible beneficiaries, ERRs, and aggregate payments for each condition/procedure and all discharges for applicable hospitals from the FY 2025 Hospital Readmissions Reduction Program applicable period (that is, July 1, 2020 through June 30, 2023).

The results in Table I.G.7.–01 include 2,855 non-Maryland hospitals estimated as eligible to receive a penalty during the performance period. Hospitals are eligible to receive a penalty if they have 25 or more eligible discharges for at least one measure between July 1, 2020 and June 30, 2023. The second column in Table I.G.7.–01 indicates the total number of non-Maryland hospitals with available data for each characteristic that have an estimated payment adjustment factor less than 1 (that is, penalized hospitals).

The third column in Table I.G.8.–01 indicates the estimated percentage of penalized hospitals among those eligible to receive a penalty by hospital characteristic. For example, 78.53 percent of eligible hospitals characterized as non-teaching hospitals are expected to be penalized. Among teaching hospitals, 87.63 percent of eligible hospitals with fewer than 100 residents and 90.29 percent of eligible hospitals with 100 or more residents are expected to be penalized. The fourth column in Table I.G.7.–01 estimates the financial impact on hospitals by hospital characteristic. Table I.G.7.–01 also shows the share of penalties as a percentage of all base operating DRG payments for hospitals with each characteristic. This is calculated as the sum of penalties for all hospitals with that characteristic over the sum of all base operating DRG payments for those hospitals between October 1, 2021, through September 30, 2022 (FY 2022). For example, the penalty as a share of payments for non-teaching hospitals is 0.49 percent. This means that total penalties for all non-teaching hospitals are 0.49 percent of total payments for non-teaching hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments accounts for differences in the amount of base operating DRG payments for hospitals with the characteristic when comparing the financial impact of the program on different groups of hospitals.

Table I.G.7.-01 Estimated Percentage of Hospitals Penalized and Penalty as Share of Payments for FY 2025 Hospital Readmissions Reduction Program by Hospital Characteristic				
Hospital Characteristic	**Number of Eligible Hospitals[a]**	**Number of Penalized Hospitals[b]**	**Percentage of Hospitals Penalized[c] (%)**	**Penalty as a share of payments[d] (%)**

Source: The table results are based on the data used to calculate the FY 2024 payment adjustment factors of open, non-Maryland, subsection (d) hospitals only. The FY 2024 payment adjustment factors are based on discharges from July 1, 2019, through December 1, 2019, and July 1, 2020, through June 30, 2022. The shortened data period is due to the COVID-19 public health emergency (PHE) nationwide Extraordinary Circumstances Exception (ECE) which excluded data from January 1, 2020, through June 30, 2020, from the Hospital Readmissions Reduction Program calculations. Although data from all subsection (d) and Maryland hospitals are used in calculations of each hospital's ERR, this table does not include results for Maryland hospitals and hospitals that are not open as of the October 2023 public reporting open hospital list because these hospitals are not eligible for a penalty under the program. Hospitals are sorted into five peer groups based on the proportion of FFS and managed care dual-eligible stays for the multi-year performance period. Hospital characteristics are from the FY 2024 IPPS Proposed Rule Impact File.

For the FY 2024 applicable period, CMS will only be assessing data from July 1, 2019, through December 1, 2019, and July 1, 2020, through June 30, 2022, due to the COVID-19 PHE nationwide ECE which excluded data from January 1, 2020, through June 30, 2020, from the Hospital Readmissions Reduction Program calculations.

[a] This column is the number of applicable hospitals within the characteristic that are eligible for a penalty (that is, they have 25 or more eligible discharges for at least one measure).

[b] This column is the number of applicable hospitals that are penalized (that is, they have 25 or more eligible discharges for at least one measure and an estimated payment adjustment factor less than 1) within the characteristic.

[c] This column is the percentage of applicable hospitals that are penalized among hospitals that are eligible to receive a penalty by characteristic.

[d] This column is calculated as the sum of all penalties for the group of hospitals with that characteristic divided by total base operating DRG payments for all those hospitals. Measuring the financial impact on hospitals as a percentage of total base operating DRG payments in this way allows for comparisons across hospital characteristics that accounts for differences in the amount of base operating DRG payments for different groups of hospitals. MedPAR data from October 1, 2021, through September 30, 2022 (FY 2022), are used to estimate the total base operating DRG payments.

[e] The total number of hospitals with hospital characteristics data may not add up to the total number of hospitals because not all hospitals have data for all characteristics. Not all hospitals had data for geographic location, teaching status, ownership type, safety net status, and DSH patient percentage (n=2,852; missing=3), region (n=2,854; missing=1), and MCR percentage (n=2,849; missing=6).

[f] A hospital is considered a teaching hospital if it has an Indirect Medical Education adjustment factor for Operation PPS (TCHOP) greater than zero.

[g] A hospital is considered a safety-net hospital if it is in the top DSH quintile.

[h] DSH patient percentage is the sum of the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[i] MCR (Medicare Cost Report) percentage is the percentage of total inpatient stays from Medicare patients.

The actual FY 2025 program year's TPSs would not be reviewed and corrected by hospitals until after the FY 2025 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2024 program year would be used for the updated impact analysis in the final rule, if the proposals, as previously described, for FY 2025 are not finalized.

7. Effects of Requirements Under the HAC Reduction Program for FY 2025

We are presenting the estimated impact of the FY 2025 Hospital-Acquired Condition (HAC) Reduction Program on hospitals by hospital characteristic based on previously adopted policies for the program. We are not proposing to add or remove any measures from the HAC Reduction Program in this proposed rule, nor are we proposing any changes to reporting or submission requirements which would have any significant economic impact for the FY 2025 program year or future years. The table in this section presents the estimated proportion of hospitals in the worst-performing quartile of Total HAC Scores by hospital characteristic. Hospitals' CMS Patient Safety and Adverse Events Composite (CMS PSI 90) measure results are based on Medicare fee-for-service (FFS) discharges from January 1, 2021 through June 30, 2022 and version 13.0 of the PSI software. Hospitals' measure results for Centers for Disease Control and Prevention (CDC) Central Line-Associated Bloodstream Infection (CLABSI), Catheter-Associated Urinary Tract Infection (CAUTI), Colon and Abdominal Hysterectomy Surgical Site Infection (SSI), Methicillin-resistant *Staphylococcus aureus* (MRSA) bacteremia, and *Clostridium difficile* Infection (CDI) are derived from standardized infection ratios (SIRs) calculated with hospital surveillance data reported to the CDC's National Healthcare Safety Network (NHSN) for infections occurring between January 1, 2022 and December 31, 2022. Hospital characteristics are based on the FY 2024 IPPS Final Rule Impact File.

This table includes 2,945 non-Maryland hospitals with an estimated FY 2025 Total HAC Score based on the most recently available data at the time of publication of this proposed rule. Maryland hospitals and hospitals without a Total HAC Score are excluded from the table. Actual results for FY 2025 will be determined in the fall of 2024 after a 30-day review and corrections period for hospitals to review their program results. The first column presents a breakdown of each characteristic and the second column indicates the number of hospitals for the respective characteristic.

The third column in the table indicates the estimated number of hospitals for each characteristic that would be in the worst-performing quartile of Total HAC Scores. For example, with regard to teaching status, 448 hospitals out of 1,719 hospitals characterized as non-teaching hospitals would be subject to a payment reduction. Among teaching hospitals, 193 out of 933 hospitals with fewer than 100 residents and 84 out of 279 hospitals with 100 or more residents would be subject to a payment reduction.

The fourth column in the table indicates the estimated proportion of hospitals for each characteristic that would be in the worst performing quartile of Total HAC Scores and thus receive a payment reduction under the FY 2025 HAC Reduction Program. For example, 26.1 percent of the 1,719 hospitals characterized as non-teaching hospitals, 20.7 percent of the 933 teaching hospitals with fewer than 100 residents, and 30.1 percent of the 279 teaching hospitals with 100 or more residents would be subject to a payment reduction.

Estimated Proportion of Hospitals in the Worst-Performing Quartile (>75th percentile) of the Total HAC Scores for the FY 2025 HAC Reduction Program (by Hospital Characteristic)			
Hospital Characteristic	**Number of Hospitals**	**Number of Hospitals in the Worst-performing Quartile[a]**	**Percent of Hospitals in the Worst-Performing Quartile[b]**

Source: FY 2025 HAC Reduction Program estimated proposed rule results are based on CMS PSI 90 data from January 1, 2021, through June 30, 2022, and CDC NHSN HAI results from January 1, 2022, through December 31, 2022. Hospital Characteristics are based on the FY 2024 IPPS Final Rule Impact File

[a] This column is the number of non-Maryland hospitals with a Total HAC Score within the corresponding characteristic that are estimated to be in the worst-performing quartile.

[b] This column is the percent of non-Maryland hospitals within each characteristic that are estimated to be in the worst-performing quartile. The percentages are calculated by dividing the number of non-Maryland hospitals with a Total HAC Score in the worst-performing quartile by the total number of non-Maryland hospitals with a Total HAC Score within that characteristic.

[c] The number of non-Maryland hospitals with a Total HAC Score (N = 2,945). Note that not all hospitals have data for all hospital characteristics.

[d] The number of hospitals that had information for geographic location with bed size, Safety-net status, DSH percent, and teaching status. (n = 2,931).

[e] A hospital is considered a Safety-net hospital if it is in the top quintile for DSH percent.

[f] The DSH patient percentage is equal to the sum of: (1) the percentage of Medicare inpatient days attributable to patients eligible for both Medicare Part A and Supplemental Security Income; and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A.

[g] A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero.

[h] Not all hospitals had data for Ownership (n = 2,930)

[i] Not all hospitals had data for MCR percent (n = 2,924).

10. Effects of the Implementation of the Rural Community Hospital Demonstration Program in FY 2025

In section V.N.2 of the preamble of this proposed rule for FY 2025, we discussed our budget neutrality methodology for section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, by section 15003 of Public Law 114–255, and most recently, by section 128 of Public Law 116–260, which requires the Secretary to conduct a demonstration that would modify payments for inpatient services for up to 30 rural hospitals.

Section 128 of Public Law 116–260 requires the Secretary to conduct the Rural Community Hospital Demonstration for a 15-year extension period (that is, for an additional 5 years beyond the previous extension period). In addition, the statute provides for continued participation for all hospitals participating in the demonstration program as of December 30, 2019.

Section 410A(c)(2) of Public Law 108–173 requires that in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented (budget neutrality). We propose to adopt the general methodology used in previous years, whereby we estimated the additional payments made by the program for each of the participating hospitals as a result of the demonstration, and then adjusted the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we have applied budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration was not implemented but does not identify the range across which aggregate payments must be held equal.

For this proposed rule, the resulting amount applicable to FY 2025 is $49,522,206, which we are proposing as the budget neutrality offset adjustment for FY 2025. This estimated amount is based on the specific assumptions regarding the data sources used, that is, recently available ''as submitted'' cost reports and historical and currently finalized update factors for cost and payment.

In previous years, we have incorporated a second component into the budget neutrality offset amounts identified in the IPPS/LTCH PPS final rules. As finalized cost reports became available, we determined the amount by which the actual costs of the demonstration for an earlier, given year differed from the estimated costs for the demonstration set forth in the IPPS/LTCH PPS final rule for the corresponding fiscal year, and we incorporated that amount into the budget neutrality offset amount for the upcoming fiscal year. We have calculated this difference for FYs 2005 through 2018 between the actual costs of the demonstration as determined from finalized cost reports once available, and estimated costs of the demonstration as identified in the applicable IPPS/LTCH PPS final rules for these years.

With the extension of the demonstration for another 5-year period, as authorized by section 128 of Public Law 116–260, we will continue this general procedure. At this time, for the FY 2025 IPPS/LTCH PPS proposed rule, not all of the finalized cost reports are available for the 26 hospitals that completed cost report periods beginning in FY 2019 under the demonstration payment methodology. If all of these cost reports are available, we will include in the budget neutrality offset amount in the FY 2025 IPPS/LTCH PPS final rule the amount by which the actual costs of the demonstration, as determined from these cost reports, differed from the estimated costs identified in the FY 2019 IPPS/LTCH PPS final rule.

11. Effects of Continued Implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration

As described in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), CMS waived certain Medicare rules for CAHs participating in the demonstration extension period to allow for alternative reasonable cost-based payment methods in the three distinct intervention service areas: telehealth services, ambulance services, and skilled nursing facility/nursing facility services. These waivers were implemented with the goal of increasing access to care with no net increase in costs. As we explained in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), section 129 of Public Law 116–159, stipulates that only the 10 CAHs that participated in the initial period of the FCHIP Demonstration are eligible to participate during the extension period. Among the eligible CAHs, five elected to participate in the extension period. The selected CAHs are located in two states—Montana and North Dakota—and are implementing the three intervention services.

As explained in the FY 2024 IPPS/LTCH PPS final rule, we based our selection of CAHs for participation in the demonstration with the goal of maintaining the budget neutrality of the demonstration on its own terms meaning that the demonstration would produce savings from reduced transfers and admissions to other health care providers, offsetting any increase in Medicare payments as a result of the demonstration. However, because of the small size of the demonstration and uncertainty associated with the projected Medicare utilization and costs, the policy we finalized for the demonstration extension period of performance in the FY 2024 IPPS/LTCH PPS final rule provides a contingency plan to ensure that the budget neutrality requirement in section 123 of Public Law 110–275 is met.

In the FY 2024 IPPS/LTCH PPS final rule, we adopted the same budget neutrality policy contingency plan used during the demonstration initial period to ensure that the budget neutrality requirement in section 123 of Public Law 110 275 is met during the demonstration extension period. If analysis of claims data for Medicare beneficiaries receiving services at each of the participating CAHs, as well as from other data sources, including cost reports for the participating CAHs, shows that increases in Medicare payments under the demonstration during the 5-year extension period is not sufficiently offset by reductions elsewhere, we will recoup the additional expenditures attributable to the demonstration through a reduction in payments to all CAHs nationwide.

