FEDERAL REGISTER

Vol. 89 Thursday,
No. 86 May 2, 2024

Pages 35685–36650

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register
Vol. 89, No. 86
Thursday, May 2, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

FEDERAL ELECTION COMMISSION

11 CFR Part 4

[Notice 2024–13]

FOIA Improvement Act

AGENCY: Federal Election Commission.

ACTION: Interim final rule; request for comments.

SUMMARY: Congress enacted the FOIA Improvement Act of 2016, which amends the Freedom of Information Act, as relevant here, to require Federal agencies to change how certain records and documents are made available for public inspection. The Commission is amending its regulations to implement this statutory mandate. The Commission is accepting comments on these revisions to its regulations, and any comments received may be addressed in a subsequent rulemaking document.

DATES: Effective July 1, 2024. Comments must be received on or before June 3, 2024.

ADDRESSES: All comments should be addressed to Ms. Amy L. Rothstein, Assistant General Counsel, and must be submitted in either written or electronic form. Commenters are encouraged to submit comments electronically via the Commission's website at *https://sers.fec.gov/fosers,* reference REG 2024–02. Alternatively, comments may be submitted in paper form addressed to the Federal Election Commission, Attn.: Ms. Amy L. Rothstein, Assistant General Counsel, 1050 First Street NE, Washington, DC.

Each commenter must provide, at a minimum, the commenter's first name, last name, city, and state. All properly submitted comments, including attachments, will become part of the public record, and the Commission will make comments available for public viewing on the Commission's website and in the Commission's Public Records Office. Accordingly, commenters should not provide in their comments any information that they do not wish to make public, such as a home street address, personal email address, date of birth, phone number, social security number, or driver's license number, or any information that is restricted from disclosure, such as trade secrets or commercial or financial information that is privileged or confidential.

FOR FURTHER INFORMATION CONTACT: Ms. Amy Rothstein, Assistant General Counsel, Ms. Joanna Waldstreicher or Ms. Sarah Herman Peck, Attorneys, (202) 694–1650 or (800) 424–9530.

SUPPLEMENTARY INFORMATION:

A. Background

The FOIA Improvement Act of 2016 (the ''FOIA Improvement Act'') amends the Freedom of Information Act (''FOIA''), as relevant here, to require Federal agencies to change how certain records and documents are made available for public inspection.[1] In particular, the FOIA Improvement Act directs Federal agencies to make certain records available in electronic format for public inspection; prohibits, subject to exception, an agency from charging fees to a FOIA requester if the agency misses a deadline after receiving a FOIA request; requires agencies to notify FOIA requesters who have received adverse determinations about their right to seek dispute resolution services; prohibits agencies from withholding information requested under FOIA unless the agencies reasonably foresee that disclosure would harm an interest protected by a FOIA exemption or the disclosure is prohibited by law; requires agencies withholding information requested under FOIA to consider whether partial disclosure is possible; and eliminates an exemption from disclosure under FOIA of certain agency records created at least 25 years before the date of the FOIA request.[2] The FOIA Improvement Act also explicitly directs the head of each Federal agency to promulgate regulations to implement these changes to its FOIA practices.[3]

To implement the FOIA Improvement Act's mandates, the Commission is now amending 11 CFR 4.4 through 4.5 and 4.7 through 4.9, setting forth the Commission's obligations and procedures for disclosing documents under FOIA. Before final promulgation of any rules or regulations to carry out the provisions of the Federal Election Campaign Act, the Commission transmits the rules or regulations to the Speaker of the House of Representatives and the President of the Senate for a thirty-legislative-day review period.[4] The effective date of this final rule is July 1, 2024. The Commission welcomes public comment on this interim final rule and may address any comments received in a later rulemaking document.

The Commission is promulgating these amendments without advance notice or an opportunity for comment because they fall under the ''good cause'' exemption of the Administrative Procedure Act.[5] The Commission finds that notice and comment are unnecessary here because the changes are technical amendments to conform with explicit statutory requirements. Amending these regulatory provisions does not involve any exercise of discretion by the Commission. Moreover, because Congress has already enacted the changes to FOIA through the FOIA Improvement Act, the new ''administrative rule is a routine determination, insignificant in nature and impact, and inconsequential to the industry and to the public.'' [6] For these reasons, the Commission is not required to publish a notice of proposed rulemaking to promulgate these regulatory provisions.

For the same reasons, these amendments fall within the ''good cause'' exception to the delayed effective date provisions of the Administrative Procedure Act and the Congressional Review Act.[7] Moreover, because this amendment is exempt from the notice and comment procedure of the Administrative Procedure Act under 5 U.S.C. 553(b), the Commission is not required to conduct a regulatory flexibility analysis under 5 U.S.C. 603 or 604.[8]

B. Revisions to 11 CFR Part 4—Public Records and the Freedom of Information Act

Part 4 of the Commission regulations sets forth the Commission's public records obligations under FOIA. Section 4.4 requires the Commission to make specific categories of materials available for public inspection, subject to exceptions outlined in 11 CFR 4.5.[9] Section 4.7 specifies the framework for requesting access to Commission records, and the appeal process for denied requests is delineated in 11 CFR 4.8. Notice requirements for any associated fees is provided in 11 CFR 4.9. The Commission is amending each of these five sections within 11 CFR part 4 pursuant to the FOIA Improvement Act.

(i). Revisions to 11 CFR 4.4—Availability of Records

The Commission is amending 11 CFR 4.4(a) and (c) and adding new paragraph (h) to reflect new standards for the availability of certain records.

First, current 11 CFR 4.4(a) requires the Commission to make certain materials available for public inspection and copying. The Commission is amending paragraph (a) to provide that the Commission will make those materials available for public inspection in an electronic format.

Second, current 11 CFR 4.4(a)(4) requires the Commission to make available for public inspection copies of all records that have been released to any person under paragraph (a) and which the agency has determined have become or are likely to become the subject of subsequent requests. The Commission is amending paragraph (a)(4) to provide that the Commission will make available for public inspection copies of all records that have been released to any person under paragraph (a) three or more times or which the agency determines have become or are likely to become subject to subsequent requests.

Third, current 11 CFR 4.4(c) provides, in part, that the Commission must maintain and make available current indexes providing identifying information regarding any matter issued, adopted, or promulgated after April 15, 1975, as required by 5 U.S.C. 552(a)(2)(C) and (E). The Commission is amending paragraph (c) to provide that these indexes will be made available in an electronic format.

Lastly, the Commission is adding new 11 CFR 4.4(h) to provide that the Commission will withhold releasing information under § 4.4 only if the Commission reasonably foresees that disclosure would harm an interest protected by an exemption listed in 11 CFR 4.5(a) or disclosure is prohibited by law. New paragraph (h) also provides that, when the Commission determines full disclosure of a requested record is not possible, the Commission will consider whether partial disclosure is possible and will take reasonable steps necessary to segregate and release nonexempt information.

(ii). Revisions to 11 CFR 4.5—Categories of Exemptions

Current 11 CFR 4.5(a)(5) provides that no FOIA request will be denied release unless the record contains, or its disclosure would reveal, inter-agency or intra-agency memoranda or letters that would not be available by law to a party in litigation with the Commission. The Commission is amending this provision to specify that the exemption applies only to documents not available to a party other than an agency in litigation with the Commission, and that the deliberative process privilege will not apply to records created 25 years or more before the request date, consistent with the FOIA Improvement Act.

(iii). Revisions to 11 CFR 4.7—Requests for Records

The Commission is amending 11 CFR 4.7(c) and (h) and adding paragraph (j) to include new requirements for notifying requesters about the status of a request.

First, current 11 CFR 4.7(c) requires the Commission to determine, within twenty working days after receiving a request or granting an appeal, whether to comply with the request, unless in unusual circumstances the time is extended or subject to § 4.9(f)(3), which governs advance payments. The Commission is amending 11 CFR 4.7(c) to provide that the Commission will immediately notify the requester of the determination, the reasons therefore, and the requester's right to seek assistance from the Commission's FOIA Public Liaison and to seek dispute resolution services from the National Archives and Records Administration (''NARA''), Office of Government Information Services.

Second, current 11 CFR 4.7(h) provides that any person denied access to records by the Commission must be notified immediately, stating the reasons for the denial. The notice must also state that the person denied access to records may appeal the adverse determination to the Commission. The Commission is amending this paragraph to provide that the person denied access will be notified of that person's right to appeal within 90 days from the date of the adverse determination. Such notice also must state that the person denied access to records may seek dispute resolution services from the Commission's FOIA Public Liaison or NARA's Office of Government Information Services.

Finally, the Commission is adding 11 CFR 4.7(j) to explain the role of, and provide contact information for, the FOIA Public Liaison.

(iv). Revisions to 11 CFR 4.8—Mediation Services and Appeal of Denial

The Commission is amending 11 CFR 4.8 by adding paragraph (h), which will notify requesters that they may seek non-compulsory, non-binding mediation services to help resolve FOIA disputes. The Commission is also amending the heading of 11 CFR 4.8 to reflect the availability of such mediation services.

(v). Revisions to 11 CFR 4.9—Fees

Finally, the Commission is amending 11 CFR 4.9(a), which lists exceptions to fee charges. The Commission is adding paragraph (a)(5) to address time limits for compliance.

New 11 CFR 4.9(a)(5)(i) provides that the Commission will not charge a fee to any requester if the Commission does not comply with the time limits in 11 CFR 4.7(c) or 4.8(f).

New 11 CFR 4.9(a)(5)(ii) provides that a failure to comply with the time limits is excused for another ten days if the Commission has determined that unusual circumstances (as defined in 5 U.S.C. 552(a)(6)(B)(i) and 11 CFR 4.7(c)) apply and has provided timely written notice to the requester under 11 CFR 4.7(c). New 11 CFR 4.9(a)(5)(ii) further provides that the Commission may not assess any search or duplication fees if it fails to comply with the extended time period.

New 11 CFR 4.9(a)(5)(iii) describes the circumstances under which the Commission may charge search or duplication fees after determining that unusual circumstances apply and more than 5,000 pages are necessary to respond to the request.

Finally, new 11 CFR 4.9(a)(5)(iv) provides that when a court has determined that exceptional circumstances exist, a failure to comply with the time limit shall be excused for the length of time provided by the court's order.

[9] Exempt documents include records that are classified, records that relate to internal personnel rules, records that are exempted by statute, records that contain trade secrets or commercial or financial information that is privileged or confidential, certain inter-agency or intra-agency documents, personnel and medical files, and certain records compiled for law enforcement purposes.

List of Subjects in 11 CFR Part 4

Freedom of information.

For the reasons set out in the preamble, the Federal Election Commission amends 11 CFR chapter I, as follows:

PART 4—PUBLIC RECORDS AND THE FREEDOM OF INFORMATION ACT

■ 1. The authority citation for part 4 continues to read as follows:

Authority: 5 U.S.C. 552, as amended.

■ 2. Amend § 4.4 by revising paragraphs (a) introductory text, (a)(4) and (c), and adding paragraph (h) to read as follows:

§ 4.4 Availability of records.

(a) In accordance with 5 U.S.C. 552(a)(2), the Commission shall make the following materials available for public inspection in an electronic format:

* * * * *

(4) Copies of all records, regardless of form or format, which have been released to any person under this paragraph (a) and;

(i) Which, because of the nature of their subject matter, the agency determines have become or are likely to become the subject of subsequent requests for substantially the same records, or

(ii) Which have been requested three or more times; and

* * * * *

(c) The Commission shall maintain and make available for public inspection in an electronic format current indexes and supplements providing identifying information regarding any matter issued, adopted, or promulgated after April 15, 1975, as required by 5 U.S.C. 552(a)(2)(C) and (E). These indexes and supplements shall be published and made available on at least a quarterly basis for public distribution unless the Commission determines by Notice in the **Federal Register** that publication would be unnecessary, impracticable, or not feasible due to budgetary considerations. Nevertheless, copies of any index or supplement shall be made available upon request at a cost not to exceed the direct cost of duplication.

* * * * *

(h) The Commission will withhold information under this section only if the Commission reasonably foresees that disclosure would harm an interest protected by an exemption described in § 4.5(a); or disclosure is prohibited by law. The Commission will consider whether partial disclosure of information is possible whenever it determines that full disclosure of a requested record is not possible, and the Commission will take reasonable steps necessary to segregate and release nonexempt information.

■ 3. Amend § 4.5 by revising paragraph (a)(5) to read as follows:

§ 4.5 Categories of exemptions.

(a) * * *

(5) Inter-agency or intra-agency memoranda or letters which would not be available by law to a party other than an agency in litigation with the Commission, provided that the deliberative process privilege shall not apply to records created 25 years or more before the date on which the records were requested.

* * * * *

■ 4. Amend § 4.7 by revising paragraphs (c) introductory text and (h) and adding paragraph (j) to read as follows:

§ 4.7 Requests for records.

* * * * *

(c) The Commission shall determine within twenty working days after receipt of a request, or twenty working days after an appeal is granted, whether to comply with such request, unless in unusual circumstances the time is extended or subject to § 4.9(f)(3), which governs advance payments. The Commission shall immediately notify the requester of such determination, the reasons therefor, and the right of the requester to seek assistance from the FOIA Public Liaison for the Commission and to seek dispute resolution services from the Office of Government Information Services. In the event the time is extended, the requester shall be notified of the reasons for the extension and the date on which a determination is expected to be made, but in no case shall the extended time exceed ten working days. An extension may be made if it is—

* * * * *

(h) Any person denied access to records by the Commission shall be notified immediately giving reasons therefor, and notified of the right of such person to appeal such adverse determination to the Commission within 90 days from the date of the adverse determination and the right of such person to seek dispute resolution services from the FOIA Public Liaison for the Commission or the Office of Government Information Services.

* * * * *

(j) The FOIA Public Liaison is responsible for reducing delays, increasing transparency and understanding of the status of requests, and assisting in the resolution of disputes. The FOIA Public Liaison may be contacted at the address identified in the definition of ''Commission'' in § 1.2 of this chapter.

■ 5. Amend § 4.8 by revising the section heading and adding paragraph (h) to read as follows:

§ 4.8 Mediation services and appeal of denial.

* * * * *

(h) The National Archives and Records Administration (NARA), Office of Government Information Services (OGIS) offers non-compulsory, non-binding mediation services to help resolve FOIA disputes as a non-exclusive alternative to litigation. A requester may contact OGIS at: Office of Government Information Services, National Archives and Records Administration, 8601 Adelphi Road, College Park, MD 20740–6001; email: *ogis@nara.gov*; telephone 202–741–5770; fax: 202–741–5769; online: *https://www.archives.gov/ogis.*

■ 6. Amend § 4.9 by adding paragraph (a)(5) to read as follows:

§ 4.9 Fees.

(a) * * *

(5) *Time limit for compliance.* (i) The Commission will not charge a fee under this section to any requester if the Commission does not comply with the time limits in § 4.7(c) or § 4.8(f).

(ii) If the Commission has determined that unusual circumstances (as defined in 5 U.S.C. 552(a)(6)(B)(iii) and § 4.7(c)(1) through (3)) apply and the Commission provided timely written notification to the requester in accordance with § 4.7(c), a failure to comply with the time limit is excused for an additional 10 days. If the Commission fails to comply with the extended time limit, the Commission may not assess any search fees or, where applicable, duplication fees.

(iii) If the Commission has determined that unusual circumstances apply and more than 5,000 pages are necessary to respond to the request, the Commission may charge search fees or, where applicable, duplication fees, if the Commission has provided timely written notification to the requester in accordance with § 4.7(c) and the Commission has discussed with the requester via written mail, electronic mail, or telephone (or made not less than three good-faith attempts to do so) how the requester could effectively limit the scope of the request in accordance with § 4.7(d).

(iv) If a court has determined that exceptional circumstances exist, a failure to comply with the time limit

shall be excused for the length of time provided by the court order.

* * * * *

Dated: April 18, 2024.

On behalf of the Commission.

Sean J. Cooksey,

Chairman, Federal Election Commission.

BILLING CODE 6715–01–P

SMALL BUSINESS ADMINISTRATION

13 CFR Part 120

[Docket No. SBA–2023–0010]

RIN 3245–AH83

Microloan Program; Changes to the Microloan Program Under the Economic Aid To Hard-Hit Small Businesses, Nonprofits, and Venues Act

AGENCY: U.S. Small Business Administration (SBA).

ACTION: Direct final rule.

SUMMARY: The U.S. Small Business Administration (SBA) is amending its Microloan Program regulations to reflect statutory changes to the Microloan Program contained in the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act. The changes increase the total amount an Intermediary may borrow under the Microloan Program per year and in aggregate, expand eligibility for Intermediaries to receive a bonus grant and add the necessary definitions, and revise the eligible base grant award amount for Intermediaries under certain circumstances. This direct final rule conforms the regulations to the Act by adopting the new statutory requirements without change.

DATES: This rule is effective June 17, 2024 without further action, unless significant adverse comment is received by June 3, 2024. If significant adverse comment is received, SBA will publish a timely withdrawal of the rule in the **Federal Register**.

ADDRESSES: You may submit comments, identified by docket number SBA–2023–0010, by any of the following methods:

(1) *Federal Rulemaking Portal: http://www.regulations.gov*, following the specific instructions for submitting comments;

(2) *Email: Daniel.Upham@sba.gov*; or

(3) *Mail/Hand Delivery/Courier:* Daniel Upham, Chief, Microenterprise Development Division, 409 3rd Street SW, 8th Floor, Washington, DC 20416.

SBA will post all comments on *http://www.regulations.gov*. If you wish to submit confidential business information (CBI) as defined in the User Notice at *http://www.regulations.gov*, please submit the information to Daniel Upham, Chief, Microenterprise Development Division, 409 3rd Street SW, 8th Floor, Washington, DC 20416. Highlight the information that you consider to be CBI and explain why you believe this information should be held confidential. SBA will review the information and make the final determination as to whether to publish the information.

FOR FURTHER INFORMATION CONTACT: Daniel Upham, Microenterprise Development Division, (202) 205–7001 or *Daniel.Upham@sba.gov*.

SUPPLEMENTARY INFORMATION:

A. General Information

The U.S. Small Business Administration (SBA) is amending its Microloan rules to reflect statutory changes from section 329 of the Economic Aid to Hard-Hit Small Businesses, Nonprofits, and Venues Act (Pub. L. 116–260), enacted December 27, 2020 (the Economic Aid Act). SBA's Microloan Program is authorized by section 7(m) of the Small Business Act, (15 U.S.C. 636(m)) and 13 CFR part 120, subpart G. The Microloan Program provides loans up to $50,000 to help small businesses and certain not-for-profit childcare centers start up and expand. SBA provides funds to specially designated intermediary lenders, which are nonprofit community-based organizations with experience in lending as well as management and technical assistance. These intermediaries administer the Microloan Program for eligible borrowers.

SBA is amending §§ 120.701, 120.706, and 120.712 to incorporate Microloan Program changes required by the Economic Aid Act. The specific regulatory changes are detailed below in the section-by-section analysis.

B. Section-by-Section Analysis

1. § 120.701 Definitions

Section 329 of the Economic Aid Act established two new definitions: ''Economically Distressed Area'' and ''Rural Area.'' To recognize these additions, the definitions for the Microloan Program are revised.

2. 120.706 What are the terms and conditions of an SBA loan to an Intermediary?

The Economic Aid Act permanently increased the maximum amount an Intermediary may borrow from SBA to $3,000,000 per year, with an aggregate outstanding limit of $7,000,000. The maximum amount an Intermediary may borrow during its first year of participation remains $750,000.

3. 120.712 How does an Intermediary get a grant to assist Microloan borrowers?

The Economic Aid Act provides a new minimum base grant amount of 25 percent of an Intermediary's total outstanding SBA loan balance applicable in fiscal years in which the amount appropriated for TA grants is sufficient to provide all Intermediaries with a grant equal to 25 percent or more of their total outstanding SBA loan balances. In these fiscal years, the maximum base grant amount is 30 percent of an Intermediary's total outstanding SBA loan balance. Intermediaries eligible for bonus grants may receive an additional grant for a total eligible maximum grant amount of 35 percent of the total outstanding SBA loan balance. SBA has revised paragraph (a) to reflect these statutory changes.

Currently, Intermediaries that maintain a portfolio of Microloans averaging $10,000 or less are eligible for a bonus grant equal to 5 percent of the Intermediary's total outstanding SBA loan balance. The Economic Aid Act expands eligibility for bonus grants to: (a) Intermediaries that provide not less than 25 percent of their Microloans to small businesses located in or owned by one or more residents of an economically distressed area and (b) Intermediaries with a Microloan portfolio of which at least 25 percent is serving rural areas. SBA has revised paragraph (c) to include these two additional bonus grant eligibility criteria.

C. Compliance With Executive Orders 12866, 12988, 13132, 13175, and 13563, the Congressional Review Act (5 U.S.C. 801–808), the Paperwork Reduction Act (44 U.S.C., Ch. 35) and the Regulatory Flexibility Act (5 U.S.C. 601–612)

Executive Order 12866

The Office of Management and Budget (OMB) has determined that this direct final rule does not constitute a significant regulatory action under Executive Order 12866.

Executive Order 12988

This action meets applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden. The action does not have preemptive effect. The final rule will

have retroactive effect to the enactment date of the statutory amendment. These changes will become effective December 28, 2020.

Executive Order 13132

This rule does not have federalism implications as defined in Executive Order 13132. The direct final rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government, as specified in the Executive Order. Therefore, SBA determined that this direct final rule has no federalism implications warranting preparation of a Federalism Assessment.

Executive Order 13175

In accordance with Executive Order 13175, SBA has determined this rulemaking does not include policies that have Tribal implications.

Executive Order 13563

Executive Order 13563, Improving Regulation and Regulatory Review (January 18, 2011), requires agencies to adopt regulations through a process that involves public participation, and to the extent feasible, base regulations on the open exchange of information and perspectives from affected stakeholders and the public as a whole. SBA has developed this rule in a manner consistent with these requirements. This direct final rule makes statutorily required changes.

Congressional Review Act, 5 U.S.C. 801–808

The Office of Management and Budget has determined that this is not a major rule under 5 U.S.C. 804(2).

Paperwork Reduction Act (44 U.S.C. Ch. 35)

SBA has determined that this direct final rule would not impose any new reporting or recordkeeping requirements.

Regulatory Flexibility Act (5 U.S.C. 601–612)

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601, requires administrative agencies to consider the effect of their actions on small entities, including small businesses. According to the RFA, when an agency issues a rule, the agency must prepare an analysis to determine whether the impact of the rule will have a significant economic impact on a substantial number of small entities. However, the RFA allows an agency to certify a rule in lieu of preparing an analysis if the rulemaking is not expected to have a significant impact on a substantial number of small entities.

This rule only makes conforming amendments to the regulations due to recent legislation on the Microloan Program and does not implement new agency policies. The amendment will affect small entities; however, SBA has determined that the amendment will not have a significant economic impact on a substantial number of such entities.

D. Justification for Direct Final Rule—Administrative Procedure Act

In general, SBA publishes a rule for public comment before issuing a final rule in accordance with the Administrative Procedure Act. 5 U.S.C. 553. The Administrative Procedure Act provides an exception to this standard rulemaking process, however, where an agency finds good cause to adopt a rule without prior public participation. 5 U.S.C. 553(b)(3)(B). The good cause requirement is satisfied when prior public participation is impracticable, unnecessary, or contrary to the public interest.

SBA is publishing this rule as a direct final rule because public participation is unnecessary. SBA believes that this rule is routine and non-controversial since it merely implements changes required by statute, and SBA anticipates no significant adverse comments to this rulemaking. This rule will be effective on the date shown in the **DATES** section unless SBA receives significant adverse comment on or before the deadline for comments. Significant adverse comments are comments that provide strong justifications why the rule should not be adopted or for changing the rule. SBA does not expect to receive any significant adverse comments because it is adopting statutory changes.

If SBA receives any significant adverse comments, it will publish a document in the **Federal Register** withdrawing this rule before the effective date. If SBA receives no significant adverse comments, the rule will be effective 45 days after publication without further notice.

List of Subjects in 13 CFR Part 120

Definitions, Economically distressed area, Grant, Intermediary, Microloan, Rural area, Terms and conditions.

For reasons set forth in the preamble, the SBA amends 13 CFR part 120 as follows:

PART 120—MICROLOAN PROGRAM

■ 1. The authority citation for 13 CFR part 120 continues to read as follows:

Authority: 15 U.S.C. 634(b)(6), (b)(7), (b)(14), (h), and note, 636(a), (h) and (m), and note, 636m, 650, 657t, and note, 657u, and note, 687(f), 696(3), and (7), and note, and 697, 697a and e, and note; Pub. L. 116–260, 134 Stat. 1182.

Subpart G—Microloan Program

■ 2. Revise § 120.701 to read as follows:

§ 120.701 Definitions.

Deposit account is a demand, time, savings, passbook, or similar account maintained with an insured depository institution (not including an account evidenced by a Certificate of Deposit).

Economically Distressed Area is a county or equivalent division of local government of a State in which the small business concern is located, in which, according to the most recent data available from the Bureau of the Census, Department of Commerce, not less than 40 percent of residents have an annual income that is at or below the poverty level.

Grant is a Federal award of money, or property in lieu of money (including cooperative agreements) to an eligible grantee that must account for its use. The term does not include the provision of technical assistance, revenue sharing, loans, loan guarantees, interest subsidies, insurance, direct appropriations, or any fellowship or other lump sum award.

Insured depository institution means any federally insured bank, savings association, or credit union.

Intermediary is an entity participating in the Microloan Program which makes and services Microloans to eligible small businesses and which provides marketing, management, and technical assistance to its borrowers. It may be:

(1) A private, nonprofit community development corporation or other entity;

(2) A consortium of private, nonprofit community development corporations or other entities;

(3) A quasi-governmental economic development entity, other than a state, county, municipal government or any agency thereof; or

(4) An agency of or a nonprofit entity established by a Native American Tribal Government.

Microloan is a short-term, fixed interest rate loan of not more than $50,000 made by an Intermediary to an eligible small business.

Non-Federal sources are sources of funds other than the Federal Government and may include indirect costs or in-kind contributions paid for under non-Federal programs. Community Block Development Grants are considered non-Federal sources.

Rural Area is any political subdivision or unincorporated area:

(1) In a nonmetropolitan county (as defined by the Secretary of Agriculture) or its equivalent thereof; or

(2) In a metropolitan county or its equivalent that has a resident population of less than 20,000 if the Small Business Administration has determined such political subdivision or area to be rural.

Specialized Intermediary is an Intermediary which maintains a portfolio of Microloans averaging $10,000 or less.

■ 3. Amend § 120.706 by revising paragraph (a) to read as follows:

§ 120.706 What are the terms and conditions of an SBA loan to an Intermediary?

(a) *Loan amount.* An Intermediary may not borrow more than $750,000 in the first year of participation in the program, or more than $3,000,000 in any subsequent year. An Intermediary's obligation to SBA may not exceed an aggregate of $7 million, subject to statutory limitations on the total amount of funds available per state.

* * * * *

■ 4. Amend § 120.712 by revising paragraphs (a) and (c) to read as follows:

§ 120.712 How does an Intermediary get a grant to assist Microloan borrowers?

(a) *General.* (1) Except as provided in (a)(2) of this section, an Intermediary is eligible to receive a base grant of not more than 25 percent of the outstanding balance of all SBA loans to the Intermediary.

(2) In fiscal years in which the amount appropriated for grants is sufficient to provide all Intermediaries with a base grant equal to 25 percent or more of their total outstanding SBA loan balances, then the amount of base grants to eligible Intermediaries will be equal to at least 25 percent of the outstanding balance of all SBA loans to the Intermediary and not more than 30 percent of such balance.

(3) The Intermediary must contribute, solely from non-Federal sources, an amount equal to 25 percent of the grant. Contributions may be made in cash or in kind.

* * * * *

(c) *Intermediaries eligible to receive additional bonus grant monies.* An Intermediary may receive an additional SBA grant equal to five percent of the outstanding balance of all loans received from SBA (with no obligation to contribute additional matching funds) if the Intermediary:

(1) Is a Specialized Intermediary;

(2) Provides not less than 25 percent of its loans to small business concerns located in or owned by one or more residents of an Economically Distressed Area; or

(3) Maintains a portfolio of Microloans of which at least 25 percent is serving Rural Areas.

* * * * *

Isabella C. Guzman,

Administrator.

[FR Doc. 2024–09520 Filed 5–1–24; 8:45 am]

BILLING CODE 8026–09–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–1817; Project Identifier MCAI–2023–00664–T; Amendment 39–22732; AD 2024–07–11]

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. This AD was prompted by a design review that identified the fixed emergency locator transmitter (ELT) lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. This AD requires replacing the ELT with a new ELT with redesigned batteries, as specified in a Transport Canada AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 6, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 6, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–1817; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

• For material that is identified in this final rule, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca;* website *tc.canada.ca/en/aviation.*

• You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket at *regulations.gov* under Docket No. FAA–2023–1817.

FOR FURTHER INFORMATION CONTACT: Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. The NPRM published in the **Federal Register** on September 6, 2023 (88 FR 60899). The NPRM was prompted by AD CF–2023–31, dated May 8, 2023 (Transport Canada AD CF–2023–31) (also referred to as the MCAI), issued by Transport Canada, which is the aviation authority for Canada. The MCAI states a design review identified that the fixed ELT lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. As a result, a thermal runaway could lead to an uncontrolled fire of the fixed ELT, which may compromise the structural integrity of the aircraft structure in the area where the fixed ELT is installed.

The FAA is issuing this AD to address the unsafe condition on these products. You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2023–1817.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from the Air Line Pilots Association,

International (ALPA) who supported the NPRM without change.

The FAA received additional comments from Delta Air Lines (Delta). The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Add Exception To Clarify Acceptable Compliance Methods

Delta requested that the FAA add an exception to clarify the acceptable compliance methods stated in Transport Canada AD CF–2023–31. Delta noted that Transport Canada AD CF–2023–31 states a compliance time of 48 months from the effective date of the AD, unless already accomplished and also states credit is provided if Airbus Canada Service Bulletin BD500–256006, Issue 001, dated March 15, 2021, or Issue 002, dated November 24, 2021, is done before the effective date of the AD. Delta states these statements are contradictory and does not provide credit for later revisions of the service bulletin (*i.e.,* Issues 003, 004, and 005). Delta requested that an exception paragraph be added to paragraph (h) of the proposed AD to specify that credit is given if actions are done before the effective date of the AD in accordance with Issues 001 through 005 of the service bulletin.

The FAA disagrees with the request to add an exception to this AD. The two statements are not contradictory. Paragraph (f) of this AD states to accomplish the required actions within the compliance times specified, ''unless already done.'' Therefore, if operators have accomplished the actions required for compliance with this AD before the effective date of this AD, no further action is necessary. Adding an exception to Transport Canada AD CF–2023–31 to provide credit for Issue 003, 004, and 005 of Airbus Canada Service Bulletin BD500–256006 is not necessary. Issue 003, 004, and 005 of Airbus Canada Service Bulletin BD500–256006 (and later approved revisions) are always acceptable methods of compliance for accomplishing the actions of this AD, whether done before or after the effective date of the AD. The FAA has not changed this AD in this regard.

Request for Exception To Correct Discrepancies in the Service Bulletin

Delta requested that the FAA add an exception in paragraph (h) of the proposed AD to correct for the following discrepancies in all issues 01 through 05 of Airbus Canada Service Bulletin BD500–256006.

1. Step 3.2.2 in Airbus Canada Service Bulletin BD500–256006 Issue 001, 002, and 003 states to keep the washers, and in Airbus Canada Service Bulletin BD500–256006 Issue 004 and 005 does not mention whether to keep or discard the washers. Delta stated that new washers are provided in the servicing kit.

2. Step 3.4.3 refers to bracket (4) in figure 4 instead of the correct bracket (8).

3. Step 3.4.4 refers to bracket (8) in figure 4 instead of the correct bracket (4).

4. Step 3.4.6 states to ''Do a countersink in the hole of the support (4) for the rivet (6).'' The support references the wrong item number, which should be support (3).

5. Step 3.5.3 states to ''torque the screw (7) (refer to AMP BD500–A–J20–31–00–00AAA–711A–A).'' Both, Step 3.5.3, and the AMP (Approved Maintenance Publications) reference do not include a torque value.

6. Step 1.ii.11. of Appendix 2 states to ''install the wire harness ID–TAG CPATE1033–001 over the EXPANDO on the marked location.'' Delta discovered that since the wire harness ID tag labeled CPATE1033–001 is a shrink wrap ID tag, it is not possible to remove as originally instructed in Steps 1.ii.7. and 8. of Appendix 2 and re-install over the EXPANDO (wire bundle protection sleeve). Delta requested that the proposed AD specify that it is acceptable to leave the ID tag access, where it is still visible under the EXPANDO.

The FAA agrees with the commenter's request, and confirmed with the manufacturer that the service information is incorrect. The manufacturer is considering addressing any errors in a future revision of Airbus Canada Service Bulletin BD500–256006. The FAA has added paragraphs (h)(2) through (7) to this AD to provide the requested clarification.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

Transport Canada AD CF–2023–31 specifies procedures for replacing the fixed ELT with an ELT with improved batteries that do not rely on cooling from the outside. The replacement includes modifying two electrical harnesses and installing a new ELT support assembly, ELT, and aircraft identification module (AIM). This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES**.

Costs of Compliance

The FAA estimates that this AD affects 71 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
19 work-hours × $85 per hour = $1,615	$12,804	$14,419	$1,023,749

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more

detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–07–11 Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.): Amendment 39–22732; Docket No. FAA–2023–1817; Project Identifier MCAI–2023–00664–T.

(a) Effective Date

This airworthiness directive (AD) is effective June 6, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (Type Certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD–500–1A10 and BD–500–1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–31, dated May 8, 2023 (Transport Canada AD CF–2023–31).

(d) Subject

Air Transport Association (ATA) of America Code: 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a design review that identified the fixed emergency locator transmitter (ELT) lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. The FAA is issuing this AD to address a thermal runaway that could lead to an uncontrolled fire of the fixed ELT. The unsafe condition, if not addressed, may compromise the structural integrity of the aircraft structure in the area where the fixed ELT is installed.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–31.

(h) Exceptions to Transport Canada AD CF–2023–31

(1) Where Transport Canada AD CF–2023–31 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Step 3.2.2 of the service information referenced in AD CF–2023–31 specifies to either to keep the washers or does not specify whether to keep or discard the washers, this AD requires the washers to be discarded.

(3) Where Step 3.4.3 of the service information referenced in AD CF–2023–31 specifies ''Backdrill three holes from the bracket (4) to a diameter of 0.160 to 0.164 in. (4.06 to 4.17 mm) in the support (3).'', for this AD, replace that text with ''Backdrill three holes from the bracket (8) to a diameter of 0.160 to 0.164 in. (4.06 to 4.17 mm) in the support (3).''

(4) Where Step 3.4.4 of the service information referenced in AD CF–2023–31 specifies ''Backdrill three holes from the bracket (8) to a diameter of 0.160 to 0.164 in. (4.06 to 4.17 mm) in the support (3).'', for this AD, replace that text with ''Backdrill three holes from the bracket (4) to a diameter of 0.160 to 0.164 in. (4.06 to 4.17 mm) in the support (3).''

(5) Where Step 3.4.6 of the service information referenced in AD CF–2023–31 specifies ''Do a countersink in the hole of the support (4) for the rivet (6)'', for this AD replace that text with ''Do a countersink in the hole of the support (3) for the rivet (6).''

(6) Where Step 3.5.3 of the service information referenced in AD CF–2023–31 specifies to torque the screw, this AD does not require that action.

(7) Where Steps 1.ii.7., 8. and 11. of Appendix 2 of the service information referenced in AD CF–2023–31 specifies to mark, remove, and re-install the wire harness ID tag CPATE1033–001, this AD does not require those actions.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send it to the attention of the person identified in paragraph (j)(1) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Airbus Canada Limited Partnership's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact: Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this

paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2023–31, dated May 8, 2023.

(ii) [Reserved]

(3) For Transport Canada AD CF–2023–31, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca;* website *tc.canada.ca/en/aviation.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on April 4, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

14 CFR Part 39

[Docket No. FAA–2023–2402; Project Identifier MCAI–2023–00370–T; Amendment 39–22731; AD 2024–07–10]

RIN 2120–AA64

Airworthiness Directives; Bombardier, Inc., Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Bombardier, Inc., Model CL–600–2B16 (604 Variant) airplanes. This AD was prompted by a report indicating that a new filter plate connector for the nose wheel steering (NWS) system electronic control module (ECM) does not meet certain certification requirements. This AD requires replacing all affected ECMs. This AD also prohibits the installation of affected parts under certain conditions. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 6, 2024.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of June 6, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–2402; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For service information identified in this final rule, contact Bombardier Business Aircraft Customer Response Center, 400 Côte-Vertu Road West, Dorval, Québec H4S 1Y9, Canada; telephone 514–855–2999; email *ac.yul@aero.bombardier.com;* website *bombardier.com.*

FOR FURTHER INFORMATION CONTACT: Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 516–228–7300; email: *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Bombardier, Inc., Model CL–600–2B16 (601–3A, 601–3R, and 604 Variants) airplanes. The NPRM published in the **Federal Register** on December 28, 2023 (88 FR 89633). The NPRM was prompted by AD CF–2023–14R1, dated May 15, 2023 (Transport Canada AD CF–2023–14R1) (referred to after this as the MCAI), issued by Transport Canada, which is the aviation authority for Canada. The MCAI states that the manufacturer of the NWS system ECM, part number (P/N) 601–86100–27, introduced a new filter plate connector that does not meet the certification requirements related to the susceptibility of electronic components to high intensity radiated field. This non-compliant filter plate connector, if not replaced, could result in a malfunction of the NWS system causing potential un-commanded steering or lateral excursion from the runway.

In the NPRM, the FAA proposed to require replacing all affected non-compliant ECMs. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2023–2402.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from two commenters, Bombardier and NetJets. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request to Provide a Figure Title

Both Bombardier and NetJets requested that a title be provided for the figure referenced in paragraph (g) of the NPRM because the title is missing.

The FAA agrees. The title ''Figure 1 to the introductory text of paragraph (g)—Applicable Bombardier Service Bulletins'' has been added to the referenced figure.

Request To Change the Applicability

Bombardier also requested that the Applicability of the proposed AD be changed. Bombardier noted that Model 601–3A and 601–3R variants are not impacted by this issue and should not be subject to this AD.

The FAA agrees. The Applicability of this AD has been changed accordingly.

Request for Clarification of Service Information Effectivity

NetJets noted that Bombardier Service Bulletin 650–32–006 is effective only for serial numbers 6050 through 6171. NetJets requested that the proposed AD be revised to provide direction for airplane serial numbers outside that range.

The FAA does not agree to revise this AD but will clarify. Bombardier has confirmed that all instructions in Service Bulletin 650–32–006 can be accomplished on serial numbers 6172 and subsequent. Because the affected ECMs are rotable parts, the FAA has determined that these parts could later be installed on airplanes that were initially delivered with acceptable ECMs, thereby subjecting those airplanes to the unsafe condition. The FAA has not changed this AD as a result of this comment.

Conclusion

This product has been approved by the aviation authority of another

country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

The FAA reviewed the following Bombardier service information.

- Service Bulletin 604–32–032, dated October 18, 2021.
- Service Bulletin 605–32–009, dated October 18, 2021.
- Service Bulletin 650–32–006, dated October 18, 2021.

This service information specifies procedures for removing and replacing all affected non-compliant ECMs, P/N 601–86100–27. These documents are distinct since they apply to different airplane configurations. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 164 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
6 work-hours × $85 per hour = $510	$75,972	$76,482	$12,543,048

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–07–10 Bombardier, Inc.: Amendment 39–22731; Docket No. FAA–2023–2402; Project Identifier MCAI–2023–00370–T.

(a) Effective Date

This airworthiness directive (AD) is effective June 6, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Bombardier, Inc., Model CL–600–2B16 (604 Variant) airplanes, certificated in any category, with serial numbers 5301 through 5665 inclusive, 5701 through 5990 inclusive, and 6050 and subsequent.

(d) Subject

Air Transport Association (ATA) of America Code 32, Landing gear.

(e) Unsafe Condition

This AD was prompted by a report indicating that a new filter plate connector for the nose wheel steering (NWS) system electronic control module (ECM) does not meet certain certification requirements. The FAA is issuing this AD to address this non-compliant filter plate connector, which, if not replaced, could result in a malfunction of the NWS system causing potential uncommanded steering or lateral excursion from the runway.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Verification of Airplane Technical Records

Within 24 months after the effective date of this AD: Inspect the serial number of the ECM, part number (P/N) 601–86100–27, in accordance with Section 2.B. Part A of the Accomplishment Instructions of the applicable service information listed in figure (1) to the introductory text of paragraph (g) of this AD to determine if the serial number of the ECM, P/N 601–86100–27, is listed in Table 1 of Section 1.A. of the applicable service information listed in figure (1) to the introductory text of paragraph (g) of this AD. A review of maintenance records is also acceptable if the serial number of the ECM can be conclusively determined from that review.

FIGURE 1 TO THE INTRODUCTORY TEXT OF PARAGRAPH (g)—APPLICABLE BOMBARDIER SERVICE BULLETINS

Model	Serial Nos.	Applicable bombardier service bulletin
CL–600–2B16	6050 and subsequent	650–32–006, dated October 18, 2021.
CL–600–2B16	5701 through 5990	605–32–009, dated October 18, 2021.
CL–600–2B16	5301 through 5665	604–32–032, dated October 18, 2021.

(1) If the serial number of the ECM is listed in Table 1 of Section 1.A. of the applicable service information or is not reidentified on the nameplate as SB–1, then the actions of paragraph (h) of this AD are required.

(2) If the serial number of the ECM is not listed in Table 1 of Section 1.A. of the applicable service information or is reidentified on the nameplate as SB–1, then the actions of paragraph (h) of this AD are not required.

(h) Replacement

For airplanes identified in paragraph (g)(1) of this AD: Do the actions specified in paragraphs (h)(1) and (2) of this AD.

(1) Within 24 months after the effective date of this AD: Replace the ECM, P/N 601–86100–27, identified in paragraph (g)(1) of this AD, in accordance with Section 2.C. Part B of the Accomplishment Instructions of the applicable service information listed in figure 1 to the introductory text of paragraph (g) of this AD.

(2) Prior to return to service, complete the operational test of the NWS system in accordance with Section 2.D. of the Accomplishment Instructions of the applicable service information listed in figure 1 to the introductory text of paragraph (g) of this AD.

(i) Parts Installation Limitation

As of the effective date of this AD, it is prohibited to install ECM, P/N 601–86100–27, as a replacement part, if the serial number is listed in Table 1 of Section 1.A. of the applicable service information listed in figure 1 to the introductory text of paragraph (g) of this AD, unless the ECM has been reidentified with SB–1 on the name plate.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager, International Validation Branch, mail it to the address identified in paragraph (k)(2) of this AD or email to: *9-avs-nyaco-cos@faa.gov.* If mailing information, also submit information by email. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Bombardier, Inc.'s Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(k) Additional Information

(1) Refer to Transport Canada AD CF–2023–14R1, dated May 15, 2023, for related information. This Transport Canada AD may be found in the AD docket at *regulations.gov* under Docket No. FAA–2023–2402.

(2) For more information about this AD, contact Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 516–228–7300; email: *9-avs-nyaco-cos@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Bombardier Service Bulletin 604–32–032, dated October 18, 2021.

(ii) Bombardier Service Bulletin 605–32–009, dated October 18, 2021.

(iii) Bombardier Service Bulletin 650–32–006, dated October 18, 2021.

(3) For service information identified in this AD, contact Bombardier Business Aircraft Customer Response Center, 400 Côte-Vertu Road West, Dorval, Québec H4S 1Y9, Canada; telephone 514–855–2999; email *ac.yul@aero.bombardier.com;* website bombardier.com.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on April 2, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–0029; Project Identifier MCAI–2023–01182–T; Amendment 39–22741; AD 2024–08–08]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2021–20–08, which applied to certain Airbus SAS Model A318, A319, A320, A321, A330–200, A330–200 Freighter, A330–300, A330–800, A330–900, A340–200, A340–300, A340–500, A340–600, and A380–800 series airplanes. AD 2021–20–08 required replacing certain nickel-cadmium (Ni-Cd) batteries with serviceable Ni-Cd batteries. This AD was prompted by a report that repetitive disconnection and reconnection of certain Ni-Cd batteries during airplane parking or storage could lead to a reduction in capacity of those batteries. This AD adds airplanes to the applicability and requires replacement of certain affected parts with serviceable parts as a precondition for return to service of airplanes from storage or parking, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 6, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 6, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–0029; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for

Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

• For material incorporated by reference in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

• You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket at *regulations.gov* under Docket No. FAA–2024–0029.

FOR FURTHER INFORMATION CONTACT: Dan Rodina, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3225; email *dan.rodina@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2021–20–08, Amendment 39–21746 (86 FR 57025, October 14, 2021) (AD 2021–20–08). AD 2021–20–08 applied to certain Airbus SAS Model A318, A319, A320, A321, A330–200, A330–200 Freighter, A330–300, A330–800, A330–900, A340–200, A340–300, A340–500, A340–600, and A380–800 series airplanes. AD 2021–20–08 required replacing certain Ni-Cd batteries with serviceable Ni-Cd batteries or maintaining the electrical storage capacity of those Ni-Cd batteries during airplane storage or parking. The FAA issued AD 2021–20–08 to address reduced capacity of certain Ni-Cd batteries, which could lead to reduced battery endurance performance and possibly result in failure to supply the minimum essential electrical power during abnormal or emergency conditions.

The NPRM published in the **Federal Register** on January 22, 2024 (89 FR 3897). The NPRM was prompted by AD 2023–0196, dated November 10, 2023 (EASA AD 2023–0196) (also referred to as the MCAI), issued by EASA, which is the Technical Agent for the Member States of the European Union. The MCAI states that it was determined that the on-wing preservation procedures originally provided for these airplanes did not ensure the expected preservation of the battery capacity.

In the NPRM, the FAA proposed to require replacement of certain affected parts with serviceable parts as a precondition for return to service of airplanes from storage or parking, as specified in EASA AD 2023–0196. The FAA is issuing this AD to address reduced capacity of certain Ni-Cd batteries. The unsafe condition, if not addressed, could lead to reduced battery endurance and possibly result in failure to supply the minimum essential electrical power during abnormal or emergency conditions.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–0029.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from the Air Line Pilots Association, International (ALPA) and an individual. Both commenters supported the NPRM without change.

The FAA received additional comments from American Airlines (AA), Delta Air Lines (DAL), United Airlines (UA), and two individuals. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Extend Compliance Time

DAL requested a 90-day transition period between AD 2021–20–08 and the new proposed AD requirements. DAL stated that compliance requirements and instructions are currently set to comply with AD 2021–20–08, and these requirements and instructions cannot be instantly transitioned the day the new AD becomes effective. As an example, DAL stated revising the Airbus A350 aircraft maintenance manual (AMM) can take 60 days due to complexity of the process. DAL explained that AD requirements that must be complied with as of the AD effective date can be set up and complied with if starting from zero AD mandated instructions, but when transitioning from one set of AD mandated instructions to a significantly different set of AD mandated instructions, a time of transition must be allowed for in the new AD.

The FAA partially agrees. The FAA concurs the requirement to replace affected batteries results in a new set of AD mandated instructions, but the FAA does not concur with a 90-day transition period (grace period). However, the FAA has determined that a 30-day grace period is appropriate and will not adversely affect safety. The FAA has added paragraph (h)(3) to this AD accordingly.

Request for Clarification of Terms

AAL requested clarification of ''parking and storage'' as intended by the proposed AD. The commenter asked whether ''parking and storage'' included extended heavy maintenance checks, such as an S-check that is abnormally extended beyond the 6-month time-limit due to inspection findings or material sourcing issues, or extended downtime for aircraft repair or modification such as a large repair for aircraft tug collision damage or a large-scale interior modification.

The FAA agrees to clarify. It is the responsibility of the operator to apply the relevant instructions provided in the AMM related to extended heavy maintenance checks or downtime for aircraft repair or modification. A dedicated preservation regime shall be defined in line with the maintenance activity requirements (for example, the need to keep batteries connected), based upon the applicable AMM parking and storage procedures. If a battery meets the definition of a ''serviceable part'' as specified in EASA AD 2023–0196, then the requirement to replace after ''parking and storage'' does not apply because it is not an affected part. However, if the battery meets the definition of an ''affected part'' as specified in EASA AD 2023–0196, the requirement to replace after ''parking and storage'' does apply.

Request To Remove Erroneous References

DAL and UA requested removal of any reference to parts manufacturer approval (PMA) batteries in the **SUMMARY** and Background of the NPRM. Delta also requested removal of the term ''PMA'' from the ''Related Service Information under 1 CFR part 51'' section of the NPRM. The commenters stated that the references are incorrect because those batteries are not referenced in the related EASA AD.

The FAA agrees. The **SUMMARY** and Background of the NPRM, as well as the ''Related Service Information Under 1 CFR part 51'' paragraph, incorrectly referred to PMA parts in describing the requirements of AD 2021–20–08 and the MCAI, which specify to replace certain Ni-Cd batteries. The FAA has removed the incorrect references to PMA parts from this AD.

Request To Withdraw the Proposed AD

A commenter asked what data there is to support the need for early replacement of the affected batteries. The FAA infers that the commenter is requesting withdrawal of the proposed AD.

The FAA does not agree with the inferred request to withdraw this AD. The FAA has obtained information to indicate that mandatory action is necessary to maintain the continued operational safety of these airplanes. This AD has not been changed regarding this inferred request.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

EASA AD 2023–0196 specifies procedures for procedures for replacing certain Ni-Cd batteries with serviceable Ni-Cd batteries. EASA AD 2023–0196 adds Model A300 series airplanes; Model A300 B4–600, B4–600R, and F4–600R series airplanes, and Model A300 C4–605R Variant F airplanes (collectively called Model A300–600 series airplanes); Model A310 series airplanes; and Model A350–941 and –1041 airplanes to the applicability. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 1,814 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
New actions	5 work-hours × $85 per hour = $425	$0	$425	$770,950

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2021–20–08, Amendment 39–21746 (86 FR 57025, October 14, 2021); and

■ b. Adding the following new AD:

2024–08–08 Airbus SAS: Amendment 39–22741; Docket No. FAA–2024–0029; Project Identifier MCAI–2023–01182–T.

(a) Effective Date

This airworthiness directive (AD) is effective June 6, 2024.

(b) Affected ADs

This AD replaces AD 2021–20–08, Amendment 39–21746 (86 FR 57025, October 14, 2021) (AD 2021–20–08).

(c) Applicability

This AD applies to all Airbus SAS airplanes identified in paragraphs (c)(1) through (14) of this AD, certificated in any category.

(1) Model A300 B4–2C, B4–103, and B4–203 airplanes.

(2) Model A300 B4–601, B4–603, B4–620, and B4–622 airplanes.

(3) Model A300 B4–605R and B4–622R airplanes.

(4) Model A300 C4–605R variant F airplanes.

(5) Model A300 F4–605R and F4–622R airplanes.

(6) Model A310–203, –204, –221, –222, –304, –322, –324, and –325 airplanes.

(7) Model A318–111, –112, –121, and –122 airplanes.

(8) Model A319–111, –112, –113, –114, –115, –131, –132, –133, –151N, –153N, and –171N airplanes.

(9) Model A320–211, –212, –214, –216, –231, –232, –233, –251N, –252N, –253N, –271N, –272N, and –273N airplanes.

(10) Model A321–111, –112, –131, –211, –212, –213, –231, –232, –251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes.

(11) Model A330–201, –202, –203, –223, –223F, –243, –243F, –301, –302, –303, –321, –322, –323, –341, –342, –343, –841, and –941 airplanes.

(12) Model A340–211, –212, –213, –311, –312, –313, –541, and –642 airplanes.

(13) Model A350–941 and A350–1041 airplanes.

(14) Model A380–841, –842, and –861 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 24, Electrical Power.

(e) Unsafe Condition

This AD was prompted by a report that repetitive disconnection and reconnection of certain nickel-cadmium (Ni-Cd) batteries during airplane parking or storage could lead to a reduction in capacity of those batteries. The FAA is issuing this AD to address reduced capacity of certain Ni-Cd batteries. The unsafe condition, if not addressed, could lead to reduced battery endurance and possibly result in failure to supply the minimum essential electrical power during abnormal or emergency conditions.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2023–0196, dated November 10, 2023 (EASA AD 2023–0196).

(h) Exceptions to EASA AD 2023–0196

(1) Where EASA AD 2023–0196 refers to its effective date, this AD requires using the effective date of this AD.

(2) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0196.

(3) The compliance for the replacement specified in paragraph (1) of EASA 2023–0196 is at the time specified in paragraph (1) of EASA AD 2023–0196, or within 30 days after the effective date of this AD, whichever occurs later.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (k) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information referenced in EASA AD 2023–0196 that contains paragraphs that are labeled as RC, the instructions in RC paragraphs, including subparagraphs under an RC paragraph, must be done to comply with this AD; any paragraphs, including subparagraphs under those paragraphs, that are not identified as RC are recommended. The instructions in paragraphs, including subparagraphs under those paragraphs, not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the instructions identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to instructions identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Dan Rodina, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3225; email *dan.rodina@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0196, dated November 10, 2023.

(ii) [Reserved]

(3) For EASA AD 2023–0196, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website at *ad.easa.europa.eu.*

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 17, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–1883; Project Identifier MCAI–2023–00804–T; Amendment 39–22734; AD 2024–08–01]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Airbus SAS Model A350–941 airplanes. This AD was prompted by a report of cracks found on the trunnion arms of the inboard flap assemblies. This AD requires repetitive inspections for cracking of the trunnion arms of the inboard flap assembly, and applicable corrective actions, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. This AD also prohibits the installation of affected parts. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 6, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 6, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–1883; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material incorporated by reference in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this

material at the FAA, call 206–231–3195. It is also available in the AD docket at *regulations.gov* under Docket No. FAA–2023–1883.

FOR FURTHER INFORMATION CONTACT: Dat Le, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus SAS Model A350–941 airplanes. The NPRM published in the **Federal Register** on September 22, 2023 (88 FR 65328). The NPRM was prompted by AD 2023–0132, dated July 3, 2023 (EASA AD 2023–0132) (also referred to as the MCAI), issued by EASA, which is the Technical Agent for the Member States of the European Union. The MCAI states that cracks were found on the trunnion arms of the inboard flap assemblies that were made of forging aluminum 7037.

In the NPRM, the FAA proposed to require repetitive inspections for cracking of the trunnion arms of the inboard flap assembly, and applicable corrective actions, as specified in EASA AD 2023–0132. The NPRM also proposed to prohibit the installation of affected parts. The FAA is issuing this AD to address potential cracks of the trunnion arms. The unsafe condition, if not detected and corrected, could adversely affect the structural integrity of the trunnion arms.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2023–1883.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from Delta Airlines. The following presents the comment received on the NPRM and the FAA's response.

Request To Clarify Requirements

Delta Air Lines (Delta) requested that the proposed AD be revised to add a clear statement addressing the relation between the instructions in the service information specified in EASA AD 2023–0132 and paragraph (i)(2) of the proposed AD for any deviations to the instructions, including those that are Required for Compliance (RC). Delta pointed out that a note in Paragraph 3., Accomplishment Instructions, of Airbus Service Bulletin A350–57–P077, dated January 31, 2023, states to contact Airbus for any deviations to the instructions, including those that are RC. Delta added that paragraph (i)(2) of the proposed AD states that for any requirement in the AD to obtain instructions from a manufacturer, the instructions must be done using a method approved by the FAA, EASA, or Airbus' EASA Design Organization Approval (DOA). Delta provided several examples of cases where it has obtained approval from the manufacturer in accordance with the requirement defined in the proposed AD—a method that is DOA approved—and wondered if those types of deviations from instructions found in RC steps that are obtained from the manufacturer may be implemented without further FAA approval. Based on the language in the service information and paragraph (i)(2) of the proposed AD, Delta explained that it interprets this to mean that approval for any deviations from the service information—including RC steps—with a DOA approval may be used without further FAA approval.

The FAA disagrees with revising the regulatory text of this AD. However, the following explanation is provided for clarification of the RC process. Any deviation to any and all RC actions identified in required service information as ''in accordance with'' a specific method requires approval of an FAA alternative method of compliance (AMOC). The ''contact the manufacturer'' language in paragraph (i)(2) of this AD applies to RC actions within the service information that specify, for example, to ''contact the manufacturer [*e.g.,* Airbus] for repair instructions and do the repair.''

If the accomplishment step in the service information is labeled RC and has substeps or tasks with no paragraph designation under the labeled RC step, then all of the substeps or tasks must also be completed. In addition, if an accomplishment step in the service information is marked RC and states to do the work ''in accordance with'' a figure, drawing, or illustration, then all of the information in the figure, drawing, or illustration is mandatory. If a step is marked RC and a procedure or document must be followed to accomplish a task in a service bulletin, the appropriate terminology to cite the procedure or document is ''in accordance with.'' However, if a step is marked RC and a procedure or document may be followed to accomplish an action (*e.g.,* the design approval holder's procedure or document may be used, but an FAA-accepted procedure could also be used), the appropriate terminology to use to cite the procedure or document is ''refer to . . . as an accepted procedure.''

Additional Changes Made to This AD

Since the FAA issued the NPRM, EASA revised EASA AD 2023–0132 and issued EASA AD 2023–0132R1, dated March 20, 2024, which adds an optional terminating action for the repetitive inspections.

The FAA has revised paragraph (g) of this AD to also refer to EASA AD 2023–0132R1, dated March 20, 2024, as an appropriate source of service information for accomplishing the required actions.

The FAA has revised paragraph (c) of this AD to refer to EASA AD 2023–0132R1, dated March 20, 2024, for the affected airplanes, which are the same between EASA AD revisions.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

EASA AD 2023–0132 specifies procedures for repetitive ultrasonic inspections for cracking of the trunnion arms of the inboard flap assemblies, and corrective actions, as applicable. Corrective actions include obtaining and following repair instructions if any cracking is found. EASA AD 2023–0132 also prohibits the installation of affected parts.

EASA AD 2023–0132R1, dated March 20, 2024, specifies the same procedures as EASA AD 2023–0132 and provides on optional terminating action for the repetitive inspections, which consists of replacing the left-hand and right-hand inboard flap, as applicable, with a modified inboard flap.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 4 airplanes of U.S. registry. The

FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 17 work-hours × $85 per hour = $1,445	$10	Up to $1,455	Up to $5,820.

The FAA has received no definitive data on which to base the cost estimates for the on-condition repairs specified in this AD.

ESTIMATED COSTS FOR OPTIONAL ACTIONS

Labor cost	Parts cost	Cost per product
Up to 122 work-hours × $85 per hour = $10,370	Up to $31,930	Up to $42,300.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–08–01 Airbus SAS: Amendment 39–22734; Docket No. FAA–2023–1883; Project Identifier MCAI–2023–00804–T.

(a) Effective Date

This airworthiness directive (AD) is effective June 6, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus SAS Model A350–941 airplanes, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2023–0132R1, dated March 20, 2024 (EASA AD 2023–0132R1).

(d) Subject

Air Transport Association (ATA) of America Code: 57, Wings.

(e) Unsafe Condition

This AD was prompted by a report of cracks found on the trunnion arms of the inboard flap assemblies. The FAA is issuing this AD to address potential cracks of the trunnion arms. The unsafe condition, if not addressed, could adversely affect the structural integrity of the trunnion arms.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2023–0132, dated July 3, 2023 (EASA AD 2023–0132) or EASA AD 2023–0132R1.

(h) Exceptions to EASA AD 2023–0132 and EASA AD 2023–0132R1

(1) Where EASA AD 2023–0132 refers to its effective date, or EASA AD 2023–0132R1 refers to July 17, 2023 (the effective date of EASA AD 2023–0132), this AD requires using the effective date of this AD.

(2) Where paragraph (2) of EASA AD 2023–0132 and EASA AD 2023–0132R1 specifies if ''any crack is detected, before next flight, contact Airbus for approved instructions and, within the compliance time(s) specified in those instructions, accomplish those instructions accordingly,'' this AD requires replacing that text with ''if any cracking is detected, the cracking must be repaired before further flight using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.''

(3) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0132 and EASA AD 2023–0132R1.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send

it to the attention of the person identified in paragraph (j) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Dat Le, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 516–228–7300; email: *9-avs-nyaco-cos@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0132, dated July 3, 2023.

(ii) EASA AD 2023–0132R1, dated March 20, 2024.

Note 1 to paragraph (k)(2)(ii): EASA AD 2023–0132R1 can be accessed in the zipped file at the bottom of the web page for EASA AD 2023–0132. When EASA posts a revised AD on their website, they watermark the previous AD as ''Revised,'' alter the file name by adding ''_revised'' to the end, and move it into a zipped file attached at the bottom of the AD web page.

(3) For EASA AD 2023–0132 and EASA AD 2023–0132R1, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 12, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–0222; Project Identifier MCAI–2023–01072–T; Amendment 39–22735; AD 2024–08–02]

RIN 2120–AA64

Airworthiness Directives; ATR—GIE Avions de Transport Régional Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain ATR—GIE Avions de Transport Régional Model ATR42 and ATR72 airplanes. This AD was prompted by a report of an electrical contactor that failed with contacts in the intermediate position, causing the airplane to lose power to multiple electrical systems. This AD requires repetitive operational tests of the affected part, and, depending on findings, accomplishment of applicable corrective action, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 6, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 6, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–0222; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For EASA material, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket at *regulations.gov* under Docket No. FAA–2024–0222.

FOR FURTHER INFORMATION CONTACT: Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3220; email: *shahram.daneshmandi@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to ATR—GIE Avions de Transport Régional Model ATR42–200, –300, –320, and –500; and ATR72–101, –102, –201, –202, –211, –212, and –212A airplanes, except those on which ATR modification (mod) 05948 has been embodied in production. The NPRM published in the **Federal Register** on February 7, 2024 (89 FR 8361). The NPRM was prompted by AD 2023–0181, dated October 13, 2023 (EASA AD 2023–0181) (also referred to as the MCAI), issued by EASA, which is the Technical Agent for the Member States of the European Union. The MCAI states that one event of electrical failure has been reported on a pre-mod 05948 airplane, possibly caused by a functional item number (FIN) 1PA contactor failing with contacts in the intermediate position.

In the NPRM, the FAA proposed to require repetitive operational tests of the affected part, and, depending on findings, accomplishment of applicable corrective action, as specified in EASA AD 2023–0181. The FAA is issuing this AD to address an electrical failure. This condition, if not addressed, could lead to temporary loss of the direct current emergency electrical network and loss of control of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–0222.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from the Air Line Pilots Association, International, and an anonymous individual, both of whom supported the NPRM without change.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

EASA AD 2023–0181 specifies procedures for repetitive operational tests on the contactor 1PA, and, depending on findings, accomplishment of applicable corrective actions. Corrective actions include replacement of the contactor. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 49 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
1 work-hour × $85 per hour = $85	$0	$85	$4,165 per test.

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
2 work-hours × $85 per hour = $170	$1,625	$1,795

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–08–02 ATR—GIE Avions de Transport Régional: Amendment 39–22735; Docket No. FAA–2024–0222; Project Identifier MCAI–2023–01072–T.

(a) Effective Date

This airworthiness directive (AD) is effective June 6, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the ATR—GIE Avions de Transport Régional airplanes specified in paragraphs (c)(1) and (2) of this AD, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2023–0181, dated October 13, 2023 (EASA AD 2023–0181).

(1) Model ATR42–200, –300, –320, and –500 airplanes.

(2) Model ATR72–101, –102, –201, –202, –211, –212, and –212A airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 24, Electrical power.

(e) Unsafe Condition

This AD was prompted by a report of an electrical contactor that failed with contacts in the intermediate position, causing the airplane to lose power to multiple electrical systems. The FAA is issuing this AD to address an electrical failure. The unsafe condition, if not addressed, could result in temporary loss of the direct current emergency electrical network and loss of control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2023–0181.

(h) Exceptions to EASA AD 2023–0181

(1) Where EASA AD 2023–0181 refers to its effective date, this AD requires using the effective date of this AD.

(2) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0181.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or ATR—GIE Avions de Transport Régional's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(j) Additional Information

For more information about this AD, contact Shahram Daneshmandi, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3220; email: *shahram.daneshmandi@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0181, dated October 13, 2023.

(ii) [Reserved]

(3) For EASA AD 2023–0181, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website at *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 12, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 591

Publication of Venezuela Sanctions Regulations Web General Licenses 5O, 8M, and 44A

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Publication of web general licenses.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing three general licenses (GL) issued pursuant to the Venezuela Sanctions Regulations: GL 8M, GL 5O, and GL 44A, each of which was previously made available on OFAC's website.

DATES: GL 8M was issued on November 16, 2023. See **SUPPLEMENTARY INFORMATION** for additional relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Assistant Director for Licensing, 202–622–2480; Assistant Director for Regulatory Affairs, 202–622–4855; or Assistant Director for Compliance, 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

This document and additional information concerning OFAC are available on OFAC's website: *https://ofac.treasury.gov.*

Background

On November 16, 2023, OFAC issued GL 8M to authorize certain transactions otherwise prohibited by the Venezuela Sanctions Regulations (VSR), 31 CFR part 591. GL 8M was made available on OFAC's website (*https://ofac.treasury.gov/*) when it was issued. GL 8M supersedes GL 8L, which was issued on May 23, 2023. GL 8M has an expiration date of May 16, 2024.

On April 15, 2024, OFAC issued GL 5O to authorize certain transactions otherwise prohibited by the VSR. GL 5O was made available on OFAC's website (*https://ofac.treasury.gov/*) when it was issued. GL 5O supersedes GL 5N, which was issued on January 16, 2024. GL 5O has an expiration date of August 13, 2024.

On April 17, 2024, OFAC issued GL 44A to authorize certain transactions otherwise prohibited by the VSR. GL 44A was made available on OFAC's website (*https://ofac.treasury.gov/*) when it was issued. GL 44A supersedes GL 44, which was issued on October 18, 2023. GL 44A has an expiration date of May 31, 2024.

The text of these GLs is provided below.

OFFICE OF FOREIGN ASSETS CONTROL

Venezuela Sanctions Regulations

31 CFR Part 591

GENERAL LICENSE NO. 8M

Authorizing Transactions Involving Petróleos de Venezuela, S.A. (PdVSA) Necessary for the Limited Maintenance of Essential Operations in Venezuela or the Wind Down of Operations in Venezuela for Certain Entities

(a) Except as provided in paragraphs (c) and (d) of this general license, all transactions and activities prohibited by Executive Order (E.O.) 13850 of November 1, 2018, as amended by E.O. 13857 of January 25, 2019, or E.O. 13884 of August 5, 2019, each as incorporated into the Venezuela Sanctions Regulations, 31 CFR part 591 (the VSR), that are ordinarily incident and necessary to the limited maintenance of essential operations, contracts, or other agreements, that: (i) are for safety or the preservation of assets in Venezuela; (ii) involve PdVSA or any entity in which PdVSA owns, directly or indirectly, a 50 percent or greater interest; and (iii) were in effect prior to July 26, 2019, are

authorized through 12:01 a.m. eastern daylight time, May 19, 2024, for the following entities and their subsidiaries (collectively, the ''Covered Entities''):

- Halliburton
- Schlumberger Limited
- Baker Hughes Holdings LLC
- Weatherford International, Public Limited Company

Note to paragraph (a): Transactions and activities necessary for safety or the preservation of assets in Venezuela that are authorized by paragraph (a) of this general license include: transactions and activities necessary to ensure the safety of personnel, or the integrity of operations and assets in Venezuela; participation in shareholder and board of directors meetings; making payments on third-party invoices for transactions and activities authorized by paragraph (a) of this general license, or incurred prior to April 21, 2020, provided such activity was authorized at the time it occurred; payment of local taxes and purchase of utility services in Venezuela; and payment of salaries for employees and contractors in Venezuela.

(b) Except as provided in paragraph (d) of this general license, all transactions and activities prohibited by E.O. 13850, as amended, or E.O. 13884, each as incorporated into the VSR, that are ordinarily incident and necessary to the wind down of operations, contracts, or other agreements in Venezuela involving PdVSA or any entity in which PdVSA owns, directly or indirectly, a 50 percent or greater interest, and that were in effect prior to July 26, 2019, are authorized through 12:01 a.m. eastern daylight time, May 16, 2024, for the Covered Entities.

(c) Paragraph (a) of this general license does not authorize:

(1) The drilling, lifting, or processing of, purchase or sale of, or transport or shipping of any Venezuelan-origin petroleum or petroleum products;

(2) The provision or receipt of insurance or reinsurance with respect to the transactions and activities described in paragraph (c)(1) of this general license;

(3) The design, construction, installation, repair, or improvement of any wells or other facilities or infrastructure in Venezuela or the purchasing or provision of any goods or services, except as required for safety;

(4) Contracting for additional personnel or services, except as required for safety; or

(5) The payment of any dividend, including in kind, to PdVSA, or any entity in which PdVSA owns, directly or indirectly, a 50 percent or greater interest.

(d) This general license does not authorize:

(1) Any transactions or dealings related to the exportation or reexportation of diluents, directly or indirectly, to Venezuela;

(2) Any loans to, accrual of additional debt by, or subsidization of PdVSA, or any entity in which PdVSA owns, directly or indirectly, a 50 percent or greater interest, including in kind, prohibited by E.O. 13808 of August 24, 2017, as amended by E.O. 13857, and incorporated into the VSR; or

(3) Any transactions or activities otherwise prohibited by the VSR, or any other part of 31 CFR chapter V, or any transactions or activities with any blocked person other than the blocked persons identified in paragraphs (a) and (b) of this general license.

(e) Effective November 16, 2023, General License No. 8L, dated May 23, 2023, is replaced and superseded in its entirety by this General License No. 8M.

Bradley T. Smith,

Director, Office of Foreign Assets Control.

Dated: November 16, 2023.

OFFICE OF FOREIGN ASSETS CONTROL

Venezuela Sanctions Regulations

31 CFR Part 591

GENERAL LICENSE NO. 5O

Authorizing Certain Transactions Related to the Petróleos de Venezuela, S.A. 2020 8.5 Percent Bond on or After August 13, 2024

(a) Except as provided in paragraph (b) of this general license, on or after August 13, 2024, all transactions related to, the provision of financing for, and other dealings in the Petróleos de Venezuela, S.A. 2020 8.5 Percent Bond that would be prohibited by subsection l(a)(iii) of Executive Order (E.O.) 13835 of May 21, 2018, as amended by E.O. 13857 of January 25, 2019, and incorporated into the Venezuela Sanctions Regulations, 31 CFR part 591 (the VSR), are authorized.

(b) This general license does not authorize any transactions or activities otherwise prohibited by the VSR, or any other part of 31 CFR chapter V.

(c) Effective April 15, 2024, General License No. 5N, dated January 16, 2024, is replaced and superseded in its entirety by this General License No. 5O.

Bradley T. Smith,

Director, Office of Foreign Assets Control.

Dated: April 15, 2024.

OFFICE OF FOREIGN ASSETS CONTROL

Venezuela Sanctions Regulations

31 CFR Part 591

GENERAL LICENSE NO. 44A

Authorizing the Wind Down of Transactions Related to Oil or Gas Sector Operations in Venezuela

(a) Except as provided in paragraph (b) of this general license, all transactions prohibited by the Venezuela Sanctions Regulations, 31 CFR part 591 (the VSR), including transactions involving Petróleos de Venezuela, S.A. (PdVSA) or any entity in which PdVSA owns, directly or indirectly, a 50 percent or greater interest (collectively, ''PdVSA Entities''), that are ordinarily incident and necessary to the wind down of any transaction related to oil or gas sector operations in Venezuela previously authorized by Venezuela General License 44 are authorized through 12:01 a.m. eastern daylight time May 31, 2024.

(b) This general license does not authorize:

(1) Any transactions involving any financial institution blocked pursuant to Executive Order (E.O.) 13850 other than Banco Central de Venezuela or Banco de Venezuela SA Banco Universal;

(2) The provision of goods or services to, or new investment in, an entity located in Venezuela that is owned or controlled by, or a joint venture with, an entity located in the Russian Federation;

(3) Any transactions related to new investment in oil or gas sector operations in Venezuela by a person located in the Russian Federation or any entity owned or controlled by a person located in the Russian Federation;

(4) Any transactions prohibited by subsections 1(a)(i)–(iii) or 1(b) of E.O. 13808, other than the payment of invoices for goods or services related to oil or gas sector operations in Venezuela, or delivery of oil or gas from Venezuela to creditors of the Government of Venezuela, including creditors of PdVSA Entities, for the purpose of debt repayment;

(5) Any transactions prohibited by E.O. 13827 or E.O. 13835; or

(6) The unblocking of any property blocked pursuant to the VSR.

(c) Effective April 17, 2024, General License No. 44, dated October 18, 2023, is replaced and superseded in its entirety by this General License No. 44A.

Note to General License No. 44A. Nothing in this general license relieves any person from compliance with the requirements of other Federal agencies, including the

Department of Commerce's Bureau of Industry and Security.

BILLING CODE 4810–AL–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket Number USCG–2024–0319]

RIN 1625–AA08

Special Local Regulation; Bush River and Otter Point Creek; Between Perryman, MD and Edgewood, MD

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary special local regulation for certain waters of the Bush River and Otter Point Creek, in Maryland. This action is necessary to provide for the safety of life on these navigable waters located at Edgewood, MD during a high-speed power boat race on May 11, 2024, and May 12, 2024. This regulation prohibits persons and vessels (other than those already at berth at the time the regulation takes effect) from being in the regulated area unless authorized by the Captain of the Port, Sector Maryland-National Capital Region (COTP), or a designated representative.

DATES: This rule is effective from 9 a.m. to 7 p.m. on May 11 and 12, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2023–0168 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email MST2 Hollie Givens, Sector Maryland-NCR, Waterways Management Division, U.S. Coast Guard: telephone 410–576–2596, email *MDNCRWaterways@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port, Sector Maryland-National Capital Region
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Kent Narrows Racing Association (KNRA) applied for a permit under 33 CFR 100.15 to conduct the Harford County Spring Nationals Inboard Hydroplane Race on May 11, 2024, and May 12, 2024, from 10 a.m. to 6 p.m. on both days. The high-speed power boat racing event consists of approximately 60 participating racing boats—including composite and wood hull inboard hydroplanes—12 to 28 feet in length. Following the approval of a permit, the COTP may issue special local regulations under 33 CFR 100.35, as the Coast Guard is doing in the form of this temporary final rule.

The Coast Guard is issuing this temporary rule under procedural authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable to provide notice, consider any comments received, and publish a final rule by May 11, 2024, when the rule must be in place to address the potential safety hazards associated with the high-speed power boat race.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. There are fewer than 30 days between now and May 11, making a 30-day delay in the effective date impracticable if the rule is to serve its purpose of addressing to the potential safety hazards associated with the high-speed power boat race.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The COTP has determined that potential hazards associated with the power boat races would be a safety concern for anyone intending to participate in this event and for vessels that operate within the specified waters of the Bush River and Otter Point Creek. The purpose of this rule is to protect event participants, non-participants, and transiting vessels before, during, and after the scheduled event.

IV. Discussion of the Rule

This rule establishes a regulated area from 9 a.m. on May 11, 2024, through 7 p.m. on May 12, 2024. Although it will be in effect during that period, it will only be enforced from 9 a.m. to 7 p.m. on May 11, 2024, and from 9 a.m. to 7 p.m. on May 12, 2024. The regulated area will cover all navigable waters of the Bush River and Otter Point Creek, shoreline to shoreline, bounded to the north by a line drawn from the western shoreline of the Bush River at latitude 39°21′15″ N, longitude 076°14′39″ W and thence eastward to the eastern shoreline of the Bush River at latitude 39°27′03″ N, longitude 076°13′57″ W, and bounded to the south by the Amtrak Railroad Bridge, across the Bush River at mile 6.8, between Perryman, MD and Edgewood, MD. These boundaries are based on a detailed course map for the event which the Coast Guard received from the sponsor on March 7, 2023.

The COTP, and the Coast Guard Event Patrol Commander (or ''Event PATCOM,'' a commissioned, warrant, or petty officer of the U.S. Coast Guard who has been so designated by the COTP) will have authority to forbid and control the movement of all vessels and persons, including event participants, in the regulated area. When hailed or signaled by an official patrol, a vessel or person in the regulated area will be required to immediately comply with the directions given by the COTP or Event PATCOM. If a person or vessel fails to follow such directions, the Coast Guard may expel them from the area, issue them a citation for failure to comply, or both.

Except for Harford County Spring Nationals participants and vessels already at berth, a vessel or person will be required to get permission from the COTP or Event PATCOM before entering the regulated area. Vessel operators will be able to request permission to enter and transit through the regulated area by contacting the Event PATCOM on VHF–FM channel 16. Vessel traffic will be able to safely transit the regulated area once the Event PATCOM deems it safe to do so. A vessel within the regulated area must operate at a safe speed that minimizes wake. A person or vessel not registered with the event sponsor as a participant or assigned as official patrols will be considered a spectator. Official Patrols are any vessel assigned or approved by the COTP with a commissioned, warrant, or petty officer onboard and displaying a Coast Guard ensign.

Official Patrols enforcing this regulated area can be contacted on VHF–FM channel 16 and channel 22A.

If permission is granted by the COTP or Event PATCOM, a person or vessel will be allowed to enter the regulated area or pass directly through the regulated area as instructed. Vessels will be required to operate at a safe speed in a manner that minimizes wake while within the regulated area and that would not endanger event participants or any other craft. A spectator vessel must not loiter within the navigable channel while present within the regulated area. Only participant vessels and official patrol vessels will be allowed to enter the race area. The Coast Guard will publish a notice in the Fifth Coast Guard District Local Notice to Mariners and issue a marine information broadcast on VHF–FM marine band radio announcing specific event dates and times.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size and duration of the regulated area, which will impact a small, designated area of the Bush River for a total of 20 enforcement hours. Although this regulated area extends across a large portion of the waterway, the rule will allow vessels and persons to seek permission to enter the regulated area, and if able to do so safely, vessel traffic will be able to transit the regulated area as instructed by the Event PATCOM. Such vessels must operate at a safe speed that minimizes wake and not loiter within the navigable channel while present within the regulated area. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the status of the regulated area.

B. Impact on Small Entities

In the spirit of 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves implementation of regulations within 33 CFR 100 applicable to organized marine events on the navigable waters of the United States that could negatively impact the safety of waterway users and shore side activities in the event area for 20 total enforcement hours. It is categorically excluded from further review under paragraph L61 of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 100

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 100 as follows:

PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS

■ 1. The authority citation for part 100 continues to read as follows:

Authority: 46 U.S.C. 70041; 33 CFR 1.05–1.

■ 2. Add § 100.T599–0319 to read as follows:

§ 100.T995–0319 Special Local Regulation; Bush River and Otter Point Creek; Between Perryman, MD and Edgewood, MD.

(a) *Location.* All coordinates are based on datum NAD 1983.

(1) *Regulated area.* All navigable waters of Bush River and Otter Point Creek, from shoreline to shoreline, bounded to the north by a line drawn from the western shoreline of the Bush River at latitude 39°27′15″ N, longitude 076°14′39″ W and thence eastward to the eastern shoreline of the Bush River at latitude 39°27′03″ N, longitude 076°13′57″ W; and bounded to the south by the Amtrak Railroad Bridge, across the Bush River at mile 6.8, between Perryman, MD and Edgewood, MD. The following locations are within the regulated area: The regulations in this section apply to the following area:

(2) *Race Area.* The area is bounded by a line commencing at position latitude 39°26′39.48″ N, longitude 076°15′23.44″ W, to latitude 39°26′36.52″ N, longitude 076°15′13.33″ W, to latitude 39°26′36.94″ N, longitude 076°15′10.01″ W, to latitude 39°26′38.59″ N, longitude 076°15′07.41″ W, to latitude 39°26′41.03″ N, longitude 076°15′06.22″ W, to latitude 39°26′43.61″ N, longitude 076°15′06.76″ W, to latitude 39°26′45.63″ N, longitude 076°15′08.89″ W, to latitude 39°26′47.93″ N, longitude 076°15′16.76″ W, to latitude 39°26′50.24″ N, longitude 076°15′24.63″ W, to latitude 39°26′49.81″ N, longitude 076°15′27.95″ W, to latitude 39°26′48.16″ N, longitude 076°15′30.56″ W, to latitude 39°26′45.72″ N, longitude 076°15′31.75″ W, to latitude 39°26′43.15″ N, longitude 076°15′31.20″ W, to latitude 39°26′41.13″ N, longitude 076°15′29.07″ W thence back to the beginning point.

(3) *Buffer Zone.* The buffer zone surrounds the entire race area and is bounded by a line commencing at position latitude 39°26′39.60″ N, longitude 076°15′30.00″ W, to latitude 39°26′37.80″ N, longitude 076°15′24.00″ W, to latitude 39°26′34″ N, longitude 076°15′14.40″ W, to latitude 39°26′34.80″ N, longitude 076°15′09.00″ W, to latitude 39°26′37.20″ N, longitude 076°15′05.40″ W, to latitude 39°26′40.80″ N, longitude 076°15′03.60″ W, to latitude 39°26′44.40″ N, longitude 076°15′04.20″ W, to latitude 39°26′46.80″ N, longitude 076°15′07.20″ W, to latitude 39°26′49.80″ N, longitude 076°15′15.60″ W, to latitude 39°26′52.20″ N, longitude 076°15′25.20″ W, to latitude 39°26′51.60″ N, longitude 076°15′28.80″ W, to latitude 39°26′49.20″ N, longitude 076°15′32.40″ W, to latitude 39°26′45.60″ N, longitude 076°15′34.20″ W, to latitude 39°26′42.60″ N, longitude 076°615′33.60″ W thence back to the beginning point.

(4) *Spectator Area.* The spectator area is designated as all the waters immediately surrounding the buffer zone up to a distance of 500 feet immediately surrounding the buffer zone.

(b) *Definitions.* As used in this section—

Buffer Zone is a neutral area that surrounds the perimeter of the race area within the regulated area described by this section. The purpose of a buffer area is to minimize potential collision conflicts with marine event participants or high-speed power boats and nearby transiting vessels. This area provides separation between a race area and other vessels that are operating in the vicinity of the regulated area established by the special local regulations in this section.

Designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Maryland-National Capital Region (COTP) in the enforcement of the regulations in this section.

Event Patrol Commander or Event PATCOM means a commissioned, warrant, or petty officer of the U.S. Coast Guard who has been so designated by the Commander, Coast Guard Sector Maryland-National Capital Region.

Official patrol means any vessel assigned or approved by Commander, Coast Guard Sector Maryland-National Capital Region with a commissioned, warrant, or petty officer on board and displaying a Coast Guard ensign.

Participant means all persons and vessels registered with the event sponsor as a participant in the race.

Race area is an area described by a line bound by coordinates provided in latitude and longitude that outlines the boundary of a race area within the regulated area defined by this section.

Spectator means a person or vessel not registered with the event sponsor as a participant or assigned as official patrols.

(c) *Regulations.* (1) The COTP Maryland-National Capital Region or Event PATCOM may forbid and control the movement of all vessels and persons, including event participants, in the regulated area described in paragraph (a)(1) of this section. When hailed or signaled by an official patrol, a vessel or person in the regulated area shall immediately comply with the directions given by the patrol. Failure to do so may result in the Coast Guard expelling the person or vessel from the area, issuing a citation for failure to comply, or both. The COTP Maryland-National Capital Region or Event PATCOM may terminate the event, or a participant's operations at any time the COTP Maryland-National Capital Region or Event PATCOM believes it necessary to do so for the protection of life or property.

(2) Except for participants and vessels already at berth, a person or vessel within the regulated area at the start of enforcement of this section must immediately depart the regulated area.

(3) A spectator must contact the Event PATCOM to request permission to either enter or pass through the regulated area. The Event PATCOM, and official patrol vessels enforcing this regulated area, can be contacted on marine band radio VHF–FM channel 16 (156.8 MHz) and channel 22A (157.1 MHz). If permission is granted, the spectator must pass directly through the regulated area as instructed by Event PATCOM. A vessel within the regulated area must operate at safe speed that minimizes wake. A spectator vessel must not loiter within the navigable channel while within the regulated area.

(4) Only participant vessels and official patrol vessels are allowed to enter and remain within the race area.

(5) Only participant vessels and official patrol vessels are allowed to enter and transit directly through the buffer area in order to arrive at or depart from the race area.

(6) A person or vessel that desires to transit, moor, or anchor within the regulated area must obtain authorization from the COTP Maryland-National Capital Region or Event PATCOM. A person or vessel seeking such permission can contact the COTP Maryland-National Capital Region at telephone number 410–576–2693 or on Marine Band Radio, VHF–FM channel 16 (156.8 MHz) or the Event PATCOM on Marine Band Radio, VHF–FM channel 16 (156.8 MHz).

(7) The Coast Guard will publish a notice in the Fifth Coast Guard District Local Notice to Mariners and issue a marine information broadcast on VHF–FM marine band radio announcing specific event dates and times.

(d) *Enforcement officials.* The Coast Guard may be assisted with marine event patrol and enforcement of the regulated area by other federal, state, and local agencies.

(e) *Enforcement period.* This section will be enforced from 9 a.m. to 7 p.m.

on May 11, 2024, and from 9 a.m. to 7 p.m. on May 12, 2024.

Dated: April 26, 2024.

David E. O'Connell,

Captain, U.S. Coast Guard, Captain of the Port Maryland-National Capital Region.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2024–0316]

Special Local Regulation; Marine Events Within the Captain of the Port Miami

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a special local regulation for the Fort Lauderdale Air Show event from May 9–12, 2024, to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Captain of the Port Miami identifies the regulated area for this event in Fort Lauderdale, FL. During the enforcement periods, no person or vessel may enter, transit through, anchor in, or remain within the regulated area unless authorized by the Coast Guard Patrol Commander or a designated representative.

DATES: The regulation in 33 CFR 100.702, will be enforced from 9 a.m. through 6 p.m., from May 9, 2024, through May 12, 2024, for the regulated area listed in item no. 3 of table 1 to § 100.702.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email Robert Michael Olivas, Sector Miami Waterways Management Division, U.S. Coast Guard: telephone 305–535–4317, Email: *Robet.M.Olivas2@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulation in 33 CFR 100.702 for the Fort Lauderdale Air Show event regulated area identified in table 1 to § 100.702, item no. 3, from 9 a.m. through 6 p.m., each day from May 9, 2024, through May 12, 2024. This action is being taken to provide for the safety of life on navigable waterways during this event. Marine Events within the Captain of the Port Miami § 100.702, table 1, item 3, specifies the location of the regulated area Fort Lauderdale Air Show event which encompasses portions of Atlantic Ocean and Fort Lauderdale Beach. Under the provisions of § 100.702(c), all persons and vessels are prohibited from entering the regulated area, except those persons and vessels participating in the event, unless they receive permission to do so from the Coast Guard Patrol Commander, or designated representative.

Under the provisions of § 100.702,(c) spectator vessels may safely transit outside the regulated area, but may not anchor, block, loiter in, impede the transit of festival participants or official patrol vessels or enter the regulated area without approval from the Coast Guard Patrol Commander or a designated representative. The Coast Guard may be assisted by other Federal, State, or local law enforcement agencies in enforcing this regulation. In addition to this notice of enforcement in the **Federal Register**, the Coast Guard will provide notice of the regulated area via Local Notice to Mariners, Marine Safety Information Bulletins, Broadcast Notice to Mariners, and on-scene designated representatives.

Dated: April 26, 2024.

C.R. Cederholm,

Captain, U.S. Coast Guard, Captain of the Port Miami.

[Docket No. USCG–2024–0315]

Special Local Regulations: Marine Events Within the Captain of the Port Miami

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a special local regulation for the Miami Beach Air and Sea Show event from May 25 and 26, 2024, to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Captain of the Port Miami identifies the regulated area for this event in Miami Beach, FL. During the enforcement periods, no person or vessel may enter, transit through, anchor in, or remain within the regulated area unless authorized by the Coast Guard Patrol Commander or a designated representative.

DATES: The regulations in 33 CFR 100.702 will be enforced from 9 a.m. through 7 p.m., on May 25 and 26, 2024, for the regulated are listed in Item No. 2 of Table 1 to § 100.702.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email Mr. Robert M. Olivas, Sector Miami Waterways Management Division, U.S. Coast Guard; telephone 305–535–4317, email at *Robert.M.Olivas2@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulations in 33 CFR 100.702 for the Miami Beach Air and Sea Show event regulated area identified in Table 1 to § 100.702, Item No. 2, from 9 a.m. through 7 p.m. on May 25 and 26, 2024. This action is being taken to provide for the safety of life on navigable waterways during this event. Our regulation for Marine Events within the Captain of the Port Miami in Table 1 to § 100.702, Item No. 2, specifies the location of the regulated area for the Miami Beach Air and Sea Show which encompasses portions of Miami Beach. Under the provisions of § 100.702(c), all persons and vessels are prohibited from entering the regulated area, except those persons and vessels participating in the event, unless they receive permission to do so from the Coast Guard Patrol Commander, or designated representative.

Under the provisions of § 100.702(c), spectator vessels may safely transit outside the regulated area, but may not anchor, block, loiter in, impede the transit of festival participants or official patrol vessels or enter the regulated area without approval from the Coast Guard Patrol Commander or a designated representative. The Coast Guard may be assisted by other Federal, State, or local law enforcement agencies in enforcing this regulation. In addition to this notice of enforcement in the **Federal Register**, the Coast Guard will provide notice of the regulated area via Local Notice to Mariners, Marine Safety Information Bulletins, Broadcast Notice to Mariners, and on-scene designated representatives.

Dated: April 26, 2024.

C.R. Cederholm,

Captain, U.S. Coast Guard, Captain of the Port Miami.

RIN 1625–AA00

Safety Zone; Vineyard Wind 1 Wind Farm Project Area, Outer Continental Shelf, Lease OCS–A 0501, Offshore Massachusetts, Atlantic Ocean

AGENCY: Coast Guard, DHS.

ACTION: Temporary interim rule and request for comments.

SUMMARY: The Coast Guard is extending the effective period for the 63 temporary 500-meter safety zones around the construction of each facility during the development of the Vineyard Wind 1 Wind Farm project area within federal waters on the Outer Continental Shelf, approximately 12 nautical miles offshore of Martha's Vineyard, Massachusetts. This rule extends the effective period of the existing safety zones for an additional two years. The safety zones will now end on May 31, 2026. When enforced, only attending vessels and vessels with authorization are permitted to enter or remain in the safety zones.

DATES: This temporary interim rule is effective from June 1, 2024, through May 31, 2026. Comments and related material must be received by the Coast Guard on or before July 31, 2024.

ADDRESSES: You may submit comments identified by docket number USCG–2023–0277 using the Federal eRulemaking Portal at *https://www.regulations.gov*. See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments. To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2023–0277 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rulemaking, call or email Mr. Craig Lapiejko, Waterways Management, at Coast Guard First District, telephone 617–603–8592, email *craig.d.lapiejko@uscg.mil*.

NPRM Notice of Proposed Rulemaking
OCS Outer Continental Shelf
NM Nautical Mile
§ Section
U.S.C. United States Code
WTG Wind Turbine Generator
VHF–FM Very High Frequency—Frequency Modulation
VW1WF Vineyard Wind 1 Wind Farm

II. Background, Purpose, and Legal Basis

On June 30, 2023, the Coast Guard published a temporary final rule (TFR) establishing 63 temporary 500-meter safety zones around the construction of 62 wind turbine generators (WTGs) and one electrical service platform (ESP) located in the Vineyard Wind 1 Wind Farm (VW1WF) project area within federal waters on the Outer Continental Shelf (OCS), specifically in the northern portion of Bureau of Ocean Energy Management Renewable Energy Lease Area OCS–A 0501, approximately 12 nautical miles (NM) offshore of Martha's Vineyard, Massachusetts and 12 NM offshore Nantucket, Massachusetts. (88 FR 42237).

The Coast Guard originally published a temporary rule to be effective, and enforceable, through May 31, 2024. We are now extending it to May 31, 2026, to provide more time for the completion of the installation of the WTG structures. This rule extends the effective period of the safety zones for two years until May 31, 2026.

The First Coast Guard District Commander has determined that extension of the 63 safety zones through rulemaking is warranted to ensure the safety of life, property, and the environment within a 500-meter radius of each of the 63 facilities during their construction.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to extending the effective period for the safety zone because doing so would be impracticable and contrary to the public interest. The Coast Guard did not receive sufficient notice that the windfarm construction would not be completed until May 31, 2026, to allow time to publish an NPRM, reviewing public comment, and publishing a subsequent rule. Providing this prior public notice and opportunity to comment is contrary to the public's interest and impracticable because doing so could result in a lapse in the safety zone's enforceability, and safety concerns with vessels and persons transiting too close to the construction efforts. Immediate action is needed to protect persons and property from the potential dangers associated with the construction.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this temporary interim rule effective less than 30 days after publication in the **Federal Register**. The current temporary final rule around the windfarm construction ends on May 31, 2024, but the construction will be ongoing after that date. Delaying the effective date of this temporary interim rule would be contrary to the public's interest and impracticable because action is needed starting June 1, 2024, to protect persons and vessels from the potential safety hazards associated with the ongoing windfarm construction.

We are soliciting comments on the extension of the enforcement period of this safety zone. If the Coast Guard determines that changes to the temporary interim rule are necessary, we will publish a temporary final rule or other appropriate document.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority provided in 14 U.S.C. 544, 43 U.S.C. 1333, and Department of Homeland Security (DHS) Delegation No. 00170.1, Revision No. 01.3. As an implementing regulation of this authority, 33 CFR part 147 permits the establishment of safety zones for non-mineral energy resource permanent or temporary structures located on the OCS for the purpose of protecting life and property on the facilities, appurtenances and attending vessels, and on the adjacent waters within the safety zone (see 33 CFR 147.10). Accordingly, a safety zone established under 33 CFR part 147 may also include provisions to restrict, prevent, or control certain activities, including access by vessels or persons to maintain safety of life, property, and the environment.

IV. Discussion of Comments, Changes, and the Rule

This rule extends the effective period of the 63 temporary 500-meter safety zones around the construction of 62 WTGs and one ESP on the OCS for two

additional years until May 31, 2026. When enforced, this rule will continue to prohibit unauthorized vessel or person to enter the safety zone without obtaining permission from the First Coast Guard District Commander or a designated representative. All other requirements in the temporary safety zone issued on June 30, 2023 (88 FR 42237) remain the same.

If the project is completed before May 31, 2026, enforcement of the safety zones will be suspended, and notice given via Local Notice to Mariners.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive Orders related to rulemaking. A summary of our analyses based on these statutes and Executive Orders follows.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866 as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, the rule has not been reviewed by the Office of Management and Budget (OMB).

Aligning with 33 CFR 147.15, the safety zones established will extend to a maximum distance of 500-meters around the OCS facility measured from its center point. Vessel traffic will be able to safely transit around the safety zones, which will impact a small, designated area in the Atlantic Ocean, without significant impediment to their overall voyage. These safety zones are necessary to provide for the safety of life, property, and the environment during the construction of each structure, in accordance with Coast Guard maritime safety missions and the First Coast Guard District Commander's finding.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received zero comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule would not have a significant economic impact on a substantial number of small entities.

This rule may affect owners or operators of vessels intending to transit or anchor in the VW1WF, some of which might be small entities. However, these safety zones will not have a significant economic impact on a substantial number of these entities because they are temporarily enforced, allow for deviation requests, and do not impact vessel transit significantly. Regarding the enforcement period, although these safety zones will continue to be in effect through May 31, 2026, vessels would only be prohibited from the regulated zone during periods of actual construction activity in correspondence to the period of enforcement. We expect the enforcement period at each location to last approximately 48 hours as construction progresses from one structure location to the next. Additionally, vessel traffic could pass safely around each safety zone using an alternate route. Use of an alternate route likely will cause minimal delay for the vessel in reaching their destination depending on other traffic in the area and vessel speed. Vessels will also be able to request deviation from this rule to transit through a safety zone. Such requests will be considered on a case by-case basis and may be authorized by the First Coast Guard District Commander or a designated representative. For these reasons, the Coast Guard expects any impact of this rulemaking establishing a temporary safety zone around these OCS facilities to be minimal and have no significant economic impact on small entities.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist all small entities in understanding this temporary final rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This temporary final rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this temporary final rule will not result in such an expenditure, we do discuss the potential effects of this temporary final rule elsewhere in this preamble.

F. Environment

We have analyzed this final rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one

of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of safety zones around an OCS facility to protect life, property, and the marine environment. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

VI. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. If we determine that changes to the temporary interim rule are necessary, the Coast Guard will publish a temporary final rule or other appropriate document. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov*. To do so, go to *https://www.regulations.gov*, type USCG–2023–0277 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov*, call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this temporary interim rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you click on the Dockets tab and then the temporary interim rule, you should see a ''Subscribe'' option for email alerts. The option will notify you when comments are posted, or a subsequent document is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 147

Continental shelf, Marine safety, Navigation (waters).

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 147 as follows:

PART 147—SAFETY ZONES

■ 1. The authority citation for part 147 continues to read as follows:

Authority: 14 U.S.C. 544; 43 U.S.C. 1333; 33 CFR 1.05–1; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Revise and republish § 147.T01–0277 to read as follows:

§ 147.T01–0277 Safety Zones; Vineyard Wind 1 Wind Farm Project Area, Outer Continental Shelf, Lease OCS–A 0501, Offshore Massachusetts, Atlantic Ocean.

(a) *Description.* The area within 500-meters of the center point of the positions provided in the following table 1 to paragraph (a) is a safety zone:

TABLE 1 TO PARAGRAPH (a)

Name	Facility type	Latitude	Longitude
AL38	WTG	N 41.1370161	W −70.4638911

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the First Coast Guard District Commander in the enforcement of the safety zones.

(c) *Regulations.* No vessel may enter or remain in the safety zones described in paragraph (a) of this section except for the following:

(1) An attending vessel as defined in 33 CFR 147.20;

(2) A vessel authorized by the First Coast Guard District Commander or a designated representative.

(d) *Request for permission.* Persons or vessels seeking to enter the safety zone must request authorization from the First Coast Guard District Commander or a designated representative. If permission is granted, all persons and vessels must comply with lawful instructions of the First Coast Guard District Commander or designated representative via VHF–FM channel 16 or by phone at 617–223–1560 (First Coast Guard District Command Center).

(e) *Effective and enforcement periods.* This section is effective from June 27, 2023, through 11:59 p.m. on May 31, 2026. But it will only be enforced during active construction or other instances which may cause a hazard to navigation deemed necessary by the First Coast Guard District Commander. The First Coast Guard District Commander will make notification of the exact dates and times in advance of each enforcement period for the locations in paragraph (a) of this section to the local maritime community through the Local Notice to Mariners and will issue a Broadcast Notice to Mariners via marine channel 16 (VHF–FM) as soon as practicable in response to an emergency. If the project is completed before May 31, 2026, enforcement of the safety zones will be suspended, and notice given via Local Notice to Mariners. The First Coast Guard District Local Notice to Mariners can be found at: *http://www.navcen.uscg.gov.*

Dated: April 27, 2024.

J.W. Mauger,

Rear Admiral, U.S. Coast Guard Commander, First Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0318]

RIN 1625–AA00

Safety Zone; Oceanside Pier, Oceanside, CA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a 500-yard radius of the Oceanside Pier. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by first

responders and repair work to the pier. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Oceanside Fire Department Fire Chief or the Captain of the Port, Sector San Diego.

DATES: This rule is effective without actual notice from May 2, 2024 through 8 a.m. on May 4, 2024. For the purposes of enforcement, actual notice will be used from April 27, 2024, until May 2, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0318 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email Lieutenant Shelley Turner, Sector San Diego Waterways Management Division, U.S. Coast Guard; telephone 619–278–7261, email *marineeventssd@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because a fire began on Oceanside Pier and caused extensive ongoing damage and response. Immediate action is needed to respond to the potential safety hazards associated with the emergency pier repairs and response phase. It is impracticable to publish an NPRM because we must establish this safety zone immediately.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because immediate action is needed to respond to the potential safety hazards associated with emergency repairs and response to the fire at Oceanside Pier.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Sector San Diego (COTP) has determined that potential hazards associated with emergency pier response and repairs starting April 27, 2024, will be a safety concern for anyone within a 500-yard radius of the Oceanside Pier. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the pier is being repaired.

IV. Discussion of the Rule

This rule establishes a safety zone from April 27, 2024, until 8 a.m. on May 4, 2024. The safety zone will cover all navigable waters within 500 yards of Oceanside Pier. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the pier is being repaired and first responders are assessing the condition of the pier and potential hazardous material surrounding the pier after the fire. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP, Oceanside Fire Department, or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, and duration of the safety zone. Vessel traffic will be able to safely transit around this safety zone. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels and persons to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct

effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 8 days that will prohibit entry within 500 yards of the Oceanside Pier. It is categorically excluded from further review under paragraph L60(d) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T11–140 to read as follows:

§ 165.T11–140 Safety Zone; Oceanside Pier, Oceanside, CA.

(a) *Location.* The following area is a safety zone: All water surface to bottom encompassing a 500-yard perimeter around the Oceanside Pier in Oceanside, CA.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port San Diego (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF-Ch 16 or contacting the Joint Harbor Operations Center at (619) 278–7033. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

J.W. Spitler,

Captain, U.S. Coast Guard, Captain of the Port San Diego.

[FR Doc. 2024–09521 Filed 5–1–24; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0278]

RIN 1625–AA00

Safety Zone; Submarine Power Cables Stone Laying Project, Straits of Mackinac, MI

AGENCY: Coast Guard, DHS.

ACTION: Temporary interim rule and request for comments.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a 500-yard radius of Tug Nancy Anne, Tug Champion, Tug General, Tug WM. Boyd, Tug Shirley Ann, crew boat Timmy V., barges Koko II, Koko III, Koko IV, MM 141, MM 142, D Barge 2002, D Barge 2006, and D Barge 2007. The safety zone is needed to protect the vessels while laying stones to protect exposed sections of 138kV Submarine Power Cables in the Straits of Mackinac, MI. Entry of vessels into this zone is prohibited unless specifically authorized by the Captain of the Port Northern Great Lakes.

DATES: This rule is effective from May 1, 2024, 12 a.m. through October 1, 2024, 11:59 p.m. local time. For the purposes of enforcement, actual notice will be used from May 1, 2024 until May 4, 2024. Comments and related material must be received by the Coast Guard on or before June 18, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0278 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email LT Rebecca Simpson, Sector Northern Great Lakes Waterways Management Division, U.S. Coast Guard; telephone 906–635–3223, email *ssmprevention@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable.

It is impracticable to publish an NPRM because this safety zone must be established by May 1, 2024, and we lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

For the same reasons discussed in the preceding paragraph, a 30 day delay of the effective date would be contrary to public interest because action is needed to respond to the potential safety hazards associated with the stone laying project over submarine power cables and the potential hazard from other vessels transiting the Straits of Mackinac at the same time this project is being conducted.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Sector Northern Great Lakes (COTP) has determined that potential hazards associated with the stone laying project over submarine power cables starting May 1, 2024, will be a safety concern for anyone within a 500-yard radius of the industrial construction equipment, including Tug Nancy Anne, Tug Champion, Tug General, Tug WM. Boyd, Tug Shirley Ann, crew boat Timmy V., barges Koko II, Koko III, Koko IV, MM 141, MM 142, D Barge 2002, D Barge 2006, and D Barge 2007. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the stone laying operation is being conducted.

IV. Discussion of the Rule

This rule establishes a safety zone from 12 a.m. on May 1, 2024 until 11:59 p.m. on October 1, 2024. The safety zone will cover all navigable waters within the Mackinac Regulated Navigation Area within 500 yards of vessels and machinery being used to lay stone over exposed 138kV submarine power cables. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the stone is being laid. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, duration and location of the safety zone. Vessel traffic will be able to safely transit around this safety zone which would impact a small, designated area of the Straits of Mackinac. Moreover, the Coast Guard will issue a Local Notice to Mariners about the safety zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In

particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone to cover all navigable waters within the Mackinac Regulated Navigation Area within 500 yards of vessels and machinery being used to lay stone over 138kV submarine power cables. It is categorically excluded from further review under paragraph L60a of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T09–0278 to read as follows:

§ 165.T09–0278 Safety Zone; Tugs Nancy Anne, Champion, General, WM. Boyd, Shirley Ann, crew boat Timmy V., and barges Koko II, Koko III, Koko IV, MM 141, MM 142, D Barge 2002, D Barge 2006, and D Barge 2007 operating in the Straits of Mackinac, MI

(a) *Location.* The following area is a safety zone: All navigable waters within 500 yards of the Tug Nancy Anne, Tug Champion, Tug General, Tug WM. Boyd, Tug Shirley Ann, crew boat Timmy V., barges Koko II, Koko III, Koko IV, MM 141, MM 142, D Barge 2002, D Barge 2006, and D Barge 2007 while laying stone over the Submarine Power cables within the Straits of Mackinac RNA.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Northern Great Lakes (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF Channel 16 or telephone at (906) 635–3233. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

Dated: April 24, 2024.

J.R. Bendle,

Captain, U.S. Coast Guard, Captain of the Port Sector Northern Great Lakes.

BILLING CODE 9110–04–P

POSTAL SERVICE

39 CFR Part 111

Commercial Mail Receiving Agencies Clarification

AGENCY: Postal Service™.

ACTION: Final rule.

SUMMARY: The Postal Service is amending *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM®) to clarify Commercial Mail Receiving Agencies (CMRA) notary responsibilities for the addressee's signature.

DATES: *Effective date:* May 1, 2024.

FOR FURTHER INFORMATION CONTACT: Heidi Michel at (414) 239–2976, Clayton Gerber at (202) 449–8076, or Garry Rodriguez at (202) 268–7281.

SUPPLEMENTARY INFORMATION: On December 29, 2023, the Postal Service published a notice of proposed rulemaking (88 FR 90137–90138) to clarify CMRA notary responsibilities for the addressee's signature. In response to the proposed rule, the Postal Service received one response to the notice of proposed rulemaking which included comments on multiple topics. The commenter is a business that provides remote notarial services to the public. Comments and the Postal Service responses are summarized as follows.

Comment: The commenter stated allowing CMRA owner/managers to witness the execution of PS Form 1583 remotely via a real-time audio and video session provided insufficient fraud controls.

Response: CMRAs are authorized to operate upon application to the Postal Service. This is a longstanding requirement, as the Postal Service required CMRA owner/managers to sign PS Form 1583 as far back as 1967. In 1973, the Postal Service required the CMRA owner/manager to witness the execution of PS Form 1583. It was not until 1982 that the Postal Service allowed a notary public to witness the execution of PS Form 1583. The final rule continues the practice of allowing CMRA owner/managers to witness the execution of PS Form 1583 provided the applicant presents themself along with two acceptable forms of identification in accordance with Domestic Mail Manual (DMM) sections 608.10.3–.4. The final rule permitting CMRA owners/managers to witness the execution of PS Form 1583 via real-time audio and video is consistent with these longstanding in-person practices and does not diminish any fraud controls that are already in place.

Comment: The commenter agreed with the Postal Service that remote alternatives to physical presence are necessary in today's business environment.

Response: The Postal Service agrees with the commenter that remote alternatives are desirable, which is why the final rule allows applicants to sign or confirm their signature in the physical or virtual (in real-time audio and video) presence of the CMRA owner/manager.

Comment: The commenter proposed that, if a CMRA owner/manager signed a PS Form 1583 after a virtual session with the applicant, the CMRA follow a

prescribed set of steps for the virtual session, including recording the virtual session and maintaining/storing that recording.

Response: The Postal Service has not prescribed the steps a CMRA must follow when witnessing the execution of PS Form 1583 during a virtual session, just like it has not prescribed the steps a CMRA must follow when witnessing the execution of PS Form 1583 in person. In addition, based on the Postal Service's experience, the burden and expense associated with the proposed additional recording and maintenance/storage requirements also must be balanced against need for such additional measures, and the Postal Service has not yet determined such a need exists. Consequently, the Postal Service declines to adopt the commenter's suggestion.

Comment: The commenter recognized the changes to the Rules related to Private Mail Box (PMB) applicant registration will help prevent fraud.

Response: The Postal Service shares this conclusion and expects that changes will reduce the incidence of fraud and criminal activity through PMBs at CMRAs.

Comment: The commenter suggested that by allowing the addressee to ''acknowledge'' his or her signature in the real or virtual presence of a CMRA owner/manager, the Postal Service may be unintentionally conferring notarial authority on the CMRA owner/manager.

Response: Notaries in the United States are appointed by state governments. The Postal Service has no authority to confer any notarial authority on any person, and we believe the use of the term ''acknowledge'' in relation to a CMRA owner/manager does not confer, and was not intended to confer, any such authority. Nevertheless, in the final rule, the language has been changed to address the commenter's concern that using the term ''acknowledge'' in relation to a CMRA owner/manager may be construed to confer notarial authority upon the CMRA owner/manager; accordingly the term ''acknowledge'' will be replaced with ''confirm'' in relation to a CMRA owner/manager: ''[t]he addressee must sign or confirm his or her signature in the physical or virtual (in real-time audio and video) presence of the CMRA owner or manager or authorized employee. . . .''

The Postal Service is revising DMM subsection 508.1.8.3a3 to clarify that the notary public must be commissioned in a United States state, territory, possession, or the District of Columbia and to clarify the notary public's responsibilities with respect to the addressee's signature on PS Form 1583. This clarification is needed to establish that the notary public is domestically commissioned and to address particularities of some state notary public laws that do not authorize notaries public to attest a signature. The revision allows notaries public to recognize the PS Form 1583 applicant's acknowledged signature.

The revision also clarifies that the addressee must sign or confirm his or her signature on the PS Form 1583 in the physical or virtual (in real-time audio and video) presence of the CMRA owner, manager, or authorized employee, or acknowledge his or her signature on the PS Form 1583 in the physical or virtual (in real-time audio and video) presence of a notary public.

We believe this revision will provide CMRA owners/managers with a more efficient process for accepting the PS Form 1583 and establishing mail delivery for a private mailbox (PMB) customer of the CMRA.

The Postal Service adopts the described changes to *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM), incorporated by reference in the *Code of Federal Regulations.*

We will publish an appropriate amendment to 39 CFR part 111 to reflect these changes.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

Accordingly, 39 CFR part 111 is amended as follows:

PART 111—[AMENDED]

■ 1. The authority citation for 39 CFR part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 13 U.S.C. 301–307; 18 U.S.C. 1692–1737; 39 U.S.C. 101, 401, 403, 404, 414, 416, 3001–3011, 3201–3219, 3403–3406, 3621, 3622, 3626, 3632, 3633, and 5001.

■ 2. Revise the *Mailing Standards of the United States Postal Service,* Domestic Mail Manual (DMM) as follows:

Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 131

[EPA–HQ–OW–2021–0791; FRL–8599–02–OW]

RIN 2040–AG17

Water Quality Standards Regulatory Revisions To Protect Tribal Reserved Rights

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is finalizing revisions to the Clean Water Act (CWA) water quality standards (WQS) regulation to add requirements for states establishing WQS in waters where Tribes hold and assert rights to CWA-protected aquatic and aquatic-dependent resources reserved through treaties, statutes, or Executive orders.

DATES: This final rule is effective on June 3, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2021–0791. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information or other information whose

disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Jennifer Brundage or Kelly Gravuer, Office of Water, Standards and Health Protection Division (4305T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 566–1265 or (202) 566–2946; email address: *brundage.jennifer@epa.gov* or *gravuer.kelly@epa.gov*.

SUPPLEMENTARY INFORMATION: This final rule is organized as follows:

I. Executive Summary

Many Tribes hold rights to natural and cultural resources that are reserved, either expressly or implicitly, through treaties, statutes, or executive orders. Environmental regulatory schemes have often failed to recognize or protect such rights. This places Tribal members who rely on these vital resources for sustenance and to support longstanding cultural practices at disproportionate risk. This rule establishes a framework for how Tribal reserved rights, as defined in this final rule, must be considered in establishing WQS. In this final rule, the EPA is amending the Federal WQS regulation at 40 CFR part 131 to: (1) define Tribal reserved rights for purposes of that regulation; (2) establish and clarify the responsibilities of states [1] with regard to Tribal reserved rights in the WQS context; and (3) establish and clarify the EPA's related responsibilities and oversight role.

This rule defines Tribal reserved rights, for purposes of 40 CFR part 131, as ''any rights to CWA-protected aquatic and/or aquatic-dependent resources reserved by right holders, either expressly or implicitly, through Federal treaties, statutes, or executive orders.'' Pursuant to its CWA authority, the EPA is defining ''Tribal reserved rights,'' for purposes of this regulation for use in WQS actions. In defining ''Tribal reserved rights'' for purposes of the EPA's WQS regulation, the EPA is not purporting to establish or interpret rights that may exist, or the scope of such rights, under a Federal treaty or other sources of Federal law. Rather, this definition provides that rights reserved by treaty, statute, or executive order to aquatic and/or aquatic-dependent resources that also fall within the ambit of resources protected under the CWA are within the scope of potentially applicable rights for purposes of this rule. Whether a Tribal reserved right, as defined in this rule, will result in new or revised WQS is a case-by-case inquiry that will be undertaken in accordance with the provisions of this final rule.

The EPA has previously addressed Tribal reserved rights in specific WQS actions. In this final rule, the agency is amending the existing WQS regulation to explicitly address how the EPA and states must consider applicable Tribal reserved rights in establishing WQS. By doing so, the agency is providing greater transparency and clarifying its expectations for WQS in waters where Tribal reserved rights apply.

The rule requires that if a Tribe asserts a Tribal reserved right in writing to a state and the EPA for consideration in establishment of WQS, the state must, to the extent supported by available data and information: (1) take into consideration the use and value of its waters for protecting the Tribal reserved right in adopting or revising designated uses; (2) take into consideration the anticipated future exercise of the Tribal reserved right unsuppressed by water quality in establishing relevant WQS; and (3) establish water quality criteria to protect the Tribal reserved right where the state has adopted designated uses that either expressly incorporate protection of the Tribal reserved right or encompass the right. This latter requirement includes developing criteria to protect right holders using at least the same risk level (*e.g.,* cancer risk level, hazard quotient, or illness rate) as the state would otherwise use to develop criteria to protect the state's general population (*i.e.,* non-right holders), paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right. The EPA will be subject to the same requirements when promulgating Federal WQS.

The rule commits the EPA to: (1) providing assistance to both states and right holders in evaluating Tribal reserved rights, upon request, to the extent practicable; and (2) initiating the Tribal consultation process with any right holders that have asserted their rights for consideration in establishment of WQS.

The rule amends the list of minimum requirements for state submissions of new or revised WQS to the EPA for review pursuant to CWA section 303(c) to include, where applicable, submission of information provided by right holders about relevant Tribal reserved rights and of documentation indicating how the state considered that information.

The rule revises the list of factors that the EPA considers in determining whether state-adopted new or revised WQS are consistent with CWA section 303(c) and 40 CFR part 131 to include, where applicable, whether WQS are consistent with the requirements for states established by this rule.

Finally, the rule modifies the procedures for state review and revision of WQS to require that the triennial review process include any new information available about Tribal reserved rights.

[1] Pursuant to 40 CFR 131.3(j), ''states'' include the 50 states, the District of Columbia, Guam, the Commonwealth of Puerto Rico, Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, and Indian Tribes that the EPA determines to be eligible for purposes of the WQS program.

II. General Information

A. Does this action apply to me?

States responsible for administering or overseeing water quality programs may be affected by this final rule, as they may need to consider and implement new provisions, or revise existing provisions, in their WQS. Federally recognized Indian Tribes [2] with reserved rights [3] may also be affected by this final rule. Entities that are subject to CWA regulatory programs, such as industrial facilities and municipalities that manage stormwater, separate sanitary, or combined sewer systems could be indirectly affected by this final rule. Categories and entities that could potentially be affected include the following:

TABLE 1—DISCHARGERS POTENTIALLY AFFECTED BY THIS FINAL RULE

Category	Examples of potentially affected entities
Industry	Industrial point sources that discharge pollutants.
Municipalities, including those with stormwater or combined sewer system outfalls.	Publicly owned treatment works or similar facilities responsible for managing stormwater, separate sanitary, or combined sewer systems that discharge pollutants.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities that could be indirectly affected by this action. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

B. How did the EPA develop this final rule?

In developing this final rule, the EPA carefully considered the input from Tribes received during a 90-day Tribal consultation and coordination period following publication of the proposed rulemaking in the **Federal Register** on December 5, 2022, as well as public comments received from interested parties during a concurrent 90-day public comment period.[4] In addition, the EPA held two online public hearings on January 24 and 31, 2023, to discuss the contents of the proposed rulemaking and accept verbal public comments.

One hundred sixty-two organizations and individuals submitted comments on a range of issues. Some comments addressed issues beyond the scope of the rulemaking, and thus the EPA did not consider them in finalizing this rule. In this preamble, the EPA explains how it responded to certain comments received on aspects of the proposal. For a complete summary of all comments received and the EPA's responses, see the EPA's Response to Comments document in the official public docket. For a summary of input received from Tribes during the Tribal consultation and coordination period, please see section VI.F of this preamble.

III. Statutory and Regulatory Background

A. Clean Water Act

The CWA establishes the basic structure for regulating pollutant discharges into waters of the United States. In the CWA, Congress established the national objective to ''restore and maintain the chemical, physical, and biological integrity of the Nation's waters,'' and to achieve ''wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water'' (CWA sections 101(a) and 101(a)(2)).

CWA section 303(c) directs states to adopt WQS for waters of the United States. The core components of WQS are designated uses, water quality criteria, and antidegradation requirements. Designated uses establish the environmental objectives for a water body, such as public drinking water supply, propagation of fish, shellfish and wildlife, or recreation. Water quality criteria define the minimum conditions necessary to achieve those environmental objectives. Antidegradation requirements maintain and protect water quality that has already been achieved.

WQS serve as the basis for several CWA programs, including:

- Water body assessments, identification of impaired waters, and development of total maximum daily loads (TMDLs) under CWA sections 305(b) and 303(d);
- Certifications of Federal licenses and permits under CWA section 401;
- Water quality-based effluent limits in National Pollutant Discharge Elimination System (NPDES) permits issued by approved state programs or by the EPA under CWA section 402; and
- Permits for dredged or fill material under CWA section 404.

Section 303(c)(2)(A) of the CWA provides that ''[water quality] standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.'' CWA section 303(c)(2)(A) and the EPA's implementing regulation at 40 CFR part 131 require, among other things, that a state's WQS specify appropriate designated uses of the waters, and water quality criteria to protect those uses.[5] Such criteria must be based on sound scientific rationale, must contain sufficient parameters to protect the designated use, must support the most sensitive use where multiple use designations apply, and may be expressed in either narrative or numeric form.[6] In addition, 40 CFR 131.10(b) provides that ''[i]n designating uses of a water body and the appropriate criteria for those uses, the state shall take into

[2] *See* Federally Recognized Indian Tribe List Act of 1944, 25 U.S.C. 479a. The current list can be found at 88 FR 2112–2116 (January 12, 2023).

[3] The EPA is defining ''Tribal reserved rights'' for the purposes of 40 CFR part 131 as ''any rights to CWA-protected aquatic and/or aquatic-dependent resources reserved by right holders, either expressly or implicitly, through Federal treaties, statutes, or executive orders.''

[4] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361 (December 5, 2022).

[5] *See* 40 CFR 131.10.

[6] *See* 40 CFR 131.11(a) and (b). Special requirements apply to ''priority toxic pollutants.'' CWA section 303(c)(2)(B) requires states to adopt numeric criteria, where available, for all toxic pollutants listed pursuant to CWA section 307(a)(1) for which the EPA has published CWA section 304(a) criteria, as necessary to support the states' designated uses. ''Priority toxic pollutants'' are identified in 40 CFR part 423, Appendix A—126 Priority Pollutants. Consistent with 40 CFR 131.11(a)(2), where a state or authorized Tribe adopts narrative criteria for priority pollutants to protect designated uses, it must also provide information identifying the method by which it intends to regulate point source discharges of priority pollutants in water quality-limited waters based on such narrative criteria.

consideration the water quality standards of downstream waters and ensure that its water quality standards provide for the attainment and maintenance of the water quality standards of downstream waters.''

Antidegradation requirements provide a framework for maintaining and protecting water quality that has already been achieved.[7] States can also choose to include general policies in their WQS that affect WQS implementation, such as WQS variance policies and mixing zone policies.[8]

States are required to hold a public hearing to review applicable WQS at least once every three years (''triennial review'') and, if appropriate, to revise standards or adopt new standards.[9] Any new or revised WQS must be submitted to the EPA for review and approval or disapproval.[10] CWA section 303(c)(4)(B) authorizes the Administrator to independently determine that a new or revised standard is necessary to meet CWA requirements, referred to as an Administrator's Determination.

CWA section 501(a) authorizes the Administrator to ''prescribe such regulations as are necessary to carry out his functions under this chapter.'' CWA section 511(a)(3) provides that the Act ''shall not be construed as . . . affecting or impairing the provisions of any treaty of the United States.''

B. Tribal Reserved Rights

1. Overview of Tribal Reserved Rights in Federal Law

The EPA recognizes that many federally recognized Tribes hold rights to use and access natural and cultural resources, and that exercise of these rights is an intrinsic part of Tribal life and is of deep cultural, economic, and subsistence importance to Tribes.[11] The Supreme Court has described Tribal reserved rights to fish and access fishing locations as ''not much less necessary to the existence of the Indians than the atmosphere they breathed[.]'' [12] Such rights are ''reserved'' by Tribes, because, as the U.S. Supreme Court has explained, treaties are ''not a grant of rights to the Indians, but a grant of rights from them, a reservation of those not granted.'' [13] As described further below, these rights may be recognized in treaties, statutes, or Executive orders, and may be explicit or implied.

The U.S. Constitution defines treaties as part of the supreme law of the land, with the same legal force as Federal statutes.[14] From 1778 to 1871, U.S. relations with Tribes were defined and conducted largely through treaty-making. In 1871, Congress stopped making treaties with Tribes,[15] and subsequent agreements between Tribes and the Federal Government were instead generally memorialized through Executive orders or statutes, such as congressionally enacted Indian land claim settlements, with equally binding effect.[16] As one court explained, generally ''it makes no difference whether . . . [Tribal] rights derive from treaty, statute or executive order, unless Congress has provided otherwise.'' [17] Pursuant to the Constitution's Supremacy Clause, treaties and statutes also bind states.[18]

Courts generally adhere to several guiding principles, known as the ''Indian canons of construction,'' in interpreting treaties and other Federal legal instruments regarding Indian Tribes. In accordance with these canons, ''Indian treaties are to be interpreted liberally in favor of the Indians, and any ambiguities are to be resolved in their favor.'' [19] Further, treaties ''are to be construed as the Indians would have understood them'' at the time of signing.[20] Although Congress may abrogate Indian treaty rights, those rights remain absent clear evidence of congressional intent.[21] While these Indian canons of construction originated in the context of treaty interpretation by Federal courts, courts have also applied the canons in other contexts,[22] including determining the scope of Tribes' rights under statutes or Executive orders setting aside land for Tribes.[23] Some Tribes have treaty rights

[18] *Antoine* v. *Washington,* 420 U.S. 194, 205 (1975) (like a treaty, when Congress by statute ratifies an agreement that reserves Tribal rights, ''State qualification of the rights is precluded by force of the Supremacy Clause, and neither an express provision precluding state qualification nor the consent of the State [is] required''); *U.S.* v. *Washington,* 853 F.3d 946, 966 (9th Cir. 2017) (Holding that ''in building and maintaining barrier culverts within the Case Area, Washington has violated, and is continuing to violate, its obligation to the Tribes under the Treaties.'') *aff'd,* 138 S.Ct. 1832 (per curiam); *Skokomish Indian Tribe* v. *United States,* 410 F.3d 506, 512 (9th Cir. 2005) (Treaties ''constitute the 'supreme law of the land' '' and have ''been found to provide rights of action for equitable relief against non-contracting parties,'' and such equitable relief ''ensures compliance with a treaty; that is, it forces state governmental entities and their officers to conform their conduct to federal law.''); *see also Minnesota* v. *Mille Lacs Band of Chippewa Indians,* 526 U.S. 172, 204 (1999) (noting that ''[a]lthough States have important interests in regulating wildlife and natural resources within their borders, this authority is shared with the Federal Government when the Federal Government exercises one of its enumerated constitutional powers, such as treaty making,'' and accordingly, the treaty in that case gave the Chippewa Tribe ''the right to hunt, fish, and gather in the ceded territory free of . . . state, regulation.'').

[19] *Mille Lacs,* 526 U.S. at 200 (internal citations omitted); *see also County of Oneida* v. *Oneida Indian Nation,* 470 U.S. 226, 247 (1985) (''it is well established that treaties should be construed liberally in favor of the Indians with ambiguous provisions interpreted for their benefit'').

[20] *Mille Lacs,* 526 U.S. at 196 (''[W]e interpret Indian treaties to give effect to the terms as the Indians themselves would have understood them.''); *Jones* v. *Meehan,* 175 U.S. 1, 11 (1899) (A ''treaty must therefore be construed, not according to the technical meaning of its words to learned lawyers, but in the sense in which they would naturally be understood by the Indians.'').

[21] *Mille Lacs,* 526 U.S. at 202 (''Congress may abrogate Indian treaty rights, but it must clearly express its intent to do so.''); *United States* v. *Dion,* 476 U.S. 734, 739–40 (1986) (noting that in finding congressional intent to abrogate ''[w]hat is essential is clear evidence that Congress actually considered the conflict between its intended action on the one hand and the Indian treaty rights on the other, and chose to resolve that conflict by abrogating the treaty'').

[22] *See e.g., Hagen* v. *Utah,* 510 U.S. 399, 423–24 (1994) (''For more than 150 years, we have applied this canon in all areas of Indian law to construe congressional ambiguity or silence, in treaties, statutes, Executive orders, and agreements, to the Indians' benefit.''); *County of Yakima* v. *Confederated Tribes,* 502 U.S. 251, 268–69 (1992) (quoting *Montana* v. *Blackfeet Tribe,* 471 U. S. 759, 766 (1985)) (''statutes are to be construed liberally in favor of the Indians, with ambiguous provisions interpreted to their benefit''); *Alaska Pacific Fisheries Co.* v. *U.S.,* 248 U.S. 78, 89 (1918) (''statutes passed for the benefit of dependent Indian Tribes or communities are to be liberally construed, doubtful expressions being resolved in favor of the Indians''); *but see Penobscot Nation* v. *Frey,* 3 F.4th 484, 502 (1st Cir. 2021) (holding that the Indian canons of construction were inapplicable to statutes settling Indian land claims in Maine).

[23] *See Winters* v. *United States,* 207 U. S. 564, 576–577 (1908) (applying the canons and holding that the Tribe was entitled to federally reserved rights to the Milk River); *Parravano,* 70 F.3d at 544 (applying the canons to determine the scope of

that are no longer enforceable because they have been abrogated or otherwise superseded by Congress in later Federal statutes.[24] In addition, some Tribes negotiated treaties with the U.S. government that were not ratified.[25]

Rights reserved to Tribes and reflected in treaties and other laws may apply in Indian country as well as outside of Indian country [26] and may be express or implied.[27] For example, in certain states in the Great Lakes region, Tribal reserved rights include hunting, fishing, and gathering rights both within Tribes' reservations and outside these reservations in specific areas that the Tribes ceded to the Federal Government.[28] In the Pacific Northwest, treaties explicitly reserved to many Tribes rights to fish in their ''usual and accustomed'' fishing grounds and at stations both within and outside their reservation boundaries and to hunt and gather throughout their traditional territories.[29] In addition to Tribes whose rights are reserved through treaties, other Tribes have statutorily reserved rights. For example, Tribes in Maine have statutorily reserved rights to practice traditional sustenance lifeways such as fishing in certain waters.[30]

2. Tribal Reserved Rights and Water Quality Standards

As explained in the proposed rulemaking, the EPA has previously addressed reserved rights held by Tribes in state-specific WQS actions. In this final rule, the agency is including additional information on its prior approaches to addressing how WQS should account for such rights, consistent with comments requesting that the agency provide a fuller description of how the requirements in this final rule differ from the agency's prior actions.

From 2015 through 2017, the EPA took actions related to three state WQS submittals where affected Tribes had asserted that they held reserved fishing rights. In those actions, the EPA ''harmoniz[ed] the requirements of the CWA with the terms of'' applicable statutes (in Maine) and treaties (in Washington and Idaho) and found that, based on that harmonization, the WQS submitted by those states were not sufficiently protective of the applicable reserved rights.[31] First, in 2015, the EPA disapproved certain human health criteria adopted by the State of Maine because they did not adequately account for Tribal members' rights to fish for sustenance, reserved under applicable Federal statutes. The agency explained that the initial step in reaching that outcome was to ''harmonize the CWA requirement that WQS must protect uses with the fundamental purpose for which land was set aside for the Tribes under the Indian settlement acts in Maine.'' [32] The agency explained that, pursuant to that harmonization, the ''EPA interprets the State's 'fishing' designated use, as applied in Tribal waters, to mean 'sustenance' fishing.'' [33]

Similarly in 2016, in promulgating human health criteria for the State of Washington, the EPA noted that most waters covered by the state's WQS were subject to Federal treaties that reserved Tribal fishing rights. The agency again harmonized the applicable treaties with the CWA and the EPA's WQS regulation and found that it was appropriate to interpret the state's relevant designated use to ''include or encompass a subsistence fishing component.'' [34] The EPA articulated a similar position in a January 2017 letter to Idaho regarding human health criteria submitted by Idaho in December 2016, reiterating the ''need to consider treaty-reserved fishing rights and harmonize those rights with the [CWA] when deriving criteria necessary to protect Idaho's designated uses for fishing.'' [35]

In each of these three actions, the EPA harmonized the CWA with the specific treaties or statutes by interpreting the relevant state uses. Based on that interpretation of each state's respective use as protecting applicable reserved rights, the agency concluded that in order to protect those uses, each state's human health criteria needed to protect Tribal members exercising the right to the same level as each state's respective general population, and the fish consumption rates used to derive those criteria needed to reflect unsuppressed consumption by that state's Tribal fish consumers.[36]

Tribes' reserved fishing rights under Executive orders and a statute).

[24] U.S. Constitution, Art. II, section 2, cl. 2; *S. Dakota* v. *Bourland,* 508 U.S. 679, 690 (1993) (Statutory language providing that ''the sum paid by the Government to the Tribe for former trust lands taken for the Oahe Dam and Reservoir Project, 'shall be in final and complete settlement of all claims, rights, and demands' of the Tribe or its allottees'' made clear that the Tribe no longer retained its treaty right to regulate hunting and fishing); *Dion,* 476 U.S. at 739 (While Congress has the power to abrogate a treaty, ''the intention to abrogate or modify a treaty is not to be lightly imputed . . . Indian treaty rights are too fundamental to be easily cast aside.''); *U.S.* v. *McAlester,* 604 F.2d 42, 62–63 (10th Cir. 1979) (describing the history of the Choctaw Tribe's treaty-making with the United States, including several treaties in the late 1700s and early 1800s providing rights to lands that were later lost due to the Indian Removal Act of 1830, which ''finally forced the Choctaw Nation to agree . . . to relinquish all its lands east of the Mississippi River and to settle on lands west of the Arkansas Territory'').

Continued

These actions followed a December 2014 memorandum from the EPA Administrator Gina McCarthy that discussed the EPA's role with respect to Tribal treaty rights.[37] This memorandum was issued to commemorate the 30th anniversary of the EPA's 1984 Indian Policy, which addressed many issues related to the EPA's relationship with federally recognized Tribes and implementation of the EPA's statutes in Indian country, but did not expressly address the EPA's consideration of Tribal treaty and other reserved rights.[38] In pertinent part, the 2014 memorandum provides that the ''EPA has an obligation to honor and respect Tribal rights and resources protected by treaties,'' and that the ''EPA must ensure its actions do not conflict with Tribal treaty rights.'' [39] In 2016, as part of the agency's efforts to implement the memorandum, the EPA issued an addendum to its Tribal consultation policy entitled ''Guidance for Discussing Tribal Treaty Rights'' with the purpose of enhancing the EPA's consultations where agency actions may affect Tribal treaty rights.[40] The goal of this document was to help ensure that the EPA's actions do not conflict with treaty rights, and that the EPA is fully informed as it seeks to implement its programs to further protect Tribal treaty rights and resources when it has discretion to do so.[41] Even before this guidance was issued in 2016, the EPA routinely discussed Tribal treaty rights during consultation with Tribes. For example, in the agency's actions in Maine, Washington, and Idaho with regard to WQS, the EPA undertook extensive consultation with the federally recognized Tribes in those states which included, consistent with the objectives of that guidance, gathering information regarding relevant reserved rights.[42]

Although the agency did not rescind the Memorandum and Guidance for Discussing Tribal Treaty Rights, in subsequent state-specific WQS actions taken in 2019 the agency disavowed the approach to protecting Tribal reserved rights that the EPA had set forth in the Maine (2015) and Washington (2016) actions, as well as in the EPA's 2017 letter to the State of Idaho regarding protection of applicable treaty rights in that state.[43] In 2019, the EPA approved Idaho's human health criteria, despite its prior expression of concern that the state's WQS did not sufficiently protect applicable Tribal reserved rights.[44] In its approval, the EPA acknowledged the approach the agency had applied in Maine and Washington in 2015 and 2016 but noted that that approach ''had not been promulgated in any nationally applicable rule or articulated in any national recommended guidance,'' and had not gone through public comment prior to the agency applying it in those states.[45] To the extent that assertion implied a procedural deficiency, that assertion is now moot because the agency is establishing, through this rule, regulatory requirements addressing how WQS are to reflect consideration and protection of applicable Tribal reserved rights, as defined by this rule.

The legal basis for the requirements in this final rule differs in an important respect from the legal underpinnings of the agency's WQS disapprovals in Maine and Washington in 2015 and 2016, respectively, and the EPA's 2017 letter to Idaho regarding its WQS. Namely, as explained above, the legal rationale for those actions was harmonizing the CWA and existing regulatory requirements with specific Federal treaties and statutes and concluding that, read together, the CWA and WQS regulatory requirements and the respective treaties and statutes justified interpreting existing state designated uses to encompass relevant Tribal fishing rights.[46] As explained in section III.C of this preamble, the EPA's authority to add the requirements set forth in this final rule does not derive from harmonizing a specific treaty, statute, or Executive order with the CWA. Rather, the regulatory requirements in this final rule are an exercise of the EPA's CWA oversight function provided by Congress in CWA section 303(c).

While the legal basis for these requirements differs from that of the EPA's 2015–2017 actions in Maine, Washington, and Idaho, there are similarities between the substantive elements of this final rule and what the EPA found would protect applicable Tribal reserved rights in those actions. Namely, in those actions, the EPA found that the applicable human health criteria needed to protect Tribal members to the same risk level as the states' general populations at an unsuppressed fish consumption rate. In this rule, as described in section IV of this preamble, the EPA is explicitly adding similar, though not identical, carefully tailored requirements regarding uses, suppression, and risk level in its regulation governing the establishment of WQS that reflect extensive input from states, Tribes, and the regulated community and are grounded in the CWA and consistent with the EPA's longstanding approach to overseeing state WQS.

C. EPA Authority

1. CWA Statutory Authority for This Final Rule

The EPA's authority for this rule derives primarily from section 303(c) of the CWA. In CWA section 303(c),

Aho, Commissioner, Maine Department of Environmental Protection, ''Re: Review and Decision on Water Quality Standards Revisions'' (February 2, 2015); Revision of Certain Federal Water Quality Criteria Applicable to Washington, 81 FR 85417, 85424 (November 28, 2016); Letter from Dennis McLerran, Regional Administrator, EPA Region 10, to John Tippets, Director, Idaho Department of Environmental Quality, ''The EPA's Preliminary Review of DEQ'S December 13, 2016 Submittal of New and Revised Human Health Criteria'' at 10 (January 19, 2017).

Congress set forth statutory requirements governing the establishment of WQS and tasked the EPA with overseeing state implementation of and compliance with those requirements.[47] Congress established a structure whereby states are responsible for establishing WQS applicable to their waters, obtaining the EPA's approval of those standards, and reviewing their standards at least once every three years. Congress also provided direction regarding the nature of such standards. As noted previously, CWA section 303(c) provides that WQS ''shall be such as to protect the public health or welfare, enhance the quality of water, and serve the purposes of'' the Act.[48] It further provides that WQS ''shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.'' [49] State discretion to determine appropriate standards for their waters is not unfettered.[50] While CWA section 303(c) directs states to establish WQS in the first instance, Congress expressly gave the EPA the responsibility to review state WQS, and to disapprove them and promulgate Federal standards if state standards do not meet the applicable requirements of the Act.[51] The ''EPA is permitted—and in fact statutorily required—to scrutinize a state's water quality standards.'' *Id.* The Act ''requires EPA to determine whether the standard is 'consistent with' the Act's requirements.'' [52]

To inform the EPA's statutorily mandated review of state WQS, the EPA's implementing regulation at 40 CFR part 131 specifies requirements for state WQS submissions. This rule, like the existing requirements in 40 CFR part 131, is issued in exercise of the EPA's oversight authority in CWA section 303(c) and is in accordance with the EPA's longstanding general approach to implementing CWA section 303(c), which is to ''use standards as a basis of restoring and maintaining the integrity of the Nation's waters.'' [53] The operative requirements in this rule are set forth in 40 CFR 131.9 and explained in detail in section IV of this preamble. This explanation includes the EPA's authority to add the specific requirements in 40 CFR 131.9.

While CWA section 303(c) is the substantive source of authority for this rule, CWA section 501 authorizes the agency to prescribe regulations as necessary to carry out the Administrator's functions under the Act,[54] and the EPA has from time to time issued regulations necessary to carry out its functions under CWA section 303(c). Those regulations, codified at 40 CFR part 131, provide a framework for implementing CWA section 303(c) and related sections, translating the statutory provisions, processes, and directives in CWA section 303(c) into specific requirements consistent with the statutory scheme. This rule adds to that existing framework.

The EPA received many comments asserting that the EPA lacks authority to promulgate the requirements in this rule. The EPA disagrees. The statutory bases for the EPA's action are outlined above and explained in detail in section IV of this preamble. Specific contentions that the EPA lacks authority for particular aspects of this rule are addressed in section IV of this preamble. As described further in section IV of this preamble, these regulatory changes are designed to ensure that WQS will in fact ''protect the public health and welfare,'' including the health and welfare of right holders, and otherwise serve the purposes of the Act, and that consideration of the waters' ''use and value'' does not overlook right holders' use pursuant to the identified reserved rights.[55]

Some commenters asserted that the EPA improperly relied on CWA section 511 as a grant of regulatory authority. These commenters assert that CWA section 511 is a savings clause and an interpretative limitation on the CWA as a whole rather than a basis for these requirements. The EPA is clarifying that, contrary to the characterizations in these comments, the agency is not relying on CWA section 511(a)(3) as a source of rulemaking authority.

In the proposed rulemaking, the agency acknowledged that there may be instances where a later-enacted statutory provision intentionally limits federally reserved rights, citing to *United States* v. *Dion,* 476 U.S. 734, 739–40 (1986). In that case, the Supreme Court applied the principle that courts will not find that Congress intends to abrogate a treaty right absent an indication of clear Congressional intent to do so, holding that ''Congressional intent to abrogate Indian treaty rights to hunt bald and golden eagles is certainly strongly suggested on the face of the Eagle Protection Act,'' the statute at issue in that decision.[56] The EPA's reference to CWA section 511(a)(3) in the proposed rulemaking was to illustrate that there is no such similar Congressional intent to abrogate treaty rights in the CWA, given that in section 511 Congress explicitly provided that the Act ''shall not be construed as . . . affecting or impairing the provision of any treaty of the United States.'' [57] While it is not an affirmative grant of authority, CWA section 511(a)(3) nonetheless supports the agency's approach in adding these requirements, which, in practice, will aid in ensuring that WQS will not ''affect[ ] or impair[ ] the provisions'' of treaties reserving rights to aquatic or aquatic-dependent resources. Indeed, the requirements in this rule will help to ensure that future WQS reflect consideration of and provide protection for treaty rights, where applicable. As explained above, rather than relying on CWA section 511(a)(3) as an affirmative source of authority for this rule, the EPA's substantive authority to promulgate this rule derives from CWA section 303(c).

2. Legal Significance of Applicable Treaties, Statutes, or Executive Orders In Informing This Final Rule's Requirements

In this final rule, the EPA is clarifying that these requirements are not based on any one treaty, statute, or Executive order, but rather reflect the EPA's judgment regarding the necessary considerations and level of protection appropriate under the CWA where such rights apply. In the proposed rulemaking, the EPA explained that, in exercising its CWA section 303(c) authority, the EPA is ensuring that its actions are consistent with treaties, statutes, Executive orders, and other sources of Federal law reflecting reserved rights of Tribes. The EPA received some public comments reflecting confusion regarding how the interpretation of a relevant treaty, statute, or Executive order relates to the

rule's requirements. Specifically, these commenters stated that the EPA was placing an undue reliance on judicial decisions in which courts have found that reserved rights to an aquatic resource also encompass subsidiary rights to support the resource.[58] These commenters opined that those decisions do not stand for the proposition that a resource reserved pursuant to a treaty, statute, or Executive order demands a certain level of water quality. The EPA disagrees with these comments because they misconstrue the role of this framework rule and the relevant inquiry into Tribal reserved rights, as used in this rule.[59]

Consideration of whether Tribal treaty, statutory or Executive order-based rights are applicable turns in part on whether they reserved a right to aquatic and/or aquatic-dependent resources that are protected under the CWA. If they do, and they are asserted by right holders, then the requirements in this rule would apply such that consideration of those rights would be part of the standard-setting process under CWA section 303(c). Their consideration in that process, however, does not hinge on whether the relevant treaty, statute, or Executive order, explicitly references water quality or has been interpreted to imply a right to a certain level of water quality. The requirements set forth in this final rule are not premised on any one treaty, statute, or Executive order, and, accordingly, the rule's substantive water quality requirements set forth in 40 CFR 131.9 do not stem from any potential water quality subsidiary rights in any one treaty, statute, or Executive order. Rather, the rule's requirements are premised on the EPA's recognition of the multitude of Federal treaties, statutes, and Executive orders that reflect various reserved rights to aquatic and aquatic-dependent resources held by Tribes. Whether, and how, a particular reserved right applies will be determined on a case-by-case basis given the facts and the relevant Federal treaties, statutes, and Executive orders.

For purposes of this rule's application in a specific context, the relevant question is not whether a treaty, statute, or Executive order is properly interpreted to reserve a subsidiary right to a particular level of water quality, but rather, whether such an instrument is properly interpreted to reserve a right to an aquatic or aquatic-dependent resource. For example, does a treaty reserve a right to fish? If so, this rule's requirements are aimed at ensuring that where Tribes wish to bring such rights to the state's attention, the state will consider the Tribe's assertion of the right in following the well-established standard setting process pursuant to the EPA's CWA section 303(c) implementing regulation at 40 CFR part 131. In that context, where supported by available data and information, the state will take into consideration whether water quality is sufficient to protect that aquatic resource and right holders exercising their right to that resource. In this final rule, the agency is revising its implementing regulation to set forth a transparent framework to ensure that such aquatic resource rights are protected under the CWA.

Some commenters also asserted that the then-pending Supreme Court case, *Arizona* v. *Navajo Nation,* is relevant to this rule and/or that the United States' position in that case was inconsistent with the EPA's position in the proposed rulemaking. The issue in that case was whether the United States has an affirmative, judicially enforceable fiduciary duty to assess and address the Navajo Nation's need for water from particular sources. The Navajo Nation argued, in pertinent part, that implied rights to water quantity pursuant to *Winters* v. *United States,* 207 U.S. 564, 576–577 (1908), created such an affirmative fiduciary trust duty. The United States argued that prior Supreme Court decisions made clear that a Tribe cannot sue to enforce an asserted fiduciary trust obligation against the United States unless the Tribe can ''identify a specific, applicable, trust-creating statute or regulation that the Government violated.'' [60] The Supreme Court issued its opinion on June 22, 2023, holding that, consistent with the United States' position, while pursuant to the *Winters* doctrine the Tribe held treaty-reserved water quantity rights, those rights ''did not require the United States to take affirmative steps to secure water for the Tribe.'' [61]

Nothing in this rule conflicts with or is contrary to that position. As explained above, the EPA's authority for this rule is the CWA. The EPA is not issuing this rule pursuant to any specific, trust-creating language in any treaty, statute, or Executive order. Rather, it is issuing this rule to ensure that, in implementing the CWA's WQS requirements, the EPA and states are adequately considering rights reserved by treaty, statute or Executive order in establishing WQS for waters where Tribal reserved rights, as defined in this rule, apply. As further explained below, this rule also does not apply to rights to specific quantities of water nor address the quantification of *Winters* rights. Rather, this rule applies to rights to aquatic or aquatic-dependent resources that are protected under the CWA. Accordingly, the EPA disagrees with comments asserting that the *Navajo Nation* case is relevant here.

3. Basis for Amending the Existing WQS Regulations

The EPA established the core of the WQS regulation in a final rule issued in 1983. Since that time, the agency has modified 40 CFR part 131 three times.[62] The agency has explained that such updates have been in response to challenges that ''necessitate a more effective, flexible and practicable approach for the implementation of WQS and protecting water quality,'' and that such updates are informed by the extensive experience with WQS implementation by states, authorized Tribes, and the EPA.[63]

As described above in section III.B.2 of this preamble, in the absence of explicit regulatory requirements aimed at ensuring protection of Tribal reserved rights, the EPA has previously addressed Tribal reserved rights case-by-case in exercising its oversight authority in reviewing state-adopted WQS. Notably, when the EPA promulgated the WQS regulation at 40 CFR part 131 in 1983, the agency considered adding regulatory requirements to ensure that state WQS complied with applicable international treaties. Specifically, in the 1983 final

[58] One commenter also cited to case law in which a court held that a treaty right to fish did not equate to ''an absolute right to the preservation of the fish runs in their original 1855 [treaty] condition, free from all environmental damage caused by the migration of increasing numbers of settlers and the resulting development of land.'' *Nez Perce* v. *Idaho Power,* 847 F. Supp. 791, 808 (D. Id. 1994).

[59] In response to comments on a 2020 decision reversing aspects of the EPA's 2015 Maine WQS disapproval, the EPA expressed a similar view to these commenters. There, the EPA asserted that it was ''unnecessary'' to ensure protection of applicable statutorily reserved rights because the Indian land claims settlement statutes at issue did not ''themselves . . . address or reference designated uses, water quality criteria, or the desired condition or use goal of the waters covered by the sustenance fishing provisions.'' As explained herein, the EPA has clarified that whether the relevant treaty, statute, or Executive order explicitly references water quality or has been interpreted to imply a right to a certain level of water quality is not relevant to applying this rule.

[63] *Id.*

rule establishing the WQS regulation, the agency noted that it had received comments asserting that the EPA should ''require States to adopt standards that meet treaty requirements.'' [64] In response, the agency explained that such issues ''have been adequately resolved previously without the need for regulatory language,'' and, accordingly, that the ''EPA sees no need to include such language in the Final Rule.'' [65] The agency further reasoned that ''[a]ny specific treaty requirements have the force of law,'' and therefore, ''State water quality standards will have to meet any treaty requirements.'' [66]

With respect to Tribal treaties, part of the rationale that the EPA articulated in the 1983 final rule applies equally here: like international treaties, Tribal treaty requirements have the force of law, and thus, in the context of the CWA where WQS must protect the public health or welfare and enhance the quality of water, state WQS must be consistent with any applicable treaty requirements. However, the other element of the agency's asserted reasoning for not adding explicit requirements regarding international treaties has less application here. Namely, while issues regarding WQS and international treaties had been ''resolved previously without the need for regulatory language,'' such resolution—while it has occurred—has been more challenging with respect to issues with WQS and Tribal treaties.[67] As detailed above, in practice the application of specific Tribal reserved rights in the WQS context has lacked consistency and transparent national expectations. The agency's prior incorporation of rights reserved to Tribes by treaty or other sources of Federal law in the WQS context was premised on harmonizing the relevant treaties or statutes with existing CWA requirements, and included interpreting Maine, Washington, and Idaho's fishing designated uses, which those states opposed.[68] That opposition was in part based on those states' views of their own uses, as well as what those states perceived as a new approach to WQS that was taken without notice and comment.[69] The explicit regulatory requirements contained in this final rule, which the agency is promulgating after receiving input from states, Tribes, and other commenters, are thus necessary to establish a set of consistent procedures, expectations, and definitions.

IV. Overview of This Final Rule

A. Definitions and Scope

This final rule provides new regulatory definitions of ''Tribal reserved rights'' and ''right holders'' at 40 CFR 131.3. This rule defines Tribal reserved rights, for purposes of 40 CFR part 131, as ''any rights to CWA-protected aquatic and/or aquatic-dependent resources reserved by right holders, either expressly or implicitly, through Federal treaties, statutes, or executive orders.'' Similarly, for purposes of 40 CFR part 131, this final rule defines ''right holders'' as ''any Federally recognized Tribes holding Tribal reserved rights, regardless of whether the Tribe exercises authority over a Federal Indian reservation.'' The scope of resources covered by this final rule is reflected in the definition of ''Tribal reserved rights,'' which refers to ''rights to CWA-protected aquatic and/or aquatic-dependent resources.''

1. Changes to Proposed Definitions

The final definitions differ from the proposed definitions in three ways, based on public input. First, the EPA added ''for purposes of this part,'' to both the definitions of ''Tribal reserved rights'' and ''right holders,'' simplified the definition of ''right holders'' to reference the definition of ''Tribal reserved rights'' to reduce redundancy, and added ''CWA-protected'' to the definition of ''Tribal reserved rights.'' Second, the EPA revised both definitions to address comments about potential confusion with the definition of ''Indian Tribe or Tribe'' at 40 CFR 131.3(l). Third, in the definition of ''Tribal reserved rights'' the EPA added ''Federal'' before ''treaties, statutes, or executive orders'' and deleted ''or other sources of Federal law.'' These changes from proposal are discussed, in turn, below.

The first set of revisions the EPA made to the proposed definitions at 40 CFR 131.3 was to add ''for purposes of this part,'' to both the definitions of ''Tribal reserved rights'' and ''right holders'' to clarify that both new definitions are applicable only for purposes of the EPA's 40 CFR part 131 regulation. The EPA made this change in response to some commenters who requested that the EPA revise the definition of ''Tribal reserved rights'' to clarify that the way Tribal reserved rights are considered in the WQS context does not dictate or limit how those rights could be considered in other contexts. Similarly, the EPA's addition of the phrase ''CWA-protected'' in the definition of ''Tribal reserved rights'' clarifies that for purposes of this rule the EPA is establishing that definition pursuant to its CWA authority, for consideration in the WQS context. This also does not dictate or limit how treaty, statutory or Executive order-based reserved rights may be considered in other contexts. In response to comments noting that the proposed definition of ''right holders'' was redundant because it repeated the definition of ''Tribal reserved rights'' from 40 CFR 131.3(r), the EPA replaced ''holding rights to aquatic and/or aquatic dependent resources pursuant to . . .'' with ''holding Tribal reserved rights.''

The second change the EPA made to the proposed definitions at 40 CFR 131.3 is intended to clarify that the definition of ''Indian Tribe or Tribe'' at 40 CFR 131.3(l) is not implicated in the definitions of either ''Tribal reserved rights'' or ''right holders.'' Some commenters noted that the definition of ''Indian Tribe or Tribe'' at 40 CFR 131.3(l) is limited to federally recognized Tribes ''exercising governmental authority over a Federal Indian reservation.'' This definition mirrors the definition in CWA section 518(h), which defines ''Indian Tribe or Tribe'' as ''any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal

[65] *Id.*

[66] *Id.* at 51413.

[67] The EPA previously took the position that the best way to ensure that risk levels and criteria protect Tribal reserved rights is in reviewing WQS submissions. In response to comments on the EPA's 1998 draft Human Health Methodology revisions, the agency asserted: ''As stated in the 1998 draft Methodology revisions, 'risk levels and criteria need to be protective of tribal rights under Federal law (*e.g.,* fishing, hunting, or gathering rights) that are related to water quality.' We believe the best way to ensure that Tribal treaty and other rights under Federal law are met, consistent with the Federal trust responsibility, is to address these issues at the time EPA reviews water quality standards submissions.'' (*See* 65 FR 66444, 66457 (November 3, 2000)). As explained herein, the EPA has revisited the latter position based on its subsequent application of these principles and is now finalizing these regulations to establish transparent national expectations with respect to WQS and Tribal rights.

[68] *See* Plaintiff's Motion for Judgment on the Administrative Record, *Maine* v. *Pruitt,* No. 1:14–cv–00264–JDL. Dkt. No. 119 at 19 (D. No. 126 at 9 (D. Me. 2018).

[69] *See id.; see also* Northwest Pulp & Paper Association, et al., Petition for Reconsideration of EPA's Partial Disapproval of Washington's Human Health Water Quality Criteria and Implementation Tools submitted by the State of Washington on August 1, 2016, and Repeal of the Final Rule Revision of Certain Federal Water Quality Standards Applicable to Washington (February 21, 2017).

Indian reservation.'' This definition is expressly limited to CWA section 518, the provision of the statute in which Congress authorized the EPA to treat an Indian Tribe as a state for purposes of enumerated CWA programs for waters ''within the borders of an Indian reservation.''

The EPA's authority for these new regulatory requirements is distinct from the treatment as a state authority granted in CWA section 518. Accordingly, to avoid any confusion regarding the CWA section 518-based definition of ''Indian Tribe or Tribe'' at 40 CFR 131.3(l), the EPA replaced the phrase ''reserved or held by Tribes'' in the definition of ''Tribal reserved rights'' with ''reserved by right holders.'' This change is intended to streamline the text and provide clarification and does not alter the scope of the rights covered.

For the same reasons, the EPA also added language to the definition of ''right holders'' to clarify that the limitation included in the definition of ''Indian Tribe or Tribe'' at 40 CFR 131.3(l) to Tribes ''exercising governmental authority over a Federal Indian reservation'' does not apply to this definition. Namely, ''right holders'' are defined to include ''any Federally recognized Tribes holding Tribal reserved rights, regardless of whether the Tribe exercises authority over a Federal Indian reservation.'' This additional language is intended to clarify that, for purposes of this rule, ''right holders'' can include federally recognized Tribes that are outside the scope of the definition at 40 CFR 131.3(l).

Lastly, for both the definition of ''Tribal reserved rights'' and the definition of ''right holders,'' the EPA added the word ''Federal'' before ''treaties, statutes, or executive orders'' and deleted ''or other sources of Federal law.'' The EPA added the word ''Federal'' to clarify that, for purposes of this rule, the rights at issue are those reserved through Federal law. Some commenters requested that the EPA broaden the scope of legal instruments in the definition of ''Tribal reserved rights'' to encompass rights that are not reflected in Federal law, such as rights pursuant to state law and rights specified in treaties that were never ratified by the U.S. government. The EPA is maintaining the intent of the proposed rulemaking, which defined reserved rights as those reserved through Federal law. This is consistent with the agency's approach to ensure its actions—including its approval and disapproval actions under CWA section 303(c)(3) and its promulgation of final rules under CWA section 303(c)(4)—are consistent with Federal treaties, statutes, and Executive orders memorializing the rights of federally recognized Tribes.

Regarding the deletion of ''or other sources of Federal law,'' some commenters noted that this term was vague. The EPA initially included this term to capture the full universe of Federal legal rights. However, after consideration of comments, the EPA concluded that the definition sufficiently captures all relevant rights without this additional language.

2. Scope of Resources Covered

This final rule, consistent with the proposed rulemaking, provides at 40 CFR 131.3 that ''Tribal reserved rights'' for purposes of 40 CFR part 131 are ''any rights to CWA-protected aquatic and/or aquatic-dependent resources . . .'' In the preamble to the proposed rulemaking, the EPA noted that examples of resources to which Tribes may have reserved rights ''include but are not limited to the rights to fish; gather aquatic plants; and to hunt for aquatic-dependent animals,'' and the agency requested comment on whether there are additional types of rights reserved to Tribes by treaty, statute, or Executive order that it should consider that were not included in the rule's proposed text.[70] The EPA received many comments on this point.[71] A few commenters supported the scope of resources covered under the definition in the proposed rulemaking, asserting that it is not necessary or appropriate to enumerate all the possible resources to which Tribes could hold reserved rights. Most commenters took the opposite view and requested that the EPA delineate the scope of resources or waters potentially covered by the rule. About half of these asserted that the definition of Tribal reserved rights is overbroad and should be narrowed, while the other half requested that the EPA explicitly expand the definition of Tribal reserved rights to ensure that the rule covers additional resources. After careful consideration, and for the reasons explained herein, the agency decided to maintain the regulatory language as proposed and not to enumerate potentially covered rights in the definition of ''Tribal reserved rights'' or otherwise expand or narrow the definition. The definition of ''Tribal reserved rights'' in this final rule is intended to capture the full spectrum of rights to aquatic and aquatic-dependent resources that are covered by the CWA and thus could be addressed by WQS. The key inquiry in determining whether a right is ''to [a] CWA-protected aquatic and/or aquatic-dependent resource[ ]'' for purposes of this rule is whether the right falls within the ambit of the resources protected under the CWA. CWA section 303(c)(2)(A) states that WQS ''shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this Act.'' ''Serve the purposes of this Act,'' as defined in CWA sections 101(a)(2) and 303(c), means that WQS should, wherever attainable, provide water quality ''for the protection and propagation of fish, shellfish and wildlife and for recreation in and on the water'' and take into consideration the use and value of public water supplies, propagation of fish, shellfish, and wildlife, recreation in and on the water, and agricultural, industrial, and other purposes including navigation. Consistent with CWA sections 101(a)(2) and 303(c)(2)(A), 40 CFR 131.2 provides that ''states adopt water quality standards to protect public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act (the Act).'' Accordingly, any aquatic or aquatic-dependent resources or practices to which Tribes have reserved rights that fall within that ambit may be relevant Tribal reserved rights for purposes of this rule. The EPA is available upon request to assist right holders and states in assessing the relevance of rights to aquatic or aquatic-dependent resources for purposes of this rule.

3. Scope Related to Allocation or Quantification of Water Rights

Under the Supreme Court's longstanding reserved water rights doctrine, sometimes referred to as the *Winters* doctrine, the reservation of land for an Indian Tribe (or other Federal purposes) ''also implicitly reserves the right to use needed water from various sources—such as groundwater, rivers, streams, lakes, and springs—that arise on, border, cross, underlie, or are encompassed within the reservation.'' [72] In the proposed rulemaking, the EPA noted ''Tribal reserved rights as defined in this proposed rule generally do not

[70] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74367 (December 5, 2022).

[71] Commenters provided many examples of reserved resources and practices, including terrestrial species, medicinal plants, shellfish, hunting and trapping of waterfowl and mammals, commercial harvest and international trade of resources, as well as the right to pray and/or conduct traditional ceremonial practices such as weaving and sweat lodge ceremonies in which Tribal members utilize and come into direct contact with water.

[72] *Arizona* v. *Navajo Nation,* 599 U.S. at 561.

address the quantification of *Winters* rights.'' [73] The EPA received some comments addressing that statement, as well as the perceived implications of the proposed rulemaking on *Winters* rights allocations and water quantity allocations generally. Almost all of these commenters requested that this rule explicitly include or exclude federally reserved water rights. Many of these commenters expressed concern that the proposed rulemaking had the potential to complicate or improperly interfere with the quantification of water rights.

The EPA disagrees with commenters asserting that regulatory text is necessary to address *Winters* rights and other water rights and disagrees with comments asserting that this rule will complicate or interfere with new or existing water rights allocations or quantifications. Congress explicitly addressed the intersection between the CWA and water quantity allocations in CWA section 101(g), providing that ''the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated, or otherwise impaired'' by the Act, and that nothing in the CWA ''shall be construed to supersede or abrogate rights to quantities of water which have been established by any State.'' Relatedly, in CWA section 518(a) Congress clarified that ''Indian Tribes shall be treated as States for purposes of such section 101(g).'' Nothing in this rule conflicts with these statutory provisions, or the EPA's WQS regulations at 40 CFR 131.4(a) (''[W]ater quality standards shall not be construed to supersede or abrogate rights to quantities of water.''). Nothing in this rule affects a state's or Tribe's authority to allocate water quantities nor provides a basis to supersede or abrogate rights to quantities of water.[74] In accordance with these provisions of the CWA and the EPA's implementing regulations, whether a Tribe has right to a quantity of the water itself is not relevant to the application of this rule, which sets forth requirements for states in establishing WQS where Tribes assert rights to CWA-protected aquatic or aquatic-dependent resources.

The EPA is also clarifying its statement in the preamble of the proposed rulemaking that ''Tribal reserved rights generally do not address the quantification of *Winters* rights.'' [75] The EPA's inclusion of the term ''generally'' in the proposed rulemaking preamble, which created confusion, was solely to recognize that, consistent with other WQS actions, water quantity would come into play only to the extent that a certain quantity or flow was under consideration in WQS development to protect an aquatic or aquatic-dependent resource. For example, that a Tribe may have a right to a certain number of acre feet of water is itself not relevant in establishing WQS. In contrast, if a Tribe has a right to fish and provides data that a certain flow rate is necessary for fish survival, that would be potentially relevant under this rule. In that scenario, considerations regarding quantity or flow would not be based on *Winters* rights, but rather would be focused on protecting a relevant designated use. Accordingly, any effects of this rule on water rights, including *Winters* rights, would be incidental to water quality goals.[76]

B. Protecting Applicable Tribal Reserved Rights

Section 131.9(a) of this final rule adds several requirements to the EPA's existing WQS regulation that apply where a right holder asserts a Tribal reserved right in writing to a state and the EPA for consideration in establishment of WQS. In such circumstances, the state must, to the extent supported by available data and information: (1) take into consideration the use and value of its waters for protecting the Tribal reserved right in adopting or revising designated uses; (2) take into consideration the anticipated future exercise of the Tribal reserved right unsuppressed by water quality in establishing relevant WQS; and (3) establish water quality criteria to protect the Tribal reserved right where the state has adopted designated uses that either expressly incorporate protection of the Tribal reserved right or encompass the right. This latter requirement includes, for human health criteria, developing criteria to protect right holders using at least the same risk level (*e.g.,* cancer risk level, hazard quotient, or illness rate) as the state would otherwise use to develop criteria to protect the state's general population (*i.e.,* non-right holders), paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right. Each of these requirements is discussed in turn in section IV.B.1 through IV.B.3 of this preamble, along with an explanation of the changes that the EPA made to the proposed requirements in response to public comments, to improve clarity and implementation of this final rule.

Pursuant to the language in 40 CFR 131.9(a), this rule's requirements are triggered when right holders assert their reserved rights to CWA-protected aquatic and aquatic-dependent resources for consideration in the establishment of WQS. The EPA recognizes that treaties, statutes, and Executive orders constitute binding legal requirements regardless of whether a right holder chooses to assert rights reserved by such instruments in the context of the CWA WQS program. A right holder's decision to raise such reserved rights for consideration in establishing WQS is based on the specific nature of that right and the specific WQS in question. For example, a right holder may have a treaty-reserved right to fish but choose not to assert or raise that right in the context of a state's planned revision to its human health criteria. The right holders' calculus in whether to assert a right entails numerous considerations, such as whether the WQS revisions at issue are focused on pollutants that impact the right holders' ability to exercise their right. If not, and the right holder decides not to raise their right to the state and the EPA, that decision in no way alters the legal scope or meaning of that right. Accordingly, a decision not to raise a right in a specific WQS context does not amount to a general waiver or disclaimer of that right in the WQS context or in other contexts, including with respect to other state or Federal actions that may impact Tribal reserved rights. Additionally, a decision not to raise a right during a specific state WQS development process does not

[73] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74363 (December 5, 2022).

[74] *Winters* rights arise by implication, vest no later than the establishment or creation date of the Indian or non-Indian Federal reservation and may be quantified through a Congressionally enacted settlement or through adjudication in Federal or state court consistent with the McCarran Amendment. *See, e.g., Colorado River Water Conserv. Dist.* v. *United States,* 424 U.S. 800, 808–09 (1976); *Arizona* v. *California,* 373 U.S. 546, 595–601 (1963); *United States* v. *Adair,* 723 F.2d 1394, 1413–14 (9th Cir. 1983), cert. denied, 467 U.S. 1252 (1984).

[75] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74363 (December 5, 2022).

[76] *See Public Utility District No. 1 of Jefferson County et al.* v. *Washington Department of Ecology,* 511 US 700, 720 (1994) (''Sections 101(g) and 510(2) preserve the authority of each State to allocate water quantity as between users; they do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation.''); citing to the Legislative History of the Clean Water Act of 1977 (''The requirements [of the Act] may incidentally affect individual water rights . . . . It is not the purpose of this amendment to prohibit those incidental effects. It is the purpose of this amendment to insure that State allocation systems are not subverted, and that effects on individual rights, if any, are prompted by legitimate and necessary water quality considerations.'').

preclude the right holder from raising that reserved right during another WQS development process.

The rule's requirements are premised on a right holder asserting a right to a state and the EPA ''for consideration in establishment of [WQS],'' and accordingly, an assertion that occurs after the state has established its WQS would not trigger the rule's requirement that the state consider that right, at that time, but would be relevant for future WQS revisions. Assertions that occur as early as possible in a state's WQS development process will help to ensure adequate time for all parties to resolve any uncertainties and consider whether and how WQS may need to be revised in accordance with 40 CFR 131.9(a). Additionally, asserting the rights and providing associated details early in the WQS development process ensures that the state can consider that information before it has invested significant resources in drafting new or revised WQS, and before those new or revised WQS have been duly adopted.[77] The CWA requires states to conduct a triennial review of their WQS and solicit public input on changes that may be needed to those WQS. In the absence of a separate state process for engaging potential right holders, the state's triennial review process is an ideal opportunity for Tribes to assert their rights for consideration.

The EPA does not intend for the requirement for right holders to assert their rights to a state and the EPA in writing for consideration in establishment of WQS to be onerous. For example, an email with information about the rights would suffice. When right holders choose to assert their rights in the WQS context, the EPA encourages right holders to provide as much detail and documentation as possible on the geographic scope and nature of the rights (*e.g.,* the right to fish for subsistence in geographic area Y; the right to gather plants in waterbody A).

If a right holder asserts a right in the WQS context, then the next step is for the state to seek further information from the right holder and other sources, if needed, to help the state determine the nature and geographic scope of the right, and whether and how state WQS may need to be revised in accordance with 40 CFR 131.9.[78] Accordingly, the EPA also encourages right holders to provide data and information, where available, about desired revisions to relevant WQS. It may be useful for the state to initiate a collaborative process with the EPA and the right holder so all parties receive the same information and can jointly discuss any areas of uncertainty. In the proposed rulemaking, the EPA explained that ''a first step'' in determining the rule's applicability ''should be engagement with potential right holders.'' [79] Accordingly, the EPA proposed adding § 131.6(g)(1), which would have required that WQS submissions include ''[i]nformation about the scope, nature, and current and past use of the [T]ribal reserved rights, *as informed by the right holders*'' (emphasis added).[80] The intent of this provision was to ensure that the identification and interpretation of any relevant Tribal reserved rights would be informed by input from the right holders.[81] Some commenters expressed confusion regarding what the EPA meant by ''as informed by the right holders,'' and what the respective roles of states, the EPA, and right holders would be in initially determining whether there are relevant rights to consider. Accordingly, the EPA revised 40 CFR 131.9(a) to clarify that §§ 131.9(a)(1) through (3) only apply where ''a right holder has asserted a Tribal reserved right in writing to the State and EPA for consideration in establishment of [WQS].'' The EPA also revised the proposed language at 40 CFR 131.6, discussed further below.

This revision to 40 CFR 131.9(a) serves two important purposes. First, in response to concerns raised by some commenters regarding states or the EPA interpreting and applying rights reserved to Tribes pursuant to treaties, statutes or Executive orders in ways that are contrary to right holders' characterizations of their rights, it allows right holders to decide whether to raise their rights for consideration in the WQS context and provide relevant information about those rights. The EPA is available to assist right holders in understanding state WQS development processes to help them determine when they may wish to assert relevant rights in the WQS context. For example, the EPA can direct right holders to information on state WQS development processes so they can stay informed, such as through participation in workgroups and signing up for state email distribution lists on WQS topics.[82]

Second, this revision provides states with requested clarity regarding the scope of rights that they need to consider in the WQS context, *i.e.,* those rights asserted by right holders. The EPA received some comments expressing concerns regarding implementation of the rule and the potential burden placed on states if they had to independently identify all applicable Tribal reserved rights in their waters before proceeding with WQS revisions. This change clarifies that such an identification is not required to comply with this rule. However, the EPA recommends that states engage with Tribes at the earliest stages of their WQS development processes to gain additional knowledge regarding any potentially applicable reserved rights and related WQS concerns before right holders assert those rights. The EPA understands from public comments that some states are already aware of potentially applicable reserved rights and routinely engage with right holders on WQS and other actions that may impact those rights; the EPA encourages that practice. By proactively providing opportunities for Tribes to engage in the WQS development process (for example, by notifying all federally recognized Tribes in the early stages of a triennial review that the Tribes may be affected by amendments to a state's WQS), states can best position right holders to make informed decisions about whether to assert their reserved rights at a stage when the state has the most flexibility to consider new information and use that information to develop revised WQS, as appropriate. The EPA is also available to assist states in identifying potential right holders.

Some commenters requested that the EPA and states keep confidential certain information about Tribal reserved rights, such as culturally sensitive information on water uses. Where a Tribe has concerns about sensitivity of

[77] Tribal assertions of reserved rights to the EPA and the relevant state(s) do not necessarily need to occur solely as part of the WQS development process but can be part of any other process addressing expressed Tribal interests, as long as the assertion relates specifically to WQS.

[78] The EPA notes that a right holder asserting a right does not necessarily mean that application of 40 CFR 131.9 will lead to a WQS revision in that instance.

[79] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74367 (December 5, 2022).

[80] *Id.*

[81] In its slides for the public hearings on the proposed rulemaking, the EPA stated, ''Whether reserved rights apply to waters subject to a specific new/revised WQS is a complex inquiry that will be informed by several factors, including: input from the right holders; language of the treaties, statutes, or Executive orders and relevant judicial precedent.'' *See https://www.epa.gov/system/files/documents/2023-02/01-24-23-Reserved-Rights-Public-Hearing-Slides-508.pdf.*

[82] The EPA has included in the docket for this rule an example implementation scenario illustrating the types of information that could constitute an assertion of rights for consideration in establishment of WQS, as well as the process steps leading from an assertion of rights to state adoption of new or revised WQS and the EPA's approval or disapproval. The EPA expects to further work with Tribes and states in the implementation of this rule.

information, in advance of sharing that information, the EPA and the Tribe should discuss the extent to which the information would likely influence the WQS revision process and steps that could be taken to protect confidentiality. The EPA and states are unlikely to be able to keep most information provided by Tribes confidential, for two reasons. First, to have any bearing on a WQS action, a right holder's assertion of a right would need to be part of the public record for any related WQS action. CWA section 101(e) provides that ''public participation in the development, revision, and enforcement of any regulations, standard, effluent limitation, plan, or program established . . . under this Act shall be provided for, encouraged, and assisted . . .'' In addition, the EPA's regulation related to public participation in the development of WQS, 40 CFR 131.20(b), references 40 CFR part 25, which requires states to provide ''[r]eports, documents and data'' relevant to discussion of proposed WQS revisions in advance of public hearings on such revisions. Information relevant to the proposed WQS and their relationship to Tribal reserved rights would therefore be subject to public review and comment. Second, the EPA is subject to the Freedom of Information Act (FOIA), and, accordingly, FOIA disclosure requirements would apply to information provided to the EPA by right holders.[83] The EPA is only able to maintain confidentiality of information protected by one of the nine exemptions in the FOIA. FOIA disclosure requirements would likely apply to most information provided to the EPA by right holders in the context of this rule.

The requirements in 40 CFR 131.9(a) are premised on states having ''available data and information'' supporting the application of those requirements. As explained above in this section of this preamble, once a right holder asserts a right, the state would seek available data and information, with assistance from the EPA if requested, and then evaluate the data and information to determine whether and how WQS may need to be revised to comply with 40 CFR 131.9(a). The EPA and the state will need to make their decisions based on the information available at the time of the WQS revision. Where a right holder asserts a right but only limited data and information about the nature and scope of the right, or the level of protection required to protect the relevant resource, can be found at the appropriate stage in the state's WQS development process (for example, before a state has duly adopted its WQS and/or the WQS are before the EPA for review under CWA section 303(c)), it could be reasonable to conclude that the information was not ''available'' per § 131.9(a) when the WQS were being developed. The triennial review process exists to ensure that any new information that was not previously addressed is considered and incorporated in a future WQS revision, as appropriate. In such cases, the state, the right holder, and the EPA should discuss next steps for a future WQS revision to address the new information, as needed, as well as how the right could be protected until that future WQS revision occurs (*e.g.,* through implementation of a narrative criterion).

A few commenters raised concerns about the complexity for right holders with rights that span multiple states of needing to engage with different states on different WQS revision timelines and with different strategies for protecting Tribal reserved rights. In such situations, if requested by one or more states or Tribes, the EPA is available to engage with multiple states and right holders to negotiate regional solutions.

Some commenters stated that the phrase ''to the extent supported by available data and information'' needed additional clarification on the appropriate data that would satisfy this requirement. The quality and soundness of available data and information will need to be evaluated case-by-case during the WQS development process. As is currently the case in development of WQS under the EPA's existing regulation at 40 CFR part 131, different parties sometimes have different opinions on the types of data to consider, and the quality and soundness of those data. The EPA received some comments expressing concern that there would be disputes between states and Tribes on appropriate methodologies and/or scientific data and information, and that there is the potential for additional workload burden to resolve these disputes or produce data and information. As stated in 40 CFR 131.9(b), ''States and right holders may request EPA assistance with evaluating Tribal reserved rights''—which could include gathering or producing data and information—and ''EPA will provide such assistance to the extent practicable.'' As for any WQS decision, states must evaluate all the available information and make their decisions based on that information. As explained below in section IV.E, the EPA will review all of the available information and the state's documentation of how that information was considered per 40 CFR 131.6(g) and decide whether to approve or disapprove a state WQS submission in the same way the EPA currently makes decisions when there are disagreements between different parties, including different states, on WQS protections.

The EPA requested comment on whether there are other factors it should consider when making WQS decisions where there are gaps in information, and/or a difference of opinion exists between the state and one or more Tribes about the level of water quality necessary to protect a reserved right. A few commenters asserted that relevant Traditional Ecological Knowledge, also referred to as Indigenous Knowledge, should be considered along with other types of data and information; the EPA agrees.

Some commenters noted that right holders may need resources and support from the EPA to collect data and information. The EPA intends to provide support to right holders, as well as states, during the WQS development process to help gather available data and evaluate differing scientific views to meet the requirements in this final rule. The EPA has, on occasion, provided funding to collect data and information to inform the level of water quality necessary to support Tribal reserved rights. The EPA could support similar projects in the future, as appropriate and as funding allows.

In the proposed rulemaking, 40 CFR 131.9(a) provided that ''[w]ater quality standards must protect [T]ribal reserved rights applicable to waters subject to such standards.'' [84] In response to comments expressing confusion about the meaning and application of this language, in this final rule, the EPA removed the initial overarching statement of principle proposed at 40 CFR 131.9(a), which the agency did not intend as a stand-alone requirement.

Finally, some commenters requested that the EPA amend proposed 40 CFR 131.9(a) to specify that upstream WQS must protect downstream Tribal reserved rights. The EPA made no changes to the final rule in response to these comments because, pursuant to the existing WQS regulation at 40 CFR 131.10(b), upstream states are already obligated to ensure that their WQS provide for the attainment and maintenance of downstream state WQS, including WQS that protect Tribal

[83] *See https://www.epa.gov/foia/learn-about-foia.*

[84] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74378 (December 5, 2022).

reserved rights.[85] Many state WQS already include a broad narrative criterion to protect downstream WQS, for example, or a tailored downstream protection narrative focused on specific waters or pollutants. In practice, where a downstream state's WQS are not yet protective of applicable reserved rights, the EPA would prioritize working with that state and the right holder(s) to gather available data and information and adopt appropriate WQS to protect the rights.

1. Considering Tribal Reserved Rights in Designating Uses

The final rule at 40 CFR 131.9(a)(1) requires states to consider the use and value of their waters for protecting applicable Tribal reserved rights in adopting or revising designated uses pursuant to 40 CFR 131.10. Specifically, it requires that states must ''*[t]ake into consideration* . . . Tribal reserved rights in adopting or revising designated uses[.]'' (Emphasis added). This requirement is consistent with CWA section 303(c)(2)(A), which provides that WQS ''shall be established *taking into consideration their use and value* for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.'' (Emphasis added).

The EPA's existing regulation at 40 CFR 131.6(a) requires that each state's WQS submitted to the EPA for review must include ''[u]se designations consistent with the provisions of [S]ections 101(a)(2) and 303(c)(2) of the Act.'' [86] Some of the uses specified in CWA section 303(c)(2)(A) are also specified in CWA section 101(a)(2), which sets a national goal of ''water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water,'' wherever attainable. The EPA refers to the uses listed in section 303(c)(2)(A) but not listed in section 101(a)(2) as ''non-101(a)(2) uses.'' [87]

The EPA is not delineating in this final rule a list of uses that states must take into consideration, but notes that the full scope of uses that states are required to consider under the CWA includes those that are explicitly listed in sections 303(c)(2)(A) and 101(a)(2) of the CWA, and those that are not, as evidenced by Congress' inclusion of the phrase ''and other purposes . . .'' in CWA section 303(c)(2)(A). As described in section IV.A.2 of this preamble, commenters provided examples of reserved resources and practices that are captured explicitly in CWA sections 101(a)(2) and 303(c)(2)(A) such as propagation of fish and wildlife, as well as examples that are not captured explicitly in either provision but could fall under section 303(c)(2)(A)'s ''other purposes,'' such as ceremonial practices. As noted above in section III.B.1 of this preamble, rights reserved to Tribes pursuant to treaties, statutes and Executive orders are binding Federal law, and thus, for any such rights that do not already fall within the explicit list of uses set forth in CWA section 101(a)(2) or section 303(c)(2)(A), consideration of waters' use and value for protecting Tribal rights reserved by such legal instruments is encompassed within the ''other purposes'' clause of CWA section 303(c)(2)(A).[88]

In this final rule, where a state finds that certain waters have use and value for protecting a Tribal reserved right based on information provided by right holders that have asserted a relevant right, the state would then consider whether those rights are already encompassed by a state's designated uses, or whether a new or revised use may be needed to protect the Tribal reserved right. 40 CFR 131.10 remains the regulatory framework for guiding this consideration. Many state-designated uses already protect the CWA section 101(a)(2) uses, which likely encompass protection of certain Tribal reserved rights. For example, a state with a ''fishing'' designated use applicable to waters where there is a subsistence fishing reserved right could conclude that its ''fishing'' use encompasses that right such that a new use would not be needed, although the state may still choose to adopt a separate subsistence fishing use for transparency and clarity.

For non-101(a)(2) uses, in the preamble to the EPA's final 2015 revisions to the Federal WQS regulation, the EPA provided several recommendations on the types of information that a state might consider when determining the use and value of its waters for various purposes.[89] In addition to the requirements in 40 CFR 131.10 to provide for the attainment and maintenance of downstream WQS and protect existing uses, the EPA recommended that states consider information such as: (1) the quality and physical characteristics of the water(s) being evaluated, (2) public comments, (3) attainability considerations, and (4) the value and/or benefits (including environmental, social, cultural, and/or economic value/benefits) associated with the use. The EPA also recommended that states work closely with the EPA when developing such ''use and value demonstrations'' for non-101(a)(2) uses in their waters.

In the EPA's view, many waters where Tribal reserved rights apply will have significant environmental, social, cultural and/or economic use and value for protecting those rights in accordance with 40 CFR 131.9. In such cases, the EPA expects that a state would either explicitly adopt a use to protect the Tribal reserved rights or conclude that its current uses encompass the rights. This is because, as emphasized in comments from Tribes, the exercise of rights reserved by Tribes is an intrinsic part of Tribal life and of deep cultural, economic, and subsistence importance to Tribes. For example, where a right holder has a reserved subsistence fishing right on a river, that river would have use and value for protecting subsistence fishing. As such, the state would either explicitly adopt a use to protect subsistence fishing or determine that its current use designation already encompasses subsistence fishing. There may be situations, however, where the use and value of certain waters suggests that designating uses for those waters to protect the reserved right is a higher priority than for other waters where the right applies. For example, natural physical characteristics in one waterbody may inhibit growth or survival of a resource covered by a Tribal reserved right, such that there is little value in designating uses for that

[85] USEPA. 2014. *Protection of Downstream Waters in Water Quality Standards: Frequently Asked Questions.* EPA–820–F–14–001. *See https://www.epa.gov/sites/default/files/2018-10/documents/protection-downstream-wqs-faqs.pdf.*

[86] The existing WQS regulation at 40 CFR part 131 interprets and implements CWA section 101(a)(2) and 303(c)(2)(A) through requirements that WQS protect the uses specified in section 101(a)(2) of the Act unless those uses are shown to be unattainable, effectively creating a rebuttable presumption of attainability. This final rule does not alter the existing requirements at § 131.10 that the uses specified in CWA section 101(a)(2) are presumed attainable unless a state affirmatively demonstrates through a Use Attainability Analysis (UAA) that 101(a)(2) uses are not attainable as provided by one of six regulatory factors at 40 CFR 131.10(g). A UAA is defined at 40 CFR 131.3(g) as ''a structured scientific assessment of the factors affecting the attainment of the use which may include physical, chemical, biological, and economic factors as described in § 131.10(g).''

[87] *See* 40 CFR 131.3(q) defining ''non-101(a)(2) uses'' as ''any use unrelated to the protection and propagation of fish, shellfish, wildlife or recreation in or on the water.''

[88] *Grand Portage Band et al.* v. *EPA,* Civil No. 22–1783 (D. Minn. March 29, 2024) at 30 (''States and EPA must consider Tribal treaty rights to aquatic and aquatic-dependent resources to comply with the Clean Water Act and implementing regulations. See 33 U.S.C. 1313(c)(2)–(3), 1371(a); 40 CFR 131.5, 131.6, 131.10(b).'').

waterbody to specifically protect the reserved right. As with any evaluation of waters' use and value for various purposes, compliance with the requirement at 40 CFR 131.9(a)(1) will require a case-specific evaluation of the waters and circumstances in question. The EPA recommends that states work closely with right holders and with the EPA when undertaking such an analysis.

The final rule reflects two key modifications from the use requirement in the proposed rulemaking, which at 40 CFR 131.9(c)(1) proposed to require states to ''[d]esignate uses . . . that either expressly incorporate protection of the [T]ribal reserved rights or encompass such rights[.]'' [90] First, the EPA aligned the rule's requirement regarding designation of uses with the language of section 303(c)(2)(A) of the CWA by requiring that states must ''[t]ake into consideration . . . Tribal reserved rights in adopting or revising designated uses[.]'' Some commenters viewed the proposed requirement in 40 CFR 131.9(c)(1) that states must ''[d]esignate uses . . .'' as a broad mandate requiring states to adopt designated uses and asserted this was inconsistent with the CWA's framework set forth in section 303(c) and improperly usurped states' roles. The EPA's intent in proposing 40 CFR 131.9(c)(1) was not to impose a new use designation requirement, but rather to make explicit that designating a use to protect rights to aquatic and/or aquatic-dependent resources reserved to Tribes by treaty, statute, or Executive order was one option available to states. It was not intended as a mandate. Given the confusion expressed in comments, the EPA is revising the proposed rulemaking language on designated uses to align with the CWA language.

The second key change the EPA made between proposed 40 CFR 131.9(c) and final 40 CFR 131.9(a)(1) was to remove proposed 40 CFR 131.9(c)(1) through (3), which provided that, in order to meet the requirements of proposed 40 CFR 131.9(a), ''states must'' either: (1) designate uses and (2) establish criteria to protect Tribal reserved rights, ''and/or'' (3) use applicable antidegradation requirements to maintain water quality that protects Tribal reserved rights.[91] As explained immediately above, the final rule includes a revised requirement with respect to designated uses, set forth at 40 CFR 131.9(a)(1). The final rule also includes a revised requirement regarding criteria, related to proposed 40 CFR 131.9(c)(2), that is described below in section IV.B.3 of this preamble. For the reasons explained immediately below, the EPA is not finalizing a requirement related to antidegradation, as set forth at proposed 40 CFR 131.9(c)(3).

The EPA requested comments on whether two proposed antidegradation policy options related to Tier 2 and Tier 3 could be used to protect Tribal reserved rights in lieu of the proposed requirements for designated uses and criteria at 40 CFR 131.9(c)(1) and (2), respectively. Some commenters expressed concerns that, as drafted, the proposed rulemaking implied that applying antidegradation requirements alone could satisfy the statement set forth at proposed 40 CFR 131.9(a) that WQS must protect Tribal reserved rights and expressed confusion about whether the proposed requirement at 40 CFR 131.9(c)(3) differed from the requirements already encompassed in the existing WQS regulation at 40 CFR 131.12. The EPA has determined not to include the proposed provision related to antidegradation because the existing antidegradation requirements can be used to protect reserved rights. Among other requirements, 40 CFR 131.12 specifies that states must develop and adopt a statewide antidegradation policy. As specified in 40 CFR 131.12(a)(2), that policy must require that water quality be maintained and protected for high quality waters unless the state finds that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. This requirement applies to all high quality waters, including those where reserved rights apply. In addition, the existing regulation at 40 CFR 131.12(a)(3) specifies that an antidegradation policy must also provide for the maintenance and protection of water quality where states have determined that such waters constitute an Outstanding National Resource Water (ONRW). Again, this requirement applies to ONRWs where reserved rights apply. In the final rule, the EPA streamlined and clarified the operative requirements set forth in 40 CFR 131.9 by removing the language related to antidegradation. The EPA concluded that existing antidegradation tools specified at 40 CFR 131.12 can be used to protect Tribal reserved rights, therefore the EPA determined it was not necessary to include an additional provision related to antidegradation in 40 CFR 131.9.

The final rule does not change or affect the antidegradation requirements in the EPA's existing WQS regulation at 40 CFR 131.12 or add any new antidegradation regulatory requirements regarding protection of Tribal reserved rights. However, the EPA recommends that states consider applying ONRW protections to maintain and protect waters where Tribal reserved rights apply. The EPA also recommends that states amend their antidegradation implementation methods to explicitly account for Tribal reserved rights when evaluating whether to authorize a lowering of water quality in Tier 2 waters.

2. Accounting for Suppression Effects

In the final rule, 40 CFR 131.9(a)(2) requires that, where a right holder has asserted a Tribal reserved right and where supported by available data and information, the state must ''[t]ake into consideration the anticipated future exercise of the Tribal reserved right unsuppressed by water quality[.]'' This requirement is intended to address situations where existing water quality does not allow for right holders to fully exercise their reserved rights. For example, a Tribe's exercise of its right to fish for subsistence is suppressed if the Tribe consumes fish below subsistence levels due to concerns about contamination. Consideration of suppression effects is important to minimize the potential that WQS merely reinforce an existing suppressed use or allow further contamination and/or depletion of the aquatic resources such that it leads to a ''downward spiral'' of further reduction/suppression.[92]

The EPA proposed to require, at 40 CFR 131.9(a)(1), states to establish WQS to ''protect'' the exercise of Tribal reserved rights ''unsuppressed by water quality or availability of the aquatic or aquatic-dependent resource.'' [93] The requirement related to suppression in the final rule reflects several key modifications to the proposed requirement: first, the EPA made it less prescriptive, while maintaining a requirement that states *consider* the effect suppression is having on the exercise of Tribal reserved rights; second, the EPA clarified the need to evaluate the ''anticipated future'' exercise of Tribal reserved rights

[90] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74378 (December 5, 2022).

unsuppressed by water quality; and third, the EPA removed the reference to availability of the resource.

Requiring consideration of the anticipated future exercise of Tribal reserved rights unsuppressed by water quality is consistent with the objectives of CWA section 303(c)(2)(A), the oversight authority that Congress granted the EPA in CWA section 303(c), and the EPA's existing WQS regulation, and builds on the EPA's longstanding recommendations on derivation of human health criteria. Specifically, requiring states to consider suppression effects in establishing WQS is consistent with the CWA goal in section 101(a) to ''restore and maintain the chemical, physical, and biological integrity of the Nation's waters,'' section 303(c)(2)(A)'s requirement that WQS ''shall be such as to protect the public health or welfare'' and ''enhance the quality of the water,'' and the EPA's longstanding position that WQS are water quality goals that are not intended to merely reflect currently attained or existing conditions.[94] As the ''Purpose'' section in the existing WQS regulation at 40 CFR 131.2 explains, WQS ''serve the dual purposes of establishing the water quality goals for a specific water body and serve as the regulatory basis for the establishment of water-quality-based treatment controls and strategies[.]'' Relatedly, the EPA's longstanding regulation at 40 CFR 131.3 defines designated uses as ''those uses specified in water quality standards for each water body or segment *whether or not they are being attained*'' (emphasis added). This definitional language illustrates the principle that WQS may be set based on goals for future water quality, even if such goals are not presently attained.

The requirement at 40 CFR 131.9(a)(2) also builds on the EPA's longstanding guidance addressing derivation of water quality criteria to protect designated uses. For example, in the EPA's *Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health* (2000 Methodology), the agency refers to human health criteria as ''health *goals*'' (emphasis added).[95] The EPA's 2016 *Guidance for Conducting Fish Consumption Surveys* recommends avoiding establishing standards based on suppressed conditions and recommends gathering information about anticipated future conditions.[96] In 2013, in a guidance document addressing human health criteria and fish consumption rates, the agency noted the importance of avoiding ''suppression effects'' that may occur when a fish consumption rate ''reflects an artificially diminished level of consumption from an appropriate baseline level of consumption . . . because of a perception that fish are contaminated with pollutants.'' [97]

The requirement in this final rule builds both on the agency's prior guidance on avoiding establishing WQS based on suppressed fish consumption rates, which was not specific to consideration of Tribal reserved rights, as well as on the case-specific actions the agency took in Maine, Washington, and Idaho, discussed previously in section III.B.2 of this preamble, where Tribal reserved rights were a factor in determining the appropriate fish consumption rate. In 2015 and 2016, in disapproving human health criteria for Maine and Washington, respectively, the EPA stated that, where Tribal rights applied, human health criteria must be based on fish consumption data ''that reasonably represent Tribal consumers taking fish from Tribal waters and fishing practices unsuppressed by concerns about the safety of the fish available to them to consume.'' [98] In 2019, the agency revisited the position taken in the Maine and Washington actions, acknowledging the EPA's prior consideration of suppression in evaluating fish consumption rates, but indicating that the concept of requiring a state to use an unsuppressed fish consumption rate based on heritage or historic data was ''new and novel[.]'' [99] The EPA noted that its applicable guidance did not explain how ''historic fish consumption rates are to be used in deriving'' criteria, and indicated that requirements to use heritage or historic data ''should have been presented for thorough public notice and comment prior to being incorporated into the EPA's human health criteria recommendations.'' [100] This final rule is informed by the general principles reflected in the EPA's pre-2019 guidance. In addition, while this final rule does not mandate use of historic or heritage data, in this rule, the EPA expressly addressed any implied procedural deficiency based on the agency's 2019 assertion by requesting public comment on the concepts of requiring protection of unsuppressed exercise of Tribal reserved rights and of using heritage or historic data to evaluate suppression (discussed further in subsequent paragraphs).

Many commenters expressed concerns that a mandate that WQS must protect unsuppressed exercise of a right would be challenging to implement, as determining what constitutes unsuppressed exercise of a Tribal reserved right could be subjective. Many other commenters supported such a mandate to prevent WQS from being established based on suppressed use of a resource. The EPA agrees, as explained above, that it is important to avoid establishing WQS that lock in current levels of contamination. However, based on public input, the EPA is finalizing a requirement that is less prescriptive than proposed and more flexible than the approach the agency took in its Maine and Washington actions. The final requirement does not mandate that states in establishing WQS in waters with applicable Tribal reserved rights,

[94] *See Water Quality Standards Regulatory Revisions,* 80 FR 51020, 51025 (August 21, 2015) (''When conducting a UAA and soliciting input from the public, states and authorized Tribes need to consider not only what is currently attained, but also what is attainable in the future after achievable gains in water quality are realized.'').

[99] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74369 (December 5, 2022), citing to the EPA's Approval of Idaho's New and Revised Human Health Water Quality Criteria for Toxics and Other [WQS] Provisions (April 4, 2019), p. 12.

[100] The EPA's Approval of Idaho's New and Revised Human Health Water Quality Criteria for Toxics and Other [WQS] Provisions (April 4, 2019), p. 12.

''must protect'' the unsuppressed exercise of those rights, nor does it mandate that, with respect to human health criteria, states must categorically use an unsuppressed fish consumption rate in each instance where Tribal reserved fishing rights apply. The final rule instead requires that states must ''take into consideration'' the anticipated future exercise of Tribal reserved rights unsuppressed by water quality. The EPA's existing WQS regulation at 40 CFR 131.11 already requires that WQS protect applicable designated uses and be based on sound science. Protection of applicable designated uses includes analysis of relevant data. Thus, states should already be considering data regarding suppression effects pursuant to the existing WQS regulation and guidance. This final rule underlines the importance of such consideration in the context of protecting Tribal reserved rights.

Consideration of suppression effects pursuant to this final rule will inform states' development of criteria that protect applicable designated uses and are based on sound scientific rationale. In complying with this requirement, states must consider right holders' anticipated future exercise of relevant rights in light of available data and information regarding suppression effects. Consistent with the final rule's requirements at 40 CFR 131.6, states must include in their WQS submittal their analysis of such information and explain how they considered it in revising their WQS. The additional changes that the agency made to this requirement, described below, are aimed at further clarifying what it means to consider suppression effects in establishing WQS.

The next substantive change in the final rule clarifies that states must take into consideration the ''*anticipated future* exercise of the Tribal reserved right unsuppressed by water quality'' (emphasis added). In the proposed rulemaking preamble, the EPA explained that the proposed requirement at 40 CFR 131.9(a)(1) requiring protection of the ''exercise of Tribal reserved rights unsuppressed by water quality'' was ''intended to result in WQS that protect reasonably anticipated future uses.'' [101] Some commenters expressed confusion regarding the meaning of unsuppressed exercise of Tribal reserved rights in the proposed regulatory text and on the distinction between that text and the preamble phrase ''protect reasonably anticipated future uses.'' In response to these commenters' concerns, the EPA added the words ''anticipated future'' to the final regulatory text, to ensure that the regulatory text clearly matches the agency's intent in adding this requirement.

Consideration of the anticipated future exercise of a Tribal reserved right is consistent with the longstanding principle that WQS establish goals for future water quality, regardless of present conditions, as discussed above. This consideration may include learning about the cultural and/or nutritional importance of the resource to the right holders, determining modern-day availability of the resource as well as alternatives to that resource, considering whether any restoration efforts that are planned or underway could impact availability of the resource, and understanding right holders' current lifestyles and practices. Determining the anticipated future exercise of a reserved right will require a case-specific evaluation to the extent supported by available data and information per 40 CFR 131.9(a). Where available data and information indicate that the existing exercise of the right is suppressed and support a quantitative determination of the anticipated future exercise of the right, the EPA expects that consideration of such data and information will lead states to revise applicable criteria, as needed, to protect the anticipated future exercise of the right. Conversely, if the state does not have sufficient available data and information to determine the anticipated future exercise of the right, after considering any information provided by right holders, it would explain that conclusion in its WQS submission, per 40 CFR 131.6(g)(1), as discussed below in section IV.E of this preamble.

One commenter requested that the EPA promulgate a minimum fish consumption rate that states must use where Tribal reserved rights to fish for subsistence apply. The EPA can provide guidance on default rates to assist states in developing criteria that take into account suppression effects but disagrees that it is appropriate to promulgate a specific rate across-the-board in this nationally applicable rule. Quantifying the anticipated future use unsuppressed by water quality is an evolving area, often requiring a complex and case-specific analysis reconciling multiple lines of evidence, in some cases including differing temporal estimates. However, the EPA agrees with commenters that the absence of data regarding an exact unsuppressed rate need not prevent a state from protecting subsistence consumption where Tribes have a right to such consumption. The EPA notes that in the absence of case-specific data and information, where a Tribal reserved right relates to subsistence fishing, the default fish consumption rate of 142 grams per day (g/day) in the EPA's 2000 methodology [102] can represent a reasonable fish consumption subsistence rate floor.

With respect to fish consumption, some commenters noted that there are other factors, beyond contamination or availability, that may affect right holders' consumption level over time, such as changes in social customs, social makeup, and dietary preferences. Additionally, some commenters noted that there are a variety of ecological and non-ecological factors other than contamination that could affect the availability of fish, including regulations that protect fish populations from overfishing. The EPA agrees that there are factors beyond contamination that could change how a reserved right is exercised, and, as explained above, the EPA intends for these other factors to be considered and discussed with right holders when determining the anticipated future exercise of the right.

Consideration of the anticipated future exercise of a Tribal reserved right unsuppressed by water quality could also include consideration of historical use of that resource. Some commenters opposing proposed 40 CFR 131.9(a)(1) conflated the proposed requirement to protect the unsuppressed use of a resource with a requirement to protect the ''heritage'' use of that resource, *i.e.,* the amount of the resource used prior to non-indigenous or modern sources of contamination and interference with natural processes. Specifically, commenters expressed concern about the use of heritage or historic rates, asserting that those are too speculative, hypothetical, and unreliable to be used in setting WQS. These commenters stated that only contemporary or current fish consumption rates should be used when establishing human health criteria, consistent with longstanding state practices. The EPA disagrees that studies of heritage rates are, as a rule, inherently speculative or unreliable such that only studies of current practices can be used in establishing WQS. Historical data are often used in

[101] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74367 (December 5, 2022).

[102] USEPA. 2000. Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health. U.S. Environmental Protection Agency, Office of Water, Washington, DC EPA–822–B–00–004. *https://www.epa.gov/wqc/human-health-water-quality-criteria-and-methods-toxics.*

the WQS program, such as to establish reference conditions to target as a future goal in impacted waters. However, the EPA agrees that heritage data are not determinative but should be considered in the context of other available information estimating future anticipated practices and goals.

The final substantive change the EPA made between the proposed and final requirements related to suppression was to delete ''or availability of the aquatic or aquatic-dependent resource'' from the phrase ''unsuppressed by water quality or availability of the aquatic or aquatic-dependent resource.'' Some commenters addressed the inclusion of the term ''availability,'' including comments expressing concern that the proposed regulation would have required states to increase the availability of fish, and/or protect pre-contact, pristine conditions. This was not the agency's intent, and in this final rule, the EPA is removing the explicit reference to ''availability'' to avoid the implication that this rule would require states to set WQS that ignore practical realities regarding availability of resources. However, the EPA notes that consideration of ''the anticipated future exercise'' of a Tribal reserved right would include consideration of the availability of the aquatic or aquatic-dependent resource, since anticipated future exercise of the right depends in part on anticipated future availability of the resource. While this rule does not require states to increase the availability of resources, states would take into consideration under 40 CFR 131.9(a)(2) planned actions or anticipated changes that may impact resource availability and therefore the anticipated future exercise of Tribal reserved rights, such as restoration efforts that are planned or underway. This is consistent with the EPA's expectations for how states should establish other WQS.[103]

3. Criteria To Protect Tribal Reserved Rights

The final rule at 40 CFR 131.9(a)(3) establishes two new requirements related to water quality criteria. This provision requires, first, that where a state has adopted designated uses that either expressly incorporate protection of Tribal reserved rights or encompass the right, it must establish criteria to protect the right consistent with 40 CFR 131.11. In contrast to the proposal, the final requirement ties the establishment of criteria to protection of an adopted use rather than calling for establishment of criteria as a freestanding requirement. This requirement in the final rule combines parts of the requirements of proposed 40 CFR 131.9(c)(1) and proposed 40 CFR 131.9(c)(2).

As explained above in section IV.B.1 of this preamble, in this final rule the EPA has removed the proposed requirement that states must ''[d]esignate uses . . . that either expressly incorporate protection of the [T]ribal reserved rights or encompass such rights.'' Instead, the final regulatory language on designated uses in this rule specifies that states must take into consideration the use and value of their waters for protecting Tribal reserved rights in adopting or revising designated uses pursuant to 40 CFR 131.10. Accordingly, the final criteria requirement, which now appears at 40 CFR 131.9(a)(3) rather than 40 CFR 131.9(c)(2), provides that states must establish criteria to protect Tribal reserved rights ''where the State has adopted designated uses that either expressly incorporate protection of or encompass the right.'' This final criteria requirement aligns with the longstanding principle, as memorialized in 40 CFR 131.11, that states must adopt criteria that protect the designated use.

Second, the final rule clarifies that the requirements at 40 CFR 131.9(a)(3) include ''developing criteria to protect right holders using at least the same risk level (*e.g.,* cancer risk level, hazard quotient, or illness rate) as the State would otherwise use to develop criteria to protect the State's general population, paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right.'' This final provision merges the proposed requirement at 40 CFR 131.9(a)(2) that WQS must protect ''[t]he health of the right holders to at least the same risk level as provided to the general population of the State[,]'' into the provision setting forth the general requirement related to adoption of criteria discussed above. The EPA expects that this clause will apply to human health criteria, which are scientifically derived values intended to protect human health from the adverse effects of pollutants in ambient water, and will most often apply to cancer risk levels, which are a critical input in deriving protective human health criteria. The EPA's longstanding agency-wide practice has been to assume, in the absence of data to indicate otherwise, that carcinogens exhibit linear ''non-threshold'' dose-responses which means that there are no ''safe'' or no ''no-effect'' levels.[104] Therefore, the EPA recommends calculating human health criteria for carcinogens as pollutant concentrations corresponding to lifetime increases in the risk of developing cancer.

Under the EPA's 2000 Methodology, a key step in deriving human health criteria is identifying the population that the criteria should protect, sometimes referred to as the ''target'' population.[105] The 2000 Methodology explains that states could set criteria to target protection of individuals with ''average'' or ''typical'' exposure (*i.e.,* the general population), or to protect more highly exposed individuals. The 2000 Methodology goes on to recommend, with respect to carcinogens, 10^{-5} (1 in 100,000) and 10^{-6} (1 in 1 million) risk levels for the general population and further says that ''highly exposed'' subpopulations should not exceed a 10^{-4} (1 in 10,000) risk level.[106] The EPA also recommends ''that priority be given to identifying and adequately protecting the most highly exposed population.'' [107] If a state determines that a highly exposed population is not adequately protected by criteria that target protection of the general population, the EPA's 2000 Methodology recommends the adoption of more stringent criteria using alternative exposure assumptions.[108]

Prior to this rulemaking, in its 2019 decision document reversing its prior disapproval of Washington's human health criteria, the EPA took the position that it was appropriate to protect Tribal members exercising their subsistence fishing rights to a lesser degree than the state's general population. In that document, the EPA made the following assertion: ''[A] state may consider Tribes with reserved fishing rights to be highly exposed populations, rather than the target general population, in order to derive criteria, and that such consideration gives due effect to reserved fishing

[103] *See Water Quality Standards Regulatory Revisions,* 80 FR 51020, 51025 (August 21, 2015) (''When conducting a UAA and soliciting input from the public, states and authorized Tribes need to consider not only what is currently attained, but also what is attainable in the future after achievable gains in water quality are realized. EPA recommends that such a prospective analysis involve the following: Identifying the current and expected condition for a water body; evaluating the effectiveness of best management practices (BMPs) and associated water quality improvements; examining the efficacy of treatment technology from engineering studies; and using water quality models, loading calculations, and other predictive tools.'').

[104] USEPA. 2000. Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health. U.S. Environmental Protection Agency, Office of Water, Washington, DC EPA–822–B–00–004. *https://www.epa.gov/wqc/human-health-water-quality-criteria-and-methods-toxics.*

[105] *Id.* at 2–1.

[106] *Id.* at 2–6.

[107] *Id.* at 2–2.

[108] *Id.*

rights.'' [109] As explained in the proposed rulemaking, the EPA has reconsidered this assertion and it no longer represents the agency's view.[110] For designated uses that either expressly incorporate protection of Tribal reserved rights or encompass such rights, a Tribal member utilizing such rights is more appropriately viewed as an individual with ''average'' or ''typical'' exposure because, as noted in the proposed rulemaking, Tribal members exercising reserved rights are a distinct, identifiable class of individuals holding legal rights under Federal law to resources with a defined geographic scope. In the EPA's judgment, their unique status as right holders warrants treating them as a target population for purposes of deriving human health criteria. The statements in the 2000 Methodology allowing a less stringent risk level for ''highly exposed subpopulations'' or ''subgroups''—as a subset of the general population—did not take into account the unique circumstances addressed here—*i.e.,* the unique attributes of Tribes with reserved rights as described above—in its general statements that such ''highly exposed subpopulations'' may receive less protection than chosen by states as the target population for derivation of criteria for carcinogens.

The final language in 40 CFR 131.9(a)(3) regarding risk level reflects a clarification to proposed 40 CFR 131.9(a)(2). Specifically, the EPA: (1) edited wording and sentence structure to clarify the intended meaning, (2) added examples of types of risk level inputs, and (3) explicitly stated that—when developing criteria to protect right holders—these risk level inputs are required to be paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right. These edits are intended to clarify that, where the designated use either expressly incorporates protection of Tribal reserved rights or encompasses such rights, Tribal members are the population, or one of the populations, that the designated use is designed to protect, and their health should be protected to at least the same risk level as the state would have provided to the general, non-right holder population if there were no applicable Tribal reserved rights in that location. These changes are explained further below in the context of responses to comments received on this point.

A few commenters expressed concerns that, under the proposed rulemaking, states would be required to revise all of their applicable criteria including criteria for the protection of aquatic life and aquatic-dependent wildlife. That was neither the EPA's intent with the proposal, nor is it the anticipated effect of the final rule. The agency anticipates that the new requirements in 40 CFR 131.9(a) will not generally necessitate more stringent criteria to protect aquatic life, wildlife, or primary contact recreation than already required by 40 CFR 131.11.

This final rule builds on requirements in the existing Federal WQS regulation at 40 CFR part 131 regarding adoption of designated uses and criteria. In accordance with the interim goal specified by CWA section 101(a)(2) of ''water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water,'' the existing Federal WQS regulation requires that state WQS provide for protection and propagation of fish, shellfish and wildlife, and recreation in and on the water, wherever attainable.[111] With respect to aquatic life and wildlife criteria, the EPA anticipates that for many aquatic and aquatic-dependent resources to which Tribes have reserved rights, the level of protection for the species resulting from application of the EPA's existing Federal WQS regulation, without specific consideration of reserved rights, is already consistent with protection of those resources. For example, where a Tribe has the right to fish for subsistence, the existing WQS regulation already requires the state to protect fish and other aquatic species with aquatic life criteria.[112] Protection of human health from fish consumption is discussed separately below.

For Tribal ceremonial practices involving activities where the principal risk is from immersion in and potential ingestion of water, the EPA anticipates that pollutant exposure would be indistinguishable from exposure through primary contact recreation (*e.g.,* swimming), and state criteria to protect primary contact recreation would therefore be protective of such Tribal practices.

Conversely, water quality criteria to protect human health for fish/shellfish and water consumption uses that were written with a state's general population in mind may not protect Tribal consumers of those resources who have higher consumption rates and therefore are exposed to greater risk. In states where right holders assert reserved fishing rights and the states' human health criteria are currently based on protection of the states' general population, the requirement the EPA is finalizing at 40 CFR 131.9(a)(3) may result in more stringent criteria than had been explicitly required by the existing Federal WQS regulation, to ensure that the right holders are protected by criteria developed using at least the same risk level (*e.g.,* cancer risk level, hazard quotient, or illness rate) as the state would otherwise use to develop criteria to protect the state's general population, paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right. For example, a state with a fishing designated use may have established its human health criteria for carcinogens using a 1 in 1 million (10^{-6}) cancer risk level and exposure inputs (including a fish consumption rate) representative of its general population, which consumes one fish meal per week. In that scenario, a member of a Tribe in that state exercising the Tribe's reserved right to fish for subsistence who consumes ten fish meals per week would be protected at a 1 in 100,000 (10^{-5}) cancer risk level, an order of magnitude less than the cancer risk level the state had determined was appropriate for its general population. In revising those criteria upon an assertion of that right by the right holders and supported by available data and information, the state

[109] U.S. EPA, Letter and enclosed Technical Support Document from Chris Hladick, Regional Administrator, EPA Region 10, to Maia Bellon, Director, Department of Ecology, Re: EPA's Reversal of the November 15, 2016 Clean Water Act Section 303(c) Partial Disapproval of Washington's Human Health Water Quality Criteria and Decision to Approve Washington's Criteria (May 10, 2019), p. 23.

[110] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74370 (December 5, 2022).

[111] 40 CFR 131.10 requires that, where waters are designated for less than the full CWA section 101(a)(2) use, that designation be supported by a use attainability analysis (UAA) demonstrating that attaining the use is not feasible. These waters must be designated for the highest attainable use. 40 CFR 131.20 requires these use designations to be reviewed at every triennial review and revised when new information indicates that the uses specified in section 101(a)(2) of the CWA are attainable.

[112] In some cases, 40 CFR 131.9(a)(3) may prompt a state to consider adjusting aquatic life criteria in a certain area to protect a culturally important species, consistent with the EPA's recommended definition of ''protection of aquatic organisms and their uses'' as, in part, prevention of unacceptable effects on ''commercially, recreationally, and other important species.'' (USEPA. 1985. Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses. U.S. Environmental Protection Agency, Office of Water, Washington, DC PB85–227049). Additionally, it may encourage efforts to advance the scientific understanding of pollutant impacts to wildlife and plants that have not been the historic focus of criteria development.

would revise its criteria to afford the right holders a 1 in 1,000,000 (10^{-6}) cancer risk level, which is the level of protection the state had determined was appropriate for its general population. This revision would have the effect of protecting the state's general population at a 1 in 10,000,000 (10^{-7}) cancer risk level given their lower fish consumption level.

Some commenters opposed the proposed requirement to protect right holders to at least the same risk level as used to calculate criteria to protect the state's general population, asserting that the CWA does not prescribe precisely how a state must establish its WQS so long as WQS are protective. The EPA does not intend for this rule to dictate specific outcomes to states. Under this rule, states maintain their statutory role set forth in CWA section 303(c) in establishing WQS. The EPA maintains its CWA section 303(c) statutory oversight role in ensuring that WQS are meeting the requirements of the Act, including that WQS are such as to protect public health and enhance the quality of water. In exercising its oversight function, the EPA also brings substantial technical expertise to the topic of criteria development. In section 304(a) of the CWA, Congress explicitly charged the EPA with developing recommended water quality criteria based on the latest scientific knowledge related to health and welfare.[113] As the EPA explained in its 2015 update to its recommended ambient water quality criteria for the protection of human health, ''[w]ater quality criteria developed under Section 304(a) are based solely on data and scientific judgments on the relationship between pollutant concentrations and environmental and human health effects.'' [114] These recommended criteria are not legally binding, and states have discretion to modify the criteria, where appropriate, to reflect site-specific conditions or criteria based on other scientifically defensible methods.

Contrary to the characterization of the proposed requirements in some of the comments, the EPA did not intend to suggest that the requirement to develop criteria to protect right holders using at least the same risk level as the state would otherwise use to develop criteria to protect the state's general population would result in criteria that protect right holders and the general population equally. The EPA recognizes that risk increases with exposure and based on susceptibility factors such as age or lifestage, pre-existing disease, genetic variation, or co-exposures. As the EPA explained in its 2000 Methodology,[115] ''. . . the incremental cancer risk levels are *relative,* meaning that any given criterion associated with a particular cancer risk level is also associated with specific exposure parameter assumptions (*e.g.,* intake rates, body weights). When these exposure parameter values change, so does the relative risk.'' (Emphasis in original). This concept is illustrated in the example above. The EPA added clarifying text to 40 CFR 131.9(a)(3) providing examples of types of risk level inputs (''*e.g.,* cancer risk level, hazard quotient, or illness rate'') to highlight that it is the risk level input *itself* that must be equal in the criteria calculations, not that the state is required to establish criteria that protect right holders and the general population equally (*i.e.,* if the state uses a 10^{-6} cancer risk level to calculate criteria to protect the general population, the state must also use a 10^{-6} cancer risk level to establish water quality criteria to protect the Tribal reserved right, where the state has adopted designated uses that either expressly incorporate protection of or encompass the right). To further address the confusion expressed by some commenters, the EPA also added clarifying text to 40 CFR 131.9(a)(3) noting that appropriate exposure inputs must be used in each of these calculations: when calculating criteria to protect the general population, the state's chosen risk level (*e.g.,* 10^{-6} cancer risk level) would be paired with exposure inputs (*e.g.,* fish consumption rate) representative of the general population, whereas when establishing water quality criteria to protect a Tribal reserved right, that same chosen risk level must be ''paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right.'' In other words, the EPA is simply requiring that right holders, in areas where they have reserved rights, be protected using the same (or a more stringent) risk level input (*e.g.* cancer risk level) to calculate criteria as is used to calculate criteria to protect the general population in areas where there are no Tribal reserved rights reserved to Tribes by treaty, Federal statute, or Executive order. As explained above, the practical effect is that in some situations in a waterbody with Tribal reserved rights, the general population will be even more protected (that is, receive protection to a more stringent risk level) than if there were no Tribal reserved rights in that waterbody. This approach does not prescribe the state's overall approach to risk management policy, but rather ensures that right holders receive the level of protection (that is, they are exposed to the same risk level) consistent with the state's risk management decision for the general population in the absence of reserved rights.

In the proposed rulemaking, the EPA explained that it anticipated the primary application of the requirement to protect the health of the right holders with criteria developed using at least the same risk level as the state would otherwise use to develop criteria to protect its general population would be in establishing human health criteria for toxic pollutants to protect Tribal reserved rights to fish for subsistence. The EPA requested comment on whether there may be other situations where this provision could apply. While the EPA received general support for this requirement, commenters did not raise, and the EPA is not currently aware of, situations other than human health criteria for toxic pollutants where the level of risk may be different for right holders versus the general population.

The EPA is not mandating any specific risk level in this rule. As explained in the EPA's 2000 Methodology,[116] with respect to carcinogens, 10^{-5} (1 in 100,000) and 10^{-6} (1 in 1 million) risk levels may be reasonable for the general population.[117] Some commenters stated that the final rule should require Tribal fishing right holders to be protected to a 10^{-6} cancer risk level to provide a baseline level of protection for subsistence fishing rights, consistent with the EPA's recommendation for the general population and with environmental justice principles. The EPA disagrees that an across-the-board requirement of 10^{-6} is appropriate. In this final rule, states maintain the discretion to utilize a cancer risk level that is within a reasonable risk management range. Per the 2000 Methodology, the EPA recommends protecting the general population using a cancer risk level of

[113] *See* CWA section 304(a).

[116] USEPA. 2000. Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health. U.S. Environmental Protection Agency, Office of Water, Washington, DC EPA–822–B–00–004. *https://www.epa.gov/wqc/human-health-water-quality-criteria-and-methods-toxics.*

[117] *Id.* at 2–6.

10^{-5} or 10^{-6} to derive criteria, recognizing the need to protect highly exposed or sensitive populations, as appropriate. Therefore, consistent with the EPA's longstanding recommendation for states' general populations in the 2000 Methodology, the EPA also considers 10^{-5} acceptable to protect right holders in areas where they are exercising reserved rights relevant to the activities that human health criteria for toxic pollutants are designed to protect. This approach does not prescribe a risk management decision to the state but rather ensures that right holders benefit from the same level of protection that the state has chosen to protect the general population for a given designated use.

One commenter requested that the EPA establish a minimum fish consumption rate for protecting rights to subsistence fishing. While the EPA is declining to establish a required minimum level of protection, as noted in section IV.B.2 of this preamble, the EPA's national recommended default fish consumption rate of 142 g/day for subsistence fishers can represent a reasonable fish consumption subsistence rate floor.[118]

[118] The EPA evaluated whether 142 g/day is still representative of current consumption rates for highly exposed groups, as noted in the 2000 Methodology. Post-2000 consumption surveys of high fish consuming populations (*e.g.,* Tribes and Asian Pacific Islanders) resulted in mean fish consumption rates ranging from 18.6 g/day to 233 g/day and 90th percentile fish consumption rates ranging from 48.9 g/day to 528 g/day. 142 g/day falls within these ranges and therefore, 142 g/day appears to still be representative of current consumption rates for certain highly exposed groups, albeit possibly on the low end. *See:* Polissar, N.L., Salisbury, A., Ridolfi, C., Callahan, K., Neradilek, M., Hippe, D.S., and Beckley, W.H. C. Designated Use Revisions, WQS Variances, and Existing Uses

As discussed above in section IV.B.1 of this preamble, in this final rule at 40 CFR 131.9(a)(1), the EPA is requiring that states consider the use and value of their waters for protecting Tribal reserved rights in adopting or *revising* designated uses, including use revisions that are required to be supported by a use attainability analysis, per 40 CFR 131.10(g) and (j). The EPA is not adding language in this final rule addressing WQS variances or existing uses and is not making changes to those sections of the existing 40 CFR part 131 regulation (*i.e.,* §§ 131.14 and 131.10, respectively).

The proposed rulemaking did not include any provisions related specifically to designated use revisions (such as provisions related to use attainability analyses), WQS variances, or existing uses. Instead, the EPA requested comment on whether and how states can revise designated uses in accordance with 40 CFR 131.10, while also ensuring the protection of Tribal reserved rights. Additionally, the EPA requested comment on whether it should specify in 40 CFR 131.9 how other WQS provisions, such as WQS variances under 40 CFR 131.14, should be used to ensure protection of Tribal reserved rights. The EPA noted that it was ''not proposing to modify the existing language in [the existing 40 CFR part 131] sections'' and was ''not reopening them for comment.'' [119] Rather, the agency was considering whether ''potential discrete additions'' to the proposed regulatory framework may be necessary.

Some commenters recommended that the final rule prohibit states from revising designated uses or adopting WQS variances in waters where Tribes hold reserved rights, especially based on factors related to economic feasibility. Some commenters recommended that a WQS variance or designated use removal should only be allowed in extremely limited circumstances, with express written consent of right holders, and/or that right holders should be able to impose conditions on designated use revisions. Conversely, some commenters stated that designated use revisions and WQS variances must be allowed in waters with applicable Tribal reserved rights, consistent with the framework in the EPA's existing WQS regulation, and that any restriction of these approaches would be inconsistent with the CWA.

[119] *See Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights Proposed Rule,* 87 FR 74361, 74373 (December 5, 2022).

Nothing in this final rule alters the existing regulatory requirements at 40 CFR 131.10 related to use attainability analyses. With respect to designated use revisions and use attainability analyses, CWA section 101(a)(2) contains the phrase ''wherever attainable,'' which the EPA has implemented in 40 CFR 131.10(g) and (j) as allowing a state to designate uses that do not include the uses specified in section 101(a)(2) of the Act, to remove a 101(a)(2) use that is not an existing use, or to designate a subcategory of such a use if the state conducts a use attainability analysis demonstrating that attaining the use is not feasible because of one or more factors at 40 CFR 131.10(g). After a state demonstrates that a use is not attainable for a certain water, 40 CFR 131.10(g) also requires the state to adopt ''the highest attainable use'' of that water, which is the aquatic life, wildlife, or recreation use that is both closest to the CWA 101(a)(2) use and attainable, as defined at 40 CFR 131.3(m). The final rule at 40 CFR 131.9(a)(1) requires states to consider the use and value of their waters for protecting Tribal reserved rights in revising designated uses, including use revisions that are required to be supported by a use attainability analysis, per 40 CFR 131.10(g) and (j). The EPA recognizes that some of the factors at 40 CFR 131.10(g) may be amenable to greater consideration than others. The EPA is available to help work with any states that are contemplating revising designated uses that expressly incorporate protection of Tribal reserved rights or encompass such rights.

Regarding WQS variances, the EPA has concluded there is no compelling reason to make additions to the Federal regulation related to WQS variances to address Tribal reserved rights, at this time. Therefore, this final rule does not explicitly address WQS variances, nor does it add to the existing WQS regulation at 40 CFR 131.14 governing WQS variances. While the EPA acknowledges the concerns raised by commenters regarding the potential impacts of WQS variances on reserved rights, it disagrees with comments asserting that the current regulatory provisions at 40 CFR 131.14 are insufficient to protect water quality necessary to support reserved rights. The existing WQS regulation at 40 CFR 131.14(b)(1)(ii) requires that WQS variances ''shall not result in any lowering of the currently attained ambient water quality, unless a WQS variance is necessary for restoration activities.'' Therefore, allowing WQS variances in waters where Tribal

reserved rights apply does not result in degraded water quality; rather, WQS variances are a time-limited tool that states may use to improve water quality over time. WQS variances provide states with time and flexibility to make incremental water quality improvements where the water body is not currently attaining WQS, with accountability measures to ensure that such improvements will occur. At the end of the specified variance term, the underlying designated use and criterion apply and, thus, WQS variances do not permanently revise the protections for a water body. Nothing in this final rule alters the existing regulatory requirements related to WQS variances.

Finally, some commenters requested clarification about how this rule relates to the existing WQS regulation governing protection of existing uses. The existing WQS regulation defines existing uses at 40 CFR 131.3(e) as ''those uses actually attained in the water body on or after November 28, 1975, whether or not they are included in the water quality standards.'' The EPA did not propose to modify the definition of existing uses in the proposed rulemaking and is not altering that definition in this final rule. If use of an aquatic or aquatic-dependent resource pursuant to a Tribal reserved right is presently being attained, the EPA's existing regulation at 40 CFR 131.10(i) requires states to revise their WQS to reflect the presently attained use. For example, if a Tribe has a right to gather an aquatic plant in a state waterbody and that use is presently attained, state WQS must reflect that as a designated use, per 40 CFR 131.10(i), and thus this resource should be protected in accordance with 40 CFR 131.9(a).

D. General WQS Policies

This final rule does not change the existing WQS regulation at 40 CFR 131.13 and 131.15 governing establishment of general WQS policies and permit compliance schedule authorizing provisions. The proposed rulemaking requested comment on whether the EPA should specify how general WQS policies, such as mixing zone policies, or permit compliance schedule authorizing provisions, should be used to ensure protection of Tribal reserved rights. The agency decided in this final rule not to revise the existing Federal regulation or add new regulatory requirements for general WQS policies adopted by states, such as mixing zone policies, or for permit compliance schedule authorizing provisions. Decisions about specific mixing zones or the use of compliance schedules in areas where Tribal reserved rights apply would be made case-by-case by the applicable NPDES permitting authority.

Some commenters recommended that the final rule require a state proposing to include a schedule of compliance in an NPDES permit discharging to a water with Tribal reserved rights demonstrate that it has conducted timely outreach to Tribe(s) whose rights are impacted, obtained written consent from the Tribe(s), and implemented reasonable conditions as requested by the Tribe(s). Compliance schedules in NPDES permits serve as a tool for dischargers to obtain additional time to implement actions that will lead to compliance with water quality-based effluent limits based on the applicable WQS. While the EPA's existing regulation at 40 CFR 131.15 requires states to include provisions in their WQS that authorize the use of compliance schedules if they intend to include compliance schedules in NPDES permits, the eventual compliance schedules that may be issued in specific NPDES permits discharging in areas where Tribal reserved rights apply are governed by the NPDES regulation at 40 CFR 122.47. The NPDES regulation, which is not affected by this final rule, requires compliance with water quality-based effluent limits ''as soon as possible'' and if an individual compliance schedule exceeds one year, the permitting authority must include interim requirements and the dates for their achievement. Additionally, interested persons such as right holders would have an opportunity to comment on any draft NPDES permits that are discharging in areas where Tribal reserved rights apply, subject to the NPDES regulation public participation requirements.[120]

E. Roles, Responsibilities, and WQS Submission Requirements

An important objective of the changes set forth in this final rule is to ensure that, in implementing CWA section 303(c), the states' and EPA's roles with respect to Tribal reserved rights in the WQS context are clearly delineated and explained. This section clarifies respective roles and responsibilities and describes the relevant regulatory language at 40 CFR 131.6(g), 131.9(b) and (c) of the final rule.

The EPA received many comments related to the roles of the EPA and/or other parts of the Federal Government, states, and right holders in implementing this rule, particularly with respect to identifying and interpreting Tribal reserved rights. Some commenters asserted that the rule should provide a clear and specific role for right holders in identifying and interpreting their rights. Many commenters expressed concerns regarding states' ability, both as a legal and practical matter, to identify and interpret rights, and many commenters stated that the Federal Government, and not States, should be interpreting and applying relevant treaties and other legal instruments reserving Tribal rights. The EPA disagrees it is the Federal Government's sole responsibility to interpret relevant treaties, statutes, and Executive orders, and provide those interpretations to states. While the EPA intends to work closely with states and right holders, where requested, in identifying and interpreting relevant rights, states are already bound to comply with Tribal reserved rights codified in Federal law even absent a Federal position on such rights.

As explained above in section III of this preamble, this final rule is premised on right holders asserting rights that they have identified as relevant in the WQS context, thus providing a specific role for right holders in identifying and interpreting their rights in the first instance. Accordingly, the EPA disagrees that this rule would place a burden on states to interpret and analyze all potentially relevant treaties, statutes, or Executive orders that reserve rights within their respective state. The operative inquiry for this rule is whether a treaty, statute, or Executive order reserves a right to a CWA-protected aquatic or aquatic-dependent resource, and as such, a full analysis of every legal instrument would not be necessary. As a practical matter, where a state chooses to undertake an analysis of asserted rights, there are interpretive resources available. Many Tribal reserved rights reflected in treaties, statutes, or Executive orders have been interpreted by courts and/or applied by the Federal Government, States, and Tribes for many years. This information regarding interpretation and application of the rights is available to right holders for purposes of asserting relevant rights in the WQS context and to the EPA and states when engaging with right holders. Additionally, the U.S. Department of Agriculture and the U.S. Department of Interior, working with Oklahoma State University, have developed a publicly available, searchable database of Tribal treaties that can provide a starting point

[120] *See, e.g.,* 40 CFR 124.10.

for research on potentially applicable Tribal reserved rights.[121]

In relation to identifying or interpreting Tribal reserved rights, final 40 CFR 131.9(b) provides that at any time in the WQS development process, a state or right holder may request EPA assistance with evaluating Tribal reserved rights. The EPA added this provision to the final rule in response to comments and in anticipation that, even with the clarifications provided in this final rule with respect to roles and expectations, states and right holders may still have questions regarding the applicability and implementation of the rule's requirements in light of particular asserted rights. The EPA will work collaboratively with states and right holders, engaging other Federal agencies as appropriate, to evaluate the available information and help states to develop WQS to protect applicable rights. In addition, the EPA periodically offers opportunities for Tribes to learn more about the WQS process and regulations, should they not yet have experience in this field.

Some commenters requested clarification about how disputes or disagreements between states and Tribes, or different Tribes holding the same rights, would be resolved. For example, some commenters noted that there may be instances when a right holder does not agree with the EPA or a state's conclusions about protecting their rights, and requested clarity on how the EPA will evaluate the right holder's position if it asserts during consultation that state WQS do not consider or protect applicable Tribal reserved rights. In some cases, the nature and precise location of some rights might not be certain, or new information may come to light that challenges prior assumptions. Much of the existing WQS development process depends on navigating situations in which consensus or clarity is lacking or where new information emerges, such as the appropriate use of a waterbody or what constitutes sound science. Where there is a lack of clarity or disagreement regarding relevant reserved rights, the EPA can work with states, right holders, and Federal partners to interpret the right, as appropriate. The CWA requirement to review WQS every three years also provides an opportunity to revisit WQS issues characterized by limited data or disputes.

The EPA did not propose a formal dispute resolution process for addressing and resolving such disputes and is not including one in this final rule.[122] In considering these comments, the EPA concluded that a formal dispute resolution mechanism would not be an efficient or practically implementable means to handle such disagreements. Rather, the agency is adding additional regulatory language at 40 CFR 131.9(b) to clarify its commitment to engaging early and partnering with states and right holders in implementing the rule's requirements. The agency intends to engage early in states' WQS processes where Tribes assert potential reserved rights to prevent or resolve disputes to the extent practicable.

The EPA recognizes that there may be situations where disputes about the relevance of the rights and/or WQS needed to protect the rights may prove intractable, and in some cases states may need to move forward with the development of their WQS in the absence of consensus. In such cases, where the state submits new or revised WQS to the EPA, the state should explain in its submission why it believes it lacks ''available data and information'' to resolve the dispute and the EPA will review all of the available information submitted pursuant to 40 CFR 131.6(g) and decide whether to approve or disapprove the submission in the same way the EPA currently makes decisions when there are disagreements between different parties on WQS protections.

Where a right holder has asserted a relevant right and 40 CFR 131.9 applies, 40 CFR 131.6(g) addresses states' obligations to provide information regarding that right and how the state considered it in establishing new or revised WQS. In the proposed rulemaking at 40 CFR 131.6(g), the EPA proposed requiring states to submit, where applicable, ''[i]nformation about the scope, nature, and current and past use of the [T]ribal reserved rights, as informed by the right holders[.]'' Many commenters disagreed with the wording of proposed 40 CFR 131.6(g), asserting that the phrase ''as informed by the right holders'' was ambiguous and that it was not clear whether or how this required states to solicit input from right holders, or what it required states to do with that input. Commenters also expressed questions and concerns with the EPA's expectations from states as far as gathering and submitting information about reserved rights, echoing the comments described above raising the appropriate role for both states and right holders in that process.

In response to these comments, the EPA revised the wording of 40 CFR 131.6(g) in the final rule to require that, where 40 CFR 131.9 applies, *i.e.,* where Tribal reserved rights apply and right holders have asserted their rights for consideration in establishment of WQS, the supporting information that the state must provide to the EPA includes ''[a]ny information provided by right holders about *relevant* Tribal reserved rights and documentation of how that information was considered,'' (emphasis added) along with data and methods used to develop the WQS. As explained in section IV.G. of this preamble below, for example, Tribal reserved rights related to human health, such as fish consumption, would be relevant to WQS related to protection of human health; rights related to human health would not be relevant to WQS targeted at protection of aquatic life or industrial uses.

To further ensure that right holders can meaningfully engage in states' WQS processes and in response to comments on this point, the EPA added the requirement for states to include in their CWA section 303(c) submission to the EPA documentation of how the information provided by right holders was considered in establishment of WQS. The EPA recommends that such documentation include how any information provided by right holders was integrated into the state's WQS; any substantive suggestions the right holders made that the state did not adopt; and the state's justification for not adopting those suggestions. The EPA also acknowledges that states can only provide information to fulfill 40 CFR 131.6(g)(1) that they have received. The

[121] Oklahoma State University Libraries. 2003. Tribal Treaties Database (public beta). *https://treaties.okstate.edu/.*

[122] Several commenters cited the existing WQS dispute resolution provision at 40 CFR 131.7. *See* 40 CFR 131.7(a) (''Where disputes between States and Indian Tribes arise as a result of differing water quality standards on common bodies of water, the EPA Regional Administrator . . . will be responsible for acting in accordance with the provisions of this section.''). One commenter pointed to that provision as a potential model for addressing disputes between states and Tribes, or Tribes and Tribes, regarding reserved rights; one commenter pointed to that provision, which was added pursuant to CWA section 518(e), as evidence that where Congress intended for the EPA to be the arbiter of disputes between states and Tribes, it said so explicitly; and one commenter questioned whether that provision would apply here. The EPA notes that 40 CFR 131.7 was added pursuant to direction from Congress set forth in CWA section 518(e), and the agency is not purporting to rely on that regulation in implementing this rule. 40 CFR 131.7 is narrowly focused on disputes between states and Tribes authorized to administer a WQS program arising as a result of differing, existing WQS on common bodies of water. Accordingly, this dispute resolution mechanism would not apply here, where disputes between a state and Tribe(s) would relate to the state's WQS, as opposed to differing state and Tribal WQS. As explained above, the EPA is not codifying a new dispute resolution provision addressing disputes relating to Tribal reserved rights. Rather, the EPA is expressing its commitment to engage on a more informal basis to prevent or resolve disputes where needed.

EPA recommends that where right holders did not respond or declined to engage, the state's record should document the opportunities afforded to right holders to engage in the WQS process and should memorialize where Tribal engagement efforts did not identify any Tribal assertions of relevant rights.

F. The EPA's Tribal Engagement and Consultation

This final rule at 40 CFR 131.9(c) requires the EPA to initiate the Tribal consultation process with right holders that have asserted their rights for consideration in establishment of WQS, as discussed in section IV.B. of this preamble above. That is, the relevant EPA regional office will notify the right holders of the opportunity for government-to-government consultation when taking actions under this rule. Government-to-government consultation between the EPA and right holders will aid the EPA in evaluating whether WQS submissions protect applicable Tribal reserved rights. The EPA updated the wording of the proposed consultation provision (previously at proposed 40 CFR 131.9(b)) for consistency with the changes to 40 CFR 131.9(a) and moved this provision to 40 CFR 131.9(c) in the final rule given the other changes that the EPA made to 40 CFR 131.9 from the proposed rulemaking. This final provision largely tracks proposed 40 CFR 131.9(b), with three clarifying edits.

First, the final rule clarifies that the EPA ''will initiate the Tribal consultation process.'' In the proposed rulemaking, the EPA proposed to ''initiate [T]ribal consultation'' with right holders when the EPA is reviewing a relevant WQS submission. This edit is being made to clarify that the EPA will notify right holders that have asserted their rights that they have the opportunity to consult with the EPA on the EPA action to approve or disapprove submitted WQS. It will then be the right holder's decision whether or not to proceed with Tribal consultation. If a right holder does not respond affirmatively to a Tribal consultation notification from the EPA, consultation would not advance beyond this notification step.[123]

The second clarifying edit the EPA made to 40 CFR 131.9(c) was to specify that the EPA will initiate the Tribal consultation process with right holders ''that have asserted their rights,'' to conform with the changes the EPA made to 40 CFR 131.9(a). In addition to initiating the Tribal consultation process with right holders that have asserted their rights for consideration in establishment of WQS per final 40 CFR 131.9(c), the EPA intends to initiate the Tribal consultation process with all federally recognized Tribes potentially affected by an EPA action per the EPA's consultation policy,[124] including any potentially affected right holders that have not asserted those rights for consideration in establishment of WQS.

Finally, 40 CFR 131.9(c) also notes that the EPA will initiate the Tribal consultation process in determining whether state WQS ''are consistent with'' final 40 CFR 131.9(a), as opposed to ''protect applicable Tribal reserved rights in accordance with'' proposed 40 CFR 131.9(a). The EPA made this change to streamline 40 CFR 131.9 and keep the operative requirements in the same regulatory section.

Some commenters stated that to ensure consultation is meaningful and the state has adequate time to fully consider critical information provided by right holders, the EPA should consult with Tribes earlier in the WQS development process. The EPA added 40 CFR 131.9(b) in response to these comments to clarify that the EPA is available to assist both states and right holders in evaluating Tribal reserved rights at any time, upon request, and will engage potential right holders whenever it provides assistance to the state with evaluating Tribal reserved rights. It is the EPA's policy to consult on a government-to-government basis with federally recognized Tribal governments when EPA actions or decisions may affect Tribal interests.[125]

Some commenters expressed the view that to ensure the EPA's consultation is meaningful, the final rule should specify consultation procedures, specify minimum thresholds of engagement, or specifically invite right holders to contribute to or collaborate on WQS to protect their rights. In light of different Tribes' varying preferences for consultation procedures, the EPA was not able to identify any universally applicable procedures or thresholds of engagement that would be appropriate to include in regulatory text. The EPA intends to implement consultation consistent with its existing consultation policies and procedures.

Some commenters stated that states or other stakeholders should be engaged in the EPA's consultation with right holders. Consultation with federally recognized Tribes, consistent with the EPA's consultation policy,[126] is government-to-government consultation between the Tribe and the EPA. It would therefore not be appropriate to add other parties to those consultations. However, in the WQS context, the EPA generally recommends close coordination between the state, the EPA, and right holders to maximize transparency, collaboration, and mutual understanding between all parties.

Finally, some commenters requested that the EPA provide a mechanism to maintain confidentiality of information Tribes provide during consultation upon request. As explained in section IV.B of this preamble, the EPA is subject to the FOIA, and accordingly, FOIA disclosure requirements would apply to information provided to the EPA by Tribes.

G. The EPA's Oversight Authority of New and Revised State WQS

40 CFR 131.5(a) sets forth the requirements that the EPA looks for in reviewing and approving or disapproving state WQS. The final rule amends the list of requirements at 40 CFR 131.5(a) to include, ''[w]here applicable, whether State adopted [WQS] are consistent with § 131.9.''

In the proposed rulemaking, the EPA proposed adding 40 CFR 131.5(a)(9), which provided that, as part of its review, the EPA would determine ''[w]hether any State adopted water quality standards protect [T]ribal reserved rights, where applicable, consistent with § 131.9.'' The EPA received several comments on the language of 40 CFR 131.5(a)(9), including comments requesting clarification on how the EPA would apply that provision. In the final rule, the EPA made two sets of changes to proposed 40 CFR 131.5(a)(9) to add greater clarity and for consistency with revisions made to 40 CFR 131.9.

First, the EPA revised the clause ''protect [T]ribal reserved rights . . . consistent with § 131.9,'' to instead provide in final 40 CFR 131.5(a)(9) that the EPA will determine whether WQS ''are consistent with § 131.9.'' Because 40 CFR 131.9 lays out the operative requirements for states to apply where Tribal reserved rights have been asserted and are applicable to the establishment of WQS, the clause ''protect [T]ribal reserved rights'' was

[123] Where a right holder does not respond or declines Tribal consultation, the EPA will proceed with reviewing a state WQS submittal in accordance with 40 CFR 131.5, including ''[w]here applicable, whether State adopted water quality standards are consistent with § 131.9,'' consistent with final § 131.5(b)(9).

[125] *Id.*

[126] *Id.*

unnecessary and the EPA is removing it for clarity and simplicity.

Second, the EPA made two changes to clarify when the agency would evaluate compliance with 40 CFR 131.5(a)(9). The proposed rulemaking provided that the EPA would evaluate whether ''any'' state-adopted WQS protected reserved rights, ''where applicable,'' consistent with 40 CFR 131.9. The EPA deleted ''any'' and moved ''where applicable'' to the beginning of the clause. The EPA made these changes to clarify that WQS must only be consistent with 40 CFR 131.9 where those WQS are applicable to the exercise of the Tribal reserved right in question. If a state has a designated use that encompasses a Tribal reserved right, then the criteria applicable to that use must protect that right. For example, a Tribal reserved right to gather aquatic resources may be encompassed by a state's broadly defined aquatic life use. If so, then the aquatic life criteria must protect those aquatic resources and/or right holders that are consuming those resources, as appropriate. This revision is intended to address concerns that the provision as proposed could be read to require consideration and protection of Tribal reserved rights in every WQS revision in the future. The EPA does not intend for this rule to blur the lines between the different WQS that states establish to protect different uses of their waters. For example, this rule would not require WQS intended to protect human health uses such as fish consumption to also protect aquatic life uses such as survival, growth, and reproduction of fish or shellfish.

H. Triennial Reviews

This final rule modifies the existing regulation governing state review and revision of WQS at 40 CFR 131.20(a) to require that the triennial review process include an evaluation of whether there is any new information that needs to be considered about Tribal reserved rights applicable to waters subject to the state's WQS and whether WQS need to be revised to be consistent with 40 CFR 131.9.

In the proposed rulemaking, the EPA proposed modifying 40 CFR 131.20(a) to require that state triennial reviews include ''evaluating whether there are [T]ribal reserved rights applicable to State waters and whether water quality standards need to be revised to protect those rights pursuant to § 131.9.'' Some commenters indicated that it is overly burdensome to require states to re-evaluate Tribal reserved rights at every triennial review. In response to these comments, the EPA added the clause ''new information available . . . that needs to be considered'' to clarify that states are not expected to independently evaluate whether there are applicable Tribal reserved rights to consider at every triennial review. Rather, in conjunction with the revisions to 40 CFR 131.9(a), states are expected to evaluate whether a right has been newly asserted since the state's last triennial review or there is new information relevant to the protection of a previously asserted Tribal reserved right.

This regular review of WQS and evaluation of new information to determine whether WQS need to be modified is consistent with the triennial review requirement in CWA section 303(c)(1). In order for these new requirements and the existing requirements at 40 CFR 131.20(a) to be meaningful, states must conduct regular triennial reviews and must provide opportunities for interested and affected parties to bring forward new information for the state's consideration. The CWA makes clear that each state's fulfillment of their triennial review responsibilities is an integral part of the WQS paradigm.[127] The EPA strongly urges states to fulfill their triennial review requirements.

Many commenters stated that it should be the Federal Government's rather than states' responsibility to periodically re-evaluate Tribal reserved rights, and that the EPA should inform states of any new information relevant for WQS. As discussed above, final §§ 131.20(a) and 131.9, are intended to clarify the expectation that at each triennial review states consider and evaluate new assertions of Tribal reserved rights and any new data and information relevant to protection of asserted rights. If the EPA becomes aware of any new information relevant to the protection of applicable Tribal reserved rights, it will endeavor to inform states of that information as expeditiously as possible.

One commenter asserted that proposed 40 CFR 131.20(a) was redundant with their state's existing process for engaging Tribes. Some commenters recommended that the EPA specify a process to ensure that states work directly with right holders early in the triennial review process, separate from and well before engagement with the general public. As explained in section IV.E of this preamble, the EPA revised 40 CFR 131.6(g) in the final rule to require that, where 40 CFR 131.9 applies, state WQS submissions to the EPA include information provided by right holders. The EPA recommends that states provide opportunities for known and potential right holders to engage as early as possible in the WQS development process to ensure adequate time for consideration of any information they provide. The EPA is not establishing a specific process but rather is deferring to existing state processes in place that could serve this purpose, including state public engagement processes that are required for all WQS revisions.

[127] *See* CWA section 303(c)(1).

V. Economic Analysis

Pursuant to Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review), the EPA has prepared an economic analysis to inform the public of potential benefits and costs of this final rule. The EPA's economic analysis is documented in *Economic Analysis for Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights (Final Rule)* and can be found in the docket for this final rule.

This final rule does not establish any requirements directly applicable to regulated entities, such as industrial dischargers or municipal wastewater treatment facilities, but could ultimately lead to additional compliance costs to meet permit limits put in place to comply with new WQS adopted by states because of this final rule. Some commenters on the economic analysis that accompanied the EPA's proposed rulemaking asserted that the EPA must estimate costs to regulated entities before finalizing the rule and that many NPDES permits would need to be modified or reissued with more stringent water quality-based effluent limits as a result of this rule. While the EPA has included a qualitative assessment of indirect costs and benefits in the economic analysis that accompanies this final rule, the EPA is unable to quantify indirect costs and benefits since it cannot anticipate precisely how states will implement the rule and because of a lack of data.

While this rule would not directly lead to improvements in water quality, it establishes a framework that, where applicable, is expected to result in future improvements in water quality in geographic areas where Tribes hold reserved rights. Better protection of Tribal reserved rights has the potential to provide a variety of economic benefits associated with cleaner water. The EPA also anticipates that the rule will result in improved coordination between Federal, State, and Tribal governments regarding the protection of water resources that support the exercise of Tribal reserved rights. Tribal

members and the general public may indirectly benefit from this rule through targeted improvements to water quality that are implemented to meet more stringent WQS adopted in accordance with this rule.

The primary benefits of the rule for reserved right holders will likely be improved ability to maintain traditions and cultural landscapes and reduced risk to human health while exercising their reserved rights. Reducing pollutant levels so that traditional foods such as fish and wild rice are abundant and safe to eat in subsistence quantities would allow for unsuppressed levels of Tribal consumption of these resources, which in turn contributes to restoring and maintaining traditional lifeways, preserving Indigenous Knowledge, and cultural self-determination. This rule seeks to ensure that water quality does not limit right holders' ability to exercise their rights, and therefore achieve any corresponding economic, cultural, and social benefits.

Other potential benefits as a result of state actions taken pursuant to this rule include the availability of clean, safe, and affordable drinking water, greater recreational opportunities, water of adequate quality for agricultural and industrial use, and water quality that supports the commercial fishing industry and higher property values. These benefits could accrue to both Tribal and non-Tribal populations.

The EPA acknowledges that achievement of any benefits associated with cleaner water would involve additional control measures, and thus costs to regulated entities and nonpoint sources, that, for the reasons explained above, have not been included in the economic analysis for this rule. The EPA has not attempted to quantify either the costs of control measures that might ultimately be required as a result of state actions taken pursuant to this rule, or the benefits they would provide.

Instead, the focus of the EPA's quantitative analysis of costs is to estimate the potential administrative burden and costs to state and Tribal governments. The EPA does not anticipate this rule would impose any compliance costs on territorial governments because the EPA is not aware of any federally recognized Tribes with reserved rights in any U.S. territory.

The EPA assessed the potential incremental burden and cost of this final rule using the same basic methodology used to assess the potential incremental burden and cost of the EPA's proposed rulemaking. First, the EPA identified the elements of the regulatory revisions that may impose incremental burdens and costs. Then, the EPA estimated the incremental number of labor hours potentially required to comply with those elements of the regulatory revisions, and then estimated the costs associated with those additional labor hours.

The EPA's cost estimate for the final rule is higher than the estimate for the proposed rulemaking for the following reasons:

1. The EPA added estimated costs for all federally recognized Tribes to determine whether they wish to assert their rights for consideration in the WQS context.

2. The EPA increased the estimated labor hours for states in response to comments that the proposed rulemaking underestimated these costs. The EPA made several changes between the proposed and final rule as detailed in this preamble above that the agency anticipates will mitigate the burdens that commenters perceived this rule would impose on states. However, in light of comments received on the additional resources that may be required for activities such as coordinating with right holders to understand the scope and nature of the rights or developing criteria to protect resources that have not been the historic focus of criteria development, the EPA increased its low-end burden estimate five-fold and doubled its high-end burden estimate based on the best professional judgment of EPA staff experienced in the WQS program.

3. The EPA added estimated costs for authorized Tribes to comply with the final rule. The economic analysis for the proposed rulemaking assumed that no authorized Tribes would incur costs as a result of the rule. This was based on the assumption that few, if any Tribes have reserved rights to resources on another Tribe's reservation or otherwise under the jurisdiction of another Tribe, and that if there are Tribes with reserved rights to resources under the jurisdiction of a different Tribe that is an authorized Tribe, their interests may align such that any adopted WQS would reflect consideration and protection of such rights in absence of this rule. In response to comments that these assumptions were not valid, the EPA added estimated costs to account for authorized Tribes who may set WQS for waters where other Tribes hold reserved rights.

4. The EPA updated the labor rates and cost of benefits used in its cost estimates from 2020 to 2022 to reflect the latest available data from the United States Bureau of Labor Statistics (USBLS).

The EPA assumed for the purpose of this analysis that all 574 currently federally recognized Tribes would incur a burden of 10 hours, on average, to evaluate whether they wish to assert their reserved rights in the context of WQS development and, if so, to do so. The EPA also assumed that all 50 states would each undertake three WQS rulemakings to consider and protect Tribal reserved rights. The agency assumed one rulemaking for each of the following purposes:

- To revise WQS for protection of human health;
- To revise WQS for protection of aquatic life; and
- To account for any other WQS changes needed to protect Tribal reserved rights, including addressing the emergence of any information in the future that informs either the applicability of the reserved rights or the necessary level of water quality.

Finally, the EPA assumed that all 84 Tribes currently authorized for treatment in a manner similar to a state for the purpose of establishing WQS (*i.e.,* authorized Tribes) would each undertake two rulemakings to comply with this final rule, one with equivalent burden to the first state rulemaking, and a second rulemaking with 50% less burden than the first.

The EPA has likely over-estimated the incremental burden and costs of this rule. The EPA has included burden and costs for all 574 federally recognized Tribes, all 50 states, and all 84 authorized Tribes, although it is not likely that Tribal reserved rights to aquatic and/or aquatic-dependent resources exist in all 50 states and 84 reservations, nor is it likely that all 574 federally recognized Tribes have relevant reserved rights and will need time to evaluate whether to assert them for consideration in establishment of WQS. Since attributing costs to all currently federally recognized Tribes is likely an overestimate, the EPA anticipates that this estimated burden accounts for any additional Tribes that gain Federal recognition in the foreseeable future, as well as for the fact that some Tribes may incur a higher burden while others incur less or none. For example, some Tribes may elect to incur a higher burden to coordinate with states and authorized Tribes to facilitate a better understanding of the scope and nature of the rights. As a result, the assertion burden estimate should be considered an average value for all federally recognized Tribes.

Further, the EPA also included burden and cost estimates for states and authorized Tribes to consider and revise WQS for protection of aquatic life as a

result of this rule, even though, as explained above in section IV.B.3. of this preamble, this rule is not expected to result in widespread changes to aquatic life criteria. As noted above, in some cases, 40 CFR 131.9(a)(3) may prompt a state to consider adjusting aquatic life criteria in a certain area to protect a culturally important species or to advance the scientific understanding of pollutant impacts to wildlife and plants that have not been the historic focus of criteria development. In addition, states and authorized Tribes may choose to revise designated uses to explicitly denote protection of particular aquatic species to which Tribal reserved rights (as defined in this rule) apply, even if they conclude that existing aquatic life criteria for the relevant water bodies are protective of those species. The EPA included burden and cost related to aquatic life rulemakings to ensure that these burdens, if they occur, would be covered, but including this burden for all 50 states and all 84 authorized Tribes is likely a significant overestimate.

The EPA considered the costs associated with labor from economists, engineers, scientists, and lawyers for development of state and authorized Tribal WQS regulations. The EPA did not include any labor or other costs associated with potential litigation, as this would not be a direct consequence of this rule and would be highly speculative. However, the EPA included costs associated with lawyers in the labor mix in anticipation that legal advice could be needed in evaluating reserved rights.

The EPA anticipates that once a state or authorized Tribe takes into consideration and, where it determines is necessary, adopts new or revised WQS to protect Tribal reserved rights, it will not have any recurring costs (*i.e.,* ongoing annual burden and costs) that would be specifically attributable to the rule revisions to 40 CFR 131.20, because periodic evaluation of and revision to WQS is already a requirement of the CWA and WQS regulation. The EPA also determined that a federally recognized Tribe's evaluation of whether they wish to assert their reserved rights in the context of WQS development was best modeled as a one-time cost, although the right may be asserted in stages.

Estimates of the incremental administrative burden and costs to state and Tribal governments associated with this final rule are summarized in table 2.

TABLE 2—SUMMARY OF POTENTIAL ADMINISTRATIVE BURDENS AND COSTS TO STATE AND TRIBAL GOVERNMENTS ASSOCIATED WITH THE FINAL RULE

Government entity	Burden per entity (hours)	Cost per entity (2022$)	Number of potentially affected entities	Total burden (hours)	Total cost (2022$; one-time)
Federally Recognized Tribes	10	$897.40	574	5740	$515,100
States	1,325–2,650	108,020–216,055	50	66,250–132,500	5,401,000–10,802,000
Authorized Tribes	750–1,500	61,147.50–122,295	84	63,000–126,000	5,136,000–10,272,000
Total				134,990–264,240	11,052,000–21,589,000

Total one-time costs for this final rule are estimated to range from $11,052,000 to $21,589,000. The EPA chose not to annualize these costs given uncertainty about the period over which that annualization would occur.

VI. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a ''significant regulatory action'' as defined in Executive Order 12866, as amended by Executive Order 14094. Accordingly, the EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to the Executive Order 12866 review is available in the docket. The EPA prepared an economic analysis of the potential impacts associated with this action. The economic analysis is available in the docket for this action and is summarized in section V of this preamble.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rule have been submitted for approval to the Office of Management and Budget (OMB) under the PRA. The Information Collection Request (ICR) document that the EPA prepared has been assigned EPA ICR number 2700.02; OMB assigned control number 2040–0309 when approving the ICR for the proposed rule. A copy of the ICR can be found in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

The information collection requirements in this rule will be in addition to the requirements described in the existing ICR for the Water Quality Standards Regulation and approved by OMB through February 2025.[128] At this time, the EPA is not revising the existing ICR to consolidate the requirements of this rule. The EPA will use the information required by this rule to carry out its responsibilities under the CWA to review and approve or disapprove new and revised WQS submitted by states. In reviewing state WQS submissions, the EPA considers whether those submissions are consistent with the WQS regulation at 40 CFR part 131. The existing regulation requires states to include supporting information to accompany WQS submissions to help the EPA determine whether the submitted new and revised WQS are consistent with 40 CFR part 131. This rule adds new requirements to 40 CFR part 131 that holders of Tribal reserved rights must assert their rights in writing to the state and the EPA to receive the benefits of this rule, and that, where applicable, state WQS submissions must include any information provided by right holders about relevant Tribal reserved rights and documentation of how that information was considered. This information collection will provide the EPA with information necessary to review and approve or disapprove WQS in accordance with the CWA and 40 CFR part 131.

[128] ''Information Collection Request for Water Quality Standards Regulation,'' OMB Control Number 2040–0049, EPA ICR Number 0988.15, expiration date February 28, 2025.

If the information collection activities in this rule are not carried out, states and the EPA may not be able to ensure that WQS are consistent with treaties and other Federal laws. In some cases, this could result in implementation steps such as TMDLs and NPDES permits that also are not consistent with treaties and other Federal laws.

Respondents/affected entities: states, federally recognized Tribes, and Tribes authorized for treatment in a manner similar to a state for purposes of establishing WQS under the CWA.

Respondent's obligation to respond: mandatory under 40 CFR part 131 for states and authorized Tribes in their capacity of establishing WQS; for all federally recognized Tribes, required to obtain the benefit of having their rights considered under 40 CFR part 131.

Estimated number of respondents: 624 (84 of which are both federally recognized Tribes and Tribes authorized for treatment in a manner similar to a state for purposes of establishing WQS under the CWA).

Frequency of response: on occasion/as necessary.

Total estimated burden: 20,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $1.63 million (per year), includes $0 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act. In making this determination, the EPA concludes that the impact of concern is any significant adverse economic impact on small entities and that the agency is certifying that this rule will not have a significant economic impact on a substantial number of small entities because small entities are not directly regulated by this rule and this action will not impose any requirements on small entities; rather, this action will impose requirements only on states to take into consideration whether and how WQS may need to be revised in accordance with 40 CFR 131.9(a).

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments.

E. Executive Order 13132: Federalism

The EPA has concluded that this action does not have federalism implications as defined by the EPA's policy for implementing E.O. 13132 [129] on federalism. This rule does not impose substantial compliance costs on state and local governments or on small governments or preempt state or local laws. As explained above, this rule establishes the EPA's expectations for states in setting WQS where Tribal reserved rights apply. This rule adds new requirements that are applicable in certain instances, *i.e.,* where right holders assert relevant Tribal reserved rights consistent with 40 CFR 131.9, and which build on and are consistent with the EPA's existing WQS paradigm at 40 CFR part 131. The requirement to have criteria that protect the designated use is an existing requirement, and the states maintain their role in designating uses. States continue to have considerable discretion in adopting and implementing WQS. This rule will not have substantial direct effects [130] on the states, on the relationship between the Federal Government and the states, or on the distribution of power and responsibilities among the various levels of government. Thus, E.O. 13132 does not apply to this action.

In the spirit of E.O. 13132 and consistent with the EPA's policy to promote communications between the EPA and state and local governments, in January 2023, the EPA presented an overview of the proposed rulemaking to the Association of Clean Water Administrators (ACWA)'s Monitoring, Standards and Assessment Subcommittee. The EPA provided additional engagement during three additional meetings with ACWA representatives in 2023 at their request to hear their views on implementation of this rule in addition to accepting written comments on the proposal.

Written comments on the proposed rulemaking were submitted by 13 state governments, including state environmental agencies, water boards, governors' offices, and attorneys general. Comments were also submitted by national and regional state associations. The EPA summarized and responded in detail to public comment letters from state governments and associations in a Response to Comments document that can be found in the docket for this rule.

Participants reiterated concerns raised in their comment letters, including that the EPA did not provide sufficient engagement with states in shaping the proposed rulemaking. The EPA provided states with the same opportunities for engagement provided to the general public plus additional dedicated meetings. In addition, the EPA has carefully considered the states' comments and in some instances has made changes to the proposed rulemaking language in this final rule that may mitigate the states' concerns. These changes are detailed in relevant sections of this preamble.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has Tribal implications, however it will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. This rule may affect Tribes with reserved rights to aquatic and/or aquatic-dependent resources in waters subject to state WQS, and it may also affect Tribes administering a CWA section 303(c) WQS program. To date, 84 Indian Tribes have been approved for treatment in a manner similar to a state (TAS) for CWA sections 303(c) and 401.[131] Some of these authorized Tribes could be subject to this final rule, depending on the location and nature of any other Tribes' rights.

The EPA consulted with Tribal officials early in the process of developing this regulation to permit

[129] E.O. 13132 requires meaningful and timely consultation with elected state and local officials or their representative national organizations early in the process of developing the proposed regulation. Under the technical requirements of E.O. 13132, agencies must conduct a federalism consultation as outlined in the Executive order for regulations that (1) have federalism implications, that impose substantial direct compliance costs on state and local governments, and that are not required by statute; or (2) that have federalism implications and that preempt state law. Where actions are determined to have federalism implications as defined by agency policy for implementing E.O. 13132, a federalism summary impact statement is published in the preamble to the regulation, and the agencies must provide OMB copies of all written communications submitted by state and local officials.

[130] *i.e.,* imposed intergovernmental costs or preemption of state/local law.

[131] To date, one Tribe with TAS for CWA section 303(c) (Havasupai Tribe in Arizona) has declined TAS for CWA section 401. For the most current information please refer to *https://www.epa.gov/wqs-tech/epa-actions-tribal-water-quality-standards-and-contacts.*

them to have meaningful and timely input into its development. The EPA held a 90-day pre-proposal Tribal consultation and coordination period from June 15 through September 13, 2021, to inform development of the proposed rulemaking. The EPA conducted the consultation and coordination process in accordance with the EPA Policy on Consultation and Coordination with Indian Tribes in effect at the time.[132] In addition to two national Tribal listening sessions held in July and August 2021, the EPA presented at 20 meetings of Tribal staff and leadership, as well as held seven staff-level coordination meetings and seven leader-to-leader meetings at the request of Tribes. The EPA continued outreach and engagement with Tribes at national and regional Tribal meetings after the end of the consultation period before publishing the proposed rulemaking. Twenty-one Tribes and Tribal organizations submitted written pre-proposal comments to the EPA. These are included in the docket for the rule.

The EPA held a second 90-day Tribal consultation and coordination period after the Administrator signed the proposed rulemaking from November 30, 2022, to February 28, 2023. During the second Tribal consultation and coordination period and throughout the public comment period, the EPA held two additional national listening sessions for Tribal representatives, in January 2023, as well as seven leader-to-leader meetings and twelve staff-level coordination meetings with representatives of individual Tribes upon request. A summary of the EPA's Tribal consultation titled *Summary Report of Tribal Consultation on Revisions to the Federal Water Quality Standards Regulation to Protect Tribal Reserved Rights* is available in the docket for this rule.

The EPA encouraged Tribal representatives to submit written comments through the docket on the proposed rulemaking. The EPA received written comments representing 47 Tribes and Tribal organizations raising a wide variety of complex questions and concerns, which largely captured the questions and concerns Tribes raised during consultation and engagement meetings. Key themes included how Tribal interests and sensitive information will be protected, how disputes will be resolved, and numerous specific recommendations for expanding the inclusiveness and protectiveness of the rule. The EPA carefully considered all Tribal comments in development of the final rule and made several clarifications in the preamble to this final rule and changes in response to comments on the proposed regulation to address Tribal concerns. The EPA has responded in detail to Tribal comments along with other public comments received in the Response to Comment document available in the docket for this rule. In addition, the EPA has continued to engage with Tribes to discuss their water quality concerns, including concerns centered on reserved rights and protection of subsistence fishing, in a variety of forums, including regular meetings and discussions with the National Tribal Water Council.[133]

As required by section 7(a), the EPA's Designated Consultation Official has certified that the requirements of the Executive order have been met in a meaningful and timely manner. A copy of the certification is included in the docket for this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 directs Federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in Federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 because it is not a significant regulatory action under section 3(f)(1) of Executive Order 12866, and because the EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children. 40 CFR 131.9(a) will be relevant to protection of human health in situations where it is applied to establishing WQS to protect human health. It is not possible to evaluate whether this provision would result in disproportionate risks on children in any given case since the EPA lacks information about every instance where the rule will be applied. However, in general, the EPA recommends that human health criteria be designed to reduce the risk of adverse cancer and non-cancer effects occurring from a lifetime of exposure to pollutants through the ingestion of drinking water and consumption of fish/shellfish obtained from inland and nearshore waters. Any human health criteria established pursuant to this regulation would similarly be based on reducing the chronic health effects occurring from lifetime exposure and therefore are expected to be protective of a person's exposure during both childhood and adult years.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution or use of energy. This action impacts state and Tribal water quality standards, which do not regulate the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act of 1995

This rule does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with environmental justice concerns. The failure to consider and protect Tribal reserved rights in WQS may contribute to suppression effects that can negatively impact the health, culture, and economy of Indigenous peoples. These impacts may be further exacerbated by climate change, resulting in cumulative disproportionate and adverse effects on the health and environment of Indigenous peoples. As mentioned in section V of this preamble above and more fully explained in the economic analysis for the final rule, which is available in the docket for this rule, the EPA was unable to quantify disproportionate and adverse impacts of the existing condition prior to this rule because the EPA does not have complete data about where Tribal reserved rights exist and where existing WQS do and do not protect those rights. Instead, below the EPA has qualitatively assessed the disproportionate and adverse impacts of the existing condition prior to this rule. This assessment was conducted to inform the

[132] USEPA, 2011. EPA Policy on Consultation and Coordination with Indian Tribes.

[133] The National Tribal Water Council (NTWC) is a technical and scientific body created to assist the EPA; federally recognized Indian Tribes, including Alaska Native Tribes; and their associated Tribal communities and Tribal organizations with research and information for decision-making regarding water issues and water-related concerns that affect Indian and Alaska Native Tribal members, as well as other residents of Alaska Native Villages and Indian country in the United States.

EPA's understanding of the benefits of the rule.

Many Tribes in the U.S. rely on subsistence fishing or otherwise have reserved rights to use aquatic and aquatic-dependent resources in ways that differ from how the U.S. general population uses these resources, and/or have rights to harvest such resources at relatively higher rates than the general population. As a result, in some parts of the country, WQS that may sufficiently protect the general population may not be sufficiently stringent and/or comprehensive to protect Tribes exercising their reserved rights. These rights often reflect traditional practices that support a Tribe's cultural self-determination and can be pivotal to the economic well-being of the community. Impacts to these rights can affect the very foundation of Tribal social and political organization [134] as well as a Tribe's ability to provide for present and future generations and the maintenance of their lifeways.

For example, some Tribes have rights to fish for subsistence, which typically implies a higher rate of fish consumption than that at which the general population consumes fish from U.S. waters. The fish consumption rate is a key input to the equation used to calculate water quality criteria to protect human health; [135] such criteria represent the maximum levels of contaminants that can be present in waters for the fish caught in those waters to be safe to eat at the given rate. If all other inputs to the human health criteria equation remain the same, increasing the fish consumption rate results in more stringent criteria. For subsistence fishers, the EPA recommends a default fish consumption rate of 142 g/day in the absence of local data.[136] This rate is the estimated 99th percentile fish consumption rate from the 1994–96 Continuing Survey of Food Intake by Individuals (CSFII) conducted by the U.S. Department of Agriculture.[137] The EPA's 2000 Methodology noted that at the time 142 g/day was ''representative of average rates for highly exposed groups such as subsistence fishermen, specific ethnic groups, or other highly exposed people.'' [138] Post-2000 consumption surveys of high fish consuming populations (*e.g.,* Tribes and Asian Pacific Islanders) resulted in mean fish consumption rates ranging from 18.6 g/day to 233 g/day and 90th percentile fish consumption rates ranging from 48.9 g/day to 528 g/day.[139]

In contrast, states generally rely on the EPA's nationally recommended default fish consumption rate for the general population to calculate their human health criteria. The EPA's current nationally recommended default fish consumption rate is 22 g/day, which represents the 90th percentile consumption rate of fish and shellfish from inland and nearshore waters for the U.S. adult population 21 years of age and older, based on National Health and Nutrient Examination Survey (NHANES) data from 2003 to 2010.[140] Some states rely on this current national default fish consumption rate to calculate their statewide human health criteria, and many others have not updated their human health criteria since 2015 and rely on the EPA's prior, outdated default general population fish consumption rates (17.5 g/day or 6.5 g/day), which results in less stringent human health criteria. In states that rely on current or outdated national default general population fish consumption rates, for waters in which Tribes have rights to fish for subsistence, the existing human health criteria may expose Tribal members exercising their legal rights to consume higher amounts of fish to greater risk from toxic pollutants. The rule will have the benefit of ensuring that criteria are set at appropriate levels to protect the exercise of Tribal reserved rights.

Additionally, the EPA's current guidance for developing human health criteria [141] does not address how Tribal populations with reserved rights should be treated in developing human health criteria. Some states have treated Tribal populations as high consuming subpopulations. Since the 2000 Methodology is not specific about how to treat Tribal populations with reserved rights, it could be read as implying those Tribal populations could be protected at a less stringent cancer risk level of 10^{-4} as compared to the general population, for which the EPA recommends 10^{-5} or 10^{-6}. This regulation clarifies this important point on which the EPA's current guidance is silent.

The EPA believes that this action is likely to reduce existing disproportionate and adverse effects on communities with environmental justice concerns. Specifically, one benefit of this action is to directly address existing disproportionate and adverse effects of state WQS that fail to protect Tribal reserved rights by requiring states to consider Tribal reserved rights in establishing their WQS and requiring states to protect Tribal populations to the same risk level to which the general population of the state would otherwise be protected. This action makes the EPA's regulation explicit about how states are to consider Tribal reserved rights in adopting and revising WQS.

Finally, as discussed in section IV.F of this preamble, this rule establishes explicit regulatory requirements to provide right holders with meaningful opportunities to engage during the WQS development process. Specifically, the final rule requires state WQS submissions to include as supporting information any information provided by the right holders. This will encourage

states to meaningfully engage Tribes in WQS development, although states retain discretion on how and when to engage. Consistent with applicable EPA Tribal consultation policies, the final rule also requires the EPA to offer consultation to Tribes when the EPA is evaluating state WQS submissions that impact Tribal reserved rights that the right holder has asserted for consideration in the WQS context. These new regulatory requirements recognize the importance of State and Federal coordination with Tribes by establishing mechanisms for Tribal input in the WQS setting process.

A few comments the EPA received on the proposed rulemaking also asserted that a legacy of and ongoing environmental injustices imposes disproportionate health risks on Tribal communities throughout the U.S., and that this rule is important for advancing environmental justice and protecting vulnerable communities from climate change.

For the reasons explained in section V of this preamble above and as more fully explained in the economic analysis for this final rule, which is available in the docket for this rule, the EPA is unable to quantify the anticipated reduction in disproportionate and adverse effects to Tribal populations that will result from this final rule. This revision to the Federal WQS regulation is not self-implementing. It establishes rules for states and will be implemented by states revising their WQS. While the EPA is aware of particular situations in certain parts of the country in which Tribal reserved rights have previously been identified in relation to water quality issues, the EPA cannot estimate with certainty the geographic distribution of Tribal reserved rights across the country and how those rights apply to various CWA-protected aquatic and/or aquatic-dependent resources, which of those rights Tribes would choose to assert for consideration in establishment of WQS, whether and how states may revise various WQS components to protect the asserted rights, or how the scope or stringency of any state WQS will change as a result.

The EPA additionally identified and addressed environmental justice concerns by maximizing opportunities for meaningful involvement of Tribal governments in providing input on the rulemaking through both pre- and post-proposal Tribal consultation, as explained in section VI.F. of this preamble above.

The information supporting this Executive order review is contained in the above preamble, the document titled *Summary Report of Tribal Consultation on Revisions to the Federal Water Quality Standards Regulation to Protect Tribal Reserved Rights* and the Economic Analysis for this final rule. The latter two documents can be found in the docket for this rule.

The EPA recognizes that Tribes without federally reserved rights to aquatic or aquatic-dependent resources will not be directly impacted by this rule. The agency also acknowledges that since this rule only covers locations with reserved rights, other aquatic resources upon which Tribes depend may not be covered. It is the EPA's expectation that many of the coordination and collaboration processes that will be developed to implement this rule will also lead to better protection of aquatic and aquatic-dependent resources not referenced in treaties and similar instruments because this rulemaking aims to facilitate greater coordination between the EPA, states, and Tribal governments. The EPA will continue to work with states and Tribes to help reach this goal. While this rule does not address all obstacles to the full exercise of Tribal reserved rights, the EPA believes it takes a positive step in that direction.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 131

Environmental protection, Indians—lands, Intergovernmental relations, Reporting and recordkeeping requirements, Water pollution control.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, the EPA amends 40 CFR part 131 as follows:

PART 131—WATER QUALITY STANDARDS

■ 1. The authority citation for part 131 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

Subpart A—General Provisions

■ 2. Amend § 131.3 by adding paragraphs (r) and (s) to read as follows:

§ 131.3 Definitions.

* * * * *

(r) *Tribal reserved rights,* for purposes of this part, are any rights to CWA-protected aquatic and/or aquatic-dependent resources reserved by right holders, either expressly or implicitly, through Federal treaties, statutes, or Executive orders.

(s) *Right holders,* for purposes of this part, are any Federally recognized Tribes holding Tribal reserved rights, regardless of whether the Tribe exercises authority over a Federal Indian reservation.

■ 3. Amend § 131.5 by adding paragraph (a)(9) and revising paragraph (b) to read as follows:

§ 131.5 EPA authority.

(a) * * *

(9) Where applicable, whether State adopted water quality standards are consistent with § 131.9.

(b) If EPA determines that the State's or Tribe's water quality standards are consistent with the factors listed in paragraphs (a)(1) through (9) of this section, EPA approves the standards. EPA must disapprove the State's or Tribe's water quality standards and promulgate Federal standards under section 303(c)(4), and for Great Lakes States or Great Lakes Tribes under section 118(c)(2)(C) of the Act, if State or Tribal adopted standards are not consistent with the factors listed in paragraphs (a)(1) through (9) of this section. EPA may also promulgate a new or revised standard when necessary to meet the requirements of the Act.

* * * * *

■ 4. Amend § 131.6 by adding paragraph (g) to read as follows:

§ 131.6 Minimum requirements for water quality standards submission.

* * * * *

(g) Where applicable, information that will aid the Agency in evaluating whether the submission is consistent with § 131.9, including:

(1) Any information provided by right holders about relevant Tribal reserved rights and documentation of how that information was considered; and

(2) Data and methods used to develop the water quality standards.

Subpart B—Establishment of Water Quality Standards

■ 5. Add § 131.9 to subpart B to read as follows:

§ 131.9 Protection of Tribal reserved rights.

(a) Where a right holder has asserted a Tribal reserved right in writing to the State and EPA for consideration in establishment of water quality standards, to the extent supported by available data and information, the State must:

(1) Take into consideration the use and value of their waters for protecting

the Tribal reserved right in adopting or revising designated uses pursuant to § 131.10;

(2) Take into consideration the anticipated future exercise of the Tribal reserved right unsuppressed by water quality in establishing relevant water quality standards; and

(3) Establish water quality criteria, consistent with § 131.11, to protect the Tribal reserved right where the State has adopted designated uses that either expressly incorporate protection of or encompass the right. This requirement includes developing criteria to protect right holders using at least the same risk level (*e.g.,* cancer risk level, hazard quotient, or illness rate) as the State would otherwise use to develop criteria to protect the State's general population, paired with exposure inputs (*e.g.,* fish consumption rate) representative of right holders exercising their reserved right.

(b) States and right holders may request EPA assistance with evaluating Tribal reserved rights. EPA will provide such assistance to the extent practicable. In providing assistance to States as they adopt and revise water quality standards consistent with paragraph (a) of this section, EPA will engage with right holders.

(c) In reviewing State water quality standards submissions under this section, EPA will initiate the Tribal consultation process with the right holders that have asserted their rights for consideration in establishment of water quality standards, consistent with applicable EPA Tribal consultation policies, in determining whether State water quality standards are consistent with paragraph (a) of this section.

Subpart C—Procedures for Review and Revision of Water Quality Standards

■ 6. Amend § 131.20 by revising paragraph (a) to read as follows:

§ 131.20 State review and revision of water quality standards.

(a) *State review.* The State shall from time to time, but at least once every 3 years, hold public hearings for the purpose of reviewing applicable water quality standards adopted pursuant to §§ 131.9 through 131.15 and Federally promulgated water quality standards and, as appropriate, modifying and adopting standards. This review shall include evaluating whether there is any new information available about Tribal reserved rights applicable to State waters that needs to be considered to establish water quality standards consistent with § 131.9. The State shall also re-examine any waterbody segment with water quality standards that do not include the uses specified in section 101(a)(2) of the Act every 3 years to determine if any new information has become available. If such new information indicates that the uses specified in section 101(a)(2) of the Act are attainable, the State shall revise its standards accordingly. Procedures States establish for identifying and reviewing water bodies for review should be incorporated into their Continuing Planning Process. In addition, if a State does not adopt new or revised criteria for parameters for which EPA has published new or updated CWA section 304(a) criteria recommendations, then the State shall provide an explanation when it submits the results of its triennial review to the Regional Administrator consistent with CWA section 303(c)(1) and the requirements of paragraph (c) of this section.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 372

[EPA–HQ–TRI–2022–0262; FRL–2425.1–05–OCSPP]

RIN 2025–AA17

Addition of Diisononyl Phthalate Category; Community Right-to-Know Toxic Chemical Release Reporting; Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Correcting amendment.

SUMMARY: The Environmental Protection Agency (EPA or the Agency) is correcting a final rule that appeared in the **Federal Register** on July 14, 2023, which added a diisononyl phthalates (DINP) category to the list of toxic chemicals subject to the reporting requirements under the Emergency Planning and Community Right-to-Know Act (EPCRA) and the Pollution Prevention Act (PPA). However, the amendment could not be incorporated into the regulation due to an inaccurate amendatory instruction. This document corrects the amendatory instructions.

DATES: Effective on May 2, 2024.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–TRI–2022–0262, is available at *https://www.regulations.gov.* Additional instructions on visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Rachel Dean, Data Collection Branch, Data Gathering, Management, and Policy Division (Mail code: 7406M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 566–1303; email address: *dean.rachel@epa.gov.*

For general information contact: The Emergency Planning and Community Right-to-Know Information Center; telephone number: (800) 424–9346 or (703) 348–5070 in the Washington, DC Area and International; website: *https://www.epa.gov//hotlines.*

SUPPLEMENTARY INFORMATION:

I. Does this action apply to me?

The Agency included in the July 14, 2023, final rule a list of those who may be potentially affected by this action.

II. What does this correction do?

EPA issued a final rule in the **Federal Register** on July 14, 2023 (88 FR 45089) (FRL–2425.1–03–OCSPP) which added a diisononyl phthalates (DINP) category to the list of toxic chemicals subject to the reporting requirements under the EPCRA and the PPA. In the final rule's instructions to amend the Code of Federal Regulations (CFR), EPA intended to add the DINP category alphabetically to the list of TRI chemical categories at 40 CFR 372.65(c). However, the list of TRI chemical categories in the CFR at the time had been incorporated as a static image of a table, which introduced formatting challenges with regard to updating 40 CFR 372.65(c) per the amendatory instructions in the DINP category rule because the Agency did not provide a new static image of the table. This document corrects the formatting in Table 3 to paragraph (c) of 40 CFR 372.65(c) by removing the static image of the table and replacing it with a table consisting of text and images of chemicals structures, as applicable.

III. Why is this correction issued as a final rule?

Section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)(3)(B)) provides that, when an agency for good cause finds that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the agency may issue a final rule without providing notice and an opportunity for public comment. EPA has determined that notice and public

procedure are unnecessary because EPA provided a full opportunity for notice and comment before issuing the final rule that published in the **Federal Register** on July 14, 2023, and this correction merely corrects the amendatory instructions to ensure that the rule is correctly codified in the CFR. EPA finds that this constitutes good cause under 5 U.S.C. 553(b)(3)(B).

IV. Do any of the statutory and executive order review requirements apply to this action?

No. For a detailed discussion concerning the statutory and executive order review requirements refer to Unit VI. of the final rule issued on July 14, 2023.

V. Congressional Review Act (CRA)

Pursuant to the CRA (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 372

Environmental protection, Community right-to-know, Reporting and recordkeeping requirements, and Toxic chemicals.

Dated: April 24, 2024.

Michal Freedhoff

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

Therefore, for the reasons set forth in the preamble, EPA is amending 40 CFR part 372 as follows:

PART 372—TOXIC CHEMICAL RELEASE REPORTING: COMMUNITY RIGHT-TO-KNOW

■ 1. The authority citation for part 372 continues to read as follows:

Authority: 42 U.S.C. 11023 and 11048.

■ 2. In § 372.65, amend Table 3 in paragraph (c) to read as follows:

§ 372.65 Chemicals and chemical categories to which this part applies.