As explained in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), because of the small scale of the demonstration, we indicated that we did not believe it would be feasible to implement budget neutrality for the demonstration extension period by reducing payments to only the participating CAHs. Therefore, in the event that this demonstration extension period is found to result in aggregate payments in excess of the amount that would have been paid if this demonstration extension period were not implemented, CMS policy is to comply with the budget neutrality requirement finalized in the FY 2024 IPPS/LTCH PPS final rule, by reducing payments to all CAHs, not just those participating in the demonstration extension period.

In the FY 2024 IPPS/LTCH PPS final rule, we stated that we believe it is appropriate to make any payment reductions across all CAHs because the FCHIP Demonstration was specifically designed to test innovations that affect delivery of services by the CAH provider category. As we explained in the FY 2024 IPPS/LTCH PPS final rule, we believe that the language of the statutory budget neutrality requirement at section 123(g)(1)(B) of Public Law 110–275 permits the agency to implement the budget neutrality provision in this manner. The statutory language merely refers to ensuring that aggregate payments made by the Secretary do not exceed the amount which the Secretary estimates would have been paid if the demonstration project was not implemented and does not identify the range across which aggregate payments must be held equal.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45323 through 45328), CMS concluded that the initial period of the FCHIP Demonstration had satisfied the budget neutrality requirement described in section 123(g)(1)(B) of Public Law 110–275. Therefore, CMS did not apply a budget neutrality payment offset policy for the initial period of the demonstration. As explained in the FY 2022 IPPS/LTCH PPS final rule, we finalized a policy to address the demonstration budget neutrality methodology and analytical approach for the initial period of the demonstration. In the FY 2024 IPPS/LTCH PPS final rule, we finalized a policy to adopt the same budget neutrality methodology and analytical approach used during the demonstration initial period to be used for the demonstration extension period. As stated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59119 through 59122), our policy for implementing the 5-year extension period for section 129 of Public Law 116–260 follows same budget neutrality methodology and analytical approach as the demonstration initial period methodology. While we expect to use the same methodology that was used

to assess the budget neutrality of the FCHIP Demonstration during initial period of the demonstration to assess the financial impact of the demonstration during this extension period, upon receiving data for the extension period, we may update and/or modify the FCHIP budget neutrality methodology and analytical approach to ensure that the full impact of the demonstration is appropriately captured. Therefore, we are not proposing to apply a budget neutrality payment offset to payments to CAHs in FY 2025. This policy will have no impact for any national payment system for FY 2025.

12. Effects of Proposed Implementation of the Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this proposed rule, we are proposing to test a new mandatory episode-based payment model titled the Transforming Episode Accountability Model (TEAM) under the authority of the CMS Center for Medicare and Medicaid Innovation (CMS Innovation Center). Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries while reducing program expenditures. The intent of TEAM is to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM would test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM would benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

As proposed, TEAM would be mandatory for acute care hospitals located within selected CBSAs. This episode-based payment model would begin on January 1, 2026, and end on December 31, 2030. Payment approaches that hold providers accountable for episode cost and performance can potentially create incentives for the implementation and coordination of care redesign between participants and other providers and suppliers such as physicians and post-acute care providers. TEAM could enable hospitals to consider the most appropriate strategies for care redesign, including (1) increasing post-hospitalization follow-up and medical management for patients; (2) coordinating care across the inpatient and post-acute care spectrum; (3) conducting appropriate discharge planning; (4) improving adherence to treatment or drug regimens; (5) reducing readmissions and complications during the post-discharge period; (6) managing chronic diseases and conditions that may be related to the proposed episodes; (7) choosing the most appropriate post-acute care setting; and (8) coordinating between providers and suppliers such as hospitals, physicians, and post-acute care providers.

Under this proposed model, TEAM participants would continue to bill Medicare under the traditional FFS system for items and services furnished to Medicare FFS beneficiaries. The TEAM participant may receive a reconciliation payment from CMS if Medicare FFS expenditures for a performance year are less than the reconciliation target price, subject to a quality adjustment. TEAM would not have downside risk for Track 1 and TEAM participants would only be accountable for performance year spending below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount. For Track 2 and Track 3, TEAM would be a two-sided risk model that requires TEAM participants to be accountable for performance year spending above or below their reconciliation target price, subject to a quality adjustment, that would result in a reconciliation payment amount or a repayment amount.

a. Effects on the Medicare Program

TEAM is a mandatory episode-based payment model which would have a direct effect on the Medicare program because TEAM participants would be incentivized to reduce Medicare spending. Additionally, TEAM participants could receive a reconciliation payment amount from CMS or have to pay CMS a repayment amount based on their spending and quality performance. Table I.G.12–01 shows the projected financial impacts of TEAM over the course of the five-year model test. The first performance year (2026) of TEAM is expected to cost the Medicare program $27 million because we assume most TEAM participants would elect participation in Track 1, which is not subject to downside risk. Therefore, the estimated $85 million represents the difference between reconciliation payment amounts and repayment amounts resulting in more TEAM participants earning reconciliation payment amounts in performance year 1 rather than paying CMS repayment amounts. In performance year 2 (2027), TEAM participants would be subject to both upside and downside risk, regardless of participation track, and we estimate TEAM participants on net (that is, repayment amounts less reconciliation payments) would pay $98 million to CMS, and that TEAM would save the Medicare program $157 million. To protect TEAM participants from significant financial risk, we have proposed a 10 percent stop-loss and stop-gain limit for TEAM participants in Track 2 and a 20 percent stop-loss and stop-gain limit for TEAM participants in Track 3. These limits would cap the total amount of repayments paid by TEAM participants to CMS or cap the total amount of reconciliation payment amounts paid by CMS to TEAM participants. In performance year 3 (2028), we estimate TEAM participants on net would pay $133 million to CMS, and that TEAM would save the Medicare program $194 million. We estimate that TEAM participants on net would pay CMS $136 million in performance year 4 and $121 million in performance year 5, and that TEAM would save the Medicare program $197 million and $184 million for these performance years, respectively. We estimate that on net, TEAM participants would pay CMS $403 million, and that TEAM would save the Medicare program approximately $705 million over the 5 performance years (2026 through 2030).

TABLE I.G.12.-01: PROJECTED FINANCIAL IMPACTS OF TEAM (IN MILLIONS)

	2026	2027	2028	2029	2030
TEAM episode spending	$5,729	$5,842	$5,958	$6,073	$6,179
(+) Reconciliation payment amounts (positive) and Repayment amounts (negative)	$85	-$98	-$133	-$136	-$121
- Baseline episode spending	$5,787	$5,902	$6,018	$6,134	$6,241
Impact	$27	-$157	-$194	-$197	-$184
Impact as % of Baseline	**0.5%**	**-2.7%**	**-3.2%**	**-3.2%**	**-2.9%**

(1) Assumptions

We assumed TEAM episode volume is estimated to grow at the same rate as projected Medicare FFS enrollment as indicated in the 2023 Medicare Trustees Report.[875] Further, an internal sample set of hospitals was used to estimate financial impacts and simulate TEAM participation. The amount of national episode spending

[875] *https://www.cms.gov/oact/tr/2023.*

captured by the sample set of hospitals was 29 percent in 2023.

We note that TEAM participants are estimated to reduce episode spending by 1 percent as a result of participating in TEAM. The fifth annual evaluation report of the Comprehensive Care for Joint Replacement (CJR) model indicated that CJR resulted in roughly a 4 percent reduction in lower extremity joint replacement (LEJR) spending (not including reconciliation payments) for participants over the course of the model.[876] Since participation in CJR is mandatory in 34 metropolitan statistical areas, and LEJR episodes make up a significant portion of the episodes included in TEAM, the CJR evaluation results appear to be a reasonable proxy for what to expect in TEAM. However, the episode length in CJR is 90 days, whereas in TEAM the proposed length is 30 days. Internal analysis indicated that the 30-day episode is approximately 75 percent as costly as a 90-day episode for LEJR procedures. In addition, post-acute care spending has been declining in recent years for episodes that we are proposing to include in TEAM, which could limit the potential for TEAM participants to achieve significant improvements in efficiency. Thus, we believe that the intervention effect of TEAM on episode spending will be a reduction of 0 to 3 percent (see Table I.G.12–02 for a sensitivity analysis for how the financial impact is affected by changes in this assumption).

We also note that starting from actual episode spending that occurred in the first half 2023, average baseline spending per episode is estimated to increase by 1.5 percent every year. The national average per episode spending growth for all TEAM episode types in years 2018, 2019, 2022, and 2023 was approximately 1.3 percent. Annual growth rates for each episode type were weighted by spending, and historical experience during 2020 and 2021 were excluded due to possible impacts from the peak of the COVID–19 pandemic. Since some of the historical experience in these years includes Medicare policy changes for LEJR episodes that resulted in surgeries occurring in more efficient care settings, translating to spending decreases that may not be duplicated in future years, the assumed annual trend is slightly greater than the observed average trend from the historical experience.

Additionally, our estimates do not include the impact of TEAM beneficiary overlap with total cost of care models, such as when a TEAM beneficiary is also assigned to a Medicare Shared Savings Program ACO. However, given the precision in the Shared Savings Program projections, we do not anticipate a practical difference in the ACO's shared savings estimates. Nor do we anticipate TEAM beneficiary overlap with total cost of care models having a meaningful effect to TEAM's projected financial impacts, described in Table I.G.12–01.

Because the financial impact is based on projections of spending, the estimates implicitly assume that there will be no significant difference between the projected episode spending used to calculate the prospective target prices and actual episode spending. This assumption has a large degree of uncertainty, and the actual TEAM financial impacts will be highly sensitive to this difference. The direction, magnitude and timing of projection inaccuracies would all affect the overall financial impact estimate.

(2) Sensitivity Analysis

We also performed a sensitivity analysis to assess various intervention effects on TEAM. Overall financial impacts are sensitive to the intervention effect TEAM would have on TEAM participants' episode spending. Table I.G.12–02 includes financial impacts at various intervention effect assumptions (note that negative values indicate savings):

TABLE I.G.12-02: TEAM SENSITIVITY ANALYSIS AT VARIOUS INTERVENTION EFFECTS

Intervention Effect	2026	2027	2028	2029	2030
-3.0%	-0.7%	-2.7%	-4.3%	-4.3%	-3.5%
-1.0%	**0.5%**	**-2.7%**	**-3.2%**	**-3.2%**	**-2.9%**
0.0%	1.1%	-2.7%	-2.7%	-2.7%	-2.7%

The sensitivity is due to the lack of the requirement that participants participate in downside risk during performance year 1 and the effect that reductions in episode spending during performance years would have on target prices for future performance years.

b. Effects on the Medicare Beneficiaries

We believe that episode-based payment models may have the potential to benefit beneficiaries because the intent of the models is to test whether providers are able to improve the coordination and transition of care, invest in infrastructure and redesigned care processes for high quality and efficient service delivery and incentivize higher value care across the inpatient and post-acute care spectrum. We believe that episode-based payment models have a patient-centered focus such that they incentivize improved healthcare delivery and communication based on the needs of the beneficiary, thus potentially benefitting beneficiaries. The proposed model would not affect beneficiary cost sharing for items and services that beneficiaries receive from TEAM participants or premiums paid by beneficiaries. If there is a shift in the utilization of items and services within each episode, then beneficiary cost sharing could be higher or lower than would otherwise be experienced.

We are proposing to include a patient reported outcome measure, specific to LEJR episode categories, in the TEAM quality measures that would be tied to payment with the belief that doing so would encourage TEAM participants to focus on and deliver improved quality of care for Medicare beneficiaries. Additionally, TEAM participants must perform well on quality measure performance to achieve their maximum reconciliation payment. The accountability of TEAM participants for both quality and the cost of care that is furnished to TEAM beneficiaries within an episode provides TEAM participants with new incentives to improve the health and well-being of the Medicare beneficiaries they treat.

Additionally, the proposed model does not affect the beneficiary's freedom of choice to obtain health services from any individual or organization qualified to participate in the Medicare program as guaranteed under section 1802 of the Act. Eligible beneficiaries who receive one of the five proposed surgical episode categories from a TEAM participant would not have the option to opt their episodes out of the model. TEAM participants may not prevent or restrict beneficiaries to any list of preferred or recommended providers.

Many controls exist under Medicare to ensure beneficiary access and quality, and we have proposed to use our existing authority, if necessary, to audit TEAM participants if claims analysis indicates an inappropriate change in delivered services. Given that TEAM participants would receive a reconciliation payment, subject to a quality adjustment, when they are able to reduce spending below the reconciliation target price, they could have an incentive to avoid complex, high-cost cases by referring them to nearby facilities or specialty referral centers. We intend to monitor the claims data from TEAM participants—for example, to compare a hospital's case mix relative to a pre-model historical baseline to determine whether complex patients are being systematically excluded. Furthermore, we also proposed to require TEAM participants to supply beneficiaries with written information

[876] *https://www.cms.gov/priorities/innovation/data-and-reports/2023/cjr-py5-annual-report.*

regarding the hospital's participation in TEAM as well as their rights under Medicare, including their right to use their provider of choice.

We have proposed to implement safeguards to ensure that Medicare beneficiaries do not experience a delay in services. Specifically, to avoid perverse incentives to withhold or delay medically necessary care until after an episode ends, we propose that TEAM participants remain responsible for episode spending in the 30-day period following completion of each episode for all services covered under Medicare Parts A and B, regardless of whether the services are included in the proposed episode definition.

Importantly, approaches to savings will include taking steps that facilitate patient recovery, shorten recovery duration, and minimize post-operative problems that might lead to readmissions. Thus, the model itself rewards better patient care.