* * * * *

(c) * * *

Table 3 to Paragraph (c)

BILLING CODE 6560–50–P

Category name	Effective Date
Antimony compounds: Includes any unique chemical substance that contains antimony as part of that chemical's infrastructure.	1/1/1987
Arsenic compounds: Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure.	1/1/1987
Barium compounds: Includes any unique chemical substance that contains barium as part of that chemical's infrastructure (except for barium sulfate (CAS No. 7727-43-7)).	1/1/1987
Beryllium compounds: Includes any unique chemical substance that contains beryllium as part of that chemical's infrastructure.	1/1/1987
Cadmium compounds: Includes any unique chemical substance that contains cadmium as part of that chemical's infrastructure.	1/1/1987
Certain glycol ethers $R\text{-}(OCH_2CH_2)_n\text{-}OR'$ Where: n = 1, 2, or 3; R = alkyl C7 or less; or R = phenyl or alkyl substituted phenyl; R′ = H or alkyl C7 or less; or OR′ consisting of carboxylic acid ester, sulfate, phosphate, nitrate, or sulfonate.	1/1/1995
Chlorophenols  Where x = 1 to 5	1/1/1987
Chromium compounds: Includes any unique chemical substance that contains chromium as part of that chemical's infrastructure (except for chromite ore mined in the Transvaal Region of South Africa and the unreacted ore component of the chromite ore processing residue (COPR). COPR is the solid waste remaining after aqueous extraction of oxidized chromite ore that has been combined with soda ash and kiln roasted at approximately 2,000 °F).	1/1/1987
Cobalt compounds: Includes any unique chemical substance that contains cobalt as part of that chemical's infrastructure.	1/1/1987

Copper compounds: Includes any unique chemical substance that contains copper as part of that chemical's infrastructure (except for C.I. Pigment Blue 15 (PB-15, CAS No. 147-14-8), C.I. Pigment Green 7 (PG-7, CAS No. 1328-53-6), and C.I. Pigment Green 36 (PG-36, CAS No. 14302-13-7)) and except copper phthalocyanine compounds that are substituted with only hydrogen and/or bromine and/or chlorine that meet the following molecular structure definition:  Where R = H and/or Br and/or Cl only.	1/1/1987
Cyanide compounds: X^+CN^- where X^+ = any group (except H^+) where a formal dissociation can be made. For example, KCN or $Ca(CN)_2$.	1/1/1987
Diisocyanates (This category includes only those chemicals listed below) 38661-72-2 1,3-Bis(methylisocyanate)cyclohexane 10347-54-3 1,4-Bis(methylisocyanate)cyclohexane (1,4-Bis(isocyanatomethyl)cyclohexane) 2556-36-7 1,4-Cyclohexane diisocyanate 134190-37-7 Diethyldiisocyanatobenzene 4128-73-8 4,4'-Diisocyanatodiphenyl ether 75790-87-3 2,4'-Diisocyanatodiphenyl sulfide 91-93-0 3,3'-Dimethoxybenzidine-4,4'-diisocyanate 91-97-4 3,3'-Dimethyl-4,4'-diphenylene diisocyanate 139-25-3 3,3'-Dimethyldiphenylmethane-4,4'-diisocyanate 822-06-0 Hexamethylene-1,6-diisocyanate 4098-71-9 Isophorone diisocyanate 75790-84-0 4-Methyldiphenylmethane-3,4-diisocyanate 5124-30-1 1,1-Methylene bis(4-isocyanatocyclohexane) 101-68-8 4,4'-Methylenedi(phenyl isocyanate) 3173-72-6 1,5-Naphthalene diisocyanate 123-61-5 1,3-Phenylene diisocyanate 104-49-4 1,4-Phenylene diisocyanate 9016-87-9 Polymeric diphenylmethane diisocyanate 16938-22-0 2,2,4-Trimethylhexamethylene diisocyanate 15646-96-5 2,4,4-Trimethylhexamethylene diisocyanate	1/1/1995

Diisononyl Phthalates (DINP): Includes branched alkyl di-esters of 1,2 benzenedicarboxylic acid in which alkyl ester moieties contain a total of nine carbons. (This category includes but is not limited to the chemicals covered by the CAS numbers and names listed here). 28553-12-0 Diisononyl phthalate 71549-78-5 Branched dinonyl phthalate 14103-61-8 Bis(3,5,5-trimethylhexyl) phthalate 68515-48-0 Di(C8-10, C9 rich) branched alkyl phthalates 20548-62-3 Bis(7-methyloctyl) phthalate 111983-10-9 Bis(3-ethylheptan-2-yl) benzene-1,2-dicarboxylate	1/1/2024
Dioxin and dioxin-like compounds (Manufacturing; and the processing or otherwise use of dioxin and dioxin like compounds if the dioxin and dioxin like compounds are present as contaminants in a chemical and if they were created during the manufacturing of that chemical.) (This category includes only those chemicals listed below). 67562-39-4 1,2,3,4,6,7,8-Heptachlorodibenzofuran 55673-89-7 1,2,3,4,7,8,9-Heptachlorodibenzofuran 35822-46-9 1,2,3,4,6,7,8-Heptachlorodibenzo-*p*-dioxin 39227-28-6 1,2,3,4,7,8-Hexachlorodibenzo-*p*-dioxin 57653-85-7 1,2,3,6,7,8-Hexachlorodibenzo-*p*-dioxin 19408-74-3 1,2,3,7,8,9-Hexachlorodibenzo-*p*-dioxin 70648-26-9 1,2,3,4,7,8-Hexachlorodibenzofuran 57117-44-9 1,2,3,6,7,8-Hexachlorodibenzofuran 72918-21-9 1,2,3,7,8,9-Hexachlorodibenzofuran 60851-34-5 2,3,4,6,7,8-Hexachlorodibenzofuran 39001-02-0 1,2,3,4,6,7,8,9-Octachlorodibenzofuran 3268-87-9 1,2,3,4,6,7,8,9-Octachlorodibenzo-*p*-dioxin 57117-41-6 1,2,3,7,8-Pentachlorodibenzofuran 57117-31-4 2,3,4,7,8-Pentachlorodibenzofuran 40321-76-4 1,2,3,7,8-Pentachlorodibenzo-*p*-dioxin 51207-31-9 2,3,7,8-Tetrachlorodibenzofuran 1746-01-6 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin	1/1/2000
Ethylenebisdithiocarbamic acid, salts and esters.	1/1/1994
Hexabromocyclododecane (This category includes only those chemicals covered by the CAS numbers listed here) 3194-55-6 1,2,5,6,9,10-Hexabromocyclododecane 25637-99-4 Hexabromocyclododecane	1/1/2017
Lead compounds: Includes any unique chemical substance that contains lead as part of that chemical's infrastructure.	1/1/1987
Manganese compounds: Includes any unique chemical substance that contains manganese as part of that chemical's infrastructure.	1/1/1987
Mercury compounds: Includes any unique chemical substance that contains mercury as part of that chemical's infrastructure.	1/1/1987
Nickel compounds: Includes any unique chemical substance that contains nickel as part of that chemical's infrastructure.	1/1/1987
Nicotine and salts.	1/1/1995
Nitrate compounds (water dissociable; reportable only when in aqueous solution).	1/1/1995

Nonylphenol (This category includes only those chemicals listed below). 104-40-5 4-Nonylphenol (*p*-Nonylphenol) 11066-49-2 Isononylphenol 25154-52-3 Nonylphenol 26543-97-5 4-Isononylphenol 84852-15-3 4-Nonylphenol, branched (Branched *p*-nonylphenol) 90481-04-2 Nonylphenol, branched	1/1/2015
Nonylphenol Ethoxylates (This category includes only those chemicals covered by the CAS numbers listed here). 7311-27-5 Ethanol, 2-[2-[2-[2-(4-nonylphenoxy)ethoxy]ethoxy]ethoxy]- 9016-45-9 Poly(oxy-1,2-ethanediyl), α-(nonylphenyl)-ω-hydroxy-; (Polyethylene glycol nonylphenyl ether) 20427-84-3 Ethanol, 2-[2-(4-nonylphenoxy)ethoxy]-; (2-[2-(4-Nonylphenoxy)ethoxy]ethanol) 26027-38-3 Poly(oxy-1,2-ethanediyl), α-(4-nonylphenyl)-ω-hydroxy-; (*p*-Nonylphenol polyethylene glycol ether) 26571-11-9 3,6,9,12,15,18,21,24-Octaoxahexacosan-1-ol, 26-(nonylphenoxy)- 27176-93-8 Ethanol, 2-[2-(nonylphenoxy)ethoxy]-; (Diethylene glycol nonylphenol ether) 27177-05-5 3,6,9,12,15,18,21-Heptaoxatricosan-1-ol, 23-(nonylphenoxy)- 27177-08-8 3,6,9,12,15,18,21,24,27-Nonaoxanonacosan-1-ol, 29-(nonylphenoxy)- 27986-36-3 Ethanol, 2-(nonylphenoxy)-; (2-(Nonylphenoxy)ethanol) 37205-87-1 Poly(oxy-1,2-ethanediyl), α-(isononylphenyl)-ω-hydroxy- 51938-25-1 Poly(oxy-1,2-ethanediyl), α-(2-nonylphenyl)-ω-hydroxy- 68412-54-4 Poly(oxy-1,2-ethanediyl), α-(nonylphenyl)-ω-hydroxy-, branched; (Polyethylene glycol mono(branched nonylphenyl) ether) 127087-87-0 Poly(oxy-1,2-ethanediyl), α-(4-nonylphenyl)-ω-hydroxy-, branched; (Polyethylene glycol mono(branched *p*-nonylphenyl) ether)	1/1/2019
Polybrominated biphenyls (PBBs)  Where x = 1 to 10	1/1/1987
Polychlorinated alkanes (C_{10} to C_{13}): Includes those chemicals defined by the following formula: $C_xH_{2x-y+2}Cl_y$ where x = 10 to 13; y = 3 to 12; and where the average chlorine content ranges from 40-70% with the limiting molecular formulas $C_{10}H_{19}Cl_3$ and $C_{13}H_{16}Cl_{12}$	1/1/1995

Polycyclic aromatic compounds (PACs): (This category includes only those chemicals listed below).	1/1/1995
56-55-3 Benz[a]anthracene	
218-01-9 Benzo[a]phenanthrene (Chrysene)	
50-32-8 Benzo[a]pyrene	
205-99-2 Benzo[b]fluoranthene	
205-82-3 Benzo[j]fluoranthene	
207-08-9 Benzo[k]fluoranthene	
206-44-0 Benzo[j,k]fluorene (Fluoranthene)	1/1/2000
189-55-9 Benzo[r,s,t]pentaphene (Dibenzo[a,i]pyrene)	
226-36-8 Dibenz[a,h]acridine	
224-42-0 Dibenz[a,j]acridine	
53-70-3 Dibenzo[a,h]anthracene (Dibenz[a,h]anthracene)	
5385-75-1 Dibenzo[a,e]fluoranthene	
192-65-4 Dibenzo[a,e]pyrene	
189-64-0 Dibenzo[a,h]pyrene	
191-30-0 Dibenzo[a,l]pyrene	
194-59-2 7H-Dibenzo[c,g]carbazole	
57-97-6 7,12-Dimethylbenz[a]anthracene	
42397-64-8 1,6-Dinitropyrene	1/1/2011
42397-65-9 1,8-Dinitropyrene	1/1/2011
193-39-5 Indeno[1,2,3-cd]pyrene	
56-49-5 3-Methylcholanthrene	1/1/2000

BILLING CODE 6560–50–C

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 240429–0120]

RIN 0648–BM71

Magnuson-Stevens Fishery Conservation and Management Act Provisions; Fisheries of the Northeastern United States; Northeast Multispecies Fishery; Framework Adjustment 66

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This action approves and implements Framework Adjustment 66 to the Northeast Multispecies Fishery Management Plan (FMP). This rule sets catch limits for 8 of the 20 multispecies stocks, modifies the accountability measure (AM) implementation catch threshold for Atlantic halibut, and makes a temporary modification to the AM implementation catch threshold for the scallop fishery for Georges Bank (GB) yellowtail flounder. This action is necessary to respond to updated scientific information and to achieve the goals and objectives of the fishery management plan. The measures are intended to help prevent overfishing, rebuild overfished stocks, achieve optimum yield, and ensure that management measures are based on the best scientific information available.

DATES: Effective May 2, 2024.

ADDRESSES: Copies of Framework Adjustment 66, including the draft Environmental Assessment, the Regulatory Impact Review, and the Regulatory Flexibility Act Analysis prepared by the New England Fishery Management Council in support of this action, are available from Dr. Cate O'Keefe, Executive Director, New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950. The supporting documents are also accessible via the internet at: *http://www.nefmc.org/management-plans/northeast-multispecies* or *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Liz Sullivan, Fishery Policy Analyst, phone: 978–282–8493; email: *Liz.Sullivan@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Summary of Approved Measures

The New England Fishery Management Council (Council) adopted Framework Adjustment 66 to the Northeast Multispecies FMP on December 7, 2023. The Council submitted Framework 66, including an environmental assessment (EA), for NMFS approval on February 16, 2024. NMFS published a proposed rule for Framework 66 on March 22, 2024 (89 FR 20412), with a 15-day comment period that closed on April 8, 2024.

Under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and on behalf of the Secretary of Commerce, the Greater Atlantic Regional Fisheries Office's Regional Administrator (Regional Administrator) approves, disapproves, or partially approves measures that the Council proposes, based on consistency with the Magnuson-Stevens Act and other applicable law. NMFS reviews recommended specifications and proposed measures for consistency with the fishery management plan, plan amendments, the Magnuson-Stevens Act and other applicable law, and publishes proposed regulations, solicits public comment, and promulgates final regulations. Based on information provided in the EA and considered during the preparation of this action, and after consideration of comments, NMFS has approved all of the measures in Framework 66 recommended by the Council, as described below. The measures implemented in this final rule:

- Set shared U.S./Canada quotas for GB yellowtail flounder and eastern GB cod and haddock for fishing years 2024 and 2025;
- Set specifications, including catch limits for eight groundfish stocks: redfish, northern windowpane flounder, and southern windowpane flounder for fishing years 2024–2026; and GB cod, GB haddock, Gulf of Maine (GOM) haddock, GB yellowtail flounder, and white hake for fishing years 2024–2025;
- Make a minor adjustment to the subcomponent quotas for GOM cod and adjust the amount set aside for Canadian catch for Atlantic halibut;
- Remove the management uncertainty buffer for sectors for GOM haddock and white hake if the at-sea monitoring (ASM) target coverage level is set at 90 percent or greater for the 2024 and 2025 fishing years;
- Modify the catch threshold for implementing the Atlantic halibut accountability measures (AM); and
- Temporarily modify the catch threshold for implementing the scallop fishery's AM for GB yellowtail flounder.

This action also makes minor, clarifying regulatory changes that are not part of Framework 66, but are implemented under section 305(d) authority in the Magnuson-Stevens Act to make changes necessary to carry out the FMP. NMFS is making these changes in conjunction with the Framework 66 proposed measures for expediency purposes. These changes are described below under the heading, Minor, Clarifying Regulatory Changes under Secretarial Authority.

Fishing Years 2024 and 2025 Shared U.S./Canada Quotas

Management of Transboundary Georges Bank Stocks

As described in the proposed rule, eastern GB cod, eastern GB haddock, and GB yellowtail flounder are jointly managed with Canada under the United States/Canada Resource Sharing Understanding. This action adopts shared U.S./Canada quotas for these stocks for fishing year 2024 based on 2023 assessments and the recommendations of the Transboundary Management Guidance Committee (TMGC) and consistent with the Council's Scientific and Statistical Committee (SSC) recommendations. Framework 66 sets the same shared quotas for a second year (*i.e.,* for fishing year 2025) as placeholders, with the expectation that those quotas will be reviewed annually and new recommendations will be received from the TMGC. The 2024 and 2025 shared U.S./Canada quotas, and each country's allocation, are listed in table 1.

TABLE 1—2024 AND 2025 FISHING YEARS U.S./CANADA QUOTAS (metric tons (mt), live weight) AND PERCENT OF QUOTA ALLOCATED TO EACH COUNTRY

Quota	Eastern GB cod	Eastern GB haddock	GB yellowtail flounder
Total Shared Quota	520	10,000	168.
U.S. Quota	151 (29 percent)	3,100 (31 percent)	71 (42 percent).

TABLE 1—2024 AND 2025 FISHING YEARS U.S./CANADA QUOTAS (metric tons (mt), live weight) AND PERCENT OF QUOTA ALLOCATED TO EACH COUNTRY—Continued

Quota	Eastern GB cod	Eastern GB haddock	GB yellowtail flounder
Canadian Quota	369 (71 percent)	6,900 (69 percent)	97 (58 percent).

The regulations implementing the U.S./Canada Resource Sharing Understanding at 50 CFR 648.85(a) require deducting any overages of the U.S. quota for eastern GB cod, eastern GB haddock, or GB yellowtail flounder from the U.S. quota in the following fishing year. If catch information for the 2023 fishing year indicates that the U.S. fishery exceeded its quota for any of the shared stocks, NMFS will reduce the respective U.S. quotas for the 2024 fishing year in a future management action, as close to May 1, 2024, as possible. If any fishery that is allocated a portion of the U.S. quota exceeds its allocation and causes an overage of the overall U.S. quota, the overage reduction would be applied only to that fishery's allocation in the following fishing year. This ensures that catch by one component of the overall fishery does not negatively affect another component of the overall fishery.

Catch Limits for Fishing Years 2024–2026

Summary of the Catch Limits

This rule adopts catch limits for redfish, northern windowpane flounder, and southern windowpane flounder for the 2024–2026 fishing years, based on stock assessments completed in 2023, and catch limits for GB cod, GB haddock, GOM haddock, GB yellowtail flounder, and white hake for fishing years 2024–2025. Framework 65 (86 FR 40353, July 28, 2021) previously set 2024–2025 quotas for the remaining groundfish stocks, other than GOM cod, based on assessments conducted in 2022, and those remain in place. Framework 63 (87 FR 42375, July 15, 2022) previously set the 2024 quota for GOM cod, based on an assessment conducted in 2021, and that also remains in place. The catch limits implemented in this action, including overfishing limits (OFL), acceptable biological catches (ABC), and annual catch limits (ACL), are listed in tables 2 through 10. A summary of how these catch limits were developed, including the distribution to the various fishery components, was provided in the proposed rule and in appendix II (Calculation of Northeast Multispecies Annual Catch Limits, FY 2024–FY 2026) to the EA, and is not repeated here. The sector and common pool sub-ACLs implemented in this action are based on fishing year 2024 potential sector contributions (PSC) and preliminary fishing year 2024 sector rosters.

Management Uncertainty Buffer for Sectors

NMFS approves the measure in Framework 66 that removes the management uncertainty buffer for the sector sub-ACL for GOM haddock and white hake if the ASM coverage target is 90 percent or higher. This measure remains in place for the next 2 fishing years unless the Council adopts, and NMFS approves and implements, new specifications for fishing year 2025 based on updated assessments.

Amendment 23 (87 FR 75852, December 9, 2022) implemented a measure to remove the management uncertainty buffer for the sector sub-ACL for each allocated groundfish stock in years that the ASM coverage target is set at 100 percent, unless otherwise warranted. On February 20, 2024, the Regional Administrator announced the preliminary ASM coverage target of 100 percent and nothing has changed since that announcement to require a lower ASM coverage target. Therefore, in this action, NMFS is removing the management uncertainty buffer for each allocated stock for all sectors for the entirety of the 2024 fishing year. If the Regional Administrator makes a final determination with a lower ASM coverage target, the sectors' buffers will not be reinstated. Because the removal of the buffer is dependent on the annual determination of the ASM coverage target and consideration of its merit, the determination regarding the buffer in fishing year 2025 would be made in a future action.

Sector Annual Catch Entitlements (ACE)

On April 5, 2024, NMFS allocated stocks to each sector, based on the fishing year 2024 catch limits set by prior frameworks (89 FR 23941, April 5, 2024). This rule updates the ACE allocated to sectors based on the catch limits approved in Framework 66, fishing year 2024 PSC, and preliminary fishing year 2024 sector rosters. NMFS calculates a sector's allocation for each stock by summing its members' PSC for the stock and then multiplying that total percentage by the commercial sub-ACL for that stock. The process for allocating ACE to sectors is further described in the rule allocating ACE to sectors for fishing year 2024 and is not repeated here (see 89 FR 23941, April 5, 2024).

Table 11 shows the cumulative PSC by stock for each sector for fishing year 2024. Tables 12 and 13 show the ACEs allocated to each sector for fishing year 2024, in pounds (lb) and mt, respectively. The common pool sub-ACLs are included in tables 11 through 13 for comparison. All permits enrolled in a sector, and the vessels associated with those permits, have until April 30, 2024, to withdraw from a sector and fish in the common pool for the 2024 fishing year. In addition, all permits that change ownership after the roster deadline of March 13, 2024, may join a sector through April 30, 2024. NMFS will publish final sector and common pool sub-ACLs based on final 2024 rosters as soon as practicable after the start of the 2024 fishing year.

BILLING CODE 3510–22–C

Modification to the Catch Thresholds for Implementing Accountability Measures

As more fully described in the proposed rule, Framework 66 modifies the catch threshold for implementing the Atlantic halibut AMs. In the situation where the Atlantic halibut ACL is exceeded by more than the management uncertainty buffer, NMFS would take into account the landings from the Canadian fishery for the last calendar year and determine whether, when combined with the landings by U.S. fisheries (Federal and state), the total ABC had been exceeded as well. Framework 66 does not make any changes to the AMs themselves, which are a combination of a zero-possession limit and gear-area restrictions.

Framework 66 modifies the catch threshold for implementing the scallop fishery's AMs for GB yellowtail flounder for the 2024 and 2025 fishing years, so that the AMs for GB yellowtail flounder would only be implemented if the scallop fishery catch exceeds its sub-ACL by any amount and the total ACL is also exceeded. Unless this modification is extended in a future action, the underlying policy for implementing the scallop fishery's AM for GB cod would be in effect for catches in fishing year 2026 and beyond. This temporary modification is more fully described in the proposed rule.

Minor, Clarifying Regulatory Changes Under Secretarial Authority

Framework 66 makes minor, clarifying changes in the regulations. Specifically, this action revises § 648.90(a)(5)(i)(F) to reorganize the section to improve clarity and readability regarding the Atlantic halibut AMs.

Comments and Responses on Measures Proposed in the Framework 66 Proposed Rule

We received two comment submissions covering numerous issues regarding the Framework 66 proposed rule from Northeast Seafood Coalition (NSC) and a member of the public.

Specifications

Comment 1: NSC wrote in support of setting the ABC for white hake at 75 percent of the fishing mortality associated with maximum sustainable yield (F_{MSY}) for two years, citing that this will still allow for the stock to rebuild by 2031. NSC also supports increasing the GOM haddock ABC to the level of 90 percent F_{MSY} for fishing years 2024 and 2026, given the healthy population level and the potential economic impacts of a lower quota. A member of the public wrote in support of all the catch limits proposed in Framework 66.

Response 1: NMFS agrees and is approving the specifications as proposed.

Comment 2: NSC expressed concern regarding the proposed shared U.S./Canada quota for GB yellowtail flounder. NSC commented that the calculation of this quota follows a harvest strategy known as the Limiter Approach, designed to use data from three surveys. NSC noted that, in recent years, there have been missing survey data. NSC claims that the use of the Limiter Approach with missing survey data has not been adequately addressed. NSC recommends that NMFS prioritize scientific and management approaches that do not economically impact the commercial fishery, but does not provide an alternative to the quota that was recommended by the Council's SSC and by the TMGC, and proposed in Framework 66.

Response 2: NSC is echoing the concerns that the SSC raised when it made its recommendation of the shared U.S./Canada quota for GB yellowtail flounder of 168 mt. In the SSC's September 15, 2023, report to the Council, the SSC noted that it had previously accepted the use of the Limiter Approach despite the recognized uncertainty from having only two of the three surveys. In the last three years in which the Limiter Approach was used without all three surveys, sensitivity analyses were conducted to determine the potential impact of the missing information. For 2023, no adjustment was made to the Limiter Approach to account for the missing survey because these analyses showed that the impact of missing that particular survey was minimal.

The SSC also noted that the Yellowtail Flounder Research Track Stock Assessment was ongoing and evaluating alternative assessment approaches for GB yellowtail flounder to replace, or improve upon, the Limiter Approach. While the SSC acknowledged in its September 2023 report that fishing does not appear to be a ''major driver'' of stock status currently, it also argued that for a stock that has experienced overfishing historically and the causal mechanisms for lack of rebuilding are ''difficult to know with certainty,'' and therefore, the SSC advised caution when managing this stock. NMFS will continue to support the yellowtail research track assessment process (Memorandum from SSC to Dr. Cate O'Keefe, Council Executive Director, September 15, 2023).

Comment 3: NSC wrote in support of removing the management uncertain buffer for sectors for GOM haddock and white hake for the upcoming fishing year.

Response 3: NMFS agrees and is approving this measure. Additionally, because the management uncertainty buffer by regulation defaults to zero when the ASM coverage target is 100 percent, NMFS is removing the management uncertainty buffer for each allocated stock for all sectors for the entirety of the 2024 fishing year based on the preliminary ASM coverage target of 100 percent.

Accountability Measure Modifications

Comment 4: NSC supports the modifications of catch threshold for implementing AMs, for both Atlantic halibut and the scallop fishery's catch of GB yellowtail flounder.

Response 4: NMFS agrees and is approving both measures.

Changes From the Proposed Rule

NMFS made one change to the proposed rule. The proposed rule's section *Annual Catch Limits* included sector and common pool sub-ACLs based on fishing year 2023 PSCs and final fishing year 2023 sector rosters but did not include the PSCs and ACEs allocated to each sector. This final rule updates the total ACLs and sector and common pool sub-ACLs based on the ASM coverage target of 100 percent and the 2024 PSCs and preliminary fishing year 2024 sector rosters, and includes the PSCs and ACEs at the sector level.

Classification

NMFS is issuing this rule pursuant to sections 304(b)(3) and 305(d) of the Magnuson-Stevens Act, which provide specific authority for implementing this action. Pursuant to section 305(d), this action sets specifications for stocks managed by the Northeast Multispecies FMP as recommended by the Council, in accordance with § 648.90(a)(4), makes minor, clarifying changes in the regulations for the Northeast Multispecies FMP, and is necessary to carry out the Northeast Multispecies FMP. The NMFS Assistant Administrator has determined that this final rule is consistent with Framework Adjustment 66, the Northeast Multispecies FMP, other provisions of the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for purposes of Executive Order (E.O.) 12866, as amended by E.O. 14094. This final rule

does not contain policies with federalism or takings implications as those terms are defined in E.O. 13132 and E.O. 12630, respectively.

The Assistant Administrator for Fisheries finds that waiver of the 30-day delayed effectiveness of this action pursuant to 5 U.S.C. 553(d)(1) and 553(d)(3) is justified. This action relies on the best available science to set fishing year 2024 catch limits for groundfish stocks and adopts several other measures to improve the management of the groundfish fishery. This final rule must be implemented as soon as possible to capture fully the conservation and economic benefits of Framework 66 and avoid adverse economic impacts.

This action was developed by the New England Fishery Management Council as part of the annual Framework Adjustment process, during which final action was taken in December 2023. The Council submitted the final Framework on February 16, 2024. Given the timing of the Council process and submission, the earliest NMFS was able to publish a proposed rule for Framework 66 was on March 22, 2024.

A delay in implementation of this rule increases negative economic effects for regulated entities. Several stocks did not have 2024 quotas set by a previous framework. A separate action implemented default quotas for those stocks (75 percent of the 2023 quota). For several stocks, the fishery is operating under lower quotas than those implemented by this rule. A delay could limit economic opportunities for the fishery, as well as lead to confusion and uncertainty. A delay would also increase the administrative burden and costs for groundfish sectors of tracking temporary quotas and coordinating fishing effort relating to those quotas, and then having to reprogram their data systems to adjust to the revised quotas. Providing timely access to these stocks is also a potential safety issue. A significant portion of fishing activity occurs in early summer, due to better weather, and, for some smaller vessels, summer may be the only season in which they are able to participate in the fishery.

Additionally, this rule contains no new measures (*e.g.,* gear requirements) for which regulated entities need time to prepare or revise their current practices. Fishermen who are subject to this action expect and need timely implementation to avoid adverse economic impacts. This action is similar to the process used to set quotas every 1–2 years, approves all items as proposed, and contains only quotas and minor adjustments to the management plan that were discussed at multiple noticed meetings where the public was provided opportunity to learn about the action, ask questions, and provide input into the development of the measures. Affected parties and other interested parties participated in this public process to develop this action and desire implementation as close to the beginning of the fishing year on May 1 as possible.

Section 553(d)(1) of the Administrative Procedure Act permits that the 30-day delay in effectiveness be waived for substantive rules that relieve a restriction (5 U.S.C. 553(d)(1)). Once this rule goes into effect, all fisherman impacted by the action will be under new quota limits that increase their opportunity to fish. Until the rule is in effect, those fishermen are effectively restricted in their opportunity to fish. Therefore, waiving the 30-day delay for this rule would relieve the restriction on the fishermen. Additionally, relieving the restriction on catch from application of the management uncertainty buffer increases available quota and provides economic opportunities, operational flexibility, and prevents potential earlier closures of fisheries.

In sum, a delay in implementation of this action would greatly diminish the benefits of these specifications and other approved measures. For these reasons, a 30-day delay in the effectiveness of this rule is impracticable and contrary to the public interest.

Final Regulatory Flexibility Analysis

Section 604 of the Regulatory Flexibility Act (RFA) requires Federal agencies to prepare a Final Regulatory Flexibility Analysis (FRFA) for each final rule that describes the economic impact of this action on small entities (5 U.S.C. 604). The FRFA includes a summary of significant issues raised by public comments, the analyses contained in Framework 66 and its accompanying Environmental Assessment, Regulatory Impact Review, and Initial Regulatory Flexibility Analysis (IRFA), the IRFA summary in the proposed rule, as well as the summary provided below. A statement of the necessity for and for the objectives of this action are contained in Framework 66 and in the preamble to this final rule, and is not repeated here.

A Summary of the Significant Issues Raised by the Public in Response to the IRFA, a Summary of the Agency's Assessment of Such Issues, and a Statement of Any Changes Made in the Final Rule as a Result of Such Comments

NMFS received one comment expressing concern about the economic impacts of this action and has summarized the comments in the comments and responses section of this rule. None of the comments received were directly related to the IRFA, or provided information that changed the conclusions of the IRFA. The Chief Counsel for the Office of Advocacy of the Small Business Administration (SBA) did not file any comments. NMFS made no changes to the proposed rule measures.

Description and Estimate of the Number of Small Entities to Which the Rule Would Apply

The final rule impacts the recreational groundfish, Atlantic sea scallop, small mesh multispecies, Atlantic herring, and large-mesh non-groundfish fisheries. Individually-permitted vessels may hold permits for several fisheries, harvesting species of fish that are regulated by several different FMPs, even beyond those impacted by the action. Furthermore, multiple-permitted vessels and/or permits may be owned by entities affiliated by stock ownership, common management, identity of interest, contractual relationships, or economic dependency. For the purposes of the RFA analysis, the ownership entities, not the individual vessels, are considered to be the regulated entities.

As of June 1, 2023, NMFS had issued 675 commercial limited-access groundfish permits associated with vessels (including those in confirmation of permit history (CPH)), 639 party/charter groundfish permits, 696 limited access and general category Atlantic sea scallop permits, 694 small-mesh multispecies permits, 73 Atlantic herring permits, and 752 large-mesh non-groundfish permits (limited access summer flounder and scup permits). Therefore, this action potentially regulates 3,529 permits. When accounting for overlaps between fisheries, this number falls to 2,029 permitted vessels. Each vessel may be individually owned or part of a larger corporate ownership structure and, for RFA purposes, it is the ownership entity that is ultimately regulated by the action. Ownership entities are identified on June 1st of each year based on the list of all permit numbers, for the most recent complete calendar year, that have

applied for any type of Greater Atlantic Region Federal fishing permit. The current ownership data set is based on calendar year 2022 permits and contains gross sales associated with those permits for calendar years 2018 through 2022.

For RFA purposes only, NMFS has established a small business size standard for businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (North American Industry Classification System (NAICS) code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates) and has combined annual receipts not in excess of $11 million for all its affiliated operations worldwide. The determination as to whether the entity is large or small is based on the average annual revenue for 2018 through 2022. The SBA has established size standards for all other major industry sectors in the U.S., including for-hire fishing (NAICS code 487210). These entities are classified as small businesses if combined annual receipts are not in excess of $8.0 million for all of an entity's affiliated operations. As with commercial fishing businesses, the annual average of the most recent years (2018–2022) is utilized in determining annual receipts for businesses primarily engaged in for-hire fishing.

Based on the ownership data, 1,538 distinct business entities hold at least one permit that this action regulates. All 1,538 business entities identified could be directly regulated by this action. Of these 1,538 entities, 871 are commercial fishing entities, 291 are for-hire entities, and 376 did not have revenues (*i.e.,* were inactive in 2022). Of the 871 commercial fishing entities, 860 are categorized as small entities and 11 are categorized as large entities, per the NMFS guidelines. Furthermore, 520 of these commercial fishing entities held limited access groundfish permits, with 516 of these entities being classified as small businesses and 4 of these entities being classified as large businesses. All 291 for-hire entities are categorized as small businesses.

Description of the Projected Reporting, Record-Keeping, and Other Compliance Requirements of This Final Rule

The action does not contain any new collection-of-information requirements under the Paperwork Reduction Act.

Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes

The economic impacts of each measure are discussed in more detail in sections 6.5 and 7.12 of the Framework 66 Environmental Assessment (see **ADDRESSES**) and are not repeated here. NMFS notes that, overall, for the updated groundfish specifications and the modifications to the AMs in this final rule, the No Action alternative was the only other alternative considered by the Council. There are no significant alternatives that would minimize the economic impacts. The action is predicted to generate $40.8 million in gross revenues for the sector portion of the commercial groundfish trips. This amount is $20.4 million more than the amount of gross revenues under the No Action alternative, but $3.9 million less than the amount of gross revenues generated in fishing year 2022. Small entities engaged in common pool groundfish fishing are expected to be positively impacted by the action as well, relative to the No Action alternative. Small entities engaged in the recreational groundfish fishery are likely to be negatively impacted by the decrease in the GOM haddock sub-ACL. Sub-ACL decreases for groundfish stocks allocated to the Atlantic sea scallop fishery and the large-mesh non-groundfish fishery may negatively affect small entities engaged in those fisheries. The temporary modification to the scallop fishery's AM implementation catch threshold for GB yellowtail flounder for fishing years 2024 and 2025 will reduce the likelihood of negative impacts to the scallop fishery.

Small Entity Compliance Guide

Section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996 states that, for each rule or group of related rules for which an agency is required to prepare a FRFA, the agency will publish one or more guides to assist small entities in complying with the rule and will designate such publications as ''small entity compliance guides'' that will explain the actions a small entity is required to take to comply with a rule or group of rules. As part of this rulemaking process, a bulletin to permit holders that also serves as a small entity compliance guide was prepared. This final rule and the guide (*i.e.,* bulletin) will be sent via email to the Greater Atlantic Regional Fisheries Office Northeast multispecies fishery email list, as well as the email lists for the scallop and herring fisheries, which receive an allocation of some groundfish stocks. The final rule and the guide are available from NMFS at: *https://www.fisheries.noaa.gov/management-plan/northeast-multispecies-management-plan.* Hard copies of the guide and this final rule will be available upon request (see **ADDRESSES**).

List of Subjects in 50 CFR Part 648

Fisheries, Fishing, Recordkeeping and reporting requirements.

Dated: April 29, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons stated in the preamble, NMFS amends 50 CFR part 648 as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 648.90, revise paragraph (a)(5)(i)(F) and add paragraph (a)(5)(iv)(B) to read as follows:

§ 648.90 NE multispecies assessment, framework procedures and specifications, and flexible area action system.

* * * * *

(a) * * *

(5) * * *

(i) * * *

(F) *Atlantic halibut.* If NMFS determines, as described in paragraph (a)(5)(i)(D) of this section, that the overall ACL for Atlantic halibut is exceeded by catch from U.S. Federal and state fisheries by any amount greater than the management uncertainty buffer and, after accounting for the amount of landings of Atlantic halibut from Canadian fisheries, as appropriate, that the total ABC for Atlantic halibut has also been exceeded, the applicable AM shall be implemented as described in paragraph (a)(5)(i)(F)(*1*) of this section. If a sub-ACL for Atlantic halibut is allocated to another fishery, consistent with the process specified at § 648.90(a)(4), and there are AMs for that fishery, the multispecies fishery AM shall only be implemented if the sub-ACL allocated to the multispecies fishery is exceeded (*i.e.,* the sector and common pool catch for a particular stock, including the common pool's share of any overage of the overall ACL caused by excessive catch by other sub-components of the fishery pursuant to § 648.90(a)(5),

exceeds the common pool sub-ACL) and the overall ACL is also exceeded.

(*1*) *Description of AM.* When the AM is implemented, any vessel issued a Federal permit for any fishery management plan may not fish for, possess, or land Atlantic halibut for the fishing year in which the AM is implemented, as specified in paragraph (a)(5)(i)(F) of this section, unless otherwise specified in paragraph (a)(5)(i)(F)(*2*) of this section. Additionally, the applicable AM areas, as defined in paragraph (a)(5)(i)(F)(*4*) of this section, shall be implemented as follows: Any vessel issued a limited access NE multispecies permit and fishing with trawl gear in the Atlantic Halibut Trawl Gear AM Area may only use a haddock separator trawl, as specified in § 648.85(a)(3)(iii)(A); a Ruhle trawl, as specified in § 648.85(b)(6)(iv)(J)(*3*); a rope separator trawl, as specified in § 648.84(e); or any other gear approved consistent with the process defined in § 648.85(b)(6), except that selective trawl gear is not required in the portion of the Trawl Gear AM Area between 41 degrees 40 minutes and 42 degrees from April 1 through July 31. When in effect, a limited access NE multispecies permitted vessel with gillnet gear may not fish or be in the Atlantic Halibut Fixed Gear AM Area from March 1 through October 31, unless transiting with its gear stowed and not available for immediate use as defined in § 648.2, or such gear was approved consistent with the process defined in § 648.85(b)(6).

(*2*) *Vessels exempt from the no possession AM.* Vessels issued only a charter/party permit, and/or an Atlantic highly migratory species angling permit, and/or an Atlantic highly migratory species charter/headboat permit are exempt from the no possession AM. This exemption does not apply to any vessel that is issued any other permit that is subject to the AM. For example, a vessel issued a Northeast multispecies charter/party permit and a bluefish charter/party permit would be exempt from the no possession AM, but a vessel issued a Northeast multispecies charter/party permit and a commercial bluefish permit would not be exempt from the no possession AM.

(*3*) *Review of the AM.* If the overall ACL is exceeded by more than 20 percent, the Council shall revisit the AM in a future action.

(*4*) *Atlantic halibut AM area.* The AM areas defined below are bounded by the following coordinates, connected in the order listed by rhumb lines, unless otherwise noted.

TABLE 1 TO PARAGRAPH (a)(5)(i)(F)(*4*)

Atlantic halibut trawl gear AM area		
Points	N latitude	W longitude
1	42°00′	69°20′
2	42°00′	68°20′
3	41°30′	68°20′
4	41°30′	69°20′

TABLE 2 TO PARAGRAPH (a)(5)(i)(F)(*4*)

Atlantic halibut gillnet gear AM area		
Points	N latitude	W longitude
1	43°10′	69°40′
2	43°10′	69°30′
3	43°00′	69°30′
4	43°00′	69°40′

* * * * *

(iv) * * *

(B) *2024 and 2025 fishing year threshold for implementing the Atlantic sea scallop fishery AM for GB yellowtail flounder.* For the 2024 and 2025 fishing years, if scallop fishery catch exceeds the GB yellowtail flounder sub-ACL specified in paragraph (a)(4) of this section, and total catch exceeds the overall ACL for that stock, then the applicable scallop fishery AM will take effect, as specified in § 648.64 of the Atlantic sea scallop regulations. For the 2026 fishing year and onward, the threshold for implementing scallop fishery AMs for GB yellowtail flounder will return to that listed in paragraph (a)(5)(iv)(A) of this section.

Proposed Rules

Federal Register
Vol. 89, No. 86
Thursday, May 2, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0249]

RIN 1625–AA00

Safety Zone; Upper Mississippi River Mile 202.5–203.5 Near Alton, IL

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a temporary safety zone for Upper Mississippi River at mile marker 202.5 to 203.2. This action is necessary to provide for the safety of life on these navigable waters near Alton, IL, during a power boat championship race on June 21, 2024, through June 24, 2024. This proposed rulemaking would prohibit persons and vessels from being in the safety zone unless authorized by the Captain of the Port Sector Upper Mississippi River or a designated representative. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before May 14, 2024.

ADDRESSES: You may submit comments identified by docket number USCG–2024–0249 using the Federal Decision-Making Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments. This notice of proposed rulemaking with its plain-language, 100-word-or-less proposed rule summary will be available in this same docket.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email MST1 Benjamin Conger, Sector Upper Mississippi River Waterways Management Division, U.S. Coast Guard; telephone 314–269–2573, email *Benjamin.D.Conger@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

Great Rivers and Routes Tourism Bureau in Alton, IL, notified the Coast Guard that it will be conducting a power boat championship race from 6 a.m. to 8 p.m. on June 21 to June 24, 2024. The power boat championship race will be held on the Upper Mississippi River, near the Alton riverfront between the Clark Bridge and Argosy Casino. Hazards from the high-speed power boat racers include accidental collisions and serious or significant harm to others. The Captain of the Port Sector Upper Mississippi River (COTP) has determined that potential hazards associated with the high-speed power boats would be a safety concern for anyone within the Upper Mississippi River from mile marker 202.5 to 203.2. Race and event officials have scheduled multiple openings to allow for vessels to transit.

The purpose of this rulemaking is to ensure the safety of vessels and the navigable waters within the Upper Mississippi River from mile marker 202.5 to 203.2, during, and after the scheduled event. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034.

III. Discussion of Proposed Rule

The COTP is proposing to establish a safety zone from 6 a.m. to 8 p.m. on June 21 through June 24, 2024. The safety zone would cover all navigable waters of the Upper Mississippi River from mile marker 202.5–203.5 near Alton, IL. The duration of the zone is intended to ensure the safety of vessels and these navigable waters during the scheduled 6 a.m. to 8 p.m. power boat championship race, with scheduled openings throughout the 3 day period. No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on a safety zone located on the Upper Mississippi River mile markers 202.5–203.2 near Alton, IL. The safety zone will be active only while the power boat championship race is being conducted, from June 21, 2024, until June 24, 2024.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see

ADDRESSES) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a safety zone lasting from 6 a.m. to 8 p.m. that would prohibit entry of Upper Mississippi River from mile marker 202.5 to 203.2. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2024–0249 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you click on the Dockets tab and then the proposed rule, you should see a ''Subscribe'' option for email alerts. The option will notify you when comments are posted, or a final rule is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T08–0706 to read as follows:

§ 165.T08–0706 Safety Zone; Upper Mississippi River, Mile Markers 202.5–203.2, Alton, IL.

(a) Location. The following area is a safety zone: all navigable waters within the Upper Mississippi River, Mile Markers (MM) 202.5–203.2.

(b) Enforcement period. This section is subject to enforcement from June 21, 2024 through June 24, 2024.

(c) Regulations. (1) In accordance with the general safety zone regulations in § 165.23, entry of persons or vessels into this safety zone described in paragraph (a) of this section is prohibited unless authorized by the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard (USCG) assigned to units under the operational control of USCG Sector Upper Mississippi River.

(2) To seek permission to enter, contact the COTP or a designated representative via VHF–FM channel 16, or through USCG Sector Upper Mississippi River at 314–269–2332. Persons and vessels permitted to enter the safety zone must comply with all lawful orders or directions issued by the COTP or designated representative.

(d) Informational broadcasts. The COTP or a designated representative will inform the public of the effective period for the safety zone as well as any changes in the dates and times of enforcement, as well as reductions in size or scope of the safety zone as ice or flood conditions improve, through Local Notice to Mariners (LNMs), Broadcast Notices to Mariners (BNMs), and/or Safety Marine Information Broadcast (SMIB) as appropriate.

Dated: April 22, 2024.

A.R. Bender,

Captain, U.S. Coast Guard, Captain of the Port Sector Upper Mississippi River.

[FR Doc. 2024–09001 Filed 5–1–24; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 216

[Docket No. 240415–0108]

RIN 0648–BK65

Proposed Rule To Modify the Duration of Certain Permits and Letters of Confirmation Under the Marine Mammal Protection Act

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes to modify the regulations for Marine Mammal Protection Act (MMPA) section 104 permits, including scientific research, enhancement, photography, and public display permits and Letters of Confirmation (LOCs). The modification would remove the 5-year regulatory limitation on the duration of section 104 permits and LOCs. This would give NMFS the discretion to issue these permits for longer than 5 years where such a duration would be appropriate. This proposed rule would apply only to permits and authorizations issued under section 104 of the MMPA.

DATES: Comments and information must be received no later than June 3, 2024.

ADDRESSES: A plain language summary of this proposed rule is available at *https://www.regulations.gov/docket/NOAA-NMFS-2024-0054.* You may submit comments on this document, identified by NOAA–NMFS–2024–0054, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Visit *https://www.regulations.gov* and type NOAA–NMFS–2024–0054 in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; ATTN: Jolie Harrison, Chief, Permits and Conservation Division.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Sara Young or Carrie Hubard, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Authority for Action

Under section 104 of the MMPA (16 U.S.C. 1374), NMFS may issue permits for the take or importation of marine mammals for:

- scientific research (MMPA section 104 (c)(3));
- enhancing the survival or recovery of the species or stock (MMPA section 104 (c)(4));
- public display (MMPA section 104 (c)(2));
- commercial or educational photography (MMPA section 104(c)(6)); and
- scientific research that may result only in taking by Level B harassment under the MMPA's General Authorization provisions (MMPA section 104 (c)(3)). Level B harassment refers to activities that have the potential to disturb but not injure a marine mammal.

The implementing regulations for scientific research, enhancement, public display, and photography permits can be found at 50 CFR 216.31–216.41. The implementing regulations for issuing LOCs under the General Authorization can be found at § 216.45. Applying for an LOC is a simpler and more expedited process than applying for a scientific research permit. An LOC confirms that an applicant's proposed research activities will only result in Level B harassment (*i.e.,* activities with the potential to disturb but not injure) and will only target marine mammals that are not endangered or threatened under the Endangered Species Act (ESA). A scientific research permit is required for research on ESA-listed species or for research that involves physical contact with marine mammals.

Background

Section 2 of the MMPA, 16 U.S.C. 1361, provides that it is the Sense of Congress that marine mammals ''should be protected and encouraged to develop to the greatest extent feasible commensurate with sound policies of resource management and that the primary objective of their management should be to maintaining the health and stability of the marine ecosystem.'' Section 2, however, also includes Congress's finding that there is inadequate knowledge of the ecology and population dynamics of marine mammals. Since the MMPA was enacted in 1972, NMFS has issued permits to allow research on marine mammals as well as other permits and authorizations allowing take of marine mammals as specified in section 104.

Take, as defined in section 3 of the MMPA, 16 U.S.C. 1362, and in § 216.3,

means to harass, hunt, capture, collect, kill marine mammals, or any attempt to do so. While the permit types that are the subject of this rule authorize take of marine mammals, the majority of the take authorized under these permits is for harassment of marine mammals or collection of samples rather than lethal take. For example, a typical photography permit authorizes filming of marine mammals by underwater divers or via a drone to collect footage for a documentary series. Most LOCs under the GA are issued to researchers who photograph bottlenose dolphins (*Tursiops truncatus*) to identify individuals and study distribution and social patterns. Some research permits authorize scientists to import marine mammal biological samples to study disease, genetics, prey species, and hormones. Research permits cover a wide variety of projects, such as capturing, sampling, tagging, and releasing seals to find out how deep they dive or remotely biopsy sampling and tagging large whales to study their migrations.

Section 104 permits like those described above authorize activities that promote the goals set out in section 2 of the MMPA. Most permits authorize research on marine mammals, which ultimately benefits the species. As scientists conduct permitted research, they expand our knowledge of the abundance, distribution, and health of these animals. Resource managers then use that best available data to inform their decisions. NMFS also issues permits for commercial and educational photography of non-endangered marine mammals. The final product of these permits might, for example, be a documentary television series that may inspire awe, share conservation messages, and educate the public about marine mammals.

Section 104(b) of the MMPA requires that all permits specify ''the period during which the permit is valid.'' The MMPA does not limit how long section 104 permits or LOCs can be valid. However, there are regulatory limitations that prevent MMPA section 104 permits and LOCs from being valid longer than 5 years (§§ 216.35 and 216.45, respectively). This proposed rule would remove the 5-year regulatory limitation on the duration of MMPA section 104 permits and LOCs. This would allow NMFS to issue section 104 permits and LOCs for longer than 5 years, as appropriate. Each permit would have an expiration date, tailored to the specific activities proposed by the applicant, which would be subject to public comment.

Need for the Action

NMFS has been issuing marine mammal permits under section 104 for almost 50 years, and NMFS' implementing regulations have not been updated since 1996. Based on decades of experience with the issuance of these permits and the activities conducted pursuant to them, we believe a change is warranted to allow section 104 permits with durations greater than 5 years, in certain circumstances, as discussed below.

Most MMPA section 104 permits (93 percent of current permits) are scientific research permits, which result in data that informs management and conservation of marine mammal species. Rigorous studies of these long-lived species often require years, even decades, of data collection. Sixty percent of the current scientific research permit holders have had a permit for 20 or more years, meaning four or more permit cycles. Seventeen permit holders have held a permit for more than 40 years. Many researchers have dedicated their careers to conducting longitudinal studies. For example, one research group has been studying the population dynamics of Weddell seals (*Leptonychotes weddellii*) since 1968, while another scientist has been studying dolphins in Florida for over 50 years. NMFS science centers have held MMPA research permits since the creation of the MMPA and continue to hold 13 permits today. The MMPA requires NMFS to compile abundance and distribution data on marine mammals and publish the findings as Stock Assessment Reports. The need for these research activities is expected to continue into the extended future and is an example of why a permit of longer than 5 years in duration may be appropriate. Regardless of the requested duration of research, every application for a permit or authorization would include justification for the requested duration and all permits and authorizations issued would have expiration dates.

Another potential example of a permit that may merit a longer time period might be for non-releasable marine mammals maintained in permanent care in academic facilities, zoos, and aquariums for research or enhancement purposes for the duration of their lives. Under the proposed change, these permit holders might request a permit for longer than 5 years, and the agency may, in certain circumstances, depending on the specifics of the research or enhancement, issue a permit for a longer term.

Because NMFS has been issuing permits for decades, the effects of specific permitted activities on marine mammals, including particular research techniques, are well known. Most research methodologies have become standardized over time. Permit holders tend to request and use the same techniques year after year because they are effective and create continuity across their long-term data sets. As a result, the impacts of their activities conducted under consecutive permits is expected to be the same or similar. Historically, moreover, research and filming methods, have not raised significant public concern. As required by statute, NMFS gives the public the opportunity to comment on permit applications it processes, via notice in the **Federal Register**. Substantive comments have been received infrequently over the course of the permit program. Proposed activities are evaluated to ensure they are humane as required by issuance criteria (see *Implementation and Oversight* section). Researchers working under a scientific research permit studying marine mammal parts typically conduct analyses in a laboratory using marine mammal samples without interacting with wild animals. Researchers working under an LOC and filmmakers working under a commercial photography permit are restricted to activities that only have the potential to disturb (not kill or physically injure) marine mammals. They are not allowed to conduct any activity that has the potential to injure an animal, including any physical contact. Additionally, most filmmakers and many researchers want to observe and record natural marine mammal behavior. As a result, they can be expected to conduct their activities in a manner that avoids or minimizes any reaction of the animals to the permitted activity.

An additional benefit of removing the 5-year restriction on permits would be to make the MMPA permitting regulations consistent with those of the ESA. Many permits are issued under both the MMPA and ESA because the target species are marine mammals that are listed as threatened or endangered, and thus protected under both statutes. Unlike the current MMPA regulations, the ESA section 10 permit regulations do not limit the number of years an ESA section 10(a)(1)(A) scientific research and enhancement permit may be valid (50 CFR part 222) Consistency between the MMPA and ESA permitting regulations with respect to permit duration would allow NMFS to issue joint MMPA–ESA permits with terms of

longer than 5 years, if warranted. NMFS currently issues some 10-year ESA permits for scientific research and enhancement on species such as sawfish, sea turtles, and sturgeon. NMFS cannot currently do the same for permits involving marine mammals because of the 5-year limit on permit duration under the MMPA regulations, even if the research would otherwise qualify for a 10-year permit under the ESA.

This change would provide greater flexibility and efficiency to permit applicants and the agency. Increasing the permit durations would decrease how often researchers have to apply for a permit, thus decreasing the amount of time and effort required in reapplying to continue their research. As shown above, decades of permit data show that researchers tend to apply for multiple permits throughout their career. Lengthening permit duration where appropriate would promote efficiency and lessen the burden on our permit holders, while still providing the same protections for marine mammals as mandated by the MMPA.

Implementation and Oversight

Information Required in Applications

Applications for MMPA section 104 special exception permits and LOCs would be evaluated and processed in the same manner as they are now in accordance with 50 CFR part 216. Applicants would still have to include their proposed start and end dates, as well as a description of the frequency and seasonality of their proposed activities in their application. Currently, applicants for section 104 permits and LOCs can request a time period of 5 years or less. Under the proposed change, applicants may request a permit duration longer than 5 years, which may be more appropriately aligned with the project's goals rather than an arbitrary 5 year duration. The agency may, in its discretion, issue a permit for such a term, provided the proposed duration is justified and appropriate for the applicant's project and objectives, is supported by the applicant's history with previous MMPA permits, has undergone public comment, and meets all statutory and regulatory issuance criteria. All permits and authorizations issued would have expiration dates. While NMFS proposes to remove the 5-year regulatory maximum duration, NMFS expects that there will continue to be projects for which a permit for a terms of 5 years or less will be appropriate. For example, permits such as those for commercial or educational photography are issued for discrete projects that take place at specific times, rarely requiring more than a year or two. Similarly, permits for importation of marine mammals for public display are issued for a singular or discrete action, which would typically warrant a permit of short duration. Thus, the duration of the permit would be determined based on the specific project proposed and the justified duration of that project.

Opportunity for Public Comment

This proposed regulatory change would not remove the public's opportunity to comment on permit applications and any major permit amendments. NMFS would continue to publish notices in the **Federal Register** for a 30-day public comment period when complete permit applications and requests for major amendments are received consistent with statutory and regulatory requirements (16 U.S.C. 1374(d) and § 216.33(d), respectively). These notices provide the public an opportunity to comment on the proposed permit duration. NMFS would also continue to solicit comments from the Marine Mammal Commission consistent with § 216.33(d)(2), and other relevant federal and state agencies in accordance with § 216.33(d)(3), concurrent with the public comment period. NMFS would continue to consider all public and expert comments on a proposed permit application, including the proposed duration, prior to permit issuance. Substantial public interest in a particular application might warrant a term of 5 years or less, to provide the public with more frequent opportunities to comment. LOCs do not currently require a public comment period and that would not change.

Issuance Criteria

To obtain an MMPA section 104 permit, applicants must meet certain statutory and regulatory issuance criteria. This includes, among other things, the regulatory issuance criteria at § 216.34, which require applicants to demonstrate, for the time period proposed, that the activity is:

- humane and with no unnecessary risks;
- consistent with regulatory restrictions;
- consistent with the purposes and policies of the ESA (if threatened or endangered species are involved);
- not likely to have a significant adverse impact on the species or stock;
- conducted by personnel with expertise and adequate facilities and resources;
- conducted by personnel with adequate resources for marine mammals held captive or transported; and
- that any requested import or export will not likely result in additional taking.

Additional criteria apply for depleted, threatened, and endangered marine mammals. These criteria would still apply regardless of permit duration.

In addition to the regulatory criteria above, NMFS would also consider whether the applicant has previously held a permit, and if so, whether they have successfully carried out the permitted objectives. For example, for research permits, this may include whether the permit holder obtained funding, collected data, and made the results available to the scientific community in a reasonable period. As explained above (see *Need for Action*), most permits issued under section 104 have not raised substantial public concern, and the impacts of many activities conducted under section 104 permits are well known. If an applicant proposes activities that are considered novel or are likely to be controversial, a shorter permit duration may be warranted.

Agency Oversight

Under the proposed change, permit and LOC holders would still be subject to agency oversight. For example, permit and LOC holders must submit annual reports as required by the regulations at § 216.38 and § 216.45(d)(2), respectively. This requirement is universal, regardless of how long their permit or LOC is valid. Further, permit holders are required to stop permitted activities and submit incident reports for incidents such as mortalities, exceeding authorized take, and taking protected species that were not authorized. LOC and photography permit holders must temporarily stop authorized research if they exceed Level B harassment. Annual and incident reports allow NMFS to monitor permit and LOC compliance and impacts to protected species and are available to the public. NMFS would maintain its authority for permit or LOC modification, suspension, or revocation. For example, NMFS may determine a permit modification is warranted to add permit restrictions in response to information provided in annual or incident reports.

For any amendment to a permit, or change to an LOC, the agency would reexamine the NEPA analysis based on information provided in the amendment request, taking into consideration information in annual and incident reports and in published literature.

Likewise, if ESA listed species are involved and the action is covered under an ESA section 7 consultation and, for example, a new species is listed or critical habitat is designated, NMFS would review the new information to determine if consultation needs to be reinitiated in accordance with 50 CFR 402.16. If these analyses produce new information that would warrant a change to a permit or permits, NMFS retains the ability to amend permits to add permit conditions, such as mitigation measures to minimize impacts to protected species, as described in § 216.36(b).

Amendments To Extend the Permit or LOC Duration

For amendments that extend the duration of individual permits or LOCs, the process would work as it does now under the regulations, but without the 5-year limit. Any extension of a permit by more than 12 months would still be considered a major amendment requiring public comment. Permit holders may continue to request a minor amendment to extend the duration of their permit up to 1 year, if justified. The agency would continue to publish in the **Federal Register** notices of receipt of requests for major amendments for a 30-day public comment period, and notices of issuance of minor amendments extending a permit up to 1 year.

Classification

Pursuant to the procedures established to implement Executive Order 12866, the Office of Management and Budget has determined that this proposed rule is not significant.

Pursuant to section 605(b) of the Regulatory Flexibility Act (RFA), the Chief Counsel for Regulation of the Department of Commerce has certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. Permit and LOC applicants including individuals, academic institutions, business or other for-profit organizations, not-for-profit institutions, and government organizations are the only entities that would be subject to the requirements in these proposed regulations. The number of small governmental jurisdictions, small organizations, or small businesses affected is approximately less than 150 entities total, and less than 35 annually. The change in duration of permits would not affect the cost to these small entities, as it would require the same amount of time and resources to apply for a 5-year permit as it would to apply for a permit of a longer duration. Overall, this rule may reduce the costs to these entities because they would spend less time applying for permits. For example, the estimated number of burden hours to complete a scientific research permit application is 50 hours, with an estimated average hourly rate of $32.58. Thus, an applicant for a scientific research permit would spend approximately $3,258 and 100 hours to apply for two consecutive 5-year research permits. If the duration limit for special exception permits is removed, the number of burden hours and costs to apply for a scientific research permit could be reduced to approximately $1,629 and 50 hours for a 10-year permit, if issued. A longer duration permit would save additional costs. An applicant for a General Authorization LOC would spend approximately 10 hours and $325.80 to complete a 5-year LOC application, which if issued for a longer period, would reduce that cost. Because of this, a regulatory flexibility analysis is not required, and none has been prepared.

Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act (PRA) unless that collection of information displays a currently valid OMB control number. This proposed rule contains collection-of-information requirements subject to the provisions of the PRA.[1] No changes to the reporting requirements or to the information collection instrument is required as a result of this regulatory change, other than removing the 5-year duration restriction.

[1] The information collection is currently approved by OMB under control no. 0648–0084, *Basic Requirements for Special Exception Permits and Authorizations to Take, Import, and Export Marine Mammals, Threatened and Endangered Species, and for Maintaining a Captive Marine Mammal Inventory Under section 104 of the MMPA, the Fur Seal Act, and/or section 10(a)(1)(A) of the Endangered Species Act.*

List of Subjects in 50 CFR Part 216

Regulations governing the taking and importing of marine mammals.

Dated: April 24, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 216 is proposed to be amended as follows:

PART 216—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

■ 1. The authority citation for part 216 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

* * * * *

■ 2. In § 216.35, revise paragraph (b) to read as follows:

§ 216.35 Permit restrictions.

* * * * *

(b) Special exception permits expire on the date specified in the permit, unless limited or extended in duration by the Director in accordance with § 216.36 and § 216.39.

* * * * *

■ 3. In § 216.45, revise paragraph (b)(2)(iv) and paragraph (d)(3) to read as follows:

§ 216.45 General Authorization for Level B harassment for scientific research.

* * * * *

(b) * * *

(2) * * *

(iv) The period of time over which the research project or program will be conducted (*i.e.,* the requested period of the LOC), including the field season(s) for the research, if applicable;

* * * * *

(d) * * *

(3) Authorization to conduct research under the General Authorization is for the period(s) of time identified in the letter of confirmation issued under paragraph (c) of this section, unless limited or extended by the Director, or modified, suspended, or revoked in accordance with paragraph (e) of this section;

* * * * *

[FR Doc. 2024–09258 Filed 5–1–24; 8:45 am]

BILLING CODE 3510–22–P

Notices

Federal Register
Vol. 89, No. 86
Thursday, May 2, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Notice of Meeting

AGENCY: Agency for International Development.

ACTION: Request for public comment and notice of public meeting.

SUMMARY: The United States Agency for International Development (USAID) announces a public meeting, and requests public comment for the fourth meeting of the Partnership for Peace Fund (PPF) Advisory Board to receive updates on progress and changes to USAID programming under MEPPA following the terrorist attacks of October 7, 2023, and discuss recommendations for the strategic direction of MEPPA in this new context.

DATES: Written comments and information are requested on or before May 16, 2024, at 5:00 p.m. EST.

The public meeting will take place on Tuesday, May 21, 2024, from 9:00 a.m.–11:15 a.m. EST via the Zoom platform (*https://usaid.zoomgov.com/j/1606503264?pwd=ZVpXSWpnYnBoTHFIVFEwYTR5QTVTUT09*).

The meeting does not require pre-registration.

ADDRESSES: You may submit comments regarding the work of the PPF Advisory Board by email to *MEPPA@usaid.gov.* Include ''Public Comment, PPF Advisory Board Meeting, May 21'' in the subject line. All public comments and questions will be included in the official record of the meeting and posted publicly on the USAID website.

Please email *MEPPA@usaid.gov* to request reasonable accommodations for the public meeting. Include ''Request for Reasonable Accommodation, PPF Advisory Board Meeting, May 21'' in the subject line.

FOR FURTHER INFORMATION CONTACT: Dan McDonald, 202–712–4965, *meppa@usaid.gov*.

SUPPLEMENTARY INFORMATION: In December 2020, Congress passed the Nita M. Lowey Middle East Partnership for Peace Act, or MEPPA, with bipartisan support. The Act directs USAID and the U.S. International Development Finance Corporation (DFC), in coordination with the Department of State, to program $250 million over five years to build the foundation for peaceful coexistence between Israelis and Palestinians through a new PPF, managed by USAID, and a Joint Investment Initiative, managed by the DFC.

MEPPA serves as a recognition that economic, social, and political connections between Israelis and Palestinians are the best way to foster mutual understanding and provide the strongest basis for a sustainable, two-state solution. USAID's Middle East Bureau has been working with Congress, interagency colleagues, and partners in Israel, the West Bank, and Gaza to implement the Act. MEPPA also calls for the establishment of a board to advise USAID on the strategic direction of the PPF.

Composed of up to 15 members, the PPF Advisory Board includes development experts, private sector leaders and faith-based leaders who are appointed by members of Congress and the USAID Administrator. As stated in its charter, the Board's role is purely advisory and possesses no enforcement authority or power to bind USAID. Duties of the Board and individual members are restricted to providing information and making recommendations to USAID on matters and issues relating to the types of projects USAID should seek to support in order to further the purposes of the People-to-People Partnership for Peace Fund and partnerships with foreign governments and international organizations to leverage the impact of the People-to-People Partnership for Peace Fund.

The following are the current members of the Advisory Board:

Chair: The Honorable George R. Salem
The Honorable Elliott Abrams
Farah Bdour
Rabbi Angela Buchdahl
Rabbi Michael M. Cohen
Sander Gerber
Ambassador Mark Green (ret.)
Hiba Husseini
Heather Johnston
Harley Lippman
The Honorable Nita M. Lowey
Dina Powell McCormick
Nickolay Mladenov
Jen Stewart
The Honorable Robert Wexler

PPF Advisory Board meetings are held twice a year and are public. More information about how USAID is implementing MEPPA to increase people-to-people partnerships between Israelis and Palestinians is available at: *https://www.usaid.gov/west-bank-and-gaza/meppa*.

The purpose of this meeting is for the Advisory Board to gain a better understanding of the progress so far to program funds under the PPF to bring Israelis and Palestinians together to increase understanding and advance the goal of a two-state solution.

During this meeting, the Board will (1) receive updates on progress and changes to USAID programming under MEPPA following the terrorist attacks of October 7, 2023, and (2) discuss recommendations for the strategic direction of MEPPA in this new context.

Request for Public Comment

To inform the direction and advice of the Board, USAID invites written comments from the public on areas for focus and strategies for people-to-people peacebuilding under the PPF.

Written comments and information are requested on or before Thursday, May 16, 2024, at 5:00 p.m. EDT. Include ''Public Comment, PPF Advisory Board Meeting, May 21'' in the subject line. Please submit comments and information as a Word or PDF attachment to your email. You are encouraged to submit written comments even if you plan to attend the public meeting. All public comments and questions will be included in the official record of the meeting and posted publicly on the USAID website.

Public Meeting

A public meeting will take place Tuesday, May 21, 2024, from 9:00 a.m.–11:15 a.m. This meeting is free and open to the public. Persons wishing to attend the meeting should use the following link: (*https://usaid.zoomgov.com/j/1606503264?pwd=ZVpXSWpnYnBoTHFIVFEwYTR5QTVTUT09*).

Requests for reasonable accommodations should be directed to

Daniel McDonald at *MEPPA@usaid.gov.* Please include ''Request for Reasonable Accommodation, PPF Advisory Board Meeting, May 21'' in the subject line.

Daniel McDonald,

USAID Designated Federal Officer for the PPF Advisory Board, Bureau for the Middle East, U.S. Agency for International Development.

[FR Doc. 2024–09503 Filed 5–1–24; 8:45 am]

BILLING CODE 6116–01–P

DEPARTMENT OF AGRICULTURE

Tribal Advisory Committee

AGENCY: Office of Tribal Relations, USDA.

ACTION: Notice of public, hybrid meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the US Department of Agriculture (USDA) and the Federal Advisory Committee Act (FACA), the Office of Tribal Relations is announcing a meeting of the Tribal Advisory Committee. The committee is authorized under the Agriculture Improvement Act of 2018 (the 2018 Farm Bill) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to provide advice and guidance to USDA on matters related to Tribal and Indian affairs.

DATES: An in-person meeting with a virtual webinar with a call-in option will be held on Wednesday, May 29, 2024, from 9:00 a.m. to approximately 5:00 p.m. Eastern Time (ET), as well as Thursday, May 30, 2024, from 9:00 a.m. to approximately 12: 00 p.m. ET. The meeting will be held in the Lincoln Room of the USDA Whitten Building; 1400 Jefferson Avenue SW, Washington, DC 20250. Because this meeting will be hosted in a secured facility, members of the public wishing to attend in-person must register in advance.

Webinar Participation Information: Registration to attend this meeting, including to provide oral public comments, is available at *https://www.zoomgov.com/webinar/register/WN_KUUOcnuqSLGM0Ly7QVjKTQ*.

Public Comments: The public may file written comments to the Tribal Advisory Committee by May 13, 2024, via email at *Tribal.Relations@usda.gov*. While other comments will be included in the public record for this meeting, the Committee may not have time to deliberate on comments received at this date during this meeting.

Register for the Meeting: Because this meeting is hosted in a public facility, registration for in-person attendance will be required by Wednesday, May 22, 2024. Your pre-registration must state: the names of each person in your group; organization or interest represented; the number of people planning to give oral comments, if any; and whether anyone in your group requires special accommodations. Please submit registrations for in-person attendance to *https://forms.office.com/g/YECzJvSTcr* by May 22, 2024. Registration for virtual attendance must be submitted at *https://www.zoomgov.com/webinar/register/WN_KUUOcnuqSLGM0Ly7QVjKTQ* by May 22, 2024.

FOR FURTHER INFORMATION CONTACT: General information about the committee can also be found at *https://www.usda.gov/tribalrelations/advisory-committee*. Josiah Griffin, Designated Federal Officer, by phone at 202–689–4861 or via email at *Josiah.Griffin@usda.gov*.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: This meeting will be the second convening of the Tribal Advisory Committee. An agenda and more information for this meeting will be available at *https://www.usda.gov/tribalrelations/advisory-committee*.

The Secretary establishes the Committee pursuant to section 12303 of the Agriculture Improvement Act of 2018 (7 U.S.C. 6921(b)) and will be managed in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. 10. Under the law, the Secretary of Agriculture appointed three members, and the Chair and Ranking Members of the House Committee on Agriculture and the Senate Committees on Indian Affairs and Agriculture, Nutrition, and Forestry appointed the remaining eight members. In addition to providing recommendations to the Secretary, the Tribal Advisory Committee is required to provide a report to the three Congressional Committees listed above.

Register for the Meeting: Because this meeting is hosted in a secured public facility, registration for in-person attendance will be required by Wednesday, May 22, 2024. Your pre-registration must state: the names of each person in your group; organization or interest represented; the number of people planning to give oral comments, if any; and whether anyone in your group requires special accommodations. Please submit registrations for in-person attendance to *https://forms.office.com/g/YECzJvSTcr* by May 22, 2024. Registration for virtual attendance must be submitted at *https://www.zoomgov.com/webinar/register/WN_KUUOcnuqSLGM0Ly7QVjKTQ* by May 22, 2024.

Public Comment: Members of the public are invited to join the Tribal Advisory Committee meeting in listen only mode each day and will be invited to give oral comments to the Committee from 3:00 p.m. ET to 4:00 p.m. ET on Wednesday, May 29, 2024. Members of the public who request to give oral comments to the Committee, must arrive by 3:00P.M. Eastern Time (ET) on May 29, 2024, and will be given no more than five (5) minutes to provide oral comment.

Availability of Materials for the Meeting: All written public comments will be compiled into a binder and available for review at the meeting. Duplicate comments from multiple individuals will appear as one comment, with a notation that multiple copies of the comment were received. Please visit *https://www.usda.gov/tribalrelations/advisory-committee* to learn more about the agenda for or reports resulting from this meeting. Please be advised that anyone calling into the Zoom teleconference system or participating in-person that is interested in providing public comment will be asked to provide their names, their title, and their tribal or organizational affiliations. Callers can expect to incur charges for calls they initiate over wireless lines, and the USDA will not refund any incurred charges.

USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (*e.g.,* Braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720–2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877–8339. Additionally, program information may

be made available in languages other than English.

Equal opportunity practices in accordance with USDA's policies will be followed in all appointments to the Committee. To ensure that the recommendations of the Committee have taken in account the needs of the diverse groups served by USDA, membership shall include to the extent possible, individuals with demonstrated ability to represent minorities, women and person with disabilities. USDA is an equal opportunity provider, employer, and lender.

Dated: April 22, 2024.

Cikena Reid,

USDA Committee Management Officer.

[FR Doc. 2024–09465 Filed 5–1–24; 8:45 am]

BILLING CODE 3420–AG–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are required regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by June 3, 2024 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Food Safety and Inspection Service

Title: Consumer Labeling Research: Web-Based Experimental Survey.

OMB Control Number: 0583–NEW.

Summary of Collection: Food Safety and Inspection Service has been delegated the authority to exercise the functions of the Secretary (7 CFR 2.18, 2.53) as specified in the Federal Meat Inspection Act (FMIA) (21 U.S.C. 601, *et seq.*), the Poultry Products Inspection Act (PPIA) (21 U.S.C. 451, *et seq.*), and the Egg Products Inspection Act (EPIA) (21 U.S.C. 1031, *et seq.*). These statutes mandate that FSIS protect the public by verifying that meat, poultry, and egg products are safe, wholesome, and properly labeled. Safe handling instructions (SHI) are required on the labels of raw or partially cooked (*i.e.,* not considered ready to eat) meat and poultry products if the product is destined for household consumers or institutional uses (9 CFR 317.2(l) and 9 CFR 381.125(b)). FSIS has required the SHI label for raw and partially cooked meat and poultry products since 1994 (59 FR 40209, August 8, 1994).

Need and Use of the Information: The web-based experimental survey will address two primary research questions (RQs): (1) Do any of the test SHI labels perform better at attracting consumer attention (*i.e.,* noticeability) relative to the current SHI label? and (2) Do any of the test SHI labels perform better at motivating consumers to follow recommend safe handling instructions relative to the current SHI label? The survey will also collect information to measure the following secondary outcomes for consumer response to the SHI label: visual receptivity, perceived risk impact (overall label and risk message on label), efficacy, comprehension, learned new information, receptivity to fear appeal messaging, and perceived likelihood of getting foodborne illness if instructions are not followed. The survey will assess consumer noticeability for alternative formats of a standardized food safety cue (in addition to the SHI label) that could be used on raw and partially cooked meat and poultry products to convey that the product is not fully cooked and requires cooking to the recommended internal temperature to ensure food safety.

This data from this collection will be used to further inform label design; provide information about how consumers use food safety information on labels and whether it would be useful to provide the minimum cooking temperature on the product, and if so, where on the product (*e.g.,* front, back, no preference), and to determine the most useful location for the SHI label (*e.g.,* front, back, no preference). The survey will also collect information on the likelihood of scanning a QR code on a package of raw meat or poultry to get more information about safe handling practices. The survey will include a question to measure awareness of the current SHI label by asking respondents to select which images they have seen before (the response options will include the current SHI label and several distractors such as the MyPlate icon).

Description of Respondents: Individuals/Households.

Number of Respondents: 50,000.

Frequency of Responses: Reporting; Other (one-time).

Total Burden Hours: 2,500.

Rachelle Ragland-Greene,

Acting Departmental Information Collection Clearance Officer.

[FR Doc. 2024–09467 Filed 5–1–24; 8:45 am]

BILLING CODE 3410–DM–P

DEPARTMENT OF COMMERCE

Under Secretary of Economic Affairs

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Concrete Masonry Products Research, Education, and Promotion Evaluation and Compliance and Membership Application Forms

AGENCY: Under Secretary of Economic Affairs, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before July 1, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Kenneth White, Office of the Under Secretary of Economic Affairs, by email at *kwhite2@doc.gov* or *PRAcomments@doc.gov*. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Kenneth White, Senior Policy Analyst, Under Secretary of Economic Affairs, by mail at U.S. Department of Commerce; 1401 Constitution Avenue NW, Washington, DC or via email at *kwhite2@doc.gov*.

SUPPLEMENTARY INFORMATION:

I. Abstract

This is a request for an extension of an already approved collection of information. In 2021 the Secretary held a referendum among eligible manufacturers to determine whether they favored the implementation of an Order to establish an orderly program for developing, financing, and carrying out an effective, continuous, and coordinated program of promotion, education, and research to support the concrete masonry products industry. The referendum passed and the Order went into effect in December 2021. The Order requires the Secretary to establish a board to carry out the program. The Secretary appointed Board members in the Fall of 2022. (1) The Order establishes a three-year term limit for Board members, thus requiring ongoing and continuous consideration of applicants to fill vacancies. (2) The Order requires producers of concrete masonry block to remit quarterly, an assessment to the Board. Continuation of this approved collection will allow consideration of applicants to the Board to fill vacancies and allow reporting of quarterly assessment payments.

In 2022, the Secretary appointed members to the Concrete Masonry Products Board (Board) to develop and implement programs of research, education, and promotion. In 2023 the Board began collecting assessments from manufacturers of concrete masonry units, of which the Board will use to implement programs and activities.

There are two forms in this Information Collection Request (ICR) relating to the Board membership and the collection of assessments. The first is the application form to be considered for Board membership. Board membership is open to all manufacturers of concrete masonry products. Completion of the application form reflects an individual's interest in becoming a Board member and is necessary to verify eligibility and to assist in determining suitability to serve on the Board. The second form for this ICR relates to the payment of assessments. Producers that remit assessments will complete the form to establish proper payment of assessments. Authorizing Statute: 15 U.S.C. Chapter 13 (sections 8701–8717).

II. Method of Collection

Registrants may download, complete, print, and submit via fax or mail from the Board's website.

III. Data

OMB Control Number: 0605–0028.

Form Number(s): None.

Type of Review: Regular submission. This is an extension.

Affected Public: Business or other for-profit organizations.

Board Application

Estimate of Burden: 0.25 hour per application.

Respondents: Manufacturers of concrete masonry units.

Estimated Number of Respondents: 160.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 40 hours.

Respondents Obligation: Voluntary.

Evaluation and Compliance

Estimate of Burden: 0.5 hour per quarterly report.

Respondents: Manufacturers of concrete masonry units.

Estimated Number of Respondents: 160.

Estimated Number of Responses per Respondent: 4.

Estimated Total Annual Burden on Respondents: 320 hours.

Respondent's Obligation: Mandatory.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–09481 Filed 5–1–24; 8:45 am]

BILLING CODE 3510–06–P

Bureau of Economic Analysis

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Direct Investment Surveys: BE–10, Benchmark Survey of U.S. Direct Investment Abroad

AGENCY: Bureau of Economic Analysis, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before July 1, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Kirsten Brew, Chief, Multinational Operations Branch, Bureau of Economic Analysis, U.S. Department of Commerce, by email to *Kirsten.Brew@bea.gov* and *PRAcomments@bea.gov*. Please reference OMB Control Number 0608–0049 in the subject line of your comments. Do not submit Confidential

Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Kirsten Brew, Chief, Multinational Operations Branch, Bureau of Economic Analysis, U.S. Department of Commerce; by mail at 4600 Silver Hill Rd, Suitland, MD 20746 or via email at *Kirsten.Brew@bea.gov*.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Benchmark Survey of U.S. Direct Investment Abroad (BE- 10) obtains data on the financial structure and operations of U.S. parents and their foreign affiliates. The data are needed to provide reliable, useful, and timely measures of U.S. direct investment abroad, measure changes in such investment, and assess its impact on the U.S. and foreign economies. Such data are generally found in enterprise-level accounting records of respondent companies. The benchmark data provide a baseline for subsequent sample-based estimates in non-benchmark years. In particular, they serve as benchmarks for the quarterly direct investment estimates included in the U.S. international transactions, international investment position, and national income and product accounts, and for annual estimates of the U.S. direct investment abroad position and of the activities of U.S. multinational enterprises. The data collected include balance sheets; income statements; property, plant, and equipment; employment and employee compensation; merchandise trade; sales of goods and services; taxes; and research and development activity.

The Bureau of Economic Analysis (BEA) proposes the following changes:

Data items to be added:

Employment—A question will be added to the Employment section of the BE–10A form to collect data on employees who are on the payroll of the U.S. company but live overseas on a permanent basis. This would include full and part-time employees that work for a foreign affiliate but are paid by the U.S. parent company, and those employees that were hired, or moved, abroad to fill a remote-work position offered by the U.S. parent.

Equity investment—A question will be added to the Assets section of the BE–10C form to collect equity investment in other foreign affiliates, consistent with the BE–10B form.

Data items to be modified:

Supplement A—Will be modified on the BE–10B and C forms to offer more options for the reasons the foreign business enterprises changed since last reported, such as options for ''acquired'' or ''established'' if it is a ''new'' enterprise, and to identify the date of the transaction for new enterprises.

Advertising—Question 109 which collects advertising sales data on the BE–10B form will be expanded to capture additional sales detail by affiliated and unaffiliated customer.

Digital economy—Questions on services provided via digital intermediation platforms collected on the BE–10A (items 60–62) and BE–10B (item 108), and questions on digital delivery and digital ordering collected on the BE–10A (items 63–65) and BE–10B forms (items 110–112) will be modified to more accurately reflect terminology used by BEA survey respondents, and to reflect updates to the definitions of digitally ordered and delivered in the Handbook on Measuring Digital Trade (second edition) jointly authored by the International Monetary Fund, the Organisation for Economic Cooperation and Development, the World Trade Organization, and the United Nations Conference on Trade and Development.

II. Method of Collection

This survey is a benchmark survey, or census. The potential respondent universe for the 2024 Benchmark Survey of U.S. Direct Investment Abroad, BE–10, consists of all U.S. persons (in the broad legal sense, including companies) that own 10 percent or more of the voting securities of an incorporated foreign business enterprise, or an equivalent interest in an unincorporated foreign business enterprise. Persons subject to the reporting requirements of the BE–10, Benchmark Survey of U.S. Direct Investment Abroad, would be required to respond, whether or not they are contacted by BEA.

BEA will provide respondents with advance notice of the survey by mailing them an announcement of the upcoming survey as soon as possible after the survey has been approved by OMB. Later, in March, respondents will receive notification by mail of their obligation to file; responses covering a reporting company's fiscal year ending during the previous calendar year are due by May 31.

BEA offers electronic filing through its eFile system for use in reporting on the BE–10 annual survey forms. In addition, BEA posts all its survey forms and reporting instructions on its website (*www.bea.gov/dia*). These may be downloaded, completed, printed, and submitted via fax or mail.

III. Data

OMB Control Number: 0608–0049.

Form Number: BE–10.

Type of Review: Revision.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 29,000 respondents (U.S. parents). A complete response includes a BE–10 A form for the U.S. parent's domestic operation and one or more BE–11 B, C, or D forms for its foreign affiliates that meet the BE–11 survey requirements. BEA estimates that U.S. parents will submit 29,000 A forms, 20,100 B forms, 15,500 C forms, 29,000 D forms, and 1,700 Claim for Exemption forms.

Estimated Total Annual Burden Hours: 842,700 hours. Total annual burden is calculated by multiplying the estimated number of submissions of each form by the average hourly burden per form, which is 11 hours for the A form, 19 hours for the B form, 6 hours for the C form, 2 hours for the D form, and .5 hours for the Claim for Not Filing form.

Estimated Time per Respondent: 29 hours per respondent (842,700 hours/29,000 U.S. parents) is the average but may vary considerably among respondents because of differences in company structure, complexity, and the number of foreign affiliates each U.S. parent must report.

Estimated Total Annual Cost to Public: $0.

Respondent's Obligation: Mandatory.

Legal Authority: International Investment and Trade in Services Survey Act (P.L. 94–472, 22 U.S.C. 3101–3108, as amended).

IV. Request for Comments

We are soliciting public comments to permit the Department of Commerce/Bureau of Economic Analysis to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before

including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–06–P

DEPARTMENT OF COMMERCE

International Trade Administration

Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review and Join Annual Inquiry Service List

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT: Brenda E. Brown, Office of AD/CVD Operations, Customs Liaison Unit, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, telephone: (202) 482–4735.

Background

Each year during the anniversary month of the publication of an antidumping or countervailing duty order, finding, or suspended investigation, an interested party, as defined in section 771(9) of the Tariff Act of 1930, as amended (the Act), may request, in accordance with 19 CFR 351.213, that the U.S. Department of Commerce (Commerce) conduct an administrative review of that antidumping or countervailing duty order, finding, or suspended investigation.

All deadlines for the submission of comments or actions by Commerce discussed below refer to the number of calendar days from the applicable starting date.

Respondent Selection

In the event Commerce limits the number of respondents for individual examination for administrative reviews initiated pursuant to requests made for the orders identified below, Commerce intends to select respondents based on U.S. Customs and Border Protection (CBP) data for U.S. imports during the period of review. We intend to release the CBP data under Administrative Protective Order (APO) to all parties having an APO within five days of publication of the initiation notice and to make our decision regarding respondent selection within 35 days of publication of the initiation **Federal Register** notice. Therefore, we encourage all parties interested in commenting on respondent selection to submit their APO applications on the date of publication of the initiation notice, or as soon thereafter as possible. Commerce invites comments regarding the CBP data and respondent selection within five days of placement of the CBP data on the record of the review.

In the event Commerce decides it is necessary to limit individual examination of respondents and conduct respondent selection under section 777A(c)(2) of the Act:

In general, Commerce finds that determinations concerning whether particular companies should be ''collapsed'' (*i.e.,* treated as a single entity for purposes of calculating antidumping duty rates) require a substantial amount of detailed information and analysis, which often require follow-up questions and analysis. Accordingly, Commerce will not conduct collapsing analyses at the respondent selection phase of a review and will not collapse companies at the respondent selection phase unless there has been a determination to collapse certain companies in a previous segment of this antidumping proceeding (*i.e.,* investigation, administrative review, new shipper review or changed circumstances review). For any company subject to a review, if Commerce determined, or continued to treat, that company as collapsed with others, Commerce will assume that such companies continue to operate in the same manner and will collapse them for respondent selection purposes. Otherwise, Commerce will not collapse companies for purposes of respondent selection. Parties are requested to: (a) identify which companies subject to review previously were collapsed; and (b) provide a citation to the proceeding in which they were collapsed. Further, if companies are requested to complete a Quantity and Value Questionnaire for purposes of respondent selection, in general each company must report volume and value data separately for itself. Parties should not include data for any other party, even if they believe they should be treated as a single entity with that other party. If a company was collapsed with another company or companies in the most recently completed segment of a proceeding where Commerce considered collapsing that entity, complete quantity and value data for that collapsed entity must be submitted.

Deadline for Withdrawal of Request for Administrative Review

Pursuant to 19 CFR 351.213(d)(1), a party that requests a review may withdraw that request within 90 days of the date of publication of the notice of initiation of the requested review. The regulation provides that Commerce may extend this time if it is reasonable to do so. Determinations by Commerce to extend the 90-day deadline will be made on a case-by-case basis.

Deadline for Particular Market Situation Allegation

Section 504 of the Trade Preferences Extension Act of 2015 amended the Act by adding the concept of particular market situation (PMS) for purposes of constructed value under section 773(e) of the Act.[1] Section 773(e) of the Act states that ''if a particular market situation exists such that the cost of materials and fabrication or other processing of any kind does not accurately reflect the cost of production in the ordinary course of trade, the administering authority may use another calculation methodology under this subtitle or any other calculation methodology.'' When an interested party submits a PMS allegation pursuant to section 773(e) of the Act, Commerce will respond to such a submission consistent with 19 CFR 351.301(c)(2)(v). If Commerce finds that a PMS exists under section 773(e) of the Act, then it will modify its dumping calculations appropriately.

Neither section 773(e) of the Act nor 19 CFR 351.301(c)(2)(v) set a deadline for the submission of PMS allegations and supporting factual information. However, in order to administer section 773(e) of the Act, Commerce must receive PMS allegations and supporting factual information with enough time to consider the submission. Thus, should an interested party wish to submit a PMS allegation and supporting new factual information pursuant to section 773(e) of the Act, it must do so no later than 20 days after submission of initial Section D responses.

Opportunity to Request a Review: Not later than the last day of May 2024,[2]

[1] *See* Trade Preferences Extension Act of 2015, Public Law 114–27, 129 Stat. 362 (2015).

[2] Or the next business day, if the deadline falls on a weekend, federal holiday or any other day when Commerce is closed.

interested parties may request administrative review of the following orders, findings, or suspended investigations, with anniversary dates in May for the following periods:

Suspension Agreements	
None.	

In accordance with 19 CFR 351.213(b), an interested party as defined by section 771(9) of the Act may request in writing that the Secretary conduct an administrative review. For both antidumping and countervailing duty reviews, the interested party must specify the individual producers or exporters covered by an antidumping finding or an antidumping or countervailing duty order or suspension agreement for which it is requesting a review. In addition, a domestic interested party or an interested party described in section 771(9)(B) of the Act must state why it desires the Secretary to review those particular producers or exporters. If the interested party intends for the Secretary to review sales of merchandise by an exporter (or a producer if that producer also exports merchandise from other suppliers) which was produced in more than one country of origin and each country of origin is subject to a separate order, then the interested party must state specifically, on an order-by-order basis, which exporter(s) the request is intended to cover.

Note that, for any party Commerce was unable to locate in prior segments, Commerce will not accept a request for an administrative review of that party absent new information as to the party's location. Moreover, if the interested party who files a request for review is unable to locate the producer or exporter for which it requested the review, the interested party must provide an explanation of the attempts it made to locate the producer or exporter at the same time it files its request for review, in order for the Secretary to determine if the interested party's attempts were reasonable, pursuant to 19 CFR 351.303(f)(3)(ii).

As explained in *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties,* 68 FR 23954 (May 6, 2003), and *Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties,* 76 FR 65694 (October 24, 2011), Commerce clarified its practice with respect to the collection of final antidumping duties on imports of merchandise where intermediate firms are involved. The public should be aware of this clarification in determining whether to request an administrative review of

merchandise subject to antidumping findings and orders.[4]

Commerce no longer considers the non-market economy (NME) entity as an exporter conditionally subject to an antidumping duty administrative reviews.[5] Accordingly, the NME entity will not be under review unless Commerce specifically receives a request for, or self-initiates, a review of the NME entity.[6] In administrative reviews of antidumping duty orders on merchandise from NME countries where a review of the NME entity has not been initiated, but where an individual exporter for which a review was initiated does not qualify for a separate rate, Commerce will issue a final decision indicating that the company in question is part of the NME entity. However, in that situation, because no review of the NME entity was conducted, the NME entity's entries were not subject to the review and the rate for the NME entity is not subject to change as a result of that review (although the rate for the individual exporter may change as a function of the finding that the exporter is part of the NME entity). Following initiation of an antidumping administrative review when there is no review requested of the NME entity, Commerce will instruct CBP to liquidate entries for all exporters not named in the initiation notice, including those that were suspended at the NME entity rate.

All requests must be filed electronically in Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS) on Enforcement and Compliance's ACCESS website at *https://access.trade.gov*.[7] Further, in accordance with 19 CFR 351.303(f)(l)(i), a copy of each request must be served on the petitioner and each exporter or producer specified in the request. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[8]

Commerce will publish in the **Federal Register** a notice of ''Initiation of Administrative Review of Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation'' for requests received by the last day of May 2024. If Commerce does not receive, by the last day of May 2024,[9] a request for review of entries covered by an order, finding, or suspended investigation listed in this notice and for the period identified above, Commerce will instruct CBP to assess antidumping or countervailing duties on those entries at a rate equal to the cash deposit of estimated antidumping or countervailing duties required on those entries at the time of entry, or withdrawal from warehouse, for consumption and to continue to collect the cash deposit previously ordered.

For the first administrative review of any order, there will be no assessment of antidumping or countervailing duties on entries of subject merchandise entered, or withdrawn from warehouse, for consumption during the relevant provisional-measures ''gap'' period of the order, if such a gap period is applicable to the period of review.

Establishment of and Updates to the Annual Inquiry Service List

On September 20, 2021, Commerce published the final rule titled ''*Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws*'' in the **Federal Register**.[10] On September 27, 2021, Commerce also published the notice entitled ''*Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions*'' in the **Federal Register**.[11] The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.[12]

In accordance with the *Procedural Guidance,* for orders published in the **Federal Register** before November 4, 2021, Commerce created an annual inquiry service list segment for each order and suspended investigation. Interested parties who wished to be added to the annual inquiry service list for an order submitted an entry of appearance to the annual inquiry service list segment for the order in ACCESS, and on November 4, 2021, Commerce finalized the initial annual inquiry service lists for each order and suspended investigation. Each annual inquiry service list has been saved as a public service list in ACCESS, under each case number, and under a specific segment type called ''AISL-Annual Inquiry Service List.'' [13]

As mentioned in the *Procedural Guidance,* beginning in January 2022, Commerce will update these annual inquiry service lists on an annual basis when the *Opportunity Notice* for the anniversary month of the order or suspended investigation is published in the **Federal Register**.[14] Accordingly, Commerce will update the annual inquiry service lists for the above-listed antidumping and countervailing duty proceedings. All interested parties wishing to appear on the updated annual inquiry service list must take one of the two following actions: (1) new interested parties who did not previously submit an entry of appearance must submit a new entry of appearance at this time; (2) interested parties who were included in the preceding annual inquiry service list must submit an amended entry of appearance to be included in the next year's annual inquiry service list. For these interested parties, Commerce will

[5] *See Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings,* 78 FR 65963 (November 4, 2013).

[6] In accordance with 19 CFR 351.213(b)(1), parties should specify that they are requesting a review of entries from exporters comprising the entity, and to the extent possible, include the names of such exporters in their request.

[7] *See Antidumping and Countervailing Duty Proceedings: Electronic Filing Procedures; Administrative Protective Order Procedures,* 76 FR 39263 (July 6, 2011).

[8] *See Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings; Final Rule,* 88 FR 67069 (September 29, 2023).

[9] In the opportunity to request administrative review notice for orders, findings, or suspended investigations with April anniversary dates, Commerce inadvertently identified the deadline to request a review of covered entries as the last day of March 2024. *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review and Join Annual Inquiry Service List,* 89 FR 22390 (April 1, 2024). Commerce hereby corrects this date to identify the deadline to request a review of these entries as the last day of April 30, 2024.

[10] *See Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws,* 86 FR 52300 (September 20, 2021) (*Final Rule*).

[11] *See Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions,* 86 FR 53205 (September 27, 2021) (*Procedural Guidance*).

[12] *Id.*

[13] This segment has been combined with the ACCESS Segment Specific Information (SSI) field which will display the month in which the notice of the order or suspended investigation was published in the **Federal Register**, also known as the anniversary month. For example, for an order under case number A–000–000 that was published in the **Federal Register** in January, the relevant segment and SSI combination will appear in ACCESS as ''AISL-January Anniversary.'' Note that there will be only one annual inquiry service list segment per case number, and the anniversary month will be pre-populated in ACCESS.

[14] *See Procedural Guidance,* 86 FR at 53206.

change the entry of appearance status from ''Active'' to ''Needs Amendment'' for the annual inquiry service lists corresponding to the above-listed proceedings. This will allow those interested parties to make any necessary amendments and resubmit their entries of appearance. If no amendments need to be made, the interested party should indicate in the area on the ACCESS form requesting an explanation for the amendment that it is resubmitting its entry of appearance for inclusion in the annual inquiry service list for the following year. As mentioned in the *Final Rule,*[15] once the petitioners and foreign governments have submitted an entry of appearance for the first time, they will automatically be added to the updated annual inquiry service list each year.

Interested parties have 30 days after the date of this notice to submit new or amended entries of appearance. Commerce will then finalize the annual inquiry service lists five business days thereafter. For ease of administration, please note that Commerce requests that law firms with more than one attorney representing interested parties in a proceeding designate a lead attorney to be included on the annual inquiry service list.

Commerce may update an annual inquiry service list at any time as needed based on interested parties' amendments to their entries of appearance to remove or otherwise modify their list of members and representatives, or to update contact information. Any changes or announcements pertaining to these procedures will be posted to the ACCESS website at *https://access.trade.gov.*

Special Instructions for Petitioners and Foreign Governments

In the *Final Rule,* Commerce stated that, ''after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow.'' [16] Accordingly, as stated above and pursuant to 19 CFR 351.225(n)(3), the petitioners and foreign governments will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioners and foreign governments are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

This notice is not required by statute but is published as a service to the international trading community.

Dated: April 26, 2024.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Wooden Cabinets and Vanities and Components Thereof From the People's Republic of China: Preliminary Results and Partial Rescission of Countervailing Duty Administrative Review; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that countervailable subsidies were provided to producers and exporters of wooden cabinets and vanities and components thereof (wooden cabinets) from the People's Republic of China (China), during the period of review (POR) January 1, 2022, through December 31, 2022. In addition, Commerce is rescinding this review, in part, with respect to 28 companies. Interested parties are invited to comment on these preliminary results.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Suresh Maniam or Michael Romani, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1603 or (202) 482–0198, respectively.

Background

On April 21, 2020, Commerce published in the **Federal Register** the countervailing duty (CVD) order on wooden cabinets from China.[1] On June 12, 2023, Commerce published in the **Federal Register** the notice of initiation of an administrative review of the *Order.*[2] On August 16, 2023, Commerce selected The Ancientree Cabinet Co., Ltd. (Ancientree) and Jiangsu Sunwell Cabinet Co. Ltd. (Sunwell) for individual examination as the mandatory respondents in this administrative review.[3] Between September 13 and October 25, 2023, multiple parties either withdrew their requests for review or did not respond to our initial questionnaire.[4] On November 13, 2023, we also selected Yixing Pengjia Cabinetry Co., Ltd. for individual examination as a mandatory respondent.[5] During the course of this proceeding, Yixing Pengjia Cabinetry Co., Ltd. explained that its name changed to Yixing Pengjia Technology Co., Ltd. (Pengjia). On December 4, 2023, we extended the deadline for the preliminary results of this administrative review until April 26, 2024.[6]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[7] A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Order

The product covered by the *Order* is wooden cabinets from China. For a complete description of the scope of the *Order, see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this administrative review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found

[1] *See Wooden Cabinets and Vanities and Components Thereof from the People's Republic of China: Countervailing Duty Order,* 85 FR 22134 (April 21, 2020) (*Order*).

[3] *See* Memorandum, ''Respondent Selection,'' dated August 16, 2023.

[4] For a full description of events regarding respondent selection, *see* Memorandum ''Fourth Respondent Selection,'' dated November 13, 2023.

[5] *Id.*

[6] *See* Memorandum, ''Extension of Deadline for Preliminary Results of Countervailing Duty Administrative Review,'' dated October 30, 2023.

[7] *See* Memorandum, ''Decision Memorandum for the Preliminary Results of the Administrative Review of the Countervailing Duty Order on Wooden Cabinets and Vanities and Components Thereof from the People's Republic of China; 2022,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

countervailable, Commerce preliminarily finds that there is a subsidy (*i.e.,* a government-provided financial contribution that gives rise to a benefit to the recipient, and that the subsidy is specific).[8] For a full description of the methodology underlying our conclusions, including our reliance, in part, on adverse facts available pursuant to sections 776(a) and (b) of the Act, *see* the Preliminary Decision Memorandum.

Rescission of Administrative Review, in Part

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the parties that requested a review withdraw the request within 90 days of the date of publication of the notice of initiation. Commerce received timely-filed withdrawal of review requests for nine companies.[9] Because the withdrawal requests were timely filed and no other parties requested a review of these companies, we are rescinding this review of the *Order,* in accordance with 19 CFR 351.213(d)(1). For a list of these companies with timely-filed withdrawal of review requests, *see* Appendix II.

Based on our analysis of U.S. Customs and Border Protection (CBP) data, we determine that 19 companies had no entries of subject merchandise during the POR. On August 21, 2023, we notified parties of our intent to rescind the administrative review with respect to 19 companies because there are no reviewable suspended entries.[10] No parties commented on the notification of intent to rescind the review, in part. Pursuant to 19 CFR 351.213(d)(3), we are rescinding the administrative review of these companies. For additional information regarding this determination, *see* the Preliminary Decision Memorandum. For a list of these companies with no reviewable suspended entries, *see* Appendix III.

Preliminary Rate for Non-Selected Companies Under Review

There are seven companies for which a review was requested and not rescinded, and which were not selected as mandatory respondents or found to be cross-owned with a mandatory respondent. The statute and Commerce's regulations do not directly address the establishment of rates to be applied to companies not selected for individual examination where Commerce limits its examination in an administrative review pursuant to section 777A(e)(2) of the Act. However, Commerce normally determines the rates for non-selected companies in reviews in a manner that is consistent with section 705(c)(5) of the Act, which provides the basis for calculating the all-others rate in an investigation.

Section 705(c)(5)(A)(i) of the Act instructs Commerce, as a general rule, to calculate an all-others rate equal to the weighted average of the countervailable subsidy rates established for exporters and/or producers individually examined, excluding any rates that are zero, *de minimis,* or based entirely on facts available. In this review, the preliminary rates calculated for Ancientree and Pengjia were above *de minimis* and not based entirely on facts available. Therefore, we are applying to the non-selected companies the average of the net subsidy rates calculated for Ancientree and Pengjia, which we calculated using the publicly-ranged sales data.[11] This methodology to establish the rate for the non-selected companies uses section 705(c)(5)(A) of the Act, which governs the calculation of the all-others rate in an investigation, as guidance. For further information on the calculation of the non-selected respondent rate, *see* the Preliminary Decision Memorandum.

Preliminary Results of Review

We preliminarily find that Yixing Pengjia Technology Co., Ltd.'s claim that it is the same company as Yixing Pengjia Cabinetry Co., Ltd. is supported by information on the record. For a complete description, *see* the Preliminary Decision Memorandum. Parties are invited to comment on this issue for the final results. As a result of this administrative review, we preliminarily find that the following net countervailable subsidy rates exist for the period January 1, 2022, through December 31, 2022:

Company	Subsidy rate (percent *ad valorem*)
The Ancientree Cabinet Co., Ltd	14.23
Yixing Pengjia Technology Co., Ltd.[12]	0.91
Jiangsu Sunwell Cabinetry Co Ltd.[13]	163.46
Taizhou Overseas Trading Company Ltd	163.46
Taishan Oversea Trading Company Ltd	163.46
Review-Specific Average Rate Applicable to the Following Companies[14]	
Fujian Dushi Wooden Industry Co., Ltd	17.20
Fuzhou CBM Import & Export Co., Ltd	17.20
KM Cabinetry Co., Ltd	17.20
Nantong Aershin Cabinet Co., Ltd	17.20
Shouguang Fushi Wood Co., Ltd	17.20
Weifang Fuxing Wood Co., Ltd	17.20
Xiamen Adler Cabinetry Co., Ltd	17.20

[8] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[9] *See* Letter on Behalf of Several Companies, ''Withdrawal of Request for Administrative Review,'' dated July 11, 2023 (on behalf of Shanghai Zifeng International Trading Co., Ltd. and Linyi Bonn Flooring Manufacture Co. Ltd.); *see also* Letter on Behalf of Several Companies, ''Withdrawal of Requests for Administrative Review,'' dated September 11, 2023.

[10] *See* Memorandum, ''Intent to Rescind Review, in Part,'' dated August 21, 2023.

[11] With two respondents under examination, Commerce normally calculates: (A) a weighted-average of the estimated subsidy rates calculated for the examined respondents; (B) a simple average of the estimated subsidy rates calculated for the examined respondents; and (C) a weighted-average of the estimated subsidy rates calculated for the examined respondents using each company's publicly-ranged U.S. sale quantities for the merchandise under consideration. Commerce then compares (B) and (C) to (A) and selects the rate closest to (A) as the most appropriate rate for all other producers and exporters. *See, e.g., Ball Bearings and Parts Thereof from France, Germany, Italy, Japan, and the United Kingdom: Final Results of Antidumping Duty Administrative Reviews, Final Results of Changed-Circumstances Review, and Revocation of an Order in Part,* 75 FR 53661, 53663 (September 1, 2010).

Cash Deposit Requirements

In accordance with section 751(a)(2)(C) of the Act, Commerce intends, upon publication of the final results, to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts calculated in the final results of this review for the respective companies listed above, on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. If the rate calculated in the final results is zero or *de minimis,* no cash deposit will be required on shipments of the subject merchandise entered or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this review. For all non-reviewed companies, CBP will continue to collect cash deposits of estimated countervailing duties at the all-others rate (*i.e.,* 20.93 percent) [15] or the most recent company-specific rate applicable to the company, as appropriate. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Assessment Rates

In accordance with 19 CFR 351.221(b)(4)(i), we preliminarily assigned subsidy rates in the amounts shown above for the producers/exporters shown above. Consistent with section 751(a)(1) of the Act and 19 CFR 351.212(b)(2), upon issuance of the final results, Commerce shall determine, and CBP shall assess, countervailing duties on all appropriate entries covered by this review.

For the companies for which this review is rescinded with these preliminary results, we will instruct CBP to assess countervailing duties on all appropriate entries at a rate equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period January 1, 2022, through December 31, 2022, in accordance with 19 CFR 351.212(c)(l)(i). For companies remaining under review, we intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register.** If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Disclosure and Public Comment

Commerce intends to disclose its calculations and analysis performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Pursuant to 19 CFR 351.309(c)(1)(ii), interested parties may submit case briefs no later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than seven days after the date for filing case briefs.[16] Parties who submit case or rebuttal briefs in this proceeding are encouraged to submit with each argument: (1) a table of contents listing each issue; and (2) a table of authorities.[17]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[18] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[19]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. An electronically filed document must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5:00 p.m. Eastern Time within 30 days after the date of publication of this notice.[20] Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants and whether any participant is a foreign national; and (3) a list of issues to be discussed. If a request for a hearing is made, we will inform parties of the scheduled date and time for the hearing.

Final Results

Unless extended, we intend to issue the final results of this administrative review, which will include the results of our analysis of the issues raised in case briefs, within 120 days after the date of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h).

Notification to Interested Parties

These preliminary results and notice are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213 and 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix I

List of Topics Discussed in the Preliminary Decision Memorandum

[12] This company was formerly known as Yixing Pengjia Cabinetry Co., Ltd. *See* Pengjia's Letter ''Section III,'' dated January 4, 2024, at 2 and Exhibit 5.1.

[13] Commerce previously found Shanghai Beautystar Cabinetry Co., Ltd. to be a cross-owned affiliate with Jiangsu Sunwell Cabinetry Co Ltd. *See Wooden Cabinets and Vanities and Components Thereof from the People's Republic of China: Preliminary Results of Countervailing Duty Administrative Review, Rescission of Administrative Review in Part, and Intent To Rescind in Part; 2021,* 88 FR 29084 (May 5, 2023), and accompanying Preliminary Decision Memorandum at 33, unchanged in *Wooden Cabinets and Vanities and Components Thereof from the People's Republic of China: Final Results and Partial Recission of Countervailing Duty Administrative Review,* 2021, 88 FR 76732 (November 7, 2023).

[14] This rate is based on the rate for the respondents that were selected for individual review, excluding rates that are zero, *de minimis,* or based entirely on facts available. *See* section 705(c)(5)(A) of the Act.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–106]

Wooden Cabinet and Vanities and Components Thereof From the People's Republic of China: Preliminary Results, Preliminary Determination of No Shipments, and Partial Rescission of the Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that certain producers and/or exporters did not make sales of wooden cabinets and vanities and components thereof (wooden cabinets) from the People's Republic of China at less than normal value (NV) during the period of review (POR) April 1, 2022, through March 31, 2023. In addition, Commerce preliminarily determines that 30 companies are eligible for a separate rate and 12 companies had no shipments of subject merchandise during the POR. Further, Commerce is rescinding this review with respect to two companies. Interested parties are invited to comment on these preliminary results.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Garry Kasparov, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1397.

SUPPLEMENTARY INFORMATION:

Background

On April 21, 2020, Commerce published in the **Federal Register** the antidumping duty (AD) order on wooden cabinets from China.[1] On June 12, 2023, Commerce initiated an administrative review of the *Order*.[2]

On September 25, 2023, Commerce selected Ancientree and Jiangsu Sunwell Cabinetry Co., Ltd. (Sunwell) as the mandatory respondents.[3] On September 27, 2023, Commerce issued the initial AD questionnaire to Ancientree and Sunwell.[4] Sunwell failed to respond to the initial questionnaire by the deadline. Consequently, on November 17, 2023, Commerce selected Jiangsu Weisen Houseware Co., Ltd. (Weisen) as a mandatory respondent.[5] On November 30, 2023, Commerce extended the deadline for the preliminary results of this administrative review until April 26, 2024.[6]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[7] A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Order

The merchandise covered by the *Order* is wooden cabinets from China. For a complete description of the scope of the *Order, see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this administrative review in accordance with section 751(a)(1)(B) of the Tariff Act of 1930, as amended (the Act). Because China is a non-market economy (NME) country within the meaning of section 771(18) of the Act, we calculated NV in accordance with section 773(c) of the Act. For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum.

[7] *See* Memorandum, ''Decision Memorandum for the Preliminary Results of the Antidumping Duty Administrative Review, Preliminary Determination of No Shipments, and Rescission, in Part, 2022–2023: Wooden Cabinets and Vanities and Components Thereof from the People's Republic of China,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

Preliminary Determination of No Shipments

Based on information on the record, Commerce preliminarily determines that 12 companies subject to this administrative review had no shipments of subject merchandise during the POR.[8] Commerce is not rescinding this review with respect to these companies but, rather, intends to complete the review and issue appropriate instructions to U.S. Customs and Border Protection (CBP) based on the final results of the review.[9] For additional information regarding these preliminary determinations of no shipments, *see* the Preliminary Decision Memorandum.

Partial Rescission of Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested a review withdraws its request within 90 days of the date of publication of the notice of initiation. The requests for an administrative review of two companies, Suofeiya Home Collection Co., Ltd., and Linyi Bonn Flooring Manufacture Co., Ltd., were timely withdrawn within 90 days of the date of publication of the *Initiation Notice*.[10] As a result, Commerce is rescinding this review with respect to both companies in accordance with 19 CFR 351.213(d)(1).

Separate Rates

Commerce preliminarily determines that 30 non-individually examined companies under review are eligible for separate rates in this administrative review.[11] The Act and Commerce's regulations do not address the establishment of a separate rate to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the rate for separate rate respondents which Commerce did not examine individually in an administrative review. For the preliminary results of this review, Commerce has determined the estimated dumping margins for Ancientree and Weisen to be zero. For the reasons explained in the Preliminary Decision Memorandum, we are assigning this rate to the non-examined respondents which qualify for a separate rate.

China-Wide Entity

Under Commerce's policy regarding the conditional review of the China-wide entity,[12] the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the China-wide entity in this review, the entity is not under review, and the entity's rate (*i.e.,* 251.64 percent) is not subject to change.[13]

For these preliminary results, Commerce preliminarily determines that 20 companies for which a review was requested, but did not file a separate rate application or demonstrate separate rate eligibility, including Sunwell, to be part of the China-wide entity.[14]

Preliminary Results of Review

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist for the administrative review covering the period April 1, 2022, through March 31, 2023:

Exporter	Weighted-average dumping margin (percent)
Jiangsu Weisen Houseware Co., Ltd	0.00
The Ancientree Cabinet Co., Ltd	0.00
Non-Examined Companies Receiving a Separate Rate[15]	0.00

Disclosure and Public Comment

Commerce will disclose to parties to this proceeding the calculations performed for these preliminary results within five days after public announcement of the preliminary results or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register**, pursuant to 19 CFR 351.224(b).

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs no later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[16] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[17] All briefs must be filed electronically using ACCESS. An electronically filed document must be received successfully in its entirety in ACCESS by 5:00 p.m. Eastern Time on the established deadline.

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their briefs that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[18] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not

[18] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[19]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS by 5:00 p.m. Eastern Time within 30 days after the date of publication of this notice. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Oral presentations at the hearing will be limited to issues raised in the briefs. If a request for a hearing is made, Commerce will inform parties of the scheduled date for the hearing.[20]

Assessment Rates

Upon issuing the final results, Commerce will determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review.[21] If the preliminary results are unchanged for the final results, we will instruct CBP to apply an *ad valorem* assessment rate of 251.64 percent to all entries of subject merchandise during the POR which were exported by the companies considered to be a part of the China-wide entity listed in Appendix IV of this notice. If Commerce determines that an exporter under review had no shipments of the subject merchandise, any suspended entries that entered under that exporter's case number (*i.e.,* at that exporter's rate) will be liquidated at the China-wide rate.[22]

For the companies for which Commerce is not rescinding this administrative review, Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this review for shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) for the subject merchandise exported by the company listed above that has a separate rate, the cash deposit rate will be equal to the weighted-average dumping margin established in the final results of this administrative review (except, if the rate is zero or *de minimis,* then zero cash deposit will be required); (2) for previously investigated or reviewed Chinese and non-Chinese exporters not listed above that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific rate; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be that for the China-wide entity; and (4) for all non-Chinese exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Final Results of Review

Unless extended, Commerce intends to issue the final results of this administrative review, which will include the results of Commerce's analysis of the issues raised in case briefs, within 120 days after the date of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h).

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during these PORs. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Notification to Interested Parties

Commerce is issuing and publishing the preliminary results of this review in accordance with sections 751(a)(1)(B), 751(a)(3) and 777(i) of the Act, and 19 CFR 351.213(d)(4) and 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Common Alloy Aluminum Sheet From India: Preliminary Results and Partial Rescission of Countervailing Duty Administrative Review; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department fo Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminary determines that countervailable subsidies are being provided to producers and exporters of common alloy aluminum sheet (aluminum sheet) from India. The period of review (POR) is January 1, 2022, through December 31, 2022. Interested parties are invited to comment on these preliminary results.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Samuel Evans, AD/CVD operations, Office IX, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2420.

SUPPLEMENTARY INFORMATION:

Background

On April 27, 2021, Commerce published the countervailing duty (CVD) order on aluminum sheet from India.[1] On June 12, 2023, Commerce published in the **Federal Register** a notice of initiation of an administrative review of the *Order*.[2] On December 4, 2023, Commerce extended the deadline for the preliminary results until April 26, 2024.[3]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[4] A list of topics discussed in the Preliminary Decision Memorandum is included in an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https//access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https//access.trade.gov/public/FRNoticesListLayout.aspx.*

Scope of the Investigation

The merchandise covered by this *Order* is aluminum sheet from India. For a complete description of the scope of the *Order,* see the Preliminary Decision Memorandum.

Rescission of Administrative Review, in Part

Pursuant to 19 CFR 351.213(d)(3), Commerce's practice is to rescind an administrative review of a CVD order when it concludes that there are no suspended entries of subject merchandise during the POR.[5] Normally, upon completion of an administrative review, the suspended entries are liquidated at the countervailing duty assessment rate calculated for the review period.[6] Therefore, for an administrative review of a company to be conducted, there must be a reviewable, suspended entry that Commerce can instruct U.S. Customs and Border Protection (CBP) to liquidate at the calculated countervailing duty assessment rate calculated for the review period.[7]

According to the CBP import data, Jindal Aluminum Limited (Jindal) did not have a reviewable entry of subject merchandise during the POR for which liquidatin is suspended.[8] Therefore, we notified interested parties that we intended to rescind this administrative review with respect to Jindal and provided parties an opportunity to submit comments, including factual information to demonstrate whether there were reviewable entries during the POR for Jindal.[9] We received no comments in response to this memorandum. Therefore, in the absence of suspended entries of subject merchandise duing the POR, in accordance with 19 CFR 351.213(d)(3), we are rescinding this administrative review with respect to Jindal.

Methodology

Commerce is conduing this CVD administrative review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commercie preliminary determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[10] For a full description of the

methodology underlying our preliminary conclusions, *see* the Preliminary Decision Memorandum.

Company Not Selected for Individual Examination

The Act and Commerce's regulations do not directly address the subsidy rate to be applied to companies not selected for individual examination where Commerce limits its examination in an administrative review pursuant to section 777A(e)(2) of the Act. However, Commerce normally determines the rates for non-selected companies in reviews in a manner that is consistent with section 705(c)(5) of that Act, which provides instructions for calculating the all-others rate in an investigation. Section 777A(e)(2) fo the Act provides that ''the individual countervailable subsidy rates determined under subparagraph (A) shall be used to determine the all-others rate under section 705(c)(5) {of the Act}.'' Section 705(c)(5)(A) of the Act states that for companies not investigated, in general we will determine an all-others rate by weight averaging the countervailable subsidy rates established for each of the companies individually investigated, excluding *zero* and *de minimis* rates or any rate based on solely on the facts available.

According, to determine the rate for Virgo Aluminum Limited (Virgo), the company not selected for individual examination, Commerce's practice is to weight average the net subsidy rates for the selected mandatory respondents, excluding rates that are zero, *de minimis,* or based entirely on facts available.[11] We selected Hindalco Industries Limited (Hindalco) and Manaksia Aluminum Company Limited (MALCO) for review as mandatory respondents and preliminary determine that each received countervailable subsidies at above *de minimis* rates. Therefore, for the POR, we are assigning Virgo a weighted average of the subsidy rates calculated for Hindalco and MALCO using each company's public ranged data for the value of it's exports of subject merchandise to the United States.[12]

Preliminary Results of Review

As a result of this review, we preliminarily determine the following net countervailable subsidy rates for the period January 1, 2022, through December 31, 2022:

Company	Subsidy rate 2022 (percent *ad valorem*)
Hindalco Industries Limited[13]	54.12
Manaksia Aluminum Company Limited	2.90
Virgo Aluminum Limited	5.32

Disclousre and Public Comment

Commerce intends to disclose its calculations performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs to Commerce no later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[14] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[15] All briefs must be filed electronically using ACCESS. An electronically filed document must be received successfully in its entirety in ACCESS by 5:00 p.m. Eastern Time on the established deadline. As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limted to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[16] Further we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administravtive review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[17]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. If a request for a hearing is made, Commerce will inform parties of the scheduled date for the hearing. An electronically filed hearing request must be received successfully in its enterety by Commerce's electronic records system, ACCESS, by 5:00 p.m. Eastern Time within 30 days after the date of publication of this notice.

Final Results

Unless the deadline is extended pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised by parties in their comments, within 120 days after the date of publication of these preliminary results.

Assessment Rates

Consistent with section 751(a)(1) of the Act and 19 CFR 351.212(b)(2), upon issuance of the final results, Commerce will determine, and CBP shall assess, countervailing duties on all appropriate entries covered by this review. We intend to issue intstruction to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expried (i.e., within 90 days of publication).

of the Act regarding benefit; and section 771(5)(A) of the Act regarding specifically.

[11] *See, e.g.,* Certain Pasta from Italy: Final Results of the 13th (2008) Countervailing Duty Administrative Review, 75 FR 37386, 37387 (June 29, 2010).

[12] *See* Memorandum, ''Calculation of Rate for Company Not Selected for Individual Examination,'' dated concurrently with this notice.

[13] As discussed in the Preliminary Decision Memorandum, Commerce has found the following compaies to be cross-owned with Hindalco; Hindalco-Almex Aerospace Limited, Minerals Minerals Limited, Utkal Alumina International Limited, Suvas Holding Limited, and Birla Copper Asoj Private Limited.

[14] See 19 CFR 351.309(d); see also Administrative Protective Order, Service, and Other Procedures in Antidumpting and Countervailing Duty Proceedings, 88 FR 67069, 67077 (Sepember 29, 2023).

[15] See 19 351.209(c)(2) and (d)(2).

[16] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

[17] See Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings; Final Rule, 88 FR 67069 (September 29, 2023).

For Jindal, the company for which we are rescinding this administrative review, Commerce will instruct CBP to assess countervailing duties on all apppropriate entries at a rate equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period January 1, 2022, through December 31, 2022, in accordance with 19 CFR 351.212(c)(l)(i). Commerce intends to issue apprporate assessment instructions directly to CBP no earlier than 35 days after the date of publication of this notice in the **Federal Register**.

Cash Deposit Requirements

In accordance with section 751(a)(2)(C) fo the Act, Commerce also intends, upon publication of the final results, to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts shown for each of the companies listed above with regard to shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this review. For all non-reviewed firms, CBP will continue to collect cash deposits of estimated countervailing duties at the all-others rate or the most recent company-specific rate applicable to the company, as appropirate. These cash deposit requirements, when imposed, shall remain in effect until futher notice.

Notificatin to Interested Parties

We are issuing and publishing these preliminary results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the Non-exclusive Functions and Duties of the Assistant Secretary for Enforcement and Compliance.

Certain Aluminum Foil From the People's Republic of China: Preliminary Results of Countervailing Duty Administrative Review and Rescission of Review, in Part; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that producers and exporters of certain aluminum foil (aluminum foil) from the People's Republic of China (China) received countervailable subsidies during the period of review, January 1, 2022, through December 31, 2022.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Natasia Harrison or Harrison Tanchuck, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1240 or (202) 482–7421, respectively.

SUPPLEMENTARY INFORMATION:

Background

On June 12, 2023, Commerce published a notice of initiation of an administrative review of the countervailing duty order on aluminum foil from China,[1] covering the requested companies.[2] As explained below, between July 20 and September 11, 2023, certain interested parties withdrew their review requests with respect to certain companies.[3] On July 24, 2023, Commerce selected Hangzhou Five Star Aluminium Co., Ltd. (Five Star) and Jiangsu Zhongji Lamination Materials Co., (HK) Limited (Zhongji HK) for individual examination as the mandatory respondents in this administrative review.[4] On November 30, 2023, Commerce extended the deadline for these preliminary results until April 26, 2024.[5]

For a complete description of the events that followed the initiation of this review, see the Preliminary Decision Memorandum.[6] A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov*. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx*.

Scope of the Order

The product covered by the *Order* is aluminum foil from China. For a complete description of the scope of the *Order,* see the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this review in accordance with section 751(a)(l)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found to be countervailable, we preliminarily determine that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[7] For a full description of the methodology underlying our conclusions, see the accompanying Preliminary Decision Memorandum.

Commerce notes that, in making these findings, it relied, in part, on facts available and, because it finds that the Government of China did not act to the

best of its ability to respond to Commerce's requests for certain information, it drew an adverse inference, where appropriate, in selecting from among the facts otherwise available. For further information, see the Preliminary Decision Memorandum at the section titled ''Use of Facts Otherwise Available and Adverse Inferences.''

Rescission of Administrative Review, In Part

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party or parties that requested a review withdraw the request within 90 days of the publication date of the notice of initiation of the requested review. As noted above certain interested parties timely withdrew their requests for review of specific companies.[8]

Because no other party requested a review of these 11 companies, and in accordance with 19 CFR 351.213(d)(1), we are rescinding the review with respect to these companies (*see* Appendix II).

Companies Not Selected for Individual Review

There are 20 companies for which a review was requested and not rescinded, and which were not selected as mandatory respondents or found to be cross-owned with a mandatory respondent. The statute and Commerce's regulations do not directly address the establishment of rates to be applied to companies not selected for individual examination where Commerce limits its examination in an administrative review pursuant to section 777A(e)(2) of the Act. However, Commerce normally determines the rates for non-selected companies in reviews in a manner that is consistent with section 705(c)(5) of the Act, which provides the basis for calculating the all-others rate in an investigation.

Section 705(c)(5)(A)(i) of the Act instructs Commerce, as a general rule, to calculate an all-others rate equal to the weighted average of the countervailable subsidy rates established for exporters and/or producers individually examined, excluding any rates that are zero, *de minimis,* or based entirely on facts available. In this review, the preliminary rates calculated for Five Star and Zhongji HK are above *de minimis* and not based entirely on facts available. Therefore, we are applying to the non-selected companies the average of the net subsidy rates calculated for Five Star and Zhongji HK, which we calculated using the publicly-ranged sales data submitted by Five Star and Zhongji HK.[9] This methodology to establish the rate for the non-selected companies uses section 705(c)(5)(A) of the Act, which governs the calculation of the ''all-others'' rate in an investigation, as guidance. For further information on the calculation of the non-selected respondent rate, refer to the section in the Preliminary Decision Memorandum entitled ''Non-Selected Companies Under Review.'' For a list of the non-selected companies, *see* Appendix III to this notice.

Preliminary Results of Review

Commerce preliminarily determines that the following countervailable subsidy rates exist for the period January 1, 2022, through December 31, 2022:

Company	Subsidy rate (percent *ad valorem*)
Hangzhou Five Star Aluminium Co., Ltd.[10]	30.66
Jiangsu Zhongji Lamination Materials Co., (HK) Limited[11]	19.23
Non-Selected Companies Under Review[12]	24.95

Assessment Rates

Consistent with section 751(a)(2)(C) of the Act, upon issuance of the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review. We intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

For the companies for which this review is rescinded with these preliminary results, Commerce will instruct CBP to assess countervailing duties on all appropriate entries at a rate equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period January 1, 2022, through December 31, 2022, in accordance with 19 CFR 351.212(c)(l)(i). Commerce intends to issue appropriate assessment instructions directly to CBP no later than 35 days after publication of this notice in the **Federal Register**.

Cash Deposit Requirements

Pursuant to section 751(a)(1) of the Act, upon issuance of the final results, Commerce intends to instruct CBP to collect cash deposits of estimated countervailing duties for each of the companies listed above on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review, except where the

[8] *See* Withdrawals of Review Requests.

[9] With two respondents under examination, Commerce normally calculates: (A) a weighted-average of the estimated subsidy rates calculated for the examined respondents; (B) a simple average of the estimated subsidy rates calculated for the examined respondents; and (C) a weighted-average of the estimated subsidy rates calculated for the examined respondents using each company's publicly-ranged U.S. sale quantities for the merchandise under consideration. Commerce then compares (B) and (C) to (A) and selects the rate closest to (A) as the most appropriate rate for all other producers and exporters. *See, e.g., Ball Bearings and Parts Thereof from France, Germany, Italy, Japan, and the United Kingdom: Final Results of Antidumping Duty Administrative Reviews, Final Results of Changed-Circumstances Review, and Revocation of an Order in Part,* 75 FR 53661, 53663 (September 1, 2010).

[10] As discussed in the Preliminary Decision Memorandum, Commerce finds the following companies to be to be cross-owned with Five Star: Jiangsu Dingsheng New Materials Joint-Stock Co., Ltd. (Jiangsu Dingsheng); Dingsheng Aluminium Industries (Hong Kong) Trading Co.; Limited or Dingsheng Aluminium Industries (Hong Kong) Trading Co., Ltd. (Dingsheng HK); Hangzhou Dingsheng Import & Export Co., Ltd. or Hangzhou Dingsheng Import and Export Co., Ltd. (Dingsheng IE); Hangzhou Teemful Aluminium Co., Ltd. (Teemful); Inner Mongolia Liansheng New Energy Material Joint-Stock Co., Ltd. (Liansheng); Inner Mongolia Xinxing New Material Co., Ltd. (Xinxing); Hangzou Dingsheng Industrial Group Co., Ltd. (Dingsheng Group); Hangzhou Dingcheng Aluminum Co., Ltd. (Dingcheng); Luoyang Longding Aluminium Co., Ltd. (Longding); and Walson (HK) Trading Co., Limited (Walson HK). Longding and Walson HK were listed separately in the *Initiation Notice.*

[11] As discussed in the Preliminary Decision Memorandum, Commerce finds finds the following companies to be to be cross-owned with Zhongji HK: Jiangsu Zhongji Lamination Materials Co., Ltd. (Zhongji) (FKA Jiangsu Zhongji Lamination Materials Co., Ltd.); Jiangsu Huafeng Aluminium Industry Co., Ltd. (Jiangsu Huafeng); Shantou Wanshun New Material Group Co., Ltd. (Shantou Wanshun) (FKA Shantou Wanshun Package Material Stock Co., Ltd.); Anhui Zhongji Battery Foil Sci&Tech Co., Ltd. (Anhui Zhongji) (FKA Anhui Maximum Aluminium Industries Company Limited); and Sichuan Wanshun Zhongji Aluminium Industry Co., Ltd. (Sichuan Wanshun). Anhui Zhongji, Anhui Maximum Aluminium Industries Company Limited, Jiangsu Huafeng, Zhongji, and Shantou Wanshun Package Material Stock Co., Ltd. were listed separately in the *Initiation Notice. See* Preliminary Decision Memorandum at the ''Attribution'' section for further discussion regarding Zhongji, Shantou Wanshun and Anhui Zhongji's company name changes.

[12] *See* Appendix III for a list of the non-selected companies under review.

rate calculated in the final results is zero or *de minimis,* no cash deposit will be required. For all non-reviewed firms, we will instruct CBP to continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit instructions, when imposed, shall remain in effect until further notice.

Disclosure and Public Comment

We intend to disclose the calculations performed for these preliminary results to interested parties within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance no later than 30 days after the date of publication of these preliminary results of review in the **Federal Register**.[13] Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the deadline for filing case briefs.[14] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[15]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[16] Further, we request that interested parties limit their executive summary of each issue to no more than 450 words, not including citations. We intend to use the executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[17]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, filed electronically via ACCESS. An electronically-filed request must be received successfully, and in its entirety, by ACCESS within 30 days after the date of publication of this notice. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. All submissions, including case and rebuttal briefs, as well as hearing requests, should be filed using ACCESS.[18] An electronically-filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline.

Final Results

Unless the deadline is extended pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised by the parties in any written briefs, no later than 120 days after the date of publication of these preliminary results.

Notification to Interested Parties

This administrative review and notice are in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.213 and 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A–570–601]

Tapered Roller Bearings and Parts Thereof, Finished and Unfinished, From the People's Republic of China: Preliminary Determination of No Shipments and Rescission of Antidumping Duty Administrative Review, in Part; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is rescinding, in part, the administrative review of the antidumping duty (AD) order on tapered

toller bearings and parts thereof, finished and unfinished (TRBs) from the People's Republic of China (China) for the period of review (POR) June 1, 2022, through May 31, 2023. Further, Commerce preliminarily finds that Shanghai Tainai Bearing Co., Ltd. (Tainai) had no shipments during the POR.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Steven Seifert, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3350.

SUPPLEMENTARY INFORMATION:

Background

On February 26, 1990, Commerce published in the **Federal Register** the AD order on TRBs from China.[1] On June 1, 2023, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the *Order*.[2] On June 30, 2023, Koyo Bearings North America LLC (Koyo, a domestic interested party) submitted a timely request that Commerce conduct an administrative review of the *Order* with respect to Tainai, C&U Group Shanghai Bearing Co., Ltd., Hangzhou C&U Automotive Bearing Co., Ltd., Hangzhou C&U Metallurgy Bearing Co., Ltd., Huangshi C&U Bearing Co., Ltd., and Sichuan C&U Bearing Co., Ltd.[3] Also on June 30, 2023, Tainai submitted a timely request that Commerce conduct an administrative review of the *Order* of its entries of subject merchandise during the POR.[4]

On August 3, 2023, Commerce published in the **Federal Register** a notice of initiation of administrative review with respect to entries of TRBs from China exported or produced by Tainai, C&U Group Shanghai Bearing Co., Ltd., Hangzhou C&U Automotive Bearing Co., Ltd., Hangzhou C&U Metallurgy Bearing Co., Ltd., Huangshi C&U Bearing Co., Ltd., and Sichuan C&U Bearing Co., Ltd., in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.221(c)(1)(i).[5]

On August 3, 2023, we placed on the record U.S. Customs and Border Protection (CBP) data for entries of TRBs from China during the POR, showing one suspended entry during the POR and invited interested parties to comment.[6] On August 10, 2023, JTEKT Bearings North America LLC. (JTEKT, a domestic interested party) submitted comments regarding the CBP data.[7] Tainai timely withdrew its request for a review of itself on August 10, 2023 [8] and on August 24, 2023, timely submitted a certification of no shipments.[9] On February 27, 2024, Commerce extended the preliminary results of this review until April 30, 2024.[10]

On April 4, 2024, Commerce notified all interested parties of its intent to rescind the instant review in full because there were no suspended entries of subject merchandise during the POR and invited interested parties to comment.[11] No interested party submitted comments to Commerce in response to this notice. Subsequently, on April 22, 2024, Commerce issued a memorandum [12] correcting an error in its Intent to Rescind Memorandum in which it incorrectly stated that it intended to rescind the review in full when it intended to rescind the review in part, with respect to five of the six companies listed in the *Initiation Notice.* No party submitted comments regarding the Correction to Intent to Rescind Memorandum.

Scope of the Order

Imports covered by the *Order* are shipments of tapered roller bearings and parts thereof, finished and unfinished, from China; flange, take up cartridge, and hanger units incorporating tapered roller bearings; and tapered roller housings (except pillow blocks) incorporating tapered rollers, with or without spindles, whether or not for automotive use. These products are currently classifiable under Harmonized Tariff Schedule of the United States (HTSUS) item numbers 8482.20.00, 8482.91.00.50, 8482.99.15, 8482.99.45, 8483.20.40, 8483.20.80, 8483.30.80, 8483.90.20, 8483.90.30, 8483.90.80, 8708.700.6060, 8708.99.2300, 8708.99.27, 8708.99.4100, 8708.99.4850, 8708.99.6890, 8708.99.8115, and 8708.99.8180. Although the HTSUS item numbers are provided for convenience and customs purposes, the written description of the scope of the *Order* is dispositive.

Rescission of Review, In Part

Pursuant to 19 CFR 351.213(d)(3), it is Commerce's practice to rescind an administrative review of an AD order when there are no suspended entries of subject merchandise during the POR.[13] Normally, upon completion of an administrative review, the suspended entries are liquidated at the AD assessment rate calculated for the review period.[14] Therefore, for an administrative review to be conducted, there must be a suspended entry that Commerce can instruct CBP to liquidate at the AD assessment rate calculated for the review period.[15]

As noted above, there were no suspended entries of subject merchandise for five exporters subject to the review, C&U Group Shanghai Bearing Co., Ltd., Hangzhou C&U Automotive Bearing Co., Ltd., Hangzhou C&U Metallurgy Bearing Co., Ltd., Huangshi C&U Bearing Co., Ltd., and Sichuan C&U Bearing Co., Ltd. during the POR. Accordingly, in the absence of suspended entries of subject merchandise during the POR for these companies for which this review was initiated, we are hereby rescinding this administrative review, in part, with respect to these companies, in accordance with 19 CFR 351.213(d)(3).

[14] *See* 19 CFR 351.212(b)(1).

[15] *See* 19 CFR 351.213(d)(3).

Preliminary Determination of No Shipments

Tanai, an exporter that received a separate rate in a previous segment of the proceeding and is subject to this review, reported that it had no shipments of subject merchandise during the POR. We requested that CBP report any contrary information. CBP reported that an entry was made under the CBP 10-digit case number for Tainai, *i.e.,* the importer of record entered the shipment pursuant to Tainai's cash deposit requirement, but the information for the suspended entry identifies a different manufacturer and exporter for that merchandise.[16] Therefore, based on our analysis of information from CBP and the certification provided by Tainai, we preliminarily determine that Tanai made no shipments of subject merchandise to the United States during the POR. Further, consistent with Commerce's practice, we find that it is not appropriate to rescind the review with respect to Tanai, but rather to complete the review and issue appropriate assessment instructions to CBP based on the final results of review.[17]

Assessment

For the companies for which this review is being rescinded, in part, Commerce will instruct CBP to assess antidumping duties on all appropriate entries. Antidumping duties shall be assessed at rates equal to the cash deposit rate for estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). With respect to the recission of this review, in part, Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of this notice in the **Federal Register.**

When Commerce determines that an exporter under review made no shipments of subject merchandise during the POR, upon issuing the final results, Commerce will instruct CBP to liquidate any suspended entries of subject merchandise that entered under that exporter's cash deposit requirement, *i.e.,* under the exporter's CBP case number, during the POR at the weighted-average dumping margin for the China-wide entity.[18]

With respect to Tainai, Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register.** If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Rates

As a result of this administrative review, Commerce does not intend to revise the cash deposit requirements for estimated antidumping duties for entries subject to the *Order.*

Notification Regarding Administrative Protective Order

This notice serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation subject to sanction.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4) and 351.221(b)(4).

Dated: April 26, 2024.

SUPPLEMENTARY INFORMATION:

Background

On June 12, 2023, Commerce published a notice of initiation of an administrative review of the countervailing duty (CVD) order on phosphate fertilizers from Russia.[1] On November 27, 2023, Commerce extended the deadline for the preliminary results of this review until April 26, 2024.[2]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[3] A list of topics discussed in the Preliminary Decision Memorandum is included as the appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's

Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx/.*

Scope of the Order

The merchandise covered by the order is phosphate fertilizers. For a complete description of the scope of the order, *see* the Preliminary Decision Memorandum.

Rescission of Administrative Review, in Part

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the parties that requested the review withdraw their review requests within 90 days of the date of publication of the notice of initiation for the requested review.[4] On September 11, 2023, The Mosaic Company (the petitioner) withdrew its request for the review of Industrial Group Phosphorite LLC, a member of the EuroChem Group, within the 90-day deadline.[5] No other parties requested an administrative review of this company. Therefore, in accordance with 19 CFR 351.213(d)(1), Commerce is rescinding the administrative review of Industrial Group Phosphorite LLC. For additional information regarding this determination, *see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this review in accordance with section 751(a)(l)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found to be countervailable, we preliminarily determine that there is a subsidy, *i.e.,* a financial contribution from an authority that gives rise to a benefit to the recipient, and that the subsidy is specific.[6] For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum.

Preliminary Results of Review

As a result of this review, we preliminarily determine the following net countervailable subsidy rate for the period January 1, 2022, through December 31, 2022:

Producer/exporter	Subsidy rate (percent *ad valorem*)
Joint Stock Company Apatit[7]	18.83

Disclosure and Public Comment

Commerce intends to disclose its calculations performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance.[8] A timeline for the submission of case briefs and written comments will be notified to interested parties at a later date. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[9] Interested parties that submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[10]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[11] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[12]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. An electronically filed hearing request must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5 p.m. Eastern Time within 30 days after the date of publication of this notice.

Unless the deadline is extended, we intend to issue the final results of this administrative review, which will include the results of our analysis of the issues raised in the case briefs, within 120 days of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h).

Verification

As provided in section 782(i)(3) of the Act, Commerce intends to verify the information relied upon for its final results.

Assessment Rate

In accordance with 19 CFR 351.221(b)(4)(i), we preliminarily assigned a subsidy rate in the amount shown above for the producer/exporter shown above. Upon completion of the administrative review, consistent with section 751(a)(1) of the Act and 19 CFR 351.212(b)(2), Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review.

[4] *See Initiation Notice,* 88 FR 38021.

[5] *See* Petitioner's Letter, ''Withdrawal of Request for Countervailing Duty Administrative Review,'' dated September 11, 2023.

[6] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[7] As discussed in the Preliminary Decision Memorandum, Commerce preliminarily finds the following companies to be cross-owned with JSC Apatit: PhosAgro Public Joint Stock Company; Limited Liability Company PhosAgro-Region; Limited Liability Company PhosAgro-Belgorod; Limited Liability Company PhosAgro-Don; Limited Liability Company PhosAgro-Kuban; Limited Liability Company PhosAgro-Lipetsk; Limited Liability Company PhosAgro-Kursk; Limited Liability Company PhosAgro-Orel; Limited Liability Company PhosAgro-Stavropol; Limited Liability Company PhosAgro-Volga; Limited Liability Company PhosAgro-SeveroZapad; Limited Liability Company PhosAgro-Tambov; and Limited Liability Company PhosAgro-Sibir.

[8] *See* 19 CFR 351.309(c)(1)(ii); *see also* 19 CFR 351.303 for general filing requirements.

[9] *See* 19 CFR 351.309(d); *see also Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings,* 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Procedures*).

[10] *See* 19 CFR 351.309(c)(2) and (d)(2).

[11] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

[12] *See APO and Service Procedures.*

For the company for which this review is rescinded, we will instruct CBP to assess countervailing duties on all appropriate entries at a rate equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period January 1, 2022, through December 31, 2022, in accordance with 19 CFR 351.212(c)(l)(i). We intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of this notice in the **Federal Register**.

For the company remaining in the review, we intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce intends, upon publication of the final results, to instruct CBP to collect cash deposits of estimated countervailing duties in the amount shown for the company (and its cross-owned affiliates) listed above on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. For all non-reviewed firms, we will instruct CBP to continue to collect cash deposits at the most recent company-specific or all others rate applicable to the company. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Interested Parties

These preliminary results and partial rescission of review are issued and published pursuant to sections 751(a)(1) and 777(i)(1) of the Act, 19 CFR 351.213(d)(1), and 19 CFR 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Notice of Scope Ruling Applications Filed in Antidumping and Countervailing Duty Proceedings

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) received scope ruling applications, requesting that scope inquiries be conducted to determine whether identified products are covered by the scope of antidumping duty (AD) and/or countervailing duty (CVD) orders and that Commerce issue scope rulings pursuant to those inquiries. In accordance with Commerce's regulations, we are notifying the public of the filing of the scope ruling applications listed below in the month of March 2024.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Terri Monroe, AD/CVD Operations, Customs Liaison Unit, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, telephone: (202) 482–1384.

Notice of Scope Ruling Applications

In accordance with 19 CFR 351.225(d)(3), we are notifying the public of the following scope ruling applications related to AD and CVD orders and findings filed in or around the month of March 2024. This notification includes, for each scope application: (1) identification of the AD and/or CVD orders at issue (19 CFR 351.225(c)(1)); (2) concise public descriptions of the products at issue, including the physical characteristics (including chemical, dimensional and technical characteristics) of the products (19 CFR 351.225(c)(2)(ii)); (3) the countries where the products are produced and the countries from where the products are exported (19 CFR 351.225(c)(2)(i)(B)); (4) the full names of the applicants; and (5) the dates that the scope applications were filed with Commerce and the name of the ACCESS scope segment where the scope applications can be found.[1] This notice does not include applications which have been rejected and not properly resubmitted. The scope ruling applications listed below are available on Commerce's online e-filing and document management system, Antidumping and Countervailing Duty Electronic Service System (ACCESS), at *https://access.trade.gov.*

Scope Ruling Applications

Passenger Vehicle and Light Truck Tires from Taiwan (A–583–869); temporary-use spare tires;[2] produced in and exported from Taiwan; submitted by Cheng Shin Rubber USA Inc.; March 11, 2024; ACCESS scope segment ''SCO—T-Type.''

Aluminum Extrusions from the People's Republic of China (China) (A–570–967/C–570–968); aluminum extrusion parts of vacuum cleaner and mopping systems;[3] produced in and exported from China; submitted by Kaivac, Inc.; March 13, 2024; ACCESS scope segment ''SCO—Kaivac Mop & Vacuum Products.''

Certain Steel Wheels 12 to 16.5 Inches in Diameter from China (A–570–090/C–570–091); certain passenger vehicle and light truck wheels;[4] produced in and exported from China; submitted by Allied Wheel Components, Inc.; March

[1] *See Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws,* 86 FR 52300, 52316 (September 20, 2021) (*Final Rule*) (''It is our expectation that the **Federal Register** list will include, where appropriate, for each scope application the following data: (1) identification of the AD and/or CVD orders at issue; (2) a concise public summary of the product's description, including the physical characteristics (including chemical, dimensional and technical characteristics) of the product; (3) the country(ies) where the product is produced and the country from where the product is exported; (4) the full name of the applicant; and (5) the date that the scope application was filed with Commerce.'')

[2] The products are temporary-use spare tires with a ''T'' prefix on the sidewall markings. The numerical size designation is 155/60R18.

[3] The products are aluminum extrusion parts made of 6063 aluminum, including vacuum and mop handles, mop heads, and mop trowels, that are imported as mop and vacuum parts assemblies. The application includes products that are imported as accessories to the mopping and vacuum systems and are individually packaged for sale. The application also includes products that are imported to be incorporated into a finished unit, with a small percentage being sold as spare parts.

[4] The products are certain steel wheels with dimensions (15 x 5; 15 x 6; 15 x 7; and 16 x 7 inches) that fall within the dimensions of the scope language but are physically unsuitable for use on road or highway trailers or other towable equipment. The steel wheels are identical in dimension and purpose as products previously found to be out of scope for another importer based on key physical characteristics of rim size, bolt patterns, offset and load capacity.

26, 2024; ACCESS scope segment ''SCO—Allied Wheel III.''

Notification to Interested Parties

This list of scope ruling applications is not an identification of scope inquiries that have been initiated. In accordance with 19 CFR 351.225(d)(1), if Commerce has not rejected a scope ruling application nor initiated the scope inquiry within 30 days after the filing of the application, the application will be deemed accepted and a scope inquiry will be deemed initiated the following day—day 31.[5] Commerce's practice generally dictates that where a deadline falls on a weekend, Federal holiday, or other non-business day, the appropriate deadline is the next business day.[6] Accordingly, if the 30th day after the filing of the application falls on a non-business day, the next business day will be considered the ''updated'' 30th day, and if the application is not rejected or a scope inquiry initiated by or on that particular business day, the application will be deemed accepted and a scope inquiry will be deemed initiated on the next business day which follows the ''updated'' 30th day.[7]

In accordance with 19 CFR 351.225(m)(2), if there are companion AD and CVD orders covering the same merchandise from the same country of origin, the scope inquiry will be conducted on the record of the AD proceeding. Further, please note that pursuant to 19 CFR 351.225(m)(1), Commerce may either apply a scope ruling to all products from the same country with the same relevant physical characteristics, (including chemical, dimensional, and technical characteristics) as the product at issue, on a country-wide basis, regardless of the producer, exporter, or importer of those products, or on a company-specific basis.

For further information on procedures for filing information with Commerce through ACCESS and participating in scope inquiries, please refer to the Filing Instructions section of the Scope Ruling Application Guide, at *https://access.trade.gov/help/Scope_Ruling_Guidance.pdf.* Interested parties, apart from the scope ruling applicant, who wish to participate in a scope inquiry and be added to the public service list for that segment of the proceeding must file an entry of appearance in accordance with 19 CFR 351.103(d)(1) and 19 CFR 351.225(n)(4). Interested parties are advised to refer to the case segment in ACCESS as well as 19 CFR 351.225(f) for further information on the scope inquiry procedures, including the timelines for the submission of comments.

Please note that this notice of scope ruling applications filed in AD and CVD proceedings may be published before any potential initiation, or after the initiation, of a given scope inquiry based on a scope ruling application identified in this notice. Therefore, please refer to the case segment on ACCESS to determine whether a scope ruling application has been accepted or rejected and whether a scope inquiry has been initiated.

Interested parties who wish to be served scope ruling applications for a particular AD or CVD order may file a request to be included on the annual inquiry service list during the anniversary month of the publication of the AD or CVD order in accordance with 19 CFR 351.225(n) and Commerce's procedures.[8]

Interested parties are invited to comment on the completeness of this monthly list of scope ruling applications received by Commerce. Any comments should be submitted to James Maeder, Deputy Assistant Secretary for AD/CVD Operations, Enforcement and Compliance, International Trade Administration, via email to *CommerceCLU@trade.gov.*

This notice of scope ruling applications filed in AD and CVD proceedings is published in accordance with 19 CFR 351.225(d)(3).

Dated: April 26, 2024.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[FR Doc. 2024–09518 Filed 5–1–24; 8:45 am]

BILLING CODE 3510–DS–P

[5] In accordance with 19 CFR 351.225(d)(2), within 30 days after the filing of a scope ruling application, if Commerce determines that it intends to address the scope issue raised in the application in another segment of the proceeding (such as a circumvention inquiry under 19 CFR 351.226 or a covered merchandise inquiry under 19 CFR 351.227), it will notify the applicant that it will not initiate a scope inquiry, but will instead determine if the product is covered by the scope at issue in that alternative segment.

[6] *See Notice of Clarification: Application of ''Next Business Day'' Rule for Administrative Determination Deadlines Pursuant to the Tariff Act of 1930, As Amended,* 70 FR 24533 (May 10, 2005).

[7] This structure maintains the intent of the applicable regulation, 19 CFR 351.225(d)(1), to allow day 30 and day 31 to be separate business days.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–904]

Certain Activated Carbon From the People's Republic of China: Preliminary Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that certain activated carbon (activated carbon) from the People's Republic of China (China) was sold in the United States at prices below normal value (NV) during the period of review (POR), April 1, 2022, through March 31, 2023. We invite interested parties to comment on these preliminary results of review.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Andrew Hart or Katie Smith, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1058 or (202) 482–0557, respectively.

SUPPLEMENTARY INFORMATION:

Background

On April 27, 2007, Commerce published in the **Federal Register** the antidumping duty (AD) order on activated carbon from China.[1] On April 4, 2023, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the *Order,* covering the POR, pursuant to section 751(a)(1) of the Tariff Act of 1930, as amended (the Act).[2] On June 12, 2023, based on timely requests for review from certain interested parties,[3]

[1] *See Notice of Antidumping and Countervailing Duty Order: Certain Activated Carbon from the People's Republic of China: Antidumping and Countervailing Duty Orders,* 72 FR 20988 (April 27, 2007) (*Order*).

[2] *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review and Join Annual Inquiry Service List,* 88 FR 199616 (April 4, 2023).

[3] *See* Carbon Activated Tianjin Co., Ltd. (CA Tianjin)'s Letter, ''Request for Antidumping Administrative Review,'' dated April 26, 2023; *see also,* Ningxia Huahui Environmental Technology Co., Ltd. (Huahui)'s Letter, ''Request for Administrative Review,'' dated April 27, 2023; Ningxia Mineral & Chemical Limited (Ningxia Minerals)'s Letter, ''Request for Administrative Review,'' dated April 27, 2023; Tancarb Activated Carbon Co., Ltd.'s Letter (Tancarb), ''Request for Administrative Review,'' dated April 27, 2023;

Continued

Commerce initiated an administrative review of the *Order* covering the POR.[4] The administrative review covers 20 companies including the two mandatory respondents, Jilin Bright Future Chemicals Co., Ltd. (Jilin Bright) and Ningxia Guanghua Cherishment Activated Carbon Co., Ltd. (GHC). On December 6, 2023, Commerce extended the deadline for the preliminary results of this review until April 26, 2024.[5]

Scope of the Order

The product covered by the *Order* is activated carbon from China. For a full description of the scope of the *Order, see* the Preliminary Decision Memorandum.[6]

Separate Rates

Commerce preliminarily determines that Jilin Bright and GHC, the companies individually examined in this review, and the 12 companies, not individually examined and listed in Appendix II to this notice, are eligible to receive separate rates in this administrative review.[7]

The Act and Commerce's regulations do not address the establishment of a separate rate to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the rate for separate rate respondents which Commerce did not examine individually in an administrative review. Section 735(c)(5)(A) of the Act states that the all-others rate should be calculated by averaging the weighted-average dumping margins calculated for individually-examined respondents, excluding dumping margins that are zero, *de minimis,* or based entirely on facts available.

For the preliminary results of this review, Commerce determined the estimated dumping margins for Jilin Bright and GHC are $2.01/kg and $1.17/kg respectively. For the reasons explained in the Preliminary Decision Memorandum, we are assigning to the 12 non-examined respondents which qualify for a separate rate in this review, an estimated dumping margin of $1.43/kg, consistent with Commerce's practice and section 735(c)(5)(A) of the Act.

China-Wide Entity

Under Commerce's policy regarding the conditional review of the China-wide entity,[8] the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the China-wide entity in this review, the entity is not under review, and the entity's rate (*i.e.,* $2.42/kilogram) is not subject to change.[9] For the reasons explained in the Preliminary Decision Memorandum, Commerce considers certain companies for which a review was requested and which did not demonstrate separate rate eligibility, listed in Appendix II to this notice, to be part of the China-wide entity.[10]

Methodology

Commerce is conducting this review in accordance with section 751(a)(1)(B) of the Act. We calculated export price in accordance with section 772 of the Act. Because China is a non-market economy country within the meaning of section 771(18) of the Act, we calculated NV in accordance with section 773(c) of the Act.

For a full description of the methodology underlying our preliminary results, *see* the Preliminary Decision Memorandum.[11] A list of topics discussed in the Preliminary Decision Memorandum is included as the appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Preliminary Results of Review

For companies that established their eligibility for a separate rate,[12] Commerce preliminarily determines that the following estimated weighted-average dumping margins exist for the period April 1, 2022, through March 31, 2023: [13]

Exporter	Weighted-average dumping margin (U.S. dollars per kilogram) [14]
Jilin Bright Future Chemicals Co., Ltd.	2.01
Ningxia Guanghua Cherishmet Activated Carbon Co., Ltd.	1.17
Review-Specific Rate Applicable For Non-Selected Companies Under Review [15]	1.43

Calgon Carbon Corporation and Norit Americas Inc. (the petitioners)'s Letter, ''Petitioners' Request for Initiation of 16th Annual Administrative Review,'' dated April 28, 2023; Shanxi Sincere Industrial Co., Ltd. (Shanxi Sincere)'s and Tianjin Channel Filters Co., Ltd. (Tianjin Channel Filters)'s Letter, ''Request for Administrative Review,'' dated April 28, 2023; Jacobi Carbons Tianjin International Trade Co., Ltd., and Jacobi Absorbent Materials Co., Ltd. (collectively, Jacobi Carbons AB and Affiliates)' Letter, ''Jacobi's Request for Administrative Review,'' dated April 28, 2023 (We also received a review request for Jacobi Carbons, Inc.; however, Jacobi Carbons, Inc. is a U.S. affiliate of Jacobi Carbons AB as such, this company was not included in the *Initiation Notice*); Datong Hongdi Carbon Co., Ltd. (Datong Hongdi)'s Letter, ''AD Request for Review,'' dated April 28, 2023; Bengbu Modern Environmental Co., Ltd. (Bengbu)'s Letter, '' AD Request for Review,'' dated April 28, 2023; Jilin Bright Future Chemicals Co., Ltd. (Jilin Bright)'s Letter, ''Request for Administrative Review,'' dated May 1, 2023; Datong Juqiang Activated Carbon Co., Ltd. (Datong Juqiang)'s, Ningxia Guanghua Cherishmet Activated Carbon Co., Ltd. (GHC)'s, Datong Municipal Yunguang Activated Carbon Co., Ltd. (Datong Municipal)'s, and Shanxi Industry Technology Trading Co., Ltd. (Shanxi Industry)'s Letter, ''Request for Antidumping Administrative Review,'' dated May 1, 2023; and Petitioners' Letter, ''Supplement to Petitioners' Request for Initiation of 16th Annual Administrative Review,'' dated May 1, 2023.

Disclosure and Public Comment

Commerce intends to disclose the calculations performed for these preliminary results to interested parties within five days after public announcement, or if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register**.[16]

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs to Commerce no later than 30 days after the date of publication of this notice.[17] Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than five days after the date for filing case briefs.[18] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[19]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[20] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[21]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. An electronically filed hearing request must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5:00 p.m. Eastern Time within 30 days after the date of publication of this notice. If a request for a hearing is made, Commerce intends to hold a hearing at a time and date to be determined.[22] Parties should confirm the date, time, and location of the hearing two days before the scheduled date.

All submissions, including case and rebuttal briefs, as well as hearing requests, should be filed using ACCESS.[23] An electronically-filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline.

Assessment Rates

In accordance with section 751(a)(2)(C) of the Act, the final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by this review. Upon completion of the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review.[24]

If the individually examined respondents' weighted-average dumping margins are above *de minimis* (*i.e.,* 0.50 percent) in the final results of this review, we will calculate importer-specific per-unit assessment rates for each respondent by dividing the total amount of dumping calculated for examined sales to the importer or customer by the total sales quantity associated with those transactions. Where an importer-specific or customer-specific assessment rate is zero or *de minimis,* we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

For entries that were not reported in the U.S. sales database submitted by each mandatory respondent individually examined during this review, Commerce will instruct CBP to liquidate such entries at the China-wide rate.[25]

For the respondents that were not selected for individual examination in this administrative review but qualified for a separate rate, the per unit assessment rate will be the rate established for these companies in the final results of review.

For the final results of this review, if we continue to treat the six companies identified in Appendix II to this notice as part of the China-wide entity, we will instruct CBP to apply the China-wide per-unit assessment rate to all entries of subject merchandise during the POR which were exported by those companies.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided for by section 751(a)(2)(C) of the Act: (1) for the subject merchandise exported by the companies listed above that have a separate rate, the cash deposit rate will be equal to the weighted-average dumping margin established in the final results of this administrative review (except, if the rate is zero or *de minimis,* then zero cash deposit will be required); (2) for previously investigated or reviewed Chinese and non-Chinese exporters not listed above that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific rate; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will

[14] In the second administrative review of the *Order,* Commerce determined that it would calculate per-unit weighted-average dumping margins and assessment amounts for all future reviews. *See Certain Activated Carbon from the People's Republic of China: Final Results and Partial Rescission of Second Antidumping Duty Administrative Review,* 75 FR 70208, 70211 (November 17, 2010).

[15] *See* Appendix II.

[16] *See* 19 CFR 351.224(b).

[17] *See* 19 CFR 351.303 (for general filing requirements).

[18] *See* 19 CFR 351.309(d); *see also Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings,* 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Final Rule*).

[19] *See* 19 CFR 351.309(c)(2) and (d)(2).

[20] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

[21] *See APO and Service Final Rule,* 88 FR at 67077.

[22] *See* 19 CFR 351.310(d).

[23] *See* 19 CFR 351.303.

[24] *See* 19 CFR 351.212(b)(1).

be that for the China-wide entity; and (4) for all non-Chinese exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results of review in accordance with sections 751(a)(l) and 777(i)(l) of the Act, and 19 CFR 351.213 and 19 CFR 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Phosphate Fertilizers From the Kingdom of Morocco: Preliminary Results of the Countervailing Duty Administrative Review, 2022

AGENCY: Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that countervailable subsidies are being provided to producers and exporters of phosphate fertilizers from the Kingdom of Morocco (Morocco). The period of review (POR) is January 1, 2022, through December 31, 2022.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Robert Palmer or Jaron Moore, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–9068 or (202) 482–3640, respectively.

SUPPLEMENTARY INFORMATION:

Background

On April 28, 2023, we received a request from The Mosaic Company (the petitioner) to conduct an administrative review with respect to OCP S.A. (OCP).[1] On June 12, 2023, Commerce published a notice of initiation of an administrative review of the countervailing duty (CVD) order on phosphate fertilizers from Morocco.[2] On December 12, 2023, Commerce extended the deadline for the preliminary results of this review until April 26, 2024.[3]

For a complete description of the events that followed the initiation of this review, *see* the Preliminary Decision Memorandum.[4] A list of topics discussed in the Preliminary Decision Memorandum is included at the appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov*. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx/*.

Scope of the Order

The merchandise covered by the order is phosphate fertilizers. For a complete description of the scope of the order, *see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this review in accordance with section 751(a)(l)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, we preliminarily determine that there is a subsidy, *i.e.,* a financial contribution from an authority that gives rise to a benefit to the recipient, and that the subsidy is specific.[5] For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum.

Preliminary Results of Review

As a result of this review, we preliminarily determine the following net countervailable subsidy rate for the period January 1, 2022, through December 31, 2022:

Producer/exporter	Subsidy rate (percent *ad valorem*)
OCP S.A.[6]	14.21

Disclosure and Public Comment

Commerce intends to disclose its calculations performed to interested

[1] *See* Petitioner's Letter, ''Request for Countervailing Duty Administrative Review,'' dated April 28, 2023.

[2] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 88 FR 38021 (June 12, 2023) (*Initiation Notice*).

[3] *See* Memorandum, ''Extension of Deadline for Preliminary Results of the 2020–2021 Countervailing Duty Administrative Review,'' dated December 12, 2023.

[4] *See* Memorandum, ''Decision Memorandum for the Preliminary Results of the Countervailing Duty Administrative Review of Phosphate Fertilizers from the Kingdom of Morocco; 2022,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[6] As discussed in the Preliminary Decision Memorandum, Commerce preliminarily finds the following companies to be cross-owned with OCP S.A.: Nutircrops S.A.; Jorf Fertilizers Company I; Jorf Fertilizers Company II; Jorf Fertilizers Company III; Jorf Fertilizers Company IV; and Jorf Fertilizers Company V.

parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance.[7] A timeline for the submission of case briefs and written comments will be notified to interested parties at a later date. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[8] Interested parties that submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[9]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[10] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[11]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. An electronically filed hearing request must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5 p.m. Eastern Time within 30 days after the date of publication of this notice.

Unless the deadline is extended, we intend to issue the final results of this administrative review, which will include the results of our analysis of the issues raised in the case briefs, within 120 days of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h).

Assessment Rate

In accordance with 19 CFR 351.221(b)(4)(i), we preliminarily assigned the subsidy rate in the amount shown above for OCP. Upon completion of the administrative review, consistent with section 751(a)(1) of the Act and 19 CFR 351.212(b)(2), Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review.

We will instruct CBP to assess countervailing duties on all appropriate entries at the subsidy rate calculated in the final results of this review. We intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce intends, upon publication of the final results, to instruct CBP to collect cash deposits of estimated countervailing duties in the amount shown for OCP (and its cross-owned affiliates) on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. The cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Interested Parties

These preliminary results are issued and published pursuant to sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Certain Aluminum Foil From People's Republic of China: Preliminary Results of Antidumping Duty Administrative Review, Partial Rescission of Antidumping Duty Administrative Review, and Preliminary Determination of No Shipments; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that certain producers and/or exporters made sales of certain aluminum foil (aluminum foil) at less than normal value during the period of review (POR), April 1, 2022, through March 31, 2023. Additionally, Commerce is rescinding this administrative review with respect to certain companies. Interested parties are invited to comment on these preliminary results of this review.

DATES: Applicable May 2, 2024.

FOR FURTHER INFORMATION CONTACT: Michael J. Heaney, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4475.

SUPPLEMENTARY INFORMATION:

Background

On June 12, 2023, in response to review requests from multiple parties, Commerce published the notice of initiation of an administrative review of the antidumping duty order on certain aluminum foil from the People's Republic of China (China),[1] covering 45 companies.[2] Between July 31 and September 11, 2023, all requests for review were timely withdrawn for certain companies.[3] On December 8, 2023, we extended the deadline for these preliminary results of review until April 26, 2024.[4]

For a summary of the events that occurred since the initiation of this review and the analysis for these preliminary results, *see* the Preliminary Decision Memorandum.[5] The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.* A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice.

Scope of the Order

The merchandise covered by the *Order* is certain aluminum foil from China. For a complete description of the scope of the *Order, see* the Preliminary Decision Memorandum.

Methodology

Commerce is conducting this administrative review in accordance with section 751(a)(1)(B) of the Tariff Act of 1930, as amended (the Act). In determining the dumping margins in this review, we calculated export prices in accordance with section 772 of the Act. Because Commerce has determined that China is a non-market economy country [6] within the meaning of section 771(18) of the Act, Commerce calculated normal value in accordance with section 773(c) of the Act. For a full description of the methodology underlying the preliminary results of this review, *see* the Preliminary Decision Memorandum.

Partial Rescission of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if all parties that requested a review withdraw their requests within 90 days of the publication date of the notice of initiation of the requested review. As noted above, the following companies timely withdrew their review requests and no other party requested an administrative review of these companies: Galex Inc.; Lotte Aluminium Co., Ltd.; Sama Aluminium Co Ltd.; Korea Aluminium Co., LTD.; Kataman Metals; Prosvic Sales Inc.; Sankyu-Thai Co., Ltd.; and Suzhou Xin Zhao Jin Aluminum Foil Co., Ltd. Therefore, we are rescinding this review with respect to these eight companies, in accordance with 19 CFR 351.213(d)(1).

Preliminary Determination of No Shipments

Based on the no-shipment certifications, our analysis of the results of the CBP data queries, and the fact that CBP identified no information that contradicted certain no-shipment claims, we preliminarily determine that Anhui Zhongji Battery Foil Science & Technology Co., Ltd. (Anhui Zhongji), Anhui Maximum Aluminum Industries Company Ltd. (Anhui Maximum), Manakin Industries, LLC (Manakin), and Xiamen Xiashun Aluminium Foil Co., Ltd. (Xiashun) did not have any shipments of subject merchandise to the United States during the POR. Consistent with Commerce's practice in non-market economy cases, we have not rescinded the review with respect to Anhui Zhongji, Anhui Maximum, Manakin, and Xiashun, but we will continue the review of these companies and issue instructions to CBP based on the final results of the review.[7]

Preliminary Affiliation and Single Entity Determination

Consistent with Commerce's treatment of Dingsheng Aluminium Industries (Hong Kong) Trading Co., Limited; Hangzhou Dingsheng Import & Export Co., Ltd.; Hangzhou Five Star Aluminium Co., Ltd.; Hangzhou Teemful Aluminium Co., Ltd.; Inner Mongolia Liansheng New Energy Material Co.; and Inner Mongolia Xinxing New Energy Material Co., Ltd. (collectively, Dingsheng) in a prior segment of this proceeding,[8] we have continued to find that these companies are affiliated entities, pursuant to sections 771(33)(E), (F), and (G) of the Act, and that they should be treated as a single entity pursuant to 19 CFR 351.401 (f)(1)–(2). Consistent with Commerce's treatment of Jiangsu Zhongji Lamination Materials Co., Ltd., Jiangsu Zhongji Lamination Materials Stock Co., Ltd., Jiangsu Huafeng Aluminium Industry Co., Ltd., and Jiangsu Zhongji Lamination Materials Co., (HK) Limited, (collectively, Zhongji) in a prior segment of this proceeding,[9] we have continued to find

[8] *See Foil from China Preliminary Determination* PDM at 16–18, unchanged in *Foil from China Final Determination.* We find that record evidence supports continuing to treat these companies as a collapsed entity in this review. *See* Memorandum, ''Dingsheng Analysis for the Preliminary Results,'' dated concurrently with this notice.

[9] In the less-than-fair-value investigation, we collapsed the following companies as a single entity: Jiangsu Zhongji Lamination Materials Co., (HK) Ltd.; Jiangsu Zhongji Lamination Materials

that these companies are affiliated entities, pursuant to sections 771(33)(E), (F), and (G) of the Act, and that they should be treated as a single entity pursuant to 19 CFR 351.401 (f)(1)–(2). For additional information, *see* the Preliminary Decision Memorandum.

Separate Rates

Commerce preliminarily determines that Dingsheng and Zhongji, the two companies individually examined in this review, demonstrated their eligibility for a separate rate.[10] We also preliminarily determine that Dong-IL Aluminium Co., Ltd. (Dong-IL), Dongwon Systems Corp. (Dongwon), Eastern Valley Co., Ltd. (Eastern Valley), Granges Aluminum (Shanghai) Co., Ltd. (Granges Aluminum), Shanghai Shenyan Packaging Materials Co., Ltd. (Shanghai Shenyan), and Suzhou Manakin Aluminum Processing Technology Co., Ltd. (Suzhou Manakin Aluminum), Suzhou Manakin Trading Co., Ltd. (Suzhou Manakin Trading), companies not individually examined in this review, demonstrated their eligibility for a separate rate.[11]

The Act and Commerce's regulations do not address the establishment of a separate rate to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the rate for separate-rate respondents which Commerce did not examine individually in an administrative review. Section 735(c)(5)(A) of the Act states that the all-others rate should be calculated by averaging the weighted-average dumping margins calculated for individually examined respondents, excluding dumping margins that are zero, *de minimis,* or based entirely on facts available.

For the preliminary results of this review, Commerce determined estimated dumping margins for Dingsheng and Zhongji to be 59.52, and 75.53 percent, respectively. For the reasons explained in the Preliminary Decision Memorandum, we are assigning the 67.53 percent rate to the seven non-examined respondents, Dong-IL, Dongwon, Eastern Valley, Granges Shanghai, Shanghai Shenyan, Suzhou Manakin Aluminum, and Suzhou Manakin Trading which qualify for a separate rate in this review, consistent with Commerce's practice and section 735(c)(5)(A) of the Act.[12]

China-Wide Entity

In accordance with Commerce's policy, the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the China-wide entity.[13] Because no party requested a review of the China-wide entity, the China-wide entity is not under review, and the weighted-average dumping margin for the China-wide entity (*i.e.,* 105.80 percent) [14] is not subject to change. *See* the Preliminary Decision Memorandum for further discussion.

Aside from the companies for which we preliminarily find no shipments and the company for which the review is being rescinded, Commerce considers the 16 companies for which a review was requested and did not demonstrate separate rate eligibility to be part of the China-wide entity. Consequently, we have assigned these 16 companies to the China-wide entity and they will be subject to the China-wide entity rate.[15] For a listing of these companies, *see* Appendix II of this notice.

Preliminary Results of Review

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist for the period April 1, 2022, through March 31, 2023:

Exporter	Weighted-average dumping margin (percent)
Dingsheng Aluminium Industries (Hong Kong) Trading Co., Limited (Dingsheng Aluminium Industries (Hong Kong) Trading Co., Ltd.)/Hangzhou Dingsheng Import & Export Co., Ltd. (Hangzhou Dingsheng Import and Export Co., Ltd.)/Hangzhou Five Star Aluminium Co., Ltd./Hangzhou Teemful Aluminium Co., Ltd./Inner Mongolia Liansheng New Energy Material Co./Inner Mongolia Xinxing New Energy Material Co., Ltd	59.52
Jiangsu Zhongji Lamination Materials Co., (HK) Limited/Jiangsu Zhongji Lamination Materials Stock Co., Ltd./Jiangsu Huafeng Aluminium Industry Co., Ltd./Jiangsu Zhongji Lamination Materials Co., Ltd	75.53
Dong-IL Aluminium Co., Ltd	67.53
Dongwon Systems Corp	67.53
Eastern Valley Co., Ltd	67.53
Granges Aluminum (Shanghai) Co., Ltd	67.53
Shanghai Shenyan Packaging Materials Co., Ltd	67.53
Suzhou Manakin Aluminum Processing Technology Co., Ltd	67.53
Suzhou Manakin Trading Co., Ltd	67.53

Disclosure and Public Comment

Commerce intends to disclose its calculations and analysis performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Stock Co., Ltd.; Jiangsu Zhongji Lamination Materials Co., Ltd.; and Jiangsu Huafeng Aluminum Industry Co., Ltd. *See Foil from China Preliminary Determination* PDM at 16–18, unchanged in *Foil from China Final Determination.* We find that record evidence in this administrative review supports continuing to treat these companies as a single entity. *See* Memorandum, ''Zhongji Analysis for the Preliminary Results,'' dated concurrently with this notice.

[10] *See* Preliminary Decision Memorandum at the ''Separate Rate Determinations'' section for more details.

[14] *See Order.*

[15] *See Initiation Notice* (''All firms listed below that wish to qualify for separate rate status in the administrative reviews involving NME countries must complete, as appropriate, either a separate rate application or certification, as described below.''); *see also* Appendix II for the list of companies that are subject to this administrative review that are considered to be part of the China-wide entity.

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs to Commerce no later than 30 days after the date of publication of this notice.[16] Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[17] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[18]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[19] Further, we request that interested parties limit their public, executive summary of each issue to no more than 450 words, not including citations. We intend to use the public, executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public, executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[20]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS. Requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. An electronically filed hearing request must be received successfully in its entirety by Commerce's electronic records system, ACCESS, by 5 p.m. Eastern Time within 30 days after the date of publication of this notice.

Unless otherwise extended, Commerce intends to issue the final results of this administrative review, which will include the results of its analysis of issues raised in any briefs, within 120 days of publication of these preliminary results of review in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act.

Assessment Rates

Upon issuance of the final results of this review, Commerce will determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review.[21] Commerce intends to issue assessment instructions to CBP no earlier than 35 days after date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

For each individually examined respondent in this review whose weighted-average dumping margin in the final results of review is not zero or *de minimis* (*i.e.,* less than 0.5 percent), Commerce intends to calculate importer/customer-specific assessment rates.[22] Where the respondent reported reliable entered values, Commerce intends to calculate importer/customer-specific *ad valorem* assessment rates by aggregating the amount of dumping calculated for all U.S. sales to the importer/customer and dividing this amount by the total entered value of the merchandise sold to the importer/customer.[23] Where the respondent did not report entered values, Commerce will calculate importer/customer-specific assessment rates by dividing the amount of dumping for reviewed sales to the importer/customer by the total quantity of those sales. Commerce will calculate an estimated *ad valorem* importer/customer-specific assessment rate to determine whether the per-unit assessment rate is *de minimis;* however, Commerce will use the per-unit assessment rate where entered values were not reported.[24] Where an importer/customer-specific *ad valorem* assessment rate is not zero or *de minimis,* Commerce will instruct CBP to collect the appropriate duties at the time of liquidation. Where either the respondent's weighted average dumping margin is zero or *de minimis,* or an importer/customer-specific *ad valorem* assessment rate is zero or *de minimis,* Commerce will instruct CBP to liquidate appropriate entries without regard to antidumping duties.[25]

Pursuant to Commerce's refinement to its practice, for sales that were not reported in the U.S. sales database submitted by an exporter individually examined during this review, Commerce will instruct CBP to liquidate the entry of such merchandise at the dumping margin for the China-wide entity.[26] Additionally, where Commerce determines that an exporter under review had no shipments of subject merchandise to the United States during the POR, any suspended entries of subject merchandise that entered under that exporter's CBP case number during the POR will be liquidated at the dumping margin for the China-wide entity.

In accordance with section 751(a)(2)(C) of the Act, the final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated antidumping duties, where applicable.

Cash Deposit Requirements

Commerce will instruct CBP to require a cash deposit for antidumping duties equal to the weighted-average amount by which the normal value exceeds U.S. price. The following cash deposit requirements will be effective for shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date of this notice in the **Federal Register**, as provided by section 751(a)(2)(C) of the Act: (1) for the exporters listed in the table above, the cash deposit rate will be equal to the weighted-average dumping margin established in the final results of this review for the exporter (except, if the dumping margin is *de minimis* (*i.e.,* less than 0.5 percent), then the cash deposit rate will be zero for that exporter); (2) for previously investigated or reviewed Chinese and non-Chinese exporters that are not listed in the table above but that have separate rates, the cash deposit rate will continue to be the exporter-specific rate established in the most recently completed segment of this proceeding; (3) for all Chinese exporters of subject

[24] *Id.*

[25] *See Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification,* 77 FR 8101 (February 14, 2012).

[26] *See NME Practice,* for a full discussion of this practice.

merchandise which have not been found to be entitled to a separate rate, the cash deposit rate will be the rate for the China-wide entity (*i.e.,* 105.80 percent); [27] and (4) for all non-Chinese exporters of subject merchandise that have not received their own rate, the cash deposit rate will be the rate applicable to the China exporter that supplied that non-Chinese exporter. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties has occurred, and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Notification to Interested Parties

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213 and 351.221(b)(4).

Dated: April 26, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix I

List of Topics Discussed in the Preliminary Decision Memorandum

I. Summary
II. Background
III. Scope of the *Order*
IV. Rescission of Review, In Part
V. Preliminary Determination of No Shipments
VI. Discussion of the Methodology
VII. Adjustment Under Section 777A of the Act
VIII. Currency Conversion
IX. Recommendation

Appendix II

Non-Selected Separate Rate Companies

1. Dong-IL Aluminium Co., Ltd.
2. Dongwon Systems Corp.
3. Eastern Valley Co., Ltd.
4. Granges Aluminum (Shanghai) Co., Ltd.
5. Shanghai Shenyan Packaging Materials Co., Ltd.
6. Suzhou Manakin Aluminum Processing Technology Co., Ltd.
7. Suzhou Manakin Trading Co., Ltd.

No Shipments

1. Anhui Maximum Aluminum Industries Company Ltd.
2. Anhui Zhongji Battery Foil Science & Technology Co., Ltd.
3. Manakin Industries, LLC
4. Xiamen Xiashun Aluminium Foil Co., Ltd.

Companies Determined To Be Part of the China-Wide Entity

1. Alcha International Holdings Limited
2. Aluminum Corporation of China Limited
3. Dingheng New Materials Co., Ltd.
4. Henan Mingtai Al. Industrial
5. Hunan Suntown Marketing Limited
6. Jiangsu Dingsheng New Materials Joint-Stock Co., Ltd.
7. SAM–A Aluminum Co., Ltd.
8. Shandong Nanshan Aluminum Co., Ltd.
9. Shanghai Huafon Aluminium Corporation
10. Shanghai Shenhuo Aluminium Foil Co., Ltd
11. Shanghai Sunho Aluminum Foil Co., Ltd.
12. SK Global America Inc.
13. Suntown Technology Group Corporation Limited (Suntown Technology Group Co., Ltd.)
14. Walson (HK) Trading Co., Limited
15. Yinbang Clad Materials Co., Ltd.
16. Zhejiang Yongjie Aluminum Co., Ltd.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XC640]

Marine Mammals; Issuance of Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of permits.

SUMMARY: Notice is hereby given that individuals and institutions have been issued Letters of Confirmation (LOCs) for activities conducted under the General Authorization for scientific research on marine mammals. See **SUPPLEMENTARY INFORMATION** for a list of names and addresses of recipients.

ADDRESSES: The LOCs and related documents are available for review upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Amy Hapeman (LOC Nos. 21932, 25835, 27241, and 27326), Carrie Hubard (LOC Nos. 22081, 22291–01, 22856–01, 24045, and 25957), Erin Markin, Ph.D. (LOC Nos. 20519–01, 26784, and 27746), Shasta McClenahan, Ph.D. (LOC Nos. 21556 and 27369), Courtney Smith, Ph.D. (LOC Nos. 21134 and 26367), and Sara Young (LOC No. 25895 and 26643) at the email listed above or (301) 427–8401.

SUPPLEMENTARY INFORMATION: The requested LOCs have been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the regulations governing the taking and importing of marine mammals (50 CFR part 216). The General Authorization allows for bona fide scientific research that may result only in taking by Level B harassment of marine mammals. The following LOCs were issued between October 1, 2021, and December 31, 2023.

File No. 25895: Issued to Jacalyn Toth Sullivan, Stockton University, 101 Vera King Farris Drive, Galloway, New Jersey 08205 on October 29, 2021. This LOC authorizes unmanned aircraft system (UAS) surveys of harbor seals (*Phoca vitulina*) within Great Bay, New Jersey for count/survey, behavioral observation monitoring, photo-identification, and video purposes. The objectives of the study include determination of temporal patterns of harbor seal habitat use, population size, and shifts therein over time as the nearby wind farm becomes operational. The LOC expires on October 31, 2026.

File No. 20519–01: This LOC, held by Peggy Stap, Marine Life Studies, P.O. Box 884, Monterey, California 93942–0884, was extended on November 18, 2021, through April 30, 2022, while the holder's new application (File No. 25843) was in process. The LOC authorizes close approach of 18 species of cetaceans and 4 species of pinnipeds during vessel and UAS surveys for photo-identification, behavioral observations, passive acoustics, photogrammetry, and underwater photograph/video within the Monterey Bay National Marine Sanctuary. The objectives of the research would not change. The LOC was subsequently terminated on April 22, 2022, when a separate scientific research permit No. 25843 was issued (87 FR 29116, May 12, 2022).

File No. 22856–01: This LOC, held by Patricia Fair, Ph.D., South Carolina Aquarium, 100 Aquarium Wharf, Charleston, South Carolina 29401, was amended on August 30, 2021. The original LOC authorized vessel-based research for photo-identification, photogrammetry, and behavioral observations of bottlenose dolphins (*Tursiops truncatus*) in waters near Charleston, South Carolina. The amended LOC would allow researchers to use UAS as an additional platform to collect photographs and behavioral data. The objectives of the research would not

change. The LOC expires August 31, 2024.

File No. 25835: Issued to Tampa Bay Watch, Inc. (Principal Investigator [PI]: Savannah Gandee), 3000 Pinellas Bayway South, Tierra Verde, Florida 33715, on December 21, 2021. This LOC authorized authorize vessel-based surveys of bottlenose dolphins in the upper-middle regions of Tampa Bay, Florida, for behavioral observations, photo-identification, passive acoustic recordings, and photography/videography. The objectives of the study were to assess current life history parameters of the population, including abundance, social structure, and spatial distribution of the animals. The LOC was subsequently terminated on January 3, 2024, at the request of the PI due to the end of research efforts.

File No. 21134: This LOC, held by John Schacke, Ph.D., Georgia Ecology Dolphin Project, 223 Trace Lane, Commerce, Georgia 30530, was extended on January 14, 2022, until May 15, 2023. The LOC authorizes vessel-based research of bottlenose dolphins, including abundance surveys, behavioral observations, photography and video within coastal and estuarine waters of central Georgia. The objectives of the research would not change. The LOC was subsequently terminated on May 2, 2022, when a new LOC (No. 27241, see below) was issued.

File No. 26367: Issued to Shannon Gowans, Ph.D., Eckerd College, 4200 54th Avenue South, St. Petersburg, Florida 33711 on May 10, 2022. This LOC authorizes close approach, photo-identification, passive acoustic recordings, and behavioral observations of bottlenose dolphins, Atlantic spotted dolphins (*Stenella frontalis*), and rough-toothed dolphins (*Steno bredanensis*) during vessel surveys in Boca Ciega Bay and surrounding waters. The objectives of the study are to continue assessing population size, distribution, and changes to social structure of local bottlenose dolphins. The LOC expires on May 15, 2027.

File No. 25957: Issued to Ann Weaver, Ph.D., Good-Natured Statistics Consulting, P.O. Box 8732, St. Petersburg, Florida 33738 on May 11, 2022. This LOC authorizes close approach, photo-identification, and behavioral observations of bottlenose dolphins during vessel surveys in the John's Pass area, near St. Petersburg, Florida. The objectives of the study are to continue monitoring the abundance, distribution, birth rates, and behavior of bottlenose dolphins in the study area and identify changes, if any, related to coastal construction projects. The LOC expires on May 31, 2027.

File No. 26643: Issued to Kachemak Bay National Estuarine Research Reserve (PI: Deborah Boege Tobin, Ph.D.), University of Alaska Anchorage, 2181 Kachemak Drive, Homer, Alaska 99603 on October 15, 2022. This LOC authorizes vessel and aerial-based surveys to monitor harbor porpoise (*Phocoena phocoena*), assess site fidelity and habitat use, study foraging and social behavior, and compile a photo-identification catalog to track individuals in Kachemak Bay, Alaska. Dall's porpoise (*Phocoenoides dalli*), Eastern North Pacific gray whales (*Eschrichtius robustus*), killer whales (*Orcinus orca;* excluding the endangered Southern Resident Distinct Population Segment), minke whales (*Balaenoptera acutorostrata*), and harbor seals may also be encountered. The LOC expires on October 14, 2027.

File No. 26784: Issued to Gerard Pinto, Ph.D., Jacksonville University, Marine Science Research Institute, 2800 University Blvd. North, Jacksonville, Florida 32211 on October 19, 2022. This LOC authorizes vessel-based research surveys for close approach, photo-identification, behavioral observations, videography, passive acoustic recordings, and focal follows of bottlenose dolphins within the St. Johns River between Hart Bridge in Jacksonville and Shands Bridge in Green Cove Springs, Florida. The objective of the research is to continue a 10-year collaborative photo-identification study of the bottlenose dolphins in the St. Johns River in northeast Florida, focused on identifying individuals as well as dolphin biology, ecology, behavior, social structure, and health. The LOC expires on October 31, 2027.

File No. 21932: This LOC, held by Jessica Taylor, Outer Banks Center for Dolphin Research, 310 West Eden St., Kill Devil Hills, North Carolina 27948, was extended on January 13, 2023. This amended LOC authorizes vessel surveys, close approach, photo-identification, behavioral observations, and focal follows of bottlenose dolphins in the waters of northern North Carolina. The amended LOC expires on April 30, 2024.

File No. 21556: This LOC, held by Stephen McCulloch, Dolphins Plus Marine Mammal Responder, 31 Corrine Place, Key Largo, Florida 33037, was extended on April 26, 2023, until May 15, 2024. This LOC authorized vessel surveys, close approach, photo-identification, behavioral observations, and video recording of bottlenose dolphins in Southern Florida waters. This amendment extended the duration of the LOC until August 14, 2023. The LOC was subsequently terminated on August 14, 2023, when a new LOC (No. 27269, see below) was issued.

File No. 27241: Issued to John Schacke, Ph.D., Georgia Dolphin Ecology Project, 223 Trace Lane, Commerce, Georgia 30530, on May 2, 2023. This LOC authorizes research on bottlenose dolphins involving close approach during vessel surveys for count/survey, observations, photograph/video, and photo-identification within coastal and estuarine waters of central Georgia. The objective of the research is to describe basic population dynamics of the common bottlenose dolphin populations in the Central Georgia Estuarine Stock System. This includes evaluation of their abundance, distribution, residency, habitat utilization, and stock structure. The LOC expires on May 15, 2028.

File No. 27326: Issued to Nicole Mader, Dolphin Ecology Project, 106 Abbie Court, Stuart, Florida 34996, on June 12, 2023. This LOC authorizes research on bottlenose dolphins involving close approach during vessel surveys for counts, observations, monitoring, passive acoustic recordings, photography/videography, photo-identification, and focal follows within the St. Lucie River, Indian River Lagoon from the Stuart Causeway to Jupiter Inlet, and adjacent Atlantic coastal waters. The objectives of the research are to (1) identify dolphin seasonal residency or transient patterns on a small temporal scale, (2) monitor reproductive success and calf survival, (3) evaluate habitat use and behavior, and (4) document ranging patterns of dolphins into the nearshore coastal Atlantic Ocean of the Indian River Lagoon Estuarine System stock. The LOC expires on June 30, 2028.

File No. 27369: Issued to Stephen McCulloch, President, Protect Wild Dolphins Alliance, Inc., 307 Saint Thomas Avenue, Key Largo, Florida 33037, on August 14, 2023. This LOC authorizes research to estimate abundance, determine distribution patterns, assess habitat use, and evaluate site fidelity of bottlenose dolphins inhabiting the Upper Florida Keys. Authorized activities include close approach by vessel, for counts, photography, photo-identification, video recordings, behavioral observations, and underwater photography/videography by pole camera. The LOC expires on August 31, 2028.

File No. 22081: This LOC, held by Institute for Marine Mammal Studies (PI: Mobashir Solangi, Ph.D.), P.O. Box 207, Gulfport, Mississippi 39502, was extended on September 25, 2023. The

LOC authorizes vessel and aerial surveys using photo-identification, behavioral observations, photography, filming, and passive acoustic recordings to study bottlenose dolphins and other cetaceans, including Atlantic spotted, pantropical spotted (*Stenella attenuata*), and spinner (*Stenella longirostris*) dolphins, and pygmy sperm whales (*Kogia breviceps*) in select Mississippi and Louisiana waters. The extended LOC expires on December 1, 2024.

File No. 22291–01. Amended LOC issued to Barbara Brunnick, Ph.D., Palm Beach Dolphin Project, Taras Oceanographic Foundation, 5905 Stonewood Court, Jupiter, Florida 33468, on September 26, 2023. The LOC authorized vessel-based research for photo-identification, videography, and behavioral observations of bottlenose dolphins, Atlantic spotted dolphins, and ten other cetacean species in the nearshore and coastal waters of Palm Beach and Martin Counties, Florida. The amended LOC allows researchers to use unmanned aircraft systems as an additional platform to collect photographs, photogrammetry, and behavioral data. The LOC expires on June 30, 2025.

File No. 24045: This LOC, held by Jeremy Kiszka, Ph.D., Florida International University, 3000 NE 151st Street, Marine Science Building, Room 250D, North Miami, Florida 33181, was extended on January 30, 2024. The LOC authorizes vessel-based surveys for photo-identification, photography, videography, and behavioral observations of bottlenose and Atlantic spotted dolphins. Research may occur in Biscayne Bay and coastal waters of Broward and Miami Dade counties, Florida out to 200 m depth. The objectives of the research would not change. The extended LOC expires on February 10, 2025.

File No. 27746: Issued to Barbara Clark, Outer Banks Center for Dolphin Research, P.O. Box 7721, Kill Devil Hills, North Carolina 27948, on December 22, 2023. This LOC authorizes vessel surveys for close approach, photo-identification, and behavioral observations of bottlenose dolphins to monitor the presence, identity, ecology, and behavior of bottlenose dolphins within the sounds of North Carolina, including Roanoke Sound. The LOC expires on December 31, 2028.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a final determination has been made that the activities are categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Dated: April 29, 2024.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

Fisheries of the South Atlantic; South Atlantic Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The South Atlantic Fishery Management Council (Council) will hold a meeting of its Citizen Science Operations Committee via webinar May 22, 2024.

DATES: The Citizen Science Operations Committee meeting will be held via webinar on Wednesday, May 22, 2024, from 9 a.m. until 4 p.m.

ADDRESSES: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Julia Byrd (see **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information. Please request webinar invitations at least 24 hours in advance of each webinar. There will be an opportunity for public comment at the beginning of the meeting.

Council address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Julia Byrd, Citizen Science Program Manager, SAFMC; phone: (843) 302–8439 or toll free: (866) SAFMC–10; fax: (843) 769–4520; email: *julia.byrd@safmc.net.*

SUPPLEMENTARY INFORMATION: The Citizen Science Operations Committee serves as advisors to the Council's Citizen Science Program. Committee members include representatives from the Council's Citizen Science Advisory Panel Pool, NOAA Fisheries' Southeast Regional Office, NOAA Fisheries' Southeast Fisheries Science Center, and the Council's Science and Statistical Committee. Their responsibilities include developing programmatic recommendations, reviewing policies, providing program direction/multi-partner support, identifying citizen science research needs, and providing general advice.

Agenda items include: Review of the Citizen Science Program's initial evaluation plan, including researchers sharing preliminary findings and committee discussion of those findings; a Citizen Science Program and Project update; the Citizen Science Program's project idea portal; and other business.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for auxiliary aids should be directed to the Council office (see **ADDRESSES**) 5 days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 29, 2024.

Claudia Stephanie Womble,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Schedule for Atlantic Highly Migratory Species Outreach Workshops; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public outreach workshops; correction.

SUMMARY: NMFS has rescheduled the Atlantic Highly Migratory Species (HMS) Outreach Workshop originally scheduled for May 2, 2024 in Arecibo, Puerto Rico. This workshop was announced in the **Federal Register** on April 29, 2024. NMFS has rescheduled the HMS Outreach Workshop for May 2, 2024 at a new time and location in Arecibo, Puerto Rico.

DATES: The date of the rescheduled workshop has not changed. The HMS Outreach Workshop in Arecibo, Puerto Rico will be held on May 2, 2024. See the **SUPPLEMENTARY INFORMATION** section for the specific time.

ADDRESSES: The HMS Outreach Workshop will be held in Arecibo, Puerto Rico. See the **SUPPLEMENTARY**

INFORMATION section for the specific location, which has changed.

FOR FURTHER INFORMATION CONTACT: Delisse Ortiz by email at *delisse.ortiz@noaa.gov* or by phone at 301–427–8530.

SUPPLEMENTARY INFORMATION: Atlantic HMS fisheries are managed under the 2006 Consolidated HMS Fishery Management Plan and its amendments pursuant to the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*) and consistent with the Atlantic Tunas Convention Act (16 U.S.C. 971 *et seq.*). HMS implementing regulations are at 50 CFR part 635.

Correction

In the **Federal Register** of April 29, 2023 (89 FR 33333, April 29, 2024) in FR Doc. 2024–09138 on page 33334, in the first column, the location of the fourth HMS Outreach Workshop listed under the heading ''*Workshop Dates, Times, and Locations*'' is corrected to read as follows:

4. May 2, 2024, 6 p.m.–8 p.m. AST, Club Náutico de Arecibo (Salón Comodoro), F8G2+7X4, 6680, Cambalache, Arecibo, PR 00612.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 29, 2024.

Everett Wayne Baxter,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration (NOAA) Availability for Public Comment on NCA6 Draft Prospectus; Call for Authors and Contributors, Technical Inputs; and Notice of Public Engagement

AGENCY: Office of Oceanic and Atmospheric Research (OAR), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of request for public comment on the Draft Prospectus of the Sixth National Climate Assessment, Call for Authors and Contributors, Call for Technical Inputs, and Notice of Planned Public Engagement.

SUMMARY: NOAA is publishing this notice on behalf of the U.S. Global Change Research Program (USGCRP), which seeks public comment on the proposed themes and framework of the Sixth National Climate Assessment (NCA6) as indicated by the Draft Prospectus presented in Part I. Based on input received from this notice, USGCRP will develop an annotated outline, which will be released for public comment at a later date. This notice also requests nominations for volunteer contributors and submission of technical inputs (Parts II and III) and provides notice of planned public engagement events (Part IV) for NCA6.

DATES: Comments and nominations must be submitted to the web address specified below and received by June 7, 2024, at 11:59 p.m.

ADDRESSES: Comments, nominations, and technical inputs from the public will be accepted electronically via the USGCRP Public Contribution System: *https://contribute.globalchange.gov* Instructions for submitting comments are available on the website. Submitters may enter text or upload files in response to this notice.

FOR FURTHER INFORMATION CONTACT: Chris Avery, (202) 419–3474, *cavery@usgcrp.gov,* U.S. Global Change Research Program.

SUPPLEMENTARY INFORMATION: The following **Federal Register** Notice contains four parts:

Part I is a high-level description of the proposed themes and framework of NCA6. Comment on these themes and framework is requested from the public.

Part II is a call for volunteers to participate in NCA6 as authors and technical contributors.

Part III requests submission of relevant research for authors to review and consider in developing NCA6.

Part IV provides a notice of planned public engagement events throughout the NCA6 development cycle.

In addition to the proposed themes and framework, this **Federal Register** Notice requests public comment on ways to make the assessment information accessible and useful to multiple audiences; specific types of information or formats that would be most useful to decision-makers; how to best describe risks and impacts to inform decisions, as well as potential opportunities to reduce those risks and impacts; new topics or new approaches to topics addressed in previous assessments; overarching themes that NCA6 should consider addressing; and other relevant input.

The Global Change Research Act (GCRA) of 1990 mandates that the U.S. Global Change Research Program (USGCRP) deliver a National Climate Assessment (NCA) to Congress and the President not less frequently than every four years that ''(1) integrates, evaluates, and interprets the findings of the Program; (2) analyzes the effects of global change on the natural environment, agriculture, energy production and use, land and water resources, transportation, human health and welfare, human social systems, and biological diversity; and (3) analyzes current trends in global change, both human-induced and natural, and projects major trends for the subsequent 25 to 100 years.''

To date, five NCAs have been released. The first NCA was published in 2000, and the second was published in 2009. The third NCA was published in 2014, and the fourth was released in two volumes and completed in November 2018. The most recent, the fifth NCA, was released in November 2023, and can be found at *https://nca2023.globalchange.gov.*

NCA6 development will be transparent and inclusive, offering opportunities for diverse public participation throughout the process. The production and review processes are designed to result in a report that is authoritative, timely, relevant, and policy-neutral; valued by authors and users; accessible to the widest possible audience; and fully compliant with the GCRA.

I. Overarching Themes for NCA6 (Draft Prospectus)

NCA6 will encompass a number of overarching themes and perspectives that respond to needs and gaps identified by previous assessments. We seek inputs on potential overarching themes for the NCA6 report, including on the topics listed below:

Identification of advancements or improvements, relative to previous assessments, in scientific understanding of human-induced and natural processes of global change and the resulting implications for the U.S.

Characterization of current and future risks associated with global change, with quantifiable metrics such as indicators and projections where possible, and with the needs of different sub-national geographies and multiple audiences in mind.

Examining trends and developments in adaptation; adaptation options and effectiveness of adaptation efforts; approaches for monitoring adaptation progress including indicators and metrics.

Further exploration of how people understand the drivers, risks, and impacts of climate change; how changes in climate affects national security, society, and different people or groups of people living within the U.S.; and how people behave in response to climate-induced change.

Identification of populations living in the U.S. at higher risk of climate impacts, perspectives on equity and

environmental justice in connection with domestic mitigation and adaptation actions, exploration of the socio-economic impacts from these actions, and the role of frontline communities in the country's response to climate change.

Better understanding of sources and trends in U.S. and global greenhouse gas emissions; new strategies for mitigation, effectiveness of mitigation efforts, and new technology pathways for reaching different emissions targets; tradeoffs in different response options; and any other response-related questions that might support decision-making.

We seek comments on these proposed overarching themes, as well as suggestions for potential additional overarching themes.

Proposed Framework for NCA6

What follows is a proposed high-level framework intended to guide the scope and content for NCA6. Public comments are sought on all aspects of this proposed framework.

The proposed framework includes the following topics:

(A) Introduction and context for NCA6
(B) Foundational physical, social, and biological drivers of past and future climate change
(C) Climate risks and impacts to human health and well-being, social systems, and environments
(D) Regional and, where possible, sub-regional analyses within the United States
(E) Information needed to inform climate change mitigation and adaptation actions, increase resilience, and reduce risks
(F) Updates to the NCA Atlas and other climate services tools

This framework presents the anticipated scope and content of NCA6; it is not an indicator of the final structure of the report. Comments on these general topics, as well as any key scientific advances within a topic, are welcomed.

A. Introduction and Context for NCA6

Considerations of context and scope of NCA6 include the overarching themes noted above as well as the following:

NCA's relationship to complementary domestic and international assessment efforts.

Advancements in science or scientific approaches since NCA5 and discussion of the associated uncertainty, including assessments completed or in progress after publication of NCA5, and in particular those under the auspices of USGCRP (*e.g.,* the National Nature Assessment).

The geographic and temporal scope (*i.e.,* historic to the next 25 to 100 years).

Risks to interconnected natural, built, and social systems, and the potential for cascading or compound impacts of global change.

Terms and their definitions used to describe confidence and uncertainty levels associated with key statements and findings (and accompanying traceable accounts), which may be similar to those used in NCA5.

We seek public comment on the proposed introductory and contextual material described above for NCA6.

B. Foundational Physical, Social, and Biological Drivers of Past and Future Climate Change

NCA6 will assess the state of scientific evidence regarding the social, physical, and biological drivers of global change, with an emphasis on advances in knowledge since NCA5, including the following:

Changing global and national conditions that influence (1) drivers of climate change, namely the activities that lead to emissions and atmospheric buildup of greenhouse gas concentrations; and (2) factors that affect communities' resilience and vulnerability, such as demographic and land-use changes, behavioral changes, advances in technology, and economic development.

Observations of changes in climate-related phenomena at global, national, and subnational scales, such as atmospheric composition, radiative forcing, temperature, precipitation, climate variability, large-scale climate modes (*e.g.,* El Niño events), drought, wildfire, floods and associated hydrologic events (*e.g.,* streamflow, snowpack), sea-level rise and other physical ocean changes, biogeochemistry of land and marine systems, ocean acidification, extreme heat, and storms (*e.g.,* hurricanes), atmospheric rivers, polar changes (including permafrost and land-ice dynamics), and ice-sheet dynamics; and attribution of social, physical, and biophysical processes to human activities.

Future projections of changes in Earth system processes based on modeling results of the Coupled Model Intercomparison Project (CMIP). Treatment of future scenarios, and associated risks and impacts, will emphasize the most recent modeling data (*i.e.,* CMIP6), with CMIP5 and other future scenarios included as determined by the available sources of information.

Scientific understanding of observed and future extremes, including the attribution of an extreme event (intensity, duration, frequency, etc.) to climate change-related causes and potential tipping points or other potential outcomes that may have a low probability of occurring, but could be extremely damaging or highly beneficial to the U.S. were they to occur.

We seek public comment on the proposed physical, social, and biological science framing described above for NCA6.

C. Climate Change Risks and Impacts to Human Health and Well-Being, Social Systems, and Environments

The GCRA of 1990 requires that the NCA analyze ''the effects of global change on the natural environment, agriculture, energy production and use, land and water resources, transportation, human health and welfare, human social systems, and biological diversity.'' NCA6 will provide national-level overviews of observed and potential risks and impacts under a range of scenarios in these key areas of concern for people and the environment, with supporting regional information, as described under Part D.

To better understand global change, non-climatic trends (*e.g.,* population changes) will be discussed to provide a broader context within which the effects of climate change can be understood. Current and future risks, impacts, and benefits will be identified in each of these topic areas, using quantifiable metrics where possible. The impact of extreme events will be addressed where possible. In addition, potential mitigation, adaptation, and resilience measures to reduce risks will be described, to the extent these are identified in available sources of information.

In addition to coverage of these mandated topics, the following additional specific areas are under consideration for inclusion in NCA6: land cover and land-use change; forests; ecosystems and ecosystem services; coasts; ocean ecosystems; marine resources; built environment; urban and rural systems; air quality; effects on Tribal and Indigenous communities; economics; and international effects, in particular those that may raise environmental, humanitarian, trade, or public safety and security issues for the United States. It is worth noting that NCA6 may choose to reduce its coverage of topics that are assessed in other products (such as the National Nature Assessment), depending on the assessment findings of the author teams.

NCA6 will prioritize use of data and research that include full geographic coverage of the entire nation, inclusive

of Alaska, Hawai'i, U.S.-Affiliated Pacific Islands, and the U.S. Caribbean.

We seek public comment on the proposed areas of focus for NCA6 as described above and welcome input on other topics that should be considered for inclusion. Please note that topics listed in the Draft Prospectus or submitted as comments may or may not result in a standalone chapter or feature; development of the table of contents is at the discretion of the NCA6 Federal Steering Committee.

D. Regional Analyses Within the United States

This section will describe sub-national, regional-level perspectives for each of the areas identified in Part C, allowing for discussion of topics of interest to each region.

The proposed regional analyses for NCA6 will follow the model of NCA5, which included the following regions of the United States: Northeast, Southeast, U.S. Caribbean, Midwest, Northern Great Plains, Southern Great Plains, Northwest, Southwest, Alaska, and Hawai'i and U.S.-Affiliated Pacific Islands (see *https://nca2023.globalchange.gov/chapter/front-matter#fig-1*). Areas of focus will vary across regions based on the availability of research and the regional identification of needs.

As appropriate and where available, NCA6 will also highlight information at the state, city, Tribal, and territory level, as well as urban and rural case studies to showcase climate trends, potential risks, and mitigation, adaptation, and resilience action with local specificity.

We seek public comment on the proposed level of detail to be provided at regional scales, sectors, or topics to focus on within particular regions, and overarching themes that should inform the regional analyses within NCA6.

E. Information Needed To Support Climate Change Mitigation, Adaptation, Resilience, and Risk Reduction

NCA6 will identify needs and opportunities for mitigation, adaptation, and resilience measures and planning in the face of observed and projected changes in climate. NCA6 will not evaluate nor recommend specific policy measures, actions, instruments, or mechanisms to deliver or incentivize either adaptation or mitigation responses at any level of government. Rather, the intention of NCA6 is to inform mitigation, adaptation, and resilience needs, planning, and actions across the nation. Scientific assessment of mitigation, adaptation, and resilience needs and opportunities will also be drawn from relevant information from Parts B, C, and D as outlined above, including evidence of successful measures, and discussed in the context of the research topics described below.

Review of the following is proposed for inclusion in NCA6:

Recent information on economic drivers of emissions; social and economic impacts of climate change across sectors and regions at different levels of warming.

Recent information on the potential for reducing greenhouse gas emissions, adapting to climate impacts, and building climate resilience through various solutions and strategies. This includes an assessment of the evidence regarding the effectiveness of these solutions and strategies.

Recent information describing case studies (see Part D), where relevant.

The NCA also underpins U.S. government decision-support tools and resources such as the Climate Mapping for Resilience and Adaptation (CMRA) portal, and U.S. Climate Resilience Toolkit. Moreover, the NCA is a significant climate service for both producers and users in their mitigation, adaptation, and resilience work.

We seek public comment on the proposed framing of information in NCA6 needed to support climate change mitigation, adaptation, resilience, and risk reduction, connections between NCA6 and other U.S. government decision support tools, and how NCA6 may inform development and delivery of climate services (see Part F).

F. Updates to NCA Atlas and Other Climate Services

The incorporation of NCA information into U.S. government decision-support tools and other climate services has proven to be an effective way of ensuring NCAs are both useful and usable. USGCRP will maintain and expand the NCA Atlas as NCA6 develops, in addition to maintaining and expanding other existing support tools (see Part E). USGCRP will also seek to identify needs and opportunities for new climate services or connections between NCA and other relevant tools. This could include assessments of available climate services, especially as they relate to adaptation, resilience, and mitigation efforts. Gaps and opportunities could be a result of governance challenges and/or modeling/scientific understanding. Suggestions for other decision-support tools and services are welcomed.

As with previous assessments, appendices and front matter sections will provide additional background, context, and detail on the development of NCA6. Topics currently planned for inclusion include report process details, legal mandates and requirements, tools, and technical inputs. Suggestions for other appendix topics are requested.

We seek public comment on all aspects of the anticipated scope and content of this framework for NCA6, as described above.

Responses: Response to this Request for Comment is voluntary. Respondents need not reply to all questions or topics. Responses may be used by the U.S. Government for program planning on a non-attribution basis. NOAA therefore requests that no business proprietary information or copyrighted information be submitted in response to this Request for Comment. Please note that the U.S. Government will not pay for response preparation, or for the use of any information contained in the response.

II. Call for Authors and Contributors

NCA6 will be written by a group of volunteers with expertise in topics relevant to climate science and global change. Nominations are sought for authors with pertinent subject matter expertise, proficiency, or relevant background, including Indigenous Knowledge holders, in at least one of the topics delineated in the draft prospectus (Part I). Nominations are encouraged from all governmental and nongovernmental sectors.

The NCA6 Federal Steering Committee (FSC) recognizes the value of Indigenous Knowledge that Tribal Nations and Indigenous peoples have gained and passed down from generation to generation and recognizes Indigenous Knowledge as one of many important bodies of knowledge that can contribute to NCA6. The FSC understands that multiple lines of evidence or ways of knowing can lead to better-formed assessments and encourages nominations of Indigenous Knowledge holders for all NCA6 participant roles.

Submissions must document that nominees have demonstrated backgrounds such that they could contribute to the development of a robust assessment as subject matter experts in one or more of the topics described in the Draft Prospectus (Part I of this FRN) above. In addition, individuals interested in being considered for chapter leadership positions should have experience with leading collaborative teams under deadlines.

Authors volunteering to assist in writing NCA6 are providing an important service to the United States. In addition to providing an opportunity to inform policy, participation in NCA6 will allow authors to expand their professional networks and visibility,

and to explore opportunities to create derivative products.

The Federal Government will not provide financial compensation for these roles. The Federal Government is anticipated to provide travel costs to authors to attend meetings if requested for NCA6; however, this is not guaranteed. Formal acknowledgment of participant contributions will be provided to each author and their institution as requested.

NCA6 will attempt to address the full breadth of each topic and seeks a suitably diverse author pool, including Indigenous Knowledge holders, biophysical and social scientists, engineers, planners, and traditionally underrepresented groups. Selection criteria for all author positions will consider expertise, disciplinary background, career status, diversity, and geographic representation.

Participant Roles

Nominees may be invited to serve as Chapter Lead Authors, Graphics Development Leads, Authors, or Technical Contributors to NCA6.

A Federal Coordinating Lead Author (CLA) selected by the Federal Steering Committee (FSC) will serve as a liaison between the author team and federal agencies.

Chapter Leads (CLs) oversee chapter development by selecting authors, managing author teams, delegating chapter writing assignments, and providing drafts of the chapter to the CLA. CLs are closely involved with the writing process, working to ensure that the content of the chapter is consistent across sections and drafts are delivered on time. CLs will, with input and guidance from the FSC and CLA, establish author teams comprising federal and non-federal experts. Only non-federal experts may serve as CLs. Persons selected as CLs will be informed after the close of the nominations window.

The Graphics Development Lead is a new role introduced for NCA6. Graphics Leads will be a full author on the chapter team and will be responsible for leading and managing the development of all graphics within their assigned chapter. They will work directly with USGCRP staff and the NOAA Technical Support Unit throughout the process to ensure that well-designed informative graphics are developed alongside the text of the chapter.

Technical Contributors are invited by CLs to contribute to chapters for discrete, specific content, such as a case study or a figure, on an as-needed basis. Technical Contributors are not chapter authors and may be either federal or non-federal employees. Technical Contributors may be brought on later in the NCA6 development process as specific expertise is identified.

Eligible nominees not selected as Chapter Leads will be considered for other chapter roles as appropriate. For more information on author roles, see *https://www.globalchange.gov/nca6*.

Nomination Process

In developing NCA6, USGCRP will follow the principles of a use-inspired, knowledge-informed assessment, shaped by both the potential uses of the final products and by science and other forms of knowledge. USGCRP recognizes the importance of lived experiences and acknowledges Indigenous Knowledge as an important form of evidence. Across all phases of NCA6, USGCRP aims to be inclusive, represent diverse perspectives, and create products that are accessible to the widest possible audience.

Responses to this request for nominations for authors must be submitted by the closing of this FRN. The nomination forms can be accessed via *https://www.globalchange.gov/notices*. Interested persons may nominate themselves or third parties for these roles, and individuals may submit multiple nominations.

Each nomination must include (1) the nominee's full name, title, institutional affiliation, and contact information; (2) the nominee's area(s) of expertise; (3) the proposed NCA6 topic(s) (see Draft Prospectus in Part I above) for which the nominee is qualified; (4) a short description of the nominee's qualifications relative to contributing to the report; and (5) a current CV [maximum length four (4) pages].

All interested members of the public are encouraged to volunteer themselves for consideration. Nominations with missing information, or for nominees who do not meet the eligibility requirements above, may not be considered.

Expertise Sought

In accordance with the GCRA, USGCRP seeks nominations with expertise in the areas of climate/Earth system science, as well as sectoral, issue-specific, and regional impacts. This includes expertise in the following broad topic areas (subject to change):

Climate/Earth system science expertise to integrate, evaluate, and interpret the latest scientific findings; discuss the associated uncertainties; analyze current trends in global change; and project major trends for the subsequent 25 to 100 years.

Sectoral and issue-specific impacts expertise, including in the social sciences, to analyze the effects of global change on the natural environment (including terrestrial, aquatic, and marine ecosystems); agriculture (including food and food production); energy production and use; land and water resources (including land cover/land-use change, forests, coasts, oceans, and terrestrial/marine resources); transportation; human health and welfare (including air quality); human social systems (including the built environment, urban/rural systems, cities, and economics); biological diversity; Tribes and Indigenous peoples; and response.

Regional expertise that integrates across relevant natural and social science areas for the NCA regions (available at *https://www.globalchange.gov/nca5*).

Response expertise relevant to NCA6, including (but not limited to) mitigation, adaptation, resilience, or other relevant scientific topics.

Any other relevant climate services-related topic or skill set not listed above, including (but not limited to) engineering, planning, architecture, finance, business.

Further, authors are welcome to nominate themselves for topics not listed above that are consistent with the GCRA mandate.

In addition to technical knowledge, USGCRP seeks nominees with expertise that would be useful for developing an NCA chapter. These skills include (but are not limited to) the following:

Clear and effective scientific writing, especially for a non-technical audience.

Graphic design experience, such as developing data-focused graphics that are clear and effective, development of infographics, or downscaling modeling visualization.

Team management experience, including overseeing the work of multiple technical experts to a central project.

Synthesis and assessment projects, especially across multiple research disciplines and types of technical inputs.

Conditions of Participation

All participation in and contributions to the NCA will be without compensation and will be potentially included in the publicly released NCA. By voluntarily participating in the NCA, you acknowledge the following:

1. Participation in the NCA means facilitating the development of the NCA, contributing new work to the NCA, or contributing preexisting work for the NCA. Any such work will be

incorporated into the NCA at the Federal Government's discretion, including the possibility of modification, without any compensation and without redaction under the Freedom of Information Act (FOIA) or otherwise.

2. All contributions to the NCA of text and original figures (those newly created for NCA and not previously published) will be released under the Creative Commons 1.0 Universal Public Domain Dedication (CC0 1.0). Such contributions will not be protected by copyright or other intellectual property rights. Data, algorithms/models, and software code used to create or support the creation of text and original figures will also be publicly released in connection with the NCA. In some cases, such data, algorithms/models, and software code may be subject to copyright restrictions prohibiting both their use for commercial purposes and the creation of derivative works, such as CC BY–NC–ND 4.0, but any such restrictions may not prohibit their use for the purpose of reproducing results.

3. Participants assume any and all risks associated with participation in the NCA. By participating, participants inherently waive all claims against the Federal Government and its related entities, except for claims based on willful misconduct, for any injury, death, damage, or loss of property, revenue, or profits (whether direct, indirect, or consequential) arising from participation in the NCA.

4. By participating, participants agree to indemnify the Federal Government in the event that it suffers liability or damages as a result of its use of the contribution.

Submission of a nomination is entirely voluntary and submitters are encouraged to ensure they understand the scope of the obligation before volunteering. More information, as well as information on asking questions beforehand, at *https://www.globalchange.gov/nca6*.

III. Call for Technical Inputs

In addition, this request presents an opportunity to submit relevant scientific/technical inputs to inform the assessment. Any interested parties are encouraged to submit relevant sources of information (*e.g.,* papers, articles, reports, Indigenous Knowledge, and other local knowledge) for the NCA6 author teams to consider and assess for their work. Technical submissions will be accepted electronically via the USGCRP Public Contribution System: *https://contribute.globalchange.gov* Instructions for submitting technical inputs are available on the website. Submitters may enter text or upload files in response to this notice.

After the closure of this FRN, submissions of technical inputs will still be accepted throughout the NCA6 development process. This call for technical inputs is expected to remain open until the close of the NCA6 call for public comments on the NCA6 Third Order Draft, anticipated to end in early 2027. Additional information on the process for submitting technical inputs can be found after the closure of this FRN on USGCRP's website. See *https://www.globalchange.gov/nca6* for more information.

Response to this call for technical inputs is voluntary.

IV. Notice of Planned Public Engagement Opportunities for NCA6

Multiple opportunities for public engagement to inform NCA6 will be presented throughout the report's development. The following planned public engagement schedule is presented to notify the public of these coming opportunities. The time ranges proposed are subject to change based on the timing of various development stages for NCA6.

Public call for comments on the Draft Prospectus (Q2 2024)

Public call for authors and technical inputs (Q2 2024)

Public comment on NCA6 annotated outline (Q3 2025)

Public engagement workshops and webinars (Q3 2025)

Public call for art (Q2 2026)

Public call for Review Editors (Q3 2026)

Public comment on NCA6 Third Order Draft (Q4 2026 and Q1 2027)

National Academies of Sciences, Engineering, and Medicine peer review of NCA6 Third Order Draft (Q4 2026 and Q1 2027)

Interested parties are invited to participate in these public engagement opportunities to ensure robust public input to NCA6. Specific dates and locations for all engagements will be provided on *https://www.globalchange.gov/notices*. Members of the public may also sign up to receive updates through USGCRP's bimonthly newsletter at *https://www.globalchange.gov/newsletter-signup*.

David Holst,

Chief Financial Officer and Administrative Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

[FR Doc. 2024–09575 Filed 5–1–24; 8:45 am]

BILLING CODE 3510–KD–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Application for Commercial Fisheries Authorization Under Section 118 of the Marine Mammal Protection Act

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before July 1, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov.* Please reference OMB Control Number 0648–0293 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Jaclyn Taylor, National Marine Fisheries Service, Office of Protected Resources, 1315 East West Hwy., Bldg. SSMC3, Silver Spring, MD 20910–3282, 301–427–8402 or *Jaclyn.Taylor@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Marine Fisheries Service's (NMFS) Office of Protected Resources sponsors this information collection and is requesting renewal of the currently approved collection.

Section 118 of the Marine Mammal Protection Act (MMPA) requires any commercial fisherman operating in Category I and II fisheries to register for a certificate of authorization that will allow the fisherman to take marine

mammals incidental to commercial fishing operations. Category I and II fisheries are those identified by NOAA as having either frequent or occasional takings of marine mammals. All states have integrated the NMFS registration process into the existing state fishery registration process and vessel owners do not need to file a separate federal registration. If applicable, vessel owners will be notified of this simplified registration process when they apply for their state or Federal permit or license. A valid certificate of authorization protects the vessel owner from prosecution under the MMPA for violation of the moratorium on taking marine mammals. The information needed to register or update a commercial fishery authorization is found at 50 CFR 229.4

II. Method of Collection

Fishermen's information is imported directly into the Marine Mammal Authorization Program (MMAP) from their state. If they do not have a state or Federal fishery permit or license, fishermen can request a MMAP registration form (OMB no. 0648–0293) from their NMFS regional office and mail or email the registration form.

III. Data

OMB Control Number: 0648–0293.
Form Number(s): None.
Type of Review: Regular submission [extension of a current information collection].
Affected Public: Individuals or households; Business or other for-profit organizations.
Estimated Number of Respondents: 100.
Estimated Time per Response: Initial registration 15 minutes.
Estimated Total Annual Burden Hours: 25 hours.
Estimated Total Annual Cost to Public: $2,555 in recordkeeping/reporting costs and application fees.
Respondent's Obligation: Required for participants in Category I and II fisheries to lawfully take marine mammals' incidental to fishing operations.
Legal Authority: 16 U.S.C. 1361 *et seq.;* MMPA.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–09484 Filed 5–1–24; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD903]

Atlantic Coastal Fisheries Cooperative Management Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments.

SUMMARY: The Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an Exempted Fishing Permit (EFP) renewal application from the New Hampshire Fish and Game Department contains all of the required information and warrants further consideration. The EFP would allow federally permitted fishing vessels to fish outside fishery regulations in support of exempted fishing activities proposed by the applicant. Regulations under the Atlantic Coastal Fisheries Cooperative Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed EFPs.

DATES: Comments must be received on or before May 17, 2024.

ADDRESSES: You may submit written comments by the following method:

- *Email: nmfs.gar.efp@noaa.gov.* Include in the subject line ''NHFG Early Benthic-Phase Lobster Trap EFP''.

All comments received are a part of the public record and may be posted for public viewing in *https://www.noaa.gov/organization/information-technilogy/foia-reading-room* without change. All personal identifying information (*e.g.,* name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''anonymous'' as the signature if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Christine Ford, Fishery Management Specialist, *Christine.Ford@noaa.gov,* (978) 281–9185.

SUPPLEMENTARY INFORMATION: The New Hampshire Fish and Game Department (NHFG) submitted a complete application for an EFP to conduct commercial fishing activities that the regulations would otherwise restrict. The EFP would allow NHFG to continue pilot testing of early benthic-phase (EBP) lobster traps, designed to target juvenile lobsters between 15- and 60-millimeter (mm) carapace length, to determine their feasibility for broader use in lobster surveys. This EFP would exempt the participating vessels from the Federal regulations in table 1:

TABLE 1—REQUESTED EXEMPTIONS

CFR citation	Regulation	Need for exemption
50 CFR 697.21(c) and § 697.21(d)	Gear specification requirements	To allow for the use of modified traps with no escape vents or ghost panels.

TABLE 1—REQUESTED EXEMPTIONS—Continued

CFR citation	Regulation	Need for exemption
§ 697.19	Trap limit requirements	To allow for four additional traps per vessel (20 total).
§ 697.19(j)	Trap tag requirements	To allow for the use of four untagged traps per vessel (20 total).
§§ 697.20(a)(7), 697.20(a)(8), 697.20(b)(5), 697.20(b)(6), 697.20(d), and 697.20(g).	Possession restrictions	To allow for onboard biological sampling of undersized, oversized, v-notched, and egg-bearing lobsters.
§ 697.21(a)	Gear identification and marking requirements.	To allow for the use of four unmarked traps per vessel (20 total).

TABLE 2—PROJECT SUMMARY

Project title	Testing an EBP lobster trap on Georges Bank.
Project start	06/15/2024.
Project end	06/14/2025.
Project objectives	To continue testing an early-benthic-phase lobster trap, which targets lobsters between 15- and 60-mm carapace lengths, to determine its feasibility for broader use in lobster surveys.
Project location	Offshore Gulf of Maine & Georges Bank; Statistical Areas 513, 522, 525, 526, 537, 561, and 562.
Number of vessels	Up to 5.
Number of trips	500.
Trip duration (days)	Up to 8.
Total number of days	Up to 4,000.
Gear type(s)	Trap/pot (modified—see project narrative).
Number of tows or sets	Up to 4 per trip; up to 2,000 total.
Duration of tows or sets	~4 days.

Project Narrative

The participants would place four EBP traps on two of their existing trawls (two EBP traps per trawl) and haul them up to twice per trip (for a total of up to four hauls per trip) during the course of the vessel's normal fishing activity. The EBP traps are 80-centimeter (cm) square traps based on a modified crawfish trap. They have four square openings, measuring less than 2 inches (5.08 cm), which lead to ramps that drop the lobsters into a baited kitchen. Inside the traps, there are additional ramps that lead the lobsters to four cylindrical parlors with vertical openings. The traps are attached to cement runners that provide weight and maintain proper orientation. The crews would rig the EBP traps within Atlantic Large Whale Take Reduction Plan-compliant commercial trawls, resulting in no additional end lines. Each vessel would fish four traps above their allocation, but would remain within the universal Area 3 trap cap. At each haul, crews would record, and immediately release, all bycatch and measure, sex, and release all lobsters from the EBP trap. They would also sample catch in two standard traps within the trawl as control data. They would land and sell the legal catch from the standard traps.

The goal of this project is to test the selectivity of the EBP trap (versus ventless traps that often catch eel and crab), and the scalability of its use. If successful, EBP traps could be used in lobster surveys to provide information about larval-settlement patterns and juvenile nursery grounds.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 26, 2024.

Everett Wayne Baxter,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board; Notice of Federal Advisory Committee Meetings

AGENCY: Under Secretary of Defense for Research and Engineering (USD(R&E)), Department of Defense (DoD).

ACTION: Notice of Federal advisory committee meetings.

SUMMARY: The DoD is publishing this notice to announce that the following Federal Advisory Committee meetings of the Defense Science Board (DSB) will take place.

DATES: Closed to the public Wednesday, June 26, 2024 from 8 a.m. to 5 p.m.; closed to the public Thursday, June 27, 2024 from 8 a.m. to 4 p.m.; closed to the public Wednesday, July 24, 2024 from 8 a.m. to 5 p.m.; closed to the public Thursday, July 25, 2024 from 8 a.m. to 4 p.m.

ADDRESSES: The address of the closed meetings is 4075 Wilson Blvd., Suite 300, Arlington, VA 22203.

FOR FURTHER INFORMATION CONTACT: Ms. Elizabeth J. Kowalski, Designated Federal Officer (DFO): (703) 571–0081 (Voice), (703) 697–1860 (Facsimile), *elizabeth.j.kowalski.civ@mail.mil,* (Email). Mailing address is Defense Science Board, 3140 Defense Pentagon, Washington, DC 20301–3140. Website: *http://www.acq.osd.mil/dsb/.* The most up-to-date changes to the meeting agenda can be found on the website.

SUPPLEMENTARY INFORMATION: These meetings are being held under the provisions of chapter 10 of title 5, United States Code (U.S.C.) (commonly known as the ''Federal Advisory Committee Act'' or ''FACA''), 5 U.S.C. 552b (commonly known as the

''Government in the Sunshine Act''), and sections 102–3.140 and 102–3.150 of title 41, Code of Federal Regulations (CFR).

Purpose of the Meetings: The mission of the DSB is to provide independent advice and recommendations on matters relating to the DoD's scientific and technical enterprise. The objective of the meeting is to obtain, review, and evaluate classified information related to the DSB's mission. DSB membership will discuss the 2024 DSB Summer Study on Advanced Capabilities for Potential Future Conflict and classified strategies for continued development of symmetric and asymmetric capabilities.

Agenda: The meeting will begin on Wednesday, June 26, 2024 at 8 a.m. Ms. Betsy Kowalski, DSB DFO, and Dr. Eric Evans, DSB Chair, will provide opening remarks and a classified overview of the objectives of the 2024 Summer Study on Advanced Capabilities for Potential Future Conflict. Next, the DSB will meet to discuss classified strategies that best enable DoD's continued development of symmetric and asymmetric capabilities that will characterize future conflicts, including periodic breaks. The meeting will adjourn at 5 p.m. On Thursday, June 27, 2024, starting at 8 a.m., the DSB will continue to meet to discuss classified strategies that best enable DoD's continued development of symmetric and asymmetric capabilities that will characterize future conflicts, including periodic breaks. The meeting will adjourn at 4 p.m. On Wednesday, July 24, 2024, the meeting will begin at 8 a.m. Ms. Betsy Kowalski, DSB DFO, and Dr. Eric Evans, DSB Chair, will provide opening remarks and a classified overview of the objectives of the 2024 Summer Study on Advanced Capabilities for Potential Future Conflict. Next, the DSB will meet to discuss classified strategies that best enable DoD's continued development of symmetric and asymmetric capabilities that will characterize future conflicts, including periodic breaks. The meeting will adjourn at 5 p.m. On Thursday, July 25, 2024, starting at 8 a.m., the DSB will continue to meet to discuss classified strategies that best enable DoD's continued development of symmetric and asymmetric capabilities that will characterize future conflicts, including periodic breaks. The meeting will adjourn at 4 p.m.

Meeting Accessibility: In accordance with 5 U.S.C. 1009(d) and 41 CFR 102–3.155, the DoD has determined that the DSB meetings will be closed to the public. Specifically, the USD(R&E), in consultation with the DoD Office of the General Counsel, has determined in writing that the meetings will be closed to the public because they will consider matters covered by 5 U.S.C. 552b(c)(1). The determination is based on the consideration that it is expected that discussions throughout will involve classified matters of national security concern. Such classified material is so intertwined with the unclassified material that it cannot reasonably be segregated into separate discussions without defeating the effectiveness and meaning of the overall meetings. To permit the meetings to be open to the public would preclude discussion of such matters and would greatly diminish the ultimate utility of the DSB's findings and recommendations to the Secretary of Defense and to the USD(R&E).

Written Statements: In accordance with 5 U.S.C. 1009(a)(3) and 41 CFR 102–3.105(j) and 102–3.140, interested persons may submit a written statement for consideration by the DSB at any time regarding its mission or in response to the stated agenda of a planned meeting. Individuals submitting a written statement must submit their statement to the DSB DFO at the email address provided in the **FOR FURTHER INFORMATION CONTACT** section at any point; however, if a written statement is not received at least three calendar days prior to a meeting, which is the subject of this notice, then it may not be provided to or considered by the DSB until a later date.

Dated: April 26, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2024–09571 Filed 5–1–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2023–OS–0089]

Submission for OMB Review; Comment Request

AGENCY: Office of the Secretary of Defense, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The DoD has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by June 3, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Reginald Lucas, (571) 372–7574, *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Generic Clearance for Improving Customer Experience (OMB Circular A–11, Section 280 Implementation); OMB Control Number 0704–0595.

Type of Request: Extension.

Number of Respondents: 300,000.

Responses per Respondent: 1.

Annual Responses: 300,000.

Average Burden per Response: 10 minutes.

Annual Burden Hours: 50,000.

Needs and Uses:

A. Purpose

Whether seeking a loan, Social Security benefits, veteran's benefits, or other services provided by the Federal Government, individuals and businesses expect Government customer services to be efficient and intuitive, just like services from leading private-sector organizations. Yet the 2016 American Consumer Satisfaction Index and the 2017 Forrester Federal Customer Experience Index show that, on average, Government services lag nine percentage points behind the private sector.

A modern, streamlined and responsive customer experience means: raising government-wide customer experience to the average of the private sector service industry; developing indicators for high-impact Federal programs to monitor progress towards excellent customer experience and mature digital services; and providing the structure (including increasing transparency) and resources to ensure customer experience is a focal point for agency leadership. To support this, OMB Circular A–11 section 280 established government-wide standards for mature customer experience organizations in government and measurement. To enable Federal programs to deliver the experience taxpayers deserve, they must undertake three general categories of activities: conduct ongoing customer research, gather and share customer feedback, and test services and digital products.

These data collection efforts may be either qualitative or quantitative in

nature or may consist of mixed methods. Additionally, data may be collected via a variety of means, including but not limited to electronic or social media, direct or indirect observation (*i.e.,* in person, video and audio collections), interviews, questionnaires, surveys, and focus groups. DoD will limit its inquiries to data collections that solicit strictly voluntary opinions or responses. Steps will be taken to ensure anonymity of respondents in each activity covered by this request.

The results of the data collected will be used to improve the delivery of Federal services and programs. It will include the creation of personas, customer journey maps, and reports and summaries of customer feedback data and user insights. It will also provide government-wide data on customer experience that can be displayed on performance.gov to help build transparency and accountability of Federal programs to the customers they serve.

Method of Collection:

DoD will collect this information by electronic means when possible, as well as by mail, fax, telephone, technical discussions, and in-person interviews. DoD may also utilize observational techniques to collect this information.

B. Annual Reporting Burden

Affected Public: Collections will be targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Mr. Reginald Lucas.

Requests for copies of the information collection proposal should be sent to Mr. Lucas at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2024–09556 Filed 5–1–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0046]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel & Readiness (OUSD(P&R)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the OUSD(P&R) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 1, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Federal Voting Assistance Program, Department of Defense, 4800 Mark Center Drive, Suite 05E22, Alexandria, VA 22350–5000, Brianna Paul, (571)–545–3996.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Federal Post Card Application (FPCA); SF76; OMB Control Number 0704–0503.

Needs and Uses: The Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA), 52 U.S.C. 203, requires the Presidential designee (Secretary of Defense) to prescribe an official form containing an absentee voter registration and ballot request application for use by the States to permit absent uniformed services voters and overseas voters to participate in general, special, primary and runoff elections for Federal office. The authority for the States to collect personal information comes from UOCAVA. The burden for collecting this information resides in the States. The Federal government neither collects nor retains any personal information associated with this form.

The collected information will be used by State and local election officials to process uniformed service members, spouses and overseas citizens who submit their information to register to vote or receive an absentee ballot. The collected information will be retained by election officials to provide election materials, including absentee ballots, to the uniformed services, their eligible family members and overseas voters during the form's eligibility period provided by State law. No information from the Federal Post Card Application (FPCA) is collected or retained by the Federal government. The FPCA is completed in hardcopy or via the Federal Voting Assistance Program's (FVAP) online assistant (*fvap.gov*), and then submitted by the voter to an Election Official through mail, email, or fax (depending on State instructions). Per the law, FVAP regularly reaches out to UOCAVA citizens in order to raise awareness of its voting assistance services, primarily via its website, *FVAP.gov.*

Affected Public: Individuals; State and Local Governments.

Annual Burden Hours: 300,000.

Number of Respondents: 1,200,000.
Responses per Respondent: 1.
Annual Responses: 1,200,000.
Average Burden per Response: 15 minutes.
Frequency: On Occasion.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2024–09558 Filed 5–1–24; 8:45 am]

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0045]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel & Readiness (OUSD(P&R)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the OUSD(P&R) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 1, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Federal Voting Assistance Program, Department of Defense, 4800 Mark Center Drive, Suite 05E22, Alexandria, VA 22350–5000, Brianna Paul, (571) 545–3996.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Federal Write-In Absentee Ballot; Standard Form 186; OMB Control Number 0704–0502.

Needs and Uses: The Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA), 52 U.S.C. 203, requires the Presidential designee (Secretary of Defense) to prescribe an official backup ballot for use by the States to permit absent uniformed services voters and overseas voters to participate in general, special, primary and runoff elections for Federal office. The authority for the States to collect personal information comes from UOCAVA. The burden for collecting this information resides in the States. The Federal government neither collects nor retains any personal information associated with these forms.

The collected information will be used by State and local election officials to process uniformed service members, spouses and overseas citizens who submit their information to register to vote or receive an absentee ballot. The collected information will be retained by election officials to provide election materials, including absentee ballots, to the uniformed services, their eligible family members and overseas voters during the form's eligibility period provided by State law. No information from the Federal Write-In Absentee Ballot (FWAB) is collected or retained by the Federal government. The FWAB is completed in hardcopy or via the Federal Voting Assistance Program's (FVAP) online assistant (*fvap.gov*), and then submitted by the voter to an Election Official through mail, email, or fax (depending on State instructions). Per the law, FVAP regularly reaches out to UOCAVA citizens to raise awareness of its voting assistance services, primarily via its website, *FVAP.gov.*

Affected Public: Individuals or households; Businesses or other for-profit; Not-for-profit Institutions; Farms, Federal Governments; State, Local or Tribal Government.

Annual Burden Hours: 300,000.
Number of Respondents: 1,200,000.
Responses per Respondent: 1.
Annual Responses: 1,200,000.
Average Burden per Response: 15 minutes.
Frequency: On Occasion.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Advisory Committee on Military Personnel Testing; Notice of Federal Advisory Committee Meeting

AGENCY: Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Notice of Federal advisory committee meeting.

SUMMARY: The DoD is publishing this notice to announce that the following meeting of the Defense Advisory Committee on Military Personnel Testing (DACMPT) will take place.

DATES: Day 1—Open to the public Wednesday, June 12, 2024 from 8:30 a.m. to 5:30 p.m., Pacific Time. Day 2—Open to the public Thursday, June 13, 2024, from 8:30 a.m. to 1:15 p.m., Pacific Time.

ADDRESSES: Venue to-be-determined (TBD). Meeting details will be posted on: *https://dacmpt.com.*

FOR FURTHER INFORMATION CONTACT: Designated Federal Officer (DFO), Dr. Sofiya Velgach, (703) 697–9271 (Voice), 703 614–9272 (Facsimile), *osd.pentagon.ousd-p-r.mbx.dacmpt@mail.mil* (Email). Mailing address is Designated Federal Officer, Accession Policy, Office of the Under Secretary of Defense for Personnel and Readiness, Room 3D1066, The Pentagon, Washington, DC 20301–4000. The most up-to-date changes to the meeting can be found on the website: *https://dacmpt.com.*

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of chapter 10 of title 5, United States Code (U.S.C.) (commonly known as the ''Federal Advisory Committee Act'' or ''FACA''); 5 U.S.C. 552b (commonly known as the ''Government in the Sunshine Act''); and 41 Code of Federal Regulations (CFR) 102–3.140 and 102–3.150.

Purpose of the Meeting: The purpose of the meeting is to provide an overview of the accession testing program, review progress on the test development efforts, provide an update on the calculator study, and gather advice on current testing capabilities. Additional information can be found at *https://dacmpt.com.*

Agenda

Day 1, Wednesday, June 12, 2024 (Pacific Time)

8:30 a.m.–8:45 a.m.: Welcome and Opening Remarks—Dr. Sofiya Velgach, OASD(M&RA)/AP
8:45 a.m.–9:15 a.m.: Accession Policy Brief—Dr. Katherine Helland, OASD(M&RA)/AP
9:15 a.m.–10:00 a.m.: R&D Milestones Brief—Dr. Mary Pommerich, OPA/DTAC
10:00 a.m.–10:15 a.m.: *Break*
10:15 a.m.–11:15 a.m.: Next Generation Testing—Dr. Kimberly Adams, HumRRO
  a. Test Overviews
  b. How Pieces Fit Together
  c. Roadmap Efforts
11:15 a.m.–12:15 p.m.: Form Development Methodology—Dr. Glen Heinrich-Wallace, Dr. Ted Diaz (HumRRO)
  a. Calibration Sample Size Study
  b. Use of Machine Learning and Natural Language Processing Method
12:15 p.m.–1:45 p.m.: *Lunch*
1:45 p.m.–2:45 p.m.: Form Equating Simulation Study—Dr. Jeff Dahlke (HumRRO)
2:45 p.m.–3:45 p.m.: Calculator Analyses Efforts—Dr. Andrea Sinclair, HumRRO
3:45 p.m.–4:00 p.m.: *Break*
4:00 p.m.–4:30 p.m.: Complex Reasoning Update—Dr. Kate Klein (HumRRO)
4:30 p.m.–5:00 p.m.: Computational Thinking Update—Dr. Kimberly Adams, Dr. Scott Oppler (HumRRO)
5:00 p.m.–5:15 p.m.: *Public Comments*

Day 2, Thursday, June 13, 2024 (Pacific Time)

8:30 a.m.–9:30 a.m.: Non-Cognitive Updates
  a. Joint—Service TAPAS Background—Dr. Dan Putka, Dr. Tim McGonigle, HumRRO
  i. Identification of Phase 0 Composites
  ii. Development of Phase 1 Composites
  iii. JS TAPAS Instrument Planning and Composite Refinement
  b. Best Practices Project Team—MC Dr. Brenda Ellis, HumRRO
9:30 a.m.–10:30 a.m.: Norming Efforts—Dr. Rod McCloy (HumRRO)
10:30 a.m.–10:45 a.m.: *Break*
10:45 a.m.–11:30 a.m.: ASVAB CEP Dr. Irina Rader, Ms. Temeka Franklin, OPA/DTAC
11:30 a.m.–11:45 a.m.: Legislation/Policy Review Dr. Sofiya Velgach, OASD(M&RA)/AP
11:45 a.m.–12:00 p.m.: Resource Overview—Dr. Mary Pommerich, OPA/DTAC
  a. Systems
  b. Staffing
  c. Funding
12:00 p.m.–12:30 p.m.: Prioritization of Recommendations—Dr. Sofiya Velgach, OASD(M&RA)/AP
12:30 p.m.–12:45 p.m.: Future Topics Dr. Mary Pommerich, OPA/DTAC
12:45 p.m.–1:00 p.m.: *Public Comments*
1:00 p.m.–1:15 p.m.: Closing Comments—Dr. Nancy Tippins, Chair
1:15 p.m.–3:00 p.m.: *Working Lunch (Administrative Items)*

Abbreviations Key

ASVAB—Armed Services Vocational Aptitude Battery
ASVAB CEP—ASVAB Career Exploration Program, student testing program provided at no cost to high schools nation-wide to help students develop career exploration skills and used by recruiters to identify potential applicants for enlistment
HumRRO—Human Resources Research Organization
JS—Joint Service
MC—Military Compatibility
OASD(M&RA)/AP—Office of the Assistant Secretary of Defense for Manpower and Reserve Affairs/Accession Policy
OPA/DTAC—Office of People Analytics/Defense Testing and Assessment Center
TAPAS—Tailored Adaptive Personality Assessment System

Latest version of the agenda will be posted on *https://dacmpt.com.*

Meeting Accessibility: Pursuant to 5 U.S.C. 1009(a)(1) and 41 CFR 102–3.140 through 102–3.165, and subject to the availability of space, this meeting is open to the public. Seating availability is based on first-come, first-served basis. All members of the public who wish to attend the public meeting must contact the DFO no later than 12:00 p.m. on Monday, June 3, 2024, as listed in the **FOR FURTHER INFORMATION CONTACT** section.

Written Statements: Pursuant to 41 CFR 102–3.105(j) and 102–3.140 and 5 U.S.C. 1009(a)(3), interested persons may submit written statements to the DACMPT at any time about its approved agenda or at any time on the DACMPT's mission. Written statements should be submitted to the DACMPT's DFO at the address or facsimile number listed in the **FOR FURTHER INFORMATION CONTACT** section. If statements pertain to a specific topic being discussed at the planned meeting, then these statements must be submitted no later than five (5) business days prior to the meeting in question. Written statements received after this date may not be provided to, or not considered by the DACMPT until its next meeting. The DFO will review all timely submitted written statements and provide copies to all the DACMPT members before the meeting that is the subject of this notice. Please note that since the DACMPT operates under the provisions of the FACA, all submitted comments and public presentations will be treated as public documents and will be made available for public inspection. Opportunity for public comments will be provided at the end of each day. Public comments will be limited to 5 minutes per person, as time allows.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Proposals by Non-Federal Interests for Inclusion in the Annual Report to Congress on Future Water Resources Development

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice.

SUMMARY: The Assistant Secretary of the Army for Civil Works (ASA(CW)) is soliciting proposals for inclusion in the 2025 Annual Report to Congress on Future Water Resources Development (Annual Report). The Annual Report includes proposals submitted by non-federal interests for new feasibility studies, proposed modifications to authorized water resources development projects or feasibility studies, and proposed modifications to environmental infrastructure program authorities. The Annual Report is authorized under section 7001 of the Water Resources Reform and Development Act (WRRDA) of 2014, as amended.

DATES: Proposals must be submitted by August 30, 2024.

ADDRESSES: Submit proposals by emailing the completed proposal form

to *WRRDA7001Proposal@usace.army.mil.* If a different method of submission is required, use the further information below to arrange an alternative submission process.

FOR FURTHER INFORMATION CONTACT: For further information about the Annual Report, visit the U.S. Army Corps of Engineers (USACE) Headquarters website (*https://www.usace.army.mil/Missions/Civil-Works/Project-Planning/WRRDA-7001-Proposals/*), email *WRRDA7001Proposal@usace.army.mil,* or call Michele Gomez, Planning and Policy Division, Headquarters, USACE, Washington, DC at 202–761–7193.

SUPPLEMENTARY INFORMATION:

A. Background on the Annual Report

The Annual Report to Congress on Future Water Resources Development, prepared pursuant to section 7001 of WRRDA 2014, as amended (33 U.S.C. 2282d), provides an opportunity for communities to inform Congress about their interest in a new congressional authorization—or modifying an existing authorization—for specifically authorized Civil Works water resources studies, projects, and environmental infrastructure programs. The Annual Report provides Congress with a list of potential studies and projects to newly authorize and a list of existing study, project, and environmental infrastructure program authorities to modify. Congress generally authorizes new USACE studies, projects, and environmental infrastructure programs in an omnibus authorization bill, typically called the Water Resources Development Act (WRDA).

If a proposal from a non-federal interest for a new study authorization is included in the Annual Report, it is anticipated that authorization would be for the study, not for construction. To begin a water resources feasibility study, USACE must have sufficient study authority, and funds must be appropriated and made available for the ederal cost share of the feasibility study. A primary outcome of a USACE water resources feasibility study is a recommendation for Congressional authorization to construct a water resources project. For USACE to proceed to construction, the project must be authorized for construction by Congress, and funds must be appropriated and made available for project construction. An overview of USACE Civil Works water resources study and project processes is found in the document entitled ''Partnering with the U.S. Army Corps of Engineers: A Guide for Communities, Local Governments, States, Tribes, and Non-Governmental Organizations,'' which is available online at *https://planning.erdc.dren.mil/toolbox/library/IWRServer/2019-R-02.pdf.*

B. Sources of More Information

1. USACE will host two public virtual information sessions about the Annual Report and the proposal submission and evaluation process for the 2025 Annual Report on June 25, 2024, and August 8, 2024.The Headquarters website (*https://www.usace.army.mil/Missions/Civil-Works/Project-Planning/WRRDA-7001-Proposals/*) contains additional information and frequently asked questions about the Annual Report.

2. The local USACE district office will assist in researching and identifying existing Congressional authorities for Civil Works water resources feasibility studies, projects, and environmental infrastructure programs. Websites for all USACE district offices are available online at: *https://www.usace.army.mil/Contact/Unit-websites/.*

C. Definition of Non-Federal Interest

Proposals for the Annual Report are submitted by non-federal interests, and each feasibility study or project is conducted in partnership with a non-federal interest. For the purposes of the Annual Report, the term ''non-federal interest'' is defined in section 221(b) of the Flood Control Act of 1970 (Pub. L. 91–611), as amended (42 U.S.C. 1962–5b(b)). The term ''non-federal interest'' means (1) a legally constituted public body (including an Indian Tribe and a Tribal organization (as those terms are defined in section 5304 of title 25)); or (2) a nonprofit entity with the consent of the affected local government, that has full authority and capability to perform the terms of its agreement and to pay damages, if necessary, in the event of failure to perform.

D. Proposal Form

The information for proposals from a non-federal interest is normally entered into a fillable PDF form which can be found at the HQ Annual Report website and submitted by email to *WRRDA7001Proposal@usace.army.mil.* If a different method of submission is needed, use the contact information in the **FOR FURTHER INFORMATION CONTACT** section of this Notice to arrange an alternative submission process. Proposals must be submitted by August 30, 2024.

The fillable PDF proposal form requests the following information:

1. Contact information for the individual/agency submitting the proposal: name, phone number, email.

2. Proposal Name.

3. Project Location (State(s)/Territory).

4. Study or project area map; you'll have the option to upload a map of the study/project area (preferred format is an 8.5″ x 11″ PDF).

5. Specific project purpose(s) of the proposed study or modification (USACE mission areas).

6. Project description: demonstrate the proposal is related to USACE missions and authorities and why additional or new authorization is needed.

7. State if this proposal is for a new feasibility study, a modification to a USACE water resources development feasibility study authority, a modification to a USACE water resources project authority, or a modification to a USACE environmental infrastructure program authority.

8. If the proposal is for a modification to an existing authority, provide the name of the authorized study, project, or environmental infrastructure program. Cite the authority (*e.g.,* section of WRDA) if possible.

9. If the proposal is for a modification to an environmental infrastructure program authority, provide a brief description of the assistance provided to date and total federal cost of assistance provided to date.

10. Provide an estimate, to the extent practicable, of the total cost, and the federal and non-federal share of those costs, of the proposed study and, separately, an estimate of the cost of construction or modification.

11. Describe, to the extent applicable and practicable, an estimate of the anticipated monetary and non-monetary benefits of the proposal regarding benefits to the protection of human life and property and improvement to transportation, the national, regional, or local economy, the environment, or the national security interests of the United States.

12. *Optional:* State whether the proposal is expected to benefit disadvantaged communities, including a description of the disadvantaged community(ies) and the potential benefits which may accrue as a result of the proposal. See the Council for Environmental Quality (CEQ) website for information on (1) categories of burden at the following location (*https://screeningtool.geoplatform.gov/en/methodology*), (2) an economic justice screening tool to help identify disadvantaged communities (*https://screeningtool.geoplatform.gov.*)

13. The name of the non-federal interest planning to act as the sponsor, or all non-federal interests in the case of a modification to an environmental infrastructure program authority,

including any non-federal interest that has contributed to or is expected to contribute toward the non-federal share of the proposed feasibility study or modification.

14. A statement of support from each associated non-federal interest. Optional: attach letter(s) of support from interested stakeholders. Letters may be addressed generically to the U.S. Army Corps of Engineers, the local Corps District office, or the Assistant Secretary of the Army of Civil Works office.

15. State if the non-federal interest has the financial ability to provide for the required cost share.

16. State if there is local support for the proposal and describe the local support.

A complete list of information requested on the proposal form is available on the USACE Headquarters Annual Report web page: *https://www.usace.army.mil/Missions/Civil-Works/Project-Planning/WRRDA-7001-Proposals/.*

The information provided in a proposal will be posted to the Headquarters public website for the Annual Report. Therefore, any information that is Confidential Business Information, information that should not be disclosed because of statutory restrictions, or any other information that a non-federal interest would not want to appear publicly should not be included in the proposal.

E. Evaluation Criteria

All proposals submitted within the time frame set forth in this notice will be considered for inclusion in the 2025 Annual Report to Congress on Future Water Resources Development. To be included in the Annual Report table, the proposals must meet all the following five criteria established by Congress:

1. The proposal is related to USACE missions and authorities. The proposal must involve a proposed or existing USACE water resources project or effort where the primary purpose is flood and/or coastal storm damage reduction, commercial navigation, aquatic ecosystem restoration, or municipal or agricultural water supply. Proposals for recreation or hydropower are eligible for inclusion if undertaken in conjunction with one of the primary purposes listed in this paragraph.

2. The proposal requires specific Congressional authorization, including by an Act of Congress.

3. The proposal has not been previously authorized by Congress.

4. The proposal has not been included in the Annual Report table of any previous Annual Report to Congress on Future Water Resources Development.

5. The proposal, if authorized, could be carried out by USACE.

The purpose of the five criteria is, primarily, to determine if a proposal will require Congressional authorization for USACE to undertake the proposed water resources study or project with the non-federal interest.

Proposals for modifications to environmental infrastructure authorities are an exception to the criteria. To be included in the table within the Annual Report, the proposal must be a modification to a project that was authorized pursuant to section 219 of WRDA 1992, as amended, or must identify a programmatic modification to an environmental infrastructure assistance program, and it has not been included in any previous annual report.

Additional information and frequently asked questions on the five criteria are available on the USACE Headquarters Annual Report web page: *https://www.usace.army.mil/Missions/Civil-Works/Project-Planning/WRRDA-7001-Proposals/.*

F. Contents of the Annual Report

The Annual Report will be transmitted to Congress by the ASA(CW) and posted to the USACE Headquarters website at *https://www.usace.army.mil/Missions/Civil-Works/Project-Planning/WRRDA-7001-Proposals/.*

1. The Annual Report will include a certification by the ASA(CW) stating that each proposal included in the Annual Report meets the five criteria established by Congress or the requirements for proposed modifications to environmental infrastructure program authorities.

2. Signed Chief's Reports recommending authorization of a water resources project will be included in the Annual Report table by the ASA(CW); these proposals should not be submitted in response to this notice.

3. Section 902 of WRDA 1986, as amended, (33 U.S.C. 2280) establishes a maximum authorized cost for water resources projects (also known as the 902 limit). A post authorization change report is required to be completed to support potential modifications to the project authority, including updates to authorized project costs. Completed post authorization change reports recommending modifications to the authorization of a water resources project will be included in the Annual Report table by the ASA(CW); these proposals should not be submitted in response to this notice.

4. Proposals that do not meet all five criteria established by Congress or the requirements for proposed modifications to environmental infrastructure program authorities will be included in an appendix table included in the Annual Report to Congress on Future Water Resources Development. Proposals in the appendix table will include a description of why those proposals did not meet the criteria established by Congress.

Michael Connor,

Assistant Secretary of the Army (Civil Works).

[FR Doc. 2024–09576 Filed 5–1–24; 8:45 am]

BILLING CODE 3720–58–P

DEPARTMENT OF DEFENSE

Department of the Navy

[Docket ID: USN–2024–HQ–0006]

Proposed Collection; Comment Request

AGENCY: Department of the Navy, Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Commander, Navy Installations Command (CNIC) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 1, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions

from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Commander, Navy Installations Command (CNIC), 716 Sicard Street SE, Suite 100, Washington DC, 20374–5140, ATTN: Mr. Horace Franklin, or call 901–307–6872.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Anchored4Life Evaluability Study Interviews; OMB Control Number 0703–AFLT.

Needs and Uses: DoD Child Youth Programs (CYPs) require the Anchored4Life program (A4L) to provide Transition and Resiliency training to U.S. Navy (USN), Air Force (USAF), Space Force (USSF), Army (USA), and Marine Corps (USMC) school-based elementary, middle and high schools, installation CYPs, and Geo-dispersed locations. Service Branch CYPs are required by title 10 U.S.C. 1785, ''Youth Sponsorship Program,'' and DoD Instruction 6060.04, ''Youth Services (YS) Policy,'' to provide School Liaison and Youth Sponsorship programs. Service Branches use CYP Education Services (CYES) to execute this requirement using School Liaisons (SL), School Based Programs (SBP) and Youth Programs (YP). Execution includes providing resiliency and transition training and support, as well as system navigation assistance to parents of military associated children. A4L is an essential element of the military CYPs, PreK–12 System Navigation, and youth sponsorship programs and shall be provided at military installations and be available to Geo-dispersed locations.

The USN, USAF, and USSF, through the Trevor Romain Contract HDQMWR–21–D–003, are requesting Office of Management and Budget (OMB) clearance for a qualitative study of the A4L program intended to support military-connected youth. Military-connected youth face unique challenges specific to their association with the military in addition to those that are similar to their civilian counterparts. There has been little research examining the implementation or effectiveness of programs and initiatives specifically available to support military-connected youth.

The purpose of this study is to investigate the implementation of A4L training to support military-connected youth (kindergarten through 12th grade), to review current research on K–12 military-connected youth, and evaluate A4L programming to determine effectiveness of transition, deployment support, resiliency impact on other key youth issues including bullying prevention and recovery from grief. The long-term goal is to foster life skills and resiliency in military-connected youth, of which about 45% enter Military Service as adults.

To answer these evaluative questions, semi-structured interview questions will address awareness, implementation, impact, barriers, improvement, and coordination between stakeholders related to A4L impact on military-connected youth who participate.

Affected Public: Individuals or households.

Annual Burden Hours: 232.

Number of Respondents: 576.

Responses per Respondent: 1.

Annual Responses: 576.

Average Burden per Response: 24.17 minutes.

Frequency: Once.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2020–0617; FRL–11648–01–OCSPP]

Agency Information Collection Activities; Proposed Renewal of an Existing ICR Collection and Request for Comment; Collection of Information for TSCA Mercury Inventory Reporting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA), this document announces the availability of and solicits public comment on the following Information Collection Request (ICR) that EPA is planning to submit to the Office of Management and Budget (OMB): ''Collection of Information for TSCA Mercury Inventory Reporting,'' identified by EPA ICR No. 2567.05 and OMB Control No. 2070–0207. This ICR represents a renewal of an existing ICR that is currently approved through February 28, 2025. Before submitting the ICR to OMB for review and approval under the PRA, EPA is soliciting comments on specific aspects of the information collection that is summarized in this document. The ICR and accompanying material are available in the docket for public review and comment.

DATES: Comments must be received on or before July 1, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2020–0617, through the Federal eRulemaking Portal at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Katherine Sleasman, Mission Support Division (7602M), Office of Program Support, Office of Chemical Safety and Pollution Prevention, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–1206; email address: *sleasman.katherine@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the Agency's estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of

specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

II. What information collection activity or ICR does this action apply to?

Title: Collection of Information for TSCA Mercury Inventory Reporting.

EPA ICR No.: 2567.05.

OMB Control No.: 2070–0207.

ICR status: This ICR is currently approved through February 28, 2025. Under the PRA, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the Code of Federal Regulations (CFR), after appearing in the **Federal Register** when approved, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: As directed under TSCA, EPA is required to assist in the preparation and publication in the **Federal Register** of an ''inventory of mercury supply, use, and trade in the United States'' (15 U.S.C. 2607(b)(10)(B) and (D)). Based on the inventory of information collected through this ICR, the Agency is directed to ''identify any manufacturing processes or products that intentionally add mercury'' and ''recommend actions, including proposed revisions of Federal law or regulations, to achieve further reductions in mercury use'' (15 U.S.C. 2607(b)(10)(C)).

The primary purpose of this ICR is to support the development of that inventory. In turn, the inventory will help the Agency identify uses of mercury and recommend means to achieve further reductions of such uses in commerce. In addition, the Agency seeks to obtain the information necessary to achieve its goal to further reduce the use of mercury in products and certain manufacturing processes in order to prevent future releases to the environment, as well as assist the United States in reporting implementation under the Minamata Convention. EPA seeks to enhance its current information on how much mercury is used, in which products and manufacturing processes, and whether certain products are manufactured domestically, imported, or exported.

Reporting is required from any person who manufactures (including imports) mercury or mercury-added products, as well as any person who otherwise intentionally uses mercury in a manufacturing process under TSCA section 8(b). The Agency promulgated reporting requirements at 40 CFR part 713. To avoid duplication, EPA coordinated the reporting with the Interstate Mercury Education and Reduction Clearinghouse (IMERC).

Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 25 hours per respondent annually or a total of 75 hours per respondent over the three-year life cycle of the ICR. Burden is defined in 5 CFR 1320.3(b).

The ICR, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized here:

Forms: 9600–024.

Respondents/affected entities: Entities potentially affected are those that manufacture (including import) mercury, manufacture (including import) mercury containing products, and those who intentionally use mercury in a manufacturing process.

Respondent's obligation to respond: Mandatory, per 40 CFR 713.

Frequency of response: Triennial.

Total estimated number of potential respondents: 105.

Total estimated average number of responses for each respondent: 1.

Total estimated annual respondent burden hours: 2573 hours.

Total estimated annual respondent costs: $223,592, which includes $0 for capital investment or maintenance and operational costs.

III. Are there changes in the estimates from the last approval?

There is a decrease of 14,775 hours in the total estimated industry respondent burden compared with that identified in the ICR currently approved by OMB. This decrease reflects a change in EPA's method of estimating the number of expected reports. In 2021, EPA amended the original final rule to effectuate the vacatur ordered by the Second Circuit Court. In this ICR, with data available from the Mercury Inventory and with no new changes to the rule itself, this ICR utilizes data from the Reporting Year 2021 of the Mercury Inventory. In the RY 2021, there were 105 submissions (the previous ICR used an estimate of 252). This ICR assumes each respondent completes the entire form. Wages were also updated to 2022 dollars. These changes represent adjustments.

IV. What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another **Federal Register** document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Authority: 44 U.S.C. 3501 *et seq.*

Dated: April 26, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

[FR Doc. 2024–09527 Filed 5–1–24; 8:45 am]

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–XXXX; FR ID 217231]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

DATES: Written PRA comments should be submitted on or before July 1, 2024.

If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicole Ongele, FCC, via email *PRA@fcc.gov* and to *nicole.ongele@fcc.gov*.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Nicole Ongele, (202) 418–2991.

SUPPLEMENTARY INFORMATION: The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

OMB Control Number: 3060–xxxx.

Title: Section 9.10(s), Location-Based Routing for Wireless 911 Calls.

Form Number: N/A.

Type of Review: New information collection.

Respondents: Business or other for-profit entities.

Number of Respondents and Responses: 59 respondents; 59 responses.

Estimated Time per Response: 40 hours.

Frequency of Response: One-time and on occasion reporting requirement.

Obligation to Respond: Mandatory. Statutory authority for this collection is contained in sections 1, 2, 4(i), 4(j), 4(o), 251(e), 303(b), 303(g), 303(r), 316, and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), 154(j), 154(o), 251(e), 303(b), 303(g), 303(r), 316, 403, and section 4 of the Wireless Communications and Public Safety Act of 1999, Public Law 106–81, sections 101 and 201 of the New and Emerging Technologies 911 Improvement Act of 2008, Public Law 110–283, and section 106 of the Twenty-First Century Communications and Video Accessibility Act of 2010, Public Law 111–260, as amended 47 U.S.C. 615a, 615a–1, 615b, 615c.

Total Annual Burden: 2,360 hours.

Total Annual Cost: No Cost.

Needs and Uses: Technical limitations of legacy Enhanced 911 (E911) routing can result in a Commercial Mobile Radio Service (CMRS) provider routing a wireless 911 call to a Public Safety Answering Point (PSAP) other than the one designated by the relevant state or local 911 authority to receive calls from the actual location of the caller. To improve emergency response times, the Commission adopted rules and procedures to require CMRS providers to implement location-based routing (LBR) for wireless 911 voice calls and real-time text (RTT) communications to 911 nationwide. With location-based routing as implemented under the Commission's rules, CMRS providers will use precise location information to route wireless 911 voice calls and RTT communications to 911 to the appropriate public safety answering point. To facilitate the implementation of location-based routing for wireless 911 voice calls and RTT communications to 911, and to monitor compliance, promote transparency, and ensure accountability, the Commission adopted certain information collection requirements.

Certification and reporting. The Commission will use the information collected pursuant to section 9.10(s)(4) that is submitted by the CMRS providers in their compliance certifications, including technologies and methodologies used, and live call data reports to assess and monitor the implementation of LBR for wireless 911 voice calls and RTT communications to 911 call centers nationwide. Also, the Commission would use the data generated by the information collections to analyze the effectiveness of the LBR implementation at the benchmark dates set forth in the rules. In addition, it is imperative that CMRS providers ensure the privacy and security of location-based routing information.

Section 9.10(s)(4) requires that within 60 days after each benchmark specified in paragraphs (s)(1)(i), (ii), and (2) of section 9.10 of the rules, CMRS providers must comply with the following certification and reporting requirements.

Under section 9.10(s)(4)(i)(A), CMRS providers must certify that they are in compliance with the requirements specified in paragraphs (s)(1)(i), (ii), and (2) of this section applicable to them.

Under section 9.10(s)(4)(i)(B), CMRS providers must identify specific network architecture, systems, and procedures used to comply with paragraphs (s)(1)(i), (ii), and (2) of this section, including the extent to which the CMRS provider validates location information for routing purposes and the validation practices used in connection with this information.

Under section 9.10(s)(4)(i)(C), CMRS providers must certify that neither they nor any third party they rely on to obtain location information or associated data used for compliance with paragraphs (s)(1)(i), (ii), or (2) of this section will use such location information or associated data for any non-911 purpose, except with prior express consent or as otherwise required by law. The certification must state that the CMRS provider and any third parties it relies on to obtain location information or associated data used for compliance with paragraphs (s)(1)(i), (ii), or (2) of this section have implemented measures sufficient to safeguard the privacy and security of such location information or associated data.

Under section 9.10(s)(4)(ii)(A), CMRS providers must collect and report aggregate data on the routing technologies used for all live wireless 911 voice calls in the locations specified for live 911 call location data in paragraph (i)(3)(ii) of this section for a thirty-day period which begins on the compliance date(s) specified in paragraphs (s)(1)(i) and (ii) of this section. CMRS providers must retain live wireless 911 voice call data gathered pursuant to this section for a period of 2 years. CMRS providers must collect and report the following data, expressed as both a number and percentage of the total number of live wireless 911 voice calls for which data is collected pursuant to this section.

Under section 9.10(s)(4)(ii)(A)(*1*), CMRS providers must collect and report the data, expressed as both a number and percentage of the total number of live wireless 911 voice calls for which data is collected pursuant to this section, for live wireless 911 voice calls routed with location-based routing using location information that meets the timeliness and accuracy thresholds defined in paragraph (s)(3)(i)(A) and (B) of this section.

Under section 9.10(s)(4)(ii)(A)(*2*), CMRS providers must collect and report the data, expressed as both a number and percentage of the total number of live wireless 911 voice calls for which data is collected pursuant to this section, for live wireless 911 voice calls routed with location-based routing using location information that does not meet the timeliness or accuracy thresholds defined in paragraph (s)(3)(i)(A) and (B) of this section.

Under section 9.10(s)(4)(ii)(A)(*3*), CMRS providers must collect and report the data, expressed as both a number and percentage of the total number of live wireless 911 voice calls for which data is collected pursuant to this section, for live wireless 911 voice calls routed using tower-based routing.

Modification of deadlines by agreement. To monitor compliance dates agreed to between CMRS providers and PSAPs that are different from the compliance dates established

by the new rules, section 9.10(s)(5) establishes notification requirements for CMRS providers related to any modification of deadlines between the PSAPs and CMRS providers by mutual agreement. Nothing in this section of the rules shall prevent PSAPs and CMRS providers from establishing, by mutual consent, deadlines different from those established for CMRS provider compliance in paragraphs (s)(1)(i), (ii), and (2) of this section. The CMRS provider must notify the Commission of the dates and terms of the alternate time frame within 30 days of the parties' agreement or by June 12, 2024, whichever is later. The CMRS provider must subsequently notify the Commission of the actual date by which it comes into compliance with the location-based routing requirements in paragraphs (s)(1)(i), (ii), or (2) of section 9.10 within 30 days of that date or by June 12, 2024, whichever is later. The CMRS providers must file any such notifications pursuant to this paragraph (s)(5) in PS Docket No. 18–64.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

OFFICE OF GOVERNMENT ETHICS

Agency Information Collection Activities; Proposed Collection; Comment Request; Electronic Public Financial Disclosure Extension Request

AGENCY: Office of Government Ethics (OGE).

ACTION: Notice and request for comments.

SUMMARY: After this second round notice and public comment period, the U.S. Office of Government Ethics (OGE) plans to submit a new module allowing filers to request an extension of the time available to file a public financial disclosure report within its *Integrity* electronic filing system. This notice announces that OGE intends to submit this collection to the Office of Management and Budget (OMB) for approval under the Paperwork Reduction Act.

DATES: Consideration will be given to all written comments received by June 3, 2024 .

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Jennifer Matis at the U.S. Office of Government Ethics; telephone: 202–482–9216; TTY: 800–877–8339; Email: *jmatis@oge.gov*.

SUPPLEMENTARY INFORMATION:

Title: Electronic Public Financial Disclosure Extension Request.

Abstract: The *Integrity* Public Financial Disclosure Extension Request will be a module within OGE's *Integrity* electronic filing application. Certain officers and high-level employees in the executive branch are required to file public financial disclosure reports via the OGE Form 278e and OGE Form 278–T for the purpose of conflict of interest review and public disclosure. The form is also completed by individuals who are nominated by the President for high-level executive branch positions requiring Senate confirmation and individuals entering into and departing from other public reporting positions in the executive branch.

In 2014, OGE sought and received approval to incorporate the OGE Form 278e into its *Integrity* electronic filing application. *Integrity* has been in use since January 1, 2015, and most executive branch public financial disclosure filers now use *Integrity* to file the OGE Form 278e and OGE Form 278–T. Although *Integrity* is primarily used by current executive branch federal employees, it is also used to file termination reports by certain filers who have recently left government service.

The proposed module within *Integrity* will allow filers to easily request an extension of time to file their report. The module can be ''turned on'' by the filer's reporting agency, or the agency may choose not to use it. Requests for extensions are currently made by calling or emailing the filer's agency ethics official and require that the filer provide a reason for requesting an extension. The ethics official can then manually enter the number of days granted into *Integrity* and those days will be displayed on the cover page of the printed report, which is made public in accordance with 5 U.S.C. 13107. If the extension was granted because the filer is in a combat zone, the reason for the extension is also noted on the report. Once the new feature is deployed and an agency chooses to enable the feature, their filers will request an extension through the *Integrity* module. The electronic extension request will then be presented within the *Integrity* application to the appropriate ethics official at the employing agency. If the ethics official grants the request, the required information will automatically appear on the filer's report as generated by the *Integrity* application.

OGE believes that many agencies will avail themselves of the option to use the new module. For those that do, automating this process will make it easier for both the filer and the agency ethics officials and will reduce the chance that required information will be omitted from the filer's report. The development of this feature has been ranked a high priority by the *Integrity* Advisory Council (IAC), which is comprised of a diverse group of agencies that have at least 90% of their financial disclosure filers utilizing the *Integrity* application. The IAC was established to advise OGE on proposed enhancements, improvements, and support services.

A **Federal Register** Notice with a 60-day comment period soliciting comments on this information collection was published on January 24, 2024 (89 FR 4609). OGE did not receive any comments in response.

OMB Control Number: To Be Determined.

Type of Information Collection: New collection.

Type of Review Request: Regular.

Affected Public: Private citizens who file termination reports from such positions after their government service ends.

Estimated Annual Number of Respondents: 511.

Estimated Time per Response: 2 minutes.

Estimated Total Annual Burden: 17 hours.

Request for Comments: Public comment is invited specifically on the need for and practical utility of this information collection, the accuracy of OGE's burden estimate, the enhancement of quality, utility and clarity of the information collected, and the minimization of burden (including the use of information technology). Comments received in response to this notice will be summarized for, and may be included with, the OGE request for OMB approval under the Paperwork Reduction Act. The comments will also become a matter of public record.

Dated: April 8, 2024.

Shelley K. Finlayson,

Acting Director, U.S. Office of Government Ethics.

[FR Doc. 2024–09478 Filed 5–1–24; 8:45 am]

BILLING CODE 6345–03–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Privacy Act of 1974; System of Records Notice

AGENCY: Office on Trafficking in Persons (OTIP), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Notice of two new systems of records.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, as amended, the U.S. Department of Health and Human Services (HHS) is establishing two new systems of records that will be maintained by the Administration for Children and Families (ACF), Office on Trafficking in Persons (OTIP): System No. 09–80–0391, Anti-Trafficking Information Management System (ATIMS) Records; and System No. 09–80–0392, National Human Trafficking Training and Technical Assistance Center (NHTTAC) Participant Records.

DATES: In accordance with 5 U.S.C 552a(e)(4) and (11), this notice of two new systems of records is effective May 2, 2024, subject to a 30-day period in which to comment on the routine uses, described below. Please submit any comments by June 3, 2024.

ADDRESSES: The public should address written comments by mail to: Anita Alford, Senior Official for Privacy, Administration for Children and Families, 330 C Street SW, Washington, DC 20201; or by email to: *anita.alford@acf.hhs.gov.*

FOR FURTHER INFORMATION CONTACT: General questions about the systems of records may be submitted to Beth Kramer, HHS Privacy Act Officer, FOIA/Privacy Act Division, Office of the Assistant Secretary for Public Affairs, U.S. Department of Health and Human Services, by mail at 200 Independence Ave. SW—Suite 729H, Washington, DC 20201, or by telephone at (202) 690–6941, or by email at *beth.kramer@hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on OTIP Functions

On June 10, 2015, the Department of Health and Human Services (HHS), Administration for Children and Families (ACF) established the Office on Trafficking in Persons (OTIP) and delegated to OTIP the authority to administer human trafficking programs formerly administered by ACF's Office of Refugee Resettlement (ORR). In addition to administering human trafficking programs, OTIP provides letters of Certification and Eligibility to foreign national victims of severe forms of trafficking in persons under the authority of the Trafficking Victims Protection Act of 2000, as amended (22 U.S.C. 7105(b)(1), hereafter abbreviated ''TVPA''), to enable the victims to apply for federally-funded benefits and services to the same extent as refugees. Under the TVPA, OTIP is authorized to collect data and evaluate the effectiveness and efficiency of programs designed to serve victims of severe forms of trafficking in persons (see 22 U.S.C. 7103(d), 7104(b), 7105(b), and 7105(f)). Through participation on the President's Interagency Task Force to Monitor and Combat Trafficking (PITF), OTIP is authorized to conduct research on the causes, effectiveness, and interrelationship of human trafficking and global health risks while identifying an effective mechanism for quantifying the number of victims of trafficking on a national, regional, and international basis. OTIP authorizations include efforts to:

1. Measure and evaluate progress of the United States in the areas of prevention, protection, and assistance to victims of trafficking;

2. Expand interagency procedures to collect and organize data, including significant research and resource information on domestic and international trafficking with respect to the confidentiality of victims of trafficking; and

3. Engage in consultation and advocacy with government and nongovernmental organizations to advance the purposes of the PITF.

OTIP has determined that its performance of these functions requires maintenance of two new functionally different sets of records that will be subject to the Privacy Act (*i.e.,* records about individuals, retrieved by personal identifier), described in A and B, below. Both sets of records are functionally different from the OTIP consultant records covered in existing HHS departmentwide System of Records Notice (SORN) 09–90–1601, Outside Experts Recruited for Non-FACA Activities.

A. Records To Be Covered in New SORN 09–80–0391, Anti-Trafficking Information Management System (ATIMS) Records

SORN 09–80–0391 will cover case files that OTIP maintains about individuals who have or may have been subjected to a severe form of trafficking in persons in accordance with the TVPA. Currently, there are two main file types, briefly described below.

- *Case Files Associated with Requests for Assistance for Foreign National Child Victims of Human Trafficking*

The TVPA requires federal, state, and local officials to notify HHS not later than 24 hours after discovering that a foreign national minor may be a victim of trafficking (see 22 U.S.C. 7105(b)). OTIP developed a Request for Assistance (RFA) form for requesters (*i.e.,* assistance requesters) to use to notify HHS of trafficking concerns for foreign national minors (non-U.S. citizens or non-lawful permanent residents under the age of 18) who are currently in the United States and to request assistance on behalf of foreign national minors. Use of this form, or the completion of any section of this form, is optional. When an RFA is received, OTIP creates a case for the individual seeking assistance in an online case management system. OTIP uses case files, which contain information collected through the RFA process, to determine a child's eligibility for interim and long-term assistance (see 22 U.S.C. 7105(b)(1)(G)). If there is sufficient information during the RFA process to indicate that the child was subjected to forced labor and/or commercial sex (*i.e.,* experienced a severe form of trafficking in persons), OTIP will issue an Eligibility Letter, making the child eligible to apply for benefits and services to the same extent as a refugee. If there is sufficient information during the RFA process to indicate that the child may have been subjected to a severe form of trafficking in persons, OTIP will issue an Interim Assistance Letter, making the child eligible to apply for benefits and services to the same extent as a refugee for 90 days, or up to 120 days if extended. During the interim assistance period, OTIP will seek consultation from the U.S. Departments of Justice (DOJ) and Homeland Security (DHS), other government agencies, and nongovernmental organizations (NGOs) before issuing an Eligibility Letter or a Denial Letter. If the information OTIP receives during the RFA process does not indicate that the child may have been subjected to a severe form of trafficking in persons, OTIP will issue a Denial Letter to the child. OTIP will include instructions with the Denial Letter on how to request reconsideration and how to resubmit the child's case, if applicable.

- *Case Files Associated with Requests for HHS Certification of Foreign National Adult Victims of Human Trafficking*

OTIP provides letters of Certification to foreign national adult victims of severe forms of human trafficking under the authority of the TVPA (see 22 U.S.C. 7105(b)(1)). OTIP developed a Request for HHS Certification (RFC) form for requesters (*i.e.,* assistance requesters) to use to provide the required information for foreign national adult victims to obtain a Certification Letter. When an RFC is received, OTIP creates a case for the individual seeking Certification in an online case management system. OTIP uses case files, which contain information collected through the RFC process, to issue a Certification Letter. Certification is required for foreign national adult trafficking victims in the United States to apply for federally-funded benefits and services. Individuals can only receive an HHS Certification Letter if they have received Continued Presence, T–1 Nonimmigrant Status, or a Bona Fide T–1 Visa from the Department of Homeland Security (DHS) that has not been rescinded or denied. These immigration documents may be received and stewarded by OTIP as part of the process to issue a Certification Letter to eligible recipients.

The Privacy Act applies, in its entirety, only to U.S. citizens and lawful permanent residents. The Judicial Redress Act of 2015 (JRA), 5 U.S.C. 552a note, extends the right to pursue certain civil remedies in the Privacy Act (redress rights) to citizens of designated countries. While the above-described files may be about foreign nationals from *any* country, only foreign nationals who are from countries designated in accordance with the JRA have statutory rights under the Privacy Act, which are limited to redress rights.

B. Records To Be Covered in New SORN 09–80–0392, National Human Trafficking Training and Technical Assistance Center (NHTTAC) Participant Records

OTIP established the National Human Trafficking Training and Technical Assistance Center (NHTTAC) in 2016, pursuant to authority in the TVPA, to build the capacity of health and human services professionals and help prevent, identify, and respond to trafficking. OTIP implements the requirements of the Stop, Observe, Ask, and Respond to Health and Wellness Act of 2018 (42 U.S.C. 300d–54) through NHTTAC. NHTTAC works to further the agency's mission by increasing access to user-friendly, efficient, and cost-effective training and technical assistance resources for individuals, organizations, and communities on trafficking-related topics.

SORN 09–80–0392 will cover the following two types of records maintained by NHTTAC in participant files which are retrieved by the participant's name or other personal identifier:

- Records of feedback the individual provides to NHTTAC evaluating NHTTAC training and technical assistance (T/TA) programs and events in which the individual participated, which NHTTAC uses to address or clarify questions or issues raised by the participant; and
- Information about the individual's participation in SOAR *Online* trainings, which is used to issue Continuing Education/Continuing Medical Education (CE/CME) credits earned by participants.

A report on the two new systems of records was sent to OMB and Congress in accordance with 5 U.S.C. 552a(r), by the HHS Senior Agency Official for Privacy (SAOP), or the SAOP's designee, in accordance with OMB Circular A–108, section 7.e.

Dated: April 25, 2024.

Beth Kramer,

HHS Privacy Act Officer, FOIA-Privacy Act Division, Office of the Assistant Secretary for Public Affairs.

SYSTEM NAME AND NUMBER:

Anti-Trafficking Information Management System (ATIMS) Records, 09–80–0391.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

The address of the agency component responsible for the system of records is: Office on Trafficking in Persons (OTIP), Administration for Children and Families (ACF) Immediate Office of the Assistant Secretary (IOAS), Department of Health and Human Services (HHS), Mary E. Switzer Building, 330 C Street SW, Washington, DC 20201.

SYSTEM MANAGER(S) AND ADDRESS(ES):

The agency official who is responsible for the system of records is: System Owner, Office on Trafficking in Persons (OTIP), Administration for Children and Families (ACF) Immediate Office of the Assistant Secretary (IOAS), 330 C Street SW, Washington, DC 20201; Email: *EndTrafficking@acf.hhs.gov.*

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

22 U.S.C. 7105.

PURPOSE(S) OF THE SYSTEM:

The records in this system of records are used by OTIP to electronically process Requests for Assistance (RFA) and Requests for Certification (RFC), which are submitted to OTIP digitally via an online system that OTIP provides for this purpose and maintained in electronic case files. The records are accessed by OTIP personnel on a need-to-know basis for these purposes:

1. RFA case files contain information submitted by requesters. These files are used to make prompt determinations regarding a foreign national child's eligibility for assistance, to facilitate the required consultation process should the child receive interim assistance, to connect the child to trafficking-specific, comprehensive case management services through referral, and to assess and address potential child protection issues. OTIP issues an Interim Assistance or Eligibility Letter to a foreign national child in the United States, upon receipt of credible information which substantiates that the child may have been or was subjected to a severe form of trafficking in persons, to enable the minor to apply for federally-funded benefits and services to the same extent as a refugee. Such benefits and services include access to trafficking-specific case management services, medical services, food assistance, cash assistance, health insurance, education, and other needed services.

2. RFC case files contain information submitted by requesters. These files are used to issue a Certification Letter to a foreign national adult trafficking victim to enable the adult victim to apply for federally-funded benefits and services to the same extent as refugees. OTIP issues a Certification Letter to a foreign national adult in the United States who has experienced a severe form of trafficking after OTIP receives notice from the U.S. Department of Homeland Security (DHS) that a Continued Presence, or a T visa, has been granted or that a bona fide T visa application has not been denied with respect to that adult. Benefits and services include access to trafficking-specific case management services, medical services, food assistance, cash assistance, health insurance, education, and other needed services.

3. Records in both types of files may be used to inform HHS research and for quality assurance purposes directed at program improvement and policy development.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The records are about the following categories of individuals:

- Foreign national minors identified as potential trafficking victims on RFA forms submitted to OTIP; and

• Foreign national adults identified as trafficking victims on RFC forms submitted to OTIP.

Note: Individuals who submit RFA and RFC forms to OTIP on behalf of trafficking victims or who serve as case management points of contact at other agencies, nongovernmental organizations (NGOs), and other entities that provide benefits and services to trafficking victims are not considered record subjects for purposes of this system of records, because all records involving them are about them in a representative capacity only.

CATEGORIES OF RECORDS IN THE SYSTEM:

The records consist of electronic case files associated with RFAs and RFCs, containing the information described below. The information technology system that OTIP uses to receive RFAs and RFCs and to maintain the case files allows for case file information to be collected through structured fields, open text fields, and document attachments.

• Case files associated with RFAs contain information that is pertinent to an eligibility determination and the case management needs of an individual child. An RFA case file includes: personal identifiers such as the child's name, date of birth, and Alien Registration Number; information about the child's experiences, including information about the child's background, adverse childhood experiences, and family history; information pertaining to emergency case management or child protection needs, and; information specific to the exploitation the child experienced, including the type of trafficking exploitation experienced, and the industry or venue where that exploitation took place. The case file also contains information about the assistance requester(s) who submitted the RFA on behalf of the child, including their name, phone number, and email address, to facilitate the required consultation process should the child receive interim assistance, to connect the child to trafficking-specific, comprehensive case management services through referral, and to assess and address potential child protection issues.

• Case files associated with RFCs contain information that is pertinent to issuing a Certification Letter to an adult who DHS has identified as having experienced a severe form of trafficking in persons and, to connect the adult to trafficking-specific, comprehensive case management services through referral. The case files include: personal identifiers, such as the adult trafficking victim's name, date of birth, and Alien Registration Number; information pertaining to emergency case management needs; information about the type of trafficking experienced (sex, labor, sex and labor); and related documentation from DHS (Continued Presence, T visa, bona fide T visa documentation and date of issuance). The case files also contain information about the assistance requester(s) who submitted the RFC on behalf of the adult trafficking victim, including their name, phone number, and email address to connect the adult to trafficking-specific, comprehensive case management services through referral, if requested.

RECORD SOURCE CATEGORIES:

Information in case files is provided directly by the trafficking victim or is provided by case managers, attorneys, law enforcement officers, child welfare workers, or other representatives assisting the victim.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

These routine uses specify circumstances, in addition to those provided by statute in the Privacy Act of 1974 at 5 U.S.C. 552a(b), under which HHS may disclose information from this system of records without the consent of the data subject. Each proposed disclosure of information under these routine uses will be evaluated to ensure that the disclosure is legally permissible and appropriate. For example, information that a Violence Against Women Act (VAWA) funding recipient could not lawfully disclose under the confidentiality provision of that Act, 34 U.S.C. 12291(b)(2), would not be unlawful for HHS to disclose, because HHS is not a VAWA funding recipient so is not subject to that provision; however, it would be inappropriate for HHS to disclose, because HHS chooses to comply with that provision voluntarily.

1. *Disclosure to HHS Contractors, Grant Recipients, and Other Agents.* Information may be disclosed to contractors, consultants, grant recipients, and other agents engaged by HHS to assist in the fulfillment of an HHS function relating to the purposes of this system of records and who need to have access to the records in the performance of their duties or activities for HHS.

2. *Disclosures in Litigation and Other Proceedings.* Information may be disclosed to the Department of Justice (DOJ) or to a court or other adjudicatory body in litigation or other adjudicatory proceedings, when HHS or any of its components, or any employee of HHS in his or her official capacity, or any employee of HHS in her or her individual capacity where DOJ or HHS has agreed to represent the employee, or the United States Government, is a party to the proceedings or has an interest in the proceedings and, by careful review, HHS determines that the records are both relevant and necessary to the proceedings.

3. *Disclosure to Exchange Information With Other Government Agencies.* Information may be disclosed to the Department of Labor and other government agencies (including foreign, federal, state, Tribal, and local agencies) to exchange information with them for the purpose of preventing and responding to child and adult labor exploitation and trafficking.

4. *Disclosure to Service Provider.* Information may be disclosed to a provider of services to foreign national adults and children, including migrant and refugee youth, a foster care agency or national refugee resettlement agency, or to a local, county, or state institution (*e.g.,* state refugee coordinator, child welfare agency, court, or social service agency) for the purpose of providing trafficking-specific case management services to individuals covered by this system of records.

5. *Disclosure to an Attorney or Representative.* Information may be disclosed to an attorney or representative (as defined in 8 CFR 1.2) who is acting on behalf of an individual covered by this system of records in connection with any proceeding before the Department of Homeland Security or the Executive Office for Immigration Review, or under other circumstances when records are requested by counsel representing individuals covered by this system of records.

6. *Disclosure Incident to Requesting Information.* Information may be disclosed (to the extent necessary to identify the individual, inform the source of the purpose of the request, and identify the type of information requested), to any source from which additional information is requested when necessary to obtain information relevant to an agency decision concerning benefits.

7. *Disclosure to Congressional Office.* Information may be disclosed to a congressional office from the record of an individual in response to a written inquiry from the congressional office made at the written request of the individual.

8. *Disclosure in Connection with Settlement Discussions.* Information may be disclosed in connection with settlement discussions regarding claims by or against HHS, including public

filing with a court, to the extent that disclosure of the information is relevant and necessary to the discussions.

9. *Disclosure for Monitoring Waste, Fraud, or Abuse Purposes.* Information may be disclosed to another Federal agency or instrumentality of any governmental jurisdiction within or under the control of the United States (including the State or local governmental agency) that administers or has the authority to investigate potential fraud, waste, or abuse in federally-funded programs, when disclosure is deemed reasonably necessary by HHS to prevent, deter, discover, detect, investigate, sue with respect to, defend against, correct, remedy, or otherwise combat fraud, waste, or abuse in such programs.

10. *Disclosure in the Event of a Security Breach Experienced by HHS.* Information may be disclosed to appropriate agencies, entities, and persons when (1) HHS suspects or has confirmed that there has been a breach of the system of records; (2) HHS has determined, as a result of the suspected or confirmed breach, there is a risk of harm to individuals, the agency (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with HHS' efforts to respond to the suspected or confirmed breach, or to prevent, minimize, or remedy such harm.

11. *Disclosure to Assist Another Agency Experiencing a Breach.* Information may be disclosed to another federal agency or federal entity, when HHS determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach, or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

The records are stored electronically, in a database which is backed-up on a daily basis.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Each individual who is identified in an RFA or RFC as a trafficking victim or potential victim is assigned a unique case identification number (*i.e.* HHS Tracking Number). OTIP (and assistance requesters who submit RFAs and RFCs to OTIP) retrieves records by the trafficking victim's name (first, middle, last), date of birth, and Alien Registration Number.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

A disposition schedule is currently pending approval by the National Archives and Records Administration (NARA). When approved by NARA, it will provide for case file information gathered during the RFA and RFC processes, in identifiable form, to remain in HHS' custody for 15 years, or longer if needed for HHS' business use. Under a separate, NARA-approved disposition schedule, DAA–0292–2020–0001, the records that have met their retention period under the pending schedule will be accessioned (in identifiable form, in case needed for investigative purposes) to the National Archives of the United States for permanent retention.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Safeguards conform to the HHS Information Security and Privacy Program, *https://www.hhs.gov/ocio/securityprivacy/index.html.* Information is safeguarded in accordance with applicable laws, rules and policies, including the HHS Information Systems Security and Privacy Policy (IS2P), all pertinent National Institutes of Standards and Technology (NIST) publications, and OMB Circular A–130 Managing Information as a Strategic Resource. Records will be protected from unauthorized access through appropriate administrative, technical, and physical safeguards under the supervision of the ACF Office of the Chief Information Security Officer (OCIO). The system leverages cloud service providers that maintain an authority to operate in accordance with applicable laws, rules, and policies, including Federal Risk and Authorization Management Program (FedRamp) requirements.

Administrative safeguards include requiring security and privacy training for Federal personnel and contractor staff and requiring Rules of Behavior (ROB) to be signed by database users. Technical controls include role-based access, user identification, passwords, firewall, and maintenance of intrusion detection functionality. Physical controls include the use of nondescript facilities to house the database and backup equipment, with security staff controlling both the perimeter and various ingress points within the buildings, video surveillance, intrusion detection systems, fire detection and suppression, uninterruptible power supply (UPS), and climate control. Additionally, all individuals accessing the buildings are required to use two-factor authentication a minimum of two times for entry, and any visitor or contractor must sign in and be escorted at all times by an authorized individual.

RECORD ACCESS PROCEDURES:

An assistance requester may check the status of an RFA or RFC the assistance requester submitted on behalf of a victim (subject individual) via the online verification page, *https://shepherd.otip.acf.hhs.gov/shepherdpublic/letterverification,* using the HHS Tracking Number and one of the following: victim's date of birth, last name, or benefits start date.

All other requests for information about a victim referred to OTIP through a RFA or RFC must be made in writing by the subject individual's legal representative on the law firm or legal agency's letterhead. The request must be sent to the email address (*EndTrafficking@acf.hhs.gov*) or mailing address specified in the ''System Manager(s)'' section of this SORN. The request letter must include: the name, alias, date of birth, nationality, and Alien Registration Number of the subject individual, the name of the requesting legal representative, and the reasons why the records are being requested. The following supporting documentation must also be submitted:

- A copy of the signed and executed *G–28, EOIR–27* or *EOIR–28.* These forms are not required for attorneys who work for, or volunteer pro bono services for, non-profit legal service providers funded by the VERA Institute of Justice for ORR's Division of Children's Services' legal access and outreach project
- An *Authorization for Release of Confidential Records* on the law firm/legal agency's letterhead stationery signed by the subject individual if the subject individual is 14 years of age or older and is not legally incompetent or by the subject individual' parent or legal guardian if the subject individual is under 14 years of age or is legally incompetent.
- The authorization must specify to whom the requested records should be released and the duration of the authorization.

So that OTIP may verify the identities of the subject individual and the subject individual's requesting legal representative (and, if applicable, the subject individual's parent or legal guardian), their signatures must be

notarized or the request must include, for each of them, a written, signed certification signed under penalty of perjury stating that he/she is the individual who he/she claims to be and that he/she understands that the knowing and willful request for or acquisition of a record pertaining to an individual under false pretenses is a criminal offense subject to a fine of up to $5,000. Evidence of any parent or guardian relationship must also be provided with the request, unless previously provided to OTIP.

CONTESTING RECORD PROCEDURES:

Individuals seeking to amend records about them in this system of records must submit a written amendment request to the System Manager identified in the ''System Manager(s)'' section of this SORN, containing the same information required for an access request. The amendment request must include verification of identities in the same manner required for an access request; must reasonably identify the record and specify the information contested, the corrective action sought, and the reasons for requesting the correction; and should include supporting information to show how the record is inaccurate, incomplete, untimely, or irrelevant.

NOTIFICATION PROCEDURE:

Individuals who wish to know if this system of records contains records about them must submit a written notification request to the System Manager identified in the ''System Manager(s)'' section of this SORN. The notification request must contain the same information required for an access request and must include verification of identities in the same manner required for an access request.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

None.

SYSTEM NAME AND NUMBER:

National Human Trafficking Training and Technical Assistance Center (NHTTAC) Participant Records, 09–80–0392.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

The address of the agency component responsible for the system of records is: Office on Trafficking in Persons (OTIP), Administration for Children and Families (ACF) Immediate Office of the Assistant Secretary (IOAS), Department of Health and Human Services (HHS), Mary E. Switzer Building, 330 C Street SW, Washington, DC 20201.