Lastly, we note that the proposed TEAM Model would not change Medicare FFS payments, beneficiary copayments, deductibles, or coinsurance. Beneficiaries may benefit if TEAM participants are able to systematically improve the quality of care while reducing costs. We welcome public comments on our estimates of the impact of our proposals on Medicare beneficiaries.

c. Aggregate Effects on the Market

There may be spillover effects in the non-Medicare market, or even in the Medicare market in other areas as a result of this model, if finalized. Testing changes in Medicare payment policy may have implications for non-Medicare payers. As an example, non-Medicare patients may benefit if participating hospitals introduce system-wide changes that improve the coordination and quality of health care. Other payers may also be developing payment models and may align their payment structures with CMS or may be waiting to utilize results from CMS' evaluations of payment models. Because it is unclear whether and how this evidence applies to a test of these new payment models, our analyses assume that spillover effects on non-Medicare payers will not occur, although this assumption is subject to considerable uncertainty. We welcome comments on this assumption and evidence on how this rulemaking, if finalized, would impact non-Medicare payers and patients.

13. Effects of Proposed Changes the Provider Reimbursement Review Board (PRRB) Membership

In section X.B of the preamble of this proposed rule, we are proposing changes to 42 CFR 405.1845 to permit individuals to serve one or two additional consecutive terms as PRRB Members, relative to the current regulations, which allow two consecutive 3-year terms (6 consecutive years). Based on historical experience, PRRB Members generally serve 6 consecutive years as permitted by the current regulations; under the proposed rule, a PRRB Member would be eligible to serve for 9 years, or 12 years if they are designated as Chairperson in their second or third consecutive term. We anticipate achieving productivity gains and greater efficiencies from retaining experienced Board Members over a longer period, particularly since Board Members spend a portion of their initial term acclimating to the adjudicatory responsibilities and deepening their expertise in the wide scope of specialized matters that come before the Board. Accordingly, under this proposal, we anticipate that a Board Member could address increasingly complex and technical issues and a higher volume of cases as they gain additional seniority. Furthermore, providing an individual the opportunity to experience the day-to-day responsibilities of the PRRB before leading the Board as Chairperson could benefit the entire five-person Board. Finally, the possibility of having a 9-to-12-year tenure on the PRRB might make the position more attractive to prospective applicants, thereby increasing the size of the candidate pool. We believe for example that otherwise qualified individuals might refrain from applying, knowing that the position is limited to no more than 6 years. Therefore, these proposed changes will result in a no cost impact relative to the requirements of Executive Orders 12866, 13563, and 14094. There may be negligible government savings attributable to reducing human resource-related costs such as recruitment and hiring activity.

14. Effects of the Proposed Removal of the Puerto Rico Exclusion From Payment Error Rate Measurement (PERM) Review

In section X.E. of the preamble of this proposed rule, we discuss in detail the changes to the administration of the existing PERM program. The Further Consolidated Appropriations Act of 2020 (Pub. L. 116–94) required Puerto Rico to publish a plan, developed in coordination with CMS, and approved by the CMS Administrator, not later than 18 months after the FCAA's enactment, for how Puerto Rico would develop measures to comply with the PERM requirements of 42 CFR part 431, subpart Q. Currently, Puerto Rico is excluded from PERM via regulation at 42 CFR 431.954(b)(3). Puerto Rico would be incorporated into the PERM program starting in reporting year 2027 (Cycle 3), which covers the payment period between July 1, 2025 through June 30, 2026.

Including Puerto Rico in the PERM program would increase visibility into its Medicaid and CHIP operations and should improve program integrity efforts that protect taxpayer dollars from improper payments. A state[877] in the PERM program will be reviewed only once every 3 years and it is not likely that a provider would be selected more than once per program cycle to provide supporting documentation, minimizing the annual burden on both the state and its providers. Therefore, we estimate the cost to Puerto Rico for participating in the PERM program would be approximately $3.5 million annually. More detail about the cost and burden hours associated with response to requests for information (approximately 6,000 hours annually) can be found in the program PRA package (CMS–10166, CMS–10178, CMS–10184). Therefore, we do not anticipate this to be a significant administrative cost.

We are not preparing an analysis for this policy under the Regulatory Flexibility Act (RFA) because we have determined that the policy will not have a significant impact on a substantial number of small entities.

We are not preparing an analysis for section 1102(b) of the Act because this policy will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in expenditure in any one year of $100 million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $183 million. This policy will not result in an impact of $183 million or more on State, local or tribal governments, in the aggregate, or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. Because this policy does not impose substantial costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

14. Effects of Hospital and CAH Reporting of Acute Respiratory Illnesses

In section X.F. of the preamble of this proposed rule, we discuss our proposed requirements related to the reporting of acute respiratory illnesses that would have potentially major public health benefits. Proposed routine reporting of these illnesses absent any new emergency makes it possible to use the data to determine which hospitals faced unusually high or low reported levels of such illnesses. Such comparisons would allow individual hospitals, individual cities or states, or the federal government, to analyze outlier hospitals (either high or low rates of acute respiratory infections) to determine if there were any local factors that might suggest some form of intervention would be beneficial to redress problems or to export successes among the universe of hospitals and CAHs. For example, if hospitals in a particular geographic area were finding an unusually high rate of these illnesses among admitted patients from a particular geographic area, investigation of potential causes might lead to improvements in that area's immunization outreach efforts. It would not take many such interventions to have potentially substantial life-saving effects. Since the value of a ''statistical'' human life saved is generally estimated by HHS to have a value of about $10 million, even a dozen lives saved somewhere in the nation would exceed the cost of this reporting several times over.[878] In the

[877] For PERM, a ''state'' represents an entity receiving Medicaid and CHIP funding that is measured for improper payments, which includes the 50 states, the District of Columbia, and now Puerto Rico.

[878] See the discussion of assessing benefits in the HHS Guidelines for Regulatory Impact Analysis at *https://aspe.hhs.gov/reports/guidelines-regulatory-impact-analysis.*

hopefully unlikely case where an outbreak of acute respiratory illness was so substantial as to require the declaration of a public health emergency, the life-saving benefits could be many times higher. For example, an ''early warning'' signal could speed the development of a vaccine, effective use of particular medicines for treatments, or other interventions to prevent or ameliorate adverse outcomes ranging from a single instance of illness to a national epidemic.

H. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of January 2024, there were 91 children's hospitals, 11 cancer hospitals, 6 short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, 1 extended neoplastic disease care hospital, and 9 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, the rehabilitation hospitals and units, and the LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and the psychiatric hospitals and units are paid the Federal per diem amount under the IPF PPS. As stated previously, IRFs and IPFs are not affected by the rate updates discussed in this proposed rule. The impacts of the changes on LTCHs are discussed in section I.J. of this appendix.

For the children's hospitals, cancer hospitals, short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2025 percentage increase in the 2018-based IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. Consistent with current law, based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket increase, we are estimating the FY 2025 update to be 3.0 percent (that is, the estimate of the market basket rate-of-increase), as discussed in section V.A. of the preamble of this proposed rule. We proposed that if more recent data become available for the final rule, we would use such data, if appropriate, to calculate the final IPPS operating market basket update for FY 2025. The Affordable Care Act requires a productivity adjustment (0.4 percentage point reduction proposed for FY 2025), resulting in a proposed 2.6 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section V.B. of the preamble of this proposed rule. Children's hospitals, cancer hospitals, short term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, the extended neoplastic disease care hospital, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the percentage increase in the 2018-based IPPS operating market basket for FY 2025, currently estimated at 3.0 percent.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that would not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit; or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

I. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented in this section of this proposed rule, we used data from the December 2023 update of the FY 2023 MedPAR file and the December 2023 update of the Provider-Specific File (PSF) that was used for payment purposes. Although the analyses of the proposed changes to the capital prospective payment system do not incorporate cost data, we used the December 2023 update of the most recently available hospital cost report data to categorize hospitals. Our analysis has several qualifications and uses the best data available, as described later in this section of this proposed rule.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each proposed change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the December 2023 update of the FY 2023 MedPAR file, we simulated payments under the capital IPPS for FY 2024 and the proposed payments for FY 2025 for a comparison of total payments per case. Short-term, acute care hospitals not paid under the general IPPS (for example, hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating the capital IPPS payments in FY 2025 is as follows:

(Standard Federal rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH adjustment factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the geographic adjustment factor (GAF) and the hospital's case-mix. Then we added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- The capital Federal rate was updated, beginning in FY 1996, by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1. of the Addendum to this proposed rule, the proposed update to the capital Federal rate is 3.0 percent for FY 2025.
- In addition to the proposed FY 2025 update factor, the proposed FY 2025 capital Federal rate was calculated based on a proposed GAF/DRG budget neutrality adjustment factor of 0.9994, a proposed budget neutrality factor for the proposed continuation of the lowest quartile hospital wage index adjustment and the 5-percent cap on wage index decreases policy of 0.9943, and a proposed outlier adjustment factor of 0.9577.

2. Results

We used the payment simulation model previously described in section I.I. of Appendix A of this proposed rule to estimate the potential impact of the proposed changes for FY 2025 on total capital payments per case, using a universe of 3,090 hospitals. As previously described, the individual hospital payment parameters are taken from the best available data, including the December 2023 update of the FY 2023 MedPAR file, the December 2023 update to the PSF, and the most recent available cost report data from the December 2023 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2024 and estimated proposed total payments per case for FY 2025 based on the proposed FY 2025 payment policies. Column 2 shows estimates of payments per case under our model for FY 2024. Column 3 shows estimates of proposed payments per case under our model for FY 2025. Column 4 shows the total proposed percentage change in payments from FY 2024 to FY 2025. The change represented in Column 4 includes the proposed 3.0 percent update to the capital Federal rate and other proposed changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2025 are expected to increase 2.4 percent compared to capital payments per case in FY 2024. This expected increase is primarily due

to the proposed 3.0 percent update to the capital Federal rate being partially offset by an expected decrease in capital outlier payments. In general, regional variations in estimated capital payments per case in FY 2025 as compared to capital payments per case in FY 2024 are primarily due to the proposed changes in GAFs, and are generally consistent with the projected changes in payments due to the proposed changes in the wage index (and proposed policies affecting the wage index), as shown in Table I in section I.F. of this appendix.

The net impact of these proposed changes is an estimated 2.4 percent increase in capital payments per case from FY 2024 to FY 2025 for all hospitals (as shown in Table III). The geographic comparison shows that, on average, hospitals in both urban and rural classifications would experience an increase in capital IPPS payments per case in FY 2025 as compared to FY 2024. Capital IPPS payments per case would increase by an estimated 2.4 percent for hospitals in urban areas while payments to hospitals in rural areas would increase by 3.4 percent from FY 2024 to FY 2025. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for rural hospitals as compared to urban hospitals is the estimated increase in capital payments to rural hospitals due to the effect of proposed changes in the GAFs.

The comparisons by region show that the change in capital payments per case from FY 2024 to FY 2025 for urban areas range from a 0.1 percent decrease for the New England urban region to a 5.2 percent increase for the East South Central urban region. Meanwhile, the change in capital payments per case from FY 2024 to FY 2025 for rural areas range from a 1.0 percent increase for the Pacific rural region to a 5.4 percent increase for the East South Central rural region. Capital IPPS payments per case for hospitals located in Puerto Rico are projected to increase by an estimated 2.3 percent. These regional differences are primarily due to the proposed changes in the GAFs.

The comparison by hospital type of ownership (Voluntary, Proprietary, and Government) shows that both proprietary and government hospitals are expected to experience an increase in capital payments per case from FY 2024 to FY 2025 of 2.6 percent. Meanwhile, voluntary hospitals are expected to experience an increase in capital payments per case from FY 2024 to FY 2025 of 2.4 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2025. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this proposed rule for FY 2025, we show the proposed average capital payments per case for reclassified hospitals for FY 2025. Urban reclassified hospitals are expected to experience an increase in capital payments of 2.4 percent; urban nonreclassified hospitals are expected to experience an increase in capital payments of 2.3 percent. Rural reclassified hospitals are expected to experience an increase in capital payments of 3.9 percent; rural nonreclassified hospitals are expected to experience an increase in capital payments of 2.6 percent. The higher expected increase in payments for rural reclassified hospitals compared to rural nonreclassified hospitals is primarily due to the proposed changes in the GAFs.

BILLING CODE 4120–01–P

TABLE III.-- COMPARISON OF TOTAL PAYMENTS PER CASE

[FY 2024 PAYMENTS COMPARED TO PROPOSED FY 2025 PAYMENTS]	Number of Hospitals	Average FY 2024 Payments/Case	Proposed Average FY 2025 Payments/Case	Change
All Hospitals	3,090	1,157	1,185	2.4
By Geographic Location:				
Urban hospitals	2,390	1,191	1,219	2.4

BILLING CODE 4120–01–C

J. Effects of Proposed Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VIII. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule, we set forth the proposed annual update to the payment rates for the LTCH PPS for FY 2025. In the preamble of this proposed rule, we specify the statutory authority for the proposals that are presented, identify the proposed policies for FY 2025, and present rationales for our proposals as well as alternatives that were considered. In this section, we discuss the impact of the proposed changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this proposed rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

There are 330 LTCHs included in this impact analysis. We note that, although there are currently approximately 338 LTCHs, for purposes of this impact analysis, we excluded the data of all-inclusive rate providers consistent with the development of the FY 2025 MS–LTC–DRG relative weights (discussed in section VIII.B.3. of the preamble of this proposed rule). We have also excluded data for CCN 312024 from this impact analysis due to their abnormal charging practices. We note this is consistent with our proposals to remove this LTCH from the calculation of the FY 2025 MS–LTC–DRG relative weights, the area wage level adjustment budget neutrality factor, and the fixed-loss amount for LTCH PPS standard Federal payment rate cases (discussed in section VIII.B.3. of the preamble of this proposed rule). Moreover, another LTCH, only had one claim in the claims data used for this proposed rule. Because the number of covered days of care that are chargeable to Medicare utilization for the stay was reported as 0 on this claim, we excluded this claim and LTCH from our impact analysis. Lastly, in the claims data used for this proposed rule, one of the 330 LTCHs included in our impact analysis only had claims for site neutral payment rate cases and, therefore, does not affect our impact analysis for LTCH PPS standard Federal payment rate cases presented in Table IV (that is, the impact analysis presented in Table IV is based on the data for 329 LTCHs).