SYSTEM MANAGER(S) AND ADDRESS(ES):

The agency official who is responsible for the system of records is: System Owner, Office on Trafficking in Persons (OTIP), Administration for Children and Families (ACF) Immediate Office of the Assistant Secretary (IOAS), 330 C Street SW, Washington, DC 20201; Email: *EndTrafficking@acf.hhs.gov.*

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

22 U.S.C. 7105, 42 U.S.C. 300d–54.

PURPOSE(S) OF THE SYSTEM:

OTIP established the National Human Trafficking Training and Technical Assistance Center (NHTTAC) to build the capacity of health and human services professionals and help prevent, identify, and respond to trafficking through training and technical assistance (T/TA). On OTIP's behalf, NHTTAC collects personally identifiable information (PII) about participants in NHTTAC's T/TA offerings to inform evaluation efforts, to assess customer satisfaction with T/TA offerings, and to issue Continuing Education/Continuing Medical Education (CE/CME) credits to eligible participants. Within NHTTAC, identifiable records about participants are retrieved by personal identifier and used by NHTTAC personnel on a need-to-know basis, for these purposes:

- To identify individuals who submit applications and their needs for specialized and/or short-term training and technical assistance from OTIP, including geographic locations where T/TA is requested and provided.
- To identify individuals who enroll in and complete the Stop. Observe. Act. Respond. (S.O.A.R) Health and Wellness online (SOAR *Online*) and in-person training program and receive CE/CME credits for their participation.
- To report the fulfillment of Continuing Education/Continuing Medical Education (CE/CME) credits to the appropriate accrediting bodies.

On a need-to-know basis, information from this system of records may be shared with relevant offices within HHS, including OTIP. OTIP and the following offices support NHTTAC activities, particularly through the SOAR Coordinating Group, and might receive participant contact information (*e.g.,* name, email address and/or phone number) once OTIP has approved the delivery T/TA services and for future T/TA planning purposes: Office of the Chief Information Officer (OCIO), Substance Abuse and Mental Health Services Administration (SAMHSA) Center for Substance Abuse Treatment (CSAT), Health Resources and Services Administration (HRSA) Office for Women's Health (OWH), Office of the Assistant Secretary for Health (OASH) Office on Women's Health (OWH), Center for Disease Prevention and Control (CDC) Division of Violence Prevention (DVP), and OASH Office of Regional Operations (ORO). The PII is provided through the NHTTAC interface, encrypted email message, or by phone.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The records are about multidisciplinary anti-trafficking professionals, such as health care professionals, child welfare professionals, and other service providers, who participate in NHTTAC T/TA offerings.

CATEGORIES OF RECORDS IN THE SYSTEM:

The records consist of participant files. The information technology system that NHTTAC uses to maintain the files allows for participant file information to be collected through structured fields, open text fields, and document attachments. Files include identifiable information about participants, including their name (first, last), mailing address, email, and phone number, and may also include information about certificates received (*e.g.* training completion confirmations), and self-reported demographic information such as race/ethnicity, date of birth, gender identity, employment status, education history, employment history, professional history, language proficiency, user login name and password (user credentials), responses to requests for feedback on NHTTAC T/TA offerings, and T/TA needs assessment responses submitted on behalf of the participant or the participant's professional organization.

RECORD SOURCE CATEGORIES:

Most records are provided directly by the NHTTAC T/TA participant. Continuing education credits are issued by NHTTAC based on records in the online system confirming that the individual completed SOAR *Online* trainings. T/TA needs assessment responses may be provided by the individual participant, or representatives of the participant's professional organization.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to the disclosures authorized by statute in the Privacy Act

at 5 U.S.C. 552a(b), HHS may disclose records about an individual participant from this system of records for these routine uses:

1. *Disclosure to HHS Contractors, Grant Recipients, and Other Agents.* Information may disclosed to contractors, consultants, grant recipients, or other agents engaged by HHS to assist in the accomplishment of an HHS function relating to the purposes of this system of records who need to have access to the records in the performance of their duties or activities for HHS.

2. *Disclosure to Accrediting Bodies.* Information about a SOAR *Online* participant's fulfillment of Continuing Education/Continuing Medical Education (CE/CME) credits may be reported to the appropriate accrediting bodies.

3. *Disclosure to Congressional Office.* Information may be disclosed to a congressional office from the record of an individual in response to a written inquiry from the congressional office made at the written request of the individual.

4. *Disclosure for Monitoring Waste, Fraud, or Abuse Purposes.* Information may be disclosed to another Federal agency or instrumentality of any governmental jurisdiction within or under the control of the United States (including the State or local governmental agency) that administers or has the authority to investigate potential fraud, waste, or abuse in federally-funded programs, when disclosure is deemed reasonably necessary by HHS to prevent, deter, discover, detect, investigate, sue with respect to defend against, correct, remedy, or otherwise combat fraud, waste or abuse in such programs.

5. *Disclosure in the Event of a Security Breach Experienced by HHS.* Information may be disclosed to appropriate agencies, entities, and persons when (1) HHS suspects or has confirmed that there has been a breach of the system of records; (2) HHS has determined, as a result of the suspected or confirmed breach, there is a risk of harm to individuals, the agency (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with HHS' efforts to respond to the suspected or confirmed breach, or to prevent, minimize, or remedy such harm.

6. *Disclosure to Assist Another Agency Experiencing a Breach.* Information may be disclosed to another federal agency or federal entity, when HHS determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach, or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records are stored in electronic media format, in a web-based application. Feedback records may be maintained in paper form before being entered in the web-based system.

POLICIES AND PRACTICIES FOR RETRIEVAL OF RECORDS:

NHTTAC retrieves records about a participant by the participant's name (first, last), address, phone number, and email address.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

The records are currently unscheduled. Unscheduled records must be retained indefinitely pending the agency's submission, and the National Archives and Records Administration (NARA) approval, of a disposition schedule. OTIP is currently coordinating with the HHS Office of the Chief Information Officer (OCIO) to develop a Records Control Schedule (RCS) appropriate for these records. OTIP currently plans to propose a retention period of approximately 10 years for the records.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Information is safeguarded in accordance with applicable laws, rules and policies, including the HHS Information Systems Security and Privacy Policy (IS2P), all pertinent National Institutes of Standards and Technology (NIST) publications, and OMB Circular A–130 Managing Information as a Strategic Resource. The system leverages cloud service providers that maintain an authority to operate in accordance with applicable laws, rules, and policies, including Federal Risk and Authorization Management Program (FedRAMP) requirements.

The NHTTAC system will be hosted within the FedRAMP Amazon Web Services (AWS) Cloud Platform. Only members of the NHTTAC team are granted access to the web-based system and to any feedback records that are in paper form. Any paper feedback records are maintained in a locked filing cabinet with limited access until entered into the web-based system. Authenticated users within the system have access to review and edit their own PII. Authenticated users in roles with elevated permissions will have access to larger amounts of PII that is specific to certain system purposes. The elevated privilege accounts are associated with specific system features and are granted only to federal OTIP staff or the NHTTAC contractors. The administrator account, Admin Only, is limited to administrative activity only and does not allow for other activity within the application. This role is held by NHTTAC contractors and OCIO personnel. Administrators will have access to PII to support system setup, configuration, testing, monitoring, and other data/system administration. The administrative security controls employed include adhering to ACF, or HHS, policies and procedures around security and privacy; leveraging role-based system access to control the amount of PII available to a user; annual security training, and access to a user manual describing data entry procedures to help maintain the data integrity. The technical controls are shared between the system and the AWS platform. The system provides controls including multi-factor authentication for all users to include Personal Identity Verification (PIV) login capability; and AWS provides infrastructure controls including secure network access points. PII is encrypted at rest within the database, file system, and object storage resources using Advanced Encryption Standard algorithm in Galois/Counter Mode (AES–GCM), with 256-bit secret keys. PII is also encrypted in transit via secure hypertext transfer protocol (HTTPS) using Transport Layer Security (TLS) services provided by Federal Information Processing Standard (FIPS) 140–2 validated cryptographic modules. The physical controls will all be inherited by the AWS platform and include the following: Restricting physical access to the data center both at the perimeter and at building ingress points through the help of video surveillance, intrusion detection systems, and 2 rounds of two-factor authentication for each individual accessing a data center floor. Visitors and contractors are required to have ID, sign-in with building security, and be escorted by an authorized staff at all times; Fire detection and suppression systems; Uninterruptible Power Supply (UPS); Climate and Temperature

control; Preventative maintenance. Staff are responsible for notifying the ACF Incident Response Team (IRT) in the event that a suspected or known breach has occurred. The ACF IRT will follow standard operating procedures for handling a privacy incident that involves a breach of PII.

RECORD ACCESS PROCEDURES:

Participants who are authenticated users of the web-based system have the ability to access information about them in that system. Otherwise, participants seeking access to records about them in this system of records must submit a written access request to the relevant System Manager identified in the ''System Manager(s)'' section of this SORN. The request must contain the requester's (participant's) full name, address, telephone number and/or email address, date of birth, and signature, and should identify the state, Tribe, or territory where the requester participated in the NHTTAC T/TA offering.

So that HHS may verify the requester's identity, the requester's signature must be notarized, or the request must include the requester's written, signed certification that the requester is the individual who the requester claims to be and that the requester understands that the knowing and willful request for or acquisition of a record pertaining to an individual under false pretenses is a criminal offense subject to a fine of up to $5,000.

CONTESTING RECORD PROCEDURES:

Participants who are authenticated users of the web-based system have the ability to amend identifying and descriptive information about them in the system, which they entered in the system. Otherwise, participants seeking to amend records about them in this system of records must submit a written amendment request to the relevant System Manager identified in the ''System Manager(s)'' section of this SORN, containing the same information required for an access request. The request must include verification of the requester's (participant's) identity in the same manner required for an access request; must reasonably identify the record and specify the information contested, the corrective action sought, and the reasons for requesting the correction; and should include supporting information to show how the record is inaccurate, incomplete, untimely, or irrelevant.

NHTTAC provides support for individuals who indicate concerns that information about them has be inappropriately obtained, used, or disclosed, or is inaccurate. To support initial reporting of concerns, the web-based system includes contact information for NHTTAC support staff on the home page. Once contacted, NHTTAC will establish an issue/ticket associated with the concern, and track progress towards issue resolution within a separate internal help desk system monitored by the NHTTAC support staff. The participant will be contacted via his or her provided contact information (email or phone) upon initiation of the ticket, as progress is made, and upon resolution of the issue.

NOTIFICATION PROCEDURE:

Participants who are authenticated users of the web-based system have the ability to access the system to determine if it contains records about them. Otherwise, participants who wish to know if this system of records contains records about them should submit a written notification request to the relevant System Manager identified in the ''System Manager(s)'' section of this SORN. The request must contain the same information required for an access request and must include verification of the requester's (participant's) identity in the same manner required for an access request.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

None.

BILLING CODE 4184–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Community Living

Announcing the Intent To Award a Single-Source Supplement for the Puerto Rico Disaster Assistance Grant Program

AGENCY: Administration for Community Living, HHS.

ACTION: Notice.

SUMMARY: The Administration for Community Living (ACL) announces the intent to award a single-source supplement to the current cooperative agreement held by the Puerto Rico Ombudsman Office for the Elderly (PROOE) for the project Puerto Rico Disaster Assistance Grant which is through the Older Americans Act, Disaster Assistance for State Units on Aging (SUAs) and Tribal Organizations in Major Disasters Declared by the President and the Consolidated Appropriations Act, 2023.

DATES: The supplement award will be issued to extend the project period to May 1, 2023, through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Kathleen Votava, U.S. Department of Health and Human Services, Administration for Community Living, Center for Regional Operations: telephone (202) 795–7603; email*kathleen.votava@acl.hhs.gov.*

SUPPLEMENTARY INFORMATION: The purpose of this program, as set forth in Section 310(a)(1) of the Older Americans Act (OAA) is to provide funding to the aging network for disaster-related items in areas receiving a Major Disaster Declaration by the President under the Robert T. Relief and Emergency Assistance Act, where funds may only be used in those areas designated in the Disaster Declaration. These funds are used by the aging network in recovery so that they can resume operations to support older adults and their caregivers. The overall goals of the program are as follows:

1. Provide disaster relief reimbursements to States/Territories (or to any tribal organization receiving a grant under title VI), upon application, for funds such State makes available to area agencies on aging (and/or aging network) in such State (or funds used by such tribal organization) for the delivery of supportive services (and related supplies) during any major disaster declared by the President in accordance with the Robert T. Stafford Relief and Emergency Assistance Act. In addition, provide disaster relief reimbursements for expenses related to the consequences of Hurricanes Fiona and Ian.

2. Provide funds for the aging network to deliver the following Older Americans Act (OAA) Title III types of gap-filling services following a disaster: emergency meals and medications, outreach, information and assistance, counseling, case management, advocacy on behalf of older persons unable or reluctant to speak for themselves, and transportation.

3. Assist the aging network in restoring their capacity and operations after a disaster in order that they may be able to help older adults and caregivers in their communities.

The administrative supplement for FY 2024 will be in the amount of $7,809,231, bringing the total awards made in FY 2023 and FY 2024 to $9,779,231. The supplement will provide sufficient resources to enable the grantee, PROOE, and their partners to continue to address the significant

needs of Hurricane Fiona older adult survivors living in Puerto Rico and expand the reach and effectiveness of this project by:

- Expanding the grantee's project to restore operations impacted by Hurricane Fiona to additional multipurpose senior centers, including installing solar panels, generators, and cisterns, as well as replenishing the supply of emergency meals for older adults;
- Advancing the capacity of the broader aging services network to deliver services to older adults and their caregivers who were impacted by Hurricane Fiona by continuing to identify and address the most critical needs; and
- Increasing outreach, evaluation, technical assistance, and sub-grantee monitoring and financial oversight activities.

The supplement will accomplish the goals of the program using the following approaches:

- *Partnerships* are essential for delivering programs and services vital to help older adults remain in their communities. PROOE's partnership with the aging network, including multipurpose senior centers, is critical to allow services and programs to be provided in communities at the local level, especially in recovery from disasters.
- *Community-based resources, such as multipurpose senior centers,* provide congregate meals, home delivered meals, evidence-based disease prevention and health promotion services, outreach, information and referral services, socialization as well as many other supports for older adults in their local communities. In Puerto Rico, these centers often provide an access point for healthcare, including offering nursing care to and housing medications that need refrigeration for community-dwelling older adults.
- *Stewardship* is key to any project. The supplement will enable PROOE to increase stewardship over the sub-grant process to manage expanded work and enhance program oversight, monitoring, evaluation, and additional activities proportional to the increased funding and expectations resulting from this supplement.

Program Name: Puerto Rico Disaster Assistance Grant.

Recipient: Puerto Rico Ombudsman Office for the Elderly (PROOE).

Period of Performance: The supplement award will be issued to extend the project period to May 1, 2023, through September 30, 2025.

Total Award Amount: $ 9,779,231.

Award Type: Cooperative Agreement Supplement.

Basis for Award: The Puerto Rico Ombudsman Office for the Elderly (PROOE), the State Unit on Aging (SUA), is currently funded to carry out the objectives of the project entitled Puerto Rico Disaster Assistance Grant for the period of May 1, 2023, through September 30, 2024. Since project implementation began in 2023, the grantee has accomplished a great deal. This supplement will enable the grantee to carry their work even further, serving more older adult survivors of Hurricane Fiona by expanding their project to additional senior centers in local communities. The additional funding will not be used to begin new projects or activities. The PROOE is uniquely positioned to complete the work called for under this project. PROOE is the designated SUA and administers the Older American Act programs and services to support older adults living in the community as well as their caregivers. PROOE's partners include the Territory's network of senior centers and local communities, many of which are in rural areas. Establishing an entirely new grant project at this time would be potentially disruptive to the current work already well under way. More importantly, the older adults being served by this project could be negatively impacted by a disruption, thus posing the risk of re-traumatization and further negative impacts on health and wellbeing in their recovery from Hurricane Fiona. If this supplement is not provided, the project would be less able to address the significant unmet health and social support needs of additional older adult survivors and their caregivers. Similarly, the project would be unable to expand its current reach. Finally, providing this supplement to PROOE will allow for the greater realization of Congress' intent in the Older Americans Act which includes targeting older individuals with greatest economic need (including low- income minority individuals and older individuals residing in rural areas) and older individuals with greatest social need (including low-income minority individuals and older individuals residing in rural areas) to receive services under this Act, as well as targeting of services to older adult individuals at risk for institutional placement to permit such individuals to remain in home and community-based settings.

Statutory Authority: 42 U.S.C. 3030; Pub. L. 117–328, 136 Stat. 4459.

Dated: April 29, 2024.

Allison Barkoff,

Principal Deputy Administrator for the Administration for Community Living, performing the delegable duties of the Administrator and the Assistant Secretary for Aging.

BILLING CODE 4154–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2008–D–0394]

Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the availability of a final guidance for industry (GFI) #187A entitled ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach.'' This guidance is intended to clarify FDA's requirements and recommendations with respect to heritable intentional genomic alterations (IGAs) in animals. The guidance is being issued as one of two companion documents. This guidance, entitled ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach,'' describes FDA's risk-based regulatory approach to the oversight of heritable IGAs in animals. This means that for people or companies developing certain types of IGAs in animals, FDA may not expect them to submit an application or get approval before marketing their product. For other types of IGAs in animals that do go through the approval process, the companion draft guidance document, GFI #187B entitled ''Heritable Intentional Genomic Alterations in Animals: The Approval Process'' describes how the approval process applies to heritable IGAs in animals.

DATES: The announcement of the guidance is published in the **Federal Register** on May 2, 2024.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

• *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand Delivery/Courier (for written/paper submissions): Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2008–D–0394 for ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov*. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV–6), Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT: Adam Moyer, Center for Veterinary Medicine (HFV–108), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–796–2319, *Adam.Moyer@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of January 19, 2017 (82 FR 6561), FDA published the notice of availability for a draft GFI #187 entitled ''Regulation of Intentionally Altered Genomic DNA in Animals'' giving interested persons until April 19, 2017, to comment on the draft guidance. On April 13, 2017, we published a notice announcing the extension of the comment period to June 19, 2017 (82 FR 17844). FDA received numerous comments on the draft guidance and those comments were considered as the guidance was finalized. As noted, this guidance is intended to clarify our risk-based regulatory approach for developers of heritable IGAs in animals.

The guidance is being issued as one of two companion documents. GFI #187A, ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach,'' describes FDA's risk-based approach to the oversight of IGAs in animals. This means that, for people or companies developing certain types of IGAs in animals, FDA may not expect them to submit an application or get FDA approval before marketing their product. These are IGAs in animals and animal products for which FDA finds that we understand the product's risks for the specified intended use, any identified risks are appropriately mitigated, and we have no further questions for which we would need to see additional data to address. The guidance explains that FDA's approach is risk-based and ranges from:

• Category 1 products for which we do not expect developers to consult with us prior to marketing an animal containing an IGA where the risk is best understood and mitigated; to

• Category 2 products for which we may not expect developers to submit an application for approval of the IGA if, after looking at data submitted about that product's risk, we find that we understand the product's risks for the specified intended use, any identified risks are appropriately mitigated, and we have no further questions for which we would need to see additional data to address; to

• Category 3 products for which FDA will review and, where the data supports it, approve a product using data requirements that are proportionate to the risk associated with the particular product.

Draft GFI #187B, ''Heritable Intentional Genomic Alterations in Animals: The Approval Process,'' whose notice of availability is published elsewhere in this edition of the **Federal Register**, describes how the FDA approval process applies to heritable IGAs in animals.

FDA received comments on the draft guidance that came from industry (companies that produce IGAs and trade associations), individual consumers, academics, non-governmental organizations (consumer, environmental), other Federal and State government agencies, and individual developers of IGAs in animals. In the **Federal Register** notice announcing availability of the draft guidance, FDA posed questions regarding whether there

are categories of IGAs in animals that pose less risk and, if so, what data or information supports that contention. No commenters provided data to address the Agency's questions other than scientific literature references that were not directly applicable or conclusive.

In the notice announcing availability of the draft guidance, FDA also asked for comment on the appropriate terminology for animals with intentional genomic alterations. Commenters expressed different preferences, but there was no general consensus on an appropriate term. FDA has adopted ''intentional genomic alteration'' or ''IGA'' in animals as the term it will use to refer to intentional genomic alterations in animals regardless of whether they are developed with genetic engineering, including genome editing, or some other modern molecular technology. This term is simple and sufficiently broad to encompass intentional genomic alterations achieved through means that currently exist and those yet to be developed. Moreover, section 740(d)(4)(B) of the Federal Food, Drug, and Cosmetic Act uses this term (21 U.S.C. 379j-12(d)(4)(B)). However, the scope of the guidance does not include induction of polyploidy by heat, pressure, or chemical treatment, or selective breeding or other assisted reproductive technologies. Non-heritable intentional genomic alterations in animals are also outside the scope of this guidance document.

Changes FDA has made in response to comments include:

- Reorganization and use of plain language to make FDA's regulatory approach clearer to stakeholders;
- Expansion of IGAs for which FDA may decide it does not expect submission of an application for approval following a review of data and a determination that the IGA meets the Category 2 description in the guidance. The new types of IGAs include:
  - IGAs that are equivalent to genomic sequences that are found in animals of the same species with a history of safe use in animal agriculture food production and
  - IGAs that are equivalent to what could be theoretically achieved through conventional breeding under certain conditions,

including that the IGAs are not expected to result in changes to food composition and their intended use does not include any effect on disease or other health outcome;

- Clarification that if you are:
  - ;a farmer, grower, or other entity that just has animals with IGAs that FDA has approved or determined are Category 2 on your farm or other premises, including the offspring of those animals,
  - and you are not the developer of the IGA in the animal or marketing the animals with any new claims,

then, as a general matter, you do not have to register or list with FDA and you can engage in your ordinary activities (*e.g.,* breeding, growing, etc.) without contacting FDA; and

- Clarification that those who breed an animal containing an IGA that FDA has approved or has determined is Category 2:
  - with another animal containing an IGA that FDA has approved or also determined is Category 2 or
  - with an animal that does not contain an IGA

and make no new claims do not need to contact FDA and nothing further is required.

The guidance announced in this notice finalizes the draft guidance dated January 2017.

This level 1 guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information regarding environmental analysis in 21 CFR part 25 have been approved under OMB control number 0910–0322; the collections of information regarding applications in 21 CFR part 514 have been approved under OMB control number 0910–0284; and the collections of information regarding investigational exemptions in 21 CFR part 511 have been approved under OMB control number 0910–0117.

III. Electronic Access

Persons with access to the internet may obtain the guidance at *https://www.fda.gov/animal-veterinary/guidance-regulations/guidance-industry, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov*.

Dated: April 25, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2019–D–2648]

Heritable Intentional Genomic Alterations in Animals: The Approval Process; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the availability of a draft guidance for industry (GFI) #187B entitled ''Heritable Intentional Genomic Alterations in Animals: The Approval Process.'' This draft guidance is intended to clarify FDA's requirements and recommendations for developers of intentional genomic alterations (IGA) in animals. The draft guidance is being issued as one of two companion documents. ''Heritable Intentional Genomic Alterations in Animals: The Approval Process'' describes how the FDA approval process applies to heritable IGAs in animals. FDA is issuing GFI #187B as a draft guidance to solicit comments that will enable the Agency to update, and make as efficient as possible, the approval process for IGAs in animals. In addition, FDA requests comments on questions that it intends to address in the final version of this guidance document. The companion final guidance, GFI #187A entitled ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach,'' describes FDA's risk-based regulatory approach to the oversight of heritable IGAs in animals. This means that, for people or companies developing certain types of IGAs in animals, FDA may not expect them to submit an application or get approval before marketing their product.

DATES: Submit either electronic or written comments on the draft guidance by July 31, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2019–D–2648 for ''Heritable Intentional Genomic Alterations in Animals: The Approval Process.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov*. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV–6), Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Adam Moyer, Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301–796–2319, *Adam.Moyer@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of January 19, 2017 (82 FR 6561), FDA published the notice of availability for a draft GFI #187 entitled ''Regulation of Intentionally Altered Genomic DNA in Animals'' giving interested persons until April 19, 2017, to comment on the draft guidance. On April 13, 2017, we published a notice announcing the extension of the comment period to June 19, 2017 (82 FR 17844). FDA received numerous comments on the draft guidance GFI #187 and those comments were considered as the guidance was revised. As noted, this draft guidance, GFI #187B, is intended to explain how FDA's approval process applies in the context of products related to heritable IGAs in animals.

The draft guidance is being issued as one of two companion documents. Draft GFI #187B, ''Heritable Intentional Genomic Alterations in Animals: The Approval Process,'' describes how the FDA approval process applies to heritable IGAs in animals. Final GFI #187A, ''Heritable Intentional Genomic Alterations in Animals: Risk-Based Approach,'' whose notice of availability is published elsewhere in this edition of the **Federal Register**, describes FDA's risk-based approach to the oversight of IGAs in animals.

FDA received and reviewed comments on the draft guidance that came from industry (companies that produce IGAs and trade associations), individual consumers, academics, non-governmental organizations (consumer, environmental), other Federal and State government agencies, and individual developers of IGAs in animals. Among the changes made to the draft guidance, we have:

- Indicated our willingness to consider multiple heritable IGAs or a single IGA in multiple lines or breeds of animals of the same species under a single application;
- Clarified that FDA's review of applications is subject to specific timeframes;
- Acknowledged that it may not be feasible to gather data on multiple generations and encourage developers of heritable IGAs in animals to contact FDA to discuss alternative approaches of demonstrating durability;
- Indicated that alternative disposition methods for investigational animals may be acceptable if the sponsor contacts FDA's Center for Veterinary Medicine;
- Further described post-market records and reports requirements and clarified who they apply to; and
- Provided additional information on establishment registration requirements, including explaining that, as a general matter, pet stores, farms, or other animal production facilities do not have to register or list with FDA and can engage in ordinary activities (*e.g.,* breeding, growing, etc.) without contacting FDA.

FDA is issuing this draft guidance to solicit public comment that will further

improve it. To help inform our thinking as we begin the process of further updating the guidance, we invite comment on the following questions:

1. What are some alternative strategies for providing data that would support approval of heritable IGAs in animals?

a. How can a developer demonstrate the durability of a heritable IGA over time in situations where collection of data on multiple generations of animals is difficult or not possible?

b. What are possible strategies a developer could utilize to address the approval requirements for multiple heritable IGAs (*e.g.,* multiple iterations of the same alteration resulting in the same intended phenotype or multiple alterations resulting in more than one intended phenotype) under a single approval?

2. What areas of current good manufacturing practices and good laboratory practices specific to the production of heritable IGAs in animals do you believe need clarification through the publication of additional guidance?

3. Are there process improvements (*e.g.,* combining steps of the approval process) (see page 16, section IV.C. Recommended Process for Completing Pre-approval Assessments for IGAs in Animals, of the guidance) that you believe would make the approval process easier to navigate?

This level 1 draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Heritable Intentional Genomic Alterations in Animals: The Approval Process.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 25 have been approved under OMB control number 0910–0322; the collections of information in 21 CFR part 58 have been approved under OMB control number 0910–0119; the collections of information in 21 CFR part 207 have been approved under OMB control number 0910–0045; the collections of information in 21 CFR part 211 have been approved under OMB control number 0910–0139; the collections of information in 21 CFR part 511 have been approved under OMB control number 0910–0117; the collections of information in 21 CFR part 514 have been approved under OMB control number 0910–0284; and the collections of information in 21 CFR 558.6(a)(4) have been approved under OMB control number 0910–0363.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/animal-veterinary/guidance-regulations/guidance-industry, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov*.

Dated: April 25, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–5018]

Angela Maria Giron: Final Debarment Order

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is issuing an order under the Federal Food, Drug, and Cosmetic Act (FD&C Act) permanently debarring Angela Maria Giron, M.D. from providing services in any capacity to a person that has an approved or pending drug product application. FDA bases this order on a finding that Dr. Giron was convicted of a felony under Federal law for conduct relating to the development or approval, including the process for development or approval, of any drug product. Dr. Giron was given notice of the proposed debarment and an opportunity to request a hearing within the timeframe prescribed by regulation. As of February 16, 2024 (30 days after receipt of the notice), Dr. Giron has not responded. Dr. Giron's failure to respond and request a hearing constitutes a waiver of Dr. Giron's right to a hearing concerning this matter.

DATES: This order is applicable May 2, 2024.

ADDRESSES: Any application by Dr. Giron for special termination of debarment under section 306(d)(4) of the FD&C Act (21 U.S.C. 335a(d)(4)) may be submitted at any time as follows:

Electronic Submissions

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. An application submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your application will be made public, you are solely responsible for ensuring that your application does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your application, that information will be posted on *https://www.regulations.gov.*
- If you want to submit an application with confidential information that you do not wish to be made available to the public, submit the application as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For a written/paper application submitted to the Dockets Management Staff, FDA will post your application, as well as any attachments, except for information submitted, marked, and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All applications must include the Docket No. FDA–2023–N–5018. Received applications will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit an application with confidential information that you do not wish to be made publicly available, submit your application only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states

''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of your application. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852 between 9 a.m. and 4 p.m., Monday through Friday. Publicly available submissions may be seen in the docket.

FOR FURTHER INFORMATION CONTACT: Jaime Espinosa, Division of Compliance and Enforcement, Office of Policy, Compliance, and Enforcement, Office of Regulatory Affairs, Food and Drug Administration, at 240–402–8743, or *debarments@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 306(a)(2)(A) of the FD&C Act requires debarment of an individual from providing services in any capacity to a person that has an approved or pending drug product application if FDA finds that the individual has been convicted of a felony under Federal law for conduct relating to the development or approval, including the process of development or approval, of any drug product. On September 11, 2023, Dr. Giron was convicted as defined in section 306(l)(1) of the FD&C Act in the United States District Court for the Southern District of Florida-Miami Division when the court accepted her plea of guilty and entered judgment against her for one count of Conspiracy to defraud the United States in violation of 18 U.S.C. 371. The underlying facts supporting the conviction are as follows: As contained in the Information and the Factual Proffer in Support of Guilty Plea, from Dr. Giron's case, she was a licensed physician and served as a clinical investigator at AMB Research Center, Inc. (AMB), a medical clinic located in Miami, Florida. AMB conducted clinical trials of new drugs for pharmaceutical companies and other sponsors. AMB entered into a Clinical Trial Agreement with a Clinical Research Organization (CRO) that managed and oversaw a clinical trial designed to evaluate the safety and efficacy of an investigational drug intended to treat persons with Clostridium difficile-associated diarrhea (CDAD clinical trial) on behalf of a sponsor (a pharmaceutical company). Dr. Giron agreed to serve as the clinical investigator, also known as the principal investigator, for the CDAD clinical trial at AMB and signed the Form FDA 1572, Statement of Investigator, for the CDAD clinical trial. By signing the Form FDA 1572, she knew that as the clinical investigator she was required to, among other things, (1) conduct the CDAD clinical trial according to the study protocol and in compliance with all applicable Federal regulations; (2) personally conduct and supervise the CDAD clinical trial; (3) obtain informed consent from the subjects; and (4) comply with the clinical trial protocol and applicable Federal regulations relating to obtaining informed consent and the informed consent process.

As the CDAD principal investigator, Dr. Giron was also responsible for complying with all requirements regarding the eligibility of subjects in accordance with the protocol; dispensing study medication; collecting and reporting data; reporting adverse events; and ensuring that all employees working on the study met those same obligations. Dr. Giron was also required to prepare and maintain case histories which were records relating to the CDAD clinical trial. These case histories for each subject participating in the CDAD clinical trial included informed consent forms and medical records, drug dispensation records, and records of all observations and other data pertinent to the CDAD clinical trial.

For purposes of obtaining money from the Sponsor and/or CRO, Dr. Giron, along with her co-conspirators, created false and fraudulent study records. For example, electronic case record files (eCRFs) falsely represented that the subjects completed the informed consent form (ICF) process, which required Dr. Giron to review the ICF with each subject and personally obtain the subject's written informed consent. In truth and fact, Dr. Giron did not obtain written informed consent for any of the 22 subjects enrolled in the CDAD clinical trial. Dr. Giron knew that the study subjects did not participate in the CDAD clinical trial in accordance with the study protocol and applicable Federal regulations.

In addition, along with her co-conspirators, Dr. Giron falsified data of enrolled subjects in the CDAD clinical trial. For example, Dr. Giron did not conduct the required clinical investigator assessments at the second, third and fifth visits. She also knew that falsified and fraudulent information was submitted in case report forms and eCRFs falsely representing she had completed those required assessments according to the protocol. Furthermore, Dr. Giron also knew that false information and data was submitted in the case report forms and eCRFs representing that the subjects had satisfied eligibility criteria to participate in the CDAD clinical trial, received and taken the study medication, and completed the required documents and journals.

After an on-site audit of AMB by the Sponsor in April 2017, the Sponsor notified the FDA in writing of potential scientific misconduct by AMB. The Institutional Review Board for the CDAD clinical trial sent AMB a copy of the Sponsor's notification to FDA. Dr. Giron, along with a co-conspirator, signed a letter entitled ''Site response to the Notification of Potential Scientific Misconduct.'' At the time of signing that response letter Dr. Giron knew that it contained materially false and fraudulent representations including that (1) she was present for all subjects' informed consent and gave each subject the time to understand, read, and resolve any questions prior to signing the informed consent form; (2) AMB took special care with ICF signatures and the ICF process to ensure that subjects understood the study and its risks and could make an informed decision whether to participate; (3) all participating subjects had completed the study treatment and follow up visits; and (4) she and AMB site staff acted in accordance with the study protocol to the best of their knowledge. Dr. Giron received $58,119.60 in proceeds for the CDAD clinical trial. AMB received more than $250,000 for the CDAD clinical trial.

As a result of this conviction, FDA sent Dr. Giron, by certified mail, on January 10, 2024, a notice proposing to permanently debar her from providing services in any capacity to a person that has an approved or pending drug product application. The proposal was based on a finding, under section 306(a)(2)(A), that Dr. Giron was convicted of a felony under Federal law for conduct relating to the development or approval, including the process of development or approval, of any drug

product. The proposal informed Dr. Giron of the proposed debarment and offered her an opportunity to request a hearing, providing her 30 days from the date of receipt of the letter in which to file the request, and advised her that failure to request a hearing constituted a waiver of the opportunity for a hearing and of any contentions concerning this action. Dr. Giron received the proposal and notice of opportunity for a hearing on January 17, 2024. Dr. Giron failed to request a hearing within the timeframe prescribed by regulation and has, therefore, waived her opportunity for a hearing and waived any contentions concerning her debarment (21 CFR part 12).

II. Findings and Order

Therefore, the Assistant Commissioner, Office of Human and Animal Food Operations, under section 306(a)(2)(A) of the FD&C Act, under authority delegated to the Assistant Commissioner, finds that Angela Maria Giron, M.D. has been convicted of a felony under Federal law for conduct relating to the development or approval, including the process of development or approval, of any drug product.

As a result of the foregoing finding, Dr. Giron is permanently debarred from providing services in any capacity to a person with an approved or pending drug product application, effective (see **DATES**) (see sections 306(a)(2)(A) and 306(c)(2)(A)(ii) of the FD&C, (335a(c)(2)(A)(ii))). Any person with an approved or pending drug product application who knowingly employs or retains as a consultant or contractor, or otherwise uses in any capacity the services of Dr. Giron during her debarment, will be subject to civil money penalties (section 307(a)(6) of the FD&C Act (21 U.S.C. 335b(a)(6))). If Dr. Giron provides services in any capacity to a person with an approved or pending drug product application during her period of debarment she will be subject to civil money penalties (section 307(a)(7) of the FD&C Act). In addition, FDA will not accept or review any abbreviated new drug application from Dr. Giron during her period of debarment, other than in connection with an audit under section 306 of the FD&C Act. Note that, for purposes of sections 306 and 307 of the FD&C Act, a ''drug product'' is defined as a ''drug subject to regulation under section 505, 512, or 802 of the FD&C Act (21 U.S.C. 355, 360b, 382) or under section 351 of the Public Health Service Act (42 U.S.C. 262)'' (section 201(dd) of the FD&C Act (21 U.S.C. 321(dd))).

Dated: April 29, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No.FDA–2024–N–1464]

Agency Information Collection Activities; Proposed Collection; Comment Request; New Animal Drugs for Investigational Use

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on reporting and recordkeeping requirements of our regulations concerning new animal drugs for investigational use.

DATES: Either electronic or written comments on the collection of information must be submitted by July 1, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of July 1, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–1464 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; New Animal Drugs for Investigational Use.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit

both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Rachel Showalter, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 240–994–7399, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

New Animal Drugs for Investigational Use—21 CFR 511

OMB Control Number 0910–0117—Extension

This information collection helps support implementation of Agency statutory and regulatory requirements regarding the approval of new animal drugs. FDA has the authority under the Federal Food, Drug, and Cosmetic Act (FD&C Act) to approve new animal drugs. A new animal drug application (NADA) cannot be approved until, among other things, the new animal drug has been demonstrated to be safe and effective for its intended use(s). In order to properly test a new animal drug for an intended use, appropriate scientific investigations must be conducted. Under specific circumstances, section 512(j) of the FD&C Act (21 U.S.C. 360b(j)) permits the use of an investigational new animal drug to generate data to support a NADA approval. Section 512(j) of the FD&C Act authorizes us to issue regulations relating to the investigational use of new animal drugs.

Our regulations in part 511 (21 CFR part 511) set forth the conditions for investigational use of new animal drugs and require reporting and recordkeeping to qualify for the exemption from section 512(a) of the FD&C Act. The information collected is necessary to protect the public health. We use the information to determine that investigational animal drugs are distributed only to qualified investigators, adequate drug accountability records are maintained, and edible food products from treated food-producing animals are safe for human consumption. We also use the information collected to monitor the validity of the studies submitted to us to support new animal drug approval.

Our regulations require that certain information be submitted to us in a ''Notice of Claimed Investigational Exemption for a New Animal Drug'' (NCIE) to qualify for the exemption and to control shipment of the new animal drug and prevent potential abuse. We also require reporting by importers of investigational new animal drugs for clinical investigational use in animals (§ 511.1(b)(9)). The information provided by the sponsor in the NCIE is needed to help ensure that the proposed investigational use of the new animal drug is safe and that any edible food will not be distributed without proper authorization from FDA. Information contained in an NCIE submission is monitored under our Bioresearch Monitoring Program. This program permits us to monitor the validity of the studies and to help ensure the proper use of the drugs is maintained by the investigators.

Sponsors use eSubmitter, a secure online, question-based submission tool, to submit the NCIE electronically (*https://www.fda.gov/industry/fda-esubmitter/cvm-esubmitter-programs*).

Description of Respondents: Respondents to this collection of information are persons who use new animal drugs for investigational purposes. Investigational new animal drugs are used primarily by drug industry firms, academic institutions, and the government (*i.e.,* sponsors of investigational new animal drugs). Investigators may include individuals from these entities, as well as research firms and members of the medical professions. With respect to this information collection, the term respondent includes sponsors who are subject to user fees and sponsors who are not subject to user fees.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1] [2]

21 CFR section/activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
511.1(b)(4), 511.1(b)(5) 511.1(b)(6) 511.1(b)(8)(ii), and 511.1(b)(9); submissions of NCIE, data to obtain authorization, any additional information upon request of FDA, reporting of findings that may suggest significant hazards, and reporting by importers of investigational new animal drugs for clinical investigational use in animals ...	257	5.70	1,466	1.12	1,634

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.
[2] Totals may not sum due to rounding.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1] [2]

21 CFR section/activity	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
511.1(a)(3), 511.1(b)(3), 511.1(b)(7), and 511.1(b)(8)(ii); Maintain records showing the name and post office address of the expert or expert organization to whom the new animal drug, or feed containing the same is shipped and the date, quantity, and batch or code mark of each shipment and delivery; maintain records of the investigation and all reports received by a sponsor from investigators	257	17.44	4,482	2.57	11,519

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.
[2] Totals may not sum due to rounding.

The NCIE must contain, among other things, the following specific information: (1) identity of the new animal drug, (2) labeling, (3) statement of compliance of any non-clinical laboratory studies with good laboratory practices, (4) name and address of each clinical investigator, (5) the approximate number of animals to be treated or amount of new animal drug(s) to be shipped, and (6) information regarding the use of edible tissues from investigational animals (§ 511.1(b)(4)). If the new animal drug is to be used in food-producing animals (*e.g.,* cattle, swine, chickens, fish, etc.), certain data must be submitted to us to obtain authorization for the use of edible food products from treated food-producing animals (§ 511.1(b)(5)). We require sponsors upon request to submit information with respect to the investigation to determine whether there are grounds for terminating the exemption (§ 511.1(b)(6)). We require sponsors to report findings that may suggest significant hazards pertinent to the safety of the new animal drug (§ 511.1(b)(8)(ii)).

If the new animal drug is only for tests in vitro or in laboratory research animals, the person distributing the new animal drug must maintain records showing the name and post office address of the expert or expert organization to whom it is shipped and the date, quantity, and batch or code mark of each shipment and delivery for a period of 2 years after such shipment or delivery (§ 511.1(a)(3) and (b)(3)).

We require complete records of the investigation, including records of the receipt and disposition of each shipment or delivery of the investigational new animal drug (§ 511.1(b)(7)). We also require records of all reports received by a sponsor from investigators to be retained for 2 years after the termination of an investigational exemption or approval of a new animal drug application (§ 511.1(b)(8)(i)).

The estimate of the time required for reporting requirements, record preparation, and maintenance for this collection of information is based on our informal communication with industry. Based on the number of sponsors subject to animal drug user fees, we estimate that there are 257 respondents. We use this estimate throughout both tables to calculate the ''number of responses per respondent'' by dividing the total annual responses by number of respondents. The burden we attribute to reporting and recordkeeping activities is assumed to be distributed among the individual elements of the respective information collection activities.

Additional information needed to make a final calculation of the total burden hours (*i.e.,* the number of respondents, the number of recordkeepers, the number of NCIEs received, etc.) is derived from our records. There is a decrease in the total burden hours of 2,401, which we attribute to a decrease in the number of respondents as well as the number of annual responses and records.

Dated: April 29, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–1940]

Request for Nominations of a Nonvoting Representative of the Interest of Tobacco Growers on the Tobacco Products Scientific Advisory Committee

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is requesting nominations for a nonvoting representative of the interests of the tobacco growers to serve on the Tobacco Products Scientific Advisory Committee (TPSAC), in the Center for Tobacco Products. FDA seeks to include the views of women and men, members of all racial and ethnic groups, and

individuals with and without disabilities on its advisory committees and, therefore encourages nominations of appropriately qualified candidates from these groups. A nominee may either be self-nominated or nominated by an organization. In addition, FDA is requesting that any industry organizations interested in participating in the selection of a nonvoting representative of the interests of the tobacco growers industry to serve on the TPSAC, notify FDA in writing. Nominations will be accepted for either the representative to serve on TPSAC or for the selection group effective with this notice.

DATES: Nomination materials for prospective candidates should be sent to FDA by June 3, 2024. Concurrently, any industry organization interested in participating in the selection of an appropriate nonvoting member to represent the interests of the tobacco growers industry must send a letter stating that interest to FDA by *June 3, 2024* (see sections I and II of this document for further details).

ADDRESSES: All nominations for nonvoting representatives of the interests of the tobacco growers industry may be submitted electronically by accessing the FDA Advisory Committee Membership Nomination Portal: *https://www.accessdata.fda.gov/scripts/FACTRSPortal/FACTRS/index.cfm.*

All statements of interest from industry organizations interested in participating in the selection process of nonvoting representatives of the interests of the tobacco growers industry nomination should be sent to Serina Hunter-Thomas (see **FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Serina Hunter-Thomas, Office of Science, Center for Tobacco Products, Food and Drug Administration, Document Control Center, Bldg. 71, Rm. G335, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 1–877–287–1373 (choose Option 5), email: *Serina.Hunter-Thomas@fda.hhs.gov.*

Information about becoming a member of an FDA advisory committee can also be obtained by visiting FDA's website at: *http://www.fda.gov/AdvisoryCommittees/default.htm.*

SUPPLEMENTARY INFORMATION: FDA is requesting nominations for a nonvoting representative of the interests of the tobacco growers industry on the TPSAC.

I. General Description of the Committee Duties

The TPSAC advises the Commissioner of Food and Drugs (the Commissioner) or designee in discharging responsibilities related to the regulation of tobacco products. The TPSAC reviews and evaluates safety, dependence, or health issues relating to tobacco products and provides appropriate advice, information, and recommendations to the Commissioner.

II. Nomination Procedure

Individuals may self-nominate and/or an organization may nominate one or more individuals to serve as a nonvoting representative of the interests of the tobacco growers industry. Nominations must include a current résumé or curriculum vitae for each nominee, including current business address and/or home address, telephone number, and email address if available. Nominations must specify the advisory committee for which the nominee is recommended. Nominations must also acknowledge that the nominee is aware of the nomination unless self-nominated. The nomination should be sent to the FDA Advisory Committee Membership Nomination Portal (see **ADDRESSES**) within 30 days of publication of this document (see **DATES**). FDA will forward all nominations to the organizations expressing interest in participating in the selection process. (Persons who nominate themselves as nonvoting industry representatives will not participate in the selection process.)

III. Selection Procedure

The Agency is also seeking names of organizations to participate in the selection of the nonvoting representative of the interests of the tobacco growers industry. Any industry organization interested in participating in the selection of an appropriate nonvoting member to represent growers industry interests should send a letter stating that interest to the FDA contact (see **FOR FURTHER INFORMATION CONTACT**) within 30 days of publication of this document (see **DATES**). Within the subsequent 30 days, FDA will send a letter to each organization that has expressed an interest in participating in the selection group, attaching a complete list of all organizations participating in selection; and a list of all nonvoting nominees along with their current résumés. The letter will also state that it is the responsibility of the interested organizations on the selection group to confer with one another and to select a candidate and an alternative as backup, within 60 days after the receipt of the FDA letter, to serve as the nonvoting member to represent growers industry interests for the TPSAC. The interested organizations are not bound by the list of nominees in selecting a candidate. However, if no individual is selected within 60 days, the Commissioner will select the nonvoting member to represent growers industry interests.

This notice is issued under the Federal Advisory Committee Act (5 U.S.C. 1001 *et seq.*) and part 14, relating to advisory committees.

Dated: April 29, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2024–09532 Filed 5–1–24; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Proposed Collection: Public Comment Request; Information Collection Request Title: The Maternal, Infant, and Early Childhood Home Visiting Program Quarterly Performance Report

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the requirement for opportunity for public comment on proposed data collection projects of the Paperwork Reduction Act of 1995, HRSA announces plans to submit an Information Collection Request (ICR), described below, to the Office of Management and Budget (OMB). Prior to submitting the ICR to OMB, HRSA seeks comments from the public regarding the burden estimate, below, or any other aspect of the ICR.

DATES: Comments on this ICR should be received no later than July 1, 2024.

ADDRESSES: Submit your comments to *paperwork@hrsa.gov* or mail the HRSA Information Collection Clearance Officer, Room 14N39, 5600 Fishers Lane, Rockville, Maryland 20857.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, email *paperwork@hrsa.gov* or call Joella Roland, the HRSA Information Collection Clearance Officer, at (301) 443–3983.

SUPPLEMENTARY INFORMATION: When submitting comments or requesting information, please include the ICR title for reference.

Information Collection Request Title: The Maternal, Infant, and Early

Childhood Home Visiting Program Quarterly Performance Report OMB No. 0906–0016—Revision.

Abstract: This request is for continued approval of the Maternal, Infant, and Early Childhood Home Visiting (MIECHV) Program Quarterly Performance Report. The MIECHV Program is administered by the Maternal and Child Health Bureau (MCHB) within HRSA in partnership with the Administration for Children and Families, and provides support to all 56 States and jurisdictions, as well as Tribes and Tribal organizations. Through a needs assessment, States, jurisdictions, Tribes, and Tribal organizations identify target populations and select the home visiting service delivery model(s) that best meet their needs. In response to awardee feedback, HRSA is proposing the following revisions to the data collection forms to reduce administrative burden related to this performance report:

- Form 4, Table A.2: Remove Column D: Zip Codes
- Form 4, Definition of Key Terms: Update definitions for Table A.2
- Form 4: Remove Section B

Need and Proposed Use of the Information: HRSA uses quarterly performance information to demonstrate program accountability and continuously monitor and provide oversight to MIECHV Program awardees. The information is also used to provide quality improvement guidance and technical assistance to awardees and help inform the development of early childhood systems at the national, State, and local level. HRSA is seeking to remove collection of a variable and update key terms given this deletion.

Likely Respondents: MIECHV Program awardees that are States, jurisdictions, and, where applicable, nonprofit organizations providing home visiting services within States.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Form 4: Section A—Quarterly Performance Report	56	4	224	21	4,704
Total	56		224		4,704

HRSA specifically requests comments on (1) the necessity and utility of the proposed information collection for the proper performance of the agency's functions, (2) the accuracy of the estimated burden, (3) ways to enhance the quality, utility, and clarity of the information to be collected, and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Maria G. Button,

Director, Executive Secretariat.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Proposed Collection: Public Comment Request; Information Collection Request Title: COVID–19 Provider Relief Programs Single and Commercial Audits and Delinquent Audit Reporting Submission Activities, Office of Management and Budget No. 0906–0083—Extension

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the requirement to provide opportunity for public comment on proposed data collection projects per the Paperwork Reduction Act of 1995, HRSA announces plans to submit an Information Collection Request (ICR), described below, to the Office of Management and Budget (OMB). Prior to submitting the ICR to OMB, HRSA seeks comments from the public regarding the burden estimate, below, or any other aspect of the ICR.

DATES: Comments on this ICR should be received no later than July 1, 2024.

ADDRESSES: Submit your comments to *paperwork@hrsa.gov* or mail the HRSA Information Collection Clearance Officer, Room 14N39, 5600 Fishers Lane, Rockville, Maryland 20857.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, email *paperwork@hrsa.gov* or call Joella Roland, the HRSA Information Collection Clearance Officer, at (301) 443–3983.

SUPPLEMENTARY INFORMATION: When submitting comments or requesting information, please include the ICR title for reference.

Information Collection Request Title: COVID–19 Provider Relief Programs Single and Commercial Audits and Delinquent Audit Reporting Submission Activities, OMB No. 0906–0083—Extension.

Abstract: The Coronavirus Aid, Relief, and Economic Security Act (Pub. L. 116–136); the Paycheck Protection Program and Health Care Enhancement Act (Pub. L. 116–139); the Coronavirus Response and Relief Supplemental Appropriations Act (Pub. L. 116–260); the Families First Coronavirus Response

Act (Pub. L. 116–127); and the American Rescue Plan Act of 2021 (Pub. L. 117–2) provided the Department of Health and Human Services the authority to administer the Provider Relief Programs (PRP) (*e.g.,* Provider Relief Fund; American Rescue Plan Act Rural Distribution; COVID–19 Coverage Assistance Fund; and COVID–19 Claims Reimbursement to Health Care Providers and Facilities for Testing, Treatment, and Vaccine Administration for the Uninsured). The Department of Health and Human Services delegated the authority for these programs to HRSA. The PRP issued payments to eligible health care providers for expenses or lost revenues attributable to COVID–19 and claims reimbursement for COVID–19 testing, treatment, and vaccine administration for uninsured and COVID–19 vaccine administration for underinsured individuals. Recipients of these funds agreed to the Terms and Conditions applicable to each Program, which require, among other Terms, compliance with reporting requirements as specified by the Secretary of Health and Human Services. Recipients are eligible health care providers who include public entities, Medicare or Medicaid enrolled suppliers and providers, and for-profit and non-profit entities that provide diagnosis, testing, vaccination, or care for individuals with possible or actual cases of COVID–19. The Single Audit Act requires entities that expend $750,000 or more of federal assistance during the entity's fiscal year to conduct an independent audit. Requirements for these audits are set forth in regulations at 45 CFR subpart F. Requirements differ for non-profit and commercial/for-profit entities, and non-profit entities are required to submit their audits to the Federal Audit Clearinghouse. HRSA has established a Commercial Audit Reporting Portal to collect audits from commercial/for-profit organizations. In late calendar year 2023, HRSA developed a delinquent audit follow-up process to ensure that all providers required to submit an audit do so. The delinquent audit follow-up process includes educating PRP recipients on the 45 CFR 75 subpart F requirements and following up on overdue audit report submissions. In February 2024, OMB approved HRSA's emergency ICR for the Commercial Audit Reporting Portal and the delinquent audit follow-up process. Collectively, these activities will help ensure the fiscal and program integrity of the PRP.

Need and Proposed Use of the Information: HRSA will use the collected information to ensure all PRP recipients who expended over $750,000 in funding during the recipient's fiscal year submit an audit and resolve audit findings, including recovery of any funds used not in accordance with the Terms and Conditions of the programs.

Likely Respondents: PRP recipients who expended over $750,000 in funding during their fiscal year.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Provider Relief Bureau Commercial Audit Reporting Portal	21,000	1	21,000	0.75	15,750
Delinquent Audit Follow-up Attestation	21,000	2	42,000	0.25	10,500
Questioned Cost Attestation	7,000	10	70,000	5.00	350,000
Total	49,000		133,000		376,250

HRSA specifically requests comments on: (1) the necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Maria G. Button,

Director, Executive Secretariat.

[FR Doc. 2024–09466 Filed 5–1–24; 8:45 am]

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Advisory Committee on Seniors and Disasters Public Meeting

AGENCY: Administration for Strategic Preparedness and Response (ASPR), U.S. Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The National Advisory Committee on Seniors and Disasters (NACSD) will conduct a public meeting on Monday, May 20, 2024 (2:30 p.m.–4:30 p.m. ET). Notice of the meeting is required under Section 10(a)(2) of the Federal Advisory Committee Act (FACA). The NACSD is required by section 2811B of the Public Health Service Act (PHS) Act (42 U.S.C. 300hh–10c), as amended by the Pandemic and All-Hazards Preparedness and Advancing Innovation Act (PAHPAIA), Public Law 116–22, and governed by the provisions of the Federal Advisory Committee Act (FACA). The NACSD provides expert advice and guidance to the U.S. Department of Health and Human Services (HHS) regarding all-hazards public health and medical preparedness, response, and recovery activities related to meeting the unique needs of older adults. ASPR manages and convenes the NACSD on behalf of the Secretary of HHS. The NACSD will discuss and deliberate questions posed by ASPR on climate and health equity.

Procedures for Public Participation: The public and expert stakeholders are invited to observe the meeting either in-person or virtually and pre-registration

is required. The pre-registration link and a more detailed agenda will be available on the NACSD website. Anyone may submit questions and comments to the NACSD by email (*NACSD@hhs.gov*) before the meeting. American Sign Language translation and Communication Access Real-Time Translation will be provided.

We would like to specifically seek input from the public on climate and health equity considerations in disaster training as well as opportunities and strategic priorities for national public health and medical preparedness, response, and recovery specific to the needs of older adults. Representatives from industry, academia, health professions, health care consumer organizations, non-federal government agencies, or community-based organizations may request up to five minutes to speak directly to the Committee. Requests to speak to the Committee will be approved in consultation with the Committee Chair and based on time available during the meeting. Requests to speak to the NACSD during the public meeting must be sent to *NACSD@hhs.gov* by close of business on May 15, 2024. Please provide the full name, credentials, official position(s), and relevant affiliations for the speaker and a brief description of the intended topic. Presentations that contain material with a commercial bias, advertising, marketing, or solicitations will not be allowed. A meeting summary will be available on the NACSD website post meeting.

FOR FURTHER INFORMATION CONTACT: Dr. Maxine Kellman; NACSD Designated Federal Official, (202) 260–0047; *NACSD@HHS.GOV.*

The Administrator and Assistant Secretary for Preparedness and Response of ASPR, Dawn O'Connell, having reviewed and approved this document, authorizes Adam DeVore, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Adam DeVore,

Federal Register Liaison, Administration for Strategic Preparedness and Response.

[FR Doc. 2024–09584 Filed 5–1–24; 8:45 am]

BILLING CODE 4150–37–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2023–0036; OMB No. 1660–0033]

Agency Information Collection Activities: Submission for OMB Review, Comment Request; Residential Basement Floodproofing Certificate

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 30-Day notice of extension and request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. FEMA invites the general public to take this opportunity to comment on an extension of a currently approved information collection. In accordance with the requirements of the Paperwork Reduction Act of 1995, this notice seeks comments concerning information collected for eligible properties insured under the National Flood Insurance Program (NFIP) policies to certify the floodproofing of residential basements.

DATES: Comments must be submitted on or before June 3, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to Director, Information Management Division, 500 C Street SW, Washington, DC 20472, email address *FEMA-Information-Collections-Management@fema.dhs.gov* or Joycelyn Collins, Underwriting Branch Program Analyst, Federal Insurance Directorate, by email at *Joycelyn.Collins@fema.dhs.gov* or by telephone at (202) 701–3383.

SUPPLEMENTARY INFORMATION: The National Flood Insurance Program (NFIP) is authorized by the National Flood Insurance Act of 1968 (90–448, title XIII) and expanded by the Flood Disaster Protection Act of 1973 (93–234) and requires that FEMA provide flood insurance. FEMA delineates flood zones on a Flood Insurance Rate Map to identify Special Flood Hazard Areas (SFHAs) in a community. 44 CFR 60.3(c)(2) requires that all new construction and substantial improvements of residential structures within SFHA Zones A1–30, AE, AH, and AO zones have the lowest floor, including the basement, elevated to or above the base flood level unless a community-wide exception or site-specific variance is granted. 44 CFR 60.6(a)(7) and 44 CFR 60.6(b)(1) allow communities to apply for an exception when circumstances present a hardship that would not allow for adherence to the requirement for elevation above the base flood level. Exceptions granted under 44 CFR 60.6(c) must meet the conditions specified in the regulation. When owners of residential structures in these zones are seeking flood insurance, they must be certified that the structural design is floodproof.

This proposed information collection previously published in the **Federal Register** on January 31, 2024, at 89 FR 6124 with a 60-day public comment period. One public comment was received, and it did not specifically address the proposed extension of the collection of information on residential basements insured under the NFIP, or otherwise provide information relevant to the Notice. FEMA determined that no change in FEMA's proposed extension of the information collection related to residential basements is required. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below to the Office of Management and Budget for review and clearance.

Collection of Information

Title: Residential Basement Floodproofing Certificate.

Type of Information Collection: Extension of a currently approved information collection.

OMB Number: 1660–0033.

FEMA Forms: FEMA Form FF–206–FY–21–122 (formerly 086–0–24), Residential Basement Floodproofing Certificate.

Abstract: The Residential Basement Floodproofing Certificate is required to certify that floodproofing of a structure in communities approved for Residential Basement floodproofing meets at least minimal floodproofing specifications. Residential structures that receive this certification are granted a discount on flood insurance premiums.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 10.

Estimated Number of Responses: 10.

Estimated Total Annual Burden Hours: 25.

Estimated Total Annual Respondent Cost: $1,763.

Estimated Respondents' Operation and Maintenance Costs: $5,000.

Estimated Respondents' Capital and Start-Up Costs: $0.

Estimated Total Annual Cost to the Federal Government: $191.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Millicent Brown Wilson,

Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111–52–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7086–N–09]

60-Day Notice of Proposed Information Collection: Housing Counseling Agency Activity Reports, OMB Control No.: 2502–0622

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, Department of Housing and Urban Development (HUD).

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* July 1, 2024.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 60-day Review—Open for Public Comments'' or by using the search function. Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; telephone 202–402–3577 (this is not a toll-free number) or email: *PaperworkReductionActOffice@hud.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202–402–3400. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit: *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Housing Counseling Agency Activity Reports.

OMB Approval Number: OMB Control No.: 2502–0622.

OMB Expiration Date: 12/31/2024.

Type of Request: Revision of a currently approved collection.

Form Number: HUD–9902.

Description of the need for the information and the proposed use: The purpose of form HUD–9902 is to collect information on HUD Approved Housing Counseling Agency and household activity to assist OHC in analyzing agency performance and program impact information. In addition, the data will help to determine whether Notice of Funding Opportunity (NOFO) grant applicants meet the requirements of the NOFO and provides a method for assignment of points for awarding grant funds on a competitive and equitable basis.

Respondents: Not-for-profit institutions; State, Local or Tribal Government.

Estimated Number of Respondents: 1,614.

Estimated Number of Responses: 6,456.

Frequency of Response: 4 times a fiscal year.

Average Hours per Response: .36.

Total Estimated Burden: 2,324 hours.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 3507.

Jeffrey D. Little,

General Deputy Assistant Secretary for Housing.

[FR Doc. 2024–09541 Filed 5–1–24; 8:45 am]

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6433–N–02]

Request for Information Regarding Iron, Steel, Construction Materials, and Manufactured Products Used in Housing Programs Pursuant to the Build America, Buy America Act; Extension of Comment Period

AGENCY: Office of the Secretary, Department of Housing and Urban Development (HUD).

ACTION: Extension of comment period for request for information.

SUMMARY: On February 13, 2024, the Department of Housing and Urban Development published in the **Federal Register** a document titled, ''Request for Information Regarding Iron, Steel, Construction Materials, and Manufactured Products Used in Housing Programs Pursuant to the Build America, Buy America Act.'' (RFI) The request for comment provided for a 60-day comment period, which ended on April 15, 2024. HUD has determined that a 45-day extension of the comment period is appropriate to allow interested persons additional time to provide responses. HUD is interested in comments relating to the domestic market for products required in housing infrastructure projects that are compliant with the Build America Preference (BAP), especially those detailing domestic materials sourcing, market readiness, other product supply considerations, and whether specific housing products or their components are manufactured in the United States.

DATES: The comment period for the request for comment published on February 13, 2024, at 89 FR 10090, is extended to June 17, 2024.

ADDRESSES: Interested persons are invited to submit comments on the request for information. Copies of all comments submitted are available for inspection and downloading at *www.regulations.gov*. To receive consideration as public comments, comments must be submitted through one of two methods, specified below. All submissions must refer to the above docket number and title.

1. *Electronic Submission of Comments.* Interested persons may submit comments electronically through the Federal eRulemaking Portal at *www.regulations.gov*. HUD strongly encourages commenters to submit comments electronically. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt by HUD, and enables HUD to make them immediately available to the public. Comments submitted electronically through the *www.regulations.gov* website can be viewed by other commenters and interested members of the public. Commenters should follow the instructions provided on that site to submit comments electronically.

2. *Submission of Comments by Mail.* Comments may be submitted by mail to the Regulations Division, Office of General Counsel, Department of Housing and Urban Development, 451 7th Street SW, Room 10276, Washington, DC 20410–0500.

No Facsimile Comments. Facsimile (FAX) comments will not be accepted.

Public Inspection of Comments. All properly submitted comments and communications submitted to HUD will be available for public inspection and copying between 8:00 a.m. and 5:00 p.m. weekdays at the above address. Due to security measures at the HUD Headquarters building, an advance appointment to review the submissions must be scheduled by calling the Regulations Division at (202) 708–3055 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech and communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications relay-service-trs*.

Copies of all submissions are available for inspection and downloading at *www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Faith Rogers, Department of Housing and Urban Development, 451 Seventh Street SW, Room 10126, Washington, DC 20410–5000, at (202) 402–7082 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech and communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications relay-service-trs*. HUD encourages submission of questions about this document be sent to BuildAmerica *BuyAmerica@hud.gov*.

SUPPLEMENTARY INFORMATION: The Build America, Buy America Act (BABA), enacted on November 15, 2021, establishes a domestic procurement preference, the BAP, which HUD must implement to ensure that iron, steel, manufactured products, and construction materials used for infrastructure projects are produced in the United States. HUD has worked to develop an implementation plan across its Federal Financial Assistance (FFA) programs, including publishing a ''Request for Information Relating to the Implementation of the Build America, Buy America Act'' on June 1, 2022. In furtherance of its implementation plan, HUD published in the **Federal Register** a document titled ''Request for Information Regarding Iron, Steel, Construction Materials, and Manufactured Products Used in Housing Programs Pursuant to the Build America, Buy America Act.'' The request for information solicits comment input to improve HUD's understanding of the current state of the domestic market for products required in housing infrastructure projects.

While the request for information originally provided for a 30-day comment period, in consultation with the Office of Management and Budget's Made in America Office HUD has determined that extending the public comment period by an additional 45 days will better allow the public to submit comments that will help HUD gather information necessary to fully implement the BAP. Thus, HUD is extending the date for public comment until June 17, 2024.

Aaron Santa Anna,

Associate General Counsel for Legislation and Regulations.

BILLING CODE 4210–67–P

INTER-AMERICAN FOUNDATION

Sunshine Act Meetings

TIME AND DATE: Tuesday, May 7, 2024, 9:30 a.m.–11:30 a.m.

PLACE: Hybrid with public attendance held virtually.

STATUS: Meeting of the Board of Directors, partially closed to the public.

MATTERS TO BE CONSIDERED: Management team updates.

PORTIONS OPEN TO THE PUBLIC:

- Call to Order
- Overview of Meeting Rules by General Counsel
- Approval of Minutes from October 10, 2023 meeting
- Discussion of management team updates, including FY24 and FY25 budgets, grants management system update, core funding update, fellowships update
- Adjournment

PORTIONS CLOSED TO THE PUBLIC:

CONTACT PERSON FOR MORE INFORMATION: Nicole Stinson, Associate General Counsel, (202) 683–7117 or *generalcounsel@iaf.gov.*

For Dial-in Information contact: Nicole Stinson, Associate General Counsel, *generalcounsel@iaf.gov.*

The Inter-American Foundation is holding this meeting under the Government in the Sunshine Act, 5 U.S.C. 552b and 22 CFR 1004.

Natalia Mandrus,

Associate General Counsel.

BILLING CODE 7025–01–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–R7–ES–2024–0004; FXES111607MRG01–245–FF07CAMM00]

Marine Mammal Protection Act; Permit Applications and Issuances

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; notice of issuance of permits.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), invite public comment on applications for permits to conduct certain activities involving marine mammals for which the Service has jurisdiction under the Marine Mammal Protection Act (MMPA). In addition, we announce permits that we have issued recently in response to prior applications.

DATES: We must receive comments on the new permit applications by June 3, 2024.

ADDRESSES:

Obtaining Documents:

• *Application Materials:* The applications, application supporting materials, and any comments and other materials that we receive are available for public inspection at *https://www.regulations.gov* in Docket No. FWS–R7–ES–2024–0004.

• *Issued Permits:* To access materials pertaining to the permits we have issued, see Permits Issued by the Service under **SUPPLEMENTARY INFORMATION**.

Submitting Comments on the Applications: You may submit comments containing written data or views concerning the taking or importation proposed in each application by one of the following methods:

• *Internet: https://www.regulations.gov*. Search for and submit comments on Docket No. FWS–R7–ES–2024–0004.

• *U.S. mail:* Public Comments Processing, Attn: Docket No. FWS–R7–ES–2024–0004; U.S. Fish and Wildlife Service Headquarters, MS: PRB/3W; 5275 Leesburg Pike; Falls Church, VA 22041–3803.

For more information, see Public Comment Procedures under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Charles Hamilton, via email at *r7mmmregulatory@fws.gov* or by telephone at 907–786–3800 or 1–800–362–5148. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

I. Background

With some exceptions, the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), prohibits the take and importation of marine mammals and marine mammal products absent Federal authorization. In carrying out our responsibilities under the MMPA, we, the U.S. Fish and Wildlife Service (Service), may authorize such activities via permits after receipt of an application and verification that MMPA statutory and regulatory requirements are met.

Section 104(c) of the MMPA specifies the conditions for authorizing the taking or importation of a marine mammal for purposes of scientific research, public display, or enhancing the survival or recovery of a species or stock under the MMPA.

This notice provides information about two aspects of the MMPA permitting process: application and issuance. At section II, we provide the public with notice of and the opportunity to comment on applications that we have received from entities or individuals to conduct certain activities with marine mammals for which the Service has jurisdiction under the MMPA. At section III, we announce recently issued MMPA permits to entities or individuals in response to prior applications.

II. Applications Available for Public Review

To help us carry out our conservation responsibilities for affected species, and in consideration of section 104(c) of the MMPA, we invite the public and local, State, Tribal, and Federal agencies to comment on the applications listed below before final action is taken. Concurrent with publishing this notice in the **Federal Register**, we are forwarding copies of these marine mammal applications to the Marine Mammal Commission and the Committee of Scientific Advisors for their review.

A. Permit Applications Received

We invite comments on the following applications:

Applicant: Matson's Laboratory, Manhattan, MT; Permit No. PER6413229

The applicant requests a permit to import teeth from up to 200 legally harvested Atlantic walrus (*Odobenus rosmarus rosmarus*) from Canada. After analysis, Matson's Lab will provide information on animal ages to be used by governmental authorities in Canada to inform population abundance estimation and survival analyses, along with ensuring that legal harvest of walrus is sustainable and well managed. Once the laboratory analysis is complete, samples will be exported (returned) to Canada. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Jason Roehing/MeatEater Inc., Bozeman, MT, Permit No. 5955318

The applicant requests a permit to conduct commercial photography and filming of northern sea otters (*Enhydra lutris kenyoni*) in the wild. This notification covers activities to be conducted by the applicant during the period March through May 2024.

Applicant: North Slope Borough Department of Wildlife, Utqiagvik, AK, Permit No. 0046206

The applicant requests a reissuance of their scientific research permit to (1) collect tissue samples from dead polar bears (*Ursus maritimus*) and Pacific walrus (*Odobenus rosmarus rosmarus*); (2) conduct aerial surveys to detect carcasses of polar bears and Pacific walrus; and (3) conduct noninvasive sampling for eDNA. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: U.S. Fish and Wildlife Service, Marine Mammals Management Office, Anchorage, AK, Permit No. MA82088B–1

The applicant requests an amendment to their scientific research permit to allow the take of polar bears (*Ursus martimus*) by disturbance. The research will be used to evaluate the distance at which wild polar bears on the Beaufort seashore respond to boat traffic. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: U.S. National Park Service, Juneau, AK, Permit No. 14762C

The applicant requests a reissuance of their scientific research permit to (1) conduct aerial photographic surveys to estimate the spatial distribution and abundance of sea otters (*Enhydra lutris kenyoni*) and (2) conduct land-based foraging observations of sea otters in the Glacier Bay, Icy Strait, Cross Sound, outer coast of Glacier Bay, and Yakutat areas of southeastern Alaska. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Windfall Films, London, United Kingdom, Permit No. 9061181

The applicant requests a permit to conduct commercial photography and filming of Pacific walrus (*Odobenus rosmarus divergens*) in the wild. This notification covers activities to be conducted by the applicant during the period May through October 2024.

B. Public Comment Procedures

1. How do I comment on permit applications?

Before issuing any requested permit, we will take into consideration any information that we receive during the public comment period.

You may submit your comments and materials by one of the methods in **ADDRESSES**. We will not consider comments sent by email, or to an address not in **ADDRESSES**. We will not consider or include in our administrative record comments that we receive after the close of the comment period (see **DATES**).

When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. Provide sufficient information to allow us to authenticate any scientific or commercial data you include. The comments and recommendations that will be most useful and likely to influence agency decisions are: (a) Those supported by quantitative information or studies; and (b) those that include citations to, and analyses of, the applicable laws and regulations.

2. May I review comments submitted by others?

You may view public comments at *https://www.regulations.gov* unless our allowing so would violate the Privacy Act (5 U.S.C. 552a) or other Federal law.

3. Who will see my comments?

If you submit a comment at *https://www.regulations.gov,* your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, such as your address, phone number, or email address, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

C. Next Steps for Submitted Applications

After the comment period closes, we will make decisions regarding permit issuance. If we issue permits to any of the applicants listed above in this notice, we will publish a subsequent notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching *https://www.regulations.gov* for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to *https://www.regulations.gov* and search for ''12345A''.

III. Permits Issued by the Service

We have issued permits to conduct certain activities involving marine mammals and marine mammal products in response to prior permit applications that we received. This notice informs the public that the Service has issued the permits listed in Table 1 below.

The permittees' original permit application materials, along with public comments we received during public comment periods for the applications, are available for review. To locate the application materials and received comments, go to *https://www.regulations.gov* and search for the appropriate permit number (*e.g.,* PER12345) or docket number (*e.g.,* FWS–HQ–IA–2022–0001) provided in table 1.

TABLE 1—MMPA PERMITS RECENTLY ISSUED

Permit No.	Applicant	Permit issuance date	Docket No.
PER0030527	U.S. Geological Survey	10/05/2023	FWS–HQ–IA–2022–0007
PER690038	U.S. Geological Survey	10/19/2023	FWS–HQ–IA–2018–0083
PER84399D	NOAA Fisheries/AFSC/Marine Mammal Laboratory	10/30/2023	FWS–HQ–IA–2022–0102
PER0032559	Alaska Veterinary Pathology Services	01/04/2024	FWS–HQ–IA–2022–0138
PER0040980 (Legacy PRT #84799B)	Texas A&M University	01/12/2024	FWS–HQ–IA–2022–0138

IV. Authority

We issue this notice under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and its implementing regulations.

Peter Fasbender,

Assistant Regional Director for Fisheries and Ecological Services, Alaska Region.

[FR Doc. 2024–09479 Filed 5–1–24; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Office of the Secretary

[223D0102DM, DS6CS00000, DLSN00000.000000. DX6CS25; OMB Control Number 1093–0012]

Agency Information Collection Activities; Application Requirements for States and Tribes To Apply for Orphaned Well Site Plugging, Remediation, and Restoration Funding Consideration, and Ongoing State and Tribal Reporting Requirements for Funding Recipients

AGENCY: Office of the Secretary of the Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Office of the Secretary of the Interior (Interior), through her delegated office, the Orphaned Wells Program Office (OWPO), proposes to renew and revise an OMB-approved information collection, which is numbered OMB Control Number 1093–0012.

DATES: Interested parties are invited to submit comments on or before July 1, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent to Jeffrey Parrillo, Departmental Information Collection Clearance Officer, U.S. Department of the Interior, 1849 C Street NW, Washington, DC 20240; or by email to *DOI-PRA@ios.doi.gov.* Please reference OMB Control Number ''1093–0012 Orphaned Well Program Office'' in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this proposed information collection, please contact Ron Lev, Management and Program Analyst, OWPO, by email, at *orphanedwells@ios.doi.gov,* or by phone, at (771) 233–5722.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside of the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: In accordance with the PRA and 5 CFR 1320.8, all information collections require approval. Interior may not conduct or sponsor, and a party is not required to respond to, a collection of information unless the collection displays a currently valid OMB control number.

As part of its continuing effort to reduce paperwork and respondent burdens, Interior invites the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps Interior assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand Interior's information collection requirements and provide the requested data in the desired format.

Interior is especially interested in public comment concerning:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of the estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments submitted in response to this notice are a matter of public record. Interior will include or summarize each comment in its request to the OMB to approve this information collection request. Before commenters include their respective addresses, phone numbers, email addresses, or other personal identifying information in their comments, they should be aware that entire comments—including any personally identifying information—may be made publicly available at any time. While a commenter may request that personal identifying information be withheld from public review, Interior cannot guarantee that it will be able to do so.

Abstract: Infrastructure Investment and Jobs Act (Pub. L. 117–58) (November 15, 2021), section 40601, ''*Orphaned well site plugging, remediation, and restoration,*'' which is also known as the Bipartisan Infrastructure Law (BIL), amends section 349 of the Energy Policy Act of 2005 (42 U.S.C. 15907). Section 40601 designates Interior as the key agency responsible for implementing grant and other financial assistance programs for applicable government entities to plug, remediate, and reclaim orphaned wells on lands covered by the BIL. The associated investments will rebuild America's critical infrastructure, tackle the climate crisis, advance environmental justice, and drive the creation of good-paying union jobs.

Interior will issue financial assistance through grant awards to State and Tribal governments under Assistance Listing (CFDA) program 15.018 Energy Community Revitalization Program (ECRP). With respect to Tribal In Lieu of Grant Assistance, OWPO will coordinate with the Bureau of Indian Affairs. The authority for the above assistance is the Infrastructure Investment and Jobs Act, Division D, Title VI, Section 40601.

The types of assistance contained in section 40601 are as follows:

1. Initial Grants to States
2. Formula Grants to States
3. Performance Grants to States, which includes:
   - Regulatory Improvement Grants to States
   - Matching Grants to States
4. Grants to Tribes and Tribal In Lieu of Grant Assistance

The BIL requires Interior to collect information necessary to ensure that awarded grant and other assistance funds authorized by this legislation are used in accordance with the BIL, Federal assistance requirements (*i.e.,* 2 CFR part 200), and other applicable Federal law and authorities. Interior anticipates that most of the information will be collected by the OWPO, which has and will issue guidance concerning the above assistance programs. Interior seeks OMB approval of the proposed information collection to manage and monitor financial assistance applications and awards to ensure that States and Tribes comply with the BIL, 2 CFR part 200, and other applicable Federal law and authorities.

Consolidated Workplan

Interior proposes to collect the following from all State and Tribal grant applicants, unless noted otherwise, as part of each entity's consolidated workplan:

(a) An applicant's process for determining a well has been orphaned, including what efforts will be made to redeem financial assurances or otherwise recoup remediation costs from any responsible parties;

(b) A description of an applicant's plugging standards, including the witnessing requirements (*e.g.,* qualifications of witness, documentation);

(c) An applicant's prioritization process for evaluating and ranking orphan wells and associated surface reclamation, including criteria, weighting, and how such prioritization will address resource and financial risk, public health and safety, potential environmental harm (including methane emissions where applicable), and other land use priorities;

(d) If no prioritization process currently exists, an applicant's description of its plans to develop and implement a prioritization process;

(e) Details of how a State applicant will identify and address any disproportionate burden of adverse human health or environmental effects of orphaned wells on disadvantaged communities, low-income communities, and Tribal and indigenous communities;

(f) How applicants will identify and incorporate into their work plans health, safety, habitat, and environmental benefits of plugging, remediating, or reclamation of orphaned wells (Proposed revision);

(g) The methodology to be used by the applicant to measure and track methane and other gases associated with orphaned wells, including how the applicant will confirm the effectiveness of plugging activities in reducing or eliminating such emissions;

(h) The methodology to be used by the applicant to measure and track contamination of groundwater and surface water associated with orphaned wells, including how the applicant will confirm the effectiveness of plugging activities in reducing or eliminating such contamination;

(i) The methodology to be used to decommission or remove associated pipelines, facilities, and infrastructure and to remediate soil and restore habitat that has been degraded due to the presence of orphaned wells and associated infrastructure;

(j) Methods the applicant will use to solicit recommendations from local officials and the public regarding the prioritization of well plugging and site remediation activities, and any other processes the applicant will use to solicit feedback on the program from local officials and the public;

(k) Latitude/Longitude and all other data elements and associated units of measure as indicated in State and Tribal data reporting templates. *See* the *Data Associated with Wells Plugged Using Federal BIL Funds* portion of this proposed information collection;

(l) How the applicant will use funding to locate currently undocumented orphaned wells;

(m) Plans the applicant has to engage third parties in partnerships around well plugging and site remediation, or any existing similar partnerships the applicant currently belongs to;

(n) Training programs, registered apprenticeships, and local and economic hire agreements for workers the applicant intends to conduct or fund in well plugging or site remediation;

(o) Plans the applicant has to support opportunities for all workers, including workers underrepresented in well plugging or site remediation, to be trained and placed in good-paying jobs directly related to the project;

(p) For State applicants, plans the State applicant has to incorporate equity for underserved communities into their planning, including supporting the expansion of high-quality, good paying jobs through workforce development programs and incorporating workforce strategy into project development;

(q) Procedures the applicant will use to coordinate with Federal, State, or Tribal agencies to determine whether efficiencies may exist by combining field survey, plugging, or surface remediation work across lands covered by the BIL;

(r) The applicant's authorities to enter private property, or an applicant's procedures to obtain landowner consent to enter private property, in the event that any wells to be plugged will be accessed from privately owned surface;

(s) A work schedule covering the period of performance for the grant;

(t) If applicable, a federally approved Indirect Cost Rate Agreement or statement regarding applicant's intention to negotiate or utilize the de minimis rate;

(u) How an applicant will assist Interior to ensure that activities funded by the grant it applied for will comply with relevant Federal law and authorities, such as the Endangered Species Act of 1973, as amended (ESA), and the National Historic Preservation Act, as amended (NHPA) (Proposed revision);

(v) For Performance Grants, how a State applicant will place a higher priority on the use of the Federal funds to lower unemployment in the State, including workforce development activities related to orphaned well plugging, remediation, and reclamation (Proposed revision); and

(w) For Performance Grants, how a State applicant will place a higher priority on the use of the Federal funds to improve economic conditions in economically distressed areas of the State, provided the use of the funds is related to orphaned well plugging, remediation, and reclamation (Proposed revision).

Regulatory Improvement Grants—State Applicants Only

(Proposed Revision)

Under Section 40601(c)(5)(E)(i), a Regulatory Improvement Grant (RIG) may be awarded to an eligible State if either: (1) ''The State has strengthened plugging standards and procedures designed to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment'' (Plugging Standards RIG); or (2) ''The State has made improvements to State programs designed to reduce future orphaned well burdens, such as financial assurance reform, alternative funding mechanisms for orphaned well programs, and reforms to programs relating to well transfer or temporary abandonment'' (Program Standards RIG). In addition to a consolidated workplan, and other information required from RIG applicants that is discussed in this proposed information collection, Interior proposes to collect the following from applicants.

Plugging Standards RIGs: Interior proposes to collect from Plugging Standards RIG applicants information pertaining to their statutes, regulations, policies, and procedures, which were implemented during the 10-year period specified in the BIL, that demonstrate the ''State has strengthened plugging standards and procedures designed to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.'' The list, (a) through (j), below, are examples of information Interior proposes to collect. In determining whether a ''State has strengthened plugging standards and procedures,'' Interior may request additional types of information.

(a) Drilling well construction, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(b) Allowable well control equipment to manage actions of perforating, cutting/pulling of casing, or retrieving seal assemblies, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an

effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(c) Allowable barrier types, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(d) Allowable barrier placement locations, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(e) Allowable barrier placement techniques, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(f) Wellbore integrity and barrier verification, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(g) Spacer medium between well barriers, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(h) Wellbore capping requirements, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(i) Plugging procedure approval requirements, plugging procedure changes, plugging operations notification requirements, post-plugging reporting requirements, alternative materials or methods, and the resulting actual or anticipated positive effects of these changes, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

(j) Internal inspection and oversight, and long-term monitoring of plugged wells processes, and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to ensure that wells located in the State are plugged in an effective manner that protects groundwater and other natural resources, public health and safety, and the environment.

For Program Standards RIGs: Interior proposes to collect from Program Standards RIG applicants information pertaining to their statutes, regulations, policies, and procedures, which were implemented during the 10-year period specified in the BIL, that demonstrate the ''State has made improvements to State programs designed to reduce future orphaned well burdens, such as financial assurance reform, alternative funding mechanisms for orphaned well programs, and reforms to programs relating to well transfer or temporary abandonment.'' The list, (a) through (g), below, are examples of information Interior proposes to collect. In determining whether a ''State has made improvements to State programs designed to reduce future orphaned well burdens,'' Interior may request additional types of information.

(a) Liable parties, scope of liability, and state access (*e.g.,* non-operator liable parties, predecessor in interest liability, and state targeting of liable parties through increased or enhanced enforcement), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens.

(b) Transfers of interest (*e.g.,* notice of transfer to state from transferor and transferee, state assessment of transferor and/or transferee, and transferor maintenance of assurance), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens.

(c) Financial Assurance (*e.g.,* bonding adjusted for field, well, or operator risks), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens, including considerations for idle, marginal, and producing wells.

(d) Non-assurance State financial protections and plugging incentives (*e.g.,* fees, taxes, penalties (including increased or enhanced enforcement), and incentives), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens, including considerations for idle, marginal, and producing wells.

(e) Reporting and public notice of orphaned or potentially orphaned wells (*e.g.,* reporting mechanisms, for responsible parties, online notice of aggregate financial assurance, and online notice of marginal, orphaned, and all other wells by responsible party), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens, including considerations for idle, marginal, and producing wells.

(f) Consideration for air, groundwater, and other natural resources, as well as public safety and environmental justice (*e.g.,* considerations for surface and groundwater or soil, including hazardous materials or other contamination, special considerations for oil and gas wells converted to water wells, and considerations for public safety and environmental justice), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens, including considerations for idle, marginal, and producing wells.

(g) Orphaned-wells-related internal and external workforce development (*e.g.,* State internal workforce enhancements, State contracting process, and oversight of State vendors, including certificate programs), and the resulting actual or anticipated positive effects, or documentation, that demonstrate the State's intent to reduce future orphaned well burdens.

For both Plugging Standards and Program Standards Applications: For all Plugging Standards and Program Standards RIG applicants, Interior also proposes to collect the following:

Scoring Template: A list of questions related to the specific type of RIG they are applying for in a scoring template (*e.g.,* ''Yes'' or ''No''). Applicants will also need to provide support for the scoring template that they submit.

Interior will use the requested information to determine grant eligibility, including eligible amount, and to ensure that program objectives are being met, evaluate the applicant's readiness to obligate grant funds, and evaluate the applicant's approach to execute grant objectives and the grant-funded work that will be monitored by Interior.

Grant Applications

Interior proposes to collect the following additional elements from applicants:

- *Standard forms (SF) from the SF–424 Series:* Applicants must submit the following SF–424 series of forms:
  - SF–424, Application for Federal Assistance;
  - SF–424A, Budget Information for Non-Construction Programs or SF–424C Budget Information for Construction Program, or both;
  - SF–424B, Assurances for Non-Construction Programs) or SF–424D Assurances for Construction Programs);
  - SF–428 Tangible Personal Property Report; and
  - SF–LLL, Disclosure of Lobbying Activities, when applicable).
- *Indirect Cost Statement:* If requesting reimbursement for indirect costs, all applicants must include in their application a statement regarding how they anticipate charging indirect costs.
- *Budget Narrative and/or Template:* Applicants must provide a narrative and/or template that describes and justifies, with sufficient detail, the requested budget items and costs, and provides a description of how the applicant determined its totals by cost category in their application (Proposed revision).
- *Negotiated Indirect Cost Rate Agreement (NICRA):* When applicable, a copy of the applicant's current federal-agency-approved Negotiated Indirect Cost Rate Agreement is required.
- *Single Audit Reporting Statement:* All U.S. governmental entities and non-profit applicants must submit a statement regarding their single audit reporting status.
- *Conflict of Interest Disclosures:* Applicants must notify the Interior in writing of any actual or potential conflicts of interest known at the time of application or that may arise during the life of this award, in the event the Interior makes an award to the entity.
- *Certification Statement:* State applicants for the Initial Grant part of this program must provide a signed State Certification statement consistent with Section 40601(c)(3)(A)(ii)(III) or 40601(c)(3)(A)(i)(II) of the BIL. State and Tribal Applicants may also be required to submit other certifications for other grant programs, consistent with guidance issued by the OWPO.

Tribal In Lieu of Grant Assistance Requests—Tribal Applicants Only

(Proposed Revision)

Tribes, in lieu of grant assistance, may request that Interior administer and carry out plugging, remediation, and reclamation activities related to eligible orphaned wells on behalf of the Tribe. Interior proposes to collect the following information to evaluate and administer such requests:

- A letter of request for assistance, from the Tribe, bearing the signature of the authorized representative of the Tribe's governing body;
- A description of activities (*e.g.,* plugging and abandonment, remediation, and/or reclamation) for which the Tribe is requesting assistance;
- A brief description of the Tribe's territories, including the number and locations of known orphan wells; and
- A summary of known supporting data or information, including existing inventories and assessments and environmental compliance documents.

Amendments

For many budget and program plan revisions, 2 CFR part 200 requires recipients submit revision requests to the Federal awarding agency in writing for prior approval. Interior reviews such requests received to determine the eligibility and allowability of new or revised activities and costs and approves certain items of cost.

Reporting/Recordkeeping Requirements

To ensure that activities funded by Section 40601 are consistent with the BIL, 2 CFR part 200, and other Federal law and authorities, Interior proposes to collect the following information from all grant and other funding recipients:

- *Financial Reports:* Recipients are required to submit all financial reports on the Standard Form 425, Federal Financial Report. Recipients must submit financial reports in accordance with 2 CFR part 200. The frequency of submission may vary but will typically be annually or semi-annually. Interior, however, may require submission of financial reports more frequently in certain circumstances, such as where more frequent reporting is necessary for the effective monitoring of the Federal award or could significantly affect program outcomes (Frequency is proposed revision).
- *Performance Reports:* Recipients must submit performance reports in accordance with 2 CFR part 200. This information is necessary for Interior to track accomplishments and performance-related data. Interior uses these reports to ensure that the recipient is accomplishing its work on schedule, and to identify any problems that the recipient may be experiencing in accomplishing the work. While the frequency of performance reporting may vary, recipients typically will be required to submit their performance reports annually or semi-annually. Interior, however, may require the submission of these reports more frequently in certain circumstance, such as where more frequent reporting is necessary for the effective monitoring of the Federal award or could significantly affect program outcomes (Frequency is proposed revision).

  Performance reports must include:
  - A comparison of actual accomplishments to the goals and objectives established for the reporting period, the results/findings, or both;
  - If the goals and objectives were not met, the reasons why, including analysis and explanation of cost overruns or high unit costs compared to the benefit received to reach an objective;
  - Performance trend data and analysis to be used by the awarding program to monitor and assess recipient and Federal awarding program performance;
  - Consolidated long-term work plan and accomplishments updates, when award is part of a large scale or long-term effort funded under multiple awards over time; and
  - Other information that Interior requires to track State and Tribal accomplishments, collect performance-related data, identify and risks and failure to achieve certain milestones, and is otherwise necessary to ensure that the State's or Tribe's actions comply with the relevant guidance issued by the OWPO (Proposed revision).
- *Final 15-month Report for State Initial Grants:* As required in the BIL, State recipients under the Initial Grants part of the program must submit a report no later than 15 months after the date on which the State receives the funds, describing the means by which the State used the funds in accordance with its application and certification, and including the reporting parameters described in this guidance.
- *Recordkeeping Requirements:* Recipients must retain financial records, supporting documents, statistical records, and all other records pertinent to a Federal award, per 2 CFR part 200 requirements.
- *Data Associated with Wells Plugged Using Federal BIL Funds:* Recipients must periodically provide data, which upon Interior's request, may include pictures, video, or other media, for any well plugged with BIL funds. This may include data associated with reclamation or restoration of land or infrastructure associated with a well (Proposed revision).

Upon request, but no more frequently than annually, recipients must submit requested information related to aggregate orphaned-well data (*e.g.,* the total number of documented orphaned wells located in a State, and the rationale for why the orphaned well inventory has increased or decreased during a certain time period). Interior will use this information to evaluate the effectiveness of the programs funded by the BIL.

- *Information Concerning State or Tribal Unmet Needs:* When requested, States and Tribes must submit requested information related to unmet needs for orphaned well plugging, the decommission or removal of the associated infrastructure, and the restoration and reclamation of the lands, surface water, ground water, or other natural resources that are impacted or potentially impacted. States or Tribes may also be required to provide information regarding employment and economically distressed areas, or environmental justice (Proposed revision).
- *Compliance with Environmental and Other Statutes:* Recipients must submit information to Interior to allow Interior to ensure that Federal BIL funds are utilized in a manner that is consistent applicable Federal law, such as the ESA and NHPA, and other authorities and policy (Proposed revision).
- *Change in RIG Eligibility (Scoring Template):* During the ten-year period that begins on the date of receipt of the grant funds, each RIG recipient must periodically (*e.g.,* annually) submit an updated Scoring Template. This submission will allow Interior to ensure that the State recipient is not required to reimburse Interior for all or a portion of its RIG for ''failure to maintain protections,'' under Section 40601(c)(5)(E)(iii). Recipients will also be required to submit documentation that supports any changes between the submitted Scoring Template and the one that was previously submitted (Proposed revision).
- Interior also proposes to rename the information collection from *Application Requirement for States to Apply for Orphaned Well Site Plugging, Remediation, and Restoration Grant Consideration* to *Application Requirements for States and Tribes to Apply for Orphaned Well Site Plugging, Remediation, and Restoration Funding Consideration, and Ongoing State and Tribal Reporting Requirements for Funding Recipients* (Proposed revision).

Title of Collection: Application Requirements for States and Tribes to Apply for Orphaned Well Site Plugging, Remediation, and Restoration Funding Consideration, and Ongoing State and Tribal Reporting Requirements for Funding Recipients.

OMB Control Number: 1093–0012.

Form Number: None.

Type of Review: Revision and extension of a currently approved collection.

Respondents/Affected Public: Up to 92 (27 State and 65 Tribal governments).

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion

Total Estimated Annual Non-hour Burden Cost: None.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_WY_FRN_MO4500169700.WYW106272479, WYW–165445]

Notice of Intent To Amend the Worland Resource Management Plan and Prepare an Associated Environmental Assessment; Notice of Realty Action: Proposed Non-Competitive Direct Sale of 1.0 Acre of Public Lands in Washakie County, Wyoming

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent; notice of realty action.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended (FLPMA), the Bureau of Land Management (BLM) Wyoming State Director intends to prepare a Resource Management Plan (RMP) amendment with an associated Environmental Assessment (EA) for the non-competitive direct sale of public lands in Washakie County, Wyoming, and by this notice is announcing the beginning of the scoping period to solicit public comments and identify issues; providing the planning criteria for public review; and announcing a comment period on the proposed realty action offering a one-acre parcel of public lands by direct sale to TAG Western Properties, LLC for not less than the fair market value of $1,020.00.

DATES: The BLM requests that the public submit comments concerning the scope of the analysis, potential alternatives, identification of relevant information and studies, classification of the land for disposal, and the proposed direct sale by June 17, 2024. To afford the BLM the opportunity to consider issues raised by commenters in the Draft RMP/EA, please ensure your comments are received prior to the close of the 45-day scoping period or 15 days after the last public meeting, whichever is later.

ADDRESSES: You may submit comments on issues and planning criteria related to the proposed RMP amendment and non-competitive direct sale of public land in the Washakie County, Wyoming, by any of the following methods:

- Website: *https://eplanning.blm.gov/eplanning-ui/project/2023383/510*
- *Email: BLM_WY_Worland_WYMail@blm.gov*
- *Mail:* Field Manager, BLM, Worland Field Office, 101 South 23rd Street, Worland, WY 82401

Documents pertinent to this proposal may be examined online at the website above and at the Worland Field Office.

FOR FURTHER INFORMATION CONTACT: Connie Craft, Realty Specialist, telephone (307) 347–5233; address Worland Field Office, 101 South 23rd Street, Worland, WY 82401; email *c75craft@blm.gov*. Contact Ms. Craft to have your name added to our mailing list. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: This document provides notice that the BLM Wyoming State Director intends to prepare an RMP amendment with an associated EA for the non-competitive direct sale of public land in Washakie County, Wyoming; announces the

beginning of the scoping process; and seeks public input on issues and planning criteria. The RMP amendment is being considered to allow the BLM to evaluate the disposal of public lands to TAG Western Properties, LLC. The direct sale would be consistent with provisions of section 203 of FLPMA and BLM land-sale regulations at 43 CFR 2710. Publication of this notice in the **Federal Register** segregates the subject land from all forms of appropriation under the public land laws, including the general mining laws, and from the mineral leasing and geothermal leasing laws, except for the sale provisions of FLPMA. The planning area is in Washakie County, Wyoming, and encompasses 1.0 acre of public land.

The scope of this land use planning process does not include addressing the evaluation or designation of areas of critical environmental concern (ACECs), and the BLM is not considering ACEC nominations as part of this process.

Purpose and Need

The need of the proposed action is to resolve inadvertent, unauthorized development of public lands consisting of a metal shop and cabin constructed by a previous landowner, currently owned and operated by the proponent as an essential component of the adjoining ranch operations. The purpose for the proposed action is to convey lands from Federal ownership that are difficult and uneconomical to manage and are not suitable for management by another Federal department or agency (FLPMA, 43 U.S.C. 1713(a)(1)). The BLM proposes to amend the 2015 Worland RMP in conformance with section 203 of FLPMA, which requires that land made available for disposal under the sale authority be clearly identified in the relevant land use plan.

Preliminary Alternatives

The RMP identifies tracts of public land suitable for disposal; however, the subject land is not currently listed as available for disposal. The BLM will analyze the suitability of the 1.0 acre for disposal per the criteria listed in FLPMA Section 203(a). The RMP amendment would allow for the land to be sold if it is found suitable for disposal.

The BLM is considering a direct sale of the following described land:

Sixth Principal Meridian, Wyoming

Township 45 North, Range 87 West,
Sec. 30, Parcel A.

The area described contains 1.0 acre, according to the official plat of survey of said land on file with the BLM.

The conveyance document, if issued, will contain the following terms, covenants, conditions, and reservations:

1. A right-of-way thereon for ditches or canals constructed by the authority of the United States pursuant to the Act of August 30, 1890, (43 U.S.C. 945);

2. All the mineral deposits in the land so patented pursuant to the Act of October 21, 1976 (43 U.S.C. 1719), including, without limitation, substances subject to disposition under the general mining laws, the general mineral leasing laws, the Materials Act, and the Geothermal Steam Act, and to it, its permittees, licensees, lessees, and mining claimants, the right to prospect for, mine, and remove the minerals owned by the United States under applicable law and such regulations as the Secretary of the Interior may prescribe. This reservation includes necessary access and exit rights and the right to conduct all necessary and incidental activities including, without limitation, all drilling, underground, open pit or surface mining operations, storage, and transportation facilities deemed reasonably necessary.

Unless otherwise provided by separate agreement with the surface owner, mining claimants, permittees, licensees, and lessees of the United States shall reclaim disturbed areas to the extent prescribed by regulations issued by the Secretary of the Interior.

All causes of action brought to enforce the rights of the surface owner under the regulations above referred to shall be instituted against mining claimants, permittees, licensees, and lessees of the United States; and the United States shall not be liable for the acts or omissions of its mining claimants, permittees, licensees, and lessees.

3. An appropriate indemnification clause protecting the United States from claims arising out of the patentee's use, occupancy, or operations on the patented land.

The conveyance document, if issued, will be subject to all valid existing rights.

The No Action Alternative would not amend the 2015 Worland RMP to allow for the disposal of the tract if found to be suitable per the criteria listed in the FLPMA section 203(a). The tract would be retained in federal ownership and the BLM would proceed with a formal trespass action. Revenues to local taxing districts would not change. Additional actions would be considered by the BLM on a case-by-case basis.

The BLM welcomes comments on all preliminary alternatives as well as suggestions for additional alternatives.

Planning Criteria

The planning criteria guide the planning effort and lay the groundwork for effects analysis by identifying the preliminary issues and their analytical frameworks. Preliminary issues for the planning area have been identified by BLM personnel and from early engagement conducted for this planning effort with Federal, State, and local agencies; Tribes; and stakeholders. The BLM has identified wildlife as a preliminary issue for this planning effort's analysis. The planning criteria are available for public review and comment at the ePlanning website (see **ADDRESSES**).

Public Scoping Process

This notice of intent initiates the scoping period and public review of the planning criteria, which guide the development and analysis of the RMP Amendment and EA.

The BLM does not intend to hold any public meetings, in-person or virtual, during the public scoping period. Should the BLM later determine to hold public meetings, the specific date(s) and location(s) of any meeting will be announced at least 15 days in advance through announcements in the *Northern Wyoming News*.

Sale Notifications

The segregation will terminate upon issuance of a conveyance document or on May 2, 2026, whichever occurs first. The BLM is no longer accepting land-use applications affecting the subject public land, except applications to amend previously filed right-of-way applications or existing authorizations to increase grant terms in accordance with 43 CFR 2807.15 and 43 CFR 2886.15.

The notification of the proposed RMP amendment and EA and, if applicable, unsigned Finding of No Significant Impact (FONSI) will begin a 30-day protest period subject to BLM Manual Section 2711.1 step 4(d) on the land-sale decision. The BLM Wyoming State Director will review all protests and may sustain, vacate, or modify the RMP amendment and land sale, in whole or in part. In the absence of any protests and upon reaching a FONSI, the BLM will select the approved RMP amendment alternative and prepare a decision record which will document the final determination of the Department of the Interior for the land sale.

In addition to publication of this notice in the **Federal Register**, the BLM will publish this notice in the *Northern Wyoming News* once a week for three consecutive weeks.

Interdisciplinary Team

The BLM will use an interdisciplinary approach to develop the plan to consider the variety of resource issues and concerns identified. Specialists with expertise in the following disciplines will be involved in this planning effort: outdoor recreation, archaeology, wildlife, lands and realty, minerals and geology, soils, vegetation, sociology, and economics.

Additional Information

The BLM will identify, analyze, and consider mitigation to address the reasonably foreseeable impacts to resources from the proposed plan amendment and all analyzed reasonable alternatives and, in accordance with 40 CFR 1502.14(e), include appropriate mitigation measures not already included in the proposed plan amendment or alternatives. Mitigation may include avoidance, minimization, rectification, reduction or elimination over time, and compensation, and may be considered at multiple scales, including the landscape scale.

The BLM will utilize and coordinate the NEPA and land use planning processes for this planning effort to help support compliance with applicable procedural requirements under the Endangered Species Act (16 U.S.C. 1536) and Section 106 of the National Historic Preservation Act (54 U.S.C. 306108) as provided in 36 CFR 800.2(d)(3), including public involvement requirements of Section 106. The information about historic and cultural resources and threatened and endangered species within the area potentially affected by the proposed plan will assist the BLM in identifying and evaluating impacts to such resources.

The BLM will consult with Indian Tribal Nations on a government-to-government basis in accordance with Executive Order 13175, BLM Manual Section 1780, and other Departmental policies. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration. Federal, State, and local agencies, along with Indian Tribal Nations and other stakeholders that may be interested in or affected by the proposed RMP amendment and non-competitive direct sale of public land in Washakie County, Wyoming, that the BLM is evaluating, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a cooperating agency.

Before including your address, phone number, email address or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_NM_FRN_MO4500178720]

Notice of Protest Acceptance; Oklahoma

AGENCY: Bureau of Land Management, Interior.

ACTION: Protest decision accepted.

SUMMARY: On September 29, 2020, the Bureau of Land Management (BLM) published in the **Federal Register**, Volume 85, Number 189, on page 61028, a notice entitled ''Notice of Filing of Plats of Survey; New Mexico; Oklahoma.'' The Notice stated that four supplemental plats were scheduled to be officially filed 30 days after the date, unless a person or party who wished to protest any of these surveys filed a timely, written Notice of Protest. On October 23, 2020, the Bureau of Land Management received a timely protest to the filing of the four supplemental plats.

SUPPLEMENTARY INFORMATION: On September 14, 2021, the BLM published a notice in the **Federal Register**, Volume 86, Number 175, on page 51182, a notice entitled ''Notice of Filing of Plats of Survey; Oklahoma.'' This notice stated that the official filing of the four Oklahoma supplemental plats had been stayed, pending consideration of all protests.

On February 27, 2024, the BLM New Mexico State Office State Director issued a decision and accepted the Arkansas River Authority's protest of the four supplemental plats.

The previous notices and protest decision letter apply to the following Supplemental Plats:

Indian Meridian, Oklahoma

The supplemental plat, within Township 10 North, Range 27 East, section 4, accepted July 8, 2020, for Group 224, Oklahoma.

The supplemental plat, within Township 10 North, Range 27 East, section 5, accepted July 8, 2020, for Group 224, Oklahoma.

The supplemental plat, in two sheets, within Township 10 North, Range 27 East, section 19, accepted August 13, 2020, for Group 223, Oklahoma.

The supplemental plat, within Township 11 North, Range 27 East, section 33, accepted July 8, 2020, for Group 224, Oklahoma.

The stay of filing published in the **Federal Register** on September 14, 2021, will not be lifted because the protest was accepted, and the acceptance of the plats was cancelled.

Authority: 43 U.S.C. chap. 3.

Melanie G. Barnes,

BLM New Mexico State Director.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_AK_FRN_MO4500179376; AA–41952]

Alaska Native Claims Selection

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of decision approving lands for conveyance.

SUMMARY: The Bureau of Land Management (BLM) hereby provides constructive notice that it will issue an appealable decision approving conveyance of the surface and subsurface estates in certain lands to Cook Inlet Region, Inc., an Alaska Native regional corporation, pursuant to the Alaska Native Claims Settlement Act of 1971 and the Act of January 2, 1976.

DATES: Any party claiming a property interest in the lands affected by the decision may appeal the decision in accordance with the requirements of 43 CFR part 4 within the time limits set out in the **SUPPLEMENTARY INFORMATION** section.

ADDRESSES: You may obtain a copy of the decision from the Bureau of Land Management, Alaska State Office, 222 West Seventh Avenue, #13, Anchorage, AK 99513–7504.

FOR FURTHER INFORMATION CONTACT: Cameron Means, Land Law Examiner, BLM Alaska State Office, 907–271–3152, or *cmeans@blm.gov*. Individuals

in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point of contact in the United States.

SUPPLEMENTARY INFORMATION: As required by 43 CFR 2650.7(d), notice is hereby given that the BLM will issue an appealable decision to Cook Inlet Region, Inc. The decision approves conveyance of the surface and subsurface estates in certain lands pursuant to ANCSA (43 U.S.C. 1601), and the Act of January 2, 1976 (43 U.S.C. 1611 note), as amended. The lands are located in the vicinity of Anchorage, Alaska, and are described as:

Seward Meridian, Alaska

T. 12 N., R. 5 W.,
Sec. 8.
Containing approximately 5 acres.

The decision addresses public access easements, if any, to be reserved to the United States pursuant to sec. 17(b) of ANCSA (43 U.S.C. 1616(b)), in the lands described above.

The BLM will also publish notice of the decision once a week for four consecutive weeks in the ''Anchorage Daily News'' newspaper.

Any party claiming a property interest in the lands affected by the decision may appeal the decision in accordance with the requirements of 43 CFR part 4 within the following time limits:

1. Unknown parties, parties unable to be located after reasonable efforts have been expended to locate, parties who fail or refuse to sign their return receipt, and parties who receive a copy of the decision by regular mail which is not certified, return receipt requested, shall have until June 3, 2024 to file an appeal.

2. Parties receiving service of the decision by certified mail shall have 30 days from the date of receipt to file an appeal.

Parties who do not file an appeal in accordance with the requirements of 43 CFR part 4 shall be deemed to have waived their rights. Notices of appeal transmitted by facsimile will not be accepted as timely filed.

Cameron G. Means,

Land Law Examiner, Branch of Adjudication.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–D–COS–POL–37690; PPWODIREP0; PPMPSAS1Y.000000; PX.XDIRE0039]

Notice of the June 10 and 11, 2024, Meeting of the Advisory Committee on Reconciliation in Place Names

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, the National Park Service (NPS) is hereby giving notice that the Advisory Committee on Reconciliation in Place Names (Committee) will meet as noted below.

DATES: The Committee will meet on Monday June 10, 2024, from 11 a.m. until 6 p.m. (MOUNTAIN) and Tuesday June 11, 2024, from 9 a.m. until 5:30 p.m. (MOUNTAIN). Individuals that wish to participate must contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section no later than Friday May 31, 2024, to receive instructions for accessing the meeting.

ADDRESSES: The Committee will meet at The Outdoor Campus (West), 4130 Adventure Trail, Rapid City, SD 57702. Electronic submissions of materials or requests are to be sent to *reconciliation_committee@nps.gov.* The meeting will also be accessible virtually via webinar and audio conference technology.

FOR FURTHER INFORMATION CONTACT: For information concerning attending the Committee meeting in-person or virtually, submitting written comments to the Committee, or requesting to address the Committee, contact the Office of Policy, National Park Service, at *reconciliation_committee@nps.gov* or by telephone at (202) 354–3950.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Committee has been established by authority of the Secretary of the Interior (Secretary) under 54 U.S.C. 100906 and is regulated by the Federal Advisory Committee Act.

Purpose of the Meeting: The Committee will present its work identifying Federal land unit and geographic feature names that may be considered derogatory, and its recommendations for determining a process to engage Tribes, State and local governments, affected Federal agencies, and members of the public in identifying additional derogatory terms and Federal land unit and geographic feature names. The final agenda and briefing materials will be posted to the Committee's website prior to the meeting at *https://www.nps.gov/orgs/1892/advisory-committee-on-reconciliation-in-place-names.htm.*

The meeting is open to the public. Interested persons may choose to make oral comments at the meeting during the designated time for this purpose. Depending on the number of people wishing to comment and the time available, the amount of time for oral comments may be limited. Interested parties should contact the National Park Service Office of Policy (see **FOR FURTHER INFORMATION CONTACT**) for advance placement on the public speaker list for this meeting. Members of the public may also choose to submit written comments by emailing them to *reconciliation_committee@nps.gov.* Due to time constraints during the meeting, the Committee is not able to read written public comments submitted into the record. All comments will be made part of the public record and will be electronically distributed to all Committee members. Detailed minutes of the meeting will be available for public inspection within 90 days of the meeting.

Meeting Accessibility: Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodations. We ask that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice at least seven (7) business days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. ch. 10.

Alma Ripps,

Chief, Office of Policy.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–37691; PPWOCRADN0–PCU00RP16.R50000]

Native American Graves Protection and Repatriation Review Committee Notice of Public Meeting

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: The National Park Service is hereby giving notice that the Native American Graves Protection and Repatriation Review Committee (Committee) will hold a virtual meeting as indicated below.

DATES: The Committee will meet via teleconference on Thursday, May 23, 2024, from 2:00 p.m. until approximately 6:00 p.m. (Eastern). The meeting is open to the public.

FOR FURTHER INFORMATION CONTACT: Melanie O'Brien, Designated Federal Officer, National Native American Graves Protection and Repatriation Act Program (2253), National Park Service, telephone (202) 354–2201, or email *nagpra_info@nps.gov.*

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Committee was established in section 8 of the Native American Graves Protection and Repatriation Act of 1990 (NAGPRA). Information about NAGPRA, the Committee, and Committee meetings is available on the National NAGPRA Program website at *https://www.nps.gov/subjects/nagpra/review-committee.htm.*

The Committee is responsible for monitoring the NAGPRA inventory and identification process; reviewing and making findings related to the identity or cultural affiliation of cultural items, or the return of such items; facilitating the resolution of disputes; compiling an inventory of culturally unidentifiable human remains that are in the possession or control of each Federal agency and museum, and recommending specific actions for developing a process for disposition of such human remains; consulting with Indian Tribes and Native Hawaiian organizations and museums on matters affecting such Tribes or organizations lying within the scope of work of the Committee; consulting with the Secretary of the Interior on the development of regulations to carry out NAGPRA; and making recommendations regarding future care of repatriated cultural items. The Committee's work is carried out during the course of meetings that are open to the public.

The agenda for the meeting may include a report from the National NAGPRA Program; the discussion of the Review Committee Report to Congress; subcommittee reports and discussion; and other topics related to the Committee's responsibilities under section 8 of NAGPRA. In addition, the agenda may include presentations by Indian tribes, Native Hawaiian organizations, museums, Federal agencies, associations, and individuals, and public comment. The agenda and materials for this meeting will be posted on or before May 9, 2024, at *https://www.nps.gov/orgs/1335/events.htm.* Detailed minutes of the meeting will be available for public inspection within 90 days of the meeting.

To submit a request or comment, see **FOR FURTHER INFORMATION CONTACT**. Information on joining the meeting by internet or telephone will be available on the National NAGPRA Program website at *https://www.nps.gov/orgs/1335/events.htm.*

Meeting Accessibility: The meeting is open to the public. Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodations. We ask that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice at least seven (7) business days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Public Disclosure of Comments: Before including your address, telephone number, email address, or other personal identifying information in your comments, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. ch. 10; 25 U.S.C. 3006.

INTERNATIONAL TRADE COMMISSION

[USITC SE–24–016]

Sunshine Act Meetings

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: May 9, 2024 at 9:30 a.m.

PLACE: Room 101, 500 E Street SW, Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agendas for future meetings: none.
2. Minutes.
3. Ratification List.
4. Commission vote on Inv. Nos. 731–TA–1675–1678 (Preliminary) (Dioctyl Terephthalate (DOTP) from Malaysia, Poland, Taiwan, and Turkey). The Commission currently is scheduled to complete and file its determinations on May 10, 2024; views of the Commission currently are scheduled to be completed and filed on May 17, 2024.
5. Outstanding action jackets: none.

CONTACT PERSON FOR MORE INFORMATION: Sharon Bellamy, Supervisory Hearings and Information Officer, 202–205–2000.

The Commission is holding the meeting under the Government in the Sunshine Act, 5 U.S.C. 552(b). In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.

Issued: April 29, 2024.

Sharon Bellamy,

Supervisory Hearings and Information Officer.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–726 and 731–TA–1694 (Preliminary)]

High Chrome Cast Iron Grinding Media From India; Institution of Antidumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–726 and 731–TA–1694 (Preliminary) pursuant to the Tariff Act of 1930 (''the Act'') to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of high chrome cast iron grinding media from India, provided for in subheading 7325.91.00 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value and alleged to be subsidized by the Government of India. Unless the Department of Commerce (''Commerce'') extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by June 10, 2024. The Commission's views must be transmitted to Commerce within five business days thereafter, or by June 17, 2024.

DATES: April 26, 2024.

FOR FURTHER INFORMATION CONTACT: Peter Stebbins, (202) 205–2039, Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on April 26, 2024, by Magotteaux Inc., Franklin, Tennessee.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Office of Investigations will hold a staff conference in connection with the preliminary phase of these investigations beginning at 9:30 a.m. on Friday, May 17, 2024. Requests to appear at the conference should be emailed to *preliminaryconferences@usitc.gov* (DO NOT FILE ON EDIS) on or before Wednesday, May 15, 2024. Please provide an email address for each conference participant in the email. Information on conference procedures, format, and participation, including guidance for requests to appear as a witness via videoconference, will be available on the Commission's Public Calendar (Calendar (USITC) | United States International Trade Commission). A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before 5:15 p.m. on May 22, 2024, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties shall file written testimony and supplementary material in connection with their presentation at the conference no later than noon on May 16, 2024. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or

reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: April 26, 2024.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Modification

On April 24, 2024, the Department of Justice lodged a proposed Consent Decree Modification (''Modification'') with the United States District Court for the Eastern District of Michigan in the lawsuit entitled *United States* v. *Dow Silicones Corp.* Civ. A. No. 19–11880.

The proposed Modification amends the Revised Consent Decree entered by the Court on January 24, 2020, which resolved Plaintiff's claims that Defendant violated various federal environmental statutes including the Clean Water Act at its chemical manufacturing plant located in Midland, Michigan. The proposed Modification extends a deadline in the Revised Consent Decree for Defendant's implementation of a Stormwater Capacity and Pollutant Evaluation from January 24, 2023 to January 24, 2026. The proposed Modification also includes requirements to mitigate any environmental harm associated with the extension of the deadline.

The publication of this notice opens a period for public comment on the proposed Modification. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States* v. *Dow Silicones Corp.* Civ. A. No. 19–11880 and DJ No. 90–5–2–1–10469. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	*Send them to:*
By email	*pubcomment-ees.enrd@usdoj.gov.*
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

During the public comment period, the Modification may be examined and downloaded at this Justice Department website: *http://www.usdoj.gov/enrd/Consent_Decrees.html.* If you require assistance accessing the proposed Modification, you may request assistance by email or by mail to the addresses provided above for submitting comments.

Laura Thoms,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–445 and 50–446; NRC–2022–0183]

Vistra Operations Company, LLC.; Luminant; Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2; Final Supplemental Environmental Impact Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has published a final plant-specific supplement, Supplement 60, License Renewal, to the Generic Environmental Impact Statement (GEIS) for License Renewal of Nuclear Plants, NUREG–1437, regarding the renewal of Facility Operating License Nos. NPF–87 and NPF–89 for an additional 20 years of operation for Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2, respectively (CPNPP). CPNPP is located in Somervell County, Texas.

DATES: The final Supplement 60, License Renewal to the GEIS is available on May 2, 2024.

ADDRESSES: Please refer to Docket ID NRC–2022–0183 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2022–0183. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may access publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The final Supplement 60, License Renewal is available in ADAMS under Accession No. ML24078A261.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an

appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

• *Public Library:* A copy of Supplement 60, License Renewal, to the GEIS for License Renewal of Nuclear Plants, NUREG–1437, will be available at the following locations: Somervell County Library, 108 Allen Dr., Glen Rose, TX 76043 and Hood County Library, 222 N Travis St., Granbury, TX 76048.

The NRC staff encourages those addressees with mailing addresses listed in Chapter 7 of the final Supplemental Environmental Impact Statement, to visit the NRC's NUREG-Series Publication website (*https://www.nrc.gov/reading-rm/doc-collections/nuregs/staff.html*) or the CPNPP project website (*https://www.nrc.gov/reactors/operating/licensing/renewal/applications/comanche-peak.html*) to download an electronic copy. You may also obtain an electronic copy by contacting Tam Tran via email at *Tam.Tran@nrc.gov*.

FOR FURTHER INFORMATION CONTACT: Tam Tran, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3617, email: *Tam.Tran@nrc.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with section 51.118 of title 10 of the *Code of Federal Regulations* (10 CFR), ''Final environmental impact statement—notice of availability,'' the NRC is making available final Supplement 60, License Renewal to NUREG–1437, regarding the renewal of Vistra Operations Company LLC; Luminant (Vistra), operating licenses NPF–87 and NPF–89 for an additional 20 years of operation for CPNPP. A Notice of Availability of draft Supplement 60, License Renewal to NUREG–1437 was published in the **Federal Register** on November 9, 2023 (88 FR 77308), by the Environmental Protection Agency. The public comment period on draft Supplement 60, License Renewal to NUREG–1437 ended on December 26, 2023, and the comments received are addressed in final Supplement 60, License Renewal to NUREG–1437.

II. Discussion

As discussed in Chapter 4 of final Supplement 60, License Renewal to NUREG–1437, the NRC staff determined that the adverse environmental impacts of subsequent license renewal for CPNPP are not so great that preserving the option of subsequent license renewal for energy-planning decisionmakers would not be unreasonable. This recommendation is based on: (1) the analysis and findings in the GEIS; (2) information provided in the environmental report and other documents submitted by Vistra; (3) consultation with Federal, State, Tribal, and local agencies; (4) the NRC staff's independent environmental review; and (5) consideration of public comments received during the scoping process and on the draft SEIS.

Dated: April 26, 2024.

For the Nuclear Regulatory Commission.

John M. Moses,

Deputy Director, Division of Rulemaking, Environmental, and Financial Support, Office of Nuclear Material Safety, and Safeguards.

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–18, 50–70, 50–73, 50–183, and 70–754; NRC–2023–0191]

In the Matter of GE-Hitachi Nuclear Energy Americas, LLC and NorthStar Vallecitos, LLC; Vallecitos Nuclear Center; Direct Transfer of Licenses

AGENCY: Nuclear Regulatory Commission.

ACTION: Order; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing an order approving the license transfer application filed by GE-Hitachi Nuclear Energy Americas, LLC (GEHA) and NorthStar Vallecitos, LLC (NorthStar Vallecitos), dated September 1, 2023, as supplemented by letters dated September 5, 2023, October 19, 2023, November 1, 2023, January 22, 2024, and March 15, 2024. Specifically, the order approves the direct transfer of control of Possession Only License Nos. DPR–1 for the Vallecitos Boiling Water Reactor, TR–1 for the General Electric Test Reactor, R–33 for the Nuclear Test Reactor, and DR–10 for the Empire State Atomic Development Associates Experimental Vallecitos Superheat Reactor and Special Nuclear Material (SNM) License No. SNM–960 from GEHA to NorthStar Vallecitos and the issuance of conforming amendments to the licenses, including license conditions.

DATES: The order was issued on April 25, 2024, and is effective for 1 year.

ADDRESSES: Please refer to Docket ID NRC–2023–0191 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

• *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0191. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov*. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html*. To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov*. The order, the NRC staff safety evaluation supporting the order, and the draft conforming license amendments are available in ADAMS under Package Accession No. ML24039A011.

• *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Chris Allen, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–6877; email: *William.Allen@nrc.gov*.

SUPPLEMENTARY INFORMATION: The text of the order is attached.

Dated: April 26, 2024.

For the Nuclear Regulatory Commission.

William Allen,

Project Manager, Reactor Decommissioning Branch, Division of Decommissioning, Uranium Recovery, and Waste Programs, Office of Nuclear Material Safety and Safeguards.

Order Approving Transfer of Licenses and Conforming License Amendments

I.

GE-Hitachi Nuclear Energy Americas, LLC (GEHA) is the holder of Possession Only License No. DPR–1 for the Vallecitos Boiling Water Reactor, Possession Only License No. TR–1 for the General Electric Test Reactor, Possession Only License No. R–33 for the Nuclear Test Reactor, and Possession Only License No. DR–10 for the Empire State Atomic Development Associates Experimental Vallecitos Superheat Reactor. These licenses authorize GEHA to possess the nuclear material associated with each reactor license subject to the conditions specified therein. They do not authorize GEHA either to use or to operate the reactors associated with the licenses. These reactor facilities are located at the Vallecitos Nuclear Center (VNC) in Sunol, California. GEHA is also the holder of Special Nuclear Material (SNM) License No. SNM–960, which authorizes the storage of SNM at the VNC.

II.

By application dated September 1, 2023 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML23244A247), as supplemented by letters dated September 5, 2023 (ML23248A232); October 19, 2023 (ML23292A336); November 1, 2023 (ML23305A052); January 22, 2024 (ML24022A323); and March 15, 2024 (ML24075A277), GEHA and NorthStar Vallecitos, LLC (NorthStar Vallecitos) (collectively, the Applicants) requested that the U.S. Nuclear Regulatory Commission (NRC) consent to the direct transfer of control of Possession Only License No. DPR–1 for the Vallecitos Boiling Water Reactor, Possession Only License No. TR–1 for the General Electric Test Reactor, Possession Only License No. R–33 for the Nuclear Test Reactor, Possession Only License No. DR–10 for the Empire State Atomic Development Associates Experimental Vallecitos Superheat Reactor, and SNM License No. SNM–960 (collectively, the licenses) located at the VNC in Sunol, California. Specifically, the Applicants requested that the NRC consent to the direct transfer of GEHA's currently licensed authority to possess nuclear material, to maintain the VNC in a safe condition (including storage, control, and maintenance of all nuclear material), and to decommission the VNC to NorthStar Vallecitos. This license transfer application was submitted to the NRC for approval under Section 184, ''Inalienability of Licenses,'' of the Atomic Energy Act of 1954, as amended (AEA), and Title 10 of the *Code of Federal Regulations* (10 CFR) 50.80, ''Transfer of licenses''; 10 CFR 50.90, ''Application for amendment of license, construction permit, or early site permit''; 10 CFR 70.34, ''Amendment of licenses''; and 10 CFR 70.36, ''Inalienability of licenses.'' Notice of the receipt of the license transfer application and opportunity to comment, request a hearing, and petition for leave to intervene was published in the **Federal Register** on November 8, 2023 (88 FR 77113). The supplemental letters, listed above, contained clarifying information and did not expand the license transfer application beyond the scope of the original notice.

GEHA intends to transfer its licensed possession, maintenance, and decommissioning authorities to NorthStar Vallecitos to expedite the decommissioning at the VNC. Following approval and completion of the proposed direct transfer of control of the licenses, NorthStar Vallecitos would assume licensed responsibility for the VNC through the transfer of GEHA's responsibility for licensed activities at the VNC to NorthStar Vallecitos. NorthStar Vallecitos would own the VNC facility as well as its associated assets and real estate, including its decommissioning trust fund, title to spent nuclear fuel, and rights under the terms of its Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste with the U.S. Department of Energy. Upon the proposed license transfer, NorthStar Vallecitos would assume responsibility for compliance with the current licensing basis, including regulatory commitments that exist at the closing of the transfer transaction between the Applicants, and would implement any changes under applicable regulatory requirements and practices. The Applicants also requested that the NRC impose license conditions relating to the management of the decommissioning trust fund, established for the purpose of providing decommissioning financial assurance for the licenses, and approve conforming administrative amendments to the licenses to reflect the direct transfer of the licenses from GEHA to NorthStar Vallecitos.

The NRC received one public comment on the license transfer application. It is summarized in the NRC staff's safety evaluation of the license transfer application. The NRC staff reviewed the comment submission and considered it, as appropriate, as part of its evaluation of the application.

Under 10 CFR 50.80, no license for a production or utilization facility, or any right thereunder, shall be transferred, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, unless the Commission gives its consent in writing. Under 10 CFR 70.36, no license to possess or use special nuclear material, or any right thereunder, shall be transferred, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, unless the Commission gives its consent in writing. Upon review of the information in the license transfer application, as supplemented, and other information before the Commission, and relying upon the representations and agreements contained in the application, the NRC staff has determined that NorthStar Vallecitos is qualified to be the holder of the licenses, and that the direct transfer of the licenses, as described in the application, is otherwise consistent with applicable provisions of law, regulations, and orders issued by the Commission pursuant thereto, subject to the condition set forth below.

Upon review of the request in the license transfer application, as supplemented, for conforming administrative amendments to the licenses to reflect the direct transfer of the licenses, the NRC staff has determined the following:

(1) The application for amendments complies with the standards and requirements of the AEA and the Commission's rules and regulations set forth in 10 CFR Chapter I.

(2) There is reasonable assurance that the activities authorized by the amendments can be conducted without endangering the health and safety of the public and that such activities will be

conducted in compliance with the Commission's regulations.

(3) The issuance of the amendments will not be inimical to the common defense and security or to the health and safety of the public.

(4) The issuance of the amendments is in accordance with 10 CFR part 51, ''Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions,'' of the Commission's regulations, and all applicable requirements have been satisfied.

The findings set forth above are supported by an NRC staff safety evaluation dated April 25 2024, which is available at ML24039A011.

III.

Accordingly, under Sections 161b, 161i, 161o, and 184 of the AEA; 42 U.S.C. 2201(b), 2201(i), 2201(o), and 2234; and 10 CFR 50.80, 10 CFR 50.90, 10 CFR 70.34, and 10 CFR 70.36, IT IS HEREBY ORDERED that the application for the direct transfer of the licenses from GEHA to NorthStar Vallecitos, as described herein, is approved subject to the following condition:

Prior to the closing of the license transfer transaction, NorthStar Vallecitos, LLC shall provide the Director of the NRC's Office of Nuclear Material Safety and Safeguards (NMSS) satisfactory documentary evidence that it has obtained, or will have obtained upon the closing of the transaction, the appropriate amount of insurance under 10 CFR part 140 and 10 CFR 50.54(w), as applicable.

It is further ordered that, consistent with 10 CFR 2.1315(b), the license amendments that make changes, as indicated in Enclosures 2 through 7 to the letter transmitting this Order, to reflect the subject direct license transfer are approved. The amendments shall be issued and made effective at the time the license transfer transaction is completed.

It is further ordered that NorthStar Vallecitos shall, at least 2 business days before the planned closing of the license transfer transaction, inform the Director of NMSS in writing of the planned closing date. Should the proposed transfer not be completed within 1 year of this Order's date of issuance, this Order shall become null and void; provided, however, that upon written application and for good cause shown, such date may be extended by order. The condition of this Order may be amended upon application by the Applicants and approval by the NRC.

This Order is effective upon issuance.

For further details with respect to this Order, see the license transfer application dated September 1, 2023, as supplemented on September 5, 2023; October 19, 2023; November 1, 2023; January 22, 2024; and March 15, 2024, and the associated NRC staff safety evaluation dated April 25 2024, which are available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike, Rockville, Maryland. Publicly available documents are accessible electronically through ADAMS in the NRC Library at *https://www.nrc.gov/reading-rm/adams.html.* Persons who encounter problems with ADAMS should contact the NRC's PDR reference staff by telephone at 1–800–397–4209 or 301–415–4737 or by email to *PDR.Resource@nrc.gov*.

Dated: April 25, 2024.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100038; File No. SR–CboeBZX–2024–006]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Order Instituting Proceedings To Determine Whether To Approve or Disapprove Proposed Rule Change To Amend Rule 11.9(c)(6) and Rule 11.13(a)(4)(D) To Permit the Use of BZX Post Only Orders at Prices Below $1.00

April 26, 2024.

I. Introduction

On January 8, 2024, Cboe BZX Exchange, Inc. (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to permit the use of BZX Post Only Orders at prices below $1.00. The proposed rule change was published for comment in the **Federal Register** on January 29, 2024.[3] On March 8, 2024, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] The Commission did not receive any comments. The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act [6] to determine whether to approve or disapprove the proposed rule change.

II. Description of the Proposed Rule Change [7]

The Exchange proposes to amend Rule 11.9(c)(6) and Rule 11.13(a)(4)(D)

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 99414 (January 23, 2024), 89 FR 5596 (''Notice'').

[4] 15 U.S.C. 78s(b)(2).

[5] *See* Securities Exchange Act Release No. 99698, 89 FR 18694 (March 14, 2024) (designating April 26, 2024, as the date by which the Commission shall either approve, disapprove, or institute proceedings to determine whether to disapprove the proposed rule change).

[6] 15 U.S.C. 78s(b)(2)(B).

[7] For a more detailed description of the proposed rule change, including examples, refer to the Notice, *supra* note 3.

to modify the treatment of BZX Post Only Orders priced below a dollar on the Exchange. BZX Post Only Orders priced at or above $1.00 will only remove liquidity if the value of the execution when removing liquidity equals or exceeds the value of such execution if the order instead posted to the BZX Book and subsequently provided liquidity, including the applicable fees charged or rebates provided. Currently, all BZX Post Only Orders priced below $1.00 are automatically treated as orders that remove liquidity. Under the proposed rule change, BZX Post Only Orders priced below $1.00 will be treated in the same manner as BZX Post Only Orders priced at or above $1.00 in that BZX Post Only Orders priced below $1.00 will only remove liquidity if the value of the overall execution (taking into account all applicable fees and rebates) make it economically beneficial for the order to remove liquidity.

The Exchange also proposes to amend Rule 11.13(a)(4)(D) to permit Non-Displayed Orders [8] and orders subject to display-price sliding (collectively, ''Resting Orders'') which are not executable at their most aggressive price due to the presence of a contra-side BZX Post Only Order to be executed at one minimum price variation less aggressive than the order's most aggressive price.[9]

Currently, Rule 11.13(a)(4)(D) states that, for securities priced above $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at, in the case of an incoming sell order, one-half minimum price variation less than the price of the displayed order, and, in the case of an incoming buy order, at one-half minimum price variation more than the price of the displayed order. The Exchange proposes that for securities priced below $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at, in the case of an incoming sell order, one minimum price variation less than the price of the displayed order, and, in the case of an incoming buy order, at one minimum price variation more than the price of the displayed order.

III. Proceedings To Determine Whether To Approve or Disapprove SR–CboeBZX–2024–006, and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act [10] to determine whether the proposed rule change should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide additional comment on the proposed rule change to inform the Commission's analysis of whether to approve or disapprove the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,[11] the Commission is providing notice of the grounds for disapproval under consideration. As described above, the Exchange proposes to permit the use of BZX Post Only Orders at prices below $1.00. In addition, as described above, for securities priced below $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at one minimum price variation less (more) than the price of the displayed order for sell (buy) orders.[12] In contrast, under the current rule for securities priced above $1.00, the incoming order would execute at one-half minimum price variation less (more) than the price of the displayed order for sell (buy) orders.[13] The Commission is instituting proceedings to allow for additional analysis of, and input from commenters with respect to, the proposed rule change's consistency with the Act, and in particular, Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.[14] In addition, Sections 6(b)(5) and 6(b)(8) of the Act, respectively, prohibit the rules of an exchange from being designed to permit unfair discrimination between customers, issuers, brokers, or dealers [15] or imposing any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[16]

Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the [Act] and the rules and regulations issued thereunder . . . is on the self-regulatory organization that proposed the rule change.'' [17] The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[18] and any failure of a self-regulatory organization to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Act and the applicable rules and regulations.[19]

IV. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their data, views, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposed rule change, is consistent with Sections 6(b)(5) or any other provision of the Act, or the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of data, views, and arguments, the Commission will consider, pursuant to

[8] *See* Rule 11.9(c)(11). A ''Non-Displayed Order'' is a market or limit order that is not displayed on the Exchange.

[9] *See* Securities Exchange Act Release No. 64475 (May 12, 2011), 76 FR 28830 (May 18, 2011), SR–BATS–2011–015 (''Resting Order Execution Filing''). The Resting Order Execution Filing introduced an order handling change for certain Non-Displayed Orders and orders subject to display-price sliding that are not executable at prices equal to displayed orders on the opposite side of the market (the ''locking price''). The Resting Order Execution Filing permits Resting Orders priced at or above $1.00 to be executed at one-half minimum price variation less aggressive than the locking price (for bids) and one-half minimum price variation more aggressive than the locking price (for offers), under certain circumstances.

[10] 15 U.S.C. 78s(b)(2)(B).

[11] *Id.*

[12] According to the Exchange, executing an incoming order at the same price as the price as that of a displayed order on the same side of the market would violate the time priority of the displayed order. *See* Notice *supra* note 3, 89 FR at 5599; *see also* Exchange Rules 11.12(a) and 11.13(a)(4).

Rule 19b–4 under the Act,[20] any request for an opportunity to make an oral presentation.[21]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposed rule change should be approved or disapproved by May 23, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by June 6, 2024. The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2024–006 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2024–006. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2024–006 and should be submitted by May 23, 2024. Rebuttal comments should be submitted by June 6, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[22]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100041; File No. SR–MIAX–2024–25]

Self-Regulatory Organizations; Miami International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Increase Fees for the ToM Market Data Product and Establish Fees for the cToM Market Data Product

April 26, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 23, 2024, Miami International Securities Exchange, LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Fee Schedule (''Fee Schedule'') to: (i) amend the fees for the MIAX Top of Market (''ToM'') data feed; and (ii) establish fees for the MIAX Complex Top of Market (''cToM'') data feed. The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/all-options-exchanges/rule-filings*, at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to: (i) amend the fees for ToM; and (ii) establish fees for cToM. The ToM data feed contains top of book quotations based on options orders [3] and quotes [4] resting on the Exchange's Simple Order Book [5] as well as administrative messages.[6] The cToM data feed includes the same types of information as ToM, but for Complex Orders [7] on the Exchange's Strategy Book.[8] This information includes the Exchange's best bid and offer for a complex strategy,[9] with aggregate size,

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The term ''order'' means a firm commitment to buy or sell option contracts. *See* Exchange Rule 100.

[4] The term ''quote'' or ''quotation'' means a bid or offer entered by a Market Maker that is firm and may update the Market Maker's previous quote, if any. The Rules of the Exchange provide for the use of different types of quotes, including Standard quotes and eQuotes, as more fully described in Exchange Rule 517. A Market Maker may, at times, choose to have multiple types of quotes active in an individual option. *See* Exchange Rule 100.

[5] The term ''Simple Order Book'' means the Exchange's regular electronic book of orders and quotes. *See* Exchange Rule 518(a)(17).

[6] *See* Fee Schedule, Section 6)a).

[7] In sum, a ''Complex Order'' is ''any order involving the concurrent purchase and/or sale of two or more different options in the same underlying security (the 'legs' or 'components' of the complex order), for the same account . . . . '' *See* Exchange Rule 518(a)(5).

[8] The ''Strategy Book'' is the Exchange's electronic book of complex orders and complex quotes. *See* Exchange Rule 518(a)(19).

[9] The term ''complex strategy'' means a particular combination of components and their ratios to one another. New complex strategies can be created as the result of the receipt of a complex order or by the Exchange for a complex strategy that is not

based on displayable orders in the complex strategy. The cToM data feed also provides subscribers with the following information: (i) the identification of the complex strategies currently trading on the Exchange; (ii) complex strategy last sale information; and (iii) the status of securities underlying the complex strategy (*e.g.,* halted, open, or resumed). ToM subscribers are not required to subscribe to cToM, and cToM subscribers are not required to subscribe to ToM.

The Exchange notes that there is no requirement that any Member [10] or market participant subscribe to either the ToM or cToM data feeds. Instead, a Member may choose to maintain subscriptions to ToM or cToM based on their trading strategies and individual business decisions. Moreover, persons (including broker-dealers) who subscribe to any exchange proprietary data feed must also have equivalent access to consolidated Options Information [11] from the Options Price Reporting Authority (''OPRA'') for the same classes or series of options that are included in the proprietary data feed (including for exclusively listed products), and proprietary data feeds cannot be used to meet that particular requirement. The proposed fees described below would not apply differently based upon the size or type of firm, but rather based upon the type of subscription a firm has to ToM or cToM and their use thereof, which are based upon factors deemed relevant by each firm. The proposed pricing for ToM and cToM is set forth below.[12]

ToM

The Exchange currently charges a monthly fee of $1,250 to Internal Distributors [13] and $1,750 to External Distributors. The Exchange proposes to charge a monthly fee of $2,000 to Internal Distributors and $3,000 to External Distributors. The proposed fee increases are intended to cover the Exchange's increasing costs with compiling and producing the ToM data feed described in the Exchange's Cost Analysis detailed below. The Exchange does not currently charge, nor does it now propose to charge any additional fees based on a Distributor's use of the ToM and cToM data feeds (*e.g.,* displayed versus non-displayed use), redistribution fees, or individual per user fees.

cToM

The Exchange previously adopted rules governing the trading of Complex Orders in 2016.[14] At that time, the Exchange also adopted the cToM data feed and expressly waived fees over six years to incentivize market participants to subscribe and make the Exchange's cToM data more widely available.[15] In the eight years since the Exchange adopted Complex Order functionality, the Exchange has grown its monthly complex market share from 0% to 11.47% of the total electronic complex non-index volume executed on exchanges offering electronic complex functionality based on the month of January 2024.[16] During that same period, the Exchange experienced a steady increase in the number of cToM subscribers. Until the Exchange initially filed to adopt cToM fees in July of 2021,[17] the Exchange did not charge fees for subscriptions to the cToM data feed. The objective of this approach was to eliminate any fee-based barriers for Members when the Exchange first launched Complex Order functionality, which the Exchange believed was necessary to attract order flow as a relatively new exchange at that time. During that time, the Exchange absorbed all costs associated with compiling and disseminating the cToM data feed. The Exchange now proposes to establish fees for the cToM data feed to recoup its ongoing costs going forward, as described below.

The Exchange proposes to charge a monthly fee of $2,000 to Internal Distributors and $3,000 to External Distributors of the cToM data feed. The proposed fees are identical to those proposed herein for the ToM data feed. The Exchange proposes to assess Internal Distributors fees that are less than the fees assessed for External Distributors because External Distributors may monetize their receipt of the ToM and cToM data feeds by charging their customers fees for receipt of the Exchange's data. Internal Distributors do not have the same ability. Like the ToM data feed, the Exchange does not propose to adopt separate redistribution fees for the cToM data feed. However, the recipient of cToM data would be required to become a Distributor and would be subject to the applicable Distribution fees. Also like the ToM data feed, the Exchange does not propose to charge individual per user fees or any additional fees based on a subscriber's use of the cToM data feed (*e.g.,* displayed versus non-displayed use).

The Exchange proposes to assess cToM fees to Internal and External Distributors in the same manner as it currently does for the ToM data feed. Each Distributor would be charged for each month it is credentialed to receive cToM in the Exchange's production environment. Also, fees for cToM will be reduced for new mid-month Distributors for the first month they subscribe. New mid-month cToM Distributors would be assessed a pro-rata percentage of the applicable Distribution fee based on the percentage of the number of trading days remaining in the affected calendar month as of the

currently in the System. The Exchange may limit the number of new complex strategies that may be in the System at a particular time and will communicate this limitation to Members via Regulatory Circular. *See* Exchange Rule 518(a)(6).

[10] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[11] The term ''consolidated Options Information'' means ''consolidated Last Sale Reports combined with either consolidated Quotation Information or the BBO furnished by OPRA . . . '' Access to consolidated Options Information is deemed ''equivalent'' if both kinds of information are equally accessible on the same terminal or work station. *See* Limited Liability Company Agreement of Options Price Reporting Authority, LLC (''OPRA Plan''), Section 5.2(c)(iii). The Exchange notes that this requirement under the OPRA Plan is also reiterated under the Cboe Global Markets Global Data Agreement and Cboe Global Markets North American Data Policies, which subscribers to any exchange proprietary product must sign and are subject to, respectively. Additionally, the Exchange's Data Order Form (used for requesting the Exchange's market data products) requires confirmation that the requesting market participant receives data from OPRA.

[12] The Exchange first filed the proposed fee change on December 28, 2022. *See* Securities Exchange Act Release No. 96626 (January 10, 2023), 88 FR 2699 (January 17, 2023) (SR–MIAX–2022–49). After several withdrawals and re-filings, the Commission Staff suspended the proposed fees on August 3, 2023. *See* Securities Exchange Act Release No. 98050 (August 3, 2023), 88 FR 53941 (August 9, 2023) (SR–MIAX–2023–23). On January 17, 2024, the Exchange withdrew the suspended proposed fee change. *See* Securities Exchange Act Release No. 99408 (January 22, 2024), 89 FR 5271 (January 26, 2024).

[13] A ''Distributor'' of MIAX data is any entity that receives a feed or file of data either directly from MIAX or indirectly through another entity and then distributes it either internally (within that entity) or externally (outside that entity). All Distributors are required to execute a MIAX Distributor Agreement. *See* Fee Schedule, Section 6)a).

[14] *See* Securities Exchange Act Release No. 79072 (October 7, 2016), 81 FR 71131 (October 14, 2016) (SR–MIAX–2016–26) (Order Approving a Proposed Rule Change to Adopt New Rules to Govern the Trading of Complex Orders).

[15] *See* Securities Exchange Act Release No. 79146 (October 24, 2016), 81 FR 75171 (October 28, 2016) (SR–MIAX–2016–36) (providing a complete description of the cToM data feed).

[16] The Exchange notes that it receives complex market data for all U.S. options exchanges that offer complex functionality from direct feeds from OPRA.