In the impact analysis, we used the proposed payment rate, factors, and policies presented in this proposed rule, the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate, the proposed update to the MS–LTC–DRG classifications and relative weights, the proposed update to the wage index values (including the proposed update to the CBSA labor market areas) and labor-related share, and the best available claims and CCR data to estimate the change in payments for FY 2025.

Under the dual rate LTCH PPS payment structure, payment for LTCH discharges that meet the criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) is based on the LTCH PPS standard Federal payment

rate. Consistent with the statute, the site neutral payment rate is the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), including any applicable outlier payments as specified in § 412.525(a), reduced by 4.6 percent for FYs 2018 through 2026; or 100 percent of the estimated cost of the case as determined under § 412.529(d)(2). In addition, there are two separate high cost outlier targets—one for LTCH PPS standard Federal payment rate cases and one for site neutral payment rate cases.

Based on the best available data for the 330 LTCHs in our database that were considered in the analyses used for this proposed rule, we estimate that overall LTCH PPS payments in FY 2025 will increase by approximately 1.6 percent (or approximately $41 million) based on the proposed rates and factors presented in section VIII. of the preamble and section V. of the Addendum to this proposed rule.

Based on the FY 2023 LTCH cases that were used for the analysis in this proposed rule, approximately 29 percent of those cases were classified as site neutral payment rate cases (that is, 29 percent of LTCH cases would not meet the statutory patient-level criteria for exclusion from the site neutral payment rate). We note that section 3711(b)(2) of the CARES Act provided a waiver of the application of the site neutral payment rate for LTCH cases admitted during the COVID–19 PHE period. The COVID–19 PHE expired on May 11, 2023. Therefore, all LTCH PPS cases in FY 2023 with admission dates on or before the PHE expiration date were paid the LTCH PPS standard Federal rate regardless of whether the discharge met the statutory patient criteria. Because not all FY 2023 cases were subject to the site neutral payment rate, for purposes of this impact analysis, we continue to rely on the same considerations and actuarial projections used in FYs 2016 through 2024. Our Office of the Actuary currently estimates that the percent of LTCH PPS cases that will be classified as site neutral payment rate cases in FY 2025 will not change significantly from the most recent historical data. To estimate FY 2025 LTCH PPS payments for site neutral payment rate cases, we calculated the IPPS comparable per diem amounts using the proposed FY 2025 IPPS rates and factors along with other changes that would apply to the site neutral payment rate cases in FY 2025. We estimate that aggregate LTCH PPS payments for these site neutral payment rate cases will increase by approximately 4.7 percent (or approximately $14 million). This projected increase in payments to LTCH PPS site neutral payment rate cases is primarily due to the proposed updates to the IPPS rates and factors reflected in our estimate of the IPPS comparable per diem amount, as well as an increase in estimated costs for these cases determined using the proposed charge and CCR adjustment factors described in section V.D.3.b. of the Addendum to this proposed rule. We note that we estimate payments to site neutral payment rate cases in FY 2025 will represent approximately 12 percent of estimated aggregate FY 2025 LTCH PPS payments.

Based on the FY 2023 LTCH cases that were used for the analysis in this proposed rule, approximately 71 percent of LTCH cases will meet the patient-level criteria for exclusion from the site neutral payment rate in FY 2025, and will be paid based on the LTCH PPS standard Federal payment rate. We estimate that total LTCH PPS payments for these LTCH PPS standard Federal payment rate cases in FY 2025 will increase approximately 1.2 percent (or approximately $26 million). This estimated increase in LTCH PPS payments for LTCH PPS standard Federal payment rate cases in FY 2025 is primarily due to the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate being partially offset by a projected 1.3 percent decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, which is discussed later in this section.

Based on the 330 LTCHs that were represented in the FY 2023 LTCH cases that were used for the analyses in this proposed rule presented in this appendix, we estimate that aggregate FY 2024 LTCH PPS payments will be approximately $2.583 billion, as compared to estimated aggregate FY 2025 LTCH PPS payments of approximately $2.624 billion, resulting in an estimated overall increase in LTCH PPS payments of approximately $41 million. We note that the estimated $41 million increase in LTCH PPS payments in FY 2025 does not reflect changes in LTCH admissions or case-mix intensity, which will also affect the overall payment effects of the proposed policies in this proposed rule.

The LTCH PPS standard Federal payment rate for FY 2024 is $48,116.62. For FY 2025, we are proposing to establish an LTCH PPS standard Federal payment rate of $49,262.80 which reflects the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate and the proposed budget neutrality factor for updates to the area wage level adjustment of 0.9959347 (discussed in section V.B.6. of the Addendum to this proposed rule). For LTCHs that fail to submit data for the LTCH QRP, in accordance with section 1886(m)(5)(C) of the Act, we are proposing to establish an LTCH PPS standard Federal payment rate of $48,304.38. This proposed LTCH PPS standard Federal payment rate reflects the proposed updates and factors previously described, as well as the required 2.0 percentage point reduction to the annual update for failure to submit data under the LTCH QRP.

Table IV shows the estimated impact for LTCH PPS standard Federal payment rate cases. The estimated change attributable solely to the proposed annual update of 2.8 percent to the LTCH PPS standard Federal payment rate is projected to result in an increase of 2.7 percent in payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025, on average, for all LTCHs (Column 6). The estimated increase of 2.7 percent shown in Column 6 of Table IV also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit the required LTCH QRP data. For most hospital categories, the projected increase in payments based on the LTCH PPS standard Federal payment rate to LTCH PPS standard Federal payment rate cases also rounds to approximately 2.7 percent.

For FY 2025, we are proposing to update the wage index values based on the most recent available data (data from cost reporting periods beginning during FY 2021 which is the same data used for the FY 2025 IPPS wage index) and the revised CBSA labor market areas delineations that we are proposing to adopt (as discussed in section V.B.2. of the Addendum to this proposed rule). In addition, we are proposing to establish a labor-related share of 72.8 percent for FY 2025, based on the most recent available data (IGI's fourth quarter 2023 forecast) of the relative importance of the labor-related share of operating and capital costs of the proposed 2022-based LTCH market basket. We also are proposing to apply an area wage level budget neutrality factor of 0.9959347 to ensure that the proposed changes to the area wage level adjustment would not result in any change in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases.

For LTCH PPS standard Federal payment rate cases, we currently estimate high-cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments will decrease from FY 2024 to FY 2025. Based on the FY 2023 LTCH cases that were used for the analyses in this proposed rule, we estimate that the FY 2024 high-cost outlier threshold of $59,873 (as established in the FY 2024 IPPS/LTCH PPS final rule) will result in estimated high cost outlier payments for LTCH PPS standard Federal payment rate cases in FY 2024 that are projected to exceed the 7.975 percent target. Specifically, we currently estimate that high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be approximately 9.3 percent of the estimated total LTCH PPS standard Federal payment rate payments in FY 2024. Combined with our estimate that FY 2025 high-cost outlier payments for LTCH PPS standard Federal payment rate cases will be 7.975 percent of estimated total LTCH PPS standard Federal payment rate payments in FY 2025, this will result in an estimated decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments of approximately 1.3 percent between FY 2024 and FY 2025. We note that, in calculating these estimated high cost outlier payments, we inflated charges reported on the FY 2023 claims by the proposed charge inflation factor described in section V.D.3.b. of the Addendum to this proposed rule. We also note that, in calculating these estimated high-cost outlier payments, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our proposed methodology described in section V.D.3.b. of the Addendum to this proposed rule. We lastly note, we are soliciting comments on our proposed methodology for determining the fixed-loss amount for FY

2025 (described in section V.D.3.b. of the Addendum to this proposed rule) as well as on an alternative approach we considered (described in section I.O.4. of this appendix). We will consider these comments when finalizing the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 in the final rule.

Table IV shows the estimated impact of the proposed payment rate and policy changes on LTCH PPS payments for LTCH PPS standard Federal payment rate cases for FY 2025 by comparing estimated FY 2024 LTCH PPS payments to estimated FY 2025 LTCH PPS payments. (As noted earlier, our analysis does not reflect changes in LTCH admissions or case-mix intensity.) We note that these impacts do not include LTCH PPS site neutral payment rate cases as discussed in section I.J.3. of this appendix.

As we discuss in detail throughout this proposed rule, based on the best available data, we believe that the provisions of this proposed rule relating to the LTCH PPS, which are projected to result in an overall increase in estimated aggregate LTCH PPS payments (for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases), and the resulting LTCH PPS payment amounts will result in appropriate Medicare payments that are consistent with the statute.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 2.3 percent increase in estimated payments for LTCH PPS standard Federal payment rate cases for LTCHs located in a rural area. This increase is primarily due to the combination of the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate for FY 2025, the proposed changes to the area wage level adjustment, and estimated changes in outlier payments. This estimated impact is based on the FY 2023 data for the 18 rural LTCHs (out of 329 LTCHs) that were used for the impact analyses shown in Table IV.

3. Anticipated Effects of the Proposed LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs ''maintain budget neutrality.'' We believe that the statute's mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal payment rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

Section 1886(m)(6)(A) of the Act establishes a dual rate LTCH PPS payment structure with two distinct payment rates for LTCH discharges beginning in FY 2016. Under this statutory change, LTCH discharges that meet the patient-level criteria for exclusion from the site neutral payment rate (that is, LTCH PPS standard Federal payment rate cases) are paid based on the LTCH PPS standard Federal payment rate. LTCH discharges paid at the site neutral payment rate are generally paid the lower of the IPPS comparable per diem amount, reduced by 4.6 percent for FYs 2018 through 2026, including any applicable high cost outlier (HCO) payments, or 100 percent of the estimated cost of the case, reduced by 4.6 percent.

As discussed in section I.J.1. of this appendix, we project an increase in aggregate LTCH PPS payments in FY 2025 of approximately $41 million. This estimated increase in payments reflects the projected increase in payments to LTCH PPS standard Federal payment rate cases of approximately $26 million and the projected increase in payments to site neutral payment rate cases of approximately $14 million under the dual rate LTCH PPS payment rate structure required by the statute beginning in FY 2016.

As discussed in section V.D. of the Addendum to this proposed rule, our actuaries project cost and resource changes for site neutral payment rate cases due to the site neutral payment rates required under the statute. Specifically, our actuaries project that the costs and resource use for cases paid at the site neutral payment rate will likely be lower, on average, than the costs and resource use for cases paid at the LTCH PPS standard Federal payment rate, and will likely mirror the costs and resource use for IPPS cases assigned to the same MS–DRG. While we are able to incorporate this projection at an aggregate level into our payment modeling, because the historical claims data that we are using in this proposed rule to project estimated FY 2025 LTCH PPS payments (that is, FY 2023 LTCH claims data) do not reflect this actuarial projection, we are unable to model the impact of the change in LTCH PPS payments for site neutral payment rate cases at the same level of detail with which we are able to model the impacts of the changes to LTCH PPS payments for LTCH PPS standard Federal payment rate cases. Therefore, Table IV only reflects proposed changes in LTCH PPS payments for LTCH PPS standard Federal payment rate cases and, unless otherwise noted, the remaining discussion in section I.J.3. of this appendix refers only to the impact on LTCH PPS payments for LTCH PPS standard Federal payment rate cases. In the following section, we present our provider impact analysis for the proposed changes that affect LTCH PPS payments for LTCH PPS standard Federal payment rate cases.

b. Impact on Providers

The basic methodology for determining a per discharge payment for LTCH PPS standard Federal payment rate cases is currently set forth under §§ 412.515 through 412.533 and 412.535. In addition to adjusting the LTCH PPS standard Federal payment rate by the MS–LTC–DRG relative weight, we make adjustments to account for area wage levels and SSOs. LTCHs located in Alaska and Hawaii also have their payments adjusted by a COLA. Under our application of the dual rate LTCH PPS payment structure, the LTCH PPS standard Federal payment rate is generally only used to determine payments for LTCH PPS standard Federal payment rate cases (that is, those LTCH PPS cases that meet the statutory criteria to be excluded from the site neutral payment rate). LTCH discharges that do not meet the patient-level criteria for exclusion are paid the site neutral payment rate, which we are calculating as the lower of the IPPS comparable per diem amount as determined under § 412.529(d)(4), reduced by 4.6 percent for FYs 2018 through 2026, including any applicable outlier payments, or 100 percent of the estimated cost of the case as determined under existing § 412.529(d)(2). In addition, when certain thresholds are met, LTCHs also receive HCO payments for both LTCH PPS standard Federal payment rate cases and site neutral payment rate cases that are paid at the IPPS comparable per diem amount.

To understand the impact of the changes to the LTCH PPS payments for LTCH PPS standard Federal payment rate cases presented in this proposed rule on different categories of LTCHs for FY 2025, it is necessary to estimate payments per discharge for FY 2024 using the rates, factors, and the policies established in the FY 2024 IPPS/LTCH PPS final rule and estimate payments per discharge for FY 2025 using the proposed rates, factors, and the policies in this proposed rule (as discussed in section VIII. of the preamble of this proposed rule and section V. of the Addendum to this proposed rule). As discussed elsewhere in this proposed rule, these estimates are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for HCO cases in each year. The resulting analyses can then be used to compare how our proposed policies applicable to LTCH PPS standard Federal payment rate cases affect different groups of LTCHs.