[17] *See* Securities Exchange Act Release Nos. 92359 (July 9, 2021), 86 FR 37393 (July 15, 2021) (SR–MIAX–2021–28); 98050 (August 3, 2023), 88 FR 53941 (August 9, 2023) (SR–MIAX–2023–23) (Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove Proposed Rule Change To Increase Fees for the ToM Market Data Product and Establish Fees for the cToM Market Data Product).

date on which they have been first credentialed to receive cToM in the production environment, divided by the total number of trading days in the affected calendar month.

Minor, Non-Substantive Changes

The Exchange also proposes to amend the paragraph below the table of fees for ToM and cToM in Section 6)a) of the Fee Schedule to make a minor, non-substantive correction by deleting the phrase ''(as applicable)'' in the first sentence following the table of fees for ToM and cToM. The purpose of this proposed change is to remove unnecessary text from the Fee Schedule. This proposed change does not alter the operation of either fee.

Implementation

The proposed fee changes are immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b) [18] of the Act in general, and furthers the objectives of Section 6(b)(4) [19] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, the Exchange believes that the proposed fees are consistent with the objectives of Section 6(b)(5) [20] of the Act in that they are designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to a free and open market and national market system, and, in general, to protect investors and the public interest, and, particularly, are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In 2019, Commission staff published guidance suggesting the types of information that self-regulatory organizations (''SROs'') may use to demonstrate that their fee filings comply with the standards of the Exchange Act (the ''Staff Guidance'').[21] While the Exchange understands that the Staff Guidance does not create new legal obligations on SROs, the Staff Guidance is consistent with the Exchange's view about the type and level of transparency that exchanges should meet to demonstrate compliance with their existing obligations when they seek to charge new fees. The Staff Guidance provides that in assessing the reasonableness of a fee, the Staff would consider whether the fee is constrained by significant competitive forces. To determine whether a proposed fee is constrained by significant competitive forces, the Staff Guidance further provides that the Staff would consider whether the evidence provided by an SRO in a Fee Filing proposal demonstrates (i) that there are reasonable substitutes for the product or service that is the subject of a proposed fee; (ii) that ''platform'' competition constrains the fee; and/or (iii) that the revenue and cost analysis provided by the SRO otherwise demonstrates that the proposed fee would not result in the SRO taking supra-competitive profits.[22] The Exchange provides sufficient evidence below to support the findings that the proposed fees are reasonable because the projected revenue and cost analysis contained herein demonstrates that the proposed fees would not result in the Exchange taking supra-competitive profits.

As noted above, the Exchange also adopted the cToM data feed and expressly waived fees over six years to incentivize market participants to subscribe and make the Exchange's cToM data more widely available.[23] In the eight years since the Exchange adopted Complex Order functionality, the Exchange has grown its monthly complex market share from 0% to 11.47% of the total electronic complex non-index volume executed on U.S. options exchanges offering complex functionality for the month of January 2024. One of the primary objectives of the Exchange is to provide competition and to reduce fixed costs imposed upon the industry. Consistent with this objective, the Exchange believes that this proposal reflects a simple, competitive, reasonable, and equitable pricing structure.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs.

Accordingly, in proposing to charge fees for market data, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in relation to other Members—to ensure the fees will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange does not believe it needs to otherwise address questions about market competition in the context of this filing because the proposed fees are consistent with the Act based on its Cost Analysis. The Exchange also believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[24] and Rule 19b–4 thereunder,[25] with respect to the types of information SROs should provide when filing fee changes, and Section 6(b) of the Act,[26] which requires, among other things, that exchange fees be reasonable and equitably allocated,[27] not designed to permit unfair discrimination,[28] and that they do not impose a burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.[29] This proposal addresses those requirements, and the analysis and data in this section are designed to clearly and comprehensively show how they are met.

In 2019, the Exchange completed a study of its aggregate costs to produce market data and connectivity (the ''Cost Analysis'').[30] The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk functionality, the

[30] The Exchange frequently updates it Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers'').

As an initial step, the Exchange determined the total cost for the Exchange and its affiliated markets [31] for each cost driver as part of its 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the Finance Team. Each department head is required to send a ''bottom up'' budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.,* price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,[32] storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.,* the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates four separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all cost drivers are the same at each individual marketplace and dividing total cost by four (4) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.,* connectivity and ports, market data, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below. For instance, fixed costs that are not driven by client activity (*e.g.,* message rates), such as data center costs, were allocated more heavily to the provision of physical connectivity (for example, 59% of the data center total expense amount is allocated to 10Gb ULL connectivity), with smaller allocations to ToM and cToM (1.3% combined), and the remainder to the provision of other connectivity, ports, transaction execution, membership services and other market data services (39.7%). This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity and port services, membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange's system for executing transactions is dependent on physical hardware and connectivity; only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; many Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted methodology for the allocation of an exchange's costs, the Exchange's methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other cost-justified potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges' interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange's extensive Cost Analysis, which was again recently further refined, the Exchange analyzed nearly every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of ToM and cToM data feeds, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of ToM and

[31] The affiliated markets include Miami International Securities Exchange, LLC (''MIAX''); separately, the options and equities markets of MIAX PEARL, LLC (''MIAX Pearl''); and MIAX Emerald, LLC (''MIAX Emerald'').

[32] For example, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

cToM data feeds, and thus bears a relationship that is, ''in nature and closeness,'' directly related to ToM and cToM data feeds. In turn, the Exchange allocated certain costs more to physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide ToM and cToM data feeds is $74,789 (the Exchange divided the annual cost for each of ToM and cToM by 12 months, then added both numbers together), as further detailed below.

Costs Related to Offering ToM and cToM Data Feeds

The following chart details the individual line-item (annual) costs considered by the Exchange to be related to offering the ToM and cToM data feeds to its Members and other customers, as well as the percentage of the Exchange's overall costs that such costs represent for such area (*e.g.,* as set forth below, the Exchange allocated approximately 2.6% of its overall Human Resources cost to offering ToM and cToM data feeds).

Cost drivers	Allocated annual cost [a]	Allocated monthly cost [b]	% of all
Human Resources	$588,806	$49,067	2.6
Connectivity (external fees, cabling, switches, etc.)	1,205	101	1.3
Internet Services and External Market Data	0.00	0.00	0.0
Data Center	19,292	1,608	1.3
Hardware and Software Maintenance & Licenses	26,386	2,199	1.3
Depreciation	35,967	2,997	0.8
Allocated Shared Expenses	225,807	18,817	2.5
Total	897,463	74,789	2.2

[a] The Annual Cost includes figures rounded to the nearest dollar.
[b] The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering ToM and cToM. While some costs were attempted to be allocated as equally as possible among the Exchange and its affiliated markets, the Exchange notes that some of its cost allocation percentages for certain cost drivers differ when compared to the same cost drivers for the Exchange's affiliated market, MIAX Emerald, in its similar proposed fee change for ToM and cToM. This is because the Exchange's cost allocation methodology utilizes the actual projected costs of the Exchange (which are specific to the Exchange and are independent of the costs projected and utilized by the Exchange's affiliated markets) to determine its actual costs, which may vary across the Exchange and its affiliated markets based on factors that are unique to each marketplace. The Exchange provides additional explanation below (including the reason for the deviation) for the significant differences, if any.

The Exchange also notes that expenses included in its 2024 fiscal year budget and this proposal are generally higher than its 2023 fiscal year budget and Cost Analysis included in prior filings. This is due to a number of factors, such as, critical vendors and suppliers increasing costs they charge the Exchange, significant exchange staff headcount increases, increased data center costs from the Exchange's data center providers in multiple locations and facilities, higher technology and communications costs, planned hardware refreshes, and system capacity upgrades that increase depreciation expense. Specifically, with regard to employee compensation, the 2024 fiscal year budget includes additional expenses related to increased headcount and new hires that are needed to support the Exchange as it continues to grow (the Exchange and its affiliated companies are projected to hire over 60 additional staff in 2024). Hardware and software expenses have also increased primarily due to price increases from critical vendors and equipment suppliers. Further, the Exchange budgeted for additional hardware and software needs to support the Exchange's continued growth and expansion. Depreciation and amortization have likewise increased due to recent and planned refreshes in Exchange hardware and software. This new equipment and software then becomes depreciable, as described below. Data center costs have also increased due the following: the Exchange expanding its footprint within its data center; and the data center vendor increasing the costs it charges the Exchange. Lastly, allocated shared expenses have increased due to the overall budgeted increase in costs from 2023 to 2024 necessary to operate and support the Exchange as described below.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (''MIH''), the holding company of the Exchange and its affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market's individual Human Resources expense. Then, managers and department heads assign a percentage of each employee's time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include providing and maintaining ToM and cToM data feeds and performance thereof (primarily the Exchange's network infrastructure team, which spends a portion of their time performing functions necessary to provide market data). As described more

fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the Exchange is then allocated to market data. From that portion allocated to the Exchange that applied to market data, the Exchange then allocated a weighted average of 2.6% of each employee's time from the above group to ToM and cToM data feeds (which excludes an allocation for the recently hired Head of Data Services for the Exchange and its affiliates).

The Exchange also allocated Human Resources costs to provide ToM and cToM to a limited subset of personnel with ancillary functions related to establishing and maintaining such market data feeds (such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.,* only including those personnel who support functions related to providing market data feeds) and then applied a smaller allocation to such employees' time to ToM and cToM (less than 1.7%, which includes an allocation for the Head of Data Services). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to providing ToM and cToM, whether it is a sales person selling a market data feed, finance personnel billing for market data feeds or providing budget analysis, or information security ensuring that such market data feeds are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing market data feeds, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing ToM and cToM data feeds: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 2.6% of each of their employee's time assigned to the Exchange for ToM and cToM, as stated above. Employees from these departments perform numerous functions to support ToM and cToM data feeds, such as the configuration and maintenance of the hardware necessary to support the ToM and cToM data feeds. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting ToM and cToM data feeds and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support ToM and cToM, but illustrates the breath of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the ToM and cToM related Human Resources costs to the extent that they are involved in overseeing tasks related to providing market data. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, Etc.) [33]

The Connectivity cost driver includes cabling and switches required to generate and disseminate the ToM and cToM data feeds and operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete Member subscriptions to ToM and cToM and the servers used at the Exchange's primary and back-up data centers specifically for the ToM and cToM data feeds. Further, as certain servers are only partially utilized to generate and disseminate the ToM and cToM data feeds, only the percentage of such servers devoted to generating and disseminating the ToM and cToM data feeds was included (*i.e.,* the capacity of such servers allocated to the ToM and cToM data feeds).[34]

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. External market data includes fees paid to third parties, including other exchanges, to receive market data. The Exchange did not allocate any costs associated with internet services or external market data to the ToM and cToM data feeds.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide ToM and cToM in the third-party data centers where it maintains its equipment (such as dedicated space, security services, cooling and power). The Exchange does not own the primary data center or the secondary data center, but instead leases space in data centers operated by third parties. As the Data Center costs are primarily for space, power, and cooling of servers, the Exchange allocated 1.3% to the applicable Data Center costs for the ToM and cToM data feeds. The Exchange believes it is reasonable to apply the same proportionate percentage of Data Center costs to that of the Connectivity cost driver.

Hardware and Software Maintenance and Licenses

Hardware and Software Maintenance and Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer the ToM and cToM data feeds.[35] Because the hardware and software license fees are correlated to the servers

[33] This cost driver was titled ''Network Infrastructure'' in prior proposals. The Exchange has updated this section to now be in line with its similar cost analysis and cost driver descriptions for other non-transaction fee filings. *See, e.g.,* Securities Exchange Act Release No. 99476 (February 5, 2024), 89 FR 9194 (February 9, 2024) (SR–MIAX–2024–06).

[34] The Exchange understands that the Investors Exchange, Inc. (''IEX'') and MEMX LLC (''MEMX'') both allocated a percentage of their servers to the production and dissemination of market data to support proposed market data fees. *See* Securities Exchange Act Release Nos. 94630 (April 7, 2022), 87 FR 21945, at page 21949 (April 13, 2022) (SR–IEX–2022–02) *and* 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR–MEMX–2023–04). The Exchange does not have insight into either MEMX's or IEX's technology infrastructure or what their determinations were based on. However, the Exchange reviewed its own technology infrastructure and believes based on its design, it is more appropriate for the Exchange to allocate a portion of its Connectivity cost driver to market data based on a percentage of overall cost, not on a per server basis.

[35] This expense may be more than the Exchange's affiliated markets, specifically MIAX Emerald. This is because each market may maintain and utilize a different amount of hardware and software based on its market model and infrastructure needs. The Exchange allocated a percentage of the overall cost based on actual amounts of hardware and software utilized by that market, which resulted in different cost allocations and dollar amounts.

used by the Exchange, the Exchange again applied an allocation of 1.3% of its costs for Hardware and Software Maintenance and Licenses to the ToM and cToM data feeds. The Exchange notes that this allocation is more than MIAX Emerald as MIAX allocated 1.3% of its Hardware and Software Maintenance and License expense to ToM and cToM, while MIAX Emerald allocated 1.1% of its Hardware and Software Maintenance and License expense to ToM and cToM. MIAX's allocation results in a slightly higher dollar amount of $8,000 per year (or approximately $667 per month, when dividing the annual cost difference by 12 months and rounding to the nearest dollar) compared to the annual cost of MIAX Emerald for its Hardware and Software Maintenance and License cost driver. This is because MIAX is in the process of replacing and upgrading various hardware and software used to operate its options trading platform in order to maintain premium network performance, including dissemination of ToM and cToM. At the time of this filing, MIAX is undergoing a major hardware refresh, replacing older hardware with new hardware. This hardware includes servers, network switches, cables, optics, protocol data units, and cabinets, to maintain a state-of-the-art technology platform. Because of the timing of the hardware refresh with the timing of this filing, MIAX has a slightly higher expense than MIAX Emerald.

Depreciation

All physical assets, software, and hardware used to provide ToM and cToM, which also includes assets used for testing and monitoring of Exchange infrastructure to provide market data, were valued at cost, and depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which are owned by the Exchange and some of which are leased by the Exchange in order to allow efficient periodic technology refreshes. The vast majority of the software the Exchange uses for its operations to generate and disseminate the ToM and cToM data feeds has been developed in-house over an extended period. This software development also requires quality assurance and thorough testing to ensure the software works as intended. The Exchange also included in the Depreciation cost driver certain budgeted improvements that the Exchange intends to capitalize and depreciate with respect to ToM and cToM in the near-term. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost was therefore narrowly tailored to depreciation related to ToM and cToM. As noted above, the Exchange allocated 0.8% of its allocated depreciation costs to providing ToM and cToM.

The Exchange notes that this allocation differs from its affiliated market, MIAX Emerald, due to a number of factors, such as the age of physical assets and software (*e.g.,* older physical assets and software were previously depreciated and removed from the allocation), or certain system enhancements that required new physical assets and software, thus providing a higher contribution to the depreciated cost. For example, the Exchange notes that the percentages it and its affiliate, MIAX Emerald, allocated to the depreciation of software and hardware used to generate and disseminate their respective ToM and cToM data feeds are similar (0.8% for MIAX and 0.5% for MIAX Emerald). However, MIAX's dollar amount is greater than that of MIAX Emerald by approximately $17,000 per year (albeit a relatively small amount of approximately $1,415 per month, when rounding to the nearest dollar). This is due to two primary factors. First, the Exchange has undergone a technology refresh since the time MIAX Emerald launched in February 2019, leading to it having more hardware and software that is subject to depreciation. Second, the Exchange maintains 24 matching engines while MIAX Emerald maintains only 12 matching engines. This also results in more of the Exchange's hardware and software being subject to depreciation than MIAX Emerald's hardware and software due to the greater amount of equipment and software necessary to support the greater number of matching engines on the Exchange.

Allocated Shared Expenses

Finally, as with other exchange products and services, a portion of general shared expenses was allocated to the provision of ToM and cToM data feeds. These general shared costs are integral to exchange operations, including its ability to provide ToM and cToM. Costs included in general shared expenses include office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications. Similarly, the cost of paying directors to serve on the Exchange's Board of Directors is also included in the Exchange's general shared expense cost driver.[36] These general shared expenses are incurred by the Exchange's parent company, MIH, as a direct result of operating the Exchange and its affiliated markets.

The Exchange employed a process to determine a reasonable percentage to allocate general shared expenses to ToM and cToM pursuant to its multi-layered allocation process. First, general expenses were allocated among the Exchange and affiliated markets as described above. Then, the general shared expense assigned to the Exchange was allocated across core services of the Exchange, including market data. Then, these costs were further allocated to sub-categories within the final categories, *i.e.,* ToM and cToM as sub-categories of market data. In determining the percentage of general shared expenses allocated to market data that ultimately apply to ToM and cToM, the Exchange looked at the percentage allocations of each of the cost drivers and determined a reasonable allocation percentage. The Exchange also held meetings with senior management, department heads, and the Finance Team to determine the proper amount of the shared general expense to allocate to ToM and cToM. The Exchange, therefore, believes it is reasonable to assign an allocation, in the range of allocations for other cost drivers, while continuing to ensure that this expense is only allocated once. Again, the general shared expenses are incurred by the Exchange's parent company as a result of operating the Exchange and its affiliated markets and it is therefore reasonable to allocate a percentage of those expenses to the Exchange and ultimately to specific product offerings such as ToM and cToM.

Again, a portion of all shared expenses were allocated to the Exchange (and its affiliated markets) which, in turn, allocated a portion of that overall allocation to all market data products offered by the Exchange. The Exchange then allocated 2.5% of the portion allocated to market data to ToM and cToM. The Exchange believes this allocation percentage is reasonable because, while the overall dollar amount may be higher than other cost drivers, the 2.5% is based on and in line with the percentage allocations of each

[36] The Exchange notes that MEMX allocated a precise amount of 10% of the overall cost for directors in a similar non-transaction fee filing. *See* Securities Exchange Act Release No. 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR–MEMX–2023–04). The Exchange does not calculate is expenses at that granular a level. Instead, director costs are included as part of the overall general allocation.

of the Exchange's other cost drivers. The percentage allocated to ToM and cToM also reflects its importance to the Exchange's strategy and necessity towards the nature of the Exchange's overall operations, which is to provide a resilient, highly deterministic trading system that relies on faster market data feeds than the Exchange's competitors to maintain premium performance. This allocation reflects the Exchange's focus on providing and maintaining high performance market data services, of which ToM and cToM are main contributors.

The Exchange notes that this allocation differs from its affiliated market, MIAX Emerald, due to a number of factors, such as the increase in overall headcount, thus providing a higher contribution to the depreciated cost. The Exchange notes that the percentages it and its affiliate, MIAX Emerald, allocated to this cost driver are similar (2.5% for MIAX and 2.1% for MIAX Emerald). However, MIAX's dollar amount is greater than that of MIAX Emerald by $38,096 per year (albeit a relatively small amount of approximately $3,174 per month, when rounding to the nearest dollar). This is due primarily to significant exchange staff headcount increases.[37] As mentioned above, the 2024 fiscal year budget includes additional expenses related to increased headcount and new hires that are needed to support the Exchange as it continues to grow (with a projected 60 additional staff in 2024). Lastly, allocated shared expenses have increased due to the overall budgeted increase in costs from 2023 to 2024 necessary to operate and support the Exchange and its affiliated markets.

* * * * *

Approximate Cost for ToM and cToM per Month

After determining the approximate allocated monthly cost related to ToM and cToM combined, the total monthly cost for ToM and cToM of $74,789 was divided by the number of total subscribers to ToM and cToM that the Exchange maintained in August 2023 (33 Internal Distributors + 7 External Distributors = 40 total Distributors),[38] to arrive at a cost of approximately $1,870 per month per subscription (rounded to the nearest dollar). Due to the nature of this particular cost, this allocation methodology results in an allocation among the Exchange and its affiliated markets based on set quantifiable criteria, *i.e.,* actual number of ToM and cToM subscribers.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core service (including market data) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal and the filings the Exchange recently submitted proposing fees for certain connectivity and ports offered by the Exchange. For instance, in calculating the Human Resources expenses to be allocated to market data based upon the above described methodology, the Exchange has a team of employees dedicated to network infrastructure and with respect to such employees the Exchange allocated network infrastructure personnel with a commensurate percentage of the cost of such personnel (6.1%) given their focus on functions necessary to provide market data. The salaries of those same personnel were allocated only 2.6% to ToM and cToM and the remaining 97.4% was allocated to other market data products offered by the Exchange (MOR, AIS, etc.), connectivity services, port services, transaction services, and membership services. The Exchange did not allocate any other Human Resources expense for providing market data to any other employee group, outside of a smaller allocation of 1.7% for ToM and cToM of the cost associated with certain specified personnel who work closely with and support network infrastructure personnel.

In total, the Exchange allocated 2.6% of its personnel costs (Human Resources) to providing ToM and cToM. In turn, the Exchange allocated the remaining 97.4% of its Human Resources expense to membership services, transaction services, connectivity services, port services and other market data products. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including market data, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide ToM and cToM data feeds to its Members and their customers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing ToM and cToM, but instead allocated approximately 0.8% of the Exchange's overall depreciation and amortization expense to ToM and cToM combined. The Exchange allocated the remaining depreciation and amortization expense (99.2%) toward the cost of providing transaction services, membership services, connectivity services, port services, and other market data products.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from ToM and cToM, the Exchange will have to be successful in retaining existing clients that wish to maintain subscriptions to those market data feeds or in obtaining new clients that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections. It is possible, however, that actual costs may be higher or lower. To the extent the Exchange sees growth in use of market data services it will receive additional revenue to offset future cost increases. However, if use of market data services is static or decreases, the Exchange might not realize the revenue that it anticipates or

[37] The Exchange notes that this reference to increased headcount is used here to explain why MIAX's dollar amount of its allocated shared expense is greater than that of MIAX Emerald. A similar reference is not included in the above discussion of the Human Resources cost driver because the description of that cost driver does not include a similar comparison.

[38] The Exchange used August 2023 subscription data because that was the last full month the fees proposed herein for ToM and cToM were charged, before the Exchange's prior filing to adopt the same fees was suspended by the Commission. *See supra* note 12. While there has been no material overall change to the number of subscriptions since August 2023, the Exchange notes that the number of subscriptions may fluctuate and demand may change when fees are removed and reinstated. Accordingly, the Exchange believes that, in order to obtain an accurate measure of actual demand for fee-liable subscriptions, the Exchange looked to the last month that the fees were in place prior to suspension, which was August 2023.

needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue [39]

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with creating, generating, and disseminating the ToM and cToM data feeds and the fact that the Exchange will need to fund future expenditures (increased costs, improvements, etc.). The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by amending fees for market data subscribers. Subscribers, particularly those of ToM and cToM, expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services, membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide ToM and cToM will equal $897,463. Based on current ToM and cToM subscribers, the Exchange would generate annual revenue of approximately $1,040,880 for ToM and cToM combined.[40] The Exchange believes this represents a modest profit of 13.8% when compared to the cost of providing ToM and cToM data feeds.

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing ToM and cToM data feeds versus the total projected revenue of the Exchange associated with ToM and cToM.

The Exchange also notes that the resultant profit margin differs slightly from the profit margins set forth in a similar fee filing by its affiliated market, MIAX Emerald. This is not atypical among exchanges and is due to a number of factors that differ between these two markets, including: different market models, market structures, and product offerings (price-time, pro-rata, simple, and complex); different pricing models; different number of market participants and connectivity subscribers; different maintenance and operations costs, as described in the cost allocation methodology above; different technical architecture (*e.g.,* the number of matching engines per exchange, *i.e.,* MIAX maintains 24 matching engines while MIAX Emerald maintains only 12 matching engines); and different maturity phase of MIAX and its affiliated markets (*i.e.,* start-up versus growth versus more mature). All of these factors contribute to a unique and differing level of profit margin per exchange.

Further, MIAX and MIAX Emerald propose to charge the same rates for their respective ToM and cToM data feeds, which are comparable to, or lower than, similar fees for similar products charged by competing exchanges. For example, for Internal Distributors of ToM and cToM, the Exchange proposes a lower fee than the fee charged by ISE for ISE's Top Quote Feed ($2,000 for the Exchange vs. $3,000 for ISE).[41] NYSE Arca charges even higher fees for the NYSE Arca Options Top Feed than the Exchange's proposed fees ($2,000 for the Exchange vs. $3,000 per month plus an additional $2,000 for redistribution on NYSE Arca).[42] Accordingly, the Exchange believes that comparable and competitive pricing are key factors in determining whether a proposed fee meets the requirements of the Act, regardless of whether that same fee across the Exchange's affiliated markets leads to slightly different profit margins due to factors outside of the Exchange's control (*i.e.,* more subscribers to ToM and/or cToM on MIAX or MIAX Emerald and vice versa).

The Exchange also reiterates that prior to July of 2021, the month in which it first proposed to adopt fees for cToM, the Exchange did not charge any fees for cToM and its allocation of costs to cToM was part of a holistic allocation that also allocated costs to other core services without double-counting any expenses. The Exchange is owned by a holding company that is the parent company of four exchange markets and, therefore, the Exchange and its affiliated markets must allocate shared costs across all of those markets accordingly, pursuant to the above-described allocation methodology. In contrast, IEX and MEMX, which are currently each operating only one exchange, in their recent non-transaction fee filings allocate the entire amount of that same cost to a single exchange. This can result in lower profit margins for the non-transaction fees proposed by IEX and MEMX because the single allocated

[39] For purposes of calculating projected annualized 2024 revenue for ToM and cToM, the Exchange used monthly revenues for August 2023, the last month the Exchange billed at the proposed rates before the Commission suspended the earlier filing. *Id.*

[40] The Exchange notes that the total revenue number of $1,040,880 does not equal the full monthly fee multiplied by the total number of Distributors, due to a new Distributor first purchasing a ToM and cToM data feed mid-month and having their first month's fee(s) pro-rated for External Distribution, pursuant to Section 6)a) of the Exchange Fee Schedule.

[41] *See* ISE Options 7 Pricing Schedule, Section 10, H., *available at https://listingcenter.nasdaq.com/rulebook/ise/rules/ISE%20Options%207* (assessing Professional internal and external distributors $3,000 per month, plus $20 per month per controlled device for ISE's Top Quote Feed).

[42] Fees for the NYSE Arca Options Top Feed, which is the comparable product to ToM, are $3,000 per month for access (internal use) and an additional $2,000 per month for redistribution (external distribution), compared to the Exchange's proposed fees of $2,000 and $3,000 for Internal and External Distributors, respectively. In addition, for its NYSE Arca Options Top Feed, NYSE Arca charges for three different categories of non-display usage, and user fees, both of which the Exchange does not propose to charge, causing the overall cost of NYSE Arca Options Top Feed to far exceed the Exchange's proposed rates. *See* NYSE Arca Options Proprietary Market Data Fees, *available at: https://www.nyse.com/publicdocs/nyse/data/NYSE_Arca_Options_Proprietary_Data_Fee_Schedule.pdf.*

cost does not experience the efficiencies and synergies that result from sharing costs across multiple platforms.[43] The Exchange and its affiliated markets often share a single cost, which results in cost efficiencies that can cause a broader gap between the allocated cost amount and projected revenue, even though the fee levels being proposed are lower or competitive with competing markets (as described above). To the extent that the application of a cost-based standard results in Commission Staff making determinations as to the appropriateness of certain profit margins, the Commission Staff should consider whether the proposed fee level is comparable to, or competitive with, the same fee charged by competing exchanges and how different cost allocation methodologies (such as across multiple markets) may result in different profit margins for comparable fee levels. If Commission Staff is making determinations as to appropriate profit margins, the Exchange believes that the Commission should be clear to all market participants as to what they have determined is an appropriate profit margin and should apply such determinations consistently and, in the case of certain legacy exchanges, retroactively, if such standards are to avoid having a discriminatory effect. Further, the proposal reflects the Exchange's efforts to control its costs, which the Exchange does on an ongoing basis as a matter of good business practice. A potential profit margin should not be judged alone based on its size, but is also indicative of costs management and whether the ultimate fee reflects the value of the services provided. For example, a profit margin on one exchange should not be deemed excessive where that exchange has been successful in controlling its costs, but not excessive where on another exchange where that exchange is charging comparable fees but has a lower profit margin due to higher costs. Doing so could have the perverse effect of not incentivizing cost control where higher costs alone are used to justify fees increases.

Accordingly, while the Exchange is supportive of transparency around costs and potential margins (applied across all exchanges), as well as periodic review of revenues and applicable costs (as discussed below), the Exchange does not believe that these estimates should form the sole basis of whether or not a proposed fee is reasonable or can be adopted. Instead, the Exchange believes that the information should be used solely to confirm that an Exchange is not earning—or seeking to earn—supra-competitive profits, the standard set forth in the Staff Guidance. The Exchange believes the Cost Analysis and related projections in this filing demonstrate this fact.

Reasonableness

Overall. With regard to reasonableness, the Exchange understands that the Commission has traditionally taken a market-based approach to examine whether the exchange making the fee proposal was subject to significant competitive forces in setting the terms of the proposal. The Exchange understands that in general the analysis considers whether the exchange has demonstrated in its filing that (i) there are reasonable substitutes for the product or service; (ii) ''platform'' competition constrains the ability to set the fee; and/or (iii) revenue and cost analysis shows the fee would not result in the exchange taking supra-competitive profits. If the exchange demonstrates that the fee is subject to significant competitive forces, the Exchange understands that in general the analysis will next consider whether there is any substantial countervailing basis to suggest the fee's terms fail to meet one or more standards under the Exchange Act. The Exchange further understands that if the filing fails to demonstrate that the fee is constrained by competitive forces, the exchange must provide a substantial basis, other than competition, to show that it is consistent with the Exchange Act, which may include production of relevant revenue and cost data pertaining to the product or service.

The Exchange has not determined its proposed overall market data fees based on assumptions about market competition, instead relying upon a cost-plus model to determine a reasonable fee structure that is informed by the Exchange's understanding of different uses of the products by different types of participants. In this context, the Exchange believes the proposed fees overall are fair and reasonable as a form of cost recovery plus the possibility of a reasonable return for the Exchange's aggregate costs of offering the ToM and cToM data feeds. The Exchange believes the proposed fees are reasonable because they are designed to generate annual revenue to recoup some or all of Exchange's annual costs of providing ToM and cToM data with a reasonable mark-up. As discussed in the Purpose section, the Exchange estimates this fee filing will result in annual revenue of approximately $1,040,880, representing a potential mark-up of just 13.8% over the cost of providing ToM and cToM data. Accordingly, the Exchange believes that this fee methodology is reasonable because it allows the Exchange to recoup all of its expenses for providing the ToM and cToM data products (with any additional revenue representing no more than what the Exchange believes to be a reasonable rate of return). The Exchange also believes that the proposed fees are reasonable because they are generally less than the fees charged by competing options exchanges for comparable market data products, notwithstanding that the competing exchanges may have different system architectures that may result in different cost structures for the provision of market data.

The Exchange believes the proposed fees for the ToM and cToM data feeds are reasonable when compared to fees for comparable products, compared to which the Exchange's proposed fees are generally lower, as well as other comparable data feeds priced significantly higher than the Exchange's proposed fees for the ToM and cToM data feeds.

Internal Distribution Fees. The Exchange believes that it is reasonable to charge fees to access the ToM and cToM data feeds for Internal Distribution because of the value of such data to subscribers in their profit-generating activities. The Exchange also believes that the proposed monthly Internal Distribution fee for cToM is reasonable as it is similar to the amount charged by at least one other exchange of comparable size for comparable data products, and lower than the fees charged by other exchanges for comparable data products.[44]

External Distribution Fees. The Exchange believes that it is reasonable to charge External Distribution fees for the ToM and cToM data feeds because vendors receive value from redistributing the data in their business products provided to their customers. The Exchange believes that charging External Distribution fees is reasonable

[43] The Exchange acknowledges that IEX included in its proposal to adopt market data fees after offering market data for free an analysis of what its projected revenue would be if all of its existing customers continued to subscribe versus what its projected revenue would be if a limited number of customers subscribed due to the new fees. *See* Securities Exchange Act Release No. 94630 (April 7, 2022), 87 FR 21945 (April 13, 2022) (SR–IEX–2022–02). MEMX did not include a similar analysis in either of its recent non-transaction fee proposals. *See, e.g., supra* note 34. The Exchange does not believe a similar analysis would be useful here because it is amending existing fees, not proposing to charge a new fee where existing subscribers may terminate connections because they are no longer enjoying the service at no cost.

[44] *See supra* notes 41 and 42.

because the vendors that would be charged such fees profit by re-transmitting the Exchange's market data to their customers. These fees would be charged only once per month to each vendor account that redistributes any ToM and cToM data feeds, regardless of the number of customers to which that vendor redistributes the data. For all of the foregoing reasons, the Exchange believes that the proposed fees for the ToM and cToM data feeds are reasonable.

Equitable Allocation

Overall. The Exchange believes that its proposed fees are reasonable, fair, and equitable, and not unfairly discriminatory because they are designed to align fees with services provided. The Exchange believes the proposed fees for the ToM and cToM data feeds are allocated fairly and equitably among the various categories of users of the feeds, and any differences among categories of users are justified and appropriate.

The Exchange believes that the proposed fees are equitably allocated because they will apply uniformly to all data recipients that choose to subscribe to the ToM and cToM data feeds. Any subscriber or vendor that chooses to subscribe to the ToM and cToM data feeds is subject to the same Fee Schedule, regardless of what type of business they operate, and the decision to subscribe to one or more ToM and cToM data feeds is based on objective differences in usage of ToM and cToM data feeds among different Members, which are still ultimately in the control of any particular Member. The Exchange believes the proposed pricing of the ToM and cToM data feeds is equitably allocated because it is based, in part, upon the amount of information contained in each data feed and the value of that information to market participants.

Internal Distribution Fees. The Exchange believes the proposed monthly fees for Internal Distribution of the ToM and cToM data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the ToM and cToM data feeds for internal distribution, regardless of what type of business they operate.

External Distribution Fees. The Exchange believes the proposed monthly fees for External Distribution of the ToM and cToM data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the ToM and cToM data feeds that choose to redistribute the feeds externally, regardless of what business they operate. The Exchange also believes that the proposed monthly fees for External Distribution are equitably allocated when compared to lower proposed fees for Internal Distribution because data recipients that are externally distributing ToM and cToM data feeds are able to monetize such distribution and spread such costs amongst multiple third party data recipients, whereas the Internal Distribution fee is applicable to use by a single data recipient (and its affiliates).

The Exchange believes that it is reasonable, equitable and not unfairly discriminatory to assess Internal Distributors fees that are less than the fees assessed for External Distributors for subscriptions to the ToM and cToM data feeds because Internal Distributors have limited, restricted usage rights to the market data, as compared to External Distributors, which have more expansive usage rights. All Members and non-Members that decide to receive any market data feed of the Exchange (or its affiliates, MIAX Pearl and MIAX Emerald), must first execute, among other things, the MIAX Exchange Group Exchange Data Agreement (the ''Exchange Data Agreement'').[45] Pursuant to the Exchange Data Agreement, Internal Distributors are restricted to the ''internal use'' of any market data they receive. This means that Internal Distributors may only distribute the Exchange's market data to the recipient's officers and employees and its affiliates.[46] External Distributors may distribute the Exchange's market data to persons who are not officers, employees or affiliates of the External Distributor,[47] and may charge their own fees for the redistribution of such market data. External Distributors may monetize their receipt of the ToM and cToM data feeds by charging their customers fees for receipt of the Exchange's ToM and cToM data. Internal Distributors do not have the same ability to monetize the Exchange's ToM and cToM data feeds. Accordingly, the Exchange believes it is fair, reasonable and not unfairly discriminatory to assess External Distributors a higher fee for the Exchange's ToM and cToM data feeds as External Distributors have greater usage rights to commercialize such market data and can adjust their own fee structures if necessary.

The Exchange also utilizes more resources to support External Distributors versus Internal Distributors, as External Distributors have reporting and monitoring obligations that Internal Distributors do not have, thus requiring additional time and effort of Exchange staff. For example, External Distributors have monthly reporting requirements under the Exchange's Market Data Policies.[48] Exchange staff must then, in turn, process and review information reported by External Distributors to ensure the External Distributors are redistributing cToM data in compliance with the Exchange's Market Data Agreement and Policies.

The Exchange believes the proposed cToM fees are equitable and not unfairly discriminatory because the fee level results in a reasonable and equitable allocation of fees amongst subscribers for similar services, depending on whether the subscriber is an Internal or External Distributor. Moreover, the decision as to whether or not to purchase market data is entirely optional to all market participants. Potential purchasers are not required to purchase the market data, and the Exchange is not required to make the market data available. Purchasers may request the data at any time or may decline to purchase such data. The allocation of fees among users is fair and reasonable because, if market participants decide not to subscribe to the data feed, firms can discontinue their use of the cToM data.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the ToM and cToM data feeds are equitably allocated.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[49] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange does not believe that the proposed fees place certain market participants at a relative disadvantage to other market participants because, as noted above, the proposed fees are associated with usage of the data feed by each market participant based on whether the market participant

[45] *See* Exchange Data Agreement, *available at https://www.miaxglobal.com/markets/us-options/all-options/market-data-vendor-agreements.*

[46] *See id.*

[47] *See id.*

[48] *See* Section 6 of the Exchange's Market Data Policies, *available at https://www.miaxglobal.com/sites/default/files/page-files/MIAX_Exchange_Group_Market_Data_Policies_07202021.pdf.*

[49] 15 U.S.C. 78f(b)(8).

internally or externally distributes the Exchange data, which are still ultimately in the control of any particular Member, and such fees do not impose a barrier to entry to smaller participants. Accordingly, the proposed fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation of the proposed fees reflects the types of data consumed by various market participants and their usage thereof.

Inter-Market Competition

The Exchange does not believe the proposed fees place an undue burden on competition on other exchanges that is not necessary or appropriate. In particular, market participants are not forced to subscribe to either data feed, as described above. Additionally, other exchanges have similar market data fees with comparable rates in place for their participants.[50] The proposed fees are based on actual costs and are designed to enable the Exchange to recoup its applicable costs with the possibility of a reasonable profit on its investment as described in the Purpose and Statutory Basis sections. Competing exchanges are free to adopt comparable fee structures subject to the Commission's rule filing process. Allowing the Exchange, or any new market entrant, to waive fees (as the Exchange did for cToM) for a period of time to allow it to become established encourages market entry and thereby ultimately promotes competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[51] and Rule 19b–4(f)(2)[52] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2024–25 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2024–25. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MIAX–2024–25 and should be submitted on or before May 23, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[53]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100042; File No. SR–EMERALD–2024–15]

Self-Regulatory Organizations; MIAX Emerald, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Increase Fees for the ToM Market Data Product and Establish Fees for the cToM Market Data Product

April 26, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 18, 2024, MIAX Emerald, LLC (''MIAX Emerald'' or ''Exchange''), filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Emerald Fee Schedule (the ''Fee Schedule'') to (i) amend the fees for the MIAX Emerald Top of Market (''ToM'') data feed; and (ii) establish fees for the MIAX Emerald Complex Top of Market (''cToM'') data feed.

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/all-options-exchanges/rule-filings,* at MIAX Emerald's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to: (i) amend the fees for ToM; and (ii) establish fees for cToM. The ToM data feed contains top of book quotations based on options orders [3] and quotes [4] resting on the Exchange's Simple Order Book [5] as well as administrative messages.[6] The cToM data feed includes the same types of information as ToM, but for Complex Orders [7] on the Exchange's Strategy Book.[8] This information includes the Exchange's best bid and offer for a complex strategy,[9] with aggregate size, based on displayable orders in the complex strategy. The cToM data feed also provides subscribers with the following information: (i) the identification of the complex strategies currently trading on the Exchange; (ii) complex strategy last sale information; and (iii) the status of securities underlying the complex strategy (*e.g.,* halted, open, or resumed). ToM subscribers are not required to subscribe to cToM, and cToM subscribers are not required to subscribe to ToM.

The Exchange notes that there is no requirement that any Member [10] or market participant subscribe to either the ToM or cToM data feeds. Instead, a Member may choose to maintain subscriptions to ToM or cToM based on their trading strategies and individual business decisions. Moreover, persons (including broker-dealers) who subscribe to any exchange proprietary data feed must also have equivalent access to consolidated Options Information [11] from the Options Price Reporting Authority (''OPRA'') for the same classes or series of options that are included in the proprietary data feed (including for exclusively listed products), and proprietary data feeds cannot be used to meet that particular requirement. The proposed fees described below would not apply differently based upon the size or type of firm, but rather based upon the type of subscription a firm has to ToM or cToM and their use thereof, which are based upon factors deemed relevant by each firm. The proposed pricing for ToM and cToM is set forth below.[12]

ToM

The Exchange currently charges a monthly fee of $1,250 to Internal Distributors [13] and $1,750 to External Distributors. The Exchange proposes to charge a monthly fee of $2,000 to Internal Distributors and $3,000 to External Distributors. The proposed fee increases are intended to cover the Exchange's increasing costs with compiling and producing the ToM data feed described in the Exchange's Cost Analysis detailed below. The Exchange does not currently charge, nor does it now propose to charge any additional fees based on a Distributor's use of the ToM and cToM data feeds (*e.g.,* displayed versus non-displayed use), redistribution fees, or individual per user fees.

cToM

The Exchange previously adopted rules governing the trading of Complex Orders on the MIAX Emerald System in 2018,[14] ahead of the Exchange's planned launch, which took place on March 1, 2019. Shortly thereafter, the Exchange adopted the cToM data feed product and expressly waived fees for cToM to incentivize market participants to subscribe.[15] In the five years since the Exchange launched operations and adopted Complex Order functionality, the Exchange has grown its monthly complex market share from 0% to 3.53% of the total electronic complex non-index volume executed on exchanges offering electronic complex functionality based on the month of January 2024.[16] During that same period, the Exchange experienced a steady increase in the number of cToM subscribers. Until the Exchange initially filed to adopt cToM fees in July of 2021,[17] the Exchange did not charge fees

[3] The term ''order'' means a firm commitment to buy or sell option contracts. *See* Exchange Rule 100.

[4] The term ''quote'' or ''quotation'' means a bid or offer entered by a Market Maker that is firm and may update the Market Maker's previous quote, if any. The Rules of the Exchange provide for the use of different types of quotes, including Standard quotes and eQuotes, as more fully described in Rule 517. A Market Maker may, at times, choose to have multiple types of quotes active in an individual option. *See* Exchange Rule 100.

[5] The term ''Simple Order Book'' means the Exchange's regular electronic book of orders and quotes. *See* Exchange Rule 518(a)(15).

[6] *See* Fee Schedule, Section 6)a).

[7] In sum, a ''Complex Order'' is ''any order involving the concurrent purchase and/or sale of two or more different options in the same underlying security (the 'legs' or 'components' of the complex order), for the same account . . . .'' *See* Exchange Rule 518(a)(5).

[8] The ''Strategy Book'' is the Exchange's electronic book of complex orders and complex quotes. *See* Exchange Rule 518(a)(17).

[9] The term ''complex strategy'' means a particular combination of components and their ratios to one another. New complex strategies can be created as the result of the receipt of a complex order or by the Exchange for a complex strategy that is not currently in the System. The Exchange may limit the number of new complex strategies that may be in the System at a particular time and will communicate this limitation to Members via Regulatory Circular. *See* Exchange Rule 518(a)(6)

[10] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[11] The term ''consolidated Options Information'' means ''consolidated Last Sale Reports combined with either consolidated Quotation Information or the BBO furnished by OPRA . . .'' Access to consolidated Options Information is deemed ''equivalent'' if both kinds of information are equally accessible on the same terminal or work station. *See* Limited Liability Company Agreement of Options Price Reporting Authority, LLC (''OPRA Plan''), Section 5.2(c)(iii). The Exchange notes that this requirement under the OPRA Plan is also reiterated under the Cboe Global Markets Global Data Agreement and Cboe Global Markets North American Data Policies, which subscribers to any exchange proprietary product must sign and are subject to, respectively. Additionally, the Exchange's Data Order Form (used for requesting the Exchange's market data products) requires confirmation that the requesting market participant receives data from OPRA.

[12] The Exchange first filed the proposed fee change on December 28, 2022. *See* Securities Exchange Act Release No. 96625 (January 10, 2023), 88 FR 2688 (January 17, 2023) (SR–EMERALD–2022–37). After serval withdrawals and re-filings, the Commission Staff suspended the proposed fees on August 3, 2023. *See* Securities Exchange Act Release No. 98051 (August 3, 2023), 88 FR 53937 (August 9, 2023) (SR–EMERALD–2023–13). On January 17, 2024, the Exchange withdrew the suspended proposed fee change. *See* Securities Exchange Act Release No. 99407 (January 22, 2024), 89 FR 5273 (January 26, 2024).

[13] A ''Distributor'' of MIAX Emerald data is any entity that receives a feed or file of data either directly from MIAX Emerald or indirectly through another entity and then distributes it either internally (within that entity) or externally (outside that entity). All Distributors are required to execute a MIAX Emerald Distributor Agreement. *See* Fee Schedule, Section 6)a).

[14] *See* Securities Exchange Act Release Nos. 84891 (December 20, 2018), 83 FR 67421 (December 28, 2018) (In the Matter of the Application of MIAX EMERALD, LLC for Registration as a National Securities Exchange; Findings, Opinion, and Order of the Commission); *and* 85345 (March 18, 2019), 84 FR 10848 (March 22, 2019) (SR–EMERALD–2019–13) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 518, Complex Orders).

[15] *See* Securities Exchange Act Release No. 85207 (February 27, 2019), 84 FR 7963 (March 5, 2019) (SR–EMERALD–2019–09) (providing a complete description of the cToM data feed).

[16] The Exchange notes that it receives complex market data for all U.S. options exchanges that offer complex functionality from direct feeds from OPRA.

[17] *See* Securities Exchange Act Release Nos. 92358 (July 9, 2021), 86 FR 37361 (July 15, 2021) (SR–EMERALD–2021–21); 98051 (August 3, 2023), 88 FR 53937 (August 9, 2023) (SR–EMERALD–2023–13) (Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove Proposed Rule Change To Increase Fees

for subscriptions to the cToM data feed. The objective of this approach was to eliminate any fee-based barriers for Members when the Exchange first launched Complex Order functionality, which the Exchange believed was necessary to attract order flow as a relatively new exchange at that time. During that time, the Exchange absorbed all costs associated with compiling and disseminating the cToM data feed. The Exchange now proposes to establish fees for the cToM data feed to recoup its ongoing costs going forward, as described below.

The Exchange proposes to charge a monthly fee of $2,000 to Internal Distributors and $3,000 to External Distributors of the cToM data feed. The proposed fees are identical to those proposed herein for the ToM data feed. The Exchange proposes to assess Internal Distributors fees that are less than the fees assessed for External Distributors because External Distributors may monetize their receipt of the ToM and cToM data feeds by charging their customers fees for receipt of the Exchange's data. Internal Distributors do not have the same ability. Like the ToM data feed, the Exchange does not propose to adopt separate redistribution fees for the cToM data feed. However, the recipient of cToM data would be required to become a Distributor and would be subject to the applicable Distribution fees. Also like the ToM data feed, the Exchange does not propose to charge individual per user fees or any additional fees based on a subscriber's use of the cToM data feed (*e.g.,* displayed versus non-displayed use).

The Exchange proposes to assess cToM fees to Internal and External Distributors in the same manner as it currently does for the ToM data feed. Each Distributor would be charged for each month it is credentialed to receive cToM in the Exchange's production environment. Also, fees for cToM will be reduced for new mid-month Distributors for the first month they subscribe. New mid-month cToM Distributors would be assessed a pro-rata percentage of the applicable Distribution fee based on the percentage of the number of trading days remaining in the affected calendar month as of the date on which they have been first credentialed to receive cToM in the production environment, divided by the total number of trading days in the affected calendar month.

for the ToM Market Data Product and Establish Fees for the cToM Market Data Product).

Minor, Non-Substantive Changes

The Exchange also proposes to amend the paragraph below the table of fees for ToM and cToM in Section 6)a) of the Fee Schedule to make a minor, non-substantive correction by deleting the phrase ''(as applicable)'' in the first sentence following the table of fees for ToM and cToM. The purpose of this proposed change is to remove unnecessary text from the Fee Schedule. This proposed change does not alter the operation of either fee.

Implementation

The proposed fee changes are immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b) [18] of the Act in general, and furthers the objectives of Section 6(b)(4) [19] of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, the Exchange believes that the proposed fees are consistent with the objectives of Section 6(b)(5) [20] of the Act in that they are designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to a free and open market and national market system, and, in general, to protect investors and the public interest, and, particularly, are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In 2019, Commission staff published guidance suggesting the types of information that self-regulatory organizations (''SROs'') may use to demonstrate that their fee filings comply with the standards of the Exchange Act (the ''Staff Guidance'').[21] While the Exchange understands that the Staff Guidance does not create new legal obligations on SROs, the Staff Guidance is consistent with the Exchange's view about the type and level of transparency that exchanges should meet to demonstrate compliance with their existing obligations when they seek to charge new fees. The Staff Guidance provides that in assessing the reasonableness of a fee, the Staff would consider whether the fee is constrained by significant competitive forces. To determine whether a proposed fee is constrained by significant competitive forces, the Staff Guidance further provides that the Staff would consider whether the evidence provided by an SRO in a Fee Filing proposal demonstrates (i) that there are reasonable substitutes for the product or service that is the subject of a proposed fee; (ii) that ''platform'' competition constrains the fee; and/or (iii) that the revenue and cost analysis provided by the SRO otherwise demonstrates that the proposed fee would not result in the SRO taking supra-competitive profits.[22] The Exchange provides sufficient evidence below to support the findings that the proposed fees are reasonable because the projected revenue and cost analysis contained herein demonstrates that the proposed fees would not result in the Exchange taking supra-competitive profits.

As noted above, the Exchange also adopted the cToM data feed and expressly waived fees over two years to incentivize market participants to subscribe and make the Exchange's cToM data more widely available.[23] In the five years since the Exchange launched operations and adopted Complex Order functionality, the Exchange has grown its monthly complex market share from 0% to 3.53% of the total electronic complex non-index volume executed on U.S. options exchanges offering complex functionality for the month of January 2024. One of the primary objectives of the Exchange is to provide competition and to reduce fixed costs imposed upon the industry. Consistent with this objective, the Exchange believes that this proposal reflects a simple, competitive, reasonable, and equitable pricing structure.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs.

[18] 15 U.S.C. 78f.

[19] 15 U.S.C. 78f(b)(4).

[20] 15 U.S.C. 78f(b)(5).

[22] *Id.*

[23] *See supra* note 15.

Accordingly, in proposing to charge fees for market data, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in relation to other Members—to ensure the fees will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange does not believe it needs to otherwise address questions about market competition in the context of this filing because the proposed fees are consistent with the Act based on its Cost Analysis. The Exchange also believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[24] and Rule 19b–4 thereunder,[25] with respect to the types of information SROs should provide when filing fee changes, and Section 6(b) of the Act,[26] which requires, among other things, that exchange fees be reasonable and equitably allocated,[27] not designed to permit unfair discrimination,[28] and that they do not impose a burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.[29] This proposal addresses those requirements, and the analysis and data in this section are designed to clearly and comprehensively show how they are met.

In 2019, the Exchange completed a study of its aggregate costs to produce market data and connectivity (the ''Cost Analysis'').[30] The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk functionality, the ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers'').

As an initial step, the Exchange determined the total cost for the Exchange and its affiliated markets[31] for each cost driver as part of its 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the Finance Team. Each department head is required to send a ''bottom up'' budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.,* price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,[32] storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.,* the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates four separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all cost drivers are the same at each individual marketplace and dividing total cost by four (4) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.,* connectivity and ports, market data, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below. For instance, fixed costs that are not driven by client activity (*e.g.,* message rates), such as data center costs, were allocated more heavily to the provision of physical connectivity (for example, 61.9% of the data center total expense amount is allocated to 10Gb ULL connectivity), with smaller allocations to ToM and cToM (1.1% combined), and the remainder to the provision of other connectivity, ports, transaction execution, membership services and other market data services (37%). This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange

[30] The Exchange frequently updates it Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

[31] The affiliated markets include Miami International Securities Exchange, LLC (''MIAX''); separately, the options and equities markets of MIAX PEARL, LLC (''MIAX Pearl''); and MIAX Emerald, LLC (''MIAX Emerald'').

[32] For example, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity and port services, membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange's system for executing transactions is dependent on physical hardware and connectivity; only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; many Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted methodology for the allocation of an exchange's costs, the Exchange's methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other cost-justified potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges' interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange's extensive Cost Analysis, which was again recently further refined, the Exchange analyzed nearly every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of ToM and cToM data feeds, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of ToM and cToM data feeds, and thus bears a relationship that is, ''in nature and closeness,'' directly related to ToM and cToM data feeds. In turn, the Exchange allocated certain costs more to physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide ToM and cToM data feeds is $62,626 (the Exchange divided the annual cost for each of ToM and cToM by 12 months, then added both numbers together), as further detailed below.

Costs Related to Offering ToM and cToM Data Feeds

The following chart details the individual line-item (annual) costs considered by the Exchange to be related to offering the ToM and cToM data feeds to its Members and other customers, as well as the percentage of the Exchange's overall costs that such costs represent for such area (*e.g.,* as set forth below, the Exchange allocated approximately 2.3% of its overall Human Resources cost to offering ToM and cToM data feeds).

Cost drivers	Allocated annual cost [a]	Allocted monthly cost [b]	% of all
Human Resources	$509,350	$42,446	2.3
Connectivity (external fees, cabling, switches, etc.)	1,011	84	1.1
Internet Services and External Market Data	0.00	0.00	0.0
Data Center	16,624	1,385	1.1
Hardware and Software Maintenance & Licenses	18,958	1,580	1.1
Depreciation	17,853	1,488	0.5
Allocated Shared Expenses	187,711	15,643	2.1
Total	751,507	62,626	2.0

[a] The Annual Cost includes figures rounded to the nearest dollar.
[b] The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering ToM and cToM. While some costs were attempted to be allocated as equally as possible among the Exchange and its affiliated markets, the Exchange notes that some of its cost allocation percentages for certain cost drivers differ when compared to the same cost drivers for the Exchange's affiliated market, MIAX, in its similar proposed fee change for ToM and cToM. This is because the Exchange's cost allocation methodology utilizes the actual projected costs of the Exchange (which are specific to the Exchange and are independent of the costs projected and utilized by the Exchange's affiliated markets) to determine its actual costs, which may vary across the Exchange and its affiliated markets based on factors that are unique to each marketplace. The Exchange provides additional explanation below (including the reason for the deviation) for the significant differences, if any.

The Exchange also notes that expenses included in its 2024 fiscal year budget and this proposal are generally higher than its 2023 fiscal year budget and Cost Analysis included in prior filings. This is due to a number of factors, such as, critical vendors and suppliers increasing costs they charge the Exchange, significant exchange staff headcount increases, increased data center costs from the Exchange's data center providers in multiple locations and facilities, higher technology and communications costs, planned hardware refreshes, and system capacity upgrades that increase depreciation expense. Specifically, with regard to employee compensation, the 2024 fiscal year budget includes additional expenses related to increased headcount and new hires that are needed to support the Exchange as it continues to grow (the Exchange and its affiliated companies are projected to hire over 60 additional staff in 2024). Hardware and software expenses have also increased primarily due to price increases from critical vendors and equipment suppliers. Further, the Exchange budgeted for additional hardware and

software needs to support the Exchange's continued growth and expansion. Depreciation and amortization have likewise increased due to recent and planned refreshes in Exchange hardware and software. This new equipment and software then becomes depreciable, as described below. Data center costs have also increased due the following: the Exchange expanding its footprint within its data center; and the data center vendor increasing the costs it charges the Exchange. Lastly, allocated shared expenses have increased due to the overall budgeted increase in costs from 2023 to 2024 necessary to operate and support the Exchange as described below.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (''MIH''), the holding company of the Exchange and its affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market's individual Human Resources expense. Then, managers and department heads assign a percentage of each employee's time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include providing and maintaining ToM and cToM data feeds and performance thereof (primarily the Exchange's network infrastructure team, which spends a portion of their time performing functions necessary to provide market data). As described more fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the Exchange is then allocated to market data. From that portion allocated to the Exchange that applied to market data, the Exchange then allocated a weighted average of 2.1% of each employee's time from the above group to ToM and cToM data feeds (which excludes an allocation for the recently hired Head of Data Services for the Exchange and its affiliates).

The Exchange also allocated Human Resources costs to provide ToM and cToM to a limited subset of personnel with ancillary functions related to establishing and maintaining such market data feeds (such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.,* only including those personnel who support functions related to providing market data feeds) and then applied a smaller allocation to such employees' time to ToM and cToM (less than 1.6%, which includes an allocation for the Head of Data Services). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to providing ToM and cToM, whether it is a sales person selling a market data feed, finance personnel billing for market data feeds or providing budget analysis, or information security ensuring that such market data feeds are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing market data feeds, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing ToM and cToM data feeds: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 2.1% of each of their employee's time assigned to the Exchange for ToM and cToM, as stated above. Employees from these departments perform numerous functions to support ToM and cToM data feeds, such as the configuration and maintenance of the hardware necessary to support the ToM and cToM data feeds. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting ToM and cToM data feeds and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support ToM and cToM, but illustrates the breath of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the ToM and cToM related Human Resources costs to the extent that they are involved in overseeing tasks related to providing market data. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, Etc.) [33]

The Connectivity cost driver includes cabling and switches required to generate and disseminate the ToM and cToM data feeds and operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete Member subscriptions to ToM and cToM and the servers used at the Exchange's primary and back-up data centers specifically for the ToM and cToM data feeds. Further, as certain servers are only partially utilized to generate and disseminate the ToM and cToM data feeds, only the percentage of such servers devoted to generating and disseminating the ToM and cToM data feeds was included (*i.e.,* the capacity of such servers allocated to the ToM and cToM data feeds).[34]

[33] This cost driver was titled ''Network Infrastructure'' in prior proposals. The Exchange has updated this section to now be in line with its similar cost analysis and cost driver descriptions for other non-transaction fee filings. *See, e.g.,* Securities Exchange Act Release No. 99475 (February 5, 2024), 89 FR 9223 (February 9, 2024) (SR–EMERALD–2024–03).

[34] The Exchange understands that the Investors Exchange, Inc. (''IEX'') and MEMX LLC (''MEMX'') both allocated a percentage of their servers to the production and dissemination of market data to support proposed market data fees. *See* Securities Exchange Act Release Nos. 94630 (April 7, 2022), 87 FR 21945, at page 21949 (April 13, 2022) (SR–IEX–2022–02) *and* 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR–MEMX–2023–04). The Exchange does not have insight into either MEMX's

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. External market data includes fees paid to third parties, including other exchanges, to receive market data. The Exchange allocate any costs associated with internet services or external market data to the ToM and cToM data feeds.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide ToM and cToM in the third-party data centers where it maintains its equipment (such as dedicated space, security services, cooling and power). The Exchange does not own the primary data center or the secondary data center, but instead leases space in data centers operated by third parties. As the Data Center costs are primarily for space, power, and cooling of servers, the Exchange allocated 1.1% to the applicable Data Center costs for the ToM and cToM data feeds. The Exchange believes it is reasonable to apply the same proportionate percentage of Data Center costs to that of the Connectivity cost driver.

Hardware and Software Maintenance and Licenses

Hardware and Software Maintenance and Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer the ToM and cToM data feeds.[35] Because the hardware and software license fees are correlated to the servers used by the Exchange, the Exchange again applied an allocation of 1.1% of its costs for Hardware and Software Maintenance and Licenses to the ToM and cToM data feeds. The Exchange notes that this allocation is less than MIAX as MIAX allocated 1.3% of its Hardware and Software Maintenance and License expense to ToM and cToM, while MIAX Emerald allocated 1.1% of its Hardware and Software Maintenance and License expense to ToM and cToM. MIAX's allocation results in a slightly higher dollar amount of $8,000 per year (or approximately $667 per month, when dividing the annual cost difference by 12 months and rounding to the nearest dollar) compared to the annual cost of MIAX Emerald for its Hardware and Software Maintenance and License cost driver. This is because MIAX is in the process of replacing and upgrading various hardware and software used to operate its options trading platform in order to maintain premium network performance, including dissemination of ToM and cToM. At the time of this filing, MIAX is undergoing a major hardware refresh, replacing older hardware with new hardware. This hardware includes servers, network switches, cables, optics, protocol data units, and cabinets, to maintain a state-of-the-art technology platform. Because of the timing of the hardware refresh with the timing of this filing, MIAX has a slightly higher expense than MIAX Emerald.

Depreciation

All physical assets, software, and hardware used to provide ToM and cToM, which also includes assets used for testing and monitoring of Exchange infrastructure to provide market data, were valued at cost, and depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which are owned by the Exchange and some of which are leased by the Exchange in order to allow efficient periodic technology refreshes. The vast majority of the software the Exchange uses for its operations to generate and disseminate the ToM and cToM data feeds has been developed in-house over an extended period. This software development also requires quality assurance and thorough testing to ensure the software works as intended. The Exchange also included in the Depreciation cost driver certain budgeted improvements that the Exchange intends to capitalize and depreciate with respect to ToM and cToM in the near-term. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost was therefore narrowly tailored to depreciation related to ToM and cToM. As noted above, the Exchange allocated 0.5% of its allocated depreciation costs to providing ToM and cToM.

The Exchange notes that this allocation differs from its affiliated market, MIAX, due to a number of factors, such as the age of physical assets and software (*e.g.,* older physical assets and software were previously depreciated and removed from the allocation), or certain system enhancements that required new physical assets and software, thus providing a higher contribution to the depreciated cost. For example, the Exchange notes that the percentages it and its affiliate, MIAX, allocated to the depreciation of software and hardware used to generate and disseminate their respective ToM and cToM data feeds are similar (0.8% for MIAX and 0.5% for MIAX Emerald). However, MIAX's dollar amount is greater than that of MIAX Emerald by approximately $17,000 per year (albeit a relatively small amount of approximately $1,415 per month, when rounding to the nearest dollar). This is due to two primary factors. First, MIAX has undergone a technology refresh since the time MIAX Emerald launched in February 2019, leading to it having more hardware and software that is subject to depreciation. Second, MIAX maintains 24 matching engines while MIAX Emerald maintains only 12 matching engines. This also results in more of MIAX's hardware and software being subject to depreciation than MIAX Emerald's hardware and software due to the greater amount of equipment and software necessary to support the greater number of matching engines on MIAX.

Allocated Shared Expenses

Finally, as with other exchange products and services, a portion of general shared expenses was allocated to the provision of ToM and cToM data feeds. These general shared costs are integral to exchange operations, including its ability to provide ToM and cToM. Costs included in general shared expenses include office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications. Similarly, the cost of paying directors to serve on the Exchange's Board of Directors is also included in the Exchange's general shared expense cost driver.[36] These

or IEX's technology infrastructure or what their determinations were based on. However, the Exchange reviewed its own technology infrastructure and believes based on its design, it is more appropriate for the Exchange to allocate a portion of its Connectivity cost driver to market data based on a percentage of overall cost, not on a per server basis.

[35] This expense may be less than the Exchange's affiliated markets, specifically MIAX. This is because each market may maintain and utilize a different amount of hardware and software based on its market model and infrastructure needs. The Exchange allocated a percentage of the overall cost based on actual amounts of hardware and software utilized by that market, which resulted in different cost allocations and dollar amounts.

[36] The Exchange notes that MEMX allocated a precise amount of 10% of the overall cost for directors in a similar non-transaction fee filing. *See* Securities Exchange Act Release No. 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR–

Continued

general shared expenses are incurred by the Exchange's parent company, MIH, as a direct result of operating the Exchange and its affiliated markets.

The Exchange employed a process to determine a reasonable percentage to allocate general shared expenses to ToM and cToM pursuant to its multi-layered allocation process. First, general expenses were allocated among the Exchange and affiliated markets as described above. Then, the general shared expense assigned to the Exchange was allocated across core services of the Exchange, including market data. Then, these costs were further allocated to sub-categories within the final categories, *i.e.,* ToM and cToM as sub-categories of market data. In determining the percentage of general shared expenses allocated to market data that ultimately apply to ToM and cToM, the Exchange looked at the percentage allocations of each of the cost drivers and determined a reasonable allocation percentage. The Exchange also held meetings with senior management, department heads, and the Finance Team to determine the proper amount of the shared general expense to allocate to ToM and cToM. The Exchange, therefore, believes it is reasonable to assign an allocation, in the range of allocations for other cost drivers, while continuing to ensure that this expense is only allocated once. Again, the general shared expenses are incurred by the Exchange's parent company as a result of operating the Exchange and its affiliated markets and it is therefore reasonable to allocate a percentage of those expenses to the Exchange and ultimately to specific product offerings such as ToM and cToM.

Again, a portion of all shared expenses were allocated to the Exchange (and its affiliated markets) which, in turn, allocated a portion of that overall allocation to all market data products offered by the Exchange. The Exchange then allocated 2.1% of the portion allocated to market data to ToM and cToM. The Exchange believes this allocation percentage is reasonable because, while the overall dollar amount may be higher than other cost drivers, the 2.1% is based on and in line with the percentage allocations of each of the Exchange's other cost drivers. The percentage allocated to ToM and cToM also reflects its importance to the Exchange's strategy and necessity towards the nature of the Exchange's overall operations, which is to provide a resilient, highly deterministic trading system that relies on faster market data feeds than the Exchange's competitors to maintain premium performance. This allocation reflects the Exchange's focus on providing and maintaining high performance market data services, of which ToM and cToM are main contributors.

The Exchange notes that this allocation differs from its affiliated market, MIAX, due to a number of factors, such as the increase in overall headcount, thus providing a higher contribution on MIAX to the depreciated cost. The Exchange notes that the percentages it and its affiliate, MIAX, allocated to this cost driver are similar (2.5% for MIAX and 2.1% for MIAX Emerald). However, MIAX's dollar amount is greater than that of MIAX Emerald by $38,096 per year (albeit a relatively small amount of approximately $3,174 per month, when rounding to the nearest dollar). This is due primarily to significant exchange staff headcount increases.[37] As mentioned above, the 2024 fiscal year budget includes additional expenses related to increased headcount and new hires that are needed to support the Exchange as it continues to grow (with a projected 60 additional staff in 2024). Lastly, allocated shared expenses have increased due to the overall budgeted increase in costs from 2023 to 2024 necessary to operate and support the Exchange and its affiliated markets.

* * * * *

Approximate Cost for ToM and cToM per Month

After determining the approximate allocated monthly cost related to ToM and cToM combined, the total monthly cost for ToM and cToM of $62,626 was divided by the number of total subscribers to ToM and cToM that the Exchange maintained in August 2023 (29 Internal Distributors + 5 External Distributors = 34 total Distributors),[38] to arrive at a cost of approximately $1,842 per month per subscription (rounded to the nearest dollar). Due to the nature of this particular cost, this allocation methodology results in an allocation among the Exchange and its affiliated markets based on set quantifiable criteria, *i.e.,* actual number of ToM and cToM subscribers.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core service (including market data) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal and the filings the Exchange recently submitted proposing fees for certain connectivity and ports offered by the Exchange. For instance, in calculating the Human Resources expenses to be allocated to market data based upon the above described methodology, the Exchange has a team of employees dedicated to network infrastructure and with respect to such employees the Exchange allocated network infrastructure personnel with a commensurate percentage of the cost of such personnel (5.9%) given their focus on functions necessary to provide market data. The salaries of those same personnel were allocated only 2.1% to ToM and cToM and the remaining 97.9% was allocated to other market data products offered by the Exchange (MOR, AIS, etc.), connectivity services, port services, transaction services, and membership services. The Exchange did not allocate any other Human Resources expense for providing market data to any other employee group, outside of a smaller allocation of 1.6% for ToM and cToM of the cost associated with certain specified personnel who work closely with and support network infrastructure personnel.

In total, the Exchange allocated 2.3% of its personnel costs (Human Resources) to providing ToM and cToM. In turn, the Exchange allocated the remaining 97.7% of its Human Resources expense to membership services, transaction services, connectivity services, port services and other market data products. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not

MEMX–2023–04). The Exchange does not calculate is expenses at that granular a level. Instead, director costs are included as part of the overall general allocation.

[37] The Exchange notes that this reference to increased headcount is used here to explain why MIAX's dollar amount of its allocated shared expense is greater than that of MIAX Emerald. A similar reference is not included in the above discussion of the Human Resources cost driver because the description of that cost driver does not include a similar comparison.

[38] The used August 2023 subscription data because that was the last full month the fees proposed herein for ToM and cToM were charged, before the Exchange's prior filing to adopt the same fees was suspended by the Commission. *See supra* note 12. While there has been no material overall change to the number of subscriptions since August 2023, the Exchange notes that the number of subscriptions may fluctuate and demand may change when fees are removed and reinstated. Accordingly, the Exchange believes that, in order to obtain an accurate measure of actual demand for fee-liable subscriptions, the Exchange looked to the last month that the fees were in place prior to suspension, which was August 2023.

double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including market data, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide ToM and cToM data feeds to its Members and their customers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing ToM and cToM, but instead allocated approximately 0.5% of the Exchange's overall depreciation and amortization expense to ToM and cToM combined. The Exchange allocated the remaining depreciation and amortization expense (99.5%) toward the cost of providing transaction services, membership services, connectivity services, port services, and other market data products.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from ToM and cToM, the Exchange will have to be successful in retaining existing clients that wish to maintain subscriptions to those market data feeds or in obtaining new clients that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections. It is possible, however, that actual costs may be higher or lower. To the extent the Exchange sees growth in use of market data services it will receive additional revenue to offset future cost increases. However, if use of market data services is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue [39]

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with creating, generating, and disseminating the ToM and cToM data feeds and the fact that the Exchange will need to fund future expenditures (increased costs, improvements, etc.). The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by amending fees for market data subscribers. Subscribers, particularly those of ToM and cToM, expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services, membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide ToM and cToM will equal $751,507. Based on current ToM and cToM subscribers, the Exchange would generate annual revenue of approximately $872,880 for ToM and cToM combined.[40] The Exchange believes this represents a modest profit of 13.9% when compared to the cost of providing ToM and cToM data feeds.

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing ToM and cToM data feeds versus the total projected revenue of the Exchange associated with ToM and cToM.

The Exchange also notes that the resultant profit margin differs slightly from the profit margins set forth in a similar fee filing by its affiliated market, MIAX. This is not atypical among exchanges and is due to a number of factors that differ between these two markets, including: different market models, market structures, and product offerings (price-time, pro-rata, simple, and complex); different pricing models; different number of market participants and connectivity subscribers; different maintenance and operations costs, as described in the cost allocation methodology above; different technical architecture (*e.g.,* the number of matching engines per exchange, *i.e.,* MIAX maintains 24 matching engines while MIAX Emerald maintains only 12 matching engines); and different maturity phase of MIAX and its affiliated markets (*i.e.,* start-up versus growth versus more mature). All of these factors contribute to a unique and differing level of profit margin per exchange.

Further, MIAX and MIAX Emerald propose to charge the same rates for their respective ToM and cToM data feeds, which are comparable to, or lower than, similar fees for similar products

[39] For purposes of calculating projected annualized 2024 revenue for ToM and cToM, the Exchange used monthly revenues for August 2023, the last month the Exchange billed at the proposed rates before the Commission suspended the earlier filing. *Id.*

[40] The Exchange notes that the total revenue number of $872,880 does not equal the full monthly fee multiplied by the total number of Distributors, due to a new Distributor first purchasing a ToM and cToM data feed mid-month and having their first month's fee(s) pro-rated for External Distribution, pursuant to Section 6)a) of the Exchange Fee Schedule.

charged by competing exchanges. For example, for Internal Distributors of ToM and cToM, the Exchange proposes a lower fee than the fee charged by ISE for ISE's Top Quote Feed ($2,000 for the Exchange vs. $3,000 for ISE).[41] NYSE Arca charges even higher fees for the NYSE Arca Options Top Feed than the Exchange's proposed fees ($2,000 for the Exchange vs. $3,000 per month plus an additional $2,000 for redistribution on NYSE Arca).[42] Accordingly, the Exchange believes that comparable and competitive pricing are key factors in determining whether a proposed fee meets the requirements of the Act, regardless of whether that same fee across the Exchange's affiliated markets leads to slightly different profit margins due to factors outside of the Exchange's control (*i.e.,* more subscribers to ToM and/or cToM on MIAX or MIAX Emerald and vice versa).

The Exchange also reiterates that prior to July of 2021, the month in which it first proposed to adopt fees for cToM, the Exchange did not charge any fees for cToM and its allocation of costs to cToM was part of a holistic allocation that also allocated costs to other core services without double-counting any expenses. The Exchange is owned by a holding company that is the parent company of four exchange markets and, therefore, the Exchange and its affiliated markets must allocate shared costs across all of those markets accordingly, pursuant to the above-described allocation methodology. In contrast, IEX and MEMX, which are currently each operating only one exchange, in their recent non-transaction fee filings allocate the entire amount of that same cost to a single exchange. This can result in lower profit margins for the non-transaction fees proposed by IEX and MEMX because the single allocated cost does not experience the efficiencies and synergies that result from sharing costs across multiple platforms.[43] The Exchange and its affiliated markets often share a single cost, which results in cost efficiencies that can cause a broader gap between the allocated cost amount and projected revenue, even though the fee levels being proposed are lower or competitive with competing markets (as described above). To the extent that the application of a cost-based standard results in Commission Staff making determinations as to the appropriateness of certain profit margins, the Commission Staff should consider whether the proposed fee level is comparable to, or competitive with, the same fee charged by competing exchanges and how different cost allocation methodologies (such as across multiple markets) may result in different profit margins for comparable fee levels. If Commission Staff is making determinations as to appropriate profit margins, the Exchange believes that the Commission should be clear to all market participants as to what they have determined is an appropriate profit margin and should apply such determinations consistently and, in the case of certain legacy exchanges, retroactively, if such standards are to avoid having a discriminatory effect. Further, the proposal reflects the Exchange's efforts to control its costs, which the Exchange does on an ongoing basis as a matter of good business practice. A potential profit margin should not be judged alone based on its size, but is also indicative of costs management and whether the ultimate fee reflects the value of the services provided. For example, a profit margin on one exchange should not be deemed excessive where that exchange has been successful in controlling its costs, but not excessive where on another exchange where that exchange is charging comparable fees but has a lower profit margin due to higher costs. Doing so could have the perverse effect of not incentivizing cost control where higher costs alone are used to justify fees increases.

Accordingly, while the Exchange is supportive of transparency around costs and potential margins (applied across all exchanges), as well as periodic review of revenues and applicable costs (as discussed below), the Exchange does not believe that these estimates should form the sole basis of whether or not a proposed fee is reasonable or can be adopted. Instead, the Exchange believes that the information should be used solely to confirm that an Exchange is not earning—or seeking to earn—supra-competitive profits, the standard set forth in the Staff Guidance. The Exchange believes the Cost Analysis and related projections in this filing demonstrate this fact.

Reasonableness

Overall. With regard to reasonableness, the Exchange understands that the Commission has traditionally taken a market-based approach to examine whether the exchange making the fee proposal was subject to significant competitive forces in setting the terms of the proposal. The Exchange understands that in general the analysis considers whether the exchange has demonstrated in its filing that (i) there are reasonable substitutes for the product or service; (ii) ''platform'' competition constrains the ability to set the fee; and/or (iii) revenue and cost analysis shows the fee would not result in the exchange taking supra-competitive profits. If the exchange demonstrates that the fee is subject to significant competitive forces, the Exchange understands that in general the analysis will next consider whether there is any substantial countervailing basis to suggest the fee's terms fail to meet one or more standards under the Exchange Act. The Exchange further understands that if the filing fails to demonstrate that the fee is constrained by competitive forces, the exchange must provide a substantial basis, other than competition, to show that it is consistent with the Exchange Act, which may include production of relevant revenue and cost data pertaining to the product or service.

The Exchange has not determined its proposed overall market data fees based on assumptions about market competition, instead relying upon a cost-plus model to determine a reasonable fee structure that is informed by the Exchange's understanding of different uses of the products by different types of participants. In this context, the Exchange believes the proposed fees overall are fair and reasonable as a form of cost recovery plus the possibility of a reasonable return for the Exchange's aggregate costs

[41] *See* ISE Options 7 Pricing Schedule, Section 10, H., *available at Https://listingcenter.nasdaq.com/rulebook/ise/rules/ISE%20Options%207* (assessing Professional internal and external distributors $3,000 per month, plus $20 per month per controlled device for ISE's Top Quote Feed).

[42] Fees for the NYSE Arca Options Top Feed, which is the comparable product to ToM, are $3,000 per month for access (internal use) and an additional $2,000 per month for redistribution (external distribution), compared to the Exchange's proposed fees of $2,000 and $3,000 for Internal and External Distributors, respectively. In addition, for its NYSE Arca Options Top Feed, NYSE Arca charges for three different categories of non-display usage, and user fees, both of which the Exchange does not propose to charge, causing the overall cost of NYSE Arca Options Top Feed to far exceed the Exchange's proposed rates. *See* NYSE Arca Options Proprietary Market Data Fees, *available at: Https://www.nyse.com/publicdocs/nyse/data/NYSE_Arca_Options_Proprietary_Data_Fee_Schedule.pdf.*

[43] The Exchange acknowledges that IEX included in its proposal to adopt market data fees after offering market data for free an analysis of what its projected revenue would be if all of its existing customers continued to subscribe versus what its projected revenue would be if a limited number of customers subscribed due to the new fees. *See* Securities Exchange Act Release No. 94630 (April 7, 2022), 87 FR 21945 (April 13, 2022) (SR–IEX–2022–02). MEMX did not include a similar analysis in either of its recent non-transaction fee proposals. *See, e.g., supra* note 34. The Exchange does not believe a similar analysis would be useful here because it is amending existing fees, not proposing to charge a new fee where existing subscribers may terminate connections because they are no longer enjoying the service at no cost.

of offering the ToM and cToM data feeds. The Exchange believes the proposed fees are reasonable because they are designed to generate annual revenue to recoup some or all of Exchange's annual costs of providing ToM and cToM data with a reasonable mark-up. As discussed in the Purpose section, the Exchange estimates this fee filing will result in annual revenue of approximately $872,880, representing a potential mark-up of just 13.9% over the cost of providing ToM and cToM data. Accordingly, the Exchange believes that this fee methodology is reasonable because it allows the Exchange to recoup all of its expenses for providing the ToM and cToM data products (with any additional revenue representing no more than what the Exchange believes to be a reasonable rate of return). The Exchange also believes that the proposed fees are reasonable because they are generally less than the fees charged by competing options exchanges for comparable market data products, notwithstanding that the competing exchanges may have different system architectures that may result in different cost structures for the provision of market data.

The Exchange believes the proposed fees for the ToM and cToM data feeds are reasonable when compared to fees for comparable products, compared to which the Exchange's proposed fees are generally lower, as well as other comparable data feeds priced significantly higher than the Exchange's proposed fees for the ToM and cToM data feeds.

Internal Distribution Fees. The Exchange believes that it is reasonable to charge fees to access the ToM and cToM data feeds for Internal Distribution because of the value of such data to subscribers in their profit-generating activities. The Exchange also believes that the proposed monthly Internal Distribution fee for cToM is reasonable as it is similar to the amount charged by at least one other exchange of comparable size for comparable data products, and lower than the fees charged by other exchange for comparable data products.[44]

External Distribution Fees. The Exchange believes that it is reasonable to charge External Distribution fees for the ToM and cToM data feeds because vendors receive value from redistributing the data in their business products provided to their customers. The Exchange believes that charging External Distribution fees is reasonable because the vendors that would be charged such fees profit by re-transmitting the Exchange's market data to their customers. These fees would be charged only once per month to each vendor account that redistributes any ToM and cToM data feeds, regardless of the number of customers to which that vendor redistributes the data.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the ToM and cToM data feeds are reasonable.

Equitable Allocation

Overall. The Exchange believes that its proposed fees are reasonable, fair, and equitable, and not unfairly discriminatory because they are designed to align fees with services provided. The Exchange believes the proposed fees for the ToM and cToM data feeds are allocated fairly and equitably among the various categories of users of the feeds, and any differences among categories of users are justified and appropriate.

The Exchange believes that the proposed fees are equitably allocated because they will apply uniformly to all data recipients that choose to subscribe to the ToM and cToM data feeds. Any subscriber or vendor that chooses to subscribe to the ToM and cToM data feeds is subject to the same Fee Schedule, regardless of what type of business they operate, and the decision to subscribe to one or more ToM and cToM data feeds is based on objective differences in usage of ToM and cToM data feeds among different Members, which are still ultimately in the control of any particular Member. The Exchange believes the proposed pricing of the ToM and cToM data feeds is equitably allocated because it is based, in part, upon the amount of information contained in each data feed and the value of that information to market participants.

Internal Distribution Fees. The Exchange believes the proposed monthly fees for Internal Distribution of the ToM and cToM data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the ToM and cToM data feeds for internal distribution, regardless of what type of business they operate.

External Distribution Fees. The Exchange believes the proposed monthly fees for External Distribution of the ToM and cToM data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the ToM and cToM data feeds that choose to redistribute the feeds externally, regardless of what business they operate. The Exchange also believes that the proposed monthly fees for External Distribution are equitably allocated when compared to lower proposed fees for Internal Distribution because data recipients that are externally distributing ToM and cToM data feeds are able to monetize such distribution and spread such costs amongst multiple third party data recipients, whereas the Internal Distribution fee is applicable to use by a single data recipient (and its affiliates).

The Exchange believes that it is reasonable, equitable and not unfairly discriminatory to assess Internal Distributors fees that are less than the fees assessed for External Distributors for subscriptions to the ToM and cToM data feeds because Internal Distributors have limited, restricted usage rights to the market data, as compared to External Distributors, which have more expansive usage rights. All Members and non-Members that decide to receive any market data feed of the Exchange (or its affiliates, MIAX Pearl and MIAX), must first execute, among other things, the MIAX Exchange Group Exchange Data Agreement (the ''Exchange Data Agreement'').[45] Pursuant to the Exchange Data Agreement, Internal Distributors are restricted to the ''internal use'' of any market data they receive. This means that Internal Distributors may only distribute the Exchange's market data to the recipient's officers and employees and its affiliates.[46] External Distributors may distribute the Exchange's market data to persons who are not officers, employees or affiliates of the External Distributor,[47] and may charge their own fees for the redistribution of such market data. External Distributors may monetize their receipt of the ToM and cToM data feeds by charging their customers fees for receipt of the Exchange's ToM and cToM data. Internal Distributors do not have the same ability to monetize the Exchange's ToM and cToM data feeds. Accordingly, the Exchange believes it is fair, reasonable and not unfairly discriminatory to assess External Distributors a higher fee for the Exchange's ToM and cToM data feeds as External Distributors have greater usage rights to commercialize such market data and can adjust their own fee structures if necessary.

The Exchange also utilizes more resources to support External

[44] *See supra* notes 41 and 42.

[45] *See* Exchange Data Agreement, *available at https://www.miaxglobal.com/markets/us-options/all-options/market-data-vendor-agreements.*

[46] *See id.*

[47] *See id.*

Distributors versus Internal Distributors, as External Distributors have reporting and monitoring obligations that Internal Distributors do not have, thus requiring additional time and effort of Exchange staff. For example, External Distributors have monthly reporting requirements under the Exchange's Market Data Policies.[48] Exchange staff must then, in turn, process and review information reported by External Distributors to ensure the External Distributors are redistributing cToM data in compliance with the Exchange's Market Data Agreement and Policies.

The Exchange believes the proposed cToM fees are equitable and not unfairly discriminatory because the fee level results in a reasonable and equitable allocation of fees amongst subscribers for similar services, depending on whether the subscriber is an Internal or External Distributor. Moreover, the decision as to whether or not to purchase market data is entirely optional to all market participants. Potential purchasers are not required to purchase the market data, and the Exchange is not required to make the market data available. Purchasers may request the data at any time or may decline to purchase such data. The allocation of fees among users is fair and reasonable because, if market participants decide not to subscribe to the data feed, firms can discontinue their use of the cToM data.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the ToM and cToM data feeds are equitably allocated.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,[49] the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange does not believe that the proposed fees place certain market participants at a relative disadvantage to other market participants because, as noted above, the proposed fees are associated with usage of the data feed by each market participant based on whether the market participant internally or externally distributes the Exchange data, which are still ultimately in the control of any particular Member, and such fees do not impose a barrier to entry to smaller participants. Accordingly, the proposed fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation of the proposed fees reflects the types of data consumed by various market participants and their usage thereof.

Inter-Market Competition

The Exchange does not believe the proposed fees place an undue burden on competition on other exchanges that is not necessary or appropriate. In particular, market participants are not forced to subscribe to either data feed, as described above. Additionally, other exchanges have similar market data fees with comparable rates in place for their participants.[50] The proposed fees are based on actual costs and are designed to enable the Exchange to recoup its applicable costs with the possibility of a reasonable profit on its investment as described in the Purpose and Statutory Basis sections. Competing exchanges are free to adopt comparable fee structures subject to the Commission's rule filing process. Allowing the Exchange, or any new market entrant, to waive fees (as the Exchange did for cToM) for a period of time to allow it to become established encourages market entry and thereby ultimately promotes competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[51] and Rule 19b–4(f)(2)[52] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–EMERALD–2024–15 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–EMERALD–2024–15. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–EMERALD–2024–15 and should be submitted on or before May 23, 2024.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100039; File No. SR–EMERALD–2024–14]

Self-Regulatory Organizations; MIAX Emerald LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fee Schedule for Purge Ports

April 26, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 15, 2024, MIAX Emerald, LLC (''MIAX Emerald'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the MIAX Emerald Options Exchange Fee Schedule (the ''Fee Schedule'') to amend fees for Purge Ports.[3]

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/emerald-options/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the fees for Purge Ports, which is a function enabling Market Makers [4] to cancel all open quotes or a subset of open quotes through a single cancel message. The Exchange currently provides Market Makers the option to purchase Purge Ports to assist in their quoting activity. Purge Ports provide Market Makers with the ability to send purge messages to the Exchange System.[5] Purge Ports are not capable of sending or receiving any other type of messages or information. The use of Purge Ports is completely optional and no rule or regulation requires that a Market Maker utilize them.

The Exchange initially filed the proposal on September 29, 2023 (the ''Initial Proposal'').[6] On November 22, 2023, the Exchange withdrew the Initial Proposal and replaced with a revised filing (the ''Second Proposal'').[7] On January 17, 2024, the Exchange withdrew the Second Proposal and, on January 31, 2024, replaced it with a further revised filing (the ''Third Proposal'').[8] On March 8, 2024, the Exchange withdrew the Third Proposal and replaced it with a further revised filing (the ''Fourth Proposal'').[9] On April 15, 2024, the Exchange withdrew the Fourth Proposal and replaced it with a further revised filing (the ''Fifth Proposal'').

The Exchange is including a cost analysis in this filing to justify the proposed fees. As described more fully below, the cost analysis includes, among other things, descriptions of how the Exchange allocated costs among it and its affiliated exchanges for similar proposed fee changes (separately between MIAX Pearl Options [10] and MIAX,[11] collectively referred to herein as the ''affiliated markets''), to ensure no cost was allocated more than once, as well as detail supporting its cost allocation processes and explanations as to why a cost allocation in this proposal may differ from the same cost allocation in similar proposals submitted by the affiliated markets. The proposed fees are intended to cover the Exchange's cost of providing Purge Ports with a reasonable mark-up over those costs.

Purge Port Fee Change

Unlike other options exchanges that charge fees for Purge Ports on a per port basis,[12] the Exchange assesses a flat fee of $1,500 per month, regardless of the number of Purge Ports utilized by a Market Maker. Prior to the Initial Proposal, a Market Maker could request and be allocated two (2) Purge Ports per Matching Engine [13] to which it connects and not all Market Makers connected to all of the Exchange's Matching Engines.

The Exchange now proposes to amend the fee for Purge Ports to align more closely with other exchanges who charge on a per port basis by providing two (2) Purge Ports per Matching Engine for a monthly flat fee of $600 per month per Matching Engine. The only difference with a per port structure is that Market Makers receive two (2) Purge Ports per Matching Engine for the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The proposed fee change is based on a recent proposal by Nasdaq Phlx LLC (''Phlx'') to adopt fees for purge ports. *See* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[4] The term ''Market Makers'' refers to Lead Market Makers (''LMMs''), Primary Lead Market Makers (''PLMMs''), and Registered Market Makers (''RMMs'') collectively. *See* Exchange Rule 100.

[5] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[6] *See* Securities Exchange Act Release No. 98734 (October 12, 2023), 88 FR 71894 (October 18, 2023) (SR–EMERALD–2023–26).

[7] *See* Securities Exchange Act Release No. 99089 (December 5, 2023), 88 FR 85941 (December 11, 2023) (SR–EMERALD–2023–29).

[8] *See* Securities Exchange Act Release No. 99529 (February 13, 2024), 89 FR 12907 (February 20, 2024) (SR–EMERALD–2024–05).

[9] *See* Securities Exchange Act Release No. 99812 (March 20, 2024), 89 FR 21080 (March 26, 2024) (SR–EMERALD–2024–11).

[10] MIAX Pearl Options is the options market of MIAX PEARL, LLC (''MIAX Pearl''), which also operates an equities trading facility called MIAX Pearl Equities. *See* Exchange Rule 100 and MIAX Pearl Rule 1901.

[11] The term ''MIAX'' means Miami International Securities Exchange, LLC. *See* Exchange Rule 100.

[12] *See* Cboe BXZ Exchange, Inc. (''BZX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe EDGX Exchange, Inc. (''EDGX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe Exchange, Inc. (''Cboe'') Fee Schedule ($850 per purge port per month). *See also* Nasdaq GEMX, Options 7, Pricing Schedule, Section 6.C.(3). Nasdaq GEMX, LLC (''Nasdaq GEMX'') assesses its members $1,250 per SQF Purge Port per month, subject to a monthly cap of $17,500 for SQF Purge Ports and SQF Ports, applicable to market makers. *See also* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[13] A Matching Engine is a part of the Exchange's electronic system that processes options quotes and trades on a symbol-by-symbol basis. Some matching engines will process option classes with multiple root symbols, and other matching engines will be dedicated to one single option root symbol (for example, options on SPY will be processed by one single matching engine that is dedicated only to SPY). A particular root symbol may only be assigned to a single designated matching engine. A particular root symbol may not be assigned to multiple matching engines. *See* the Definitions Section of the Fee Schedule.

same proposed monthly fee, rather than being charged a separate fee for each Purge Port. The Exchange proposes to charge the proposed fee for Purge Ports per Matching Engine, instead on a per Purge Port basis, due to its System architecture which provides two (2) Purge Ports per Matching Engine for redundancy purposes. In addition, the proposed fee is lower than the comparable fee charged by competing exchanges that also charge on a per port basis, notwithstanding that the Exchange is providing up to two (2) Purge Ports for that same lower fee.[14] Other exchanges may also maintain a different number of matching engines within their architecture than the Exchange (*i.e.,* MIAX maintains twenty-four (24) matching engines, MIAX Pearl Options maintains twelve (12) matching engines, and MIAX Emerald maintains twelve (12) matching engines).

Similar to a per port charge, Market Makers are able to select the Matching Engines that they want to connect to,[15] based on the business needs of each Market Maker, and pay the applicable fee based on the number of Matching Engines and ports utilized. The Exchange believes that the proposed fee provides Market Makers with flexibility to control their Purge Port costs based on the number of Matching Engines each Marker Maker elects to connect to based on each Market Maker's business needs.

* * * * *

A logical port represents a port established by the Exchange within the Exchange's System for trading and billing purposes. Each logical port grants a Member [16] the ability to accomplish a specific function, such as order entry, order cancellation, access to execution reports, and other administrative information.

Purge Ports are designed to assist Market Makers [17] in the management of, and risk control over, their quotes, particularly if the firm is dealing with a large number of securities. For example, if a Market Maker detects market indications that may influence the execution potential of their quotes, the Market Maker may use Purge Ports to reduce uncertainty and to manage risk by purging all quotes in a number of securities. This allows Market Makers to seamlessly avoid unintended executions, while continuing to evaluate the market, their positions, and their risk levels. Purge Ports are used by Market Makers that conduct business activity that exposes them to a large amount of risk across a number of securities. Purge Ports enable Market Makers to cancel all open quotes, or a subset of open quotes through a single cancel message. The Exchange notes that Purge Ports increase efficiency of already existing functionality enabling the cancellation of quotes.

The Exchange operates highly performant systems with significant throughput and determinism which allows participants to enter, update and cancel quotes at high rates. Market Makers may currently cancel individual quotes through the existing functionality, such as through the use of a mass cancel message by which a Market Maker may request that the Exchange remove all or a subset of its quotations and block all or a subset of its new inbound quotations.[18] Other than Purge Ports being a dedicated line for cancelling quotations, Purge Ports operate in the same manner as a mass cancel message being sent over a different type of port. For example, like Purge Ports, mass cancellations sent over a logical port may be done at either the firm or MPID level. As a result, Market Makers can currently cancel quotes in rapid succession across their existing logical ports [19] or through a single cancel message, all open quotes or a subset of open quotes.

Similarly, Market Makers may also use cancel-on-disconnect control when they experience a disruption in connection to the Exchange to automatically cancel all quotes, as configured or instructed by the Member or Market Maker.[20] In addition, the Exchange already provides similar ability to mass cancel quotes through the Exchange's risk controls, which are offered at no charge and enables Market Makers to establish pre-determined levels of risk exposure, and can be used to cancel all open quotes.[21] Accordingly, the Exchange believes that the Purge Ports provide an efficient option as an alternative to already available services and enhance the Market Maker's ability to manage their risk.

The Exchange believes that market participants benefit from a dedicated purge mechanism for specific Market Makers and to the market as a whole. Market Makers will have the benefit of efficient risk management and purge tools. The market will benefit from potential increased quoting and liquidity as Market Makers may use Purge Ports to manage their risk more robustly. Only Market Makers that request Purge Ports would be subject to the proposed fees, and other Market Makers can continue to operate in exactly the same manner as they do today without dedicated Purge Ports, but with the additional purging capabilities described above.

Implementation Date

The proposed fee change is immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[22] in general, and furthers the objectives of Section 6(b)(5) of the Act,[23] in particular, in that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes that its proposed fee is consistent with Section 6(b)(4) of the Act [24] because it represents an equitable allocation of reasonable dues, fees and other charges among market participants.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs.

In proposing to charge fees for port services, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in

[14] *See supra* note 12.

[15] The Exchange notes that each Matching Engine corresponds to a specified group of symbols. Certain Market Makers choose to only quote in certain symbols while other Market Makers choose to quote the entire market.

[16] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[17] Members seeking to become registered as a Market Maker must comply with the applicable requirements of Chapter VI of the Exchange's Rules.

[18] *See* Exchange Rule 519C(a) and (b).

[19] Current Exchange port functionality supports cancelation rates that exceed one thousand messages per second and the Exchange's research indicates that certain market participants rely on such functionality and at times utilize such cancelation rates.

[21] *See* Exchange Rule 532.

[22] 15 U.S.C. 78f(b).

[23] 15 U.S.C. 78f(b)(5).

[24] 15 U.S.C. 78f(b)(4).

relation to other Members, *i.e.,* to assure the fee will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[25] and Rule 19b–4 thereunder,[26] with respect to the types of information exchanges should provide when filing fee changes, and Section 6(b) of the Act,[27] which requires, among other things, that exchange fees be reasonable and equitably allocated,[28] not designed to permit unfair discrimination,[29] and that they not impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[30] The Exchange notes that the legacy exchanges with whom the Exchange vigorously competes for order flow and market share, were not subject to any such diligence or transparency in setting their baseline non-transaction fees, most of which were put in place before the Staff Guidance.[31]

As detailed below, the Exchange recently calculated its aggregate annual costs for providing Purge Ports to be $822,969 (or approximately $68,581 per month, rounded to the nearest dollar when dividing the annual cost by 12 months). In order to cover the aggregate costs of providing Purge Ports to its Market Makers going forward and to make a modest profit, as described below, the Exchange proposes to modify its Fee Schedule to charge a fee of $600 per Matching Engine for Purge Ports.

In 2019, the Exchange completed a study of its aggregate costs to produce market data and connectivity (the ''Cost Analysis'').[32] The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk and purge functionality, the ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers''). The Exchange recently update its Cost Analysis using its 2024 estimated budget as described below.

As an initial step, the Exchange determined the total cost for the Exchange and the affiliated markets for each cost driver as part of its 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the Finance Team. Each department head is required to send a ''bottom up'' budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.,* price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,[33] storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.,* the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates four separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all costs drivers are the same at each individual marketplace and dividing total cost by four (4) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.,* connectivity and ports, market data, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below.

This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has five primary sources of revenue that it can

[32] The Exchange frequently updates it Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

[33] For example, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

potentially use to fund its operations: transaction fees, fees for connectivity and port services, membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange's system for executing transactions is dependent on physical hardware and connectivity; only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; many Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted methodology for the allocation of an exchange's costs, the Exchange's methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges' interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange's extensive updated Cost Analysis, which was again recently further refined, the Exchange analyzed every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of connectivity and port services, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of Purge Port services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to Purge Port services. In turn, the Exchange allocated certain costs more to physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide Purge Port services is $68,581, as further detailed below.

Costs Related to Offering Purge Ports

The following chart details the individual line-item costs considered by the Exchange to be related to offering Purge Ports as well as the percentage of the Exchange's overall costs that such costs represent for each cost driver (*e.g.,* as set forth below, the Exchange allocated approximately 2.2% of its overall Human Resources cost to offering Purge Ports).

Cost drivers	Allocated annual cost [a]	Allocated monthly cost [b]	% of all
Human Resources	$491,123	$40,927	2.2
Connectivity (external fees, cabling, switches, etc.)	868	72	0.9
Internet Services and External Market Data	4,914	410	0.9
Data Center	20,379	1,698	1.3
Hardware and Software Maintenance and Licenses	16,268	1,356	0.9
Depreciation	36,917	3,076	1.0
Allocated Shared Expenses	252,500	21,042	2.9
Total	822,969	68,581	2.1

[a] The Annual Cost includes figures rounded to the nearest dollar.
[b] The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering Purge Ports. While some costs were attempted to be allocated as equally as possible among the Exchange and its affiliated markets, the Exchange notes that some of its cost allocation percentages for certain cost drivers differ when compared to the same cost drivers for the Exchange's affiliated markets in their similar proposed fee changes for Purge Ports. This is because the Exchange's cost allocation methodology utilizes the actual projected costs of the Exchange (which are specific to the Exchange and are independent of the costs projected and utilized by the Exchange's affiliated markets) to determine its actual costs, which may vary across the Exchange and its affiliated markets based on factors that are unique to each marketplace. The Exchange provides additional explanation below (including the reason for the deviation) for the significant differences.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (''MIH''), the holding company of the Exchange and its affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market's individual Human Resources expense. Then, managers and department heads assign a percentage of each employee's time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include providing and maintaining Purge Ports and performance thereof (primarily the Exchange's network infrastructure team, which spends most of their time performing functions necessary to provide port and connectivity services). As described more fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the

Exchange is then allocated to port services. From that portion allocated to the Exchange that applied to ports, the Exchange then allocated a weighted average of 2.6% of each employee's time from the above group to Purge Ports.

The Exchange also allocated Human Resources costs to provide Purge Ports to a limited subset of personnel with ancillary functions related to establishing and maintaining such ports (such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.,* only including those personnel who support functions related to providing Purge Ports) and then applied a smaller allocation to such employees' time to Purge Ports (1.3%). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to Purge Ports, whether it is a sales person selling port services, finance personnel billing for port services or providing budget analysis, or information security ensuring that such ports are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing Purge Ports, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing Purge Ports: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 2.6% of each of their employee's time assigned to the Exchange for Purge Ports, as stated above. Employees from these departments perform numerous functions to support Purge Ports, such as the installation, re-location, configuration, and maintenance of Purge Ports and the hardware they access. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting Purge Ports and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support Purge Ports, but illustrates the breath of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the Purge Ports related Human Resources costs to the extent that they are involved in overseeing tasks related to providing Purge Ports. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, Etc.)

The Connectivity cost driver includes external fees paid to connect to other exchanges and third parties, cabling and switches required to operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete connections to the Exchange and to connect to external markets. The Exchange notes that its connectivity to external markets vendors is required in order to receive market data to run the Exchange's matching engine and basic operations compliant with existing regulations, primarily Regulation NMS.

The Exchange relies on various connectivity providers for connectivity to the entire U.S. options industry, and infrastructure services for critical components of the network that are necessary to provide and maintain its System Networks and access to its System Networks via 10Gb ULL connectivity. Specifically, the Exchange utilizes connectivity providers to connect to other national securities exchanges and the Options Price Reporting Authority (''OPRA''). The Exchange understands that these service providers provide services to most, if not all, of the other U.S. exchanges and other market participants. Connectivity provided by these service providers is critical to the Exchanges daily operations and performance of its System Networks which includes Purge Ports. Without these services providers, the Exchange would not be able to connect to other national securities exchanges, market data providers or OPRA and, therefore, would not be able to operate and support its System Networks, including Purge Ports. In addition, the connectivity is necessary for the Exchange to notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Also, like other types of ports offered by the Exchange, Purge Ports leverage the Exchange's existing 10Gb ULL connectivity, which also relies on connectivity to other national securities exchanges and OPRA. The Exchange does not employ a separate fee to cover its connectivity provider expense and recoups that expense, in part, by charging for Purge Ports.

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. For purposes of Purge Ports, the Exchange also includes a portion of its costs related to external market data. External market data includes fees paid to third parties, including OPRA, to receive and consume market data from other markets. The Exchange includes external market data costs towards Purge Ports because such market data is necessary to offer certain services related to such ports, such as checking for market conditions (*e.g.,* halted securities). External market data is also consumed at the Matching Engine level for, among other things, validating quotes on entry against the national best bid or offer (''NBBO'').[34] Purge Ports are a component of the Matching Engine, and used by market participants to cancel multiple resting quotes within the Matching Engine. While resting, the Exchange uses external market data to manage those quotes, such as preventing trade-throughs, and those quotes are also reported to OPRA for inclusion in this consolidated data stream. The Exchange also must notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Thus, since market data from other exchanges is consumed by the Matching Engine to validate quotes and check market conditions, the Exchange

[34] The term ''NBBO'' means the national best bid or offer as calculated by the Exchange based on market information received by the Exchange from OPRA. *See* Exchange Rule 100.

believes it is reasonable to allocate a small amount of such costs to Purge Ports.

For the reasons set forth above, the Exchange believes it is reasonable to allocate a small amount of such costs to Purge Ports since market data from other exchanges is consumed at the Exchange's Purge Port level to validate purge messages and the necessity to cancel a resting quote via a purge message or via some other means.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide Purge Ports in the third-party data centers where it maintains its equipment as well as related costs for market data to then enter the Exchange's System. The Exchange does not own the Primary Data Center or the Secondary Data Center, but instead, leases space in data centers operated by third-parties. The Exchange has allocated a percentage of its Data Center cost (1.3%) to Purge Ports because the third-party data centers and the Exchange's physical equipment contained therein are necessary for providing Purge Ports. In other words, for the Exchange to operate in a dedicated physical space with direct connectivity by market participants to its trading platform, the data centers are a critical component to the provision of Purge Ports. If the Exchange did not maintain such a presence, then Purge Ports would be of little value to market participants.

Hardware and Software Maintenance and Licenses

Hardware and Software Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer Purge Ports for each Matching Engine of the Exchange. This hardware includes servers, network switches, cables, optics, protocol data units, and cabinets, to maintain a state-of-the-art technology platform. Without hardware and software licenses, Purge Ports would not be able to be offered to market participants because hardware and software are necessary to operate the Exchange's Matching Engines, which are necessary to enable the purging of quotes. The Exchange also routinely works to improve the performance of the hardware and software used to operate the Exchange's network and System. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to allocate a certain percentage of its hardware and software expense to help offset those costs of providing Purge Port connectivity to its Matching Engines.

Depreciation

The vast majority of the software the Exchange uses to provide Ports has been developed in-house and the cost of such development, which takes place over an extended period of time and includes not just development work, but also quality assurance and testing to ensure the software works as intended, is depreciated over time once the software is activated in the production environment. Hardware used to provide Purge Ports includes equipment used for testing and monitoring of order entry infrastructure and other physical equipment the Exchange purchased and is also depreciated over time.

All hardware and software, which also includes assets used for testing and monitoring of order entry infrastructure, were valued at cost, depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which is owned by the Exchange and some of which is leased by the Exchange in order to allow efficient periodic technology refreshes. The Exchange allocated 1.0% of all depreciation costs to providing Purge Ports. The Exchange allocated depreciation costs for depreciated software necessary to operate the Exchange because such software is related to the provision of Purge Ports. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost driver was therefore narrowly tailored to depreciation related to Purge Ports.

Allocated Shared Expenses

Finally, a portion of general shared expenses was allocated to overall Purge Port costs as without these general shared costs the Exchange would not be able to operate in the manner that it does and provide Purge Ports. The costs included in general shared expenses include general expenses of the Exchange, including office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications costs. The Exchange again notes that the cost of paying directors to serve on its Board of Directors is included in the calculation of Allocated Shared Expenses, and thus a portion of such overall cost amounting to less than 3% of the overall cost for directors was allocated to providing Purge Ports.

Approximate Cost for Purge Ports per Month

Based on projected 2024 data, the total monthly cost allocated to Purge Ports of $68,581 was divided by the total number of Matching Engines in which Market Makers used Purge Ports for the month of December 2023, which was 132, resulting in an approximate cost of $522 per Matching Engine per month for Purge Port usage (when rounding to the nearest dollar). The Exchange notes that the flat fee of $600 per month per Matching Engine entitles each Market Maker to two Purge Ports per Matching Engine. The majority of Market Makers are connected to all twenty-four of the Exchange's Matching Engines and utilize Purge Ports on each Matching Engine, except one Market Maker, which only utilizes Purge Ports on three Matching Engines.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core services (including Purge Ports) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal. For instance, in calculating the Human Resources expenses to be allocated to Purge Ports based upon the above described methodology, the Exchange has a team of employees dedicated to network infrastructure and with respect to such employees the Exchange allocated network infrastructure personnel with a higher percentage of the cost of such personnel (19.3%) given their focus on functions necessary to provide Ports. The salaries of those same personnel were allocated only 2.6% to Purge Ports and the remaining 97.4% was allocated to connectivity, other port services, transaction services, membership services and market data. The Exchange did not allocate any other Human Resources expense for providing Purge Ports to any other employee group, outside of a smaller allocation of 1.3% for Purge Ports, of the cost associated with certain specified personnel who work closely with and support network infrastructure personnel. This is because a much wider range of personnel are involved in functions necessary to offer, monitor and maintain Purge Ports but the tasks necessary to do so are not a primary or full-time function.

In total, the Exchange allocated 2.2% of its personnel costs to providing Purge

Ports. In turn, the Exchange allocated the remaining 97.8% of its Human Resources expense to membership services, transaction services, connectivity services, other port services and market data. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including Purge Ports, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide Purge Port services to its Market Makers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing Purge Port services, but instead allocated approximately 1.0% of the Exchange's overall depreciation and amortization expense to Purge Ports. The Exchange allocated the remaining depreciation and amortization expense (approximately 99%) toward the cost of providing transaction services, membership services, connectivity services, other port services, and market data.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from Purge Ports, the Exchange will have to be successful in retaining existing Market Makers that wish to maintain Purge Ports or in obtaining new Market Makers that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections. It is possible, however, that actual costs may be higher or lower. To the extent the Exchange sees growth in use of connectivity services it will receive additional revenue to offset future cost increases. However, if use of port services is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue [35]

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with providing and maintaining necessary hardware and other network infrastructure as well as network monitoring and support services; without such hardware, infrastructure, monitoring and support the Exchange would be unable to provide port services. Much of the cost relates to monitoring and analysis of data and performance of the network via the subscriber's connection(s). The above cost, namely those associated with hardware, software, and human capital, enable the Exchange to measure network performance with nanosecond granularity. These same costs are also associated with time and money spent seeking to continuously improve the network performance, improving the subscriber's experience, based on monitoring and analysis activity. The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by amending fees for Purge Port services. Subscribers, particularly those of Purge Ports, expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services (connections and ports), membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide Purge Port services will equal $822,969. Based on current Purge Port services usage, the Exchange would generate annual revenue of approximately $950,400. The Exchange believes this represents a modest profit of 13.4% when compared to the cost of providing Purge Port services, which could decrease over time.[36]

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing Purge Port services versus the total projected revenue of the Exchange associated with network Purge Port services.

The Proposed Fees are Also Equitable, Reasonable, and Not Unfairly Discriminatory

The Exchange believes that the proposed rule change would promote

[35] For purposes of calculating projected 2024 revenue for Purge Ports, the Exchange used revenues for the most recently completed full month.

[36] Assuming the U.S. inflation rate continues at its current rate, the Exchange believes that the projected profit margins in this proposal will decrease; however, the Exchange cannot predict with any certainty whether the U.S. inflation rate will continue at its current rate or its impact on the Exchange's future profits or losses. *See, e.g., https://www.usinflationcalculator.com/inflation/current-inflation-rates/* (last visited April 15, 2024).

just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market because offering Market Makers optional Purge Port services with a flexible fee structure promotes choice, flexibility, and efficiency. The Exchange believes Purge Ports enhance Market Makers' ability to manage quotes, which would, in turn, improve their risk controls to the benefit of all market participants. The Exchange believes that Purge Ports foster cooperation and coordination with persons engaged in facilitating transactions in securities because designating Purge Ports for purge messages may encourage better use of such ports. This may, concurrent with the ports that carry quotes and other information necessary for market making activities, enable more efficient, as well as fair and reasonable, use of Market Makers' resources. The Exchange believes that proper risk management, including the ability to efficiently cancel multiple quotes quickly when necessary is valuable to all firms, including Market Makers that have heightened quoting obligations that are not applicable to other market participants.

Purge Ports do not relieve Market Makers of their quoting obligations or firm quote obligations under Regulation NMS Rule 602.[37] Specifically, any interest that is executable against a Member's or Market Maker's quotes that is received by the Exchange prior to the time of the removal of quotes request will automatically execute. Market Makers that purge their quotes will not be relieved of the obligation to provide continuous two-sided quotes on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against a Market Maker for failing to meet their continuous quoting obligation each trading day.[38]

The Exchange also believes that offering Purge Ports at the Matching Engine level promotes risk management across the industry, and thereby facilitates investor protection. Some market participants, in particular the larger firms, could and do build similar risk functionality in their trading systems that permit the flexible cancellation of quotes entered on the Exchange at a high rate. Offering Matching Engine level protections ensures that such functionality is widely available to all firms, including smaller firms that may otherwise not be willing to incur the costs and development work necessary to support their own customized mass cancel functionality.

The Exchange also believes that moving to a per Matching Engine fee for Purge Ports is reasonable due to the Exchange's architecture that provides the Exchange the ability to provide two (2) Purge Ports per Matching Engine.

The Exchange believes that the proposed Purge Port fees are equitable because the proposed Purge Ports are completely voluntary as they relate solely to optional risk management functionality.

The Exchange also believes that the proposed amendments to its Fee Schedule are not unfairly discriminatory because they will apply uniformly to all Market Makers that choose to use the optional Purge Ports. Purge Ports are completely voluntary and, as they relate solely to optional risk management functionality, no Market Maker is required or under any regulatory obligation to utilize them. All Market Makers that voluntarily select this service option will be charged the same amount for the same services. All Market Makers have the option to select any port or connectivity option, and there is no differentiation among Market Makers with regard to the fees charged for the services offered by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Purge Ports are completely voluntary and are available to all Market Makers on an equal basis at the same cost. While the Exchange believes that Purge Ports provide a valuable service, Market Makers can choose to purchase, or not purchase, these ports based on their own determination of the value and their business needs. No Market Maker is required or under any regulatory obligation to utilize Purge Ports. Accordingly, the Exchange believes that Purge Ports offer appropriate risk management functionality to firms that trade on the Exchange without imposing an unnecessary or inappropriate burden on competition.

The Exchange also does not believe the proposal would cause any unnecessary or inappropriate burden on intermarket competition as other exchanges are free to introduce their own purge port functionality and lower their prices to better compete with the Exchange's offering. The Exchange does not believe the proposed rule change would cause any unnecessary or inappropriate burden on intramarket competition. Particularly, the proposal would apply uniformly to any market participant, in that it does not differentiate between Market Makers. The proposal would allow any interested Market Makers to purchase Purge Port functionality based on their business needs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange received one comment letter on the Initial Proposal and one comment letter on the Second Proposal, both from the same commenter.[39] These comment letters were submitted not only on these proposals, but also the proposals by the Exchange and its affiliates to amend fees for 10Gb ULL connectivity and certain other ports. The Exchange received one other comment letter on the Second Proposal, another on the Third Proposal, and another on the Fourth Proposal from a separate commenter.[40] Overall, the Exchange believes that the issues raised by the first commenter are not germane to this proposal because they apply primarily to the other fee filings. Also, both commenters raised concerns with the current environment surrounding exchange non-transaction fee proposals that should be addressed by the Commission through rule making, or Congress, more holistically and not through an individual exchange fee filings. However, the commenters do raise one issue that concerns this proposal whereby it asserts that the Exchange's comparison to fees charged by other exchanges for similar ports is irrelevant and unpersuasive. The core of the issue raised is regarding the cost to connect to one exchange compared to the cost to connect to others. A thorough response to this comment would require the Exchange to obtain competitively sensitive information about other exchanges' architecture and how their members connect. The Exchange is not privy to this information. Further, the commenters compare the Exchange's proposed rate to other exchanges that offer purge port functionality across all matching engines for a single fee, but fails to provide the same comparison to other exchanges that charge for purge functionality as proposed herein. Nonetheless, the Exchange notes that it

[38] *Id.*

[39] *See* letters from Thomas M. Merritt, Deputy General Counsel, Virtu Financial, Inc. (''Virtu''), to Vanessa Countryman, Secretary, Commission, dated November 8, 2023 and January 2, 2024.

[40] *See* letters from John C. Pickford, Counsel, Susquehanna International Group, LLP (''SIG''), to Vanessa Countryman, Secretary, Commission, dated January 4, 2024, March 1, 2024, and April 11, 2024.

is relying on a cost-based justification to support the proposed fee change, not a comparison of the proposed fees to the fees charged by other exchanges for similar purging services. The Exchange does not have insight into the technical architecture of other exchanges so it is difficult to ascertain the number of purge ports a firm would need to connect to another exchange's entire market. Therefore, the Exchange is limited to comparing its proposed fee to other exchanges' purge port fees as listed in their fee schedules.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[41] and Rule 19b–4(f)(2)[42] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–EMERALD–2024–14 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–EMERALD–2024–14. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–EMERALD–2024–14 and should be submitted on or before May 23, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[43]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100037; File No. SR–PEARL–2024–20]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the MIAX Pearl Options Fee Schedule for Purge Ports

April 26, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 15, 2024, MIAX PEARL, LLC (''MIAX Pearl'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the MIAX Pearl Options Exchange Fee Schedule (the ''Fee Schedule'') to amend fees for MIAX Express Network (''MEO'')[3] Purge Ports (''Purge Ports'').[4]

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/pearl-options/rule-filings* at MIAX Pearl's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the fees for Purge Ports, which is a function enabling the Exchange's two types of Members,[5] Market Makers[6] and Electronic Exchange Members[7]

[3] ''MEO Interface'' or ''MEO'' means a binary order interface for certain order types as set forth in Rule 516 into the MIAX Pearl System. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[4] The proposed fee change is based on a recent proposal by Nasdaq Phlx LLC (''Phlx'') to adopt fees for purge ports. *See* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[5] The term ''Member'' means an individual or organization that is registered with the Exchange pursuant to Chapter II of Exchange Rules for purposes of trading on the Exchange as an ''Electronic Exchange Member'' or ''Market Maker.'' Members are deemed ''members'' under the Exchange Act. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[6] The term ''Market Maker'' or ''MM'' means a Member registered with the Exchange for the purpose of making markets in options contracts traded on the Exchange and that is vested with the rights and responsibilities specified in Chapter VI of the Exchange Rules. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[7] The term ''Electronic Exchange Member'' or ''EEM'' means the holder of a Trading Permit who

Continued

(''EEMs''), to cancel all open orders or a subset of open orders through a single cancel message. The Exchange currently provides Members the option to purchase Purge Ports to assist in their quoting activity. Purge Ports provide Members with the ability to send purge messages to the Exchange System.[8] Purge Ports are not capable of sending or receiving any other type of messages or information. The use of Purge Ports is completely optional and no rule or regulation requires that a Market Maker utilize them.

The Exchange initially filed the proposal on September 29, 2023 (the ''Initial Proposal'').[9] On November 22, 2023, the Exchange withdrew the Initial Proposal and replaced with a revised filing (the ''Second Proposal'').[10] On January 17, 2024, the Exchange withdrew the Second Proposal and, on January 31, 2024, replaced it with a further revised filing (the ''Third Proposal'').[11] On March 8, 2024, the Exchange withdrew the Third Proposal and replaced it with a further revised filing (the ''Fourth Proposal'').[12] On April 15, 2024, the Exchange withdrew the Fourth Proposal and replaced it with a further revised filing (the ''Fifth Proposal'').

The Exchange is including a cost analysis in this filing to justify the proposed fees. As described more fully below, the cost analysis includes, among other things, descriptions of how the Exchange allocated costs among it and its affiliated exchanges for similar proposed fee changes (separately between MIAX[13] and MIAX Emerald,[14] collectively referred to herein as the ''affiliated markets''), to ensure no cost was allocated more than once, as well as detail supporting its cost allocation processes and explanations as to why a cost allocation in this proposal may differ from the same cost allocation in similar proposals submitted by the affiliated markets. The proposed fees are intended to cover the Exchange's cost of providing Purge Ports with a reasonable mark-up over those costs.

Purge Port Fee Change

Unlike other options exchanges that charge fees for Purge Ports on a per port basis,[15] the Exchange assesses a flat fee of $750 per month, regardless of the number of Purge Ports utilized by a Market Maker. Prior to the Initial Proposal, a Market Maker could request and be allocated two (2) Purge Ports per Matching Engine[16] to which it connects and not all Members connected to all of the Exchange's Matching Engines.

The Exchange now proposes to amend the fee for Purge Ports to align more closely with other exchanges who charge on a per port basis by providing two (2) Purge Ports per Matching Engine for a monthly flat fee of $600 per month per Matching Engine. The only difference with a per port structure is that Members receive two (2) Purge Ports per Matching Engine for the same proposed monthly fee, rather than being charged a separate fee for each Purge Port. The Exchange proposes to charge the proposed fee for Purge Ports per Matching Engine, instead on a per Purge Port basis, due to its System architecture which provides two (2) Purge Ports per Matching Engine for redundancy purposes. In addition, the proposed fee is lower than the comparable fee charged by competing exchanges that also charge on a per port basis, notwithstanding that the Exchange is providing up to two (2) Purge Ports for that same lower fee.[17] Other exchanges may also maintain a different number of matching engines within their architecture than the Exchange (*i.e.,* MIAX maintains twenty-four (24) matching engines, MIAX Pearl Options maintains twelve (12) matching engines, and MIAX Emerald maintains twelve (12) matching engines).

Similar to a per port charge, Members are able to select the Matching Engines that they want to connect to,[18] based on the business needs of each Market Maker, and pay the applicable fee based on the number of Matching Engines and ports utilized. The Exchange believes that the proposed fee provides Members with flexibility to control their Purge Port costs based on the number of Matching Engines each Marker Maker elects to connect to based on each Market Maker's business needs.

* * * * *

A logical port represents a port established by the Exchange within the Exchange's System for trading and billing purposes. Each logical port grants a Member the ability to accomplish a specific function, such as order entry, order cancellation, access to execution reports, and other administrative information.

Purge Ports are designed to assist Members[19] in the management of, and risk control over, their orders, particularly if the firm is dealing with a large number of securities. For example, if a Market Maker detects market indications that may influence the execution potential of their orders, the Market Maker may use Purge Ports to reduce uncertainty and to manage risk by purging all orders in a number of securities. This allows Members to seamlessly avoid unintended executions, while continuing to evaluate the market, their positions, and their risk levels. Purge Ports are used by Members that conduct business activity that exposes them to a large amount of risk across a number of securities. Purge Ports enable Members to cancel all open orders, or a subset of open orders through a single cancel message. The Exchange notes that Purge Ports increase efficiency of already existing functionality enabling the cancellation of orders.

The Exchange operates highly performant systems with significant

is a Member representing as agent Public Customer Orders or Non-Customer Orders on the Exchange and those non-Market Maker Members conducting proprietary trading. Electronic Exchange Members are deemed ''members'' under the Exchange Act. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[8] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[9] *See* Securities Exchange Act Release No. 98733 (October 12, 2023), 88 FR 71907 (October 18, 2023) (SR–PEARL–2023–52).

[12] *See* Securities Exchange Act Release No. 99814 (March 20, 2024), 89 FR 21131 (March 26, 2024) (SR–PEARL–2024–13).

[13] The term ''MIAX'' means Miami International Securities Exchange, LLC. *See* Exchange Rule 100.

[14] The term ''MIAX Emerald'' means MIAX Emerald, LLC. *See* Exchange Rule 100.

[15] *See* Cboe BXZ Exchange, Inc. (''BZX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe EDGX Exchange, Inc. (''EDGX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe Exchange, Inc. (''Cboe'') Fee Schedule ($850 per purge port per month). *See also* Nasdaq GEMX, Options 7, Pricing Schedule, Section 6.C.(3). Nasdaq GEMX, LLC (''Nasdaq GEMX'') assesses its members $1,250 per SQF Purge Port per month, subject to a monthly cap of $17,500 for SQF Purge Ports and SQF Ports, applicable to market makers. *See also* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[16] A Matching Engine is a part of the Exchange's electronic system that processes options quotes and trades on a symbol-by-symbol basis. Some matching engines will process option classes with multiple root symbols, and other matching engines will be dedicated to one single option root symbol (for example, options on SPY will be processed by one single matching engine that is dedicated only to SPY). A particular root symbol may only be assigned to a single designated matching engine. A particular root symbol may not be assigned to multiple matching engines. *See* the Definitions Section of the Fee Schedule.

[17] *See supra* note 15.

[18] The Exchange notes that each Matching Engine corresponds to a specified group of symbols. Certain Market Makers choose to only quote in certain symbols while other Market Makers choose to quote the entire market.

[19] Members seeking to become registered as a Market Maker must comply with the applicable requirements of Chapter VI of the Exchange's Rules.

throughput and determinism which allows participants to enter, update and cancel orders at high rates. Members may currently cancel individual orders through the existing functionality, such as through the use of a mass cancel message by which a Market Maker may request that the Exchange remove all or a subset of its quotations and block all or a subset of its new inbound quotations.[20] Other than Purge Ports being a dedicated line for cancelling quotations, Purge Ports operate in the same manner as a mass cancel message being sent over a different type of port. For example, like Purge Ports, mass cancellations sent over a logical port may be done at either the firm or MPID level. As a result, Members can currently cancel orders in rapid succession across their existing logical ports [21] or through a single cancel message, all open orders or a subset of open orders.

Similarly, Members may also use cancel-on-disconnect control when they experience a disruption in connection to the Exchange to automatically cancel all orders, as configured or instructed by the Member or Market Maker.[22] In addition, the Exchange already provides similar ability to mass cancel orders through the Exchange's risk controls, which are offered at no charge and enables Members to establish pre-determined levels of risk exposure, and can be used to cancel all open orders.[23] Accordingly, the Exchange believes that the Purge Ports provide an efficient option as an alternative to already available services and enhance the Member's ability to manage their risk.

The Exchange believes that market participants benefit from a dedicated purge mechanism for specific Members and to the market as a whole. Members will have the benefit of efficient risk management and purge tools. The market will benefit from potential increased quoting and liquidity as Members may use Purge Ports to manage their risk more robustly. Only Members that request Purge Ports would be subject to the proposed fees, and other Members can continue to operate in exactly the same manner as they do today without dedicated Purge Ports, but with the additional purging capabilities described above.

Implementation Date

The proposed fee change is immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[24] in general, and furthers the objectives of Section 6(b)(5) of the Act,[25] in particular, in that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes that its proposed fee is consistent with Section 6(b)(4) of the Act [26] because it represents an equitable allocation of reasonable dues, fees and other charges among market participants.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs.

In proposing to charge fees for port services, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in relation to other Members, *i.e.,* to assure the fee will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[27] and Rule 19b–4 thereunder,[28] with respect to the types of information exchanges should provide when filing fee changes, and Section 6(b) of the Act,[29] which requires, among other things, that exchange fees be reasonable and equitably allocated,[30] not designed to permit unfair discrimination,[31] and that they not impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[32] The Exchange reiterates that the legacy exchanges with whom the Exchange vigorously competes for order flow and market share, were not subject to any such diligence or transparency in setting their baseline non-transaction fees, most of which were put in place before the Staff Guidance.[33]

As detailed below, the Exchange recently calculated its aggregate annual costs for providing Purge Ports to be $1,017,523 (or approximately $84,793 per month, rounded to the nearest dollar when dividing the annual cost by 12 months). In order to cover the aggregate costs of providing Purge Ports to its Market Makers going forward and to make a modest profit, as described below, the Exchange proposes to modify its Fee Schedule to charge a fee of $300 per Matching Engine for Purge Ports.

In 2019, the Exchange completed a study of its aggregate costs to produce market data and connectivity (the ''Cost Analysis'').[34] The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk and purge functionality, the ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers''). The Exchange recently update its Cost Analysis using its 2024 estimated budget as described below.

As an initial step, the Exchange determined the total cost for the Exchange and the affiliated markets for each cost driver as part of its 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the

[20] *See* Exchange Rule 519C(a) and (b).

[21] Current Exchange port functionality supports cancelation rates that exceed one thousand messages per second and the Exchange's research indicates that certain market participants rely on such functionality and at times utilize such cancelation rates.

[34] The Exchange frequently updates it Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

Finance Team. Each department head is required to send a ''bottom up'' budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.,* price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,[35] storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.,* the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates four separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all costs drivers are the same at each individual marketplace and dividing total cost by four (4) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.,* connectivity and ports, market data, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below.

This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity and port services, membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange's system for executing transactions is dependent on physical hardware and connectivity; only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; many Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted methodology for the allocation of an exchange's costs, the Exchange's methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges' interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange's extensive updated Cost Analysis, which was again recently further refined, the Exchange analyzed every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of connectivity and port services, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of Purge Port services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to Purge Port services. In turn, the Exchange allocated certain costs more to physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide Purge Port services is $84,793, as further detailed below.

Costs Related to Offering Purge Ports

The following chart details the individual line-item costs considered by the Exchange to be related to offering Purge Ports as well as the percentage of the Exchange's overall costs that such costs represent for each cost driver (*e.g.,* as set forth below, the Exchange allocated approximately 3.5% of its overall Human Resources cost to offering Purge Ports).

[35] For example, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

Cost drivers	Allocated annual cost [a]	Allocated monthly cost [b]	% of all
Human Resources	$776,560	$64,713	3.5
Connectivity (external fees, cabling, switches, etc.)	521	43	0.6
Internet Services and External Market Data	2,949	246	0.6
Data Center	21,359	1,780	1.4
Hardware and Software Maintenance and Licenses	11,069	922	0.6
Depreciation	67,682	5,640	1.7
Allocated Shared Expenses	137,383	11,449	1.5
Total	1,017,523	84,793	2.6

[a] The Annual Cost includes figures rounded to the nearest dollar.
[b] The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering Purge Ports. While some costs were attempted to be allocated as equally as possible among the Exchange and its affiliated markets, the Exchange notes that some of its cost allocation percentages for certain cost drivers differ when compared to the same cost drivers for the Exchange's affiliated markets in their similar proposed fee changes for Purge Ports. This is because the Exchange's cost allocation methodology utilizes the actual projected costs of the Exchange (which are specific to the Exchange and are independent of the costs projected and utilized by the Exchange's affiliated markets) to determine its actual costs, which may vary across the Exchange and its affiliated markets based on factors that are unique to each marketplace. The Exchange provides additional explanation below (including the reason for the deviation) for the significant differences.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (''MIH''), the holding company of the Exchange and its affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market's individual Human Resources expense. Then, managers and department heads assign a percentage of each employee's time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include providing and maintaining Purge Ports and performance thereof (primarily the Exchange's network infrastructure team, which spends most of their time performing functions necessary to provide port and connectivity services). As described more fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the Exchange is then allocated to port services. From that portion allocated to the Exchange that applied to ports, the Exchange then allocated a weighted average of 5.4% of each employee's time from the above group to Purge Ports.

The Exchange also allocated Human Resources costs to provide Purge Ports to a limited subset of personnel with ancillary functions related to establishing and maintaining such ports (such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.,* only including those personnel who support functions related to providing Purge Ports) and then applied a smaller allocation to such employees' time to Purge Ports (2.4%). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to Purge Ports, whether it is a sales person selling port services, finance personnel billing for port services or providing budget analysis, or information security ensuring that such ports are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing Purge Ports, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing Purge Ports: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 5.4% of each of their employee's time assigned to the Exchange for Purge Ports, as stated above. Employees from these departments perform numerous functions to support Purge Ports, such as the installation, re-location, configuration, and maintenance of Purge Ports and the hardware they access. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting Purge Ports and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support Purge Ports, but illustrates the breath of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the Purge Ports related

Human Resources costs to the extent that they are involved in overseeing tasks related to providing Purge Ports. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, Etc.)

The Connectivity cost driver includes external fees paid to connect to other exchanges and third parties, cabling and switches required to operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete connections to the Exchange and to connect to external markets. The Exchange notes that its connectivity to external markets vendors is required in order to receive market data to run the Exchange's matching engine and basic operations compliant with existing regulations, primarily Regulation NMS.

The Exchange relies on various connectivity providers for connectivity to the entire U.S. options industry, and infrastructure services for critical components of the network that are necessary to provide and maintain its System Networks and access to its System Networks via 10Gb ULL connectivity. Specifically, the Exchange utilizes connectivity providers to connect to other national securities exchanges and the Options Price Reporting Authority (''OPRA''). The Exchange understands that these service providers provide services to most, if not all, of the other U.S. exchanges and other market participants. Connectivity provided by these service providers is critical to the Exchanges daily operations and performance of its System Networks which includes Purge Ports. Without these services providers, the Exchange would not be able to connect to other national securities exchanges, market data providers or OPRA and, therefore, would not be able to operate and support its System Networks, including Purge Ports. In addition, the connectivity is necessary for the Exchange to notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Also, like other types of ports offered by the Exchange, Purge Ports leverage the Exchange's existing 10Gb ULL connectivity, which also relies on connectivity to other national securities exchanges and OPRA. The Exchange does not employ a separate fee to cover its connectivity provider expense and recoups that expense, in part, by charging for Purge Ports.

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. For purposes of Purge Ports, the Exchange also includes a portion of its costs related to external market data. External market data includes fees paid to third parties, including OPRA, to receive and consume market data from other markets. The Exchange includes external market data costs towards Purge Ports because such market data is necessary to offer certain services related to such ports, such as checking for market conditions (*e.g.,* halted securities). External market data is also consumed at the Matching Engine level for, among other things, as validating quotes on entry against the national best bid or offer (''NBBO'').[36] Purge Ports are a component of the Matching Engine, and used by market participants to cancel multiple resting quotes within the Matching Engine. While resting, the Exchange uses external market data to manage those quotes, such as preventing trade-throughs, and those quotes are also reported to OPRA for inclusion in this consolidated data stream. The Exchange also must notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Thus, since market data from other exchanges is consumed by the Matching Engine to validate quotes and check market conditions, the Exchange believes it is reasonable to allocate a small amount of such costs to Purge Ports.

For the reasons set forth above, the Exchange believes it is reasonable to allocate a small amount of such costs to Purge Ports since market data from other exchanges is consumed at the Exchange's Purge Port level to validate purge messages and the necessity to cancel a resting quote via a purge message or via some other means.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide Purge Ports in the third-party data centers where it maintains its equipment as well as related costs for market data to then enter the Exchange's System. The Exchange does not own the Primary Data Center or the Secondary Data Center, but instead, leases space in data centers operated by third parties. The Exchange has allocated a percentage of its Data Center cost (1.4%) to Purge Ports because the third-party data centers and the Exchange's physical equipment contained therein are necessary for providing Purge Ports. In other words, for the Exchange to operate in a dedicated physical space with direct connectivity by market participants to its trading platform, the data centers are a critical component to the provision of Purge Ports. If the Exchange did not maintain such a presence, then Purge Ports would be of little value to market participants.

Hardware and Software Maintenance and Licenses

Hardware and Software Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer Purge Ports for each Matching Engine of the Exchange. This hardware includes servers, network switches, cables, optics, protocol data units, and cabinets, to maintain a state-of-the-art technology platform. Without hardware and software licenses, Purge Ports would not be able to be offered to market participants because hardware and software are necessary to operate the Exchange's Matching Engines, which are necessary to enable the purging of quotes. The Exchange also routinely works to improve the performance of the hardware and software used to operate the Exchange's network and System. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to allocate a certain percentage of its hardware and software expense to help offset those costs of providing Purge Port connectivity to its Matching Engines.

Depreciation

The vast majority of the software the Exchange uses to provide Ports has been developed in-house and the cost of such development, which takes place over an extended period of time and includes not just development work, but also quality assurance and testing to ensure the software works as intended, is depreciated over time once the software is activated in the production

[36] The term ''NBBO'' means the national best bid or offer as calculated by the Exchange based on market information received by the Exchange from OPRA. *See* Exchange Rule 100.

environment. Hardware used to provide Purge Ports includes equipment used for testing and monitoring of order entry infrastructure and other physical equipment the Exchange purchased and is also depreciated over time.

All hardware and software, which also includes assets used for testing and monitoring of order entry infrastructure, were valued at cost, depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which is owned by the Exchange and some of which is leased by the Exchange in order to allow efficient periodic technology refreshes. The Exchange allocated 1.9% of all depreciation costs to providing Purge Ports. The Exchange allocated depreciation costs for depreciated software necessary to operate the Exchange because such software is related to the provision of Purge Ports. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost driver was therefore narrowly tailored to depreciation related to Purge Ports.

Allocated Shared Expenses

Finally, a portion of general shared expenses was allocated to overall Purge Port costs as without these general shared costs the Exchange would not be able to operate in the manner that it does and provide Purge Ports. The costs included in general shared expenses include general expenses of the Exchange, including office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications costs. The Exchange again notes that the cost of paying directors to serve on its Board of Directors is included in the calculation of Allocated Shared Expenses, and thus a portion of such overall cost amounting to less than 3% of the overall cost for directors was allocated to providing Purge Ports.

Approximate Cost for Purge Port per Month

Based on projected 2024 data, the total monthly cost allocated to Purge Ports of $84,793 was divided by the total number of Matching Engines in which Market Makers used Purge Ports for the month of December 2023, which was 142, resulting in an approximate cost of $597 per Matching Engine per month for Purge Port usage (when rounding to the nearest dollar). The Exchange notes that the flat fee of $600 per month per Matching Engine entitles each Market Maker to two Purge Ports per Matching Engine. The majority of Market Makers are connected to all twenty-four of the Exchange's Matching Engines and utilize Purge Ports on each Matching Engine, except one Market Maker, which only utilizes Purge Ports on three Matching Engines.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core services (including Purge Ports) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal. For instance, in calculating the Human Resources expenses to be allocated to Purge Ports based upon the above described methodology, the Exchange has a team of employees dedicated to network infrastructure and with respect to such employees the Exchange allocated network infrastructure personnel with a higher percentage of the cost of such personnel (19.3%) given their focus on functions necessary to provide Ports. The salaries of those same personnel were allocated only 5.4% to Purge Ports and the remaining 94.6% was allocated to connectivity, other port services, transaction services, membership services and market data. The Exchange did not allocate any other Human Resources expense for providing Purge Ports to any other employee group, outside of a smaller allocation of 2.4% for Purge Ports, of the cost associated with certain specified personnel who work closely with and support network infrastructure personnel. This is because a much wider range of personnel are involved in functions necessary to offer, monitor and maintain Purge Ports but the tasks necessary to do so are not a primary or full-time function.

In total, the Exchange allocated 3.5% of its personnel costs to providing Purge Ports. In turn, the Exchange allocated the remaining 96.5% of its Human Resources expense to membership services, transaction services, connectivity services, other port services and market data. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including Purge Ports, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide Purge Port services to its Market Makers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing Purge Port services, but instead allocated approximately 1.7% of the Exchange's overall depreciation and amortization expense to Purge Ports. The Exchange allocated the remaining depreciation and amortization expense (approximately 98.3%) toward the cost of providing transaction services, membership services, connectivity services, other port services, and market data.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from Purge Ports, the Exchange will have to be successful in retaining existing Market Makers that wish to maintain Purge Ports or in obtaining new Market Makers that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections. It is possible, however, that actual costs may be higher or lower. To the extent the Exchange sees growth in use of connectivity services it will receive additional revenue to offset future cost increases. However, if use of port services is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current

projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue [37]

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with providing and maintaining necessary hardware and other network infrastructure as well as network monitoring and support services; without such hardware, infrastructure, monitoring and support the Exchange would be unable to provide port services. Much of the cost relates to monitoring and analysis of data and performance of the network via the subscriber's connection(s). The above cost, namely those associated with hardware, software, and human capital, enable the Exchange to measure network performance with nanosecond granularity. These same costs are also associated with time and money spent seeking to continuously improve the network performance, improving the subscriber's experience, based on monitoring and analysis activity. The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by amending fees for Purge Port services. Subscribers, particularly those of Purge Ports, expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services (connections and ports), membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide Purge Port services will equal $1,017,523. Based on current Purge Port services usage, the Exchange would generate annual revenue of approximately $1,029,600. The Exchange believes this represents a modest profit of 1.2% when compared to the cost of providing Purge Port services, which could decrease over time.[38]

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing Purge Port services versus the total projected revenue of the Exchange associated with network Purge Port services.

The Proposed Fees Are Also Equitable, Reasonable, and Not Unfairly Discriminatory

The Exchange believes that the proposed rule change would promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market because offering Members optional Purge Port services with a flexible fee structure promotes choice, flexibility, and efficiency. The Exchange believes Purge Ports enhance Members' ability to manage orders, which would, in turn, improve their risk controls to the benefit of all market participants. The Exchange believes that Purge Ports foster cooperation and coordination with persons engaged in facilitating transactions in securities because designating Purge Ports for purge messages may encourage better use of such ports. This may, concurrent with the ports that carry orders and other information necessary for market making activities, enable more efficient, as well as fair and reasonable, use of Members' resources. The Exchange believes that proper risk management, including the ability to efficiently cancel multiple orders quickly when necessary is valuable to all firms, including Members that have heightened quoting obligations that are not applicable to other market participants.

Purge Ports do not relieve Members of their quoting obligations or firm quote obligations under Regulation NMS Rule 602.[39] Specifically, any interest that is executable against a Member's or Market Maker's orders that is received by the Exchange prior to the time of the removal of orders request will automatically execute. Members that purge their orders will not be relieved of the obligation to provide continuous two- sided orders on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against a Market Maker for failing to meet their continuous quoting obligation each trading day.[40]

The Exchange also believes that offering Purge Ports at the Matching Engine level promotes risk management across the industry, and thereby facilitates investor protection. Some market participants, in particular the larger firms, could and do build similar risk functionality in their trading systems that permit the flexible cancellation of orders entered on the Exchange at a high rate. Offering Matching Engine level protections ensures that such functionality is widely available to all firms, including smaller firms that may otherwise not be willing to incur the costs and development work necessary to support their own customized mass cancel functionality.

The Exchange also believes that moving to a per Matching Engine fee for Purge Ports is reasonable due to the Exchange's architecture that provides the Exchange the ability to provide two (2) Purge Ports per Matching Engine.

The Exchange believes that the proposed Purge Port fees are equitable because the proposed Purge Ports are completely voluntary as they relate solely to optional risk management functionality.

[37] For purposes of calculating projected 2024 revenue for Purge Ports, the Exchange used revenues for the most recently completed full month.

[38] Assuming the U.S. inflation rate continues at its current rate, the Exchange believes that the projected profit margins in this proposal will decrease; however, the Exchange cannot predict with any certainty whether the U.S. inflation rate will continue at its current rate or its impact on the Exchange's future profits or losses. *See, e.g., https://www.usinflationcalculator.com/inflation/current-inflation-rates/* (last visited April 15, 2024).

[39] *See* Exchange Rule 604. *See also generally* Chapter VI of the Exchange's Rules.

[40] *Id.*

The Exchange also believes that the proposed amendments to its Fee Schedule are not unfairly discriminatory because they will apply uniformly to all Members that choose to use the optional Purge Ports. Purge Ports are completely voluntary and, as they relate solely to optional risk management functionality, no Market Maker is required or under any regulatory obligation to utilize them. All Members that voluntarily select this service option will be charged the same amount for the same services. All Members have the option to select any port or connectivity option, and there is no differentiation among Members with regard to the fees charged for the services offered by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Purge Ports are completely voluntary and are available to all Members on an equal basis at the same cost. While the Exchange believes that Purge Ports provide a valuable service, Members can choose to purchase, or not purchase, these ports based on their own determination of the value and their business needs. No Member is required or under any regulatory obligation to utilize Purge Ports. Accordingly, the Exchange believes that Purge Ports offer appropriate risk management functionality to firms that trade on the Exchange without imposing an unnecessary or inappropriate burden on competition.