For the following analysis, we group hospitals based on characteristics provided in the OSCAR data, cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

c. Proposed Calculation of LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases

For purposes of this impact analysis, to estimate the per discharge payment effects of our policies on payments for LTCH PPS standard Federal payment rate cases, we simulated FY 2024 and proposed FY 2025 payments on a case-by-case basis using historical LTCH claims from the FY 2023 MedPAR files that met or would have met the criteria to be paid at the LTCH PPS standard Federal payment rate if the statutory patient-level criteria had been in effect at the time of discharge for all cases in the FY 2023 MedPAR files. For modeling FY 2024 LTCH PPS payments, we used the FY 2024 standard Federal payment rate of $48,116.62 (or $47,185.03 for LTCHs that failed to submit quality data as required under the

requirements of the LTCH QRP). Similarly, for modeling payments based on the proposed FY 2025 LTCH PPS standard Federal payment rate, we used the proposed FY 2025 standard Federal payment rate of $49,262.80 (or $48,304.38 for LTCHs that failed to submit quality data as required under the requirements of the LTCH QRP). In each case, we applied the applicable proposed adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, for modeling FY 2024 LTCH PPS payments, we used the current FY 2024 labor-related share (68.5 percent), the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2024 IPPS/LTCH PPS final rule (which are available via the internet on the CMS website), the FY 2024 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $59,873 (as reflected in the FY 2024 IPPS/LTCH PPS final rule), and the FY 2024 COLA factors (shown in the table in section V.C. of the Addendum to that final rule) to adjust the FY 2024 nonlabor-related share (31.5 percent) for LTCHs located in Alaska and Hawaii. Similarly, for modeling proposed FY 2025 LTCH PPS payments, we used the proposed FY 2025 LTCH PPS labor-related share (72.8 percent), the proposed FY 2025 wage index values from Tables 12A and 12B listed in section VI. of the Addendum to this proposed rule (which are available via the internet on the CMS website), the proposed FY 2025 HCO fixed-loss amount for LTCH PPS standard Federal payment rate cases of $90,921 (as discussed in section V.D.3. of the Addendum to this proposed rule), and the proposed FY 2025 COLA factors (shown in the table in section V.C. of the Addendum to this proposed rule) to adjust the proposed FY 2025 nonlabor-related share (27.2 percent) for LTCHs located in Alaska and Hawaii. We note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we inflated charges reported on the FY 2023 claims by the proposed charge inflation factors in section V.D.3.b. of the Addendum to this proposed rule. We also note that in modeling payments for HCO cases for LTCH PPS standard Federal payment rate cases, we estimated the cost of each case by multiplying the inflated charges by the adjusted CCRs that we determined using our proposed methodology described in section V.D.3.b. of the Addendum to this proposed rule.

The impacts that follow reflect the estimated ''losses'' or ''gains'' among the various classifications of LTCHs from FY 2024 to FY 2025 based on the payment rates and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. Table IV illustrates the estimated aggregate impact of the change in LTCH PPS payments for LTCH PPS standard Federal payment rate cases among various classifications of LTCHs. (As discussed previously, these impacts do not include LTCH PPS site neutral payment rate cases.)

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria.
- The fourth column shows the estimated FY 2024 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The fifth column shows the estimated proposed FY 2025 payment per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria (as described previously).
- The sixth column shows the percentage change in estimated payments per discharge for LTCH cases expected to meet the LTCH PPS standard Federal payment rate criteria from FY 2024 to FY 2025 due to the proposed annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this proposed rule).
- The seventh column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the proposed changes to the area wage level adjustment (that is, the proposed updated hospital wage data, the proposed labor market areas, and the proposed labor-related share) and the application of the corresponding proposed budget neutrality factor (as discussed in section V.B.6. of the Addendum to this proposed rule).
- The eighth column shows the percentage change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 (Column 4) to FY 2025 (Column 5) due to all proposed changes.

[1] Estimated FY 2025 LTCH PPS payments for LTCH PPS standard Federal payment rate criteria based on the proposed payment rate and factor changes applicable to such cases presented in the preamble of and the Addendum to this proposed rule.

[2] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the proposed annual update to the LTCH PPS standard Federal payment rate.

[3] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 due to the proposed changes to the area wage level adjustment under § 412.525(c) (that is, the proposed updated hospital wage data, the proposed labor market areas, and the proposed labor related share) with budget neutrality.

[4] Percent change in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 (shown in Column 4) to FY 2025 (shown in Column 5), due to all of the proposed changes to the rates and factors applicable to such cases presented in the preamble and the Addendum to this proposed rule. We note that this column, which shows the percent change in estimated payments per discharge due to all proposed changes, does not equal the sum of the percent changes in estimated payments per discharge due to the proposed annual update to the LTCH PPS standard Federal payment rate (Column 6) and due to the proposed changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in estimated payments to aggregate HCO payments for LTCH PPS standard Federal payment rate cases (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

BILLING CODE 4120–01–C

d. Results

Based on the FY 2023 LTCH cases (from 329 LTCHs) that were used for the analyses in this proposed rule, we have prepared the following summary of the impact (as shown in Table IV) of the proposed LTCH PPS payment rate and policy changes for LTCH PPS standard Federal payment rate cases presented in this proposed rule. The impact analysis in Table IV shows that estimated payments per discharge for LTCH PPS standard Federal payment rate cases are projected to increase 1.2 percent, on average, for all LTCHs from FY 2024 to FY 2025 as

a result of the proposed payment rate and policy changes applicable to LTCH PPS standard Federal payment rate cases presented in this proposed rule. This estimated 1.2 percent increase in LTCH PPS payments per discharge was determined by comparing estimated FY 2025 LTCH PPS payments (using the proposed payment rates and factors discussed in this proposed rule) to estimated FY 2024 LTCH PPS payments for LTCH discharges which will be LTCH PPS standard Federal payment rate cases if the dual rate LTCH PPS payment structure was or had been in effect at the time of the discharge (as described in section I.J.3. of this appendix).

As stated previously, we are proposing an annual update to the LTCH PPS standard Federal payment rate for FY 2025 of 2.8 percent. For LTCHs that fail to submit quality data under the requirements of the LTCH QRP, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the LTCH PPS standard Federal payment rate. Consistent with § 412.523(d)(4), we also are applying a proposed budget neutrality factor for changes to the area wage level adjustment of 0.9959347 (discussed in section V.B.6. of the Addendum to this proposed rule), based on the best available data at this time, to ensure that any proposed changes to the area wage level adjustment will not result in any change (increase or decrease) in estimated aggregate LTCH PPS standard Federal payment rate payments. As we also explained earlier in this section of the proposed rule, for most categories of LTCHs (as shown in Table IV, Column 6), the estimated payment increase due to the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate is projected to result in approximately a 2.7 percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases for all LTCHs from FY 2024 to FY 2025. We note our estimate of the changes in payments due to the proposed update to the LTCH PPS standard Federal payment rate also includes estimated payments for short-stay outlier (SSO) cases, a portion of which are not affected by the annual update to the LTCH PPS standard Federal payment rate, as well as the reduction that is applied to the annual update for LTCHs that do not submit data under the requirements of the LTCH QRP.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 4 percent of all LTCH PPS standard Federal payment rate cases are expected to be treated in these rural hospitals. The impact analysis presented in Table IV shows that the overall average percent increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 for all hospitals is 1.2 percent. Urban LTCHs are projected to experience an increase of 1.1 percent. Meanwhile, rural LTCHs are projected to experience an increase of 2.3 percent.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the best available data, the categories of LTCHs with the largest expected percentage of LTCH PPS standard Federal payment rate cases (approximately 41 percent and 45 percent, respectively) are in LTCHs that began participating in the Medicare program between October 1993 and September 2002 and after October 2002. These LTCHs are expected to experience an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 1.3 percent and 1.1 percent, respectively. LTCHs that began participating in the Medicare program between October 1983 and September 1993 are projected to experience an increase in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 1.3 percent, as shown in Table IV. Approximately 3 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience a decrease in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 1.4 percent, partially due to the proposed changes to the area wage level adjustment.

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the best available data, approximately 16 percent of LTCHs are identified as voluntary (Table IV). The majority (approximately 81 percent) of LTCHs are identified as proprietary, while government owned and operated LTCHs represent approximately 3 percent of LTCHs. Based on ownership type, proprietary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases of 1.3 percent. Voluntary LTCHs are expected to experience an increase in payments to LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 0.2 percent. Meanwhile, government owned and operated LTCHs are expected to experience a decrease in payments to LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 of 0.3 percent.

(4) Census Region

The comparisons by region show that the changes in estimated payments per discharge for LTCH PPS standard Federal payment rate cases from FY 2024 to FY 2025 are projected to range from a decrease of 0.2 percent in the New England region to an increase of 2.2 percent in the Mountain region. These regional variations are primarily due to the proposed changes to the area wage adjustment and estimated changes in outlier payments.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. We project that LTCHs with greater than 200 beds will experience no change in payments for LTCH PPS standard Federal payment rate cases. LTCHs with 25–49 beds are projected to experience the largest increase in payments, 1.6 percent. The remaining bed size categories are projected to experience an increase in payments in the range of 0.2 to 1.5 percent.

4. Effect on the Medicare Program

As stated previously, we project that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments to LTCH PPS standard Federal payment rate cases in FY 2025 relative to FY 2024 of approximately $26 million (or approximately 1.2 percent) for the 330 LTCHs in our database. Although, as stated previously, the hospital-level impacts do not include LTCH PPS site neutral payment rate cases, we estimate that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments to site neutral payment rate cases in FY 2025 relative to FY 2024 of approximately $14 million (or approximately 4.7 percent) for the 330 LTCHs in our database. (As noted previously, we estimate payments to site neutral payment rate cases in FY 2025 will represent approximately 12 percent of total estimated FY 2025 LTCH PPS payments.) Therefore, we project that the provisions of this proposed rule will result in an increase in estimated aggregate LTCH PPS payments for all LTCH cases in FY 2025 relative to FY 2024 of approximately $41 million (or approximately 1.6 percent) for the 330 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries as a result of this proposed rule, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program. As discussed previously, we do not expect the continued implementation of the site neutral payment system to have a negative impact on access to or quality of care, as demonstrated in areas where there is little or no LTCH presence, general short-term acute care hospitals are effectively providing treatment for the same types of patients that are treated in LTCHs.

K. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In section IX.C. of the preamble of this proposed rule, we discuss proposed requirements for hospitals reporting quality data under the Hospital IQR Program to receive the full annual percentage increase for the FY 2027 payment determination and subsequent years.

In the preamble of this proposed rule, we are proposing: (1) to adopt the Age-Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (3) to adopt the Catheter-Associated Urinary Tract Infection (CAUTI)

Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 payment determination; (4) to adopt the Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations measure beginning with the CY 2026 reporting period/FY 2028 reporting period; (5) to adopt the Hospital Harm—Falls with Injury electronic clinical quality measure (eCQM) beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) to adopt the Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; (7) to adopt the Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination; (8) to modify the Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; (9) to modify the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 payment determination (10) to remove the Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (11) to remove the Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (12) to remove the Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (13) to remove the Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021–March 31, 2024 reporting period/FY 2026 payment determination; (14) to remove the Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI–04) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination; (15) to increase the total number of eCQMs reported from six to nine for the CY 2026 reporting period/FY 2028 payment determination and then from nine to eleven beginning with the CY 2027 reporting period/FY 2029 payment determination; (16) to update the scoring methodology for eCQM validation; (17) to remove the requirement that hospitals must submit 100 percent of eCQM records to pass validation beginning with CY 2025 eCQM data affecting the FY 2028 payment determination; and (18) to no longer require hospitals to resubmit medical records as part of their request for reconsideration of validation beginning with CY 2025 discharges affecting the FY 2028 payment determination.

As shown in the summary tables in section XII.B.6.k. of the preamble of this proposed rule, we estimate a total information collection burden increase for 3,050 IPPS hospitals of 40,019 hours at a cost of $1,274,980 annually associated with the policies we are proposing across a 3-year period from the CY 2025 reporting period/FY 2027 payment determination through the CY 2027 reporting period/FY 2029 payment determination, compared to our currently approved information collection burden estimates.

In sections IX.C.5.a. and IX.B.1 of the preamble of this proposed rule, we are proposing to adopt the Age-Friendly Hospital and Patient Safety Structural measures. In order for hospitals to receive a point for each of the domains in the measures, affirmative attestations are required for each of the statements within a domain. Similar to the FY 2023 IPPS/LTCH PPS final rule adoption of the Hospital Commitment to Health Equity measure, for hospitals that are unable to attest affirmatively for a statement and would like to earn additional points under the measure, there are likely to be additional costs associated with activities such as updating hospital policies, protocols, or processes; engaging senior leadership; conducting required analyses, surveys, and screenings; performing data analysis and collection; and training staff (87 FR 49492). The extent of these costs would vary from hospital to hospital depending on what policies the hospital already has in place, what activities the hospital is already performing, hospital size, and the individual choices each hospital makes to meet the criteria necessary to attest affirmatively. There may also be some non-recurring costs associated with changes in workflow and information systems to collect patient screening data, however the extent of these costs is difficult to quantify as different hospitals may utilize different modes of data collection (for example paper-based, electronically patient-directed, clinician-facilitated, etc.).

For the Age-Friendly Hospital measure, there would be additional impacts incurred by patients admitted to hospitals that do not currently conduct patient screenings but would decide to do so. Hospitals would be able to conduct these screenings via multiple methods, however, we believe most hospitals would likely collect data through a screening tool incorporated into their electronic health record (EHR) or other patient intake process. For the Frailty Screening and Intervention domain, we assume patients would be screened using a combination of validated tools such as the Katz Index of Independence in Activities of Daily Living, the Lawton and Brody Instrumental Activities of Daily-Living Scale, the Mini-Cog screening for early dementia, and the Patient Health Questionnaire-2 depression module.[879] [880] [881] [882] [883] For the Social Vulnerability domain, we assume patients would be screened using a tool such as the Emergency Department Senior Abuse Identification (ED Senior AID) tool,[884] which is currently undergoing validation. We estimate each patient would require no more than 20 minutes (0.33 hours) to complete the screenings for both domains.