The Exchange also does not believe the proposal would cause any unnecessary or inappropriate burden on intermarket competition as other exchanges are free to introduce their own purge port functionality and lower their prices to better compete with the Exchange's offering. The Exchange does not believe the proposed rule change would cause any unnecessary or inappropriate burden on intramarket competition. Particularly, the proposal would apply uniformly to any market participant, in that it does not differentiate between Members. The proposal would allow any interested Members to purchase Purge Port functionality based on their business needs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange received one comment letter on the Initial Proposal and one comment letter on the Second Proposal, both from the same commenter.[41] These comment letters were submitted not only on these proposals, but also the proposals by the Exchange and its affiliates to amend fees for 10Gb ULL connectivity and certain other ports. The Exchange received one other comment letter on the Second Proposal, another on the Third Proposal, and another on the Fourth Proposal from a separate commenter.[42] Overall, the Exchange believes that the issues raised by the first commenter are not germane to this proposal because they apply primarily to the other fee filings. Also, both commenters raised concerns with the current environment surrounding exchange non-transaction fee proposals that should be addressed by the Commission through rule making, or Congress, more holistically and not through an individual exchange fee filings. However, the commenters do raise one issue that concerns this proposal whereby it asserts that the Exchange's comparison to fees charged by other exchanges for similar ports is irrelevant and unpersuasive. The core of the issue raised is regarding the cost to connect to one exchange compared to the cost to connect to others. A thorough response to this comment would require the Exchange to obtain competitively sensitive information about other exchanges' architecture and how their members connect. The Exchange is not privy to this information. Further, the commenters compare the Exchange's proposed rate to other exchanges that offer purge port functionality across all matching engines for a single fee, but fails to provide the same comparison to other exchanges that charge for purge functionality as proposed herein. Nonetheless, the Exchange notes that it is relying on a cost-based justification to support the proposed fee change, not a comparison of the proposed fees to the fees charged by other exchanges for similar purging services. The Exchange does not have insight into the technical architecture of other exchanges so it is difficult to ascertain the number of purge ports a firm would need to connect to another exchange's entire market. Therefore, the Exchange is limited to comparing its proposed fee to other exchanges' purge port fees as listed in their fee schedules.

[42] *See* letters from John C. Pickford, Counsel, Susquehanna International Group, LLP (''SIG''), to Vanessa Countryman, Secretary, Commission, dated January 4, 2024, March 1, 2024, and April 11, 2024.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[43] and Rule 19b–4(f)(2)[44] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–PEARL–2024–20 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–PEARL–2024–20. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100040; File No. SR–CboeBYX–2024–003]

Self-Regulatory Organizations; Cboe BYX Exchange, Inc.; Order Instituting Proceedings To Determine Whether To Approve or Disapprove Proposed Rule Change To Amend Rule 11.9(c)(6) and Rule 11.13(a)(4)(D) To Permit the Use of BYX Post Only Orders at Prices Below $1.00

April 26, 2024.

I. Introduction

On January 8, 2024, Cboe BYX Exchange, Inc. (''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to permit the use of BYX Post Only Orders at prices below $1.00. The proposed rule change was published for comment in the **Federal Register** on January 29, 2024.[3] On March 8, 2024, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] The Commission did not receive any comments. The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act[6] to determine whether to approve or disapprove the proposed rule change.

II. Description of the Proposed Rule Change[7]

The Exchange proposes to amend Rule 11.9(c)(6) and Rule 11.13(a)(4)(D) to modify the treatment of BYX Post Only Orders priced below a dollar on the Exchange. BYX Post Only Orders priced at or above $1.00 will only remove liquidity if the value of the execution when removing liquidity equals or exceeds the value of such execution if the order instead posted to the BYX Book and subsequently provided liquidity, including the applicable fees charged or rebates provided. Currently, all BYX Post Only Orders priced below $1.00 are automatically treated as orders that remove liquidity. Under the proposed rule change, BYX Post Only Orders priced below $1.00 will be treated in the same manner as BYX Post Only Orders priced at or above $1.00 in that BYX Post Only Orders priced below $1.00 will only remove liquidity if the value of the overall execution (taking into account all applicable fees and rebates) make it economically beneficial for the order to remove liquidity.

The Exchange also proposes to amend Rule 11.13(a)(4)(D) to permit Non-Displayed Orders[8] and orders subject to display-price sliding (collectively, ''Resting Orders'') which are not executable at their most aggressive price due to the presence of a contra-side BYX Post Only Order to be executed at one minimum price variation less aggressive than the order's most aggressive price.[9] Currently, Rule 11.13(a)(4)(D) states that, for securities priced above $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at, in the case of an incoming sell order, one-half minimum price variation less than the price of the displayed order, and, in the case of an incoming buy order, at one-half minimum price variation more than the price of the displayed order. The Exchange proposes that for securities priced below $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at, in the case of an incoming sell order, one minimum price variation less than the price of the displayed order, and, in the case of an incoming buy order, at one minimum price variation more than the price of the displayed order.

III. Proceedings To Determine Whether To Approve or Disapprove SR–CboeBYX–2024–003, and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act[10] to determine whether the proposed rule change should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide additional comment on the proposed rule change to inform the Commission's analysis of whether to approve or disapprove the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,[11] the Commission is providing notice of the grounds for disapproval under consideration. As described above, the Exchange proposes to permit the use of BYX Post Only Orders at prices below $1.00. In addition, as described above, for securities priced

[5] *See* Securities Exchange Act Release No. 99697, 89 FR 18699 (March 14, 2024) (designating April 26, 2024, as the date by which the Commission shall either approve, disapprove, or institute proceedings to determine whether to disapprove the proposed rule change).

[6] 15 U.S.C. 78s(b)(2)(B).

[7] For a more detailed description of the proposed rule change, including examples, refer to the Notice, *supra* note 3.

[8] *See* Rule 11.9(c)(11). A ''Non-Displayed Order'' is a market or limit order that is not displayed on the Exchange.

[9] *See* Securities Exchange Act Release No. 64753 (June 27, 2011), 76 FR 38714 (July 1, 2011), SR–BYX–2011–009 (''Resting Order Execution Filing''). The Resting Order Execution Filing introduced an order handling change for certain Non-Displayed Orders and orders subject to display-price sliding that are not executable at prices equal to displayed orders on the opposite side of the market (the ''locking price''). The Resting Order Execution Filing permits Resting Orders priced at or above $1.00 to be executed at one-half minimum price variation less aggressive than the locking price (for bids) and one-half minimum price variation more aggressive than the locking price (for offers), under certain circumstances.

[10] 15 U.S.C. 78s(b)(2)(B).

[11] *Id.*

below $1.00, incoming orders that are market orders or limit orders priced more aggressively than a displayed order on the same side of the market, the Exchange will execute the incoming order at one minimum price variation less (more) than the price of the displayed order for sell (buy) orders.[12] In contrast, under the current rule for securities priced above $1.00, the incoming order would execute at one-half minimum price variation less (more) than the price of the displayed order for sell (buy) orders.[13] The Commission is instituting proceedings to allow for additional analysis of, and input from commenters with respect to, the proposed rule change's consistency with the Act, and in particular, Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.[14] In addition, Sections 6(b)(5) and 6(b)(8) of the Act, respectively, prohibit the rules of an exchange from being designed to permit unfair discrimination between customers, issuers, brokers, or dealers [15] or imposing any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[16]

Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the [Act] and the rules and regulations issued thereunder . . . is on the self-regulatory organization that proposed the rule change.'' [17] The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[18] and any failure of a self-regulatory organization to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Act and the applicable rules and regulations.[19]

IV. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their data, views, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposed rule change, is consistent with Sections 6(b)(5) or any other provision of the Act, or the rules and regulations thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of data, views, and arguments, the Commission will consider, pursuant to Rule 19b–4 under the Act,[20] any request for an opportunity to make an oral presentation.[21]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposed rule change should be approved or disapproved by May 23, 2024. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by June 6, 2024. The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–CboeBYX–2024–003 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR-CboeBYX–2024–003. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBYX–2024–003 and should be submitted by May 23, 2024. Rebuttal comments should be submitted by June 6, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[22]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100036; File No. SR–MIAX–2024–22]

Self-Regulatory Organizations; Miami International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fee Schedule for Purge Ports

April 26, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934

(''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 15, 2024, Miami International Securities Exchange, LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the MIAX Options Exchange Fee Schedule (the ''Fee Schedule'') to amend fees for Purge Ports.[3]

The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-options/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the fees for Purge Ports, which is a function enabling Market Makers[4] to cancel all open quotes or a subset of open quotes through a single cancel message. The Exchange currently provides Market Makers the option to purchase Purge Ports to assist in their quoting activity. Purge Ports provide Market Makers with the ability to send purge messages to the Exchange System.[5] Purge Ports are not capable of sending or receiving any other type of messages or information. The use of Purge Ports is completely optional and no rule or regulation requires that a Market Maker utilize them.

The Exchange initially filed the proposal on September 29, 2023 (the ''Initial Proposal'').[6] On November 22, 2023, the Exchange withdrew the Initial Proposal and replaced with a revised filing (the ''Second Proposal'').[7] On January 17, 2024, the Exchange withdrew the Second Proposal and, on January 31, 2024, replaced it with a further revised filing (the ''Third Proposal'').[8] On March 8, 2024, the Exchange withdrew the Third Proposal and replaced it with a further revised filing (the ''Fourth Proposal'').[9] On April 15, 2024, the Exchange withdrew the Fourth Proposal and replaced it with a further revised filing (the ''Fifth Proposal'').

The Exchange is including a cost analysis in this filing to justify the proposed fees. As described more fully below, the cost analysis includes, among other things, descriptions of how the Exchange allocated costs among it and its affiliated exchanges for similar proposed fee changes (separately between MIAX Pearl Options[10] and MIAX Emerald,[11] collectively referred to herein as the ''affiliated markets''), to ensure no cost was allocated more than once, as well as detail supporting its cost allocation processes and explanations as to why a cost allocation in this proposal may differ from the same cost allocation in similar proposals submitted by the affiliated markets. The proposed fees are intended to cover the Exchange's cost of providing Purge Ports with a reasonable mark-up over those costs.

Purge Port Fee Change

Unlike other options exchanges that charge fees for Purge Ports on a per port basis,[12] the Exchange assesses a flat fee of $1,500 per month, regardless of the number of Purge Ports utilized by a Market Maker. Prior to the Initial Proposal, a Market Maker could request and be allocated two (2) Purge Ports per Matching Engine[13] to which it connects and not all Market Makers connected to all of the Exchange's Matching Engines.

The Exchange now proposes to amend the fee for Purge Ports to align more closely with other exchanges who charge on a per port basis by providing two (2) Purge Ports per Matching Engine for a monthly flat fee of $300 per month per Matching Engine. The only difference with a per port structure is that Market Makers receive two (2) Purge Ports per Matching Engine for the same proposed monthly fee, rather than being charged a separate fee for each Purge Port. The Exchange proposes to charge the proposed fee for Purge Ports per Matching Engine, instead on a per Purge Port basis, due to its System architecture which provides two (2) Purge Ports per Matching Engine for redundancy purposes. In addition, the proposed fee is lower than the comparable fee charged by competing exchanges that also charge on a per port basis, notwithstanding that the Exchange is providing up to two (2) Purge Ports for that same lower fee.[14] Other exchanges may also maintain a different number of matching engines within their architecture than the Exchange (*i.e.,* MIAX maintains twenty-

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The proposed fee change is based on a recent proposal by Nasdaq Phlx LLC (''Phlx'') to adopt fees for purge ports. *See* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[4] The term ''Market Makers'' refers to Lead Market Makers (''LMMs''), Primary Lead Market Makers (''PLMMs''), and Registered Market Makers (''RMMs'') collectively. *See* Exchange Rule 100.

[5] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[6] *See* Securities Exchange Act Release No. 98732 (October 12, 2023), 88 FR 71913 (October 18, 2023) (SR–MIAX–2023–37).

[7] *See* Securities Exchange Act Release No. 99088 (December 5, 2023), 88 FR 85958 (December 11, 2023) (SR–MIAX–2023–43).

[8] *See* Securities Exchange Act Release No. 99526 (February 13, 2024), 89 FR 12898 (February 20, 2024) (SR–MIAX–2024–07).

[9] *See* Securities Exchange Act Release No. 99813 (March 20, 2024), 89 FR 21140 (March 26, 2024) (SR–MIAX–2024–14).

[10] MIAX Pearl Options is the options market of MIAX PEARL, LLC (''MIAX Pearl''), which also operates an equities trading facility called MIAX Pearl Equities. *See* Exchange Rule 100 and MIAX Pearl Rule 1901.

[11] The term ''MIAX Emerald'' means MIAX Emerald, LLC. *See* Exchange Rule 100.

[12] *See* Cboe BXZ Exchange, Inc. (''BZX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe EDGX Exchange, Inc. (''EDGX'') Options Fee Schedule, Options Logical Port Fees, Purge Ports ($750 per purge port per month); Cboe Exchange, Inc. (''Cboe'') Fee Schedule ($850 per purge port per month). *See also* Nasdaq GEMX, Options 7, Pricing Schedule, Section 6.C.(3). Nasdaq GEMX, LLC (''Nasdaq GEMX'') assesses its members $1,250 per SQF Purge Port per month, subject to a monthly cap of $17,500 for SQF Purge Ports and SQF Ports, applicable to market makers. *See also* Securities Exchange Act Release No. 97825 (June 30, 2023), 88 FR 43405 (July 7, 2023) (SR–Phlx–2023–28).

[13] A Matching Engine is a part of the MIAX electronic system that processes options quotes and trades on a symbol-by-symbol basis. Some matching engines will process option classes with multiple root symbols, and other matching engines will be dedicated to one single option root symbol (for example, options on SPY will be processed by one single matching engine that is dedicated only to SPY). A particular root symbol may only be assigned to a single designated matching engine. A particular root symbol may not be assigned to multiple matching engines. *See* Fee Schedule, Section 5)d), note 29.

[14] *See supra* note 12.

four (24) matching engines, MIAX Pearl Options maintains twelve (12) matching engines, and MIAX Emerald maintains twelve (12) matching engines).

Similar to a per port charge, Market Makers are able to select the Matching Engines that they want to connect to,[15] based on the business needs of each Market Maker, and pay the applicable fee based on the number of Matching Engines and ports utilized. The Exchange believes that the proposed fee provides Market Makers with flexibility to control their Purge Port costs based on the number of Matching Engines each Marker Maker elects to connect to based on each Market Maker's business needs.

* * * * *

A logical port represents a port established by the Exchange within the Exchange's System for trading and billing purposes. Each logical port grants a Member [16] the ability to accomplish a specific function, such as order entry, order cancellation, access to execution reports, and other administrative information.

Purge Ports are designed to assist Market Makers [17] in the management of, and risk control over, their quotes, particularly if the firm is dealing with a large number of securities. For example, if a Market Maker detects market indications that may influence the execution potential of their quotes, the Market Maker may use Purge Ports to reduce uncertainty and to manage risk by purging all quotes in a number of securities. This allows Market Makers to seamlessly avoid unintended executions, while continuing to evaluate the market, their positions, and their risk levels. Purge Ports are used by Market Makers that conduct business activity that exposes them to a large amount of risk across a number of securities. Purge Ports enable Market Makers to cancel all open quotes, or a subset of open quotes through a single cancel message. The Exchange notes that Purge Ports increase efficiency of already existing functionality enabling the cancellation of quotes.

The Exchange operates highly performant systems with significant throughput and determinism which allows participants to enter, update and cancel quotes at high rates. Market Makers may currently cancel individual quotes through the existing functionality, such as through the use of a mass cancel message by which a Market Maker may request that the Exchange remove all or a subset of its quotations and block all or a subset of its new inbound quotations.[18] Other than Purge Ports being a dedicated line for cancelling quotations, Purge Ports operate in the same manner as a mass cancel message being sent over a different type of port. For example, like Purge Ports, mass cancellations sent over a logical port may be done at either the firm or MPID level. As a result, Market Makers can currently cancel quotes in rapid succession across their existing logical ports [19] or through a single cancel message, all open quotes or a subset of open quotes.

Similarly, Market Makers may also use cancel-on-disconnect control when they experience a disruption in connection to the Exchange to automatically cancel all quotes, as configured or instructed by the Member or Market Maker.[20] In addition, the Exchange already provides similar ability to mass cancel quotes through the Exchange's risk controls, which are offered at no charge and enables Market Makers to establish pre-determined levels of risk exposure, and can be used to cancel all open quotes.[21] Accordingly, the Exchange believes that the Purge Ports provide an efficient option as an alternative to already available services and enhance the Market Maker's ability to manage their risk.

The Exchange believes that market participants benefit from a dedicated purge mechanism for specific Market Makers and to the market as a whole. Market Makers will have the benefit of efficient risk management and purge tools. The market will benefit from potential increased quoting and liquidity as Market Makers may use Purge Ports to manage their risk more robustly. Only Market Makers that request Purge Ports would be subject to the proposed fees, and other Market Makers can continue to operate in exactly the same manner as they do today without dedicated Purge Ports, but with the additional purging capabilities described above.

Implementation Date

The proposed fee change is immediately effective.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[22] in general, and furthers the objectives of Section 6(b)(5) of the Act,[23] in particular, in that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes that its proposed fee is consistent with Section 6(b)(4) of the Act [24] because it represents an equitable allocation of reasonable dues, fees and other charges among market participants.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the Exchange Act requirements that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among members and markets. In particular, the Exchange believes that each exchange should take extra care to be able to demonstrate that these fees are based on its costs and reasonable business needs.

In proposing to charge fees for port services, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in relation to other Members, *i.e.,* to assure the fee will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,[25] and Rule 19b–4 thereunder,[26] with respect to the types of information exchanges should provide when filing fee changes, and Section 6(b) of the Act,[27] which requires, among other things, that exchange fees be reasonable

[15] The Exchange notes that each Matching Engine corresponds to a specified group of symbols. Certain Market Makers choose to only quote in certain symbols while other Market Makers choose to quote the entire market.

[16] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[17] Members seeking to become registered as a Market Maker must comply with the applicable requirements of Chapter VI of the Exchange's Rules.

[18] *See* Exchange Rule 519C(a) and (b).

[19] Current Exchange port functionality supports cancelation rates that exceed one thousand messages per second and the Exchange's research indicates that certain market participants rely on such functionality and at times utilize such cancelation rates.

[20] *See* Exchange Rule 519C(c).

[21] *See* Exchange Rule 532.

[22] 15 U.S.C. 78f(b).

[23] 15 U.S.C. 78f(b)(5).

[24] 15 U.S.C. 78f(b)(4).

[25] 15 U.S.C. 78s(b)(1).

[26] 17 CFR 240.19b–4.

[27] 15 U.S.C. 78f(b).

and equitably allocated,[28] not designed to permit unfair discrimination,[29] and that they not impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[30] This rule change proposal addresses those requirements, and the analysis and data in each of the sections that follow are designed to clearly and comprehensively show how they are met. The Exchange notes that the legacy exchanges with whom the Exchange vigorously competes for order flow and market share, were not subject to any such diligence or transparency in setting their baseline non-transaction fees, most of which were put in place before the Staff Guidance.[31]

As detailed below, the Exchange recently calculated its aggregate annual costs for providing Purge Ports to be $910,413 (or approximately $75,868 per month, rounded to the nearest dollar when dividing the annual cost by 12 months). In order to cover the aggregate costs of providing Purge Ports to its Market Makers going forward and to make a modest profit, as described below, the Exchange proposes to modify its Fee Schedule to charge a fee of $300 per Matching Engine for Purge Ports.

In 2019, the Exchange completed a study of its aggregate costs to produce market data and connectivity (the ''Cost Analysis'').[32] The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk and purge functionality, the ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.,* personnel), and certain general and administrative expenses (''cost drivers''). The Exchange recently update its Cost Analysis using its 2024 estimated budget as described below.

As an initial step, the Exchange determined the total cost for the Exchange and the affiliated markets for each cost driver as part of its 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the Finance Team. Each department head is required to send a ''bottom up'' budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.,* price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,[33] storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.,* the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates four separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all costs drivers are the same at each individual marketplace and dividing total cost by four (4) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.,* connectivity and ports, market data, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below.

This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that as a non-listing venue it has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity and port services, membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange's system for executing transactions is dependent on physical hardware and connectivity;

[29] 15 U.S.C. 78f(b)(5).

[30] 15 U.S.C. 78f(b)(8).

[31] *See* Staff Guidance on SRO Rule Filings Relating to Fees (May 21, 2019), *available athttps://www.sec.gov/tm/staff-guidance-sro-rule-filings-fees (the ''Staff Guidance'').*

[32] The Exchange frequently updates it Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

[33] For example, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; many Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted methodology for the allocation of an exchange's costs, the Exchange's methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges' interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange's extensive updated Cost Analysis, which was again recently further refined, the Exchange analyzed every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the provision of connectivity and port services, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of Purge Port services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to Purge Port services. In turn, the Exchange allocated certain costs more to physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide Purge Port services is $75,868, as further detailed below.

Costs Related to Offering Purge Ports

The following chart details the individual line-item costs considered by the Exchange to be related to offering Purge Ports as well as the percentage of the Exchange's overall costs that such costs represent for each cost driver (*e.g.,* as set forth below, the Exchange allocated approximately 2.2% of its overall Human Resources cost to offering Purge Ports).

Cost drivers	Allocated annual cost [a]	Allocated monthly cost [b]	% of all
Human Resources	$492,357	$41,030	2.2
Connectivity (external fees, cabling, switches, etc.)	1,036	86	1.1
Internet Services and External Market Data	16,081	1,340	2.1
Data Center	31,102	2,592	2.1
Hardware and Software Maintenance and Licenses	42,539	3,545	2.1
Depreciation	82,610	6,884	1.9
Allocated Shared Expenses	244,688	20,391	2.8
Total	910,413	75,868	2.3

[a] The Annual Cost includes figures rounded to the nearest dollar.
[b] The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering Purge Ports. While some costs were attempted to be allocated as equally as possible among the Exchange and its affiliated markets, the Exchange notes that some of its cost allocation percentages for certain cost drivers differ when compared to the same cost drivers for the Exchange's affiliated markets in their similar proposed fee changes for Purge Ports. This is because the Exchange's cost allocation methodology utilizes the actual projected costs of the Exchange (which are specific to the Exchange and are independent of the costs projected and utilized by the Exchange's affiliated markets) to determine its actual costs, which may vary across the Exchange and its affiliated markets based on factors that are unique to each marketplace. The Exchange provides additional explanation below (including the reason for the deviation) for the significant differences.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (''MIH''), the holding company of the Exchange and its affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market's individual Human Resources expense. Then, managers and department heads assign a percentage of each employee's time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include providing and maintaining Purge Ports and performance thereof (primarily the Exchange's network infrastructure team, which spends most of their time performing functions necessary to provide port and connectivity services). As described more fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the Exchange is then allocated to port services. From that portion allocated to the Exchange that applied to ports, the Exchange then allocated a weighted average of 2.7% of each employee's time from the above group to Purge Ports.

The Exchange also allocated Human Resources costs to provide Purge Ports to a limited subset of personnel with ancillary functions related to establishing and maintaining such ports

(such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.,* only including those personnel who support functions related to providing Purge Ports) and then applied a smaller allocation to such employees' time to Purge Ports (1.2%). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to Purge Ports, whether it is a sales person selling port services, finance personnel billing for port services or providing budget analysis, or information security ensuring that such ports are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing Purge Ports, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing Purge Ports: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 2.7% of each of their employee's time assigned to the Exchange for Purge Ports, as stated above. Employees from these departments perform numerous functions to support Purge Ports, such as the installation, re-location, configuration, and maintenance of Purge Ports and the hardware they access. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting Purge Ports and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support Purge Ports, but illustrates the breath of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the Purge Ports related Human Resources costs to the extent that they are involved in overseeing tasks related to providing Purge Ports. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, etc.)

The Connectivity cost driver includes external fees paid to connect to other exchanges and third parties, cabling and switches required to operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete connections to the Exchange and to connect to external markets. The Exchange notes that its connectivity to external markets vendors is required in order to receive market data to run the Exchange's matching engine and basic operations compliant with existing regulations, primarily Regulation NMS.

The Exchange relies on various connectivity providers for connectivity to the entire U.S. options industry, and infrastructure services for critical components of the network that are necessary to provide and maintain its System Networks and access to its System Networks via 10Gb ULL connectivity. Specifically, the Exchange utilizes connectivity providers to connect to other national securities exchanges and the Options Price Reporting Authority (''OPRA''). The Exchange understands that these service providers provide services to most, if not all, of the other U.S. exchanges and other market participants. Connectivity provided by these service providers is critical to the Exchanges daily operations and performance of its System Networks which includes Purge Ports. Without these services providers, the Exchange would not be able to connect to other national securities exchanges, market data providers or OPRA and, therefore, would not be able to operate and support its System Networks, including Purge Ports. In addition, the connectivity is necessary for the Exchange to notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Also, like other types of ports offered by the Exchange, Purge Ports leverage the Exchange's existing 10Gb ULL connectivity, which also relies on connectivity to other national securities exchanges and OPRA. The Exchange does not employ a separate fee to cover its connectivity provider expense and recoups that expense, in part, by charging for Purge Ports.

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. For purposes of Purge Ports, the Exchange also includes a portion of its costs related to external market data. External market data includes fees paid to third parties, including OPRA, to receive and consume market data from other markets. The Exchange includes external market data costs towards Purge Ports because such market data is necessary to offer certain services related to such ports, such as checking for market conditions (*e.g.,* halted securities). External market data is also consumed at the Matching Engine level for, among other things, as validating quotes on entry against the national best bid or offer (''NBBO'').[34] Purge Ports are a component of the Matching Engine, and used by market participants to cancel multiple resting quotes within the Matching Engine. While resting, the Exchange uses external market data to manage those quotes, such as preventing trade-throughs, and those quotes are also reported to OPRA for inclusion in this consolidated data stream. The Exchange also must notify OPRA and other market participants that an order has been cancelled, and that quotes may have been cancelled as a result of a Member purging quotes via their Purge Port. Thus, since market data from other exchanges is consumed by the Matching Engine to validate quotes and check market conditions, the Exchange believes it is reasonable to allocate a small amount of such costs to Purge Ports.

For the reasons set forth above, the Exchange believes it is reasonable to allocate a small amount of such costs to Purge Ports since market data from other exchanges is consumed at the Exchange's Purge Port level to validate purge messages and the necessity to

[34] The term ''NBBO'' means the national best bid or offer as calculated by the Exchange based on market information received by the Exchange from OPRA. *See* Exchange Rule 100.

cancel a resting quote via a purge message or via some other means.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide Purge Ports in the third-party data centers where it maintains its equipment as well as related costs for market data to then enter the Exchange's System. The Exchange does not own the Primary Data Center or the Secondary Data Center, but instead, leases space in data centers operated by third-parties. The Exchange has allocated a percentage of its Data Center cost (2.1%) to Purge Ports because the third-party data centers and the Exchange's physical equipment contained therein are necessary for providing Purge Ports. In other words, for the Exchange to operate in a dedicated physical space with direct connectivity by market participants to its trading platform, the data centers are a critical component to the provision of Purge Ports. If the Exchange did not maintain such a presence, then Purge Ports would be of little value to market participants.

Hardware and Software Maintenance and Licenses

Hardware and Software Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer Purge Ports for each Matching Engine of the Exchange. This hardware includes servers, network switches, cables, optics, protocol data units, and cabinets, to maintain a state-of-the-art technology platform. Without hardware and software licenses, Purge Ports would not be able to be offered to market participants because hardware and software are necessary to operate the Exchange's Matching Engines, which are necessary to enable the purging of quotes. The Exchange also routinely works to improve the performance of the hardware and software used to operate the Exchange's network and System. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to allocate a certain percentage of its hardware and software expense to help offset those costs of providing Purge Port connectivity to its Matching Engines.

Depreciation

The vast majority of the software the Exchange uses to provide Ports has been developed in-house and the cost of such development, which takes place over an extended period of time and includes not just development work, but also quality assurance and testing to ensure the software works as intended, is depreciated over time once the software is activated in the production environment. Hardware used to provide Purge Ports includes equipment used for testing and monitoring of order entry infrastructure and other physical equipment the Exchange purchased and is also depreciated over time.

All hardware and software, which also includes assets used for testing and monitoring of order entry infrastructure, were valued at cost, depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which is owned by the Exchange and some of which is leased by the Exchange in order to allow efficient periodic technology refreshes. The Exchange allocated 1.9% of all depreciation costs to providing Purge Ports. The Exchange allocated depreciation costs for depreciated software necessary to operate the Exchange because such software is related to the provision of Purge Ports. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost driver was therefore narrowly tailored to depreciation related to Purge Ports.

Allocated Shared Expenses

Finally, a portion of general shared expenses was allocated to overall Purge Port costs as without these general shared costs the Exchange would not be able to operate in the manner that it does and provide Purge Ports. The costs included in general shared expenses include general expenses of the Exchange, including office space and office expenses (*e.g.,* occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications costs. The Exchange again notes that the cost of paying directors to serve on its Board of Directors is included in the calculation of Allocated Shared Expenses, and thus a portion of such overall cost amounting to less than 3% of the overall cost for directors was allocated to providing Purge Ports.

Approximate Cost for Purge Ports per Month

Based on projected 2024 data, the total monthly cost allocated to Purge Ports of $75,868 was divided by the total number of Matching Engines in which Market Makers used Purge Ports for the month of December 2023, which was 291, resulting in an approximate cost of $261 per Matching Engine per month for Purge Port usage (when rounding to the nearest dollar). The Exchange notes that the flat fee of $300 per month per Matching Engine entitles each Market Maker to two Purge Ports per Matching Engine. The majority of Market Makers are connected to all twenty-four of the Exchange's Matching Engines and utilize Purge Ports on each Matching Engine, except one Market Maker, which only utilizes Purge Ports on three Matching Engines.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core services (including Purge Ports) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal. For instance, in calculating the Human Resources expenses to be allocated to Purge Ports based upon the above described methodology, the Exchange has a team of employees dedicated to network infrastructure and with respect to such employees the Exchange allocated network infrastructure personnel with a higher percentage of the cost of such personnel (19.6%) given their focus on functions necessary to provide Ports. The salaries of those same personnel were allocated only 2.7 to Purge Ports and the remaining 97.3% was allocated to connectivity, other port services, transaction services, membership services and market data. The Exchange did not allocate any other Human Resources expense for providing Purge Ports to any other employee group, outside of a smaller allocation of 1.2% for Purge Ports, of the cost associated with certain specified personnel who work closely with and support network infrastructure personnel. This is because a much wider range of personnel are involved in functions necessary to offer, monitor and maintain Purge Ports but the tasks necessary to do so are not a primary or full-time function.

In total, the Exchange allocated 2.2% of its personnel costs to providing Purge Ports. In turn, the Exchange allocated the remaining 97.8% of its Human Resources expense to membership services, transaction services, connectivity services, other port services and market data. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not

double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including Purge Ports, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide Purge Port services to its Market Makers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing Purge Port services, but instead allocated approximately 1.9% of the Exchange's overall depreciation and amortization expense to Purge Ports. The Exchange allocated the remaining depreciation and amortization expense (approximately 98.1%) toward the cost of providing transaction services, membership services, connectivity services, other port services, and market data.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from Purge Ports, the Exchange will have to be successful in retaining existing Market Makers that wish to maintain Purge Ports or in obtaining new Market Makers that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections. It is possible, however, that actual costs may be higher or lower. To the extent the Exchange sees growth in use of connectivity services it will receive additional revenue to offset future cost increases. However, if use of port services is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.,* to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue [35]

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with providing and maintaining necessary hardware and other network infrastructure as well as network monitoring and support services; without such hardware, infrastructure, monitoring and support the Exchange would be unable to provide port services. Much of the cost relates to monitoring and analysis of data and performance of the network via the subscriber's connection(s). The above cost, namely those associated with hardware, software, and human capital, enable the Exchange to measure network performance with nanosecond granularity. These same costs are also associated with time and money spent seeking to continuously improve the network performance, improving the subscriber's experience, based on monitoring and analysis activity. The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by amending fees for Purge Port services. Subscribers, particularly those of Purge Ports, expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, fees for connectivity services (connections and ports), membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide Purge Port services will equal $910,413. Based on current Purge Port services usage, the Exchange would generate annual revenue of approximately $1,047,600. The Exchange believes this represents a modest profit of 13.1% when compared to the cost of providing Purge Port services, which could decrease over time.[36]

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing Purge Port services versus the total projected revenue of the Exchange associated with network Purge Port services.

The Proposed Fees Are Also Equitable, Reasonable, and Not Unfairly Discriminatory

The Exchange believes that the proposed rule change would promote just and equitable principles of trade and remove impediments to and perfect the mechanism of a free and open market because offering Market Makers optional Purge Port services with a flexible fee structure promotes choice, flexibility, and efficiency. The Exchange believes Purge Ports enhance Market Makers' ability to manage quotes, which

[35] For purposes of calculating projected 2024 revenue for Purge Ports, the Exchange used revenues for the most recently completed full month.

[36] Assuming the U.S. inflation rate continues at its current rate, the Exchange believes that the projected profit margins in this proposal will decrease; however, the Exchange cannot predict with any certainty whether the U.S. inflation rate will continue at its current rate or its impact on the Exchange's future profits or losses. *See, e.g., https://www.usinflationcalculator.com/inflation/current-inflation-rates/* (last visited April 15, 2024).

would, in turn, improve their risk controls to the benefit of all market participants. The Exchange believes that Purge Ports foster cooperation and coordination with persons engaged in facilitating transactions in securities because designating Purge Ports for purge messages may encourage better use of such ports. This may, concurrent with the ports that carry quotes and other information necessary for market making activities, enable more efficient, as well as fair and reasonable, use of Market Makers' resources. The Exchange believes that proper risk management, including the ability to efficiently cancel multiple quotes quickly when necessary is valuable to all firms, including Market Makers that have heightened quoting obligations that are not applicable to other market participants.

Purge Ports do not relieve Market Makers of their quoting obligations or firm quote obligations under Regulation NMS Rule 602.[37] Specifically, any interest that is executable against a Member's or Market Maker's quotes that is received by the Exchange prior to the time of the removal of quotes request will automatically execute. Market Makers that purge their quotes will not be relieved of the obligation to provide continuous two-sided quotes on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against a Market Maker for failing to meet their continuous quoting obligation each trading day.[38]

The Exchange also believes that offering Purge Ports at the Matching Engine level promotes risk management across the industry, and thereby facilitates investor protection. Some market participants, in particular the larger firms, could and do build similar risk functionality in their trading systems that permit the flexible cancellation of quotes entered on the Exchange at a high rate. Offering Matching Engine level protections ensures that such functionality is widely available to all firms, including smaller firms that may otherwise not be willing to incur the costs and development work necessary to support their own customized mass cancel functionality. The Exchange also believes that moving to a per Matching Engine fee for Purge Ports is reasonable due to the Exchange's architecture that provides the Exchange the ability to provide two (2) Purge Ports per Matching Engine.

The Exchange believes that the proposed Purge Port fees are equitable because the proposed Purge Ports are completely voluntary as they relate solely to optional risk management functionality.

The Exchange also believes that the proposed amendments to its Fee Schedule are not unfairly discriminatory because they will apply uniformly to all Market Makers that choose to use the optional Purge Ports. Purge Ports are completely voluntary and, as they relate solely to optional risk management functionality, no Market Maker is required or under any regulatory obligation to utilize them. All Market Makers that voluntarily select this service option will be charged the same amount for the same services. All Market Makers have the option to select any port or connectivity option, and there is no differentiation among Market Makers with regard to the fees charged for the services offered by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Purge Ports are completely voluntary and are available to all Market Makers on an equal basis at the same cost. While the Exchange believes that Purge Ports provide a valuable service, Market Makers can choose to purchase, or not purchase, these ports based on their own determination of the value and their business needs. No Market Maker is required or under any regulatory obligation to utilize Purge Ports. Accordingly, the Exchange believes that Purge Ports offer appropriate risk management functionality to firms that trade on the Exchange without imposing an unnecessary or inappropriate burden on competition.

The Exchange also does not believe the proposal would cause any unnecessary or inappropriate burden on intermarket competition as other exchanges are free to introduce their own purge port functionality and lower their prices to better compete with the Exchange's offering. The Exchange does not believe the proposed rule change would cause any unnecessary or inappropriate burden on intramarket competition. Particularly, the proposal would apply uniformly to any market participant, in that it does not differentiate between Market Makers. The proposal would allow any interested Market Makers to purchase Purge Port functionality based on their business needs.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange received one comment letter on the Initial Proposal and one comment letter on the Second Proposal, both from the same commenter.[39] These comment letters were submitted not only on these proposals, but also the proposals by the Exchange and its affiliates to amend fees for 10Gb ULL connectivity and certain other ports. The Exchange received one other comment letter on the Second Proposal, another on the Third Proposal, and another on the Fourth Proposal from a separate commenter.[40] Overall, the Exchange believes that the issues raised by the first commenter are not germane to this proposal because they apply primarily to the other fee filings. Also, both commenters raised concerns with the current environment surrounding exchange non-transaction fee proposals that should be addressed by the Commission through rule making, or Congress, more holistically and not through an individual exchange fee filings. However, the commenters do raise one issue that concerns this proposal whereby it asserts that the Exchange's comparison to fees charged by other exchanges for similar ports is irrelevant and unpersuasive. The core of the issue raised is regarding the cost to connect to one exchange compared to the cost to connect to others. A thorough response to this comment would require the Exchange to obtain competitively sensitive information about other exchanges' architecture and how their members connect. The Exchange is not privy to this information. Further, the commenters compare the Exchange's proposed rate to other exchanges that offer purge port functionality across all matching engines for a single fee, but fails to provide the same comparison to other exchanges that charge for purge functionality as proposed herein. Nonetheless, the Exchange notes that it is relying on a cost-based justification to support the proposed fee change, not a comparison of the proposed fees to the fees charged by other exchanges for similar purging services. The Exchange does not have insight into the technical architecture of other exchanges so it is difficult to ascertain the number of purge ports a firm would need to

[38] *Id.*

[39] *See* letters from Thomas M. Merritt, Deputy General Counsel, Virtu Financial, Inc. (''Virtu''), to Vanessa Countryman, Secretary, Commission, dated November 8, 2023 and January 2, 2024.

[40] *See* letters from John C. Pickford, Counsel, Susquehanna International Group, LLP (''SIG''), to Vanessa Countryman, Secretary, Commission, dated January 4, 2024, March 1, 2024, and April 11, 2024.

connect to another exchange's entire market. Therefore, the Exchange is limited to comparing its proposed fee to other exchanges' purge port fees as listed in their fee schedules.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[41] and Rule 19b–4(f)(2)[42] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2024–22 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2024–22. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MIAX–2024–22 and should be submitted on or before May 23, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[43]

Sherry R. Haywood,

Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #20274 and #20275; Alaska Disaster Number AK–20003]

Administrative Disaster Declaration of a Rural Area for the State of Alaska

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a notice of an Administrative disaster declaration of a rural area for the State of ALASKA dated 04/26/2024.

Incident: Severe Storm, Flooding, and Landslides.

Incident Period: 11/20/2023.

DATES: Issued on 04/26/2024.

Physical Loan Application Deadline Date: 06/25/2024.

Economic Injury (EIDL) Loan Application Deadline Date: 01/27/2025.

ADDRESSES: *Visit the MySBA Loan Portal at https://lending.sba.gov* to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Alan Escobar, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205–6734.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the Administrator's disaster declaration of a rural area, applications for disaster loans may be submitted online using the MySBA Loan Portal *https://lending.sba.gov* or other locally announced locations. Please contact the SBA disaster assistance customer service center by email at *disastercustomerservice@sba.gov* or by phone at 1–800–659–2955 for further assistance.

The following areas have been determined to be adversely affected by the disaster:

Primary Area: Southeast Island REAA

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners with Credit Available Elsewhere	5.375
Homeowners without Credit Available Elsewhere	2.688
Businesses with Credit Available Elsewhere	8.000
Businesses without Credit Available Elsewhere	4.000
Non-Profit Organizations with Credit Available Elsewhere	3.250
Non-Profit Organizations without Credit Available Elsewhere	3.250
For Economic Injury:	
Business and Small Agricultural Cooperatives without Credit Available Elsewhere	4.000
Non-Profit Organizations without Credit Available Elsewhere	3.250

The number assigned to this disaster for physical damage is 202749 and for economic injury is 202750.

The State which received an EIDL Declaration is Alaska.

(Catalog of Federal Domestic Assistance Number 59008)

Isabella Guzman,

Administrator.

SMALL BUSINESS ADMINISTRATION

Reporting and Recordkeeping Requirements Under OMB Review

AGENCY: Small Business Administration.

ACTION: 30-Day notice.

SUMMARY: The Small Business Administration (SBA) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act and OMB procedures, SBA is publishing this notice to allow all interested member of the public an

additional 30 days to provide comments on the proposed collection of information.

DATES: Submit comments on or before June 3, 2024.

ADDRESSES: Written comments and recommendations for this information collection request should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Small Business Administration''; ''Currently Under Review,'' then select the ''Only Show ICR for Public Comment'' checkbox. This information collection can be identified by title and/or OMB Control Number.

FOR FURTHER INFORMATION CONTACT: You may obtain a copy of the information collection and supporting documents from the Agency Clearance Office at *Curtis.Rich@sba.gov;* (202) 205–7030, or from *www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: The information collected from the public, including our program participants and stakeholders, will help ensure users have an effective, and satisfying experience with the programs and activities offered or sponsored by the Small Business Administration. The information will provide insights into the public's perceptions, experience, and expectations, and help focus attention on areas where communication, training or changes in operations might improve delivery of products or services.

Solicitation of Public Comments: Comments may be submitted on (a) whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

OMB Control: 3245–0398.

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Description of Respondents: Program participants and stakeholders, SBA Form Number: N/A.

Estimated Annual Responses: 500,000.

Estimated Annual Hour Burden: 70,000.

Curtis Rich,

Agency Clearance Officer.

BILLING CODE 8026–09–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 1305 (Sub No. 1)]

Great Redwood Trail Agency—Adverse Abandonment—Mendocino Railway in Mendocino County, Cal.

On April 12, 2024, Great Redwood Trail Agency (GRTA), a public agency created by the State of California, filed an application under 49 U.S.C. 10903 requesting that the Surface Transportation Board (Board) authorize the third-party, or ''adverse,'' abandonment of an approximately 40-mile rail line owned by Mendocino Railway (MR) that extends between milepost 0 at Fort Bragg and milepost 40 at Willits, in Mendocino County, Cal. (the Line). The Line traverses U.S. Postal Service Zip Codes 95437 and 95490.

According to GRTA, the Line has not been used for Board-regulated rail transportation for over 20 years. GRTA states no rail shipments have originated or terminated on the Line since it was purchased out of bankruptcy by MR in 2004, *see Mendocino Ry.—Acquis. Exemption—Assets of the Cal. W. R.R.,* FD 34465 (STB served Apr. 9, 2004), and that the last business to use the Line ceased operations in 2002. GRTA also states MR has no reasonable prospects for future business along the Line as there is no need for rail service in this area, and that the Line is no longer connected to the interstate freight rail system.

GRTA explains that it is seeking adverse abandonment to support the transformation of a connecting 307-mile rail line (the GRTA Line) into a trail. According to the application, under California law, GRTA must seek abandonment of the GRTA Line and seek railbanking thereon. Without the abandonment of the Line, GRTA states it would be prohibited from seeking abandonment of a portion of the GRTA Line because such action would leave the Line stranded from the interstate rail network.

In a decision served in this proceeding on August 21, 2023, GRTA was granted exemptions from several statutory provisions as well as waivers of certain Board regulations that the Board concluded were inapplicable and unneeded in connection with GRTA's anticipated application.

According to GRTA, the Line does not contain any federally granted rights-of way. GRTA states that any documentation in its possession will be made available promptly to those requesting it. GRTA's entire case-in-chief for adverse abandonment was filed with the application.

The interests of railroad employees will be protected by the conditions set forth in *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979).

Any interested person may file comments concerning the proposed adverse abandonment or protests (including protestant's entire opposition case) by May 28, 2024. Persons who may oppose the proposed adverse abandonment but who do not wish to participate fully in the process by submitting verified statements of witnesses containing detailed evidence should file comments. Persons opposing the proposed adverse abandonment who wish to participate actively and fully in the process should file a protest, observing the filing, service, and content requirements of 49 CFR 1152.25. GRTA's reply is due by June 11, 2024.

Any request for an interim trail use/railbanking condition under 16 U.S.C. 1247(d) and 49 CFR 1152.29 must be filed by May 28, 2024,[1] and should address whether the issuance of a certificate of interim trail use or abandonment in this case would be consistent with the grant of an adverse abandonment application.

All pleadings, referring to Docket No. AB 1305 (Sub-No. 1), should be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on GRTA's representative, Daniel Elliott, GKG Law, P.C., 1055 Thomas Jefferson Street NW, Suite 620, Washington, DC 20007. Except as otherwise set forth in 49 CFR part 1152, every document filed with the Board must be served on all parties to this adverse abandonment proceeding. *See* 49 CFR 1104.12(a).

A Draft Environmental Assessment (EA) (or environmental impact statement (EIS), if necessary) prepared by the Board's Office of Environmental Analysis (OEA) will be served upon all parties of record and upon any agencies or other persons who commented during its preparation. Any other persons who would like to obtain a copy of the Draft EA (or EIS) may contact OEA by phone at the number listed below. Draft EAs normally will be made available within 33 days of the filing of the application, and the deadline for submission of comments on the Draft EA will generally be within 30 days of its service. The comments received will

[1] Filing fees for interim trail use/railbanking requests can be found at 49 CFR 1002.2(f)(27).

be addressed in a Final EA (or EIS) and the Board's decision. A Supplemental Final EA (or EIS) may be issued where appropriate.

Persons seeking further information concerning abandonment procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245–0238 or refer to the full abandonment regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to OEA at (202) 245–0305. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245–0245.

Board decisions and notices are available at *www.stb.gov.*

Decided: April 29, 2024.

By the Board, Mai T. Dinh, Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36766]

East Ohio Valley Railway LLC—Lease and Operation Exemption Containing Interchange Commitment—Norfolk Southern Railway Company

East Ohio Valley Railway LLC (EOVR), a Class III rail carrier, has filed a verified notice of exemption pursuant to 49 CFR 1150.41 to lease from Norfolk Southern Railway (NSR) and operate a line of railroad with two segments: (1) approximately 16.5 miles between RO 44.0 near Bellaire, Ohio, and RO 60.5 near Powhatan Point, Ohio; and (2) 1.78 miles of rail between OP 0.0 and OP 1.78 near Powhatan Point (collectively, the Line).

According to the verified notice, EOVR and NSR have reached an agreement pursuant to which EOVR will lease and operate the Line. EOVR states that the Line does not physically connect to any other carrier and NSR will be the exclusive interchange partner for EOVR.

EOVR certifies that its projected annual revenues from this transaction will not result in its becoming a Class I or Class II rail carrier and will not exceed $5 million. EOVR also certifies that the agreement with NSR contains a provision that, through a per-car penalty, would limit EOVR's ability to interchange with a third-party carrier if that ever became physically possible. EOVR has provided additional information regarding the interchange commitment, as required by 49 CFR 1150.43(h).[1]

The transaction may be consummated on or after May 16, 2024, the effective date of the exemption (30 days after the verified notice was filed).

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than May 9, 2024.

All pleadings, referring to Docket No. FD 36766, must be filed with the Surface Transportation Board via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on EOVR's representative, William A. Mullins, Mullins Law Group, 2401 Pennsylvania Ave. NW, Suite 300, Washington, DC 20037.

According to EOVR, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirements under 49 CFR 1105.8(b).

Board decisions and notices are available at *www.stb.gov.*

Decided: April 26, 2024.

By the Board, Mai T. Dinh, Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

[FR Doc. 2024–09577 Filed 5–1–24; 8:45 am]

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent of Waiver With Respect to Land; John Glenn Columbus International Airport, Columbus, OH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: The FAA is considering a proposal to change approximately 2.392 acres of airport land from aeronautical use to non-aeronautical use and to authorize the sale of airport property located at John Glenn Columbus International Airport, Columbus, OH. The property is located in the northwest portion of the airport along the north side of Johnstown Road, west of the Runway Protection Zone for Runway 10L. The aforementioned land is proposed to be sold for future development of an office/warehouse building and is not needed for aeronautical use.

DATES: Comments must be received on or before June 3, 2024.

ADDRESSES: All requisite and supporting documentation will be made available for review by appointment at the FAA Detroit Airports District Office, Mark Grennell, Program Manager, 11677 S Wayne Rd., Romulus, MI 48174. Telephone: (734) 229–2900/Fax: (734) 229–2950.

Written comments on the Sponsor's request may be submitted using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov,* and follow the instructions for sending your comments electronically.
- *Mail:* Mark Grennell, Program Manager, Federal Aviation Administration, Detroit Airports District Office, 11677 S Wayne Rd., Romulus, MI 48174–1412.
- *Hand Delivery:* Deliver to mail address above between 8 a.m. and 5 p.m. Monday through Friday, excluding Federal holidays.
- *Fax:* (734) 229–2950.

FOR FURTHER INFORMATION CONTACT: Mark Grennell, Program Manager, Federal Aviation Administration, Detroit Airports District Office, 11677 S Wayne Rd., Romulus, MI 48174. Telephone Number: (734) 229–2900/ Fax: (734) 229–2950.

SUPPLEMENTARY INFORMATION: In accordance with section 47107(h) of title 49, United States Code, this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

The subject property is currently undeveloped vacant land. The Columbus Regional Airport Authority (CRAA), sponsor of the John Glenn Columbus International Airport, is proposing to dispose of the property for compatible non-aeronautical development under the Sponsor's obligations of Grant Assurance 31, *Disposal of Land.* The 2.392-acre property, made up of thirteen parcels, was acquired in 1994 for noise compatibility with FAA Airport Improvement Program participation, grant number 3–39–0025–19. The anticipated future development includes a one-story office building and an office/warehouse building. CRAA plans to sell the property at fair market value to a proposed developer who will then develop the two buildings.

[1] EOVR filed a copy of the agreement under seal with the verified notice. *See* 49 CFR 1150.43(h)(1).

The disposition of proceeds from the sale of the airport property will be in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999 (64 FR 7696).

This notice announces that the FAA is considering the release of the subject airport property at the John Glenn Columbus International Airport, Columbus, OH, from federal land covenants, subject to a reservation for continuing right of flight as well as restrictions on the released property as required in FAA Order 5190.6B section 22.16. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA.

Legal Description

Parcel I: 190–001636–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 3 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel II: 190–001637–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 4 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel III: 190–001635–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 2 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel IV: 190–001638–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 5 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following 120 Square Foot tract as conveyed by Herbert R. Mengert and Jean R. Menger to The Ohio Fuel and Gas Company by document recorded on October 11, 1926 of record in Deed Book 845 Page 65.

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being a part of Lot Number Five (No. 5) of Herbert R. Mengerts' Maple Lawn Addition to the City of Columbus as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book No. 16, page 51, Recorder's Office, Franklin County, Ohio; said part of said lot number five being a tract of ground ten feet by twelve feet (10 ft. x 12 ft.) in area, facing ten (10) feet upon Sterling Street and twelve (12) feet upon the alley along the Northern and Northwestern border of said lot and then South ten (10) feet and West twelve (12) feet to the place of beginning, containing in all one hundred twenty (120) square feet.

Parcel V: 190–001771–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 138 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel VI: 190–001722–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 139 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following 0.12 Acre tract as conveyed by Jean R. Mengert to The State of Ohio, by document recorded on August 17, 1964 of record in Miscellaneous Book 136 Page 577.

Beginning at the northwest corner of said lot; thence along the north line of said lot 10 feet more or less to a point; thence across said lot to a point which is on the west line of said lot; thence north 9 feet more or less to the point of beginning.

Parcel VII: 190–001773–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 140 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following 0.09 Acre tract as conveyed by Jean R. Mengert to The State of Ohio, by document recorded on August 17, 1964 of record in Miscellaneous Book 136 Page 577.

Beginning at a point which is the northwest corner of said lot; thence along the north line of said lot 67 feet more or less to a point; thence across said lot 140 to a point on the south line of said lot; thence along the said south line 10 feet more or less to a point which is the southeast corner of said lot 140; thence along the west line of said lot 45 feet to the point of beginning.

Parcel VIII: 190–001774–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 141 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following 0.11 Acre tract as conveyed by Jean R. Mengert to The State of Ohio, by document recorded on August 17, 1964 of record in Miscellaneous Book 136 Page 577.

Beginning at a point which is the northwest corner of said lot; thence along the north line of said lot 112 feet to the northeast corner of said lot, being also the west right of way of Floway Drive, 14 feet more or less to a point; thence across said lot to a point on the south line of lot 141; thence along the south line of lot 141, 67 feet more or less to a point which is the southeast corner of said lot; thence along the west line of said lot 50 feet to the point of beginning.

Parcel IX: 190–000402–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 1 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel X: 190–001768–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 135 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following tract as conveyed by Esther M. Willford and Maxwell L. Willford to The State of Ohio, by document recorded on August 7, 1967 of record in Deed Book 2417 Page 221.

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being part of lot 135 of the Maple Lawn Addition as recorded in Plat Book 16, Page 51, Recorders Office, Franklin County, Ohio and more fully described as follows:

Beginning at a point which is the northwest corner of said Lot 135; thence along the north line of said lot, 79 feet more or less to a point; thence across said lot to a point which is on the south line of said lot; thence along the said south line 13 feet more or less; thence along the west line of said lot, being also the east right of way line of Sterling Avenue, 50 feet to the point of beginning.

Parcel XI: 190–001769–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 136 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Less and Excepting therefrom the following tract as conveyed by Esther M. Willford and Maxwell L. Willford to The State of Ohio, by document recorded on August 7, 1967 of record in Deed Book 2417 Page 221.

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being part of lot 136 of the Maple Lawn Addition as recorded in Plat Book 16, Page 51, Recorders Office, Franklin County, Ohio and more fully described as follows:

Beginning at a point which is the northwest corner of said Lot 136; thence east along the north line of said lot 136, 13 feet more or less to a point; thence across said lot to a point on the west line of said lot said point being also 120.00 feet right of centerline Station 1088+41.21 of the above mentioned centerline survey; thence north along said west line being the east right of way line of existing Sterling Avenue, 10 feet more or less to the point of beginning.

Parcel XII: 190–001770–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being Lot Number 137 in Maple Lawn Addition, as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book 16 Page 31, Recorder's Office, Franklin County, Ohio.

Parcel XIII: 190–001939–00

Situated in the State of Ohio, County of Franklin, and in the Township of Mifflin:

Being a part of Lot Number Five (No. 5) of Herbert R. Mengerts' Maple Lawn Addition to the City of Columbus as the same is numbered and delineated upon the recorded plat thereof, of record in Plat Book No. 16, page 51, Recorder's Office, Franklin County, Ohio; said part of said lot number five being a tract of ground ten feet by twelve feet (10 ft. x 12 ft.) in area, facing ten (10) feet upon Sterling Street and twelve (12) feet upon the alley along the Northern and Northwestern border of said lot and then South ten (10) feet and West twelve (12) feet to the place of beginning, containing in all one hundred twenty (120) square feet.

Being the same premises conveyed to The Ohio Fuel Gas Company by Herbert R. Mengert and Jane Rowland Mengert, husband and wife, by deed dated August 19, 1926, and recorded in Deed Book Volume 845, page 65 of the Deed Records of Franklin County, Ohio.

Parcel XIV:

Together with any and all interest contained in the portions of Right of Way as vacated by the Franklin County Commissioners in Road Record 27 Page 144 and Recorded in Instrument 199903260075325. (As to All Parcels)

Issued in Romulus, Michigan, on April 25, 2024.

Stephanie R. Swann,

Deputy Manager, Detroit Airports District Office, FAA, Great Lakes Region.

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2024–0031]

Agency Information Collection Activities: Notice of Request for Revision of a Currently Approved Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of request for revision of a currently approved information collection.

SUMMARY: The FHWA has forwarded the information collection request described in this notice to the Office of Management and Budget (OMB) for a renewal of an existing information collection. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by June 3, 2024.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 0031 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to *http://www.regulations.gov.*

Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Daniel Jenkins, 202–366–1067, *Daniel.jenkins@dot.gov,* National Travel Behavior Data Program Manager, Federal Highway Administration, Office of Policy, 1200 New Jersey Avenue SE, Room E83–414, Washington, DC 20590, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: We published a **Federal Register** Notice with a 60-day public comment period on this information collection on December 14, 2023, at [88 FR 86719]. The comments and FHWA's responses to the 60-day notice are below:

Comment 1

I admire embracing the internet as a survey tool. Too often the decrease in landline usage has been seen as the harbinger of the survey's death. Taking advantage of changing technology, not only the internet but also smartphones, points to intelligent survey design and strategy. Also, the estimated total number of burden hours makes sense and parallels the importance of these survey results in evaluating transit in the United States. I would be curious to learn if the initial offer of 2 dollars is enough to garner the interest of most survey takers, and how much total money is earmarked for compensating survey takers. I agree that 2 dollars is a better incentive than nothing, but I fear the number might not be enticing enough for most survey takers. Of

course, the total compensation for completing the survey is 20 dollars, so perhaps that might be enough incentive even if the initial offering appears minute. I am also curious as to what determines the frequency of these surveys and perhaps the final proposal could briefly explain the history of past surveys and how the USDOT determines when another survey is due. In any case, I think the survey as proposed holds tremendous importance for federal and state agencies, especially in the face of climate change. Climate change is already impacting how Americans move, from the buying of electric cars to the shunning of a walk outside because the heat is too intense, and gaining knowledge about these changing trends could help us embrace a greener future.

DOT Response

Incentives: The amount to offer as an initial incentive was tested as part of the 2022 NHTS pilot. In that test, the initial amount varied between $2 and $5. The difference in participation levels between the two groups was 1.7%, suggesting that the $2 incentive was strong enough to elicit participation from the general public.

Title: 2024 Next Generation National Household Travel Survey (NextGen NHTS).

OMB Control: 2125–0545.

Background: Title 23, United States Code, Section 502 authorizes the USDOT to carry out advanced research and transportation research to measure the performance of the surface transportation systems in the US, including the efficiency, energy use, air quality, congestion, and safety of the highway and intermodal transportation systems. The USDOT is charged with the overall responsibility to obtain current information on national patterns of travel, which establishes a data base to better understand travel behavior, evaluate the use of transportation facilities, and gauge the impact of the USDOT's policies and programs.

The NHTS is the USDOT's authoritative nationally representative data source for daily passenger travel. This inventory of travel behavior reflects travel mode (*e.g.,* private vehicles, public transportation, walk and bike) and trip purpose (*e.g.,* travel to work, school, recreation, personal/family trips) by U.S. household residents. Survey results are used by federal and state agencies to monitor the performance and adequacy of current facilities and infrastructure, and to plan for future needs.

The collection and analysis of national transportation data has been of critical importance for more than half a century. Previous surveys were conducted in 1969, 1977, 1983, 1990, 1995, 2001, 2009, 2017 and 2022. The current survey will be the tenth in this series, and allow researchers, planners, and officials at the state and federal levels to monitor travel trends.

Data from the NHTS are widely used to support research needs within the USDOT, and State and local agencies, in addition to responding to queries from Congress, the research community and the media on important issues. Current and recent topics of interest include:

- Travel to work patterns by transportation mode for infrastructure improvements and congestion reduction,
- Access to public transit, paratransit, and rail services by various demographic groups,
- Measures of travel by mode to establish exposure rates for risk analyses,
- Support for Federal, State, and local planning activities and policy evaluation,
- Active transportation by walk and bike to establish the relationship to public health issues,
- Vehicle usage for energy consumption analysis,
- Traffic behavior of specific demographic groups such as Millennials, Gen Z, and the aging population.

Within the USDOT, the Federal Highway Administration (FHWA) holds responsibility for technical and funding coordination. The National Highway Traffic Safety Administration (NHTSA), Federal Transit Administration (FTA), and the Bureau of Transportation Statistics (BTS) are also primary data users and have historically participated in project planning and financial support.

Proposed Data Acquisition Methodology

NHTS data are collected from a stratified random sample of households that represent a broad range of geographic and demographic characteristics. Letters and postcards are sent to selected households requesting some basic demographic and contact information and inviting them to participate in the diary survey. The recruitment survey is completed on the study website.

Households who complete the recruitment survey are subsequently invited to complete a diary survey. All household members aged 5 and older are eligible. The household is assigned to record their travel on a specific day and asked to note every trip taken during a 24-hour period. Based upon their preferences, the travel information is then reported through a survey website, a smartphone app., or through a telephone interview.

Reminders are sent periodically to households who do not respond within the expected timeframe. Monetary incentives are provided in increasing amounts for all households that complete the survey.

The survey will collect data during an entire 12-month period so that all 365 days of the year including weekends and holidays are accounted for. A total of 7,500 households will comprise the national sample for the 2024 survey.

Issues Related to Sampling. The sampling design reflects the U.S. household trends of decreasing landline telephone ownership and increasing access to the internet. The 2024 NextGen NHTS will leverage this shift in technology, in particular the move away from home telephone usage, to structure a research design that uses mail, web, smartphone app. and telephone data collection modes. The methodological approach starts with a national address-based sample (ABS).

The survey sample will be drawn from the ABS frame maintained by Marketing Systems Group (MSG). It originates from the U.S. Postal Service (USPS) Computerized Delivery Sequence file (CDS) and is updated on a monthly basis. MSG also provides the ability to match some auxiliary variables (*e.g.,* race/ethnicity, education, household income) to a set of sampled addresses. MSG geocodes their entire ABS frame, so block-, block group-, and tract-level characteristics from the Decennial Census and the American Community Survey (ACS) may be appended to addresses and used for sampling and/or data collection purposes.

Sample Size. Completed surveys will be obtained from a nationally representative sample of 7,500 households. Assuming response rates of 26 percent for the recruitment stage, 60 percent at the diary stage, and a residency rate of 92 percent for sampled addresses, a total of 52,258 sampled addresses will be required to attain the targeted 7,500 responding households.

Stratification. The sample will be stratified by Census Division and urban/rural classification (18 strata total). The target sample size (of responding households) will then be initially allocated among the strata according to the proportion of addresses falling in the stratum determined by the counts of addresses from the American Community Survey (ACS).

With the ABS approach, identifying targeted areas that correspond to those

for which estimates can be developed from the NHTS data are straightforward. Geocoding and GIS processing can be used to link addresses to states and counties in a highly reliable fashion. There can be some ambiguity for addresses that are P.O. boxes or are listed as rural route addresses. These can be handled in a routine manner with a set of well-defined rules as such addresses will represent only a small proportion of the population. Thus, no important issues arise in the definition of areas with an ABS sample design that relies on mail for initial contact, as is the case with the proposed approach.

Assignments for recording travel data by sampled households will be equally distributed across all days to ensure a balanced day-of-week distribution. The sample (of recruitment letters to households) will be released periodically through a process that will control the balance of travel days by month.

Data Collection Methods

An updated approach to enhancing survey response has been developed. This includes providing progressive monetary incentives and using a mail with push-to-web recruitment survey that is just 5 minutes in length. Upon completing the recruitment survey, household members aged 5 and older are offered the opportunity to provide their travel on an assigned travel day via a smartphone app. or web using a unique personal identification number (PIN) or telephone interview.

Information Proposed for Collection

Recruitment. The survey will begin with mailing the sampled households an initial invitation letter followed by postcard and letter reminders. The letter will contain a $2 cash incentive per household and promised incentives (up to $20 per person) to encourage diary completion. Participants will complete the recruitment survey on the web. The survey is designed to collect key household information (*e.g.,* enumeration of household members), basic demographic characteristics (*e.g.,* age, gender, etc.), and personal contact information (*e.g.,* email address and telephone number). To support recruitment, the study will provide a toll-free number on survey materials. The study website will provide responses to likely questions and will serve as the portal to the survey.

Diary Retrieval. The travel day diary data will be collected from respondents either from self-reporting via the web or a smartphone app., or from professionally trained interviewers using a computer-assisted telephone interviewing (CATI) system. The questionnaire and back-end systems allow for sophisticated branching and skip patterns to enhance data retrieval by asking only those questions that are necessary and appropriate for the individual participant. Look-up tables are included at the back end to assist with information such as vehicle makes and models. Google API is used to assist in identifying specific place names and locations. The location data for the participant's home, workplace, or school are stored and automatically inserted in the dataset for trips after the first report. Household rostering is a list of all vehicles and persons in the household that allows a trip to be reported from one household member and can include another household member who travel together to be inserted into the record for the second person. This automatic insert of information reduces the burden of the second respondent to be queried about a trip already reported by the initial respondent.

Data range, consistency and edit checks are automatically programmed to reduce reporting errors, survey length, and maintain the flow of information processing. Data cross checks also help reduce the burden by ensuring that the reporting is consistent within each trip.

The study website and web instrument will be reviewed for Section 508 compliance using the rules specified in sections 1194.22—'Web-based intranet and internet information and applications' and 1194.23—'Telecommunications products.' All materials will be available in both English and Spanish language forms. Spanish translations will be developed using industry standards and will apply reverse- translation protocols.

Respondents: A stratified random sample of 7,500 households across the 50 states and the District of Columbia will be included in the survey. Household will include an average of 2.5 members for a total of 18,750 individual respondents 5 years and older to the diary survey.

Frequency: This is a periodic study last conducted in 2022.

Estimated Average Burden per Response: It will take approximately 5 minutes per household member to complete the recruitment survey, and 20 minutes per eligible household member to complete the diary survey.

Estimated Total Annual Burden Hours: It is estimated that a total of 29,375 persons will complete the survey. This includes 5,000 persons in households who completed just the recruitment survey and did not participate in the diary survey and 16,125 persons who completed both the recruitment and diary surveys. This results in approximately 6,417 hours of support for this data collection effort assuming an average of 5 minutes per household for the recruitment, and 20 minutes per household member (aged 5 and older) for the diary survey.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 49 CFR 1.48.

Issued on: April 27, 2024.

Jazmyne Lewis,

Information Collection Officer.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2012–0332; FMCSA–2013–0124; FMCSA–2013–0125; FMCSA–2014–0103; FMCSA–2014–0387; FMCSA–2017–0057; FMCSA–2018–0138; FMCSA–2020–0024; FMCSA–2021–0017; or FMCSA–2022–0032]

Qualification of Drivers; Exemption Applications; Hearing

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for 13 individuals from the hearing requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) for interstate commercial motor vehicle (CMV) drivers. The exemptions enable these hard of hearing and deaf individuals to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates provided

below. Comments must be received on or before June 3, 2024.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2012–0332, Docket No. FMCSA–2013–0124, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2014–0103, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2018–0138, Docket No. FMCSA–2020–0024, Docket No. FMCSA–2021–0017, or Docket No. FMCSA–2022–0032 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *www.regulations.gov/,* insert the docket number (FMCSA–2012–0332, FMCSA–2013–0124, FMCSA–2013–0125, FMCSA–2014–0103, FMCSA–2017–0057, FMCSA–2018–0138, FMCSA–2020–0024, FMCSA–2021–0017, or FMCSA–2022–0032) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click on the ''Comment'' button. Follow the online instructions for submitting comments.
- *Mail:* Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery:* West Building Ground Floor, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal Holidays.
- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the ''Public Participation'' portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, (202) 366–4001, *fmcsamedical@dot.gov.* Office hours are 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2012–0332, Docket No. FMCSA–2013–0124, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2014–0103, Docket No. FMCSA–2014–0387, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2018–0138, Docket No. FMCSA–2020–0024, Docket No. FMCSA–2021–0017, or Docket No. FMCSA–2022–0032), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *www.regulations.gov/,* insert the docket number (FMCSA–2012–0332, FMCSA–2013–0124, FMCSA–2013–0125, FMCSA–2014–0103, FMCSA–2014–0387, FMCSA–2017–0057, FMCSA–2018–0138, FMCSA–2020–0024, FMCSA–2021–0017, or FMCSA–2022–0032) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, click the ''Comment'' button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to *www.regulations.gov.* Insert the docket number (FMCSA–2012–0332, FMCSA–2013–0124, FMCSA–2013–0125, FMCSA–2014–0103, FMCSA–2014–0387, FMCSA–2017–0057, FMCSA–2018–0138, FMCSA–2020–0024, FMCSA–2021–0017, or FMCSA–2022–0032) in the keyword box and click ''Search.'' Next, sort the results by ''Posted (Newer-Older),'' choose the first notice listed, and click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption requests. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov.* As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at *https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices,* the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding hearing found in 49 CFR 391.41(b)(11) states that a person is physically qualified to drive a CMV if that person first perceives a forced whispered voice in the better ear at not less than 5 feet with or without the use of a hearing aid or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z24.5—1951.

This standard was adopted in 1970 and was revised in 1971 to allow drivers to be qualified under this standard while wearing a hearing aid, (35 FR 6458, 6463 (Apr. 22, 1970) and 36 FR 12857 (July 8, 1971), respectively).

The 13 individuals listed in this notice have requested renewal of their exemptions from the hearing standard in § 391.41(b)(11), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these

drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the 13 applicants has satisfied the renewal conditions for obtaining an exemption from the hearing requirement. The 13 drivers in this notice remain in good standing with the Agency. In addition, for commercial driver's license (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each of these drivers for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

In accordance with 49 U.S.C. 31136(e) and 31315(b), the following groups of drivers received renewed exemptions in the month of May and are discussed below.

As of May 15, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 12 individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Yunier Alegre (NE)
Dustin Bemesderfer (FL)
Marion Bennet (MD)
Marquarius Boyd (MS)
Stephan Gensmer (MN)
Leonie Hall (IL)
William Larson (NC)
Jonathan Ramirez (CA)
Tami Richardson-Nelson (NE)
Joseph Strassburg (SD)
Charles Whitworth (LA)
Aldale Williamson (DC)

The drivers were included in docket number FMCSA–2012–0332, FMCSA–2013–0124, FMCSA–2014–0103, FMCSA–2014–0387, FMCSA–2017–0057, FMCSA–2018–0138, FMCSA–2020–0024, FMCSA–2021–0017, or FMCSA–2022–0032. Their exemptions are applicable as of May 15, 2024 and will expire on May 15, 2026.

As of May 19, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), Michael Paasch (NE) has satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

This driver was included in FMCSA–2013–0125. The exemption is applicable as of May 19, 2024 and will expire on May 19, 2026.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must report any crashes or accidents as defined in § 390.5T; and (2) report all citations and convictions for disqualifying offenses under 49 CFR parts 383 and 391 to FMCSA; and (3) each driver prohibited from operating a motorcoach or bus with passengers in interstate commerce. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. In addition, the exemption does not exempt the individual from meeting the applicable CDL testing requirements. Each exemption will be valid for 2 years unless rescinded earlier by FMCSA. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based upon its evaluation of the 13 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the hearing requirement in § 391.41 (b)(11). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Extension of Information Collection Request Submitted for Public Comment; Comment Request on Burden Related to the Qualified Intermediary (QI), Withholding Foreign Partnership (WP), and Withholding Foreign Trust (WT) Application and Account Management System

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently, the IRS is soliciting comments concerning the burden related to the Qualified Intermediary (QI), Withholding Foreign Partnership (WP), and Withholding Foreign Trust (WT) Application and Account Management System.

DATES: Written comments should be received on or before July 1, 2024 to be assured of consideration.

ADDRESSES: Direct all written comments to Andrés Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *pra.comments@irs.gov.* Please include, ''OMB Number: 1545–1597—Public Comment Request Notice'' in the Subject line.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Ronald J. Durbala, at (202) 317–5746, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at *RJoseph.Durbala@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Qualified Intermediary (QI), Withholding Foreign Partnership (WP), and Withholding Foreign Trust (WT) Application and Account Management System.

OMB Number: 1545–1597.

Document Number: Form 14345.

Abstract: Internal Revenue Code (IRC) section 1441 (Withholding of tax on nonresident aliens), states any nonresident alien individual or of any foreign partnership shall deduct and withhold from such items a tax equal to 30 percent or 14 percent depending on circumstances. Revenue Procedure

2022–43 sets forth the final qualified intermediary (QI) withholding agreement (QI agreement) entered by the Internal Revenue Service and certain foreign persons under Treas. Reg. § 1.1441–1(e) (5) and (6). The Qualified Intermediary (QI), Withholding Foreign Partnership (WP), and Withholding Foreign Trust (WT) Application and Account Management System (QAAMS) allows entities to apply, renew, or terminate their status as a QI, WP, or WT.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households and Business or other for-profit.

Estimated Number of Respondents: 1,097,991.

Estimated Time per Respondent: 16 min.

Estimated Total Annual Burden Hours: 301,018.

The following paragraph applies to all the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number.

Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Desired Focus of Comments: The Internal Revenue Service (IRS) is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* by permitting electronic submissions of responses.

Comments submitted in response to this notice will be summarized and/or included in the ICR for OMB approval of the extension of the information collection; they will also become a matter of public record.

Approved: April 29, 2024.

Ronald J. Durbala,

IRS Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Internal Revenue Service (IRS) Information Collection Requests

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The public is invited to submit comments on these requests.

DATES: Comments should be received on or before June 3, 2024 to be assured of consideration.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained from Melody Braswell by emailing *PRA@treasury.gov,* calling (202) 622–1035, or viewing the entire information collection request at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

Internal Revenue Service (IRS)

Title: Consent for Disclosure of Non-Tax IRS Records Protected under the Privacy Act and IRS Request for Individual Access to Non-Tax Records under the Privacy Act.

OMB Number: 1545–NEW.

Form Numbers: 15293 and 15603.

Abstract: Form 15293 is used as an option to consent and approve disclosure of your non-tax IRS records. This form may be used by the parent consenting to and authorizing disclosure of the records of a minor or the legal guardian consenting to and authorizing disclosures of the records of an incompetent. Form 15603 is used to request access to non-tax records from a Privacy Act System of Records. This form may also be used by the parent seeking access to the records of a minor or the legal guardian seeking access to the records of an incompetent.

Current Actions: This form is being submitted for OMB approval.

Type of Review: New collection.

Affected Public: Individuals.

Estimated Number of Respondents: 600.

Estimated Time per Response: 15 minutes.

Estimated Total Annual Burden Hours: 150 hours.

Authority: 44 U.S.C. 3501 *et seq.*

Melody Braswell,

Treasury PRA Clearance Officer.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0005]

Agency Information Collection Activity Under OMB Review: Application for Dependency and Indemnity Compensation by Parent(s) (Including Accrued Benefits and Death Compensation When Applicable)

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/*

PRAMain. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0005''.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20420, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0005'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 U.S.C. 1310, 38 U.S.C. 1315, 38 U.S.C. 1121, 38 U.S.C. 501(a)(2), 38 U.S.C. 5121.

Title: Application for Dependency and Indemnity Compensation by Parent(s) (Including Accrued Benefits and Death Compensation when Applicable).

OMB Control Number: 2900–0005.

Type of Review: Revision of a currently approved collection.

Abstract: VA Form 21P–535 is primarily used to collect the information necessary to determine a surviving parent's eligibility for Parents' DIC benefits. The information is used to determine eligibility for VA benefits, and, if eligibility exists, the proper rate of payment.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 15268 on Friday, March 1, 2024, pages 15268.

Affected Public: Individuals or Households.

Estimated Annual Burden: 1,200 hours.

Estimated Average Burden per Respondent: 1 hour and 12 minutes (1.2 hours).

Frequency of Response: One time.

Estimated Number of Respondents: 1,000.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

Disciplinary Appeals Board Panel

AGENCY: Department of Veterans Affairs

ACTION: Notification of Disciplinary Appeals Board Panel.

SUMMARY: The Department of Veterans Affairs (VA) Health-Care Personnel Act of 1991 revised the disciplinary grievance and appeal procedures for employees appointed under Federal law. It also required the periodic designation of VA employees who are qualified to serve on the Disciplinary Appeals Board. These employees constitute the Disciplinary Appeals Board Panel from which board members in a case are appointed. This notice announces that the roster of employees on the panel is available for review and comment. Employees, employee organizations, and other interested parties shall be provided, upon request and without charge, the list of the employees on the panel, and they may submit comments concerning the suitability of any employee on the panel list.

DATES: The names that appear on the panel roster may be selected to serve on a Disciplinary Appeals Board or as a grievance examiner after June 3, 2024.

FOR FURTHER INFORMATION CONTACT: Ms. Nicole Flood, Lead Employee Relations Specialist, Employee Relations and Performance Management Service, Office of the Chief Human Capital Officer, Department of Veterans Affairs, 810 Vermont Avenue NW, Mailstop 051, Washington, DC 20420 or *Nicole.Flood@va.gov.* Ms. Flood may be reached at 708–980–3553. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: Section 203 of the Department of Veterans Affairs (VA) Health-Care Personnel Act of 1991 revised the disciplinary grievance and appeal procedures for employees appointed under Federal law. It also required the periodic designation of VA employees who are qualified to serve on the Disciplinary Appeals Board. Public Law 102–40 and 38 U.S.C. 7464(d) require that the availability of the roster be posted in the **Federal Register** periodically, but not less than annually. Requests for the panel roster and/or concerns regarding suitability for service on the panel may be emailed to *vaco051erpms@va.gov.*

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, approved and signed this document on April 25, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Jeffrey M. Martin,

Assistant Director, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0830]

Agency Information Collection Activity Under OMB Review: Claim for Reimbursement of Travel Expenses

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice by clicking on the following link *www.reginfo.gov/public/do/PRAMain,* select ''Currently under Review—Open for Public Comments'', then search the list for the information collection by Title or ''OMB Control No. 2900–0830.''

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20420, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0830'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 U.S.C. 501(a) and 38 U.S.C. 111.

Title: Claim for Reimbursement of Travel Expenses.

OMB Control Number: 2900–0830.

Type of Review: Revision of a currently approved collection.

Abstract: VA Form 28–0968, Claim for Reimbursement of Travel Expenses serves as a request to collect information for claimants to apply for the mileage reimbursement benefit in an efficient, convenient, and accurate manner. VR&E

must determine the identity of the claimant; the dates and length of the trip being claimed, based on the claimant's residence and the place of initial evaluation, reevaluation, and counseling to include personal or vocational adjustment, training, and attendant travel, or other place in connection with vocational rehabilitation; and whether expenses other than mileage are being claimed. Once the information is obtained, it is entered into the case management system and then the form is sent to the Support Services Division (SSD) to process payment.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 11945 on Thursday, February 15, 2024, pages 11945 and 11946.

Affected Public: Individuals or Households.

Estimated Annual Burden: 27,500 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 110,000 per year.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

Privacy Act of 1974; System of Records

AGENCY: Veterans Health Administration (VHA), Department of Veterans Affairs (VA).

ACTION: Notice of a modified system of records.

SUMMARY: Pursuant to the Privacy Act of 1974, notice is hereby given that the VA is modifying the system of records titled, ''Investigative Database-OMI–VA'' (162VA10E1B). This system is used to document the investigative activities of the Office of the Medical Inspector (OMI).

DATES: Comments on this amended system of records must be received no later than June 3, 2024. If no public comment is received during the period allowed for comment or unless otherwise published in the **Federal Register** by the VA, the modified system of records will become effective a minimum of 30 days after date of publication in the **Federal Register**. If VA receives public comments, VA shall review the comments to determine whether any changes to the notice are necessary.

ADDRESSES: Comments may be submitted through *www.Regulations.gov* or mailed to VA Privacy Service, 810 Vermont Avenue NW, (005X6F), Washington, DC 20420. Comments should indicate that they are submitted in response to ''Investigative Database-OMI–VA'' (162VA10E1B). Comments received will be available at *regulations.gov* for public viewing, inspection or copies.

FOR FURTHER INFORMATION CONTACT: Stephania Griffin, VHA Chief Privacy Officer, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420; telephone (704) 245–2492 (*Note:* this is not a toll-free number).

SUPPLEMENTARY INFORMATION: VA is amending the system of records by revising the System Number; System Location; System Manager; Purpose; Categories of Individuals Covered by the System; Categories of Records in the System; Records Source Categories; Policies and Practices for Storage of Records; Policies and Practices for Retention and Disposal of Records; Safeguards; Record Access Procedure; Contesting Records Procedures; and Notification Procedure. VA is republishing the system notice in its entirety.

The System Number is being updated from 162VA10E1B to 162VA10 to reflect the current VHA organizational routing symbol.

The System Location is being updated to remove, ''Additional records are maintained by the Austin Information Technology Center, 1615 Woodward Street, Austin, Texas 78772, and subject to their security control.''

The System Manager is being updated to replace Correspondence Analyst, with Executive Assistant.

The Purpose is being updated to remove, ''to perform statistical analysis to produce various management and follow-up reports. The data may be used for VA's extensive quality improvement programs in accordance with VA policy. In addition, the data may be used for law enforcement investigations. Survey data will be collected for the purpose of measuring and monitoring various aspects and outcomes of National, Veterans Integrated Service Network (VISN) and Facility-Level performance. Results of the survey data analysis are shared throughout the Veterans Health Administration (VHA) system.''

The Categories of Individuals Covered by the System is being updated to remove, ''their immediate family members, members of the armed services, subcontractors, consultants, volunteers.''

The Categories of Records in the System is being updated to replace 24VA10P2 with 24VA10A7. Number 3 is being removed, ''Medical benefit and eligibility information.'' Renumbering as number 4 is now number 3, and so on. Number 5 is also being removed ''Patient Satisfaction Survey Data which include questions and responses.''

The Records Source Categories is being updated to remove, ''VA Health Eligibility Center, the Food and Drug Administration, the Department of Defense, ''Income Verification Records-VA'' (89VA10NB), VA Veterans Benefits Administration automated record systems (including the ''Veterans and Beneficiaries Identification and Records Location Subsystem-VA'' (38VA23), and subsequent iterations of those systems of records.'' 24VA10P2 will be replaced with 24VA10A7 and 33VA113 will be replaced with 33VA10.

Policies and Practices for Storage of Records is being updated to remove, ''paper, magnetic tape, disk, encrypted flash memory, and laser optical media''.

Policies and Practices for Retention and Disposal of Records is being updated to include Item Numbers 1160.1 and 1160.2.

Administrative, Technical and Physical Safeguards is being updated to remove from number 4 ''an elevator card reader for floor access and a separate VHA card reader for access to the office area; and in locked storage (paper).''

Record Access Procedure is being updated to reflect the following language: ''Individuals seeking information on the existence and content of records in this system pertaining to them should contact the system manager in writing as indicated above or write or visit the VA facility location where they normally receive their care. A request for access to records must contain the requester's full name, address, telephone number, be signed by the requester, and describe the records sought in sufficient detail to enable VA personnel to locate them with a reasonable amount of effort.''

Contesting Records Procedures is being updated to reflect the following language, ''Individuals seeking to contest or amend records in this system pertaining to them should contact the system manager in writing as indicated above, or may write or visit the VA facility location where they normally

receive their care. A request to contest or amend records must state clearly and concisely what record is being contested, the reasons for contesting it, and the proposed amendment to the record.''

Notification Procedure is being updated to state, ''Generalized notice is provided by the publication of this notice. For specific notice, see Record Access Procedure, above.''

The Report of Intent to Amend a System of Records Notice and an advance copy of the system notice have been sent to the appropriate Congressional committees and to the Director of the Office of Management and Budget (OMB) as required by the Privacy Act and guidelines issued by OMB, December 12, 2000.

Signing Authority

The Senior Agency Official for Privacy, or designee, approved this document and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Kurt D. DelBene, Assistant Secretary for Information and Technology and Chief Information Officer, approved this document on March 26, 2024 for publication.

Dated: April 29, 2024.

Amy L. Rose,

Government Information Specialist, VA Privacy Service, Office of Compliance, Risk and Remediation, Office of Information and Technology, Department of Veterans Affairs.

SYSTEM NAME:

''Investigative Database-OMI–VA'' (162VA10).

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Records are located at the Office of the Medical Inspector (OMI) in secure files within the OMI and indexed on a secure document management server within the Department of Veterans Affairs (VA) Central Office firewall.

SYSTEM MANAGER(S):

Official responsible for maintaining this system of records: Executive Assistant, OMI, Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420. Telephone 202–815–9508 (this is not a toll-free number).

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

38 U.S.C. 501.

PURPOSE(S) OF THE SYSTEM:

The purpose of this system is to document the investigative activities of the OMI, and to monitor the activities of VA Medical Centers in fulfilling action plans developed in response to OMI reports.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The records contain information for individuals (1) Receiving health care from the Veterans Health Administration (VHA), and (2) VHA providers that are providing the health care. Individuals encompass Veterans, current and former employees, trainees, contractors, and other individuals working collaboratively with VA.

CATEGORIES OF RECORDS IN THE SYSTEM:

The records may include information and health information related to:

1. Patient medical record abstract information including information from ''Patient Medical Record—VA'' (24VA10A7);

2. Identifying information (*e.g.,* name, birth date, death date, admission date, discharge date, gender, Social Security Number, taxpayer identification number); address information (*e.g.,* home and/or mailing address, home and/or cell telephone number, emergency contact information such as name, address, telephone number and relationship); prosthetic and sensory aid serial numbers; medical record numbers; integration control numbers; information related to medical examination or treatment (*e.g.,* location of VA medical facility providing examination or treatment, treatment dates, medical conditions treated or noted on examination); information related to military service and status;

3. Patient aggregate workload data such as admissions, discharges and outpatient visits; resource utilization such as laboratory tests, x-rays and prescriptions;

4. Data captured from various VA databases. According to VHA Directive 1038, Role of the Office of the Medical Inspector, Paragraph 4k., ''OMI, as a component of VHA, has legal authority under applicable Federal privacy laws and regulations to access and use any information, including health information, maintained in VHA records for the purposes of health care operations and health care oversight.''; and

5. Documents and reports produced and received by OMI in the course of its investigations.

RECORD SOURCE CATEGORIES:

Information in this system of records is provided by Veterans, VA employees, VA computer systems, Veterans Health Information Systems and Technology Architecture (VistA), VA medical centers, VA program offices, Veterans Integrated Service Networks (VISNs), Austin Information Technology Center, the Department of Defense, Survey of Healthcare Experiences of Patients, External Peer Review Program, and the following Systems of Records: ''Patient Medical Records-VA'' (24VA10A7) and ''National Prosthetics Patient Database-VA'' (33VA10).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

To the extent that records contained in the system include information protected by 45 CFR parts 160 and 164, *i.e.,* individually identifiable health information, and 38 U.S.C. 7332, *i.e.,* medical treatment information related to drug abuse, alcoholism or alcohol abuse, sickle cell anemia or infection with the human immunodeficiency virus, that information cannot be disclosed under a routine use unless there is also specific statutory authority in 38 U.S.C. 7332 and regulatory authority in 45 CFR parts 160 and 164 permitting disclosure.

1. *Congress:* To a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

2. *National Archives and Records Administration (NARA):* To the NARA in records management inspections conducted under 44 U.S.C. 2904 and 2906, or other functions authorized by laws and policies governing NARA operations and VA records management responsibilities.

3. *Department of Justice (DoJ), Litigation, Administrative Proceeding:* To the DoJ, or in a proceeding before a court, adjudicative body or other administrative body before which VA is authorized to appear, when:

(a) VA or any component thereof;

(b) Any VA employee in his or her official capacity;

(c) Any VA employee in his or her individual capacity where DoJ has agreed to represent the employee; or

(d) The United States, where VA determines that litigation is likely to affect the agency or any of its components,

is a party to such proceedings or has an interest in such proceedings, and VA determines that use of such records is relevant and necessary to the proceedings.

4. *Governmental Agencies, for VA Hiring, Security Clearance, Contract, License, Grant:* To a Federal, state, local or other governmental agency maintaining civil or criminal violation

records, or other pertinent information, such as employment history, background investigations, or personal or educational background, to obtain information relevant to VA's hiring, transfer or retention of an employee, issuance of a security clearance, letting of a contract, or issuance of a license, grant, or other benefit. The disclosure of the names and addresses of Veterans and their dependents from VA records under this routine use must also comply with the provisions of 38 U.S.C. 5701.

5. *Law Enforcement:* To a Federal, State, local, territorial, Tribal or foreign law enforcement authority or other appropriate entity charged with the responsibility of investigating or prosecuting a violation or potential violation of law, whether civil, criminal, or regulatory in nature, or charged with enforcing or implementing such law, provided that the disclosure is limited to information that, either alone or in conjunction with other information, indicates such a violation. The disclosure of the names and addresses of Veterans and their dependents from VA records under this routine use must also comply with the provisions of 38 U.S.C. 5701.

6. *Attorneys Representing Clients:* To assist attorneys in representing their clients, any information in this system may be disclosed to attorneys representing subjects of investigations, including Veterans, Federal Government employees, retirees, volunteers, contractors, subcontractors or private citizens.

7. *Federal Labor Relations Authority (FLRA):* To the FLRA in connection with the investigation and resolution of allegations of unfair labor practices, the resolution of exceptions to arbitration awards when a question of material fact is raised; matters before the Federal Service Impasses Panel; and the investigation of representation petitions and the conduct or supervision of representation elections.

8. *Equal Employment Opportunity Commission (EEOC):* To the EEOC in connection with investigations of alleged or possible discriminatory practices, examination of Federal affirmative employment programs, or other functions of the Commission as authorized by law.

9. *Merit Systems Protection Board (MSPB):* To the MSPB in connection with appeals, special studies of the civil service and other merit systems, review of rules and regulations, investigation of alleged or possible prohibited personnel practices, and such other functions promulgated in 5 U.S.C. 1205 and 1206, or as otherwise authorized by law.

10. *Guardians, Courts, for Incompetent Veterans:* To a court, magistrate or administrative tribunal in matters of guardianship, inquests, and commitments; to private attorneys representing Veterans rated incompetent in conjunction with issuance of Certificates of Incompetency; or to probation and parole officers in connection with court-required duties.

11. *State Licensing Board, for Licensing:* To a Federal agency, a State or local government licensing board, the Federation of State Medical Boards, or a similar non-governmental entity that maintains records concerning individuals' employment histories or concerning the issuance, retention or revocation of licenses, certifications or registration necessary to practice an occupation, profession or specialty, to inform such non-governmental entities about the health care practices of a terminated, resigned or retired health care employee whose professional health care activity so significantly failed to conform to generally accepted standards of professional medical practice as to raise reasonable concern for the health and safety of patients in the private sector or from another Federal agency. These records may also be disclosed as part of an ongoing computer matching program to accomplish these purposes.

12. *Contractors:* To contractors, grantees, experts, consultants, students and others performing or working on a contract, service, grant, cooperative agreement or other assignment for VA, when reasonably necessary to accomplish an agency function related to the records.

13. *Federal Agencies, Fraud and Abuse:* To other Federal agencies to assist such agencies in preventing and detecting possible fraud or abuse by individuals in their operations and programs.

14. *Data Breach Response and Remediation, for VA:* To appropriate agencies, entities and persons when (1) VA suspects or has confirmed that there has been a breach of the system of records; (2) VA has determined that as a result of the suspected or confirmed breach there is a risk to individuals, VA (including its information systems, programs and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities or persons is reasonably necessary to assist in connection with VA efforts to respond to the suspected or confirmed breach or to prevent, minimize or remedy such harm.

15. *Data Breach Response and Remediation, for Another Federal Agency:* To another Federal agency or Federal entity, when VA determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

16. *Office of Special Counsel:* To the Office of the Special Counsel for investigation and inquires of alleged or possible prohibited personnel practices.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records are maintained on electronic storage media.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records are retrieved by name, Social Security Number or other assigned identifiers of the individuals on whom they are maintained.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records in this system are retained and disposed of in accordance with the schedule approved by the Archivist of the United States, VA Records Control Schedule (RCS) 10–1, Item Numbers 1160.1 and 1160.2.

ADMINISTRATIVE, TECHNICAL AND PHYSICAL SAFEGUARDS:

1. Access to and use of national administrative databases, warehouses and data marts are limited to those persons whose official duties require such access, and VA has established security procedures to ensure that access is appropriately limited. Information security officers and system data stewards review and authorize data access requests. VA regulates data access with security software that authenticates users and requires individually unique codes and passwords. VA provides information security training to all staff and instructs staff on the responsibility each person has for safeguarding data confidentiality.

2. VA maintains Business Associate Agreements and Non-Disclosure Agreements where appropriate with contracted resources in order to maintain confidentiality of the information.

3. Physical access to computer rooms housing national administrative databases, warehouses and data marts are restricted to authorized staff and

protected by a variety of security devices. Unauthorized employees, contractors and other staff are not allowed in computer rooms. The Federal Protective Service or other security personnel provide physical security for the buildings housing computer rooms and data centers.

4. All materials containing real or scrambled Social Security numbers are kept only on secure, encrypted VHA servers, personal computers, laptops or media. All email transmissions of such files use Public Key Infrastructure (PKI) encryption. If a recipient does not have PKI, items are mailed or sent to a secure fax. Paper records containing Social Security numbers are secured in locked cabinets or offices within the OMI area. Access to OMI requires passing a security officer. All materials, both paper and electronic, that are no longer required are shredded/obliterated in accordance with VHA guidelines. Materials required for case documentation and follow up are archived in our secure document management server (electronic).

5. In most cases, copies of back-up computer files are maintained at off-site locations.

RECORD ACCESS PROCEDURES:

Individuals seeking information on the existence and content of records in this system pertaining to them should contact the system manager in writing as indicated above or write or visit the VA facility location where they normally receive their care. A request for access to records must contain the requester's full name, address, telephone number, be signed by the requester, and describe the records sought in sufficient detail to enable VA personnel to locate them with a reasonable amount of effort.

CONTESTING RECORD PROCEDURES:

Individuals seeking to contest or amend records in this system pertaining to them should contact the system manager in writing as indicated above. A request to contest or amend records must state clearly and concisely what record is being contested, the reasons for contesting it, and the proposed amendment to the record.

NOTIFICATION PROCEDURES:

Generalized notice is provided by the publication of this notice. For specific notice, see Record Access Procedure, above.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0079]

Agency Information Collection Activity: Employment Questionnaire

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Benefits Administration, Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed revision of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before July 1, 2024.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to *nancy.kessinger@va.gov.* Please refer to ''OMB Control No. 2900–0079'' in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0079'' in any correspondence.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Authority: 38 U.S.C. 501, 38 U.S.C. 5317, 38 CFR 3.362 and 3.343, 38 CFR 4.16.

Title: Employment Questionnaire (VA Form 21–4140).

OMB Control Number: 2900–0079.

Type of Review: Revision of a currently approved collection.

Abstract: VA Forms 21–4140 is used to gather the necessary information to determine continued entitlement to individual unemployability. Recipients are required to certify, when requested, that the eligibility factors which established entitlement to the benefit being paid continue to exist. Individual unemployability is awarded based on a veteran's inability to be gainfully employed due to service-connected disabilities, and entitlement may be terminated if a veteran begins working. Without information about recipients' employment, VA would not be able to determine continued entitlement to individual unemployability, and overpayments would result. No changes have been made to this form. The respondent burden has increased due to the estimated number of receivables averaged over the past year.

Affected Public: Individual or Households.

Estimated Annual Burden: 285 hours.

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 3,422 per year.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

Medicare and Medicaid Programs and the Children's Health Insurance Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2025 Rates; Quality Programs Requirements; and Other Policy Changes

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; make changes relating to Medicare graduate medical education (GME) for teaching hospitals; update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs); and make other policy-related changes.

DATES: To be assured consideration, comments must be received at one of the addresses provided in the **ADDRESSES** section, no later than 5 p.m. EDT on June 10, 2024.

ADDRESSES: In commenting, please refer to file code CMS–1808–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission. Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may (and we encourage you to) submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the instructions under the ''submit a comment'' tab.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1808–P, P.O. Box 8013, Baltimore, MD 21244–8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments via express or overnight mail to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1808–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, we refer readers to the beginning of the **SUPPLEMENTARY INFORMATION** section.

Tables Available on the CMS Website

The IPPS tables for this fiscal year (FY) 2025 proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* Click on the link on the left side of the screen titled ''FY 2025 IPPS Proposed rule Home Page'' or ''Acute Inpatient—Files for Download.'' The LTCH PPS tables for this FY 2025 proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1808–P. For further details on the contents of the tables referenced in this proposed rule, we refer readers to section VI. of the Addendum to this FY 2025 IPPS/LTCH PPS proposed rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact Michael Treitel, *DAC@cms.hhs.gov.*

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2025 IPPS/LTCH PPS proposed rule would make payment and policy changes under the Medicare inpatient prospective payment system (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule also would make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2025 proposed rule, we are proposing to continue policies to address wage index disparities impacting low wage index hospitals. We are also proposing changes relating to Medicare graduate medical education (GME) for teaching hospitals and new technology add-on payments.

We are proposing a separate IPPS payment for establishing and maintaining access to essential medicines.

In the Hospital Value-Based Purchasing (VBP) Program, we are proposing to modify scoring of the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years to only score six unchanged dimensions of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey, and we are proposing to adopt the updated HCAHPS Survey in the Hospital VBP Program beginning with the FY 2030 program year after the updated survey would have been publicly reported under the Hospital Inpatient Quality Reporting (IQR) Program for 1 year. We are also proposing to modify scoring on the HCAHPS Survey beginning with the FY 2030 program year to incorporate the updated HCAHPS Survey measure into nine survey dimensions. Lastly, we are providing previously and newly established performance standards for the FY 2027 through FY 2030 program years for the Hospital VBP Program.

In the Hospital IQR Program, we are proposing to add seven new measures, modify two existing measures including the HCAHPS Survey measure, and remove five measures. We are also proposing changes to the reporting and submission requirements for electronic clinical quality measures (eCQMs) and the validation process for the Hospital IQR Program data.

In the PPS-Exempt Cancer Hospital Quality Reporting Program (PCHQR), we are proposing to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year. We are also proposing to modify the HCAHPS Survey measure and to move up the start date for publicly displaying hospital performance on the Hospital Commitment to Health Equity measure.

In the LTCH QRP, we are proposing to add four items to the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) and modify one item on the LCDS beginning with the FY 2028 LTCH QRP. Additionally, we are proposing to extend the admission assessment window for the LCDS beginning with the FY 2028 LTCH QRP. Finally, we are seeking information on future measure concepts for the LTCH QRP and a future LTCH Star Rating system.

In the Medicare Promoting Interoperability Program, we are proposing to separate the Antimicrobial Use and Resistance (AUR) Surveillance measure into two measures, an Antimicrobial Use (AU) Surveillance measure and an Antimicrobial Resistance (AR) Surveillance measure, beginning with the electronic health record (EHR) reporting period in CY 2025. We are proposing to increase the performance-based scoring threshold from 60 to 80 points beginning with the EHR reporting period in CY 2025. We are proposing to adopt two new eCQMs and modify one eCQM, in alignment with the Hospital IQR Program. Finally, we are proposing changes to the reporting and submission requirements for eCQMs, in alignment with the Hospital IQR Program.

The Transforming Episode Accountability Model (TEAM) proposes the creation and testing of a new mandatory alternative payment model. The intent of TEAM is to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM would test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that TEAM would benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode. We propose to test TEAM for a 5-year model performance period, beginning January 1, 2026, and ending December 31, 2030. Under the Quality Payment Program (QPP), we anticipate that TEAM would be an Advanced Alternative Payment Model (APM)for Track 2 and Track 3 and a Merit-based Incentive Payment System (MIPS) APM for all participation tracks.

Under various statutory authorities, we either discuss continued program implementation or propose to make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2025 and subsequent fiscal years, and

other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals; and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the Balanced Budget Refinement Act of 1999 (BBRA) (Public Law (Pub. L.) 106–113) and section 307(b)(1) of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Section 1814(l)(4) of the Act requires downward adjustments to the applicable percentage increase, beginning with FY 2015, for CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for an EHR reporting period for a payment adjustment year.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. Hospitals paid under the IPPS with approved GME programs are paid for the indirect costs of training residents in accordance with section 1886(d)(5)(B) of the Act.
- Section 1886(d)(5)(F) of the Act provides for additional Medicare IPPS payments to subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. These payments are known as the Medicare disproportionate share hospital (DSH) adjustment. Section 1886(d)(5)(F) of the Act specifies the methods under which a hospital may qualify for the DSH payment adjustment.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(b)(3)(B)(ix) of the Act, which requires downward adjustments to the applicable percentage increase, beginning with FY 2015 (and beginning with FY 2022 for subsection (d) Puerto Rico hospitals), for eligible hospitals that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting period for a payment adjustment year.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(n) of the Act, which establishes the requirements for an eligible hospital to be treated as a meaningful EHR user of CEHRT for an EHR reporting period for a payment adjustment year or, for purposes of subsection (b)(3)(B)(ix) of the Act, for a fiscal year.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries in determining the extent of excess readmissions.
- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for an additional uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act if subsection (r) did not apply (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act, in the absence of section 1886(r) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) the hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by 2 percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data on quality measures in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.
- Section 1899B of the Act, which provides for the establishment of standardized data reporting for certain

post-acute care providers, including LTCHs.

• Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this proposed rule. In general, these major provisions are being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this proposed rule is presented in section I.D. of the preamble of this proposed rule.

a. Proposed Continuation of the Low Wage Index Hospital Policy

To help mitigate growing wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. As discussed in section III.G.5. of the preamble of this proposed rule, while we are using the FY 2021 cost report data for the FY 2025 wage index, we are unable to comprehensively evaluate the effect, if any, the low wage index hospital policy had on hospitals' wage increases during the years the COVID–19 public health emergency (PHE) was in effect. We believe it is necessary to wait until we have useable data from fiscal years after the PHE before reaching any conclusions about the efficacy of the policy. Therefore, we are proposing that the low wage index hospital policy and the related budget neutrality adjustment would be effective for at least three more years, beginning in FY 2025.

b. Proposed Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.J. of the preamble of this proposed rule, the Biden-Harris administration has made it a priority to strengthen the resilience of medical supply chains and support reliable access to products for public health, including through prevention and mitigation of medical product shortages. As a first step in this initiative, we are proposing to establish a separate payment for small, independent hospitals for the IPPS shares of the additional resource costs to voluntarily establish and maintain a 6-month buffer stock of one or more of 86 essential medicines, either directly or through contractual arrangements with a pharmaceutical manufacturer, distributor, or intermediary. For the purposes of this policy, we define small, independent hospitals as hospitals with 100 beds or fewer that are not part of a chain organization. We are proposing to make this separate payment in a non-budget neutral manner under section 1886(d)(5)(I) of the Act. We are proposing that the payment adjustments would commence for cost reporting periods beginning on or after October 1, 2024.

c. DSH Payment Adjustment, Additional Payment for Uncompensated Care, and Supplemental Payment

Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare disproportionate share hospitals (DSHs) receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that would have been paid as Medicare DSH payments under section 1886(d)(5)(F) of the Act if subsection (r) did not apply, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH that has uncompensated care will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period. This additional payment is known as the uncompensated care payment.

In this proposed rule, we are proposing to update our estimates of the three factors used to determine uncompensated care payments for FY 2025. We are also proposing to continue to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in conjunction with more recently available data in the calculation of Factor 2. Consistent with the regulation at § 412.106(g)(1)(iii)(C)(*11*), which was adopted in the FY 2023 IPPS/LTCH PPS final rule, for FY 2025, we will use the 3 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals.

Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico. In section IV.D of the preamble of this proposed rule, we summarize the ongoing methodology for supplemental payments.

In this proposed rule, we are also proposing, for FY 2025 and subsequent fiscal years, to calculate the per-discharge amount for interim uncompensated care payments using the average of the most recent 3 years of discharge data. Accordingly, for FY 2025, we propose to use an average of discharge data from FY 2021, FY 2022, and FY 2023. We believe that our proposed approach will likely result in a better estimate of the number of discharges during FY 2025 and subsequent years for purposes of the interim uncompensated care payment calculation. We propose to codify this proposed approach in new § 412.106(i)(1).

d. Proposed Adoption of the Patient Safety Structural Measure in the Hospital IQR Program and PCHQR Program

The proposed Patient Safety Structural measure is an attestation-based measure that assesses whether hospitals have a structure and culture that prioritizes safety as demonstrated by the following five domains: (1) leadership commitment to eliminating preventable harm; (2) strategic planning and organizational policy; (3) culture of safety and learning health system; (4) accountability and transparency; and (5) patient and family engagement. Hospitals would attest to whether they engage in specific evidence-based best practices within each of these domains to achieve a score from zero to five out of five points. We are proposing that hospitals would be required to report this measure beginning with the CY 2025 reporting period/FY 2027 program year for the PCHQR Program and for the CY 2025 reporting period/FY 2027 payment determination for the Hospital IQR Program.

e. Proposed Updated Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey Measure in the Hospital IQR Program, Hospital VBP Program, and PCHQR Program

The proposal to use the updated version of the HCAHPS Survey measure aligns with the National Quality Strategy goal to bring patient voices to the forefront by incorporating feedback from patients and caregivers. The proposed updated HCAHPS Survey measure would be adopted for the Hospital IQR and PCHQR Programs beginning with the CY 2025 reporting period/FY 2027 payment determination and the CY 2025 reporting period/FY 2027 program year, respectively. For the Hospital VBP Program, we are proposing to modify scoring on the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years to only score six unchanged dimensions of the HCAHPS Survey. We are proposing to adopt the updated HCAHPS Survey measure beginning with the FY 2030 program year, which would result in nine HCAHPS Survey dimensions for the Person and Community Engagement Domain. We are also proposing to modify scoring of the Person and Community Engagement Domain beginning with the FY 2030 program year to account for the proposed updates to the HCAHPS Survey.

f. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this proposed rule, we are proposing to modify scoring on the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years while the updated HCAHPS Survey measure would be publicly reported under the Hospital IQR Program. In addition, we are proposing to adopt the updated HCAHPS Survey measure beginning with the FY 2030 program year and modify scoring beginning with the FY 2030 program year to account for the updated HCAHPS Survey.

g. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase. In the FY 2025 IPPS/LTCH PPS proposed rule, we are proposing several changes to the Hospital IQR Program. We are proposing the adoption of seven new measures: (1) Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) Age Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (3) Catheter-Associated Urinary Tract Infection (CAUTI) Standardized Infection Ratio Stratified for Oncology Locations beginning with the CY 2026 reporting period/FY 2028 payment determination; (4) Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations beginning with the CY 2026 reporting period/FY 2028 reporting period; (5) Hospital Harm—Falls with Injury eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; and (7) Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination. We are also proposing refinements to two measures currently in the Hospital IQR Program measure set: (1) Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; and (2) the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 payment determination. We are also proposing the removal of five measures: (1) Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI 04) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 27 payment determination ; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination and (5) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021–March 31, 2024 reporting period/FY 2026 payment determination.

We are proposing to modify eCQM data reporting and submission requirements by proposing a progressive increase in the number of mandatory eCQMs a hospital would be required to report on beginning with the CY 2026 reporting period/FY 2028 payment determination. We are also proposing two changes to current policies related to validation of hospital data: (1) to implement eCQM validation scoring based on the accuracy of eCQM data beginning with the validation of CY 2025 eCQM data affecting the FY 2028 payment determination; and (2) modification of the data validation reconsideration request requirements to make medical records submission optional for reconsideration requests beginning with CY 2023 discharges/FY 2026 payment determination.

h. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. In the FY 2025 IPPS/LTCH PPS proposed rule, we are proposing to adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year. We are also proposing to modify the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 program year. We are also proposing to move up the start date for publicly displaying hospital performance on the Hospital Commitment to Health Equity measure from July 2026 to January 2026 or as soon as feasible thereafter.

i. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

We are proposing the following changes to the LTCH QRP: (1) add four items to the LCDS beginning with the FY 2028 LTCH QRP; (2) modify one item on the LCDS beginning with the FY 2028 LTCH QRP; and (3) extend the admission assessment window for the LCDS beginning with the FY 2028 LTCH QRP. We are also seeking information on future measure concepts for the

LTCH QRP and a future LTCH Star Rating system.

j. Medicare Promoting Interoperability Program

In section X.F. of the preamble of this proposed rule, we are proposing several changes to the Medicare Promoting Interoperability Program. Specifically, we are proposing: (1) to separate the Antimicrobial Use and Resistance (AUR) Surveillance measure into two measures, an Antimicrobial Use (AU) Surveillance measure and an Antimicrobial Resistance (AR) Surveillance measure, beginning with the EHR reporting period in CY 2025; to add a new exclusion for eligible hospitals or critical access hospitals (CAHs) that do not have a data source containing the minimal discrete data elements that are required for AU or AR Surveillance reporting; to modify the applicability of the existing exclusions to either the AU or AR Surveillance measures, respectively; and to treat the AU and AR Surveillance measures as new measures with respect to active engagement beginning with the EHR reporting period in CY 2025; (2) to increase the performance-based scoring threshold for eligible hospitals and CAHs reporting under the Medicare Promoting Interoperability Program from 60 points to 80 points beginning with the EHR reporting period in CY 2025; (3) to adopt two new eCQMs that hospitals can select as one of their three self-selected eCQMs beginning with the CY 2026 reporting period: the Hospital Harm—Falls with Injury eCQM and the Hospital Harm—Postoperative Respiratory Failure eCQM; (4) beginning with the CY 2026 reporting period, to modify one eCQM, the Global Malnutrition Composite Score eCQM; and (5) to modify eCQM data reporting and submission requirements by proposing a progressive increase in the number of mandatory eCQMs eligible hospitals and CAHs would be required to report on beginning with the CY 2026 reporting period.

k. Proposed Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

In this proposed rule, we are including a proposal to implement section 4122 of the CAA, 2023. Section 4122(a) of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also referred to as slots) to hospitals. We refer readers to section V.F.2. of the preamble of this proposed rule for a summary of the provisions of section 4122 of the CAA, 2023 that we are proposing to implement in this proposed rule.

l. Extension of the Medicare-Dependent, Small Rural Hospital (MDH) Program and the Temporary Changes to the Low-Volume Hospital Payment Adjustment

The Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program and the temporary changes to the low-volume hospital qualifying criteria and payment adjustment under the IPPS for a portion of FY 2025. Specifically, section 306 of the CAA, 2024 further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) of the Act through December 31, 2024. Section 307 of the CAA, 2024 extended the MDH program under section 1886(d)(5)(G) of the Act through December 31, 2024. Prior to enactment of the CAA, 2024, the low-volume hospital qualifying criteria and payment adjustment were set revert to the statutory requirements that were in effect prior to FY 2011 at the end of FY 2024 and beginning October 1, 2024, the MDH program would have no longer been in effect.

We recognize the importance of these extensions with respect to the goal of advancing health equity by addressing the health disparities that underlie the health system is one of CMS' strategic pillars [1] and a Biden-Harris Administration priority.[2] These provisions are projected to increase payments to IPPS hospitals by approximately $137 million in FY 2025.

m. Transforming Episode Accountability Model (TEAM)

In section X.A. of the preamble of this proposed rule, we propose the Transforming Episode Accountability Model (TEAM). TEAM would be a 5-year mandatory model tested under the authority of section 1115A of the Act, beginning on January 1, 2026, and ending on December 31, 2030. The intent of TEAM is to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM would test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries.

Under Traditional Medicare, Medicare makes separate payments to providers and suppliers for the items and services furnished to a beneficiary over the course of an episode of care. Because providers and suppliers are paid for each individual item or service delivered, providers may not be incentivized to invest in quality improvement and care coordination activities. As a result, care may be fragmented, unnecessary, or duplicative. By holding hospitals accountable for all items and services provided during an episode, providers would be better incentivized to coordinate patient care, avoid duplicative or unnecessary services, and improve the beneficiary care experience during care transitions.

Under the TEAM proposals, all acute care hospitals, with limited exceptions, located within the Core-Based Statistical Areas that CMS selects for model implementation would be required to participate in TEAM. As proposed, TEAM would have a 1-year glide path opportunity that would allow TEAM participants to ease into full financial risk as well as different participation tracks to accommodate different levels of financial risk and reward. Episodes would include non-excluded Medicare Parts A and B items and services and would begin with an anchor hospitalization or anchor procedure and would end 30 days after hospital discharge. We are proposing that the following episode categories, when furnished by a TEAM participant, would initiate a TEAM Episode: lower extremity joint replacement, surgical hip femur fracture treatment, spinal fusion, coronary artery bypass graft, and major bowel procedure.

TEAM participants would continue to bill Medicare FFS as usual but would receive target prices for episodes prior to each performance year. Target prices would be based on 3 years of baseline data, prospectively trended forward to the relevant performance year, and calculated at the level of MS–DRG/HCPCS episode type and region. Target prices would also include a discount factor, normalization factor, and a risk-adjustment. Performance in the model would be assessed by comparing TEAM participants' actual Medicare FFS spending during a performance year to their reconciliation target price as well as by assessing performance on three quality measures. TEAM participants would earn a payment from CMS, subject to a quality performance

[1] *https://www.cms.gov/about-cms/what-we-do/cms-strategic-plan.*

[2] *https://www.whitehouse.gov/priorities/.*

adjustment, if their spending is below the reconciliation target price. TEAM participants would owe CMS a repayment amount, subject to a quality performance adjustment, if their spending was above the reconciliation target price.

n. Maternity Care Request for Information (RFI)

In alignment with our commitment to addressing the maternal health crisis, this RFI seeks to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients. To the extent that the resources required differ between patient populations, we also wish to gather information on the extent to which non-Medicare payers, or other commercial insurers may be using the IPPS as a basis for determining their payment rates for inpatient pregnancy and childbirth services and the effect, if any, that the use of the IPPS as a basis for determining payment by those payers may have on maternal health outcomes.

o. Obstetrical Services RFI

As a result of ongoing concerns about the provision of maternity care in Medicare and Medicaid certified hospitals, CAHS, and REHs, this proposed rule includes a request for information regarding our intent to propose baseline health and safety standards for obstetrical services in future rulemaking. Public comments on the FY 2023 IPPS/LTCH PPS proposed rule maternal health request for information recommended that CMS explore options to establish an Obstetrical Services condition of participation (CoP) for participating hospitals in collaboration with relevant stakeholders. With this RFI, we hope to further explore such options as we develop a proposal for a targeted Obstetrical Services CoP. We are seeking public comment on multiple detailed questions, ultimately seeking potential solutions that can be implemented through the hospital CoPs to address well-documented concerns regarding maternal morbidity, mortality, and access in the United States. The goal is to ensure that any policy changes improve maternal health care outcomes, addresses unjust disparities in care, and do not exacerbate access to care issues.

p. Conditions of Participation Requirements for Hospitals and Critical Access Hospitals To Report Acute Respiratory Illnesses

In section X.F. of the preamble of this proposed rule, we are proposing to update the hospital and CAH infection prevention and control and antibiotic stewardship programs conditions of participation (CoPs) to extend a limited subset of the current COVID–19 and influenza data reporting requirements. These proposed reporting requirements ensure that hospitals and CAHs have appropriate insight related to evolving infection control needs. Specifically, CMS is proposing to replace the COVID–19 and Seasonal Influenza reporting standards for hospitals and CAHs with a new standard addressing acute respiratory illnesses to require that, beginning on October 1, 2024, hospitals and CAHs would have to electronically report information about COVID–19, influenza, and RSV. CMS is proposing that outside of a public health emergency (PHE), hospitals and CAHs would have to report these data on a weekly basis.

q. Proposed Changes to the Severity Level Designation for Z Codes Describing Inadequate Housing and Housing Instability

As discussed in section II.C. of the preamble of this proposed rule, we are proposing to change the severity level designation for the social determinants of health (SDOH) diagnosis codes describing inadequate housing and housing instability from non-complication or comorbidity (NonCC) to complication or comorbidity (CC) for FY 2025. Consistent with our annual updates to account for changes in resource consumption, treatment patterns, and the clinical characteristics of patients, CMS is recognizing inadequate housing and housing instability as indicators of increased resource utilization in the acute inpatient hospital setting.

Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' [1] we also continue to be interested in receiving feedback on how we might further foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.2. of the preamble of this proposed rule.

BILLING CODE 4120–01–P

[1] *Available at* 86 FR 7009 (January 25, 2021) (*https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government*).

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Proposed Continuation of the Low Wage Index Hospital Policy	We are proposing to continue the low wage index hospital policy and the related budget neutrality adjustment for at least 3 years beginning in FY 2025.
Proposed Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines	We are proposing to make an IPPS payment adjustment for the additional resource costs that small, independent hospitals incur in establishing and maintaining access to a 6-month buffer stock of one or more essential medicine(s) beginning in FY 2025. This proposed payment adjustment would not be budget neutral. We estimate that 493 hospitals would qualify under our proposal. We estimate that the cost to those hospitals to establish buffer stocks of essential medicines would, in aggregate summed across all 493 hospitals, be approximately $2.8 million. Under our proposal, Medicare would pay its share of those costs (approximately 11 percent of that amount, or $0.3 million).
Uncompensated Care Payments	For FY 2025, we are proposing to update our estimates of the three factors used to determine uncompensated care payments. We are proposing to continue using uninsured estimates produced by OACT as part of the development of the NHEA in the calculation of Factor 2. As provided in the regulation at § 412.106(g)(1)(iii)(C)(*11*), for FY 2025, we are proposing to use the 3 most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals.
Proposed Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, acute care hospitals are estimated to experience an increase of approximately $3.2 billion in FY 2025, primarily driven by the changes in FY 2025 operating payments and capital payments and the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program on January 1, 2025.
Proposed Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, based on the best available data for the 330 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we present in the preamble of and Addendum of this proposed rule, which reflect the proposed update to the LTCH PPS standard Federal payment rate for FY 2025, would result in an estimated increase in payments in FY 2025 of approximately $41 million.
Proposed Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)	Section 4122(a) of the CAA, 2023 amended section 1886(h) of the Act by adding a new paragraph 1886(h)(10) requiring the distribution of additional residency positions (also referred to as slots) to hospitals. We refer readers to section V.J.2. of this proposed rule for a summary of the provisions of section 4122 that we are proposing to implement in this proposed rule. We estimate that the proposal we present in the preamble of this proposed rule to implement section 4122 of the CAA, 2023 would result in an estimated cost of approximately $10 million for FY 2026.
Changes to the Value-Based Incentive Payments under the Hospital VBP Program	We estimate that there would be no net financial impact to the Hospital VBP Program for the FY 2025 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2025 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2025 discharges is approximately $1.7 billion.
Changes to the Hospital IQR Program	Across 3,050 IPPS hospitals, we estimate that our proposed changes for the Hospital IQR Program would result in a total information collection burden increase of 40,019 hours at a cost increase of $1,274,980 associated with our proposed policies across a 3-year period from the CY 2025 reporting period/FY 2027 payment determination through the CY 2027 reporting period/FY 2029 payment determination.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Changes to the PCHQR Program	Across 11 PCHs, we estimate that our proposed changes for the PCHQR Program would result in a total information collection burden increase of 166 hours at a cost increase of $4,047 beginning with the CY 2025 reporting period/FY 2027 program year.
Changes to the LTCH QRP	Across 329 LTCHs, we estimate that our proposed changes for the LTCH QRP would result in a total information collection burden increase of 116.55 hours associated with our policies and updated burden estimates and a total cost increase of approximately $138,231.88 for the FY 2028 LTCH QRP.
Changes to the Medicare Promoting Interoperability Program	Across 4,550 eligible hospitals and CAHs, we estimate that our proposed changes for the Medicare Promoting Interoperability Program would result in an increase of 5,038 hours at a cost increase of $262,581 to the information collection burden for the EHR reporting period in CY 2027 and subsequent years.
Transforming Episode Accountability Model (TEAM)	We estimate that testing TEAM would result in saving the Medicare program $705 million across the 5 performance years.
CoP Requirements for Hospitals and CAHs to Report Acute Respiratory Illnesses	Across 6,384 hospitals and CAHs, we estimate that our proposed changes would result in 248,976 hours and a total cost of $19,420,128 for the weekly reporting, which is $3,042 per facility yearly. We estimate for PHE reporting, if declared by the secretary, Low to high hours range 1,005,480 to 3,495,240 and total cost ranging from $ 78,427,440 to S 272,628,720 depending on the frequency of reporting required.
Proposed Changes for the Add-On Payments for New Services and Technologies	As discussed in Appendix A of this proposed rule, we are proposing to change the April 1 cutoff to October 1 for determining whether a technology would be within its 2- to 3-year newness period. If we determine that all 10 of the FY 2025 new technology add-on payment applications that have been FDA-approved or cleared since the start of FY 2024 meet the specified criteria for new technology add-on payments and if we determine that none of these for technologies would be substantially similar to those technologies that were first approved for new technology add-on payments prior to FY 2025, based on preliminary information from the applicants at the time of this proposed rule, this proposal would increase IPPS spending by approximately $380 million in FY 2027. We are also proposing to no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment. We note that the cost impact of this proposal is not estimable. We expect that some applicants who were ineligible to apply in FY 2025 may apply for new technology add-on payments for FY 2026. Finally, we are proposing, for certain gene therapies for the treatment of sickle cell disease, we will temporarily increase the new technology add-on payment percentage to 75 percent. We note that it is premature to estimate the potential payment impact for FY 2025 because we have not yet determined whether any gene therapy indicated and used specifically for the treatment of SCD will meet the specified criteria for new technology add-on payments for FY 2025.

BILLING CODE 4120–01–C

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for an additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

With the recent enactment of section 307 of the CAA, 2024, under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through December 31, 2024. For discharges occurring on or after October 1, 2007, but before January 1, 2025, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 307 of the CAA, 2024 extended the MDH program through the first quarter of FY 2025 only, beginning on January 1, 2025, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond December 31, 2024, beginning January 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin

Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413. Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved GME program receive an additional payment for each Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to non-teaching hospitals. The additional payment is based on the indirect medical education (IME) adjustment factor, which is calculated using a hospital's ratio of residents to beds and a multiplier, which is set by Congress. Section 1886(d)(5)(B)(ii)(XII) of the Act provides that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. The regulations regarding the indirect medical education (IME) adjustment are located at 42 CFR 412.105.

C. Summary of Provisions of Recent Legislation That Would Be Implemented in This Proposed Rule

1. The Consolidated Appropriations Act, 2023 (CAA 2023; Pub. L. 117–328)

Section 4122 of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also referred to as slots) to hospitals. Section 1886(h)(10)(A) of the Act requires that for FY 2026, the Secretary shall initiate an application round to distribute 200 residency positions. At least 100 of the positions made available under section 1886(h)(10)(A) of the Act shall be distributed for psychiatry or psychiatry subspecialty residency training programs. The Secretary is required, subject to certain provisions in the law, to increase the otherwise applicable resident limit for each qualifying hospital that submits a timely application by the number of positions that may be approved by the Secretary for that hospital. The Secretary is required to notify hospitals of the number of positions distributed to them by January 31, 2026, and the increase is effective beginning July 1, 2026.

In determining the qualifying hospitals for which an increase is provided, section 1886(h)(10)(B)(i) of the Act requires the Secretary to take into account the ''demonstrated likelihood'' of the hospital filling the positions made available within the first 5 training years beginning after the date the increase would be effective, as determined by the Secretary.

Section 1886(h)(10)(B)(ii) of the Act requires a minimum distribution for certain categories of hospitals. Specifically, the Secretary is required to distribute at least 10 percent of the aggregate number of total residency positions available to each of four categories of hospitals. Stated briefly, and discussed in greater detail later in this proposed rule, the categories are as follows: (1) hospitals located in rural areas or that are treated as being located in a rural area (pursuant to sections 1886(d)(2)(D) and 1886(d)(8)(E) of the Act); (2) hospitals in which the reference resident level of the hospital is greater than the otherwise applicable resident limit; (3) hospitals in States with new medical schools or additional locations and branches of existing medical schools; and (4) hospitals that serve areas designated as Health Professional Shortage Areas (HPSAs). Section 1886(h)(10)(F)(iii) of the Act defines a qualifying hospital as a hospital in one of these four categories.

Section 1886(h)(10)(B)(iii) of the Act further requires that each qualifying hospital that submits a timely application receive at least 1 (or a fraction of 1) of the residency positions made available under section 1886(h)(10) of the Act before any qualifying hospital receives more than 1 residency position.

Section 1886(h)(10)(C) of the Act places certain limitations on the distribution of the residency positions.

First, a hospital may not receive more than 10 additional full-time equivalent (FTE) residency positions. Second, no increase in the otherwise applicable resident limit of a hospital may be made unless the hospital agrees to increase the total number of FTE residency positions under the approved medical residency training program of the hospital by the number of positions made available to that hospital. Third, if a hospital that receives an increase to its otherwise applicable resident limit under section 1886(h)(10) of the Act is eligible for an increase to its otherwise applicable resident limit under 42 CFR 413.79(e)(3) (or any successor regulation), that hospital must ensure that residency positions received under section 1886(h)(10) of the Act are used to expand an existing residency training program and not for participation in a new residency training program.

2. The Consolidated Appropriations Act, 2024 (CAA, 2024; Pub. L. 118–42)

Section 306 of the CAA, 2024 extended through the first 3 months of FY 2025 the modified definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals in effect for FYs 2019 through 2024. Specifically, under section 1886(d)(12)(C)(i) of the Act, as amended, for FYs 2019 through 2024 and the portion of FY 2025 occurring before January 1, 2025, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through December 31, 2024, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

Section 307 of the CAA, 2024 amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to provide for an extension of the MDH program through the first 3 months of FY 2025 (that is, through December 31, 2024).

D. Summary of the Proposed Provisions

In this proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2025 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2025.

The following is a general summary of the changes that we are proposing to make in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2025.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2025 status of new technologies approved for add-on payments for FY 2024, a presentation of our evaluation and analysis of the FY 2025 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) Pub. L. 108–173, obtained in a town hall meeting for applications not submitted under an alternative pathway), and a discussion of the proposed status of FY 2025 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.
- A proposal to change the April 1 cutoff to October 1 for determining whether a technology would be within its 2- to 3-year newness period when considering eligibility for new technology add-on payments, beginning in FY 2026, effective for those technologies that are approved for new technology add-on payments starting in FY 2025 or a subsequent years (as discussed in II.E.7. of the preamble of this proposed rule).
- A proposal that, beginning with new technology add-on payment applications for FY 2026, we will no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment (as discussed in section II.E.8. of the preamble of this proposed rule).
- A proposal that, subject to our review of the new technology add-on payment eligibility criteria, for certain gene therapies approved for new technology add-on payments in the FY 2025 IPPS/LTCH final rule for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024, and concluding at the end of the 2- to 3-year newness period for such therapy, we will temporarily increase the new technology add-on payment percentage to 75 percent (as discussed in section II.E.9. of the preamble of this proposed rule).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of this proposed rule, we propose revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- Proposed changes in CBSAs as a result of new OMB labor market area delineations and proposed policies related to the proposed changes in CBSAs.
- The proposed FY 2025 wage index update using wage data from cost reporting periods beginning in FY 2019.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2025 based on the 2022 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and continuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2025 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for the FY 2025 wage index.

3. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2025

In section IV. of the preamble of this proposed rule, we discuss the following:

- Proposed calculation of Factor 1 and Factor 2 of the uncompensated care payment methodology.
- Proposed methodological approach for determining Factor 3 of the uncompensated care payment for FY 2025, which is the same methodology that was used for FY 2024.
- Proposed methodological approach for determining the amount of interim uncompensated care payments using the average of the most recent 3 years of discharge data.

4. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2025.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status and clarification of the qualification under the discharge criterion for osteopathic hospitals.
- Proposed implementation of the statutory extension of the temporary changes to the low-volume hospital payment adjustment through December 31, 2024, the statutory expiration beginning January 1, 2025, and the proposed payment adjustments for low-volume hospitals for FY 2025.
- Proposed implementation of the statutory extension of the MDH program through December 31, 2024, and the statutory expiration beginning January 1, 2025.
- A proposal to implement a provision of the Consolidated Appropriations Act relating to payments to hospitals for GME and IME costs, proposed direct graduate medical education (GME) and indirect medical education (IME) policy modifications to the criteria for new residency programs; technical fixes to the DGME regulations; a notice of closure of two teaching hospitals and opportunities to apply for available slots and a reminder of core-based statistical area (CBSA) changes and application to GME policies;.
- Proposed nursing and allied health education program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CY 2023.
- Proposed update to the payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

Proposed separate IPPS payment for establishing and maintaining access to essential medicines.

- Updating the proposed estimate of the financial impacts for the FY 2025 Hospital Readmissions Reduction Program.
- Proposed modifications to the scoring of the Person and Community Engagement Domain in the Hospital VBP Program.

++ For the FY 2027 through FY 2029 program years to only score on six unchanged dimensions of the HCAHPS Survey.

++ Beginning with the FY 2030 program year to account for the proposed updated HCAHPS Survey.

- Updating the proposed estimate of the financial impacts for the FY 2025 Hospital-Acquired Conditions Reduction Program.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2025.

5. Proposed FY 2025 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble of the proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2025.

6. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of the proposed rule, we discuss the following:

- Proposed changes to payments to certain excluded hospitals for FY 2025.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

7. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of the proposed rule, we propose to rebase and revise the LTCH market basket to reflect a 2022 base year, which includes a proposed update to the LTCH PPS labor-related share. In section VIII. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2025. We are also proposing a technical clarification to the regulations for hospitals seeking to be classified as an LTCH.

8. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed the following:

- Solicitation of comment on adopting measures across the hospital quality reporting and value-based purchasing programs which capture more forms of unplanned post-acute care and encourage hospitals to improve discharge processes.
- Proposed changes to the requirements for the Hospital IQR Program.
- Proposed changes to the requirements for the PCHQR Program.
- Proposed adoption of the Patient Safety Structural measure in the Hospital IQR Program and the PCHQR Program.
- Proposed updated HCAHPS Survey measure in the Hospital IQR Program, PCHQR Program, and Hospital VBP Program.
- Proposed changes to the requirements for the Long-Term Care Hospital Quality Reporting Program (LTCH QRP), and request for information on future measure concepts for the LTCH QRP and a star rating system for the LTCH QRP.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

9. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section X. of the preamble of the proposed rule includes the following:

- Proposed implementation of TEAM that would test whether an episode-based pricing methodology linked with accountability for quality measure performance for select acute care hospitals reduces Medicare program expenditures while preserving or improving the quality of care for Medicare beneficiaries.
- Proposed changes to permit a Provider Reimbursement Review Board (PRRB) member to serve up to 3 consecutive terms (9 consecutive years total), and up to 4 consecutive terms (12 consecutive years total) in cases where a PRRB Member who, in their second or third consecutive term, is designated as Chairperson, to continue serving as Chairperson in the fourth consecutive term.
- Solicitation of comments to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients.
- Solicitation of comments to gather information on potential solutions that can be implemented through the hospital CoPs to address well-documented concerns regarding maternal morbidity, mortality, disparities, and maternity care access in the United States.
- Proposal to remove the exclusion of Puerto Rico from the Payment Error Rate Measurement (PERM) program found at 42 CFR 431.954(b)(3).
- Proposal for a new hospital CoP to replace the COVID–19 and Seasonal Influenza reporting standards for hospitals and CAHs that were created during PHE.

10. Other Provisions of the Proposed Rule

Section XI.A. of the preamble of the proposed rule includes our discussion of the MedPAC Recommendations.

Section XI.B. of the preamble of the proposed rule includes a descriptive listing of the public use files associated with this proposed rule.

Section XII. of the preamble of the proposed rule includes the collection of information requirements for entities based on our proposals.

Section XIII. of the preamble of the proposed rule includes information regarding our responses to public comments.

11. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2025 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We are proposing to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum of the proposed rule, we address the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2025 for certain hospitals excluded from the IPPS.

12. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2025 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2025. We are proposing to establish the adjustments for the wage index (including proposed changes to the LTCH PPS labor market area delineations based on the new OMB delineations), labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

13. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs and other entities.

14. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2025 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

15. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2024 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2024 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov.*

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2024 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085; 83 FR 41158 through 41258; 84 FR 42058 through 42165; 85 FR 58445 through 58596; 86 FR 44795 through 44961; 87 FR 48800 through 48891; and 88 FR 58654 through 58787, respectively).

For discussion regarding our previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48799 through 48800).

C. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2025 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding

System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for Proposed FY 2025 MS–DRG Updates

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28127) and final rule (87 FR 48800 through 48801), beginning with FY 2024 MS–DRG classification change requests, we changed the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. We also described the new process for submitting requested changes to the MS–DRGs via a new electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), accessed at *https://mearis.cms.gov.* We stated that effective with FY 2024 MS–DRG classification change requests, CMS will only accept requests submitted via MEARIS™ and will no longer consider requests sent via email. Additionally, we noted that within MEARIS™, we have built in several resources to support users, including a ''Resources'' section available at *https://mearis.cms.gov/public/resources* with technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'', also at the bottom of the MEARIS™ site. Accordingly, interested parties had to submit MS–DRG classification change requests for FY 2025 by October 20, 2023.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the request for MS–DRG classification changes to CMS. The aforementioned burden is subject to the Paperwork Reduction Act (PRA) of 1995 and approved under OMB control number 0938–1431 and has an expiration date of 09/30/2025.

Interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2026 consideration by October 20, 2024 via MEARIS™ at: *https://mearis.cms.gov/public/home.*

As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking.

We received four requests to modify the GROUPER logic in a number of cardiac MS–DRGs under Major Diagnostic Category (MDC) 05 (Diseases and Disorders of the Circulatory System). Specifically, we received requests to—

- Modify the GROUPER logic of new MS–DRG 212 (Concomitant Aortic and Mitral Valve Procedures) to be defined by cases reporting procedure codes describing a single open mitral or aortic valve replacement/repair (MVR or AVR) procedure, plus an open coronary artery bypass graft procedure (CABG) or open surgical ablation or cardiac catheterization procedure plus a second concomitant procedure.
- Modify the GROUPER logic of new MS–DRG 212 by redefining the procedure code list that describes the performance of a cardiac catheterization by either removing the ICD–10–PCS codes that describe plain radiography of coronary artery codes from the logic list or adding ICD–10–PCS procedure codes that involve computed tomography (CT) or magnetic resonance imaging (MRI) scanning using contrast to the list. This requestor also suggested that CMS add ICD–10–PCS procedures codes that describe endovascular valve replacement or repair procedures into the GROUPER logic of MS–DRG 212.
- Modify the GROUPER logic of new MS–DRGs 323, 324 and 325 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC, without MCC, and without Intraluminal Device, respectively). In two separate but related requests, the requestors suggested that we add procedure codes that describe additional percutaneous coronary intervention (PCI) procedures such as percutaneous coronary rotational, laser, and orbital atherectomy to the GROUPER logic of new MS–DRGs 323, 324, and 325.

We appreciate the submissions and related analyses provided by the requestors for our consideration as we review MS–DRG classification change requests for FY 2025; however, we note the complexity of the GROUPER logic for these MS–DRGs in connection with these requests requires more extensive analyses to identify and evaluate all of the data relevant to assessing these potential modifications. Specifically, we note the list of procedure codes that describe the performance of a cardiac catheterization is in the definition of multiple MS–DRGs in MDC 05. Analyzing the impact of revising this list necessitates evaluating the impact across numerous other MS–DRGs in MDC 05 that also include this list in their definition, in addition to new MS–DRG 212. Secondly, as discussed further in section II.C.4.c of this proposed rule, our analysis continues to indicate that, when performed, open cardiac valve replacement and supplement procedures are clinically different from endovascular cardiac valve replacement and supplement procedures in terms of technical complexity and hospital resource use. Lastly, as we have stated in prior rule making (88 FR 58708), atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. Additional analysis to assess for unintended consequences across the classification is needed as we have made a distinction between the root operations used to describe atherectomy (Extirpation) and the root operation used to describe lithotripsy (Fragmentation) in evaluating other requests in rulemaking. We will need to consider the application of these two root operations in other scenarios where we have also specifically stated that Extirpation is not the same as Fragmentation and do not warrant similar MS–DRG assignment (85 FR 58572 through 58573). Furthermore, as MS–DRG 212 and MS–DRGs 323, 324 and 325 recently became effective on October 1, 2023 (FY 2024), we believe additional time is needed to review and evaluate extensive modifications to the structure of these MS–DRGs.

We will continue to monitor the data as we consider these issues in connection with future rulemaking. As we continue the analysis of the claims data with respect to MS–DRGs in MDC 05, we welcome public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. Feedback and other suggestions may be directed to MEARIS™ at: *https://mearis.cms.gov/public/home.* As noted, interested parties should submit any MS–DRG classification change requests, including any comments and suggestions for FY 2026 consideration by October 20, 2024 via MEARIS™ at: *https://mearis.cms.gov/public/home.*

As we did for the FY 2024 IPPS/LTCH PPS proposed rule, for this FY 2025

IPPS/LTCH PPS proposed rule we are providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 42, so that the public can better analyze and understand the impact of the proposals included in this proposed rule. We note that this test software reflects the proposed GROUPER logic for FY 2025. Therefore, it includes the new diagnosis and procedure codes that are effective for FY 2025 as reflected in Table 6A.—New Diagnosis Codes—FY 2025 and Table 6B.—New Procedure Codes—FY 2025 associated with this proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2025 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2025, and Table 6D.—Invalid Procedure Codes—FY 2025 associated with this proposed rule. These tables are not published in the Addendum to this proposed rule, but are available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this proposed rule. Because the diagnosis codes no longer valid for FY 2025 are not reflected in the test software, we are making available a supplemental file in Table 6P.1a and 6P.1b that includes the mapped Version 42 FY 2025 ICD–10–CM and ICD–10–PCS codes and the deleted Version 41 FY 2024 ICD–10–CM codes and V41.1 ICD–10–PCS codes that should be used for testing purposes with users' available claims data. Therefore, users will have access to the test software allowing them to build case examples that reflect the proposals included in this proposed rule. In addition, users will be able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 42.

We also note that in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58764), we stated that, as discussed in the CY 2024 Outpatient Prospective Payment System and Ambulatory Surgical Center (OPPS/ASC) proposed rule (CY 2024 OPPS/ASC proposed rule) (88 FR 49552, July 31, 2023), consistent with the process that is used for updates to the ''Integrated'' Outpatient Code Editor (I/OCE) and other Medicare claims editing systems, we proposed to address any future revisions to the IPPS Medicare Code Editor (MCE), including any additions or deletions of claims edits, as well as the addition or deletion of ICD–10 diagnosis and procedure codes to the applicable MCE edit code lists, outside of the annual IPPS rulemakings. As discussed in the CY 2024 OPPS/ASC proposed rule, we proposed to remove discussion of the IPPS MCE from the annual IPPS rulemakings, beginning with the FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the Medicare administrative contractors (MACs). We encouraged readers to review the discussion in the CY 2024 OPPS/ASC proposed rule and submit comments in response to the proposal by the applicable deadline by following the instructions provided in that proposed rule.

In the CY 2024 OPPS/ASC final rule (88 FR 82121 through 82124), after consideration of the public comments we received, we finalized the proposal to remove discussion of the MCE from the annual IPPS rulemakings, beginning with FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the MACs. Beginning with FY 2025, in association with the annual proposed rule, we are making available a draft version of the Definitions of Medicare Code Edits (MCE) Manual to provide the public with an opportunity to review any changes that will become effective October 1 for the upcoming fiscal year. In addition, as a result of new and modified code updates approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, any further changes to the MCE will be reflected in the finalized Definitions of Medicare Code Edits (MCE) Manual, made available in association with the annual final rule. We are making available the draft FY 2025 ICD–10 MCE Version 42 Manual file on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.*

The MCE manual is comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and *Chapter 2: Code list changes* summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. The public may submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at *MSDRGClassificationChange@cms.hhs.gov* for our review and consideration.

The test version of the ICD–10 MS–DRG GROUPER Software, Version 42, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 42, the draft version of the Definitions of Medicare Code Edits Manual, Version 42, and the supplemental mapping files in Table 6P.1a and 6P.1b of the FY 2024 and FY 2025 ICD–10–CM diagnosis and ICD–10–PCS procedure codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

Following are the changes that we are proposing to the MS–DRGs for FY 2025. We are inviting public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in this proposed rule. In some cases, we are proposing changes to the MS–DRG classifications based on our analysis of claims data and clinical appropriateness. In other cases, we are proposing to maintain the existing MS–DRG classifications based on our analysis of claims data and clinical appropriateness. For this FY 2025 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2023 update of the FY 2023 MedPAR file, which contains hospital bills received from October 1, 2022 through September 30, 2023. In our discussion of the proposed MS–DRG reclassification changes, we refer to these claims data as the ''September 2023 update of the FY 2023 MedPAR file.''

In deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on clinical factors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication

or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798), we finalized a delay in applying this technical criterion to existing MS–DRGs until FY 2023 or future rulemaking, in light of the public health emergency (PHE). Interested parties recommended that a complete analysis of the MS–DRG changes to be proposed for future rulemaking in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, the impact to the relative weights, payment rates, and hospital case mix to allow meaningful comment prior to implementation.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48803), we also finalized a delay in application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split in light of the ongoing PHE and until such time additional analyses can be performed to assess impacts, as discussed in response to public comments in the FY 2022 and FY 2023 IPPS/LTCH PPS final rules.

In association with our discussion of application of the NonCC subgroup criteria in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26673 through 26676), we provided an alternate test version of the ICD–10 MS–DRG GROUPER Software, Version 41.A, reflecting the proposed GROUPER logic for FY 2024 as modified by the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split, available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.* Therefore, users had access to the alternate test software allowing them to build case examples that reflect the proposals included in the proposed rule with application of the NonCC subgroup criteria. We also provided additional files including an alternate Table 5—Alternate List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay, an alternate Length of Stay (LOS) Statistics file, an alternate Case Mix Index (CMI) file, and an alternate After Outliers Removed and Before Outliers Removed (AOR_BOR) file. The files are available in association with the FY 2024 IPPS/LTCH PPS proposed rule on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.*

We stated that the alternate test software and additional files were made available so that the public could better analyze and understand the impact on the proposals included in the proposed rule if the NonCC subgroup criteria were to be applied to existing MS–DRGs with a three-way severity level split. We refer readers to the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26673 through 26676) for further discussion of the alternate test software and additional files that were made available.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58655 through 58661), we finalized to delay the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2024. We stated that we would continue to review and consider the feedback we had received in response to the additional information we made available in association with the FY 2024 IPPS/LTCH PPS proposed rule for our development of the FY 2025 proposed rule.

We note that the IPPS Payment Impact File made available in connection with our annual IPPS rulemakings includes information used to categorize hospitals by various geographic and special payment consideration groups, including geographic location (urban or rural), teaching hospital status (that is, whether or not a hospital has GME residency programs and receives an IME adjustment), DSH hospital status (that is, whether or not a hospital receives Medicare DSH payments), special payment groups (that is, SCHs, MDHs, and RRCs) and other categories reflected in the impact analysis generally shown in Appendix A of the annual IPPS rulemakings. The IPPS Payment Impact File associated with the FY 2024 IPPS/LTCH PPS final rule can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2024-ipps-final-rule-home-page#Data.*

We are proposing to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2025, as we continue to consider the public comments received in response to the FY 2024 rulemaking. We encourage interested parties to review the impacts and other information made available with the alternate test software (V41.A) and other additional files provided in connection with the FY 2024 IPPS/LTCH PPS proposed rule, as previously discussed, and we continue to welcome feedback for consideration for future rulemaking.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661), we continue to apply the criteria to create subgroups, including application of the NonCC subgroup criteria, in our annual analysis of MS–DRG classification requests, consistent with our approach since FY 2021 when we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. Accordingly, in our analysis of the MS–DRG classification requests for FY 2025 that we received by October 20, 2023, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria Number	Three-Way Split 123 (MCC vs CC vs NonCC)	Two-Way Split 1_23 MCC vs (CC+NonCC)	Two-Way Split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+ CC) group and NonCC group
4. There is at least a $2,000 difference in average cost between subgroups	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group	$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	R2 > 3.0 for the three-way split within the base MS-DRG	R2 > 3.0 for the two-way 1_23 split within the base MS-DRG	R2 > 3.0 for the two-way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for this FY 2025 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2023 update of the FY 2023 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent 2 years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria is satisfied for a three-way split. In applying the criteria for a three-way split, a base MS–DRG is initially subdivided into the three subgroups: MCC, CC, and NonCC. Each subgroup is then analyzed in relation to the other two subgroups using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. In applying the criteria for a two-way split, a base MS–DRG is initially subdivided into two subgroups: ''with MCC'' and ''without MCC'' (1_23) or ''with CC/MCC'' and ''without CC/MCC'' (12_3). Each subgroup is then analyzed in relation to the other using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits; however, we do not also evaluate the criteria for a three-way split.

2. Pre-MDC MS–DRG 018 Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies

We received a request to revise the title of Pre-MDC MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies) in connection with an ICD–10–PCS procedure code request that was submitted via MEARIS™ by the December 1, 2023 deadline for consideration as an agenda topic to be discussed at the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee meeting. The procedure code request involves the application of an autologous genetically engineered cell-based gene therapy, prademagene zamikeracel (PZ), that is indicated in the treatment of recessive dystrophic epidermolysis bullosa (RDEB), an extremely rare genetic disease of the skin that leads to large chronic wounds. The proposal was presented and discussed at the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at *https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal are due by April 19, 2024. The requestor suggested that if finalized, a new procedure code to identify the application of PZ should be assigned to Pre-MDC MS–DRG 018 and that the title for Pre-MDC MS–DRG 018 be revised to reflect ''Chimeric Antigen Receptor (CAR) T and Other Autologous Gene and Cell Therapies''.

Because the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as we have noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors

that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. Under this established process, the MS–DRG assignment for the upcoming fiscal year for any new diagnosis or procedure codes finalized after the March meeting would be reflected in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with the final rule for that fiscal year. Accordingly, the MS–DRG assignment for any new procedure codes describing PZ, if finalized following the March meeting, would be reflected in Table 6B.—New Procedure Codes associated with the final rule for FY 2025. As noted in prior rulemaking (87 FR 28135), the codes that are finalized after the March meeting are specifically identified with a footnote in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes that are made publicly available in association with the final rule on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.* The public may provide feedback on these finalized assignments, which is then taken into consideration for the following fiscal year.

We do not agree with the request to revise the title for Pre-MDC MS–DRG 018 for FY 2025 as requested because the logic for Pre-MDC MS–DRG 018 is intended to include other immunotherapies and is not restricted to CAR T-cell and autologous gene and cell therapies. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806), we finalized our proposal to revise the title of Pre-MDC MS–DRG 018 to include ''Other Immunotherapies'' to better reflect the cases reporting the administration of non-CAR T-cell therapies and other immunotherapies that would also be assigned to this MS–DRG, in addition to CAR T-cell therapies. We noted that the term ''Other Immunotherapies'' is intended to encompass the group of therapies that are currently available and being utilized today (for which codes have been created for reporting in response to industry requests or are being considered for implementation), and to enable appropriate MS–DRG assignment for any future therapies that may also fit into this category and are not specifically identified as a CAR T-cell product, that may become available (for example receive marketing authorization or a newly established procedure code in the ICD–10–PCS classification).

We also note, as discussed in prior rulemaking, that this category of therapies continues to evolve, and we are in the process of carefully considering the feedback we have previously received about ways in which we can continue to appropriately reflect resource utilization while maintaining clinical coherence and stability in the relative weights under the IPPS MS–DRGs. We appreciate the recommendations and suggestions for consideration we have received and will continue to examine these complex issues in connection with future rulemaking. We acknowledge that there may be distinctions to account for as we continue to gain more experience in the use of these therapies and have additional claims data to analyze. Therefore, we are not proposing to revise the title for Pre-MDC MS–DRG 018 to reflect ''Chimeric Antigen Receptor (CAR) T and Other Autologous Gene and Cell Therapies'' at this time and are proposing to maintain the existing title to Pre-MDC MS–DRG 018, ''Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies'' for FY 2025.

3. MDC 01 (Diseases and Disorders of the Nervous System)

a. Logic for MS–DRGs 023 Through 027

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661 through 58667), we discussed a request to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) to MS–DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC) or reassign all cases currently assigned to MS–DRG 023 that involve a craniectomy or a craniotomy with the insertion of device implant and create a new MS–DRG for these cases.

We stated the requestor acknowledged that the relatively low volume of cases that only involve the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain in the claims data was likely not sufficient to warrant the creation of a new MS–DRG. The requestor further stated given the limited options within the existing MS–DRG structure that fit from both a cost and clinical cohesiveness perspective, they believed that MS–DRG 021 was the most logical fit in terms of average costs and clinical coherence for reassignment even though, according to the requestor, the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain is technically more complex and involves a higher level of training, extreme precision and sophisticated technology than performing a craniectomy for hemorrhage.

We noted that while our data findings demonstrated the average costs are higher for the cases with a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain when compared to all cases in MS–DRG 023, these cases represented a small percentage of the total number of cases reported in this MS–DRG. We stated that while we appreciated the requestor's concerns regarding the differential in average costs for cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain when compared to all cases in their assigned MS–DRG, we believed additional time was needed to evaluate these cases as part of our ongoing examination of the case logic to the MS–DRGs for craniotomy and endovascular procedures, which are MS–DRG 023, MS–DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively).

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48808 through 48820), in connection with our analysis of cases reporting laser interstitial thermal therapy (LITT) procedures performed on the brain or brain stem in MDC 01, we stated we have started to examine the logic for case assignment to MS–DRGs 023 through 027 to determine where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to those MS–DRGs. We stated that specifically, we were in the process of evaluating procedures that are performed using an open craniotomy (where it is necessary to surgically remove a portion of the skull) versus a percutaneous burr hole

(where a hole approximately the size of a pencil is drilled) to obtain access to the brain in the performance of a procedure. We stated we were also reviewing the indications for these procedures, for example, malignant neoplasms versus epilepsy to consider if there may be merit in considering restructuring the current MS–DRGs to better recognize the clinical distinctions of these patient populations in the MS–DRGs.

As part of this evaluation, as discussed in the FY 2024 IPPS/LTCH PPS final rule, we have begun to analyze the ICD–10 coded claims data to determine if the patients' diagnoses, the objective of the procedure performed, the specific anatomical site where the procedure is performed or the surgical approach used (for example, open, percutaneous, percutaneous endoscopic, among others) demonstrates a greater severity of illness and/or increased treatment difficulty as we consider restructuring MS–DRGs 023 through 027, including how to better align the clinical indications with the performance of specific intracranial procedures. We referred the reader to Tables 6P.2b through 6P.2f associated with the FY 2024 IPPS/LTCH PPS proposed rule (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for data analysis findings of cases assigned to MS–DRGs 023 through 027 from the September 2022 update of the FY 2022 MedPAR file as we continue to look for patterns of complexity and resource intensity.

In summary, we stated that while we agreed that neurostimulator cases can have average costs that are higher than the average costs of all cases in their respective MS–DRGs, in our analysis of this issue, it was difficult to detect patterns of complexity and resource intensity. Therefore, for the reasons discussed, we finalized our proposal to maintain the current assignment of cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain for FY 2024.

In the FY 2024 IPPS/LTCH PPS final rule, we stated we continue to believe that additional time is needed to evaluate these cases as part of our ongoing examination of the case logic for MS–DRGs 023 through 027. As part of our ongoing, comprehensive analysis of the MS–DRGs under ICD–10, we stated we would continue to explore mechanisms to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped. We stated that the data analysis as displayed in Tables 6P.2b through 6P.2f associated with the FY 2024 IPPS/LTCH PPS proposed rule was displayed to provide the public an opportunity to review our examination of the procedures by their approach (open versus percutaneous), clinical indications, and procedures that involve the insertion or implantation of a device and to reflect on what factors should be considered in the potential restructuring of these MS–DRGs. We welcomed further feedback on how CMS should define technical complexity, what factors should be considered in the analysis, and whether there are other data not included in Tables 6P.2b through 6P.2f that CMS should analyze. We also stated we are interested in receiving feedback on where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to these MS–DRGs.

In response to this discussion in the FY 2024 IPPS/LTCH PPS final rule, we received two comments by the October 20, 2023 deadline. A commenter recommended that CMS not use surgical approach (for example, open versus percutaneous) as a factor to reclassify MS–DRGs 023 through 027. The commenter stated whether the opening is created via a drill into the skull percutaneously or through a larger incision in the skull for a craniotomy, both approaches involve the risk of intracranial bleeding, infection, and brain swelling. The commenter further stated they do not support a consideration of the reassignment of the ICD–10–PCS procedure codes describing LITT, currently assigned to MS–DRGs 025 through 027, based on the diagnosis being treated. The commenter stated that the LITT procedure requires the same steps, time, and clinical resources when performed for brain cancer or epilepsy. In the requestor's view, differences in the disease causing the tumors or lesions do not affect the resources used for performing the procedure or the post-operative care for the patient. Lastly, the commenter stated they support the current structure of MS–DRGs 023 and 024 based on an acute complicated principal diagnosis, or chemotherapy implant, or epilepsy with neurostimulator. The commenter stated these diagnoses represent severe complex conditions that require immediate and urgent intervention.

Another commenter stated that the current logic for MS–DRGs 023 through 027 is sufficient and supports the clinical and resource similarities of the procedures reflected in these MS–DRGs. The commenter performed its own analysis and stated they found that realignment based on surgical approach or root operation could create significant new inequities. The commenter recommended that CMS maintain the current logic for MS–DRGs 025 through 027, as making changes could be disruptive to hospitals and create challenges for Medicare beneficiary access to life-saving technologies. The commenter stated they strongly believe that maintaining the current structure provides payment stability and integrity of these procedures over time.

CMS appreciates the comments submitted in response to the request for feedback in the FY 2024 IPPS/LTCH PPS final rule. As we continue analysis of the claims data with respect to MS–DRGs 023 through 027, we continue to seek public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. As stated in prior rulemaking, we recognize the logic for MS–DRGs 023 through 027 has grown more complex over the years and believe there is opportunity for further refinement. We refer the reader to the ICD–10 MS–DRG Definitions Manual, Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 023 through 027. Feedback and other suggestions may continue to be directed to MEARIS™, discussed in section II.C.1.b. of the preamble of this proposed rule at: *https://mearis.cms.gov/public/home.*

b. Intraoperative Radiation Therapy (IORT)

We received a request to add ICD–10–PCS procedure codes D0Y0CZZ (Intraoperative radiation therapy (IORT) of brain) and D0Y1CZZ (Intraoperative radiation therapy (IORT) of brain stem), to the Chemotherapy Implant logic list in MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator). According to the requestor, intraoperative radiation therapy (IORT) for the brain is always performed as part of the surgery to remove a brain tumor during the same operative episode. The requestor stated that once maximal safe tumor resection is achieved, the tumor cavity is examined for active egress of cerebrospinal fluid or bleeding. Next,

intraoperative measurements are made using neuro-navigation or intraoperative imaging such as magnetic resonance imaging (MRI) or computed tomography (CT) to ensure safe distance to organs or tissues at risk, aid in appropriate dose calculation, and selection of proper applicator size. The applicator is then implanted into the tumor cavity and the radiation dose is delivered. The requestor stated that delivery time can be up to 40 minutes and upon completion of the treatment, the source is removed, and the cavity is re-inspected for active egress of cerebrospinal fluid and bleeding.

The requestor stated that currently the ICD–10–PCS procedure codes for excision of a brain tumor, 00B00ZZ (Excision of brain, open approach) and 00B70ZZ (Excision of cerebral hemisphere, open approach) map to both sets of craniotomy MS–DRGs. Specifically, MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) and MS–DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively). However, the requestor also stated that the procedure codes describing IORT (D0Y0CZZ or D0Y1CZZ) are not listed in the GROUPER logic and do not affect MS–DRG assignment. Therefore, cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT currently map to MS–DRGs 025, 026, and 027. The requestor suggested that cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT (D0Y0CZZ or D0Y1CZZ) should map to MS–DRG 023 because of the higher costs associated with the addition of IORT to the excision of brain tumor surgery. According to the requestor, MS–DRG 023 includes complicated craniotomy cases involving the placement of radiological sources and chemotherapy implants. The requestor stated that because IORT involves a full course of radiation therapy delivered directly to the tumor bed via an applicator that is implanted into the tumor cavity during the same surgical session and is clinically similar to two other procedures listed in the Chemotherapy Implant logic list, it should also be included in the Chemotherapy Implant logic list. Specifically, the requestor stated procedure code 00H004Z (Insertion of radioactive element, cesium-131 collagen implant into brain, open approach) and procedure code 3E0Q305 (Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach) also involve the delivery of either radiation or chemotherapy directly after tumor resection. According to the requestor, the resources involved in placing the delivery device are similar for all three procedures and the distinction is that the procedures described by codes 00H004Z and 3E0Q305 involve the insertion of devices that deliver radiation or chemotherapy over a period of time, whereas IORT delivers the entire dose of radiation during the operative session. As such, the requestor asserted that IORT is clinically aligned with the other procedures from a therapeutic and resource utilization perspective.

The requestor performed its own analysis using the FY 2022 MedPAR file that was made available in association with the FY 2024 IPPS/LTCH PPS final rule and stated it found fewer than 11 cases reporting IORT in MS–DRGs 025, 026, and 027, with the majority of those cases mapping to MS–DRG 025. According to the requestor, the volume of claims reporting IORT is anticipated to increase as appropriate use of the technology is adopted.

The requestor is correct that currently, the logic for case assignment to MS–DRG 023 includes a Chemotherapy Implant logic list and the procedure codes that identify IORT (D0Y0CZZ and D0Y1CZZ) are not listed in the GROUPER logic and do not affect MS–DRG assignment as the procedures are designated as non-O.R. procedures. The requestor is also correct that cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT currently map to MS–DRGs 025, 026, and 027. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic.

In review of this request, we analyzed claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRGs 023, 024, 025, 026, and 027 and for cases reporting excision of brain tumor and IORT. We identified claims reporting excision of brain tumor with procedure code 00B00ZZ or 00B70ZZ and identified claims reporting IORT with procedure code D0Y0CZZ or D0Y1CZZ. The findings from our analysis are shown in the following table. We note that there were no cases found to report IORT of brain (D0Y0CZZ) or brain stem (D0Y1CZZ) with excision of brain (00B00ZZ) or excision of cerebral hemisphere (00B70ZZ).

BILLING CODE 4120–01–P

MS-DRG		Number of cases	Average Length of Stay	Average Costs
23	All cases	11,439	10.3	$48,762
	Cases reporting excision of brain (00B00ZZ)	98	11.6	$61,938
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	242	10.7	$58,498
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	All other cases	11,099	10.3	$48,433
24	All cases	4,641	5.1	$33,784
	Cases reporting excision of brain (00B00ZZ)	6	5.7	$32,308
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	7	9.3	$34,707
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0		$0
	All other cases	4,628	5.1	$33,785
25	All cases	21,118	8.8	$37,822
	Cases reporting excision of brain (00B00ZZ)	1,676	8.8	$38,410
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	3,968	7.9	$33,904
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	All other cases	15,474	9.0	$38,763

26	All cases	5,882	4.5	$27,231
	Cases reporting excision of brain (00B00ZZ)	188	4.8	$26,093
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	418	4.2	$23,867
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	All other cases	5,276	4.5	$27,538
27	All cases	7,232	2	$22,136
	Cases reporting excision of brain (00B00ZZ)	161	2.9	$20,695
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	323	2.5	$21,039
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	$0
	All other cases	6,748	2.0	$22,223

BILLING CODE 4120–01–C

As the data show, there were no cases found to report the use of IORT in the performance of a brain tumor excision; therefore, we are unable to evaluate whether the use of IORT directly impacts resource utilization. For this reason, we are proposing to maintain the current structure of MS–DRGs 023, 024, 025, 026, and 027 for FY 2025. We will continue to monitor the claims data in consideration of any future modifications to the MS–DRGs for which IORT may be reported.

4. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Concomitant Left Atrial Appendage Closure and Cardiac Ablation

We received a request to create a new MS–DRG to better accommodate the costs of concomitant left atrial appendage closure and cardiac ablation for atrial fibrillation in MDC 05 (Diseases and Disorders of the Circulatory System). Atrial fibrillation (AF) is an irregular and often rapid heart rate that occurs when the two upper chambers of the heart experience chaotic electrical signals. AF presents as either paroxysmal (lasting <7 days), persistent (lasting >7 day, but less than 1 year), or long standing persistent (chronic) (lasting >1 year) based on time duration and can increase the risk for stroke, heart failure, and mortality. Management of AF has two primary goals: optimizing cardiac output through rhythm or rate control and decreasing the risk of cerebral and systemic thromboembolism. Among patients with AF, thrombus in the left atrial appendage (LAA) is a primary source for thromboembolism. Left Atrial Appendage Closure (LAAC) is a surgical or minimally invasive procedure to seal off the LAA to reduce the risk of embolic stroke.

According to the requestor, the manufacturer of the WATCHMAN™ Left Atrial Appendage Closure (LAAC) device, patients who are indicated for a LAAC device can also have symptomatic AF. For these patients, performing a cardiac ablation and LAAC procedure at the same time is ideal. Cardiac ablation is a procedure that works by burning or freezing tissue on the inside of the heart to disrupt faulty electrical signals causing the arrhythmia, which can help the heart maintain a normal heart rhythm. The requestor highlighted a recent study (Piccini et al. Left atrial appendage occlusion with the WATCHMAN™ FLX and concomitant catheter ablation procedures. Heart Rhythm Society Meeting 2023, May 19, 2023; New Orleans, LA.). According to the requestor, the results of this study indicate that when LAAC is performed concomitantly with cardiac ablation, the outcomes are comparable to patients who have undergone these procedures separately.

The requestor identified the following potential procedure code combination that would comprise a concomitant left atrial appendage closure and cardiac ablation procedure: ICD–10–PCS procedure code 02L73DK (Occlusion of left atrial appendage with intraluminal device, percutaneous approach), that identifies the WATCHMAN™ device, in combination with 02583ZZ (Destruction of conduction mechanism, percutaneous approach). The requestor performed its own analysis of this procedure code combination and stated that it found the average costs of cases reporting concomitant left atrial appendage closure and cardiac ablation procedures were consistently higher compared to the average costs of other cases within their respective MS–DRG, which it asserted could limit beneficiary access to these procedures. The requestor asserted that improved Medicare payment for providers who perform these procedures concomitantly would help Medicare patients to gain better access to these lifesaving and quality-improving services and decrease the risk of future readmissions and the need for future procedures.

We reviewed this request and noted concerns regarding making proposed MS–DRG changes based on a specific, single technology (the WATCHMAN™ Left Atrial Appendage Closure (LAAC) device) identified by only one unique procedure code versus considering proposed changes based on a group of related procedure codes that can be reported to describe the same type or class of technology, which is more consistent with the intent of the MS–DRGs. Therefore, in reviewing this request, we identified eight additional ICD–10–PCS procedure codes that describe LAAC procedures and included these codes in our analysis. The nine codes we identified are listed in the following table.

ICD-10-PCS Code	Description
02L70CK	Occlusion of left atrial appendage with extraluminal device, open approach
02L70DK	Occlusion of left atrial appendage with intraluminal device, open approach
02L70ZK	Occlusion of left atrial appendage, open approach
02L73CK	Occlusion of left atrial appendage with extraluminal device, percutaneous approach
02L73DK	Occlusion of left atrial Appendage with intraluminal device, percutaneous approach
02L73ZK	Occlusion of left atrial appendage, percutaneous approach
02L74CK	Occlusion of left atrial appendage with extraluminal device, percutaneous endoscopic approach
02L74DK	Occlusion of left atrial appendage with intraluminal device, percutaneous endoscopic approach
02L74ZK	Occlusion of left atrial appendage, percutaneous endoscopic approach

Similarly, as noted previously, the requestor identified code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) to describe cardiac ablation. In our review of the ICD–10–PCS classification, we identified 26 additional ICD–10–PCS codes that describe cardiac ablation that we also examined. The 27 codes we included in our analysis are listed in the following table.

ICD-10-PCS Code	Description
02540ZZ	Destruction of coronary vein, open approach
02543ZZ	Destruction of coronary vein, percutaneous approach
02544ZZ	Destruction of coronary vein, percutaneous endoscopic approach
02550ZZ	Destruction of atrial septum, open approach
02553ZZ	Destruction of atrial septum, percutaneous approach
02554ZZ	Destruction of atrial septum, percutaneous endoscopic approach
02560ZZ	Destruction of right atrium, open approach
02563ZZ	Destruction of right atrium, percutaneous approach
02564ZZ	Destruction of right atrium, percutaneous endoscopic approach
02570ZK	Destruction of left atrial appendage, open approach
02570ZZ	Destruction of left atrium, open approach
02573ZK	Destruction of left atrial appendage, percutaneous approach
02573ZZ	Destruction of left atrium, percutaneous approach
02574ZK	Destruction of left atrial appendage, percutaneous endoscopic approach
02574ZZ	Destruction of left atrium, percutaneous endoscopic approach
02580ZZ	Destruction of conduction mechanism, open approach
02583ZZ	Destruction of conduction mechanism, percutaneous approach
02584ZZ	Destruction of conduction mechanism, percutaneous endoscopic approach
02590ZZ	Destruction of chordae tendineae, open approach
02593ZZ	Destruction of chordae tendineae, percutaneous approach
02594ZZ	Destruction of chordae tendineae, percutaneous endoscopic approach
025S0ZZ	Destruction of right pulmonary vein, open approach
025S3ZZ	Destruction of right pulmonary vein, percutaneous approach
025S4ZZ	Destruction of right pulmonary vein, percutaneous endoscopic approach
025T0ZZ	Destruction of left pulmonary vein, open approach
025T3ZZ	Destruction of left pulmonary vein, percutaneous approach
025T4ZZ	Destruction of left pulmonary vein, percutaneous endoscopic approach

In the ICD–10 MS–DRGs Definitions Manual Version 41.1, for concomitant left atrial appendage closure and cardiac ablation procedures, the GROUPER logic assigns MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) depending on the presence of any additional MCC secondary diagnoses. We examined claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS–DRGs 273 and 274 and compared the results to cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation. Our findings are shown in the following table.

MS-DRGs 273 and 274: All Cases and Cases Reporting Concomitant Left Atrial Appendage Closure and Cardiac Ablation				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
273	All cases	7,250	5.4	$35,197
	Cases with a procedure code LAAC and a procedure code for cardiac ablation	80	5.8	$70,447
274	All Cases	47,801	1.4	$29,209
	Cases with a procedure code LAAC and a procedure code for cardiac ablation	781	1.5	$66,277

As shown in the table, in MS–DRG 273, we identified a total of 7,250 cases with an average length of stay of 5.4 days and average costs of $35,197. Of those 7,250 cases, there were 80 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 273 ($70,447 compared to $35,197) and a slightly longer average length of stay (5.8 days compared to 5.4 days). In MS–DRG 274, we identified a total of 47,801 cases with an average length of stay of 1.4 days and average costs of $29,209. Of those 47,801 cases, there were 781 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 274 ($66,277 compared to $29,209) and a slightly longer average length of stay (1.5 days compared to 1.4 days).

We reviewed these data and note, clinically, the management of AF by performing concomitant left atrial appendage closure and cardiac ablation can improve symptoms, prevent stroke, and reduce the risk of bleeding compared with oral anticoagulants. The data analysis clearly shows that cases reporting concomitant left atrial appendage closure and cardiac ablation procedures have higher average costs and slightly longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we are proposing to create a new MS–DRG for cases reporting a LAAC procedure and a cardiac ablation procedure.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 1,723 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation. We believe the resulting proposed MS–DRG assignment is more clinically homogeneous, coherent and better reflects hospital resource use.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Concomitant Left Atrial Appendage Closure and Cardiac Ablation	1,723	3.1	$54,629

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2025 IPPS/LTCH PPS proposed rule. As shown in the table that follows, a three-way split of the proposed new MS–DRGs failed the criterion that there be at least 500 cases for each subgroup due to low volume. Specifically, for the ''with MCC'' split, there were only 268 cases in the subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	268	6.9	$60,667
With CC	772	2.9	$47,479
Without CC/MCC	683	1.7	$60,340

We then applied the criteria for a two-way split for the ''with CC/MCC'' and ''without CC/MCC'' subgroups and found that the criterion that there be at least a 20% difference in average cost between subgroups could not be met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	1,040	3.9	$50,877
Without CC/MCC	683	1.7	$60,340

We also applied the criteria for a two-way split for the ''with MCC'' and ''without MCC'' subgroups and found that the criterion that there be at least 500 or more cases in each subgroup similarly could not be met. The criterion that there be at least a 20% difference in average costs between the subgroups also was not met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	268	6.9	$60,667
Without MCC	1,455	2.3	$53,516

Therefore, for FY 2025, we are not proposing to subdivide the proposed new MS–DRG for cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation into severity levels.

In summary, for FY 2025, taking into consideration that it clinically requires greater resources to perform concomitant left atrial appendage closure and cardiac ablation procedures, we are proposing to create a new base MS–DRG for cases reporting a LAAC procedure and a cardiac ablation procedure in MDC 05. The proposed new MS–DRG is proposed new MS–DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation). We are also proposing to include the nine ICD–10–PCS procedure codes that describe LAAC procedures and 27 ICD–10–PCS procedure codes that describe cardiac ablation listed previously in the logic for assignment of cases reporting a LAAC procedure and a cardiac ablation procedure for the proposed new MS–DRG. We note that discussion of the surgical hierarchy for the proposed modification is discussed in section II.C.15. of this proposed rule.

b. Neuromodulation Device Implant for Heart Failure (Barostim™ Baroreflex Activation Therapy)

The BAROSTIM™ system is the first neuromodulation device system designed to trigger the body's main cardiovascular reflex to target symptoms of heart failure. The system consists of an implantable pulse generator (IPG) that is implanted subcutaneously in the upper chest below the clavicle, a stimulation lead that is sutured to either the right or left carotid sinus to activate the baroreceptors in the wall of the carotid artery, and a wireless programmer system that is used to non-invasively program and adjust BAROSTIM™ therapy via telemetry. The BAROSTIM™ system is indicated for the improvement of symptoms of heart failure in a subset of patients with symptomatic New York Heart Association (NYHA) Class III or Class II (who had a recent history of Class III) heart failure, with a low left ventricular ejection fraction, who also do not benefit from guideline directed pharmacologic therapy or qualify for Cardiac Resynchronization Therapy (CRT). The BAROSTIM™ system was approved for new technology add-on payments for FY 2021 (85 FR 58716 through 58717) and FY 2022 (86 FR 44974). The new technology add-on payment was subsequently discontinued effective FY 2023 (87 FR 48916).

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48837 through 48843), we discussed a request we received to reassign the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM™ system from MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without MCC respectively) to MS–DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively). The requestor stated that the subset of patients that have an indication for the implantation of a BAROSTIM™ system also have indications for the implantation of Implantable Cardioverter Defibrillators (ICD), Cardiac Resynchronization Therapy Defibrillators (CRT–D) and/or Cardiac Contractility Modulation (CCM) devices, all of which also require the permanent implantation of a programmable, electrical pulse generator and at least one electrical lead. The requestor further stated that the average resource utilization required to implant the BAROSTIM™ system demonstrates a significant disparity compared to all procedures within MS–DRGs 252, 253, and 254.

In the FY 2023 IPPS/LTCH PPS final rule, we stated that the results of the claims analysis demonstrated we did not have sufficient claims data on which to base and evaluate any proposed changes to the current MS–DRG assignment. We also expressed concern in equating the implantation of a BAROSTIM™ system to the placement of ICD, CRT–D, and CCM devices as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s). We noted there is no intravascular component or vascular puncture involved when implanting a BAROSTIM™ system. In contrast, the placement of ICD, CRT–D, and CCM devices generally involve a lead being affixed to the myocardium, being threaded through the coronary sinus or crossing a heart valve and are procedures that involve a greater level of complexity than affixing the stimulator lead to either the right or left carotid sinus when implanting a BAROSTIM™ system. We stated that we believed that as the number of cases reporting procedure codes describing the implantation of neuromodulation devices for heart failure increases, a better view of the associated costs and lengths of stay on average will be reflected in the data for purposes of assessing any reassignment of these cases. Therefore, after consideration of the public comments we received, and for the reasons stated earlier, we finalized our proposal to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device in MS–DRGs 252, 253, and 254 for FY 2023.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58712 through 58720), we discussed a request we received to add ICD–10–CM diagnosis code R57.0 (Cardiogenic shock) to the list of ''secondary diagnoses'' that grouped to MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with Acute Myocardial Infarction (AMI), Heart Failure (HF), or Shock with and without MCC, respectively). During our review of the issue, we noted that the results of our claims analysis showed that in procedures involving a cardiac defibrillator implant, the average costs and length of stay were generally similar without regard to the presence of diagnosis codes describing AMI, HF, or shock. We stated we believed that it may no longer be necessary to subdivide MS–DRGs 222, 223, 224, 225, 226, and 227 based on the diagnosis codes reported. After consideration of the public comments we received, and for the reasons stated in the rule, we finalized our proposal to delete MS–

DRGs 222, 223, 224, 225, 226, and 227. We also finalized our proposal to create new MS–DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC), new MS–DRG 276 (Cardiac Defibrillator Implant with MCC) and new MS–DRG 277 (Cardiac Defibrillator Implant without MCC) in MDC 05 for FY 2024.

For this FY 2025 IPPS/LTCH PPS proposed rule, we received a similar request to again review the MS–DRG assignment of the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM™ system. Specifically, the requestor recommended that CMS consider reassigning the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM™ system from MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without MCC respectively) to MS–DRGs 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC), MS–DRG 276, and 277 (Cardiac Defibrillator Implant with MCC and without MCC respectively); or to other more clinically coherent MS–DRGs for implantable device procedures indicated for Class III heart failure patients. The requestor stated in their analysis the number of claims reporting procedure codes that describe the implantation of the BAROSTIM™ system has been consistently growing over the past few years. The requestor acknowledged that the implantation of the BAROSTIM™ system is predominantly performed in the outpatient setting but noted that a significant number of severely sick patients with multiple comorbidities (such as chronic kidney disease, end stage renal disease (ESRD), chronic obstructive pulmonary disease (COPD), and AF) are treated in an inpatient setting. The requestor stated in their experience, hospitals that have performed BAROSTIM™ procedures have stopped allowing patients to receive the device in the inpatient setting due to the high losses for each Medicare claim. The requestor asserted it is critically important to allow very sick and fragile patients access to the BAROSTIM™ procedure in an inpatient setting and stated these patients should not be denied access by hospitals due to the perceived gross underpayment of the current MS–DRG.

The requestor stated the BAROSTIM™ procedure is not clinically coherent with other procedures assigned to MS–DRGs 252, 253, and 254 (Other Vascular Procedures) as the majority of the ICD–10–PCS codes assigned to MS–DRGs 252, 253, and 254 describe procedures to identify, diagnose, clear and restructure veins and arteries, excluding those that require implantable devices. Furthermore, the requestor stated the costs of the implantable medical devices used for the BAROSTIM™ system (that is, the electrical pulse generator and electrical lead) alone far exceed the average costs of other cases assigned to MS–DRGs 252, 253, and 254.

The following ICD–10–PCS procedure codes uniquely identify the implantation of the BAROSTIM™ system: 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead into right internal carotid artery, percutaneous approach) or 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach).

To analyze this request, we first examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRGs 252, 253, and 254 to identify cases reporting procedure codes describing the implantation of the BAROSTIM™ system with or without a procedure code describing the performance of a cardiac catheterization as MS–DRG 275 is defined by the performance of cardiac catheterization and a secondary diagnosis of MCC. Our findings are shown in the following table.

MS-DRGs 252-254: All Cases and Cases Reporting Procedures Describing the Implantation of a BAROSTIM™ System

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
252	All cases	18,964	8	$30,456
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	1	9	$110,928
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	12	7.8	$66,291
253	All cases	15,551	5.2	$22,870
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0	0	$0
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	7	4	$52,788
254	All cases	5,973	2.3	$15,778
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0	0	$0
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	3	1.3	$29,740

As shown in the table, in MS–DRG 252, we identified a total of 18,964 cases with an average length of stay of 8 days and average costs of $30,456. Of those 18,964 cases, there was one case reporting procedure codes describing

the implantation of the BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization with costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 252 ($110,928 compared to $30,456) and a longer length of stay (9 days compared to 8 days). There were 12 cases reporting procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 252 ($66,291 compared to $30,456) and a slighter shorter average length of stay (7.8 days compared to 8 days). In MS–DRG 253, we identified a total of 15,551 cases with an average length of stay of 5.2 days and average costs of $22,870. Of those 15,551 cases, there were seven cases reporting procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 253 ($52,788 compared to $22,870) and a shorter average length of stay (4 days compared to 5.2 days). We found zero cases in MS–DRG 253 reporting procedure codes describing the implantation of a BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization. In MS–DRG 254, we identified a total of 5,973 cases with an average length of stay of 2.3 days and average costs of $15,778. Of those 5,973 cases, there were three cases reporting procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 254 ($29,740 compared to $15,778) and a shorter average length of stay (1.3 days compared to 2.3 days). We found zero cases in MS–DRG 254 reporting procedure codes describing the implantation of a BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization.

We then examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRGs 275, 276, and 277. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
275	3,358	10.3	$63,181
276	3,264	8.2	$54,993
277	3,840	4.2	$42,111

As the table shows, for MS–DRG 275, there were a total of 3,358 cases with an average length of stay of 10.3 days and average costs of $63,181. For MS–DRG 276, there were a total of 3,264 cases with an average length of stay of 8.2 days and average costs of $54,993. For MS–DRG 277, there were a total of 3,840 cases with an average length of stay of 4.2 days and average costs of $42,111.

In exploring mechanisms to address this request, we noted in total, there were only 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system in MS–DRGs 252, 253, and 254 (13, 7, and 3, respectively). We reviewed these data, and while we recognize that the average costs of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ are greater when compared to the average costs of all cases in MS–DRGs 252, 253, and 254, the number of cases continues to be too small to warrant the creation of a new MS–DRG for these cases.

We further note, that of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system identified in MS–DRGs 252, 253, and 254, only one case reported the performance of cardiac catheterization. As discussed in the FY 2024 IPPS/LTCH PPS final rule, when reviewing the consumption of hospital resources for the cases reporting a cardiac defibrillator implant with cardiac catheterization during a hospital stay, the claims data clearly showed that the cases reporting secondary diagnoses designated as MCCs were more resource intensive as compared to other cases reporting cardiac defibrillator implant. Therefore, we finalized the creation of MS–DRG 275 for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC. Of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system, there was only one case reporting a procedure code describing the performance of cardiac catheterization and a secondary diagnosis designated as an MCC, and we note that there may have been other factors contributing to the higher costs of this one case. The results of the claims analysis demonstrate we do not have sufficient claims data on which to base and propose a change to the current MS–DRG assignment of cases reporting procedure codes describing the implantation of a BAROSTIM™ system from MS–DRGs 252, 253, and 254 to MS–DRG 275.

Further analysis of the claims data demonstrates that the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system had an average length of stay of 5.8 days and average costs of $59,355, as compared to the 3,264 cases in MS–DRG 276 that had an average length of stay of 8.2 days and average costs of $54,993. While the cases reporting procedure codes describing the implantation of a BAROSTIM™ system had average costs that were $4,362 higher than the average costs of all cases in MS–DRG 276, as noted, there were only a total of 23 cases, and there may have been other factors contributing to the higher costs. We noted, however, reassigning all cases reporting procedure codes describing the implantation of a BAROSTIM™ system to MS–DRG 276, even if there is not a MCC present, the cases would receive higher payment and better account for the differences in resource utilization of these cases than in their respective MS–DRG.

We reviewed the clinical issues and the claims data, and while we continue to note that there is no intravascular component or vascular puncture involved when implanting a BAROSTIM™ system, and that the implantation of a BAROSTIM™ system is distinguishable from the placement of ICD, CRT–D, and CCM devices, as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s), as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48837 through 48843), we agree that ICD, CRT–D, and CCM devices and the BAROSTIM™ system are clinically coherent in that they share an indication of heart failure, a major cause of morbidity and mortality in the United States, and that these cases demonstrate comparable resource utilization. Based on our review of the clinical issues and

the claims data, and to better account for the resources required, we are proposing to reassign the cases reporting procedure codes describing the implantation of a BAROSTIM™ system to MS–DRG 276, even if there is no MCC reported, to better reflect the clinical severity and resource use involved in these cases.

Therefore, for FY 2025, we are proposing to reassign all cases with one of the following ICD–10–PCS code combinations capturing cases reporting procedure codes describing the implantation of a BAROSTIM™ system, to MS–DRG 276, even if there is no MCC reported:

- 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead into right internal carotid artery, percutaneous approach); and
- 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach).

We also are proposing to change the title of MS–DRG 276 from ''Cardiac Defibrillator Implant with MCC'' to ''Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator'' to reflect the proposed modifications to MS–DRG assignments. We note that discussion of the surgical hierarchy for this proposed modification is discussed in section II.C.15. of this proposed rule.

c. Endovascular Cardiac Valve Procedures

The human heart contains four major valves—the aortic, mitral, pulmonary, and tricuspid valves. These valves function to keep blood flowing through the heart. When conditions such as stenosis or insufficiency/regurgitation occur in one or more of these valves, valvular heart disease may result. Intervention options, including surgical aortic valve replacement or transcatheter aortic valve replacement can be performed to treat diseased or damaged aortic heart valves. Surgical aortic valve replacement (SAVR) is a traditional, open-chest surgery where an incision is made to access the heart. The damaged valve is replaced, and the chest is surgically closed. Since SAVR is a major surgery that involves an incision, recovery time tends to be longer. Transcatheter aortic valve replacement (TAVR) is a minimally invasive procedure that involves a catheter being inserted into an artery, without an incision for most cases, and then guided to the heart. The catheter delivers the new valve without the need for the chest or heart to be surgically opened. Since TAVR is a non-surgical procedure, it is generally associated with a much shorter recovery time.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49892 through 49893), we discussed a request we received to create a new MS–DRG that would only include the various types of cardiac valve replacements performed by an endovascular or transcatheter technique. We reviewed the claims data and stated the data analysis showed that cardiac valve replacements performed by an endovascular or transcatheter technique had a shorter average length of stay and higher average costs in comparison to all of the cases in their assigned MS–DRGs, which were MS–DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, and without CC/MCC, respectively). In the FY 2015 IPPS/LTCH PPS final rule we stated that patients receiving endovascular cardiac valve replacements were significantly different from those patients who undergo an open chest cardiac valve replacement and noted that patients receiving endovascular cardiac valve replacements are not eligible for open chest cardiac valve procedures because of a variety of health constraints, which we said highlights the fact that peri-operative complications and post-operative morbidity have significantly different profiles for open chest procedures compared with endovascular interventions. We further noted that separately grouping these endovascular valve replacement procedures provides greater clinical cohesion for this subset of high-risk patients. Therefore, we finalized our proposal to create MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement, with MCC and without MCC, respectively) for FY 2015.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42080 through 42089), we discussed a request we received to modify the MS–DRG assignment for transcatheter mitral valve repair (TMVR) with implant procedures. We reviewed the claims data and stated based on our data analysis, transcatheter cardiac valve repair procedures and transcatheter (endovascular) cardiac valve replacement procedures are more clinically coherent in that they describe endovascular cardiac valve interventions with implants, and were similar in terms of average length of stay and average costs to cases in MS–DRGs 266 and 267 when compared to other procedures in their current MS–DRG assignment. For the reasons described in the rule and after consideration of the public comments we received, we finalized our proposal to modify the structure of MS–DRGs 266 and 267 by reassigning the procedure codes that describe transcatheter cardiac valve repair (supplement) procedures, to revise the title of MS–DRG 266 from ''Endovascular Cardiac Valve Replacement with MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC'' and to revise the title of MS–DRG 267 from ''Endovascular Cardiac Valve Replacement without MCC'' to ''Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC'', to reflect the finalized restructuring.

For this FY 2025 IPPS/LTCH PPS proposed rule, we received a request to delete MS–DRGs 266 and 267 and to move the cases reporting transcatheter aortic valve replacement or repair (supplement) procedures currently assigned to those MS–DRGs into MS–DRGs 216, 217, 218, 219, 220, and 221. The requestor asserted that under the current IPPS payment methodology, TAVR procedures are not profitable to hospitals and when patients are clinically eligible for both a TAVR and SAVR procedures, factors beyond clinical appropriateness can drive treatment decisions. According to the requestor (the manufacturer of the SAPIEN™ family of transcatheter heart valves) sharing a single set of MS–DRGs would eliminate the current disincentives hospitals face and create financial neutrality between the two lifesaving treatment options. The requestor stated the current disincentives are increasingly problematic because they contribute to treatment disparities among certain racial, socioeconomic, and geographic groups.

The requestor noted that currently surgical cardiac valve replacement and supplement procedures, such as SAVR, are assigned to MS–DRGs 216, 217, 218, 219, 220, and 221, and endovascular cardiac valve replacement and supplement procedures, such as TAVR, are assigned to MS–DRGs 266 and 267. The requestor stated that both sets of MS–DRGs address valve disease and include valve repair or replacement procedures for any of the four heart valves. According to the requestor, while the sets of MS–DRGs involve clinically similar cases their payment rates differ which may be unintentionally influencing clinical decision-making by incentivizing hospitals to choose more invasive SAVR

procedures over less-invasive TAVR procedures.

As mentioned earlier, the requestor recommended that CMS delete MS–DRGs 266 and 267 and move the cases reporting transcatheter aortic valve replacement or repair (supplement) procedures currently assigned to those MS–DRGs into MS–DRGs 216, 217, 218, 219, 220, and 221. The requestor performed their own analysis and stated that their models of this suggested solution indicated the change would result in moderate differences in per case payments by case type and would not increase overall Medicare spending. The requestor noted that while their requested solution would potentially decrease payment to cases currently assigned to MS–DRGs 216, 217, 218, 219, 220, and 221, while at the same time increasing the payment to cases reporting endovascular cardiac valve replacement and supplement procedures, the results of their claim analysis demonstrated that the net difference in total payments across all cases would increase by approximately $6.5 million. The requestor stated that they anticipate that their proposed solution could increase Medicare patients' access to innovative endovascular cardiac valve procedures by establishing payment neutrality between SAVR and TAVR procedures.

We reviewed this request and note the requestor is correct that in Version 41.1 cases reporting procedure codes that describe endovascular cardiac valve replacement and supplement procedures, including TAVR, group to MS–DRGs 266 and 267. The requestor is also correct that cases reporting procedure codes that describe surgical cardiac valve replacement and supplement procedures, including SAVR, group to MS–DRGs 216, 217, 218, 219, 220, and 221. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 216, 217, 218, 219, 220, 221, 266 and 267.

To begin our analysis, we identified the ICD–10–PCS procedure codes that describe endovascular (transcatheter) cardiac valve replacement and supplement procedures and the ICD–10–PCS procedure codes that describe surgical cardiac valve replacement and supplement procedures. We also identified the ICD–10–PCS codes that describe cardiac catheterization, as MS–DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) are defined by the performance of cardiac catheterization. We refer the reader to Table 6P.2a, Table 6P.2b, and Table 6P.2c, respectively, associated with this proposed rule (and available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) for the lists of the ICD–10–PCS procedure codes that we identified that describe endovascular cardiac valve replacement and supplement procedures, surgical cardiac valve replacement and supplement procedures, and cardiac catheterization procedures.

We then examined the claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS–DRGs 216, 217, 218, 219, 220, and 221 and compared the results to cases reporting surgical cardiac valve replacement and supplement procedures in MS–DRG 216, 217, 218, 219, 220, and 221. The following table shows our findings:

MS-DRGs 216-221: All Cases and Cases Reporting Surgical Cardiac Valve Replacement and Supplement Procedures

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
216	All cases	5,033	13.9	$84,176
	Surgical cardiac valve replacement and supplement procedures	2,973	16.8	$87,497
217	All cases	1,635	7.2	$58,381
	Surgical cardiac valve replacement and supplement procedures	867	9.5	$56,829
218	All cases	275	3.4	$54,624
	Surgical cardiac valve replacement and supplement procedures	60	6.7	$45,096
219	All cases	12,458	10.5	$67,228
	Surgical cardiac valve replacement and supplement procedures	9,780	10.3	$64,954
220	All cases	9,829	6.3	$47,242
	Surgical cardiac valve replacement and supplement procedures	7,841	6.4	$46,245
221	All cases	1,242	3.8	$41,539
	Surgical cardiac valve replacement and supplement procedures	627	4.9	$39,081

As shown in the table, in MS–DRG 216, we identified a total of 5,033 cases with an average length of stay of 13.9 days and average costs of $84,176. Of those 5,033 cases, there were 2,973 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 216 ($87,497 compared to $84,176) and a longer average length of stay (16.8 days

compared to 13.9 days). In MS–DRG 217, we identified a total of 1,635 cases with an average length of stay of 7.2 days and average costs of $58,381. Of those 1,635 cases, there were 867 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 217 ($56,829 compared to $58,381) and a longer average length of stay (9.5 days compared to 7.2 days). In MS–DRG 218, we identified a total of 275 cases with an average length of stay of 3.4 days and average costs of $54,624. Of those 275 cases, there were 60 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 218 ($45,096 compared to $54,624) and a longer average length of stay (6.7 days compared to 3.4 days). In MS–DRG 219, we identified a total of 12,458 cases with an average length of stay of 10.5 days and average costs of $67,228. Of those 12,458 cases, there were 9,780 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 219 ($64,954 compared to $67,228), and a slightly shorter average length of stay (10.3 days compared to 10.5 days). In MS–DRG 220, we identified a total of 9,829 cases with an average length of stay of 6.3 days and average costs of $47,242. Of those 9,829 cases, there were 7,841 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 220 ($46,245 compared to $47,242) and a slightly longer average length of stay (6.4 days compared to 6.3 days). In MS–DRG 221, we identified a total of 1,242 cases with an average length of stay of 3.8 days and average costs of $41,539. Of those 1,242 cases, there were 627 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 221 ($39,081 compared to $41,539) and a longer average length of stay (4.9 days compared to 3.8 days).

Next, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRGs 266 and 267. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
266	19,936	4.7	$54,188
267	36,665	1.5	$43,058

Because there is a two-way split within MS–DRGs 266 and 267 and there is a three-way split within MS–DRGs 216, 217, and 218, and MS–DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively), we also analyzed the cases reporting a code describing an endovascular cardiac valve replacement and supplement procedure with a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC). We also analyzed the cases reporting a code describing an endovascular cardiac valve replacement and supplement procedure without a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a CC or an MCC.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
266	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization with MCC	5,443	7.9	$63,128
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization with MCC	14,493	3.5	$50,831
267	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization with CC	4,761	2	$42,163
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization with CC	22,996	1.5	$43,637
	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization without CC/MCC	1,386	1.3	$39,709
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization without CC/MCC	7,522	1.2	$42,472

As shown in the table, the data analysis performed indicates that the 5,443 cases in MS–DRG 266 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the

performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is shorter than the average length of stay (7.9 days versus 16.8 days) and lower average costs ($63,128 versus $87,497) when compared to the cases in MS–DRG 216 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC. The 4,761 cases in MS–DRG 267 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have an average length of stay that is shorter than the average length of stay (2 days versus 9.5 days) and lower average costs ($42,163 versus $56,829) when compared to the cases in MS–DRG 217 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an CC. The 1,386 cases in MS–DRG 267 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is shorter than the average length of stay (1.3 days versus 6.7 days) and lower average costs ($39,709 versus $45,096) when compared to the cases in MS–DRG 218 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, without a secondary diagnosis code designated as a CC or MCC.

The 14,493 cases in MS–DRG 266 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is shorter than the average length of stay (3.5 days versus 10.3 days) and lower average costs ($50,831 versus $64,954) when compared to the cases in MS–DRG 219 reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC. The 22,996 cases in MS–DRG 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have an average length of stay that is shorter than the average length of stay (1.5 days versus 6.4 days) and lower average costs ($43,637 versus $46,245) when compared to the cases in MS–DRG 220 reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an CC. The 7,522 cases in MS–DRG 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is shorter than the average length of stay (1.2 days versus 4.9 days) and higher average costs ($42,472 versus $39,081) when compared to the cases in MS–DRG 221 reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, without a secondary diagnosis code designated as a CC or MCC.

This data analysis shows the cases in MS–DRG 266 and 267 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a CC or a MCC have average costs lower than the average costs of cases reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization in the FY 2023 MedPAR file for MS–DRGs 216, 217, and 218 respectively, and the average lengths of stay are shorter. Similarly, the cases in MS–DRG 266 and 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a CC or a MCC generally have average costs lower than the average costs of cases reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization in the FY 2023 MedPAR file for MS–DRGs 219, 220, and 221 respectively, and the average lengths of stay are shorter.

For patients with an indication for cardiac valve replacement, clinical and anatomic factors must be considered when decision-making between procedures such as TAVR and SAVR. We note that SAVR is not a treatment option for patients with extreme surgical risk (that is, high probability of death or serious irreversible complication), severe atheromatous plaques of the ascending aorta such that aortic cross-clamping is not feasible, or with other conditions that would make operation through sternotomy or thoracotomy prohibitively hazardous. We agree that the endovascular or transcatheter technique presents a viable option for high-risk patients who are not candidates for the traditional open surgical approach, however we also note that TAVR is not indicated for every patient. TAVR is contraindicated in patients who cannot tolerate an anticoagulation/antiplatelet regimen, or who have active bacterial endocarditis or other active infections, or who have significant annuloplasty ring dehiscence.

We have concern with the assertion that clinicians perform more invasive surgical procedures, such as SAVR procedures, only to increase payment to their facility where minimally invasive TAVR procedures are also viable option. The choice of SAVR versus TAVR should not be based on potential facility payment. Instead, the decision on the procedural approach to be utilized should be based upon an individualized risk-benefit assessment that includes reviewing factors such as the patient's age, surgical risk, frailty, valve morphology, and presence of concomitant valve disease or coronary artery disease. As we have stated in prior rulemaking (83 FR 41201), it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that involves increased costs. Conversely, it is not appropriate for facilities to recommend a specific type of therapy or treatment strictly because it may involve higher payment to the facility.

Also, we have concern with the requestor's assertion that sharing a single set of MS–DRGs could eliminate any perceived disincentives hospitals may face and create financial neutrality between the two lifesaving treatment options. Data analysis shows that cases reporting surgical cardiac valve

replacement and supplement procedures have higher costs and longer lengths of stay. If clinical decision-making is being driven by financial motivations, as suggested by the requestor, in circumstances where the decision on which approach is best (for example, TAVR or SAVR) is left to the providers' discretion, it is unclear how reducing payment for surgical cardiac valve replacement and supplement procedures would eliminate possible disincentives, or not have the opposite effect, and instead incentivize endovascular cardiac valve replacement and supplement procedures.

The MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources and are not intended to be utilized as a tool to incentivize the performance of certain procedures. When performed, surgical cardiac valve replacement and supplement procedures are clinically different from endovascular cardiac valve replacement and supplement procedures in terms of technical complexity and hospital resource use. In the FY 2015 IPPS/LTCH PPS final rule, we stated that separately grouping endovascular valve replacement procedures provides greater clinical cohesion for this subset of high-risk patients. Our claims analysis for this FY 2025 IPPS/LTCH PPS proposed rule demonstrates that this continues to be substantiated by the difference in average costs and average lengths of stay demonstrated by the two cohorts. We continue to believe that endovascular cardiac valve replacement and supplement procedures are clinically coherent in their currently assigned MS–DRGs. Therefore, we are proposing to maintain the structure of MS–DRGs 266 and 267 for FY 2025.

d. MS–DRG Logic for MS–DRG 215

We received a request to review the GROUPER logic for MS–DRG 215 (Other Heart Assist System Implant) in MDC 05 (Diseases and Disorders of the Circulatory System). The requestor stated that when the procedure code describing the revision of malfunctioning devices within the heart via an open approach is assigned, the encounter groups to MS–DRG 215. The requestor stated that, in their observation, ICD–10–PCS code 02WA0JZ (Revision of synthetic substitute in heart, open approach) can only be assigned if a more specific anatomical site is not documented in the operative note. The requestor further stated they interpreted this to mean that an ICD–10–PCS procedure code describing the open revision of a synthetic substitute in the heart can only apply to the ventricular wall or left atrial appendage and excludes the atrial or ventricular septum or any valve to qualify for MS–DRG 215 and recommended that CMS consider the expansion of the open revision of heart structures to include the atrial or ventricular septum and heart valves.

To begin our analysis, we reviewed the GROUPER logic. The requestor is correct that ICD–10–PCS procedure code 02WA0JZ is currently one of the listed procedure codes in the GROUPER logic for MS–DRG 215. While the requestor stated that when procedures codes describing the revisions of malfunctioning devices within the heart via an open approach are assigned, the encounter groups to MS–DRG 215, we wish to clarify that the revision codes listed in the GROUPER logic for MS–DRG 215 specifically describe procedures to correct, to the extent possible, a portion of a malfunctioning heart assist device or the position of a displaced heart assist device. Further, it is unclear what is meant by the requestor's statement that ICD–10–PCS code 02WA0JZ can only be assigned if more specific anatomical site is not documented in the operative note, as ICD–10–PCS code 02WA0JZ is used to describe the open revision of artificial heart systems. Total artificial hearts are pulsating bi-ventricular devices that are implanted into the chest to replace a patient's left and right ventricles and can provide a bridge to heart transplantation for patients who have no other reasonable medical or surgical treatment options. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the GROUPER logic for MS–DRG 215. We encourage the requestor and any providers that have cases involving heart assist devices for which they need ICD–10 coding assistance and clarification on the usage of the codes, to submit their questions to the American Hospital Association's Central Office on ICD–10 at *https://www.codingclinicadvisor.com/*.

As previously noted, the requestor recommended that we consider expansion of the open revision of heart structures to include the atrial or ventricular septum and heart valves. The requestor did not provide a specific list of procedure codes involving the open revision of heart structures. While not explicitly stated, we understood this request to be for our consideration of the reassignment of the procedure codes describing the open revision of devices in the heart valves, atrial septum, or ventricular septum to MS–DRG 215, therefore, we reviewed the ICD–10–PCS classification and identified the following 18 procedure codes. These 18 codes are all assigned to MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) in MDC 05 in Version 41.1.

ICD-10-PCS Code	Description
02W50JZ	Revision of synthetic substitute in atrial septum, open approach
02WF07Z	Revision of autologous tissue substitute in aortic valve, open approach
02WF08Z	Revision of zooplastic tissue in aortic valve, open approach
02WF0JZ	Revision of synthetic substitute in aortic valve, open approach
02WF0KZ	Revision of nonautologous tissue substitute in aortic valve, open approach
02WG07Z	Revision of autologous tissue substitute in mitral valve, open approach
02WG08Z	Revision of zooplastic tissue in mitral valve, open approach
02WG0JZ	Revision of synthetic substitute in mitral valve, open approach
02WG0KZ	Revision of nonautologous tissue substitute in mitral valve, open approach
02WH07Z	Revision of autologous tissue substitute in pulmonary valve, open approach
02WH08Z	Revision of zooplastic tissue in pulmonary valve, open approach
02WH0JZ	Revision of synthetic substitute in pulmonary valve, open approach
02WH0KZ	Revision of nonautologous tissue substitute in pulmonary valve, open approach
02WJ07Z	Revision of autologous tissue substitute in tricuspid valve, open approach
02WJ08Z	Revision of zooplastic tissue in tricuspid valve, open approach
02WJ0JZ	Revision of synthetic substitute in tricuspid valve, open approach
02WJ0KZ	Revision of nonautologous tissue substitute in tricuspid valve, open approach
02WM0JZ	Revision of synthetic substitute in ventricular septum, open approach

Next, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRG 228 and 229 to identify cases reporting one of the 18 codes listed previously that describe the open revision of devices in the heart valves, atrial septum, or ventricular septum. Our findings are shown in the following table:

MS-DRGs 228 – 229: All Cases and Cases Reporting Open Revision of Devices in the Heart Valves, Atrial Septum, or Ventricular Septum

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
228	All cases	4,391	8.7	$44,565
	Cases with a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum	12	15.7	$51,549
229	All Cases	5,712	3.3	$28,987
	Cases with a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum	1	1	$11,322

As shown in the table, in MS–DRG 228, we identified a total of 4,391 cases with an average length of stay of 8.7 days and average costs of $44,565. Of those 4,391 cases, there were 12 cases reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 228 ($51,549 compared to $44,565) and a longer average length of stay (15.7 days compared to 8.7 days). In MS–DRG 229, we identified a total of 5,712 cases with an average length of stay of 3.3 days and average costs of $28,987. Of those 5,712 cases, there was one case reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum with costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 229 ($11,322 compared to $28,987) and a shorter length of stay (1 day compared to 3.3 days).

We then examined claims data from the September 2023 update of the FY 2023 MedPAR for MS–DRG 215. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
215	3,668	9.2	$91,021

Our analysis indicates that the cases assigned to MS–DRG 215 have much higher average costs than the cases reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum currently assigned to MS–DRGs 228 and 229. Instead, the average costs and average length of stay for case reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum appear to be generally more aligned with the average costs and average length of stay for all cases in MS–DRGs 228 and 229, where they are currently assigned.

In addition, based on our review of the clinical considerations, we do not believe the procedure codes describing the open revision of devices in the heart valves, atrial septum, or ventricular septum are clinically coherent with the procedure codes currently assigned to MS–DRG 215. Heart assist devices, such as ventricular assist devices and artificial heart systems, provide circulatory support by taking over most of the workload of the left ventricle. Blood enters the pump through an

inflow conduit connected to the left ventricle and is ejected through an outflow conduit into the body's arterial system. Heart assist devices can provide temporary left, right, or biventricular support for patients whose hearts have failed and can also be used as a bridge for patients who are awaiting a heart transplant. Devices placed in the heart valves, atrial septum, or ventricular septum do not serve the same purpose as heart assist devices and we do not believe the procedure codes describing the revision of these devices should be assigned to MS–DRG 215. Further, the various indications for devices placed in the heart valves, atrial septum or ventricular septum are not aligned with the indications for heart assist devices. We believe that patients with indications for heart assist devices tend to be more severely ill and these inpatient admissions are associated with greater resource utilization. Therefore, for the reasons stated previously, we are proposing to maintain the GROUPER logic for MS–DRG 215 for FY 2025.

5. MDC 06 (Diseases and Disorders of the Digestive System): Excision of Intestinal Body Parts

We identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs regarding the assignment of eight ICD–10–PCS codes that describe the excision of intestinal body parts by open, percutaneous, or percutaneous endoscopic approach. Under the Version 32 ICD–9 based MS–DRGs, ICD–9–CM procedure code 45.33 (Local excision of lesion or tissue of small intestine, except duodenum) was designated as an O.R. procedure and was assigned to MDC 06 (Diseases and Disorders of the Digestive System) in MS–DRGs 347, 348, and 349 (Anal and Stomal Procedures with MCC, with CC, and without CC/MCC, respectively).

There are eight ICD–10–PCS code translations that provide more detailed and specific information for ICD–9–CM code 45.33 that also currently group to MS–DRGs 347, 348, and 349 in the ICD–10 MS–DRGs Version 41.1. These eight procedure codes are shown in the following table:

ICD-10-PCS Code	Description
0DB83ZZ	Excision of small intestine, percutaneous approach
0DBA3ZZ	Excision of jejunum, percutaneous approach
0DBA4ZZ	Excision of jejunum, percutaneous endoscopic approach
0DBB3ZZ	Excision of ileum, percutaneous approach
0DBB4ZZ	Excision of ileum, percutaneous endoscopic approach
0DBC0ZZ	Excision of ileocecal valve, open approach
0DBC3ZZ	Excision of ileocecal valve, percutaneous approach
0DBC4ZZ	Excision of ileocecal valve, percutaneous endoscopic approach

We noted during our review of this issue that under ICD–9–CM, procedure code 45.33 did not differentiate the specific type of approach used to perform the procedure. This is in contrast to the eight comparable ICD–10–PCS code translations listed in the previous table that do differentiate among various approaches (open, percutaneous, and percutaneous endoscopic). We also noted that there are four additional ICD–10–PCS code translations that provide more detailed and specific information for ICD–9–CM code 45.33, however these four codes currently group to MS–DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively), and not MS–DRGs 347, 348, and 349, in the ICD–10 MS–DRGs Version 41.1. These four procedure codes are shown in the following table:

ICD-10-PCS Code	Description
0DB80ZZ	Excision of small intestine, open approach
0DB84ZZ	Excision of small intestine, percutaneous endoscopic approach
0DBA0ZZ	Excision of jejunum, open approach
0DBB0ZZ	Excision of ileum, open approach

We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the GROUPER logic for MS–DRGs 329, 330, 331, 347, 348, and 349.

Next, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRG 347, 348, and 349 to identify cases reporting one of the eight codes listed previously that describe excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach. Our findings are shown in the following table:

MS-DRGs 347 – 349: All Cases and Cases Reporting One of Eight Procedure Codes Describing Excision of an Intestinal Body Part by Open, Percutaneous, or Percutaneous Endoscopic Approach				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
347	All cases	752	7.6	$21,462
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	66	8.5	$27,081
348	All cases	1,580	4.2	$12,020
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	192	4.9	$17,063
349	All Cases	644	2.2	$9,095
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	117	3	$14,612

As shown in the table, in MS–DRG 347, we identified a total of 752 cases with an average length of stay of 7.6 days and average costs of $21,462. Of those 752 cases, there were 66 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 347 ($27,081 compared to $21,462) and a longer average length of stay (8.5 days compared to 7.6 days). In MS–DRG 348, we identified a total of 1,580 cases with an average length of stay of 4.2 days and average costs of $12,020. Of those 1,580 cases, there were 192 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 348 ($17,063 compared to $12,020) and a longer average length of stay (4.9 days compared to 4.2 days). In MS–DRG 349, we identified a total of 644 cases with an average length of stay of 2.2 days and average costs of $9,095. Of those 644 cases, there were 117 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 349 ($14,612 compared to $9,095), and a longer average length of stay (3 days compared to 2.2 days).

We then examined claims data from the September 2023 update of the FY 2023 MedPAR for MS–DRGs 329, 330, and 331. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
329	28,706	12.5	$38,468
330	37,642	6.3	$20,852
331	18,004	3.3	$14,796

While the average costs for all cases in MS–DRGs 329, 330, and 331 are higher than the average costs of the cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, the data suggest that overall, cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach may be more appropriately aligned with the average costs of the cases in MS–DRGs 329, 330, and 331 in comparison to MS–DRGs 347, 348, and 349, even though the average lengths of stay are shorter.

We reviewed this grouping issue, and our analysis indicates that the eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach were initially assigned to the list of procedures in the GROUPER logic for MS–DRGs 347, 348, and 349 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs. We also note that procedure codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ do not describe procedures on a stoma, which is an artificial opening on the abdomen that can be connected to either the digestive or urinary system to allow waste to be diverted out of the body, or the anus. We support the reassignment of codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ for clinical coherence and believe these eight procedure codes should be appropriately grouped along with the four other procedure codes that describe excision of intestinal body parts by an open, or percutaneous endoscopic approach currently assigned to MS–DRGs 329, 330, and 331.

Accordingly, because the procedures described by the eight procedure codes that describe excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach are not clinically consistent with procedures on the anus or stoma, and it is clinically appropriate to reassign these procedures to be consistent with the four other procedure codes that describe excision of intestinal body parts by an open, or percutaneous endoscopic approach in MS–DRGs 329, 330, and 331, we are proposing the reassignment of procedure codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ from MS–DRGs 347, 348, and 349 (Anal and Stomal Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 06, effective FY 2025.

6. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. MS–DRG Logic for MS–DRGs 456, 457, and 458

We identified an inconsistency in the GROUPER logic for MS–DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) related to ICD–10–CM diagnosis codes describing deforming dorsopathies. The logic for case assignment to MS–DRGs 456, 457, and 458 as displayed in the ICD–10 MS–DRG Definitions Manual Version 41.1 (which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) is comprised of four logic lists. The first logic list is entitled ''Spinal Fusion Except Cervical'' and is defined by a list of procedure codes designated as O.R. procedures that describe spinal fusion procedures of the thoracic, thoracolumbar, lumbar, lumbosacral, sacrococcygeal, coccygeal, and sacroiliac joint. The second logic list is entitled ''Spinal Curvature/Malignancy/Infection'' and is defined by a list of diagnosis codes describing spinal curvature, spinal malignancy, and spinal infection that are used to define the logic for case assignment when any one of the listed diagnosis codes is reported as the principal diagnosis. The third logic list is entitled ''OR Secondary Diagnosis'' and is defined by a list of diagnosis codes describing curvature of the spine that are used to define the logic for case assignment when any one of the listed codes is reported as a secondary diagnosis. The fourth logic list is entitled ''Extensive Fusions'' and is defined by a list of procedure codes designated as O.R. procedures that describe extensive spinal fusion procedures. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1, (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software*) for complete documentation of the GROUPER logic for MS–DRGs 456, 457, and 458.

In the second logic list entitled ''Spinal Curvature/Malignancy/Infection'' there are a subset of six diagnosis codes describing other specified deforming dorsopathies as shown in the following table.

ICD-10-CM Code	Description
M43.8X4	Other specified deforming dorsopathies, thoracic region
M43.8X5	Other specified deforming dorsopathies, thoracolumbar region
M43.8X6	Other specified deforming dorsopathies, lumbar region
M43.8X7	Other specified deforming dorsopathies, lumbosacral region
M43.8X8	Other specified deforming dorsopathies, sacral and sacrococcygeal region
M43.8X9	Other specified deforming dorsopathies, site unspecified

In the third logic list entitled ''OR Secondary Diagnosis'' there are currently 14 diagnosis codes listed, one of which is diagnosis code M43.8X9 (Other specified deforming dorsopathies, site unspecified) as shown in the following table.

OR Secondary Diagnosis Codes	
ICD-10-CM Code	**Description**
M40.10	Other secondary kyphosis, site unspecified
M40.14	Other secondary kyphosis, thoracic region
M40.15	Other secondary kyphosis, thoracolumbar region
M41.40	Neuromuscular scoliosis, site unspecified
M41.44	Neuromuscular scoliosis, thoracic region
M41.45	Neuromuscular scoliosis, thoracolumbar region
M41.46	Neuromuscular scoliosis, lumbar region
M41.47	Neuromuscular scoliosis, lumbosacral region
M41.50	Other secondary scoliosis, site unspecified
M41.54	Other secondary scoliosis, thoracic region
M41.55	Other secondary scoliosis, thoracolumbar region
M41.56	Other secondary scoliosis, lumbar region
M41.57	Other secondary scoliosis, lumbosacral region
M43.8X9	Other specified deforming dorsopathies, site unspecified

We recognized that the five diagnosis codes describing deforming dorsopathies of specific anatomic sites that are listed in the second logic list entitled ''Spinal Curvature/Malignancy/Infection'' are not listed in the third logic list entitled ''OR Secondary Diagnosis'', rather, only diagnosis code M43.8X9 (Other specified deforming dorsopathies, site unspecified) appears in both logic lists. Therefore, we considered if it was clinically appropriate to add the five diagnosis codes describing deforming dorsopathies of specific anatomic sites that are listed in the second logic list entitled ''Spinal Curvature/Malignancy/Infection'' to the third logic list entitled ''OR Secondary Diagnosis''.

A deforming dorsopathy is characterized by abnormal bending or flexion in the vertebral column. All spinal deformities involve problems with curve or rotation of the spine, regardless of site specificity. We believe the five diagnosis codes describing deforming dorsopathies of specific anatomic sites to be clinically aligned with the diagnosis codes currently

included in the ''OR Secondary Diagnosis'' logic list. Therefore, for clinical consistency we are proposing to add diagnosis codes M43.8X4, M43.8X5, M43.8X6, M43.8X7, and M43.8X8 to the ''OR Secondary Diagnosis'' logic list for MS–DRGs 456, 457, and 458, effective October 1, 2024 for FY 2025.

b. Interbody Spinal Fusion Procedures

In the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26726 through 26729) and final rule (88 FR 58731 through 58735, as corrected in the FY 2024 final rule correction notice at 88 FR 77211), we discussed a request we received to reassign cases reporting spinal fusion procedures using an aprevo™ customized interbody fusion device from the lower severity MS–DRG 455 (Combined Anterior and Posterior Spinal Fusion without CC/MCC) to the higher severity MS–DRG 453 (Combined Anterior and Posterior Spinal Fusion with MCC), from the lower severity MS–DRG 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions without CC/MCC) to the higher severity level MS–DRG 456 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC) when a diagnosis of malalignment is reported, and from MS–DRGs 459 and 460 (Spinal Fusion Except Cervical with MCC and without MCC, respectively) to MS–DRG 456. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the GROUPER logic.

We also noted that the aprevo™ Intervertebral Body Fusion Device technology was approved for new technology add-on payments for FY 2022 (86 FR 45127 through 45133). We further noted that, as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49468 through 49469), CMS finalized the continuation of the new technology add-on payments for this technology for FY 2023. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58802), we finalized the continuation of new technology add-on payments for the transforaminal lumbar interbody fusion (TLIF) indication for aprevo™ for FY 2024, and the discontinuation of the new technology add-on payments for the anterior lumbar interbody fusion (ALIF) and lateral lumbar interbody fusion (LLIF) indications for FY 2024. We refer the reader to section II.E. for discussion of the FY 2025 status of technologies receiving new technology add-on payments for FY 2024, including the status for the aprevo™ technology.

As also discussed in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26726 through 26729) and final rule (88 FR 58731 through 58735), effective October 1, 2021 (FY 2022), we implemented 12 new ICD–10–PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device. In the proposed rule we noted that the manufacturer expressed concerns that there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship and that following the submission of the request for the FY 2024 MS–DRG classification change for cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device, it submitted a code proposal requesting a revision to the title of the procedure codes that were finalized effective FY 2022. As discussed in the FY 2024 IPPS/LTCH PPS final rule, a proposal to revise the code title for the procedure codes that identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device was presented and discussed as an Addenda item at the March 7–8, 2023 ICD–10 Coordination and Maintenance Committee meeting and subsequently finalized.

The code title changes for the 12 ICD–10–PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device were reflected in the FY 2024 ICD–10–PCS Code Update files available via the CMS website at: *https://www.cms.gov/medicare/coding-billing/icd-10-codes/2024-icd-10-pcs,* as well as in Table 6F.—Revised Procedure Code Titles—FY 2024 associated with the FY 2024 IPPS/LTCH PPS final rule and available via the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.* We note that only the code titles were revised and the code numbers themselves did not change.

Accordingly, effective with discharges on and after October 1, 2023 (FY 2024), the 12 ICD–10–PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device with their revised code titles are as follows:

ICD-10-PCS Code	Description
XRGA0R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGA3R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGA4R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGB0R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGB3R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGB4R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGC0R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGC3R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGC4R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGD0R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGD3R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGD4R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7

As discussed in the FY 2024 proposed and final rules, as part of our analysis of the manufacturer's request to reassign cases involving the aprevo™ device, we presented findings from our analysis of claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 and cases reporting any one of the 12 original procedure codes describing utilization of an aprevo™ customized interbody spinal fusion device. We stated that while we agreed that the findings from our analysis appeared to indicate that cases reporting the performance of a procedure using an aprevo™ customized interbody spinal fusion device reflected a higher consumption of resources, due to the concerns expressed with respect to suspected inaccuracies of the coding and therefore, reliability of the claims data, we would continue to monitor the claims data for resolution of the potential coding issues identified by the requestor (the manufacturer). We stated that we continued to believe additional review of claims data was warranted and would be informative as we continued to consider cases involving this technology for future rulemaking. Specifically, we stated we believed it would be premature to propose any MS–DRG modifications for spinal fusion procedures using an aprevo™ customized interbody spinal fusion device for FY 2024 and finalized our proposal to maintain the structure of MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460, without modification, for FY 2024 (88 FR 58734 through 58735). As discussed further in the FY 2024 final rule correction, in response to the manufacturer's comment expressing concern about the reliability of the Medicare claims data in the MedPAR file used for purposes of CMS's claims data analysis, as compared to the manufacturer's analysis of its own customer claims data, we stated that in order for us to consider using non-MedPAR data, the non-MedPAR data must be independently validated, meaning when an entity submits non-MedPAR data, we must be able to independently review the medical records and verify that a particular procedure was performed for each of the cases that purportedly involved the procedure. We noted that, in this particular circumstance, where external data for cases reporting the use of an aprevo™ spinal fusion device was provided, we did not have access to the medical records to conduct an independent review; therefore, we were not able to validate or confirm the non-MedPAR data submitted by the commenter for consideration in FY 2024. However, we also noted that our work in this area was ongoing, and we would continue to examine the data and consider these issues as we develop potential future rulemaking proposals. We refer readers to the FY 2024 IPPS/LTCH PPS correction notice (88 FR 77211) for further discussion.

In advance of this FY 2025 IPPS/LTCH PPS proposed rule, the manufacturer provided us with a list of the providers with which it indicated it has an explicit relationship to assist in our ongoing review of its request for reassignment of cases reporting spinal fusion procedures using an aprevo™ interbody fusion device from the lower severity spinal fusion MS–DRGs to the higher severity level spinal fusion MS–DRGs.

To continue our analysis of cases reporting spinal fusion procedures using an aprevo™ customized interbody fusion device, we first analyzed claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460, and cases reporting any one of the previously listed procedure codes describing the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.[3] Our findings are shown in the following tables.

[3] As noted earlier in the discussion, the code titles were updated but the code numbers themselves did not change.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	$80,420
MS-DRG 453 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	26	9.8	$99,162
MS-DRG 454 All cases	20,425	4.3	$54,983
MS-DRG 454 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	129	4.9	$71,527
MS-DRG 455 All cases	17,000	2.6	$41,015
MS-DRG 455 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	87	2.6	$54,922
MS-DRG 456 All cases	1,475	12.6	$76,060
MS-DRG 456 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	2	8.5	$69,009
MS-DRG 457 All cases	3,730	6.1	$52,179
MS-DRG 457 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	11	5	$47,221
MS-DRG 458 All cases	1,260	3.1	$39,260
MS-DRG 458 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	6	3	$53,140
MS-DRG 459 All cases	3,152	9.6	$53,192
MS-DRG 459 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	1	22	$288,499
MS-DRG 460 All cases	28,698	3.4	$32,586
MS-DRG 460 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	64	2.4	$53,513

Summary Data for MS-DRGs 453, 454 and 455			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 453, 454, and 455 All cases	41,491	4.1	$51,753
MS-DRGs 453, 454, and 455 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	242	4.6	$68,526

Summary Data for MS-DRGs 456, 457 and 458			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 456, 457, and 458 All cases	6,465	7.0	$55,110
MS-DRGs 456, 457, and 458 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	19	4.7	$51,384

Summary Data for MS-DRGs 459 and 460			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 459 and 460 All cases	31,850	4.0	$34,625
MS-DRGs 459 and 460 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	65	2.7	$57,128

We identified the majority of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, and 455 with a total of 242 cases (26 + 129 + 87 = 242) with an average length of stay of 4.6 days and average costs of $68,526. The 26 cases found in MS–DRG 453 appear to have a comparable average length of stay (9.8 days versus 9.5 days) and higher average costs ($99,162 versus $80,420) compared to all the cases in MS–DRG 453, with a difference in average costs of $18,742 for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device. The 129 cases found in MS–DRG 454 appear to have a comparable average length of stay (4.9 days versus 4.3 days) and higher average costs ($71,527 versus $54,983) compared to all the cases in MS–DRG 454, with a difference in average costs of $16,544 for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device. The 87 cases found in MS–DRG 455 have an identical average length of stay of 2.6 days in comparison to all the cases in MS–DRG 455, however, the difference in average costs is $13,907 ($54,922 − $41,015 = $13,907) for the cases reporting the performance of a spinal fusion procedure using an

aprevo™ custom-made anatomically designed interbody fusion device.

For MS–DRGs 456, 457, and 458, we found a total of 19 cases (2 + 11 + 6 = 19) reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device with an average length of stay of 4.7 days and average costs of $51,384. The 2 cases found in MS–DRG 456 have a shorter average length of stay (8.5 days versus 12.6 days) and lower average costs ($69,009 versus $76,060) compared to all the cases in MS–DRG 456. The 11 cases found in MS–DRG 457 also have a shorter average length of stay (5.0 days versus 6.1 days) and lower average costs ($47,221 versus $52,179). For MS–DRG 458, we found 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device with a comparable average length of stay (3.0 days versus 3.1 days) and higher average costs ($53,140 versus $39,260) compared to the average costs of all the cases in MS–DRG 458, with a difference in average costs of $13,880 ($53,140 − $39,260 = $13,880) for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.

For MS–DRGs 459 and 460, we found a total of 65 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device with an average length of stay of 2.7 days and average costs of $57,128. The single case found in MS–DRG 459 had a longer average length of stay (22 days versus 9.6 days) and higher average costs ($288,499 versus $53,192) compared to the average costs of all the cases in MS–DRG 459. For MS–DRG 460, the 64 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device had a shorter average length of stay (2.4 days versus 3.4 days) and higher average cost ($53,513 versus $32,586), compared to all the cases in MS–DRG 460, with a difference in average costs of $20,927 ($53,513 − $32,586 = $20,927) for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.

As discussed in the FY 2024 final rule, the manufacturer expressed concern that there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship and, as previously discussed, subsequently provided the list of providers with which it indicated it has an explicit relationship to assist in our ongoing review. In connection with the list of providers submitted, the manufacturer also resubmitted claims data from the Standard Analytical File (SAF) that included FY 2022 claims and the first two quarters (discharges beginning October 1, 2022 through March 31, 2023) of FY 2023 from these providers. We note that the list of providers the manufacturer submitted to us was considered applicable for the dates of service in connection with the resubmitted claims data. The manufacturer stated that the list of providers with which it has an explicit relationship is subject to change on a weekly basis as additional providers begin to use the technology. The manufacturer also clarified that the external customer data it had previously referenced in connection with the FY 2024 rulemaking that was received directly from the providers with which it has an explicit relationship is Medicare data. We reviewed the September update of the FY 2022 MedPAR file and compared it against the claims data file with the list of providers submitted by the manufacturer for FY 2022. In this updated analysis of the September update of the FY 2022 MedPAR claims data, we were able to confirm that the majority of the cases for the providers with which the manufacturer indicated it has an explicit relationship matched the claims data in our FY 2022 MedPAR file. However, we identified 3 claims that appeared in the manufacturer's file that were not found in our FY 2022 MedPAR file and could not be validated. Next, we reviewed the September update of the FY 2023 MedPAR file and compared it against the claims data file with the list of providers submitted by the manufacturer for the first two quarters of FY 2023. We were able to confirm that the majority of the cases for the providers with which the manufacturer indicated it has an explicit relationship matched the claims data in our FY 2023 MedPAR file. However, we identified 2 claims that appeared in the manufacturer's file that were not found in our FY 2023 MedPAR file and also could not be validated.

In our analysis of the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 from the September update of the FY 2023 MedPAR file, we also reviewed the findings for cases identified based on the list of providers with which the manufacturer indicated it has an explicit relationship and cases based on other providers, (that is, those providers not included on the manufacturer's list), and compared those to the findings from all the cases we identified in the September update of the FY 2023 MedPAR file reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460. The findings from our analysis are shown in the following table. We note that there were no cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device based on the list of providers submitted by the manufacturer in MS–DRG 456.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	$80,420
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	26	9.8	$99,162
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	10	10.5	$118,863
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	16	9.4	$86,849
MS-DRG 454 All cases	20,425	4.3	$54,983
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	129	4.9	$71,527
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	48	6.3	$81,680
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	81	4.1	$65,510
MS-DRG 455 All cases	17,000	2.6	$41,015
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	87	2.6	$54,922
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	14	2.5	$61,637
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	73	2.6	$53,634
MS-DRG 456 All cases	1,475	12.6	$76,060
MS-DRG 456 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	2	8.5	$69,009
MS-DRG 457 All cases	3,730	6.1	$52,179
MS-DRG 457 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	11	5	$47,221
MS-DRG 457 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	2	4.5	$53,113
MS-DRG 457 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	9	5.1	$45,912
MS-DRG 458 All cases	1,260	3.1	$39,260
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	6	3	$53,140
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	3	3.33	$52,760
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	3	2.7	$53,520
MS-DRG 459 All cases	3,152	9.6	$53,192
MS-DRG 459 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	1	22	$288,499
MS-DRG 459 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	1	22	$288,499
MS-DRG 460 All cases	28,698	3.4	$32,586
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	64	2.4	$53,513
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	13	2.6	$62,829
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	51	2.3	$51,138

For MS–DRG 453, the data show that of the 26 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 10 cases were reported based on the manufacturer's provider list, and 16 cases were reported based on other providers. The average length of stay is longer (10.5 days versus 9.4 days), and the average costs are higher ($118,863 versus $86,849) for the 10 cases reported based on the manufacturer's provider list compared to the 16 cases that were reported based on other providers. For MS–DRG 454, the data show that of the 129 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 48 cases were reported based on the manufacturer's provider list, and 81 cases were reported based on other providers. The average length of stay is longer (6.3 days versus 4.1 days), and the average costs are higher ($81,680 versus $65,510) for the 48 cases reported based on the manufacturer's provider list compared to the 81 cases that were reported based on other providers. For MS–DRG 455, the data show that of the 87 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 14 cases were reported based on the manufacturer's provider list, and 73 cases were reported based on other providers. The average

length of stay is shorter (2.5 days versus 2.6 days), and the average costs are higher ($61,637 versus $53,634) for the 14 cases reported based on the manufacturer's provider list compared to the 73 cases that were reported based on other providers.

For MS–DRG 456, the data show that of the 2 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, there were no cases reported based on the manufacturer's provider list and the 2 cases reported were based on other providers. For MS–DRG 457, the data show that of the 11 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 2 cases were reported based on the manufacturer's provider list, and 9 cases were reported based on other providers. The average length of stay is shorter (4.5 days versus 5.1 days), and the average costs are higher ($53,113 versus $45,912) for the 2 cases reported based on the manufacturer's provider list compared to the 9 cases that were reported based on other providers. For MS–DRG 458, the data show that of the 6 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 3 cases were reported based on the manufacturer's provider list, and 3 cases were reported based on other providers. The average length of stay is longer (3.3 days versus 2.7 days), and the average costs are lower ($52,760 versus $53,520) for the 3 cases reported based on the manufacturer's provider list compared to the 3 cases that were reported for other providers.

For MS–DRG 459, the data show that the single case found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file was based on the manufacturer's provider list. There were no cases reported based on other providers. For MS–DRG 460, the data show that of the 64 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 13 cases were reported based on the manufacturer's provider list, and 51 cases were reported based on other providers. The average length of stay is comparable (2.6 days versus 2.3 days), and the average costs are higher ($62,829 versus $51,138) for the 13 cases reported based on the manufacturer's provider list compared to the 51 cases that were reported from other providers.

We considered these data findings with regard to the concerns expressed by the manufacturer that there may be unintentional miscoded claims reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from providers with whom the manufacturer does not have an explicit relationship. Based on our review and analysis of the claims data, we are unable to confirm that the claims from these providers with whom the manufacturer indicated that it does not have an explicit relationship are miscoded.

We note that, while a newly established ICD–10 code may be associated with an application for new technology add-on payment, such codes are not generally established to be product specific. If, after consulting the official coding guidelines, a provider determines that an ICD–10 code associated with a new technology add-on payment describes the technology that they are billing, the hospital may report the code and be eligible to receive the associated add-on payment. Providers are responsible for ensuring that they are billing correctly for the services they render. In addition, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), coding advice is issued independently from payment policy. We also note that, historically, we have not provided coding advice in rulemaking with respect to policy (82 FR 38045). As one of the Cooperating Parties for ICD–10, we collaborate with the American Hospital Association (AHA) through the *Coding Clinic for ICD–10–CM and ICD–10–PCS* to promote proper coding. We recommend that an entity seeking coding guidance submit any questions pertaining to correct coding to the AHA.

Accordingly, after review of the list of providers and associated claims data submitted by the manufacturer, and our analysis of the MedPAR data, we believe these MedPAR data are appropriate for our FY 2025 analysis. Therefore, in assessing the request for reassignment of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity MS–DRG 455 to the higher severity MS–DRG 453, from the lower severity MS–DRG 458 to the higher severity level MS–DRG 456 when a diagnosis of malalignment is reported, and cases from MS–DRGs 459 and 460 to MS–DRG 456 for FY 2025, we considered all the claims data reporting the performance of a spinal fusion procedure, including those spinal fusion procedures using an aprevo™ custom-made anatomically designed interbody fusion device as identified in the September update of the FY 2023 MedPAR file for these MS–DRGs. Consequently, our analysis also included claims based on the list of providers submitted by the manufacturer as well as other providers.

Based on the findings from our analysis and clinical review, we do not believe the requested reassignments are supported. Specifically, it would not be appropriate to propose to reassign the 87 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity level MS–DRG 455 (without CC/MCC) with an average length of stay of 2.6 days and average costs of $54,922 to the higher severity level MS–DRG 453 (with MCC) with an average length of stay of 9.5 days and average costs of $80,420. If we were to propose to reassign the 87 cases from the lower severity MS–DRG 455 to the higher severity MS–DRG 453, the MS–DRGs would no longer be clinically coherent with regard to severity of illness of the patients, and the cases would reflect a difference in resource utilization, as demonstrated by the difference in average costs of approximately $25,498 ($80,420 − $54,922 = $25,498), as well as a difference in average length of stay (2.6 days versus 9.5 days) compared to all the cases in MS–DRG 453. Similarly, it would not be appropriate to propose to reassign the 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity level MS–DRG 458 (without CC/MCC) with an average length of stay of 3.0 days and average costs of $53,140 to the higher severity level MS–DRG 456 (with MCC) with an average length of stay of 12.6 days and average costs of $76,060. If we were to propose to reassign the 6 cases from the lower severity MS–DRG 458 to the higher severity MS–DRG 456, the MS–DRGs would no longer be clinically coherent with regard to severity of illness of the patients and the cases would reflect a difference in resource utilization, as demonstrated by the difference in average costs of approximately $22,920 ($76,060 − $53,140 = $22,920) as well as a difference in average length of stay

(3.0 days versus 12.6 days) compared to all the cases in MS–DRG 456. Finally, it would not be appropriate nor consistent with the definition of the MS–DRGs to propose to reassign the 65 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from MS–DRGs 459 and 460 with an average length of stay of 2.7 days and average costs of $57,128 to MS–DRG 456. In addition to the cases reflecting a difference in resource utilization as demonstrated by the difference in average costs of approximately $18,932 ($76,060 − $57,128 = $18,932) as well as having a shorter average length of stay (2.7 days versus 12.6 days), we note that the logic for case assignment to MS–DRGs 456, 457, and 458 is specifically defined by principal diagnosis logic. As such, cases grouping to this set of MS–DRGs require a principal diagnosis of spinal curvature, malignancy, or infection, or an extensive fusion procedure. Therefore, it would not be clinically appropriate to propose to reassign cases from MS–DRGs 459 and 460 that do not have a principal diagnosis of spinal curvature, malignancy, or infection, or an extensive fusion procedure, and are not consistent with the logic for case assignment to MS–DRG 456.

In light of the higher average costs of the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, 455, 458, and 460, we further reviewed the claims data for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in these MS–DRGs and identified a wide range in the average length of stay and average costs. For example, in MS–DRG 453, the average length of stay for the 26 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 3.0 days to 27 days and the average costs ranged from $28,054 to $177,919. In MS–DRG 454, the average length of stay for the 129 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 16 days and the average costs ranged from $10,242 to $316,780. In MS–DRG 455, the average length of stay for the 87 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 9.0 days and the average costs ranged from $7,961 to $216,200. In MS–DRG 456, the average length of stay for the 2 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device were 8.0 days and 9.0 days, respectively, with average costs of $107,457 and $30,560, respectively. In MS–DRG 457, the average length of stay for the 11 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 17 days and the average costs ranged from $25,955 to $89,176. In MS–DRG 458, the average length of stay for the 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 5.0 days and the average costs ranged from $33,165 to $78,720. In MS–DRG 459, the length of stay for the single case reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device was 22 days with a cost of $288,499, indicating it is an outlier. In MS–DRG 460, the average length of stay for the 64 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 8.0 days and the average costs ranged from $8,981 to $325,104.

In our analysis of the claims data for MS–DRGs 453, 454, and 455, we also identified a number of cases for which additional spinal fusion procedures were performed, beyond the logic for case assignment to the respective MS–DRG. For example, the logic for case assignment to MS–DRGs 453, 454, and 455 requires at least one anterior column fusion and one posterior column fusion (that is, combined anterior and posterior fusion). We note that the aprevo™ custom-made anatomically designed interbody fusion device is used in the performance of an anterior column fusion. Findings from our analysis of MS–DRG 453 show that of the 26 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 24 cases also reported another spinal fusion procedure. We categorized these cases as ''multiple level fusions'' where another procedure code describing a spinal fusion procedure was reported in addition to the combined anterior and posterior fusion procedure codes. Findings from our analysis of MS–DRG 454 show that of the 129 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 100 cases also reported another spinal fusion procedure. Lastly, findings from our analysis of MS–DRG 455 show that of the 87 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 51 cases also reported another spinal fusion procedure.

While the findings from our analysis indicate a wide range in the average length of stay and average costs for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, we believe the increase in resource utilization for certain cases may be partially attributable to the performance of multiple level fusion procedures and, specifically for MS–DRGs 453 and 454, the reporting of secondary diagnosis MCC and CC conditions. Our analysis of the data for MS–DRGs 453 and 454 show that the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device also reported multiple MCC and CC conditions, which we believe may be an additional contributing factor to the increase in resource utilization for these cases, combined with the reported performance of multiple level fusions.

In our analysis of the data for MS–DRGs 453, 454, and 455 and cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, we also identified other procedures that were reported, some of which are designated as operating room (O.R.) procedures, that we believe may be another contributing factor to the increase in resource utilization and complexity for these cases. (We note that because a discectomy is frequently performed in connection with a spinal fusion procedure, we did not consider these procedures as contributing factors to consumption of resources in these spinal fusion cases). In the tables that follow we provide a list of the top 5 MCC and CC conditions, as well as the top 5 O.R. procedures (excluding discectomy) reported in MS–DRGs 453, 454, and 455 that we believe may be contributing factors to the increase in resource utilization and complexity for these cases. We note that the logic for case assignment to MS–DRG 453 includes the reporting of at least one

secondary diagnosis MCC condition (''with MCC'') and cases that group to this MS–DRG may also report secondary diagnosis CC conditions. We are providing the frequency data for both the top 5 secondary diagnosis MCC conditions and the top 5 secondary diagnosis CC conditions, in addition to the top 5 O.R. procedures (excluding discectomy) that were reported for spinal fusion cases with an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRG 453. Because the logic for case assignment to MS–DRG 454 includes the reporting of at least one secondary diagnosis CC condition (''with CC'') we are providing the top 5 secondary diagnosis CC conditions and the top 5 O.R. procedures (excluding discectomy) that were reported for spinal fusion cases with an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRG 454. We note that the logic for case assignment to MS–DRG 455 is ''without CC/MCC'' and does not include any secondary diagnosis MCC or CC conditions, therefore, we are only providing a table with the top 5 O.R. procedures (excluding discectomy) reported for that MS–DRG in addition to a spinal fusion procedure.

00NY0ZZ	Release lumbar spinal cord, open approach	3,192
01NB0ZZ	Release lumbar nerve, open approach	10,405

As previously summarized, our analysis of the claims data for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device demonstrated a low volume of cases and higher average costs in comparison to all the cases in their respective MS–DRGs (that is, in MS–DRGs 453, 454, 455, 458, 459, and 460). Therefore, we expanded our analysis to include all spinal fusion cases in MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 to identify and further examine the cases reporting multiple level fusions versus single level fusions, multiple MCCs or CCs, and other O.R. procedures as we believed that clinically, all of these factors may contribute to increases in resource utilization, severity of illness and technical complexity.

We began our expanded analysis with MS–DRGs 453, 454, and 455. Based on the findings for a subset of the cases (that is, the subset of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device) in these MS–DRGs as previously discussed, and our review of the logic for case assignment to these MS–DRGs, we developed three categories of spinal fusion procedures to further examine. The first category was for the single level combined anterior and posterior fusions except cervical, the second category was for the multiple level combined anterior and posterior fusions except cervical and the third category was for the combined anterior and posterior cervical spinal fusions. We refer the reader to Table 6P.2d for the list of procedure codes we identified to categorize the single level combined anterior and posterior fusions except cervical, Table 6P.2e for the list of procedure codes we identified to categorize the multiple level combined anterior and posterior fusions except cervical, and Table 6P.2f for the list of procedure codes we identified to categorize the combined anterior and posterior cervical spinal fusions. Findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	$80,420
MS-DRG 453 Cases with single level combined anterior and posterior fusion except cervical	791	6.4	$47,031
MS-DRG 453 Cases with multiple level combined anterior and posterior fusion except cervical	2,664	9.6	$91,358
MS-DRG 453 Cases with combined anterior and posterior cervical fusion	587	12.5	$75,077
MS-DRG 454 All cases	20,425	4.3	$54,983
MS-DRG 454 Cases with single level combined anterior and posterior fusion except cervical	6,481	3.4	$38,107
MS-DRG 454 Cases with multiple level combined anterior and posterior fusion except cervical	12,498	4.8	$64,065
MS-DRG 454 Cases with combined anterior and posterior cervical fusion	1,391	5.1	$52,274
MS-DRG 455 All cases	17,000	2.6	$41,015
MS-DRG 455 Cases with single level combined anterior and posterior fusion except cervical	8,787	2.3	$33,010
MS-DRG 455 Cases with multiple level combined anterior and posterior fusion except cervical	7,855	3.0	$50,097
MS-DRG 455 Cases with combined anterior and posterior cervical fusion	345	2.9	$37,515

BILLING CODE 4120–01–C

The data show that across MS–DRGs 453, 454, and 455, cases reporting multiple level combined anterior and posterior fusion procedures have a comparable average length of stay (9.6 days versus 9.5 days, 4.8 days versus 4.3 days, and 3.0 days versus 2.6 days, respectively) and higher average costs ($91,358 versus $80,420, $64,065 versus $54,983, and $50,097 versus $41,015) compared to all the cases in MS–DRGs 453, 454, and 455, respectively. The data also show that across MS–DRGs 453, 454, and 455, cases reporting multiple level combined anterior and posterior fusion procedures have a longer average length of stay (9.6 days versus 6.4 days, 4.8 days versus 3.4 days, and 3.0 days versus 2.3 days, respectively) and higher average costs ($91,358 versus $47,031, $64,065 versus $38,107, and $50,097 versus $33,010, respectively) compared to cases reporting a single level combined anterior and posterior fusion. For cases reporting a combined anterior and posterior cervical fusion across MS–DRGs 453 and 454, the data show a longer average length of stay (12.5 days versus 9.5 days, and 5.1 days versus 4.3 days, respectively) compared to all the cases in MS–DRGs 453 and 454 and a comparable average length of stay (2.9 days versus 2.6 days) for cases reporting a combined anterior and posterior cervical fusion in MS–DRG 455. The data also show that across MS–DRGs 453, 454, and 455, cases reporting a combined anterior and posterior cervical fusion have higher average costs ($75,077 versus $47,031, $52,274 versus $38,107, and $37,515 versus $33,010, respectively) compared to the single level combined anterior and posterior fusion cases.

The data also reflect that in applying the logic that was developed for the three categories of spinal fusion in MS–DRGs 453, 454, and 455 (single level combined anterior and posterior fusion except cervical, multiple level combined anterior and posterior fusion except cervical, and combined anterior and posterior cervical fusion), there is a

small redistribution of cases from the current MS–DRGs 453, 454, and 455 to other spinal fusion MS–DRGs because the logic for case assignment to MS–DRGs 453, 454, and 455 is currently satisfied with any one procedure code from the anterior spinal fusion logic list and any one procedure code from the posterior spinal fusion logic list, however, the logic lists that were developed for our analysis using the three categories of spinal fusion are comprised of specific procedure code combinations to satisfy the criteria for case assignment to any one of the three categories developed. For example, based on our analysis of MS–DRG 453 using the September update of the FY 2023 MedPAR file, the total number of cases found in MS–DRG 453 is 4,066 and with application of the logic for each of the three categories, the total number of cases in MS–DRG 453 is 4,042 (791 + 2,664 + 587 = 4,042), a difference of 24 cases. Using the September update of the FY 2023 MedPAR file, the total number of cases found in MS–DRG 454 is 20,425 and with application of the logic for each of the three categories, the total number of cases in MS–DRG 454 is 20,370 (6,481 + 12,498 + 1,391 = 20,370), a difference of 55 cases. Lastly, using the September update of the FY 2023 MedPAR file, the total number of cases found in MS–DRG 455 is 17,000 and with application of the logic for each of the three categories, the total number of cases in MS–DRG 455 is 16,987 (9,763 + 6,879 + 345 = 16,987), a difference of 13 cases. Overall, a total of 92 cases are redistributed from MS–DRGs 453, 454, and 455 to other spinal fusion MS–DRGs.

The findings from our analysis of MS–DRGs 453, 454, and 455 are consistent with the expectation that clinically, the greater the number of spinal fusion procedures performed during a single procedure (for example, intervertebral levels fused), the greater the consumption of resources expended. We believe the use of interbody fusion cages, other types of spinal instrumentation, operating room time, comorbidities, pharmaceuticals, and length of stay may all be contributing factors to resource utilization for spinal fusion procedures. In addition, it is expected that as a result of potential changes to the logic for case assignment to a MS–DRG, there will be a redistribution of cases among the MS–DRGs.

Based on our review and analysis of the spinal fusion cases in MS–DRGs 453, 454, and 455, we believe new MS–DRGs are warranted to differentiate between multiple level combined anterior and posterior spinal fusions except cervical, single level combined anterior and posterior spinal fusions except cervical, and combined anterior and posterior cervical spinal fusions, to more appropriately reflect utilization of resources for these procedures, including those performed with an aprevo™ custom-made anatomically designed interbody fusion device. We note that the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device as identified by any one of the 12 previously listed procedure codes would not be reported for a cervical spinal fusion procedure as reflected in Table 6P.2f associated with this proposed rule and available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.*

To compare and analyze the impact of our suggested modifications, we ran simulations using claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 23,017 cases reporting procedure codes describing multiple level combined anterior and posterior spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	23,017	4.7	$62,457

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG was met. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,664	9.6	$91,358
With CC	12,498	4.8	$64,065
Without CC/MCC	7,855	3.0	$50,097

For the proposed new MS–DRGs, there is (1) at least 500 or more cases in the MCC group, the CC subgroup, and in the without CC/MCC subgroup; (2) at least 5 percent of the cases are in the MCC subgroup, the CC subgroup, and in the without CC/MCC subgroup; (3) at least a 20 percent difference in average costs between the MCC subgroup and the CC subgroup and between the CC group and NonCC subgroup; (4) at least a $2,000 difference in average costs between the MCC subgroup and the with CC subgroup and between the CC subgroup and NonCC subgroup; and (5) at least a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

As a result, for FY 2025, we are proposing to create new MS–DRG 426 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC), new MS–DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), and new MS–DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC). The following table reflects a simulation of the proposed new MS–DRGs.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 426	2,664	9.6	$91,358
Proposed new MS-DRG 427	12,498	4.8	$64,065
Proposed new MS-DRG 428	7,855	3.0	$50,097

The next step in our analysis of the impact of our suggested modifications to MS–DRGs 453, 454, and 455 was to review the cases reporting single combined anterior and posterior cervical fusions. The following table illustrates our findings for all 16,059 cases reporting procedure codes describing single level combined anterior and posterior spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	16,059	2.9	$35,758

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that at least 5% or more of the cases are in the MCC subgroup. It also failed to meet the criterion that there be at least a 20% difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	791	6.4	$47,031
With CC	6,481	3.4	$38,107
Without CC/MCC	8,787	2.3	$33,010

As discussed in section II.C.1.b. of the preamble of this proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least 5% or more of the cases in the with MCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	791	6.4	$47,031
Without MCC	15,268	2.8	$35,174

We then applied the criteria for a two-way split for the ''with CC/MCC and without CC/MCC'' subgroups. As shown in the table that follows, a two-way split of this base MS–DRG failed to meet the criterion that there be at least a 20% difference in average costs between the ''with CC/MCC and without CC/MCC'' subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	7,272	3.7	$39,078
Without CC/MCC	8,787	2.3	$33,010

We note that because the criteria for both of the two-way splits failed, a split (or CC subgroup) is not warranted for the proposed new base MS–DRG. As a result, for FY 2025, we are proposing to create new base MS–DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical). The following table reflects a simulation of the proposed new base MS–DRG.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed MS-DRG 402	16,059	2.9	$35,758

For the final step in our analysis of the impact of our suggested modifications to MS–DRGs 453, 454, and 455 we reviewed the cases reporting combined anterior and posterior cervical fusions. The following table illustrates our findings for all 2,323 cases reporting procedure codes

describing combined anterior and posterior cervical spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	2,323	6.6	$55,844

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that that there be at least 500 cases in the NonCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	587	12.5	$75,077
With CC	1,391	5.1	$52,274
Without CC/MCC	345	2.9	$37,515

As discussed in section II.C.1.b. of the preamble of this proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this proposed new base MS–DRG was met. For the proposed MS–DRGs, there is at least (1) 500 or more cases in the MCC group and in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group and in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system. The following table illustrates our findings for the suggested MS–DRGs with a two-way severity level split.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	587	12.5	$75,077
Without MCC	1,736	4.6	$49,341

Accordingly, because the criteria for the two-way split were met, we believe a split (or CC subgroup) is warranted for the proposed new base MS–DRG. As a result, for FY 2025, we are proposing to create new MS–DRG 429 (Combined Anterior and Posterior Cervical Spinal Fusion with MCC) and new MS–DRG 430 (Combined Anterior and Posterior Cervical Spinal Fusion without MCC). The following table reflects a simulation of the proposed new MS–DRGs.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 429	587	12.5	$75,077
Proposed new MS-DRG 430	1,736	4.7	$49,341

We then analyzed the cases reporting spinal fusion procedures in MS–DRGs 456, 457, and 458. As previously described, the logic for case assignment to MS–DRGs 456, 457, and 458 is defined by principal diagnosis logic and extensive fusion procedures. Cases reporting a principal diagnosis of spinal curvature, malignancy, or infection or an extensive fusion procedure will group to these MS–DRGs. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software* for complete documentation of the GROUPER logic for MS–DRGs 456, 457, and 458.

As also previously described, in our initial analysis of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, the 13 cases we found in MS–DRGs 456 and 457 (2 + 11 = 13, respectively) appeared to be grouping appropriately, however, the average costs for the 6 cases found in MS–DRG 458 showed a difference of approximately $13,880. Because of the low volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in the ''without CC/MCC'' MS–DRG 458, and the low volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 456, 457, and 458 overall (2 + 11 + 6 = 19), for this expanded review of the claims data, we are sharing the results of our analysis in association with cases reporting extensive fusion procedures in MS–DRGs 456, 457, and 458. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 456 All cases	1,475	12.6	$76,060
MS-DRG 456 Cases reporting an extensive fusion	332	11.5	$89,773
MS-DRG 457 All cases	3,730	6.1	$52,179
MS-DRG 457 Cases reporting an extensive fusion	171	6.6	$75,588
MS-DRG 458 All cases	1,260	3.1	$39,260
MS-DRG 458 Cases reporting an extensive fusion	146	3.8	$48,035

The data show that the 332 cases reporting an extensive fusion procedure in MS–DRG 456 have a shorter average length of stay (11.5 days versus 12.6 days) and higher average costs ($89,773 versus $76,060) compared to all the cases in MS–DRG 456. For MS–DRG 457, the data show that the 171 cases reporting an extensive fusion have a comparable average length of stay (6.6 days versus 6.1 days) and higher average costs ($75,588 versus $52,179) compared to all the cases in MS–DRG 457. Lastly, for MS–DRG 458, the data show that the 146 cases reporting an extensive fusion procedure have a comparable average length of stay (3.8 days versus 3.1 days) and higher average costs ($48,035 versus $39,260) compared to all the cases in MS–DRG 458.

We believe that over time, the volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 456, 457, and 458 may increase and we could consider further in the context of the cases reporting an extensive fusion procedure. However, due to the logic for case assignment to these MS–DRGs also being defined by diagnosis code logic, additional analysis would be needed prior to considering any modification to the current structure of these MS–DRGs. As we continue to evaluate how we may refine these spinal fusion MS–DRGs, we are also seeking public comments and feedback on other factors that should be considered in the potential restructuring of MS–DRGs 456, 457, and 458. Thus, for FY 2025, we are proposing to maintain the current structure of MS–DRGs 456, 457, and 458, without modification. Feedback and other suggestions for future rulemaking may be submitted by October 20, 2024 and directed to MEARIS™ at *https://mearis.cms.gov/public/home.*

Next, we performed an expanded analysis for spinal fusion cases reported in MS–DRGs 459 and 460. We note that cases grouping to MS–DRG 459 have at least one secondary diagnosis MCC condition reported (''with MCC'') and because MS–DRG 460 is ''without MCC'', cases grouping to this MS–DRG may include the reporting of at least one secondary diagnosis CC condition (in addition to cases that may not report a CC (for example, NonCC)). Based on the findings for a subset of the cases (that is, the subset of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device) in these MS–DRGs as previously discussed, and our review of the logic for case assignment to these MS–DRGs, we developed two categories of spinal fusion procedures to further examine. The first category was for the single level spinal fusions except cervical, and the second category was for the multiple level spinal fusions except cervical. We refer the reader to Table 6P.2g for the list of procedure codes we identified to categorize the single level spinal fusions except cervical and Table 6P.2h for the list of procedure codes we identified to categorize the multiple level spinal fusions except cervical. Findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 459 All cases	3,152	9.6	$53,192
MS-DRG 459 Cases reporting single level spinal fusion except cervical	1,098	8.9	$46,031
MS-DRG 459 Cases reporting multiple level spinal fusion except cervical	2,069	10.1	$57,209
MS-DRG 460 All cases	28,698	3.4	$32,586
MS-DRG 460 Cases reporting single level spinal fusion except cervical	14,058	3.0	$28,110
MS-DRG 460 Cases reporting multiple level spinal fusion except cervical	14,677	3.9	$36,932

The data show that the 2,069 cases reporting a multiple level spinal fusion except cervical in MS–DRG 459 have a longer average length of stay (10.1 days versus 9.6 days) and higher average costs ($57,209 versus $53,192) when compared to all the cases in MS–DRG 459. The data also show that the 2,069 cases reporting a multiple level spinal fusion except cervical in MS–DRG 459 have a longer average length of stay (10.1 days versus 8.9 days) and higher average costs ($57,209 versus $46,031) when compared to the 1,098 cases reporting a single level spinal fusion except cervical in MS–DRG 459. For MS–DRG 460, the data show that the 14,677 cases reporting a multiple level spinal fusion except cervical have a comparable average length of stay (3.9 days versus 3.4 days) and higher average costs ($36,932 versus $32,586) when compared to all the cases in MS–DRG 460. The data also show that the 14,677 cases reporting a multiple level spinal fusion except cervical have a comparable average length of stay (3.9 days versus 3.0 days) and higher average costs ($36,932 versus $28,110) when compared to the 14,058 cases reporting a single level spinal fusion except cervical in MS–DRG 460.

Based on our review and analysis of the spinal fusion cases in MS–DRGs 459 and 460, we believe new MS–DRGs are warranted to differentiate between multiple level spinal fusions except cervical and single level spinal fusions except cervical to more appropriately reflect utilization of resources for these procedures, including those performed with an aprevo™ custom-made anatomically designed interbody fusion device.

To compare and analyze the impact of our suggested modifications, we ran simulations using claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 16,746 cases reporting procedure codes describing multiple level spinal fusions except cervical.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	16,746	4.6	$39,438

Consistent with our established process as discussed in section II.C.1.b. of the preamble of this proposed rule, once the decision has been made to propose to make further modifications to the MS–DRGs, such as creating a new base MS–DRG, all five criteria to create subgroups must be met for the proposed new base MS–DRG to be split (or subdivided) by a CC subgroup. Therefore, we applied the criteria to create subgroups in a base MS–DRG. We note that, as shown in the table that follows, a three-way split of this proposed new base MS–DRG failed to meet the criterion that there be at least a 20% difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,069	10.1	$57,209
With CC	8,695	4.6	$38,574
Without CC/MCC	5,982	2.8	$34,546

As discussed in section II.C.1.b. of the preamble of this proposed rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the ''with MCC and without MCC'' subgroups. We note that, as shown in the table that follows, a two-way split of this proposed new base MS–DRG was met. For the proposed MS–DRGs, there is at least (1) 500 or more cases in the MCC group and in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group and in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a $2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS–DRG in capturing differences in expected cost between the proposed MS–DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system. The following table illustrates our findings for the suggested MS–DRGs with a two-way severity level split.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,069	10.1	$57,209
Without MCC	14,677	3.9	$36,932

As a result, for FY 2025, we are proposing to create new MS–DRGs 447 (Multiple Level Spinal Fusion Except Cervical with MCC) and new MS–DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC). We are also proposing to revise the title for existing MS–DRGs 459 and 460 to ''Single Level Spinal Fusion Except Cervical with MCC and without MCC'', respectively. This proposal would better differentiate the resource utilization, severity of illness and technical complexity between single level and multiple level spinal fusions that do not include cervical spinal fusions in the logic for case assignment. The following table reflects a simulation of the proposed new MS–DRGs.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 447	2,069	10.1	$57,209
Proposed new MS-DRG 448	14,677	3.9	$36,932

In conclusion, we are proposing to delete MS–DRGs 453, 454, and 455 and proposing to create 8 new MS–DRGs. We are proposing to create new MS–DRG 426 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC), MS–DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), MS–DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC), MS–DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical), MS–DRG 429 (Combined Anterior and Posterior Cervical Spinal Fusion with MCC), MS–DRG 430 (Combined Anterior and Posterior Cervical Spinal Fusion without MCC), MS–DRG 447 (Multiple Level Spinal Fusion Except Cervical with MCC) and MS–DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC) for FY 2025. We are proposing the logic for case assignment to these proposed new MS–DRGs as displayed in Table 6P.2d, Table 6P.2e, Table 6P.2f, Table 6P.2g, and Table 6P.2h. We are also proposing to revise the title for MS–DRGs 459 and

460 to ''Single Level Spinal Fusion Except Cervical with MCC and without MCC'', respectively. Lastly, as discussed in section II.C.14 of the preamble of this proposed rule, we are proposing conforming changes to the surgical hierarchy for MDC 08.

7. MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders): Resection of Right Large Intestine

We identified an inconsistency in the MDC and MS–DRG assignment of procedure codes describing resection of the right large intestine and resection of the left large intestine with an open and percutaneous endoscopic approach. ICD–10–PCS procedure codes 0DTG0ZZ (Resection of left large intestine, open approach) and 0DTG4ZZ (Resection of left large intestine, percutaneous endoscopic approach) are currently assigned to MDC 10 in MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). However, the procedure codes that describe resection of the right large intestine with an open or percutaneous endoscopic approach, 0DTF0ZZ (Resection of right large intestine, open approach) and 0DTF4ZZ (Resection of right large intestine, percutaneous endoscopic approach) are not assigned to MDC 10 in MS–DRGs 628, 629, and 630. To ensure clinical alignment and consistency, as well as appropriate MS–DRG assignment, we are proposing to add procedure codes 0DTF0ZZ and 0DTF4ZZ to MDC 10 in MS–DRGs 628, 629, and 630 effective October 1, 2024 for FY 2025.

8. MDC 15 (Newborns and Other Neonates With Conditions Originating in Perinatal Period): MS–DRG 795 Normal Newborn

We received a request to review the GROUPER logic that would determine the assignment of cases to MS–DRG 794 (Neonate with Other Significant Problems). The requestor stated that it appears that MS–DRG 794 is the default MS–DRG in MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal Period), as the GROUPER logic for MS–DRG 794 displayed in the ICD–10 MS–DRG Version 41.1 Definitions Manual is defined by a ''principal or secondary diagnosis of newborn or neonate, with other significant problems, not assigned to DRG 789 through 793 or 795''. The requestor expressed concern that defaulting to MS–DRG 794, instead of MS–DRG 795 (Normal Newborn), for assignment of cases in MDC 15 could contribute to overpayments in healthcare by not aligning the payment amount to the appropriate level of care in newborn cases. The requestor recommended that CMS update the GROUPER logic that would determine the assignment of cases to MS–DRGs in MDC 15 to direct all cases that do not have the diagnoses and procedures as specified in the Definitions Manual to instead be grouped to MS–DRG 795.

Specifically, the requestor expressed concern that a newborn encounter coded with a principal diagnosis code from ICD–10–CM category Z38 (Liveborn infants according to place of birth and type of delivery), followed by code P05.19 (Newborn small for gestational age, other), P59.9 (Neonatal jaundice, unspecified), Q38.1 (Ankyloglossia), Q82.5 (Congenital non-neoplastic nevus), or Z23 (Encounter for immunization) is assigned to MS–DRG 794. The requestor stated that they performed a detailed claim level study, and in their clinical assessment, newborn encounters coded with a principal diagnosis code from ICD–10–CM category Z38, followed by diagnosis code P05.19, P59.9, Q38.1, Q82.5, or Z23 in fact clinically describe normal newborn encounters and the case assignment should instead be to MS–DRG 795.

Our analysis of this grouping issue confirmed that when a principal diagnosis code from MDC 15, such as a diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), is reported followed by ICD–10–CM code P05.19 (Newborn small for gestational age, other), Q38.1 (Ankyloglossia) or Q82.5 (Congenital non-neoplastic nevus), the case is assigned to MS–DRG 794.

However, as we examined the GROUPER logic that would determine an assignment of cases to MS–DRG 795, we noted the ''only secondary diagnosis'' list under MS–DRG 795 already includes ICD–10–CM codes P59.9 (Neonatal jaundice, unspecified) and Z23 (Encounter for immunization). Therefore, when a principal diagnosis code from MDC 15, such as a diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery) is reported, followed by ICD–10–CM code P59.9 or Z23, the case is currently assigned to MS–DRG 795, not MS–DRG 794, as suggested by the requestor. We refer the reader to the ICD–10 MS–DRG Version 41.1 Definitions Manual (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the GROUPER logic for MS–DRGs 794 and 795.

Next, we reviewed the claims data from the September 2023 update of the FY 2023 MedPAR file; however, we found zero cases across MS–DRGs 794 and 795. We then examined the clinical factors. The description for ICD–10–CM diagnosis code P05.19 is ''Newborn small for gestational age, other'' and the inclusion term in the ICD–10–CM Tabular List of Diseases for this diagnosis code is ''Newborn small for gestational age, 2500 grams and over.'' We note that ''small-for-gestational age'' is diagnosed by assessing the gestational age and the weight of the baby after birth. There is no specific treatment for small-for-gestational-age newborns. Most newborns who are moderately small for gestational age are healthy babies who just happen to be on the smaller side. Unless the newborn is born with an infection or has a genetic disorder, most small-for-gestational-age newborns have no symptoms and catch up in their growth during the first year of life and have a normal adult height. Next, ICD–10–CM diagnosis code Q38.1 describes ankyloglossia, also known as tongue-tie, which is a condition that impairs tongue movement due to a restrictive lingual frenulum. In infants, tongue-tie is treated by making a small cut to the lingual frenulum to allow the tongue to move more freely. This procedure, called a frenotomy, can be done in a healthcare provider's office without anesthesia. Newborns generally recover within about a minute of the procedure, and pain relief is usually not indicated. Lastly, ICD–10–CM diagnosis code Q82.5 describes a congenital non-neoplastic nevus. A congenital nevus is a type of pigmented birthmark that appears at birth or during a baby's first year. Most congenital nevi do not cause health problems and may only require future monitoring.

In reviewing these three ICD–10–CM codes and the conditions they describe; we believe these diagnoses generally do not prolong the inpatient admission of the newborn and newborns with these diagnoses generally receive standard follow-up care after birth. Clinically, we agree with the requestor that newborn encounters coded with a principal diagnosis code from ICD–10–CM category Z38 (Liveborn infants according to place of birth and type of delivery), followed by code P05.19 (Newborn small for gestational age, other), Q38.1 (Ankyloglossia), or Q82.5 (Congenital non-neoplastic nevus) should not map to MS–DRG 794 (Neonate with Other Significant Problems) and should instead be assigned to MS–DRG 795 (Normal

Newborn). Therefore, for the reasons discussed, we are proposing to reassign diagnosis code P05.19 from the ''principal or secondary diagnosis'' list under MS–DRG 794 to the ''principal diagnosis'' list under MS–DRG 795 (Normal Newborn). We are also proposing to add diagnosis codes Q38.1 and Q82.5 to the ''only secondary diagnosis'' list under MS–DRG 795 (Normal Newborn). Under this proposal, cases with a principal diagnosis described by an ICD–10–CM code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes P05.19, Q38.1, or Q82.5 will be assigned to MS–DRG 795.

In response to the recommendation that CMS update the GROUPER logic that would determine an assignment of cases to MS–DRGs in MDC 15, we agree with the requestor that the GROUPER logic for MS–DRG 794 is defined by a ''principal or secondary diagnosis of newborn or neonate, with other significant problems, not assigned to DRG 789 through 793 or 795''. We acknowledge that MS–DRG 794 utilizes ''fall-through'' logic, meaning if a diagnosis code is not assigned to any of the other MS–DRGs, then assignment ''falls-through'' to MS–DRG 794. We have started to examine the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15, including MS–DRGs 794 and 795, to determine where further refinements could potentially be made to better account for differences in clinical complexity and resource utilization. However, as we have noted in prior rulemaking (72 FR 47152), we cannot adopt the same approach to refine the newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these MS–DRGs. Additional time is needed to fully and accurately evaluate cases currently grouping to the MS–DRGs in MDC 15 to consider if restructuring the current MS–DRGs would better recognize the clinical distinctions of these patient populations. Any proposed modifications to these MS–DRGs will be addressed in future rulemaking consistent with our annual process.

As noted earlier, we have started our examination of the GROUPER logic that would determine an assignment of cases to MS–DRGs in MDC 15. During this review we noted the logic for MS–DRG 795 (Normal Newborn) includes five diagnosis codes from ICD–10–CM category Q81 (Epidermolysis bullosa). We refer the reader to the ICD–10 MS–DRG Version 41.1 Definitions Manual (available via on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software)* for complete documentation of the GROUPER logic for MS–DRG 795. The five diagnosis codes and their current MDC and MS–DRG assignments are listed in the following table.

ICD-10-CM Code	Description	MDC	MS-DRG
Q81.0	Epidermolysis bullosa simplex	09	606 and 607 (Minor Skin Disorders with MCC and without MCC, respectively)
Q81.1	Epidermolysis bullosa letalis		
Q81.2	Epidermolysis bullosa dystrophica		
Q81.8	Other epidermolysis bullosa		
Q81.9	Epidermolysis bullosa, unspecified	15	795 (Normal Newborn)

We reviewed this grouping issue and noted that epidermolysis bullosa (EB) is a group of genetic (inherited) disorders that causes skin to be fragile, blister, and tear easily in response to minimal friction or trauma. In some cases, blisters form inside the body in places such as the mouth, esophagus, other internal organs, or eyes. When the blisters heal, they can cause painful scarring. In severe cases, the blisters and scars can harm internal organs and tissue enough to be fatal. Patients diagnosed with severe cases of EB have a life expectancy that ranges from infancy to 30 years of age.

EB has four primary types: simplex, junctional, dystrophic, and Kindler syndrome, and within each type there are various subtypes, ranging from mild to severe. A skin biopsy can confirm a diagnosis of EB and identify which layers of the skin are affected and determine the type of epidermolysis bullosa. Genetic testing may also be ordered to diagnose the specific type and subtype of the disease. In caring for patients with EB, adaptions may be necessary in the form of handling, feeding, dressing, managing pain, and treating wounds caused by the blisters and tears. If there is a known diagnosis of EB, but the neonate has no physical signs at birth, there will still need to be specialty consultation in the inpatient setting or referral for outpatient follow-up. We believe the five diagnosis codes from ICD–10–CM category Q81 (Epidermolysis bullosa) describe conditions that require advanced care and resources similar to other conditions already assigned to the logic of MS–DRG 794 and MS–DRGs 595 and 596 (Major Skin Disorders with MCC and without MCC, respectively), even in cases where the type of EB is unspecified.

Therefore, for clinical consistency, we are proposing to reassign ICD–10–CM diagnosis codes Q81.0, Q81.1, Q81.2, Q81.8, and Q81.9 from MS–DRGs 606 and 607 in MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MS–DRG 795 (Normal Newborn) in MDC 15 to MS–DRGs 595 and 596 in MDC 09 and MS–DRG 794 in MDC 15, effective October 1, 2024 for FY 2025.

9. MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms): Acute Leukemia

We identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs regarding the assignment of six ICD–10–CM diagnosis codes that describe a type of acute leukemia. Under the Version 32 ICD–9–CM based MS–DRGs, the ICD–9–CM diagnosis codes as shown in the following table were assigned to surgical MS–DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), surgical MS–DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively), and medical MS–DRGs 840, 841, and 842 (Lymphoma and Non-Acute Leukemia with MCC, with CC, and without CC/MCC, respectively) in MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms). The six ICD–10–PCS code translations also shown in the following table, that provide more detailed and specific information for the ICD–9–CM codes reflected, also currently group to MS–DRGs 820, 821, 822, 823, 824, 825, 840, 841 and 842 in the ICD–10 MS–DRGs Version 41.1. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/*

medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software) for complete documentation of the GROUPER logic for MS–DRGs 820, 821, 822, 823, 824, 825, 840, 841, and 842.

ICD-9-CM Diagnosis Code	Description	ICD-10-CM Diagnosis Code	Description
207.20	Megakaryocytic leukemia, without mention of having achieved remission	C94.20	Acute megakaryoblastic leukemia not having achieved remission
207.21	Megakaryocytic leukemia, in remission	C94.21	Acute megakaryoblastic leukemia, in remission
207.22	Megakaryocytic leukemia, in relapse	C94.22	Acute megakaryoblastic leukemia, in relapse
238.79	Other lymphatic and hematopoietic tissues	C94.40	Acute panmyelosis with myelofibrosis not having achieved remission
238.79	Other lymphatic and hematopoietic tissues	C94.41	Acute panmyelosis with myelofibrosis, in remission
238.79	Other lymphatic and hematopoietic tissues	C94.42	Acute panmyelosis with myelofibrosis, in relapse

During our review of this issue, we noted that under ICD–9–CM, the diagnosis codes as reflected in the table did not describe the acuity of the diagnosis (for example, acute versus chronic). This is in contrast to their six comparable ICD–10–CM code translations listed in the previous table that provide more detailed and specific information for the ICD–9–CM diagnosis codes and do specify the acuity of the diagnoses.

We note that ICD–10–CM codes C94.20, C94.21, and C94.22 describe acute megakaryoblastic leukemia (AMKL), a rare subtype of acute myeloid leukemia (AML) that affects megakaryocytes, platelet-producing cells that reside in the bone marrow. Similarly, ICD–10–CM codes C94.40, C94.41, and C94.42 describe acute panmyelosis with myelofibrosis (APMF), a rare form of acute myeloid leukemia characterized by acute panmyeloid proliferation with increased blasts and accompanying fibrosis of the bone marrow that does not meet the criteria for AML with myelodysplasia related changes. As previously mentioned, these six diagnosis codes are assigned to MS–DRGs 820, 821, 822, 823, 824, 825, 840, 841, and 842. The GROUPER logic lists for MS–DRGs 820, 821, and 822 includes diagnosis codes describing lymphoma and both acute and non-acute leukemias, however the logic lists for MS–DRGs 823, 824, 825, 840, 841, and 842 contain diagnosis codes describing lymphoma and non-acute leukemias. In our analysis of this grouping issue, we also noted that cases reporting a chemotherapy principal diagnosis with a secondary diagnosis describing acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis are assigned to MS–DRGs 846, 847, and 848 (Chemotherapy without Acute Leukemia as Secondary Diagnosis, with MCC, with CC, and without CC/MCC, respectively) in Version 41.1.

Next, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRG 823, 824, 825, 840, 841, and 842 to identify cases reporting one of the six diagnosis codes listed previously that describe acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis. We also examined MS–DRGs 846, 847, and 848 (Chemotherapy without Acute Leukemia as Secondary Diagnosis, with MCC, with CC, and without CC/MCC, respectively). Our findings are shown in the following tables:

MS-DRGs 823, 824, and 825: All Cases and Cases Reporting Diagnosis Codes Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
823	All cases	2,235	14	$40,587
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	2	31.5	$49,600
824	All cases	1,764	6.8	$19,262
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	$0
825	All Cases	427	2.9	$10,959
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	1	6	$17,293

As shown in the table, in MS–DRG 823, we identified a total of 2,235 cases with an average length of stay of 14 days and average costs of $40,587. Of those 2,235 cases, there were two cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 823 ($49,600 compared to $40,587) and a longer average length of stay (31.5 days compared to 14 days). We found zero cases in MS–DRG 824 reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis. In MS–DRG 825, we identified a total of 427 cases with an average length of stay of 2.9 days and average costs of $10,959. Of those 427 cases, there was one case reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with costs higher than the average costs in the FY 2023 MedPAR file for MS–DRG 825 ($17,293 compared to $10,959) and a longer length of stay (6 days compared to 2.9 days).

MS-DRGs 840, 841, and 842: All Cases and Cases Reporting Diagnosis Codes Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
840	All cases	7,747	9.6	$26,215
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	12	8.7	$21,357
841	All cases	5,019	5.3	$13,502
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	6	2.8	$6,976
842	All Cases	726	3.4	$9,272
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	$0

As shown in the table, in MS–DRG 840, we identified a total of 7,747 cases with an average length of stay of 9.6 days and average costs of $26,215. Of those 7,747 cases, there were 12 cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 840 ($21,357 compared to $26,215) and a shorter average length of stay (8.7 days compared to 9.6 days). In MS–DRG 841, we identified a total of 5,019 cases with an average length of stay of 5.3 days and average costs of $13,502. Of those 5,019 cases, there were six cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 841 ($6,976 compared to $13,502) and a shorter average length of stay (2.8 days compared to 5.3 days). We found zero cases in MS–DRG 842 reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis.

MS-DRGs 846, 847, and 848: All Cases and Cases with a Chemotherapy Principal Diagnosis Code and a Secondary Diagnosis Code Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
846	All cases	2,936	8	$22,705
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	$0
847	All cases	7,329	4.4	$11,250
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	2	5	$7,569
848	All Cases	113	3.1	$7,347
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	$0

As shown in the table, in MS–DRG 847, we identified a total of 7,329 cases with an average length of stay of 4.4 days and average costs of $11,250. Of those 7,329 cases, there were two cases reporting a chemotherapy principal diagnosis code with a secondary diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average costs in the FY 2023 MedPAR file for MS–DRG 840 ($7,569 compared to $11,250) and a longer average length of stay (5 days compared to 4.4 days). We found zero cases in MS–DRGs 846 and 848 reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis.

Next, we examined the MS–DRGs within MDC 17. Given that the six diagnoses codes describe subtypes of acute myeloid leukemia, we determined that the cases reporting a principal diagnosis of acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis would more suitably group to medical MS–DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). Similarly, cases reporting a chemotherapy principal diagnosis with a secondary diagnosis describing acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis would more suitably group to medical MS–DRGs 837, 838, and 839 (Chemotherapy with Acute Leukemia as Secondary Diagnosis, or with High Dose Chemotherapy Agent with MCC, with CC or High Dose Chemotherapy Agent, and without CC/MCC, respectively).

We then examined claims data from the September 2023 update of the FY 2023 MedPAR for MS–DRGs 834, 835, 836, 837, 838, and 839. Our findings are shown in the following table.

MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
834	Acute Leukemia without Major O.R. Procedures with MCC	4,094	16.3	$49,986
835	Acute Leukemia without Major O.R. Procedures with CC	1,682	7.2	$19,023
836	Acute Leukemia without Major O.R. Procedures without CC/MCC	230	4	$11,225
837	Chemotherapy with Acute Leukemia as Secondary Diagnosis or with High Dose Chemotherapy Agent with MCC	1,567	15.3	$43,195
838	Chemotherapy with Acute Leukemia as Secondary Diagnosis with CC or High Dose Chemotherapy Agent	1,131	6.7	$18,162
839	Chemotherapy with Acute Leukemia as Secondary Diagnosis without CC/MCC	502	4.4	$12,417

While the average costs for all cases in MS–DRGs 834, 835, 836, 837, 838, and 839 are higher than the average costs of the small number of cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, or reporting a chemotherapy principal diagnosis with a secondary diagnosis describing acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, and the average lengths of stay are longer, we note that diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 describe types of acute leukemia. For clinical coherence, we believe these six diagnosis codes would be more appropriately grouped along with other ICD–10–CM diagnosis codes that describe types of acute leukemia.

We reviewed this grouping issue, and our analysis indicates that the six diagnosis codes describing the acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis were initially assigned to the list of diagnoses in the GROUPER logic for MS–DRGs 823, 824, 825, 840, 841, and 842 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs. We also note that diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 do not describe non-acute leukemia diagnoses.

Accordingly, because the six diagnosis codes that describe acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis are not clinically consistent with non-acute leukemia diagnoses, and it is clinically appropriate to reassign these diagnosis codes to be consistent with the other diagnosis codes that describe acute leukemias in MS–DRGs 834, 835, 836, 837, 838, and 839, we are proposing the reassignment of diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 from MS–DRGs 823, 824 and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively), and MS–DRGs 840, 841, and 842 (Lymphoma and Non-Acute Leukemia with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 837, 838, and 839 (Chemotherapy with Acute Leukemia as Secondary Diagnosis, or with High Dose Chemotherapy Agent with MCC, with CC or High Dose Chemotherapy Agent, and without CC/MCC, respectively) in MDC 17, effective FY 2025. Under this proposal, diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 will continue to be assigned to surgical MS–DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

In our review of the MS–DRGs in MDC 17 for further refinement, we next examined the procedures currently assigned to MS–DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS–DRGs 826, 827, and 828 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). We note that the logic for case assignment to MS–DRGs 820, 821, 822, 826, 827, and 828 is comprised of a logic list entitled ''Operating Room Procedures'' which is defined by a list of 4,320 ICD–10–PCS procedure codes, including 90 ICD–10–PCS codes describing bypass procedures from the cerebral ventricle to various body parts. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 41.1 (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps)* for complete documentation of the GROUPER logic for MS–DRGs 820, 821, 822, 826, 827, and 828.

In our review of the procedures currently assigned to MS–DRGs 820, 821, 822, 826, 827, and 828, we noted 12 ICD–10–PCS procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns, such as subgaleal or cisternal shunt placement, that are not included in the logic for MS–DRGs 820, 821, 822, 826, 827, and 828. The 12 procedure codes are listed in the following table.

ICD-10-PCS Code	Description
001607A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, open approach
00160JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, open approach
00160KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, open approach
00160ZB	Bypass cerebral ventricle to cerebral cisterns, open approach
001637A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, percutaneous approach
00163JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, percutaneous approach
00163KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, percutaneous approach
00163ZB	Bypass cerebral ventricle to cerebral cisterns, percutaneous approach
001647A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, percutaneous endoscopic approach
00164JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, percutaneous endoscopic approach
00164KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, percutaneous endoscopic approach
00164ZB	Bypass cerebral ventricle to cerebral cisterns, percutaneous endoscopic approach

A subgaleal shunt consists of a shunt tube with one end in the lateral ventricles while the other end is inserted into the subgaleal space of the scalp, while a ventriculo-cisternal shunt diverts the cerebrospinal fluid flow from one of the lateral ventricles, via a ventricular catheter, to the cisterna magna of the posterior fossa. Both procedures allow for the drainage of excess cerebrospinal fluid. Indications for ventriculosubgaleal or ventriculo-cisternal shunting include acute head trauma, subdural hematoma, hydrocephalus, and leptomeningeal disease (LMD) in malignancies such as breast cancer, lung cancer, melanoma, acute lymphocytic leukemia (ALL) and non-hodgkin's lymphoma (NHL).

Recognizing that acute lymphocytic leukemia (ALL) and non-hodgkin's lymphoma (NHL) are indications for ventriculosubgaleal or ventriculo-cisternal shunting, we support adding the 12 ICD–10–PCS codes identified in the table to MS–DRGs 820, 821, 822, 826, 827, and 828 in MDC 17 for consistency to align with the procedure codes listed in the definition of MS–DRGs 820, 821, 822, 826, 827, and 828 and also to permit proper case assignment when a principal diagnosis from MDC 17 is reported with one of the procedure codes in the table that describes bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns. Therefore, we are proposing to add the 12 procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns listed previously to MS–DRGs 820, 821, 822, 826, 827, and 828 in MDC 17 for FY 2025.

Lastly, in our analysis of the MS–DRGs in MDC 17 for further refinement, we noted that the logic for case assignment to medical MS–DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD–10 MS–DRG Version 41.1 Definitions Manual (available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*) is comprised of a logic list entitled ''Principal Diagnosis'' and is defined by a list of 27 ICD–10–CM diagnosis codes describing various types of acute leukemias. When any one of the 27 listed diagnosis codes from the ''Principal Diagnosis'' logic list is reported as a principal diagnosis, without a procedure code designated as an O.R. procedure or without a procedure code designated as a non-O.R. procedure that affects the MS–DRG, the case results in assignment to MS–DRG 834, 835, or 836 depending on the presence of any additional MCC or CC secondary diagnoses. We note however, that while not displayed in the ICD–10 MS–DRG Version 41.1 Definitions Manual, when any one of the 27 listed diagnosis codes from the ''Principal Diagnosis'' logic list is reported as a principal diagnosis, along with a procedure code designated as an O.R. procedure that is not listed in the logic list of MS–DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), the case also results in assignment to medical MS–DRG 834, 835, or 836 depending on the presence of any additional MCC or CC secondary diagnoses.

As medical MS–DRG 834, 835, and 836 contains GROUPER logic that includes ICD–10–PCS procedure codes designated as O.R. procedures, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS–DRG 834, 835, and 836 to identify cases reporting an O.R. procedure. Our findings are shown in the following table:

MS-DRGs 834, 835, and 836: All Cases and Cases Reporting an O.R. Procedure

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
834	All cases	4,094	16.3	$49,986
	Cases reporting an O.R. procedure	277	28.2	$92,246
835	All cases	1,682	7.2	$19,023
	Cases reporting an O.R. procedure	79	10.4	$30,771
836	All Cases	230	4	$11,225
	Cases reporting an O.R. procedure	7	5.9	$17,950

As shown by the table, in MS–DRG 834, we identified a total of 4,094 cases, with an average length of stay of 16.3 days and average costs of $49,986. Of those 4,094 cases, there were 277 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS–DRG 834 ($92,246 compared to $49,986), and a longer average length of stay (28.2 days compared to 16.3 days). In MS–DRG 835, we identified a total of 1,682 cases with an average length of stay of 7.2 days and average costs of $19,023. Of those 1,682 cases, there were 79 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS–DRG 835 ($30,771 compared to $19,023), and a longer average length of stay (10.4 days compared to 7.2 days). In MS–DRG 836, we identified a total of 230 cases with an average length of stay of 4 days and average costs of $11,225. Of those 230 cases, there were 7 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS–DRG 836 ($17,950 compared to $11,225), and a longer average length of stay (5.9 days compared to 4 days). The data analysis shows that the average costs of cases reporting an O.R. procedure are higher than for all cases in their respective MS–DRG.

The data analysis clearly shows that cases reporting a principal diagnosis code describing a type of acute leukemia with an ICD–10–PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS–DRGs 820, 821, and 822 have higher average costs and longer lengths of stay compared to all the cases in their assigned MS–DRG. For these reasons, we are proposing to create a new surgical MS–DRG for cases reporting a principal diagnosis code describing a type of acute leukemia with an O.R. procedure.

To compare and analyze the impact of our suggested modifications, we ran a simulation using the claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 367 cases reporting a principal diagnosis code describing a type of acute leukemia with an ICD–10–PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS–DRGs 820, 821, and 822. We believe the resulting proposed MS–DRG assignment, reflecting these modifications, is more

clinically homogeneous, coherent and better reflects hospital resource use.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Acute Leukemia with Other Procedures	367	23.9	$76,996

We applied the criteria to create subgroups in a base MS–DRG as discussed in section II.C.1.b. of this FY 2025 IPPS/LTCH PPS proposed rule. As shown in the table, we identified a total of 367 cases using the claims data from the September 2023 update of the FY 2023 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, for FY 2025, we are not proposing to subdivide the proposed new MS DRG for acute leukemia with other procedures into severity levels.

In summary, for FY 2025, we are proposing to create a new base surgical MS–DRG for cases reporting a principal diagnosis describing a type of acute leukemia with an ICD–10–PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS–DRGs 820, 821, and 822 in MDC 17. The proposed new MS–DRG is proposed new MS–DRG 850 (Acute Leukemia with Other Procedures). We are proposing to add the 27 ICD–10–CM diagnosis codes describing various types of acute leukemias currently listed in the logic list entitled ''Principal Diagnosis'' in MS–DRGs 834, 835, and 836 as well as ICD–10–CM codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 discussed earlier in this section to the proposed new MS–DRG 850. We are also proposing to add the procedure codes from current MS–DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively) to the proposed new MS–DRG 850. We note that in the current logic list of MS–DRGs 823, 824, and 825 there are 189 procedure codes describing stereotactic radiosurgery of various body parts that are designated as non-O.R. procedures affecting the MS–DRG, therefore, as part of the logic for new MS–DRG 850, we are also proposing to designate these 189 codes as non-O.R. procedures affecting the MS–DRG.

In addition, we are proposing to revise the titles for MS–DRGs 834, 835, and 836 by deleting the reference to ''Major O.R. Procedures'' in the title. Specifically, we are proposing to revise the titles of medical MS–DRGs 834, 835, and 836 from ''Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC'', respectively to ''Acute Leukemia with MCC, with CC, and without CC/MCC'', respectively to better reflect the GROUPER logic that will no longer include ICD–10–PCS procedure codes designated as O.R. procedures. We note that discussion of the surgical hierarchy for the proposed modifications is discussed in section II.C.15. of this proposed rule.

10. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

Based on the results of our review of the claims data from the September 2023 update of the FY 2023 MedPAR file of cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we did not identify any cases for reassignment and are not proposing to move any cases from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into a surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

In addition to the internal review of procedures producing assignment to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned. We did not receive any requests suggesting reassignment.

We also review the list of ICD–10–PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS DRGs to the other group of MS DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

Additionally, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. Based on the results of our review of the claims data from the September 2023 update of the FY 2023 MedPAR file we did not identify any cases for reassignment. We also did not receive any requests suggesting reassignment. Therefore, for FY 2025 we are not proposing to move any cases reporting procedure codes from MS–

DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

11. Operating Room (O.R.) and Non-O.R. Procedures

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed.

Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as

O.R. procedures or non-O.R. procedures affecting the MS–DRG, we recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.C.13 of the preamble of this proposed rule, we are making Table 6B.—New Procedure Codes—FY 2025 available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html.* We also refer readers to the ICD–10 MS–DRG Version 41.1 Definitions Manual at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.