We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $24.04/hr. The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices identifies the approach for valuing time when individuals undertake activities on their own time.[885] To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of $1,118 was divided by 40 hours to calculate an hourly pre-tax wage rate of $27.95/hr.[886] This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 14 percent calculated by comparing pre- and post-tax income,[887] resulting in the post-tax hourly wage rate of $24.04/hr. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

Based on information collected by the Agency for Healthcare Research and Quality for CY 2010 through CY 2019,[888] we estimate approximately 7,600,000 patients would be screened annually across all participating IPPS hospitals (12,850,233 average annual admissions of patients aged 65 and over × (3,050 IPPS hospitals ÷ 5,157 total U.S. community hospitals [889])) or an average of 2,492 patients per IPPS hospital. For the CY 2025 reporting period and subsequent years, for each IPPS hospital that elects to perform these screenings, we estimate it would require patients an average of 831 hours (2,492 respondents × 0.33 hours) at a cost of $19,969 (831 hours × $24.04) to complete the screenings.

In sections IX.C.5.c. and IX.C.5.d. of the preamble of this proposed rule, we are proposing to adopt two new eCQMs. As noted in the FY 2019 IPPS/LTCH PPS final

rule regarding removal of eCQMs, while there is no change in information collection burden related to the proposed policies with regard to submission of measure data, we believe that costs associated with adopting two new eCQMs are multifaceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining all of the eCQMs available for use in the Hospital IQR Program in hospitals' EHR systems (83 FR 41771). We do not believe the remaining proposed policies would result in any additional economic impact beyond the additional collection of information burden discussed in section XII.B.6 of this proposed rule.

Historically, 100 hospitals, on average, that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year due to the failure to meet all requirements of the Hospital IQR Program. We anticipate that the number of hospitals not receiving the full annual percentage increase will be approximately the same as in past years based on review of previous performance.

L. Effects of Proposed New Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

In section IX.D. of the preamble of this proposed rule, we discuss proposed requirements for PPS-exempt cancer hospitals (PCHs) reporting quality data under the PCH Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act. There is no financial impact to PCH Medicare reimbursement if a PCH does not submit data.

In the preamble of this proposed rule, we are proposing: (1) to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year; (2) to modify the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 program year; and (3) to move up the start date for public display of PCH performance on the Hospital Commitment to Health Equity measure.

As shown in the summary table in section XII.B.7.d. of the preamble of this proposed rule, we estimate a total information collection burden increase for 11 PCHs of 166 hours at a cost of $4,047 annually associated with our proposed policies and updated burden estimates beginning with the CY 2025 reporting period/FY 2027 program year compared with our currently approved information collection burden estimates. We refer readers to section XII.B.7. of this proposed rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the PCHQR Program.

In section IX.B.1. of the preamble of this proposed rule, we are proposing to adopt the Patient Safety Structural measure. We are proposing that in order for a PCH to receive a point for a domain in the measure, the PCH would be required to affirmatively attest to each of the statements within that domain. We estimate that if a PCH is unable to attest affirmatively to all of the statements in a domain and, in a future program year, desires to earn a point for that domain, the PCH will likely incur costs associated with activities needed to be able to affirmatively attest, which could include updating policies, protocols, or processes; engaging senior leadership; conducting required analyses; or training staff (87 FR 49492). The extent of these costs will vary from PCH to PCH depending on what policies the PCH already has in place, what activities the PCH is already performing, facility size, and the individual choices each PCH makes in order to meet the criteria necessary to attest affirmatively. We do not believe the remaining proposals to modify the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 program year and to move up the start date for public display of PCH performance on the Hospital Commitment to Health Equity measure will result in any additional economic impact.

M. Effects of Requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

In section IX.E. of the preamble of the proposed rule, we are proposing to adopt four new items as standardized patient assessment data elements under the SDOH category and to modify the current Transportation item on the LCDS beginning with the FY 2028 LTCH QRP. We are proposing to adopt items to be collected at admission using the LCDS for: Living Situation (one item), Food (two items), and Utilities (one item). We are proposing to modify the current Transportation item on the LCDS, which is currently collected at admission and discharge. We are proposing that the Transportation item would only be collected at admission beginning with the FY 2028 LTCH QRP. We are also proposing to extend the admission assessment window for the LCDS from three to four days beginning with the FY 2028 LTCH QRP. Finally, we are seeking information on two topics: future measure concepts for the LTCH QRP and a future LTCH Star Rating system.

The effect of these proposals for the LTCH QRP would be an overall increase in burden for LTCHs participating in the LTCH QRP. As shown in summary table XII.B–06 in section XII.B.7. of the preamble of this proposed rule, we estimate a total information collection burden increase for 329 eligible LTCHs of 2,116.55 hours for a cost increase of $138,231.88 annually associated with our proposed policies and updated burden estimates for the FY 2028 program year compared to our currently approved information collection burden estimates. We refer readers to section XII.B.8. of the preamble of this proposed rule, where CMS has provided an estimate of the burden and cost to LTCHs, and note that it will be included in a revised information collection request for 0938–1163.

N. Effects of Requirements Regarding the Medicare Promoting Interoperability Program

In section IX.F. of the preamble of this proposed rule, we discuss proposed requirements for eligible hospitals and critical access hospitals (CAHs) to report objectives and measures, and report electronic clinical quality measures (eCQMs) under the Medicare Promoting Interoperability Program.

In this proposed rule, we are proposing: (1) to adopt the Hospital Harm—Falls with Injury eCQM beginning with the CY 2026 reporting period; (2) to adopt the Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period; (3) to modify the Antimicrobial Use and Resistance (AUR) Surveillance measure by splitting it into an Antimicrobial Use Surveillance measure and an Antimicrobial Resistance Surveillance measure beginning with the electronic health record (EHR) reporting period in CY 2025; (4) to modify the Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period; (5) to increase the total number of eCQMs reported from six to nine for the CY 2026 reporting period and then from nine to eleven beginning with the CY 2027 reporting period; and (6) to increase the minimum scoring threshold from 60 points to 80 points beginning with the EHR reporting period in CY 2025.

As shown in the summary table in section XII.B.9. of this proposed rule, we estimate a total information collection burden increase for 3,150 eligible hospitals and 1,400 CAHs of 5,038 hours at a cost of $262,581 annually associated with our proposed policies and updated burden estimates over the three-year period from the EHR reporting period in CY 2025 through the EHR reporting period in CY 2027 compared to our currently approved information collection burden estimates. We refer readers to section XII.B.9.f. of the preamble of this proposed rule (Collection of Information) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Medicare Promoting Interoperability Program.

In section IX.F.6.a. of the preamble of this proposed rule, we are proposing to adopt two new eCQMs and to modify one eCQM. Similar to the FY 2019 IPPS/LTCH PPS final rule regarding removal of eCQM measures, while there is no change in information collection burden related to the proposed policies with regard to submission of measure data, we believe that costs associated with adopting two new eCQMs and modifying one existing eCQM are multifaceted and include not only the burden associated with reporting, but also the costs associated with implementing and maintaining all of the eCQMs available for use in the Medicare Promoting Interoperability Program in hospitals' and CAHs' EHR systems (83 FR 41771).

In section IX.F.5. of the preamble of this proposed rule, we are proposing to increase the performance-based scoring threshold for eligible hospitals and CAHs reporting under the Medicare Promoting Interoperability Program from 60 points to 80 points beginning with the EHR reporting period in CY 2025. Our review of the CY 2022 Medicare Promoting Interoperability Program's performance results indicates 98.5% of eligible hospitals and CAHs currently successfully meet the threshold of 60 points while 81.5% of eligible hospitals and CAHs currently exceed a score of 80

points. If this proposal is finalized, the 17% of eligible hospitals and CAHs that meet the current threshold of 60 points but not the proposed threshold of 80 points would be required to better align their health information systems with evolving industry standards and/or increase data exchange to raise their performance score or be subject to a potential downward payment adjustment. We do not believe the remaining proposed policies would result in any additional economic impact beyond the additional collection of information burden discussed in section XII.B.9. of the preamble of this proposed rule.

O. Alternatives Considered

This proposed rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

1. Alternatives Considered for the Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

Section 4122(a) of the CAA, 2023 amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of an additional 200 residency positions (also referred to as slots) to qualifying hospitals. Section 1886(h)(10)(B)(iii) of the Act further requires that each qualifying hospital that submits a timely application receive at least 1 (or a fraction of 1) of the slots made available under section 1886(h)(10) of the Act before any qualifying hospital receives more than 1 residency position.

In section V.F.2. of this proposed rule we discuss our proposal to first distribute slots by prorating the available 200 positions among all qualifying hospitals such that each qualifying hospital receives up to 1.00 FTE—that is, 1.00 FTE or a fraction of 1.00 FTE. We are proposing that a qualifying hospital is a Category One, Category Two, Category Three, or Category Four hospital, or one that meets the definitions of more than one of these categories, as defined at section 1886(h)(10)(F)(iii) of the Act.[890] We are proposing that if any residency slots remain after distributing up to 1.00 FTE to each qualifying hospital, we will prioritize the distribution of the remaining slots based on the HPSA score associated with the program for which each qualifying hospital is applying using the methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). Using this HPSA prioritization method, we are proposing to limit a qualifying hospital's total award under section 4122 of the CAA, 2023, to 10.00 additional FTEs, consistent with section 1886(h)(10)(C)(i) of the Act.

We are considering an alternative approach to distributing the 200 residency slots under section 4122 of the CAA, 2023, which would place greater emphasis on the distribution of additional residency positions to hospitals that are training residents in geographic and population HPSAs. Under this approach, the statutory requirement that each qualifying hospital receive 1 slot or a fraction of 1 slot would be met by awarding each qualifying hospital 0.01 FTE. The remaining residency slots would be prioritized for distribution based on the HPSA score associated with the program for which each hospital is applying using the HPSA prioritization methodology we finalized for purposes of implementing section 126 of the CAA, 2021 (86 FR 73434 through 73440). To illustrate, if 1,000 qualifying hospitals were to apply under section 4122 of the CAA, 2023, we would first award each qualifying hospital 0.01 FTEs, resulting in the distribution of 10.00 FTEs (1,000 x 0.01). We would then distribute the remaining 190 slots (200 − 10) based on the HPSA prioritization method we finalized for implementation of section 126 of the CAA, 2021, such that applications associated with higher HPSA scores would receive priority. We believe that under this alternative distribution methodology we would further the work achieved by section 126 of the CAA, 2021, by distributing residency slots to underserved areas in greatest need of additional physicians. Using this alternative distribution methodology, we would limit a qualifying hospital's total award under section 4122 of the CAA, 2023, to 10.00 additional FTEs consistent with section 1886(h)(10)(C)(i) of the Act. Consistent with the methodology we use for implementation of section 126 of the CAA, 2021, as part of determining eligibility for additional slots, we would compare the hospital's FTE resident count to its adjusted FTE resident cap on the cost report worksheets submitted with its application. If the hospital's FTE count is below its adjusted FTE cap, the hospital would be ineligible for its full FTE request. We note that in calculating the adjusted FTE cap we do not consider adjustments for Medicare GME Affiliation Agreements, since these adjustments are temporary. We seek comment on this alternative proposal, including awarding each qualifying hospital 0.01 FTEs and use of HPSA scores to determine priority for remaining slots.

2. Alternative Considered for the Proposed Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.J. of the preamble of this proposed rule, we are proposing a separate payment to hospitals for the IPPS share of the additional costs of establishing and maintaining access to a 6-month buffer stock of one or more essential medicines, either directly or through contractual arrangement with pharmaceutical manufacturers, distributors, or intermediaries. Eligibility for payment under this proposed policy would be limited to small, independent hospitals with 100 or fewer beds that are not part of a chain organization. As also discussed in section V.J. of the preamble of this proposed rule, this proposal was informed by commenter feedback on the Request for Comment on a potential Medicare payment policy that would provide separate payment for Medicare's share of the inpatient costs of establishing and maintaining a 3-month buffer stock of one or more essential medicines for all IPPS hospitals, included in the CY 2024 OPPS/ASC proposed rule (88 FR 49867).

As part of a broader HHS initiative to address the detrimental effects of drug shortages, our intention with this proposed payment policy is to help insulate small, independent hospitals, and the inpatient care they provide, from the negative effects of drug shortages and promote the overall resiliency of drug supply chains without exacerbating existing shortages or contributing to hoarding behaviors for essential medicines during active shortages. As discussed in section V.J. of the preamble of this proposed rule, the appropriate time to establish a buffer stock for a drug is before it goes into shortage or after a shortage period has ended. In order to further mitigate any potential for the proposed policy to exacerbate existing shortages or contribute to hoarding, if an essential medicine is listed as ''Currently in Shortage'' on the FDA Drug Shortages Database, we are proposing that no separate buffer stock payment for that medicine would be made unless the hospital had already established and was maintaining a buffer stock of that medicine prior to the shortage. We believe that this approach is necessary to avoid rewarding hoarding behaviors, which we believe are not consistent with resiliency goals. If an essential medicine is listed as ''Currently in Shortage'' on the FDA Drug Shortages Database, we are proposing that a hospital that newly establishes a buffer stock of that medicine while it is in shortage would not be eligible for separate buffer stock payment for that medicine for the duration of the shortage. However, if a hospital had already established and was maintaining a buffer stock of that medicine prior to the shortage, we are proposing that the hospital would continue to be eligible for separate buffer stock payment for that medicine for the duration of the shortage. We are proposing that hospital would continue to be eligible even if the number of months of supply of that medicine in the buffer stock were to drop to less than 6 months as the hospital draws down that buffer stock. Once an

[890] Category One consists of hospitals that are located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or have been reclassified being located in a rural area (pursuant to section 1886(d)(8)(E) of the Act). Category Two consists of hospitals in which the reference resident level of the hospital (as specified in section 1886(h)(10)(F)(iv) of the Act) is greater than the otherwise applicable resident limit. Category Three consists of hospitals located in States with new medical schools that received 'Candidate School' status from the Liaison Committee on Medical Education (LCME) or that received 'Pre-Accreditation' status from the American Osteopathic Association (AOA) Commission on Osteopathic College Accreditation (the COCA) on or after January 1, 2000, and that have achieved or continue to progress toward 'Full Accreditation' status (as such term is defined by the LCME) or toward 'Accreditation' status (as such term is defined by the COCA); or additional locations and branch campuses established on or after January 1, 2000, by medical schools with 'Full Accreditation' status (as such term is defined by LCME) or 'Accreditation' status (as such term is defined by the COCA). Category Four consists of hospitals that serve areas designated as HPSAs under section 332(a)(1)(A) of the Public Health Service Act (PHSA), as determined by the Secretary.

essential medicine is no longer listed as ''Currently in Shortage'' in the FDA Drug Shortages Database, our proposed policy does not differentiate that essential medicine from other essential medicines and hospitals would be eligible to establish and maintain buffer stocks for the medicine as they would have before the shortage.

We also considered an alternative to this policy whereby a hospital would no longer be eligible for separate payment for the buffer stock of an essential medicine beginning on the day the medicine is listed as ''Currently in Shortage'' on the FDA Drug Shortages Database, even if the hospital had already established and was maintaining a buffer stock of that medicine prior to the shortage. Under this alternative approach, the separate payment would not be available for the portion of the cost reporting period during which the medicine is listed on the FDA Drug Shortages Database. However, as this separate payment is proposed to be limited to small, independent hospitals, we do not believe such an approach is necessary, as we do not believe these hospitals would have the ability to continue to acquire essential medicines for their buffer stocks during an active shortage the way that larger hospitals and chain hospitals may be able to do. If we proposed different hospital eligibility requirements, including larger hospitals or chain hospitals that have greater ability to continue to acquire and potentially hoard an essential medicine in active shortage, we would likely have proposed to limit eligibility for separate payment for the buffer stock during a given cost reporting period in this alternative manner. We were also concerned about the potential administrative burden of record keeping and additional monitoring of the FDA Drug Shortages Database on these small, independent hospitals if this alternative policy was proposed.

We also considered whether a certain period of time, 6 months for example, should elapse before an essential medicine that was listed as ''Currently in Shortage'' on the FDA Drug Shortages Database would become eligible for separate payment for the additional resource costs of establishing and maintaining a 6-month buffer stock. Had we proposed different hospital eligibility requirements for the separate payment, including larger hospitals or chain hospitals as mentioned previously, we may have proposed such a requirement to account for the ramp up time that manufacturers need to reestablish supply of a given drug in shortage and to not reward potential hoarding behaviors. Because the buffer stocks that small, independent hospitals would require are likely smaller compared to larger hospitals and hospital chains, we do not believe that these hospitals would induce substantial demand shocks in the pharmaceutical supply chain through establishing their respective buffer stocks of essential medicines immediately following an active shortage of an essential medicine. Therefore, we do not believe it is necessary to require that a certain period of time should elapse after an essential medicine is no longer listed as ''Currently in Shortage'' before that medicine becomes eligible for separate payment under our proposed policy.

As discussed in section V.J. of the preamble of this proposed rule, we are proposing that for purposes of the proposed separate payment under the IPPS, the costs of buffer stocks that would be eligible for separate payment are the additional resource costs of establishing and maintaining access to a 6-month buffer stock for any eligible medicines on ARMI's List of 86 essential medicines, including any subsequent revisions to that list of medicines. We are proposing that if the ARMI List is updated to add or remove any essential medicines, all medicines on the updated list would be eligible for separate payment under this policy for the IPPS shares of the costs of establishing and maintaining access to 6-month buffer stocks as of the date the updated ARMI List is published. However, we recognize that the ARMI List does not include certain medicines that have recently been in shortage and that may be considered essential and are more prevalent in specific care settings other than an inpatient hospital, such as drugs used in oncology care on an outpatient basis. We considered providing separate payment under this proposal for establishing and maintaining access to a buffer stock of a broader list of medicines than just those on the ARMI List, for example, to include certain types of oncology drugs. To the extent that in the future other lists or medicines (such as buprenorphine-based medications or oncology drugs) are identified for eligibility in future iterations of this policy, we are seeking comment on the potential mechanism and timing for incorporating those updates.

3. Alternatives Considered to the LTCH QRP Reporting Requirements

With regard to the proposal to add three assessment items to the LCDS and replace one assessment item on the LCDS, we believe these proposals will advance the CMS National Quality Strategy Goals of equity and engagement. We considered the alternative of delaying the proposal to collect these assessment items, but given the fact they will encourage meaningful collaboration between healthcare providers, caregivers, and community-based organizations to address HRSNs prior to discharge from the LTCH, we believe further delay is unwarranted. With regard to the proposal to extend the LCDS Admission assessment window, we considered the option of maintaining the current 3-day assessment period versus extending it to 4 days. However, this proposal is responsive to providers' feedback we received regarding the difficulty of collecting the required LCDS data elements within the 3-day assessment window when medically complex patients are admitted prior to and on weekends. Additionally, extending the assessment period would have no impact on the calculation of LTCH QRP measures, and would only require minimal revisions to the LCDS guidance manuals.

4. Alternatives Considered for the FY 2025 LTCH PPS Outlier Fixed-Loss Threshold

As discussed in section V.D.3. of the Addendum of this proposed rule, we are proposing a fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 of $90,921 that would result in estimated outlier payments projected to be equal to 7.975 percent of estimated FY 2025 payments for such cases. We acknowledge that the proposed increase to the fixed-loss amount from the FY 2024 fixed-loss amount ($59,873) is substantial. We also acknowledge that the FY 2024 fixed-loss amount was substantially higher than the FY 2023 fixed-loss amount ($38,518). We recognize that such substantial increases to the fixed-loss amount in consecutive years could impact LTCH operations.

For this reason, as an alternative to our proposed fixed-loss threshold, using the broad authority conferred upon the Secretary under section 307(b)(1) of the BIPA to make ''adjustment'' to ''outliers'' under the LTCH prospective payment system, we considered proposing to establish the FY 2025 fixed-loss amount as an average of the FY 2024 fixed-amount ($59,873) and our modelled FY 2025 fixed-loss amount ($90,921). Under this approach, the proposed fixed-loss amount would have been $75,397 (($59,873 + $90,921)/2). This alternative approach would provide a 1-year transition to the full increase to the fixed-loss amount for LTCH PPS standard Federal payment rate cases that we project would result in estimated outlier payments projected to be equal to 7.975 percent of estimated payments for such cases.

We estimate that this alternative fixed-loss amount would result in estimated outlier payments projected to be equal to 9.5 percent of estimated FY 2025 payments for such cases. Under this approach, the estimated difference between the 7.975 percent target and the estimated percentage of outlier payments under the alternative fixed-loss amount would be non-budget neutral. As we have previously stated in the RY 2007 LTCH PPS final rule (71 FR 27863 through 27864) and most recently in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59426), we believe that the mandate in section 123(a)(1) of the BBRA for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). We estimate that aggregate FY 2025 LTCH PPS payments would increase by $39 million under this alternative approach, based on the data used in this proposed rule. We are soliciting comments on both our proposed methodology for determining the FY 2025 fixed-loss amount discussed in section V.D.3. of the Addendum of this proposed rule and the alternative approach discussed in this section. We will consider these comments when finalizing the fixed-loss amount for LTCH PPS standard Federal payment rate cases for FY 2025 in the final rule.

5. Alternatives Considered for the Transforming Episode Accountability Model

In section X.A. of the preamble of this proposed rule, we are proposing to test a new mandatory episode-based payment model called the Transforming Episode Accountability Model (TEAM). TEAM is designed to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft, lower extremity joint replacement, major bowel procedure, surgical hip/femur fracture treatment, and spinal fusion. TEAM would test whether financial accountability

for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM would benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare FFS payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode.

Throughout this proposed rule, we have identified our proposed policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the proposed policies. For example, we considered allowing physician group practices (PGPs) be TEAM participants, however, we are concerned that PGPs are generally smaller entities and care for a lower volume of Medicare beneficiaries which could make it challenging to take on the level of financial risk to participate in the model. We solicit and welcome comments on our proposals, on the alternatives we have identified, and on other alternatives that we should consider. We note that our estimates are limited to acute care hospitals that may be selected to participate in this proposed model. This proposed model would not directly affect hospitals that are not participating in the model. However, the model may encourage innovations in health care delivery in other areas or in care reimbursed through other payers. For example, a TEAM participant may choose to extend their arrangements to arrangements outside of the model for all surgical procedures they provide, as permitted by all applicable laws, not just those reimbursed by Medicare and tested in TEAM. We welcome comments on our proposals and the alternatives we have identified in the preamble.

P. Overall Conclusion

1. Acute Care Hospitals

Acute care hospitals are estimated to experience an increase of approximately $3.2 billion in FY 2025, including operating, capital, and the combined effects of (1) the proposed changes to add-on payments for certain ESRD discharges, (2) the proposed payment adjustment for establishing and maintaining access to a buffer stock of essential medicines, (3) new technology add-on payment changes, and (4) the statutory expiration of the MDH program and the temporary changes to the low-volume hospital payment adjustment on January 1, 2025. The estimated change in operating payments is approximately $3.1 billion (discussed in sections I.F of this Appendix). The estimated change in capital payments is approximately $0.183 billion (discussed in section I.I. of this Appendix). The estimated change in the combined effects of (1) the proposed changes to add-on payments for certain ESRD discharges, (2) the proposed payment adjustment for establishing and maintaining access to a buffer stock of essential medicines, (3) new technology add-on payment changes, and (4) the statutory expiration of the temporary changes to the low-volume hospital payment adjustment on January 1, 2025 is approximately −$0.158 billion as discussed in sections I.F and I.G. of this Appendix. Totals may differ from the sum of the components due to rounding.

Table I. of section I.F. of this Appendix also demonstrates the estimated redistributional impacts of the IPPS budget neutrality requirements for the proposed MS–DRG and proposed wage index changes, and for the wage index reclassifications under the MGCRB.

We estimate that hospitals will experience a 2.4 percent increase in capital payments per case, as shown in Table III. of section I.I. of this Appendix. We project that there will be a $183 million increase in capital payments in FY 2025 compared to FY 2024.

The discussions presented in the previous pages, in combination with the remainder of this proposed rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience an increase in estimated payments in FY 2025. In the impact analysis, we are using the rates, factors, and policies presented in this proposed rule based on the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2025. Accordingly, based on the best available data for the 330 LTCHs included in our analysis, we estimate that overall FY 2025 LTCH PPS payments would increase approximately $41 million relative to FY 2024, primarily due to the proposed annual update to the LTCH PPS standard Federal rate partially offset by an estimated decrease in high-cost outlier payments.

Q. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret a rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's proposed rule will be the number of reviewers of this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing the rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We recognize that different types of entities are in many cases affected by mutually exclusive sections of the rule. Thus, for the purposes of our estimate we assume that each reviewer read approximately 50 percent of the proposed rule. Finally, in our estimates, we have used the 3,274 number of timely pieces of correspondence on the FY 2024 IPPS/LTCH proposed rule as our estimate for the number of reviewers of this rule. We continue to acknowledge the uncertainty involved with using this number, but we believe it is a fair estimate due to the variety of entities affected and the likelihood that some of them choose to rely (in full or in part) on press releases, newsletters, fact sheets, or other sources rather than the comprehensive review of preamble and regulatory text. We seek comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing the proposed rule is $100.80 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 20.83 hours for the staff to review half of this proposed rule. For each IPPS hospital or LTCH that reviews this proposed rule, the estimated cost is $2,099.66 (20.83 hours × $100.80). Therefore, we estimate that the total cost of reviewing this proposed rule is $6,874,299.94 ($2,099.66 × 3,274 reviewers).

II. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), in Table V. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the proposed changes to the IPPS presented in this proposed rule. All expenditures are classified as transfers to Medicare providers.

As shown in Table V. of this Appendix, the net costs to the Federal Government associated with the policies in this proposed rule are estimated at $3.2 billion.

TABLE V.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2024 TO FY 2025

Category	Transfers
Annualized Monetized Transfers	$3.2 billion
From Whom to Whom	Federal Government to IPPS Medicare Providers

B. LTCHs

As discussed in section I.J. of this Appendix, the impact analysis of the payment rates and factors presented in this proposed rule under the LTCH PPS is projected to result in an increase in estimated aggregate LTCH PPS payments in FY 2025 relative to FY 2024 of approximately $41 million based on the data for 330 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), in Table VI. of this Appendix, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this proposed rule as they relate LTCHs. Table VI. of this Appendix provides our best estimate of the estimated change in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this proposed rule based on the data for the 330 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs).

As shown in Table VI. of this Appendix, the net cost to the Federal Government associated with the policies for LTCHs in this proposed rule are estimated at $41 million.

TABLE VI.—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2024 LTCH PPS TO THE FY 2025 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	$41 million
From Whom to Whom	Federal Government to LTCH Medicare Providers

III. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $8.0 million to $41.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 38 of the Table of Small Business Size Standards for NAIC 622 found on the SBA website at *https://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf*.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Because all hospitals are considered to be small entities for purposes of the RFA, the hospital impacts described in this proposed rule are impacts on small entities. Individuals and States are not included in the definition of a small entity. MACs are not considered to be small entities because they do not meet the SBA definition of a small business.

HHS's practice in interpreting the RFA is to consider effects economically ''significant'' if greater than 5 percent of providers reach a threshold of 3 to 5 percent or more of total revenue or total costs. We believe that the provisions of this proposed rule relating to IPPS hospitals would have an economically significant impact on small entities as explained in this Appendix. Therefore, the Secretary has certified that this proposed rule would have a significant economic impact on a substantial number of small entities. For example, the majority of the 3,090 IPPS hospitals included in the impact analysis shown in ''Table I.—Impact Analysis of Proposed Changes to the IPPS for Operating Costs for FY 2025,'' on average are expected to see increases in the range of 2.4 percent, primarily due to the proposed hospital rate update, as discussed in section I.F. of this Appendix. On average, the proposed rate update for these hospitals is estimated to be 2.4 percent.

The 330 LTCH PPS hospitals included in the impact analysis shown in ''Table IV: Impact of Proposed Payment Rate and Policy Changes to LTCH PPS Payments for LTCH PPS Standard Federal Payment Rate Cases for FY 2025 (Estimated FY 2024 Payments Compared to Estimated Proposed FY 2025 Payments)'' on average are expected to see an increase of approximately 1.2 percent, primarily due to the proposed annual standard Federal rate update for FY 2025 (2.8 percent) being partially offset by a projected 1.3 percent decrease in high cost outlier payments as a percentage of total LTCH PPS standard Federal payment rate payments, as discussed in section I.J. of this Appendix.

This proposed rule contains a range of proposals. It provides descriptions of the statutory provisions that are addressed, identifies the proposed policies, and presents rationales for our decisions and, where relevant, alternatives that were considered. The analyses discussed in this Appendix and throughout the preamble of this proposed rule constitutes our regulatory flexibility analysis. We are seeking public comments on our estimates and analysis of the impact of our proposals on small entities.

IV. Impact on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals.

As shown in Table I. in section I.F. of this Appendix, rural IPPS hospitals with 0–49 beds (350 hospitals) are expected to experience an increase in payments from FY 2024 to FY 2025 of 0.7 percent and rural IPPS hospitals with 50–99 beds (183 hospitals) are expected to experience no change in payments from FY 2024 to FY 2025. These changes are primarily driven by the proposed hospital rate update offset by the statutory expiration of the MDH program. We refer readers to Table I. in section I.F. of this Appendix for additional information on the quantitative effects of the proposed policy changes under the IPPS for operating costs.

All rural LTCHs (18 hospitals) shown in Table IV. in section I.J. of this Appendix have less than 100 beds. These hospitals are

expected to experience an increase in payments from FY 2024 to FY 2025 of 2.3 percent. This increase is primarily due to the combination of the proposed 2.8 percent annual update to the LTCH PPS standard Federal payment rate for FY 2025, the proposed changes to the area wage level adjustment, and estimated changes in outlier payments, as discussed in section I.J. of this Appendix.

V. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2024, that threshold level is approximately $183 million. This proposed rule would not mandate any requirements that meet the threshold for State, local, or tribal governments, nor would it affect private sector costs.

VI. Executive Order 13132

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications. This proposed rule would not have a substantial direct effect on state or local governments, preempt states, or otherwise have a federalism implication.

VII. Executive Order 13175

Executive Order 13175 directs agencies to consult with Tribal officials prior to the formal promulgation of regulations having tribal implications. Section 1880(a) of the Act states that a hospital of the Indian Health Service, whether operated by such Service or by an Indian tribe or tribal organization, is eligible for Medicare payments so long as it meets all of the conditions and requirements for such payments which are applicable generally to hospitals. Consistent with section 1880(a) of the Act, this proposed rule contains general provisions also applicable to hospitals and facilities operated by the Indian Health Service or Tribes or Tribal organizations under the Indian Self-Determination and Education Assistance Act. We continue to engage in consultations with Tribal officials on IPPS issues of interest. We will use input received from these consultations, as well as the comments on the proposed rule, to inform this rulemaking.

VIII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget reviewed this proposed rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2025, consistent with our approach for FY 2024, we are including the Secretary's recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2025

A. Proposed FY 2025 Inpatient Hospital Update

As discussed in section V.B. of the preamble to this proposed rule, for FY 2025, consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the productivity adjustment). Section 1886(b)(3)(B)(xi) of the Act, as added by section 3401(a) of the Affordable Care Act, states that application of the productivity adjustment may result in the applicable percentage increase being less than zero.

We note that, in compliance with section 404 of the MMA, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45194 through 45204), we replaced the 2014-based IPPS operating and capital market baskets with the rebased and revised 2018-based IPPS operating and capital market baskets beginning in FY 2022.

In this FY 2025 IPPS/LTCH PPS proposed rule, in accordance with section 1886(b)(3)(B) of the Act, we are proposing to base the proposed FY 2025 market basket update used to determine the applicable percentage increase for the IPPS on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket rate-of-increase with historical data through third quarter 2023, which is estimated to be 3.0 percent. In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B. of the preamble of this FY 2025 IPPS/LTCH PPS proposed rule, based on IGI's fourth quarter 2023 forecast, we are proposing a productivity adjustment of 0.4 percentage point for FY 2025. We are also proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2025 market basket update and productivity adjustment for the FY 2025 IPPS/LTCH PPS final rule.

Therefore, based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket update and the productivity adjustment, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we are proposing four possible applicable percentage increases that could be applied to the standardized amount, as shown in the following table.

FY 2025	Hospital Submitted Quality Data and is a Meaningful EHR User	Hospital Submitted Quality Data and is NOT a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is a Meaningful EHR User	Hospital Did NOT Submit Quality Data and is NOT a Meaningful EHR User
Proposed Market Basket Rate-of-Increase	3.0	3.0	3.0	3.0
Proposed Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.75	-0.75
Proposed Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-2.25	0.0	-2.25
Proposed Productivity Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.4	-0.4	-0.4	-0.4
Proposed Applicable Percentage Increase Applied to Standardized Amount	**2.6**	**0.35**	**1.85**	**-0.4**

B. Proposed FY 2025 SCH and MDH Update

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2025 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

Section 307 of the Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program for FY 2025 discharges occurring before January 1, 2025. Prior to enactment of the CAA, 2024, the MDH program was only to be in effect through the end of FY 2024. Therefore, under current law, the MDH program will expire for discharges on or after January 1, 2025. We refer readers to section V.E. of the preamble of this proposed rule for further discussion of the MDH program.

As previously stated, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are proposing the same four possible applicable percentage increases in the previous table for the hospital-specific rate applicable to SCHs and MDHs.

C. Proposed FY 2025 Puerto Rico Hospital Update

Because Puerto Rico hospitals are no longer paid with a Puerto Rico-specific standardized amount under the amendments to section 1886(d)(9)(E) of the Act, there is no longer a need for us to make an update to the Puerto Rico standardized amount. Hospitals in Puerto Rico are now paid 100 percent of the national standardized amount and, therefore, are subject to the same update to the national standardized amount discussed under section V.B.1. of the preamble of this proposed rule.

In addition, as discussed in section V.B.2. of the preamble of this proposed rule, section 602 of Public Law 114–113 amended section 1886(n)(6)(B) of the Act to specify that subsection (d) Puerto Rico hospitals are eligible for incentive payments for the meaningful use of certified EHR technology, effective beginning FY 2016. In addition, section 1886(n)(6)(B) of the Act was amended to specify that the adjustments to the applicable percentage increase under section 1886(b)(3)(B)(ix) of the Act apply to subsection (d) Puerto Rico hospitals that are not meaningful EHR users, effective beginning FY 2022.

Section 1886(b)(3)(B)(ix) of the Act in conjunction with section 602(d) of Public Law 114–113 requires that for FY 2024 and subsequent fiscal years, any subsection (d) Puerto Rico hospital that is not a meaningful EHR user as defined in section 1886(n)(3) of the Act and not subject to an exception under section 1886(b)(3)(B)(ix) of the Act will have a reduction of three-quarters of the applicable percentage increase (prior to the application of other statutory adjustments).

Based on IGI's fourth quarter 2023 forecast of the 2018-based IPPS market basket update with historical data through third quarter 2023, for this FY 2025 proposed rule, in accordance with section 1886(b)(3)(B) of the Act, as previously discussed, for Puerto Rico hospitals, we are proposing a market basket update of 3.0 percent and a productivity adjustment of 0.4 percentage point. Therefore, for FY 2025, depending on whether a Puerto Rico hospital is a meaningful EHR user, there are two possible applicable percentage increases that can be applied to the standardized amount. Based on these data, we are proposing the following applicable percentage increases to the standardized amount for FY 2025 for Puerto Rico hospitals:

- For a Puerto Rico hospital that is a meaningful EHR user, we are proposing an applicable percentage increase to the operating standardized amount of 2.6 percent (that is, the FY 2025 estimate of the proposed market basket rate-of-increase of 3.0 percent less an adjustment of 0.4 percentage point for the proposed productivity adjustment).
- For a Puerto Rico hospital that is not a meaningful EHR user, we are proposing an applicable percentage increase to the operating standardized amount of 0.35 percent (that is, the FY 2025 estimate of the proposed market basket rate-of-increase of 3.0 percent, less an adjustment of 2.25 percentage point (the proposed market basket rate-of-increase of 3.0 percent × 0.75 for failure to be a meaningful EHR user), and less an adjustment of 0.4 percentage point for the proposed productivity adjustment).

As noted previously, we are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2025 market basket update and the productivity adjustment for the FY 2025 IPPS/LTCH PPS final rule.

D. Proposed Update for Hospitals Excluded From the IPPS for FY 2025

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and America Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, religious nonmedical health care institutions (RNHCIs) are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. In addition, in accordance with § 412.526(c)(3) of the regulations, extended neoplastic disease care hospitals (described in § 412.22(i) of the regulations) also are subject to the rate-of-increase limits. As discussed in section VI. of the preamble of this proposed rule, we are proposing to use the percentage increase in the 2018-based IPPS operating market basket to update the target amounts for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and extended neoplastic disease care hospitals for FY 2025 and subsequent fiscal years. Accordingly, for FY 2025, the rate-of-increase percentage to be applied to the target amount for these children's hospitals, cancer hospitals, RNHCIs, extended neoplastic disease care hospitals, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa is the FY 2025 percentage increase in the 2018-based IPPS operating market basket. For this proposed rule, the current estimate of the IPPS operating market basket

percentage increase for FY 2025 is 3.0 percent. We are proposing that if more recent data subsequently become available, we would use such data, if appropriate, to determine the FY 2025 market basket update for the FY 2025 IPPS/LTCH PPS final rule.

E. Proposed Update for LTCHs for FY 2025

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this proposed rule, we are proposing to update the LTCH PPS standard Federal payment rate for FY 2025 by 2.8 percent, consistent with section 1886(m)(3) of the Act which provides that any annual update be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (that is, the productivity adjustment). Furthermore, in accordance with the LTCH QR Program under section 1886(m)(5) of the Act, we are proposing to reduce the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to submit the required quality data. Accordingly, we are proposing to establish an update factor of 1.028 in determining the LTCH PPS standard Federal rate for FY 2025. For LTCHs that fail to submit quality data for FY 2025, we are proposing to establish an annual update to the LTCH PPS standard Federal rate of 0.8 percent (that is, the proposed annual update for FY 2025 of 2.8 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying a proposed update factor of 1.008 in determining the LTCH PPS standard Federal rate for FY 2025. (We note that, as discussed in section VII.D. of the preamble of this proposed rule, the proposed update to the LTCH PPS standard Federal payment rate of 2.8 percent for FY 2025 does not reflect any budget neutrality factors.)

III. Secretary's Recommendations

MedPAC is recommending inpatient hospital rates be updated by the amount specified in current law plus 1.5 percent. MedPAC's rationale for this update recommendation is described in more detail in this section. As previously stated, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa and extended neoplastic disease care hospitals of 3.0 percent.

For FY 2025, consistent with policy set forth in section VII. of the preamble of this proposed rule, for LTCHs that submit quality data, we are recommending an update of 2.8 percent to the LTCH PPS standard Federal rate. For LTCHs that fail to submit quality data for FY 2025, we are recommending an annual update to the LTCH PPS standard Federal rate of 0.8 percent.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2024 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates by the amount specified in current law plus 1.5 percent. MedPAC anticipates that their recommendation to update the IPPS payment rate by the amount specified under current law plus 1.5 percent in 2025 would generally be adequate to maintain beneficiaries' access to hospital inpatient and outpatient care and keep IPPS payment rates close to, if somewhat below, the cost of delivering high-quality care efficiently.

MedPAC stated that their recommended update to IPPS and OPPS payment rates of current law plus 1.5 percent may not be sufficient to ensure the financial viability of some Medicare safety-net hospitals with a poor payer mix. MedPAC recommends redistributing the current Medicare safety-net payments (disproportionate share hospital and uncompensated care payments) using the MedPAC-developed Medicare Safety-Net Index (MSNI) for hospitals. In addition, MedPAC recommends adding $4 billion to this MSNI pool of funds to help maintain the financial viability of Medicare safety-net hospitals and recommended to Congress transitional approaches for a MSNI policy.

We refer readers to the March 2024 MedPAC report, which is available for download at *www.medpac.gov,* for a complete discussion on these recommendations.

We are proposing an applicable percentage increase for FY 2025 of 2.6 percent as described in section 1886(b)(3)(B) of the Act, provided the hospital submits quality data and is a meaningful EHR user consistent with these statutory requirements. We note that, because the operating and capital payments in the IPPS remain separate, we are continuing to use separate updates for operating and capital payments in the IPPS. The proposed update to the capital rate is discussed in section III. of the Addendum to this proposed rule.

We note that section 1886(d)(5)(F) of the Act provides for additional Medicare payment adjustments, called Medicare disproportionate share hospital (DSH) payments, for subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. Section 1886(r) of the Act provides that, for FY 2014 and each subsequent fiscal year, the Secretary shall pay each such subsection (d) hospital that is eligible for Medicare DSH payments an empirically justified DSH payment equal to 25 percent of the Medicare DSH adjustment they would have received under section 1886(d)(5)(F) of the Act if subsection (r) did not apply. The remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments if subsection (r) of the Act did not apply, reduced to reflect changes in the percentage of individuals who are uninsured, is available to make additional payments to each hospital that qualifies for Medicare DSH payments and has uncompensated care. These additional payments are called uncompensated care payments. We refer readers to section IV. of this proposed rule for a further discussion of Medicare DSH and uncompensated care payments.
